Interest on sum paid for, is included in valuation of properties (Mr. Barton, Ireland), 3282-92; 3356-61; 3404-7; 3494-503.  
Interest on sum paid for, with rent fixed by Land Commission, should be basis of valuation of land (Mr. Barton, Ireland), 3306-10.  
In Ulster. Principles adopted by the valuers in making Griffith's valuation (Mr. Barton, Ireland), 3293. Valuation included interest on value of tenant right, 3408-11; 3514-9.

**TITHE ACT, 1891 (54 & 55 Vict. c. 8.):**

Effect has been to transfer the burden of tithe to owner from occupier (Capt. E. G. Pretyman, M.P.), 9899; 9900.  
Effect upon landowners. Incidence of the tithe (Capt. E. G. Pretyman, M.P.), 9585.  
Deductions from tithe rent-charge for loss to owner owing to inability under Tithe Act, 1891, to sue for it until three months after it is due (Mr. Peterson), 8295; 8296.

**TITHE AND TITHE RENTCHARGE:**

(a.) *Payment of Tithes.*

Tithe is really rent (Mr. Clarke), 7400-6; (Mr. Peterson), 8241-3.  
Tithe estimated on produce not on rental (Mr. De Bock Porter), 11,046-51.  
Tithe rentcharge deducted from gross rent of occupier (Mr. Rotton), 150-7; (Mr. Hett), 4592-8.  
Rates on land subject to tithe and free of tithe (Rev. D. J. Davies), 5676-9.  
Tithe equal to rent in certain corn lands (Mr. Peterson), 3506-9.

(b.) *Redemption of Tithes.*

Market value of tithe. Redemption at present prices not desirable (Mr. Peterson), 8496-503.  
Number of years' purchase necessary to produce present income (Rev. E. F. Gepp), 8544-9; 8554-6.  
Scheme desirable (Mr. A. F. Jeffreys, M.P.), 11,282.

(c.) *Rateability of Tithes.—Who should pay Rates.*

Tithe commutation rentcharge, rating of (Mr. Rotton), 42-4; (Sir H. B. Poland), 2214; 2215.  
Extraordinary tithe rentcharge, rateability of (Mr. Rotton), 158-60.  
Rating of, is rating part of value of land (Sir H. B. Poland), 2498; 2499. As much as the rating of glebe, 2502; 2503.  
Collection of rates from occupier not desirable (Mr. Duffield), 5471; 5472.

TITHE AND TITHE RENTCHARGE—*cont.*

- Advantages of payment of rates by tithe owner (Mr. Cobbold), 5393-5.
- Rates in respect of tithe rentcharge. Whether payment by occupier desirable (Mr. Cobbold), 5316-44.
- Occupier should be rated in respect of tithe (Mr. Hett), 4657-60.
- Hereditaments subject to tithes should be rated on full value (Mr. Hett), 4616-9.
- Tithes sometimes assessed twice over (Mr. Cobbold), 5262-7.
- Tithe rentcharge as compared with ground rentcharge (Rev. D. J. Davies), 5712-4.

(d.) *Valuation of Tithes.*

- Principle of valuation (Sir H. B. Poland), 2485-97.
- Uniform basis of valuation, how far practicable (Rev. C. Theobald), 5594-9.
- Tithe rentcharge is generally fully assessed though there is great variation (Mr. De Bock Porter), 10,979.
- Owners not treated fairly by union assessment committees, which are chiefly composed of farmers (Mr. Peterson), 8257-61.
- Valuation is fairly dealt with by union assessment committee composed of farmers (Mr. C. S. Read), 10,325-6.
- Practice of Ecclesiastical Commission and of union assessment committees (Mr. De Bock Porter), 10,975-7.
- Parochial incumbents do not take sufficient pains to get their property properly valued (Mr. De Bock Porter), 10,990-4.
- Ecclesiastical Commissioners' property. Value of tithe rentcharge in certain parishes and assessment to rates (Mr. De Bock Porter), 11,084-92.
- Tithe Commutation Act, 1836, should not preclude a revision in respect to the rating of tithe rentcharge (Rev. C. Theobald), 5613-7.
- Alton Union and certain other unions in Hampshire. System adopted (Rev. C. Theobald), 5547.

(e.) *Deductions generally.*

- Deductions to arrive at net rateable value (Sir H. B. Poland), 2485-97; (Mr. Hett), 4592-8; (Mr. Cobbold), 5345-54; (Mr. Duffield), 5441-6; (Mr. De Bock Porter), 10,977.
- Dunmow Union. System adopted. More rates paid proportionally in respect of tithes than of land since fall in value of land (Rev. E. F. Gepp), 8553; 8602.
- Uniform basis. How far practicable (Rev. C. Theobald), 5594-9.
- What would be equitable and what would not be (Mr. C. S. Read), 10,327.
- Owner is rated above the sum at which his property would let to a hypothetical tenant. Deductions now allowed, and those which should be allowed in respect of tithe rentcharge (Mr. Peterson), 8262-73; 8301-3; 8438-50; 8489-95.
- Tithe rentcharge should be subject to certain deductions (Mr. A. G. Boscawen, M.P.), 10,900-3.
- Those applicable to cases of land and buildings, not applicable to case of tithe rentcharge, but deductions which would be applicable to tithes are not made (Mr. A. G. Boscawen, M.P.), 10,889-91.
- Deductions claimed for repair of chancel, curates, daughter churches, and professional services. Similar deductions should be given in case of tithe rentcharge as in case of persons subject to income tax in respect of professional incomes (Mr. A. G. Boscawen, M.P.), 10,907-14.
- Deductions allowed to tenant farmers, should be allowed in case of tithe rentcharge (Mr. Peterson), 8451-5.
- Lay impropriator (Mr. Peterson), 8430-7.
- "Dean and Chapter of St. Asaph v. The Overseers of Llanrhadr." If tithe owner entered in possession of land to earn his tithe from the produce, the deductions mentioned in this case would be inapplicable (Mr. De Bock Porter), 11,052-4.
- Hackney cases (Rev. E. F. Gepp), 8577; 8578.
- Tithe owner as incumbent cannot be said to receive tithe in the nature of professional income. But if this view is correct, then deductions, such as curates' salaries, &c., should be allowed. Also in case of glebe (Mr. De Bock Porter), 10,955-63.
- Loss to owner owing to inability under Tithe Act, 1891, to sue for it until three months after it is due (Mr. Peterson), 8295; 8296.

TITHE AND TITHE RENTCHARGE—*cont.*

- Queen Anne's Bounty. Interest on loans cannot well be deducted (Mr. De Bock Porter), 11,005; 11,006.
- (f.) *Deductions in respect of Chancel Repairs.*
- Chancel repairs not allowed for (Mr. De Bock Porter), 10,977; 10,978.
- Chancel repairs should be allowed for (Mr. Peterson), 8274-82; (Mr. A. G. Boscawen, M.P.), 10,907-14; (Mr. De Bock Porter), 11,100-3.
- (g.) *Deductions in respect of Costs of Collection.*
- Amount allowed (Sir H. B. Poland), 2496; 2497.
- Samford Union. Uniform deduction for expenses of collection (Mr. Cobbold), 5247-9.
- (h.) *Deductions in respect of Curates' Stipend.*
- No deduction allowed in respect of stipend of curates (Sir H. B. Poland), 2500; 2501; (Rev. C. Theobald), 5542-4.
- Curate's salary cannot well be deducted (Mr. De Bock Porter), 11,002-4.
- Curate's stipend should be allowed (Rev. E. F. Gepp), 8589-98; (Mr. A. G. Boscawen, M.P.), 10,907-14.
- Question who should decide if a curate was necessary (Mr. Peterson), 8289-90.
- (i.) *Deductions in respect of Land Tax on Tithe.*
- Land tax not deducted (Mr. A. G. Boscawen, M.P.), 10,915-8; (Mr. De Bock Porter), 11,012.
- (j.) *Deductions in respect of Payments to Daughter Churches.*
- No deductions made for payments to daughter churches (Mr. A. G. Boscawen, M.P.), 10,928-31.
- Deductions claimed for payments to daughter churches (Mr. A. G. Boscawen, M.P.), 10,907-14.
- Deduction could not well be allowed, but it is a hardship (Mr. De Bock Porter), 11,013-5.
- (k.) *Deductions in respect of Pensions to Retired Incumbents.*
- No deductions made for pensions to retired incumbents (Mr. A. G. Boscawen, M.P.), 10,928-31.
- Deduction could not well be allowed (Mr. De Bock Porter), 11,016; 11,017.
- (l.) *Deductions in respect of Personal Services.*
- Deduction claimed for personal services (Mr. Peterson), 8298-300; (Rev. E. F. Gepp), 8528-33; 8550-2; 8557-9; 8589-98; (Mr. A. G. Boscawen, M.P.), 10,907-14. Question how far personal services and tenants' profits can be separately treated; (Mr. Peterson), 8304; (Rev. E. F. Gepp), 8524-7. To what extent should they be estimated (Mr. Peterson), 8456-60.
- Personal services cannot well be deducted (Mr. De Bock Porter), 11,000; 11,001.
- (m.) *Deductions with respect to Property Tax on Tithe.*
- No deductions made for property tax on tithe (Mr. A. G. Boscawen, M.P.), 10,915-8.
- Property tax could not well be deducted (Mr. De Bock Porter), 11,008-11.
- (n.) *Deductions in respect of Tenant's Profits.*
- Deduction allowed for tenants' profits (Mr. Peterson), 8262-73; 8297; 8438-50.
- Question how far personal services and tenants' profits can be separately treated (Mr. Peterson), 8304; (Rev. E. F. Gepp), 8524-7.
- (o.) *Principle of Valuation according to Rent that a hypothetical Tenant would give.*
- Owner is rated above the sum at which his property would let to a hypothetical tenant (Mr. Peterson), 8262-73; 8301-3; 8438-50; 8489-95.
- Application of the principle of what a hypothetical tenant would give (Mr. A. G. Boscawen, M.P.), 10,904-6.
- Difficulty of conjecturing what a lessee would give (Rev. E. F. Gepp), 8579-88; 8599-601.

TITHE AND TITHE RENTCHARGE—*cont.*

Leasing of tithe rentcharge is very uncommon (Mr. Peterson), 8426-9.  
Tithe rentcharge let to a hypothetical tenant. Increase of rates (Mr. Peterson), 8291-4.

(p.) *Relative positions of Lay and Clerical Tithe owners.*

Tithe or tithe rentcharge belonging to the church should be treated differently from the tithe belonging to a lay tithe owner. Question whether tithe rentcharge is a hereditament (Rev. C. A. Stevens), 8645-55.

(q.) *Decrease in Value of Tithe, and Burdens borne.*

Statistics showing amounts of tithe rentcharge, rateable value, deductions, rates paid (Mr. De Bock Porter), 10,981-4; and rates in the £, 10,981-4, 11,064-6; 11,076-83. Cases of tithe highly rated, 11,093-9; 11,104.

Reduction of clerical incomes and increase of burdens of rates (Rev. C. Theobald), 5551-7; 5634-42.

Decrease in rateable value of tithe rentcharge and increase in land tax (Rev. D. J. Davies), 5658-60.

Effect of Agricultural Rates Act, 1896, on clerical tithe owners (Rev. D. J. Davies), 5661-75.

Effect of Agricultural Rates Act, 1896, on tithe owners when rates increase (Mr. De Bock Porter), 11,105; 11,106; 11,111-5.

New rates should not have been imposed in respect of tithe rentcharge since Tithe Commutation Act, 1836 (Mr. Peterson), 8244-7.

Imposition of new rates an injustice (Mr. De Bock Porter), 10,995; 10,996; 11,116; 11,117.

Orwell Park and Bacton estates. Fall in amount of tithes (Capt. E. G. Pretyman, M.P.), 9816-8.

(r.) *Exemption of Tithe.*

Relief of owners of tithe or tithe rentcharge under Public Health Act, 1875 (s. 211 (1) (b)), but not under Agricultural Rates Act, 1896 (Rev. C. Theobald), 5545; 5546.

For general district rate tithes are rated at one-fourth under Public Health Act, 1875 (Mr. Rotton), 173-5.

Rating in respect of tithe rentcharge under Lighting and Watching Act, 1833, and Public Health Act, 1875. Extension of the principle of these Acts desirable (Rev. C. Theobald), 5600-12.

Reasons for omission of tithe rentcharge from Agricultural Rates Act, 1896 (Mr. Peterson), 8461-72. Inclusion of, in scope of Act would give substantial justice, and satisfy tithe owners, 8461-72; (Rev. E. F. Gepp), 8528.

Question whether tithe could be included in the scope of the Agricultural Rates Act, 1896 (Mr. De Bock Porter), 11,067-71.

Claim of tithe owners for similar relief to that given to agriculturists under Agricultural Rates Act, 1896 (Rev. C. Theobald), 5525-37; 5538-41; 5558-64. Position of tithe owners and agriculturists, 5525-37.

If relief had been given to tithe owners under Agricultural Rates Act, 1896, it should not have been given in respect of tithe charged on property other than agricultural land (Rev. C. Theobald), 5581-90.

(s.) *Relative positions of Tithe owner and Land owner.*

Relative position of tithe owners and agriculturists (Rev. C. Theobald), 5525-37; 5618-33; (Rev. D. J. Davies), 5654-7; (Capt. E. G. Pretyman, M.P.), 9590; 9591. The clerical tithe owner rated in respect of his gross receipts, the occupier of land in respect of his rent (Mr. A. G. Boscawen, M.P.), 10,885-8.

Rating in respect of land and tithe rentcharge. If equitable in the one case is equitable in the other (Mr. Peterson), 8248-56.

Valuation of tithe rentcharge and land compared. Land not lightly assessed (Mr. De Bock Porter), 10,985-9.

Inequality in the assessment of tithe rentcharge and of agricultural land (Rev. C. Theobald), 5550.

Land valued lower than tithe rentcharge. Reason for this, and illustrations (Rev. E. F. Gepp), 8514-7.

TITHE AND TITHE RENTCHARGE—*cont.*

Gross estimated rental and rateable value of tithe rentcharge as compared with land (Rev. E. F. Gepp), 8523.

Fall in value of tithe as compared with that of land (Rev. C. Theobald), 5565-80.

## TITHE COMMUTATION ACT, 1836 (6 &amp; 7 Will. 4. c. 71):

History of the Act (Mr. Peterson), 8416-25.

How the question of rates was dealt with (Mr. Peterson), 8234-40.

Septennial average (Mr. Peterson), 8407-15.

Allegation that addition was made to tithe rentcharge to provide for payment of rates. Addition only made in cases where tithepayer was paying the rates by agreement. But rates decreased since then (Mr. De Bock Porter), 11,018-40. Cases where rates added. Amount of rates in the £ at that time, 11,107-10.

No addition of rates to commuted tithe (Rev. C. Theobald), 5591-3.

Tithe Commutation Act, an equitable arrangement and beneficial to both land owner and tithe owner (Mr. De Bock Porter), 11,041-5.

Land owners not benefited in certain districts (Mr. De Bock Porter), 11,075.

Land built on before and after passing of Act (Mr. De Bock Porter), 11,072-4.

Act should not preclude a revision in respect to the rating of tithe rentcharge (Rev. C. Theobald), 5613-7.

## TIVERTON UNION (DEVONSHIRE):

Machinery rating in respect of. A compromise effected with Union Assessment Committee pending the fate of the Bill before the House of Commons, dealing with the subject generally (Mr. C. H. Fox), 4449; 4450.

## TOLLS OR RATES, profits from, taken into account in making valuation (Mr. Dodds, Scotland), 573-9.

## TRADE PROFITS, rateability of, under Act of Elizabeth. A parochial income tax (Sir H. E. Poland), 2397-401.

Gas companies said to be rated in respect of trade profits (Mr. Jones), 9177; 9178.

Gasworks, valuation of. Question of the equity of taking trade profits into account discussed (Mr. Jones), 9204-10; 9217-22. Should not be taken into account, 9228-74.

Gasworks, valuation of. Trade profits should not be the basis, though they should be considered (Mr. Jones), 9146-57.

Gasworks, valuation of. Trade profits should not be the basis, otherwise the profits arising from by-products would be assessed (Mr. Jones), 9127; 9128.

Water companies, valuation of. Trade profits should be excluded (Mr. Wilkins), 9496; 9497.

## TRAMWAYS, VALUATION OF:

System of valuation (Mr. Munro, Scotland), 3691-7.

System of employing professional valuer should be extended (Mr. Cleaver), 4032-5.

Independent assessor, as in Scotland, desirable (Mr. Jones), 9287; 9288.

## TREASURY SUBVENTIONS. (See under "IMPERIAL CONTRIBUTIONS" and "LOCAL TAXATION (ENGLAND) ACCOUNT.")

## TUNBRIDGE WELLS:

Examination of Town Clerk (Mr. W. C. Cripps), 2002-75.

A non-county borough in two unions (Mr. W. C. Cripps), 2005-7.

Borough has no direct representation in making up valuation list (Mr. W. C. Cripps), 2008.

Deductions. Inequalities in Tonbridge Union as compared with Ticehurst Union (Mr. W. C. Cripps), 2009; 2010; 2033-6.

Application to Local Government Board for transfer of powers to appoint assistant overseers refused (Mr. W. C. Cripps), 2063-70.

**TYNE BOILER CASE (55 L. J.):**

- Principle laid down in (Sir H. B. Poland), 2209; 2210; (Mr. Humphreys-Davies), 4131-9; 4184. Has been extended to other sorts of machinery whether fixed or movable in certain unions, 4131-9.
- How far practice of rating in respect of machinery has been extended since (Mr. Humphreys-Davies), 4232-5.
- Tenant's machinery. Present system of rating in certain districts not adopted before this case (Mr. Humphreys-Davies), 4311-4.
- Decision uncertain and difficult to appreciate (Mr. Humphreys-Davies), 4213; 4214.

**UNDERTAKINGS (BUSINESS), RATING IN RESPECT OF:**

- "Undertaking" as used in 17 & 18 Vict. c. 91 should be defined. Definition suggested by assessor of railways and canals (Mr. Munro, Scotland), 3726.
- Valuation of premises is not made on rental value as it should be, but on profits (Mr. Morse), 4952-63.
- Classification of "undertakings" desirable for rating purposes (Mr. Morse), 4872-8.
- Should be on a uniform basis and administered by an independent body (Mr. Morse), 4964; 4965.
- Heavy rates on business undertaking and reduction of dividends (Mr. Morse); 4934; 4935.
- Amounts of deductions for interest on capital, profits, and contingencies (Mr. Morse), 4919-27.
- Wasting capital. There should be a deduction for. Meaning of a "tenant from year to year" (Mr. Morse), 4936-45.
- Scale of deductions in respect of profits on different classes of businesses desirable (Mr. Morse), 4946-8.
- Valuation for local and Imperial purposes, difference (Mr. Morse), 4949-51.

**UNDERTAKINGS (MUNICIPAL).—(See under "MUNICIPAL PROPERTY AND UNDERTAKINGS.")****UNION AND RURAL DISTRICT CLEEK'S ASSOCIATION:**

- Objects of association (Mr. Vulliamy), 7121-4.

**UNION ASSESSMENT ACTS. Where applicable (Mr. Rotton), 8; 9.****UNION ASSESSMENT COMMITTEE ACT, 1862 (25 & 26 Vict. c. 103):**  
Criticisms on (Mr. Harris), 6390-3.**UNION ASSESSMENT COMMITTEES:***(a.) Constitution and Procedure.*

- Constitution of Committees. How far representative of the various interests (Mr. Humphreys-Davies), 4306-10.
- Constitution of Committees not always satisfactory (Mr. Morse), 4931-3; (Mr. Adamson), 5134-40.
- As at present constituted committees are not sufficiently competent bodies (Mr. Pell), 7921.
- Committees have no particular knowledge of rating matters (Mr. A. F. Jeffreys, M.P.), 11,167.
- Committees have different ideas of the values of properties (Mr. P. R. Smith), 11,541; 11,542.
- Procedure of committees not always satisfactory (Mr. P. R. Smith), 11,566; 11,567; (Mr. Payne), 11,592; 11,593.
- Constitution of committees in certain places not equitable with regard to interests of larger ratepayers (Mr. Humphreys-Davies), 4316; 4433-7. Reasons why this is so (Mr. D. Howard), 4500; 4501.
- Committees are chiefly composed of farmers. Tithe rentcharge owners not treated fairly by the committees (Mr. Peterson), 8257-61.
- Constitution and appointment of committees. Suggested alterations (Mr. Morse), 4727-41.
- All classes of ratepayers should be represented on committees (Mr. Humphreys-Davies), 4351, 4352.
- Companies should have some representation upon committees (Mr. Humphreys-Davies), 4179-81.
- Constitution of committees not satisfactory to manufacturers (Mr. Morse), 4836-9.
- Committees deal fairly in matters of valuation with all interests concerned. Valuation of tithe rentcharge is fairly dealt with by Assessment Committee composed of farmers (Mr. C. S. Read), 10,325; 10,326.

**UNION ASSESSMENT COMMITTEES—cont.**

- Metropolis. All classes are fairly represented on Union Assessment Committees and all interests fairly dealt with (Mr. Cutter), 7108-13.
- Burnley. Manufacturers, shopkeepers, and companies well represented on Union Assessment Committee. Case in London compared\* (Mr. Horn), 6964-72.
- Dewsbury Union. Procedure of committee (Mr. Peace), 4674-8.

*(b.) Representation of Urban and Rural Interests.*

- Desirable that Union Assessment Committees should be representative of all authorities (Mr. Cleaver), 3961; 3962; 4041-8.
- Representation of urban and rural interests on Union Assessment Committees (Mr. C. H. Fox), 4459; (Mr. Knocker), 6225-34; 6258-62.
- Representation of borough interest on Union Assessment Committee and board of guardians not adequate compared with representation of rural portion of union. Dissatisfaction with regard to this (Mr. Knocker), 6178-96.
- Power of guardians to invite a corporation to place members upon Assessment Committee (Mr. Cleaver), 3959; 3960.
- Corporation should be the assessing authority, or else corporation should be represented on Union Assessment Committee in proportion to rateable value of borough (Mr. Knocker), 6225-34.
- Representation of non-county boroughs upon committees (Mr. Knocker), 6157-60.
- Representation of town council upon Union Assessment Committee (Mr. Horn), 6945; 6946. To what extent desirable (Mr. Vulliamy), 7202-5.
- Dover. Representation of urban parishes on board of guardians. No complaints made to Local Government Board (Mr. Knocker), 6235-7.

*(c.) Representation of Railway Companies.*

- Railway Companies not represented on (Mr. Rotton), 304-11.
- Railway Companies should be represented (Mr. Payne), 11,639; 11,640.
- Railway Companies should be able to appoint an *ex-officio* member (Mr. Payne), 11,594-9.

*(d.) Representation of Inland Revenue.*

- Surveyor of taxes should sit with Union Assessment Committee (Mr. Peace), 4672; (Mr. Merrifield), 6078; (Mr. Horn), 6884; (Mr. Pell), 7923-5; (Mr. P. R. Smith), 11,344-54; 11,372; 11,422; 11,423; 11,472-6; (Mr. Payne), 11,600; and have power of appeal (Mr. Horn), 6888-97; 6947; (Rev. E. F. Gepp), 8560-5.
- Surveyor of taxes should assist Union Assessment Committees to secure uniformity (Mr. A. F. Jeffreys, M.P.), 11,170-2.
- Surveyor of taxes should sit with Union Assessment Committees; and then those tribunals would be satisfactory (Mr. S. M. Howard), 11,718-20.
- Representation of surveyor of taxes upon Union Assessment Committees. Reasons suggested against such representation (Mr. C. S. Read), 10,328-30.

*(e.) Access to Income Tax Returns.*

- Inland Revenue information, access to (Mr. Rotton), 273-6; (Mr. Holmes), 2756; 2757.
- Schedule A found to be a useful guide to committee (Mr. Duffield), 5409; 5410; (Mr. C. S. Read), 10,434-40.

**UNION CHARGEABILITY ACT, 1865 (28 & 29 Vict. c. 79):** Effect was to throw heavier burdens upon some parishes. Benefits which country parishes receive from their proximity to towns. Radius within which such benefits accrue is limited to 2½ miles (Mr. S. Rowlandson), 9961-7; 9990-4.**UNITED PROPERTY OWNERS AND RATEPAYERS' ASSOCIATION OF GREAT BRITAIN:**

- Particulars of (Mr. Watkins), 6594-8.
- Constitution of (Mr. Watkins), 6686-91.

\* See 4174-6 (Mr. Humphreys-Davies).

## UNOCCUPIED PROPERTY:

- Liability of owners of such property to pay rates in burghs (Mr. Dodds, Scotland), 434-7. In counties, 418; 419.
- Houses. Non-rateability of (Sir H. B. Poland), 2319. Rated on half annual value under certain local Acts, 2196-201.
- Houses and land. Reasons for not rating (Sir H. B. Poland), 2193-5.
- Building land in burghs rated at a fourth of its agricultural value (Mr. Dodds, Scotland), 464-71.
- Land. Rating of, undesirable (Sir H. B. Poland), 2320-2. Property must be rated on basis of value of its use for present purpose in present condition, 2473-84.

## UXBRIDGE UNION:

- Valuations made for Schedule A. and for purposes of poor rate (Mr. P. R. Smith), 11,370-2.

## VALUATION (ENGLAND):

(a.) *Basis and System of Valuation.*

- Rent the basis. Is not now a fair basis (Rev. C. A. Stevens), 8608; 8609.
- True annual value of property to be ascertained; rent paid not necessarily the test (Sir H. B. Poland), 2103-7.
- Annual value of saleable or lettable hereditaments not determined by cost (Sir H. B. Poland), 2345-50.
- "Tenant from year to year," meaning of (Sir H. B. Poland), 2344.
- Value of hereditament is what it will fetch, not what it cost (Sir H. B. Poland), 2470; 2471.
- Rates now contributed by ratepayers according to value of bricks and mortar and land, which is an unsatisfactory system (Mr. P. R. Smith), 11,459-63.
- Uniform system should override all local Acts (Mr. Hulton), 5817-9.
- Uniformity in a union desirable (Mr. North), 4515.
- A common basis desirable where a rack rent is not paid (Mr. Morse), 4857-62.
- Actual rent the best test. Advisable to take Schedule A. as basis (Mr. Hubbard), 3198; 3199.
- Fair rental value a fair basis for assessment (Mr. Morse), 4759-61; (Mr. Adamson), 5147.
- Capital value as the basis for rating would be more satisfactory than taking the rent a hypothetical tenant would give (Mr. Jones), 9283-6.
- Houses and land should be valued on basis of rent (Mr. Hulton), 5821; 5822.
- Hereditaments should be rated on full value (Mr. Hett), 4616-9.
- Law and basis satisfactory, except in respect of machinery (Mr. Humphreys-Davies), 4388-93.
- Unsatisfactory (Mr. Adamson), 5176-85; (Mr. Eve), 7695; 7696.
- Present system is inequitable when applied to different classes of persons (Mr. Clarke), 7368-74.
- An equitable basis for valuation and for the incidence of taxation desirable (Mr. Dodgson), 7592-4.
- Uniformity throughout the country in basis and mode of valuation and the making and levying of the rate desirable (Mr. Humphreys-Davies), 4226.
- Uniform basis for the whole country could be secured by getting assistance of the Surveyor of Taxes (Mr. Hulton), 5943-51.
- A fair method desirable. Net annual value should be the basis (Rev. E. F. Gepp), 8518-22.
- Basis should be rental less cost of repairs, &c. (Mr. Adamson), 5151; 5152.
- Basis is annual value to tenant (Mr. Rotton), 213-7.
- Basis should be annual value, not capital value (Sir H. B. Poland), 2428; 2429.
- Valuation of rateable hereditaments based upon value of their use for present purposes in present condition (Sir H. B. Poland), 2281-9; 2341-3; 2473-84.
- "Tenant from year to year," meaning of (Mr. Morse), 4936-45.
- Valuation (Metropolis) Act should be extended to rest of country (Mr. Rotton), 244-7; (Mr. Humphreys-Davies), 4223-5; (Mr. Cutter), 7094-101; 7104-7; (Mr. Pell), 7896-9.
- Basis should be gross value (Mr. Horn), 6911-7; 6953-8; 6973-82. Reasons for this view, 6911-7.
- Rating on gross estimated rental, effect of (Mr. Cleaver), 3981; 3982.

VALUATION—*cont.*

- Gross estimated rental should not be basis for valuation. Reasons why rateable value should be (Mr. Eve), 7699-701.
- Rates could not be levied upon gross value (Mr. P. R. Smith), 11,373-5.
- Rating upon gross or net value (Sir H. B. Poland), 2422-7.
- Rates levied upon gross value instead of net prejudicial to manufacturers. The case of Oldham (Mr. Humphreys-Davies), 4343-50.
- Basis of assessment should be income (Capt. E. G. Pretzman, M.P.), 9661-76; 9719-34.
- Desirable for large unions to employ a professional valuer for all purposes (Mr. E. H. Davies), 7044-54.
- Agricultural Rates Act, 1896, does not observe the principle of taking actual value of the occupation as basis for valuation (Mr. Eve), 7794-802.
- Permanent basis for three or five years desirable (Mr. Cobbold), 5241-6.
- Dewsbury Union. Procedure and system adopted (Mr. Peace), 4664-7; 4674-8.
- West Derby Union. Rules provided for guidance of overseers in 1872 and 1892 to secure uniform application of definite principles in valuing (Mr. Cleaver), 3927-35.
- Norfolk, different bases of valuation in (Mr. Holmes), 2812; 2813. Want of uniformity, 2811. Rent not always taken as basis, 2964-9.
- (b.) *Officials and their Power of obtaining Information from Owners and Occupiers.*
- Officers responsible for valuation lists (Mr. Rotton), 18-20; 269-72.
- Power of officers to obtain information (Mr. Dawe), 1151-3.
- Method of obtaining information (Mr. Dawe), 1363-71.
- Best method to be adopted by municipality for obtaining information (Mr. Dawe), 1147-50.
- Compulsory powers to ascertain rent paid desirable (Mr. Holmes), 2758; 2759; (Mr. Cleaver), 3938-41; 3969; (Mr. North), 4519; (Mr. Peace), 4673.
- Compulsory powers to ascertain rent paid not desirable. Local knowledge in a rural district is a sufficient guide (Mr. Hett), 4574-8.
- Coal mines. Committee should have power to obtain information from lessor and lessee (Mr. T. Ratcliffe Ellis), 2574-6.
- (c.) *Over Valuation.*
- Increase of urban influence upon, and over-valuation of, agricultural property (Mr. Little), 8024.
- Valuation of agricultural property above rental value (Mr. Pell), 7974-82; 8024.
- Over-valuation of agricultural property, Cambridgeshire (Mr. Pell), 7939.
- Over-valuation of agricultural property, Essex (Mr. Pell), 7915-20. Action of union assessment committee and quarter sessions. Suggestions as to alteration of the tribunal of appeal, 7940-9.
- (d.) *Under Valuation.*
- Interest of parishes and unions to have low assessment (Mr. Rotton), 249-55.
- (e.) *Comparison of Local and Income Tax Assessments.*
- Difference in valuation for Imperial and local purposes outside Metropolis (Mr. Morse), 4949-51; (Mr. Hulton), 5785-90.
- Lancashire. Local assessments, as a rule, have been lower than income tax assessments. Reasons for this (Mr. Hulton), 5971-83.
- Somersetshire. Valuations for county rates and for Schedule A. in certain Poor Law Unions (Mr. P. R. Smith), 11,355-69.
- (f.) *Comparison of County and Union Valuations.*
- County Rate Committees do not always accept the valuation of Union Assessment Committees (Mr. E. H. Davies), 6999-7004.
- Comparison between county rate basis and union basis (Mr. Rotton), 38; (Mr. Hubbard), 3209-11; (Mr. Cobbold), 5250-6; 5292-8.
- Lancashire. County Rate Committee has obliged Union Assessment Committees to keep up the rateable value, and to make re-valuations of railways, mines and mills (Mr. Hulton), 5764. But there is still a difference in valuation for county

VALUATION—*cont.*

rate and valuation of the several unions, 5780-4  
Valuations vary very much in some rural unions, 5765-7.

Northampton. Attitude of County Rate Committee towards Union Assessment Committees in the county and their valuations (Mr. Pell), 7929-36.

Sussex. County Rate Committee disregards valuations of Union Assessment Committees (Mr. Merrifield), 6075; 6076. County rate basis is on basis of income tax valuation, and is higher than poor rate valuation, 6104-11.

## VALUATION IN ENGLAND, SCOTLAND, AND IRELAND COMPARED:

Present valuation would be an unfair basis for charges common to the three countries (Mr. Barton, Ireland), 3504; 3505.

## VALUATION, (IRELAND):

System in Ireland (Mr. Robinson, Ireland), 606-11; in towns, 648-54. Administrative systems in England and Ireland compared, 941-5.

Hereditaments subject to valuation (Mr. Barton, Ireland), 3277; 3278.

Relative position of town and country with regard to rating under present valuation (Mr. Barton, Ireland), 3412-4.

One only for each area (Mr. Barton, Ireland), 3485. Basis for local rates and income tax (Mr. Robinson, Ireland), 966-71.

Lack of uniformity (Mr. Robinson, Ireland), 972-5. Cannot be altered to a great extent under existing circumstances (Mr. Barton, Ireland), 3597; 3598.

Valuation by central authority is satisfactory (Mr. Barton, Ireland), 3471; 3472.

Valuations made by Government. Periods at which made (Mr. Barton, Ireland), 3276.

Cost of valuation (Mr. Robinson, Ireland), 946-9; (Mr. Barton, Ireland), 3462-5. Annual cost of maintenance, 3466-70.

Based on fair letting value to a solvent tenant (*see* 15 & 16 Vict. c. 63), (Mr. Barton, Ireland), 3552-7.

Valuation of land based on rent paid by tenant and the sum paid for tenant right is comparable with valuation based on rent paid to landlord in England (Mr. Barton, Ireland), 3288-92.

Fair letting value is the value to the tenant, excluding profits, but including interest on value of tenant right (Mr. Barton, Ireland), 3282-7.

Tenant right interest. Method of valuing (Mr. Barton, Ireland), 3579-81.

Houses, how valued (Mr. Barton, Ireland), 3330-2.

Houses in towns. Method adopted practically the same as in England (Mr. Barton, Ireland), 3567-70.

Houses (new). System of making deductions in order to arrive at the basis upon which houses were valued by Sir R. Griffith (Mr. Barton, Ireland), 3333-9. Not a satisfactory one, but the best course to adopt under present circumstances, 3377-85. Percentage deductions made, 3537-40.

Hereditaments other than land, annual value (Mr. Robinson, Ireland), 641-3. Principles of ascertaining are similar in England and Ireland, 1047-62.

Province of Ulster. Valuation now above the judicial rents, and in other parts of Ireland below them. Reasons for this (Mr. Barton, Ireland), 3520-8.

## VALUATION (SCOTLAND):

Basis for county, burgh, and parish rates (Mr. Dodds, Scotland), 336; 337; 356.

Owners bound to give information as to their rents (Mr. Dodds, Scotland), 349-52.

Burgh assessors, appointment of (Mr. Dodds, Scotland), 339.

Employment of surveyor of taxes in counties (Mr. Dodds, Scotland), 338. Is economical, 568; 569.

## VALUATION LISTS (ENGLAND):

(a.) *Deposit of and Objections to List.*

Deposit of lists and objections (Mr. Harris), 6394.

Objectors before Union Assessment Committee should be compelled to give figures (Mr. Eve), 7704-7.

(b.) *Form of Lists.*

Union and county (Mr. Rotton), 10-3.

Names of owners and occupiers to be entered (Mr. Rotton), 45.

VALUATION LISTS (ENGLAND)—*cont.*

Elimination of either the column "gross estimated rental" or "rateable value" desirable (Mr. Cobbold), 5206-8.

"Gross estimated rental" columns should be abolished (Mr. Eve), 7699-701; 7847-59; (Mr. Peil), 7999. And instructions given as to the method by which the rateable value should be arrived at (Mr. Eve), 7753-9.

(c.) *Preparation of Lists.*

Procedure (Sir H. B. Poland), 2230.

System of making, as in Scotland, a desirable one (Mr. Holmes), 2754; 2755.

Surveyor of taxes should prepare list and Union Assessment Committee should revise (Mr. Cobbold), 5359-69.

Provision for including in valuation list of parish for purposes of common fund of union contributions in respect of Government property (Sir H. B. Poland), 2144.

Time for making up lists and time for appeals (Sir H. B. Poland), 2231; 2232.

Chelmsford Union. Course adopted by overseers in making out list (Mr. Duffield), 5399-405.

## VALUATION LISTS (ENGLAND), REVISION OF:

New lists and revision of old ones (Mr. Dawe), 1118-22.

When revised (Mr. Rotton), 14-7.

Revision not compulsory (Mr. Rotton), 189; 190; 221; 222; necessity for, 248.

Reasons for avoiding a revision (Mr. Rotton), 191; 192; (Mr. Duffield), 5419-22.

(a.) *Supplemental Valuation Lists.*

Supplemental valuation lists in provinces (Mr. Rotton), 99-101; 221; 222; (Mr. Dawe), 1215.

Present system satisfactory (Mr. Peace), 4688-92.

Burnley. Overseers are required to send in such lists at least twice a year and four times a year if they like (Mr. Horn), 6843-7.

(b.) *Annual Revision.*

System of annual revision but not of annual revaluation (Mr. Jeeves), 1615. But periodical revaluation desirable, 1616; 1617.

Annual revision desirable so as to give ratepayers opportunity to object to list (Mr. Dawe), 1143-6; 1257-40; 1419-21.

New list made annually in West Derby Union since 1882. Advantages of system (Mr. Cleaver), 3918-26.

## VALUATION LISTS (IRELAND):

Description of (Mr. Robinson, Ireland), 644-7.

## VALUATION LISTS (IRELAND), REVISION OF:

Annual revision, procedure, officials (Mr. Robinson, Ireland), 620-8. No revision in respect of land, 616-9, 630.

Annual revision, how made (Mr. Barton, Ireland) 3350. Right of appeal against, 3351-3.

Revision in towns, (Mr. Robinson, Ireland), 655-62.

Houses. A number escape revision (Mr. Barton, Ireland), 3543; 3544.

## VALUATION (METROPOLIS) ACT, 1869. (32 &amp; 33 Vict. c. 67.)

Is satisfactory (Sir H. B. Poland), 2290-302; (Mr. Cutter), 7083; 7084; 7094-101; 7104-7; 7114; (Mr. Pell), 7937; 7938.

Act could with advantage be extended to the rest of the country (Mr. Humphreys-Davies), 4223-5; (Mr. Cutter), 7069-71; 7094-101; 7104-7; 7114; (Mr. Pell), 7922. Suggested alterations in Act with reference to appointment of Assessment Committee in certain cases (Mr. Cutter), 7094-101.

Valuation list conclusive evidence of gross estimated value for all purposes (Mr. Adamson), 5148-50; (Mr. Goldney), 10,052-5; 10,155; 10,156.

Surveyor of taxes sits with Union Assessment Committee and valuation is applicable to all purposes of taxation. Advantages of (Mr. Cutter), 7072; 7073.

Definition of value, questions to be answered by occupier (Sir H. B. Poland), 2290-302.

Schedule limiting deductions from gross value is unfair (Mr. Humphreys-Davies), 4215-7.

Ratepayers should be able to object to assessment at any time within the quinquennial period (Mr. Humphreys-Davies), 4222.

County rate in Metropolis (Mr. Cutter), 7083; 7084.

## VALUATION OF SPECIAL CLASSES OF PROPERTY:

(See also under "RAILWAYS," "MINES," &amp;c.)

(a.) *Authorities.*

Union Assessment Committee should make the valuation list for the parishes instead of the overseers (Mr. Pell), 7903; 7967; 7968.

Valuation of railways and certain other properties by overseers is not satisfactory. Scottish system desirable. Production of books of railway companies desirable for purposes of valuation. Basis of valuation of railways (Mr. Pell), 7950-66.

Independent assessor, as in Scotland, desirable for gas works (Mr. Jones), 9119-26; 9167; 9287; 9288; (Mr. Livesey), 9309-11. Waterworks, canals, docks, railways (Mr. Jones), 9119-26; 9287; 9288. Tramways and electric light works, 9287; 9288.

(b.) *System.*

Rating certain properties in respect of receipts (Sir H. B. Poland), 2430.

Valuation of business premises (Sir H. B. Poland), 2139.

General principles for ascertaining annual value of properties never let (Sir H. B. Poland), 2110-6. What is cost, 2361-7.

What rate of percentage charged on capital value of properties never let (Sir H. B. Poland), 2109; 2351-5.

Question of cost with regard to power of borrowing money (Sir H. B. Poland), 2463-9.

How far annual value of properties never let can be determined by power to borrow money for their purchase or erection (Sir H. B. Poland), 2356-60.

Structural value of certain hereditaments (Mr. Hett), 4613.

Valuation of properties never let should be based, as far as possible, on what the rent would be. A percentage of the profits should be taken according to the class of property rated (Mr. Morse), 4863-71.

Scotland. Tolls or rates, profits from, taken into account (Mr. Dodds, Scotland), 573-9.

(c.) *Employment of Valuers and Surveyors.*

Professional valuers should be employed who should have access to Companies' books (Mr. Pell), 7903. System of employing such valuers should be extended (Mr. Cleaver), 4082-5.

Appointment of county valuers in busy counties (Mr. Rotton), 204; 205.

Railways, mines, mills, &c. should be valued by a special county valuer (Mr. Hulton), 5820; 5821.

Difficulties of such a system in England as compared with Scotland (Mr. Vulliamy), 7159-63.

Metropolis. A professional valuer is appointed for valuing railways, gasworks, &c. (Mr. Cutter), 7102; 7103.

West Derby. Professional valuer is the officer of Union Assessment Committee (Mr. Cleaver), 4079-81.

Burnley Union. Professional valuer employed (Mr. Horn), 6848-50.

Chelmsford Union. Professional valuer is employed for valuing certain hereditaments (Mr. Duffield), 5411-5.

Pontypridd Union. Professional valuer appointed for valuing collieries, railways, &c. (Mr. E. H. Davies), 7044-54.

Scotland. Subjects valued by Assessor of Railways and canals (Mr. Dodds, Scotland), 348. Valuation of such property. Cost of valuation and by whom paid (Mr. Munro, Scotland), 3715-22. (See also under "ASSESSOR OF RAILWAYS AND CANALS.")

(d.) *Payment of Valuers and Surveyors.*

System of remuneration by results is very unsatisfactory (Mr. D. Howard), 4502; (Mr. P. R. Smith), 11,383-90; (Mr. Payne), 11,586-9; 11,617-9.

Payment of valuers in proportion to increase of valuation (Mr. Jones), 9279-82. System condemned (Mr. Livesey), 9303; 9304.

## VALUATION ROLL:

Annually made up by experts (Mr. Dodds, Scotland), 329; 330.

Heritable subjects included in (Mr. Dodds, Scotland), 345-7.

In reference to parochial rates (Mr. Dodds, Scotland), 370-4.

## VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES:

(a.) *Lack of Uniformity due to existence of several Authorities in one Area.*

Number and description of valuation authorities in Provinces as shown in returns obtained by Mr. Vulliamy. (See under "RATING AUTHORITIES") (Mr. Vulliamy), 7125.

Five lists for various purposes (Mr. Rotton), 83-90. Desirability of reduction in number, 206-9.

Lack of uniformity in different unions; reasons for (Mr. Holmes), 2857-64. Where several parishes or unions exist in a municipal borough (Mr. R. E. Fox), 1492; (Sir H. B. Poland), 2386; 2387.

More uniform in London than in the Provinces. Reasons for this (Mr. Morse), 4928-30.

Hull. Want of uniformity in making and collection of rates (Mr. Dawe), 1137-40.

Liverpool has three classes of assessments with regard to property (Mr. Norton), 6435-9.

Norfolk. Lack of uniformity in (Mr. Holmes), 2811.

(b.) *Uniform system desirable.*

Present system a bad one. Uniformity desirable (Mr. W. C. Cripps), 2050; 2051; (Mr. Humphreys-Davies), 4237-9; (Mr. A. F. Jeffreys, M.P.), 11,168; 11,169.

Uniformity of system in a union desirable (Mr. North), 4515.

One uniform valuation for all rates and taxes throughout the country desirable (Mr. Holmes), 2752; 2753; 2801; (Mr. Hulton), 5809-12.

Present areas for valuation purposes satisfactory, but uniformity desirable, and one basis for Imperial and local purposes (Mr. A. F. Jeffreys, M.P.), 11,172-4.

A specially constituted board for all rating and taxing purposes on which surveyor of taxes should sit and a uniform basis of valuation desirable, (Rev. C. Theobald), 5550.

A General Valuation Act, objection to and advantages of (Mr. Humphreys-Davies), 4270-6.

Uniform valuation for all rates and taxes desirable in provinces as well as in Metropolis (Mr. Dawe), 1294; 1295; (Mr. Cobbold), 5379-92; (Mr. Hulton), 6000-6; (Mr. Watkins), 6631-6; (Mr. Pell), 7926-8; 7937; 7938; (Mr. Rowlandson), 9975-7; (Mr. A. F. Jeffreys, M.P.), 11,172-4; 11,222.

Uniformity in a county desirable (Mr. Rowlandson), 9980-7.

One valuation authority and one rate-collecting authority desirable in a given area (Mr. Rotton), 242; 243; (Mr. Dawe), 1314-8; (Mr. Knocker), 6263-6. Results in economy (Mr. W. C. Cripps), 2052; (Mr. Norton), 6486-90. Advantages of, (Mr. W. C. Cripps), 2056-62.

Desirable to have one basis of valuation for local and Imperial purposes instead of four (Mr. Cleaver), 3955; 3956.

Boroughs should have one assessing and one rate collecting authority, but not necessary to interfere with areas of unions (Mr. R. E. Fox), 1493-6.

Consolidation of parishes in boroughs, and appointment by Council of one collecting authority for all rates (Mr. Jeeves), 1610-4.

Municipality, uniform system desirable in a (Mr. Rotton), 224-7.

Desirable to have an assessing body representing a large area or a government official (Mr. D. Howard), 4503; 4504.

Government department for making valuations for the whole country discussed (Mr. P. R. Smith), 11,533-40. Disadvantages of (Mr. Peace), 4693-6.

County or union authorities. Discussion as to which system would be best (Mr. A. F. Jeffreys, M.P.), 11,223-31.

(c.) *Retention of Union Authorities desirable.*

(See also under "UNION ASSESSMENT COMMITTEES.")

Union Assessment Committee representing the chief spending authorities should be the sole local authority for making all assessments and collecting all rates. Assessment Committee should take the duties of overseers and should raise fixed rates in the £ (Mr. Harris), 6395-417.

Union assessment committee should be assessing authority. Surveyor of taxes and representative of county council should sit on it. County could then take the actual basis of valuation of the Union Assessment Committee (Mr. E. H. Davies), 7010-5. Suggested procedure, 7064-6.

Index  
to Evidence.

VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES—*cont.*

- One assessing body in each union appointed by the guardians desirable for the purposes of local and Imperial taxation. Power of appeal. Assistant overseers to be skilled officials, and surveyor of taxes to attend meetings of Union Assessment Committees. Boroughs to be represented where convenient. Position of Imperial authorities and the county authorities under such a scheme (Mr. Vulliamy), 7182-200.
- One valuation for all purposes desirable. Overseers should be retained, but assistant overseers of experience and skill should be appointed either by the guardians or the borough (Mr. Vulliamy), 7128; 7129.
- One valuation for local and Imperial purposes. County authorities might follow the valuation of Assessment Committees if Surveyor of Taxes had a seat on them with power of appeal. But county authorities should have right of appeal to quarter sessions (Mr. Horn), 6888-97.
- County rate basis unnecessary, but County Council should have right of appeal (Mr. Horn), 6948-52.
- Union Assessment Committee the best authority (Mr. Horn), 6881-3; (Mr. Vulliamy), 7126; 7127; 7137.
- Municipality should be represented on Union Assessment Committees, but should not be the assessing authority (Mr. Horn), 6929.
- Town Councils, representation upon Union Assessment Committees (Mr. Rotton), 94-8; (Mr. Jeeves), 1590-2; 1691-3. Urban and rural districts should be represented in proportion to rateable value (Mr. W. C. Cripps), 2011-6.
- Boroughs in two unions. Representation of corporation on Union Assessment Committees. Representation of urban and rural interests secured by (Mr. Jeeves), 1590-2. Representation of joint interests of unions, and uniformity secured by, 1691-3.
- Borough council might nominate a certain portion of Union Assessment Committee. How far practicable. Bill of Borough of Bolton (Mr. Humphreys-Davies), 4353-5.
- Borough should be rated on valuation of Union Assessment Committee (Mr. Duffield), 5475.
- Union Assessment Committee should be retained. County Assessment Committee also desirable, but there should be an appeal from (Mr. Merrifield), 6062-8.
- Advantages of retaining Union Assessment Committees. But they should be strengthened, and the valuation lists approved by the County Assessment Committee (Mr. Merrifield), 6122-8.
- Retention of general County and Union Assessment Committees desirable (Mr. W. C. Cripps), 2071-3.
- County purposes. Valuation of hereditaments varies in different unions. Incentive for a low union valuation. Suggested County Committee (Mr. Duffield), 5419-22.
- County Committee suggested to obtain uniformity in rateable value of unions (Mr. Duffield), 5473.

(d.) *County and borough Authorities suggested.*

- Valuation of all properties in a geographical county could be finally settled by one authority (Mr. Hulton), 5918. Such authority being a County Assessment Committee having the assistance of the Inland Revenue and the surveyor of taxes (Mr. Hulton), 6000-6; 6027-9.
- Uniform valuation throughout the country secured by County Assessment Committee, and a special Commission to supervise these committees and prescribe regulations (Mr. Hulton), 6010-2.
- Would be necessary to have a strong body to effect a uniform valuation of individual properties in a county (Mr. Hulton), 5971-83.
- Suggested constitution of County Assessment Committee (Mr. Merrifield), 6112-21. Surveyor of taxes should assist committee (Mr. Hulton), 5768-70; (Mr. Merrifield), 6078.
- Advantages of retaining Union Assessment Committees, but they should be strengthened, and the valuation lists approved by the County Assessment Committee (Mr. Merrifield), 6122-8.
- County Assessment Committee is desirable, but there should be an appeal to an independent authority (Mr. Merrifield), 6062-8, 6072-4. And Union Assessment Committees should be retained, 6062-8.

VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES—*cont.*

- Mr. Hulton's and Mr. Merrifield's proposals compared (Mr. Merrifield), 6081-7.
- Valuation by one authority for county and also for union purposes desirable. Suggested means of obtaining this result—abolition of Assessment Committees (Mr. Dawe), 1293. Case of counties and boroughs considered, 1277-89.
- County councils should be the valuation authorities for all purposes in counties, and also in metropolis (Mr. Jeeves), 1699-701; (Mr. Watkins), 6637-40. Position of county boroughs under such a scheme (Mr. Cobbold), 5309-15.
- County rate basis made by County Rate Basis Committee with assistance from unions desirable (Mr. Cobbold), 5218-25.
- County councils and corporations as rating authorities suggested (Mr. Dawe), 1350-5; 1422; 1423.
- County valuation desirable, but not dual valuation (Mr. Dawe), 1219-24; (Mr. Jeeves), 1694-8.
- Valuation of hereditaments varies in different unions. Incentive for a low union valuation (Mr. Rotton), 191; 192; (Mr. Duffield), 5419-22. Suggested county committee, 5419-22; 5473.
- County Rate Committee would still be required if only one valuation (Mr. Jeeves), 1694-8.
- Retention of Union Assessment Committees and also of General County Committee desirable (Mr. W. C. Cripps), 2071-3.
- One valuation and one rate-collecting authority for whole borough desirable (Mr. Swainson), 6386; 6387.
- Corporation should be rating authority in boroughs (Mr. Dawe), 1350-5; 1422; 1423.
- Corporation should be the valuation authority, or else corporation should be represented on Union Assessment Committee in proportion to rateable value of borough. Representation of urban and rural interest (Mr. Knocker), 6225-34.
- Suggestion that if borough was created a union it should take over duties of boards of guardians and of assessment and collection (Mr. Knocker), 6245-51.
- Liverpool. One body for valuation purposes desirable. This could be accomplished notwithstanding the city is in three unions (Mr. Norton), 6452-68.
- Oxford Corporation. Valuation of, is satisfactory (Mr. Swainson), 6291-5.

(c.) *Special Commission as an Appeal Court from suggested County Assessment Committee.*

- Special Commission as an appeal court from suggested County Assessment Committee with administrative and judicial functions (Mr. Hulton), 6049-56; (Mr. Merrifield), 6072-4. Should supervise county committees and prescribe regulations (Mr. Hulton), 6010-2.
- Special Commission could hear appeals of bodies represented on Committee from Decision of the Committee (Mr. Merrifield), 6129-37.

(f.) *Independent Authority appointed by County Council suggested.*

- Constitution of Union Assessment Committees, objections to. Independent body appointed by county council (Mr. Morse), 4830-5; (Mr. Crompton), 4967-73; and power of appeal from, desirable, (Mr. Morse), 4893-7; (Mr. Crompton), 4967-73.

VALUE:

- Suggested definition of (Mr. Eve), 7807-13.
- Annual value, net annual value, gross value, and rateable value. Valuation (Metropolis) Act, 1869 intended to make language of Parochial Assessment Act clearer (Sir H. B. Poland), 2099-102.

VOLUNTARY SCHOOLS. (*See under "EDUCATION."*)

WALSALL:

- Valuation has been too low for a number of years (Mr. Cooper), 10,290-2.
- Alleged loss sustained by Walsall in the apportionment of the amount paid out of the Local Taxation (England) Account between the county of Stafford and the county boroughs therein (Mr. Cooper), 10,222-5. No appeal made against award, 10,257-71. Position of Walsall if residue apportioned upon basis of population, 10,230-4.

**WASTING CAPITAL OF A BUSINESS:**

There should be a deduction for. Meaning of a "tenant from year to year" (Mr. Morse), 4936-45.

**WATER RATE:**

Question of the area with which a local authority shares its taxation in respect of the water supply (Mr. Gomme), 8819-23.

Liverpool. Owner pays half (Mr. Norton), 6428-30.

**WATERWORKS, VALUATION OF:**

System of valuation (Mr. Dawe), 1247-9; (Mr. Barton, Ireland), 3399-403; (Mr. Munro, Scotland), 3846-9. English and Scottish systems compared, 3698-705.

Results of application of parochial earnings system (Sir H. B. Poland), 2270-6.

Element of trade profits should be excluded (Mr. Wilkins), 9496; 9497.

Present results not unsatisfactory, i.e., resulting in rateable value being half net profits. But apprehension is felt for the future (Mr. Wilkins), 9498-502.

Partial exemptions should be extended to (Mr. R. E. Fox), 1497-501.

Water companies as trading concerns have no direct representation on local bodies (Mr. Humphreys-Davies), 4326-38.

System of allocation of valuation of reservoirs in rating areas inequitable (Mr. Barton, Ireland), 3599-606.

Reservoirs, rating on structural value in respect of, situated in other districts than those in which the profits are earned (Mr. Morse), 4824-9.

Country districts obtain a larger share of the valuation than the towns which pay for the works (Mr. Munro, Scotland), 3861-8.

Independent assessor, as in Scotland, desirable (Mr. Jones), 9116-26; 9287; 9288.

Valuation of pipes (Mr. Wilkins), 9494; 9495. Water pipes do not get three-fourths exemption (Mr. Jones), 9223; 9224.

Birmingham Corporation charges the same inside and outside the city (Mr. Crompton), 5057-9.

Municipal waterworks. Prohibited by statute from making a profit (Sir H. B. Poland), 2369-77. Community gets benefit, 2461; 2462.

**WEST DEAN, TOWNSHIP OF:**

Particulars of (Mr. Elsom), 7242; 7243.

Coal mining industry in (Mr. Elsom), 7296-9.

District is in a depressed condition (Mr. Elsom) 7244-8; 7272; 7273.

A number of small freeholders who are heavily mortgaged, reside in the district (Mr. Elsom), 7244-8.

Industries and also rateable value are declining, expenses on out relief are increasing (Mr. Elsom), 7272; 7273.

Rateable value and rates in £ (Mr. Elsom), 7251; 7253; 7348-53.

Rateable value low and population large (Mr. Elsom), 7318-36.

**WEST DEAN, TOWNSHIP OF—cont.**

Rateable value of agricultural land is comparatively small (Mr. Elsom), 7262; 7263.

Contribution of Crown to rates added to rateable value of township (Mr. Elsom), 7274-7.

School board expenditure has been heavy with regard to building. The Elementary Education Act, 1897, will be a benefit (Mr. Elsom), 7257-61.

Arrears of poor rates considerable. Excusals (Mr. Elsom), 7249; 7250; 7278-86; 7354-9.

Excusals on ground of poverty in case of small freeholders who are mortgaged (Mr. Elsom), 7250; 7254-6; 7265-71; 7287-95.

Freeholders in receipt of out-door relief (Mr. Elsom), 7287-95.

Freeholders. Amount at which their properties are assessed, and amount paid in rates (Mr. Elsom), 7300-8.

Freehold value of land. Local customs called "miners' free rights" (Mr. Elsom), 7339-47.

**WEST DERBY UNION (LANCASHIRE):**

Rates in the £ (Mr. Rew), 10,604-6.

Burden of rates felt owing to extension of Liverpool (Mr. Cleaver), 4066-71.

**WEST HAM:**

Many workmen employed in London live in West Ham, and the manufacturers there pay rates in respect of their requirements (Mr. D. Howard), 4505-7.

Chemical works not offensive or destructive to vegetation (Mr. D. Howard), 4508-12.

**WIGAN.** Valuation of coal mines, system adopted; plant not rated; information, how obtained from owners (Mr. T. Ratcliffe Ellis), 2527-40. An exceptional system, 2603-5.

Apportionment of the amount paid out of the Local Taxation (England) Account between the County of Lancaster and the county boroughs therein (Mr. Cooper), 10,222-5.

**WINCHESTER, DIOCESE OF:**

Parliamentary Committee (Rev. C. Theobald), 5522-4. Evidence of representative of, 5520-642.

**WOOLLEN INDUSTRY:**

In West of England would be crippled if the assessment committees had not come to a compromise with respect to rates on machinery pending the fate of the Bill before the House of Commons (Mr. C. H. Fox), 4453-5.

In West of England, number of manufacturers greatly decreased (Mr. C. H. Fox), 4452.

Manufactories could be carried on better in Austro-Hungary than in England (Mr. C. H. Fox), 4478-82.

**YORKSHIRE, NORTH:**

Agricultural depression in (Mr. Rowlandson), 9988; 9989.

## II.—INDEX TO EVIDENCE GIVEN BY EACH WITNESS.

*THE FIGURES REFER TO THE NUMBERED QUESTIONS IN THE MINUTES OF EVIDENCE.*

Index  
to Evidence.

- I.—Mr. JOHN FRANCIS ROTTON, Q.C.,** Legal Adviser to the Local Government Board (England). (Questions 1-321.)
- APPEALS :**  
By owners, no powers unless paying rates, 211 ; 212.  
By railway companies, 297-300.
- APPORTIONMENT OF RATES BETWEEN VARIOUS INTERESTS IN A PROPERTY.**  
Power of occupier to deduct from rent, 145-9.
- AREAS (RATING).** Complication of, in certain municipalities, 223.
- CHARGES ON PROPERTY,** non-rateability of mortgages, ground landlords, and other persons in respect of, 139 ; 140.
- CLASSIFICATION OF RATES :**  
Objects on which expended ; rates of benefit and rates of burden, 57-62. Illustration of each, 72.  
Difficulty of distinguishing in certain cases, 73-5.  
Difficulty of determining who derive benefits from expenditure, 63-8.  
Method of classifying, 69-71.
- COLLECTION** of poor rates, 228 ; 229. In municipality comprising different parishes, 230-4.
- CONSOLIDATED FUND,** grants paid out of, 284-9.
- COUNTY RATES :**  
Basis for, 33-6.  
Settlement of, and officers employed, 37.  
Revision of valuation, reasons for avoiding, 191 ; 192.
- COUNTY VALUERS,** 204 ; 205.
- DEDUCTIONS, SYSTEMS OF MAKING :**  
In different unions, 195 ; 196.  
Railways rated on receipts subject to deductions, 315-21.
- EXEMPTIONS (PARTIAL) :**  
Under Public Health Act, 1875. For general district rate, railways, canals, and agricultural land, &c., are rated at one-fourth, 173-5.  
Proportion of contribution in respect of land to rates for certain purposes in different districts, 210.
- EXEMPTIONS (TOTAL) :**  
Property belonging to local authorities, 218-20.  
Stock-in-trade exempted under Poor Rate Exemption Act, 1840, 130.  
Certain persons in respect to certain properties, 106-11.
- GENERAL DISTRICT RATE.** Area to which it extends, 176.
- GOVERNMENT PROPERTY,** exemption of, 218-20.
- GRADING, SYSTEM OF :**  
Relative liability of owners and occupiers of land and other property under Lighting and Watching Act, 1833, 161-71.  
Relief obtained under Agricultural Rates Act, 1896, 172.
- HEREDITAMENTS (RATEABLE),** list of, 41.
- LOCAL GOVERNMENT BOARD.** Statement prepared by, scope and contents of, 3-7.
- METROPOLIS, UNION ASSESSMENT COMMITTEES IN.** Position of County Council with regard to, 92 ; 93.
- METROPOLIS, VALUATION LISTS IN :**  
Officers responsible for, 21.  
Information, how obtained, 23-32.  
Rights of surveyors of taxes, 91.  
Conclusive for local and Imperial purposes, 82.  
Quinquennial valuation, 22 ; 187 ; 188.
- MINES (COAL) :**  
Rating in respect of, 51-3.  
Basis of assessment of, 54-6 ; 199-201.
- OCCUPIERS OF LAND,** growth of practice of rating ; legal decisions, 131-4.
- OVERSEERS AND ASSISTANT OVERSEERS :**  
Position and appointment of, 183-6.  
Power of Local Government Board to transfer to urban authorities the powers and duties of, under Local Government Act, 1894. Policy of Local Government Board, 235-41.
- PAROCHIAL ASSESSMENTS ACT, 1836.** Method prescribed for ascertaining value, 128 ; 129.
- PERSONAL PROPERTY :**  
Exemption of, under Poor Rate Exemption Act, 1840, 102-5 ; 130 ; 256-62.  
Grants from Treasury a method of taxing personalty for local purposes, 263-8.
- POOR RELIEF ACT, 1601 :**  
Taxation of inhabitants, 120 ; 121.  
Intentions of the Act, 122-7.  
Rates in aid, 135-8.
- PUBLIC HEALTH ACT, 1875.** General and special expenses in rural districts ; position of owners and occupiers of land, 177.
- RAILWAYS, VALUATION OF :**  
Method and principle of, 290-6 ; 312-4.  
Difficulties of, 301-3.
- RATES :**  
New rates since 1869, 76-81 ; 112-4.  
Expenditure which benefits owners of property, 115-9.
- RATING AUTHORITIES :** One valuation authority and one rate-collecting authority desirable in a given area, 242 ; 243.
- REPAIRS, ALLOWANCE FOR,** statutory only in London, 39 ; 40.
- REVENUES FROM DEFINITE SOURCES** assigned to local authorities by the Treasury, 277-83.
- SPORTING RIGHTS :**  
Rateability of, 46 ; 47.  
Basis of assessment, 48-50.  
Liability for payment of rates when severed from the land, 141-4.  
Assessment on copyhold lands, 197 ; 198.
- TITHES :**  
Rateability of, 42-4.  
Tithe rent-charge deducted from gross rent of occupier, 150-7.  
Extraordinary tithe rent-charge, rateability of, 158-60.
- UNION ASSESSMENT COMMITTEES :**  
Town councils, representation of, 94-8.  
Inland Revenue information, access to, 273-6.  
Railway companies not represented on, 304-11.
- VALUATION :**  
Relation of inter-parochial valuation for county and union purposes, 38.  
Interest of parishes and unions to have low assessment, 249-55.  
Officials, 269-72.  
Union Assessment Acts ; where applicable, 8 ; 9.  
Assessments made for certain purposes not to be made public, 193 ; 194.  
Municipality, uniform system desirable in, 224-7.  
Basis is annual value to tenant, 213-7.  
Desirability of system of assessment and valuation in metropolis being extended to the country, 244-7.

**VALUATION LISTS:**

- Union and county, 10-3. Officers responsible for, 18-20.
- County list compiled by county council; powers of county council, 178-82.
- Names of owners and occupiers to be entered, 45.
- Five lists for various purposes, 83-90. Desirability of reduction in number, 206-9.

**VALUATION LISTS, REVISION OF:**

- Not compulsory, 189; 190; 221; 222. Necessity for, 248.
- When revised, 14-7.
- Method of altering list. Supplemental lists, 99-101; 221; 222.
- Re-assessment more frequent in mining or manufacturing counties than in agricultural ones, 202; 203.

2.—Mr. **JAMES M. DODDS**, Senior Clerk in the Scottish Office. (Questions 322-592.)

**ABILITY TO PAY**, application of principle of, 497-500.

**AGRICULTURAL LAND, RATING OF:**

- Exemptions (partial). Amounts allowed in various districts, 533-6.
- No separation between valuation of land and buildings under Agricultural Rates Act, 1896, 387-90.

**AGRICULTURAL RATES ACT, 1896:**

- Classification system, effect on, 384-6.
- No separation between valuation of agricultural land and buildings, 387-90.

**APPEALS:**

- By owners and occupiers, 353-5. Procedure on appeal by owners, 537-9.
- Cost of, 400-3.
- Court of Session, appeals to, are few, 400-3.

**AREAS (RATING):**

- Counties, burghs, parishes. Boundaries, 331-5.
- Burghs, royal and police, 340-3.
- County, royal burgh, and police burgh correspond generally to county, municipality, and urban district in England, 456-9.

**ASSESSMENT ROLL**, 370-4.

**ASSESSOR OF RAILWAYS AND CANALS**, subjects valued by, 348.

**ASSESSORS (BURGH)**, appointment of, 339.

**ASSESSORS (GOVERNMENT)**, employment of, in counties, 338. Is economical, 568; 569.

**BORROWING POWERS OF RATING AUTHORITIES**, 404-17.

**BUILDING LAND**, if vacant, is rated in burghs at a fourth of its agricultural value, 464-71.

**BURGH RATES IN SCOTLAND**. Put upon gross value with certain exceptions, 359-62; 554-9.

- Most leviable from occupier in point of amount, but in point of number more leviable half and half, 368; 369.

Liability of owner to pay rates in respect of unoccupied property, 434-7.

Upon whom levied, 441-9.

Collected direct from owner, 460; 461.

**CANALS, ASSESSOR OF**, subjects valued by, 348.

**CHARGES ON PROPERTY**, no statutory deduction by owners in respect of, 515-8.

**CLASSIFICATION, SYSTEM OF:**

- Applicable only to occupiers, 375-81. And only to parish rates, 474; 475.
- Parishes adopting the system, kind of, 545-53.
- Number of, diminishing, 382; 383. Reasons for diminution in number, 507; 508.
- Agricultural Rates Act, 1896; effect of, 384-6.
- Rate in £ imposed upon owner and occupier likely to vary, 394; 395.

**CLASSIFICATION, SYSTEM OF—cont.**

- Position of members of parish council if interested in certain properties, 476-9.
- Taken into consideration on sale or purchase of property, 490; 491.
- A continuation of rating according to means and substance, 501-6; 591; 592.
- Control by a central authority desirable, 509; 510.
- Objections to, 511-4.

**COLLECTION OF RATES:**

- Joint collection by different local bodies in certain localities, 565-7.
- Dumfries. County and parish rates levied upon one demand note by one collector, 396-9.

**COUNTY RATES:**

- Division between owner and occupier, 363-6.
- Collected direct from owner, 460; 461.
- Liability of owner to pay rates in respect of unoccupied property, 418; 419.
- Road debts incurred before 1889 paid by owner, 367.
- Gross value rated with certain exceptions, 357; 358.

**COURT OF SESSION**, appeals to, are few, 400-3.

**DEBTS (LOCAL)**, amount of, 424-6.

**DEDUCTIONS, SYSTEMS OF MAKING:**

- For parochial rates, 370-4.
- No statutory deduction in respect of properties burdened with charges, 515-8.

**DEMAND NOTES:**

- Separate ones for owner and occupier, 485-9. Form of, 588-90.
- Dumfries. Parish and county rates levied upon one note by one collector, 396-9.

**DIFFERENTIAL SYSTEM OF RATING:**

- Glasgow, 519; 520.
- An attempt to rate according to ability, 521-6.

**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER:**

- County rates, 363-7.
- Burghs, rates in, 368; 369.
- Poor rate, 450-4.
- Advantages of Scottish system of levying half and half, 427-33.
- Taken into consideration on sale or purchase of property, 490; 491.
- Purposes for which rate levied considered by legislature; question of convenience in raising rate also an element, 527-9. But no general principal specified, 587.
- Statutory enactments, 530.
- Which borne by owners and which by occupiers; reasons for, 531; 532.

**EXEMPTIONS (PARTIAL):**

- Agricultural land. Amounts allowed in various districts, 533-6.
- Rates in respect of certain properties in Scotland paid upon one-fourth instead of upon the whole as in England, 492-6.

**FEU DUTIES** not rated as such, 570-2; 580-6.

**LIMITATION OF RATES**, 404-17; 480-4.

**MINES (COAL)**. Basis of valuation, 391-3.

**OWNERS AND OCCUPIERS**, definition of, 580-6.

**OWNERSHIP VOTE:**

- For local purposes, 462; 463.
- Same for burgh register as for parliamentary register, but with certain additions, 472; 473.

**PAROCHIAL RATES:**

- Valuation roll, assessment roll, deductions, 370-4.
- Collected direct from owner, 460; 461.

**POLICE BURGH**. Provost is chief magistrate, 344.

**POLICE RATE (BURGH)**, from whom levied, 438-40.

**POOR RATES:**

- Levied half on owner and half on occupier, 450-4.
- Power under Poor Law Act of levying in whole from occupier who has power of recovery from owner, 455.
- Raised on net value, 554-9.
- Rating on means and substance for purposes of, finally abandoned at Greenock in 1880, 540-4.

Index  
to Evidence.

**RATES :**

Vary very considerably, 420-3.  
Explanation of large number for separate purposes, 560-4.

**SCOTTISH OFFICE**, statement prepared by, scope and contents of, 323-8.

**TOLLS OR RATES**, profits from, taken into account in making valuation, 573-9.

**VALUATION ROLL :**

Basis for county, burgh, and parish rates, 336; 337; 356.  
Annually made up by experts, 329; 330.  
Heritable subjects included in, 345-7.  
Owners bound to give information as to their rents, 349-52.

3.—**Mr. HENRY A. ROBINSON, C.B.**, Member of the Local Government Board (Ireland). (Questions 593-1112).

**AREAS (RATING) :**

County and borough areas, 598; 599.  
Electoral divisions and unions, description of areas and boundaries, 673-86.  
Electoral divisions as compared with parishes, size of, 931-5.  
Possibility of obtaining amounts and particulars of rates from all rateable areas, 773-80; 878-91.

**CHARGES ON PROPERTY**, no deductions allowed to owners in respect of, 1023-5.

**CONSTABULARY CHARGES**, 873-7; 985; 986.

**COUNTY CESS :**

Comparison of English and Irish systems, 637-40.  
Liability for payment of, 663-9. Property is liable as against persons for poor rate, 670-2; 1040; 1041.  
Payment of, under Act of 1870, 936-40.  
Valuation for and by whom levied, 596; 597.  
Charges; returns of, 736-52.  
Contracting out of Land Act of 1870 by landowners, 822-4.  
Expenditure, details of, 913.

**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER :**

Valuation of land over 4l.—payment of rates by occupier subject to deduction of moiety from lessor, 699-703. Reasons for division where valuation is over 4l., 1032-9.  
Immediate lessor entitled to deduct from owner, 906-12.

**EDUCATION (NATIONAL)**, sources of revenue, 981-4.

**EXEMPTIONS (TOTAL)**. Properties exempted, 1018-22. Complaints, 1016; 1017.

**FARMERS**, rates and taxes paid by, 1075; 1076.

**GRANTS (GOVERNMENT)**. Imperial contributions given, not Local Taxation licences, 1042-6.

**GROUND RENTS**, deduction from, 1026-31.

**IMPROVEMENTS ON FARMS**, when taken into account, 976-9.

**INEQUALITIES IN RATING :**

Disparity in different districts, 855-72; 926-30.  
Complaints against present system of rating for poor law purposes in electoral divisions, 1008-10.

**LAND (IRELAND), GRIFFITH'S VALUATION OF :**

Description of, 612-5. Principles observed, 781-98; 892-4. Procedure adopted, 892-4. Land and buildings assessed together, 1077-9.  
Cost of, 946-9.  
Definitions of "annual value," 895-902. Of "land," 962-5.  
Below rack-rent in 1852, 989-96.  
Changes in quantities of commodities grown, and in their prices, 799-806. Prices of commodities in 1852 and 1896, 950-6.  
No revision in valuation since first made, 616-9; 630. Reasons, 980.  
Difference between actual valuation and actual letting value, 957-61.

**LAND (IRELAND), GRIFFITH'S VALUATION OF—cont.**

Reduction of rent below, 631-3; 807-15. Lessors' and lessees' shares of rates, 693-8. Occupier pays more than half of actual amount of rates, 903-5.  
All rates paid on, 629.  
Objections to, 634-6. Suggested improvements in present system, 1080-4. Actual letting value not a sufficient basis for assessment purposes, 1085-9.

**LAW OF SETTLEMENT**, 1100-8

**LOCAL GOVERNMENT BOARD (IRELAND)**, statement prepared by, scope and contents of, 594; 595; 705-25.

**LOCAL TAXATION RETURNS (ENGLAND)**; Details given, 1063-6.

**LOCAL TAXATION RETURNS (IRELAND) :**

As compared with those for England, 726-35; 816-21.  
For 1895, 825-9.  
Mr. Lough's return. Details on which based, 1090-7. Local taxation per head increased (1826-1893); but not due to an increase in charges for pauperism, 914-20.

**LUNATICS, MAINTENANCE OF**. Imperial contributions, 987; 988.

**POOR RATES :**

Rates included under poor rate, 704. Possibility of distinguishing between charges for relief of poor and other Poor Law charges, 921-5.  
Liability for payment of, 687-92. Persons are liable as against property for county cess, 670-2; 1040; 1041.  
Electoral divisions the unit for Poor Law purposes, 600-2; 1098; 1099. So constituted in 1838, 1109-12. Union preferable, 1067-74.  
Amounts paid by different classes—farmers and tradesmen, 1011-5.

**RACK RENT**, definition of, and how determined, 927-1007.

**RAILWAYS**, rates on, 753-72.

**RATING AUTHORITIES :**

For counties, baronies, boroughs, 603.  
Under special Acts, 604; 605.

**VALUATION, COST OF**, 946-9.

**VALUATION, PRINCIPLES OF :**

For local rates and income tax, 966-71.  
System in Ireland, 606-11; in towns, 648-54.  
Administrative systems in England and Ireland compared, 941-5.  
Lack of uniformity, 972-5.  
Hereditaments other than land; annual value, 641-3.  
Principles of ascertaining are similar in England and Ireland, 1947-62.

**VALUATION LISTS :**

Description of, 644-7.  
Annual revision, procedure, officials, 620-8.  
Revision in towns, 655-62.

4.—**Mr. RICHARD HILL DAWE**, Town Clerk of the county borough of Kingston-upon-Hull, and representative of the Association of Municipal Corporations. (Questions 1113-1428.)

**ABILITY TO PAY, PRINCIPLE OF :**

Application of 1372-82.  
How far imported into Public Health Act, 1875, 1424-8.

**AGRICULTURAL RATES ACT, 1896 :**

Has no application where Public Health Act, 1875, applies, 1243-6.  
Exemptions (partial) under Act are reasonable, 1312; 1313.

**APPEALS :**

Owners should be entitled to appeal, 1309-11.  
By ratepayer against rate made according to precept issued upon existing valuation list. If successful, parish must still contribute same amount, 1205.  
Cost of, to small parishes, 1276.

**AREAS (RATING) :** Large boroughs are the best areas for municipal as well as poor law administration, 1155; 1156.

**AREAS (RATING)—cont.**

- Urban and rural areas, proposed reforms, 1141; 1142.
- Overlapping to be avoided, 1154.
- Union or corporate boundary instead of parish, 1235; 1236.
- Rating areas should be identical with areas for valuation purposes, 1341-3.

**ASSOCIATION OF MUNICIPAL CORPORATIONS:**

- Constitution of, 1115-7.
- Irish municipalities not represented by, 1348; 1349.

**COLLECTION OF RATES:**

- Dual levying and collection of municipal and sanitary rates, method of, 1126-30.
- Disadvantages of present system, 1314; 1315.

**COMPOUNDING:**

- Advantages of system, 1163-8; 1216-8; 1326-8.
- Inequalities in system; want of uniformity, 1157-62.
- Suggested alterations in law, 1231; 1232.
- Should be allowed upon the valuation instead of a discount off the rate, 1275.
- Limit of composition should depend upon rent paid by working classes in different localities, 1329; 1330. Increase to uniform limit desirable in Hull, 1345-7.
- Distinctions under Poor Rate Assessment Act, 1869, and Public Health Act, 1875, 1133.
- Causes inequalities in contributions from parishes within a union to common fund, 1204.

**COUNTY CONTRIBUTIONS.** Committee of authorities to settle basis of contributions between county and county borough, 1344.**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER.** Most rates in Hull levied on occupier, 1194-8.**DOCKS, RATING IN RESPECT OF.** Difficulty for corporation to apportion rate determined by overseers between the wharves and land covered by water, 1135; 1136.**EXEMPTIONS (PARTIAL):**

- Under Public Health Act, 1875. Railways, canals, and agricultural land, &c. rated at one-fourth, 1131; 1132; 1134.
- Principal upon which allowed, 1181; 1182.
- Abolition of, in respect of certain portions of railways and docks desirable, 1169-89; 1183; 1184; 1331-6; 1399-412. Reasons, 1225; 1250-7. Should also be abolished in respect of canals, 1331-6.
- Agricultural land, rated at one-fourth, 1131; 1132; 1134. Exemptions under Public Health Act, 1875, and Agricultural Rates Act, 1896, are reasonable, 1312; 1313.
- Cause injustice to persons rated in respect of other properties under existing system of issuing precepts, 1319-25.

**GOVERNMENT PROPERTY,** exemption of. No grievance in practice, 1185.**GRANTS (GOVERNMENT)** in aid of poor rate. Grants distributed on basis of population, 1299-301. Scheme for a fixed grant according to ability of localities to pay, 1187-93; 1233; 1234; 1302-5. Objections to such a scheme, 1383-98.**GROSS ESTIMATED RENTAL:**

- Method of obtaining information, 1363-71.
- Actual rent taken if possible, though evidence admitted to show what the property is actually worth, 1356-62.

**INEQUALITIES IN RATING:**

- In the various parishes of a union as regards their contributions to the common fund, 1199-203.
- Compounding a cause of this inequality, 1204.
- In Hull. As between parishes, reasons for, 1264-74.
- Steps taken to remove, 1206-14. Amalgamation of parishes to equalise, 1228-30; 1258-63.

**INFECTIOUS DISEASES.** Cost of precautions; to Hull for preventing introduction from abroad should be borne by the State, 1186.**INHABITED HOUSE DUTY** should be handed over to local authorities, 1306-8.**LAW OF RATING** should be consolidated, 1296-8.**METROPOLIS, UNION ASSESSMENT COMMITTEES IN.** Inland Revenue represented, 1241; 1242.Index  
to Evidence.**OVERSEERS AND ASSISTANT OVERSEERS.** Power of Local Government Board to transfer to urban authorities the powers and duties of, under Local Government Act, 1894. Policy of Local Government Board, 1338-40.**RAILWAYS** in some parishes derive little or no benefit from local expenditure, 1337.**RATING AUTHORITIES:**

- County councils as rating authorities suggested, 1350-5. Also corporations, 1422; 1423.
- Valuation by one authority for county and union purposes desirable, 1277; 1316-8.
- Objections to an authority consisting of representatives of boards of guardians, county council, town councils, and surveyors of taxes, 1290-2.
- Hull. Want of uniformity in making and collection of rates, 1137-40.

**SUPPLEMENTARY LIST, ANNUAL, 1215.****UNION ASSESSMENT COMMITTEES,** abolition of, and creation of one rating authority, 1278; 1293. Case of county and non-county boroughs considered, 1279-89.**VALUATION:**

- Power of officers to obtain information, 1151-3.
- Best method to be adopted by municipality for obtaining information, 1147-50.
- Disadvantages of present system, 1314; 1315.
- County valuation desirable, but not dual valuation, 1219-24.

**VALUATION LISTS:**

- None for whole union, 1226; 1227.
- Power of town councils to make, not often exercised, 1123-5.
- Should be conclusive for local and Imperial purposes in provinces as well as in Metropolis, 1294; 1295.

**VALUATION LISTS, REVISION OF:**

- New lists and revision of old ones, 1118-22.
- Annual re-valuation or revision at instance of ratepayer, 1143-6.
- Annual revision desirable so as to give ratepayers opportunity to object to list, 1237-40; 1419-21.

**VOTING POWERS.** Companies have no power to vote at election of guardians, 1413-8.**WATERWORKS,** rating of, 1247-9.**5.—Mr. ROBERT E. FOX,** Town Clerk of the County Borough of Blackburn, and representative of the Association of Municipal Corporations. (Questions 1429-1533).**AGRICULTURAL LAND, PARTIAL EXEMPTION OF:**

- Revision in amounts allowed suggested, 1474-6.
- Reasons for, 1532-41.
- Whether benefits received from general district rate are substantial ones, 1542-7.

**AREAS (RATING),** No interference with union areas necessary in carrying out suggested reforms, 1495; 1496.**ARREARS OF RATES IN BLACKBURN:**

- Comparatively few, 1444-7.
- Special summary powers of distraint under local Act, 1448-64. Procedure in carrying out; time allowed and notices given, 1568-80. Possible objections to these powers, 1502-9.

**COMPOUNDING:**

- Local authorities should have option to adopt, 1471; 1472; 1514; 1515.
- Association of Municipal Corporations consider the Poor Rate Assessment and Collection Act, 1869, should apply to all kinds of rates levied within one borough boundary, 1472; 1473.
- Blackburn. System adopted in, 1523-31. And amounts of compositions, 1581-3. Increase to uniform limit desirable, 1465-70.

Index  
to Evidence.

**DISCOUNTS ALLOWED IN BLACKBURN:**

System of, 1437-43; 1510-3; 1523-31.  
Amounts of, 1581-3. Five per cent. allowed under a local Act if rates paid within specified time, 1433-6.

**EXEMPTIONS (PARTIAL):**

Revisions of amounts allowed for railways and agricultural land suggested, 1474-6. Reasons for, 1532-41.

Whether benefits received by agricultural land from general district rate are substantial ones, 1542-7.

Allowed in respect of certain properties where profits are taken into consideration, 1477-83.

**GAS WORKS.** Partial exemptions should be extended to certain portions of, 1497-501.

**INEQUALITIES IN RATING.** Valuation, rating, and collection of rates. Systems not uniform where several parishes exist in a municipal borough, 1492.

**INHABITED HOUSE DUTY.** Suggested transference of proceeds by Imperial authority to local authorities in aid of local expenditure, 1484-91. Difficulties in connection with carrying out of scheme, 1548-67.

**OVERSEERS AND ASSISTANT OVERSEERS:** Power of Local Government Board to transfer to urban authorities the powers and duties of, under Local Government Act, 1894. Policy of Local Government Board, 1516-22.

**RATING AUTHORITIES:** Boroughs should have one assessing and one rate-collecting authority, 1493; 1494.

**WATERWORKS.** Partial exemptions should be extended to certain portions of, 1497-501.

6.—**Mr. WILLIAM JOHN JEEVES,** Town Clerk of the County Borough of St. Helens, and representative of the Association of Municipal Corporations. (Questions 1584-1939.)

**AREAS (RATING).** Consolidation of parishes in boroughs, 1610-4. Case of St. Helens, 1677-9. Large boroughs should comprise one union and one parish where possible to obtain uniformity in rating systems, 1750-3.

**ASSOCIATION OF MUNICIPAL CORPORATIONS.** Returns prepared by, 1659-62. Method of calculation, 1866-73; 1915-25. Rates raised in certain boroughs, 1764-75.

**BOROUGHES IN TWO UNIONS:**

Representation of corporation on Assessment Committee. Representation of urban and rural interests secured by, 1590-2. Representation of joint interests of unions and uniformity secured by 1691-3.

Deductions; uniformity in amounts secured by the creation of a joint assessment committee, 1602-9.

**CLASSIFICATION OF RATES:**

Rates of benefit and rates of burden, 1650-4. How far distinguishable, 1776-82.

National and local matters. Distinguishing rates in respect of, 1641-4. Local taxation raised for both purposes should be partly borne by taxpayers, 1709-14.

**COLLECTION OF RATES.** One authority appointed by council of borough, and consolidation of parishes therein desirable, 1610-4.

**COMPOUNDING:**

Advantages of system, 1620; 1621; 1686-8.

Adoption of principle should be voluntary on part of locality, but there should be a uniform limit of rateable value, 1689; 1690.

Equalisation of system for municipal, public health, and poor law purposes desirable, 1754.

How far do occupiers take the same view as owners with regard to expenditure, 1755-63; and how far a movement in rates affects rents, and how far are occupiers paying no rates interested in the administration of local affairs, 1622-8.

St. Helens. Local Act in force, 1683-5. Uniform allowances in case of corporation rates as well as poor rates, 1618; 1619.

**CONSOLIDATION OF PARISHES** in boroughs, 1610-4. In St. Helens, 1677-2.

**COUNTY CESS.** Grand jury system in Ireland, 1855-61.

**COUNTY RATES.** Periodical revision by county rating committee, gross rateable value taken; uniform deductions made, 1702-8.

**DEBTS (LOCAL).** Charges in respect of, at St. Helens, for remunerative and unremunerative expenditure; how treated in accounts, 1882-92.

**DEDUCTIONS, SYSTEMS OF MAKING:**

Variation in amounts allowed in different unions, 1593-8.

Amount could be fixed by statute, 1599-601.

Uniformity in amounts as between two unions forming parts of a borough, secured by the creation of a joint assessment committee, 1602-9.

Uniform deductions made on periodical revision by county rating committee, 1702-8.

**EXEMPTIONS (PARTIAL),** in case of railways should be abolished, 1862-5. Reasons, 1629-38.

**GRANTS (GOVERNMENT):**

Importance of, 1929-31.

More aid from Imperial sources required by local taxation, 1639; 1640. Proceeds of taxes required, not power to impose taxes, 1893-900.

St. Helens. Sums received from local taxation account, how applied, 1874-8. Are not conducive to extravagance, 1879-81.

**GRIEVANCES** as between different classes of persons in respect of rating, 1741-4.

**INCIDENCE OF RATES** as between owners and occupiers, 1834-45.

**INCREASE OF RATES:**

How far objected to by community, 1647-9.

Lancashire. How far poor rate has increased, 1673-6.

**INEQUALITIES IN RATING** in urban area comprising several parishes subject to a common rate, 1737-40.

**INHABITED HOUSE DUTY,** proceeds of, should be transferred to local authorities, 1715-9; 1932-4.

**LAND,** ownership of, 1846-52.

**LICENCE DUTIES PAID TO LOCAL AUTHORITIES,** no advantage for local bodies to have power to collect or to vary in amount, 1727-36.

**LIMIT OF RATING FOR LOCAL PURPOSES:**

Limit reached, 1645; 1646; 1723-6; 1853; 1854. Therefore land and houses from which rates are derived should have relief, 1645; 1646.

Maximum limit in boroughs, 1783-5.

**MANUFACTURING TOWNS.** High rates detrimental to industry, 1663-8; 1926-8.

**MUNICIPAL UNDERTAKINGS,** profits from, as an aid to rates, 1720-2; 1786-94. Income tax paid on, 1901-3.

**OVERSEERS,** transfer of the powers of, at St. Helens. Advantages of, 1580-2.

**POOR RATES:**

Title misleading, 1912-4. Rates included under poor rate, 1909-11.

Basis of all rating, 1587.

Poor Law union the area of valuation, 1588. Is the best area, 1589.

Poor relief expenditure should be contributed to by Government, and controlled by it to a considerable extent, but not entirely, 1655-8; 1669-72.

**RAILWAYS, RATING OF.** Relative proportion of profits to amount paid in rates, 1745-9.

**SHEFFIELD,** variation in certain rates, 1935-9.

**UNION ASSESSMENT COMMITTEES:** Town Councils, representation of, 1590-2; 1691-3.

**VALUATION:**

One valuation desirable, but county rate committee should be retained and urban authorities represented, 1694-701.

Boroughs in two unions—representation of corporation on assessment committee. Representation of urban and rural interests secured by 1590-2. Representation of joint interests of unions and uniformity secured by, 1691-3.

Consolidation of parishes in boroughs, and appointment by council of one collecting authority for all rates, 1610-4.

**VALUATION LISTS, REVISION OF.** System of annual revision, but not of annual re-valuation, 1615. But periodical re-valuation desirable, 1616; 1617.

**VALUE OF LAND AND BUILDINGS** in different localities, reasons for difference in, 1795-833.

7.—Mr. **JOHN HENRY ELLIS**, Town Clerk of the County Borough of Plymouth, and representative of the Association of Municipal Corporations. (Questions 1940-2001).

**AREAS (RATING).** Advantages of Plymouth Borough and Union being co-extensive, 1944-8.

**EXEMPTIONS (PARTIAL),** under Public Health Act. Discount on whole rate preferable, 1982-6.

**GOVERNMENT ESTABLISHMENTS AND HEAD-QUARTERS** an additional source of expense, for which compensation to local expenditure should be made from Imperial sources, 1955-65.

**GRANTS (GOVERNMENT).** Certain sums now received from local taxation account should be collected by local body, 1975-8.

**PLYMOUTH:**

Has one assessing and one collecting authority, 1953; 1954; 2000; 2001.

Government expenditure an advantage, 1990; 1991. Government property included in rateable value, 1987-9.

No compounding, but guardians assess landlords of certain tenements under old private Acts, 1949-52.

Rateable value low compared with population, 1966-8.

**RATES,** new sources of, 1979-81.

**SEAPORT TOWNS, SPECIAL EXPENSES INCURRED BY.** Special contributions should be received in respect of, 1969-74; 1992-9.

8.—Mr. **WILLIAM CHARLES CRIPPS**, Town Clerk of the Borough of Tunbridge Wells, and representative of the Association of Municipal Corporations. (Questions 2002-2075).

**AREAS (RATING):**

Local Government Board, inquiries by. Objections likely to be raised by local bodies to alterations of boundaries, 2017-21.

Area containing several parishes cannot get an equal rate equitably levied, 2050; 2051.

**BOUNDARY COMMISSION IN 1887,** local objections to alterations of boundaries, 2037-44.

**COLLECTION OF RATES:**

Cost of, 2045-9.

Simplification of and economy, 2023-32.

**COMPOUNDING,** recommendations as to, 2022.

**COUNTY RATES, VALUATION FOR:**

Periodical revision, 2074; 2075.

Retention of general county and assessment committees desirable, 2071-3.

**DEDUCTIONS, SYSTEMS OF MAKING.** Inequalities in Tunbridge and Ticehurst Unions, 2009; 2010; 2033-6.

**OVERSEERS AND ASSISTANT OVERSEERS.**

Power of Local Government Board to transfer to urban authorities the powers and duties of, under Local Government Act, 1894; policy of Local Government Board, 2053-5; application as regards assistant overseers refused in case of Tunbridge Wells, 2063-70.

**RATING AUTHORITIES:** Advantages of one rating and one collecting authority, 2056-62; results in economy, 2052.

**TUNBRIDGE WELLS:**

A non-county borough in two unions, 2005-7.

Borough has no direct representation in making up valuation list, 2008.

**UNION ASSESSMENT COMMITTEES:**

Retention of, and also of general county committee desirable, 2071-3.

Urban and rural districts should be represented in proportion to rateable value, 2011-6.

**VALUATION LISTS.** Uniform system for arriving at necessary, 2050; 2051.

9.—Sir **HARRY BODKIN POLAND, Q.C.** (Questions 2076-2514.)

**APPEALS,** time for, 2231; 2232.

**AREAS (RATING).** Parish the unit for assessment, 2222; 2223. Advantages and disadvantages of, 2443-50.

**ART GALLERIES,** rating of, 2312; 2313.

**BOARD SCHOOLS,** annual value, how determined; contractor's rent, 2108.

**BRICKFIELDS,** rating of, 2438.

**BUILDING LAND.** Difficulty of determining what is "building land," 2281-9.

**CANALS, VALUATION OF.** Public assessor; advantages and difficulties of such a system, 2247-50.

**CHARGES ON PROPERTY.** Mortgage not an element in letting value, 2472.

**CLASSIFICATION OF RATES.** Rates of benefit and rates of burden, 2505-14.

**COLLECTION OF RATES** on tithes, cost of, 2496; 2497.

**COMPOUNDING:**

Advantages of system, 2417-21.

Law as to, perfectly clear, 2213.

**DEDUCTIONS, SYSTEMS OF MAKING:**

Statutory maximum scale in metropolis, 2224. But not always allowed, 2226; 2227. Advantages of scale, 2228; 2229. No statutory scale outside metropolis, 2225.

Tithes, principle of valuation of, 2485-97.

**DOCKS, VALUATION OF.** Difficulty of applying parochial earnings system, 2259-62.

**EXEMPTIONS (PARTIAL):**

Under Public Health Act, 1848, 2410-6. A reasonable provision, 2189-92.

Objections to, 2174-86.

Reductions or increase in number, 2314-8.

Certain properties rated at sums at which rated when acquired, 2169-73.

Contained in old Canal Acts, 2187; 2188.

**EXEMPTIONS (TOTAL):**

Certain institutions and societies exempted under 6 & 7 Vict. c. 36, 2157-60.

Undesirable except in cases of churches, chapels, and schools, &c., 2161-6; 2307; 2308.

Not fair to general body of ratepayers, 2504.

**EXTRA-PAROCIAL PLACES,** rating of, 2167.

**FORTIFICATIONS,** rating of, 2148-51.

Index  
to Evidence.

Index  
to Evidence.

**GAS WORKS:**

Three-fourths exemption on general district rate should be extended to gas pipes, 2314-8.  
Parochial earnings system, results of application of, 2270-6.

**GOVERNMENT PROPERTY:**

Not mentioned in Act of Elizabeth, 2280.  
Property occupied by the Crown, and property occupied by public bodies for Government purposes not liable to be assessed to local rates, 2083-5; 2439-42.  
Objections to its exemption, 2140; 2263-8; 2451.  
No practical reasons for exemption; rateability of municipal property, 2145-7.  
Voluntary contributions in respect of property occupied for the public service. Treasury minute, 1874. Government valuer, 2141-2.  
Provision for including in valuation list of parish for purposes of common fund of union contributions in respect of, 2144.  
System of rating in England and Ireland, 2142-4.

**GOVERNMENT PROPERTY, VALUATION OF:**

By local assessors, whether advisable, 2452-9.  
Profit not a test, 2460.  
System in England and Scotland identical, 2152-3.

**GRAVEL PITS, rating of, 2438.****GROSS ESTIMATED RENTAL, statutory definition of, 2096; 2097.****GROSS VALUE AND RATEABLE VALUE. Union Assessment Committee Acts intended to make language of Parochial Assessment Act clearer, 2099-102.****HEREDITAMENTS (RATEABLE):**

Definition of, 2086-8.  
Valuation of, is based upon the value of their use for present purposes in present condition, 2281-9; 2341-3.

**HOUSES OR PREMISES (PORTIONS OF) SEPARATELY OCCUPIED. Rateability in respect of, 2088.****LAND:**

Unoccupied. Rating of, undesirable, 2320-2. Reasons, 2193-5. Property must be rated on basis of value of its use for present purpose in present condition, 2473-84.  
Value of, enhanced by a profitable trade, 2431; 2432.

**LAW OF RATING. Explanation of Acts, 43 Eliz. c. 2, 2079; 2081. 37 & 38 Vict. c. 54, 2080.****LIBRARIES (FREE), rating of, 2312; 2313.****MACHINERY, RATING IN RESPECT OF:**

Difficulties of valuation, 2326-34.  
Type boiler case, principle laid down in, 2209; 2210.  
Personal property to some extent rated, 2211; 2212.

**METROPOLIS, VALUATION IN:**

Valuation (Metropolis) Act. Advantages of, and questions to be answered by occupier, 2290-302.  
Definitions of gross value and rateable value, 2098.

**METROPOLIS, VALUATION LISTS IN:**

Same basis for local and Imperial taxation, 2219-21.  
Quinquennial valuation, some objections to, 2216-8.

**MINES, rating of, 2438.****MUNICIPAL PROPERTY:**

Rateability of, and not of Government property, 2145; 2439-42.  
Profit not a test of valuation, 2460.  
Rateability or non-rateability of. Position of parishes in which situate, 2337-40.

**MUSEUMS, RATING IN RESPECT OF, 2312; 2313.****NET ANNUAL VALUE:**

Statutory definition of, 2091-7.  
Parochial Assessments Act, 1836, declaratory of the old law, 2089; 2090.  
Union Assessment Committee Acts intended to make language of Parochial Assessments Act clearer, 2099-102.

**OVERSEERS, qualification of, in urban and rural districts, 2381-5.****PARKS (PUBLIC), rating of, 2309-11.**

**PAROCHIAL ASSESSMENTS ACT, 1836. Difficulty of applying principles of Act to rating of railways and certain public bodies, 2268; 2269.**

**PERSONAL PROPERTY:**

Exemption of, under Poor Rate Exemption Act, 1840, 2203; 2393-6.  
Rating in respect of personal property not localised has never been legal, 2277-9.  
Parochial Assessments Act, 1836. The Queen v. Lumsdaine; difficulties arising from this decision. Passing of 3 & 4 Vict. c. 89, exempting personal property, 2203.  
Difficulties of rating and objections to, 2202; 2335; 2336. Still objectionable, although larger area than parish be taken for rating, 2206-8. Rating of, an impossibility, 2323-5; 2406-9.  
Abolition of rating on means and substance in Scotland, 2204; 2205.

**POLICE STATIONS AND COURTS, rating in respect of, 2154-6; 2439-42.****POOR RATES:**

Imposed on occupiers of land, not on the land, 2082.  
How far intended to be in the nature of a local income tax, 2391; 2392.

**POOR RELIEF ACT, 1601:**

Origin and basis of present system of rating, 2388-90.  
Relief of poor was object of Act; ability to pay and not benefits derived to be considered, 2402-5.

**PROPERTY BELOW LOW WATER MARK, non-rateability of, 2167; 2168.****RAILWAYS, VALUATION OF:**

Principles and elements to be considered, 2117-9; 2433-7. English and Scotch methods compared, 2236.  
Disadvantages of present system, 2120-7.  
Parochial earnings principle and mileage principle, 2128-30. Disadvantages of parochial rating system, 2131-5; 2237-46.  
Amount of deductions from gross receipts compared with power of borrowing money, 2378-80.  
Public assessor. Advantages and difficulties of such a system, 2247-50.  
Railway Commissioners a court of appeal, advantages of 2251-8.  
Special tribunal to ascertain certain particulars, 2303-6.

**RECEIPTS, rating certain properties in respect of, 2430.****SEWERS, RATING OF. Main sewers, outfall sewers, and ordinary sewers, 2368.****TITHES:**

No deductions allowed in respect of stipend of curates, 2500; 2501.  
Tithe commutation rentcharge, rating of, 2214; 2215.  
Rating of, is rating part of value of land; 2498; 2499. As much as the rating of glebe, 2502; 2503.

**TRADING COMPANIES. Difficulties in connection with rating of certain classes, 2136-8.****TRADING PROFITS, rateability of, under Act of Elizabeth. A parochial income tax, 2397-401.****UNOCCUPIED HOUSES. Non-rateability of, 2319. Reasons for, 2193-5. Rated on half annual value under certain local Acts, 2196-201.****VALUATION:**

Destruction of property for public improvements, or for purposes of a railway. Liability to make up deficiency in amount of old rates until works completed, 2233-5.  
Question of cost with regard to power of borrowing money, 2463-9.  
Uniformity in different unions in the same borough, 2386; 2387.  
True annual value of property to be ascertained; rent paid not necessarily the test, 2103-7. Annual value, not capital value, 2428; 2429.  
Value of hereditament is what it will fetch, not what it cost, 2470; 2471.  
Annual value of saleable or lettable hereditaments not determined by cost, 2345-50.  
"Tenant from year to year," meaning of, 2344.  
Rating upon gross or net value, 2422-7.  
Business premises, 2139.

**VALUATION OF PROPERTIES NEVER LET:**

- General principles for ascertaining annual value, 2110-6. What is cost, 2361-7.  
How far annual value can be determined by power to borrow money for their purchase or erection, 2356-60.  
What rate of percentage charged on capital value, 2109; 2351-5.  
Board schools. Annual value, how determined; contractor's rent, 2108; 2351-5.

**VALUATION LISTS:**

- Time for making up lists and time for appeals, 2231; 2232.  
Procedure, 2230.

**WATERWORKS:**

- Rating of; results of application of parochial earnings system, 2270-6.  
Municipal. Prohibited by statute from making a profit, 2369-77. Community gets benefit, 2461; 2462.

10.—**Mr. THOMAS RATCLIFFE ELLIS**, Solicitor and Secretary to the Mining Association of Great Britain. (Questions 2515-2739.)

**CANNOCK CHASE.** Valuation of coal mines, system adopted, 2576.

**DEDUCTIONS FOR COAL MINES, SYSTEMS OF MAKING:**

- Greatly vary, 2596-9.  
Statutory provision, 2600-2.  
Deductions for charges necessary to carrying on working desirable, 2719-25.

**INCIDENCE OF RATES.** How far taken into account by lessees of coal mines, 2738, 2739.

**INSURANCE**, meaning of, in Parochial Assessment Act, 1836, 2667-74.

**LEIGH UNION (LANCS)**, system adopted in valuation of coal mines. Plant rated, 2541; 2542.

**MINES (COAL):**

- Mentioned in Act of Elizabeth, 2522.  
Exemptions (partial). Coal mines should be included in hereditaments subject to, under Public Health Act, 1875. Reasons for this view, 2555-63. Ungotten seams of coal should be partially exempted, 2665; 2666.  
Royalties and rent. Systems of payment of, 2545-8. Ungotten seams of coal should be partially exempted under Public Health Act, 1875, 2665; 2666. Legal owner of, 2675-709.  
Influence of collieries on population, industries, expenses of local government, and value of property, 2624-9. Increase in value of property, 2715-8.  
Comparison of the position of coal mines with other industries or properties with regard to profits, capital invested, &c., 2651-9.

**MINES (COAL), VALUATION OF:**

- How entered on list, 2526.  
Systems of, different, 2726-9. Greatly vary in different unions, 2569.  
System adopted by experts, 2606.  
Letting value should be best test, but true letting value difficult to ascertain before mines have been worked, 2543; 2544.  
Basis for ascertaining annual value; obtainable royalty; royalty value should include plant, 2570; 2571.  
Actual royalty paid not necessarily the actual basis for assessment purposes, 2572; 2573.  
Profits of collieries in relation to rateable value, 2647-50; 2664.  
Plant usually rated. How far equitable, 2607-11. Not equitable, 2660-3; 2710-4. How far depreciation should be allowed for, 2612-23.  
Mines placed in favourable and unfavourable circumstances. Value to lessor. Royalty and rent, 2577-95.  
Average annual assessable value not altered if proposed change in law adopted. Contribution per ton in certain counties, 2630-46.  
Statutory provision to obtain uniformity desirable. Proposal of Mine Owners' Association, 2730-7.  
Scotland. System adopted, 2549-54.

**MINES (OTHER THAN COAL), VALUATION OF:**  
Rateability under 37 & 38 Vict. c. 54, 2523-5.  
Royalty, the actual value including plant, 2576.

**MINING ASSOCIATION OF GREAT BRITAIN**, statement authorised by, 2519-21.

**ORMSKIRK UNION (LANCS).** Valuation of coal mines, system adopted, 2564-8.

**UNION ASSESSMENT COMMITTEES** should have power to obtain information from lessor or lessee of coal mine, 2574-6.

**WIGAN.** Valuation of coal mines, system adopted; plant not rated; information, how obtained, from owners, 2527-40. An exceptional system, 2603-5.

11.—**Mr. JOHN SANCROFT HOLMES**, landowner in Norfolk, Chairman of Loddon and Claverling Board of Guardians, and member of the Norfolk Chamber of Agriculture. (Questions 2740-3127.)

**AGRICULTURAL LAND, RATING OF:**

- Share of local taxation borne by agricultural land, 2794-8.  
Value of land and buildings, proportion, 3101; 3102.

**AGRICULTURAL RATES ACT, 1896:**

- Permanency of Act desirable, 3103-5.  
System by which relief given open to some objection, 2839; 2840; 3037; 3038.  
Norfolk gets a large grant under, 3039-44. Amount received by Depwade Union, 3113-23.

**AREAS (RATING).** County preferable to union for valuation purposes; representation of union and borough authorities, 2760-6.

**ASSESSORS (GOVERNMENT)**, appointment of, desirable; should be advised by Union Assessment Committee, 2847-52. Reasons for this view, 2802-10. Would tend to economy, 2853-6. Difficulties in connection with scheme, 2939-47.

**CLASSIFICATION OF RATES.** Rates of benefit and rates of burden, 2982-4.

**DEPWADE UNION (NORFOLK)**, amount received by, in respect of Agricultural Rates Act, 1896, 3118-23.

**FARM HOUSES** rated low, 2897-9.

**GRADING, SYSTEM OF**, desirability of, 2997-3001.

**GRANTS (GOVERNMENT):**

- Basis of distribution, 2833-8.  
Extravagance, how far conducive to, 2844-6. As regards union officer's grant, 3010-8. Have not led to extravagance on out-door relief, but Local Government Act of 1894 has tended to produce such a result, 3019-26.  
Salaries of union officers, how far paid out of, 3110-7.  
Extension of system desirable, 3002-6.  
Norfolk, how allocated in, 3055-8. Are conducive to extravagance, 2906; 2907. Reasons for this view, 2948-52.

**INCIDENCE OF RATES.** Burden of rates borne by different classes of community contrasted, 2985-92. Possible re-adjustment of burden, 2993-6.

**INCREASE OF RATES IN NORFOLK:**

- Agricultural land, 2815-31. Rates paid in 1875, 1885, and 1895, 3089-100. Expenditure increased while value of agricultural property and profits derived from agriculture decreased, 2953-61.  
Relief of poor. Increase due to migration of best labourers, 3027-9. Increase of out-door relief, 2908-14.  
Roads, increased expenditure on, 2865-8. Reasons for, 2799; 2800.  
Extent and explanation of, 2767-85; 2790-3; 2915-38. Partly due to new obligations, 3007-9.

- Index  
to Evidence.
- INCREASE OF RATES IN NORFOLK—cont.**  
Expenditure increased, ability to pay decreased, 2974-7.  
Possibility of getting a return of rates paid on some estate for last 20 years, 2786-9.
- LAND**, rateable value of, in Depwade Union (Norfolk), is in excess of actual rent, 3080-8.
- LUNATICS, MAINTENANCE OF**, increased cost, 3030-6.
- NORFOLK:**  
Rates, expenditure of, 2744-51. Amounts of burdens borne by ratepayers, 2875-96. Purposes for which levied, 2978-81. Rural districts as compared with boroughs, 3074-9.  
Buildings, rateable value of proportion to total, 2900-3. Increase of, in certain districts, 2904; 2905.
- NORFOLK CHAMBER OF AGRICULTURE, RETURNS OBTAINED BY:**  
Rates raised in various districts, 2970-3; 3045-54.  
Effect of operation of Agricultural Rates Act, 1896, 3059-73.  
"Lands." Explanation of term as used in returns, 3124-7.
- PAROCHIAL RATES** comparatively small, 2832.
- PUBLIC HOUSE PROPERTY**, valuation of, 2814.
- RATES**, extent of contributions from, to subjects of national concern, 2841-3.
- RATING AUTHORITIES**. Valuation and spending authorities. Members upon, who contribute little or nothing to rates. Objection to this system, 2869-74.
- REAL PROPERTY**, share of local taxation borne by, 2794-8.
- UNION ASSESSMENT COMMITTEES:**  
Inland Revenue, information obtained by, should be available for purposes of local assessments, 2756; 2757.  
No objection to committees having increased power to obtain information as to rents actually paid, 2758; 2759.
- VALUATION:**  
Inequalities in different unions, reasons for, 2857-64. Uniformity desirable, 2752; 2753; 2801.  
Norfolk, different bases of valuation in, 2812; 2813. Want of uniformity, 2811. Rent not always taken as basis, 2964-9.  
Fall in value of agricultural property not represented by value as appearing in lists, 2962; 2963.
- VALUATION ROLL**. System of making in Scotland a desirable one, 2754; 2755.
- 
12. — **Mr. HENRY CALTHROP HOLLWAY CALTHROP**, landowner in Norfolk, and President of the Norfolk Chamber of Agriculture. (Questions 3123-3176.)
- AGRICULTURAL RATES ACT, 1896**. Relief obtained under, 3173.
- GRANTS (GOVERNMENT)**. Basis of distribution, 3160-9. Objections to, 3133-6; 3145-8; 3174; 3175. And to basis of distribution of residue between counties and county boroughs, 3149-56.
- INCIDENCE OF RATES**. Burden in respect of real and not personal property, 3137-9.
- INCREASE OF RATES:**  
Local expenditure borne by locality. How far enjoyed by general public, and how far is expenditure borne in proportion to benefits received, 3176.  
Possibility of getting a return of rates paid on some estate in Norfolk for last 20 years. Home farm not a good illustration, 3130-2.
- NORFOLK CHAMBER OF AGRICULTURE**, returns obtained by, as to rates raised in various districts, 3170-2.
- PERSONAL PROPERTY**, rates in respect of, suggested, 3157-9. Difficulties of, 3140-4.
- ROADS**, improvement of, and expenditure on; how far cost of improvements should be borne by localities, and how far is expenditure borne in proportion to benefits received, 3106-9.
- 
13. **Mr. THOMAS HENRY HUBBARD**, tenant-farmer in Norfolk, Chairman of Mitford and Launditch Board of Guardians, and Vice-President of the Norfolk Chamber of Agriculture. (Questions 3177-3272).
- AGRICULTURAL RATES ACT, 1896**, relief obtained under, 3188-93; 3217-28.
- FARMING IN NORFOLK:**  
Rent of a farm, 3183-7.  
Profits greatly reduced, 3233-7.
- GRANTS (GOVERNMENT)**. How far conducive to extravagance as regards lunatic grant and union officers grant.
- INCREASE OF RATES IN NORFOLK:**  
On a farm in 1896 compared with 1886. Cause, 3180-2.  
Outdoor relief, increase of, 3212-6. Reasons for, 3194-7.
- LAND:**  
Unduly burdened, 3200-8; 3229-32.  
Relief in respect of rates paid, 3241-4.
- NORFOLK CHAMBER OF AGRICULTURE**, returns obtained by, as to rates raised in various districts, 3261-72.
- VALUATION:**  
Basis for county and union rates, 3209-11.  
Actual rent the best test. Advisable to take Schedule A, as basis, 3198; 3199.
- WAGES (AGRICULTURAL)** have remained stationary in Mitford and Launditch Union of Norfolk, 3238-40.
- 
14. — **Mr. JOHN GEORGE BARTON**, Commissioner of Valuation and Boundary Surveyor for Ireland. (Questions 3273-3610.)
- APPEALS AGAINST VALUATION**. Right of appeal against annual revision of valuation, 3351-3.
- "BUILDINGS" IN IRELAND**. Total rateable value of, 3548-51.
- CANALS**. Valuation of, 3349.
- COMMISSIONER OF VALUATION, IRELAND:**  
Memorandum prepared by, scope and contents of, 3274; 3275.  
Complaints made to, 3325-9.  
Works in harmony with the local authorities, 3354.  
Communicates with Inland Revenue officers with reference to valuation of certain properties, 3355.
- DEDUCTIONS MADE IN VALUATION OF NEW HOUSES:**  
System adopted in order to arrive at the basis upon which houses were valued by Sir R. Griffith, 3332-9. Not a satisfactory one, but the best course to adopt under present circumstances, 3377-85.  
Percentage deductions made, 3337-40.
- DIVISION OF RATES**. How divided between immediate lessor and lessee in event of reduction of rent below Griffith's valuation, 3321-4.
- EXEMPTIONS**, more common in Ireland than in England, 3545-7.
- FISHERIES**, valuation of, 3349.

**GAS COMPANIES:**

System of valuation in Ireland is same as in England, 3349.  
Generally easy to value, 3398.

**GRIFFITH'S VALUATION:**

Principles observed, 3279-81. Procedure adopted, 3297-300.  
Steps taken to arrive at the valuation explained, 3506-13.  
System of arriving at full annual value not now satisfactory, 3373-6.  
Was 15 to 20 per cent. below rack-rent, but it varied in different parts according to the circumstances which existed in the different localities at the time, 3311-8.  
Based on prices of certain articles of agricultural produce. Method of applying this principle, 3294-6. Since making the valuation growing of wheat has practically ceased, 3447-51.  
Prices of agricultural produce in 1894 slightly higher than at time of Griffith's valuation, 3301-5.  
Ulster tenant right, principles adopted by the valuers in respect of, 3293. Valuation included interest on the value of tenant right which at that time only existed in Ulster, 3408-11; 3514-9.  
Ulster, position in, not now different from the rest of Ireland, 3446.

**INCIDENCE OF IMPERIAL TAXATION.** Imperial taxation in respect of land, payment of by landlord and tenant, 3367-70.

**INCOME TAX:**

Schedule A., basis of payment under, 3319.  
Taxation under Schedule B, when paid by tenants, 3320.  
Taxation under Schedule B. amounts to a small total in Ireland, 3371; 3372.

**INCREASE OF LOCAL TAXATION** in Ireland, 3480-4.

**JUDICIAL RENTS IN IRELAND:**

Are above valuation except in Ulster. Reasons for this, 3520-8.  
Are not comparable with rental value of land in England, 3529-36.

**LAND COMMISSION:** Rents fixed by, should, with the interest on the sum paid for tenant right, form the basis of any new valuation of land, 3306-10.

**LAND VALUATION AND RATING IN RESPECT OF:**

Valuation is based upon rental value to a solvent tenant, which would include interest on sum paid for tenant right, if any, 3356-61; 3404-7; 3494-503.  
Valuation is made without regard to the distribution of the different interests in it, or to the relative value, 3415-34.  
Landlord's and tenant's interests in land considered, 3452-61; 3571-4.  
Valuation tenant's profits not an element considered, 3607; 3608.  
Valuation of land and buildings made separately and entered separately on rolls. Method adopted to arrive at their valuation, 3558-66.  
Total rateable value of lands, 3548-51.

**LICENSED HOUSES, RATING IN RESPECT OF:**

System of valuation, 3541; 3542.  
Value of licences not taken into account, 3596.  
Increase in the assessed value of, 3491-3.

**RAILWAYS (IRISH):**

System of valuation, 3340-5; 3386-97; 3443-5.  
System of valuation as regards, stations, sidings, buildings, &c., 3582-6.  
Train mileage principle has generally given satisfaction, 3587-95.  
In present system of train mileage no distinction made in class or amount of goods carried by individual trains, 3629; 3610.  
Proportion of value of stations to value of train mileage, whether increasing or decreasing, 3346-8.  
Total rateable value of, 3548-51.  
System of valuation compared with those in England and Scotland, 3386-97; 3486-90.

**RE-VALUATION:**

Re-valuation would raise the present valuation, 3412-4. Reason for this, 3435-42.  
Land should be periodically re-valued, 3473; 3474.  
Re-valuation of agricultural land and buildings and of town-houses, how often desirable, 3575-8.  
Land, valuation of, if now made should be based upon the rents fixed by Land Commission and the interest on the sum paid for tenant right, 3306-10.

**RE-VALUATION, COST OF.** 3475-9.

**TENANT RIGHT:**

Value of, how ascertained, 3362-6; 3579-81.  
Interest on sum paid for, is included in valuation of properties, 3282-92; 3356-61; 3404-7; 3494-503.  
Interest on sum paid for, with rent fixed by Land Commission, should be basis of any new valuation of land, 3306-10.  
In Ulster. Principles adopted by the valuers in making Griffith's valuation, 3293. Valuation included interest on value of tenant right, 3408-11; 3514-9.

**VALUATION IN ENGLAND, SCOTLAND, AND IRELAND COMPARED:** Present valuation would be an unfair basis for charges common to the three countries, 3504; 3505.

**VALUATION:**

Hereditaments subject to valuation, 3277; 3278.  
Relative position of town and country with regard to rating under present valuation, 3412-4.  
One only for each area, 3485.  
Cannot be altered to a great extent under existing circumstances, 3597; 3598.  
Valuation by central authority is satisfactory, 3471; 3472.  
Valuations made by Government. Periods at which made, 3276.  
Cost of valuation, 3462-5. Annual cost of maintenance, 3466-70.  
Based on fair letting value to a solvent tenant (see 15 & 16 Vict. c. 63), 3552-7.  
Valuation of land based on rent paid by tenant and the sum paid for tenant right, is comparable with valuation based on rent paid to landlord in England, 3288-92.  
Fair letting value is the value to the tenant, excluding profits, but including interest on value of tenant right, 3282-7.  
Houses, how valued, 3330-2.  
Houses in towns. Method adopted practically the same as in England, 3567-70.  
Houses (new). System of making deductions in order to arrive at the basis upon which houses were valued by Sir R. Griffith, 3333-9. Not a satisfactory one, but the best course to adopt under present circumstances, 3377-85. Percentage deductions made, 3537-40.  
Province of Ulster. Valuation now above the judicial rents, and in other parts of Ireland below them. Reasons for this, 3520-8.

**VALUATION ROLLS, REVISION OF:**

Annual revision, how made, 3350. Right of appeal against, 3351-3.  
Houses. A number escape revision, 3543; 3544.

**WATERWORKS, VALUATION OF:**

System of valuation, 3399-403.  
System of allocation of valuation of reservoirs in rating areas inequitable, 3599-606.

15.—Mr. **WILLIAM MUNRO**, Assessor of Railways and Canals for Scotland. (Questions 3611-3914.)

**APPEALS AGAINST VALUATION:** A change in tribunals for appeals desirable. Difference in tribunals for appeals from local assessors and railway assessor, 3673-8; 3706-12.

Index  
to Evidence.

### ASSESSOR OF RAILWAYS AND CANALS, SCOTLAND:

Memorandum prepared by, 3611; 3612.  
Work of, has increased owing to recent Acts of Parliament sub-dividing districts for special purposes, 3723-5.  
Value of property valued by. Cost of valuation, and by whom paid, 3715-22.  
*Locus standi* of, in courts of law, 3661-7.  
Appeals from assessor and local assessors. Difference in tribunals. A change desirable, 3706-12.

ASSESSORS (LOCAL): Appeals from Assessor of Railways and Canals and local assessors. Difference in tribunals. A change desirable, 3706-12.

CALEDONIAN CANAL, valuation of, 3687-9.

### CALEDONIAN RAILWAY:

Value per mile fluctuated very much during last 20 years. Reason for this, 3635; 3636.  
Net revenue increased and the rateable value has decreased, comparing 1876-7 with 1897-8. Value of hereditament has not followed the fortunes of the undertaking, 3876-89.  
Decrease in value of lines attributable to a great extent to increase in number of, and additions to, railway stations, 3624-31.

CANALS, valuation of, 3687-9; 3845.

ELECTRIC LIGHT COMPANIES. May be valued by assessor of railways and canals in Scotland, 3713; 3714.

FORTH AND CLYDE CANAL, valuation of, 3690.

GAS COMPANIES. May be valued by assessor of railways and canals in Scotland, 3713; 3714.

GROUND LANDLORDS. Suggestion that they should pay part of local rates, 3869-75.

### RAILWAYS (SCOTTISH)—LINES, VALUATION OF:

#### (a) *System of Valuation. Single, Double, and Quadruple Lines.*

How allocated to the different rating areas. If running line is a quadruple one a double allowance is given, but a double line treated as a single one. Objection to this system, and suggested reform, 3615-23.  
Single and double lines. Method of valuation is identical, but double lines should be treated as of twice the length of single ones, 3742-6.  
Quadruple lines, method of valuation, 3741.  
Scottish system of valuing running lines a fair one, 3758-60.  
Valuation should be based on lettable value to a hypothetical tenant, 3831-42.  
Decrease in value of lines per mile attributable to a certain extent to increase in value of plant, 3634.  
Scottish railways partly situated in England. Method of valuation adopted, 3682-4.  
Proportion of net receipts to rateable value. Comparison with England, 3679-81.

#### (b) *Deductions generally.*

Amount of deductions made for working expenses and tenants' allowances, 3613; 3614.  
Deductions not likely to increase so as to greatly reduce the valuation, 3642; 3643.  
Revision of amounts allowed desirable, 3672.  
Deductions should be fixed and varied by a legal tribunal, 3738-40.

#### (c) *Deductions for Working Stock and Plant.*

Deduction of 25 per cent. for working stock and plant, how made up, 3637-9.  
Standing stock. Reduction of 25 per cent. from prime cost, 3784-97.  
Plant, value has increased and character improved, 3825-30.

### RAILWAYS (SCOTTISH)—LINES, VALUATION OF—cont.

Depreciation of working stock and plant. Deduction of 5 per cent. given in addition to allowance for repairs and renewals which are done out of revenue, 3654-7. How far depreciation met by renewals, 3808-10. Lord Kinnear's observations, 3659; 3660.  
Tenants' profits. Deduction of 12 per cent. is a large one, but the assessor is bound by a legal decision, 3644-53. How far a fair deduction, 3798-807; 3890-903.  
How far deduction of 5 per cent. for interest is fair, 3811-4; 3890-903.  
Deduction of 5 per cent. for interest on value of working stock and plant is a high one, 3640; 3641; 3658.  
Change in value of money has made it desirable to have some alteration, 3727-37; 3776; 3777.  
Accidents and incidents. Deduction of 3 per cent. is a high one, 3668-71. How far fair, 3815-21.

#### (d) *Deduction for Interest on Floating Capital.*

Deduction of 5 per cent. for interest on floating capital not excessive, 3904-13.

#### (e) *Abatements in respect of Traders' Wagons.*

Allowances to traders in respect of their supplying their own wagons, 3850-3.  
Nothing material to be gained by ascertaining proper abatements in respect of traders' wagons, 3685; 3686.

RAILWAYS (SCOTTISH)—SIDINGS, VALUATION OF. Should be treated as running lines instead of being treated as stations. This would diminish the valuation in the large towns, as the question of the value of the land would be eliminated, 3747-57.

### RAILWAYS (SCOTTISH)—STATIONS, VALUATION OF:

Valuation goes to area in which stations are situated, 3615.  
Towns get too large a share of valuation owing to increase in value of stations, 3822-4. Suggested scale of apportionment as between town and country, 3761-6. Lines and stations should both be treated on basis of profits earned, 3822-4; 3843; 3844.  
A proportion should be attributed to the lines, 3854-60.  
Should depend on the success of the enterprise, 3780-3.  
Valuation of stations is fixed, whereas valuation of running lines depends upon the success of the enterprise. Scheme suggested to make stations share the trading fortunes of the enterprise, 3767-75.  
Statutory allowance of 5 per cent. given to stations is too high, 3632; 3633.  
Stations not too large for necessities of traffic, 3778; 3779.

TRAMWAYS. System of valuation, 3691-7.

"UNDERTAKING" as used in 17 & 18 Vict. c. 91 should be defined. Definition suggested by assessor of railways and canals, 3726.

### WATERWORKS, VALUATION OF:

System of valuation, 3846-9. English and Scottish systems compared, 3698-705.  
Country districts obtain a larger share of the valuation than the towns which pay for the works, 3861-8.

16.—Mr. **HARRIS P. CLEAVER**, Clerk to the Board of Guardians of West Derby Union, Lancs. (Questions 3915-4115.)

AGRICULTURAL LAND, rent not necessarily the lettable value, 3936; 3937.

### AREAS FOR PURPOSES OF VALUATION OR RATING (ENGLAND):

Union in more than one administrative county. No disadvantages, 3963-6; 4049-56.  
West Derby Union, parishes in, 3983-90.

**COMPOUNDING:**

How far influenced by rise or fall in rates, 4022.  
 Present allowances give owner too great a benefit, 4076; 4077.  
 Objection to owners getting additional 15 per cent. if they run the risk of paying for empties, 3947-50.  
 Effect of system with regard to voters' attitude in local affairs, 4017-21.  
 Liverpool. Limit of composition is 15l., 3995-7.  
 West Derby Union. Amounts allowed, 3943-6.  
 Compounding exists to a large extent. Not desirable that it should exist to this extent, 4086-91. To what extent it is desirable and undesirable, 3998-4016.

**CONSOLIDATION OF RATES:**

One rate and one demand note showing purposes for which rates are raised, presented on behalf of the different authorities in the union desirable, 4038-40.  
 Desirable to have one basis of valuation for local and Imperial purposes instead of four, one rate levied, one demand note, and one collector, 3955; 3956.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE:**

West Derby Union. Scale laid down in rules provided for guidance of overseers, 3970-80.  
 Uniform deductions for the same classes of property desirable, 3991-4; 4037.

**DEMAND NOTES.** West Derby Union, number of demand notes in, 3951-4.**INCIDENCE OF LOCAL TAXATION:** Local taxation presses most heavily upon small shopkeepers, whose rentals are up to 40l. a year, 4078. Rental of 60l. usually paid by a man with an income of 600l. a year, 4113-5.**INCREASE OF LOCAL TAXATION.** West Derby Union. Increase of rates has caused people to leave the district, and has also lowered rents, 4072-5; 4092-112. Amount saved in rates by those who leave district and live further from Liverpool, 4092-112.**LEVYING AND COLLECTION OF RATES:**

Method of levying and collection in a union, 3942.  
 West Derby Union and City of Liverpool, 4023-6.

**LIVERPOOL:**

Limit of composition is 15l., 3995-7.  
 Total rate in the £ as compared with county of Lancaster, 4063-5.  
 Extension of Liverpool has caused burden of rates to be felt in West Derby Union, 4066-71.  
 West Derby Union. Amount saved in rates by those who leave the district, and live further from Liverpool, 4092-112.

**MACHINERY AND PLANT, RATING IN RESPECT OF:** West Derby Union. Rating of machinery fixed to freehold, 4057-62.**OVERSEERS AND ASSISTANCE OVERSEERS:**

Local knowledge of overseers very valuable; they should assist paid valuers, 3957; 3958; 3967; 3968.  
 West Derby Union. Rules provided for guidance of overseers in 1872 and 1892 to secure uniformity. Scale of deductions laid down therein, 3927-35; 3970-80.

**RATES IN £ IN CERTAIN DISTRICTS:** Lancashire and Liverpool. Total rates in £, 4063-5.**UNION ASSESSMENT COMMITTEES:**

Desirable that union assessment committees should be representative of all authorities, 3961; 3962; 4041-3.  
 Power of guardians to invite a corporation to place members upon assessment committee, 3959; 3960.

**VALUATION:**

Compulsory powers to ascertain rent paid desirable, 3938-41; 3969.  
 Rating on gross valuation, effect of, 3981; 3982.  
 West Derby Union. Rules provided for guidance of overseers in 1872 and 1892 to secure uniform application of definite principles in valuing, 3927-35.

**VALUATION LISTS, REVISION OF.** New list made annually in West Derby Union since 1882. Advantages of system, 3918-26.**VALUATION OF SPECIAL CLASSES OF PROPERTY:**

System of employing professional valuers for valuing docks, railways, tramways, &c., should be extended, 4082-5.  
 West Derby Union. Professional valuer is the officer of Union Assessment Committee, 4079-81.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES.** Desirable to have one basis of valuation for local and imperial purposes, instead of four, 3955; 3956.**17.—Mr. GEORGE HUMPHREYS - DAVIES,** surveyor and valuer in London and Manchester, and representative of the Machinery Users' Association. (Questions 4116-4437).**ABILITY OF RATEPAYERS TO PAY,** doctrine of, 4399-404.**ACTS OF PARLIAMENT.** Local Acts often inconvenient, 4226.**APPEALS AGAINST VALUATION.** Metropolis. Surveyor of taxes has right of appeal, 4433-7.**AREAS FOR UNION AND VALUATION PURPOSES** are satisfactory as at present constituted. Objection to enlarging area, 4207-10.**AUDIT OF ACCOUNTS OF PUBLIC BODIES.** Reason for advocating Government audit of municipal accounts, and objections to such a course, 4277-305.**BENEFITS RECEIVED BY RATEPAYERS** should be taken into consideration, 4394-8.**BISHOPWEARMOUTH CASE** (3 Q.B.D. 299). Tenants' machinery. Present system of rating in certain districts not adopted before this case, 4311-4.**BOLTON TRAMWAY AND IMPROVEMENT BILL,** 1897.\* How far practicable for borough council of a corporation to nominate overseers and a certain portion of Assessment Committee, 4353-5.**CHORLTON UNION (LANCASHIRE):** Two systems of assessment in force owing to local Acts, 4152-5.  
 Appeal by Whitworth & Co. with reference to the rating of their movable and fixed machinery, 4156-61.**COMPOUNDING.** Amounts allowed are too great in certain places, 4315-8.**COMPOUND PROPERTY OWNER.** Has no representation or vote for representation on local body, 4319-25.**ELECTIONS (LOCAL).** Companies have no power to vote at election of guardians, 4191-6.**EXEMPTIONS AND PARTIAL EXEMPTIONS** should be abolished, 4211; 4212.**HEREDITAMENTS (RATEABLE).** Under 42 Eliz., c. 2. s. 1, 4146; 4167.**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:** How far system is equitable and desirable, 4419-29. Tend to extravagant administration, 4236.**LAW WITH REFERENCE TO VALUATION:** Satisfactory as regards owners and occupiers of real property, 4123-6.  
 Law and basis of assessment satisfactory, except in respect of machinery, 4388-93.**LEE GAS CASE.** Reg. v. Lee (L.R., 1 Q.B.D. 241), judgment in, 4184.

\* This Bill received the Royal Assent on July 15, 1897 (60 & 61 Vict. c. 134).

**LICENSED HOUSES, RATING IN RESPECT OF.**  
How far is the value of the licence an element in the valuation, 4356-73.

**LOCAL GOVERNMENT ACT, 1894 (56 & 57 Vict. c. 73).** Power given to parish councils to appoint overseers, and to town councils and urban authorities to apply for same power to Local Government Board, 4386; 4387.

**MACHINERY AND PLANT, RATING IN RESPECT OF:**

(a) *Objections to.*

Opposition of Poor Law Conferences to, 4187-90.  
Heavy tax upon the manufacturer, 4140; 4141.

(b) *Existing state of Law.*

Law and basis of assessment satisfactory except in respect of machinery, 4388-93.  
Action of corporations, 4265-9.  
Appeals to quarter sessions against principles have frequently been made, 4142; 4143.  
Appeals to High Court have been few because of the difficulty of getting a case with the real issue stated, 4144; 4145.  
Which trades most affected by rating in respect of machinery, 4430-2.  
Mills fitted with machinery. How far machinery taken into consideration in valuation, 4374-85.

(c) *Effect of certain Appeals.*

Tyne boiler case. Principle laid down in this case has been extended to other sorts of machinery, whether fixed or movable in certain unions, 4131-9.  
Tyne boiler case. How far practice of rating in respect of machinery has been extended since this case, 4232-5.  
Tyne boiler case. Decision uncertain and difficult to appreciate, 4213; 4214.  
Fixed and movable machinery. Judgement in the Tyne boiler case (55 L.J.); and the Lee gas case (L. R., 1 Q.B.D., 241), 4184.  
Present system in certain districts of rating tenants' machinery not adopted before the Bishopwearmouth and the Tyne boiler cases, 4311-4.  
Whitworth and Company's appeal with reference to the rating in respect of their movable and fixed machinery, 4156-61.  
Appeal successfully maintained by dock company against rating of portable cranes, 4177; 4178.

(d) *What is desired,*

Uniform system desirable, 4339-42.  
Fixed machinery which is part of the hereditament should be rated, 4167.  
Tenant should not be rated in respect of machinery which is a chattel, 4227-9.  
Tenants' machinery should not be subject to rating, 4240-2.

(e) *Bills introduced into Parliament.*

Bills to amend the law relating to hereditaments containing machinery. Object is to get a definition of what machinery should be rated, 4230; 4231. First Bill introduced in 1887, 4162; 4163. History of the Bills; their provisions and objects, 4165; 4166. Strongest opponents are the small property owners, 4168-73.

(f) *Practice in certain Districts.*

Machinery not rated in many unions, 4130.  
In what districts rating in respect of machinery is attempted, 4149; 4150.  
Principle has been adopted more in agricultural than in manufacturing districts, 4163; 4164.  
Principle more frequent in rural and semi-rural districts than in urban districts. Localities affected by the adoption of the system, 4252-64. Attempts have been made in some unions to rate persons in respect of a class of machinery which is personal property, 4127-9.  
Sunderland is adopting principle, 4182; 4183. No action yet taken by the machinery users there, 4185; 4186.  
Lancashire. Only fixed machinery rated, 4151.  
Scotland, 4251.

**MILLS:**

Mills fitted with machinery or supplied with water power. How far taken into consideration in valuation, 4374-85.  
Oldham Improvement Act, 1880, is unjust to mill-owners, 4218-21.

**OLDHAM IMPROVEMENT ACT, 1880 (43 & 44 VICT. c. 147).** Is unjust to mill-owners, 4218-21.

**OVERSEERS AND ASSISTANT OVERSEERS.**  
Borough council of corporation might nominate overseers. How far practicable. Bill of Borough of Bolton, \* 4353-5.

**PERSONAL PROPERTY:**

Rating in respect of, an impossibility, 4197.  
Rating directly in respect of, not feasible or desirable. Contributions from the Exchequer to local taxation. How far equitable and desirable, 4419-29.

**POOR RATE** raised for purposes both connected and unconnected with the relief of the poor, 4203-6.

**RAILWAYS, RATING OF.** English, Scottish, and Irish systems. English system is the best, 4243-50.

**REAL PROPERTY:**

Owners and occupiers, law with reference to rating of is satisfactory, 4123-6.  
Injustice has been caused to owners of, by the increase of taxation imposed upon them, and not upon other people, 4200-2.  
Subject to hereditary burdens, or which has been bought and sold subject to burdens, should not be relieved of them, 4198; 4199. To what extent can this view be supported, 4405-18.

**REG. v. LEE (L.R., 1 Q.B.D., 241).** Judgement in, 4184.

**REPRESENTATION UPON LOCAL AUTHORITIES:**

The people who raise the rates and expend them are not always the people who pay them, 4174-6.  
Railway, gas, and water companies as trading concerns have no direct representation on local bodies, 4326-38.

**STOCK-IN-TRADE, RATING IN RESPECT OF,** abolished under 3 & 4 Vict. c. 89, 4148.

**TYNE BOILER CASE (55 L.J.):**

Principle laid down in, 4131-9; 4184. Has been extended to other sorts of machinery whether fixed or movable in certain unions, 4131-9.  
How far practice of rating in respect of machinery has been extended since, 4232-5.  
Tenant's machinery. Present system of rating, not adopted in certain districts before this case, 4311-4.  
Decision uncertain and difficult to appreciate, 4213; 4214.

**UNION ASSESSMENT COMMITTEES:**

Constitution of committees. How far representative of the various interests, 4306-10.  
Constitution of committees in certain places not equitable with regard to interests of larger rate-payers, 4316; 4435-7. In metropolis surveyor of taxes has right of sitting with committee, and has a right of appeal, 4433-7.  
All classes of ratepayers should be represented upon committees, 4351; 4352.  
Companies should have some representation on committees, 4179-81.  
Borough council might nominate a certain portion of Union Assessment Committee\*. How far practicable. Bill of borough of Bolton, 4353-5.

**VALUATION:**

Law and basis satisfactory, except in respect of machinery, 4388-93.  
Uniformity throughout the country in basis and mode of valuation desirable, 4226; 4237-9.

\* This Bill received the Royal Assent on 15th July 1897 (60 & 61 Vict. c. 134).

**VALUATION—cont.**

Valuation (Metropolis) Act should be extended to rest of country, 4223-5.

Rates levied upon gross value instead of net prejudicial to manufacturers. The case of Oldham, 4343-50.

A General Valuation Act, objection to and advantages of, 4270-6.

**VALUATION (METROPOLIS) ACT, 1869 (32 & 33 Vict. c. 67):**

Act could with advantage be extended to the rest of the country, 4223-5.

Schedule limiting deductions from gross value is unfair, 4215-7.

Ratepayers should be able to object to assessment at any time within the quinquennial period, 4222.

18.—**Mr. CHARLES H. FOX**, director of a limited liability woollen company, member of Wellington Board of Guardians and Assessment Committee, and representative of the Machinery Users' Association. (Questions 4438-4482.)

**FOREIGN COMPETITION.** Advantages given to manufacturers abroad, 4458. A woollen manufactory could be carried on better in Austria-Hungary than in England, 4478-82.

**GIFFORD, FOX & CO. V. THE CHARD GUARDIANS:** Judgment in the case and rating in respect of machinery before and after. Result and effect of judgment, 4441-7. Since Lord Esher's judgment manufacturers are afraid of further extension of assessing machinery, 4451.

**MACHINERY AND PLANT, RATING IN RESPECT OF:**

Manufacturers desire a clear definition of the class of machinery rateable, 4448; 4460; 4461. They complain of the possibility of their being rated in respect of movable machinery, particularly in semi-rural districts, 4460; 4461.

Tiverton Union (Devonshire). A compromise effected with union assessment committee pending the fate of the Bill before the House of Commons dealing with the subject generally, 4449; 4450.

**MANUFACTURERS:**

Position of manufacturers as compared with that of agriculturists, 4462-71.

Rates paid by manufacturers in the country less than in the towns, but in the towns there are greater facilities for carrying on their business, 4472-7.

**NORTH BRITISH RAILWAY COMPANY v. THE ASSESSOR OF RAILWAYS (25 S.L.B. 4):** Lord Fraser's judgement. The principle laid down in the judgement is satisfactory to manufacturers, 4456; 4457.

**UNION ASSESSMENT COMMITTEES:** Representation of urban and rural interests on union assessment committees, 4459.

**WOOLLEN INDUSTRY:**

In West of England would be crippled if the assessment committees had not come to a compromise with respect to rates on machinery pending the fate of the Bill before the House of Commons, 4453-5.

In West of England, number of manufacturers greatly decreased, 4452.

19.—**Mr. DAVID HOWARD**, Vice-President of the London Chamber of Commerce, a chemical manufacturer in Stratford, London, and representative of the Machinery Users' Association. (Questions 4483-4512.)

**APPEALS AGAINST VALUATION.** Suggestions as to alterations of tribunals for appeals, 4502-4.

I 97620.

**CHEMICAL WORKS:**

Method of valuation very unsatisfactory. The plant is usually tenants' fixtures, and deteriorates very rapidly, 4487-99.

West Ham. The works are not offensive or destructive to vegetation, 4508-12.

**MACHINERY AND PLANT, RATING IN RESPECT OF.** Present system and method is uncertain and undefined, and imposes a great burden on the manufacturers, 4485; 4486.

**MANUFACTURERS.** In West Ham manufacturers pay rates in respect of the requirements of many workmen living there, but who are employed in London, 4505-7.

**UNION ASSESSMENT COMMITTEES.** Constitution of committees not equitable with regard to interests of larger ratepayers. Reasons why this is so, 4500; 4501.

**VALUATION OF SPECIAL CLASSES OF PROPERTY.** Payment of valuers and surveyors. System of remuneration by results is very unsatisfactory, 4502.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES.** Desirable to have an assessing body representing a large area or a Government official, 4503; 4504.

20.—**Mr. JOHN NORTE**, Clerk to the Board of Guardians and to the Assessment Committee of Aston Union, Warwickshire. (Questions 4513-4539.)

**AGRICULTURAL LAND.** Aston Union, how valued in. Valuations about equal to amount of rent actually received by the landlord, 4533-9.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE.** Aston Union. Amounts allowed on various classes of property, 4520-2.

**LEVYING AND COLLECTION OF RATES:**

Aston Union, method in, 4523-6.

One demand note presented on behalf of the different authorities in the union desirable, 4527; 4528.

**RE-VALUATION:**

Quinquennial or septennial re-valuations desirable, 4516-8.

Aston Union. Periods at which re-valuation made, 4529-32.

**VALUATION.** Uniformity of system in a union desirable, 4515. Compulsory powers to ascertain rent paid desirable, 4519.

21.—**Mr. FRANK CROWDER HETT**, Clerk to the Guardians, and to the Assessment Committee of Glanford Brigg Union, Lincolnshire. (Questions 4540-4660.)

**AGRICULTURAL LAND (INCLUDING HOUSES AND BUILDINGS ATTACHED THERETO):**

Land in hand. Valuation of, 4551-3.

Valuation. Mortgaged land. Interest inserted in Schedule A., 4579-84.

Fall in value. Rateable value decreased in proportion to letting value, 4545-50.

Glanford Brigg Union. Farm buildings valued separately from the land, 4610-2.

Glanford Brigg Union. Value of land in, 4620-31.

Glanford Brigg Union. Amount of rates on land, 4642-54.

**AGRICULTURAL RATES ACT, 1896. (59 & 60 Vict. c. 16.):**

Extension of principle of Act advocated, 4588-91.

Glanford Brigg Union. Amounts received, 4587.

**CHARGES ON PROPERTY.** Should not be deducted from valuation of hereditaments, 4616-9.

Index  
to Evidence.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE:**  
Glanford Brigg Union. Amounts allowed and system adopted, 4557-60.  
Statutory scale of deductions desirable, 4561; 4562.

**GLANFORD BRIGG UNION:**  
Description of, 4541-4.  
Value of land and buildings in, 4620-31.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

Equality in respect to assessment of houses and land and increase of contributions desirable, 4655; 4656.  
Contributions should be extended to houses, 4588-91; 4632-41.  
Glanford Brigg Union. Amounts received, 4585; 4586; 4632-41.

**INCOME TAX.** Mortgaged land. Interest inserted in Schedule A., 4579-84.

**LEVYING AND COLLECTION OF RATES.**  
In a union. One collector and one demand note would entail paying a collector instead of collection by unpaid overseers, 4564-73.

**RAILWAYS:** Glanford Brigg Union. Mileage of railways in, 4607-9.

**RE-VALUATION:**  
Periodical re-valuation desirable, 4599-606.  
Re-valuation entails a great expense, 4554-6.

**SPORTING RIGHTS.** Basis of valuation, 4614; 4615.

**TITHE AND TITHE RENTCHARGE:**  
Rating of tithe. Tithe deducted from gross estimated rental, 4592-8.  
Occupier should be rated in respect of tithe, 4657-9.

**VALUATION:**  
Compulsory powers to ascertain rent paid not desirable. Local knowledge in a rural district is a sufficient guide, 4574-8.  
Hereditaments should be rated on full value, 4616-9.

**VALUATION OF SPECIAL CLASSES OF PROPERTY.** System. Structural value of certain hereditaments, 4613.

22.—Mr. **JOSEPH PEACE**, Clerk to the Board of Guardians of Dewsbury Union, Yorks, W.R. (Questions 4661-4713.)

**AGRICULTURAL LAND:** Total rateable value of land as compared with other hereditaments. Valuation of land above rental value. Dewsbury Union (Yorks, W.R.), 4697-708.

**AREAS FOR PURPOSES OF VALUATION:** Poor law unions the best areas, 4709.

**CONSOLIDATION OF RATES:** Desirable to have only one assessing, one rating, and one collecting authority in each union, 4679-87.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE:** Statutory scale of deductions throughout the country desirable, 4710.

**LEVYING AND COLLECTION OF RATES:**  
Dewsbury Union. Procedure and system adopted, 4674.

**LICENSED HOUSES, RATING IN RESPECT OF:**  
Tied-house system. Actual rent does not represent annual value of premises, 4711-3.

**RE-VALUATION:** Annual or triennial re-valuations desirable, 4668-71.

**SURVEYOR OF TAXES:** Should sit with union assessment committees, 4672.

**VALUATION:**  
Compulsory powers to ascertain rent paid desirable, 4673.  
Government department for making valuations for the whole country. Disadvantages of, 4693-6.  
Dewsbury Union. Procedure and system adopted, 4664-7; 4674.

**VALUATION LISTS, REVISION OF:** Supplemental valuation lists. Present system satisfactory, 4688-92.

23.—Mr. **SYDNEY MORSE**, Solicitor, Chairman of the Electrical Trade Section of the Rating Committee of the London Chamber of Commerce. (Questions 4714-4965.)

**APPEALS AGAINST VALUATION:**  
Objections to quarter sessions as a tribunal, 4742-5; 4778-802.  
A specially constituted appeal court to hear rating appeals instead of quarter sessions desirable, 4893-7. The Railway Commission, or some legal tribunal suggested, 4742-5; 4803; 4804.

**COMPANIES:**  
Do not get same benefit from expenditure of certain rates as householders, 4716-20.  
Should be classified for the purpose of valuation, 4846-56.

**CONSUMABLE PROPERTY:**  
The question of capital and income considered, 4805-12.  
Assessment in respect of, 4840-5.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE:**  
Amounts of deductions for interest on capital, profits, and contingencies in respect of business undertakings, 4919-27.  
Deductions for wasting capital should be made. Meaning of a "tenant from year to year," 4936-45.  
Scale of deductions in respect of profits on different classes of businesses desirable, 4946-8.

**ELECTRIC LIGHT COMPANIES, VALUATION OF:**  
Present method of assessing, 4725.  
Machinery belonging to. Rating in respect of, 4885; 4886.  
Case of a company rated at a sum almost identical with net receipts, 4889-92.  
Suggested method of valuing, 4726.  
Appeals by companies, 4721; 4722.

**INCIDENCE OF LOCAL TAXATION:**  
Upon whom should taxation fall, 4762-6; 4771-7.  
Payment of rates by landlord, probable effect of; the rating of tenants' fixtures; and election of authorities, 4898-910.

**INDEPENDENT VALUATION AUTHORITY:** Desirable, 4830-5; 4879-84; 4893-7.

**MACHINERY AND PLANT, RATING IN RESPECT OF:**  
Case of manufacturer moving abroad in consequence, 4887; 4888.  
Rating in respect of machinery and plant not desirable, 4767-70.  
Tenant's machinery should not be subject to rating, 4879-84.

**MANUFACTURERS:**  
Should not contribute more largely to rates than householders occupying premises of a similar size. Their machinery should not be taken into consideration, 4813-23.  
Do not get same benefit from expenditure of certain rates as householders do, 4716-20.  
Classification of manufacturers desirable for rating purposes, 4872-3.

**PROFITS, SYSTEM OF ASCERTAINING RATEABLE VALUE HAVING REFERENCE TO:**  
Objections to, 4746; 4747. Companies should be classified for the purpose of valuation, 4846-56.  
Companies, a grievance to, 4723; 4724.  
Suggested method, 4752-6. Classification of companies, and a uniform scale laid down for each, 4757; 4758.

**STRUCTURAL VALUE, VALUING ON:**  
In respect of premises or reservoirs owned by undertakings which earn profits in other districts, 4824-9.  
In respect of a generating station of an electric lighting company situated in a district where the earnings are not made, 4748-51.

**UNDERTAKINGS (BUSINESS), RATING IN RESPECT OF:**

- Ability of a business undertaking to pay should be measured rather by rent than by profits, 4911-8.  
Valuation of premises is not made on rental value as it should be, but on profits, 4952-62.  
Classification of "undertakings" desirable for rating purposes, 4872-8.  
Should be on a uniform basis and administered by an independent body, 4964; 4965.  
Heavy rates on business undertakings and reduction of dividends, 4934; 4935.  
Amounts of deductions for interest on capital, profits, and contingencies, 4919-27.  
Wasting capital. There should be a deduction for. Meaning of a "tenant from year to year," 4936-45.  
Scale of deductions in respect of profits on different classes of businesses desirable, 4946-8.  
Valuation for local and Imperial purposes, difference 4949-51.

**UNION ASSESSMENT COMMITTEES:**

- Constitution of committees not always satisfactory 4931-3.  
Constitution and appointment of committees. Suggested alterations, 4727-41; 4830-5.  
Constitution of committees not satisfactory to manufacturers, 4836-9.

**VALUATION:**

- A common basis desirable where a rack-rent is not paid, 4857-62.  
Fair rental value a fair basis for assessment, 4759-61.  
"Tenant from year to year," meaning of, 4936-45.  
Difference in valuation for Imperial and local purposes outside Metropolis, 4949-51.

**VALUATION OF SPECIAL CLASSES OF PROPERTY:** Valuation of properties never let should be based, as far as possible, on what the rent would be. A percentage of the profits should be taken according to the class of property rated, 4863-71.**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES:**

- More uniform in London than in the provinces. Reasons for this, 4923-30.  
Constitution of Union Assessment Committees, objections to. Independent body appointed by county council, 4830-5; and power of appeal from, desirable, 4893-7.

**WATERWORKS, VALUATION OF.** Reservoirs, rating on structural value in respect of, situated in other districts than those in which the profits are earned, 4824-9.**24.—Mr. ROBERT EVELYN BELL CROMPTON,** Representative of the London Chamber of Commerce, Past President of the Institution of Electrical Engineers, Chief Engineer to the Kensington and Knightsbridge Electric Lighting Company, and Managing Director of Crompton and Company, Electrical Engineers, of London and Chelmsford. (Questions 4966-5059).**AREAS FOR PURPOSES OF RATING.** County preferable to union, 4974; 4975.**BIRMINGHAM.** Corporation charges the same for gas and water inside and outside the city, 5057-9.**COMPANIES:**

- Companies whose accounts are published should be valued upon gross income, 5011-35.  
Have no power to vote at elections, 5038-40.

**ELECTRIC LIGHT COMPANIES, VALUATION OF:**

- Uncertainty in present principles, 4976-80.  
Valuation in different parts of the country varies notwithstanding publication of accounts, 4981-7.  
Valuation in different parts of the country varies greatly owing to want of a defined principle, 5041-4.  
Valuation of works belonging to public companies and undertakings of local bodies, 5001-10; 5048-55.  
Valuation should be based upon gross income, 4988-5000; 5011-35.

**EXEMPTIONS.** Undertakings of local authorities under Improvement Acts, 5036; 5037.**INDEPENDENT VALUATION AUTHORITY:**

- Desirable for valuation purposes, 5045-7.  
Independent body appointed by county council and power of appeal from, desirable, 4967-73.

**MACHINERY (Movable), rating in respect of, is increasing.** A definite principle is wanted, 5056.**UNDERTAKINGS (MUNICIPAL).** Exemption from rating under Improvement Acts, 5036; 5037.**UNION ASSESSMENT COMMITTEES:** Constitution of, objections to, 4967-73.**VALUATION:** Independent body appointed by county council, and power of appeal from, desirable, 4967-73.**25.—Mr. HORATIO JOHN ADAMSON,** Representative of the London Chamber of Commerce, and Director of John Howell and Company, Limited; wholesale warehousemen, St. Paul's Churchyard. (Questions 5060-5200).**CITY OF LONDON:**

- Rates in £ paid in certain parishes, 5186-90.  
Class of ratepayers in City who elect the guardians are chiefly business men, 5191-8.

**COMPANIES:** Have no power to vote at parliamentary or municipal elections, 5069. Effect of this, 5128-33.**FREEHOLD PREMISES, VALUATION OF:**

- Basis must depend on an estimate, 5153-6.  
Tests to be applied, 5079-86.

**HOWELL & CO., LIMITED:**

- Rents paid by, 5157; 5158.  
Rateable value of shops almost equal to rental, 5199.  
Value of leasehold, 5141-6. Alleged to be over-assessed, 5163-75. Increase of rates paid on leasehold premises, 5064-8; 5070-8.  
Valuation of leasehold and freehold premises too high, 5093-112.

**INDEPENDENT AUTHORITY** desirable for valuation purposes, 5113-23; 5162; and also power to appeal, 5087-92.**LEASEHOLD PREMISES:** Valuation of. Tests to be applied, 5079-86. Payment of premiums, 5124-7.**RATEABLE VALUE:** Definition of, 5063.**REBUILDING OF PREMISES.** Increase in valuation of premises rebuilt, 5159-61.**UNION ASSESSMENT COMMITTEES.** Constitution of committees not always satisfactory, 5134-40.**VALUATION:**

- System unsatisfactory, 5176-85.  
Basis should be rental value, 5147. Less cost of repairs, &c., 5151; 5152.

**VALUATION (METROPOLIS) ACT, 1869 (32 & 33 Vict. c. 67.)** Valuation list conclusive evidence of gross estimated value for all purposes, 5148-50.**26.—ALFRED TOWNSEND COBOLD,** Clerk to the Assessment Committee of Samford Union, Suffolk, Deputy Clerk of the Peace for Suffolk, Deputy Clerk to the East and West Suffolk County Councils and the Suffolk Joint Committee, and Clerk to the Suffolk County Rate Basis Committee. (Questions 5201-5395).**AGRICULTURAL LAND:**

- Valuation in certain unions is not made at less than a fixed amount. Practice not warranted, 5226-9.  
Permanent basis of valuation for a certain period desirable, 5268; 5269. For three or five years, 5241-6.

**AGRICULTURAL LAND—cont.**

Actual rent should be the basis of valuation, 5270.  
 Samford Union. Value of land in, 5204; 5205.  
 Value now below that appearing in valuation list  
 of 1895, 5257-61.  
 Suffolk. Fall in value, 5241-6.

**APPEALS AGAINST VALUATION.** No objection  
 to owners having power of appeal, 5271-5.

**AREAS FOR PURPOSES OF VALUATION OR  
RATING:**

Union in more than one administrative county, dis-  
 advantages, 5209-11.  
 County boundaries. Alteration of, whether possible  
 and whether desirable, 5212-7.  
 County or union boundaries, alteration of, practical  
 difficulties, 5231-6.

**COUNTY RATE BASIS AND COMMITTEE:**

Basis in regard to Government grants, 5299-308.  
 Committee as assessing authority of county. Position  
 of county boroughs under such a scheme, 5309-15.  
 County rate basis made by County Rate Basis Com-  
 mittee with assistance from unions desirable, 5218-  
 25.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c.  
TO ARRIVE AT RATEABLE VALUE:**

Uniform deductions for the same class of property  
 desirable, 5276-88.  
 Uniform scale throughout a county desirable for  
 union valuation lists, 5218-25; 5230.

**INEQUALITIES IN RATING:**

Produced by valuation of property by overseers in  
 each parish, 5289-91.  
 County rate and union bases. Inequalities in results  
 of valuation, 5250-6; 5292-8.  
 Union in two counties. Dissimilarity of rate in £ for  
 various purposes in different parishes, 5370-8.

**LEVYING AND COLLECTION OF RATES.** Poor  
 and highway rates. Advantage if collected for  
 similar period, 5355-8.

**OVERSEERS:** Samford Union. Overseers carry out  
 instructions as to valuation satisfactorily, 5237-40.

**SUFFOLK.** Agricultural land, fall in value of. Per-  
 manent basis of valuation for three or five years  
 desirable, 5241-6.

**SURVEYOR OF TAXES.** Valuation list should be  
 prepared by surveyor of taxes, and union assess-  
 ment committee should revise it, 5359-69.

**TITHE AND TITHE RENTCHARGE:**

Advantages of payment of rates by tithe owner,  
 5393-5.  
 Rates in respect of tithe rentcharge. Whether pay-  
 ment by occupier desirable, 5316-44.  
 Tithes sometimes assessed twice over, 5262-7.  
 Deductions to arrive at net rateable value, 5345-54.  
 Samford Union. Uniform deduction for expenses of  
 collection, 5247-9.

**VALUATION:**

Permanent basis for three or five years desirable,  
 5241-6.  
 Comparison between county rate basis and union  
 basis, 5250-6; 5292-8.

**VALUATION LISTS:**

Elimination of either the column "gross estimated  
 rental" or "rateable value" desirable, 5206-8.  
 Surveyor of Taxes should prepare list and Union As-  
 sessment Committee should revise, 5359-69.

**VALUATION, UNIFORMITY IN, AND SUG-  
GESTED AUTHORITIES:**

Uniform valuation for all rates and taxes desirable  
 in provinces as well as in metropolis, 5379-92.  
 County rate basis committee as valuation authority  
 for all purposes in county. Position of county  
 boroughs under such a scheme, 5309-15.  
 County rate basis made by County Rate Basis Com-  
 mittee with assistance from unions desirable,  
 5218-25.

27.—Mr. **WILLIAM WARD DUFFIELD**, Clerk  
 to the Board of Guardians of Chelmsford Union,  
 Essex, and Clerk to the District Council. (Que-  
 stions 5396-5475.)

**APPEALS AGAINST ASSESSMENT** in Chelmsford  
 Union. No appeals for 20 years, 5416-8.

**AREAS FOR RATING PURPOSES.** Poor law unions  
 the best areas, 5474.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL  
TAXATION:**

Increase of contributions in aid of maintenance of  
 poor, 5459-63.  
 To what extent a contribution in respect of personal  
 property, 5426-40.

**INCIDENCE OF LOCAL TAXATION.** Owners'  
 interest in rates, 5464-70.

**INCOME TAX.** Schedule A. Desirable that Union  
 Assessment Committees should have access to  
 assessment to, 5409; 5410.

**PERSONAL PROPERTY:**

Should contribute to maintenance of poor, 5423-5.  
 Grants from Treasury, a method of taxing personalty  
 for local purposes, 5426-40.

**POOR RELIEF (EXPENDITURE UPON):**

Personal property should contribute to maintenance  
 of poor, 5423-5.  
 Increase of Imperial contributions desirable, 5459-63.  
 Contributions from income-tax payers desirable, but  
 questions of control and representation difficult,  
 5447-58.

**RE-VALUATION.** Chelmsford Union. Re-valuation  
 practically takes place every five years, 5406;  
 5407.

**TITHE:**

Rating of tithe. Collection of rates from occupier  
 not desirable, 5471; 5472.  
 Deductions, 5441-6.

**VALUATION.** Chelmsford Union. Gross estimated  
 rental and rateable value, how arrived at, 5408.

**VALUATION LISTS:**

Chelmsford Union. Course adopted by overseers in  
 making out lists, 5399-405.  
 Reasons for avoiding a revision, 5419-22.

**VALUATION OF SPECIAL CLASSES OF  
PROPERTY.** Chelmsford Union. Expert valuer  
 is employed for valuing certain hereditaments,  
 5411-5.

**VALUATION, UNIFORMITY IN, AND SUG-  
GESTED AUTHORITIES:**

Borough should be rated on valuation of Union Assess-  
 ment Committee, 5475.  
 Valuation of hereditaments varies in different unions.  
 Incentive for a low union valuation, 5419-22.  
 County Committee suggested to obtain uniformity  
 in rateable value of unions, 5419-22; 5473.

28.—Mr. **JOHN WILLIAM BOOTYMAN  
ANDERSON**, Chairman of the Board of Guar-  
 dians of Morpeth Union, Northumberland. (Que-  
 stions 5476-5519).

**MINES (COAL) WORKINGS UNDER THE SEA  
BELOW LOW-WATER MARK:**

Non-rateability of mines in respect of, 5476-83.  
 Should be placed on same footing as workings above  
 low-water mark, 5484-92.  
 Should be assessed in the parish where coal is  
 brought to bank, 5493-7.  
 Liability of parish for share of maintenance of  
 widows and orphans in case of accidents, 5498-504.  
 Owners of, get benefit of local government, and  
 should contribute to local rates in respect of the  
 coal, 5505-12.  
 Royalties paid in respect of coal belong to the Crown,  
 5513-9.

29.—The Rev. **CHARLES THEOBALD**, Rector of Lasham, and Representative of the Parliamentary Committee of the Diocese of Winchester. (Questions 5520-5642.)

**AGRICULTURAL RATES ACT, 1896** (59 & 60 Vict. c. 16):

Act does not give relief to owners of tithe or tithe rentcharge, 5545; 5546.

Tithe-owners claim for similar relief to that given to agriculturists by the Act, 5525-41; 5558-64.

**CLERGY.** Reduction of clerical incomes and increase of burden of rates, 5551-7; 5634-42.

**LIGHTING AND WATCHING ACT, 1833** (3 & 4 Will. IV., c. 90). Rating in respect of tithe rentcharge under. Extension of the principle of the Act desirable, 5600-12.

**PUBLIC HEALTH ACT, 1875** (38 & 39 Vict. c. 55). Rating in respect of tithe rentcharge under, 5545; 5546. Extension of the principle of the Act desirable, 5600-12.

**SURVEYOR OF TAXES.** A specially constituted board for all rating and taxing purposes on which surveyor of taxes should sit, desirable, 5550.

**TITHE AND TITHE RENTCHARGE:**

Alton Union and certain other unions in Hampshire. System adopted, 5547.

Deductions. Uniform basis of assessment in respect of tithe rentcharge, how far practicable, 5594-9.

No deduction allowed in respect of stipend of curates, 5542-4.

Reduction of clerical incomes and increase of burdens of rates, 5551-7; 5634-42.

Relief of owners of tithe or tithe rentcharge under Public Health Act, 1875 (s. 211 (1) (b)), but not under Agricultural Rates Act, 1896, 5545; 5546.

Rating in respect of tithe rentcharge under Lighting and Watching Act, 1833, and Public Health Act, 1875. Extension of the principle of these Acts desirable, 5600-12.

Claim of tithe owners for similar relief to that given to agriculturists under Agricultural Rates Act, 1896, 5525-41; 5558-64.

If relief had been given to tithe-owners under Agricultural Rates Act, 1896, it should not have been given in respect of tithe charged on property other than agricultural land, 5581-90.

Relative position of tithe-owners and agriculturists, 5525-37; 5548; 5549; 5618-33.

Inequality in the assessment of tithe rentcharge and of agricultural land, 5550.

Fall in value of tithe as compared with that of land, 5565-80.

**TITHE COMMUTATION ACT, 1836** (6 & 7 Will. 4. c. 71):

No addition of rates to commuted tithe, 5591-3.

Act should not preclude a revision in respect to the rating of tithe rentcharge, 5613-7.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES.** A specially constituted board for all rating and taxing purposes on which surveyor of taxes should sit and a uniform basis of valuation desirable, 5550.

**WINCHESTER, DIOCESE OF:** Parliamentary Committee, 5522-4.

30.—The Rev. **DAVID JONES DAVIES**, Rector of North Benfleet, Essex. (Questions 5643-5720.)

**AGRICULTURAL LAND.** Rates on land subject to tithe and free of tithe, 5676-9.

**AGRICULTURAL RATES ACT, 1896** (59 & 60 Vict. c. 16). Criticisms, 5680-90; 5698-711.

**CLERGY.** Said to be rated upon their professional incomes, 5651-3; 5715-9.

**GROUND RENTCHARGE** as compared with tithe rentcharge, 5712-4.

**LAND TAX:**

Decrease in rateable value of tithe rentcharge and increase in land tax, 5658-60.

Increase of, in a certain parish, 5691-7.

**TITHE AND TITHE RENTCHARGE:**

Rates on land subject to tithe and free of tithe, 5676-9.

Tithe rentcharge as compared with ground rentcharge, 5712-4.

Decrease in rateable value of tithe rentcharge and increase in land tax, 5658-60.

Effects of Agricultural Rates Act, 1896, on clerical tithe-owners, 5661-75.

Relative position of tithe-owners and agriculturists, 5654-7.

31.—Mr. **FREDERIC CAMPBELL HULTON**, Clerk of the Peace and Clerk of the Council of the County of Lancaster. Representative of the County Councils Association. (Questions 5721-6059.)

**AGRICULTURAL LAND.** Valuation. Actual rent should be the basis, 5821; 5822.

**AGRICULTURAL RATES ACT, 1896** (59 & 60 Vict. c. 16):

Lancashire. Assessable value of administrative county since passing of Act, 5892-907.

Effect of Act, 5952-61.

**ASSESSABLE VALUE:**

Difference between rateable value and assessable value, 5908; 5909.

Rateable and assessable value of certain counties, 5962-70.

**BRIDGES.** Lancashire. Special rate for hundred bridges, 5752; 5753.

**COUNTY ASSESSMENT COMMITTEE,** with assistance of surveyor of taxes, can undertake the valuation of a county, 5768-70; 6000-6; 6027-9.

**COUNTY COUNCILS:**

Financial arrangements and method of keeping county accounts, 5729-31.

Government grants have not made councils extravagant, 5919; 5920.

Exchequer Contribution Account, procedure in connexion with, 5791-806.

**COUNTY COUNCILS ASSOCIATION:**

Memorandum of, 5726-8.

Statistics supplied by, 5867-72. Rateable and assessable value of certain counties, 5962-70.

**COUNTY RATE JOINT COMMITTEE IN LANCASTHIRE:**

A joint committee created under Local Government Act, 1888, 51 & 52 Vict. c. 41. s. 33 (2). Procedure. System has proved a satisfactory one to county and borough members, 5757-63.

System and procedure adopted, 5823-32.

Only one appeal against decision of committee since 1872; 5773-9.

Committee deals, if necessary, with individual properties in a parish, 5915-7.

Committee has made the Union Assessment Committees keep up the rateable value, and obliged them to make re-valuations of railways, mines, and mills, 5764.

**COUNTY RATES:**

General and special purposes of expenditure. Mode of levying payment for deficits, 5755; 5756.

Lancashire. Rates for special and general purposes. Rise or fall in recent years, 5878-83.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE.** Lancashire. Scale of deductions adopted by County Rate Committee in revision of valuation, 5771; 5772.

**EXCHEQUER CONTRIBUTION ACCOUNT:**

Distribution of, 5952-61.

In 1888, when revenues were first handed over, there was a balance for general county purposes, but there is none now owing to increased expenses, 5984-97.

Principle on which awards of the commissioners under Local Government Act, 1888, were made. Distribution of local taxation account as between county boroughs and the county, 5910-4.

Accounts of county councils and their procedure in connexion with the Exchequer Contribution Account. No difficulties as between county and county boroughs, 5791-806.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION.** Have not made county councils extravagant, 5919; 5920.

**INCOME TAX.** Lancashire. Local assessments, as a rule, have been lower than income tax assessment, 5971-83.

**INCREASE OF LOCAL TAXATION.** Lancashire. 5884; 5885.

**LANCASHIRE:**

Assessable value of administrative county since Agricultural Rates Act, 1896; 5892-907.

General county account. Main purposes of expenditure, 5732-9.

Special county account. Main purposes of expenditure, 5740; 5741; 5754.

Exchequer Contribution Account. Contributions not sufficient if half the expense of main roads be charged, 5813-6.

Exchequer Contribution Account. Contributions not sufficient, and no balance remains, 5833-66; 5873-7. Amount of rates to be raised has not been reduced since this was instituted, 5833-66.

**LOCAL GOVERNMENT ACT COMMISSION:** Lancashire. Commission gave satisfaction to county boroughs and to the county, 5891; 5921-3.

**POLICE, COST OF:**

System of dividing some counties into police districts, 5746-51.

Net cost in Lancashire, 5742-5.

**POLICE PENSION FUND.** Lancashire. Effect of pension fund upon superannuation fund, 5807; 5808.

**POOR RATE, VALUATION FOR.** Differences in valuation for Imperial and poor rate purposes outside Metropolis, 5785-90.

**PROBATE DUTY GRANT.** Proposed distribution should not be upon the basis of certain circumstances existing in 1888, but on basis of rateable value, if assessment in geographical counties uniform, 6013-26; 6030-7; 6046-8; 6057-9.

**RAILWAYS, RATING IN RESPECT OF:** Systems in England, Scotland, and Ireland, compared, 5886-90.

**RATEABLE VALUE.** Distinction between rateable value and assessable value, 5908; 5909.

**RE-VALUATION:**

Quinquennial re-valuation sufficient with power of revision and addition, 6007-9; 6038-45.

**ROADS (MAIN).** Lancashire. Main roads a charge upon the hundred. Effect of this, 5924-42.

**SPECIAL COMMISSION** as an appeal court from suggested County Assessment Committee with administrative and judicial functions, 6049-56. Should supervise county committees and prescribe regulations, 6010-2.

**SURVEYOR OF TAXES:**

Assistance of surveyor of taxes would enable a uniform basis of valuation for the whole country to be secured, 5943-51.

Advantage of assistance of surveyor of taxes in revision of county assessment, 5768-70.

Assistance of surveyor of taxes on a joint rate committee in each geographical county would help to secure a uniform assessment for all rates and taxes, 6000-6.

A county assessment committee with assistance of surveyor of taxes can undertake the valuation of a county, 6027-9.

**VALUATION:**

Houses and land should be valued on basis of rent, 5821; 5822.

Difference in valuation for Imperial and local purposes outside Metropolis, 5785-90.

Lancashire. Local assessments, as a rule, have been lower than income tax assessments. Reasons for this, 5971-83.

**VALUATION—cont.**

Lancashire. County Rate Committee has obliged union assessment committees to keep up the rateable value, and to make re-valuations of railways, mines, and mills, 5764. But there is still a difference in valuation for county rate and valuation of the several unions, 5780-4. Valuations vary very much from those for county rate basis in some rural unions, 5765-7.

**VALUATION OF SPECIAL CLASSES OF PROPERTY.** Railways, mines, mills, &c., should be valued by a special county valuer, 5820; 5821.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES:**

Uniform basis for the whole country could be secured by getting assistance of the surveyor of taxes, 5943-51.

One uniform valuation for all rates and taxes throughout the country desirable, 5809-12.

Uniform system should override all local Acts, 5817-9.

Uniform valuation for all rates and taxes desirable. Could be secured by a joint rate committee in each geographical county, with assistance of Inland Revenue and surveyor of taxes, 6000-6.

Valuation of all properties in a geographical county could be finally settled by one authority, 5918.

Uniform valuation throughout the country secured by County Assessment Committee, and a special commission to supervise these committees and prescribe regulations, 6010-2.

Would be necessary to have a strong body to effect a uniform valuation of individual properties in a county, 5971-83.

32.—**Mr. FREDERIC MERRIFIELD**, Clerk of the Peace, and of the Councils of the Counties of East Sussex and West Sussex. Representative of the County Councils Association. (Questions 6060-6153.)

**BRIDGES.** County bridges charged upon separate rapes in West Sussex and upon hundreds in East Sussex, 6079.

**COUNTY ASSESSMENT COMMITTEE:**

Suggested constitution of County Assessment Committee, 6112-21. Surveyor of taxes should assist committee, 6078.

Advantages of retaining union assessment committees, but they should be strengthened, and the valuation lists approved by the County Assessment Committee, 6122-8.

County Assessment Committee is desirable, but there should be an appeal to an independent authority, 6062-8; 6072-4. And union assessment committees should be retained, 6062-8.

Mr. Hulston's and Mr. Merrifield's proposals compared, 6081-7.

**COUNTY RATE BASIS AND COMMITTEE:**

Committee endeavour to ascertain whether individual properties are fairly assessed, 6098-101.

No joint committee in Sussex as in Lancashire, between county and county boroughs. Difficulty in carrying out such a scheme. A compromise effected, 6069-71.

Sussex County Rate Committee disregard valuations of union assessment committees, 6075; 6076. County rate basis is on basis of income tax valuation, and is higher than poor rate valuation, 6104-11.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE** Statutory scale of deductions throughout the country desirable, 6088; 6089.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

If distribution based on expenditure, contributions tend to produce extravagance, 6150-2.

No surplus in any county at present time, 6142-9.

**LOCAL TAXATION (ENGLAND) ACCOUNT:** Relief obtained by ratepayers under Local Government Act, 1888, 6080.

**POLICE, COST OF.** Boroughs can increase number and pay of their police, and half cost falls on county rates. Counties cannot do so without leave of Home Office, 6153.

**POOR RATE, VALUATION FOR.** Sussex. County rate basis is higher than poor rate valuation, 6104-11.

**PROBATE DUTY GRANT.** Basis of distribution, 6138-41.

**RE-VALUATION.** Triennial or quinquennial revaluations sufficient with power of revision and addition, 6077.

**SPECIAL COMMISSION:**

Special Commission desirable to hear appeals from county assessment committee, 6062-8.

Special Commission as an appeal court from suggested county assessment committee with administrative and judicial functions, 6072-4.

Special Commission could hear appeals of bodies represented on county assessment committee from decision of the committee, 6129-37.

**SURVEYOR OF TAXES:**

Should assist the county committees and union assessment committees, 6078; 6090-7.

**SUSSEX:**

Rateable value and assessable value compared, 6102; 6103.

No joint committee, as in Lancashire, as between county and county boroughs. Difficulty of carrying out such a scheme. A compromise effected, 6069-71.

County bridges charged upon separate rates in West Sussex and upon hundreds in East Sussex, 6079.

**UNION ASSESSMENT COMMITTEE.** Surveyor of taxes should sit with Union Assessment Committee, 6078; 6090-7.

33.—Mr. **EDWARD WOLLASTON NADIR KNOCKER**, Town Clerk of the Borough of Dover, and representative of the Association of Municipal Corporations. (Questions 6154-6267.)

**AREAS FOR PURPOSES OF VALUATION OR RATING:**

Consolidation of parishes in boroughs. Has been beneficial in Dover, 6201-4.

Dover. Boundary of union and borough should be conterminous, 6215-20. Administrative difficulties connected with alteration of boundaries of union, 6238-44.

**COUNTY COUNCILS.** Kent. Council and borough interests. No friction now. Rural representatives greatly outnumber urban, 6166-77.

**DOVER.** Public undertakings and buildings, 6163-5.

**GENERAL DISTRICT RATE.** Cost of collection as compared with poor rate, 6255-7. Reasons for difference, 6211-4.

**GUARDIANS, BOARDS OF:**

Representation of borough interest upon union assessment committee and board of guardians, 6158-60. Not adequate compared with representation of rural portion of unions. Dissatisfaction with regard to this, 6178-96.

Dover. Representation of urban parishes on board of guardians. No complaints made to Local Government Board, 6235-7.

**LEVYING AND COLLECTION OF RATES:**

One authority in each area over which a rate is laid desirable, 6263-6.

Suggestion that Corporation should be the rating and collecting authority for borough, 6221-4.

**LOCAL GOVERNMENT ACT, 1888** (51 & 52 Vict. c. 41), Dover. Effect of Act, 6161; 6162.

**OVERSEERS AND ASSISTANT OVERSEERS.**

Power of Local Government Board to transfer to urban authorities, on application, the powers and duties of, under Local Government Act, 1894. Case of Dover. Power of Council to appoint overseers and assistant overseers. Action of Local Government Board, 6205-10; 6262-4.

**POOR RATE:**

Uniform rate in borough made by one authority desirable, 6201-4.

Cost of collection as compared with general district rate, 6255-7. Reason for difference, 6211-4.

**RATES IN £ in Dover,** 6197-200.

**RATING AUTHORITIES.** Suggestion that corporation should be the rating and collecting authority for borough, 6221-4.

**UNDERTAKINGS (MUNICIPAL) in Dover,** 6163-5.

**UNION ASSESSMENT COMMITTEES:**

Representation of urban and rural districts on union assessment committees, 6225-34; 6258-62.

Representation of borough interest on Union Assessment Committee and board of guardians not adequate compared with representation of rural portion of union. Dissatisfaction with regard to this, 6178-96.

Corporation should be the assessing authority, or else corporation should be represented on Union Assessment Committee in proportion to rateable value of borough, 6225-34.

Representation of non-county boroughs upon committees, 6158-60.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES:**

One valuation authority and one rate-collecting authority desirable in each area over which a rate is laid, 6263-6.

Corporation should be the valuation authority, or else corporation should be represented on Union Assessment Committee in proportion to rateable value of borough. Representation of urban and rural interests, 6225-34.

Suggestion that if borough was created a union it should take over duties of boards of guardians and of valuation and collection, 6245-51.

Suggestion that the corporation should be the rating and collecting authority for borough, 6221-4.

34.—Mr. **GEORGE SWAINSON, F.L.S.**, Treasurer of the County Borough of Bolton. (Questions 6268-6337.)

**AREAS FOR RATING.** Consolidation of parishes in Bolton, 6308; 6309.

**AUDITING OF ACCOUNTS:**

Of overseers, 6282; 6283. Present and past systems, 6371-82.

Poor rate. Government auditor, 6310-2.

School board accounts, 6313.

**BARROW-IN-FURNESS.** Consolidation and collection of rates. Method, 6275-81.

**BOLTON:**

Consolidation of parishes, 6308; 6309.

Consolidation and collection of rates. Method, 6275-81.

Appointment of assistant overseers by corporation, but the guardians appoint the collector for poor rate, 6300-7; 6364; 6365.

System of collection of rates, &c., satisfactory. Suggested improvements, 6315-8.

**BOLTON IMPROVEMENT ACT, 1877** (40 & 41 Vict. c. 188). Consolidation and collection of rates, 6284-6.

**BOLTON TEAMWAY AND IMPROVEMENT BILL,\* 1897:**

Proposed that corporation should collect poor rate for the guardians, which is an unprecedented proposal, 6366-70.

No provision made with regard to the audit of the rate, 6383-5.

Withdrawal of certain clauses. The Oxford clauses, 6287-90. Power sought by corporation to collect all rates, 6296-9.

\* This Bill received the Royal Assent on July 15th, 1897 (60 & 61 Vict. c. 184).

- CLASSIFICATION OF RATES:** Rates of burden or necessity, and rates of benefit or luxury. Return, 6319-25. Character of circular sent to certain towns with reference to, 6326-53. Classification in return discussed, 6354-63.
- COMPOUNDING, Bolton.** A 10% limit under special Act, 6314.
- CONSOLIDATION OF RATES:**  
Bolton Improvement Act, 1877, 6275-81; 6284-6.  
Barrow-in-Furness, 6275-81.  
Huddersfield, 6275-81.
- HUDDERSFIELD.** Consolidation and collection of rates. Method, 6275-81.
- LEVYING AND COLLECTION OF RATES:**  
Bolton. System in, is satisfactory. Suggested improvements, 6315-8.  
Barrow-in-Furness, Bolton, and Huddersfield, methods in, 6275-81.  
One assessing and one rate collecting authority for whole borough desirable, 6386; 6387.  
Inclusion of poor rate in Corporation's demand for borough and district and one receipt given desirable, 6314.
- OVERSEERS AND ASSISTANT OVERSEERS.** Power of Local Government Board to transfer to urban authorities on application the powers and duties of, under Local Government Act, 1894. Application as regards overseers refused in the case of Bolton, 6300-7; 6364; 6365.
- OXFORD CORPORATION ACT, 1890 (53 & 54 Vict. c. 223):**  
Oxford clauses (ss. 115 and 116), 6287-90.  
Valuation of city. Satisfactory system, 6291-5.
- POOR RATE (ENGLAND):**  
Inclusion of, in corporation's demand for borough and district rates, and one receipt given desirable, 6314.
- VALUATION, UNIFORMITY IN.** One valuation and one rate-collecting authority for whole borough desirable, 6386; 6387.
- 
- 35.—Mr. **ARTHUR JOHN HARRIS**, Clerk to the Assessment Committee of Cardiff Union, Glamorgan. (Questions 6388-6421.)
- VALUATION AND COLLECTION, UNIFORMITY IN, AND SUGGESTED AUTHORITY.** Union Assessment Committee representing the chief spending authorities should be the sole local authority for making all assessments and collecting all rates. Assessment Committee should take the duties of overseers and should raise fixed rates in £, 6395-417.
- CARDIFF UNION.** Assessment of Union Assessment Committee and county rate basis nearly correspond, 6418; 6419.
- UNION ASSESSMENT COMMITTEE ACT, 1862 (25 & 26 Vict. c. 103).** Criticisms on, 6390-3.
- VALUATION LISTS.** Deposit of lists and objections, 6394.
- 
- 36.—Mr. **GEORGE NORTON**, President of the Liverpool Land and House Owners' Association. (Questions 6422-6592.)
- COMPOUNDING:**  
Allowances with regard to poor rate, 6543-60.  
Liverpool has a local Act with reference to municipal rates, 6543-60. Owner obliged to pay whether property occupied or not, and gets 50 per cent. for collection, 6426-8. System is satisfactory, 6431-4.
- DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE:**  
Liverpool. Poor rate valuation. Amounts allowed, 6441-6.  
Uniform deductions for the same classes of property desirable, 6447, 6448, 6469, 6470.
- EDUCATION, COST OF.** Suggested that expenditure on education should be paid by Exchequer, 6475-85, 6569-79. But such expenditure should be in the form of subventions, 6586.
- INCIDENCE OF LOCAL TAXATION:**  
Small property owners, position of, 6491-8.  
Present incidence as between owners and occupiers, 6527-42; 6587-90.  
Contributions in respect of different classes of real and personal property to rates desirable, 6471-3.
- INCOME TAX IN AID OF LOCAL EXPENDITURE.** Suggested addition to income tax for local purposes, 6499-508.
- LEVYING AND COLLECTION OF RATES:**  
West Derby Union and City of Liverpool. Poor Law authorities collect poor rate, city rate, school board rate, and library rate, and charge municipality commission, 6449-51.  
One authority in each area over which a rate is laid results in economy, 6486-90.  
Liverpool. One body for purposes of collection desirable. This could be accomplished notwithstanding the city is in three unions, 6452-68.
- LIVERPOOL LAND AND HOUSE OWNERS' ASSOCIATION.** Particulars of, 6424, 6425, 6509-26.
- PERSONAL PROPERTY:** Persons owning personal property should contribute in respect of it to local rates, 6471-3; 6561-8. Suggested method of carrying this out, 6474.
- POOR RELIEF (EXPENDITURE UPON).** Suggested that it should be met by Exchequer, 6475-85; 6569-79. Suggested that Poor Law should be administered by a Government Department, 6580-5.
- REAL PROPERTY.** Contributions in respect of different classes of real and personal property to rates desirable, 6471-3.
- SEWER RATE.** Liverpool. Owner pays half, 6428-30.
- VALUATION, UNIFORMITY IN:**  
One valuation authority and one rate-collecting authority in a given area results in economy, 6486-90.  
Liverpool has three classes of assessments with regard to property, 6435-9.  
Liverpool, assessments with regard to poor rate. Seven sets of assessors and seven areas, 6440.  
Liverpool. One body for valuation purposes desirable. This could be accomplished notwithstanding the city is in three unions, 6452-68.
- WATER RATE:** Liverpool. Owner pay half, 6428-30.
- 
- 37.—Mr. **CHARLES WATKINS**, Representative of the United Property Owners and Ratepayers' Association of Great Britain. (Questions 6593-6723.)
- EDUCATION, COST OF:** Suggested that expenditure on education should be paid by Exchequer, 6628. Effect of this on particular classes, 6704-6. Question of control discussed, 6599-622; 6641-68. Discussion as to what classes should bear this expenditure, and what administrative changes should take place, 6641-68.
- INCIDENCE OF LOCAL TAXATION** in respect of the burden borne by owners and tenants; the case of tenants belonging to different classes, 6707-22.
- INCREASE OF LOCAL TAXATION:** Greater objection taken to a rise in taxes than to a rise in rates, 6692-703.
- INHABITED HOUSE DUTY:** Tax should be abolished, 6623-7.
- LEVYING AND COLLECTION OF RATES:** One authority desirable, 6631-6.
- LOCAL GOVERNMENT.** Indifference of ratepayers, 6669-85.

**POLICE, COST OF:** Suggested that cost should be paid by Exchequer. Question of control discussed, 6599-622; 6641-68. Effect of this on particular classes, 6704-6. Discussion as to what classes should bear this expenditure, and what administrative changes should take place, 6641-68.

**POOR RELIEF (EXPENDITURE UPON):** Suggested that it should be met by Exchequer, 6628. Question of control discussed, 6599-622; 6641-68. Effect of this on particular classes, 6704-6. Discussion as to what classes should bear this expenditure, and what administrative changes should take place, 6641-68.

**UNITED PROPERTY OWNERS AND RATEPAYERS' ASSOCIATION OF GREAT BRITAIN:**  
Particulars of, 6594-8.  
Constitution of, 6686-91.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES:**  
Uniform valuation for all rates and taxes desirable in provinces as well as in Metropolis, 6631-6.  
County councils should be the valuation authorities for all purposes in counties, and also in Metropolis, 6637-40.  
Metropolis. Different assessing authorities and assessments. Uniformity desirable, 6629; 6630.

38.—Mr. **ROBERT ALFRED BELLWOOD**, General Secretary of the United Property Owners and Ratepayers' Association of Great Britain. (Questions 6724-6795.)

**EDUCATION, COST OF.** Suggested that expenditure on education should be paid by Exchequer, 6735-7.

**INCIDENCE OF LOCAL TAXATION:**  
Whether all classes of the community contribute to local taxation, 6763-78.  
Contributions in respect of different classes of real and personal property to rates. Probable effect in Liverpool, 6728-32.

**LEVYING AND COLLECTION OF RATES.** One authority desirable, 6738-41. For both local and Imperial rates and taxes in a municipality, 6779-94.

**PERSONAL PROPERTY:**  
Rating in respect of, on income tax basis suggested. Difficulty of localisation, 6742-62.  
Difficulties of rating, 6733; 6734.

**POOR RELIEF (EXPENDITURE UPON).** Suggested that it should be met by Exchequer, 6735-7.

39.—Mr. **WILLIAM KING**, Secretary of the Southport and District Property Owners and Ratepayers' Association. (Questions 6796-6838.)

**EDUCATION, COST OF,** should be borne by Exchequer. Question of control of expenditure and administration discussed, 6802-37.

**POOR RELIEF (EXPENDITURE UPON).** Suggested that it should be borne by Exchequer. Question of control of expenditure and of administration discussed, 6802-37.

**SOUTHPORT AND DISTRICT PROPERTY OWNERS AND RATEPAYERS' ASSOCIATION.** Constitution of, 6797-801.

40.—Mr. **JOSEPH STEVENSON HORN**, Clerk to the Board of Guardians of Burnley Union, Lancs. (Questions 6839-6983.)

**AREAS FOR PURPOSES OF VALUATION OR RATING.** Should be poor law unions, not the county, 6941-4.

**BURNLEY UNION.** Particulars of areas, rateable value, &c., 6842. In two administrative counties. No inconvenience 6885-7.

**COMPOUNDING:**

Local authorities should have option to adopt, 6938-40.  
Burnley and Nelson. Collection is rather better in Burnley, where there is no compounding, than in Nelson, where there is, 6869-74.  
Allowance of 25 per cent. is too high, 6959.  
Nelson. Amounts allowed are too high, 6926, 6927.  
Burnley Union. No advantage in compounding. Economy on behalf of spending authorities promoted if occupiers pay rates and know cost of local government, 6875-8.

**CONSOLIDATION OF RATES.** There should only be one rate collected by overseers, 6880. And audited by district auditor, 6928.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE (ENGLAND):**

Burnley Union. Amounts allowed on various classes of property, 6848-50. Case of land and buildings, 6851-64.  
Statutory scale of deductions throughout the country desirable, 6918-25.  
Proposed statutory scale if gross value be not made rateable value, 6973-82.

**GOVERNMENT PROPERTY:** Should be assessed to rates, 6930-5.

**LEVYING AND COLLECTION OF RATES:**

Burnley. Procedure in, 6867; 6868.  
One authority desirable, 6936; 6937.  
Desirable to have overseers constituted the authority for all purposes, 6879; 6880.

**LOCAL GOVERNMENT:** Economy on behalf of spending authorities if occupiers pay rates and know cost of local government, 6875-8.

**MACHINERY, RATING IN RESPECT OF:** Burnley Union. Movable machinery is not rated, 6960-3.

**RE-VALUATION:** Triennial re-valuations desirable, 6898-910.

**SURVEYOR OF TAXES:** Should sit with union assessment committees, 6884. And have power of appeal, 6888-97; 6947.

**UNION ASSESSMENT COMMITTEES:**

Burnley. Manufacturers, shopkeepers, and companies well represented on Union Assessment Committee. Case in London compared,\* 6964-72.  
Representation of town council upon Union Assessment Committee, 6945; 6946.  
Surveyor of Taxes should sit with Union Assessment Committee, 6884. And have power of appeal, 6888-97; 6947.  
Municipalities should be represented upon union assessment committees, but should not be the assessing authority, 6929.

**VALUATION,** Basis should be gross value, 6911-7; 6953-8; 6973-82; Reasons for this view, 6911-7.

**VALUATION LISTS, REVISION OF:** Burnley. Overseers are required to send in supplemental lists at least twice a year and four times a year if they like, 6843-7.

**VALUATION OF SPECIAL CLASSES OF PROPERTY:** Burnley Union. Only one appeal to quarter sessions in 15 years, 6865; 6866.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES:**

One valuation for local and Imperial purposes. County authorities might follow the valuation of assessment committees if Surveyor of Taxes had a seat on them with power of appeal. But county authorities should have rights of appeal to quarter sessions, 6888-97.  
County rate basis unnecessary, but county council should have right of appeal, 6948-52.  
Union Assessment Committee the best authority, 6881-3.  
Municipality should be represented on union assessment committees, but should not be the assessing authority, 6929.

\* Referred to by Mr. Humphreys-Davies. See 4174-6.

**INCOME TAX IN AID OF LOCAL EXPENDITURE.** Income and not rental value should be the basis for assessment in respect of rates, 7595-616. And also taxes, 7646-57. Difficulty of carrying out such a proposal, 7617-30. Suggested scheme for defraying all local rates by means of a national charge. Questions of local benefits received and local control discussed, 7595-616; 7658-62.

**SPORTING RIGHTS.** Rating in respect of, 7632-40.

47.—Mr. **WILLIAM EVE**, Fellow of the Surveyors' Institution, and Honorary Examiner at that Institution on the subject of Parochial Assessments. Representative of the London Farmers' Club. (Questions 7693-7893.)

**ACCOMMODATION LAND :**

Suggested definition of, 7771-4; 7822-31.  
Should have been excluded from operation of Agricultural Rates Act, 1896, 7712-7; 7729-52; 7771-4.

**AGRICULTURAL LAND.** Highways and school boards. Owners and occupiers of agricultural land contribute too much towards local rates in respect of expenditure upon, 7708-11; 7760; 7761.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16) :**

Suggested reason for its introduction, 7775-80.  
Benefits derived from accrue to tenants and not to the landlords, 7878-84.  
Reasons why permanency of Act is desirable, 7768-70.

Act has proved beneficial, 7874-7.  
Act has removed the injustice imposed on owners and occupiers of land in respect of their contribution to poor law expenditure, 7762-7.

Does not observe the principle of taking actual value of occupation as basis for valuation, 7794-802.

**AGRICULTURISTS.** Farmers used to take farms without considering rates, but they consider them now, 7867-73; 7892; 7893.

**APPEALS AGAINST VALUATION :**

Quarter sessions should have power to raise as well as to reduce assessments, 7702; 7703.

Not desirable that owners should be given a right of appeal, 7786-8.

Overseers should have right of appeal against decision of union assessment committees in the country as they have in London, 7832-46.

A specially constituted appeal court to hear rating appeals, instead of quarter sessions desirable, 7726-8.

**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER.** Would be inexpedient. Reasons for this view, 7789; 7790.

**GLASS HOUSES.** Should be the subject of valuation for rating purposes like farm buildings, 7718-22.

**INCIDENCE OF LOCAL TAXATION.** All persons interested in property pay a contribution to local rates. Evidence in support of this view, 7791-3.

**LAND.** If principle of remitting taxation on poor land exists the principle of raising it on land which has increased in value should also exist, 7803-6.

**MACHINERY, RATING IN RESPECT OF.** Principle said to be equitable, 7723-5; 7781-5.

**MARKET GARDENS.** Should have been excluded from operation of Agricultural Rates Act, 1896 7712-7; 7729-52.

**RENT :**

Suggested definition of, 7814-21.  
Adjustment of rent in case of high or low rates, 7860-6.

Householders take rates into account when taking property, 7892; 7893.

**RE-VALUATION.** Re-valuation should be made every 10 years in country, and every five years in cities, 7697; 7698.

**VALUATION :**

Basis and system unsatisfactory, 7695; 7696.

Gross estimated rental should not be basis for valuation. Reasons why rateable value should be, 7699-701.

Distinction between gross value and rateable value, 7885-90.

**VALUATION LISTS :**

Objectors before Union Assessment Committee should be compelled to give figures, 7704-7.

"Gross estimated rental" column should be abolished, 7699-701; 7847-59. And instructions given as to the method by which the rateable value should be arrived at, 7753-9.

**VALUE.** Suggested definition of, 7807-13.

48.—Mr. **ALBERT FELL**. Representative of the Local Taxation Committee. (Questions 7894-8037.)

**AGRICULTURAL LAND :**

Essex. Valuation of land above rental value, 7915-20. Valuation of certain land in hand above rental value, 7909; 7910. Action of union assessment committees and quarter sessions. Suggestion as to alteration of the tribunal of appeal, 7940-9. Certain union assessment committees do not deduct tithe from gross rental, 7911-4.

Valuation of land above rental value, 7974-82. In Cambridgeshire, 7939.

Profits from farming. Results of farming land in hand belonging to Guy's Hospital, 7983-96.

Increase of urban influence upon union assessment committees and over valuation of agricultural property, 8024-6.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16) :**

Value of Act to agriculturists, 7997; 7998; 8000-8.  
Separate valuation of houses, buildings, and land is desirable, 7939.

**APPEALS AGAINST VALUATION.** Suggestions as to alterations of tribunals for appeals, 7940-9.

**COUNTY RATE BASIS AND COMMITTEE.** Northamptonshire. Attitude of County Rate Committee towards union assessment committees in the county and their valuations, 7929-36.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON :**

Local rates expended on purposes of a national character should receive relief from Imperial sources, 7969-73.

Suggestion that funds for support of indoor paupers should be raised from a large area such as the county, with a contribution from Imperial sources, 8027-9.

Pauper lunatics should be paid for out of Imperial funds, 8030-7.

Nationalisation of poor rate not at all desirable on administrative grounds, 8009-11. Nor of charges for district roads, sanitation, or school boards, 8012-4.

**LOCAL TAXATION COMMITTEE.** Their view on the subject of rating, 8015-23.

**METROPOLITAN COMMON POOR FUND.** Advantages of fund, 8027-9.

**POOR RELIEF (EXPENDITURE UPON) :**

Suggestion that funds for support of indoor paupers should be raised from a large area, such as the county, with a contribution from Imperial sources. Advantages of Metropolitan Common Poor Fund, 8027-9.

Pauper lunatics should be paid for out of Imperial funds, 8030-7.

**RAILWAYS :**

Valuation by overseers is not satisfactory, 7902.  
Production of books of railway companies desirable for purposes of valuation. Basis of valuation, 7950-66.

Valuation raised by certain unions. Appeals, 7908.  
Scottish method of rating is better than English, 7904-7; 7950-66.

- RE-VALUATION.** Periodical re-valuation desirable, 7900; 7901.
- SURVEYOR OF TAXES.** Should sit with union assessment committees, 7923-5; 8024-6.
- UNION ASSESSMENT COMMITTEES:**  
As at present constituted committees are not sufficiently competent bodies, 7921.  
Surveyor of taxes should sit with Union Assessment Committee, 7923-5; 8024-6.
- VALUATION.** Valuation (Metropolis) Act should be extended to rest of country, 7896-9; 7922.
- VALUATION LISTS (ENGLAND).** "Gross estimated rental" column should be abolished, 7999.
- VALUATION (METROPOLIS) ACT, 1869 (32 & 33 Vict. c. 67).** Is satisfactory, 7937; 7938.
- VALUATION OF SPECIAL CLASSES OF PROPERTY:**  
Union Assessment Committee should make the valuation list for the parishes in respect of certain properties, such as railways, instead of the overseers, 7903; 7923-5; 7967; 7968. Professional valuers should be employed who should have access to companies' books, 7903.  
Valuation of railways and certain other properties by overseers is not satisfactory. Scottish system desirable. Production of books of railway companies desirable for purposes of valuation. Basis of valuation of railways, 7950-66.
- VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES.** Uniform valuation for all rates and taxes desirable in provinces as well as in metropolis, 7926-8; 7937; 7938.
- 
- INCIDENCE OF LOCAL TAXATION:**  
Present incidence as between owners and occupiers, 8101-32.  
Effect of Imperial contributions, 8166; 8167.  
Owners and occupiers of real property, and particularly of agricultural land, alleged to be unduly burdened, 8044-6.  
Non-rateable property, contribution in respect of, to Imperial purposes, 8181-5; 8193-6.  
In urban and rural districts, 8174-80.
- INHABITED HOUSE DUTY** applied to local purposes. How far desirable, 8186-92.
- LAND TAX** applied to local purposes. How far desirable, 8186-92.
- LOCAL SERVICES, EXPENDITURE UPON.** New sources of revenue, 8158.
- LONDON FARMERS' CLUB,** constitution of, 8041-3.
- MORTGAGEES:** Position as regards local taxation, 8155-7.
- PERSONAL PROPERTY,** suggested income tax on, 8081-3; 8139-44. For expenditure on purposes of a national character now borne by local rates, 8089-97.
- POOR RELIEF (EXPENDITURE UPON):**  
Indoor maintenance should be assisted by Imperial contributions, 8098-100.  
Imperial contributions should be increased in respect of maintenance of indoor poor and pauper lunatics, 8149-53.
- RATES, INCREASE OR DECREASE OF:**  
Increase or decrease of the burden of certain rates, 8084-6.  
Rural districts. Whether aggregate amount has increased, 8197.
- 
- 49.—**Mr. WILLIAM CUTLACK LITTLE, J.P.,** Chairman of the County Council for the Isle of Ely, Chairman of the Income Tax and Land Tax Commissioners in the Isle of Ely, land-owner, and tenant farmer; Representative of the London Farmers' Club. (Questions 8038-8197.)
- ABILITY TO PAY, TAXATION UPON PRINCIPLE OF.** Income is the best measure, 8133-7.
- AGRICULTURAL LAND:**  
Rates paid, 8160-2.  
Cambridgeshire, rates paid on a farm in, 8056-7.  
Owners and occupiers alleged to be unduly burdened, 8044-6.  
Suggested that land should be assessed at one-fourth, 8087; 8088.  
Agricultural land contributes too much towards local rates in proportion to the income derived from it, 8101-19; 8138.  
Agricultural land contributes too much in rates towards expenditure on purposes of a national character, 8047-55; 8058-63.  
Maintenance of poor, agriculturists contribute too much in respect of expenditure upon, 8047-55.
- AGRICULTURISTS** often take farms without considering the rates, 8101-19; 8168-73.
- BENEFITS DERIVED FROM EXPENDITURE OF RATES.** Position of agriculturists and owners and occupiers of other rateable property with regard to benefits received from expenditure of rates, 8064-77.
- CLASSIFICATION, SYSTEM OF,** is a fair one, but complicated, 8154.
- DIVISION OF RATES BETWEEN OWNER AND OCCUPIER.** Question of representation by owners, 8159.
- HEREDITARY BURDENS IN RESPECT OF REAL PROPERTY.** Theory objected to, 8193-6.
- IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION.** Contributions should be taken out of a fund to which real property does not contribute, 8078-80; 8145-8; 8163-5.
- 
- 50.—**Mr. EDWARD WHITTRED ILTYD PETERSON,** Secretary and Solicitor to the Tithe Rentcharge Owners' Union. (Questions 8198-8509.)
- ABILITY TO PAY, TAXATION UPON PRINCIPLE OF:**  
Definition of ability to pay, 8220-3.  
Doctrine cannot be applied to local rating, 8305.  
Local taxes should be paid by persons in respect of all kinds of property according to their ability to pay, 8211-9.  
Contributions to Imperial as well as local taxation must be considered, 8207-10.  
Maidstone rate-books for year 1680, extracts from, 8380-5.
- AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16).** Reasons for omission of tithe rentcharge from the Act. Inclusion of tithe rentcharge in the scope of Act would give substantial justice and satisfy tithe-owners, 8461-72.
- GLEBE LAND.** Valued as other agricultural land, 8486-8.
- IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION.** Increase of contributions. Question of local control and extravagance discussed, 8224-33; 8473-5.
- INCIDENCE OF LOCAL TAXATION:**  
Contribution, direct and indirect, to rates in respect of real and personal property, 8306-43.  
Rates expended upon purposes which do not specially benefit real property should be paid in respect of both real and personal property, 8203-6.
- INCOME TAX IN AID OF LOCAL EXPENDITURE.** Suggested addition to income tax for local purposes. Income derived from property and personal exertion. Should any distinction be made? 8476-85.

Index  
to Evidence.

**LAND:**

To what extent land should be assessed to rates, 8344-79.  
Increase of rent in England and Wales between 1836 and 1876. Landowners obtained a large sum representing the benefit which would have accrued to the Church under the old right of participation. Sir James Caird's views, 8386-406; 8504; 8505.  
Decrease of rent since 1876, 8504; 8505.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON.** Imperial contribution in respect of certain local expenditure. Question of local control and administration, 8224-33.

**REAL PROPERTY.** Owners and occupiers bear the burden of local rates, 8200-2.

**TITHE ACT, 1891 (45 & 55 Vict. c. 8).** Deductions from tithe rentcharge for loss to owner owing to inability under Tithe Act, 1891, to sue for it until three months after it is due, 8295; 8296.

**TITHE AND TITHE RENTCHARGE:**

Tithe is really rent, 8241-3.  
Tithe equal to rent in certain corn lands, 8506-8.  
Market value of tithe. Redemption at present prices not desirable, 8496-503.  
Tithe owners not treated fairly by union assessment committees, which are chiefly composed of farmers, 8257-61.  
Owner is rated above the sum at which his property would let to a hypothetical tenant. Deductions now allowed, and those which should be allowed in respect of tithe rentcharge, 8262-73; 8301-3; 8438-50; 8489-95.  
Deductions allowed to tenant farmers should be allowed in case of tithe rentcharge, 8451-5.  
Lay improprator, 8430-7.  
Deduction for loss to owner owing to inability under Tithe Act, 1891, to sue for tithe until three months after it is due, 8295; 8296.  
Chancel repairs should be allowed for, 8274-82.  
Deductions in respect of curate's stipend. Question who should decide if a curate was necessary, 8283-90.  
Deductions claimed for personal services, 8298-300. Question how far personal services and tenants' profits can be separately treated, 8304. To what extent should they be estimated, 8456-60.  
Deduction allowed for tenants' profits, 8262-73; 8297; 8438-50.  
Leasing of tithe rentcharge is very uncommon, 8426-9.  
Tithe rentcharge let to a hypothetical tenant. Increase of rates, 8291-4.  
New rates should not have been imposed in respect of tithe rentcharge since Tithe Commutation Act, 8244-7.  
Reasons for omission of tithe rentcharge from Agricultural Rates Act, 1896. Inclusion of, in scope of Act would give substantial justice, and satisfy tithe owners, 8461-72.  
Rating in respect of land and tithe rentcharge. If equitable in the one case is equitable in the other, 8248-56.

**TITHE COMMUTATION ACT, 1836 (6 & 7 Will. IV., c. 71.):**  
History of the Act, 8416-25.  
How the question of rates was dealt with, 8234-40.  
Septennial average, 8407-15.

**UNION ASSESSMENT COMMITTEES.** Committees are chiefly composed of farmers. Tithe rentcharge owners not treated fairly by the committees, 8257-61.

**AGRICULTURAL LAND:**

Essex. Land assessed in Dunmow Union at less than annual value, 8542; 8543; 8566-76.  
Land valued lower than tithe rentcharge. Reasons for this and illustrations, 8514-7. Gross estimated rental and rateable value of land as compared with tithe rentcharge, 8523.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16).** Inclusion of tithe rentcharge in the scope of Act would give substantial justice and satisfy tithe owners, 8528.

**GLEBE LAND.** Valued as other agricultural land, 8534-41.

**HACKNEY CASES (Tithe Rentcharge), 8577; 8578.**

**SURVEYOR OF TAXES.** Should sit with union assessment committees, and have power of appeal, 8560-5.

**TITHE AND TITHE RENTCHARGE:**

Redemption. Number of years' purchase necessary to produce present income, 8544-9; 8554-6.  
Dunmow Union. System adopted. More rates paid proportionally in respect of tithes than of land since fall in value of land, 8553; 8602.  
Hackney cases, 8577; 8578.  
Deduction claimed for personal services, 8528-33; 8550-2; 8557-9; 8589-98. Question how far personal services and tenant's profits can be separately treated, 8524-7.  
Deduction claimed for curates' stipend, 8589-98.  
Difficulty of conjecturing what a lessee would give, 8579-88; 8599-601.  
Inclusion of tithe rentcharge in scope of Agricultural Rates Act, 1896, would give substantial justice, and satisfy tithe-owners, 8528.  
Land valued lower than tithe rentcharge. Reason for this and illustrations, 8514-7.  
Gross estimated rental and rateable value of tithe rentcharge as compared with land, 8523.

**UNION ASSESSMENT COMMITTEES.** Surveyor of taxes should sit with Union Assessment Committee, and have power of appeal, 8560-5.

**VALUATION.** A fair method desirable. Net annual value should be the basis, 8518-22.

52.—The Rev. **CHARLES ABBOTT STEVENS**, Vicar of Portslade, near Brighton, and formerly Secretary of the Committee which conducted the Hackney cases. (Questions 8604-57.)

**CHURCH, PROPERTY OF, IN LAND AND TITHES.** Whether a profitable security, 8641-4.

**CLERGY.** Position of parsons and vicars. Whether inhabitants or occupiers, 8609; 8621.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON.** Maintenance of poor and highways should be paid for out of the general income of the country by Imperial contributions, according to the ability of the inhabitants. Question of administration, 8610-20.

**PAROCHIAL ASSESSMENTS ACT, 1836 (6 & 7 Will. IV. c. 96).** Act is unsatisfactory, 8656; 8657.

**POOR RATE ACT, 1840 (3 & 4 Vict. c. 89).** Is unsatisfactory, 8656; 8657.

**TITHE AND TITHE RENTCHARGE.** Tithe or tithe rentcharge belonging to the Church should be treated differently from the tithe belonging to a lay tithe-owner. Question whether tithe or tithe rentcharge is a hereditament, 8645-55.

**VALUATION.** Rent the basis. Is not now a fair basis, 8608; 8609.

51.—The Rev. **EDWARD FRANCIS GEPP**, M.A., J.P., Vicar of High Easter, Essex, Deputy Chairman of Quarter Sessions and Alderman of the Essex County Council, Member of the Council of the Tithe Rentcharge Owners' Unions. (Questions 8510-8603.)

53.—**MR. GEORGE LAURENCE GOMME**, Statistical Officer of the London County Council. (Questions 8658-9105.)

**AGRICULTURAL RATES ACT, 1896** (59 & 60 Vict. c. 16):

Amounts received from local taxation account vary in different counties, and also in boroughs. Inequalities further increased by Act, 8699-706. London. Amount received under Act, 8811.

**AREAS FOR PURPOSES OF RATING.** Question of the area with which a local authority shares its taxation, 8819-23.

**BENEFITS DERIVED FROM EXPENDITURE OF RATES:**

Local expenditure which benefits property. Direct and indirect. Classification. Statistics. Payment of local taxation in respect of property, 8861-4. Comments upon suggested classification of cost of in-door and out-door poor, roads, 8970; 8971. Parks, commons, open spaces, out-door poor, lunatics, 8988-91.

**CITY OF LONDON:**

Rates said to have decreased, 8802; 8803. No special county rate, 8754-79.

**CRIMINAL PROSECUTIONS.** Position of London in relation to rest of country as regards Government grants towards cost of criminal prosecutions, 8944-50.

**DISEASES OF ANIMALS ACT, 1894** (57 & 58 Vict. c. 57). Unfavourable operation as regards Government grants to London, 8728.

**EDUCATION, COST OF:**

Proportion of expenditure borne by rates and proportion borne by Government grants. Comparison between London, county boroughs, and counties, 8712-8. Grants to school boards according to education results. London's share, 8961-3. Grants to voluntary schools. London's share, 8964-9. Suggested that expenditure on education should be paid by Exchequer, 8996. Question of control discussed, 9088-101.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION (ENGLAND):**

Alteration of system. Mr. Gomme's suggestion. Effect on London and rest of country, 8997-9007. Counties distribute certain amounts from contributions to parishes and unions, 8941-3. Expenditure should not be the basis of distribution, 8882-96. How far population should be the basis of distribution, 8921-9. Equalisation of Rates Act (London). Distribution on basis of population, 9015-31. Amounts levied in a local area should be appropriated by that area. But the same method would not be fair to apply to all kinds of grants, 8916-20. Inhabited house duty and land tax, which are really local taxes, should be handed over to localities instead of equivalent sums being paid by the Government on the present basis, 8930-6; 9084-7. Amounts received by county boroughs said to compare unfavourably with that received by counties. Statistical tables (1893-4) in support of this view, 8996-8. Amounts received vary in different counties and also in boroughs. Inequalities further increased by Agricultural Rates Act, 1896, 8699-706. Proportion of local expenditure defrayed out of Imperial contributions and out of rates. Comparison between London, county boroughs, and counties, 8719-22.

**INHABITED HOUSE DUTY:**

Is really a local tax, and should be handed over to localities instead of equivalent sums being paid by the Government on the present basis, 8930-6; 9084-7. Suggested transference of proceeds by Imperial authority to local authorities in aid of local expenditure, 8838-45.

**LAND TAX:**

Suggested that proceeds should be applied to local purposes, 8838-45. Is really a local tax, and should be handed over to localities instead of equivalent sums being paid by the Government on the present basis, 8930-6.

**LOCAL AND IMPERIAL SERVICES. EXPENDITURE UPON:**

Imperial and local taxation should be re-classified, and each locality bear its own local burdens, 9075-7. And all taxes collected locally, including inhabited house duty, should be applied to local purposes, 9084-7. Imperial contributions should not be made for services which benefit property, nor should property pay locally for services which are for Imperial purposes, 8992-5. Most of poor law purposes and education should be paid for out of Imperial sources, 8996. Question of administration discussed, 9088-101.

**LOCAL TAXATION (ENGLAND) ACCOUNT:** Allotment of licences based on amounts collected in counties a satisfactory basis, 8729-33.

**LUNATICS,** expenditure upon, should be paid out of Imperial sources. Question of administration discussed, 9088-101.

**METROPOLIS. ADMINISTRATIVE AND NON-ADMINISTRATIVE PARISHES IN.** Distinction between, 8741-6.

**METROPOLIS. DIRECT LOCAL TAXATION:**

(a.) *Exemptions from Rating.*

List of local Acts, 8790-3. How dealt with in parish demand notes, also county rate. Suggested alteration, 8794; 8795. Cause inequalities, 8754-79. Position of parishes in regard to, 8804-7. Should be thrown on the county rate and become a county charge, and be borne by London as a whole, 8780-9; 8808.

(b.) *Amount of Local Taxation.*

Map showing degree of rating and rate in the £ in every parish, 8741-6; 8754-79. Growth of local taxation in recent years, 8857-60. Proportion to England and Wales, 8664-7; 8812-8. Rateable value of property and rates, increase of, 8865-74.

(c.) *Relief of Poor.*

Differentiation in rates in respect of. How far due to difference in administration, 8824-30. Expenditure higher than in most places in England. Administration, 8831; 8832. Position of London as regards Imperial contributions for relief of poor, 8944-50.

(d.) *Differentiation in Rates.*

How far altered by equalisation of rates. Principal causes of. Special county rate not levied in city; Asylums Board charge not levied upon certain places; common poor fund not levied on Penge. Also exemptions from rating cause inequalities, 8754-79; 8808. Also amounts payable for loans in different parishes, 8796; 8808. Site values and special services, 8808. Differentiation in rates that is due to non-preventable causes, 8804-7. Poor and rich districts compared, 8809; 8810. Rates in respect of poor law. How far differentiation due to difference in administration, 8824-30.

(e.) *Equalisation of Rates.*

Suggested alteration in system, 8747-51. Effect on differentiation in rates, 8754-79. Distribution of amounts on basis of population, 9015-31.

(f.) *Private Rating Authorities.*

Taxation in hands of; voluntary schools; certain markets; and water companies, 8752; 8753. Question of the areas with which London shares its taxation in respect of water supply. London said to be disadvantageously affected, 8819-23. Water companies' charges excluded from Mr. Gomme's tables, 9048-64.

Index  
to Evidence.

**METROPOLIS. DIRECT LOCAL TAXATION—cont.***(g.) Valuation.*

Valuation high owing to action of surveyor of taxes, 9078; 9079.  
Site values not separately valued. Effect of this, 8797-801; 8808.

**METROPOLIS—EDUCATION, COSTS OF:**

Imperial contributions. Statistics, 8707-11.  
Proportion of expenditure borne by rates and proportion borne by Government grants. Comparison between London, county boroughs, and counties, 8712-8.  
Grants to school boards according to education results. London's share, 8961-3.  
Grants to voluntary schools. London's share, 8964-9.

**METROPOLIS—IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

Position of London. Statistical tables, 8685-95.  
Apportionment of contributions. Mr. Gomme's objections and proposals. London's share of estate duty, beer and spirit duties. Also what its share would be of land tax and inhabited house duty, 9065-74.  
Alteration of system. Mr. Gomme's suggestion. Effect of, on London and rest of country, 8997-9007.  
Allotment of licences based on amounts collected in counties. A satisfactory basis though relatively small proportion received by London, 8729-33.  
Amount received by London and the county boroughs said to compare unfavourably with that received by counties. Statistical tables (1893-4) in support of this view, 8696-8.  
Alleged inequitable distribution. Reasons for this. The year chosen for fixing the basis of apportionment by discontinued grants not fair to London, 8723. City police paid for from City estates and London lost portion of Government grant, 8724; 8725; 8951-6. Also grant to London for main roads very small; and for medical officers and sanitary inspectors nothing, 8724; 8725.  
Apportionment of contributions. London said to be worse off in proportion to rateable value and local taxation than counties and county boroughs, and the position gets worse, 8727; 8728. But the purposes of expenditure in different localities must be taken into consideration, 9032-47. What is the best basis or standard, 8909-15.  
Proportion of local expenditure defrayed by Imperial contributions and out of rates, 8876-81; 8897-908. Comparison between London, county boroughs, and counties, 8719-22. Criticism of Mr. Gomme's figures. Question of the inclusion of police courts and royal parks, 8897-908.  
Apportionment of contributions. London said to be at a disadvantage because it receives less of its total expenditure than other places. Expenditure should not be the test, 8882-96.  
Apportionment of contributions. Unfavourable operation of Diseases of Animals Act, 1894, 8728.  
Local taxation, local expenditure, licences, and inhabited house duty. Comparison between London and rest of England and Wales, 8812-8.  
London's share from local taxation licences, estate duty and customs, police pensions, education (school boards), Diseases of Animals Act, 1894, Agricultural Rates Act, 1896; 8811.  
Contributions for poor relief; criminal prosecutions; main roads, police, 8944-50.  
Education statistics, 8707-11. Proportion of expenditure on education borne by rates, and proportion borne by Government grants. Comparison between London, county boroughs, and counties, 8712-8.  
Police pension grant on satisfactory basis, but not other grants, 8726.  
Metropolitan grant of four-ninths of cost of police, and county grant of half cost of pay and clothing compared, 8957-60.  
Sum paid to Fire Brigade. Contribution in lieu of rates, 9102-5.  
Relationship of Imperial to local taxation. Estate duty varies in amount. A settled income for purposes of local taxation desirable, 8833-7.

**METROPOLIS—INDIRECT TAXATION:**

Licences and duties collected by London County Council and Metropolitan Police, 8734-9.  
Area of collection not always coincident with area of administration, 8740.

**METROPOLIS—INHABITED HOUSE DUTY:**

Amount raised. Comparison between London and rest of England and Wales, 8812-8; 8824.  
Suggested that proceeds should be applied to local purposes, 8838-45. London's share in this case, 9065-74.

**METROPOLIS. LAND TAX.** Suggested that proceeds should be applied to local purposes, 8838-45. London's share in this case, 9065-74.

**METROPOLIS—LOCAL AND IMPERIAL SERVICES, RECEIPTS FOR PURPOSES OF, AND EXPENDITURE UPON:**

Receipts which lessen expenditure, and receipts which reduce taxation distinguished, 8678-81.  
Expenditure met by three classes of taxation. Amount of each class, 8682-4.  
Local taxation and local expenditure. Comparison between London and rest of England and Wales, 8812-8.  
Expenditure of the local authorities. Amount, 8668; 8669.  
Principal heads of expenditure. Receipts in aid, 8670-7.  
Certain local services paid for out of Imperial taxation. Police courts, 8838-45.  
Certain Imperial services paid for out of local taxation. Metropolitan police said to perform some services of an Imperial character, 8846-56.

**METROPOLIS.—PARKS, COST OF, IN RELATION TO DISTRIBUTION OF IMPERIAL CONTRIBUTIONS:**

How far the benefits which London receives from the parks should be considered when reckoning what the rest of the country has had out of the Exchequer, 9008-14.  
Large towns like Liverpool, Manchester, and Birmingham have to buy parks, whereas London does not, 9080-3.

**METROPOLIS.—POLICE:**

Question of the area with which London shares its taxation in respect of police. London said to be disadvantageously affected, 8819-23.  
Police Pension Grant on satisfactory basis but not other grant, 8726.  
Position of London as regards Imperial contributions towards cost of police, 8944-50. City police paid for out of City estates, and London lost portion of Imperial contribution, 8724; 8725; 8951-6.  
Imperial contributions. Metropolitan grant of four-ninths of cost, and county grant of half cost of pay and clothing compared, 8957-60.  
Police courts paid for out of Imperial taxation, 8838-45.  
Metropolitan police said to perform some services of an Imperial character, 8846-56.  
Pension Fund. London's share, 8811.

**PENGE.** Metropolitan Common Poor Fund not levied, 8754-79.

**POLICE, COST OF.** Imperial contributions. Metropolitan grant of four-ninths of cost, and county grant of half cost of pay and clothing, 8944-56; 8957-60.

**POLICE PENSION FUND.** London's share, 8811.

**POOR RELIEF (EXPENDITURE UPON):**

Position of London in relation to rest of country as regards Imperial contributions for relief of poor, 8944-50.  
Considerable part should be a national charge, 8996.  
Question of administration, 8937-40; 9088-101.

**REAL PROPERTY.** Property receives the benefit of expenditure which falls upon indirect taxation and Imperial contributions, and should be charged with a proportion of these in addition to the rates charged directly, 8875.

**ROADS (MAIN).** London, position of, in relation to rest of country as regards Government grants towards maintenance of main roads, 8944-50.

**SITE VALUES.** Not separately valued, 8797-801; 8808.

54.—Mr. **HARRY EDWARD JONES**, Representative of the Commercial Gas Company and other Gas Companies. (Questions 9106-9299.)

**APPEALS AGAINST ASSESSMENT IN ENGLAND:**

Procedure at quarter sessions. Objection to Appellants having to open their case, 9111-3; 9275-8.  
Appeals at quarter sessions are unsatisfactory, 9183-7.

**CANALS, VALUATION OF.** Independent assessor as in Scotland desirable, 9119-26; 9287; 9288.

**CAPITAL VALUE:**

Definition of, 9211-5.  
As the basis for rating. Capital value would be more satisfactory than taking the rent a hypothetical tenant would give, 9283-6.

**COMMERCIAL GAS COMPANY,** Rates paid by, represent 15 per cent. on gross receipts for gas and meter rents, and rateable value 50 per cent. of the profits, 9168-76.

**COMPANIES.** Accounts, period for making up. Quinquennial valuation. Different practices allowed by the courts, 9145.

**DOCKS, RATING IN RESPECT OF:** Independent assessor as in Scotland desirable, 9119-26; 9287; 9288.

**ELECTRIC LIGHT COMPANIES, VALUATION OF.** Independent assessor as in Scotland desirable, 9287, 9288.

**EPSOM AND EWELL GAS COMPANY.** Large increase in valuation necessitating increased charge for gas. Gross rent taken as net rateable value, 9141-4.

**GAS COMPANIES:**

Reg. v. Lee (L.R., 1, Q.B.D. 241). New circumstances, such as introduction of sliding scale &c., have arisen since this case, 9110.

Unsatisfactory method of valuing upon receipts upon the mains by some valuers, 9114.  
Net rateable value. Proper method of ascertaining, 9115-8.

Gas pipes do not get three-fourths exemptions, 9223; 9224.

Valuation cannot be ascertained by reference to rent paid, 9225-7.

Said to be rated in respect of trade profits, 9177, 9178.

Question of the equity of taking trade profits into account discussed, 9204-10, 9217-22. Should not be taken into account, 9228-74.

Statutory monopolies, privileges, and obligations. Difficulty of ascertaining what a hypothetical tenant would pay for such undertakings, 9188-203.

Monopoly enjoyed by gas companies. How far an element to be taken into consideration in valuation, 9292-9.

Uniform and simple method of valuation desirable. Quarter sessions. Appeals are unsatisfactory, 9183-7.

Valuation should be in respect of value of land, buildings, and plant, 9290; 9291.

Suggested valuation on basis of capital value, 9216.

Suggested valuation on basis of capital value of structure and site, not including goodwill. Percentage to be taken on capital cost, having regard to the success of the business. Trade profits should not be the basis, though they would have to be considered, 9146-57.

Suggested basis for valuation. Capital represented by the fixed plant and value of land occupied. Method of valuing structures and sites, 9129-40.

Trade profits should not be the basis of valuation, otherwise the profits arising from by-products would be assessed, 9127; 9128.

What is a fair average profit on structural value, 9160-6.

Mains and pipes. Suggested method of valuation, 9158, 9159.

Independent assessor as in Scotland desirable, 9119-26; 9167; 9287; 9288.

Gas companies pay in respect of rates a much larger percentage on their capital outlay than owners of small residential properties, and a much larger

**GAS COMPANIES—cont.**

proportion comparing the incomes derived from these properties, 9179-82.

Rates per 1,000 feet of gas supplied by certain companies, 9289.

Commercial Gas Company. Rates paid represent 15 per cent. on gross receipts for gas and meter rents, and rateable value represents 50 per cent. of the profits, 9168-76.

Large increase in valuation in case of Epsom and Ewell Gas Company necessitating increased charge for gas. Gross rent taken as net rateable value, 9141-4.

**RAILWAYS, VALUATION OF.** Independent assessor, as in Scotland, desirable, 9119-26; 9287; 9288.

REG. v. LEE (L.R., 1 Q.B.D., 241). New circumstances, such as introduction of sliding scale, &c., have arisen since this case, 9110.

**TRAMWAYS, VALUATION OF.** Independent assessor as in Scotland, desirable, 9287; 9288.

**VALUATION OF SPECIAL CLASSES OF PROPERTY:**

Independent assessor as in Scotland desirable, 9119-26; 9167; 9287; 9288.

Payment of valuers in proportion to increase of valuation, 9279-82.

**WATERWORKS, VALUATION OF:**

Independent assessor as in Scotland desirable, 9119-26; 9287; 9288.

Water pipes do not get three-fourths exemption, 9223; 9224.

55.—Mr. **GEORGE LIVESEY**, Chairman of the South Metropolitan Gas Company and Chairman of the Crystal Palace District Gas Company. (Questions 9300-9386.)

**BREWERIES.** System of valuation, 9377-86.

**GAS COMPANIES:**

Existing system of valuation unsatisfactory, 9305.

Unequal valuations. How far consumers pay the rates, 9330.

Residual products, 9330.

Valued on basis of what a hypothetical tenant would give, 9342. Effect is that rateable value is half divisible profits, 9354-61.

Basis of a hypothetical tenant should be abolished, 9309-11.

Quinquennial valuation in Metropolis. Profits of quinquennial year taken which conduces to appeals. Desirable to have the average of five years, 9329; 9330.

Method of valuation. Basis of gas sold or profits discussed, 9370-6.

Rateable value to be based on the price of gas suggested, 9306-8; 9326-8; 9342-53.

Independent assessor, as in Scotland, desirable, 9309-11.

Proportion that rates paid bear to net profits considered too high compared with other undertakings, 9362-9.

Consumers of gas would pay in an increased price of gas excessive rates put upon gas companies.

Position of gas companies in this respect compared with that of railways and other undertakings, 9312-25.

Sliding scale. Effect of, to make gas consumers and shareholders partners, 9329.

Interest of companies to be rated lightly to produce gas as cheaply as possible, 9331-3.

Incidence of rates as between shareholders and consumers of gas, 9334-41.

**VALUATION OF SPECIAL CLASSES OF PROPERTY.** Payment of valuers in proportion to increase of valuation. System condemned, 9303; 9304.

Index  
to Evidence.

56.—Mr. **CHARLES CROWTHER SMITH**, Secretary of the Southampton Gas Light and Coke Company. (Questions 9337-9485.)

**APPEALS AGAINST VALUATION.** Cost of, is great, 9395.

**BANKING COMPANIES.** Rated in respect of their buildings, 9407.

**COMPANIES.** Now rated on basis of hypothetical tenant. Suggested basis to be half the net profits taken from income tax returns for each year, 9396-406; 9408-15; 9449-61; 9477-82.

**COMPOUNDING.** Provisions in Public Health Act, 1875, better than in Poor Rate Assessment Act, 1869, 9422-34.

**CONSOLIDATION OF RATES.** There should only be one rate, 9420; 9421.

**GAS COMPANIES:**

Existing system of valuation uncertain and unsatisfactory. Instances, 9391-4. Also expensive, but the results are not complained of, 9419.

Statistics referring to valuation of 50 gas companies, 9416-8; 9435-43.

Method of valuation. Basis of gas sold as suggested by Mr. Livesey not approved of, 9444-8; 9475; 9476.

Valuation of corporation works restricted by Act of Parliament from making a profit, 9477-82.

Valuation of corporation gas works where a profit may be earned. Result of application of suggested basis of taking half net profits as basis, 9483-5.

**MONOPOLIES, COMPANIES POSSESSING.** Valuation of, 9462-78.

**SOUTHAMPTON.** Local Act relating to assessment of properties and making of poor rates, 9389; 9390.

57.—Mr. **HARRY WILKINS**, Secretary of the Lambeth Waterworks Company. (Questions 9486-9515.)

**COMPANIES.** Valuation of gas companies and certain other companies. Mr. Wilkins' scheme described. Combination of structural value and profits made, 9489-93.

**MONOPOLIES, COMPANIES POSSESSING.** Valuation of, 9503-8.

**PIPES (UNDERGROUND).** Should be included among the hereditaments subject to partial exemption under the Public Health Act, 9509-15.

**WATERWORKS, VALUATION OF:**

Element of trade profit should be excluded, 9496; 9497.

Present results not unsatisfactory, i.e., resulting in rateable value being half net profits. But apprehension is felt for the future, 9498-502.

Valuation of pipes, 9494; 9495.

58.—Captain **ERNEST GEORGE PRETYMAN**, M.P., Member of the Local Taxation Committee. (Questions 9516-9930.)

**ABILITY TO PAY, TAXATION UPON PRINCIPLE OF:**

Contributions should be made according to ability to pay by all persons, except those whose incomes are derived from labour, for expenditure on purposes of a national character. Amounts expended out of local taxation on purposes said to be of a national character, 9677-90.

Doctrine discussed, 9603; 9604.

**AGRICULTURAL LAND:**

Orwell Park and Bacton estate. Statistical tables to prove owner and occupier rated too heavily in respect of agricultural land, 9520-4.

Land from which no profit is derived should pay no rates in respect of purposes of a national character. But if the land is valueless for purposes of profit it should be valueless for rental purposes, 9621-9.

In many cases rent received represents only interest on expenditure on improvements, 9757-68; 9774; 9775.

Light land, how farmed, 9596-8.

**AGRICULTURAL LAND—cont.**

*Land in hand.*

Difficulty of getting tenants, 9565-7.

Orwell Park and Bacton estate, number of acres, 9534-6.

Orwell Park and Bacton estate. Results of farming. Land left in bad condition; expense of improving it, 9537-51.

Orwell Park and Bacton estate. Rates paid in respect of farms in hand. Particulars of, 9572-5. Relief obtained under Agricultural Rates Act, 9582-4.

Orwell Park and Bacton estate. Profits derived from, and expenditure upon, farms in hand. Proportion of rates paid to profits, 9825-39.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Viet. c. 16).**

Relief obtained under the Act has gone to the farmers and labourers and not to the landowners, 9691-3. Agricultural labourers' wages raised in Suffolk on account of Act, 9694; 9695.

To what extent an indirect benefit to landowners, 9695-7.

Land best able to bear burden gets the most relief, 9860-2.

The principle of the Act objected to. Classification of certain properties for the purpose of rating. Distinction between principle underlying Public Health Act and Agricultural Rates Act, 9847-59.

**AGRICULTURISTS:**

Small and large farms, advantages of small farms, 9793-8.

Capital expenditure and commercial enterprise benefit the agricultural interest, 9819-24.

Suffolk. Custom for incoming and outgoing tenants, 9784-92.

Ownership of land and payment of rates, 9700-12.

Position and interest of landowners, farmers, and labourers, 9599; 9698; 9699.

Profit made by tenant farmer and landlord farming through bailiff, 9568. Their positions compared, 9924-30.

Should be assessed upon the income they derive from the land, 9769-73.

**ASSESSMENT.** Basis of assessment should be income, 9661-76; 9719-34.

**CLASSIFICATION, SYSTEM OF.** Classification of certain properties for purpose of rating, 9847-59.

**COTTAGES** assessed above actual rentals in certain unions in Suffolk, 9576-81; 9776-83.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION (ENGLAND):**

A satisfactory mode of contribution. Increase of contributions desirable, 9605, 9606.

To what extent a contribution in respect of personal property, 9871-5.

Would not be satisfactory to increase contributions paid out of estate duty towards purposes of local taxation, 9876-81.

**INCIDENCE OF LOCAL TAXATION:**

Burden of rates borne by agriculturists compared with the burden borne by those engaged in other industries, 9840-6.

Rates paid partly by landlord and partly by tenant. Suggested that landlord could not bear the additional burden, 9586-9.

Personal and real property. History of rating in respect of. Reasons for rating in respect of real property. Ability to pay, doctrine of, discussed, 9603; 9604.

**INCOME TAX IN AID OF LOCAL EXPENDITURE:**

A more practical suggestion than an increase of death duties, 9882-5.

Owner of foreign investments should contribute towards local taxation raised for purposes of a national character, 9741-56.

For purposes of a national character suggested, 9603; 9604; 9640-60; 9863-70. Whether such a proposal would be practical or popular discussed, 9863-70.

Question of administration, 9640-60.

**INCREASE OF LOCAL TAXATION.** Fresh sources from which to raise revenue for local purposes are very few, 9906-9.

**LAND LEGISLATION IN IRELAND.** Market value of rental not decreased by reduction of rent to a particular tenant, 9893-8.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON:**

Personal property should be assessed to local rates for purposes of a national character just as much as agricultural land, 9600-2.

Contributions should be made according to ability to pay by all persons, except those whose incomes are derived from labour, for expenditure on purposes of a national character. Amounts expended out of local taxation on purposes said to be of a national character, 9677-90.

Owner of foreign investments should contribute towards local taxation raised for purposes of a national character. But expenditure on purposes of a local character should be met by assessing persons within the locality on their property within it, 9741-56.

**LOCAL TAXATION COMMITTEE.** Their view on the subject of rating, 9607-10.

**MORTGAGES.** Contribution to local taxation discussed, 9886-92. Effect of, discussed, 9901-5.

**ORWELL PARK AND BACTON ESTATE:**

Particulars of, 9525-33.

Game on estate, 9735-40.

Farming accounts, 9611-20.

Particulars of losses or profits on certain farms, 9799-815.

Cost of labour, 9552-5.

Expenditure on buildings and cottages. Conditions of letting cottages, 9569-71.

Expenditure on buildings and improvements, 9630-9.

Expenditure has benefited the property, 9910-3.

Increased expenditure on buildings, &c. in recent years necessary to secure tenants, 9921-3.

Rental, 9592-4. Outgoings have exceeded receipts during the last seven years. Comparison of the rent roll in the seventies and the nineties, 9556-64.

Arrears of rent. Practically none, as the owner will not allow them to accrue, 9595; 9713-8.

**PERSONAL PROPERTY:**

Should be assessed to local rates for purposes of a national character, just as much as agricultural land, 9600-2.

To what extent Imperial contributions are a contribution in respect of, 9871-5.

**PROBATE DUTY GRANTS.** Would not be satisfactory to increase contributions paid out of estate duties towards purposes of local taxation, 9876-81.

**PROFITS.** Rating on basis of, desirable, 9918-20.

**REAL PROPERTY.** Reasons for rating in respect of, 9603; 9604.

**SUFFOLK.** Rates are low, partly due to fact that valuations have not been reduced in proportion to reduction of rent, and partly because district is poor and spends very little, 9914-7.

**TITHE ACT, 1891 (54 & 55 Vict. c. 8):**

Effect has been to transfer the burden of tithe to owner from occupier, 9899; 9900.

Effect upon landowners. Incidence of the tithe, 9585.

**TITHE AND TITHE RENTCHARGE:**

Orwell Park and Bacton Estates. Fall in amount of tithes, 9816-8.

Relative position of clergy and landlords, 9590; 9591.

59. — Mr. **SAMUEL ROWLANDSON**, tenant farmer in Durham and Yorkshire, North Riding, Member of the Business Committee of the Central Chamber of Agriculture, Vice-Chairman of the North Riding County Council and of the Board of Guardians of the Darlington Union, Commissioner of Taxes for the County of Durham, Chairman of the Croft District Council and of the Barton Parish Council. (Questions 9931-10,049.)

**AGRICULTURAL DEPRESSION** in North Yorkshire, 9988; 9989.

**AGRICULTURAL LAND:**

Further relief than that afforded by the Agricultural Rates Act, 1896, should be given to agriculturists, 10,034-6.

Agricultural land should not be assessed to local rates, 9955; 9956; 10,033; 10,037-9.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16):**

Tenant has derived the full benefit of relief given, 10,046-9.

Permanency of Act desirable, 10,034-6.

**AGRICULTURISTS.** Rates paid by agriculturists and by business men in towns compared, 9942-54; 10,014-29.

**BENEFITS DERIVED FROM EXPENDITURE OF RATES** are less to agriculturists than those received by townsmen, 10,030-2.

**DARLINGTON UNION.** Position of certain country parishes said to be unfair with regard to their contributions to rates, 9968-72.

**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER.** Suggested division, 9973; 9974. Present incidence of rates, 9995-10,013.

**INCOME TAX IN AID OF LOCAL EXPENDITURE:**

Suggested addition to income tax for local purposes, 9978; 9979.

Contribution to local taxation should be based upon income, 9942-54.

**PARISHES (RURAL) ADJOINING TOWNS.** Benefits received. Radius within which such benefits accrue is limited to 2½ miles, 9961-7; 9990-4.

**PERSONAL PROPERTY.** Persons owning personal property should contribute in respect of it to local rates, 10,040-5.

**SCHOOL BOARD RATES** are a considerable burden upon farmers in some parishes, 9957-60.

**UNION CHARGEABILITY ACT, 1865 (28 & 29 Vict. c. 79).** Effect was to throw heavier burdens upon some parishes. Benefits which country parishes receive from their proximity to towns. Radius within which such benefits accrue is limited to 2½ miles, 9961-7; 9990-4.

**VALUATION:**

One valuation for all purposes desirable, 9975-7.

Uniformity in a county desirable, 9960-7.

60. — Mr. **GABRIEL PRIOR GOLDNEY**, Remembrancer of the City of London. (Questions 10,050-10,178.)

**CITY OF LONDON:**

Decreasing night population. Reasons, 10,062-8. To some extent due to increased facilities of transit, but the porters, &c. who could live in warehouses have not gone to the suburbs, 10,149-52.

Increasing day population, 10,062-8. How ascertained, 10,140-2.

Value of land has increased, 10,091-110; 10,124-33.

**INCIDENCE OF LOCAL TAXATION.** Upon whom should taxation fall, 10,111-23. Rates of benefit and rates of burden, 10,134-9.

Index  
to Evidence.

**INHABITED HOUSE DUTY:**

- Question of importance in City of London, 10,051; 10,052.  
 Levied on gross value, 10,052-5; 10,157-70.  
 Hereditament cannot be divided, 10,056.  
 Is a survival of the window tax, 10,057.  
 What constitutes "inhabiting." Hardships falling on large businesses in the City of London and other towns, 10,058; 10,059.  
 Case of a large firm making arrangements to avoid payment, 10,060; 10,061.  
 Decrease of, in City of London, 10,069.  
 Prevents clerks and their families from living in the warehouses and offices, 10,070.  
 Property occupied for business purposes and property occupied as a residence, though in the same occupation, should be distinguished, 10,070-4; 10,078-80. And the tax levied only in respect of the parts of the premises inhabited, 10,087; 10,088; 10,143-7.  
 Case of barmaids not able to sleep on the premises, 10,075.  
 City police who are married cannot live in warehouses, 10,076; 10,077.  
 People will not pay the tax on business premises, and they let the residential parts stand empty, 10,081-4.  
 Transference in aid of local rates would be an advantage if wishes of Corporation could be carried into effect, 10,085; 10,086; 10,177.  
 Transference in aid of local rates would be an advantage from a country point of view, 10,085; 10,086.  
 Incidence of the tax, 10,089; 10,090.  
 Unused residential portions of warehouses. How far possible to make a separate access, 10,153; 10,154.  
 Value of residential property for assessment purposes has fallen in the City, 10,148.  
 City desire to make use of premises at present unoccupied owing to operation of inhabited house duty, 10,171-6.

**VALUATION (METROPOLIS) ACT, 1869 (32 & 33 Vict. c. 67).** Valuation list conclusive evidence of gross estimated value for all purposes, 10,052-5; 10,155; 10,156.

61.—Mr. **JOHN RICHMOND COOPER**, Town Clerk of the County Borough of Walsall. (Questions 10,179-10,292.)

**BOOTLE.** Effect on, of apportionment of the amount paid out of the Local Taxation (England) Account between the county of Lancaster and the county boroughs therein, 10,222-5.

**COMPOUNDING.** Limit of composition should be 10% for all rates. Each locality should exercise discretion as to allowance when owner pays the rate whether the premises are occupied or not, 10,226-9.

**LOCAL GOVERNMENT ACT COMMISSION.** Instructions to the Commissioners, 10,181-94.

**LOCAL TAXATION (CUSTOMS AND EXCISE) ACT, 1890 (53 & 54 Vict. c. 60).**

*Apportionment of Residue of Duties between Counties and County Boroughs under Section 1 of Act.*

Alleged that the Commissioners adopted rateable value as the basis of distribution, 10,205-8; 10,235-40. Statistics showing distribution in certain counties and county boroughs, 10,205-8.

Suggested that distribution should be in proportion to population, or in proportion to amount contributed by each county and county borough to the Local Taxation Licence Duties and Customs and Excise duties, and not in proportion to rateable value, 10,209-19; 10,241-56. Difference in rateable value per head of population in certain county boroughs, 10,209-19.

**LOCAL TAXATION (ENGLAND) ACCOUNT:**

*Apportionment of Amounts between Counties and County Boroughs under Local Government Act, 1888.*

Figures showing results of awards of the Commissioners under Act, 10,220; 10,221; 10,275-89.

**LOCAL TAXATION (ENGLAND) ACCOUNT—cont.**

List of counties and county boroughs receiving more and also less than the amount they contribute to the Local Taxation Licence Duties, 10,201-4.

Alleged that the Commissioners adopted rateable value as the basis of the apportionment of the residue of the Local Taxation Licence Duties and the Probate Duty Grants, 10,195-200; 10,235-40. Contention that apportionment was made partly on basis of rateable value and partly on basis of population, 10,272-4.

Alleged loss sustained by Walsall, 10,222-5. No appeal made against award, 10,257-71. The cases of Bootle and Wigan, 10,222-5.

Suggested that distribution of residue after the deduction of the discontinued grants should be in proportion to population, or in proportion to amount contributed by each county and county borough to the Local Taxation Licence Duties and Customs and Excise Duties, and not in proportion to rateable value, 10,209-19; 10,241-56. Difference in rateable value per head of population in certain county boroughs, 10,209-19.

Walsall, position of, if residue apportioned upon basis of population, 10,230-4.

Contended that it was the intention of Parliament and of the Act that each county and county borough should take the licence duties raised within their respective areas, subject to an adjustment by agreement or by the Commissioners appointed under the Act. Instructions to the Commissioners, 10,181-94.

**RATEABLE VALUE PER HEAD OF POPULATION.** Difference in certain county boroughs, 10,209-19.

**WALSALL.** Valuation has been too low for a number of years, 10,290-2.

**WIGAN.** Effect on, of apportionment of the amount paid out of the Local Taxation (England) Account between the county of Lancaster and the county boroughs therein, 10,222-5.

62.—Mr. **CLARE SEWELL BEAD**, Tenant Farmer and County Councillor in Norfolk. Representative of the London Farmers' Club. (Questions 10,293-10,444.)

**ABILITY TO PAY, TAXATION UPON PRINCIPLE OF.** Rent of a house apart from land in agricultural parish is a rough criterion representing a tenth of income. But the clergy and farmers pay more than this proportion, 10,331-3.

**AGRICULTURAL DEPRESSION.** Decrease in value of produce, 10,444.

**AGRICULTURAL LAND:**

Land in hand. Valuation of, 10,322-4.

Rental of a house apart from land in agricultural parish is a rough criterion of ability to pay, representing a tenth of income. But the farmer pays more than this proportion, 10,331-3.

Valuation. Actual rent should be the basis, 10,322-4.

Increase or decrease of rates on agricultural land never affects the question of rent, 10,342-5.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16.):**

Should be continued until contribution is made to local rates in respect of personalty, 10,408-14.

Agriculturists have benefited by it. A greater measure of relief should have been given, and buildings should not have been separated. Even now rates levied in respect of agricultural land are more than is just, 10,415-21.

**AGRICULTURISTS:**

Ask for no adjustment of rent if rates increase, 10,342-5; 10,358-60.

How far agriculturists take rates into account when taking a farm, 10,342-5.

**APPEALS AGAINST VALUATION.** An appeal court composed of committee of county council better than quarter sessions, 10,395-7.

**AREAS FOR PURPOSES OF VALUATION.** Union is the best area, 10,395-7.

**CLERGY.** Rental of a house apart from land in agricultural parish is a rough criterion of ability to pay, representing a tenth of income. But clergy pay more than this proportion, 10,331-3.

**COUNTY COUNCILS.** Tendency to increase local expenditure. Increased expenditure for main roads, and in consequence of new responsibilities and duties imposed upon them, as well as increased expenditure in respect of old duties. How far present constitution of local bodies responsible for this. Position of Norfolk, 10,300-21; 10,383-6.

**DISEASES OF ANIMALS.** Cost of their extermination to local taxation, 10,441-3.

**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER.** Would not now be fair, as owners have so small a representation on local bodies and so little control over the expenditure, 10,356; 10,357.

**ELEMENTARY EDUCATION ACT, 1870 (33 & 34 Vict. c. 75).** Tendency of new rates to increase in amount, 10,294.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

A satisfactory mode of contribution, 10,422-5.

Contributions have contributed materially to reduction of burdens upon ratepayers, 10,298; 10,299.

Contributions do not tend to produce extravagant administration, 10,393; 10,394.

**INCIDENCE OF LOCAL TAXATION:**

How far lessees of houses in towns take rates into consideration when taking a house, 10,346-8.

How far do real and personal property contribute to local and imperial taxation, 10,334-41.

**INCOME TAX IN AID OF LOCAL EXPENDITURE.** Suggested addition to income tax for local purposes, 10,375-80.

**INCREASE OF LOCAL TAXATION:**

Tendency of new rates to increase in amount, 10,294; 10,349; 10,350.

**LAND TAX.** Suggested that proceeds should be applied to local purposes, 10,355; 10,398-404.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON:**

Government should bear the cost of certain expenditure now paid locally, such as expenditure on lunatics, &c. Also half cost of indoor poor, but not outdoor, and perhaps whole cost of police. Question of administration discussed, 10,351-4; 10,381; 10,382; 10,389-92; 10,426-33.

Main roads. Should they be paid for by the Government, 10,387; 10,388.

**LOPES, SIR MASSEY.** Resolution carried in House of Commons in 1872, 10,295-7.

**MORTGAGEES** should contribute towards local taxation, 10,405-7.

**PARISH COUNCILS,** Increased expenditure. Constitution of rating authorities. How far composed of non-ratepayers, 10,383-6.

**RATING AUTHORITIES,** Constitution of. How far composed of non-ratepayers, 10,383-6. How far responsible for increase of local taxation, 10,300-21.

**RURAL AND URBAN RATES.** Amounts compared, and purposes of expenditure, 10,361-74.

**SURVEYOR OF TAXES.** Representation of Surveyor of Taxes on union assessment committees. Reasons suggested against such representation, 10,328-30. But Schedule A. found to be a useful guide for committee, 10,434-40.

**SWINE FEVER, EXTIRPATION OF,** Cost of, to local taxation, 10,441-3.

**TITHE AND TITHE RENTCHARGE:**

Valuation of tithe rentcharge is fairly dealt with by Union Assessment Committee composed of farmers, 10,326.

Deductions. What would be equitable and what would not be, 10,327.

**UNION ASSESSMENT COMMITTEES:**

Committees deal fairly in matters of valuation with all interests concerned, 10,325; 10,326.

Representation of Surveyor of Taxes upon union assessment committees. Reasons suggested against such representation, 10,328-30. But Schedule A. found to be a useful guide to committee, 10,434-40.

63.—Mr. **ROBERT HENRY REW**, Secretary of the Central Chamber of Agriculture, and of the Local Taxation Committee, and late an Assistant Commissioner of the Royal Commission on Agriculture. (Questions 10,445-10,876.)

**ABILITY TO PAY, TAXATION UPON PRINCIPLE OF:**

The Legislature intended that individuals should be taxed for local purposes according to their ability to pay, 10,460-3.

Rent not a fair test, 10,599-603.

Suggested that local rates be levied as an income tax collected by the Government. Question of administration and control considered. Contribution to rates according to benefits received from their expenditure considered, 10,640-52.

Agriculturists' ability to pay has decreased. Fall in prices of agricultural produce, 10,635-9.

**AGRICULTURAL DEPRESSION.** Decrease in value of produce, 10,635-9.

**AGRICULTURAL LAND:**

Valuation. Suggested that the machinery employed upon a farm is taken into account, 10,617-24; 10,861-71. Also tenant's capital, 10,607-16.

Rates in the £, 10,512-35. Said to have increased, 10,536-9. Sir Henry Fowler's figures discussed, 10,512-35.

An undue proportion said to be paid in rates in respect of agricultural land as compared with other real property. Sir Alfred Milner's figures, 10,454, 10,665-78.

Suggestion that land should be assessed at one-fourth, 10,657-62.

Buildings separated from the land for purposes of valuation, objections to, 10,663; 10,664.

Fall in value, 10,720-7. Rateable value decreased, 10,744-58.

Decrease in value of land and increase in value of buildings, 10,688-90.

Decrease in value of land and increase in value of land in towns, 10,691-7.

Land and its products. Who should bear the burden of rates, 10,759-89.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16).** Agriculturists have benefited by the Act. A greater measure of relief should have been given, 10,629-31.

**AGRICULTURISTS.** Agriculturists consider that their position has been injuriously affected by the passing of the Finance Act, 1894, and the Local Government Act, 1894, 10,625-8.

**BENEFITS DERIVED FROM EXPENDITURE OF RATES:**

Contributions to rates according to, considered, 10,640-52.

By urban ratepayers, 10,544; 10,552; 10,553.

**CENTRAL CHAMBER OF AGRICULTURE.** Objects of, 10,448.

**COUNTY RATES** said by agriculturists to have increased, 10,632-4.

**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER.** Resolution passed by Central Chamber of Agriculture, 10,654-6; 10,740-3; 10,872-6.

**FINANCE ACT, 1894 (57 & 58 Vict. c. 30).** Agriculturists consider that their position has been injuriously affected by the Act, 10,625-8.

**FOWLER, SIR HENRY:**

Return by. Figures discussed, 10,512-35; 10,540-3; 10,728-36.

School board rates, 10,698-701.

**HEREDITARY BURDENS IN RESPECT OF REAL PROPERTY.** Proposition in Sir Henry Fowler's report referred to, and the hereditary burden theory discussed, 10,494-8; 10,685-7.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION (ENGLAND):**

Amounts applied to relief of local taxation, 10,800-7.  
Purposes for which contributions given and amounts, 10,464-73.

Grants made to defray cost of new burdens should not be considered as grants made in relief of local taxation generally, 10,464-73; 10,728-36.

Contributions are made from a fund derived from taxation in respect of both real and personal property. Contributions of lands, other rateable property, and non-rateable property. Excise and customs not taken into consideration. Sir Alfred Milner's figures, 10,474-88.

**INCIDENCE OF IMPERIAL TAXATION.** Contributions to Imperial taxation in respect of different classes of property. Sir Alfred Milner's figures, 10,459.

**INCIDENCE OF LOCAL TAXATION:**

An undue proportion said to be paid in rates in respect of real property compared with personal property, and also in respect of agricultural land compared with other real property. Sir Alfred Milner's figures, 10,451-5; 10,665-78.

Valuation of property occupied by, and rates paid by, certain farmers and also by others engaged in certain other trades and businesses compared. Mr. Rew's figures discussed, 10,556-98; 10,711-9; 10,816-60.

Non-rateable property said to increase to a greater extent than rateable, 10,456-8.

In urban and rural districts, 10,554; 10,555.

**INCREASE OF LOCAL TAXATION:**

Chiefly due to increase of urban rates, 10,679-82.

Increase of local taxation compared with increase of Imperial taxation between 1868 and 1894, 10,489-91.

**LAND TAX.** Sir Alfred Milner's figures relating to redeemed land tax, 10,737-9.

**LEFEVRE, MR. G. SHAW, RETURN BY: \***

Meaning of "land." Fall in value of agricultural land, 10,720-7.

Rateable value of lands, buildings, railways, and other rateable property in England and Wales in 1870 and 1894, as shown in return, 10,499-511.

**LOANS RAISED BY LOCAL AUTHORITIES:**

Urban and rural, 10,545-51.

Increase of, due to borrowing by urban authorities, 10,683; 10,684.

Increase of, between 1875 and 1894, and decrease of National Debt, 10,492-4.

Benefits derived from expenditure, 10,808-15.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON.** Benefits derived by the community, 10,790-9.

**LOCAL GOVERNMENT ACT, 1894 (56 & 57 Vict. c. 73):** Agriculturalists consider that their position has been injuriously affected by the Act, 10,625-8.

**LOCAL TAXATION COMMITTEE.** Objects of, 10,449; 10,450.

**MILNER, SIR ALFRED.** Figures prepared by, 10,451-5; 10,459; 10,474-88; 10,665-78; 10,737-9.

**NATIONAL DEBT.** Decrease of, between 1875 and 1894, 10,492-4.

**PARISH COUNCILS.** Increased expenditure of, 10,632-4.

**RURAL AND URBAN RATES.** Rates in the £ higher in urban than in rural districts, 10,540-3.

**SCHOOL BOARD RATES:**

Sir Henry Fowler's figures, 10,698-701.

Mr. Rew's figures, 10,702-10.

**WEST DERBY UNION (LANCASHIRE).** Rates in the £, 10,604-6.

64.—**Mr. A. G. BOSCAWEN, M.P.,** Member of the Church Committee of the House of Commons. (Questions 10,877-10,970.)

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16.).** Effect of Act on clerical tithe-owners, 10,893-5. And effect if rates increase, 10,880-4; 10,932-41.

**CLERGY:**

Gross and net income of certain clergy, 10,942-9.

Said to be rated upon their professional incomes, 10,892; 10,896-9; 10,919-27. And to be the only class so rated, 10,963-70.

Said to be owners and occupiers, and therefore excluded from operation of Agricultural Rates Act, 1896, 10,950-62.

**TITHE AND TITHE RENTCHARGE:**

Tithe rentcharge should be subject to certain deductions, 10,900-3.

Deductions applicable to cases of land and buildings, not applicable to case of tithe rentcharge, but deductions which would be applicable to tithe are not made, 10,889-91.

Deductions claimed for repair of chancel, curates, daughter churches, and professional services. Similar deductions should be given in case of tithe rentcharge as in case of persons subject to income tax in respect of professional incomes, 10,907-14.

No deduction made for payments to daughter churches, nor to retired incumbents, 10,928-31.

No deductions made for property tax nor land tax on tithe, 10,915-8.

Application of the principle of what a hypothetical tenant would give, 10,904-6.

The clerical tithe-owner rated in respect of his gross receipts, the occupier of land in respect of his rent, 10,885-8.

65.—**Mr. ALFRED DE BOCK PORTER, C.B.,** Secretary to the Ecclesiastical Commissioners. (Questions, 10,971-11,124.)

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16.):**

Question whether tithe could be included in scope of Act, 11,067-71.

Tithe-owners claim for similar relief to that given to agriculturists by the Act, 11,007.

Effect of Act on clerical tithe-owners if rates increase, 10,997-9; 11,105; 11,106; 11,111-5.

**CEMETERIES, VALUATION OF,** a parochial cemetery only valued on the basis of value of land before it was a cemetery, 11,118-24.

**GLEBE LAND.** Rents received by incumbent cannot be said to be in the nature of professional income. But if this view is correct, then deductions such as curates' salaries, &c., should be allowed, 11,055-63.

**TITHE AND TITHE RENTCHARGE:**

Tithe estimated on produce not on rental, 11,046-51.

Tithe rentcharge is generally fully assessed though there is great variation, 10,979; 10,980.

Valuation of tithe rentcharge. Practice of Ecclesiastical Commission and of union assessment committees, 10,975-7.

Parochial incumbents do not take sufficient pains to get their property properly valued, 10,990-4.

Ecclesiastical Commissioners' property. Value of tithe rentcharge in certain parishes and assessment to rates, 11,084-92.

Deductions to arrive at net rateable value, 10,977.

"Dean and Chapter of St. Asaph v. The Overseers of Llanrhaidr." If tithe-owner entered into possession of land to earn his tithe from the produce, the deductions mentioned in this case would be inapplicable, 11,052-4.

Tithe-owner as incumbent cannot be said to receive tithe in the nature of professional income; but if this view is correct, then deductions, such as curates' salaries, &c., should be allowed; also in case of glebe, 10,055-63.

Queen Anne's Bounty. Interest on loans cannot well be deducted, 11,005, 11,006.

Deductions. Chancel repairs not allowed for, 10,977; 10,978.

Deductions. Chancel repairs should be allowed for, 11,100-3.

**TITHE AND TITHE RENTCHARGE—cont.**

Curate's salary cannot well be deducted, 11,002-4.  
 Land Tax not deducted, 11,012.  
 Deduction could not well be allowed in respect of payments to daughter churches, but it is a hardship, 11,013-5.  
 Deduction could not well be allowed in respect of pensions to retired incumbents, 11,016; 11,017.  
 Personal services cannot well be deducted, 11,000; 11,001.  
 Property tax could not well be deducted, 11,008-11.  
 Statistics showing amounts of tithe rentcharge, rateable value, deductions, rates paid, 10,981-4; and rates in the £, 10,981-4; 11,064-6; 11,076-83.  
 Cases of tithe highly rated, 11,093-9; 11,104.  
 Imposition of new rates an injustice; 10,995; 10,996; 11,116; 11,117.  
 Valuation of tithe rentcharge and land compared. Land not lightly assessed, 10,985-9.

**TITHE COMMUTATION, ACT, 1836 (6 & 7 Will. 4. c. 71.):**

Allegation that addition was made to tithe rentcharge to provide for payment of rates. Addition only made in cases where tithe-payer was paying the rates by agreement. But rates decreased since then, 11,018-40. Cases where rates added. Amount of rates in the £ at that time, 11,107-10.  
 Tithe Commutation Act an equitable arrangement and beneficial to both landowner and tithe-owner, 11,041-5.  
 Landowners not benefited in certain districts, 11,075.  
 Land built on before and after passing of Act, 11,072-4.

66.—Mr. **ARTHUR F. JEFFREYS, M.P.**, Alderman of the Hants County Council, and Member of Assessment Committee, Member of Basingstoke District Council and Board of Guardians, Chairman of Bentworth Parish Council, Overseer of Bradley Parish, Member of the Council and of the Business Committee of the Central and Associated Chambers of Agriculture. (Questions 11,125-11,294.)

**AGRICULTURAL LABOURERS.** Relation of wages to poor relief, 11,191-3.

**AGRICULTURAL LAND:**

Owners and occupiers alleged to be unduly burdened, 11,175; 11,219-21.  
 Rating in respect of agricultural land alleged to be inequitable, 11,139.  
 Further relief than that afforded by the Agricultural Rates Act, 1896, should be given to agriculturists, 11,265-72.  
 Suggestion that land should be assessed at one-fourth, 11,152-4; 11,194-7; 11,216-8; 11,236-42.  
 Poor Rates. Occupiers of agricultural land should be assessed at one-fourth only, 11,216-8; 11,236-42.  
 Buildings should be included with the land, but farmhouse separately valued for rating purposes, 11,219-21; 11,293; 11,294.  
 Farmers should only be rated in respect of their houses and premises, 11,127; 11,128.  
 Occupiers should be free from paying rates in respect of certain purposes, 11,155-61; 11,233-5. Police, 11,129-35. School board rates, county lunatic asylums, main roads, bridges, 11,136-8. Question of local control and administration, 11,155-61.  
 Agricultural land should be relieved of rates raised for purposes of a national character. Question of control and administration. Respective contributions of rateable and non-rateable property to the Imperial Exchequer, 11,198-215.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16.):**

Difficulty of giving relief where most wanted, but farmers thankful for the Act, 11,290-2.  
 Buildings should not have been separated. Even now rates levied in respect of agricultural land are more than is just, 11,219-21.

**AGRICULTURISTS:**

Incidence of rates as between lessor and lessee, 11,140-2; 11,253-60.  
 Increase or decrease of rates never affects the question of rent. How far agriculturists take rates into account when taking a farm, 11,283-9.  
 Farmers frequently do not take rates into consideration when bargaining for a farm, 11,143-7.

**AGRICULTURISTS—cont.**

Contribution to rates by different classes. Amounts: Agriculturists said to pay most in proportion to income, 11,148-51. Different bases of assessment as between agriculturists and other classes: Agriculturists said to be rated in respect of their raw material, 11,243-52.

**AREAS FOR PURPOSES OF VALUATION:**

Objection to enlarging area, 11,170-2.  
 Present areas satisfactory, but uniformity in valuation desirable, and one basis for Imperial and local purposes, 11,172-4.

**BENEFITS DERIVED FROM EXPENDITURE OF RATES.** Expenditure on purposes for which rate are raised benefits property in towns more than in rural districts, 11,177-9; 11,182-90; 11,232.

**DEATH DUTIES.** Relief desirable, 11,273-5.

**HEREDITARY BURDENS IN RESPECT OF REAL PROPERTY.** Theory discussed, 11,276-81.**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

Increase of contributions desirable, 11,176.  
 A satisfactory mode of contribution, Increase of contributions to pay for certain purposes, 11,261-4.

**INCIDENCE OF IMPERIAL TAXATION.** Respective contributions by rateable and non-rateable property, 11,198-215.

**LAND TAX.** Relief desirable, 11,272-5.

**POLICE, COST OF.** Increased cost of, 11,162-6.

**POOR RELIEF (EXPENDITURE UPON).** Poor Law must be administered locally, 11,180; 11,181. But occupiers of agricultural land should contribute to poor rates at one-fourth, 11,216-8; 11,236-42.

**SURVEYOR OF TAXES** should sit with union assessment committees, 11,170-2.

**TITHE AND TITHE RENTCHARGE.** Redemption of tithes. Scheme desirable, 11,282.

**UNION ASSESSMENT COMMITTEES:**

Committees have no particular knowledge of rating matters, 11,167.  
 Surveyor of Taxes should assist union assessment committees to secure uniformity, 11,170-2.

**VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES:**

Present system a bad one. Uniformity desirable, 11,168; 11,169.  
 Present areas for valuation purposes satisfactory, but uniformity desirable, and one basis for Imperial and local purposes, 11,172-4; 11,222.  
 County or union authorities. Discussion as to which system would be best, 11,223-31.

67.—Mr. **PHILIP RANDOLL SMITH**, Rating Agent of the Great Western Railway Company, and Representative of the Railway Companies' Association. (Questions 11,295-11,568)

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16).** May in some respects prejudicially affect other interests to some extent, 11,334; 11,335.

**APPEALS AGAINST VALUATION:**

Production of books by objectors, 11,417-9.  
 A specially constituted appeal court to hear rating appeals instead of quarter sessions desirable, 11,528-32. The Railway Commission or some legal tribunal suggested, 11,431-5.

**AREAS FOR PURPOSES OF VALUATION.** Poor law unions the best areas, 11,430. And not county areas, 11,470-2; 11,543-5.

**COMPOUNDING.** Present allowances give owner too great a benefit, 11,420; 11,421.

**COUNTRY HOUSES.** Often inadequately valued, 11,422.

Index to Evidence.

**EXEMPTIONS (PARTIAL).** Exemptions under Public Health Act, 1875, and the Lighting Act, should be extended to certain other rates. Railways get no benefit from the expenditure of rates upon certain purposes, 11,436-9.

**GOVERNMENT PROPERTY, VALUATION OF:**

Government appoints its own valuer for valuation of Government property. Whether this system satisfactory, 11,526, 11,527.

Government property contributes inadequately to local taxation, 11,424-9. This property sometimes decreases the value of surrounding property, 11,480-9.

Government property should be subject to valuation in the same way as other properties, 11,424-9, 11,477-9.

**GREAT WESTERN RAILWAY COMPANY:**

Increase of burden of rates, 11,306; 11,307; 11,553-8.

Amount paid in rates by Company in certain years compared with gross receipts, 11,302; 11,303. This amount is  $3\frac{1}{2}$  per cent., which is an excessive contribution in respect of railway lines, and would also be so in case of agricultural land, 11,454-8.

Rateable values of certain parishes, and the rateable values of the Company included therein, 11,304.

Rateable values per acre of land in certain parishes, and of the lands occupied by the Company's line of railway, 11,305.

**LAND.** Valuation, means of ascertaining. How far the value of the land alone should be the basis for assessment to local rates, 11,502-25.

**LAND TAX.** Powers of the local commissioners of land tax, 11,440-5.

**MACHINERY, RATING IN RESPECT OF:**

Machinery should be assessed to local rates, 11,490-501.

The law wants carrying into effect, 11,379; 11,381; 11,382.

Effect of certain appeals. Principles laid down by the courts, 11,376-8.

The appeals in the Chard Union, Somersetshire, 11,380.

**PARISH COUNCILS:**

Powers of. Attitude towards railway companies, 11,310-33.

Railway companies should be represented, 11,563-5.

**RAILWAY COMMISSION,** suggested as a suitable tribunal for appeals instead of quarter sessions, 11,431-5.

**RAILWAYS:**

Assessed on gross receipts less certain deductions, 11,298; 11,299.

Whether capital value should be basis of valuation discussed, 11,559.

Companies complain more of the system of valuation than of the result, 11,551; 11,552.

Difficulty in suggesting any other system of rating than the present one, but valuation of certain other properties should be raised, 11,300.

Areas for purposes of railway valuation. Union and not county areas desirable. Reasons for this view, 11,404-16; 11,464-9.

Assessment committees do not accept offers to inspect companies' books, as the work would be too great an undertaking and would require specially trained knowledge, 11,391-403.

The companies pay rates on their lines for purposes for which they receive no benefit. Their valuations are also increased to a greater extent than those of other properties, 11,446-53.

Deductions vary greatly in different districts. A statutory scale desirable, 11,336-8.

Tenants' capital.  $17\frac{1}{2}$  per cent. not considered a sufficient allowance for risks, 11,339-43.

Partial exemptions should be allowed to railway companies in respect of their lines for rates expended on certain purposes, 11,308-10; 11,560-2.

Rates. Amounts paid by railway companies, 11,301. Companies should have representation at parish and other meetings and the right to vote, 11,563-5.

Parish councils, powers of. Attitude towards railway companies who have no representation or *locus standi* at public meetings, though they are large ratepayers. This is a disadvantage to the railway companies and sometimes to the parishes, 11,310-33.

**RAILWAYS—cont.**

English, Scottish, and Irish systems of valuation discussed, 11,546-50.

**SURVEYOR OF TAXES** should sit with union assessment committees, 11,344-54; 11,372; 11,422; 11,423; 11,472-6.

**UNION ASSESSMENT COMMITTEES:**

Committees have different ideas of the values of properties, 11,541; 11,542.

Procedure of committees not always satisfactory, 11,566; 11,567.

Surveyor of Taxes should sit with Union Assessment Committee, 11,344-54; 11,372; 11,422; 11,423; 11,472-6.

**VALUATION:**

Rates now contributed by ratepayers according to value of bricks and mortar and land, which is an unsatisfactory system, 11,459-63.

Rates could not be levied upon gross value, 11,373-5.

Uxbridge Union. Valuations made for Schedule A. and for purposes of poor rate, 11,370-2.

Somersetshire. Valuations for county rates and for Schedule A. in certain poor law unions, 11,355-69.

**VALUATION OF SPECIAL CLASSES OF PROPERTY.**

Payment of valuers and surveyors. System of remuneration by results is very unsatisfactory, 11,383-90.

**VALUATION. SUGGESTED AUTHORITY.**

Government department for making valuations for the whole country discussed, 11,533-40.

68.—Mr. **WILLIAM PERCY PAYNE**, Rating Surveyor to the Midland Railway Company, Professional Associate of the Surveyors' Institution, Chairman of the Railway Rating Surveyors' Association, and Representative of the Railway Companies' Association. (Questions 11,569-11,664.)

**APPEALS AGAINST VALUATION** Present system unsatisfactory, 11,610.

**DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE.** Allowances on house property are excessive, 11,590.

**LAND.** How far the value of the land alone should be the basis for assessment to local rates, 11,642-57.

**MIDLAND RAILWAY COMPANY:**

Valuation per acre of land occupied by company, and of land adjoining occupied by other persons in certain parishes, 11,582-4.

Total valuation of property of company compared with that of all other properties in the same area, 11,625-38.

**PARISH COUNCILS.** Railway companies should be able to appoint an *ex-officio* member, 11,594-9.

**RAILWAYS:**

Present system of valuation not satisfactory, 11,613-6.

Present system of valuation a tax on profits which is undesirable, 11,581; 11,603.

Union assessment committees not qualified to value railways, 11,591.

Train mileage valuation discussed, 11,620-1.

Notices served on companies by union assessment committees. Suggested alteration in procedure, 11,658-63.

Total valuation of property of company compared with that of all other properties in the same area, 11,625-38.

Tenants' capital. Statutory deductions desirable, 11,585.

Structural value of buildings. Fixed deductions desirable, 11,601.

Three-fourths exemption in respect of lines should be extended to every rate except poor rate, 11,604-9.

Union assessment committees, companies not represented upon. They should have representation upon them, 11,629; 11,640.

Companies should be able to appoint an *ex-officio* member of union assessment committees and parish councils, 11,594-9.

English, Scottish, and Irish systems of valuation discussed, 11,573-80.

**SURVEYOR OF TAXES** should sit with union assessment committees, 11,600.

**UNION ASSESSMENT COMMITTEES:**

Procedure of committees not always satisfactory, 11,592; 11,593.

Railway companies should be represented, 11,639; 11,640.

Railway companies should be able to appoint an *ex-officio* member, 11,594-9.

Surveyor of Taxes should sit with Union Assessment Committee, 11,600.

**VALUATION OF SPECIAL CLASSES OF PROPERTY.** Payment of Valuers and Surveyors: System of remuneration by results is very unsatisfactory, 11,586-9; 11,617-9.

69.—Mr. **SAMUEL MOWBRAY HOWARD**, Rating Agent to the London and North-Western Railway Company, and Representative of the Railway Companies' Association. (Questions 11,665-11,773.)

**AGRICULTURAL RATES ACT, 1896** (59 & 60 Vict. c. 16). Effect on properties other than agricultural land, 11,726; 11,727; 11,730; 11,731.

**APPEALS AGAINST VALUATION.** Objections to quarter sessions as a tribunal, 11,745; 11,746. A specially constituted appeal court to hear rating appeals desirable, 11,721-5.

**HEREDITARY BURDENS IN RESPECT OF REAL PROPERTY.** How far certain rates are hereditary burdens, 11,732-44.

**LAND.** How far the value of the land alone should be the basis for assessment to local rates, 11,760-72.

**LONDON AND NORTH-WESTERN RAILWAY COMPANY:**

Have improved their stock in greater ratio than the gross receipts have increased, 11,671-80.

Increase in amount of rates paid by company. Statistics, 11,686; 11,687.

Rateable value in certain parishes compared with total rateable value of each parish, 11,668; 11,689.

Highest and lowest valuations per mile, 11,710-5.

**PARISH COUNCILS.** Railway companies should be represented, and have the right to vote, 11,690-700.

**RAILWAYS:**

Valuation. Present system a tax on profits which is undesirable, 11,670.

Areas for purposes of railway valuation. Union and not county areas desirable. Reasons for this view, 11,702-4.

Notices served on companies by union assessment committees. Suggested alteration in procedure, 11,728; 11,747-52.

Tenants' capital, 17½ per cent; not considered a sufficient allowance for risks. At least 20 per cent. should be given. Reasons for this view, 11,681-4. Statutory deductions desirable, 11,685.

Further extension of partial exemptions in favour of railway companies. Effect on other properties. How far certain rates hereditary burdens, 11,732-44.

Partial exemptions should be allowed to railway companies in respect of their lines for rates expended on certain purposes, 11,701.

In some cases railway companies should be totally exempt from payment of certain rates, 11,753-9.

Companies should have representation at parish and other meetings, and the right to vote, 11,690-700.

Scottish system of rating would not be applicable in England, 11,705-9.

Irish system of rating would not be applicable in England, 11,716; 11,717.

**UNION ASSESSMENT COMMITTEES.** Surveyor of taxes should sit with Union Assessment Committees, and then those tribunals would be satisfactory, 11,718-20.

**LIST OF WITNESSES EXAMINED ON THE SYSTEM UNDER WHICH  
TAXATION IS RAISED FOR LOCAL PURPOSES IN ENGLAND AND  
WALES DURING 1898, WITH DESCRIPTION.**

Name.	Description.	Page of Minutes of Evidence.	Page of Index to Evidence.
1. Mr. W. MALE - - -	Inspector of Taxes - - -	1	214
2. Mr. R. CLARK - - -	Surveyor of Taxes - - -	9	214
3. Mr. E. J. HARPER - - -	Assistant Valuer to the London County Council.	13	215
4. Mr. G. LAURENCE GOMME -	Statistical Officer of the London County Council.	33	216
5. Mr. W. VALLANCE - - -	Clerk to the Whitechapel Board of Guardians.	35	216
6. Mr. FRANK DETHRIDGE -	Vestry Clerk of the parish of Paddington	43	217
7. Mr. W. F. DEWEY - - -	Vestry Clerk of the parish of Islington -	46	218
8. Mr. W. C. LEETE - - -	Vestry Clerk of the parish of Kensington -	56	219
9. Mr. W. H. WARNER - - -	Of Messrs. Lofts and Warner, Estate Agents and Surveyors.	65	219
10. Mr. W. H. B. CASTLE - -	Of the firm of Castle and Son, Surveyors and Valuers.	72	220
11. Mr. E. J. CASTLE, Q.C. -	Recorder of Bristol - - -	83	220
12. The Rev. H. MACPHERSON -	Vicar of Grayne, Rochester, and Honorary Secretary of the Federation to Free Clerical Incomes from Rates.	89	221
13. Sir CHARLES ELLIOTT - -	} Members of the London School Board - {	94	221
14. Mr. H. MORGAN-BROWNE -		97	221
15. Mr. T. J. MACNAMARA - -		104	222
16. Mr. C. W. TAGG - - -	Vestry Clerk of the parish of Camberwell -	106	222
17. The Rev. R. KENNEDY - -	Vicar of Wressell (Yorks) - - -	115	222
18. The Rev. E. LODWICK ELLIS	Vicar of Bettys-yn-Rhŷs (Denbigh) -	119	223
19. The Rev. J. MANNERS SMITH.	Rector of Barnardiston (Suffolk) - -	121	223
20. The Rev. EBEN MOLLOY - -	Rector of Keyston (Hunts.) - - -	125	223
21. The Rev. R. F. MCLEOD - -	Rector of North Fambridge (Essex) -	127	223
22. Mr. ROBERT VIGERS - - -	Valuer and Surveyor, and President of the Surveyors' Institution.	130	224
23. Mr. H. G. HILLS - - -	Clerk to the Wandsworth District Board of Works.	141	225
24. Mr. W. A. DARBISHIRE - -	Managing Director of Penyrosedd Slate Quarry, in the parish of Llandwrog, Carnarvonshire.	145	225
25. Mr. B. F. C. COSTELLOE -	Chairman of the Local Government and Taxation Committee of the London County Council.	147 & 169	225

# MINUTES OF EVIDENCE

TAKEN BEFORE THE

## ROYAL COMMISSION

ON

# LOCAL TAXATION.

VOL. II.

THIRTIETH DAY.

Thursday, 10th February 1898.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BUBLEIGH, *Chairman.*

The Right Hon. J. B. BALFOUR, Q.C., M.P.  
Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.

H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq., C.B.  
E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. W. MALE called and examined.

11,774. (*Chairman.*) You are Inspector of Taxes; I think that is your official title, is it not?—Yes, I am.

11,775. How long have you been in that position?—I have been about two years as inspector.

11,776. Your services beginning in the department at what time?—39 years ago.

11,777. (*Mr. Murray.*) You were a surveyor before you were an inspector, were you not?—Yes.

11,778. What was your experience as surveyor, was it in London or in the country?—I was in the provinces for about 23 years and the remainder of the time I was in London.

11,779. Then you have seen a good deal of the two systems?—I have.

11,780. They are quite distinct, are they not?—Quite, in their direction and purpose.

11,781. Can you mention the principal points in which they differ?—In the provinces the valuation for the property tax is made by the local assessors of income tax under the supervision of the surveyor of taxes, on the principles of the Income Tax Act, 5th and 6th Victoria, chapter 35. Returns are made of the rack-rent payable at the time of making the return. The assessments are finally settled by the district commissioners of income tax after approval by the surveyors,

and objection by the different persons charged, against the assessments made by the surveyor. The Metropolitan Act is based upon a similar class of return being made by the occupiers of properties, but the basis of valuation is a lower standard than that of the property tax, and is almost entirely in the hands of the local authorities who administer the Poor Law.

11,781a. On the initiative of the overseers of the parish. The returns are practically the same?—Both in the metropolis and in the country, the returns being made of the rent that is paid whether under lease or under annual agreement, or, in case of ownership, as to the annual value estimated by the occupier as owner.

11,782. What is the difference in the basis upon which the gross value is arrived at in London and in the country?—Briefly it is this: the income tax (or property tax as it is popularly called) is on the full rental value at the time of making the return; whilst that in London is on the rent which a tenant might reasonably be expected to pay.

11,783. Perhaps it would make matters clearer if you were to state what you mean by the term rack rent?—It is simply the best annual value at which the property is worth to be let at the present time, as against the term "reasonable rent" given in the definition of the gross value in the Metropolitan Valuation Act. There is this distinction—one is the *best* rent in the provinces, and the other is the *reasonable* rent in the metropolis.

Mr.  
W. Male.

10 Feb. '98

Mr.  
W. Male.  
10 Feb. '98

11,784. On whom does the burden of repairs fall under what you call a rack rent?—The burden of repairs would fall upon the landlord.

11,785. Then the rack rent is the best rent, on the assumption that the landlord keeps the property in repair?—Yes.

11,786. Then, of course, there is that further difference between the two systems, that in London the full valuation is applicable to all purposes, both taxes and rates, and in the country it is only applicable to the property tax?—Yes, and to the house duty.

11,787. Can you tell the Commission what the advantages of the London system are as compared with the other?—The first I should take to be that you get, as regards the local rates, a re-valuation of the whole of the property every five years. As at present, in the country, the poor rate is simply revised at the pleasure of the assessment committee, or the parish, as circumstances arise; in some parishes, perhaps, they are not revised at all for a long period of years. It is an optional revision in the country.

11,788. The main difference is that it is optional in the country, and compulsory in London at intervals of five years?—Yes. Then another advantage is that by the surveyor of taxes being associated with the valuation, his opinion and experience are brought to bear in seeing that the properties are duly assessed according to the returns that are made, and the power of objection given him wherever the overseers fail to comply with the returns that are made, so that he can make a revised valuation, and the assessment committees can decide upon the objections he takes. Then, moreover, the Metropolitan Act gives an opportunity for each ratepayer to object to his co-ratepayer's valuation, or for one parish to object to the valuation of another parish, which the country poor rate arrangements do not admit of.

11,789. For the purposes of income tax in the country has the taxpayer any right to object to other people's valuations?—No, and he has no knowledge of them; he has no knowledge of his neighbour's valuation for income tax.

11,790. Then, on the whole, you think that the metropolitan system is a good one?—Most decidedly.

11,791. And it has worked well in practice?—Yes.

11,792. Supposing it was thought desirable to extend it or apply it to the country, what modifications do you think should be introduced into it?—I should consider, first of all, that the definition in respect of gross value as now existing in the Valuation (Metropolis) Act should be revised in respect of the fact that the term "reasonably be expected to pay" leaves too much to the opinion of committees, which, under most favourable circumstances, are more or less fluctuating and different in composition and capacity. I base that principle upon the fact that it has taken pretty well 25 years of the action of this Valuation Act in the metropolis to arrive at the satisfactory position which I now assert. In the earlier part of the time, when the Act was brought into force, a great deal of friction and contention arose between the assessment committees and the surveyor of taxes as to the use of this word "reasonable"; gradually that difference has passed away owing to the fact that the assessment committees and the other valuation authorities have become more taken with the idea of arriving at the full annual value as the basis of charge.

11,793. Where does that word "reasonable" occur?—In the definition of gross value in the Valuation (Metropolis) Act. The present condition of the Metropolitan valuation has mainly been brought about through the surveyors of taxes in the first instance, and through the action of the London County Council more recently, wherein at present there is more equality and uniformity in the metropolis than has ever existed before.

11,794. On what basis would you frame a substitute for what a man may "reasonably be expected to pay"?—Practically, I should substitute the basis as laid down in the Income Tax Act—the 5th and 6th Victoria, cap. 35 sec. 60.

11,795. The actual rent?—The actual rack-rent.

11,796. The actual rent mentioned in the lease, for instance?—No, provided there are contingent liabilities chargeable on the tenant which ordinarily fall on the owner.

11,797. Would you modify that according to the time when that rent was fixed?—Yes, taking the life

of the lease and the rent and the contingencies arising, whether the tenant does repairs or not, would be taken into consideration in arriving at the full rental value of the property.

11,798. Take a lease in London of 7, 14, or 21 years, the rent fixed at the beginning of that lease might not, of course, be the basis for the valuation in the last seven years?—Yes; the Income Tax provides that it shall be within seven years. If the Act were applied to the provinces and revised for the metropolis, I should say five years, instead of seven, as provided in the Income Tax Act of 1842, when the circumstances of the tenure of property differed from what they are at the present time. Circumstances change more quickly at the present time than in those days, and, therefore, instead of the seven-year limit, I should take five years.

11,799. How would you deal with the case of a tied public house, for instance, where the nominal rent is probably not the real rent at all?—Public houses vary so much in reference to the way in which they are taken. Take, for instance, a public house which is held upon a lease through the brewer, I presume that is the point you wish to deal with. We will say that in the lease there is a certain reserve rent. I should take that rent. If, in addition to that, the lease expressed that the tenant shall keep the place in repair, and if, also, he has undertaken any structural alterations or improvements, I should take that into consideration, and also the premium, where a premium is paid by the tenant for the lease. I should adopt the principle that is laid down by the London County Council in their recommendations to the vestries.\* It is generally the custom to take half the premium at 5 per cent. so that you have the rent reserved; you have half the premium at 5 per cent., also a percentage on the outlay for structural improvements; and then, having arrived at the total of the same, I should add 10 per cent. upon that sum for repairs, which the tenant undertakes annually.

11,800. In fact, the actual rent can be little more than a basis?—It is only one item in the calculation.

11,801. What is the practice in London with regard to a repairing lease?—I find from inquiry that out of some 30 assessing authorities in London, about 28 of them have adopted the principle of adding to the rent reserved in the lease 10 per cent. for repairs, &c., undertaken by the tenant; that is, with an ordinary repairing lease.

11,802. Is that uniform all over the metropolis?—So far as some 28 assessing authorities out of 30 are concerned, yes. One authority—I think it is the Strand Union—adds 5 per cent., and the City do not add anything at all. I was surveyor in the City for some years, and it was found there that the rent, as expressed in the lease, was taken as the gross estimated rental of the property, without any addition to the rent for repairs or other contingent liability undertaken by the tenant.

11,803. Then the City is very much under-valued compared with the rest of the metropolis?—Yes, upon the basis of the other parts of the metropolis.

11,804. How would you deal with an increase or decrease in the value during the currency of the valuation?—In the metropolis or in the country?

11,805. Supposing you extended the Metropolitan Act to the country with modifications?—At present there is a conflict of opinion and practice in regard to this provision in section 47. New valuations are made quinquennially, but this section gives directions how new properties and increases and decreases in value are to be dealt with by provisional lists in the intervening years. Originally the section was interpreted by most committees to mean that a mere reduction or increase of rent was not a sufficient ground for altering the valuation, and that structural alterations or some other clearly specific reason apart from rent had to be proved. Now most committees have been led by experience and the force of public opinion to accept a proved reduction of rent as a reason for lowering the valuation. Following upon this, some committees increase the valuation when rent is raised, but as a matter of practice, this is confined to cases of change of tenancy where the value of the property and the altered conditions of the new tenancy are of importance. The intention of the Act was probably to fix the valuation for five years, unless some strong reason for alteration was shown, but it is so difficult to refuse relief when the rent is shown to be

\* London County Council Return, Assessment Conference, 1893-4. Resolutions, &c. (No. 168). P. S. King and Son, Great Smith Street, Westminster, S.W.

Mr.  
W. Male.  
10 Feb. '98

Valuation in metropolis:  
Quinquennial valuation compulsory.

Valuation in metropolis:  
Advantages of system compared with that in rest of country.

Valuation in metropolis:  
The term "actual rack rent" should be substituted for "reasonably rent."

Valuation in City of London:  
Properties under-valued<sup>†</sup>

Valuation in metropolis:  
Supplemental and provisional lists.

Valuation in metropolis:  
Leasehold property. Actual rent, and how arrived at.

Mr. W. Male. Feb. '98

reduced, that the balance of argument seems to be in favour of what has grown to be the practice of most of the metropolitan committees. The power to raise the valuation upon an increase of rent should, it is thought, be more definitely given, otherwise the temptation would remain to postpone a contemplated increase in rent until immediately after the making of the lists, as has been not infrequently found. I might add that I experienced great difficulty in some unions to get them to increase any valuation in the union in cases where there has been a change of tenancy involving increase of rental value.

11,806. How would you get the information which is necessary to enable the authority to increase the valuation?—I should suggest that authority be given to overseers or the persons who are responsible for making the valuation lists, or the provisional valuation lists, to call upon the parties for returns in the same way as we do at the formation of a quinquennial valuation.

11,807. That the overseers should call upon anybody that they choose, to make an intermediate return?—Where there was cause to enter his name in the provisional valuation lists.

11,808. Then, as regards the position of the surveyor of taxes, do you think his position under the Metropolitan Act is satisfactory?—No.

11,809. What different position would you give him?—I should urge that the position and duties of the surveyor should be more fully defined and extended. At present his rights are very limited. He examines the occupiers' returns with the quinquennial lists after these are made; he has the power to insert a higher value in the list subject to the after decision of the assessment committee or the appeal to the assessment sessions; he has the right to require the overseers to make a provisional list in respect of any properties which should be included therein, and to be summoned by the clerk to the assessment committee to the meetings at which objections to the provisional lists are heard. He, however, does not seem to have any legal right to be summoned to, or to attend, any other meetings of the assessment committee, or any meetings of the overseers. Even when the assessment committees sit to hear the objections on the quinquennial valuation, there is nothing in the Act authorising the surveyor to be present at those meetings, although he may be at meetings when hearing objections against the provisional valuation lists. Evidently, to my mind, that is an inadvertence in the construction of the Act in the first instance.

11,810. But apart from being present he has a right to be heard, has he not?—There is nothing in the Act to prevent his being heard in any case other than what he has personally objected to, but he cannot claim to be heard.

11,811. Wherever he enters an objection he has a right to be heard?—Yes, and in no other so far as the construction of the Act is concerned. Hitherto, as a matter of courtesy on the part of these bodies, the surveyor is frequently invited to attend their meetings, but this is by no means universal. It is advised that he should have the right to be summoned to, and to attend, every meeting of the overseers and assessment committees held for valuation purposes.

11,812. Do you think that his position is stronger in the position he now occupies in the metropolis, than if he was a member of the valuing authority?—Most decidedly.

11,813. He exercises a better influence as a critic and as an adviser?—He acts more as an assessor than as a member of any valuing authority.

11,814. And you think it would not be desirable to alter that?—No, I do not. The time allowed to the surveyor in quinquennial years in which to compare the lists with the occupiers' returns and to decide upon the objections he proposes to make—28 days—has been found to be too short in some of the London districts as at present constituted, and in any application of the Act to the provinces this difficulty would be intensified, owing to the wide area and numerous properties in most of those surveys as now existing. This would be met, to some extent, if, as already suggested, the surveyor had the right to be present at the overseers' meetings when the lists were made. In Bills formerly before Parliament, proposing to apply the principle of the Metropolitan Act to the provinces, considerable jealousy was expressed of the interference of the surveyor, but the lapse of nearly a quarter of a century and

the experience gained in London, and the recent action of the surveyors in assisting to carry out the Agricultural Rating Act of 1896, have, it is thought, brought about a different state of feeling. It is significant that in the greater part of Scotland the surveyors have not only the sole responsibility of making the annual valuation lists but they are also, to a large extent, registrars of voters not only for local but for Parliamentary purposes, and this system has given general satisfaction.

11,815. Do you think it would be desirable to give the surveyor the power that the surveyors have in Scotland of being the valuers, so to speak?—Personally I have little knowledge of that. My colleague, who is a Scotchman, is better acquainted with the point than myself.

11,816. Are there any more suggestions that you have to make?—Not on that point, with reference to the surveyor.

11,817. Have you any with regard to the Act generally?—Yes. As regards the notice to occupiers, these notices are required to be delivered only in cases of properties which have not previously appeared in the valuation list, or where the gross or rateable value has been increased. It is considered that every ratepayer should have a notice. At present the surveyor has to send notices of his objections in respect to any property affected, and also a list of his objections to the assessment committee, unless his figures have been formally adopted by the committee. It is considered that as the overseers have to give notice on the re-deposit of the list of any increases made by the assessment committee, they should also be required to give notice of the surveyor's proposed increases; and as regards notices from occupiers of objection to valuation lists, I suggest that the ratepayer should give such notice to the surveyor as well as the other authorities.

11,818. As regards the constitution of the valuing authority, would you give the district commissioners of taxes any representation on it?—I think so for this reason, that hitherto the District Commissioners of Income Tax, who have to do the valuation under Schedule A, are fully conversant with the rateable character of the property in their different areas and divisions; their presence would be a great strengthening of the assessment committees.

11,819. They do their work well on the whole you find?—They do, very efficiently. I would suggest also that the county council's representatives of each division should also be *ex officio* members of the assessment committee.

11,820. Then, as regards appeals from the valuing authority, have you anything to say on that point?—As at present provided there are two courts of appeal, the special sessions and the assessment sessions. We consider that the former might be dispensed with, and that the only appeal should be to the court of assessment sessions.

11,821. Do you think that the quarter sessions is a good body for valuing appeals?—The assessment sessions of course would have more to do with questions of law than questions of value; and in connexion with the assessment sessions (or quarter sessions) there would have to be a legal element which would be necessary to dispose of cases brought from the union assessment committees.

11,822. Is there an appeal on questions of fact now to the assessment sessions?—Yes. If the decision of an assessment committee is considered by a ratepayer, or by a surveyor, or by a parochial authority to be unfair, they could carry the point to the assessment sessions for value.

11,823. (Mr. Smith.) I think the examples you have given us have been all taken from the Property Tax Act, not from the Poor Law Assessment?—That is so.

11,824. (Mr. Stuart.) You mentioned the case of the valuation of leases. I understand that in 28 out of the 30 metropolitan districts these valuations are made with an addition of 10 per cent.?—Yes, in 28 out of 30.

11,825. The principal district where that addition is not made is the City?—Yes.

11,826. Have you formed any idea of the extent of the undervaluation of the City from that cause?—It is but a rough estimate that I have made; in fact, I am not fully acquainted with what the total valuation of the City is, but I should estimate it somewhere about four millions.

Mr. W. Male. Feb. '98

Valuation in metropolis: Notice of objections by surveyor of taxes to occupiers and by occupiers to surveyors.

Assessment committees in metropolis: Desirable for District Commissioners of Income Tax and county councillors to be members.

Appeals in metropolis.

Valuation in City of London: Undervaluation of properties.

Mr.  
W. Male.

10 Feb. '93

11,827. Roughly P—Roughly about four millions; I should take it, therefore, it would be 10 per cent. undervalued.

11,828. And in the Strand there would be a considerable sum also?—That I have not got, as I have not brought my mind to it. The only point I know of the Strand is, that at the time I was surveyor of one of the parishes of the Strand Union, I knew that they only added 5 per cent.

11,829. Then, roughly speaking, would you say that probably the City is undervalued by 400,000, owing to this particular point?—In respect of this particular property, but a large proportion of the City property is in the occupation of the owners, and that, of course, would not apply.

11,830. Is there any other point with respect to the City where you conceive it is undervalued?—From my standpoint as an income tax assessor, I consider that the mode of valuation in the City is considerably below what we, as an income tax authority, would put it at, under the provisions of the Income Tax Act; for instance, we should take into consideration cost in the City, especially as the cost of land is considered almost out of proportion with what you have outside the City. Knowing something of the cost of land in Cornhill, Lombard Street, the Mansion House and that part of the City (for which I was surveyor), in making the quinquennial valuation of 1895, I found that some very large figures were brought under notice, which were not entertained by the valuation committee in arriving at the full annual value on the basis that we should have adopted if outside the City. As everyone knows, ground value in Cornhill, Lombard Street and that neighbourhood is enormous; it fetches almost fabulous prices, and to take anything like a percentage of the value would make an enormous amount of annual value.

11,831. Owing to what difficulty has it been that the surveyor of taxes has been unable to raise the City valuation in respect of these matters?—Simply because the union assessment committee have adopted a rule of dealing with these cases of leases and values under the guidance of experts, who come before them from time to time, of the highest standing in the metropolis. They, therefore, have had to take a view of the matter which has certainly been of a minimum character.

11,832. Is it your opinion that it is advisable that the difference of practice in the various matters you have spoken of should continue to exist between the City and other unions of London?—Taking the principle of the Valuation (Metropolis) Act, I should say no.

11,833. Let me take one other point with respect to this valuation in the City. Are there not one or two parishes in the City in a very peculiar position? Take the Bank of England, how is the valuation of the Bank of England, as a matter of fact, conducted just now. Can you explain that to the Commission?—That did not come under my official notice, as it was not within my district. I have heard by way of rumour, that there are peculiar privileges associated with the rating of the Bank of England, but what they are I am not able to say.

11,834. Is it not part of your knowledge in what parish the Bank of England was situated?—No; it was not in any of the parishes with which I was officially associated.

11,835. Another point with respect to the valuation; you have not touched at all the question of the rateable value; you have been speaking on the question of the gross valuation?—Yes.

11,836. Now, is the rateable value got from the gross rental?—Of course; you are aware that in the Valuation (Metropolis) Act there is a maximum scale of deduction.

11,837. (Chairman.) Generally one-sixth I think P—As a part of our duty we have never interested ourselves on that point; it does not come within the purview of the surveyor to deal with the rateable value; he has simply to deal with the gross value.

11,838. (Mr. Stuart.) Would you prefer not to say anything with respect to how we arrive at the rateable value from the gross rental, or shall I put to you a question about it?—I have in my mind at the moment a definition of rateable value as laid down in the 6th and 7th of William IV. cap. 96, in which the rules laid down are too indefinite for me to lay down a scale by way of giving you any conclusion as to what should be allowed from the gross for the rateable.

I believe that Act provides that, not only shall there be an allowance for repairs, but there shall be also an allowance for expenses, whereby a reserve shall be accumulated to keep the property intact owing to the wear and tear, and the influences of climate and of age; and that a reserve shall be also considered whereby that property can be renewed or rebuilt. That is a feature, of course, which covers a very large area of deduction.

11,839. I shall ask this question, and then you will see whether it is within the limits of what you have considered; as I understand, when you arrive at rateable value from the gross annual rental which you have spoken of, you do so by making a deduction, and that deduction, am I right, is made as a certain percentage of the total?—Yes.

11,840. That total includes very different items in different parts of London; suppose you to be in the City, a property has an equal ground valuation to its building valuation, and suppose you take out here, or somewhere else, one that has one-fifth part of ground value to its building value, would you make the same deduction in both of those cases; I will not press you upon this matter, but have you any remark to offer upon it from your experience?—I could not advise the Commission upon that point, because it has never come under my special observation.

11,841. I will go to another point with respect to the valuation in London to which you have referred. You said that you thought that members of the county council here, and elsewhere, I presume, should be *ex officio* members of assessment committees?—Yes.

11,842. I suppose you would give them the same rights of making objections as you would give to the surveyor of taxes practically, or would you not?—The county council, as an authority, most decidedly; but not its individual members.

11,843. Then I take it that you would like to see the principles of the Valuation (Metropolis) Act extended to the rest of the country, with certain amendments?—Yes.

11,844. And then you would also desire to see those amendments made in the London district itself?—Most decidedly.

11,845-6. Another point, about the valuation of railways and other matters of that kind, which I need not more exactly describe; are you satisfied with the way that is done at present in London?—Well, so far as our department is concerned, we are not interested in the rating of railways, canals, gasworks, and so on, inasmuch as they come under another schedule of the Income Tax Act; and therefore this point does not interest the department in that respect. All those concerns come under Schedule D, and therefore we have not interfered in any way with such valuations.

11,847. Then, in dealing with the assessment committee, are these committees formed on any uniform basis all over London, or does the character of their appointment vary from parish to parish?—I believe that the custom is out of the board of guardians of each union to elect a certain number to act on the assessment committee; I believe the number varies, that is, the size of the committee, according to the number that constitutes the guardians of the union.

11,848. Have you found any difference in dealing with assessment committees in different parts of London, or have you found them equally amenable?—I found some more amenable to reason and to argument than others in earlier times; I am not speaking now of more recent times. I have found in my recent experience in the last two quinquennials a very great deal of help and of assistance; in fact, my experiences were very different in the last two, from what it had been before. I attribute that, in a great measure, to the influence of the London County Council working in connexion with the local authorities with a view of arriving at a uniform basis of valuation. I may say that in 1885 I was interested in calling a conference and we tried to arrive at a common basis of valuation for all the unions in the Metropolis at that conference, which I attended, and it was partially successful. But on the following quinquennial in 1890 there was a greater desire on the part of the rating authorities to come to a general principle, and I believe that at the last quinquennial in 1895 the bases of the valuations upon which the London County Council issued sugges-

10 Feb. '98

tions\* to the local bodies were generally followed and led to greater uniformity in assessments.

11,849. That influence, you think, of the London County Council has been valuable in tending to secure greater uniformity?—Yes, by getting a consensus of opinion and in that way ensuring co-operation.

11,850. I presume if you go to the other counties your idea would be that the county councils of other counties also should have representatives on the various assessment committees?—Yes.

11,851. Have you formed any idea in your own experience in the country whether those assessment committees should be over the whole county area or over union areas?—I should prefer taking them according to union areas.

11,852. Why?—Simply for this reason, that the more you are brought into touch with the properties which you have to value the more definitely and the more equably your properties are likely to be valued.

11,853. (Mr. Clare.) Following that up, I understand that if the present union areas were accepted as the areas for the formation of the committee for valuing, or whatever it may be, you are of opinion that it would be advisable for the county council or some supervising body of the council to have supervision over their work?—My observation as regards the influence of the London County Council was as to their securing the co-operation and educating the opinion of different rating bodies, and thus securing a greater uniformity of practice. It was not made with the idea of giving the London County Council any official authority or status in advising what has to be done by the assessment committee. What I would suggest in having the County Council represented on the assessment committee, would be that it should have power in that way, but not constituting the county council any superior authority over the assessment committee. The superior authority which is suggested should be in the assessment sessions; the assessment sessions should have the revising power over the assessment committee by way of objection taken.

11,854. Do you think it would be an advantage if the London County Council had the right of giving directions to the assessment committee to the extent to which they now do it, that is, by merely suggesting?—I would not give to any authority any orders outside what are prescribed by Act of Parliament. Whatever the rating authority or assessment committee had to do by way of valuation should be in accordance with the Act, and no other authority should give directions except the Local Government Board, in the way that they dealt with the Agricultural Rating Act.

11,855. The Valuation (Metropolis) Act lays down certain maximum deductions to be allowed in arriving at the rateable value of property, does it not?—Yes.

11,856. Would it not be an advantage if the county council could give directions with regard to these deductions not exceeding the maximum named in the Act, to be followed by every union throughout the whole county?—On the question of rating deductions, I must say, as I have already said to Mr. Stuart, that I am not experienced as to the deductions from gross value to rateable value; but on the general principle I prefer that such directions should be given by the Local Government Board.

11,857. With regard to the provinces, what is the ordinary district of a surveyor of taxes?—What is its ordinary size?

11,858. Yes; possibly to go with the parish or the union, or what area?—It is according to the tax divisions. Every county is divided into what are called tax divisions, parliamentary divisions for which commissioners of taxes—Income Tax commissioners—are appointed. A certain number of these divisions are united under the Board of Inland Revenue, and form what is called a Survey, over which a surveyor of taxes is placed. It varies according to the importance of each locality.

11,859. Would there be any difficulty in making the surveyor of taxes an *ex officio* member of each assessment committee, as they are now constituted?—It would be undesirable from an official point of view.

11,860. In your memorandum you suggest that the district commissioners of taxes should be made *ex officio*

members of the assessment committees; I do not understand the distinction between district commissioners and surveyors?—The commissioners are resident. They are constantly associated with the tenure of land, being, for the most part, themselves owners and occupiers of properties; and being constantly associated with the properties of the neighbourhood, they have that intimate knowledge which the surveyor cannot have.

11,861. Would there be any object in the surveyor of taxes attending the meetings of the assessment committees in his union?—We should desire them to do it; we consider it most desirable that they should attend all meetings.

11,862. That the surveyors of taxes should?—Yes.

11,863. But they should not be *ex officio* members of the committee?—The surveyor should not be a member of the committee.

11,864. (Mr. Dalton.) Would the proposals which you have made for amending the Valuation Act in London remedy this under-valuation of land and property in the City?—I think so.

11,865. In what way?—The London County Council would have a representative upon the Assessment Committee of the City of London.

11,866. But I suppose he would be completely outvoted by the other members of the committee, would he not?—As far as my experience goes, he would; but still the matter would thus be brought from the inside of the committee itself to public notice.

11,867. You have no further remedy to suggest by which the property of the Strand Union and of the City could be brought up to the same level as that of the rest of London?—Except that you should put into the Act the definition that I spoke of, and which I ask for, namely, that, instead of having it a "reasonable rent," you should adopt the terms of the Income Tax Act, and say it should be the "rack rent." You would have then a legal power which could be enforced.

11,868. Do you propose to take, then, exactly the definition of gross value that you have in the rest of the country for valuation purposes; leaving the income tax alone for a moment, there is a definition, of course, in the Union Assessment Acts; is that the same as the London one, or is it different?—It is the same. The definition in the Act of 1862 is the same as that in the Act of 1869.

11,869. Then you simply propose to substitute the income tax definition for the present local taxation definition?—Yes.

11,870. I think you said you considered the Poor Law area a satisfactory area for valuation purposes, as a general rule?—I do.

11,871. I think, from what you have said, it is clear that, however accurate the gross value may be, the rates will not be levied evenly upon any area unless you get the rateable value right?—Exactly.

11,872. But that is a matter you do not concern yourself with?—I have not hitherto.

11,873. But you would agree that it is necessary to take some step in order to get it uniform?—Yes, most decidedly.

11,874. Not only in London, but in the rest of the country?—Yes.

11,875. You have no suggestions to make as to the manner of doing it?—No.

11,876. In adding a certain percentage, say, 10 per cent., for repairs to get at the gross value, would that not work very unevenly as between different properties?—I believe that it has been found, on investigation, that it is as equitable an addition as can be found, taking one property with another, so far as house property is concerned. Taking it on the whole, I think it is a minimum.

11,877. But in a new house, for example, the repairs would not be anything like so expensive as in an old house?—That would be so.

11,878. With one class of property the repairs may be very much more expensive than with another?—Yes; but before you add the 10 per cent. there is also the question of the life of the lease, which is also an ingredient. Take it for the sake of argument, that you have a house which has been held under lease for 21 years; if the lease is 21 years old, you would naturally consider that the amount to be added to the rent by

of assessment committees. Surveyors should attend all meetings.  
  
Valuation in City of London and the Strand Union: Property would be adequately valued if London County Council had representation on assessment committees and "rack rent" was basis for valuation.

Area of Poor Law Union: A satisfactory one for purposes of valuation.

Rateable value: Desirable to obtain uniformity in a rating area. How to ascertain rateable value.

Mr. W. Male.  
10 Feb. '98

Valuation: Union areas preferable to county areas.

London County Council: Should be represented on assessment committees in metropolis, but should have no authority over committees.

Surveyor of taxes: Size of district outside metropolis.

District commissioners of taxes, but not surveyors of taxes, should be *ex officio* members

\* London County Council Return, Assessment Conference, 1893-4, Resolutions, &c. (No. 166). P. S. King and Son, Great Smith Street, Westminster, S.W.

Mr.  
W. Male.  
10 Feb. '98

way of bringing it up to the present annual value would be less than if you had had it for only four or five years.

11,879. Take two houses, a small house of the labouring class of property, and a large well-built house in the West End. Supposing they are both of them let, say, from year to year, and for the same period, is it right to take the addition for repairs the same in both cases, the same percentage of the rent?—No; in the first place, a letting from year to year would not be on lease. No repairs would be done by the tenant, and you would not get a place at a low rent let on a lease. You would never meet with a case, I venture to say, in the metropolis with a house under 20% taken on lease.

11,880. No, but the repairs of 20% houses would bear a larger proportion to the rent, would they not, than they would in the case of a large, well-built, valuable house?—Yes.

11,881. An inferior house would wear out quicker?—Yes.

Under-valuation in City of London is due to interpretation by assessment committee of a reasonable rent. Rack rent should be taken as basis.

11,882. (Mr. Elliott.) I am not quite sure whether I understood you to say that the low valuation at present existing, in your opinion, in the City, is due to the difference between the definition of gross value in the Income Tax Acts and in the Valuation (Metropolis) Act of 1869. Is it simply a question of definition?—It is a question of standard. The standard of the Income Tax Act is much higher than that of the Valuation (Metropolis) Act. The Income Tax Act says it is the full annual value. The Valuation (Metropolis) Act says it is the reasonable rent at which it is worth to let, and, because of the open manner in which that definition leaves it, the assessment committee take their own view of what is a reasonable rent, and thus ignore the question in the case of leaseholds as to what is the outlay for repairs in connexion with the rent.

11,883. And you think there would be no such loophole if the income tax definition were adopted?—Certainly, because the income tax full annual value is the letting year by year, and in such a letting the landlord would do the repairs.

11,884. It becomes a question of fact, and not a question of opinion in the minds of the assessment committee?—Yes.

11,885. I think you said that you estimated that the adoption of this income tax definition in the City would make a difference of some 10 per cent. of the value?—I should estimate it at about 10 per cent.

11,886. Do you think that a corresponding difference would occur elsewhere than in the metropolis?—No.

11,887. Do you think, judging from your experience in the country, which I know is very considerable, that a similar difference would arise if the alteration of this definition were to apply to districts outside of London?—Well, outside of London is a very large area. I have taken some pains to ascertain what the leading towns in the provinces have done; and to show you how varied it is, I have taken, for instance, a town where they have taken, in the case of a leasehold, the rent reserved as the rateable value, and put upon that rateable value, that is, the rent reserved, such an amount as they consider to be the cost of repairs, thus making it the gross value. That is in the provinces. In another large town in the provinces they have no rule at all, they take all rents as gross value. It is a happy-go-lucky state of things, just as it suits them, and that is in a very large town in the north of England. And so on, all round you have a variety, and, therefore, I could not form any estimate from the variety of the methods in the provinces.

11,888. I gather that your contention is, that the present definitions in the Valuation (Metropolis) Act and the Union Assessment Acts do rather lend themselves to a happy-go-lucky system, to use your own words?—They do, owing to the open character of the definition of gross value.

11,889. Should you think that the adoption of the definition in the Income Tax Act would result in a very substantial alteration, whether a diminution or increase, in the present valuation?—Yes, and to a greater uniformity.

11,890. It would be a more strict definition?—Exactly.

11,891. I have one or two questions to put to you about the existing powers of appeal. I suppose the appeal ordinarily made is by a ratepayer in respect of his own property?—Yes.

11,892. Would you mind telling me very shortly what those powers of appeal are at the present moment in the country?—Do you mean similar in the country to the metropolis as against the poor rate valuation.

11,893. In the metropolis the ratepayer has first the power of appeal to the assessment committee?—Yes.

11,894. And then to the special sessions?—Yes.

11,895. And then to quarter sessions?—Yes.

11,896. And then an appeal to the High Court on questions of law?—Yes.

11,897. But not an appeal to the High Court on questions of fact?—No.

11,898. You propose that the long series of appeals should be restricted, as I understand, and that the power of appeal to the assessment committee should be substituted for the power of appeal to the assessment sessions, and then on to quarter sessions?—I would make the assessment sessions to be the representative of quarter sessions.\*

11,899. Quite so, for one appeal court?—Yes.

11,900. For one appeal sessions?—Yes.

11,901. And you would substitute one appeal sessions for the two, and get rid of one of the stages which a ratepayer may take?—Yes.

11,902. To what extent is that power of appeal to quarter sessions and to assessment sessions adopted; are there many appeals from the assessment sessions to quarter sessions?—The appeal for revising the decision of the assessment committee would go to the assessment sessions as respects questions of fact. There should be no further appeal in respect of the valuation, except on a point of law, to the High Court.

11,903. But at the present time there is a further appeal to quarter sessions?—In the provinces there is an appeal. There is no assessment sessions in the provinces.

11,904. I am speaking now of London?—Yes, in the metropolis there is no appeal from the assessment sessions.

11,905. There is only an appeal to the High Court on questions of law?—Yes.

11,906. Then you would propose no reduction there; you would propose to maintain that?—The only reduction would be, to do away with the special sessions, which is an appeal to the local magistrates, which I consider a superfluity.

11,907. Is there an appeal to special sessions from the assessment committee?—Yes.

11,908. And then to the assessment sessions?—If the ratepayer chooses to do so.

11,909. To what extent are those various appeals exercised; take appeals to special sessions for instance?—There are very few.

11,910. And I suppose still fewer appeals to the special sessions than to the assessment sessions?—There are more to the assessment sessions than there would be to special sessions, because a great many ratepayers ignore the special sessions altogether and go direct to the assessment sessions.

11,911. And comparatively few go to the special sessions?—Yes.

11,912. Are there many appeals in the metropolis by ratepayers in respect of the valuation of the property of other ratepayers?—I have heard of very few.

11,913. Have you ever heard of any?—Only one case which was some 10 years ago; but I do not know how it ended, because officially I took no interest in the matter, it was more a question of personal feeling than anything else.

11,914. That was the object of my question; I wanted to know whether you thought that it gave an opportunity of an unnecessary and harsh expression of personal opinion, and that it rather fostered personal difficulties?—It might do, but it is not frequent.

11,915. It was a mere paper provision then?—Quite so.

11,916. What are the existing powers of the London County Council under the Valuation (Metropolis) Act?—There are none as far as I know except as regards the

Appeals in metropolis, power of: Proposals for curtailing number of appeals.

\* As by the Local Government Act, 1888, the London Quarter Sessions was substituted for the "Assessment Sessions," it must be understood that the latter term is now merged into "Quarter Sessions."—W. M.

Mr. W. Mate. 10 Feb. '98  
London County Council Conference  
representatives of assessment committees in metropolis.

Mr. W. Mate. 10 Feb. '98

matter that I have referred to, that, preparatory to the making of the quinquennial valuation in 1890 or 1895 the London County Council held a conference of all the various representatives of the assessment committees in the metropolis, and the result of that conference was the adoption of a series of resolutions\* whereby certain rules were followed by these various assessment committees in the making of the quinquennial valuation which was practically the essence of the income tax law which I have mentioned as the basis.

11,917. Strictly speaking, as I understand from your answer, the London County Council have no statutory powers with regard to the valuation under the Act?—None that I am aware of.

11,918. But of course they are ratepayers, are they not?—Yes.

11,919. And they use their position as ratepayers?—They could do so.

11,920. Now, one question with regard to your suggestion about the District Commissioners of Taxes being represented on the assessment committee, or on the valuation board of the county, if such were constituted; would not the District Commissioners of Taxes very often be members of those assessment committees now?—Well, not generally. I am looking at the county of Kent, where I was surveyor for many years. Several of the members of the quarter sessions were members of the County Rate Basis Committee, but they had no connexion with the assessment committees.

11,921. Would many of them be members of a county council?—I do not think they would be.

11,922. I rather wanted to get your opinion as to whether they were such a distinct class as to make it desirable that they should be specially represented?—The Commissioners of Taxes as a body are generally county magistrates, and as county magistrates they are members of quarter sessions.

11,923. Quite so. And they would be of that class, and that class would be very largely represented on the county council?—Yes.

11,924. (Mr. Stuart.) I have one or two questions to ask that arise rather out of what has occurred since I questioned you last. You have spoken of the duty of the surveyor of taxes in London, and, as I understand, he sits upon the committee as an assessor?—No.

11,925. Well, he does as a matter of fact sit upon the committee?—No.

11,926. What are his exact powers—those of appeal?—His exact powers, as affecting the valuation, are, making objections on examination of the returns with the valuation list prepared by the overseers.

11,927. Would you wish to give him the further power of sitting as an assessor?—I wish in the first place that he should have the opportunity of being present with the overseer in preparing the valuation. Of course, my theory is that prevention is better than correction.

11,928. That is an addition to his duties that you wish him to have?—Yes.

11,929. As a matter of fact, is he never present on such occasions now?—I have already said he is present by courtesy.

11,930. That is all that I meant—that he was present practically by courtesy in many instances, and you would wish to render it obligatory?—Yes.

11,931. Is not there another very important power in section 53 of the Metropolitan Valuation Act—when a surveyor of taxes gives notice of objection or of appeal the amount specified in the notice as being in his judgment the gross value of any hereditament referred to in the notice shall be inserted in the valuation list by the assessment committees, special sessions, or assessment sessions, unless it is proved to the satisfaction of the assessment committee, special sessions, or assessment sessions, that such amount ought not to be so inserted? That is a very important power, is it not?—It is subject, of course, to the objection of the ratepayer, and subject to the objection of the assessment committee.

11,932. Yes, but is it not the case that it is taken as the value until it is proved not to be the value—it is inserted, is it not, as the value?—As by way of

procedure, I may say, I put into my column of the valuation list the amount which I consider shall be the annual value of the property. If the amount that I have put in is not, in the opinion of the Assessment Committee, consistent with their rules of valuing, they cut it down. I put in, say, 100*l.*; they say it should be 80*l.*; which amount they insert in the valuation list. Upon re-deposit of the list I have the power of objection before the assessment committee to that revised amount.

11,933. Yes. It starts, then, with your making the suggestion of a higher sum?—Yes.

11,934. They inserting the lower sum, and you then raising the objection before them again?—Yes.

11,935. Then supposing there is a disagreement in that second instance, what is the procedure?—If they decline to accept my view, and keep it at their own figure, of course, it is then within my power to take it to the assessment sessions.

11,936. Then unless that assessment sessions objects that such amount ought not to be so inserted that amount is inserted?—Yes.

11,937. So that you have the pull, so to speak: you get your figure in?—Yes.

11,938. Unless there is an objection to it?—Yes.

11,939. Is not that a considerable power, that you get your figure in?—Well, of course, the point would be met by the valuation in the first instance; if the surveyor was present with the valuation list he would have the amount of the valuation in the first instance without taking it to the assessment committee. The surveyor would not be there by way of objection at all.

11,940. You made a statement that came in two rather different forms. I suppose you do not attach much importance to the form of it, but you stated that the members of the county council should be *ex officio* members of the assessment committee; and then again at another period I think it was stated that it was desirable that they should stand in the same position as the surveyor of taxes. I suppose you would not put any weight upon the claim that they should be *ex officio* members with a vote; it would be sufficient if they were present as members of the county council at the assessment committee, or would you wish them to have a vote?—I was looking at the question more in the direction of the provinces, and I should consider their *ex officio* position to entitle them to a vote. I do not consider they should be on the same footing as the surveyor of taxes whose position would be more for the sake of securing uniformity of principle in valuation. There is a peculiarity in the work of the London County Council so far as its responsibilities are concerned. The number of areas comprised in the provinces, and the constitution of the county council in the provinces, would be of a different character from London.

11,941. Where do you say that they should be *ex officio* members, and where do you say that they should be assessors?—I am speaking generally of their being *ex officio* members of the assessment committee in the divisions with which they are residentially associated.

11,942. (Chairman.) You mentioned earlier in your examination that in the case of a repairing lease you were in the habit of adding 10 per cent. to get at the value?—I said the authorities were in the habit of doing so. I am only speaking of what I found is the custom in the metropolitan area.

11,943. Is there any statutory authority for that, or is it quite arbitrary?—It is quite arbitrary.

11,944. Is it the result of long experience, or what is the basis for it?—It is by the experience of those who have had to do with making valuation lists in a long series of years.

11,945. Have you had experience yourself to warrant you in saying that it is the proper figure or not?—Yes; when I was acting in the provinces as surveyor of taxes I used to advise the commissioners that the 10 per cent. was a fair valuation in respect of the repairs done by the tenant.

11,946. And you agree with that still?—Yes.

11,947. How long was your country experience?—I was 25 years in the provinces. I was not quite certain when I mentioned it, that I had been 25 years in the provinces and 12 in London.

11,948. What parts of the provinces were you in during those 25 years?—I was in Suffolk, Kent,

London County Council should be represented on assessment committees in metropolis.

District Commissioners of Taxes should be *ex officio* members of Assessment Committees.

Surveyor of taxes in metropolis should be present with overseers in preparing valuation.

Surveyor of taxes in metropolis: Power to insert gross value in valuation list.

Valuation. Leasehold property: Addition of 10 per cent. for repairs a fair proportion.

\* London County Council Return, Assessment Conference, 1889-4, Resolutions, &c. (No. 168.) P. S. King and Son, Great Smith Street, Westminster, S.W.

*Mr. W. Male.* Brighton, Oldham in Lancashire; those are my country places.

10 Feb. '98 11,949. How long were you at Oldham?—I was two years in Oldham.

Area of Poor Law Union : A satisfactory one for purposes of valuation. Area of administrative county not a practicable one for purposes of valuation. Question of areas discussed.

11,950. You expressed, as I understood it, a strong preference for the union area as the area of valuation?—Yes.

11,951. On the ground that being compared to some others which have been suggested, it is comparatively speaking small, and you get the local familiarity with each other's property?—Yes.

11,952. Have you any other reasons for advocating the union?—No, I am not aware of any other.

11,953. You would go with me this length, I suppose, that the fewer the different authorities there are and the larger the area over which they hold control the more likely you are to secure uniformity over the country?—Well, my experience does not go to that extent.

11,954. You think it is easier to get uniformity if there are a hundred authorities than if you have ten authorities?—If you have one authority working that number of areas—I am speaking from the surveyor's point of view—the surveyor has a certain number of divisions which he would have to supervise, and he would have a definite rule laid down to follow.

11,955. Uniformity of valuation as between property and property and man and man is in itself, you will agree with me, a good thing?—Yes.

11,956. It is worth a considerable amount of consideration on account of abstract justice, is it not?—Yes.

11,957. Do you not think that, taking such an area as an administrative county as the valuation authority, you would be more likely in the long run to secure that uniformity?—I say it would be difficult to do it, and because of dealing with specific properties, it is impossible for anyone to deal with it. I take Lincolnshire, for instance; supposing you have a county authority for Lincolnshire, it would be impossible for a member of a county council in Lincolnshire to know the peculiarities of the fens in the south if he was resident in the north.

11,958. No doubt, but to a certain extent it would be impossible for any one individual to know the whole of a union, would it not?—The initial valuation of a union, or a parish, would be more definite than that of a county.

11,959. Yes, but would it not be impossible for any one individual to go over the whole of a union even?—Certainly.

11,960. Therefore to that extent it is only a question of degree, the personal knowledge?—Certainly it is.

11,961. If it could be attained would you, or would you not, think it in the abstract a desirable thing to aim at, and to go for a larger area than a union in matters of valuation?—Am I clear as regards the preserving the parish valuation in the first instance? Perhaps I do not quite follow your idea. Is it this: Having the parish area at the starting point of the valuation—

11,962. I will take you upon that. Perhaps I was wrong in thinking that the parish was given up by most people. Do I understand you to advocate the parish as the area?—The parish area and then the union; the assessment committee as it stands now.

11,963. Are you satisfied with the present system?—I am satisfied with the present system of making the valuation and completing it.

11,964. Have you never heard it suggested that the present system leads to those in authority, first in the parish and then in the union, trying to keep down their valuation as compared with others in the same county?—Of course I have, but I contend that it would be an impossibility for the work of valuation to be done thoroughly if you take the initial area larger than the parish.

11,965. Why?—It is a physical impossibility to do it within the period. I know it has been attempted for county rate; I have had practical experience of the point as regards the county rate of Kent. When I was surveyor there it was found, on the adoption of this Metropolitan Act, that Lewisham protested against their contribution to the county rate of Kent and it was found necessary to take a county rate made upon the lines of the Schedule A. Income Tax assessment to bring it up

to a level with Lewisham, which was in the metropolitan area because the local areas were so undervalued and so irregularly valued. It took us two years to get that county rate valuation settled.

11,966. I see your difficulty that you put to me just now is one of carrying it out; it is not an abstract objection?—No, I should certainly prefer it. It is an impracticable thing to get uniform valuation done by one authority for such a very large area as a county within the time prescribed according to the Metropolitan Act.

11,967. But you put two or three limitations within the time; you have no experience of Scotland, have you?—No, I have not; my colleague, Mr. Clark, has.

11,968. In a large county, such as Lanarkshire, which, even in comparison with English counties, is a considerable size, the thing is done every year; should you still say that, once started, it would be an impossibility to do it?—Certainly not, but this Act prescribes a quinquennial valuation.

11,969. Do I understand that you have really no objection to attempting to take such an area as the administrative county except the difficulty of carrying it into practice?—No, I should prefer it if it were practicable.

11,970. In that case what would you do as regards appeals, I make you a present of the difficulties, the appeals would be a difficulty, the larger the area the more difficult it would be to get a proper appealing body in the first instance?—Yes.

11,971. I understand that you think there are too many appeals at the present time?—Yes.

11,972. And you would like to see them diminished?—Yes.

11,973. Do I understand that you mean to put it as broadly as this: that there should be one court of appeal and probably the Court of Quarter Sessions would be the best?—Yes.

11,974. Did I understand you to say that there should be no appeal from quarter sessions, even on points of law?—No, on the point of law there should be power of appeal, but, on points of fact, quarter sessions should be final.

11,975. Do you think a court of quarter sessions is itself a good body to which to appeal?—Yes, assisted by someone in the position of a Recorder; it would be a Recorder in a borough who acts in that capacity at the present time; a Recorder is the authority in settling those matters where the union is comprised within the borough.

11,976. Some people have suggested in matters of valuation the line of demarcation between fact and law is sometimes so narrow that it is impossible really to say upon which side a particular issue really lies?—Yes, there I would urge a legal assessor or barrister, or someone analogous to a Recorder, to be associated with the body.

11,977. What would you think of a proposal that instead of maintaining the present system of having only an appeal on a point of law to the High Court, that you should have a central authority for the whole country, to set up a body somewhat analogous to the Railway Commission, which should be composed partly of the legal element and partly of the lay administrative experience, which should take the place of the High Court as a court of final appeal, and be a permanent body with proper equipment?—It would command, in my opinion, public confidence; it would be an association of expert opinion with legal opinion, and I think it would be an advantage.

11,978. I have only one other point. Have you considered the abstract possibility of carrying out a suggestion which has sometimes been made, that in valuations a distinction should be made between what I call the site value and the structural value of any premises?—I have always associated, in my own mind, that a lower percentage should be taken for a site value than for a structural value in arriving at the valuation, for the reason of the permanency of the one as against—well, I would say, the uncertainty of the other.

11,979. Perhaps what you say is beyond your province, but it arises on the point of the deduction for repairs in getting at the rateable value. The contention, I understand, is this: that it is not fair to take the same maximum deduction from a building

*Mr. W. Male.*

10 Feb. '98

Area of an administrative county not a practicable one for purposes of valuation, but preferable if it were practicable.

Appeal There too many Appeal Courts. Quarter sessions should be the only Appeal Court.

Appeal Court analogous in its constitution to Railway Commission would be advantageous.

Site value and structural value: It is possible to make a separate valuation, but it would provoke litigation, and is not a system upon which the Legislature should insist.

Mr. W. Male.  
10 Feb. '98

which is put on a site with a high value, as from a building which is put on a site with a low value; do you feel inclined to express any opinion upon that contention?—I should say this: that there should be differential rates of deduction in comparison with the site value and the structural value; that is in proportion to the land value being more or less, so the rateable value should be more or less.

11,980. When you go about the country making valuations, or when you used to go about the country making valuations for Imperial purposes, did you, in your own mind, differentiate between the site and the structural value of the hereditament that you had to value?—No, I never took that into consideration at that time.

11,981. Do you think it an easy thing to do?—Well, it is a difficult thing to do; it would not be so much in the provinces where I was. Of those districts I would say that Brighton was the only place where such a difficulty could arise, and there the poor rate authorities adopted the view which I considered was a fair one from the income tax point of view, and I did not go into the matter.

11,982. It is only a pressing question in urban districts, then?—Yes.

11,983. Do you think that it is a duty which skilled men could reasonably be asked to undertake?—Yes.

11,984. Separating the site from the structural value?—Yes, certainly.

11,985. You think so?—Yes.

11,986. If adopted it would be necessary to give an appeal upon each of the sides—the structural and the site valuation—because the owner of the hereditament might think that the one was expanded at the expense of the other?—He might think so.

11,987. Do you think it would, or would not, add to the difficulty of making up the quinquennial lists if that had to be taken into consideration?—Certainly it would, it would considerably increase the difficulty of arriving at rateable values if that distinction was to be drawn.

11,988. Would it increase the cost materially?—Yes, it would provoke a great deal more litigation, too.

11,989. Is it, speaking generally, an undertaking which you would recommend the Legislature to insist upon?—Certainly not.

11,990. (Sir Edward Hamilton.) I daresay you know this Commission was originally appointed mainly in connexion with the Agricultural Rates Act of 1896, and I think that the surveyors had a great deal to do with bringing that Act into operation?—They had.

11,991. Have you, from your experience in assisting to bring that Act into operation, formed any views as to how it is actually operating at the present moment?—From the reports I have had from my surveyors they give me to understand that it is very greatly appreciated by the agricultural interest, in so far as the relieving of lands of contributions to local rates is concerned; and it has, moreover, developed the fact, which was practically unknown to a large portion of the assessment committees, of the inequality of the ratings that existed.

11,992. It has brought those inequalities out, you think?—Yes, very definitely, and expressions have gone round very generally of the desirability of having some such officer as a surveyor to develop those inconsistencies and to show where the failure has been in the past in getting proper valuations. So that, I am told, that a very large number of representations have been made to the Local Government Board by those

The witness withdrew.

Mr. R. CLARK called and examined.

Mr. R. Clark.

12,001. (Chairman.) You are a Surveyor of Taxes in the Metropolitan area are you not?—Yes.

12,002. What district is under you at the present moment?—My present district is the Finsbury district, but I have been 21 years in London, and I have had four districts in London.

12,003. Have you had districts in the country too?—Yes.

12,004. Where?—I have been in Lancashire, Cambridgeshire, Norfolk, Somerset, Dorset, and Wilts.

a 93478.

assessment committees asking for the powers for the surveyor of taxes to attend and to help them in making the valuation.

11,993. (Mr. Balfour.) Can you tell us wherein those inequalities and differences arise; was it between one property and another, or between one kind of property and another?—It was more especially between the properties held on lease and those in occupation of owners; for instance, I might mention that I have a letter here from a friend, in which he says, "I found the greatest discrepancy between our Schedule A assessments and the poor rate valuations to be in a union where the valuation (except on new properties) had not been made for, I think, 20 or 25 years. The result was that all old properties were rated, in many cases, at half the rental, while new ones were rated up to the full rent."

11,994. That is not quite the point?—I am coming to the inequalities.

11,995. But that is inequalities between the old and new. I thought you said that it had developed inequalities between properties in the hands of their owners and properties let; did you say that?—I was going on to read, "the valuation was kept so, I understood, on account of the county rate, which for many years was based on the totals of the rateable value in each union, but latterly the clerk to the commissioners supplied the county authorities with the total of our Schedule A for each parish, but this, of course, did not include railways, gasworks, &c." And then it went on to show that the assessments on the old properties had been continued where there had been no change of tenancy for a long period.

11,996. Was the rate higher in the case of property in the hands of its owners or property in the hands of tenants?—The rating was higher upon the new properties and recent lettings than upon the old tenancies and those in the owner's occupation.

11,997. I must have misunderstood what you said at the beginning, that the inequality was between property occupied by its owners and property occupied by tenants; did you say that?—The lowest standard of valuation was on the property occupied by owners and leaseholders and higher on more recent lettings.

May I make one addition to my answer to the question addressed to me by Mr. Murray as to the provisional list? There is one point I should like to be brought before the Commission, and that is, there is no power in the Valuation (Metropolis) Act to bring into a valuation list any omitted properties. Supposing, in making up a quinquennial list, one side of a street is omitted inadvertently, in that case there is no power in the Act for five years to put that into the valuation list, and the rates will be lost on such property for that period.

11,998. (Chairman.) Have you ever known it happen?—I know cases of individual properties where it has happened, and where they have been, so omitted.

11,999. (Mr. Stuart.) You have been in London and the provinces; is it to your belief or knowledge that the valuation in London is screwed up higher than in the provinces, or is it not the case?—In London, from an income tax point of view, no; but for the provinces I could not give it to you. As I have already mentioned to Mr. Elliott, there are higher valuations in some localities in the provinces than in others—it is so varied. To take the large towns in the provinces as a class, they are quite up to the standard I should say, of London.

12,000. And in the country districts, what do you say?—In the agricultural districts, and in the country districts, I should say no.

Mr. W. Male.  
10 Feb. '98

Metropolis Valuation List in. No power to include in Provisional or Supplemental List properties inadvertently omitted from Quinquennial List.

Valuation in metropolis and rest of country compared.

Mr. R. Clark.

12,005. (Mr. Murray.) Have you heard Mr. Male's evidence?—I have.

12,006. Do you agree with it generally?—Yes, generally. I dare say I could supplement it on some points, but generally speaking I agree with it.

12,007. Would you mention any points on which you wish to add to anything that he said?—I took a few notes with regard to country valuations; I wish to emphasise the loss that accrues to both revenue and local rates from the present system of valuation. My

owners  
compared  
with valuation  
of property  
in hands of  
tenants.

experience is that it is almost impossible to increase the property tax beyond the gross value in the poor rate, and that may be very insufficient. I have found in my experience in the west of England, that between 1867 and 1876—it would be triennial assessments then—rents were going up in a very striking manner. I noticed in three years an increase of 10 per cent. and 15 per cent.; but whilst the tenants' gross valuations were put up to the rent the owners' were left as they were. In that way that was not only affecting the Imperial revenue, but was affecting the incidence of local taxation very materially.

12,008. How do you account for that discrepancy?—No fresh valuations were made. That is one of the points I am very strong upon, that it would be a great point gained if there was a periodical re-valuation.

12,009. But you have that in the income tax?—No. We used to have a triennial re-assessment, but the basis of Schedule A is to a very large extent the poor rate basis.

12,010. But there is no reason why it should be?—The Act says so. The income tax valuation is based upon the primary principle of rack rent; if a rack rent has been fixed within seven years, that is, the tenant paying the usual tenants' rates and the landlord doing the repairs, that is the value; but after seven years that does not apply, and the surveyor by the Act of Parliament is bound to fall back upon the poor rate as his basis for properties not let at rack rent.

12,011. Is there anything to prevent him, upon the occasion of triennial or quinquennial re-assessments, putting the property up?—There is nothing to prevent him, but my experience is that the Commissioners are unwilling to go above the gross value.

12,012. The poor rate gross value?—The poor rate gross value, and besides it is very difficult to find a basis. I have known parishes where a proprietor had put up all his rents, and the assessment committee got a copy of the Schedule A. assessments. They immediately brought up the tenants gross value to the rents, but the property in occupation of the owners that had risen equivalently was not touched at all, therefore the surveyor had no basis. If he attempted to increase a farm occupied by an owner, he was met by the reply; where is your basis? The gross value is as a rule up to the rents.

12,013. And the difficulty arises where it is in the occupation of the owner?—Yes.

12,014. Is there any other point you wish to mention?—Well, rent is not always taken even in London. Mr. Male, of course, is quite right—I quite agree with him, that it is usual, and since I took part in the first quinquennial valuation of 1880, there has been a very great improvement in that way. But even now rent is not always taken, and I think it would be a great point gained if the basis of actual rack rent was taken. If assessment committees and parish overseers were confronted with a legal enactment that the rack rent fixed within seven years—or I am disposed to favour five years, as things march quicker than when the Income Tax Act was passed in 1842—if they were met with this stern fact, that the minimum gross value must be the actual rack rent fixed within five years—that is the recommendation of the county council, and I quite agree with it—that would remove a great many difficulties and remove the question of the value, which is so largely now a matter of opinion, to one of fact.

12,015. But there would be an enormous number of cases in London in which the rent had been fixed at an earlier date than five years?—Yes.

12,016. It would not help these cases at all?—Well it would help to this extent, that you would have the basis of comparison with other properties. In many parts of London nine out of ten houses are let at rack rent. In all the suburban districts, practically speaking, property is let at rack rents, and you would have the basis of actual rent. If in any road, take for instance the road I live in, there are plenty of houses let at 50% and 60% a year, and if you have a corresponding house occupied by the owner, you would have this test to go upon.

12,017. Are not 7, 14, or 21 years' leases more common do you not think?—There are few 7, 14, or 21 years' leases in the suburbs of London in my experience. But very frequently in the centre of London (and my district, before I was in my present position, was Holborn, and the region of Gray's Inn Road and

Tottenham Court Road) there were many 7, 14, and 21 years' leases there.

12,018. I should like to ask one question which I did not put to Mr. Male. The valuation in the Metropolis Valuation Act does not apply to land tax, does it?—No, it does not.

12,019. Do you think it would be advisable to make it apply to land tax?—Yes, I think so. I am inclined to think that is an omission in the Act.

12,020. And if it was extended to the provinces would you make it cover land tax?—Of course that raises the wide question of having one basis for more than the land tax. I see no reason why it should not be applied to land tax.

12,021. Have you had any Scotch experience?—I have not had practical Scotch experience, but I am a Scotchman myself, and, of course, I have heard a good deal of the working of the Valuation Act; I have taken a little interest in the question, and with some friends who are assessors under the Lands Valuation Acts in Scotland, I have discussed the matter, and we have sometimes drawn comparisons between the English and Scotch systems.

12,022. Do you think it possible to extend that system to England?—Well, it would be a great revolution, and it would be a difficult matter to introduce. It was a very difficult matter in Scotland when it was introduced—matters were in a state of chaos; but since then it has worked very smoothly, and I have no hesitation in saying that if it were possible to get such an Act passed for England, in 10 or 20 years we should all be very much delighted. As you are aware, they have an annual valuation. That sounds rather formidable, but it is not so formidable as it looks, because it is simply the revision. Once you get a valuation list and you find a proper basis, it is not a very difficult matter to revise it every year.

12,023. (Chairman.) In other words, it is a big thing to make a Bradshaw's Guide, but it is not a very difficult thing to alter it month by month?—That is so. I have a very decided opinion that it would be a blessed social change if you had the Scotch system introduced into England, but it is such a big change.

12,024. (Mr. Murray.) From the point of view of the Imperial revenue, do you think we should be better off under that system?—I do not think it would make a very great difference in the Imperial revenue—it would affect it, I believe; but it would tend to very much greater equality in the incidence of local taxation. I believe in England there has been a great deal of inequality in the incidence of local taxation, and especially in regard to rateable value. I think there are great inequalities perpetrated in arriving at the rateable value.

12,025. And the Imperial taxation too, I suppose?—Of course, for Imperial taxation we take the gross as our basis.

12,026. Is the gross value for Imperial taxation more uniform than the gross value for rateable purposes?—Fewer inequalities arise by taking the gross value than by taking the rateable.

12,027. What I meant was this: Do you think that Schedule A, as assessed in the county of Lincoln, for instance, is on about the same basis as it is assessed in the Metropolis?—The county of Lincoln is chiefly land. My experience in the provinces—I quite agree with Mr. Male—is this; that so far as the large towns are concerned in England, there is not so much to complain of in regard to the gross value, but under the rateable value which was referred to great inequalities arise.

12,028. But you do think that the gross value for Imperial purposes is on a tolerably uniform basis all over the country?—In large towns, yes; but not in the country—there is a good deal of loss in the country.

12,029. Do you mean in agricultural land?—Yes, in agricultural land.

12,030. Have you any further points to mention?—With regard to legal points; as to the returns by the occupiers called for every five years, the present system in the metropolis is very loose. The return is sent out by the overseers, and it is very often left to take care of itself, there is no effort to get it returned, and the consequence is that in some parishes perhaps 40 or 50 per cent. of the returns never come back.

12,031. Does not the surveyor see to that?—No, there is no duty thrown upon the surveyor of doing

that. Some of the best managed parishes have sent out a refresher; but in the smaller parishes the return is sent out and left at a house, and no further steps are taken to get it.

12,032. But the surveyor sees the returns when they come in?—Yes.

12,033. But when they do not come in, does not he suggest to the overseers that they should take steps to get them?—He has no duty cast upon him to do it. I suggest, in any amendment of the Metropolis Valuation Act, there should be at least a reminder, and, if rent is going to be taken as a basis, I should enforce the penalty. I have only known one case in my 21 years' experience where they enforced the penalty. There is a doubt as to who is to enforce the penalty. There is the word "wilful" in the clause that makes it very difficult to enforce the penalty; he must "wilfully neglect," and the penalty is very small, 5*l.* to 10*l.* I believe that in every valuation that is made, if a few cases where the parties make grossly false returns, or neglect to make the returns, were proceeded against, it would have a very wholesome effect.

12,034. But you cannot go much beyond this 58th section, which says, that if anyone refuses or neglects to make a return, he shall be liable to a penalty of 5*l.*?—I should. Who is to proceed for it? In my experience, I think I have only known of one case in 21 years; the word "wilful" is so difficult to prove, it is "wilful neglect."

12,035. (Mr. Balfour.) I suggest that the penalty should be enlarged, or failing the return of the schedule that some arbitrary amount should be put in like surcharging a man in income tax?—That is a very useful suggestion, that in the event of no return being made, there should be power to increase the rate.

12,036. And if they put what appeared to be an unfair value there would be an appeal against that?—There is that power now.

12,037. (Mr. Smith.) Would you propose to send the return to compound householders?—No, that is one feature in which I think that the Scotch Act is so immensely superior to the English Act, that in Scotland they deal with the few, and not with the many. In Scotland a landlord gets a return, and he has to enter the names of his tenants, and the rents, and the conditions of the tenancy; and, instead of having to deal with a hundred tenants in a parish you have to deal with one owner only, and there is power to check the return, by occasionally sending a return to a tenant.

12,038. You are probably aware that in the poorer districts a return like this is looked upon as a county court process?—I know that is so with tenement holders.

12,039. (Mr. Dalton) I think you are of opinion that the valuation in the City would be considerably higher than now, if you adopted the income tax definition of gross value?—I think so, except that the clause in the Act should be imperative, in the case of repairing leases, to add something for repairs.

12,040. What is the annual loss to the Exchequer, do you imagine, from this low valuation of the City; it must be something serious?—Well, it would be a difficult matter to say that. I think the gross value of the City of London is about four millions. Out of that, of course, there must be deducted properties let on annual rental, which I suppose would be fairly assessed, but I have no doubt the loss is considerable, probably between 300,000*l.* and 400,000*l.* a year.

12,041. How has it quite come about, that this valuation of the City is so low having regard to the powers of the surveyor of taxes under section 53 of the Act; has he not thought it desirable to proceed to extremities in respect of those properties?—Well, if he puts an increased value, of course, he goes before the City of London Assessment Committee, and they adhere to the system; they simply set aside his figures. Then it becomes a question of appealing to the quarter sessions, and that is a very cumbrous process, and can only be taken by the surveyor with the consent of the Inland Revenue.

12,042. Still, if the loss is so great, would it not be worth while to take a few typical cases before the court?—That is a question that should be dealt with by the Inland Revenue. The surveyor could not proceed without the consent of the Commissioners of Inland Revenue.

12,043. (Mr. Elliott.) With reference to what you said just now as to the value of agricultural land, when did you leave your last district which might be called an agricultural one?—In 1877.

12,044. Then your experience since 1877 has been mainly of an urban character?—That is so.

12,045. And you have had no experience as to the effect of agricultural depression upon the value of land, and the effect of agricultural depression upon the valuation of land?—No, I have not.

12,046. (Mr. Stuart.) I understand you to say that from your experience the gross annual value is more fairly estimated, take it as a whole, than the rateable value?—It is.

12,047. Would you say that is true as between London and the rest of the country as a whole, or would you say it is true as between part and part of London. I mean this: does your remark apply in relation to London and the rest of the country, or to one part of London and to another part of London?—My experience is chiefly a metropolitan experience. I would rather speak as to the metropolis. In the metropolis my experience is that it relates largely to classes of property. You arrive at a gross, and then you immediately neutralise, at least you seriously affect, that gross, as far as local rates are concerned, by making unequal deductions. I had a very typical case when in Bermondsey. There were two houses adjoining worth 100*l.* a year each; in one case there was a little gas engine put in, and 5*l.* was added for the value of the gas engine. This 5*l.* brought the house into the category of a factory, and 35*l.* was taken off before arriving at the rateable value, reducing it to 70*l.* The adjoining house, exactly the same kind of house, with the exception of this little gas engine, was classed as a warehouse and one-sixth was taken off. I have frequently had cases of that kind.

12,048. (Mr. Balfour.) What was the price of the gas engine?—It was valued at 5*l.*, and might cost 40*l.* or 50*l.*

12,049. (Mr. Stuart.) Have you any proposal to make or any suggestion to make, whereby the inequalities arising in rateable value, as opposed to inequalities in gross value, could be remedied?—That brings you back again to the Scotch system. Of course it is a revolution, but in Scotland they have practically only one value. They make the valuation roll, and the gross value is the basis, and in many parts of Scotland all rates are levied upon that gross value.

12,050. (Chairman.) Is that so with regard to county rates?—Yes, county rates and other rates as well. In some parishes they have a deduction; they classify the property.

12,051. Are you quite sure? Can you name me any parish in which poor rates are laid upon the gross?—I do not know it personally.

12,052. You had better not give that then?—Quite so.

12,053. (Mr. Stuart.) My question was, have you any suggestion to make as to how to get over the inequalities of rateable value as opposed to those in the gross value, and you were proceeding to answer my question when you were interrupted?—It is a very difficult matter. I am inclined to think that the reductions—the percentages—should be simplified. Just now there are about five or six different percentages, and something would be gained if, instead of having 25 per cent., 29 per cent., 16 per cent., 33 per cent., and so on, you could reduce your per-centage of deduction to two or three scales. In regard to this 33½ for factories, of course that raises a big question. It has been held by the assessment sessions that, even where machinery has not entered into the question of value at all, that if they come up for appeal one-third must be taken off—take, for instance, a factory which has been stated to be at 500*l.*, the overseers have taken no notice of the machinery inside at all, and they thought that they would compromise, and that the ratepayer would consent to the valuation by being put in at 500*l.* with the one-sixth deduction, classing it as a warehouse; the ratepayer has come up and appealed, and the Court have given the one-third deduction. It is a very wide question, but I am disposed to think that that might to some extent be met by making only the engine and boiler with actual power rateable.

12,054. That is the Scotch system, is it not; the engine and boiler fixed and not shiftable shall be rate-

Site value and structural value: Deductions which should be made in arriving at rateable value. How the present system affects the City of London.

12,055. As to the question of the inequality in rateable value, going beyond the question of gross value, have you considered this question? Let me take the case of two buildings, or two properties rather, one where the site value is 50*l.* and where the building value is 450*l.*, and the other where the two are in equal parts, such as in some portions of the City, probably; do you deduct so much per cent. in both of those cases to account for the repairs?—Yes.

12,056. Is not there an inequality in that?—Very great. That has struck me very much.

12,057. Am I not right in saying that if that inequality were put right, the City of London would have a higher rateable value?—I think probably it would. Take, for instance, the case of a City warehouse, let, say, at 600*l.* a year, the site value of that might be 500*l.* a year, and the value of the buildings only 100*l.* a year. Of course the absurdity of the thing is shown by a case of that kind; one-sixth deduction is given, and the rateable value is only on the 500*l.* simply the value of the site; it all comes off the building. Whether that would lead to an increase of rating value I am not sure, because you would have to separate the two. This warehouse that I am speaking of, if they arrived at the estimate that the buildings were worth 2,000*l.*, and calculating 5 per cent. on the 2,000*l.*, that would be 100*l.*, that would leave 500*l.* for the site.

12,058. Without going into the question of whether it would increase or diminish the amount of the rateable value, it surely is a source of great inequality and injustice as between property and property?—I think so.

Valuation Metropolis Act should be extended to rest of country. But the Act requires certain amendments.

12,059. I presume that you agree with Mr. Male's evidence as to the advisability of extending to the country the metropolitan system?—I do strongly.

12,060. Am I also right in assuming that you agree with Mr. Male that the metropolitan system in itself requires amendment?—Yes.

12,061. And you think that that amendment ought fairly to take place at the same time as the extension to the rest of the country?—I think so.

12,062. You think that the amendment that is required in London is material and important?—It would be a decided improvement; there is no doubt about it.

London County Council have rights of appeal only as ratepayers.

12,063. There is one point which perhaps you can tell me about. As to the London county rate there is no power, or is there any power in the County Council of London, to alter the valuation lists in respect of its own rate, and is there such a power in the county councils outside of London?—I apprehend the London County Council, if a ratepayer in any parish, has the same rights as any other ratepayer, that is they can appeal against any hereditament in the parish, not only occupied by them, but against any one else, and I think they have power to appeal against the totals of value. That is where they are ratepayers.

12,064. *Qua* ratepayer?—*Qua* ratepayer. They have no *locus standi* where they are not ratepayers.

12,065. Are you aware what the *locus standi* of the county council is outside London?—No, I am not.

Valuation (Metropolis) Act should be extended to rest of country.

12,066. (*Chairman.*) Has your country experience led you to form any opinion, if you were going to set up a new system in the counties, what the valuation authority should be?—If you are setting up a brand new system do you mean?

12,067. Yes, a new system of valuation—to what local body would you commit it?—The idea is to extend and improve the existing system, to extend the principles of the Metropolitan Valuation Act to the country.

12,068. That is one idea, but I wanted to take you more in the abstract. I wanted to know what authority you would choose yourself for the country?—If I were to devise a new system my idea would be that the valuation primarily should be in few hands. It should be considerably in the hands of experts, and you should have a strong body to appeal to.

12,069. But I want to get your own opinion as to what should be the local authority under which and by whose directions those experts should work. I want

you to make your choice. There is the parish, there is the union, there is the administrative county, there is the geographical county. Which, or any, of them would you take?—Well, the parish, of course, at present, is the unit.

12,070. I know that, but I want to get from you if you were beginning with a clean sheet of paper what you would do?—If I were beginning with a clean sheet of paper I should be inclined to take the union.

12,071. On what ground?—On the ground that in many parts of England the parish is so small; but there is no other area that I can think of. You can hardly devise a fresh area; but the unions exist ready for your purpose, and I should be inclined to take the union as the local authority.

12,072. You would not go a step further, and take the administrative county?—I would take the union as the initial area, with an appeal to a body representing a larger area. I should rather favour a county board of appeal. Take the union as the primary area and a county board of appeal, comprising either quarter sessions or a committee of the county council.

12,073. Would you like to put any point that we have missed?—There is one point that is rather valuable; in the metropolis the power of one union to appeal against the totals of another union. I have found that in practice exercises a wholesome influence, and I do not know that that has been brought before the Commission.

12,074. That is an existing power in the metropolis which you would extend to the country?—Yes, the power of appealing against totals.

12,075. Is there anything in the London power which you think could be improved?—Yes, in that respect a practical difficulty arose in 1891 or 1892. There were so many appeals before the quarter sessions that the appeals could not be heard within the statutory time, and there was a difficulty in getting the totals altered. The appeals were successful, but a technical difficulty arose in that respect which would require to be seen to; that is, of course, a technicality.

12,076. Have you any other point which we have not spoken of?—No.

12,077. (*Mr. Murray.*) How does the tax district compare with a union assessment area in the country?—They vary a great deal. The tax districts are composed of so many divisions comprising so many old petty sessional divisions. That is one of the great reforms in local administration—I think one of the greatest reforms would be to alter the boundaries of parishes and to bring tax divisions into something like consonance with the union divisions. There is a great overlapping of authority.

12,078. (*Mr. Stuart.*) You spoke about appeals against totals?—Yes.

12,079. And you pointed out that the London County Council might appeal against totals as a ratepayer. I suppose where it cannot appeal against totals you would not object to giving it the power of doing so?—No, I think every body in London partaking from the common fund should have the power to appeal, decidedly.

12,080. Let me take clause 53 of the Valuation (Metropolis) Act, which I have read before, and which you know. Have you as a fact found that the existence of that clause is a strength to you?—Yes.

12,081. Am I right in supposing that the strength it is to you is that it throws the other people into the position of having to attack your figure instead of you having to attack theirs?—That is so.

12,082. When we come to extend the metropolitan system, which you advise us to do, to the rest of the country, you would continue that power in the hands of the surveyor of taxes to the country also?—That would be essential.

12,083. You have pointed out, have you not, that one of the difficulties of your sticking to your proposals right to the end has been that the Local Government Board has not, perhaps, been willing to sanction the expense of the procedure?—That is so; the Inland Revenue Board.

12,084. Would you give to the county council the same powers as in clause 53 when you extend this Act?—Yes, I would give the same powers as the Metropolitan Act.

**Mr. R. Clark.**  
10 Feb. '98

Area for purposes of valuation should be the union with an appeal to a county authority.

Appeals in metropolis: power of one union to appeal against totals of another. This provision should be extended to rest of country.

Areas of Poor Law Unions and tax districts should be continuous.

London County Council: Powers of appeal.

Mr.  
R. Clark.

10 Feb. '98

12,085. In this respect I suppose you have proposed, along with Mr. Male, to place upon the local assessment committees in a county, representatives of the county council with a view of ensuring uniformity; just as you put the surveyor of taxes, so you would wish to put him upon the committee as he practically is?—No, I do not think I should do that.

12,086. Do you disagree with Mr. Male in the point of putting assessors from the county council—I am not now speaking of London—upon the assessment committee?—I agree with that.

12,087. But you would not give them the powers of clause 53?—No.

12,088. Why not?—I think it would be making the working of the system extremely invidious if not only the member, but a certain number of the committee, had power to go beyond the decisions of the joint committee.

12,089. Not only the member but the county council which he represents?—You would give the county council representative a vote on the committee.

12,090. That, from Mr. Male's evidence, we have agreed to leave uncertain, but whether he has a vote or not, would you allow the county council to have this power which is in clause 53?—No, I think not. I should rather strengthen the Appeal Court. I am in favour of giving the county council a decided representation in the Appeal Court, but I do not think it would work well to have two officers on the parish committee each with power to object.

12,091. You would bring in the county council's power of levelling the gross or rateable value, making it comparable, each with the other over the county—you would give it the power through putting it strongly upon the Appeal Court?—Yes.

12,092. You recognise it as a necessity that a county council should somewhere intervene?—I do.

(The witness withdrew.)

(Adjourned till to-morrow at 11.30 o'clock.)

## THIRTY-FIRST DAY.

Friday, 11th February 1898.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. J. B. BALFOUR, Q.C., M.P.  
The Right Hon. C. B. STUART-WORTLEY, Q.C., M.P.  
G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
JAMES STUART, Esq. M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. E. J.  
Harper.

11 Feb. '98

Mr. EDGAR JOSIAH HARPER, called and examined.

12,093. (*Chairman.*) You are assistant valuer to the London County Council?—That is so.

12,094. And you are appointed by the Council to come here in respect of the subjects with which your memorandum\* deals?—Yes.

12,095. How long have you been in your present position?—Eight years.

12,096. And what previous experience have you had?—My previous experience was with the Metropolitan Board of Works. I have been in the valuation branch of the work, under both bodies, for about 20 years.

12,097. (*Mr. Stuart.*) I understand that you have sent to the Commission a memorandum\* which refers to the assessment machinery under the Valuation (Metropolis) Act of 1869; to the method of determining annual value; to the valuation list totals; and also to recent attempts to obtain a nearer approach to uniformity of practice?—Yes.

12,098. That memorandum, I understand, will be printed by the Commission in full, and in consequence my examination may be somewhat shortened. I now put to you a few questions which will enable you to bring out some of the substance of that without going into it in detail. I see that in paragraph 6 you refer to the non-conterminous character of the areas for Imperial and local purposes. In the matter of London assessment, is it, or is it not, a drawback that taxation areas for Imperial and local purposes, do not always coincide?—Yes, it is a drawback, for obvious reasons. Of course it is only a minor point, but the subject is already very difficult, and the complications that arise add another and unnecessary difficulty. I have prepared a map, which is in the hands of the Commission, which was hanging in the room the 1st time I was here. I do not see it now, but it is not absolutely necessary. The fact is well known that the districts of the surveyors of taxes and the districts of the overseers do not at all correspond.

12,099. The map you put in shows the failure to correspond?—It does, by verges of different colours.

12,100. Then, passing over the description of the machinery of the Metropolitan Valuation Act, and coming to paragraph 9 of your memorandum, you give us the form\* now issued to occupiers for the making of a return defining their interest in the property assessed. What objections do you take, or why do you object to the form of that return?—I do not object to the form of that return as applied to ordinary cases of house property; I object to it because it does not apply to very large and important classes of property, which are not let or occupied in the same way as house property. The return sent, for instance, to a railway company would be a mere farce; it gives them no opportunity of giving to the overseers or assessing authorities any of those particulars which are necessary for the assessment of the undertaking of a railway company.

12,101. You are acquainted with the Bill introduced by Mr. Benjamin Cohen and myself on behalf of the London County Council, entitled "London Valuation and Assessment Bill," ordered by the House of Commons to be printed on the 13th March 1896†?—Yes.

12,102. Would not a large portion, at least, of your difficulties or objections to that form of return be met if clause 83 of that Bill, giving power to vary the forms of these returns by byelaws, were adopted?—Yes, my objection would be wholly removed, because it would be possible to vary the form in accordance with the particular circumstances of each case.

12,103. And that is provided for with other amendments by clause 83 of the Bill that I have referred to?—Yes.

12,104. Will you very briefly state what is the position in London with respect to deductions?—The position in London with respect to deductions is that

Returns issued to occupiers in Metropolis in-applicable to some classes of property.

London Valuation and Assessment Bill, 1896: Some advantages of.

\* Pages 240-50.  
† No. 141 of Session of 1896.

Mr. E. J. Harper.

11 Feb. '98

Deductions from gross value in Metropolis. Deduction of one-sixth almost universal in practice. But this practice is not a satisfactory one. Deduction should be calculated upon structural value alone, not upon total gross value.

they are governed by the Third Schedule of the Valuation Act of 1869.\* That schedule prescribes a scale of deductions which is termed a "maximum"; but as a matter of practice, not only overseers and assessment committees, but also the court of quarter sessions—the ultimate authority as to facts—take that scale as if the word "maximum" were not in it, and they use those maximum rates of deduction as if they were to be the rates of deduction.

12,105. And these rates of deduction vary for different classes of property in a manner set out in Schedule II. of your memorandum?—Yes, that is so. Schedule II. is practically a copy of the scale given in the Act.

12,106. And when we commonly refer to a deduction of one-sixth; we refer to that because that deduction applies to the vast majority of London properties?—Yes, that is so; both as to number and as to value, the vast majority.

12,107. A greater deduction taking place in the case of small properties and of manufacturing premises?—Yes, that is so; and a less deduction in some small cases.

12,108. But the great majority of London properties are subject to a maximum deduction of one-sixth from the gross value, in order to obtain the rateable value?—Legally, subject to a maximum deduction—practically, subject to a deduction—of one-sixth.

12,109. In other words, the deduction of one-sixth, the maximum deduction, is fairly universally adopted? I might say it is invariably adopted.

12,110. May I ask you to explain how in your opinion it is that this practice causes inequalities?—I can best explain that by referring to a diagram which accompanies Schedule III.\* to my printed memorandum. There are there set out eight actual cases in London: the districts and actual figures relating to each case appear in Schedule III., but in the diagram they have all been reduced to a common proportion or per-centage. The diagram is coloured to indicate the different proportions (in these eight cases) which site value and structural value bear to the total rateable value. There is a third section in each case shown by hatching. That represents the difference between gross value and rateable value, being a deduction—the one-sixth deduction in question—which is supposed to be in respect of the average annual cost of the repairs, insurance, and other expenses required to maintain the hereditament in a state to command the rent. Those repairs apply almost *in toto* to the structure, and in my opinion the deduction made on account of the repairs and insurance to the structure should be calculated upon the structural value and not upon the total gross value. At present the law makes the allowance in proportion to the total gross value. The effect is shown by the diagram. In two of the eight typical cases you have a deduction for repairs and insurance, applied almost wholly to the structure, which exceeds considerably the annual value attributed to the structure by the assessment committee.

12,111. In other words, you say that with a small site value and a large building value a deduction of one-sixth on the whole leads to a fair result, that where there is a large site value and a small building value a deduction of one-sixth on the whole would be too great?—Very much too great.

12,112. Can you give me any idea of the extent in London of the inequality produced from this cause that you refer to?—I should say the rateable value of London is at least  $1\frac{1}{2}$  millions less than it would be if those deductions were fairly made.

12,113. By fairly made you mean if the percentage deduction was reckoned on the building value, and was a fair proportion of that building value?—That is what I mean.

12,114. How much do you say it is of annual rateable value?—A million and three quarters.†

12,115. Then you refer in paragraph 17 of your memorandum to another point in which there is a loss in rateable value, namely, to a practice of adding 10 per cent. to the rents of leases in order to produce the gross value. Is that regularly done in London?—I think it is in all districts except the City of London Union. At one time there was great irregularity in that respect, but since the meetings of the Assessment Conference, pro-

noted by the London County Council, that addition of 10 per cent. has been made with practical uniformity in all districts except the City of London. Of course the addition applies only to properties let on lease, but that is a very large class of property, both in number and value.

12,116. Then what is the origin of this adding of 10 per cent., is it statutable or practice?—It is simply practice.

12,117. Will you explain what the addition of the 10 per cent. means—what it is done for?—Experts are of opinion that where you have a fair rackrent reserved under a lease that that is the best test of rateable value, and that rent should appear as the rateable value; but the practice has arisen in the past of taking that rent as the gross value; but that was felt to be extremely unfair, and before the creation of the London County Council overseers and assessment committees had got into the habit of adding something to those rents. No settled proportion had been fixed, but by the resolution of the first Assessment Conference, which met, I think, in 1890, it was agreed that 10 per cent. should always be added to such rents; that was a compromise. The 10 per cent. is not really sufficient, because when you have added 10 per cent., say, to a leasehold rent of 100*l.* a year, you get 110*l.*, which is called the gross value. You then, under the Third Schedule to the Valuation Act, deduct one-sixth from the 110*l.*, and that (omitting fractions or shillings) leaves a rateable value of 92*l.* Now, you add 10*l.* in the first instance, and you subtract 18*l.* in the second: both the addition and the subtraction are supposed to cover the same items of cost, namely, the annual cost of repair, insurance, and similar things.

12,118. I understand from your reply that where there is an addition of 10 per cent. to a lease, and then a deduction of one-sixth, both of these arose from a desire to accomplish precisely the same end, and that they ought to have amounted to equal sums in money?—They should, undoubtedly.

12,119. And inasmuch as the 10 per cent. added is less than the one-sixth subtracted, there is a loss in rateable value?—Yes, and that applies all over London.

12,120. Have you any idea what the amount of loss in rateable value over London is owing to that method, owing to the fact that the 10 per cent. added, and the one-sixth deducted, which are meant to be the same thing, but are not the same amount in money?—I have not worked that out, but it is sure to be a considerable sum, certainly not less than one million.

12,121. You referred to the fact that 10 per cent. was not added in the City?—Invariably, so far as my experience goes; and at the last quinquennial I had a complete copy of the City valuation lists through my hands, and I found invariably that, where a rackrent was reserved in a lease, the amount of that rackrent appeared in the valuation list as the gross value.

12,122. How much would you suppose is thereby lost to rateable value through the non-addition in the City of the 10 per cent. in addition to the sums you have indicated?—I suppose the City alone would account for 250,000*l.*\*

12,123. Have you taken any steps to bring the City to add this 10 per cent. in the same way as you have secured other parishes to add the 10 per cent.?—Yes; the City authorities were, of course, invited to the Assessment Conference, but they did not attend; at any rate with regularity. Then the Council have from time to time, and especially in the year 1895, the year of the last quinquennial valuation, sent to the overseers of the various City parishes, and to the assessment committee of the City Union, long lists of cases where they pointed out that this inequality arose.

12,124. Has the City, in any case, followed your advice?—Not on this point.

12,125. It has not?—It has not on this point; other suggestions which have been made, they have considered, and part of them have been acted upon by the City, but not in this matter.

12,126. How many assessment authorities are there in London outside of the City?—Twenty-nine assessment committees.

12,127. How many assessment authorities are there inside the City of London?—One assessment committee.

Mr. E. J. Harper.

11 Feb. '98

Leasehold property in Metropolis: Addition of 10 per cent. to rents reserved under repairing leases to arrive at gross value, and deduction of one-sixth to arrive at rateable value. Extent of under-assessment due to this cause.

In City of London 10 per cent. not added to rents reserved under repairing leases to arrive at gross value, as in other parts of metropolis. Loss of rateable value owing to this.

\* Page 251.

† See answers to Questions 12,536-41.

\* See answer to Question 12,326.

Deductions in Metropolis: Inequalities of present system and results.

Mr. E. J. Harper.

11 Feb '98

12,128. How many groups of overseers are there?—In the City there are many groups of overseers; there is a set of overseers for every parish. I forget the number of parishes, but it is over a hundred.

12,129. So that there are over 100 sets of persons in the City from whom the assessment emanates?—Yes, over 100 from whom the assessment emanates. The assessment committee simply revises the figures of those overseers.

12,130. Passing from that, and going to paragraphs 18, 19, and 20 of your memorandum, in what other classes of properties in London do you consider that under-assessment still prevails to any extent?—In the case of freehold properties occupied by the owner; in the case of properties including machinery; in the case of licensed premises; in the case of public buildings occupied by public bodies, and from which no private profit accrues; and such large undertakings as railways, tramways, canals, docks, and gas and water works.

12,131. Have you formed any idea of how much, from your point of view, these properties are under-assessed?—No, I have not gone into figures on that point, and it would be impossible to give any reliable figure without having a great deal more information than it is possible for me to obtain.

12,132. Let us take the case you have referred to; is it not a difficult thing to deal with houses including machinery?—It is most difficult; the decisions of the courts are at variance in some cases, so far as it is possible for a layman to say that; and in any case they are couched in highly technical language, through the necessities of the case; and if you have to make a valuation of property including machinery, it means that you have to call in an expert valuer (which is a considerable expense) and you have also to determine the proper amount of per-centage to take upon the expert's report, and then, again, you have the question as to how much of the machinery is fairly to be taken into account as actually enhancing the value of the hereditament.

12,133. Is the basis upon which machinery is included that it enhances the letting value of the premises?—Yes; unless there is clear proof that the machinery does enhance the value there is no justification for including anything in the assessment in respect of it.

12,134. The practice and decisions on this point are very various?—They are very various, almost as various as the number of cases submitted to the courts.

12,135. Then taking another point to which you refer in paragraph 23; notwithstanding the revisions which have recently taken place in the estimate of the basis of contribution paid by the Government in lieu of rates, do you consider or do you not consider that that basis is still too low?—I think it is, undoubtedly.

12,136. Do you see any difficulty in rating the Government property precisely as other property is rated?—From the point of view of the London assessing authorities I see none whatever. I think that it would be an advantage to the Treasury valuer to have his figures tested in the ordinary way.

12,137. Property belonging to other bodies, such as the County Council and the vestries, is rated in the ordinary way, is it not?—Yes, it is rated just the same as any other property.

12,138. Taking the question of public-houses and the rating of them, has there been any change recently in the method adopted, or what is the method adopted for rating a public-house?—Prior to the Assessment Conference of 1890, I do not think that any method could be said to exist; but since that Conference a more uniform method has been adopted. There has, undoubtedly, been a great deal of attention given to this branch of assessment business, and I think that the result is that it has produced a better approximation to uniformity than previously existed.

12,139. Could you very shortly state to us how public-house property is valued in London?—The difficulty arises from the fact that rentals of public-houses do not represent the rackrent value. They are usually fixed at round sums, and the difference between the rent fixed in the lease, or tenancy agreement, and the real rental value of the premises is taken by the lessor in a capitalised form as premium; but that premium also includes, almost always, a certain sum for the goodwill of the publican's business; and it is a problem which only an expert can hope to solve with any degree of accuracy—to say how much of that

premium is capitalised rent, and how much is paid for the goodwill of the business. In order to avoid expense and arrive at something like uniformity, the Assessment Conference fixed upon the proportion of one-half of such premiums, and that proportion is observed now pretty generally throughout London; one-half of the premium is treated as capitalised rent and converted back into annual value and added to the rent reserved.

12,140. Referring to paragraph 24 of your memorandum, am I right in understanding that London is the only county where the assessment committees' decision as to valuation list totals is practically untested, except to the extent of the few individual cases carried to sessions on appeal?—Yes, London is the only county which is exempted from the operation of the County Rate Act, which enables county councils to fix the basis upon which all parishes contribute to the common expense.

12,141. How does it arise that London is in a different position from other counties in this matter?—It arises from the fact that London is subject to a valuation law of its own, the Valuation (Metropolis) Act of 1869, which created a different machinery for assessment in London from that which obtains in the provinces.

12,142. Do you think it desirable or advisable that each district in London should itself be able to fix its own quota of the local taxation which it has to share with other districts?—No, I do not think it desirable.

12,143. Of course I presume that a certain levelling in London takes place, which does not take place in the rest of the country, by the fact of the intervention of the surveyor of taxes?—Yes, the intervention of the surveyor of taxes, undoubtedly, tends to have an effect of the kind. You see the valuation list in London binds the surveyor of taxes.

12,144. And I presume that a considerable additional step has been taken in securing a greater uniformity of totals by the extra-legal action of the County Council in calling this Conference?—Yes, there is no doubt that has had a beneficial effect.

12,145. But still I am right in saying, am I not, as a matter of fact, each district is able to fix its own quota of the local taxation by this arrangement in London?—Yes, and does so.

12,146. And you think that is undesirable?—I think so.

12,147. Do you know of any reason, in ascertaining the total annual value, why each parish in London, which contributes to the common rates, should not be settled on the uniform basis by the County Council in the same way as the county rate is fixed by the county council of other districts?—I see no reason whatever why it should not be done; on the contrary, I think that would be a desirable course.

12,148. How much per-centage of the rates of London is raised by a rate running over the whole of London?—According to the last figures to which I have had access, it is 68 per cent.

12,149. Is that a larger per-centage than usual in other counties?—Much larger.

12,150. And therefore I suppose you would say that the necessity of fixing the contribution of each locality by some central intervention is more necessary in London than elsewhere?—Certainly it is more necessary.

12,151. And that a reform should be made in that direction?—Yes, I attach great importance to bringing one mind or one movement to bear upon that apportionment.

12,152. By what means would you propose to do that?—Simply by applying to London the existing machinery of the County Rate Act.

12,153. Passing from that to your paragraphs 29 to 33, may we take it that of recent years there has been a considerable improvement in the practice of assessing properties in London?—Outside the City, certainly.

12,154. Would you say by what means that has been brought about?—That has been brought about principally by the fact that the assessing authorities have been brought into much closer touch by reason of the Conferences arranged by the London County Council, and also by the steps taken by the Council in forwarding to all the assessing authorities cases to which they thought special attention should be given.

12,155. And in general, has the action of the County Council in that respect been met with goodwill by the

Mr. E. J. Harper.

11 Feb, '98

County Rates Act: London is the only county exempted from the operation of the Act.

Surveyor of taxes: His intervention in Metropolis valuation tends to create uniformity. London County Council: Their influence has tended to secure greater uniformity in valuation in London.

Common rates in county of London form a large proportion of total. County Rates Act: Should be extended to Metropolis.

Metropolis, valuation in: Improvement has taken place and is due to action of London County Council.

Under valuation in Metro- polis: Under valuation in cases of freeholds occupied by owners, licensed premises, and certain large undertakings.

Machinery, valuation of: Law in respect to.

Government property should be valued in the same way as other property. Basis of present contribution still too low.

Licensed premises, valuation of: Half the premium now treated as capitalised rent.

Mr. E. J.  
Harper.

11 Feb. '98

assessing authorities?—Yes, so much so, that when difficult questions now arise it is the usual course to appeal to the Council to take up the point, and endeavour to get it settled, as was the case only last year on the question of free libraries. A question was raised there in consequence of the decision in the case of the Mayor of Manchester *versus* Macadam. That was a case involving the assessment of a free library to income tax under a different Act (but still the words of the two Acts were very similar), and the result was that certain overseers omitted the free libraries in their parishes from the valuation lists; others kept them in, and, consequently, a want of uniformity arose. In that state of things the Council was appealed to, and they gave notice of objection to all the lists from which free libraries had been omitted, at the same time suggesting to the overseers of the other parishes that they should put themselves in a position to withdraw the free libraries from assessment in these cases; and having thus kept open the *locus standi* of all parties, they proceeded to take counsel's opinion. The result was to throw considerable doubt on the rateability of free libraries, and, except in the case of one parish, the free libraries were taken out of assessment.

12,156. All this action of the London County Council has been done without the sanction of law?—Quite so, as *amicus curiæ*.

12,157. And in consequence there are certain very marked exceptions in which there is an inequality in certain parishes and districts in London, who have not followed with the rest generally?—That is so.

12,158. I have already referred to the London Valuation and Assessment Bill,\* introduced by Mr. Cohen and myself, on behalf of the London County Council, which was to give statutory authority for doing what gentlemen like you have practically done; would you approve of that section of the Bill?—Certainly.

12,159. Is there not a power which the County Council has of appealing in certain parishes, because of its having property and being a ratepayer in those parishes?—Quite so, that is, in the capacity of the Council as a ratepayer—in an individual capacity, if I might say so, in distinction from its public capacity.

12,160. In how many parishes of London is the London County Council a ratepayer outside of the City?—In the case of parishes or unions, I think we are ratepayers in every district except one.

12,161. And then the City of London, in which you say there are about 100 parishes: in how many of these parishes are they ratepayers?—In three.

12,162. And therefore they cannot appeal in the others as a ratepayer?—No they cannot.

12,163. But the proposed amendment in the Bill that I have referred to would give them that power?—Yes, it would give power to appeal in any parish in the City or elsewhere in London, and I think there should be not only an appeal, which means an appeal to quarter sessions, but also power to object, which means more or less friendly discussion of the matter before the assessment committee.

12,164. In fact the London Valuation and Assessment Bill gave power both to appeal and to object?—Yes.

12,165. Could you mention the clause of the Bill in which it gave the power of objecting and the power of appealing?—Unfortunately my papers were to have been sent on here, but they have miscarried.

12,166. I think clauses 40 and 46 are the clauses of appeal, in which it says that the Council and any ratepayer within the parish to which a valuation list relates, &c. &c. may appeal?—Yes.

12,167. And an earlier clause (No. 23) gives the Council the right of objecting?—Yes.

12,168. And you regard these two clauses as important?—They are very important.

12,169. Are there any districts to which you could indicate to the Commission where under-assessment is prevalent?—The only district in which it would be fair to say that under-assessment was prevalent—apart from that serious case of the invariable deduction of one-sixth, to which I have already alluded—is the City of London Union.

12,170. What in your opinion is the extent of under-assessment in the City of London apart from or including those causes which you have already indicated

to the Commission?—Well, including the causes I have already indicated, there would be at least 700,000*l.* per annum rateable value.

12,171. Then if the London Valuation and Assessment Bill to which I have referred were passed into law and the provisions of the county rate were extended to London in addition to the provisions of that Bill, do you then think that with these two reforms uniformity of assessment in the metropolis would be sufficiently attained for all practical purposes?—No doubt there would be a very much greater approximation to uniformity, but I do not think that even those two reforms would be sufficient to deal with very valuable undertakings such as railway companies and the like.

12,172. On what do you base that view?—I base that view on the fact that these undertakings are generally assessed in a totally different manner from all other hereditaments in the country. They are practically taken at an arbitrary proportion of their profits.

12,173. Then taking all the various properties in London, which are outside the ordinary annual tenancy idea, can you give me the figures of what they come to altogether—railways, licensed premises, public buildings, and the like?—The figures taken from the quinquennial valuation of 1895-96 are as follows:—Railways, 3,865,861*l.*—that is, rateable value; licensed premises, 1,754,335*l.*; public buildings, 323,905*l.*; livery halls, 64,709*l.*; public elementary schools, 317,998*l.*; total, 6,326,808*l.* The total rateable value of London for the same year is 35,833,468*l.* 10*s.*, so that over one-sixth of the rateable value represents property which is not and can not well be assessed on the same basis as the remaining five-sixths.

12,174. Taking the case, say, of railways, as an example, would not the treatment of these complicated undertakings by one mind, as you have said already, be productive of benefit?—There is no doubt it would be: it has been found to be so in Scotland.

12,175. How would you propose to deal with those matters then, such as railways, in London?—There was a clause in the Bill\* to which reference has been made providing that in London all those undertakings should be valued by a central authority. That clause was omitted from the Bill of 1896, but I see no reason why it should not be restored.

12,176. Do you know the views which have been expressed by the courts as to the application of the principles of valuation to properties which would not in practice be let to tenants?—Yes.

12,177. Have they been uniform or various?—They have been to the general effect that the basis of an assessment laid down by law is not applicable, and show that it was never intended to apply, to such subjects as we are just now talking about. [*The witness here stated that he had several extracts from remarks on the question made by the judges in various cases, and the Chairman stated that they would look at them.*] I may say this, that the principal one is Lord Campbell's appeal to the Legislature to deal with the assessment of railways by special legislation. He had a case before him relating to the assessment of a portion of the Great Western Railway, and he deferred judgment because he said that the existing law was wholly inapplicable, and he looked to Parliament to amend it, so far as railways were concerned.

12,178. Do you think it possible to obtain an equitable apportionment of local rates on the basis of rating value, as at present defined by statute and interpreted by the courts?—No, I do not.

12,179. Have you anything more to say upon that, as to what you believe further could improve the condition of things?—Well, I am in a difficulty owing to the fact that I am sent here by the County Council to speak only as to facts; I am not supposed to put forward in their name any suggestion for amendment or any theory of my own.

12,180. Now before we leave that subject of the London Valuation and Assessment Bill, which I have already referred to several times, would you say to which of the provisions of that Bill you attach the most importance?—To those which bring the local assessing

Mr. E. J.  
Harper.

11 Feb. '98

Properties of an exceptional character in the Metropolis. Valuation should be made by a central authority. On what basis and principle they should be dealt with.

London County Council should have power to make objections and to appeal in every parish.

Under valuation is prevalent in the City of London.

\* Clause 46 of Valuation (Metropolis) Bill, No. 130 of Session of 1894.  
† See *R. v. Great Western Railway*, 1851 (Lord Campbell, C.J.), 15 Q.B. 1085; *R. v. West Middlesex Water Company*, 1859 (Wightman, J.), 23 L.J., M.C. 135; 5 Jur. N.S. 1,159; 1 El. & El. 710. *Sheffield United Gas Light Company v. Overseers of Sheffield*, 1863 (Blackburn, J.), 4 B. & S. 135. *Smith v. Churchwardens of Birmingham*, 1889 (Lord Coleridge, C.J.), 58 L.J., M.C. 161. *London County Council v. Erith, &c.*, 1893 (Herschell, L.C.), 63 L.J., M.C. 2.

Mr. E. J. Harper.

11 Feb. '98

authorities (meaning, in the first instance, the overseers) into closer touch with each other and the central authority; the provisions for a periodical conference; the provisions for the issue of byelaws from time to time as the result of the deliberations of this conference; and the provisions to which you have already referred giving the central body power in special cases to object before the assessment committee and appeal to quarter sessions.

12,181. You have already said that you would be glad to see re-introduced into that Bill a clause which was put into it originally for the valuation of railways and other undertakings by a central authority?—Yes, I would.

12,182. And you would add to that Bill, as you have already stated, as I understand, the application of the County Rate Act to London?—Not only that, but I would extend the operation of the County Rate Act. The County Rate Act deals only with the basis of the county rate made by county councils; but in London there are a number of rates—besides the county rate—which are levied by an equal pound rate over the whole of the county, and if it could be made applicable to those rates as well it would be an advantage.

12,183. In your memorandum I observe, in paragraph 35, that you refer to the valuation of the metropolis and the rest of England, and you there point out that the valuation of the metropolis for Schedule A. of the Income Tax Act, is the same as the gross value for local rates; but in the rest of England the Schedule A. valuation is eight millions more than for local rates. To what causes in the main do you ascribe the difference between the standard of assessment in London and in the provinces?—I think, in the first instance, the absence of any co-operation by the surveyor of taxes in the provinces is a misfortune. You see their figures are eight millions more than the figures of the overseers and assessment committees. Then in the provinces there is a different law; they have greater elasticity in their procedure, and not so much attention is paid to assessments as is paid in London. Then the parishes in the provinces have not the same interest as parishes in London have to see that their neighbours are kept up to a fair level, because the common rates are a small proportion of the total rates levied—in London they are a large proportion. Before the County Council existed individual parishes actually took action by way of appeals against totals to try and remedy the under assessment in other parishes.

12,184. Since the County Council came into existence the parishes have left that to the County Council?—Yes; they think that is the proper duty of a central authority.

12,185. Have you considered that any serious difference between London and the provinces results from the under-assessment of the latter on the poor rate valuation?—Of course there is the obvious inequality between London and the immediately circumjacent districts which share certain local expenditure with London, because that expenditure is apportioned on the basis of rateable value. But rateable value, as a matter of statistics, is being used very generally as a basis of comparison, and, as things stand now, so far as the practice of assessment goes, to use rateable value as a basis of comparison is undoubtedly misleading.

12,186. When you say that there are charges which fall in proportion to the rateable value on London and the outside area near it, what do you refer to?—The police rate, for instance, and certain charges in respect to the use of the main drainage system, of which outside parishes have the benefit.

12,187. Would not the water be charged in the same way?—Of course, but that is on a different basis; that is not a municipal charge.

12,188. So far as growth of value is concerned, is it your opinion that London has increased more than other urban districts upon the whole?—Much more rapidly. That is shown by the table to paragraph 39 of my memorandum. The increase for London, between 1868 and 1894, was at the rate of 100·94 per cent.; the increase during the same period in the rest of England and Wales was at the rate of 51·79 per cent.

12,189. Then how does this rapid growth of value in London affect the basis of assessment?—In my opinion, it creates the whole difficulty. That is shown to a certain extent by the explanation I previously gave as

to the unfairness of a one-sixth deduction under all circumstances; but as London grows in value the disproportion between site value and structural value—the two elements of which rateable value is made up—infinitely tends to produce inequalities and unjust sharing of rate burdens.

12,190. I wish to pass in very rapid review one or two papers to which you desire to refer the Commission but which are printed elsewhere, and which will, of course, not be reprinted in our Appendix. The first to which you have called our attention is that of the Quinquennial Valuation of 1896, containing a return of the assessment of buildings used for public purposes, except Government property and schools\*?—I wish to call the attention of the Commission to that document. I think it illustrates the action that I have been endeavouring to describe as taken by the London County Council in past years.

12,191. You mean it illustrates the action of levelling up in various districts of London, and the accomplishment of a more uniform basis?—Yes. In this particular case, when the Council first began to move, public buildings in some parishes were either not in the valuation lists at all, or they were assessed at merely nominal figures. Looking through this return you will see that they certainly approximate very much more closely to a uniform basis than they did some ten years ago.

12,192. In this return you place before us in each separate parish the valuation now existing as settled by the assessment committee of the following properties—the Council's property, free public libraries, baths and wash-houses, poor law buildings, and municipal buildings?—Yes. That division was made, of course, when public libraries and baths and wash-houses were managed by separate commissioners; now they are nearly in all cases managed by the vestry, and would come in a revised return under municipal buildings.

12,193. Have you anything further to say upon that report?—I think the report and the tables speak for themselves.

12,194. The next document that you wish to call our attention to is one entitled, "The Assessment Conference of 1893-94," containing the resolutions passed at the Conference of representatives of metropolitan assessment authorities invited by the London County Council, with a view to the consideration of pending questions of assessment procedure and practice?—Yes. That is a sample of what would be done by way of byelaw if the proposed London Valuation and Assessment Bill passed into law.

12,195. Am I right in supposing that this document gives the suggestions which would be byelaws if there was a statute to that effect with respect to promoting uniformity in assessment in weekly and monthly tenancies, in quarterly and yearly tenancies, and three years' agreements, in agreements and leases for a term, in respect of freehold properties, and rows of similar houses, in respect of premises licensed for the sale of intoxicating liquors, and also in order to obtain the rateable value from the gross annual value?—Yes. That last is simply a working out in figures of the Third Schedule to the Valuation (Metropolis) Act.

12,196. But it has an important addendum, surely. "The deductions shown in Table B. hereto annexed, are the maxima allowed by the Act (excluding fractions of a pound) in respect of clauses 1 to 5, in the Third Schedule of the Valuation (Metropolis) Act, 1869, but ought not to be allowed in full where the site value exceeds one-third of the total value"?—Yes, that is important; but at the present stage it is only the expression of a pious opinion, and has not been translated into fact.

12,197. That portion of the suggestion has not been adopted, you mean, by the assessment committees generally?—No, it has not.

12,198. Have the other suggestions been adopted generally?—Yes, I think so, using the word "generally" in a wide sense.

12,199. In addition to the points I have already asked, is it not the case that these suggestions refer

Mr. E. J. Harper.

Provisional and Supplemental valuations. Occupiers returns should be compulsory. Metropolitan valuation in. Alterations in assessments suggested by London County Council. Return by London County Council giving particulars of.

also to the date of the valuation lists, to the assessment of Government property, to the provisional and supplemental lists, and to the assessment of advertisement hoardings?—Yes.

12,200. Before we leave this document, may I ask if you have anything to say with respect to the provisional and supplemental lists; are they satisfactorily made up at present under the Act?—They would be more satisfactorily made up if the return, which is now compulsory from the occupier in the case of a quinquennial valuation list, were obtainable in respect of the provisional and supplemental lists.

12,201. The next document to which you wish to call our attention is entitled "The Quinquennial Valuation 1896. Return of Alterations of Assessments informally suggested by the Council"?—Yes, that is the next document.

12,202. Am I right in supposing that you place that document before us in order to bear out your evidence as to the method in which the Council has acted?—Yes, exactly so.

12,203. These assessments have been informally suggested to different assessment committees: Have they been frequently adopted by these assessment committees?—In that respect the return speaks for itself. The course adopted was to forward lists to each body of overseers and assessment committee concerned, accompanied by an offer to attend the assessment committee and discuss the cases if invited to do so. The offer thus made was accepted in the majority of cases, and in two instances officers of the Valuation Department of the Council were invited to sit with the assessment committee throughout the progress of the re-valuation.

12,204. This document contains for a large number of properties, first, the overseers' valuation; second, the London County Council's estimate suggested to the assessment committee; and third, the assessment committee's decision?—Yes, and in addition, in a column headed "Remarks," it gives in the majority of cases the actual facts as to the way in which the properties were held—the rents payable, the premiums paid, and so forth.

12,205. In reference to this document, the object of my question is to see what has been the basis of your suggestion, and how far that suggestion has been followed. In the first place, I will take one or two public buildings. Let us take the Bank of England in the parish of St. Margaret, Lothbury (on page 24), the rateable value of that portion of the Bank of England which is in that parish is given in the overseers' valuation as 18,926*l.*—Yes.

12,206. But, as suggested by the County Council, it was 35,834*l.*?—Yes.

12,207. What was the cause of so great a discrepancy?—I am unable to explain how it was the overseers put the rateable value so low. The figure put forward on behalf of the Council was the result of a valuation made by three very eminent surveyors, Mr. Daniel Watney (a past president of the Surveyors' Institution), Mr. G. A. Wilkinson, and the late Mr. Arthur Garrard. I have, however, heard rumours—I can put it no higher than that—that some portion of the Bank of England is subject to a limitation in the matter of assessment by a private statute. What the nature of that limitation is I have never been able to ascertain.

12,208. I think that you can tell me what the total valuation of the Bank of England is in the three parishes in which it is situated?—Yes. The overseers at the last quinquennium put it at 50,835*l.* rateable; the assessment committee increased that figure to 55,455*l.* rateable; and the valuation made by the three gentlemen I have named, on behalf of the Council, amounted to 108,335*l.* rateable—nearly double the assessment at which the property stands.

12,209. Who valued the Bank of England; who are the overseers of the district?—The overseers of the parish of St. Margaret, Lothbury, of the parish of St. Christopher-le-Stock, and the parish of St. Bartholomew-by-the-Exchange.

12,210. What other property is there in these three parishes, or any of them, besides the Bank of England?—So far as value is concerned, the Bank of England

forms the major proportion, but there are in the parish of St. Margaret, Lothbury, of course, buildings on the other side of Lothbury and on the other side of Princes Street; in the parish of St. Christopher-le-Stock is included a part of the Royal Exchange, and in the parish of St. Bartholomew-by-the-Exchange is included a considerable part of the Royal Exchange itself, and portions of Throgmorton Street and Chapel Court.

12,211. But I should be right in supposing, should I not, that the Bank of England forms a very large portion of the rateable value of those parishes?—Yes, undoubtedly.

12,212. Who appoints the overseers of those parishes?—I am afraid I am not sufficiently master of the local government in the City to say absolutely, but I presume that they are appointed by the vestry of each parish.

12,213. What does the vestry of each parish consist of?—Now I am getting beyond my depth; I think Mr. Gomme could tell you all about it.

12,214. Generally speaking, are the banks and insurance offices and public buildings, if you may call them so, of the City undervalued in anything like that proportion?—They are not undervalued in quite the same proportion as the Bank of England, but in many cases in proportions approaching to that.

12,215. Are they?—Yes; the Mercers' Hall, for instance.

12,216. Can you tell me what is the valuation of the Mercers' Hall?—I will not press the question if you have not got the figures immediately before you?—I have not got them here unfortunately.

12,217. Then I will ask one question about another bank to see how you would consider it. Take the London Consolidated Bank, 52, Threadneedle Street; will you tell me what the valuation is, and what the County Council put it at?—The Consolidated Bank is in the parish of St. Benetink, Bishopsgate (see page 19). The overseers put that at 3,750*l.* rateable value; prior to the quinquennial valuation it stood at 2,917*l.* rateable, so that was an increase. The Council suggested that it was worth 5,084*l.* rateable value, but the assessment committee confirmed the overseers' figure of 3,750*l.*

12,218. You have published from the County Council, have you not, with relation to the Quinquennial Valuation of 1896, two returns, one of the assessments of banks and the other of the assessments of insurance offices in the City of London?—Yes, and a third with regard to the assessment of the halls of the livery companies. I had copies among my papers sufficient to hand round to the members of the Commission, but as those papers have miscarried, unfortunately I am not in a position to do so at the moment, though I shall be by-and-by.

12,219. Are the figures of the Consolidated Bank that I took fairly indicative of many others?—It is one of the worst cases.

12,220. I did not mean to put the worst case; turning from these buildings of a more or less public character and referring to the return of the alteration of assessments informally suggested by the Council look for a moment at Nos. 7, 8, and 9, Throgmorton Street, and Chapel Court, on page 19, which again I merely take as a sample; tell me what are the overseers' valuation, the County Council's assessment and the assessment committee's decision as to those premises?—The overseers' valuation was 6,667*l.* rateable; the County Council's estimate was 12,705*l.* rateable; and the assessment committee's decision was 6,667*l.*

12,221. Have you any knowledge of what is the ground of the very great difference, 100 per cent. between the overseer's valuation, and the County Council's estimate?—No, I have no idea of what the overseers have to say for themselves.

12,222. In a case like that have you any power of appeal?—No, the central body has none.

12,223. Then your power has been limited to that of any other person making a suggestion?—Practically we have no *locus standi* at all. We take upon ourselves to make a suggestion, but the assessment committee of the union were legally within their right in paying no attention to it.

12,224. Why did you value that particular property at all?—We had a right at the time that property was valued to appeal, not against individual assessments, but against the total of the City of London Union. That appeal, however, fell through, on a technical point.

Mr. E. J. Harper.

11 Feb. '98

Certain banks and buildings the City of London, valuation of: Suggested by London County Council that they are undervalued.

London County Council Powers appeal.

\* London County Council, Quinquennial Valuation, 1896: Return of Alterations of Assessments informally suggested by the Council (No. 299), P. S. King and Son, Great Smith Street, Westminster, S.W.

Mr. E. J. Harper.  
11 Feb. '98

12,225. Follow that out for a moment: am I right in understanding that the County Council has a right to appeal against the totals?—Against the totals—common with any other body levying rates.

12,226. I think it did appeal against the totals in connexion with the parish of Marylebone, was it not?—The parish of Marylebone, the parish of St. George, Hanover Square, four parishes in the Holborn Union, and the majority of the parishes in the City of London Union.

12,227. What was the ground on which that appeal was not continued, or dismissed?—On the ground, as stated by the Lord Chancellor in giving judgment in the House of Lords in the St. George, Hanover Square, case, that an appeal against totals was not the proper course to adopt to remedy under-assessment in individual cases.

12,228. In other words that you would be required to appeal in each individual case?—Yes; which we have not power to do.

12,229. So that the County Council was in this position, that having power to appeal against totals, having appealed against totals, it was decided in the House of Lords that an appeal against totals was improper, and could only be carried out by an appeal against special cases, but the County Council has no power to make an appeal in special cases?—Yes, that is so.

12,230. Therefore the County Council is left powerless to remedy under-assessment of this kind?—Altogether powerless.

12,231. Am I right in supposing that a number of parishes, however, owing to the suggestions of the County Council, have considered the alterations in totals suggested?—Yes, they have; and certain overseers in the City of London have done so, not to any large extent, but it is fair to say that they have done so in some parishes.

12,232. Is it the case that all the large instances of change or amendment in the totals have been ruled out and rendered ineffective by that decision?—Yes, that is so.

12,233. Let me take another case simply to illustrate the same position: Will you take numbers 15 to 21, Throgmorton Street, which are part of the Stock Exchange, and which are shown on page 19 of the return of alterations suggested by the Council, to which we have referred several times, and tell me what are the overseers' valuation, the London County Council's estimate, and the assessment committee's decision in that case?—The overseers' valuation was 10,000*l.*, the County Council's estimate was 20,630*l.*, and the assessment committee's decision was 10,000*l.*; all figures being rateable.

12,234. You cannot say, can you, what was the cause of these differences—why the overseers put it so low and you so high?—I might suggest that they were not sufficiently aware of the value of property in their parish, and that they probably did not obtain expert advice. That is the only suggestion I can make to account for it.

12,235. But now, if that be so, let us look at some of the cases where the amount at which the property is let on lease is given, or of which the rental is known. Turn, for instance, to page 23 of the same return, and look at number 36, Bishopsgate Street, in the parish of St. Helen, Bishopsgate. Tell me how the facts stand as to that?—That is let at a rent of 375*l.* per annum, and the overseers' valuation was 250*l.*

12,236. Rateable?—Yes; the Council's estimate was 313*l.*, and the assessment committee's decision was 250*l.* That rent you will notice is not a rent on a lease, but on an ordinary tenancy.

12,237. 375*l.* being the rent on an ordinary tenancy, the gross taken by the overseers is 300*l.*, and the gross taken by the County Council is 375*l.*?—Yes, that is so.

12,238. Do you know of any reason why the overseers there should take the gross at less than the actual rent?—No, I know of none.

12,239. Then let us take the case of a lease. Turn to page 17, and take 27, Bush Lane, in the parish of All-hallows-the-Great, and tell me the facts with respect to that?—That is let on lease at 775*l.* per annum. The overseers' valuation was 459*l.* rateable, and that was confirmed by the assessment committee; the Council

suggested 709*l.* rateable, that being arrived at as suggested by the Assessment Conference by adding 10 per cent. to the rent, and then deducting one-sixth from the sum so obtained.

12,240. I observe here that although the property is let on lease at 775*l.* per annum, the gross taken by the overseers, and finally settled by the assessment committee, is only 550*l.*?—Yes, that is so.

12,241. Can you give any reason for that?—No, I am quite at a loss to account for such a large under-assessment.

12,242. Are the cases I have taken typical of many other cases in this document?—Yes

12,243. About how many cases do you suppose are dealt with in this document?—Something like 1,500 cases, I think.

12,244. Would you say that these inequalities would be largely removed if the alterations in the law that you have referred to in your evidence were adopted?—There would be machinery for removing them, of which advantage could be taken.

12,245. When these properties in the City of London or elsewhere are undervalued in this way, what is the effect upon other districts of London of that undervaluation?—The amount of under-valuation in the City causes the proportion of the common rates charged to the City to be less than it otherwise would be, and the difference has to be spread over the totals of all the other parishes and made up by them.

12,246. In other words, if the City were undervalued to the extent of a million, that would mean that the rate levied upon that million by the central authorities would have to be paid by the rest of London?—Yes, that is so.

12,247. And, as you have already said, 68 per cent. of the rates of London are raised by rates running over the whole of London?—Yes, that is so.

12,248. For rates that are not common over London, the only effect of under-valuation of certain properties in the City would be that other properties in the City not under-valued have to pay more?—Yes, that would be the only effect.

12,249. Leaving that document, there are one or two others, I believe, to which you desire to call our attention, and which may be very briefly treated. The next still deals with the Quinquennial Valuation of 1896, and is called a "Return of the Assessments of Public Elementary Schools."\* Why do you call attention to that?—Your attention is called to that because it was thought that the figures which show the assessments on all public elementary schools in London at the Quinquennial Valuation of 1896 might be valuable to the Commission. This return was not prepared so much to show the results of any central action upon the valuation of London as to throw light upon the bearing on the rates of London of the proposal made in the Education Bill which was passing through the Houses of Parliament at the time this table was prepared. That was the origin of this table.

12,250. Is there any remark that you want to make upon it?—Nothing further than that.

12,251. The next paper to which you wish to call our attention still refers to the Quinquennial Valuation of 1896, and is entitled a "Return of Objections made by the Council to the Incorrect Assessment of Properties in Private Occupation in London, excluding Public Buildings and Schools"†?—Yes, that is the next.

12,252. Am I right in supposing that these are a series of cases somewhat similar to those that we were discussing more at length a few minutes ago, but that they are cases in which the Council has not suggested, but has made, objections or appealed?—Yes, that is so. The reason of the preparation of this table apart from the larger one dealt with next previously but one, was the fact that the Council were urged by parishes interested in the matter of uniformity not to confine their action to a mere friendly suggestion, but in certain special cases to serve a formal notice of objection in order to preserve a *locus standi* for appealing to quarter sessions if necessary. No appeal

Mr. E. J. Harper.  
11 Feb. '98

Schools, valuation of: Return by London County Council giving particulars of.

Objections to certain valuations made by London County Council, Return giving particulars of.

\* London County Council, Quinquennial Valuation, 1896: Return of Assessments of Public Elementary Schools (No. 206). P. S. King and Son, Great Smith Street, Westminster, S.W.  
† *Ibid.* Return of Objections made by the Council to the Incorrect Assessment of Properties in Private Occupation in London, excluding Public Buildings and Schools (No. 205).

Certain property in the City of London: Alleged by London County Council to be undervalued.

Mr. E. J. Harper. to quarter sessions was, however, decided upon in any of those cases.

11 Feb. '98 12,253. I observe a difference between these figures and those we were dealing with before, though it would appear as if the County Council figures have been more adopted in this small return than in the large one?—Yes, I think that is so. You will see some cases where the Council's figures have not been adopted, but in most cases some increase has been made.

12,254. We will take the Whitechapel Union, on the last page of this document. Tell me in that case what were the overseers' valuation, and Council's figures, and the assessment committee's decision—it is the case of Truman Hanbury's Brewery in the Whitechapel Union?—The overseers' valuation was 5,850*l.*, the Council's figure was 7,500*l.*, and the assessment committee confirmed the overseers' figures.

12,255. Was this 7,500*l.* of yours put as a suggestion or as an objection?—As an objection.

12,256. On what ground could you object—were you ratepayers in the Whitechapel Union?—We were ratepayers in the Whitechapel Union.

12,257. Was that objection considered by the assessment committee?—Yes, fully considered.

12,258. Then the last return to which you wish our attention called is still connected with the Quinquennial Valuation of 1896, and it is called a "Return of the Assessments of Licensed Premises."\* For what purposes do you call our attention to that?—In order to show the increase which has taken place in the assessment of licensed premises, generally, in London, in consequence of the resolutions governing that branch of the subject passed by the Assessment Conference. The credit of the idea belongs to the Mile End Old Town Assessment Committee, who sent to the Council a statement on these lines so far as their own hamlet was concerned. It was decided to extend the return to the whole of the county, and with the assistance of the local assessing authorities that was done. You will see from the summary on page 5 of the table that there are 7,907 licensed premises in London, that the rateable value in force prior to the quinquennial valuation was 1,542,100*l.* that that was increased by the overseers on depositing their lists to 1,751,479*l.*, and that the assessment committees still further raised the overseers' figures to 1,754,335*l.* That was an increase in the rateable value caused by the quinquennial valuation of 212,235*l.*—13·7 per cent.

12,259. In addition to the various questions that I have asked you, and the information that you have given us, is there any other point that you wish to say anything on before the other Commissioners examine you?—I have nothing else to say.

12,260. (Chairman.) There are one or two questions I want to put to you for the sake of elucidating some of the points which I think were left at the moment a little in doubt when Mr. Stuart was examining you. First, as to the county rate basis, just let us see whether we can agree upon the exact position in which it stands. I suppose I am right, am I not, in saying that up to 1869 there was a county rate basis for London as for the rest of the country; but that what we now know as the county of London was situated in three counties?—I believe that, practically, that was the case, but I speak with diffidence on the point because I am not an expert in local government—only in valuation.

12,261. You know then that it was by the Metropolis Act of 1869 that London was taken outside the scope of that?—Yes, I am well aware of that.

12,262. Then it was by the Local Government Act of 1888 that London was created a county?—Yes.

12,263. But it was not under that Act given the power to have a county rate basis of its own?—That is so.

12,264. I understand that your case on that point is this—that the London County Council should have the same power of making a county rate basis for the county of London as other county councils have for their counties?—Yes, I think that would be desirable.

12,265. Is there any other point in regard to it; is that the whole of it, or have I left out anything that you would like to add?—I think it would also be an advantage, if, instead of confining the action of the

County Rate Act to the county rate in London it should extend to the police rate, and to all other rates which are levied by an equal pound rate over the whole of the county.

12,266. On the ground, as you have told us a moment ago, that the gross amount of what we call the common rates is 68 per cent., and therefore larger than the common rates in other counties?—Yes.

12,267. I want you to tell me exactly what is the lesson which you want the Commission to learn from the return of alterations of assessments informally suggested by the Council to which you have referred us?—The object of putting forward this return is simply to show the Commission what is being done informally by the Council without any legal status or position.

12,268. Quite so, and I do not find fault with it, but the result of it is that in many cases the suggestions of values put forward on behalf of the London County Council have not been adopted?—That appears to be so pretty generally in the case of the City of London Union.

12,269. I want to know what is the lesson you want us to draw from that?—The lesson that I would suggest should be drawn is that, in the City of London Union, where the Council have no power to enforce any opinion they may have by way of appeal, their suggestions are practically disregarded, but in other districts where they have, as individual ratepayers, the right of objecting and of appealing to sessions, more attention is paid to their objection.

12,270. What tribunal do you suggest should hear the appeal?—Of course I am not entitled to make a suggestion of that kind on behalf of the Council; but I am not inclined personally to make any suggestion for the improvement of the existing tribunal of quarter sessions—that is rather a legal point. No doubt that court is seriously over-burdened with work. In the case of the quinquennial valuation, which should have come to an end on the 31st March 1896, so far as the court of quarter sessions work is concerned, the appeals are actually not all disposed of to-day.

12,271. I quite understand that you are not here to speak as to policy, or what tribunal should be suggested, but as you have had more than 20 years' experience of valuing, I should rather like to know whether you feel inclined to say what sort of tribunal you think gives the most satisfactory decisions in these rating appeals?—As far as regards the quality of the tribunal I have no fault to find with the London Quarter Sessions. The only thing is that you cannot get your appeal heard there because of the crush.

12,272. You indicated a moment ago that that body was largely in arrear with its work?—Yes; they are nearly two years in arrear with the work on the quinquennial valuation of 1895.

12,273. Is there any reason for that that you know of except the overwork and the large mass of business?—There is no reason that I am aware of. Of course that court has to dispose of a large amount of criminal business, and other business as well.

12,274. I suppose in these individual cases, to which in the course of Mr. Stuart's examination you called our attention, the Inland Revenue authorities must have been satisfied with the valuation?—Of course I cannot speak for the Inland Revenue authorities, but I should be extremely surprised to hear that the highest authorities at Somerset House were satisfied with the state of things that prevails in the City, for instance.

12,275. They have the power of appeal?—They have.

12,276. And they have not exercised it?—They have not exercised it.

12,277. It is not your experience that they are usually too easily satisfied, is it?—I am not in a position to say, but of course a great deal depends on the action that each individual surveyor of taxes may think it right to take.

12,278. You would not put it forward to me, I suppose, that the mere fact that a body of experts, however eminent, employed on behalf of the County Council had differed from the overseers is in itself conclusive of the under-valuation?—It is not absolutely conclusive, but in the absence of any expert evidence on the other side, I think a strong *prima facie* case has been made out.

Mr. E. J. Harper.

Site value  
and structural value:  
How far  
possible  
and desirable  
to separate  
them.  
Suggested  
difficulties.  
Question of  
the proper  
deductions  
to make.

12,279. Yes, to this extent, that it is desirable to have a thoroughly independent tribunal to hear these disputed cases?—Yes, a tribunal that would take account of such evidence as has been got together and put forward.

12,280. I want to have a little further explanation of the diagram which you put before us.\* I understand that Column No. 1 relates to the district of Fulham, No. 2 to Regent's Park, No. 3 to Islington, No. 4 to Blackfriars, No. 5 to Marylebone, No. 6 to Charing Cross, No. 7 to Cheapside, and No. 8 to Old Bond Street?—Yes, that is so.

12,281. I got that from the comparison of the Appendix with the diagram, and I have done it rightly, have I?—Yes, you have done so.

12,282. The two extremes then are Fulham and Old Bond Street?—Yes.

12,283. Are these diagrams the diagrams of individual properties, or are they diagrams of large districts?—They are diagrams of individual properties as to all of which I have taken the trouble to get the exact figures from the valuation list.

12,284. They are just eight individual cases then?—Eight individual typical cases.

12,285. That operation, of course, you will agree with me, would have to be gone through if you are going to divide between site and structural value in the case of every individual property in London?—If you do it in that way it would be necessary, but of course there is the alternative of making a calculation, with regard to each hereditament, of what the average annual cost of repairs and insurance should be. For that purpose you do not need to make a separate valuation of the site.

12,286. But you do agree with me that to make a proper separation between site value and structural value the individual circumstances of every individual hereditament must be taken annually into consideration?—Certainly. You use the word "annually"; of course under the existing law it is quinquennially that it is done, but I should much prefer an annual valuation, whether it was a valuation on the basis of rateable value or on the basis of site value.

12,287. On every occasion of a re-valuation, at whatever interval that re-valuation was conducted, there would have to be an individual dealing with each individual hereditament?—Yes, there would.

12,288. Which would add very largely to the labour of the work, would it not?—No; the whole of the work is done in the same way now for rateable value.

12,289. Just explain that to me, will you?—I am assuming that you are comparing the work to be done to arrive at the site value with the work to be done to arrive at the rateable value; of course if you are going to do the two, naturally there will be an increase of work.

12,290. Tell me exactly how you would suggest that it should be done, because I am anxious to find out. I am not at the moment expressing any opinion as to whether it is a right thing to do, but I want to see, assuming that it should be done as you put it forward, how it would be carried out in effect?—I think the only satisfactory way to do it would be for each assessment committee to appoint, as they have power to do, an expert assistant, who would make a valuation of each individual hereditament.

12,291. Separating it into site value and structural value?—Arriving at the site value. I do not say that in every case it is possible to separate the rateable value accurately into site value and structural value.

12,292. But is that not of the essence of your proposal, if you are not to have a uniform scale of maximum deductions?—No, I do not think so, because it can be done in the other way, that is to say, by making an estimate of the cost of repairs.

12,293. Would you just describe to me the way in which you would like to see it done?—The way in which I would like to see the proper deduction arrived at?

12,294. Well, you may take it that way?—I think the best way to do that is to make an estimate in each case of the probable annual average cost of the repairs and insurance. At the present time all the hereditaments should be, and in most of the parishes, I believe,

are, inspected by the overseers, or someone on their behalf, before the making up of the quinquennial valuation lists. When they are on the spot, it would take them a little longer time, I admit; but it would not take very much more trouble to form an opinion of what the average annual cost of repairs would be. An ordinary man of business would very soon get used to doing that.

12,295. The estimate which he forms would, I presume, have to be submitted to the person who has now the right to appeal, in order that he might appeal against it if he chooses?—Certainly; and it would be, naturally.

12,296. Would it or would it not add to the difficulty and complication of the appeal work?—I do not think it would add very much. The complications in the matter of deduction usually arise in classes 8, 9, 10, and 11 of the Third Schedule. That is in Schedule II.\* There is there set out the Third Schedule of the Valuation Act of 1869. Classes 8, 9, 10, and 11 include mills, manufactories, tithes, tithe commutation rentcharge, railways, canals, docks, tolls, waterworks, gasworks, and miscellaneous hereditaments. It is in these cases that the great difficulty arises as to the proper deduction to be made from the gross to arrive at the rateable, and it is there that all the trouble arises. In the case of ordinary property dealt with in classes 1, 2, and 3, there will be no difficulty in arriving at a fair average amount.

12,297. But I thought you were objecting to the average, and that you wanted an estimate in each case; I thought that was the essence of your objection?—Yes; but when one is used to doing this work, there would be no difficulty after you had gone down a street of houses, for instance, even if you were a beginner at the work, you would have in your mind, roughly, the proportion that you should deduct for all property of that class. Of course, when you went into a totally different district, where the structural value formed a less proportion of the total value, you would have to learn your lesson over again, as it were.

12,298. But who would check the amount which is to be put on structural value and the amount which is to be put on site value in one district and another?—That would be checked, no doubt, in many ways; first, by the individual ratepayer's right of objection and appeal.

12,299. Wait one moment; would the individual ratepayer ever know whether the valuer was separating the two things in his mind, and, if so, in what proportions?—If the figures of the valuation list are altered, the individual ratepayer has a copy of the entry in the valuation list relating to the property in which he is interested. He sees from that entry what is proposed to be fixed as gross value, and what is proposed to be fixed as rateable value, and the difference between the two is, he knows, the deduction made to cover the average annual expense of repairs and insurance. If he thinks that too great a deduction has been made, and his rateable value is too low, he will no doubt sit still; but if he thinks that a sufficient deduction has not been made, he will object, and the matter will come before the assessment committee.

12,300. At what period of the proceedings would it come out that A. was being differently treated as regards the site value of his house from B., who might or might not be before the tribunal?—I do not see that that need necessarily come out at all. If I, as a surveyor, were making a close estimate of the average annual cost of repairs of a particular house, I should not take into consideration the value of the site on which that house stood at all.

12,301. If I am wrong you will correct me; but take a street like Great Stanhope Street, for example, one end of which faces Park Lane, looking over Hyde Park, and the other end goes back South Audley Street. Obviously the site value of the end facing Hyde Park is much larger than the site value of the end which is away from Hyde Park?—Yes.

12,302. But the actual structural repair need not vary in anything like the same proportion?—If the houses were similar in size and construction it probably would not vary.

12,303. I assume that for a moment. Supposing that from the gross value the owner of the house near to Hyde Park found that he was getting a less proportion deducted, and therefore had a higher rateable

Mr. E. J.  
Harper.

11 Feb. '98

Mr. E. J. Harper.  
11 Feb. '98

value than his neighbour, he would probably appeal?—Only if he could see some reasonable prospect of proving that his actual costs of repair were likely to exceed the deduction.

Metro-  
polis,  
valuation  
of: Is now  
too low.

12,304. In the course of your examination you said, as I understand it, that the valuation of London as a whole is, in your opinion, 1,750,000*l.* too low?—On one ground only—this ground (*referring to diagram*).

12,305. I put that in order to found upon it another question—namely, how you got at that calculation and named that figure?—I got at that calculation in this way: I took from the present total rateable value of London, which, I think, in round figures is 36 millions, the value of the site of London, less the value of the sites of exempted properties, and that I estimated in round figures at 13½ millions.

Site value  
in Metro-  
polis:  
Method of  
estimating  
total site  
value.

12,306. How did you get at the site value?—I got at the site value by dealing with each parish or district separately, by taking the area, say, of one particular district. I first deducted the area of open spaces—land covered by water and things of that sort; then by an average calculation I deducted the probable area of streets, taking the net land at the price per acre, which in my judgment—corroborated by that of Mr. Andrew Young, the Council's valuer—was the lowest that would probably be obtained for the land in the market subject to existing conditions. If a site were occupied by a building which was unsuitable for it, and which did not develop it so that the owner enjoyed the full value of that site, then the full value would not be included in the price taken, but only such proportion as was actually enjoyed.

12,307. Then you got at that figure by some process of separating site from structural value and not by endeavouring from individual cases to estimate the amount which is deducted for the cost of repairs?—I got at my table in that way, because I could obviously do it very much more readily in that way. In the other way it would have been necessary to make an estimate of the cost of the repairing of London.

12,308. Exactly; but I suggest to you that getting at it in the way that you did is necessarily so much conjecture that it is hardly sufficient for us to base anything definite upon?—I admit to the full that it is an estimate, but it is an estimate prepared on purpose to be on the safe side. If you might still, after that statement, think that my estimate of the value of the sites in London was too great, against that I put the fact that I have taken the rateable value of London, which I have no hesitation whatever in saying is too low; and if there are two errors, they are on opposite sides of the account, and tend to balance, and therefore, to produce a true result.

12,309. You would agree, I think, with this at once—that it is not possible to estimate site value by averaging a large area?—I think it is perfectly possible to produce a figure which shall not be too high.

12,310. I have no doubt about that; and it is also perfectly possible to produce one which would be a great deal too high?—Not if the estimate is made by anyone who is in the habit of buying and selling property daily.

12,311. Obviously, it is a truism that the site value depends almost entirely upon the frontage and on the importance of the thoroughfare to which it fronts?—That, no doubt, is so in individual cases, and yet we find, as surveyors, that we may take a certain average price per foot over the whole of a very large district, and the average price per acre over a still larger district. I think you would find that view confirmed by every surveyor of eminence.

12,312. You would not like, if you were buying an individual property, to have to buy it by an average in that way; you would want to examine the individual property pretty closely, and see whether it had a corner or whether it had a frontage on a street, before you took it, would you not?—Of course.

12,313. You suggested to Mr. Stuart, I think, that 10 per cent. on leases was also another fertile source of fallacious valuation?—I think so.

12,314. In that case, as I understand, you think that 10 per cent. is too much to add?—I think 10 per cent. is too little to add if you afterwards deduct one-sixth. I can conceive of cases where 10 per cent. might be too much.

12,315. When you put the two cases together I thought there was a great deal in the contention, but,

Leasehold  
property in  
Metropolis:  
Method  
of arriving  
at gross  
value and  
rateable  
value.  
Extent of  
under-  
valuation  
due to this  
method.

of course, for some purposes we must take them separately; if you want to get at the rateable value of a house which is let on lease, the tenant to do the repairs, you must add something to get at the proper value?—I do not think you must add anything to get at the proper rateable value.

12,316. Why not?—I think you will find that the rent reserved under a lease, if it is a fair rackrent, exactly complies with the definition of rateable value as given in the statutes. It does provide the net annual income that the lessor is to receive clear of everything—clear not only of rates and taxes, but clear of these very expenses for repairs and insurance that we are discussing. Therefore I believe the opinion is very general among experts—I know it was shared by Sir Peter Edlin, the late Chairman of the London Quarter Sessions—that where there is a fair rackrent reserved under a lease recently granted, that is *prima facie* evidence of the true rateable value.

12,317. Then you would make no addition?—I would make no addition to obtain rateable value, but addition is made to obtain the gross value. That leads me to a point which I omitted to mention when Mr. Stuart asked me if I had anything else to say. I think it would be a great saving of time and trouble, not only in London, but all over the country, if you were to abolish these various kinds of annual value, and confine yourselves to one, namely, the rateable value—the net income which the lessor receives for his property after making all these deductions.

12,318. I think I understand from paragraph 28 of your paper that you would apply that to Imperial purposes, too?—No doubt it would save a great deal of time and trouble if it were so applied, and as the Finance Act of 1894 provides, in the case of the property tax, for a deduction to be made from the gross value, just on the same lines, though it does not exactly correspond with the deduction made by the valuation list, it seems to me a pity that the rateable value is not taken throughout for Imperial purposes as well as for local.

12,319. You would not like, I suppose, to suggest to me what the Chancellor of the Exchequer would say if I were to make that suggestion to him?—I am not dealing at all with the difficulty of raising the rates on the basis; I am dealing only with the basis itself.

12,320. Assuming that that cannot be done, there must be, to get gross value, some addition made to leasehold property of the class we are talking of?—Yes, but even then it is unfair, because it is an outgoing.

12,321. In that case do I still understand you to believe that the 10 per cent. is too much?—If you are valuing a property for the purpose of levying a tax or a rate upon it, I do not think you ought to fix anything beyond the net income that the owner receives. It is unfair to tax a man upon a receipt which it is true he has if he is dealing with an ordinary yearly tenant, but which he has to pay out again the next moment in discharge of these obligations of repair and insurance.

12,322. Assuming that we must add something to this calculation, do you care to suggest any other figure than 10 per cent., or would you prefer to have the individual properties valued for this purpose in the same way as for the other, which we were speaking of a moment ago?—I think you would find that to take the rents on lease as rateable value would do away with the necessity of addition in more than half the properties of London. You would simplify on the one hand in connexion with leasehold properties, and you would have on the other hand to make a deduction in the case of all other properties, but I think that on the whole you would save trouble.

12,323. With this double calculation, which in this same connexion you mentioned, which in this case you mentioned to Mr. Stuart, I understood you to say that the valuation of London was too low by not less than a million a year?—No. Mr. Stuart, I think, suggested that if the City were under-valued to the extent of a million, certain —

12,324. No, I think the figure given for the City was 250,000*l.* on that same heading?—Yes, on that.

12,325. What was the million that you gave—I am sure I am right, for I took it down in answer to Mr. Stuart, that the valuation of London was too low?—I think that was in respect of the excessive deduction of a sixth; and it was not a million, but a million and three quarters.

11 Feb. '98

12,326. I will not keep you about it now, but when your evidence is printed you will see that there was a figure of a million, and perhaps, in answer to this question that I have now put, you will give me the answer, which I am sure you would give me if you could at this moment—whether the 250,000L., which you referred to immediately afterwards is or is not in addition to the million which you mentioned for the rest of London?—I now recall the figure. The 250,000L. is included in the million, and the million is intended to show that, by the addition of 10 per cent. all over, London is under-valued.\*

Government property, valuation of: Should be valued in same way as other property.

12,327. Very well. What is your suggestion as to the method that should be adopted for rating Government property?—My suggestion is that it should be assessed in exactly the same way as all other property.

12,328. What is the test that you would apply to Government property?—It is difficult, as learned judges have always said, to apply the test prescribed by law—the test of an ordinary tenancy, practically from year to year. The difficulty has been got over by certain practices which the courts have suggested, and which have been acted upon, and they practically amount to taking a per-centage of the capital value.

12,329. I want to know exactly what it is you would do—what is the process that you would go through in valuing Government property?—Of course it would depend on the class of property. If I were valuing the British Museum, I should estimate the capital value and take a per-centage upon it. That is the only way we can do under the existing law; I admit that it is a defective one.

12,330. Have you anything better to suggest?—As representing the Council I am not entitled to make a suggestion. Of course, one cannot deal with questions of this kind for so long without forming opinions of one's own.

12,331. In paragraph 21, of your statement, I see these words: "During the last 10 or 12 years cases have been fought on this point by several public authorities"—that is the point of assessing buildings which belong to public bodies, and which are not let—including the School Board for London and the London County Council, with the result of "reducing the 5 per cent., which was previously the ordinary rate of interest, to one varying from 3 to 4 per cent."—That deals with those buildings which are unique in character in this way, that they are provided for a special purpose, and for a special body, and could not be let for any other purpose to another tenant except at a rent very much less than the body which has provided the premises would probably be willing to pay.

12,332. Just like the British Museum?—Just like the British Museum. That being so you come to this position, that you have only one tenant and you have no competition, and there comes in the difficulty of applying the law, which pre-supposes competition. In that case, and in that class of case only, resort is had to the credit of the public body concerned; that is, the rate at which they can borrow money, and that undoubtedly has weight with quarter sessions in determining the per-centage which should be applied to the capital value.

12,333. As I understand this paragraph, the London County Council were sometimes in the position of trying to raise the value and sometimes in the position of objecting to have its own value raised by the local authorities?—We have always been in that position; our object is uniformity—to raise what is too low and to reduce what is too high.

12,334. Do you find that the local authorities are anxious to assess the County Council beyond what the County Council think is a fair value for the premises which it occupies as an individual ratepayer?—No, I cannot say that I do.

12,335. Have you had to appeal on many occasions against the local authorities' proposal to increase your valuation?—Since the Quinquennial Valuation of 1890 very seldom indeed. We get into close touch; we discuss figures with each other and we arrive at a conclusion which is mutually satisfactory.

12,336. I understood you to urge upon the Commission that such properties as railways (I understood you also to say licensed premises and livery halls) should not be valued as they are at present, but that what you

describe as one mind should be applied to value them all over the country?—All over London.

12,337. You do not extend that to railways all over the country, then?—I think I should be prepared to go as far as that, if it were practically possible. It is possible in Scotland, I believe—at any rate, it is done in Scotland; but I doubt whether it would be practically possible all over England and Wales. At the same time there would be no difficulty in cutting up the kingdom into districts, and arranging that the expert who dealt with each particular district should be in close touch with his colleagues, so that a common line of action would be taken.

12,338. Do you think any difficulty would arise in dividing the value which the expert had arrived at as the total value of the undertaking, such as a railway, between the different authorities through which its course is taken?—No; on the contrary, I think there would be no difficulty of that kind. I have here an instance in London—the assessment of the South Metropolitan Gas Company's undertaking. That undertaking was assessed by different overseers in the south of London on varying bases. The gas company appeared before all the assessment committees, and contended for a basis which represented 11 per cent. of gas receipts. The assessment committees in some parishes were satisfied, but in the Greenwich, Lewisham, and Woolwich Unions, which were advised by an expert, they were told that 11 per cent. of gas receipts was far too low a basis, and they ought to contend for 17 per cent. They did so contend. They decided against the objection of the gas company. The gas company appealed to quarter sessions, and in the result the quarter sessions practically confirmed the figures of these three assessment committees. The result was that they had an increased rateable value in those three unions of 18,000L. odd, or rates amounting to about 6,000L. per annum, and it was calculated by a learned counsel who was in the case that the other parishes who allowed themselves to be persuaded by the gas company, that 11 per cent. of gas receipts were sufficient, lost a possible increase of rateable value, amounting to 22,582L., involving rates of about 7,200L. per annum.

12,339. I think you rather missed my point which was this—that a railway goes through a great many more different authorities than a gas company can possibly do?—Yes, it does.

12,340. Would there not be great difficulty in getting the local authorities to agree to the proportion of the value, say, for the London and North-Western or the Great Eastern Railway from its terminus, to where it passes out of the metropolitan area?—No doubt you would be able to say better than I could, because you probably know what the practical difficulties are, if any, in working the system in Scotland.

12,341. You must not compare the system in Scotland because there is a particular statutory arrangement, there it has to be done by the mile—and it is very generally complained of. I do not mind telling you that it is not a fair system, and we have had a good deal of objection to it. So on this particular point that we are on, the Scottish analogy breaks down. I want to know what you are going to suggest on this point?—I agree that the basis in Scotland is unfair, but I still think that the machinery in Scotland is good, and I was using this case of the South Metropolitan Gas Company to show how it would work out in London. Here we have three assessment committees combining to use one mind, the expert who advised the whole three—it was Mr. Dinwiddy—how to deal with this undertaking; and I was pointing out that, if that one mind had been concerned in assessing the whole undertaking, instead of getting an increased rateable value of 18,000L. confined to three Unions, you would have had an increased rateable value of over 40,000L. a year in the south of London.

12,342. You must not always put a case of when there is an increase because there might be a decrease, and then there would obviously be much more difficulty, but are we to understand that what you are referring to is the premises of the South Metropolitan Gas Company and not their mains?—I am referring to the whole undertaking.

12,343. To the mains as well?—Yes; that is why I think it a case in point.

12,344. Do you mean the mains only go through the districts of three authorities?—The mains undoubtedly

go through a larger number than three, but only three authorities fought the case at quarter sessions: the others perhaps were content with the figures the gas company put forward, and suffered a loss.

12,345. You are not prepared to suggest to me a basis on which the valuation of a railway could be divided between different authorities that have opposing interests?—As a matter of fact the valuers advising railway companies have to face that problem now, and I do not know that they experience any special difficulty in doing it; a valuer on the other side, acting for the assessing authority, would have just the same facilities.\*

12,346. (Mr. Murray.) You made a suggestion just now that the gross value should be abolished for all purposes, and that all kinds of taxation should be levied on the rateable value?—Yes, I made that suggestion purely from the point of view of one who has to do with arriving at the basis of assessment. It would simplify that branch of work very considerably.

12,347. You urge that merely as a matter of convenience, then?—As a matter of convenience, as a matter of saving labour, and also as a matter of uniformity.

12,348. Would you not have just the same difficulty in arriving at the rateable value directly, as in arriving at it by means of a deduction from the gross value?—No, certainly not in London, because the majority of the property in London is let on leases at rack rents, and where that is the case those rack rents are the best *prima facie* evidence you can get of rateable value, and you have no addition or deduction to make.

12,349. Still there are very large deductions made from that?—Yes, there are, and in my opinion the result is lamentable; it produces inequality.

12,350. But you would still have to make those deductions, would you not?—No, I do not think you should; having arrived at the rateable value, that is the basis on which the rates should be levied.

12,351. You are assuming that the rack rent is to be the rateable value?—Certainly; a rack rent on lease, that is to say, the net income that the owner of the property receives. The lessee bears all the other expenses which are deductions in other cases; he bears the expenses of all rates and taxes, the water, the repairs, and the insurance; everything, in fact; and leaves the lessor a clear income. That is the great advantage of letting property on lease at a rack rent in London; it saves the landlord so much trouble.

12,352. What about the property in the hands of the owner?—Property in the hands of the owner always has been difficult to deal with.

12,353. And that difficulty would still remain?—That difficulty would remain: but, of course, property in the hands of the owner, compared with property in the hands of lessees at rack rents, is an infinitesimal proportion.

12,354. Are you not assuming, when you suggest that all kinds of taxation should be levied on a uniform value, that the subject matter of those taxes and all the circumstances of the case are the same? I will not ask you to express an opinion on the main question, but is it not conceivable that the interest which it is desired to tax for the purposes of income tax, and for the purposes of inhabited house duty, and for the purposes of rates, may be quite different interests, not necessarily the same?—That may be so; the measure in all cases is annual value, and it seems to me a pity, from the point of view of one who has to arrive at the basis, that there should be so many different kinds of annual value.

12,355. The measure may be, as you say, annual value in all cases, but is it necessarily the same annual value?—It is not, but I think it should be.

12,356. Is it not conceivable that it should not?—From the point of view of levying a tax, I do not think it should.

12,357. Take, for instance, the case of the inhabited house duty: that is a tax levied not on the occupiers of hereditaments generally, but on the occupiers of a particular class of hereditaments, namely, houses that are used for residential purposes. Does it necessarily follow that the value for the purposes of that tax should be the same as the value for the purposes of

local rates?—I do not say that it necessarily follows, but in my judgment it would be infinitely better if it did follow even in the case of that tax.

12,358. As a matter of fiscal equity, it does not necessarily follow, does it?—I should not like to go quite so far as that, but I go very nearly as far.

12,359. Take, again, the question of income tax. It is conceivable, is it not, that as the income tax under Schedule "A." must bear some relation to the income tax under the other schedules, the rateable value of the property is not necessarily a fair basis for it?—There I am on stronger ground. I think that it is most unfair that the income tax should be levied on owners of property on a basis which includes an admitted outgoing and not a receipt. The landlord has not only to pay the cost of repairs, but he has to pay an income tax on the average annual cost of repairs.

12,360. Does not your proposition practically come to this, then: That an income tax ought to be levied on net income?—So it appears to me.

12,361. Do you think that is a proposition which would be generally admitted?—As I say, I have not studied that side of the question; I am only arriving at the basis of assessment of real property, and I have not considered the other classes of property that are subject to income tax. But it does appeal to me as a matter of equity that if you are taxing income you should tax net income, and not gross.

12,362. But you see there may be a good deal to be said on that subject on the other side?—Not from the point of view of equity; from the point of view of convenience, I daresay there may be.

12,363. I gather from your evidence that the London County Council object very much to the system on which Government property is valued in London?—In that respect the Council are only the mouthpiece of the parishes as a whole.

12,364. Are they?—The whole of the parishes in London are dissatisfied, or were dissatisfied some year or two ago, and several of them have taken action in the direction of bringing pressure to bear on the Treasury, with the result that a large number of increases in the valuation of Government property has been made in the last two years.

12,365. Then, at the present time, would you not say that the local authorities are fairly well satisfied with the valuation?—I do not think all of them are.

12,366. Do you not think they are in most cases?—I do not like to speak for authorities that I do not represent. I would prefer to express my personal opinion that there is still some leeway to make up.

12,367. (Mr. Balfour.) Was I right in understanding your explanation of the diagram\* to be to the effect that at no period did the person whose property was in question have an opportunity of knowing how much was put upon site and how much was put upon building?—That is so, because at the present time the site and the structure are not separated.

12,368. So that there might be, conceivably, error in either the one or the other, and he would not know which error to strike out?—I do not think so, because what you have to test is the average annual cost of repairs and insurance.

12,369. But for the purpose of ascertaining that, there would be no interest to sever them?—I do not think you need to sever them even to do that.

12,370. I understood that the interest was this, you will tell me if I am wrong—of course, a site does not need repairs, and it can look after itself?—Yes.

12,371. But the building does need repairs?—Yes.

12,372. And it is only for the purpose of ascertaining upon what proportion of the total value the deduction should be made, is that not so?—I have separated site from structure in that diagram merely to give point to my argument. It is not necessary to do it in order to attain my object.

12,373. It is not done in actually performing the duty of valuation, is it?—No, it is not.

12,374. Of course the test of rent would be the most obvious test—namely, the rent actually paid or the lettable value?—Yes; that, of course, is the test prescribed by statute.

\* The witness subsequently wrote "A basis, known as the 'parochial principle,' has been laid down by the Courts for apportioning the assessment of railways, &c., between various districts. (Rex v. King-swinford, 7 B. and C. 236; 1 M. and R. 20.)"

Method of deter-  
mining site  
value and  
structural  
value dis-  
cussed.

Mr. E. J. Harper. 12,375. Quite so; and, of course, the rent is paid for site and building, for the whole thing, all standing?—Yes.

11 Feb. '98 12,376. So that you do not need it for ascertaining the lettable value?—Not in ordinary cases let at rack rents, certainly not.

12,377. You pay a rent in gross for the site and what is built upon it?—Yes, in ordinary cases.

12,378. It would be a very curious kind of arrangement if your rent was paid merely on the house, but not on the site?—Yes, it would.

12,379. I mean it is taken all standing?—Yes. The exceptions which were in my mind were these: big undertakings such as railways and other properties which are not let.

12,380. Where the hypothetical tenant and not the real tenant comes in?—Yes.

12,381. Is there any case where there is an actual letting or where the subject is of a character capable of being let for a rent in which it would be material to separate site and structure?—No.

12,382. Unless it was for the purpose of ascertaining on what proportion of the aggregate rent deductions should be made in respect of repairs, that would be the only object?—That would be the only object under the law as it now stands.

12,383. In determining what proportion of aggregate rent or value was to be attributed to site and what to building, what evidence do you take? Do you take, for instance, the value that bare ground, as it is called in these inquiries in Scotland, would be sold at without building upon it—the nearest in the neighbourhood, or what do you do?—That is in the last resort the basis of an estimate that I should make. In nearly all these cases I have had the advantage of ascertaining the precise ground rent which is paid, and in most cases that is a recently fixed ground rent.

12,384. I was going to ask that?—So we have the evidence of a transaction in the market as to the actual value of the land.

12,385. Do you think a ground rent, unless it was a very recent ground rent, would be satisfactory—an old ground rent would be useless for that purpose, would it not?—That is the point of my observation. It is only a recent ground rent that I would be guided by, and even then in districts where values are very fluctuating I should be inclined to disregard it.

12,386. I should think so. Might there not be a consideration beyond the ground rent given for the renewal or granting of a lease?—Yes, you might have a premium.

12,387. So that it would not be safe; if this was to be done rightly, would it not drive you to the ultimate necessity of ascertaining by the most analogous sales of ground unbuilt upon in the neighbourhood, the value of the site?—If you wished to have a separate valuation of site and structure it would be necessary to do what every surveyor does when he is valuing a property to buy or sell it.

12,388. Of course, in very many cases where the ground is at present and has for long been built on, so that no site becomes vacant and exposed, you would not have that means of forming an opinion at all—you would not have the test of an actual sale of a site?—If I could imagine such a district, I should not; but I know of no district in the county of London where I could not put my finger on evidence that would enable me to form a very reliable opinion as to the value of any particular site, cleared or uncleared.

12,389. (Mr. Smith.) I understood this diagram to be put in merely to show your objection to a uniform scale of deductions in respect of repairs, but that it has no reference to the distinct valuation of site values?—That is so.

12,390. I just want to see whether I am right; in a theoretically perfect system of valuation you take first the actual rent, plus the actual cost of repairs, insurance and other outgoings, do you not, in order to arrive at the gross estimated rental?—Yes, that is the basis.

12,391. Actual rent plus actual cost of repairs, insurance and other necessary outgoings, to make the gross estimated rental?—Yes.

12,392. Then when you have got that, if you want to arrive at rateable value properly ascertained, you deduct

precisely the same, I think, that you previously added?—Yes, precisely.

12,393. In other words you first add something, and then deduct it?—Yes.

12,394. And that is how you arrive at the conclusion, that it is a roundabout process, and that it would be simpler to take the actual rent?—Yes.

12,395. What you complain of is, in other words, that the addition and subtraction in practice are not the same?—Yes; that is what causes the inequality.

12,396. For instance, they add 10 per cent. or sometimes they do not add anything, and they take off 16 per cent. or one sixth?—Yes.

12,397. (Mr. Arthur O'Connor.) I suppose you know that if the existing system and the existing law were considered to be quite satisfactory, we should not be here at all?—Of course, I take that for granted.

12,398. Then I will ask you to put away from your mind, for the moment, all the existing provisions and systems and practice, and just look at one or two fundamental points. Whatever is valued, whether houses, or agricultural land, or canals, or railways, or gasworks, or anything else, it is always on the ground or in the ground, is it not?—Yes, every hereditament must have a site.

12,399. It may be that there is no hereditament beyond the site?—It may be.

12,400. In that case the valuation would be very low?—It would comprise the site only.

12,401. That might be merely nominal?—Yes.

12,402. Have you had experience of valuation outside London as well as inside London. I suppose you have?—Yes, that is to say within the home counties.

12,403. There is some land within the home counties of very little value, is there not?—Yes.

12,404. Which has a very low standard of value?—Yes.

12,405. And you may regard land, I suppose, as going off from zero, in point of value, to a very high indefinite amount?—From something a very little above zero to a high indefinite amount—yes.

12,406. But even where it is lowest it is at any rate available for human use somehow or other?—The value may be derived, certainly.

12,407. Would you tell me, in general terms, what is it that makes this value rise from zero to something high—what is the main cause if there is one cause?—The growth of population and the progress of civilisation.

12,408. Then, may I take it that, in your opinion population is the main factor in increasing the value of land?—I attach almost as much importance to progress the march of invention, and so forth: but that may be said to follow population in a country like England.

12,409. I suppose, with an increasing population, there is greater subdivision of labour, and increased efficiency of human effort, as a rule, is there not?—Yes.

12,410. In the city of London land is very valuable, is it not?—Yes, I know of no other place in the kingdom where land is so valuable as in the city of London.

12,411. Salisbury Plain is not so valuable?—No.

12,412. If you were to build two houses, stone for stone and brick for brick alike, one in Salisbury Plain and one in the city of London, probably the cost of production would be greater for that in Salisbury Plain, would it not?—Yes, on account of the difficulty of carriage.

12,413. The cost of production of a house is ascertainable?—Yes.

12,414. The value of land may be a matter of estimate, not so readily ascertained?—Not so exactly ascertained as the cost of a building.

12,415. When you are dealing with very high valuations such as you find in the City of London, you have at any rate one factor which you can assess very accurately, namely, the structural value?—Yes.

12,416. And when you deduct a structural value from your table, whatever it may be, you have then the site value left?—You have something which will not exceed site value, but which may not be quite the true site value.

Mr. E. J. Harper.

11 Feb. '98

Site values, variations of.

Deductions for repairs in Metropolitan. A uniform allowance objectionable because of the variations in the proportion of site value to structural value.

Mr. E. J.  
Harper.  
11 Feb. '98

12,417. When you are assessing property, railways or canals, or commercial premises, you have told us you have always one constant element, namely, the land?—Yes, that is so.

12,418. But the land is used differently in different circumstances; for instance, a canal is quite different from a street, and a railway derives a good portion of its value as a railway from the easement or right of uninterrupted transport from one end to another?—No doubt, without that, a railway could not be carried on.

12,419. The use, then, to which land is put, is purely accidental from a valuer's point of view; it may be canal, it may be railway, it may be road, it may be houses?—It depends on the volition of the party in occupation of the land.

Site value:  
The use  
of a site  
does not  
affect its  
value.

12,420. Supposing that one party in occupation makes an intelligent use of his land and a profit out of it, and another party in occupation of an adjoining parcel is a stupid bungling man and loses money over it, does that in any way affect the value of the site as a site?—Other things being equal, I should think it would probably not.

12,421. Then, from an assessment point of view, it is the value of the property which should be regarded rather than trade profits which may be non-existent in the one case and very high in the other?—Of course, that is my personal opinion.

12,422. But you agree?—Yes, I agree.

12,423. Do you see any advantage in constructing a system of valuation which is dependent upon what is accidental, what is varying and what is a matter of chance when you can get to that which is fixed and immovable?—I am afraid I have reached the point at which my brief ends; I am only sent here to speak as to facts, anything that I might say in answer to your question would be mere personal opinion.

12,424. Then I will ask you to confine yourself to your county of London. By this diagram,\* which you have put in, and which is interesting, because it is the first piece of colour we have had in our proceedings, you have shown that out of a total of 800—that is, eight columns multiplied by a hundred—some 316, represented by these blue portions, represent the site value; is that not so, or is it the other way about?—It looks something about that; I should say it would be a little more.

12,425. The red represents structural value, you told us, and the blue indicates site value?—Yes.

12,426. I have added up the marginal figures which indicate the top lines of these blue columns, and I find they come, as far as I can make out, to 316 out of 800?—I am quite content to take it from you that that is so.

12,427. It is the same as taking your own limiting lines—the transverse lines. How do you ascertain that these columns in any way represent fact; I mean how do you satisfy yourself that the different portions of the city of London when valued as between structure and site are fairly represented by these eight columns?—I satisfied myself by taking, as I have already explained, eight particular cases, which I selected from all parts of the Metropolis.

12,428. Would your mind telling me where this number eight comes from?—Number eight comes from Old Bond Street. I have the precise number in Old Bond Street, but I do not wish to disclose it unless the Commission think it necessary.

12,429. No; we will take it as in the neighbourhood of Old Bond Street?—I have there a ground rent fixed in 1892 of 700*l.* per annum, and I have knowledge that, on top of that ground rent, there was no premium charged.

12,430. Would not that house, if standing in Cornhill or Threadneedle Street, be rated much higher than it is now?—That is a very difficult question to answer.

12,431. Presumably it would?—The hereditament has been built in order to adapt it to the requirements of Bond Street; it is not adapted to the requirements of, say, Threadneedle Street, and therefore, probably, would not be assessed so high if it were transported there as it is now.

12,432. Then let me put it in another way: supposing that a structure costing the same as that which has

been put up in Old Bond Street were erected in Threadneedle Street on an equal area, would that not be very much more highly assessed than this No. 8?—If I follow your assumption correctly, it probably would be more highly assessed.

12,433. Never mind my assumption?—You are assuming that you transfer not the actual building in Old Bond Street.—

12,434. No, but the structural value?—The structural value adapted to the requirements of Threadneedle Street. That being so, my opinion is that in all probability the rateable value would be increased, but not to any large extent. There is not so great a difference between the values of Threadneedle Street and Old Bond Street as your question would indicate.

12,435. Do you not think a good deal of the property in the City of London at this moment is so assessed that a good deal more than 70 per cent. really represents the site value, and less than 30 per cent. represents structural value?—I should not put the proportion of site value in the city so high as 70 per cent.

12,436. But you have already put it at 70 per cent. on this place in Old Bond Street, and you tell us that that is, if anything, below what it would be in Threadneedle Street?—Yes; but then when you ask me a general question relating to the whole of the City of London Union, I get an average value which is less than the value of this particular site in Old Bond Street.

12,437. At any rate we find that in such places as the City of London, and even in places outside the City, there are instances which show that sometimes, at any rate, the site value may be 70 per cent. of the total value?—Yes.

12,438. And that is due to population?—That is due—

12,439. To the pressure of men on those centres?—Yes; the growth of the community perhaps is as good a phrase as one could use.

12,440. It in no way arises from the personal action of the owner of the site?—Only in so far as he is a unit in the total population; it does not arise from his expenditure in putting the building upon the site, certainly.

12,441. (Mr. Clare.) Does the Poor Rate Assessment Act of 1836 apply to London?—I do not know whether my legal knowledge is sufficient to enable me to answer that question accurately, but I believe it does not. The London Act is practically the outcome of that Act.

12,442. The rateable value of any hereditament in London is based, is it not, on the estimate of the net annual value of the hereditament?—Yes, so far as regards rateable value, the definition although slightly different in wording, is practically the same under the two Acts.

12,443. It is based upon the theory of the rent that the tenant would be willing to pay for the property?—Yes.

12,444. You do not suggest that that principle of rating should be altered, do you?—I am not here to make any suggestions at all.

12,445. I understand from this diagram\* that you suggest that there should be a division in the valuation of the property separating the site value from the value of the buildings?—No, that is not the intention of the diagram at all. The rateable value is divided in that diagram in that way simply to lend point to the argument. As a matter of fact the deduction for repairs and insurance relates to structure only, and not to site, and that causes the inequality; but you do not need to separate the structural and site values in order to remedy that inequality.

12,446. Each of these figures in the diagram represents, presumably, properties of a similar character, only in different situations; perhaps it would be sufficient for my purpose if you can tell me this; is every case a case where it is land with buildings but not houses?—Yes, that is so.

12,447. They are all of a similar class so far as regards the schedule appended to the Valuation (Metropolis) Act of 1869, namely, property where a deduction not exceeding one sixth is to be made?—Yes, they all belong to Class 3, in the third schedule, houses and

buildings, without land other than gardens and pleasure grounds, valued therewith for the purpose of inhabited house duty where the gross value is 40*l.* per annum or upwards.

12,448. Are they houses or are they business premises?—They are both; there are residential and business premises included in these, I think.

12,449. Which would be residential, and which would be business premises? Take No. 1 and No. 2, would those be residential?—I must rely on my memory, but I think I can tell you. No. 1 is a private residence; No. 2 is a private residence; No. 3 is a shop; and the house No. 4, I think, is warehouse premises; No. 5 is residential, and Nos. 6, 7, and 8 are all commercial.

12,450. Then does it not follow that if the annual value of the No. 7, which is a commercial building, has immensely increased because it is placed upon land which is of great value, it is a considerable advantage to the occupier of No. 1 which is a dwelling-house, to have the rates from the increased value of the business premises contributing to the expenditure of the area in which they are both placed?—I cannot say that I think it is an advantage to the occupier, but that is because I entertain a theory that I am not putting forward.

12,451. Do you not think that the occupier of a dwelling-house within a general rating area gets more advantages out of the expenditure of the local authority than the occupier of, we will say an office, or warehouse in the business part of the town?—Whatever advantages of that kind he gets, he pays for in rent to his landlord.

12,452. I understand that really the object of this diagram is to show that the scale of deductions, as fixed by No. 3 in the schedule, ought to be altered, and that there ought to be a further differential scale provided?—I do not think that the remedy will come by way of a further differential scale; that will only add to the complication. I think you would do better, as in fact you do do better in the provinces, where there is no scale at all.

12,453. Do the blue and the red fairly represent the apportionment of the annual value to the land as compared with the buildings?—They fairly represent the apportionment of the existing rateable value.

12,454. Of the land as compared to the buildings?—I would not like to say that the rateable value is quite accurate in all cases.

12,455. The blue is intended to represent the annual value of the land, and the pink the annual value of the buildings?—Yes.

Site value:  
Cases  
where site  
value ex-  
ceeds the  
value of  
the whole  
heredita-  
ment.

12,456. Supposing you have a case of this kind where an old building exists upon land which has recently been immensely increased in value owing to street widening, and that if you took, we will say, 3 per cent. upon what you consider the site value, the figure so arrived at would come to more than the actual rent which the existing buildings are let at?—That is quite conceivable.

12,457. How will you apportion it according to this diagram?—As I have explained, I should not apportion it according to this diagram at all. I should apportion it according to my estimate of the probable cost of the repairs.

12,458. Now, we will assume that this old house, situated upon this valuable site, will cost, I suppose, in repairs a larger amount than a new house?—No doubt.

12,459. What deduction would you allow then in a case where the annual value of the site is in excess of the actual rent paid for the present buildings upon the site?—I should allow a fair estimate of the actual average annual cost of repairs.

12,460. How does your theory come in about separating the value of the site from the value of the buildings?—I have no theory about separating the value of the site from the value of the buildings; I only used that separation in order to give point to my argument that the deduction is excessive. The deduction, although it is on a false theoretical basis, might not cause any real inequality if the proportions of value—the proportion between the blue and the red, between the site value and the structural value—were fairly constant. But in the case of London that is not so; in the case of a great many districts in the provinces it is so, and therefore, the difficulty does not arise. In London you get a great variety of proportions of value

and consequently the constant deduction of one sixth causes inequality.

12,461. But I want to know who it is that is going to be damaged in the case I mentioned, namely, where the annual value you put on the site is in excess of the rent that you are receiving from an old building for which you ought to allow at least a 15 per cent. deduction for repairs?—So far as rating is concerned, I do not think it is a case of anyone being damaged, because as the law now stands the basis of assessment is not a per-centage on site value.

12,462. I understand that you suggest that for the purposes of repairs the annual value of the site should be deducted from the total value of the whole hereditament; I ask you how you would deal with a case where the annual value of the site is in excess of the present annual value of the whole building?—With all submission, I must say that I have not suggested that that should be done. I say that that is a way in which it might be done in some cases, but the proper way to do it is to make an estimate of the cost of repairs, and to do that it is not necessary to consider the value of the site at all.

12,463. You have taken the values of these different sites, and I presume that you have valued them as freehold?—These colours represent annual value, and of course it does not matter whether they are freehold or leasehold.

12,464. Supposing that a man has buildings on a site, and he has, we will say, 15 years of the lease to run of those buildings, I will ask you to go back into the case I before mentioned, namely, that owing to some circumstance or other the annual value of the site has increased to an amount which is in excess of the annual value of the whole hereditament; owing to the shortness of his lease he cannot reasonably be expected to put up a building which will probably develop the site to give it the value that you put upon it; I want to know how you are going to separate the value of the site from the value of the building, in a case like that?—Your question seems to me to be directed to a separate valuation of site. Of course I can answer it, but it is not germane to the point that I have raised.

12,465. Pardon me, I think it is, rather. We will take the case I have given you, and I will assume that 15 per cent. reduction for repairs would be a reasonable amount for an old building on a valuable site; you suggested that, because the site is valuable and the buildings of small value, it is unfair to deduct 15 per cent. from the total rent to arrive at the rateable value, but that you ought to separate the rent assigned to the house and the rent assigned to the land, and only to take your deductions from the rent assigned to the buildings?—That is the way I test it.

12,466. Now, how are you going to separate the annual value of the total hereditament in the case of property which is subject to leases, which with any reasonable man we will say will prohibit the lessee or anyone else from developing that property so long as these leases continue?—I do not think you can separate it, but I think that you can arrive at your own idea of a fair separation. I do not see any object to be obtained in separating it, but you can get the value of the building in a sense, that is to say, you can calculate what it would cost to reproduce the building, and you can get the value of the site in a sense, namely, what it would let for if it were clear; but it does not follow in extraordinary cases, such as the one you quote, that the addition of those two amounts would produce the proper total annual value.

12,467. I am not quoting an extraordinary case; I think I am quoting numerous cases where property is subject to leases, which practically prohibit any development of that property until the termination of the lease?—Yes, that is a very common case.

12,468. We will take two cases—I will assume that No. 1 and No. 8 in your diagram are two premises adjoining each other in the same street?—I am afraid I cannot follow you there.

12,469. I will ask you to assume that they represent two houses, we will say, in the same street; No. 8 is freehold in the possession of the owner, and No. 1 is leasehold with 15 years of a long lease to run; according to your theory you would take a larger deduction, I presume, off No. 1, which is the leasehold portion for the buildings, than you would off No. 8?—If such an assumption were possible of realization I should; but it is quite impossible.

Mr. E. J.  
Harper.  
11 Feb. '98

12,470. Do you mean to say that you do not often find a freehold running alongside of a leasehold property?—Not with such varying proportions of value as these.

12,471. Pardon me; I asked you to put the value on it yourself. We will take two old dwelling-houses in a street which has very much increased in value; one is freehold in possession and can be developed at any moment by the owner, the other is a leasehold with 15 years to run, and which I think you will acknowledge neither the lessee nor the owner can develop. I wanted to know what value you would put upon the site of those two respectively?—If you ask me to value the sites separately, the sites being side by side, and situated equally advantageously, I should put the same value upon both; that is to say, if I were valuing as a valuer for any ordinary purpose.

12,472. Is that fair when you have a leasehold interest for 15 years, and you cannot possibly develop for 15 years?—That, of course, is not a matter for me to pronounce upon. If there is an unfairness, it arises, not from the system of valuation adopted, but from the leasehold system which prevails in London.

12,473. (Chairman.) No, but you have got to value in accordance with the system?—With submission, I differ from you.

12,474. (Mr. Clare.) Supposing you are asked by someone or other to say what price he can afford to pay for No. 1 and No. 8 under the conditions I have stated, do you mean to say you would advise him to pay as much for a property which is subject to a 15 years' lease, and which during the term of that lease cannot be altered at all, as you would do for a freehold in possession?—Now you are altering the form of your question. If you ask me whether I would give the same sum for the property which is subject to the tag end of a lease as I would for the one which is in hand, I should say certainly not; but if you ask me to value the two sites, of course, I make no difference.

12,475. Then for the purposes of rating you would put them both the same?—No, not for the purposes of rating, but for the ordinary purposes of valuation.

12,476. But I am asking as to valuation for the purpose of rating?—The question of rating site values is not for the moment before me; the question of rating on the basis of rateable value is; and I say that the deduction of one-sixth is too great in cases where the structural value does not form a large proportion of the rateable value—that is all.

12,477. You referred also to the question of repairs, and I think you stated that it was unfair to add 10 per cent. for repairs to the actual rent paid in the case of repairing leases, and then to take 16 per cent. off to arrive at the rateable value?—Yes, I think it is obviously unfair.

12,478. In a repairing lease what the lessee does is, is it not, to pay the taxes, rates, and outgoings necessary to keep the premises in repair, and to insure?—Yes.

12,479. But to arrive at the rateable value according to the Valuation (Metropolis) Act, you have not only to take off the repairs and insurance from the gross, but you have also to take off the sum necessary to keep the premises in a position to command the rent, which in many cases, particularly of old property, must be a considerable sinking fund?—I do not think that if you spread that sinking fund over a proper period it would have any appreciable effect on rateable value.

12,480. Take the case of ordinary workmen's houses let, we will say, at 8s. 6d. a week, which from experience one knows are pretty well worn out at the end of 50 years: do you mean to say that you would not, in arriving at the rateable value, allow a considerable annual sum in proportion to the rent to be put by as a sum to replace the value of these premises when they were worn out?—As a matter of fact I have to manage large estates of model dwellings of that kind, and the amount which is put aside, spreading over a period of 60 years for that purpose, is the smallest possible fraction you could imagine of the rental value, and, as I say, although I admit, in theory your point is right, practically it has little or no effect.

12,481. You do not suggest, do you, that bare, unbuilt upon, and unoccupied land should be rated?—Of course it should be valued as the law provides, but if valued the rates cannot be recovered from it while it is unoccupied.

12,482. Do I understand that you would suggest that unbuilt-upon land in a town should be assessed for the purposes of local rates?—I do not suggest it, the law provides it.

12,483. But we are here to consider whether there should be any alteration; do you suggest that it would be advisable to bring into the assessment, property which is of great value, admittedly, but which is undeveloped and unoccupied?—Speaking for myself, and not for the County Council, I think these sites ought to be included; whether they should be charged with the full rate or only a proportion is another question: but I think they ought to be charged with something, because they undoubtedly benefit by local expenditure.

12,484. (Mr. Elliott.) With reference to some replies which you gave to Mr. Murray and to Mr. Smith, with regard to rent and rateable value, I understood you to say that in regard, at any rate, to some property, let under certain conditions, you look upon rent as equivalent to rateable value?—I say it is the best evidence you can get of rateable value.

12,485. That, of course, is the case where the tenant undertakes to do the repairs?—Yes.

12,486. But it would not apply to the large mass of cases with which you are probably familiar in the suburban districts of London, where the landlord contracts to do the repairs?—No, it would not: you must make the deduction in those cases.

12,487. It would only apply to the better class of property let very often on a 7, 14, or 21 years' repairing lease?—Yes, that is so.

12,488. Therefore the adoption of that principle would not carry you very far, would it?—I think it would carry you 50 per cent. of the way.

12,489. Do you think 50 per cent. of the property in London is let on a repairing lease?—50 per cent. as to value, I think, is pretty nearly correct.

12,490. But not as to the number of hereditaments?—No.

12,491. With regard to your very interesting Return, I should like to ask you on what principle the London County Council has selected these properties?—I, personally, am responsible for the selection of these illustrative cases.\*

12,492. Are these cases in the Memorandum merely illustrative cases?—They are cases taken, so far as I was able to take them, to illustrate all varieties of proportion in value between site and structure.\*

12,493. Then I understand that apart from this table there is a large number of other properties with regard to which the London County Council have obtained similar information?—Yes, we have thousands of cases in the office. These are simply selected as typical.\*

12,494. These are typical cases?—Yes, these are fairly typical cases.\*

12,495. I think I understood you to say that the London County Council has no power to appeal in the case of individual properties?—In certain districts they have not, that is, where they are not ratepayers; but where they happen to be ratepayers, in that capacity they have the right of objection and also the right of appeal.

12,496. I should like to press you a little further as to the selection of these cases: for instance, I see in regard to the Westminster Union, in which I think you have not been very successful with regard to the alteration of the assessments, you select a certain number of clubs; on what principle did you select these clubs?—For instance, I will ask you why the Reform was selected and not the Carlton?—I may say that I made a valuation of both. The reason we did not succeed so well in Westminster—if you gauge success by the amount of increase—was that Westminster had been practically beforehand with us. Westminster had a thorough re-valuation of all the clubs in their district. If you will look at page 31 of the Return, towards the bottom, you will see that we suggested that they had valued the Travellers Club and the Thatched House

Gross value and rateable value in Metropolis, how determined. Repairs of old buildings.

*Mr. E. J. Harper.* Club too highly, and we suggested that they should be reduced.

11 Feb. '98 12,497. Can you give me any idea as to the expense which has been entailed upon the London County Council by this system of valuation of individual properties?—I could not give you the information off-hand, but there is a complete return showing it, which no doubt could be placed at the service of the Commission.\*

12,498. Is that a return which has been published?—I believe it has been published. I know it was circulated to all the members of the Council. It is in print and could be obtained.

12,499. (*Chairman.*) You might send us a copy?—Certainly I will.

12,500. (*Mr. Elliott.*) You do not remember off-hand what the approximate cost of this work was?—No, I would not like to trust my memory.

12,501. Do you think any equivalent advantage was gained in regard to the adjustment of the assessments?—I think if we take into consideration only the improvement that has resulted during the last six or seven years, the money was well spent.

12,502. Was that a direct improvement or an indirect improvement?—Indirect.

12,503. I notice that in some cases in the return of suggested alterations, the final decision of the assessment committee seems to have been to place the assessment at a lower valuation, not only than that put upon the property by the London County Council, but lower than that put upon the property by the overseers; what would be the explanation of that?—Have you a particular instance before you to which you could refer me? It is a very unusual occurrence.

12,504. I think the Reform Club, which is given on page 14, is a case in point?—Yes, that is a case in point; of course in Pall Mall we are dealing with high values and there is room for difference of opinion.

12,505. Who made the valuation of the Reform Club in that case for the London County Council?—The valuer of the Council. I should at once add that the detailed valuation was made by me and confirmed by him.

12,506. Of course you would say that, notwithstanding the original valuation put upon the property by the overseers, and notwithstanding the assessment committee's decision, your valuation was the correct one?—Of course I incline to that view, because I took it; but I should not like to go so far as to say that I am infallible.

12,507. How many valuations have you yourself made of properties for the London County Council?—It is quite impossible to say; they run up to thousands.

12,508. Are those valuations made by you individually?—Yes; of course I have the assistance of a competent staff.

12,509. But you are responsible for those valuations?—The valuer of the Council is responsible for them; I am responsible to him.

12,510. Of course, the assessment committee would consist, would it not, of several individuals who were looking at the matter purely judicially?—Who should be looking at the matter purely judicially.

12,511. Therefore, it is rather a question of judicial decision, is it not, against, may I say, a single expert?—I am afraid, as a matter of fact and practice, it is not.

12,512. Do you not think that, to some extent, to head these estimates "London County Council's Estimate," is to give a somewhat adventitious importance to them, as, after all, they are an estimate put upon these properties by the valuer—no doubt a very eminent and competent valuer—but by the valuer of the County Council?—I think, perhaps, it would be better to say that it was the estimate of the advisers of the Council, rather than the estimate of the Council itself. The instructions of the committee dealing with this matter to the valuer are, in any case of doubt, to take a lower rather than a higher figure, and those instructions are, of course, fully carried out.

12,513. I think you stated that 68 per cent. of the local taxation of the metropolis was levied over the whole metropolitan area?—By a common rate; by an equal pound rate.

\* Quinquennial Assessment, 1891. Cost of Assessment Appeals.—An unpublished return pursuant to an order of the London County Council of 11th July 1893.

12,514. That contribution of 68 per cent., levied by an equal rate, is 68 per cent. of the local taxation raised in the Metropolis?—Yes. There are certain rates levied by the parishes for their own purposes; there are certain other rates levied by the Council and other central authorities for their purposes. The first class represents 32 per cent. of the total local taxation of London, and the second class represents 68 per cent.

12,515. (*Mr. Dalton.*) Continuing the questions on this return of suggested alterations, I see on page 15, under the head of "Remarks," you say, with regard to six properties, "also surveyors of taxes' estimate." Does that mean that the surveyor of taxes in those six cases came to the same conclusion as the London County Council or that he came to the same conclusion as the assessment committee?—The same conclusion as the London County Council.

12,516. Those, as far as I can see, are the only six cases, or very nearly so, in these 31 pages, where it is stated in the return that the surveyor of taxes' estimate was the same as that of the London County Council?—The reason that note is put in is that those particular cases were considered by the Westminster Union assessment committee under pressure from the surveyor of taxes; they declined to consider the remainder of the Council's suggestions.

12,517. Can you tell me at all in what proportion of these cases in this return of 31 pages, the estimate of the surveyor of taxes coincides with the estimate of the County Council? You have it that in six cases it did. Should you say, for instance, that in the majority of cases his estimate was the same as that of the London County Council or the same as that of the assessment committee?—Of course, the surveyor of taxes does not take anything like so extensive action as the London County Council, for the reason, I believe, that he has not sufficient funds to enable him to do so. He deals with properties where he has a fact to go upon—namely, a rental paid; where he has no such fact to go upon, my experience, in London at any rate, is that he passes the matter by, and leaves the decision entirely to the overseers and the assessment committees.

12,518. We have had pointed out to us the very extensive powers which he possesses under section 53 of the Act, which requires the assessment committee to take his objection unless they are satisfied to the contrary; may I infer from your answer that you think he really has a strong influence on the valuation of property in London, or that his influence is a merely illusory protection?—It depends to a large extent on the personality of each surveyor of taxes. Where the surveyor of taxes makes his influence felt, no doubt it is very weighty, when he has a basis of a rental to go upon, but when he has not such a basis he has no means of finding another one without expert assistance, and for that he has no funds.

12,519. Should you say that those were the only six cases in this return in which he came to the same conclusion as the London County Council?—Oh dear me, no, certainly not. In the majority of parishes the surveyor of taxes is in accord with the County Council in principle. He has not of course the same information as enables the Council to go into detailed figures in difficult cases, but wherever it is a question of rental we generally find ourselves in accord with him.

12,520. This return says, "A large number of cases of incorrect assessment were noted in this department, and particulars of these are stated in the return." Am I to judge from that that it was considered that the whole of these cases in this return are incorrect assessments?—Of course that is the expression of the individual view of the adviser of the Council, perhaps the word "incorrect" is a little too strong under those circumstances.

12,521. Can you say whether these suggestions, when they were made to the assessment committee, came in any way before the surveyor of taxes?—They were not sent by the Council to the surveyor of taxes, but any surveyor who availed himself of the usual invitation to sit with the assessment committee must have been cognizant of them all.

12,522. You would have thought if he had considered that the assessment was an incorrect one he would have been inclined to back up the case?—Not only does he back up cases of this kind, but I have had surveyors of taxes communicate to me in certain cases where they think there is under-assessment, and they have

*Mr. E. J. Harper.*

Surveyors of taxes in Metropolis. Their powers, action and influence in regard to valuation.

Common rates in county of London form a large proportion of total.

*Mr. E. J. Harper.* asked me to make a representation, in order that their hands may be strengthened.

11 Feb. '98

London County Council: Effect of their influence with reference to the raising of assessments in Metropolis.

12,523. I am not suggesting that the action which the London County Council have taken in this matter has not been very beneficial. I was simply speaking with regard to this particular return. You have not totalled the figures in the column, and therefore it is impossible to tell from the assessments, as they at present stand here, what has been the effect of these suggestions as a whole in London. Could you give us the total result of the cases in which you have caused the assessments to be raised, that is, the total amount of increased valuation that is the direct result of these suggestions?—I could have that worked out if the Commission desired it, but I attach no importance whatever to figures in that connexion myself.\* It is the moral influence of bringing a little pressure to bear on assessment committees to go a little more deeply into these matters rather than the actual increase in figures that I value.

12,524. I think you say your recommendations have been adopted to a greater extent outside the City of London than in?—Yes, undoubtedly.

12,525. Looking at these figures cursorily, it would seem that in the great majority of cases outside the City of London the assessment committee has adhered to the overseers' valuation in preference to that of the London County Council?—I think, in the majority of cases, it is fair to say that that is so. The overseers and assessment committee, in many parishes in London, as distinct from the provinces, are one and the same authority; so that when we are criticising the overseers and submitting our case, as between ourselves and the overseers, to what you would call a judicial tribunal, that tribunal is practically one of the parties to the dispute, so that we may expect adverse decisions as a rule.

Metropolis, deductions in. The practice of generally allowing maximum deduction has produced inequalities.

12,526. You have expressed the opinion that you would like to see this Third Schedule in the Valuation (Metropolis) Act† go altogether?—I think it would be better than having the schedule as it now stands.

12,527. Do you think the maximum rates of deduction in the various cases are too high or too low, if they are treated simply as maxima?—As a maximum scale I do not think I have any fault to find with it. It is because the word "maximum" has been altogether ignored that the difficulty has arisen.

12,528. Is that not mainly with the intention of saving trouble?—No doubt.

12,529. Would you prefer that each case should be dealt with on its own merits?—In order to obtain a reasonably fair assessment, even in such a vast metropolis as this, it is necessary that each case should be treated on its merits.

12,530. Then the danger of that would be that each assessment committee would have an inclination, possibly, to allow too big deductions, for the purpose of local popularity. Might that not be the case?—I am bound to say that I have not found the assessment committees so amenable to local pressure as I should have thought probable.

12,531. Then why have they not, in these cases in the return of suggested alterations, taken your estimates?—Because of the reason that you have just now mentioned—it was to save trouble. They have got a scale, and, ignoring the fact that that is a maximum scale, they use it.

12,532. If you were to sweep away this schedule, do you think the result would be that they would really deal with each case on its own merits, or would they not amongst themselves adopt some uniform deduction?—I think that each parish would, in all probability, ultimately work out its own scale, but that in parishes where there were considerable differences of value—by that I mean considerable differences in the proportion between site value and structural value—they would find it necessary to have two or more scales. The scale in the City, for instance, ought to be very

different indeed from the scale in St. George's-in-the-East or Poplar.

12,533. If your proposal, that the county rate basis should be applied to London was adopted, that would necessitate a duplicate valuation, would it not—one for the purposes of the county rate, and one for the purposes of the local rate?—I do not think it necessitates duplicate valuation in all the other counties.

12,534. I am speaking of London?—From that I conclude that it would not mean a fresh valuation in London; for instance, if I had any part in the operation of such an Act in London, I know certain assessment committees and overseers whose work I should take practically, in the lump, as correct; in other districts I should be inclined to criticise more closely—it would not mean a re-valuation of all London.

12,535. Am I right in inferring from one of your answers to Mr. Clare that you think that the urban rates in London fall on the owners and not on the occupiers?—Of course that is a matter of personal opinion; I am not sent here to give evidence on that, but that is the tendency of my opinion. Of course you can only arrive at a tendency in such a case as that; to say that they all do fall on owners is further than I am prepared to go.

12,536. (*Mr. Stuart.*) There are two figures upon which I wish to clear up your position. You, as I understand, have stated in the course of your evidence that, quite apart from the loss by cases of under-valuation, such as Mr. Dalton has been referring to, there are two individualised causes for under-valuation which you have specified, one amounting to a million, and the other, amounting, in your estimate, to a million and three quarters?—Yes, the first being the practice of adding only 10 per cent. and taking off one sixth, and the second being the excessive deduction due to the fact that the proportion is calculated on the whole value instead of on that portion which is due to structure.\*

12,537. Now, with respect to the first, I think the Commission is pretty clear what you mean, but with respect to the second, namely, that a million and three quarters is lost by some erroneous method of deduction of the one-sixth, the Chairman began to question you upon that matter, and then the questions were interrupted and failed by a discussion that arose about the determination of site value. Now I want you to pursue that further, and to find exactly what your basis is for that million and three quarters, due to the irregular or unfair operation of the deduction of one-sixth?—My estimate is arrived at in this way; the difference between the gross and rateable values of London in the valuation list coming into force next April is 7,495,482*l.*; that is the deduction which is actually made. I have arrived in the way I have described at the estimate of the proportion of rateable value which is due to structure, and that I put down at 22,370,490*l.* Now, I think a fourth of that value would be a fair deduction to cover the cost of repairs, insurance, and the sinking fund which Mr. Clare properly suggested was necessary. That gives me a proper deduction of 5,592,622*l.* Deducting that from the actual deduction shows a difference of 1,902,860*l.*, but to be on the safe side I have called it one million and three quarters.

12,538. (*Chairman.*) You say you have arrived at an estimate that one fourth is the proper deduction?—Yes.

12,539. How have you arrived at that estimate?—By my experience of the last 10 years.

12,540. But your estimate has never been tested?—I think the estimate has been tested in nearly every case that has come before the court of quarter sessions. I am arriving at what I think would be a fair deduction for repairs and insurance, apportioned to structural value. Of course, the practice is to apportion it to gross value: but I am only translating the proportion which is accepted as fair as regards gross value into a proportion which would be fair as regards structural value.

12,541. Who tests your estimate of what is structural value?—That can only be tested by my stating the manner in which I have arrived at the value.

12,542. (*Mr. Stuart.*) I put this question to you in order to come to the point: Is this the position that

*Mr. E. J. Harper.*

11 Feb. '98

A county rate basis suggested for Metropolis would not necessarily involve an additional valuation.

Incidence of urban rates.

Metropolis, under-valuation in: Estimated amount of, caused by, making percentage deductions for repairs, &c. without taking into consideration the relative values of the site and structure. Suggested method of making deductions.

\* The totals are as follows:—

	Gross.	Rateable.
	£	£
Under assessments:—		
Overseers' valuation	840,601	701,955
London County Council's estimate	1,193,192	992,583
Assessment Committees' decision	853,751	713,680
Over assessments:—		
Overseers' valuation	15,157	12,635
London County Council's estimate	12,727	10,606
Assessment Committees' decision	14,078	11,737

\* See answers to Questions 12,112-4, 12,323-6.

Mr. E. J.  
Harper.  
11 Feb. '98

you are in—that you say the best way of making deductions for repairs, &c. would be to make those deductions upon the structural, and not upon the site, value, but that for that purpose it is not necessary for you to separate site value from structural value, and that the best way of arriving at the deductions is to do what you yourself have done, namely, to estimate what would be actually required for repairs?—Yes, that is my position exactly stated.

12,543. Therefore, your position that structural value ought to be that upon which deductions fall, and not site value, does not imply a separation of structural value and site value in valuation, but the result of that is arrived at if you take what is actually required for repairs?—Yes.

12,544. You say that the sound way is to go through London, and see at each house what is required for its repairs, and deduct that?—Yes, that is the proper way.

12,545. You say that if that be done throughout London, it is exactly the same thing as if you took a reasonable sum off the structural value alone?—Yes; that is exactly so.

12,546. In order to answer our question, when we asked you why do you put that at one million and three quarters you say there would be two ways of answering that question—the one way would be to go through London and see what the repairs of each house would cost?—Yes.

12,547. And you say, “That is too long for me to do, but I can arrive at it roughly, and only roughly, in another way?”—Yes.

12,548. That way being to answer your question—not in order to carry out the administration of the Act?—Exactly.

12,549. Then you say, in order to answer your question, I have made a rough estimate of what the site value and the structural value of London is, is that so?—I have made a rough estimate of what the site value is, and I have obtained the structural value, approximately, by deducting my estimate of the site value from the actual rateable value.

12,550. And you say that though that might not be a fair method, necessarily, in the valuing of any individual property, it is yet right within a few millions of money, out or in, which is all that we are talking about in this general way, over the whole of London?—Yes, and I am fortified in putting it as high as that by my experience of making estimates of all kinds for the purchase and sale of property. One is always liable to make mistakes, and we find in the Valuation Department that errors on the one side, as a very general rule, balance errors on the other, and our estimates may be relied upon on that account.

12,551. Then you say that you believe you have got a fairly true estimate of the site value of London in the statement that you have already given us as to that?—Yes.

12,552. You believe so?—I believe that any valuation of individual sites throughout London would produce certainly a higher total than the figure I am working upon.

12,553. But you say that the valuation is only of use in enabling us to seize the figure of a million and three quarters, and it is not necessary for the carrying out of such a proposal as you have laid before us?—Exactly, it is purely illustrative.

12,554. You have said, and the Chairman has somewhat questioned its propriety, that a quarter of the structural value would be, in your esteem, a fair average of the cost for repairs, &c. which ought to be deducted to get the rateable value over London?—Yes.

12,555. And you say that from your experience of valuing many properties as a valuer?—Yes, I do.

12,556. If that quarter ought to be a third it would *pro tanto* alter the sum of one million and three-quarters?—It would *pro tanto*.

12,557. But you say that when you come to value any individual property it would be perfectly possible to ascertain what the repairs required on that property would be?—It would be much easier to do that than to do it by way of separating site and structure.

12,558. It would not only be a feasible but a perfectly easy thing for a valuer to go to a property and make an estimate of what the sum required to keep it in

repair, &c., would be?—Not only would it be easy for a valuer, but I think it would be comparatively easy for such laymen as one finds on the assessment committees of London.

12,559. You propose, therefore, that the scheme you lay before us for the better deductions in securing rateable value should be carried out by the estimation of the repairs necessary and not by the separate site value?—Yes.

12,560. In doing that you are saying nothing, as far as what your own opinion may be, as to whether arriving at site value is a possible thing or not?—Exactly; I do not wish to deal with that latter question at all.

12,561. (Chairman.) I want to know now whether you put it forward to us as a practical proposition that it is a simple thing or not to separate structural from site value?—I have already explained that if you were to arrive at the cost of reproducing a building, which is one way of taking its value, and then to arrive at a valuation of the site, considered as vacant, and add those two together, you would not in all cases, though you would in the majority, obtain the true total annual value. Therefore to that extent I say it is not feasible to separate, that is, to divide rateable value exactly into its two elements. What I would suggest, if that is desired, would be a separate valuation of the site only, and not to attempt to call the difference structural value or anything else.

12,562. I do not understand you to put that forward to us as a thing that is practically possible?—It is perfectly possible.

12,563. And expedient?—Expediency I do not wish to speak about; I am not sent here to speak about it.

12,564. (Mr. Stuart.) You are not basing your proposals for the improvement of the valuation of London, as at present undertaken, upon any idea or proposition of the separation of site value from other value?—No, I am not.

12,565. You have only used the separation in your own mind to enable us to get rough figures?—That is the whole purpose to which I have applied it.

12,566. Now, to follow out what the Chairman has asked you about the separation of site value, or rather the ascertainment of site value, what you say is this—that the site value, if it be made, and the structural value, when added together, do not necessarily in all cases give the rateable value?—Yes, that is so.

12,567. Would they in a large number of cases?—Undoubtedly they would in a large proportion of cases.

12,568. Then you say that it is perfectly possible to make a site value in London?—Perfectly.

12,569. It is perfectly possible to make a valuation of any of the sites in London?—Yes.

12,570. (Chairman.) Do you think that would be a plain and uncontentious thing to do, or would it be very controversial?—It would be less controversial than the present valuations, which include machinery, railways, and all that sort of thing.

12,571. Do you think so, considering the number of houses, structures, and hereditaments that you would have to value?—Of course you would not have to value structures, that is the simplicity of it.

12,572. That is just what I want to get at—why not? My position is this. As I understand it, if you are going to attempt to separate, not for your own special purpose, but for any other purpose, site and structural value, you will have to go through every individual hereditament, over every individual street in London, will you not?—You will not necessarily have to enter each hereditament, but you will have to go over every street in London.

12,573. And every different hereditament in every street?—Not necessarily; for instance, I might get out on the back wall of a garden of a house which was one of a row of 20, and I could see at once from my coign of vantage that the sites were practically the same in shape and size; that one inspection would do for 20 hereditaments as to site.

12,574. Excuse me, it is not enough for you to satisfy yourself; you have got to satisfy the committee or tribunal that has to hear your case, and therefore you would have to take the tribunal on to the top of the back wall?—Only in those cases where the ratepayer was dissatisfied with my valuation.

Mr. E. J.  
Harper.  
11 Feb. '98

Valuation  
of site and  
structure.  
How far  
possible to  
value them  
separately.

*Mr. E. J. Harper.* 12,575. And as a matter of course, anyone has the power to be dissatisfied if he chooses, and to appeal?—He has the power; the question is, to what extent he exercises it.

12,576. (*Mr. Stuart.*) In forming a valuation of the sites, by that or any other means, would you have to do anything more difficult than has to be done just now in forming the rateable value?—On the contrary, I should have to do something simpler. For myself, if I had to value London, I would much prefer to value it in sites than in hereditaments; I could do it more quickly, more cheaply, and, I believe, more accurately—that is to say, I could obtain greater uniformity.

12,577. (*Chairman.*) Then put them both together, and have both parties, one interested in the site and the other in the structure, appealing against you; do you think the Appeal Court would be more or less congested with business than it is at the present time?—Of course I was not thinking of the two being done; I am choosing between the two systems, and I say I prefer the valuation of the site.

12,578. (*Mr. Clare.*) In reference to your suggested method, how do you value buildings separate from the site?—It is not, strictly speaking, a valuation; it is a calculation of what it would cost to reproduce the building.

12,579. Then it has capital costs as a basis?—Practically, yes.

12,580. What rate of interest do you put upon it?—That varies according to the character of the building.

12,581. What rate of interest does a man usually want who invests his capital in buildings?—If he is a builder he wants from 6 to 8 per cent.

12,582. What sort of rate of interest would you put upon the buildings of the Bank of England if you had to value them separately from the site?—Something like 4 per cent.

12,583. Then you take capital cost, plus 4 per cent., as representing the value of the buildings?—No, 4 per cent. of capital cost.

12,584. Then you add on, I presume, your estimated value of the site and put say 3½ per cent. on that?—Something like that.

12,585. And the two together would make up a total rent from which you would arrive at the rateable value?—Yes, that is the only way, practically, under the decisions of the courts, that it can be done.

12,586. Allow me to suggest to you this case:—Supposing that a company is formed and builds a hotel which costs them 100,000*l.*: the undertaking turns out an absolute failure, and they lose money every year upon it; would you assess them on the 6 per cent., upon the value of the cost of the buildings plus 3½ per cent. upon the cost of the site?—In assessing a property like that, I should entirely disregard the circumstances under which it came into existence. I should only consider its capability, not the use that is actually being made of it—that is one objection that I have to the present system of rating railways.

12,587. Then you would not adopt the principle of assessment in the Act of 1836, which says you are to base it upon the rent which a tenant would pay from year to year as it stands?—That is the basis on which I should go—the basis of capacity—what a tenant would pay, not what a particular man who happens to be in possession is making out of it.

12,588. (*Mr. Elliott.*) But that might have no relation at all to capital cost?—Not necessarily.

12,589. (*Mr. Stuart.*) Supposing that you ascertain the rateable value, and supposing that you endeavour to ascertain the structural value, and supposing you subtract the structural value from the rateable value, you would get a certain result; am I right in saying that that result would never be greater than the site value?—Yes, you would be perfectly right in saying that: it would never be greater.

12,590. And that in some instances it would be smaller, and in a few considerably smaller?—Yes, I think that is a fair statement.

12,591. And that in the large multitude of cases it would be pretty nearly the site value?—Yes.

12,592. What would you put as the proportion of cases in which it would be so in London?—I should think something like 70 per cent.

12,593. Lastly, have you any idea what it costs to make the quinquennial valuation in London altogether, the whole cost to the public authorities?—I have not any recent figures, but 6 or 7 years ago I went into that, and my recollection is that it was something like 25,000*l.*

12,594. Would you say, therefore, if it cost 25,000*l.* to make a complete valuation of London for rateable value quinquennially it would cost less than that to ascertain what the site value of London was?—I would not say that on the first valuation, because the quinquennial valuation of 1895 is the outcome, not of the work of a man coming fresh to the valuation, but it is the result that has grown up from previous quinquennial valuations, period after period, and therefore a great deal of economy is effected in simply renewing that valuation: whereas if you were making a valuation of site only, you have got to do the whole of the work for the first time.

12,595. Supposing the valuation were going on from quinquennial epoch to quinquennial epoch, you would expect that the ascertainment of the site value in any given quinquennial epoch once began and started would be less than 25,000*l.*?—I have no doubt it would be.

12,596. Have you any conception what the first cost would be?—I could supply the Commission with figures that would be more reliable than anything I could state now on the spur of the moment.\*

12,597. (*Chairman.*) Would you give an appeal in each case if the owner was dissatisfied between the site value and the structural value?—No, I should not deal with it in that way. The occupier, or whoever was concerned, would have to appeal against the estimate of site value, pure and simple: not comparing it with the structural value.

12,598. And the owner, too, of the site value should have an appeal?—I do not see how you can withhold the right from the owner.

12,599. (*Mr. Dalton.*) I think you say the total cost of the valuation in London was 25,000*l.* last time?—I am speaking from memory of figures which I compiled six or seven years ago, and that is subject to correction.

12,600. Does that include litigation?—No, that only involves the cost of preparing the lists.

12,601. Can you make any estimate of the cost of the litigation?—There are no means of making that estimate, because we do not know what the appellants spend. One could easily arrive at an estimate of the probable cost to the public authorities of litigation.

12,602. Does this 25,000*l.* include the whole cost to the local authorities, including the law costs of the local authorities?—No, it does not include any law costs before quarter sessions.

12,603. Can you say what that sum was?—Not now, but I could ascertain it.†

12,604. (*Mr. Elliott.*) Is there any information published, in the accounts of the London County Council, as to what the London County Council have spent on valuation business?—Yes, that is the return to which allusion has previously been made and copies of which I have undertaken to furnish.‡

12,605. Does that include the cost of litigation and all other expenses?—That includes only the expenditure of the London County Council, but it does include their litigation.

\*The witness subsequently wrote:—"I think an assessment of each separate site in the County of London, if carried out by expert surveyors—not necessarily of the most eminent rank—would probably cost 40,000*l.*, if it had to be done under conditions similar to those governing the present quinquennial assessment. This is exclusive of any cost of litigation which might arise out of the valuation."

†The witness subsequently wrote:—"This information can only be obtained by making inquiries of every assessment authority."

‡Quinquennial Assessment, 1891. Cost of Assessment Appeals.—An unpublished return pursuant to an order of the London County Council of 11th July 1893.

Metropolis, valuation in: Cost of.

Mr. GEORGE LAURENCE GOMME recalled and further examined.\*

Mr. G. L. Gomme. 12,606. (Chairman.) I do not think I need keep you very long, because I think the only matters which concern us are in this paper of comments which you put in upon the figures which I handed you over the table last year (see Appendix).† You refer to those, I notice, all through your comments as my tables and my figures, but I hope you understand that I have not invented the figures, and that I have taken them always from public returns?—I quite understand that; I simply adopted that phraseology for the purpose of conciseness, and I made my memorandum as short as possible for the purpose of the Commission.

Royal parks in and around London: Cost of. 12,607. There are three points; they are the question of the parks, the question of the police, and the question of the education grants. Take the parks; what is there really between us on that question? All that my original memorandum said was that the cost of the public parks, in and around London, was not included in a certain table which I handed to you?—Yes, that was so.

12,608. I then said that the total cost of the parks was 102,466l.?—Yes.

12,609. There is nothing in your choice of the estimate for 1897-8 as against mine for the year 1895-6, except that yours is 466l. less than mine, is there?—There is nothing in the choice of the estimate. I took the latest figures. I have distributed the parks between London and Extra-London, but your Lordship took not only the London parks, but the parks in and around London, and as we are dealing only with London, it is only fair to credit to London the benefit of the Royal Parks in London.

Suburban parks a benefit to London. 12,610. I agree, of course, about Edinburgh and Holyrood, and so on, but you are not going to put to me that London gets no benefit from places like Bushy and Hampton and Richmond?—I would suggest that London gets only the same benefit, or proportionate benefit, from those outlying parks as the Surrey people get from the London parks when they come into London.

12,611. No doubt, but surely London gets a much greater benefit from these parks than the average of the subjects of Her Majesty?—But we are not, if your Lordship will forgive me for saying so, upon a question of the particular benefit that London derives from parks, but upon the cost of the Royal Parks which should fall upon London; and when you are estimating the amount of benefit which London gets from Imperial expenditure, you can only take the Imperial expenditure which is spent upon London.

12,612. I do not agree at all; I say in and around London is quite fair to take; but I do not expect to convert you, and I do not suppose you will convert me, so we must just agree to differ?—It is a question between London and the other counties, and inasmuch as it is a question between what London gets as compared with what Surrey, Middlesex, Essex, and other counties get, surely it would only be fair to credit to Surrey and Middlesex the Imperial expenditure in those counties.

12,613. No doubt; but then it is not only a question as between London, Surrey, and Middlesex, but as between London and Lancashire and the Shetland Islands?—Yes, but in that proportion Surrey and Middlesex go on the side of the Shetland Islands, whereas London stands by itself.

Metropolitan Police: Cost of. Percentage of Exchequer contributions to amounts obtained from rates. 12,614. Very well, we shall not get any nearer, I think. As regards the police, look at page 256 of your memorandum, at the long paragraph which begins with the words "Apart from the basis of comparison;" you there put forward some figures, and consequently upon them a different per-centage?—Yes.

12,615. Would you tell me where you got those figures?—Do you mean where I got the basis for the different per-centages?

12,616. No, the per-centages, I assume, are correctly calculated out; I want the figures which are the basis of the per-centages?—I first of all take the fact that the Metropolitan Police levy indirect taxation as well as direct taxation, and therefore, in ascertaining the proportion of the grants to police taxation, you must

take both, and I add the 37,176l., which is levied by the police by public carriage and other licences, to the rates levied by the police; that is the first item.

12,617. (Mr. Dalton.) That 37,176l. includes the licences for public hackney carriages?—That is so.

12,618. You have made no deduction, I think, in respect of the expenses of the police in administering the Hackney Carriage Acts?—No, because the only deduction that would be possible to be made would be the cost of collection.

12,619. It is a great deal more than the cost of collection, is it not—they have to administer the Acts?—I think not, because we are here comparing the cost of the London police with the cost of the country police. In all other places, so far as I know, the hackney carriage licences go to the municipal authority apart from its police fund, but the police of the different municipal authorities do administer, as one of their ordinary duties, and look after the hackney carriages.

12,620. (Chairman.) The point that I want to get at is in the sentence beginning: "A further criticism, however, occurs here, namely, that portions of the Metropolitan Police district are not in the county of London, and the rates and grants in respect of these portions should be calculated as for the rest of the country." I want to know where you got the figures you refer to there, because I have not been able to get them?—They are contained in the Local Government Board Analysis of the Exchequer Grants.

12,621. I have not been able myself to find any separation for the police as between what is in, and what is not in, the county of London; does the Local Government Board analysis separate it?—Yes, they separate it in the Local Government Board Return relative to the Exchequer Grants. I could give you the exact page, and I will do so in correcting the evidence.\*

12,622. Of course I need not go far into this, but even then there would be still the point that the City of London, for reasons of its own, does not choose to apply for a police grant, which you think it ought to apply for?—That is so.

12,623. Is there really anything in the education figures which is big enough to make it worth while to further discuss them?—No, I think not.

12,624. In one of our calculations the voluntary schools are taken in, and in the other they are put out; there is nothing more between us than that, is there?—I think not; in fact, the conclusion that I come to on this point is that, assuming the correctness of the basis, London gets its fair proportion of the Education grant.

12,625. And your summary at the bottom of page 258 is nothing more nor less, as I understand it, than a re-statement, in short form, of the points to which your former evidence was directed?—That is so. I thought it would be convenient to the Commission to have it in that short form.

12,626. And as such of course it must be taken, subject to any discount, such as it is, as was taken off in examination, after your examination-in-chief?—Quite so.

12,627. (Mr. Elliott.) I want to refer you to a question (No. 9,045) which was put to you on the occasion of your previous examination by the Chairman; he asked you: "Supposing in one of those districts the proportion of the expenditure which gets a large Imperial subvention was largely on poor law, which you say ought to be national, and in another district the local taxation was very much, not for poor law, but for the improvement of property, surely the whole inference to be drawn from the gross expenditure, as you give it, would fall to the ground." Do you remember that question?—I do.

12,628. You then stated that you had taken out, in a separate table, the proportion of poor rates to other rates, which you would be willing to put in?—Yes, I remember that perfectly well.

Mr. G. L. Gomme.

11 Feb. '98

Education grants: Proportion obtained by London.

Exchequer contributions: Proportion of expenditure borne by such contributions in different districts. Purposes of expenditure should be taken into consideration.

† Pages 254.

*Mr. G. L. Gomme.*  
11 Feb. '98

12,629. I think you have been good enough to send in that statement?—Yes, I did send in that statement, and I think you have it.\*

12,630. It scarcely shows what I think it is important should be shown, and I would now ask you whether you are able to give us any information on that point; that is, how does the proportion of the Exchequer contributions to poor law expenditure in London compare with what it is elsewhere?—I have not dealt with that in the table that I have handed in. It is simply the proportion of the total taxation divided between poor and other expenditure. Of course I was quite conscious of the fact, as the Chairman put it to me, that that was an important element in the consideration of the subject.

12,631. I think, in the course of your evidence, you agreed that the poor law expenditure was something more than local, and that some part of it, at any rate, was of a quasi-national character?—Yes; I rather fancy I went a little further than that in my evidence. My own personal opinion is that it is very largely national.

12,632. Have you at any time made any inquiry as to the proportion of Exchequer contributions to poor law expenditure in different districts?—Not in different districts. In my evidence in chief, I put in a table which showed how the Exchequer contribution was made up for London.†

12,633. I want to bring you back again to the position which the Chairman presented to you—that supposing the poor law expenditure in any district was heavy, you would expect to find the Exchequer contributions heavy in proportion to that poor law expenditure, because the poor law expenditure has been recognised as one of the fittest objects for Imperial subventions?—Yes, if it so happened that in the particular year in which the basis of the Exchequer contributions was fixed, the poor law expenditure was very heavy, in the district that you have in your mind.

12,634. I want to take, district by district, not so much year by year. Supposing the poor law expenditure in London was not so heavy, say, as in a town like Oldham or Portsmouth, you would expect to find the proportion of Exchequer contributions heavier, would you not?—No, I think not, because the Exchequer contributions are based upon the grants given in a particular year, and in that year the expenditure on the poor in London was a given sum, also in that year the expenditure in the various districts of the country for poor law purposes was a given sum: it is on that proportion that we are now receiving Exchequer contributions, so that the receipt from the Exchequer does not alter with the increase or decrease of poor law expenditure.

12,635. But from the very earliest date of Exchequer subventions or Treasury subventions, those subventions have always been directed to some particular classes of expenditure rather than others, have they not?—But that was all altered by the Act of 1888.

12,636. Is that so; were not all the old grants kept on foot?—No; the position was entirely altered. Before 1888, the Imperial Exchequer used to grant a certain proportion of the cost of a given service in whatever district that service happened to be administered; now they have stereotyped the grants that they made in one particular year, namely, 1887, and they have made that figure the basis for all future contributions.

12,637. But still when you look at the Local Government Act of 1888, and see the particular purposes to which the Exchequer contributions are to be devoted, you see the preference that Parliament has given, do you not, in favour of the grant of a Treasury contribution to particular classes of expenditure?—That is so, as a matter of account, but as a matter of rating between one district and another at the present moment, I do not agree that that is a result of the Act of 1888.

12,638. But you agree that that is the letter and the spirit of the Act of 1888, that towards particular classes of expenditure, particular contributions should be given?—I can quite conceive that that was the intention of the Act of 1888.

12,639. Is it not expressed in the letter of the Act of 1888?—I think I would say yes to that, but I go on to say from that, that the result of the Act of 1888 is not in accordance with its letter and spirit.

12,640. I only want to press upon you the point that the basis of your evidence is very much this—as the Chairman pointed out—the proportion of Exchequer grants to total expenditure of all classes?—Because I believe that that is the operation of the present system of Exchequer grants.

12,641. But you would agree that towards some classes of expenditure, which are something more than a local concern, it is equitable that the taxpayer, as a whole, should contribute?—That is rather involved in the question of the way that I think a contribution should come, and, as a matter of fact, I think in my evidence, I more than once stated that I did not believe that the present system was the correct system.

12,642. (*Mr. Dalton.*) In this reduction of the percentage of the Exchequer contributions to the amount paid from local rates in the case of the Metropolitan police district and the Midland, Northern, and Southern districts, which, in these figures in the table on page 260, are 99 for the Metropolitan police district and 83 for the Midland, Northern, and Southern districts, you entirely alter them—you bring them down by a series of calculations to something totally different?—Yes.

12,643. I have endeavoured to follow this, and I shall be very much obliged if you will explain one or two of the deductions. In the first place you deduct the whole, I understand, of the licences for hackney carriages without putting on the other side anything in respect of the management of hackney carriages on the part of the police?—Yes. I do that, because in the country with which we are making the comparison the whole of the hackney carriage licences goes to the municipal authority.

12,644. To the municipal authority, but not, as I understand, to the police fund?—That is so.

12,645. Nor do I understand that in the majority of cases that work is done by the police; I understand there is generally a hackney carriage inspector, who is not a policeman. If they, in a municipal borough, take the fees for these carriages and have to appoint an inspector who is not a policeman to do the work, the only benefit they get is the difference between the cost of the servants they employ on that work, and the fees which they receive?—My information is that they do employ the police for this.

12,646. Very well, we will begin with that deduction of 37,176*l.* How do you get at the City of London deduction? You have got the rates amounting to 94,759*l.*, but you do not set out the calculation to show us what you deduct for the grant they should have received?—For the purposes of the police I take it that they are entitled, or that London is entitled, I would rather say, as a whole, to the proportion of the grant which the City of London might receive for its police.

12,647. What do you reckon that on?—At the same figure as we get in London, namely, four-ninths.

12,648. Four ninths of what?—Four ninths of the 94,759*l.* which they levy by rate.

12,649. Then you bring it down to 85?—Yes.

12,650. How do you bring it down the next 4 per cent. to 81?—I bring it down by deducting from the original 99 per cent., which was in Lord Balfour's table, that portion of the Metropolitan police district which is not in the county of London, but which is in the counties of Surrey, Essex, and Hertfordshire, and the proportions of which formed the basis for those counties—for Surrey, Hertfordshire, Essex, Middlesex, and Kent—of the present grants from the Exchequer contributions.

12,651. Could you give us the calculations by which these per-centages are arrived at?—Yes, I could; I have not the exact calculations with me, but I will let you have them very willingly.

12,652. My difficulty is in finding out how the 85, which is the proportion that London gets after making the deductions that you suggest, can ever be reduced to 81, because, as I understand, the proportion that is repaid in London is the same as that which is repaid in the remainder of the Metropolitan police district?—Yes, but you transfer that which is paid for the

*Mr. G. L. Gomme.*

*Mr. G. L. Gomme.*  
11 Feb. '98

remainder of the Metropolitan police district to the country at large.

12,653. That brings up the per-centage on that side, but how you can bring down London to 81 by that process I do not know?—That is simply the difference between the proportion.

12,654. You will let us have the calculation?—I will most willingly send you the calculations.\*

12,655. You point out what a comparatively small portion of these Exchequer contribution grants comes to the London County Council, and how much is taken for the Metropolitan police, but does the same observation apply in the rest of the country—that the amount which goes to the police continues to increase every year, and leaves less for the corporations?—Not exactly, nor in the same way, because in London the proportion goes up in accordance with the rateable value.

12,656. Have you anything to show that it goes up faster in London than it does in other big towns—take Liverpool, Manchester or Birmingham for instance?—No, I cannot say that I have off hand, except my general theory of the London police, that it is partly national and partly local.

12,657. With regard to the parks, I suppose you are aware that in other towns the corporations buy parks outside the town for the benefit of the town, and at the expense of the town rates?—I am not aware that they do it at the expense of the town rates. I know that it is done. I know that the City of London, for instance, has bought parks outside the area of the county of London, but then they have done it, not out of their rates, but out of a tax.

12,658. I was speaking of provincial towns?—I was not aware of that fact in their case.

12,659. (*Mr. Stuart.*) You have given, on page 259, the proportionate Exchequer contributions as between London and the rest of the country, and you have also given the proportionate rateable value and other figures, and you get there certain proportions as between London and the rest of the country?—Those are the Chairman's figures, not mine.

12,660. Yes, they are the Chairman's figures; but, at any rate, you have also given figures of a similar kind?—Yes, that is so.

\* See footnote on p. 257.

The witness withdrew.

Adjourned till Thursday, the 24th instant, at 11.30 o'clock.

## THIRTY-SECOND DAY.

Thursday, 24th February 1898.

At 16, Victoria Street, S.W.

PRESENT :

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. Sir J. T. HIBBERT.  
Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
G. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.  
The Right Hon. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

MR. W. VALLANCE, called and examined.

12,667. (*Chairman.*) You are clerk of the White-chapel Union are you not?—Yes.

12,668. How long have you held that office?—Nearly 30 years.

12,669. We have got the information as to the existing state of the law and procedure, and also as to the valuation lists in the metropolis pretty completely,

12,661. The figures for the rest of the country consist of an enormous number of items added together?—Yes.

12,662. I presume that if you were to take certain parts of the country and, again, other parts of the country the relations between the first figures, say, in page 259, 18.4 per cent. and 81.6 per cent. would, by no means, be preserved through each portion of the country?—That is so.

12,663. The country varies enormously?—Yes, I mentioned that in the return that the Commission had before them at my last examination.\*

12,664. I wanted to to ask you a question upon that point, you have referred to a return which you presented to the County Council which gave the items for the rest of the country, and that return is not placed upon our minutes for reasons which we need not enter into, but can you let us know the steps by which you obtained that return, so that we may know whether we can get it for ourselves?—It is a matter of calculation from the local taxation accounts, entirely. The local taxation accounts published by the Local Government Board really formed the basis of the return. In cases where the unions, or what are called the registration counties, which are the union counties, are not conterminous with the administrative county, a certain proportion has been taken on the basis of rateable value, so as to fit them into the administrative county. The urban and rural districts are all conterminous now with the administrative counties, and I think there are one or two other cases where a certain proportion has been obliged to be taken, but with that exception the whole of the information is obtained from the local taxation accounts.

12,665. We could get the Local Government Board to make up figures covering the same ground, I presume, as your figures, then?—I anticipate no difficulty.

12,666. Would you be kind enough to let the Commission have some rough account of how you made up those figures, and the points on which they may have required some adjustment, so that we may see whether we could deal with that?—I should be very pleased to do so.†

Mr. W. Vallance.

24 Feb. '98

Metropolis valuation. Vestry Clerks are customarily invited to conference with assessment committees before lists are prepared by overseers, in order to secure uniformity.

Metropolis valuation. Intervention of Surveyor of Taxes. His influence is great and very useful.

Deductions from gross value are almost uniformly fixed at a maximum in the Metropolis. They are not always justifiable.

meet the assessment committees in conference before the lists are prepared by the overseers?—That is so.

12,670. That is only by custom, not by statute?—It is by custom, not by statute.

12,671. Is it universally done?—I think not. The chief object is to secure uniformity in regard to the assessment of certain properties, especially small tenements of various kinds, so that the various parishes might adopt one uniform principle. We do not invite the overseers: it is merely a conference of vestry clerks, so that they may go back to the vestry and report what, in the judgment of the assessment committee, should be the bases and procedure upon which to arrive at the correct value of various properties.

12,672. This is distinct from the conferences which the London County Council have endeavoured to get together from time to time?—It is quite distinct. It is rather for the purpose of giving effect, as far as possible, to the conclusions reached by the county council conferences. Since the conferences have been held under the auspices of the London County Council, it has appeared to be the more necessary that we should call the vestry clerks together in order to secure uniformity upon the bases of those conclusions.

12,673. And is that anterior to the time when the surveyor of taxes is called in?—Quite so, quite in the early part of the year.

12,674. Is the surveyor of taxes ever present at these conferences?—He has not been.

12,675. I suppose the presence of the surveyor is another element which tends to secure uniformity?—The presence of the surveyor in my experience is a most useful one, apart from the power which he possesses of giving notice of objection, and apart from the authority given him by statute; and although not sitting there exactly as an assessor, he is of great assistance to the committee in drawing attention to special circumstances of which sometimes they are not aware.

12,676. If he is an able and painstaking man, he naturally exercises very great influence?—He does exercise very great influence.

12,677. An influence which, in your opinion, is beneficial?—Decidedly; he is very warmly welcomed by the Committee.

12,678. Do you consider that his position is as good as it could be, or have you any suggestion for improving it?—I have no suggestion. I think that the surveyor already exercises as much influence as he possibly can do.

12,679. Of course it is obvious that his influence is exercised as regards the gross value?—Precisely.

12,680. It has been represented to us, and I do not understand that you differ, that in almost all cases the maximum rates of deduction mentioned in the third schedule of the Act are those which are allowed?—Almost uniformly.

12,681. Do you think that is quite in conformity with what was the intention of Parliament?—Possibly not. The exceptions we do make are in cases of newly built properties, or where the outgoings on account of repairs are very slight indeed. Where it is obvious that it would be unfair to others to allow the maximum deductions we have allowed some smaller amount, but they are quite exceptions.

12,682. Does it not occur to you that Parliament having fixed a maximum, that it ought to be regarded as a maximum, and not as the average?—That is quite so.

12,683. What are the considerations which have led the committees to regard it as an average rather than as a maximum beyond which they are not to go?—It is difficult to say what considerations have been in the minds of the Committee, beyond a general convenience. In conference with the County Council the suggested rateable values also correspond to the full maximum deduction.

12,684. But obviously it must result in a considerable loss of value upon which rates might be laid?—Yes, but in settling the values of properties, it is obviously very difficult to determine what rates of deduction, being less than the maximum should be allowed. At the same time, in saying this I must admit that the maximum deduction which is made is not absolutely justified in every case.

12,685. Do you put it to me that the difficulty of coming more near the obvious intention of the statute would, in practice, be so great as to make it undesirable?—I would not go so far as that.

12,686. Would it not be expedient to find some means by which the intention of Parliament should be carried into actual effect?—There is no doubt that, with a greater amount of care in fixing the assessments, it might be possible to fix a deduction well within the maximum, which would more fairly represent the cost of outgoings for repairs.

12,687. On this point a witness sent by the London County Council, one of their valuers, represented very strongly to us that one way in which this present practice of giving the maximum deduction operated very unfairly was this: that the site value as distinguished from the structural value of premises varied so largely in different parts of London, that in the parts where the sites were more valuable than others, you were thereby taking off a very much larger amount, six per cent. off the gross value, than in the poorer districts of London?—I could not resist the argument; I think there is a great deal in it.

12,688. He went on to say that a skilled valuer, after he had become accustomed to the class of property, by going down one side of a street would very soon be able to arrive at a tolerably fair estimate of what ought to be the deduction allowed upon the houses in that street; and that the practice would soon become settled, and would not result in any injustice, while it would certainly increase the rateable value of London?—Of course, there are exceptional properties in relation to which the maximum deduction would not be allowed by my committee.

12,689. Would you tell me how far the provisions contained in sections 3 and 4 of the Poor Rate Assessment and Collection Act, 1869, are adopted in the Whitechapel Union; I understand you to say they are partially adopted?—It would be more correct to say that section 4 of the Poor Rate Assessment and Collection Act of 1869 is not in force at all in the Whitechapel Union, and that section 3 is alone adopted in three parishes, Aldgate, Christchurch (Spitalfields), and Mile End New Town. In the first two parishes the allowance is 25 per cent., and in the latter 15 per cent., applicable to hereditaments having a rateable value of 15*l.* and under.

12,690. Have you any comments to make, or any suggestion to put before us in that connexion?—I have often wished that the powers contained in sections 3 and 4 were made compulsory, that there was a provision of law which made it imperative to adopt a uniform system of compounding.

12,691. Do you advocate their being made compulsory?—I should do so.

12,692-3. (Chairman.) I understand you to indicate to us that, at any rate, so far as the metropolis is concerned, the union has superseded the parish as the unit of assessment?—Yes, the union is now practically the unit of assessment.

12,694. Following upon that, what change would you suggest in the early stages of making the valuation—would you put the earlier stages, the first drafts of the quinquennial revision, into the hands of the union rather than of the parish?—I would. I think it is very much to be desired, and you would secure then, first of all, more skilled assistance in the original preparation of the list; you would secure a greater uniformity, and you would have but one assessment and one rate, one levy, one uniform collection.

12,695. It has been represented to us that over most of England the rates levied upon the parochial basis are of more importance than those levied upon a county basis, but that does not apply in the case of London, because the rates levied by the County Council are relatively of much greater importance than the county rate outside London. It is upon these considerations I wish to elicit your opinion, not to indicate mine, as to whether the London County Council should not have either a power of revision or a power of objection to valuations which they thought were too low?—In a communication which I addressed to the London County Council in 1895 in connexion with the

Mr. W. Vallance.

24 Feb. '98

Deductions from gross value in Metropolis. It would be possible to fix lower amounts than the maximum, which would more fairly represent cost of repairs, especially where site value is relatively high.

Compounding: Practice in Whitechapel. A uniform practice should be made compulsory.

In Metropolis, the union and not the parish is practically the unit for valuation. The preliminary stages of valuation should be entrusted to the union authorities, and greater uniformity would be obtained. The London County Council should be given a *locus standi* on assessment

Mr. W. Vallance.

24 Feb. '98

committees with powers similar to those of surveyor of taxes. This arrangement should include provisional valuations.

Bill\* which they proposed to introduce into Parliament, I said, that the Assessment Committee "will welcome such legislation as will give the Council a *locus standi* in order to secure uniformity of assessment in the metropolis. In effecting this purpose, the Committee are of opinion that the Council are adopting an expedient course in promoting a consolidating, as well as amending, Bill, and in seeking powers broadly corresponding to those already given to the Surveyor of Taxes. The Committee are sorry to find that the Council do not propose to take powers (as under clauses 36 and 37) in regard to 'Provisional' Valuation Lists; and are of opinion that much friction will be avoided if the Committee can have the assistance of the Council in the assessments of property appearing in such lists rather than be left unaided by the Council until the assessments appear in an original, or supplemental, list. The Committee are of opinion that points, considerations, questions, and difficulties will be best dealt with upon provisional lists spread over the whole year; supplemental valuation lists being thus simplified and forming, practically, summaries of the provisional lists of the year." I attach a great deal of importance to that.

12,696. I understand that that means, does it not, that the quinquennial revaluation would be very much lightened, because you would be so much more up to date?—It rather applies to the supplemental lists. Those supplemental lists affect the totals, but in the case of the London County Council intervening in those lists for the first time we have been deprived of their assistance in connexion with the provisional lists. The consequence is that considerations are first brought before the committee upon supplemental lists, and this causes a good deal of difficulty and a good deal of heart burning, whereas if we had their arguments and those considerations brought under our notice at the earliest stage upon the provisional lists we should practically have settled all difficulties.

12,697. When there is a difference of opinion, or when there are considerations which are not present to your mind, you would rather have them at an early stage and before your committee has committed itself to an opinion, than at a time when, so to speak, they have to revise an opinion they have already come to?—Precisely.

12,698. You would welcome a change in the law which would enable that to be done?—I would.

12,699. Do you speak for your committee on that point?—I do.

Vacant properties: Rating in respect of, is fair in principle, but too difficult to carry out.

12,700. What do you say about vacant properties? Suggestions have been made that vacant properties, properties unlet, should be assessed?—In principle I do not think it is quite fair that empty properties should be exempt from rating. On the other hand, I feel a good deal of difficulty in suggesting how the property can be brought into rating, inasmuch as the rating is upon the occupation, and there is no occupation. At all events it is a point upon which I have reached no very definite conclusion.

12,701. And upon that point which I put to you a moment ago, which you did not quite understand, I see that you have put here before us the resolution arrived at by your assessment committee in 1895, and which you quoted at length?—Yes, I should like, with reference to the paper I have put in, to refer to to the last paragraph as to special properties.

London County Council should undertake and defend valuation of "special" properties, and should make initial valuation of large undertakings, such as railways.

12,702. You may read it if you please?—"With regard to clause 67, the Committee will be glad to find that, additional to the properties therein specifically mentioned, where an assessment committee shall inform the Council that they deem a property to be 'special,' and the opinion of the Committee is concurred in by the Council, that the latter shall be empowered to undertake the valuation and to defend the same. The class of property which is in the mind of the Committee in making this suggestion is a 'market' which does not necessarily extend into more than one parish."

12,703. Perhaps following that I ought to ask you whether you have anything to put before us as to the valuation of large public undertakings, such as docks, railways, or gas works, which extend into more than one parish?—I think that the initial valuation should be by the central authority, the London County Council.

12,704. (Sir John Hübner.) I think from your evidence that you consider that the London County Council by their conferences upon these questions did great service to the question of uniformity?—I do.

12,705. I presume the London County Council took up that question owing largely to the want of uniformity throughout the metropolis?—Clearly so.

12,706. It had been brought to their notice with respect to the rates which they have to raise?—That is so.

12,707. I also gathered from the letter which you have read that your assessment committee is very favourably disposed not only to the past action but to any future action of the London County Council in the same direction?—The committee as well as myself, are of opinion, that the intervention of the London County Council is an absolute necessity in London, having regard to the large metropolitan charge; uniformity being of the first importance.

12,708. And also, I presume, because, though the Metropolitan Act has worked fairly well, it does not produce the uniformity of assessment which is desirable?—It does not produce the same degree of uniformity that we might anticipate from the further intervention of the London County Council.

12,709. I may take it for granted that the uniformity obtained in the metropolis is much greater than the uniformity which is obtained in the provinces?—That would be so.

12,710. I dare say your attention has been drawn to the great differences between the gross and rateable value in provincial unions and the gross and rateable value in the metropolis?—Yes, that was my experience years ago, when I was clerk to a country assessment committee.

12,711. Can you tell us why the London County Council Bill proposing to deal with this question was not proceeded with?—I really do not know.

12,712. It was some time ago when it was brought in?—I think the Bill was brought in in 1896.

12,713. You said, as I understood, that a surveyor of taxes was not present in your union in the early stages?—The surveyor has not been present within my recollection at any informal meeting.

12,714. Is it not the case that he is present in other parts of the metropolis?—The surveyor is present with us at all meetings of the assessment committee.

12,715. But not in the early stages?—Not at the preliminary informal conference.

12,716. Is not he present in other parts of the metropolis, even in the conference of vestry clerks?—Not that I am aware of.

12,717. Are you aware whether anything more than the maximum deductions have ever been allowed in any part of the metropolis?—I am not aware of it; not where the maximum deduction is actually specified in the schedule to the Act.

12,718. But if what you have said, with respect to the undesirability of allowing a maximum deduction in every case, be true, would you not think it reprehensible that they should go beyond the maximum terms of the Act, as, I have seen it stated, has taken place in some unions?—May I just qualify that with regard to exceeding the maximum deduction. In the case of rating of small tenements, and in order to avoid the shillings and pence in the assessment, we do get what appears to be an excess of deduction, but when they are taken as a whole they are quite within the maximum, even within the scale suggested by the county council conferences.

12,719. And that might be the case, probably, in other unions to which I have referred?—Yes, following the scale of the London County Council, there is necessarily, in some few cases, a deduction beyond the statutory limit, but when you deal with a terrace of fifty hereditaments in succession, varying in value, in one case the rateable value would be lower than it strictly should be, and in another case it would be a little higher. It is merely the question of the 10s., within the 10s. we allow, and beyond the 10s. they have to pay.

12,720. It is merely a matter of arithmetic?—It is merely a matter of arithmetic.

12,721. Supposing the maximum deductions were allowed in every part of the metropolis, and it became

Mr. W. Vallance.

24 Feb. '98

Conferences promoted by London County Council with reference to questions of assessment very useful. Their intervention regarded as essential for purpose of obtaining uniformity.

Surveyor of taxes in Metropolis. To what extent does he attend proceedings of assessment committees.

Deductions in Metropolis alleged to be sometimes in excess of legal maximum. Reasons for this.

\* London Valuation and Assessment Bill No. 141 of Session of 1896.

Mr. W.  
Vallance.

24 Feb. '98

uniform as a principle, I suppose that would not be unfair as a matter of rating, would it?—Well, there is an element of unfairness in it.

12,722. In reference to the cases which the Chairman has mentioned as to the value of the land?—Yes, but when you come to smaller classes of properties, I do not think there is anything very seriously at fault.

12,723. You suggested that the first arrangements with respect to the assessments should be in the hands of the union, and not the parish. Would you in such a case utilise the overseers of the parish in any way?—No, I think not.

12,724. Would not that raise a very difficult question of the overseers as to compensation?—Are you speaking of assistant overseers?

12,725. Yes?—Clearly it would.

12,726. Is it not a question more of specific rates than of all rates. If you rate empty properties at all, would you not make a difference between the different classes of rates; you would not rate empty properties for all rates, supposing they were rated?—As I have already said, I am not prepared to express a very definite opinion upon it, but what was in my mind was, that if empty properties were rateable at all, they would be rateable in respect of all rates.

12,727. But empty property has to be watched and guarded by the police, and all the lighting has to be done just in the same way, whether the properties are empty or full; is not there a distinction under which empty properties might be called upon to pay on those grounds?—I am not prepared to answer the question satisfactorily.

12,728. You will not give a decided opinion upon the question as to whether owners should be rated for empty properties?—It seems to me to be bristling with so many difficulties that I find it difficult to indicate in what way it could be done.

12,729. You think that it is a case of letting sleeping dogs lie, I suppose?—Yes.

12,730. (Mr. Elliott.) How many parishes are there in the Whitechapel Union?—There are six, but, until recently, there were nine.

12,731. In how many parishes are overseers appointed?—In all.

12,732. I rather gathered from your memorandum that in some cases the local authorities exercise the powers of overseers?—In several cases there are local Acts, and the local Acts make the trustees and governors, or whatever the designation may be in each parish, persons with the power of overseers.

12,733. Are you able to express any opinion as to which is the better of the two systems?—Well, the local Acts have practically become obsolete, and their purpose has been served. A time has come when they might very well be repealed.

12,734. Do you see any advantage in the powers and duties of the overseers vesting in the local authority?—To whom were you referring as local authorities.

12,735. I mean either in the vestry or in the guardians?—I take it, that if the union was dealt with as the unit, not only the unit of administration, but the unit of rating, the powers of overseers would cease.

12,736. I presume, that if that were the case the assessment committee of the union would appoint persons who would practically perform, in regard to rating, the same duties as assistant overseers perform now?—I take it, that in an area like Whitechapel, a skilled valuer would be appointed to make the preliminary valuation. The assessment committee would deal with it as at present, and that that or some other central authority would be required for levying and collection.

12,737. And, of course, in the case of a small union such as yours, one skilled valuer would possess sufficient local knowledge to enable properties to be properly assessed?—I think so. I may say, in that connexion, that I should be sorry to eliminate altogether the voluntary element from the original valuation; but I am rather indicating that the assistance of a skilled valuer would be of the greatest service. I think local knowledge is of great assistance in relation to the value of property, but if they had at their elbow an assessor, that would suffice.

12,738. In such a union, as yours you would have an assessment committee in the union, plus such skilled assistance as the assessment committee thought it desirable to employ?—Yes.

12,739. And there would be no parochial organisation, such as you have now?—None necessarily.

12,740. Does your experience of the metropolis enable you to say whether you would apply that to other unions?—I cannot speak of them.

12,741. One question with regard to the suggestion contained in the letter addressed by you to the London County Council in November 1895. You suggest, as I understand, that the London County Council should have powers somewhat similar to those which the surveyor of taxes possesses?—Yes.

12,742. Have you thought what would be the position in the event of both the London County Council and the surveyor of taxes putting a value upon the property?—It has the appearance of cumbrousness, but at the same time the surveyor of taxes represents the imperial authority, and it is the imperial taxation that he is concerned with.

12,743. At the present moment, supposing the surveyor of taxes puts a value upon the property, that value stands unless it is set aside upon appeal?—Yes, upon objection before the committee.

12,744. Supposing that the London County Council put a value upon the property, is it your idea that the value should stand unless it were set aside upon appeal?—It would not be possible to have both standing.

12,745. Then to which would you give priority; to the higher, or to the valuation of the surveyor of taxes?—For the moment I am not prepared to say.

12,746. You would have to give some priority; you could not have two assessments standing?—No. I do not myself see that it is absolutely essential that the surveyor's figures should stand till the contrary is shown, because in practice the surveyor attends and confers with the committee, submits his grounds, discusses points, and leaves the committee to adjudicate.

12,747. That is, I presume, in the event of any objection being made?—In the event of any objection being made.

12,748. Do you know in what proportion of cases an objection is made to the surveyor's figures?—I have not the exact figures with me.

12,749. Would you say that in a large proportion of cases the surveyor's figures are objected to?—In a large proportion of cases objections were made to the surveyor's alterations, but it is to be borne in mind that the surveyor in inserting his figures deals alone with the occupiers' returns.\* Those returns are frequently very defective and imperfect. We have information before the committee which he had not, and we simply draw his attention to the fact of such and such circumstances, and he at once concurs. If we alter the figures, and he is not content, he has, of course, his remedy afterwards; but there is never an appeal by the surveyor against our figures.

12,750-1. Does not what you have just now said rather point to the desirability of the maintenance of the present arrangement, by which the surveyor's figures stand?—Yes, I think that, taken on the whole, the surveyor's figure might stand as at present, and the county council be empowered to object and appeal.

12,752. (Mr. Dalton.) It seems that in the last quinquennial valuation the number of objections heard by your assessment committee was 1,184?—Yes.

12,753. What proportion, roughly, does that bear to the total number of assessments?—There were 1,184 objections out of a total number of 10,672 assessments.

12,754. Was the objection in most cases to the gross value or the rateable value?—On paper the objection was to both, but it was practically to the rateable value; that is, the aggrieved ratepayer objected to the rateable value upon which he would be assessed.

\* The witness subsequently wrote:—"The number of assessments in relation to which the surveyor estimated a 'gross value' in excess of that of the overseer was 392, and in relation to these there were 137 objections."

Mr. W.  
Vallance.

24 Feb. '98

London County Council should be given a *locus standi* on assessment committee, with powers similar to those of surveyor of taxes. Question as to whether their duties would clash.

Objections in Metro- polis to surveyor of taxes' valuations. Surveyor often makes a settlement when facts are brought to his notice.

London County Council should be given a *locus standi* on assessment committees.

Number of objections heard by White- chapel Assess- ment Committee at last quinquennial valuation was 1,184 on 10,672 assess- ments.

Mr. W. Vallance.

24 Feb. '98

12,755. But in the majority of cases the maximum deductions have been allowed?—Yes, but primarily the grievance is in being assessed at a higher rate than they ought to be; and in giving notice of their objection they give both the gross and the rateable which they desire to be inserted in the list, so that in theory it is an objection to both gross and rateable; but practically their grievance is in relation to the net amount upon which they will have to pay.

12,756. In the cases where their objections were sustained the gross value would be too high in most cases?—Yes, in most cases.

12,757. Do you get more appeals from one class of property owners than from another, or are the appeals equally spread over all classes of property?—They are spread over all classes of property, but not equally. There is no doubt that by far the larger proportion were to small properties. I have here three lists of objections of three separate meetings which show the properties. At one meeting the objections are of a very special character. The East London Water Company's mains and pipes, public-houses, brewery, market, warehouses; and in another meeting we get terraces of small properties, and artizans' dwellings, houses, and shops.

12,758. No appeal was made in any case against the decision of the committee?—I have no recollection during my 30 years' clerkship of more than three appeals, and two of these were settled out of court.

12,759. Have the committee very protracted sittings in dealing with this very large number of objections?—I cannot say that they are protracted; they occupied 16 sittings of the Committee.

12,760. What number of hours per day have they sat at these 16 sittings?—Seldom more than four hours a day.

12,761. Do you think there is any practical advantage in rating on the net instead of on the gross, taking all things into account, the difficulty of the deductions, and the fact that the maximum is nearly always allowed?—The maximum deduction varies with different classes of property. If you were to rate upon the gross it would be a serious injustice in the case of some properties.

12,762. What class of property are you thinking of?—Properties where as much deduction is allowed as one-third, sometimes. In fact in very special properties the maximum is not prescribed by the Statute, consequently the committee are left free to form their own judgment as to what deduction should be made. Then in the case of small tenements the deduction is larger; it diminishes as the gross value increases.

12,763. Do you think that the statutory maximum rates of deductions are satisfactory?—Broadly.

12,764. But, of course, the income-tax, as you know, is paid upon the gross value?—Yes.

12,765. If that is just, why would it be unjust to rate the occupier on the gross also? Is the occupier concerned with the question as to how much the owner will have to pay in repairs?—It is a question as to what the occupier would have to pay in repairs, not the owner.

12,766. You make an addition for repairs to get at the gross?—No, we deduct it to get at the rateable.

12,767. Do you not make any addition for repairs to the rent if the occupier is taking it on a repairing lease?—We do.

12,768. You prefer rating on the rateable to rating on the gross?—I have formed no definite opinion upon that point.

12,769. As regards the power of the London County Council to have a voice in the assessment, should you see any objection to their being represented on the assessment committee and members of the county council sitting with the assessment committee?—Not at all.

12,770. Do you think it would be useful?—I think it would be useful.

12,771. (Mr. Smith.) I think you have had some country experience as well as experience in Whitechapel?—Yes; a good many years ago.

12,772. I was going to ask you whether your suggestion of union areas for rating purposes is the result of

your country or your Whitechapel experience?—I am bound to say it is the result of my Whitechapel experience.

12,773. With reference to the empty or unlet property, there is no difficulty in rating the owner, is there?—There might not be absolute difficulty, but it would be a very complex arrangement.

12,774. You rate the owner in the case of a compounding tenant?—Yes; but that is a continuous assessment.

12,775. Let me put a case. If you take the case in Whitechapel of a large building with empty rooms and offices unlet, retained by the landlord, what do you do in those cases?—We have no such buildings other than artizans' dwellings.

12,776. You can conceive such buildings in large towns being frequent?—Where you get an ordinary dwelling-house separately let in rooms, there, no doubt, you have the risk of certain empties. If that house is assessed at one value there is a wrong done, there is no doubt about that, in the allowance not being made.

12,777. The proper thing would be to rate the owner for the empty room or empty offices under the provision of the statute, if it came under the 20l. in London or the other compounding amounts in the country, whether the rooms are occupied or not; would not that be the legal position?—I find it difficult to answer the question.

12,778. Where a house is let out to several tenants and the landlord retains the top storey, which is generally the last to be let, you ought to rate him for those empty rooms if they come within the compound?—Assuming that you speak of a house in which the landlord does not reside at all, then the separate tenements are presumably separately rated in the rate book.

12,779. In manufacturing towns or business towns, for instance, you have a great number of houses let with offices, and the top floors are very often retained by the owner because he has not got a tenant; there you have to rate him?—But in that case they would not be separately rated; the whole hereditament could be rated at one value.

12,780. Supposing they are let off in flats?—I think as a general principle, that where the landlord is on the premises the tenants of the house are merely lodgers.

12,781. But I am talking of the case of an owner, or, say, a company, that builds those buildings, not a resident owner at all?—Then assuming any portion of the house to be empty, that portion would be a separate tenement, and separately rated; if empty they would not pay rates.

12,782. If you rate it as a whole what then?—If rated as a whole, of course there would be a loss.

12,783. I think, in answer to Mr. Dalton, you pointed out that the objection to rating on the gross would be the very varying scales of deduction that it has been thought proper to allow for different classes of property. For instance, in a tumble-down manufactory you would allow 33 per cent., would you not?—Yes.

12,784. I mean it would be about the highest scale that I could mention?—I have never known a deduction beyond 33 per cent.

12,785. The difficulty in the whole case is in the assumption that the imperial tax is right in being taken upon the gross, is that not so?—Yes, that would be so.

12,786. (Mr. Clare.) Referring to a question put by Mr. Smith with regard to what is called compound property; is not the reason that the owner is rated for small property that it is for the purpose of assisting the local authority in collecting the rate, and not really for the purpose of rating the owner, supposed to be the occupier?—That was the primary intention.

12,787. And in consideration of the owner undertaking to pay all the rates, whether the property is occupied or not, you give him a reduction of 25 to 30 per cent. for doing it?—That is so.

12,788. In other words, he undertakes to collect the rates for you in consideration of your allowing him an all-round reduction of from 25 to 30 per cent.?—There is no doubt that was the primary object.

Mr. W. Vallance.

24 Feb. '98

Vacant properties, rating in respect of. Difficulties of rating owner.

Appeals from assessment committee in Whitechapel very few in number.

Gross value, rating on. Would be unfair in some cases.

London County Council: Their representation on assessment committee would be useful.

Gross value, rating on. Difficulty of doing this on account of the different classes of property and their condition.

Compounding. Primary object of system was convenience of collection.

Mr. W.  
Vallance.

24 Feb. '98

Vacant property, rating in respect of. How far consistent with principle of rating according to valuation of the occupation as a measure of ability to pay.

12,789. Then with regard to empty property, is not the principle of rating that the occupier has to pay according to his ability, and his ability is gauged by the value of his occupation?—That is the original principle.

12,790. And that is the principle on which all rating in this country is now carried on?—Yes, I think so.

12,791. Therefore, if you are going to start the rating of an owner of empty property, you must go away from the principle upon which all the rating of this country is now carried on?—There is no doubt that it is bristling with difficulties, and, therefore, I hesitate to express a definite opinion upon it. At the same time, knowing that there are empty properties and empty properties—that there is the one property waiting for a tenant, and the other property empty from speculation—when you come to those properties it certainly is rather hard upon the ratepayers generally that the latter should not contribute to the expenses which are incurred for the protection of the property, though empty.

12,792. That is one class of property. Another class of property is this: Supposing, by the action taken by a local authority, an owner's premises are seriously depreciated in value, and ultimately he cannot get an occupier at all, the action of the local authority in widening a street has emptied his property, do you still propose that he should pay the rates which have been the cause of his ruination?—That is a strong point, but I prefer not expressing a definite opinion upon it.

12,793. I am only putting it as the alternative to the case you mentioned?—I may say, generally, the question in Whitechapel of assessing empty property scarcely arises at all, inasmuch as the demand far and away exceeds the supply of property of all descriptions.

Deductions Valuation authority should have discretion as to allowance for deductions.

12,794. With regard to the maximum deductions, it would hardly be possible, if you were to act fairly, would it, to have a fixed scale applicable in every case. By way of explanation, I may say, that, supposing you take the rate of maximum deduction allowed by the Valuation (Metropolis) Act, all houses over 40l. rental are allowed a deduction of one-sixth as a maximum. Is not it obvious that, if you have an old house let at 100l. a year, and I will assume that it is a house that is painted outside, and requires a very considerable amount of repairs every year, is not it reasonable to allow a larger amount of deduction in that case than to a newly erected mansion in Park Lane, for instance?—Clearly.

12,795. So that, therefore, it is essential that, although you fix a maximum, a certain amount of discretion should be given to the valuation authority in making the deductions?—I am not prepared to justify the allowance of the maximum deduction to the extent that it is allowed. At the same time, directly you come within that maximum, you have to determine, as a separate question, what deduction shall be made, and then, of course, the difficulties of assessment begin.

12,796. But you still think it essential that there should be discretion left?—I do think so.

12,797. You referred to the fact that, by the interference of the county council, uniformity of rating has, to a large extent, been brought about in the metropolis?—I think the intervention of the county council has contributed to uniformity of assessment in the metropolis already.

12,798. That is with a voluntary intervention?—Yes.

London County Council or a central authority for Metropolis should give directions with regard to system of valuation, and should make initial valuation of special properties.

12,799. If the voluntary action has proved successful do you see any objection to statutory legislation, in the direction of giving the county council or some other authority acting over the whole county, powers to do that which they have done voluntarily?—I do not see any objection whatever; I should, personally, welcome it.

12,800. Do you see any objection to something in the shape of a valuation board being constituted for the whole of the metropolis, or the whole of the county, who should give directions to the subordinate rating authorities with regard to their method of rating, and who should undertake the rating of all properties, such as railways, docks, canals, and so on?—I think that the central authority, whether it is the county council or any other authority, should have the initial power given them to rate special properties, not only those which run into different parishes, but also those which

the assessment committee, with the assent of the county council, may determine to be special.

12,801. Do you think that some such creation of a central authority is desirable, irrespective of the areas of unions, vestries or municipalities within the metropolitan area?—I think it is desirable, if not actually essential.

12,802. And which would still be essential, even if London were divided into 10 or 12 municipalities?—If London were divided into municipalities I assume that, as at present, a very considerable charge would be upon the whole of the metropolis, and, at any rate, it would be to the interest of the metropolis to secure uniformity of assessment.

12,803. Do I follow, from what you say, that, as a general principle, you would advocate that where the rate is levied over a large area the rating authority must represent that large area?—No; I would rather say that, inasmuch as the assessment is not only the basis of the smaller taxation, but also the taxation of the whole of the metropolis, that that assessment should be supervised and controlled as regards the principle by some central authority.

12,804. (Mr. Stuart.) In the City is not it the case that a certain portion of the rates falls upon the owners of empty houses?—I am not aware of it.

12,805. You do not say that it is not the case?—I have no knowledge of it.

12,806. Then I understand that you have seen the Bill introduced in 1896, on behalf of the London County Council, by Mr. Benjamin Cohen and myself, for the improvement of the assessment of London?—Yes.

12,807. Has that Bill as a whole met with your approval?—As a whole it has met with my approval, subject to the letter which I have already quoted.

12,808. And you are not in favour of a county rating authority?—No, I think that it is much better left to the various localities.

12,809. I take it, from what I have heard you say, that you prefer in Whitechapel, at any rate, a union rating authority to the parish rating authority?—Yes.

12,810. And therefore, you would, roughly speaking, abolish the existing parish overseers?—Yes; that would be the effect of my suggestion being adopted.

12,811. You are aware that in London there are a number of parishes which are also unions themselves?—Yes.

12,812. Are you aware that under the Local Government Act of 1894, on the application of the local authority, the powers of the overseers can be transferred to it?—Yes, that is so.

12,813. Then, going to another point, you were speaking about the deductions from the gross to get the rateable value, and I understand, from what you said, that you look upon these deductions as having for their object, to get fairness between property and property?—Undoubtedly.

12,814. And I am right in understanding, am I not, that you consider a certain unfairness is introduced where the value of the site is very different between different properties in proportion to the value of the assessed premises?—There is undoubtedly unfairness in allowing the maximum deduction in the case of such properties. May I just add that I could scarcely think that in the case of such a property that any assessment committee would allow the maximum deduction precisely in the same way as in that of small properties requiring considerable repair.

12,815. I presume that such a matter does not really much affect your union; I mean that within the bounds of your union you would not find very violent variations in site value?—That fact explains the few exceptions there are to the maximum being allowed.

12,816. But are you aware that in the City of London the site value there bears a much larger proportion to the total rateable value than in your district?—I assume that would be so.

12,817. Are you aware that in the City the maximum deductions are adopted exactly?—I was not aware of that.

12,818. I will ask one other question about the City and your parish. First about your union, has the rateable value been greatly raised or not in the time during which you have been connected with the union?—There has been a considerable augmentation,

Mr. W.  
Vallance.

24 Feb. '98

Areas for valuation: Union a better area than county or parish. Abolition of overseers.

Deductions Variations in deductions, are necessary for fairness between different properties, especially where proportion of site value to total value differs.

Mr. W. Vallance. having regard to the limited area and that there were few uncovered sites. For instance, the rateable value in 1870 was 301,333*l.*, whereas, the present rateable value is 435,392*l.*

24 Feb. '98 12,819. Do you mean by that that the rateable value of the same properties has been augmented, that is to say, not owing to additional properties, but owing to a rise of the same property?—The rateable values of the same properties have considerably increased in value by reason of the increased demand for accommodation.

12,820. Now, would you say that your union was, roughly speaking, rated as highly as it ought to be?—I think the union is rated quite as highly as it fairly could be.

12,821. Do you know if you could say the same thing of the City of London?—I am quite unable to speak for the City.

Under-valuation of one area increases burden of tax in other areas. 12,822. Supposing that the City of London (for this is a question which was submitted to you)\* or any other part of London were under assessed to the extent of 100,000*l.*, have you calculated what effect that would have on the rates in your union?—I have been trying to ascertain what the effect would be of 100,000*l.* under-assessment in other parts of the metropolis. Taking the Equalization Act into account I make it something like 435*l.* But, inasmuch as I have not within my reach returns of all the local expenditure, it is very difficult for me to make a calculation. I may say 100,000*l.* would correspond to a difference of basis of apportionment of about 1,237*l.*

12,823. You are aware, of course, that there are a number of rates which run over the whole of London, roughly speaking, something short of three-quarters of the whole of the rates paid in London run over the whole of London?—I do not quite follow that.

12,824. There are a number of rates which are applied by central bodies and which run over the whole of London, that is to say, 1*s.* rate for the School Board or whatever it may be, goes over all parts of London?—Yes, that is the administration.

12,825. Yes, and therefore in respect of all those rates that are of that character it is clear that an under-assessment of the rest of London of 100,000*l.* would make a larger proportion to fall upon you?—Undoubtedly.

12,826. You have not calculated, have you, what that would amount to for each 1*s.* of rate?—No, I have not made that calculation.

12,827. You could do that?—Yes.

12,828. Will you do it?—I will do that.†

Properties in White-chapel Union: Rateable value of has risen last 30 yrs, and rates in the have risen slightly. 12,829. Now, then, I come to a point that you have mentioned in your reply to me, namely, that your union was rated up to the full, the rateable value has been rising. Have the rates in your union been rising or falling during your period of tenure of office?—They have been rising.

12,830. They have been rising, much or little?—They have risen considerably during the 30 years.

12,831. Then, as I understand, during that 30 years the rateable value of the properties in your union has been rising quite apart from the introduction of new property, and also the rates in your union have been rising?—Yes; when I say rates, I mean the aggregate amount collected from the rate, but I do not think there has been a large increase of rate in the £.

12,832. But there has not been a diminution?—There has not been a diminution.

12,833. In other words, the same piece of property has to pay a slightly higher rate in the £, and a considerably larger sum?—That is it, precisely.

12,834. Is the rateable value, in your mind, a fair index of the rent that is actually paid?—The rateable value is a fair index of the rental value of the property.

12,835. That being so, your evidence amounts to this; that the rental value of a given piece of property and the rates that have to be paid by that piece of property, have both of them risen?—Both of them have risen.

12,836. The occupier therefore has to pay a larger rent, and a heavier amount of rates?—That would be so.

12,837. What do you suppose is the position of the owner; is he getting more or less for his property?—We have had a large immigration into the district of foreign Jews. They have considerably altered both the character of, and the value of the houses in, the district. The demand for accommodation is such, that the rents have been screwed up to, in some cases, an almost fictitious value. In such cases it is found to be very difficult to get away from the rent actually paid as a criterion of value, and as a means of deducing the hypothetical tenant. At the same time, one cannot help sometimes seeing that the hypothetical tenant is not always the man who would give quite the sum at which that property is assessed. You get the aggregate of rents paid by those Jews, and that forms a basis of value.

12,838. I am not finding fault with you in arriving at the rateable value; all that I meant to ask is, whether, from your experience, embodied in your evidence, the value to the owner, from whatever causes, of property in your neighbourhood has risen during your period of office?—The rent which the owner receives now for property is very much in excess of the rent which he received for that same property 30 years ago.

12,839. Would you draw from that the conclusion that the value of the owner's property has not in your district been seriously diminished by the rise in the rates?—I think not.

12,840. Now there are two questions I should like to ask you, which I do not think have been asked, and upon which I should very much value your opinion, namely, about empties and compound householding. In the first place, about empties; have you got large losses through empties in Whitechapel?—Scarcely any; empty properties scarcely exist.

12,841. You know that in some of the neighbouring parishes there is a good deal of loss?—Yes.

12,842. At present it is the case that the loss for empties falls upon the parish?—It is a very considerable loss.

12,843. Have you formed any opinion as to whether that loss should fairly be retained upon the parish, or distributed over the whole of London?—As I said just now, I have no definite opinion to offer in regard to the cases of empty properties as to any amendment of the law.

12,844. My question, of course, applies not to whether they should be rated or not, which is, of course, a very difficult question; but it applies to this, that, as you know, when the School Board or the County Council rate comes upon you, it comes upon you for the total value of the property in your district, including empties; and if you imagine for a moment what is impossible, one half of the property in your district being empty, you would have simply to put double the rate upon the other half. Have you formed any conception as to whether that system should be altered, and whether, for central purposes, you should be valued minus your empties, which would throw the charge for empties then upon London as a whole?—I have not formed any opinion upon that at all.

12,845. Then I will not press you upon it; but I had hoped you had, because it is a thing I very much value your opinion upon?—It is a very difficult question.\*

12,846. Well, then, as to compounding, you have a large amount of compounding, have you not?—No; relatively we have only a small amount. In the parish of Whitechapel, which comprises more than half the union, there is no compounding at all. In the three parishes that I have mentioned there is compounding, but it is only on voluntary agreement under section 3; section 4 is not put into operation at all. With these exceptions we have no compounding.

12,847. Then I suppose you compound because you find it the most profitable for the union?—The act of compounding is an act of the parochial authorities; it does not touch the assessment with which I am connected. The fact is I could not have answered the question had I not sought the information as to what they were doing in the parishes.

Mr. W. Vallance.

24 Feb. '98

White-chapel Union: Rent in has increased in last 30 years. Reasons for this.

White-chapel Union: Value of property has not been diminished by rise in rates. Empties: Loss in this respect is often considerable.

Compounding system is convenient, but prevents profit from feeling pressure of rates.

\* See page 362.

† The witness subsequently wrote:—"If the parishes of London outside Whitechapel were under-assessed to the extent of 100,000*l.*, there would be a total deficiency on a 1*s.* central rate of 5,000*l.* This would have to be met by the whole of London, and Whitechapel would contribute its proportion, namely, 61*l.*, equal to a rate of '03d. in the £."

\* The witness subsequently wrote:—"It involves the policy of 'compounding'; it raises the point of the inclusion or exclusion of very 'temporary and casual' empties which must be numerous throughout London; and would, I fear, lessen parochial interest in the 'diligent collection of rates.'"

*Mr. W. Vallance.* 12,848. Then without asking you for the bases of what is done, I will put this to you: Have you from your long and very important connexion with London government formed any idea of the propriety and advantage, or disadvantage, of compounding?—It is a point upon which I have been a good deal exercised. On the one hand there is the convenience and the fairness of the compounding system, the simplification of the collection and the security of rates. On the other hand, I have been exercised also as to the fact of the poor, who are the occupiers of compounded tenements, not feeling the pressure of rates at all, and so being led too readily to have recourse to the poor law. That is the position in which I feel myself.

12,849. Supposing for a moment there was no compounding in your union or in London generally, would there not be almost a necessity of collecting rates weekly?—The collection of rates would be a most difficult thing. There is no question about that; you cannot get away from that.

12,850. Still I gather that you recognise it as a very serious problem?—Yes, it is.

*Areas for valuation: Union a better area than parish.* 12,851. You have given evidence in favour of union rating in London; your union consists of several parishes; it therefore approximates rather more than many parts of London to the country position?—As a union.

12,852. Would you make the system of the union the unit of the rating authority, or the county the unit of the rating authority? Which of those would you adopt?—It might be a matter of considerable difficulty in the country, where you get unions occupying a very large area. At the same time, looking at the condition of administration generally now, I think the union would be the convenient unit both for administration and taxation.

12,853. You have no hesitation about it in London?—None whatever.

12,854. You mentioned the London County Council. I presume it has been helpful to you in the assessment committee?—It has.

*London County Council: Their influence has been beneficial to assessment committees.* 12,855. And while approving, speaking roughly, of the Bill that you have referred to, subject to the qualification in your letter, you have not been at cross purposes with the London County Council?—Not in the slightest.

12,856. Then you and the county council have together or separately raised the rateable value in your district in one way or another?—I should not be prepared to say that the intervention of the London County Council —

12,857. I do not mean that; it has been done by somebody or other—the rateable value of your district has been raised?—May I say, generally, that the London County Council, through their representatives, have made no general suggestion which has led to a general increase of rating. Their assistance has been in connexion with certain individual properties, drawing attention to facts of which they had obtained knowledge, and then discussing with us the proper mode of dealing with the property under the Act; and the committee naturally are always grateful for the submission of points and arguments and facts.

12,858. I see that, but whether it be the London County Council, or whether it be the surveyor of taxes, or whether it be anybody else, the general trend of action has been to raise the rateable value in your district of a given property?—I am not prepared to say that the intervention of the County Council has led to any actual increase, but it certainly has contributed to uniformity.

12,859. Let me put the County Council out of the question, because my question really does not depend upon them; but by some means or other, as you have already said, in your district there has been a tendency to raise the rateable value of property?—There has been a tendency to raise the value of property, but it is upon bases from which we could not get away.

12,860. I quite understand that?—There has been the application of no new principle of assessment.

12,861. But the question I want to ask you upon that is this: Have you observed the concomitant result of that, namely, that all the people in your district have to pay more for their water?—Yes.

12,862. Have you ever thought of that?—Yes, I have.

12,863. Will you say how that strikes you?—I think it is most unfair.

12,864. Have you had that matter under your consideration?—I have not had it under consideration other than it has struck me as the assessments have gone up that the value of the commodity which the company have to sell has not correspondingly risen, and therefore that there is a manifest unfairness in it. That is all.

12,865. (*Mr. Arthur O'Connor.*) As I understand the area of the Whitechapel Union is one in which there is a great demand for accommodation of all kinds?—Very great.

12,866. There are very few empty properties of any kind in the union?—Scarcely any.

12,867. There is an increase of population?—The population has increased; it has become more dense.

12,868. With the increase of population I suppose the value of the property, taken as a whole, has increased?—Very considerably.

12,869. Have ground values gone up?—Very considerably. Only recently sales have been effected of property close by which show a ground value of from 10s. to 15s. a foot.

12,870. (*Chairman.*) Per square foot?—Yes.

12,871. (*Mr. Arthur O'Connor.*) Would you say that the population during the last 30 years has very considerably increased?—It has increased, but, of course, there is not room for a very considerable increase.

12,872. During the last 30 years, I said?—The population has varied a good deal. At one census you would find the population relatively low, but that would be by reason of the clearances which have been effected; and then at the next census—

12,873. The population come back again?—The new buildings are up, the artizans' dwellings and other places, and the population is up again. It has fluctuated a good deal.

12,874. But even those clearances were to arrange for the accommodation of the increased population?—Precisely.

12,875. May I take it that the ground values have gone up in the 30 years correspondingly?—The ground rents have gone up immensely.

12,876. When you have an empty, even in the Whitechapel Union, it may be freehold or leasehold?—Yes.

12,877. If it is freehold it may be regarded as absolutely empty, but if it is leasehold, so far as the ground landlord goes, it is not empty, for he gets his ground rent, does he not, just the same?—That is so.

12,878. Is that rated?—Not during the time of the property being empty.

12,879. As between different properties is the rating of shops the same as the rating of dwelling-houses?—Yes. The rent is a criterion of value, that is, the rent paid is the basis of calculation as to what the hypothetical tenant would give for the property.

12,880. Is that the case in respect of licensed premises?—No, in the case of licensed premises we have endeavoured to adhere as nearly as possible to the conclusions reached by the assessment conference convened by the County Council.\*

12,881. But it is not the case with licensed premises that the mere rent is the standard, is it?—Clearly not.

12,882. A public-house, for instance, is rated on a special scale?—Yes.

12,883. Would you say the same of hotels?—Yes. We ask the question, what would the hypothetical tenant give for this property to use it as a hotel or as a licensed house.

12,884. Is the same true of a temperance hotel?—I have not had a case of that kind under my notice.

12,885. Have you in Whitechapel such a thing as a boarding-house?—I am not aware of one.

12,886. But you have lodging-houses?—We have common lodging-houses.

\* London County Council Return. Assessment Conference, 1893-94. Resolutions, &c. (No. 168). P. S. King and Son, Great Smith Street, Westminster, S.W.

*Mr. W. Vallance.*

24 Feb. '98

Ground rents in Whitechapel have gone up owing to increase of population.

Ground rent continues to be paid, but is not rated when leasehold property is vacant.

Water companies' charges have increased owing to rise of rateable value, and this is unfair.

Mr. W.  
Vallance.

24 Feb. '98

12,887. How are they rated?—It is very difficult to define the principle upon which they are rated. We simply endeavour, having regard to the size, to determine what a tenant could reasonably be expected to give for that property, to carry it on as a lodging-house.

12,888. I suppose the surveyor of taxes is concerned only with the gross valuation?—He is concerned with the gross value only.

12,889. In order that he may get as much money for the Exchequer as possible?—Yes.

12,890. He is not concerned with deductions?—He is not concerned at all with those.

12,891. He does not value the Government property?—No.

12,892. Would you say that the Government, as rate-payers, get off more easily than any other ratepayers?—I think the Government property in Whitechapel is very fairly rated. I think the Treasury have acted very fairly.

12,893. Do you think that if your assessment committee had to value those premises they would not put them at a little higher value than the Government now pays on?—Possibly. At the same time they would be very difficult properties for the assessment committee to value.

12,894. They would be difficult?—Yes.

12,895. Very difficult?—I should prefer Mr. Griffiths' valuation.

12,896. Of course, all property must be very difficult to value. If the statutory maximum of deductions was higher than it is, on the grounds that you have given for adopting the maximum at present, I suppose you would go up even to the increased maximum, would you not. It is very convenient to adopt a maximum, is it not?—There is no doubt about that.

12,897. It saves a lot of trouble?—Unquestionably.

12,898. There is not very much principle about it except that, is there?—No, but in our case I have no hesitation in saying that the assessment committee would not have adhered to the maximum to the extent they have, were it not that there is so little diversity of property.

12,899. (Sir Edward Hamilton.) Do you consider that, speaking roughly, public-houses in your union are a good deal under-rated?—No, I do not.

12,900. You do not think the system of tied houses has had any effect upon the system of valuation?—It has increased the difficulty of assessment where you get a tied house with a mere nominee of the brewery in the house. Of course, the principle laid down by the Conference cannot be made to apply in such cases at all. There we have received a good deal of assistance from the County Council representative; he has got facts together which have been most useful to us in reaching the assessment.

12,901. (Mr. Wharton.) You mentioned, I think, that you only had one case of appeal; is that of late, or do you mean one case in the whole of your time?—I think

The witness withdrew.

it was in 1886. In that case there ought not to have been an appeal. The East London Water Company were the appellants.

12,902. Not having had a large experience, perhaps you would not feel justified in saying whether you are satisfied with the present legal system of appeal. What was your appeal court in that case—it would be the court of quarter sessions, I suppose?—The assessment sessions.

12,903. Are you satisfied with the court of appeal as it now exists?—No, I should like to see some court constituted specially.

12,904. That is what I wish to know—some court constituted *ad hoc*?—Yes.

12,905. And not a court of quarter sessions?—No.

12,906. Have you at all considered what that court should be?—No, I have not considered that.

12,907. Have you ever known of a difficulty in getting a court together where the appeal would last more than one day, and in continuing the same number of magistrates for sitting on that appeal court?—I am unable to answer that question.

12,908. Can you conceive that where an appeal was a question of perhaps two or three days, there might be considerable difficulty in getting the same body of men to sit together in the appeal court day by day?—Yes, I can conceive that that would be possible.

12,909. Then you would probably contemplate a smaller body as a judicial court for the determination of appeals than such a court as now—a court of quarter sessions—on which any member may sit?—Yes, but I am not prepared to make any suggestion.

12,910. You have not made up your mind as to what the court should be?—No.

12,911. What was the result of the appeal which you had?—It was very unsatisfactory. It was a case in which I took immense pains personally to avoid an appeal at all. There was no question of principle, and there was no question of law to be decided; it was simply a question of value. We could get no information at all from the representatives of the company before the assessment committee; we could get no figures that would be helpful to us at all; consequently we were driven to employ a valuer. We employed a valuer with special instructions to keep the value well down, so as not to excite an appeal. He gave us what he said were figures 25 per cent. below what he would contend for in the witness box, and, as I say, there was no question of law between us; it was simply a question of the application of the law by experts. It was for that very reason that I endeavoured to avoid an appeal. However, it went into court, was referred to arbitration; the arbitration took considerable time; it affected six parishes, and at the end amounted to "splitting the difference" all round.

12,912. Then, in fact, the court of appeal did not decide it, but handed it over to another tribunal?—Yes, it handed it over to the arbitrator.

12,913. (Chairman.) Is there anything you want to add?—No.

Mr. FRANK DETHRIDGE called and examined.

12,914. (Chairman.) You are, I understand, the vestry clerk of Paddington?—I am.

12,915. How long have you been in that position?—30 years.

12,916. This paper contains your answers to the questions\* which we sent to you, does it not?—Yes, it does.

12,917. In regard to your reply to our second question, I see that at the end you say: "In arriving at the rateable value the Committee work within the maximum rates of deduction as set forth in the Act, so as to create a result unfettered by fractions"; perhaps you would just explain that sentence?—It is simply to avoid fractions; it is nothing beyond that.

12,918. I understand that, but I want to know what you mean by the expression "work within the maximum rates of deduction"?—Practically we work up to

the maximum, we only have that little difference to avoid the odd figure; we take even assessments.

12,919. Then you regard the maximum rate of deduction as fixed in the Schedule as what Parliament intended you to give in every case?—Yes, we do.

12,920. But do you think that is the real reading of the intention of Parliament?—We have always considered the 16½ per cent. to be so.

12,921. Do you think it is a fair system?—I do.

12,922. Are all structures, new and old, and under all the varying conditions in which buildings are put up, fairly valued for rating, if the same rate of deduction is made from the gross?—Of course, I am speaking for a comparatively new parish. In Paddington we have not many old buildings, and the large majority of houses come under the same class.

12,923. But still, some of them were better built than others when they started?—As a matter of fact, we do take the 16½ per cent.; we work, as I say, within

Mr. W.  
Vallance.

24 Feb. '98

Quarter sessions not a satisfactory tribunal. A special tribunal desirable.

Government property in Whitechapel: Valuation of, is very fair.

Government property would be very difficult for assessment committee to value, and Treasury valuation is preferable.

Licensed premises in Whitechapel are not under-rated. Tied houses difficult to value.

Mr. F.  
Dethridge.

Mr. F.  
Dethridge.

variations of site value are not now considered, but there would be no objection to going more into detail.

Deductions from gross value: Maximum rate adopted in Paddington.

Peculiarities of separate hereditaments including

*Mr. F. Dethridge.* the maximum, so as to avoid odd figures—nothing more.

12,924. You do not at all endeavour, as I understand it, to consider the individual peculiarities of each set of buildings?—No. We are guided by documentary evidence and the returns, and where the house is let on a repairing lease, 10 per cent. is added.

12,925. Let us get rid for a moment of the houses which are let on repairing leases; what I am rather at is those houses which are not so let, that is, those in which you have to deduct without adding anything for repairs?—Practically we work up to the maximum.

12,926. I will put to you the same question as I put to Mr. Vallance. It has been contended here that, taking one property with another, the value of the site in the one case, compared with the value of the site in the other, bears a very different proportion to the total value of the subject, and that if, therefore, you make a maximum deduction from the whole of the value, the gross value, you must, in some cases at any rate, make too large a deduction so as to be fair to other properties. What do you say to that argument?—There may be certain cases of that nature, but I can only say that our practice has been to take the 16½ per cent.

12,927. Would you see any objection to going more into detail in fixing the rateable as compared with the gross value?—No.

12,928. Do you know what the considerations are which have guided your committee from time to time in keeping to the practice which you have indicated to us?—We have been desirous of carrying out the provisions, as we thought, of the Valuation Act.

12,929. Has it ever been the subject of discussion at all in your presence?—Never.

12,930. I see that in answer to another of the questions we have put to you, you express an adverse opinion to the equalisation of rates, saying in your opinion it is not beneficial to the localities as a whole?—I think it is not.

12,931. Would you give me the reasons for that?—A parish gets this amount under the head of equalisation, whether it deserves it or not; whether it conducts its business properly, or otherwise, the amount comes to it as a matter of course. It does not earn it, it simply gets it through population and rateable value.

12,932. You will excuse me for asking the question whether Paddington is one of those parishes which pays or which receives?—We pay.

12,933. Have you any other reason beyond that for the opinion which you have expressed?—Nothing beyond that.

12,934. In another part of your paper you express an opinion adverse to any central authority having power to secure equality of assessment between parish and parish, on the ground that it would lead to centralisation?—I do.

12,935. Do you not think that there is something to be said upon the other side, namely, that if there is a union rate for some purposes, as we know there is, and a rate for other purposes levied equally over all the property in the County of London; and, if there is not some efficient security taken for something like a uniformity of assessment, that the parishes which do not do their duty, and do not assess fairly, would gain an undue advantage at the expense of the others?—I consider that the ratepayers are protected now. One parish can object to the figures of another parish if the work is not fairly done. I have very strong faith in local knowledge. In regard to the assessments in Paddington, I can, without hesitation, say that the ratings have been very fairly arrived at. The creation of a central body might cause friction. We consider that we are quite capable with our local knowledge of supplying these values ourselves.

12,936. But you would go this length with me, I suppose that you take care not to overvalue?—Yes, we take care not to do an injustice; the proof that our valuations are correct, is that we have very few objections and very few appeals.

12,937. It has been suggested to us that the County Council, as the authority having an interest in the whole of London, should have power to object and power to appeal?—They can object now to the figures.

12,938. But they cannot appeal, I think?—In the neighbouring parish of Marylebone, the County Council appealed against the totals in the Valuation list, and

I think the appeal cost the ratepayers there something like 5,000*l.*

12,939. That is so; there is power to appeal against the total, but then the point I wish to put to you is, do you not think that a better way to get at it would be to give such a body as the County Council or some central authority power to object to a valuation of individual properties, so as to avoid that great expense?—I would suggest that the County Council members for the district should attend the assessment committee, if they thought proper; there would be no necessity then for a central body.

12,940. What you alluded to a moment ago was this, was it not, that the County Council at one time did object to the totals, in hopes of thereby being able to get at individual items?—I presume that was their motive.

12,941. I agree with you in what is, I understand, your opinion that that is a cumbersome method of proceeding; but I want you to state to me your objection to giving such a body as the County Council the power to object to individual valuations which could be dealt with upon their individual merits before an impartial tribunal, and so save the great expense which you have just indicated?—My opinion is, that it might weaken local self-government, and lead to centralisation; it would be one step towards centralisation. I have very strong views as regards a central rating authority—a central county council court to overhaul assessment.

12,942. You clearly understand that my suggestion is not that the County Council should have power to be the deciding authority, but that it should have power to take any individual property and have it re-considered before an impartial tribunal?—I think it would lead to friction and to ill-feeling. Speaking for Paddington, I consider that there is no occasion for a central body to overhaul the assessments there beyond the authorities already existing. If a central body could be formed, consisting of the chairmen of all the assessment committees in London, there might be some service in that; at any rate, that would preserve local self-government. I should not care to go beyond that.

12,943. Would you give the County Council a power to appeal before such a body as that?—Yes, I would go so far as that.

12,944. Then I see you make some suggestions at the end of your paper for new sources of revenue and for the re-adjustment of existing ones. I should like to have a little further explanation as to the first suggestion, namely, that local authorities should be empowered to borrow at a low rate of interest from the trustees of national savings banks. Is there any restriction upon local authorities now, as to the sources from which they may borrow if the lender is willing to lend?—They can borrow, but they have to obtain the consent of the County Council beforehand.

12,945. I want really to elicit from you what your own suggestion is. Am I to understand that you wish to force the lender whoever he may be to lend at a low rate of interest?—Not to force him; I have been informed that the trustees of the national savings banks are bound now to place all their money in consols.

12,946. Then your point is that the trustees of the national savings banks should be empowered to lend on such terms as they see fit to local authorities?—Clearly, that is all.

12,947. I suppose you are not a bicyclist?—No, but I have been nearly killed by cycles.

12,948. I am not either, and therefore we can speak quite impartially about the next proposal, which is, that there should be a registration fee of 7*s.* 6*d.* per cycle. Do you put it forward seriously that you could carry that into effect at the present time?—If it could be collected like the dog tax. It would be a great boon to local authorities to have a certain portion of the 150,000*l.* which it would realize in greater London for the repair of their roads.

12,949. Would you make any exemptions at all?—Probably trade exemptions, that is, where a man uses a bicycle for trade purposes.

12,950. What do you mean by trade purposes?—Where it is exclusively used for trade purposes.

12,951. Do you not think you would get into a difficulty? Supposing a workman—and I know the

*Mr. F. Dethridge.*

24 Feb. '98

Valuation Revision by a central authority would lead to friction. At most the County Council might be allowed to appeal to a conference of the chairmen of all the assessment committees in Metropolitan.

Loans to local authorities by trustees of savings banks suggested.

Registration tax on cycles proposed.

Equalisation of rates not beneficial.

Valuation: Centralisation of, undesirable. Ratepayers already sufficiently protected.

Mr. F. Dethridge.

24 Feb. '98

as far as Scotland is concerned, I am not putting a fictitious case—uses his bicycle to go to and from his work five days in the week, would you prevent him from using it for pleasure on the other two?—There might be some difficulty in that case; in most countries cycles are now taxed.

12,952. Taxing cycles would, of course, involve the registration, and a number, and machinery for that?—Yes.

12,953. What is the exact meaning of your next suggestion—I do not quite follow it—"by basing " school board rate and poor rate proper on income " instead of rateable value " ?—I would have all charges raised for school board purposes based upon a man's income.

12,954. I told you that I was not a bicyclist, but here you touch me rather keenly. I live, for reasons over which I have no control, for five or six months each year in London, and the rest of the time at my own home in Scotland; is my income to be rated fully in London for that purpose?—There are difficulties, of course, but I think the old Scotch system was to rate people according to their ability to pay.

12,955. You make this suggestion, and I want to know how you are going to deal with me in my circumstances?—It is a matter of detail. There has been a very strong opinion expressed in London in favour of this suggestion.

12,956. I do not doubt that for a moment; but supposing you had that case put to you that I have just put, what would be your suggestion—what proportion of my income would you take?—That would require adjustment.

12,957. There is another suggestion which I do not quite understand. You say "Where more than one " trade is carried on by the same person, an annual " registration fee to be paid to the local exchequer ; " what do you mean by that?—There are traders now that go in for half-a-dozen businesses, and I am informed in some countries a registration fee is imposed. Local authorities are so keen to get something towards the rates, people are now rated so highly, that they have to look for extra sources of revenue. In Paddington there are several traders carrying on five or six businesses.

12,958. How would you define a trade for that purpose; would you say that a bookseller or stationer would have to pay a fee?—No, I should look upon that as the same kind of trade; but take a man who is a grocer and a linen draper—those are two distinct trades—and he may be an undertaker as well, and half-a-dozen other things.

12,959. I go some way with you in your last suggestion, but I am afraid some people will say it is a tax upon trade. I am not sure that I should not like to see, speaking for myself personally, something got from advertisements in or upon omnibuses; but why should there be an assessment according to the number of vehicles housed within a particular area?—That is only a way to arrive at a figure. The London General Omnibus Company have their stables in various parishes, and so many omnibuses are housed in each. The only way to get at a figure in their case would be to take the number of vehicles.

12,960. Might I suggest to you that the vehicles are not seen, and that the advertisements are not of use when the vehicles are housed, and, therefore, that it ought rather to be the parishes through which the vehicles run, and where they show their advertisements, that should get the benefit of the assessment?—Well, it might be done in that way, but I thought the only way to get hold of them would be when they were together, when they were stationed in any one place.

12,961. They pay for local rates now, do they not, according to the rateable value of the premises in which they are housed?—Yes.

12,962. (Sir Edward Hamilton.) With respect to the first suggestion that you make, I suppose you are not aware that at this present moment local authorities who come to the Government for a loan practically have savings bank money lent to them; and that, under the Act of last year, the terms upon which a local authority, which can offer the security of its rates, can get a Government loan are very moderate indeed, that is 2½ per cent.—I am aware of that Act, but I was not aware that the money came from the moneys in the hands of the trustees of the national savings' banks.

12,963. That is the case?—I am glad to hear it.

12,964. When you speak of a bicycle tax and of a stamp duty upon advertisements, have you in your mind the idea of a tax which should be levied by the local authority, at its own option; or have you in your mind taxes to be levied by the Imperial Parliament and merely handed over to the local authority?—I was thinking of taxes levied by the Imperial Parliament and handed over to the several authorities.

12,965. You do not contemplate that the imposition should be by the local authority itself?—No; let the Government collect and distribute, according to the rateable value of each district.

12,966. Would you not consider it preferable to leave it to the local authority itself as to whether it would be expedient to raise such a tax or not?—The local authority could express an opinion in favour of raising the tax, but it would be more convenient for the Imperial authorities to collect it and to make a contribution to the local authorities.

12,967. (Mr. Arthur O'Connor.) I do not know whether I am right, but I think I gather that the general effect of your evidence, as condensed in your statement, is that the existing state of things is, on the whole, satisfactory in point of principle and machinery and method?—That is my opinion.

12,968. All you have to suggest is that the local authorities should be supplied with more money by having the inhabited house duty handed over to them, the omnibuses taxed, the wall advertisements and bicycles taxed, and the people who carry on more than one trade in the same area taxed?—Yes.

12,969. And also by having enlarged powers of borrowing?—Of getting money cheaper.

12,970. (Mr. Stewart.) What are your rates at present in Paddington?—5s. 7d.; we are reduced 3d. this year I am happy to say.

12,971. How much of that is under your own parish or local authority's control?—Out of every 1s. in the pound we have control of something over 3d.

12,972. The remaining 9d. is controlled by other authorities, is it?—Yes.

12,973. Do you approve of that condition of things?—No, I think the local authorities, if it could be managed, might have additional control.

12,974. How much of that 9d. that you do not control now would you think you reasonably ought to control?—If we get municipal government I would control the whole as far as each area goes.

12,975. If you got municipal government you would control the whole?—Yes. That is only my opinion.

12,976. You have referred to the poor rate and to the school board rate, which you think should be levied upon the Chairman's and other gentlemen's income, and you have said that it would be difficult to adjust; would not the proper method of adjusting your proposal be to make the poor rate expenditure and school board expenditure a national tax—would not that get over the difficulty?—Yes that would.

12,977. Would you approve of that?—I should.

12,978. Would you approve of the management of the poor of the country being taken out of your hands and carried on by a central authority?—I do not quite follow you.

12,979. We have agreed so far that the rate for the relief of the poor ought to be a national charge; that being so, would it not follow that the administration of the poor law should be national?—No, not as a matter of course. The same bodies might distribute the money if they received the necessary contribution.

12,980. Let us go back to one of your replies to the questions sent to you; one of the objections that you have to the equalisation of rates is that it "is calculated to lead to lavish expenditure," would that not somewhat apply to the proposal of a common poor fund for the whole country with expending local bodies?—That I am not prepared to say.

12,981. (Mr. Arthur O'Connor.) I see that in your list of exemptions you include volunteer drill-halls; what is your authority for that?—There is statute authority, I think.

12,982. The statute authority is for volunteer armouries and not drill-halls, is that not so?—I believe a drill-hall when used for special purposes is

Mr. F. Dethridge.

24 Feb. '98

Suggested duties on cycles and advertisements should be raised by Imperial authorities and distributed to localities according to rateable value.

Valuation and rating Existing state of things on the whole satisfactory.

Rates in Paddington.

Poor rate and school board rate should be made a national charge. Question of administration.

Rating on income: How to be effected in case of persons resident in more than one place.

Trade registration fees suggested.

Advertisements on omnibuses: Rating in respect of, suggested.

Loans are made to local authorities by the Government at 2½ per cent.

*Mr. F. Dethridge.* exempt under statute, but I will look it up and give you the reference.\*

24 Feb. '98 12,983. (*Mr. Dalton.*) I see you recommend that canals should be assessed "in the ordinary way"?—Yes I do.

Canals,  
valuation  
of dis-  
ussed.

12,984. What do you consider to be "the ordinary way"?—It would be according to their receipts, just like a railway company.

12,985. In your parish how are the canals rated?—They have protective clauses; they are rated at the value of adjoining agricultural land.

12,986. That is under some very old Act?—Yes.

12,987. Has it never been altered when they have gone to Parliament for a new Act?—No, it has never been altered.

12,988. I presume you are aware that in some parts of the country when canal companies have gone for further powers the local authorities have succeeded in getting their old Acts altered?—Yes.

12,989. Which is the canal in your district?—We have the Regent's Canal and the Grand Junction Canal, and we get a mere nothing from them—the assessment being based upon a nominal rental only.

12,990. (*Mr. Elliott.*) Are the London County Council ratepayers in the parish of Paddington?—Yes.

12,991. Have they utilized that position of ratepayer to object to any individual assessments in the case of your parish?—No.

\* The witness subsequently wrote:—"The Act 26 & 27 Vict. c. 65. exempted Volunteer Storehouses from rating, but it was held in the case of *Pearson v. Holborn Union Assessment Committee* (1893: 1 Q.B. 339) that the whole of the premises used solely for the purposes of a Volunteer Corps were exempt either under that Act or the general law referring to the exemption of Crown property."

The witness withdrew.

Adjourned till to-morrow at 11.30.

## THIRTY-THIRD DAY.

Friday, 25th February 1898.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. Sir J. T. HIBBERT.  
C. N. DALTON, Esq., C.B.  
T. H. ELLIOTT, Esq., C.B.

E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.  
The Right Hon. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. WILLIAM FRANCIS DEWEY, called and examined.

*Mr. W. F. Dewey.*

25 Feb. '98

13,001. (*Chairman.*) We understand that you are vestry clerk to the parish of St. Mary, Islington, and clerk to the assessment committee, and you have been vestry clerk since 1883, having had 14 years' previous experience in the office?—That is so.

13,002. Have you had any experience of a similar class outside of London?—No, I have not.

13,003. You have dealt very fully in your memorandum\* with the questions† which were put to you, and therefore I shall not take you through it all for the sake of merely repeating it, so to speak, in an examination in chief. I should like to ask you generally whether you want to concentrate our attention upon any particular suggestions which your experience leads you to think could be made for the improvement of the present system of valuation, or, rather, I should say, perhaps, assessment in the metropolis?—That is a point that I should like to deal with, because I have been associated with it (as I indicate in paragraph 6) in nearly all the

Valuation  
(Metro-  
polis) Act:  
Defects in  
Act.

12,992. With regard to your suggestion that a tax should be imposed on cycles, do you base that suggestion on the fact that the wear and tear of the roads is increased in consequence?—To some small extent.

12,993. Do you think you could justify the imposition of a tax on cycles if at the same time you did not impose a tax on horses, carriages, and carts?—One might lead to the other.

12,994. Is not the wear and tear of the roads much greater in the one case than in the other?—It is so, the tax suggested is imposed in other countries, and it would be a profitable source of revenue if adopted here.

12,995. Horses and carts are taxed in other countries, too, are they not?—Yes.

12,996. Therefore you do not altogether base the suggestion on the fact that cycles are taxed in other countries?—No. They use the road; and they help to cut up the road.

12,997. Would you tax everything that uses the roads?—No, I am not prepared to say that; but simply dealing with cycles, I am surprised to find that a registration fee of 7s. 6d. would bring so much to the revenue.

12,998. With regard to your suggestion that there should be a stamp duty on all posters and wall advertisements, would that interfere in any way with the present practice of rating hoardings?—No. I refer to those posters that do not come under the Act; there are lots of posters that are, perhaps, only up for three or four days.

12,999. Then you would exempt posters which were placed on rated hoardings?—I would not rate twice over.

13,000. (*Chairman.*) Is there anything you want to add?—No.

*Mr. F. Dethridge.*

24 Feb. '98

Tax on  
cycles  
suggested.  
Should  
carts and  
horses also  
be taxed?

Posters  
and adver-  
tisements:  
Rating in  
respect of  
suggested.

*Mr. W. F. Dewey.*

25 Feb. '98

conferences that have been called in the metropolis, since the passing of the Valuation Act. I have had the matter more or less under consideration, either suggesting, in the first instance, to my parish that they should take it up, or, if started by the London County Council, that they should take part in it as representing Islington. When the Bill of Mr. Torrens (who was then member of Parliament for Finsbury) for altering the incidence of the water charges and making them fall upon rateable instead of gross value, which, you will remember, was introduced some years ago, I represented the inhabitants of the metropolis before the Committee of the House of Lords, as regards the administration of the Valuation Act. The water companies were represented by Mr. Hollams. So that from almost the passing of the Valuation Act I have been more or less accustomed, if I may say so, to speak of its advantages and its failures. The main difficulty, or one of the main defects of the Act is its insufficiency to provide a thorough scrutiny or supervision of the dealings of the several parishes with their own assessment.

Mr. W. F. Dewey.

25 Feb. '98

Valuation (Metropolis) Act: Appeal, powers of.

13,004. Are you now alluding to the point which has been before us more than once, that the London County Council, except as an individual ratepayer, has no power of appealing on the details of a valuation, but has only power of dealing with the totals of the various parishes?—That is so; and not only has the London County Council no power, but I say that, practically, the various parishes who are interested (of course, one against the other) have no such powers on account of the insufficiency of the time.

13,005. But you would not suggest, would you, that every parish was to have the power of appeal against every item in the valuation of other parishes if there was a supervising authority which had a common interest with them?—Probably not. Of course the parishes have a common appeal. They have a right of appeal now under the Valuation Act as against totals.

13,006. Quite so, but you would not like to see that taken away?—Certainly not, although I have found it of very little use. From the time since the passing of the Valuation Act there has been only one case, and that was in Kensington, I think—I am not sure whether it was against St. George's, Hanover Square—but they lodged an appeal which resulted in an increase of the valuation of the parish of St. George, Hanover Square, by some thousands of pounds.

Valuation in Metropolis: Differences of practice in various parishes.

Suggestion that Act should be administered by an independent body or official for the whole county.

13,007. As I understand it, these conferences have confirmed your opinion that differences of practice exist in the different parishes which ought not to exist, and which lead to unfairness as between one parish and another?—Yes, and many of which are directly contrary to the Valuation Act.

13,008. Would you indicate them one by one?—Allow me to guide myself by my memorandum. In paragraph 7 I say, as to the change in method of preparing the list, it is a question with respect to the authority who should discharge that duty. I omit altogether the reference to the rates, and I go on to say that "after considerable experience of the disadvantages attendant on the present administration of the Valuation Act, and having regard to the fact that the proportion of county and other central or consolidated charges out of every 100*l.* raised by way of local taxation has increased since 1869 in the county of London from 33 per cent. to 67 per cent."—that is the important question. There was a time when this Act was passed when it would have been practically of little difference as to how the parish assessed itself, because if they assessed the whole of the parish at half value, it merely meant that the rates were doubled, and therefore it was comparatively unimportant. Then the central charges—the common charges—were only 33 per cent., but now in some parishes they are 75 per cent.; in Islington they amount to 67 per cent. Then I go on to say, "I have come to the conclusion that the Valuation Act should be administered by an independent body or official for the whole county, or that each body of overseers, and each assessment committee, in dealing with its own valuation list, should have upon it representatives from other bodies of overseers and assessment committees in the county."

Areas for purposes of valuation discussed.

13,009. Do you not think you go too far when you suggest an independent body for the whole county—such as London. Would you not lose a good deal in the way of local knowledge which you can at present draw upon?—Supposing you had a body like the London County Council, they would be bound to fall back upon the overseers, or the body representing the overseers of the parish for information.

13,010. The suggestion has been made to us, and without expressing an opinion upon it. I ask you whether instead of taking the parish as the assessment unit you should take the union as the assessment unit, with a general power of supervision or of representation from the central body upon the Committee; what do you say as to that?—The union is the assessment unit under the Valuation (Metropolis) Act.

13,011. Are not the overseers of the parish responsible for their own valuation?—Yes, in the first instance, but the assessment committee is appointed by the union.

13,012. Then should we not get rid of the duty laid upon the parish overseers; is it not too small a unit for London?—Of course, you should except such a unit as Islington, which is a very large unit.

13,013. It is a unit of its own?—The parish there is the union.

13,014. If it is a union in itself, it is a large unit?—Take the Holborn union; where Clerkenwell and St. Luke's form the Holborn Union, that would be an instance in point.

13,015. Or some of the parishes in the City of London, which are much smaller in area?—Yes. The difficulty to my mind would be this—that you then practically put the valuation into the hands of persons who have nothing whatever to do with the collection of the rates.

13,016. Well, but if the principle was accepted that the valuation and collection of rates should be in the same hands, that would get rid of that objection, would it not?—To some extent it would. But you would not get rid of the difficulty that I am urging. I have not the slightest doubt as regards the Holborn Union that by the union assessment committee justice is done between Clerkenwell and St. Luke's, and between the Clerkenwell and the Holborn parishes. By what you are now suggesting you would not ensure justice between the Holborn Union and the Islington Union, or instance.

13,017. I think you must have missed the suggestion, which perhaps I did not put quite clearly to you, that the common authority over all to bind them was to be some representation in some form or other of the London County Council?—I beg your pardon; yes. I think if you had that common authority it would be comparatively unimportant. I do not think there is much in the suggestion as to how the items were made up, excepting that they would be somewhat larger.

13,018. Is it not desirable that the common authorities should be brought into the matter at as early a stage as possible before the preparation of draft lists, and before any amount is made up on the part of the assessing authority?—Speaking as a representative of Islington, I have no experience of any distinction between the union and the parish; it is all one for me.

13,019. But you say—and this was the point to which I wished to attract your attention—alluding to the conference convened by the London County Council in 1893-94: "It was apparent not only that different practices prevailed as regards fixing the gross values, especially where properties were let on lease or occupied by the owners, or, on the other hand, let at weekly rents, including rates and taxes, but that even in arriving at the rateable values certain parishes paid little or no attention to the limits of deduction laid down by Schedule III. to the Valuation (Metropolis) Act." I wish you to make a little more distinct to us what it is you allude to?—I find it was alleged in connexion with this Bill before the House of Lords, that some of the parishes did not even limit themselves to the rates of deduction prescribed by Schedule III., but where it suited their purpose, or where possibly the actual rate of deduction—the full amount of deduction, one-sixth—resulted in a fraction in the rateable amount (coming out at a fraction of pounds) they took the pound below. I have got a scale here. This is the scale adopted now, or which was recently agreed upon—I do not know whether it is carried out. It is on page 2 of the regulations agreed at the London County Council Conference, 1893-94.\* It is a copy of a scale which was used in Islington long before that. What I am calling attention to was the fact that practically Schedule III. of the Valuation of Property (Metropolis) Act gives general instructions for arriving at rateable value, by certain deductions from gross. Those, of course, have to be worked out for every pound up to a certain point. At the foot of this scale are these words: "These maxima have been adopted so far as is consistent with leaving the rateable values unfettered by fractional parts of a pound." 16½ would result, in certain cases in bringing out the rateable values to so many pounds, shillings, and pence. In many of these parishes, assuming 6*l.* 8*s.* 4*d.* as the actual rateable value, they would call it 6*l.*, thereby transgressing the schedule.

Valuation in Metropolis. System adopted in arriving at rateable value in different parishes.

13,020. To the extent of the odd shillings and pence they went over the maximum allowed by the schedule?—Quite so.

13,021. If they had taken the other pound, they would have been equally within the maximum?—Yes, it should be 7*l.*

\* London County Council Return: Assessment Conference 1893-94. Resolutions, &c. (No. 168.) P. S. King and Son, Great Smith Street Westminster, S.W.

Mr. W. F.  
Dewey.  
25 Feb. '98

13,022. Have you made any calculation as to whether that makes a serious difference in the total amounts upon which rates are made?—I have not, but I think I indicated in paragraph 7 of my memorandum how a difference of one pound on each assessment in Islington would result in the reduction of the rateable value in Islington by 40,000*l.*, as a matter of fact. You can, therefore, conceive that if one parish deals with its assessment in accordance with the Act of Parliament, and a number of others do not, the honest parish may be treated unjustly to a considerable extent.

13,023. Will you pass to another point?—Another point was the question, a very important one, as to what extent large parishes adopted this principle. The Act of Parliament recognises, as the Commission are aware that the gross value is the value at which a house will let from year to year, the landlord doing the repairs. It was a custom in many parishes—I need not instance parishes—where houses were let on lease without any question of whether the lease was an old lease and the property might have gone up in value, to take the rent under the lease as the gross value, and from that to make a further deduction on account of the repairs in accordance with the scale.

13,024. Others have told us that they add 10 per cent. before taking off the 16½ per cent.?—That is the arrangement now, but in many parishes it was not the case; I believe in some parishes they do not add that 10 per cent. even now. A third point which leaked out was, that in a large number, a very considerable number, of parishes represented at this conference parochial buildings, hospitals, and schools, and hereditaments of that kind were not put into the assessment, or, if they were put in, they were put in at very nominal values.

13,025. Have you any other points?—I do not know that anything occurs to me at the moment.

13,026. What is the practice in your parish as regards the deduction of the maximum allowed of 16½ per cent.?—In all cases where the property comes under classes 1 to 5, I think it is, we allow the full deduction up to the scale as far as we can, keeping the pounds level.

13,027. Do you think that is in conformity with the intention of Parliament?—I agree that it is rather doubtful, but it would be rather a difficult thing to make varying deductions. It would entail an immense amount of detail work on the part of the body doing it, and would almost necessitate the viewing of all the properties.

13,028. Not viewing them every year, would it?—Every five years, at the quinquennial.

13,029. I will put it this way, not doing it every valuation?—I should think it is likely the aggrieved persons would allege the objections that their property had undergone considerable deterioration. I think the intention of the Act is fairly met if in all cases the utmost allowance for repairs is allowed.

13,030. Some comments have been made on that practice in connexion with the great difference which obtains between the proportion of what is called site value to structural value in various properties. You will see the point which has been made when I say that a witness sent by the London County Council contended that in cases where the site value formed a very large proportion of the whole value of the hereditament, the deduction of the maximum amount allowed was very unfair to other properties where the site value was not in such large proportions; what do you say to that?—There are very few such properties in Islington; I suppose there is half an acre of garden ground hardly to be found in Islington. I think, as regards Islington, the principle works very fairly of allowing the maximum. Whether every house should receive the full allowance or not, I should have thought hardly worth discussing; although I can understand that in parishes where there are park-like lands with comparatively small mansions (and there are very few such in London) it might be a very unfair thing to allow the maximum rate of deduction.

13,031. But I gather that your experience would not lead you to express a confident opinion as to whether a fair amount could be estimated for such a deduction without individual examination of every such premises?—I am almost certain it could not.

13,032. Do I understand you to suggest, or do you wish to express any opinion, as to whether the friction and expense inevitable to that attempt would or would not be compensated for by the greater accuracy that

would probably be arrived at?—I think decidedly not, because, dealing generally with London as a whole, I think there are comparatively few such parks and open spaces as those to which you allude, and, as I said before, if the whole of London is treated upon the same system, it really, as far as I can see for the moment, makes comparatively little difference whether you—

13,033. It does not quite depend only upon the parks and open spaces. The particular instance given to us was as between a site, we will say, at Fulham and another in Bond Street; that is the extreme difference between the circumstances, and that would not depend upon a park or open space; what do you say to such an instance as that?—I gather your Lordship to put this case: that two houses and grounds are each assessed at 100*l.*, one at Fulham and the other at Bond Street; the possible site value of the property at Fulham being 25*l.* while at Bond Street it would be 75*l.* I am putting it roughly, but I apprehend that that is the point—that the site value of two similarly assessed properties of 100*l.* would be much larger in the case of a property in Bond Street than in that of Fulham.

13,034. Well, that is the suggestion; what have you to say to it?—Of course, to that extent, there would be a certain unfairness to Fulham if the Bond Street property were allowed the same rate of repairs. I have not gone into that point very fully; I see the point, but it is not one of those that press most urgently from the parochial point of view. It is not one which I should suggest making an alteration in or providing for.

13,035. Then there has been a suggestion made to us as to the rating of empty property; what do you say about that?—Well, personally, I rather hesitate to express an opinion, but I do not see that the corresponding advantages would be very great. It seems to me that a considerable hardship would be entailed—I deal of course again with my experience in Islington—upon a class of persons who have probably invested small savings in the purchase of leasehold property. If the owner of the leasehold is going to be rated when he is already out of pocket by the fact that he is losing his rent, a considerable hardship would be entailed upon such an individual, and I think I have said in paragraph 16 of my memorandum that I do not see that he is deriving any great or corresponding advantages out of the rates. He benefits neither by the poor relief, by the education rate, by the highway rate, nor sewer rate; it may be said, possibly, that he does, to some extent, by the police and lighting, because his property may be said to be guarded, but I apprehend that the attraction of empty walls to burglars or persons likely to interfere with such property is very little.

13,036. The point is as to the injustice upon the other occupiers of property in the same parish or district as the empty property. If I understand the point rightly, it is that the quota to be paid by the parish to the total county rate is fixed by the valuation, and if part of that valuation is empty, and therefore not rated, the occupied property has to bear an additional burden to make up the sum to be paid to the common fund?—I take it that was the original principle of rating. As I read the Act of Elizabeth, it was contemplated that the occupiers (those who were receiving benefits, for instance) must take their chance as to how many empties there are, and that those who are receiving the benefits of rating should bear the burden.

13,037. If you appeal to the Act of Elizabeth, I feel bound to put this, that in the days of Elizabeth, a common fund had not been invented?—Quite so, and probably the occupiers were nearly always owners—at any rate to a large extent, I should say. I do not think there were many tenement properties.

13,038. On that point what is the opinion you have formed?—I am not very strong upon it, but I should see no advantage, but corresponding disadvantages. I would express my opinion against it, although not strongly.

13,039. On what considerations?—On the ground that if, as I am assuming, you are going to rate the leaseholder—because a great deal would depend upon that—it would be an unfair charge upon a person suffering from the loss of the rent if he were getting no benefit. I venture to qualify my evidence by saying that there might be something said for rating the site of the empty houses, because to the extent of the freeholder's interest there is somewhat of a beneficial occupation on account of the ground rent received.

Mr. W. F.  
Dewey.

25 Feb. '98

Site value and structural value: It would entail a great deal of work to ascertain the respective values. Whether maximum deduction should be allowed in Metropolis.

Empty property: Rating in respect of undesirable.

Site values: Rating in respect of. How far desirable and practicable.

Mr. W. F.  
Dewey.

13,040. That entails an ascertainment of the difference between site value and structural value?—Yes.

25 Feb. '98

13,041. Do you mean that?—Then I should be going into a question which you have not raised, a question as to what extent the owner should be rated, whether owners should be rated to any extent, or whether site values should be rated separately.

13,042. If you have any definite opinion that you would like to give expression to, the Commission would like to hear it?—It is a very difficult question. A great deal may be said about it. Some might say that if you charge the owners, if the owners were to be taxed or rated on account of the value of the land, they would simply charge higher rents. In that sense you would simply add to the amounts already paid by the occupier. That would be the result from one point of view. On the other hand, I have heard it said that the owner now pays the rates, and that if all the rates were taken off the occupier at the present time, the owner would not be able to charge a higher rent. It is a difficult thing to see whence the rates come. But I have thought it would be possible to rate site values, to show them distinctly in the valuation list, and, if it were thought well, to charge the owners. The occupier would, of course, pay all the rates in the first instance, and would deduct the rates upon ground value from his immediate landlord, who would in turn deduct it, if it were held by a sublease, from his superior landlord.

13,043. Would you apply that to an existing contract?—I can see a good deal of hardship in matters of that sort, and there would be a very great distinction which might be brought forward as between the unfortunate widow or clergyman who had just purchased an investment with her or his own money, and, we will say, the landed proprietor who had inherited it.

13,044. Would it be consistent with your experience, that what are called site values are not the property of any one class of the community?—Quite so.

Quinquennial valuation: How far was it the intention of the Act that the valuation of property should be fixed for five years.

13,045. Have I exhausted the matters you put before us in connexion with the questions that we have just been speaking of?—There is one point in connexion with the Valuation Act, which, supposing it were to be dealt with by legislation, I should like to call your attention to. I do not know whether your attention has been called to it. I think that the decisions of the courts of law have very much altered the intention of the legislature as regards changes during the quinquennial period. I daresay the Commission may be aware that in the first place the list, of course, is made for a quinquennial period; by sections 46 and 47 provisions are inserted for the making of a provisional or supplemental valuation list, with a view to meet what was originally understood to be alterations of structure that might take place during the quinquennial period.

13,046. Or as to new buildings?—Yes, as to new buildings, or something equivalent to structural alteration. I can understand that it might be other than structural, but something equivalent to structural. A public house might have a railway station opened opposite to it. I can understand a necessity for the revision of the valuation of the public-house, but I have always felt myself, and we have thought out the question, that it was never intended to apply to mere changes of rent. But the courts have practically decided the contrary, at all events, in the cases of the Agricultural Hall and other places of that kind, and the result has been that the overseers and assessment committees of the Metropolis, anxious, of course,—in fact, being bound—to show some consideration to their own ratepayers, whenever a person now comes forward and brings a receipt showing that his landlord has dropped his rent 2*l.*, the overseers and the assessment committees, I believe, almost universally, follow that dropping. I need hardly point out to the Commission that there can be no corresponding increase where rents are raised, because the overseers never learn of it, nor would the assessment committee. So, from the time that the quinquennial list is established, unless there are large increases by additions or by new property, the valuation list begins to drop every year. That has not been very apparent in Islington, because we have had new property which has more than met it; but in the central parishes of London that might be a somewhat serious question to them, and that tendency would possibly require new legislation to prevent it. I have always felt myself that the intention was that you were to be assessed for five years for good or bad. It may not be perfect, but it is a rough and

ready way of determining the matter for the parish for five years, and unless you considerably increase or improve your property, or unless something interferes to lower its value, you are not to be relieved, or saddled with additional rates on the other hand.

13,047. Have you anything else to tell the Commission?—Not in connexion with the Valuation Act.

13,048. I understand you to approve of the suggestion that there should be a central valuation for such a county as London for property such as railways, tramways, gas and waterworks, electric lighting, telephones, and so on?—I certainly do; I think that those undertakings are only partly assessed at the present time, because they are split up like a bundle of sticks.

13,049. Instead of being taken piecemeal according to the districts they cut through, you would value them as a whole, by a common authority, and devote the proper proportion of the property to each parish or union?—Quite so.

13,050. Do you think that the appeal to quarter sessions is a satisfactory way of reaching a final decision?—No, I am not at all satisfied with the present appeals to quarter sessions. No principles are ever laid down to guide us. Take the case of the Gas Light and Coke Company's appeal—one of the most important appeals ever heard probably—in which the Gas Company appealed against some 15 or 20 parishes. They had a large number of expert valuers, who gave opinions as low as they could, naturally; we, on the other hand, retained a large number of valuers, who gave opinions as high as they could in parishes differing in themselves—such is the custom. After hearing the whole of the evidence, which occupied 18 months—of course, not right off—the appeal costing over 30,000*l.*—Sir Peter Edlin—I am not intending to reflect upon Sir Peter Edlin—ultimately announced that the court had come to the decision that the assessment was to be so much. That was the only result, and there was nothing at all in it to guide us. The court did not let us know what principles were adopted, more particularly in connexion with one question which is always raised now in dealing with such companies. I am pleased to have an opportunity of referring to it. It is the practice of making what are termed recognised allowances—deductions that have to some extent the sanction of the courts of law—to recognise something like 15 per cent. upon the estimated tenant's capital. We are certainly very desirous of guidance upon that question. The time, no doubt, was when 5 per cent., as a mere return for capital invested, and an additional 10 per cent. for the trouble taken in working those great undertakings, was probably a reasonable thing; but we are desirous of showing that at the present day 15 per cent. is an absurdly high amount to allow to a hypothetical tenant upon an assumed capital for the working of a monopoly. Whether any or what ideas guided the court of quarter sessions on the point we do not know, nor do we know what the practice of the courts is really on this point.

13,051. I observe in paragraph 17 of your memorandum you comment upon the Equalisation of Rates Act. I see at once that you are in favour of the principle of the Act, but you say, "The rates, however, in Islington have not decreased in proportion" to the 3*d.* in the £ which you receive. "In 1894-5 they amounted to "5*s.* 8½*d.*; in 1895-6, to 5*s.* 7½*d.*; and in 1896-7, to "5*s.* 6½*d.* in the £, while during the current year, "with a net grant from the fund of 23,505*l.*, they have "gone up to 5*s.* 8*d.* in the £." I should like you to carry that a little further, and tell me to what you attribute that result?—The going up of the rates, do you mean?

13,052. Yes?—They have gone up largely owing to—well, I will not say the excessive borrowing, but—the large borrowing, which has been recently exercised by the vestry in connexion with electric lighting, baths and washhouses, to a very considerable expenditure in connexion with sanitary administration, and, I think, also to improvements under the Metropolis Management Act.

13,053. Do you suggest that the subsidy received through the operation of the Equalisation of Rates Act has acted as a temptation or inducement to the vestry to embark in this expenditure?—I should hardly like to go so far as that. What I was anxious to point out to the Commission was this: I rather think you assumed, in the first instance, that I was in favour of the Equalisation of Rates Act. I think I guard myself

Mr. W. F.  
Dewey.

Valuation by a central authority for such properties as railways, gas and waterworks, desirable.

Quarter Sessions not satisfactory tribunals for appeals. Appeal of Gas Light and Coke Company.

Equalisation of Rates Act: Its operation and results discussed.

Mr. W. F.  
Dewey.

25 Feb. '98

from going so far as that. Of course, as representing Islington, the Commission will understand I should like to say that there has been a pecuniary advantage to Islington; but, speaking generally, I am not at all sure that this Act has been the best way of meeting what, I imagine, was the intention of the Legislature in reference to the object, which, I take it, was the relief of the poorer parishes.

13,054. The intention of those who advocated the Act, and of the Legislature in passing it, was to prevent burdens being unduly pressing upon poorer districts and richer ones getting off more easily—that was the generally accepted intention of the Legislature. Do I understand from you that there would have been a better way of attaining the result?—I think it would not be impossible to make suggestions upon that, but I am not prepared to do so. I take again the parish of Islington, and I say that Islington has not been what I call a highly rated parish from the rate in the £ point of view. I cannot go beyond that. Islington, among the 60 or 70 parishes of the Metropolis, has always been among the 10 lowest rated. One of the results of the Act is that Islington, owing to its excessive population, receives a larger grant than parishes that have rates of 2s. or 3s. in the £ more. Dealing with the point to which your Lordship was referring—of course I do not know, but would it be far from right to say that the Legislature had this in its mind—"Inasmuch as an East End parish pays 8s. in the £, or 7s. 6d. in the £, which we think is a burden upon the inhabitants, we will pass an Act which will cause the West End parishes to assist to reduce those rates." In Islington, from some cause or other, it has not had, at all events, that result. Whether that was the intention of the Legislature I would not say; but the idea would probably have been this: here are parishes overburdened with rates, and the West End parishes ought to pay a portion of those rates. That object is not attained if the rates do not go down. Of course, they have gone down slightly in Islington, but not anything like in proportion.

13,055. But the rates in Islington would have gone down at once if it had not been for this extra expenditure to which you have called our attention; and what I want to get at is this—it is rather a hypothetical question—supposing the Equalisation of Rates Act had not been passed, do you think the vestry would still have gone in for this additional expenditure?—I should doubt whether they would to the same extent, because there would have been an outcry if the rates of Islington had been raised to such an amount in the £ as would then have been necessary.

13,056. It amounts to this, that the Equalisation of Rates Act has spread the cost of your baths and wash-houses over the whole Metropolis?—I am not prepared to go so far as that. Of course, the baths and wash-houses were built, some of them, before that time. But there are some—as you can understand, with a body like a vestry, and especially as it is now constituted—who think that it is very desirous, not so much to lower the rates, as for the authority to expand itself. They see the advantages, or the presumed advantages, of electric lighting, and of the cutting off of a corner of a street, and of the widening of the thoroughfares; and now they have the money for those things without laying any great additional burden upon the ratepayers.

13,057. I think I need only ask you as to one other point. I want to know what your practice in Islington is as to compounding?—The vestry as overseers enter into agreements with owners under section 3 of the Poor Rate Assessment and Collection Act, 1869. That is not the compulsory section—the compulsory section is section 4. This enables them to enter into agreements with the owners of such properties as they think proper, and not over the whole parish, or, rather, over the whole of the houses under the Act in the parish. Before doing so, however, they ascertain from the rate collectors what are the circumstances attending the collection, and it by no means follows that they enter into agreements as regards all the property in the parish coming within the limits of the section. For instance, they treat it from their own point of view. A large number of owners are very desirous that they should be allowed this composition. The vestry ask the collectors what is the nature of the collection: "Do you find that you can get the rates with comparatively little difficulty?" and if the collector says: "Yes," they allow no compounding at all, but they collect direct from the tenants. If, on the

other hand, the rate collector says: "This is very bad property," they would probably enter into an agreement with the landlord. But in Islington the number of agreements by no means extends to the whole of that class of property, and in very few cases do the vestry allow the 25 per cent. maximum permitted by the Act; the average they allow is 15 per cent., and in some cases 20 per cent.

13,058. Do you collect the rates half-yearly or quarterly?—We collect them quarterly.

13,059. Is that universally so?—Yes, and within the quarter—we enforce them within the quarter. I have ventured to add—the Commission I thought would attach some importance to it—what the result of that quarterly collection is in Islington, namely, a loss of 6s. in every 100l.

13,060. You regard that as a very satisfactory result, of course?—Very, indeed; and I think the Local Government Auditors are in the habit of holding Islington up as a pattern. I do not think such a record could be shown elsewhere in the country with a debit of something approaching 500,000l. annually.

13,061. (Mr. Wharton.) You told us, I think, that that very heavy appeal before Sir Peter Edlin was 18 months in court. Was there any difficulty in securing the same court during all that time?—I think, if I may say so, there was very great difficulty in securing Sir Peter Edlin. Of course, he was continually going over to Surrey in connexion with the ordinary business of quarter sessions. I venture to think that the convenience of the ratepayers had necessarily to wait the convenience of the court. I am not reflecting upon the court, as it was the necessary consequence of Sir Peter having to attend to the ordinary business of quarter sessions.

13,062. I was only thinking that Sir Peter, or whoever else it was, would be obliged to attend during that trial, otherwise the court would be illegally constituted?—Sir Peter was the court, to all intents and purposes. I do not know that there was any limitation. Perhaps some two or three members were asked to sit with him. Sir Peter was the court on all those occasions.

13,063. (Mr. Stuart.) I have one or two questions to put to you. You have referred in paragraph 6 of your memorandum to the Bill\* introduced by Mr. Cohen and myself on behalf of the London County Council for the amendment of the system of assessment in London; is that a Bill of which you generally approve?—Yes, I did myself; there were some small provisos that I think the London County Council would have met us upon, but, as representing Islington and the overseers of Islington, I may say they decidedly approved of it.

13,064. The Bill was thrashed out more or less in the conferences to which you have referred, was it not?—That was so.

13,065. And I presume that the result of those conferences, even in an unofficial way, was to give a certain greater uniformity in the assessment of London?—I think they did.

13,066. You took a personal and a very prominent and useful part in that, I think?—I did my best. I was certainly there.

13,067. At the present moment, does any member or representative of the county council attend on your assessment committee?—No.

13,068. But you are on friendly relations with them upon these matters?—Yes. I think the London County Council have recognised the fact that Islington has always done its best. They never, in fact, raise any objection to our list.

13,069. My information is, as to that, entirely coincident with your own. I suppose, as a rule, the members of the local bodies would support that Bill?—In Islington they would, but probably in other parts of London there would be opposition to it.

13,070. Where, for instance?—Perhaps you will excuse me mentioning names, I might be mistaken, they are only assumptions, you know.

13,071. I will not press you upon that point at all. Now you mentioned, with respect to compounding and empties, a certain practice in your district. With respect to empties there are two questions, are there

Mr. W. F.  
Dewey.

Collection of rates made quarterly in Islington has satisfactory results.

Appeal of Gas Light and Coke Company.

London County Council: Bill introduced to amend the system of valuation in London.

Compounding: Practice in Islington.

Compounding in Islington.

\* London Valuation and Assessment Bill, No. 141 of Session of 1896.

Mr. W. F.  
Dewey.  
25 Feb. '98

not; first, the question which you were discussing, namely, whether they should be rated or not; and then there is also the further question of the loss to the rate collecting body from the fact of their being empty?—Yes.

13,072. Has it, however, ever occurred to you that that loss might be borne by the metropolis as a whole?—No.

13,073. Have you any opinion to express upon that suggestion?—It would be a very crude opinion if I were to express it off hand.

13,074. Would you think over that, because I should personally very much value your opinion upon it?—I will certainly do so. You will understand me when I say that it would be necessary to consider where those empties pinch the hardest.

13,075. I quite understand, but I hope you will turn it over in your mind?—I should like to do so.

13,076. Then you have losses in collection which are very small, smaller, I take it, than almost anywhere else?—I think so.

13,077. And that you attribute to your quarterly collection?—Yes. Might I say, in connexion with that, I have put it in my memorandum (paragraph 18), but I think the Commission would not mind my emphasising it, that in 1878—the year before we adopted the quarterly collection—with a debit of something like 250,000*l.* only, the avoidable losses, I mean “runs” and “excuses” were 18*s.* in the 100*l.*, but now, when we debit twice the amount, something like 494,000*l.*, they are only 6*s.* in the 100*l.*

13,078. Taking the case of compounding, for a moment again, you have mentioned that you carry out the principle of compounding simply from the point of view of what will pay the vestry best?—Yes.

13,079. Suppose there was no compounding, how would you meet it? Have you any proposition for meeting the case from the vestry point of view?—Of course it would be a difficult thing, because these persons are fleeting tenants. A vestry however which collects quarterly, and within the quarter, would run comparatively little risk of loss, although there would be some, no doubt.

13,080. If the system of compounding were non-existent, or were abolished, would you see a profound difficulty in a weekly collection in those particular cases?—I think there would be a considerable difficulty in a weekly collection of the rates.

13,081. What is the most frequent collection that you would think would be absolutely possible?—Of course you mean in Islington?

13,082. I mean in those particular properties in which you now compound and in which we assume compounding would be at an end, and in your own district of Islington?—They are so comparatively small in number in Islington that I should doubt whether the vestry would be inclined to make any change.

13,083. You spoke of the intermediate valuation between the quinquennials; am I right in understanding that your view is that the quinquennial valuation should endure to the next quinquennial in all cases, practically, except where there is an alteration of structure?—Quite so; or an alteration of this nature, if I may say so—it is difficult to define, but you can understand that the pulling down or the addition of a public-house or a large building, or a railway station near a property might affect its value one way or the other.

13,084. But a mere alteration in rent as between landlord and tenant should not be taken account of at all?—Quite so.

13,085. Then a question was put to you about site values. I suppose in Islington there is no great variation in the proportion of value that attaches to site and building; practically, it is about the same proportion?—I should think so. The only difference, of course, being the difference of area.

13,086. But you would recognise this, would you not, that if you go, say, to the City of London, you will find that the proportion of the whole gross value which is due to the site is very much greater than it would be in Islington?—Undoubtedly.

13,087. The deduction of a sixth which is allowed by the Act is for the repair and outgoings on the buildings, practically?—Yes.

13,088. If the deduction of a sixth is fair all over Islington, roughly, it may still be very unfair when comparing Islington with the City?—Yes.

13,089. Suppose, for instance, that you have in the City property where the site value is two-thirds of the whole value, then if the deduction of a sixth was fair in an ordinary Islington property, the deduction of a sixth would be too much in the case of that particular City property?—Yes, that would be so.

13,090. Have you formed any idea of how much the City is below the rateable value of what it ought to be on account of that very cause?—No, I have formed no idea.

13,091. Every hundred thousand pounds rateable value that it was under what it ought to be would, I understand from paragraph 9 of your Memorandum, cost Islington about 1,000*l.*?—Yes, I think that is so; I made the calculation.

13,092. Whatever sum it is, it is stated in your memorandum. Do you suppose there would be any very serious difficulty in Islington in separating the value of the site from the gross value?—No, I think that is quite practicable.

13,093. It is quite practicable in Islington?—Yes.

13,094. If that were done, would it not be a more equitable way over London to make the deductions then upon the remaining portion, and not upon the site value?—Yes, I think it would be.

13,095. Then coming to another point; is not the action of the public bodies of London, both their action in respect of appeals and their action generally in connexion with rateable value in the direction of increasing and screwing up the rateable value, not of diminishing it?—No. Perhaps I misunderstand you. I think in paragraph 5 of my memorandum I show that out of the many objections that are lodged—and of course these objections are lodged by persons who seek reductions—in the case of a very large proportion of them the objection is allowed. I use the word “objection” as distinct from that of “appeal,” because both words are used in the Act, and “appeal” would mean going to the Court of Quarter Sessions, and “objection” would mean going to the assessment committee.

13,096. But the public authority, whichever it is, appears in that instance as the persons who are desiring to keep the rateable value up, and the object of the appeal is to bring the rateable value down?—Yes, of course the overseers are the persons who, having once decided it, as a formality support their own valuation.

13,097. Then when you point out that of late years there has been a great inequality in the method in which different portions of London have been valued or assessed, the method by which that inequality has been put right has been, not by reducing the assessments where they were high, but by raising the assessments where they were low?—The result of the adoption of the regulations prescribed by the conference has been undoubtedly to increase the values of parishes as a whole. One of the facts which was ascertained at that conference was that empty property was in many parts of London excluded from the valuation until it was occupied, with the direct object, and they had it mentioned, of saving the payment of the precept to the central bodies.

13,098. In respect of the increase of the rateable value of a given property, or of the principles upon which the rateable value is ascertained, in connexion with that increase, do you regard the public as the only benefiter, or are there any other people that benefit besides the public?—By the increase in the rateable value?

13,099. Yes?—Of course the Government benefits by the increase in the gross value; the public only benefits to the extent that by so much as A.'s assessment is increased the total of the rates payable by the other ratepayers are reduced in a corresponding proportion.

13,100. Then is there anyone else who benefits?—No. I do not quite, perhaps, see the point.

13,101. May I suggest to you that the water companies have a charge of five per cent. practically on the rateable value?—Yes, the water companies benefit by an increase in the rateable value.

13,102. Is it not the case that the effect of a large amount of the endeavour to put the assessment and valuation of London on a proper basis has been to present the water companies gratuitously with a large

benefit by  
an increase  
in rateable  
value of  
property.

Mr. W. F. Dewey.  
25 Feb. '98

sum of money?—I think that has been to some extent the result. I must not be understood as saying that the result of the increase in the valuation has been that alone, even as regards the water companies, because, of course, a great deal of the increase of the valuation in such a parish as Islington has been in respect of new property which the company supplies with water.

13,103. Quite clearly; and I was very particular to take the case of the raising of the value of the same property?—The water companies have now a direct interest in the increase every quinquennium of the valuation lists.

13,104. Your rates in Islington have not diminished in the last 30 years, have they?—No; in my experience they have gone up.

13,105. Take the rateable value of Islington, and do not turn your mind to the new premises, but take the same premises that have continued through a number of years; has the tendency been that the rateable value of the same premises has risen during that time or diminished?—If I go back for 20 years it has, I think, diminished.

13,106. But if you go back 30 years?—I may remind you that some, shall I say 30 years ago, when I first became acquainted with Islington, buildings were being erected, and houses were being let, I will not say at fabulous sums, but perhaps almost as fast as they could be built; the time came—about 15 years ago or something like that—when there was a sudden drop in the better class of our property, and I should say that, dealing with such properties as Highbury New Park and Hornsey Lane, where City merchants lived largely at one time, that such properties have gone down in their selling value very nearly half.

13,107. To what do you attribute that decrease of rental?—Largely to the overspreading of the parish with smaller properties which have deteriorated the value of this property and have either driven the class of persons to whom I am alluding out of London (and they have been going out of London rapidly) or, as is the fact now, have led rather to a desire to live in what they call the West End. These two causes have been effecting great changes in Islington lately.

13,108. Would you say that any of that was attributable to the rise in the rates in Islington?—No, I should say not. I often say to persons who complain of the rates in Islington: you cannot step out of Islington, north, south, east, or west, without stepping into a more highly rated parish.

13,109. Now we will come to the Equalisation of Rates Act. There were certain questions put to you thereon, and you point out in paragraph 17 of your Memorandum that although, I think, about 3d. in the £ has come to you from the Equalisation of Rates Act, yet your rates have not fallen to that amount?—Not correspondingly.

13,110. Am I right in thinking that you attributed the failure to fall to the fact that the vestry have undertaken more sanitary operations and other operations of a more or less similar kind?—Yes, such as street improvements.

13,111. Are you aware of this: that when the Equalisation of Rates Act passed through the House of Commons it was distinctly impressed by the Local Government Board authorities on the House of Commons that it was not desirable that the sum which went to the poorer locality should go in diminution of the rate, but that it should go to enable them to carry out precisely the class of improvements you have suggested without burdening their own ratepayers; are you aware that that was distinctly stated in the House of Commons?—Not, I think, precisely that. The Local Government Board, I think, called attention by certain circulars issued, to the fact that it was the object of the Legislature, as you put it, not so much to reduce the rate as to enable a vestry to provide for its own sanitary necessities more efficiently, and I think, secondly, for its lighting, if I am not mistaken.

13,112. That was so?—Of course, it does not occur to one that the provision of electric lighting and the street improvements were directly within that, although I am not saying they might not have been intended.

13,113. Still, taking that into consideration, which I now remind you of, might not one, roughly, say that

your parish has not very greatly failed to carry out the object of the Equalisation of Rates Act?—Yes, I think that is so.

13,114. You have reduced the rates slightly?—Yes, and what they have been doing has been, I have not the slightest doubt, for the advantage of the ratepayers—and of the poorer ratepayers, too.

13,115. You mentioned with great truth that your parish has always been a fairly low rated one, and yet it receives from the Equalisation of Rates Act a considerable relief. You are aware, are you not, that your parish is the one exception to the usual state of affairs in London, that the relief has gone to the high-rated parish?—I was not aware that it was the one exception. I imagined that it was one of the few; I am not quite sure whether St. Pancras is or is not an exception, as I have not the list before me.

13,116. I suppose you have found that your vestry and the County Council of London work with a fair amount of harmony?—On some points we have differed. You may be aware that the question of the sanctioning of loans by the London County Council is a source of great annoyance in Islington, and is a very bitter matter.

13,117. I do not think I can pursue that question, as I understand it is not within the reference. I will merely confine myself to the question of the assessment. In that matter I understand you have carried a good many of your vestry's views in the London County Council?—Undoubtedly. We look upon the County Council as furthering the interests of Islington, because our object is to obtain fair assessments from all the other parishes.

13,118. Your parish, by the way, is one in which the area of the vestry and the area of the union are conterminous?—Yes, it is.

13,119. Is your assessment committee appointed by the vestry or is it appointed by the Board of Guardians?—It is appointed by the vestry.

13,120. Are the vestry the overseers?—Yes.

13,121. Are you not overseers under the Act of 1894, or have you become overseers under a private Act?—We are practically the overseers for all purposes connected with rate collection by means of our local Act, which transferred the collection of rates to the existing vestry.

13,122. What was the date of that Act, do you remember?—1857, I think; it was passed shortly after the Metropolis Management Act was passed.

13,123. Can you give me, off hand, the names of the parishes in London in which the vestry are the overseers?—I am afraid I cannot. I think they are in St. Pancras. I could give you at once an instance of where they are not overseers, that is in the large parish of Lambeth.

13,124. Do you feel that there is any importance in the question of who are overseers?—I do attach very great importance to it.

13,125. And you would attach great importance to the circumstance that in Islington the vestry are the overseers?—I do.

13,126. From what you know of Lambeth there have been difficulties, I presume?—No, I do not go so far as to say that.

13,127. I will not question you about what you do not know. Roughly speaking, would you advocate that in any change, if there was a change in the system in London, where the vestry and union are conterminous, the vestry should be made the overseers?—I think the local authority should act as overseers, not only in London, but all over the country. I think you will find that the view which is, as a rule, taken all over the country, is that those comparatively irresponsible bodies the overseers and trustees who are not directly elected by the ratepayers are really not the persons to deal, at all events in large parishes, with the collection of the rates.

13,128. The difficulty which I am going to put to you does not occur in your parish, nor in that of Shoreditch with which I am more particularly acquainted, but it occurs, for instance, in a parish like Holborn; do you think that there the local board of works should be the overseers for the whole district?—The Holborn Board of Works is practically another mode of uniting several parishes, and they have nothing to do with the

Mr. W. F. Dewey.

Assessment Committee in Islington: Appointed by vestry, and vestry are overseers. It is desirable that the local authorities should be made overseers in all cases.

Islington, rates in. Their tendency to rise or fall in the last 30 years.

Equalisation of Rates Act: Its intention, operation, and results discussed.

Mr. W. F. Dewey.  
25 Feb. '98

rates. I am assuming, for a moment, that a new authority is going to be created in London; I think, certainly, that that body should be entrusted with the duty of the collection and making of the rates.

13,129. You see no particular difficulty in taking those duties away from the parish and putting them into the hands of the Holborn Local Board of Works, just as you have them in your hands on the vestry of Islington?—Of course, there would be the question there of the different parishes; the rates in the different parishes might vary.

13,130. (Chairman.) Does it concern Islington?—No, it does not concern Islington, and in single parishes I can imagine no such difficulty occurring because there the board of works and the vestry is the same body.

13,131. (Mr. Stuart.) You have formed no conception of how assessments should be made and rates should be collected outside of London, have you?—No, I would not express an opinion on that. I may have opinions, but they would be crude, from a lack of experience, and I should not like to express them.

13,132. Is your position that, roughly speaking, taking your own parish, you feel that your parish should be the authority to make the assessment, acting through the vestry, and that there should be those additional powers given to the London County Council, roughly speaking, which are in the Bill introduced by Mr. Benjamin Cohen and myself?—I think there should be certainly some control by a supervising authority, that is, by a common authority.

13,133. You do not regard the control by the surveyor of taxes as sufficient?—No, I do not.

13,134. Where does that control fail?—If I may say so, I do not think the surveyor of taxes feels strong enough; I do not think he feels that he dare go very far in connexion with the increases of assessments. I have always found surveyors very cautious, and I have usually thought that they were advised by their board, the Inland Revenue Department at Somerset House, to be cautious in what they did. That is my own idea. I have thought that they did not want to provoke undue hostility, as it were.

13,135. (Mr. Smith.) I want to ask you one question about valuation: I see that in the case of property held on a modern lease, with the usual covenants for the tenant to repair, you add 10 per cent. to the gross value?—Yes.

13,136. You add that in respect of what items?—Principally repairs and insurance, I think.

13,137. Then, when you make your deduction, you take off 16 per cent.?—16½, as near as possible.

13,138. For what items?—For the same items, really. I fully recognise the anomaly.

13,139. What is the justification of the extra 6 per cent.?—As a matter of fact, the difficulty has been all over London to induce overseers and assessment committees to see the necessity for adding. I was going to say, anything in some cases to the rent paid under lease. I fully recognise your point. I say that the rent paid under the lease is the rateable value.

13,140. And might be taken as such without all this complication?—I think so. Sometimes the conditions of a lease, I need not tell you, will vary and the conditions of a property will vary very much.

13,141. In the ordinary case of a London house let on lease without a premium, and the tenant doing repairs, the addition and the subtraction are unnecessary?—I have always thought so; I have always said that the rent paid under lease is the rateable value.

13,142. (Mr. Dalton.) Is the comparatively low rate in the £ at Islington due to some extent to economical administration?—I think so, decidedly.

13,143. To the economical collection of the rates?—Greatly.

13,144. It would appear that if you leave a very small amount of your rates uncollected the nominal rate in the £ does not represent, as compared with another parish where there are a great many irrecoverables, the real comparative burden as between the two parishes?—Certainly not.

13,145. It would be rather hard if the Equalisation of Rates Act had simply taken the nominal rate in the £ in the different parishes, and distributed the fund in

accordance with any such rate of that kind?—Do you mean that it would have been an encouragement to inefficiency?

13,146. Yes, and it would have been a discouragement to economy?—Quite so.

13,147. What is the position of the majority of the householders in Islington, are they wealthy persons?—No, certainly not, far from it; they are largely clerks and artisans. It is essentially a residential parish. There are few or no manufactories or warehouses or large business premises—few, I say, or none; there are a few but it is essentially a population of persons who would live in houses of between 30l. and 40l. or 45l.

13,148. That class of person would naturally be very sensitive to any increase in the rates, I suppose?—Yes.

13,149. And that has to some extent probably kept the rates down as well as the economy?—Yes.

13,150. You have, I see, to summons a very large proportion of them every quarter?—That, if I may venture to explain, is not, perhaps, as would be thought the result of the poverty of the inhabitants, but as a rule is due to their thinking it worth while to pay a shilling for a fortnight's additional time. They treat the summons very much as a sort of final demand. As a rule, if you were to read the annual report, you would find that very few of those people have to be distrained upon.

13,151. I see that from the figures you have given us in paragraph 11?—When I tell you that the shillings for the summonses amount to about 1,300l. per annum, you will imagine that we do not lose by it. These shillings, I may say, do not come to the vestry clerk.

13,152. Yours is a class of parish, then, that the Equalisation of Rates Act was intended to benefit, is it not—you have comparatively poor ratepayers?—Yes, but not so poor, I should think, as in many parishes of the East End, where considerably less relief is obtained.

13,153. Are you speaking of the amount of relief in the £?—Yes.

13,154. Not of the total amount of the relief?—I am speaking of the effect upon the rates, if I may say so.

13,155. Of the 3d. in the £?—Yes.

13,156. You think there would be poorer parishes in London where the relief to the rates would be less than 3d. in the £?—Yes.

13,157. Could you name any such parishes?—I should hardly like to speak off hand, but I fancy I might name such a parish—I am not speaking with certainty—as St. Luke's, where the rates, at all events, are very much higher.

13,158. That is in the neighbourhood of the City, is it not?—Yes, and it adjoins Islington to the south.

13,159. But it contains a great deal of warehouse property, office property, and so forth, which is highly assessed?—Yes.

13,160. Then, on the quinquennial valuation question, I think you expressed an opinion that an alteration in rent during the five years should not be taken into account in the valuation?—That is my own opinion, decidedly.

13,161. Do you confine that to old tenancies, or do you think that it is equally applicable if a new tenancy is created in the course of the five years?—Do you mean where there is a change of tenancy?

13,162. Yes, I do?—I think it is quite unnecessary. A man who takes a house, takes it with the understanding that it is rated at 40l. a year, we will say; he perhaps presses his landlord; the landlord may be in immediate difficulty, and he lets the tenant take it at 38l., but the value of that property has not altered.

13,163. Take the case of a tenancy which is expiring at the commencement of the quinquennial valuation; in such a case I suppose the outgoing tenant does not care to appeal against the valuation?—No.

13,164. It is a matter of no importance to him?—That is so.

13,165. Then the subsequent tenant who comes in has had no voice on the question, although perhaps he finds that he is too highly assessed?—Yes, of course there is that to be said.

Mr. W. F. Dewey.  
25 Feb. '98

A central authority desirable in London to control various valuation authorities.

Valuation of property held on lease in Metropolitan. Practice of adding 10 per cent. to gross value and deducting 16 per cent. gives unnecessary double.

Islington, rates in: Classes of rate-payers.

Quinquennial valuation in Metropolitan should fix valuation for five years.

Mr. W. F.  
Dewey.

25 Feb. '98

13,166. Would you not allow in those cases the man to have an opportunity of appealing?—I do not think it is necessary. Speaking from my experience in Islington, the assessment is governed by the value of the adjoining property in nearly every case, and is arrived at after a consideration of the returns of rents paid in adjoining houses.

13,167. There has been rather a rapid fall, I understand, in the rentals of some classes of property of late years?—There has. It commenced some 15 years ago; it is now going up again, but we are not finding the result in the valuation list of its going up; we know it to be so in a few incidental cases, but they never come to light until the quinquennium.

13,168. (Mr. Elliott.) With regard to what you said in reply to Mr. Stuart as to the interest of the revenue authorities, you would agree, would you not, that the interest of the revenue authorities is very great?—In what way do you mean?

13,169. Supposing a lump valuation of 100,000*l.*, the interest of the Inland Revenue authorities would be very much greater than the 1,000*l.* of which you spoke in the case of Islington?—Yes.

13,170. Both the Income Tax Schedule A and the House Duty would be dependent upon it?—Yes.

13,171. Have you had any opportunity of making yourself acquainted with the views of the Inland Revenue authorities as to the working of the Act generally?—Are you dealing with the question of the allowance for the site?

13,172. I am dealing now with the question of what has been called the under-valuation?—Which I have complained of—now I understand. I think the surveyors of taxes, and I have known many in Islington, have all expressed the opinion that in very few parishes has that Act worked as it has in Islington, and that it suffers elsewhere.

13,173. Then you would not agree with the expression of opinion that was given before this Commission a week or two ago, that that Act on the whole has fulfilled the intention of the Legislature?—No, I should hardly think it has.

13,174. From the same witness we had the statement that the low valuation at present existing is due very much to the difference between the definition of gross value in the Income Tax Act, and the definition of gross value in the Valuation (Metropolis) Act. Has your attention been at all called to that?—I cannot say that I know what the distinction is.

13,175. The surveyors of taxes who attended before us pointed out the distinction, but you are not familiar with that distinction?—I always understand the gross value to be the rent which an annual tenant would pay, providing that the landlord did the repairs and insured the property, and the tenant paid the rates and taxes.

13,176. The Valuation (Metropolis) Act says that it is to be a reasonable rent, does it not?—Yes.

13,177. The rent at which it is worth to be let?—Yes.

13,178. Those words, I think, do not occur in the Income Tax Act, do they?—I see what you mean; you are bound by the actual rent.

13,179. Yes, and the other is the full rent; but you have not studied the question of the distinction between the two definitions?—No. We have carried it into effect to the extent which I think I have mentioned. Terraces of 20 or 30 houses are very common in Islington, all let according to the peculiarities of the particular landlord or tenant at varying rents, from 3*l.* to 42*l.* say; the overseers would assess those at probably an average of 40*l.*, thereby carrying out to some extent the interpretation of gross value in the Valuation (Metropolis) Act, that is, putting on a reasonable rent.

13,180. You are not prepared to express any opinion as to whether in the event of the amendment of the definition in the Valuation (Metropolis) Act as suggested by the surveyors of taxes, this question of under-valuation would disappear?—No, I should not like to express an opinion on that. I should hardly think that affects us very much in Islington.

13,181. With reference to the question of central control, did your vestry pass any resolution in regard to the Bill of 1893?—I am not quite sure, but I think they petitioned in favour of it.

13,182. Do you know why that Bill was dropped, and has not recently been pressed forward?—I think there was a great deal of antagonism on the part of some of the London vestries who, no doubt, influenced their representatives in the House, and pointed out probably that it would not be for the advantage of the particular parishes. I think there was a good deal of jealousy of the London County Council having the control.

13,183. With reference to your remarks as to central control, I rather gathered from you that you had in your mind some form of central control other than the London County Council; you spoke of some other authority, did you not?—Yes, because I am not sure that I look upon the London County Council as a perfect body for such a purpose. I think they have a very great deal to do at the present time, and the result would be that it is possible this would fall into the hands of officials, and might be hastily administered. The work during the quinquennial year of any body that deals with the adjustment of the valuations of the County of London, as a whole, would I venture to say occupy the body's or the individual's time fully, and should have very full consideration.

13,184. What other form of control was present to your mind?—In the first place it occurred to me whether it would be possible to create such a board, or whether it would be worth creating. Of course, I have hardly thought the matter out. Again, it has occurred to me whether it would be possible to ensure that on each of these assessment committees there should be a representation of other parishes of the metropolis who are as much interested in seeing that Islington is properly rated as they are in seeing that they themselves are properly rated.

13,185. You contemplate roughly, then, as I understand it, the constitution of some tribunal which should comprise representatives of the various assessment committees?—At all events, representatives of the parishes in some shape—whether they should come direct from the assessment committees or in what way, I hardly like to say. But I think in some way each parish should be either represented, or should have an opportunity of urging its views.

13,186. Do you think that by the constitution of such a central body as that you would get a body of men who would be more likely to be experts in questions of valuation?—I certainly do. I doubt very much whether the London County Council at the present time, with all deference to their ability, are possessed of the necessary knowledge in small matters.

13,187. You would, as I understand it, be in favour of the appointment of some central authority which should be gathered from the different assessment committees, and which should comprise men familiar with the work of valuation?—I think that would be a very good idea.

13,188. Would you prefer that to vesting the central control in a body elected for a great variety of purposes such as the London County Council?—I think I should myself.

13,189. One question as to the property in Islington: I gather that the work of valuation in Islington is not of very great difficulty, since the class of property is very similar?—Yes.

13,190. And that fact to some extent accounts for the comparative ease with which you assess and collect the rates?—You mean the assessment, because it would not so much affect the collection of the rates.

13,191. You have not very many difficult problems of valuation to settle in Islington, have you?—No.

13,192. (Sir John Hübbert.) I was intending to ask you questions with respect to the Valuation (Metropolis) Act, but you have given answers in your evidence that satisfy me that you are not satisfied entirely with the working of that Act?—I am not.

13,193. I presume that one of the chief reasons is that it fails to attain uniformity in valuation?—Yes, I think so; and, of course, I, representing Islington, have reason to believe that Islington has been very deeply aggrieved in the past by the result of the working of this Act in other parishes.

13,194. If you were called upon to amend the Act, would you suggest that there should be some central controlling body?—I should.

13,195. Apart from the question of what that body should be?—Yes.

Mr. W. F.  
Dewey.

25 Feb. '98

A central authority, other than London County Council, is desirable in London to control various valuation authorities.

Valuation of property in Islington. Comparatively an easy matter.

Operation of Valuation (Metropolis) Act is not altogether satisfactory.

A central authority is desirable in London to control

Valuation (Metropolis) Act has hardly fulfilled intention of legislature.

"Gross value" and "reasonable rent."

Mr. W. F. Dewey.  
25 Feb. '98

13,196. But you do admit that the London County Council, by the action that it has taken in calling a conference, has been of great use in improving the valuations in the Metropolis?—I certainly think so.

various valuation authorities.  
Quinquennial valuation in Metropolis should fix valuation for five years.

13,197. You suggest that when the quinquennial valuation is made for five years, it should be for five years certain, and that there should be no alterations, except for alterations in the structure of the property?—Yes. I think the interpretations of the courts have altogether defeated the intention of the Act.

13,198. Is not your view supported in this way: that you have only the power of asking for returns from the ratepayers at the commencement of each five years?—That is the only power that is given us by the Act, but we do, as a matter of fact, frequently send out and obtain, in many cases, these returns during the quinquennium.

Power to obtain returns from owners and occupiers as in Metropolis should be extended to rest of country.

13,199. Do you think you have the power to obtain them?—We act upon it; I do not think we could compel it.

13,200. I suppose you would quite agree, with respect to other parts of the country outside the metropolis, that it would be a great advantage to have the power of asking for such returns as you have in the metropolis?—I should think so.

13,201. I presume you find it to be of the greatest service?—The greatest.

13,202. Of course, in allowing an exception in the case of alteration of structural property, you include new property?—Quite so.

Compound-  
ing in Islington.

13,203. Just one question about compounding: Has your vestry ever considered the question of applying compulsory compounding under section 4?—Yes.

13,204. And have they decided against it?—They have decided against it, because it would be an unwise thing from a pecuniary point of view; they have come to the conclusion that they would be losers.

13,205. Does not your present system, which last year required 25,000 summonses to be issued, rather harass the ratepayers?—We do not find it so.

13,206. These people, I presume, are brought into court, are they not?—They attend very largely as a matter of course, and get time allowed almost as a matter of course—a week's time or something of that sort is what they want. The class of persons who compound in Islington are not so very much above them, and are as likely as not to be summoned themselves.

13,207. Would there not be greater certainty of getting more money than you do under your present system by obtaining your rates from the owners under section 4, even with the deductions?—No, I think we have come to the conclusion that we should be decidedly losers.

13,208. You have counted the cost?—Yes; you can imagine that when I tell you that 6s. in every 100l. represents our loss.

13,209. But that is a state in which I may say very few parishes in the country would be?—That is so; largely, if I may say so, owing to the fact that they allow the quarter to run over before they attempt to enforce, and the person has gone.

Quarterly collection of rates in Islington.

13,210. Of course you lay great stress upon this collection of rates quarterly?—And within the quarter; and I say so again, because I have reason to believe that you remove from your collectors a very great temptation which is often afforded to them by not collecting within the quarter. I only heard of a case the other day, not in my own parish, though I remember one. In some parishes in London the collection of the rates overlaps, and collectors—unfortunate men—have been more than once induced to help themselves from the quarter's rates, knowing that before that quarter is balanced up they will have a new quarter coming in.

Demand notes and receipt forms: Uniformity desirable. Actual purposes for which rates are levied should be specified.

13,211. It opens the door to great abuses, then?—I think so.

13,212. There are two points referred to in your memorandum on which no questions have been put to you, and I should like to put one particularly with reference to there being more uniformity in the forms of rate demands and rate receipts?—That is a very interesting point to me.

13,213. Is there not some special provision in the metropolis for a consolidated rate?—No, there is no such thing now as a consolidated rate. That was

destroyed by the Act of 1888 when the London County Council was formed, by which the whole of the council's requirements are merged in the poor rate.

13,214. You suggest—in which I entirely agree with you—that the present names which are now used in that form of obtaining money for rates are very misleading?—I think they are undoubtedly so.

13,215. For instance, the poor rate includes the police rate?—And the county council expenditure and the metropolitan asylums.

13,216. And the school board rate?—No, not the school board rate. The school board rate is included in the general rate by an equal absurdity.

13,217. Would you suggest that if a new form could be authorised, the poor rate should merely mean the amount collected for the relief of the poor?—That is my point.

13,218. In the same way with respect to the asylums rate, that that should merely mean the expenditure of the Metropolitan Asylums Board?—Quite so, or practically the relief of the sick.

13,219. So with the county rate with respect to the expenditure of the county council?—Yes.

13,220. So with the education rate with respect to the expenses of the school board?—Quite so.

13,221. So with the police rate with respect to the expenses of the police?—Quite so.

13,222. And so with the district rate with respect to the expenses of the local authority?—Quite so.

13,223. When the rate is demanded from the ratepayers, you would have all these different specified names introduced, showing the purposes for which the rate is demanded?—Yes, because, as a matter of fact, as I could show you by my own rate receipts, we are bound now to split up the meaning of the rate by a lot of almost unnecessary words in order to show the ratepayer what he is paying for; otherwise we have letters coming to know what is the cause of this increase in the rate and whose fault it is. We want at once to lay the burden upon the right shoulders.

13,224. Of course, if that is good for the metropolis, it would be equally good for the country generally?—I should think so. I am not quite sure of one thing, perhaps, in regard to the country. In London the incidence of the rating in regard to all these rates is practically the same, owing to there being comparatively little land; but I am under the impression that probably there are some rates in the country, lighting it may be, and so on, where the incidence of a rate would not be the same on one property as on another. Certain properties, I am under the impression, are exempt perhaps from the sewers rate or from something of that kind.

13,225. Still, your view with respect to making the poor rate merely represent the money spent upon the poor would be equally applicable to the country as to the metropolis?—Yes, only I am proposing to abolish in London the term lighting rate and sewers rate and calling all the district rate, which is a far better term, I think, than to call it a lighting rate.

Tenement houses: Compounding desirable.

13,226. With respect to what are called tenement houses, what is your suggestion as to the mode of meeting that difficulty?—That is a growing difficulty, I believe, at the present time in London, and persons who own this class of property are forcing some of the parishes in London to assess to the poor's rate separately, not in houses, but rooms which might be let out in tenements one quarter and as a whole the next.

13,227. In the case of flats, is each occupier of a flat rated separately?—Yes. Where we have artisans' dwellings and labourer's dwellings built in Islington for the purpose, and structurally separate, we rate them separately; but we have a difficulty in dealing with that class of house which you are probably familiar with in some parts of Islington which are going down. Say, a respectable street the houses in which originally let at 40l. a year goes down in value and the landlord finds he must let his houses out in separate tenements, at all events one here and one there; then when they are let out in tenements neither of the occupiers can be rated for the whole, but it is certainly very undesirable from every point of view that each tenant should be rated separately from the other—that the house should be separately arranged one quarter and then perhaps have to be restored or re-arranged another quarter.

Mr. W. F. Dewey. 13,228. The present system is very inconvenient, no doubt, to the rating authority?—Yes.

13,229. And to the preparation of the list of rate payers?—Yes.

13,230. Would you consider the mode of rating the owner would be the best way out of the difficulty?—I certainly do, and I imply in paragraph 18 of my memorandum that I am under the impression that it is reserved by existing legislation in the Act of 1867.

13,231. Are you quite certain that that has not been repealed?—I am almost certain that it has not been repealed.

13,232. I do not know whether you are aware that that clause was put in the Act of 1867 when compounding was abolished?—Quite so, and Mr. Sturges Bourne's Act was repealed.

13,233. In the year 1869, I think it was, the whole compounding system was again set up?—Yes, by the Poor Rate Assessment and Collection Act.

13,234. Did not that Act repeal this exception?—No, I think not; and I think Sir Hugh Owen expresses that view himself in his introduction to the Act.\* I think it right to say that there was a decision upon it very shortly after it was passed in *Stamper v. the Overseers of Sunderland*—a very noted and often referred to case, in which the overseers of Sunderland attempted to rate Stamper, who was the occupier of a room or rooms in such a property. He appealed, and it was held that he had been improperly rated.

13,235. I may say that I am interested in this question. Do you think there would be any difficulty in the rating of owners in such cases?—We never find any difficulty in Islington, because, as a rule, and I think it is so with the metropolis generally, these landlords collect their rents inclusive of rates, but they would be very desirous of getting a commission if they

\* The witness subsequently wrote—"In the 5th edition of the Poor Rate Assessment and Collection Act, by Hugh Owen, junior (Knight and Co.) there occurs the following note to page 8:—"The Representation of the People Act, 1867, by section 7, enacts that where the dwelling-house or tenement shall be wholly let out in apartments or lodgings not separately rated, the owner of such dwelling-house or tenement shall be rated in respect thereof to the poor rate. The section referred to is not repealed by this Act, and continues in force in parishes wholly or partly comprised in Parliamentary Boroughs."

The witness withdrew.

Mr. WILLIAM CHAMBERS LEETE called and examined.

13,242. (Sir John Hibbert.) I believe you have been vestry clerk of Kensington for some years?—Since 1889.

13,243. Having previously occupied other positions of official experience in other departments?—Prior to taking up my position at Kensington, I was for six years under Mr. Dewey at Islington, holding the position of chief clerk at Islington. Altogether I have had some 20 years' experience in municipal life.

13,244. You have had a very varied experience, I presume, in your position as assistant vestry clerk at Islington and in your present position?—The vestry of Kensington, like the vestry of Islington, are overseers for rating purposes, and consequently my experience has been somewhat wide.

13,245. Is the Kensington case somewhat parallel to the Islington case, or does it differ in any great respect?—I think you will find that it runs very much on the same lines.

13,246. In regard to the valuation list, you, I presume, take much the same action with respect to the making up of that list as is done in Islington?—Yes, I may mention that the parish of Kensington is a union within itself, using the words of the Valuation Act, and the vestry therefore appoint the assessment committee, and I act as clerk to that committee. The vestry act as overseers, and they prepare the list, the actual duty of the preparation of the list being deputed by them to a committee, which is a somewhat large committee, consisting of 32 members of the vestry with other *ex-officio* members.

13,247. The valuation list, I see, contains something like 24,000 rateable hereditaments?—Yes.

13,248. What is the population of Kensington?—About 167,000.

13,249. Would you say a few words\* with respect to the second part of your memorandum, which refers to

could force the vestries and overseers into dividing the assessments.

13,236. Would it not be necessary in those cases to give the landlords some allowance, like you do in the case of compounding on account of possible empties which might occur?—No, I think not. It seems to me that, in the case of a 35l. or 36l. or 40l. house, the person who is interested in the house has no more right to claim an empty than I have in my house or you might have in yours, because you might happen to have two of the rooms at the top unoccupied.

13,237. In the case of empty houses they are not rated at all, and they do not pay any rates?—Quite so, but if I, in my house, happen to have half of it unoccupied, I have to pay for it.

13,238. Would you treat it as a whole house?—As a unit, yes.

13,239. When you are speaking with respect to the appointment of the overseers by the different authorities in the metropolis, are you aware of the clause that was put in the Act of 1894, giving power to the Local Government Board, on the application of any municipal borough or county borough, or any other urban district, to make an order granting the appointment of overseers and assistant overseers to those bodies?—Yes, but the Local Government Board will not do it, or at all events transfer the powers and duties of overseers to the local authorities.

13,240. Is that the case, that they have not done it?—They have declined to do it in our parish, where, however, as I have already said, it is not much needed, because we are the overseers for rating purposes; but we are not the overseers, for instance, for making out the registration lists, or for the preparation of the jury lists, or for dealing with disorderly houses. As a matter of fact, we do it all because the overseers are members of the vestry, and I act as the clerk to both bodies.

13,241. Would you be in favour of making that provision compulsory?—As I say, I would make the local authorities responsible for the whole of this class of work, which is administered by such an authority in Islington, and, I think, with very great success.

Mr. W. F. Dewey.

25 Feb. '98

Overseers and assistant overseers, appointment of, by borough councils. Powers of Local Government Board.

Mr. W. C. Leete.

Valuation in Kensington. Preparation of lists.

Mr. W. C. Leete.

Conferences convened by London County Council were beneficial.

the principles adopted by your assessment committee in dealing with the valuation list and determining the gross estimated rental and rateable value of different classes of property. You have, I suppose, sent representatives to the conferences that have been called by the London County Council?—On both occasions Kensington was represented at those conferences.

13,250. Do you approve of the action taken by the London County Council; do you consider that it has been of service to the different parishes of the metropolis?—I have mentioned in paragraph 13 of my memorandum that I consider it was a most politic step which the Council took in convening those conferences. I am quite satisfied that the work performed at those conferences has resulted in good generally to the metropolis. I am not altogether in sympathy with the action taken by the County Council in regard to dealing with the valuations in the metropolitan parishes. There, I think, they have not shown quite the discretion that one would have hoped for.

13,251. I suppose you would admit that the action of the London County Council has been the means of obtaining greater uniformity in the assessments of the metropolis?—Through the action taken at the conference where we all met, and where we laid down certain rules which should guide the rating authorities in dealing with valuation matters, and owing to the prominence which was given to the matter, and to the guidance which was laid down by those rules, good has been accomplished.

13,252. While we are upon that question, may I ask you whether you would approve of some central body being appointed?—I do not say that it would be the London County Council—but some central body which should control the different actions of the different assessing authorities of the metropolis?—I am clearly of opinion that there should be a supervising authority.

13,253. Have you formed any opinion as to what that supervising authority should be?—I rather fancy the

A central representative authority desirable in London to control various valuation authorities.

Valuation in Kensington: Principles adopted in arriving at gross value.

Valuation of licensed premises in Kensington.

Valuation in Kensington: Maximum deductions are made.

Compounding in Kensington.

appointment of a Board. I heard the evidence given by the last witness, and he expressed exactly the view that I was going to submit to the Commission, namely, that it should be a board upon which the representatives of the various parishes should sit. I do not think that it is desirable that an elected body, elected on a somewhat narrower franchise than the vestries, should supervise the work of the vestry. I think there is objection to be taken to that on principle. It causes some friction, but if there could be a central board, on which the Government should have its representative, the various central authorities their representatives, and upon which the parochial authorities should be duly represented, I think that would be a very good board to deal with this matter.

13,254. Will you state the principles you adopt in Kensington with respect to the valuation of properties of various kinds?—In the case of quarterly or annual tenants, or where the property is held under three years' agreements, with no liability upon the tenant for repairs, the rent is taken as the gross value. Where the property is held on agreements or leases which throw the liability for repairs upon the occupier, it is our practice to add 10 per cent. to the rent to arrive at the gross value. In the case of freehold properties, where no assistance is derived from the letting value of adjacent and similar property, it is our practice to take 4 per cent. on the value of the land, together with 5 or 6 per cent. on the value of the building, and thus to arrive at our gross value.

13,255. With respect to the assessing of public-houses, do you adopt the rules laid down by the conference that was held?—In the main we follow those rules, but just at the present time the valuing of public-houses in the metropolis is really furnishing very great difficulties to the authorities. As a rough and ready principle, we take the rent reserved under the lease together with a per-centage (calculated in accordance with Table A. of the resolutions passed by the Conference\*) of half the premium, with 10 per cent. added for repairs, and the sum of these amounts represents the gross value.

13,256. Do you obtain the valuations of public-houses by experts, or merely by the assessment committee?—By the valuation and rating committee, who act as overseers.

13,257. Do they employ experts to value these properties?—No, we have not found it necessary to employ experts.

13,258. I suppose your experience is that the value of these houses has very much increased of late years?—Of recent years there have been remarkable rises in the price.

13,259. As regards the deductions made from the gross value, do you take the maximum in every case?—We take the maximum deductions as laid down in the third schedule of the Valuation Act, and I believe that course is followed in every other metropolitan parish.

13,260. I daresay you have heard the questions put to the former witness with respect to what might lead to a certain amount of unfairness in the valuation owing to the difference in the value of the sites upon which properties are built?—Yes, I heard those questions.

13,261. What is your view upon that point?—I must confess that I have not given thought to that particular point, and without having given some thought to it, I should hardly like to speak upon it.

13,262. With respect to the composition, do you allow compounding under both sections of the Act in Kensington?—In Kensington section 4 is in operation. The vestry adopted section 4 of the Act shortly after the same passed, and it has been in force in Kensington ever since.

13,263. What is the allowance you make under section 4?—Under section 4, as you are aware, we rate the owners; there is a compulsory deduction of 15 per cent., and then it is our practice to require those who desire to be rated for the whole year to give notice to that effect, and those notices are considered on their merits, and in some cases a further abatement of 5 per cent., in some cases 10 per cent., and in some cases the maximum further abatement of 15 per cent. is allowed.

13,264. Would those extreme cases of allowing the additional 15 per cent. cover empties—would the owner pay for empties?—In all cases where a further abatement, whether of 5, 10, or 15 per cent. is allowed, the rates are paid whether the properties are empty or full. I might mention the number of properties in the parish rated at 20l. and under to which section 4 applies is 2,765, that is 11·13 per cent. of the rateable hereditaments of the parish. The number of properties in respect of which the owners are voluntarily rated for the property, whether the same is empty or not, is 2,193, and the deductions allowed beyond the statutory 15 per cent. are as follows: in the case of 356 properties an additional 5 per cent. is allowed, in the case of 452 an additional 10 per cent., and in the case of 1,385 an additional 15 per cent.

13,265. What is your system with respect to the collecting of the rates, is it half-yearly or quarterly?—In Kensington the rates are made and collected half-yearly—in the early part of April and of October the rates are made, and they are for the period from Lady Day to Michaelmas, and from Michaelmas to Lady Day respectively.

13,266. The number of assessments, I think, you said was 24,000?—Yes.

13,267. And out of that number it appears you had a considerable number of summonses which were obliged to be issued in the parish for the last year—5,168, I see?—That was the number.

13,268. In 1,379 cases you were obliged to issue distress warrants?—That is so.

13,269. Is that not rather a large number out of the number of assessments, considering that you have the compulsory composition arrangements in operation?—I should say that it is a very large number.

13,270. How would you account for it?—I have no explanation to offer, but I submit to the Commission that the number of summonses issued goes to show the difficulty that persons have in paying their rates in Kensington.

13,271. Now, with respect to Kensington and Islington, is the class of persons different? Have you a lower class in Kensington than you had in Islington?—Kensington is a peculiar parish. It might be divided into two parishes. There is the wealthy residential district of South Kensington, there is a residential district of the middle class in the north, and in North Kensington, too, there are also some of the very poorest persons that can be found in London.

13,272. Is that latter class a decreasing body?—It is an increasing quantity.

13,273. Not a decreasing one?—I should say it is an increasing quantity. Having had experience of the collection of rates both in Islington and in Kensington, I have not the slightest hesitation in saying that the rates are far more difficult to collect in Kensington than they are in Islington. In the one parish you have a more uniform description of property; the rents are not so high, and consequently the demands in the shape of rates are not so high. It is when you come to demand the very much larger sums that the capacity of the persons is tested to the utmost to meet those liabilities. For instance, in South Kensington, even in our wealthy districts, persons, we may say, without due forethought, take upon themselves responsibilities which they are not able to cope with, and eventually it comes to this, that we are compelled to take the most extreme process, even to committal to prison, to obtain from them or to extract from them the rates.

13,274. (Mr. Elliott.) Do they actually go to prison?—Large numbers go to prison. Dealing with the year ending Lady Day last, in 139 cases, applications were actually made for the committal of the person to prison. Of course the whole 139 persons did not go to prison. Many paid either during the time that was given before the warrant should be put in force—possibly a week or so was given by the magistrate—and in other cases the amounts were paid on arrest; but I should say that at least 25 or 30 persons actually suffered incarceration.

13,275. (Mr. Dalton.) What time would they remain in prison?—The warrant of committal runs for one month. Of course, when a person goes to Holloway, in many cases efforts are made by the friends of the person to pay over to the governor of Holloway Prison the amount of the rates which the warrant is for, and the person is then released; but in many cases the persons serve the full term.

Collection of rates in Kensington and Islington compared. Number of committals to prison.

\* London County Council Return. Assessment Conference 1893-4. Resolutions, &c. (No. 166). P.S. King and Son, Great Smith Street, Westminster, S.W.

Mr. W. C. 13,276. (*Sir John Hibbert*.) I presume that most of those cases would be cases of persons living in houses over a rateable value of 20l. ?—In all cases.

25 Feb. '98

13,277. Is not that rather extraordinary?—It is. I give you, as one instance, a person in Cromwell Road, which is spoken of as one of the wealthy districts. It is a person who keeps an hotel; I have had to apply for a warrant of committal against that person for certainly the last eight half-years.

13,278. (*Mr. Elliott*.) He has never gone to prison, I suppose?—He has been arrested, but the money has always been forthcoming.

13,279. (*Sir John Hibbert*.) Have these difficulties suggested to you any plan of making it less hard upon the ratepayer—any change in the mode of collection, or any other plan that you could adopt which would alleviate the pressure?—No. The only remedy that I see is to keep down the rates to as reasonable an amount as possible.

13,280. Are your rates higher than the rates in other parts of the metropolis?—According to the last published return of Mr. Gomme's, our rates were 5s. 11d. in the £ for 1896-7, the average rates for the metropolis being 6s. 2d. in the £.\*

Collection of rates in Kensington : Empty houses, losses, arrears, &c.

13,281. (*Mr. Stuart*.) Is there anything else that you want to add to what Sir John Hibbert has put to you?—On the question of the collection of the rates, I should like to call attention to two points in connexion with the table showing the percentage of rates collected, the percentage of rates lost on empty houses, the percentage discharged as irrecoverable from various causes, and the recoverable arrears carried forward, which is given in paragraph 17 of my memorandum. One is the large percentage that has to be written off by reason of empty properties; no less than 6·47 per cent. in the year 1896-7, and that is lower than it has been for some years, it being in 1895-6, 7·96, and 1894-5, 8·19. The other is that the amount actually discharged—that is for runs and excusals—is 0·42 for the year 1896-7, 0·45 for the year 1895-6, and 0·54 for the year 1894-5. I think that really amounts to about 8s. in £100. The last witness noticed that the loss in Islington on that source was about 6s. in £100, so that there is really no very wide discrepancy between Islington and Kensington as regards the loss from runs and excusals.

Surveyor of taxes : His attendance at all meetings of valuation authorities in Metropolis, generally speaking, would prevent serious wrong being done by those authorities.

13,282. Is there any other point that you would like to make any further remarks upon?—With regard to the question of the surveyor of taxes and his position, I may mention that in Kensington, at the quinquennial periods when the valuation list is being prepared, it has been found a convenient course to allow the surveyor of taxes to attend all meetings of the Valuation and Rating Committee when acting as overseers. The surveyor of taxes has no statutory right to be present, but the vestry have always considered that it has assisted matters—at any rate, they have, at the last two quinquennial valuations with which I have been associated, deemed it expedient that the representative of the Crown should be present from the commencement of the proceedings. That, no doubt, has led to a simplification of the work of the assessment committee when revising the valuation list, because if the surveyor of taxes attends the valuation and rating committee, and is heard by them when the assessment is fixed, it avoids the necessity for him to lodge objections. At the last quinquennial valuation the number of objections lodged by the two surveyors of taxes who had districts in Kensington were 32, and I may state that 30 of those referred to public-house property, which I have already said is creating so much difficulty for the authorities.

13,283. Do you regard the intervention of the surveyor of taxes as not adequate for keeping the London rating authorities on a uniform basis of action?—The surveyor of taxes, if he is a person who does his duty, does certainly, I think, prevent any serious wrong being done by an assessment authority, but I do not think the surveyor of taxes looks at it with so keen an eye as a representative might who was sent there by, we will say, the various metropolitan central authorities to watch the interests of the metropolis, and not the interests of the country generally.

\* For the year 1897-8 the rates in Kensington were 5s. 8½d., and the average for the Metropolis 6s. 1d. See London County Council Return. Rates made in 1897-8 (No. 384). P. S. King and Son, Great Smith Street, Westminster, E. W.

13,284. Is there any other point that you would like to explain or enter upon further than you have done?—I think not.

13,285. I see that in paragraph 13 of your memorandum you refer to the Bill\* for the Amendment of the Valuation (Metropolis) Act, introduced into Parliament on behalf of the County Council by Mr. Benjamin Cohen and myself; do you, generally, approve of the provisions of that Bill?—I was, as I have stated before, present at the conference, and I took some active part in the discussions with regard to that Bill. In the main, I approve of it. The only point I was at difference upon with the conference generally was with regard to the constitution of the County Valuation Committee, which it was proposed should be appointed under that Bill. You will remember that at the early part of the conference a resolution was passed that the County Valuation Committee should consist of certain members of the London County Council, and representatives from the various assessment committees of London, but I fancy that the Bill as finally settled left the appointment of the County Valuation Committee entirely in the hands of the London County Council. That I deemed to be an objectionable feature of the Bill.

13,286. You prefer the first arrangement?—Yes.

13,287. Was it the conference that suggested the second arrangement, which was finally adopted in the Bill?—The conference were not quite consistent on that point. At one meeting they passed a resolution on one line, and at a subsequent meeting, with a more scanty attendance, I think it was, they rather departed from their former resolution.

13,288. Still, I may take it, that with the exception of that important point that you refer to, the general lines of the Bill are such as you would approve?—Yes.

13,289. Do you think that then there would be a fairly satisfactory system of valuation and assessment in the metropolis?—Yes, I do.

13,290. Your present parish is a parish where the union and the vestry are conterminous?—Yes.

13,291. The vestry are the overseers, are they not?—For rating purposes the vestry act as overseers.

13,292. Should I be right in supposing that you think that that system might well be extended to all other similarly situated parishes?—Yes, I think the local authority of the district should have entrusted to it the valuation of that district, undoubtedly.

13,293. You probably heard my question to Mr. Dewey about those portions of the metropolis that are under what we call Schedule B. Do you see any similar way of dealing with them?—I perceive a difficulty whilst the existing boundaries remain, but if those districts were created governing districts, then I think the same principle which applies in Kensington could be made applicable to them.

13,294. Do I understand that what you mean is, if they were to all intents and purposes a directly elected local authority?—That is so—made the unit for local government purposes.

13,295. Are they not that almost as it is, exclusive of the poor law?—For Board of Works purposes they are; that is to say, for all works under the Metropolis Management Act they are, undoubtedly.

13,296. Would you propose, as part of the same scheme, to do away with the parish as an area for the poor law, and to make the union conterminous with the Local Government Board district?—I have not thought of the position as regards the working of the poor law.

13,297. Then I will not go into that. I presume the system of valuation and assessment that you would fairly approve of in the metropolis would be the overseers being the local government body, and certain supervision being exercised from the centre, with a view to keeping them on the same basis?—Yes, a certain supervision, to see that the principles of the Act were not departed from. But I do feel that it is essential that the work should be done locally, because I think you get local knowledge.

13,298. I was coming to that; I was going to say that I presume you would be entirely against an

Bill for the amendment of Valuation (Metropolis) Act. Approval of its provisions except that County Valuation Committee should consist of London County Council.

Valuation in Kensington : Areas and powers of overseers.

County valuation authority desirable for supervision, but not to perform actual work of valuation.

Mr. W. C. Leete. endeavour to make a county valuation the basis?—I should.

25 Feb. '98 13,299. You need not answer this question unless you like; would you apply the same scheme to the rest of the country; have you considered whether you would make a county valuation authority, or a union valuation authority, or a local district valuation authority, or a parish valuation authority?—I am afraid I must say that I have not considered the question in its bearing upon the country outside the metropolis.

Losses on empty houses should be made a common charge throughout Metro- polis. Divergence in practice in Metro- polis of including new properties in valuation list. 13,300. Now, passing to another point, you have mentioned in paragraph 17 of your memorandum the loss to the parish from empties and the like; quite apart from the idea of rating empty buildings—which is altogether a different question—have you considered the question of whether the loss on empties should be borne by the parish or should be made a common charge on London?—I am strongly of opinion that no parish ought to be called upon to contribute to common charges on the empty property within the district.

13,301. That would practically come, from another point of view, to making it a common charge on London?—Certainly.

13,302. Have you thought how you could manage to let the parishes off from contributing on their empties?—The point was raised at the conference which was before referred to, when a resolution was passed.\* The attention of the conference was called to the divergence of practice as regards the rating of empties. As Mr. Dewey has just said, some parishes rated their properties immediately they were structurally complete, other parishes awaited occupation before they put these properties into the valuation list. To remedy that, the conference passed a resolution that all properties should be assessed immediately they were completed, and it went on to state that, with a view to encouraging parishes to do this, the central authority should, in the issue of their precepts, be required to make an allowance for the empty properties. It was thought that that might be done by the central authority, requiring from the district a return of the empties for the previous year, and allowing on that basis.

13,303. Did that proposal seem to meet with favour?—That proposal found favour, and was passed as a resolution of that conference. It went on to say that an amendment of the law should be brought about to allow this to be done, but of course that amendment of the law has not yet been effected.

13,304. It was not introduced into Mr. Cohen's and my Bill?—No, it was not.

Empty property in Kensington: Particulars of. 13,305. But I presume you know we were very anxious not to overload that Bill?—That is so. It may be interesting to the Commission if I state from my rate books the rateable value of the empty property in Kensington during the year ending Lady Day, 1897, upon which the parish was required to contribute towards common charges.

13,306. We should be glad if you could give us that?—The rateable value of the property in the half year to Michaelmas 1896, was 136,090*l.* and in the half year to Lady Day 1897, 133,003*l.* that gives a total of 269,093*l.*

13,307. Out of a rateable value of how much?—Out of a total rateable value of two millions. Then of course that has to be divided to give it for the year, so that you may take the rateable value of the empty properties in Kensington to have been 134,500*l.* in round figures.

13,308. Out of a total of two millions?—Yes, that is to say, taking the common charges at 4*s.* in the £. (Mr. Gomme makes them 4*s.* 2.21*d.*.) Kensington contributed to the common charges nearly 27,000*l.* more than it should have done.

13,309. And in fact that 27,000*l.* became an additional burden upon existing occupiers?—That is so.

Compound- ing in Ken- sington. 13,310. Then, take the question of compounding; when you compound you draw a smaller sum for your vestry, but do you have to pay on the full amount to the central authority?—Certainly.

13,311. Do you suggest any method of meeting that difficulty?—Of course that has not been so glaring a difficulty in Kensington.

\* London County Council Return, Assessment Conference, 1893-94, Resolutions, &c. (No. 168). P. S. King and Son, Great Smith Street, Westminster, S.W.

† For 1896-97. In 1897-98 they were 4*s.* 1.7*d.* See footnote to 13,280.

13,312. Still it is a difficulty of the same class, is it not? You are rated by the central authority upon the total value, and you yourself only raise from say two thirds or three fourths of that value, and the consequence is that it is as if a fourth was empty for the purposes of calculation?—Yes.

13,313. I think you said that the rates in Kensington were 5*s.* 11*d.* in the £.\*?—Yes.

13,314. What percentage of these rates is raised by the vestry, or are they all collected by the vestry, or by whom are they collected?—All the rates are collected by the vestry.

13,315. Then would you propose having a similar arrangement generally throughout London for the collection of the rates as well as for the assessment by the local authority?—Do you mean one uniform system of collection?

13,316. To explain what I mean, the rates are not at present always collected by the vestry of course; as you have already said that you would have the assessment made by the vestry, acting as overseers, I suppose you would have the rates collected generally by the vestry, or local authority?—Certainly. I may state that in Kensington, prior to the year 1888 there was a board of trustees of the poor, and the position was somewhat complicated. The vestry still ascertained and made the rates, but as regards the collection of the poor rate that rested with the trustees of the poor, whilst the vestry collected the general rate. Of course, had there been any conflict between the two bodies it would have simply resulted in chaos, but as a matter of fact the trustees of the poor appointed the same men as collectors as the vestry, and so the matter was arranged without much friction.

13,317. When did that system come to an end?—In 1888, the Local Government Board, by a Provisional Order, abolished the board of trustees of the poor and transferred all their duties to the vestry. Since that time, of course, the matter has been very much simplified.

13,318. I presume greatly to the public advantage?—Undoubtedly.

13,319. You are aware that there are districts in London where the former state of things in Kensington still prevails?—I believe there are.

13,320. You see no reason why that should continue to prevail, I presume there has been no regret in Kensington at the change?—Not at all, but the reverse.

13,321. You collect that 5*s.* 11*d.* of rates, but of course the vestry only has the control of a portion of that?—Only of a portion.

13,322. How much does the vestry control?—On our rate demands we summarise, for the information of the ratepayers, the purposes for which the rates are levied. We show thereon the expenditure of the County Council, the Metropolitan Police, the London School Board, and the Guardians of the Poor—over whose expenditure the vestry has not the slightest control; also the expenditure of the Baths and Washhouses and Public Library Commissioners, over which the vestry may be said to have only a limited control, because the duties of those bodies have not been taken over by the vestry.

13,323. The vestry could take them over under the Act of 1894, could they not?—They could. Our rate demands also show, of course, the amount which the vestry have direct control over.

13,324. Do you take any account in that notice paper that you have described to me of balances unapplied from last year?—No, we simply deal with the calls of the various authorities.

13,325. But you raise sometimes more than is required, and sometimes less, do you not, because of the balances existent?—That we do show in our estimates which we prepare; but with regard to the rate demand, that shows the amount which it is assumed will be spent during the period.

13,326. Of that 5*s.* 11*d.* how much is spent under the control of authorities within Kensington, and how much is altogether beyond their control?—I can give you the return for a few half years.

13,327. Perhaps you will do so?—I will give you for the half-year ending Lady Day, 1897; the expenditure

Mr. W. C. Leete.

25 Feb. '98

Collection of rates in Kensington: Purposes for which rates are levied, and authorities who expend them.

\* See footnote to 13,280.

Mr. W. C. by the vestry then was 58,308*l.*, and the expenditure  
Leete. by other authorities, 230,710*l.*

13,328. (Mr. Elliott.) Could you give those in detail?  
25 Feb. '98 —Yes. The London County Council, 53,996*l.*; the  
equalisation charge, 8,663*l.*

13,329. (Mr. Stuart.) Is that 8,663*l.* the balance of  
the equalisation, or is that the product of the whole  
6*d.*?—It is the contribution to the fund by the parish.

13,330. But you get back a portion?—That is the  
amount after the allowance has been made; it is the  
net payment.

13,331. That is what I meant; it is the net payment  
by you after the total 6*d.* has been paid and after the  
deduction of what is received back again?—That is so.

13,332. You have a net sum to pay out of your  
pockets of 8,663*l.*?—Yes.

13,333. Will you go on, please?—Then, the guardians  
of the poor are responsible for 87,341*l.*

13,334. That, I presume, represents the sum payable  
by the parish other than comes on the Metropolitan  
Poor Fund, or does that include what you pay towards  
the Metropolitan Poor Fund?—It includes what is  
paid towards the Metropolitan Common Poor Fund.

13,335. Less what is got back?—Yes.

13,336. That is the net guardians' precept?—That is  
the net guardians' precept, exclusive of the County  
Council. Then there is the Police Rate, 21,575*l.*; the  
Commissioners of Baths and Washhouses, 2,288*l.*; the  
Commissioners of Public Libraries and Museums,  
1,991*l.*, and the expenses of the Burial Board, 290*l.*

13,337. (Mr. Elliott.) What about the School Board?  
—Then, the School Board for London represents  
54,566*l.*

13,338. (Mr. Stuart.) Where does the Asylums Board  
come in?—Under the guardians' call.

13,339. You do not know, of course, how much that  
comes to?—No, I do not.

13,340. Have you given us the whole sum?—I think  
you will find that I have given you the whole sum.

13,341. Of these items the vestry is not the largest;  
the largest appears to be the guardians?—Yes, that  
is so.

13,342. Have you ever had the guardians claiming  
to be the assessing and rate-collecting authority?—I  
never heard of it.

13,343. They never were, I suppose, in your district,  
except so far as through the trustees of the poor in the  
old time?—I believe so.

13,344. Have you anything to say upon these various  
items, or upon your objection to or approval of them as  
outside your own control?—I have made several obser-  
vations in paragraphs 27 to 38 of my memorandum, as  
regards the equalisation of rates fund; perhaps you  
would say whether you would take that at the present  
moment.

13,345. If you would like to say anything upon the  
equalisation of rates fund by all means do so now?—I  
venture to submit to the Commission that the question  
of this equalisation of rates is one upon which a con-  
siderable amount of misapprehension has existed, and  
it is one which requires to be approached in a very  
judicial manner. That in the peculiar circumstances  
of the parishes of the metropolis there must be certain  
expenditure in the administration of its affairs, whether  
such administration is carried out by a central authority  
or a local authority, which should be borne equally by  
the rateable occupiers of the whole Administrative  
County of London, no person who has considered the  
subject will gainsay. The principle has been widely  
recognised in regard to the Metropolitan Common  
Poor Fund, in regard to the expenditure of the London  
County Council, in regard to the Metropolitan Asylums  
Board, in regard to the School Board for London, and  
in regard to the Metropolitan Police; and it has now  
been further extended by the operation of the London  
(Equalisation of Rates) Act, 1894. I should like, in the  
first place, to point out one fact which, of course,  
ought to be apparent to everybody, but to which, I  
venture to think, sufficient importance has not been  
attached in the past, viz., that, by reason of the fact  
that all the expenditure of the central bodies is appor-  
tioned among the various parishes and districts on the  
basis of their rateable value, there is something more

than equalisation of rates effected, and that is that in  
the parish or district in which rents are high whether  
you take the wealthy resident occupying a mansion or  
the clerk or artisan occupying an 8 or 10-roomed house,  
he is called upon to assist, by contribution, the rate-  
payers in the parish in which lower rents prevail.  
To make my point perfectly clear, if I may, I will  
take two persons whose circumstances shall be equally  
good; they have eight-roomed houses affording exactly  
similar accommodation, the one situate in Kensington  
and the other in Islington. In the one case a rent of  
50*l.* per annum is paid, and in the other the rent is 40*l.*  
The Kensington ratepayer not only pays an equal rate  
in the pound with the Islington ratepayer, but he has  
to pay that rate on the increased amount at which he  
is assessed by reason of his higher rent.

13,346. You have made your point very clear, as,  
indeed, your whole evidence has been. First of all,  
I understand that your point is that there is already in  
existence, without any new machinery being brought  
into play, a large contribution from a richer parish to  
a poorer one, through the common public bodies,  
because of the larger rateable value of very similar  
property in the richer parish?—You have exactly  
grasped my point—that the higher rental in itself does  
at once create an equalisation—more than an equalisa-  
tion, it creates a contribution from the wealthier to the  
poorer districts.

13,347. I see your point; but may it not be said, on  
the other hand, that the contribution which is got  
through the rates is meant to be, as far as possible, a  
contribution on the basis of ability to pay, and that the  
person who lives in a house of 50*l.* a year in your  
district is thereby showing a greater ability to pay  
than the person who lives in a 40*l.* house in the other  
district?—I recognise that that is the idea which has  
prevailed as regards the incidence of local taxation;  
and I venture to suggest that that may be a somewhat  
false basis. I think that in dealing with the incidence  
of local taxation sufficient attention has not been given  
to that fact.

13,348. Would it not be possible, now that we are  
trying to see how to arrive at a fair contribution from  
one district to another, to consider this—that the person  
who lives in the 50*l.* house in your district should be  
relieved of the taxation on that portion of the value  
that arises in your district, namely, I presume, the site  
value, and that the owner of that site value should be  
brought in for the difference—do you perceive my  
point?—I perceive the point, it is the rating of ground  
values.

13,349. I do not wish to put it in that way; I want  
to put it in a more business-like form?—The rating of  
the site as distinct from the structure.

13,350. I will put it in this way; a cause of the  
difference of the rental of identical houses—we will  
presume them to be identical in your district and in  
some district in the East End—is really a difference of  
the site value, is it not?—I should say it is.

13,351. You are feeling that your occupier contributes  
more than, if all other things were equal, he ought,  
owing to his contributing on a basis of 50*l.* instead of  
on a basis of 40*l.* I ask you whether the real way of  
correcting that difference would not be to tax somebody  
else, if it could be done?—I think it would.

13,352. Do not answer this question unless you have  
considered it, but have you ever thought whether it is  
a possible thing to isolate site values from the general  
value of the building and property together?—The  
question has been before me, because it has been before  
my vestry. I am bound to say that I have not yet  
seen any practical solution of that question put forward,  
nor do I feel prepared to suggest one personally.

13,353. Would it be possible, do you think, in your  
district, to value the sites as apart from the gross  
value of the property as a whole?—I think it would be  
absolutely impracticable.

13,354. To ascertain them, do you mean?—Yes, I  
may say, taking the South Kensington district, that I  
cannot conceive it would be possible. As I understand  
your suggestion, it would be to have two columns in  
your rate book—one, rateable value of structure, and  
the other, rateable value of site.

13,355. I do not suggest the rateable value of  
structure and the rateable value of site; I suggest a  
rateable value, namely, the rateable value of site?—  
That would be the same thing, I take it.

Mr. W. C.  
Leete.

Leete.

25 Feb. '98

13,356. I do not wish to enter into the argument, but I think it would not. There would be many cases in which the rateable value of the structure and the rateable value of the site, if added together, did not necessarily make the rateable value of the premises?—I see that.

13,357. There might be very inferior premises built upon them; however, excuse me, I do not wish to enter into that. Would you go so far as to say that your feeling is that there would be a difficulty in ascertaining the value of the site?—Yes, I think there would be.

13,358. More difficulty than in ascertaining the value of the building and the site together?—In dealing with the building and the site together, you have a great deal to guide you in the rent derivable. But once you depart from that, ignoring that, you are, I venture to think, landed somewhat in a difficulty in arriving at any value of the proportionate parts.

13,359. Could you put it higher than to say that you are arriving at a greater difficulty?—I content myself with that—it is a very serious difficulty.

13,360. Suppose, for instance, I wish to buy a site, could I not get a value?—Yes.

Equalisation of Rates Act in Metropolis: Basis of contribution discussed.

13,361. I do not wish to go further in the matter because it has rather come up incidentally. Now, you have complained of the Equalisation of Rates Act, upon the grounds that you have stated; but are you not straining at a gnat and swallowing a camel? I see that your London County Council rate, your school board rate, and your police rate come together to 130,000*l.* a year, and I presume that of your guardians' precept, at least 50,000*l.* out of that 87,000*l.* would belong to the common poor fund—I should probably not be far wrong in that. Putting them together you get 180,000*l.* and the Equalisation of Rates Act is 8,000*l.*; of course, that is 5 per cent., but still do you complain of the others in the same way?—In dealing with the Equalisation of Rates Act, I should, if I could, like to exclude Kensington from my thoughts. My objection to the Equalisation of Rates Act is to the principle that has been adopted by the framers of the Act in applying their grants. They have adopted the very rough and ready idea—if we collect on rateable value, and distribute on population, we shall effect some good as regards the various parishes of the metropolis. I venture to suggest that in that they have absolutely failed. I compare the working of that Act with the working of the common poor fund, and I think that is a reasonable comparison to make. The result of my investigation shows me that the disparities are very exceptional. I have gone to some little trouble, and have prepared a statement contrasting the equalisation charge with the Metropolitan Common Poor Fund for two half-years—

13,362. Give us the one parish that you feel most backs up your position?—I would give you the following illustrations of disparity in support of my view. I find the parish of Hampstead pays 7 per cent. to the common poor fund, but it pays only one per cent. to the equalisation of rates fund. Bethnal Green receives 10 per cent. from the common poor fund, but only 5 per cent. from the equalisation of rates fund. Marylebone actually receives a small amount from the common poor fund, but contributes a substantial amount to the equalisation fund.

13,363. You have a better case than any in Islington, have you not?—Islington, of course, is the most glaring case of all. Its contribution to the common poor fund is 2 per cent., and I may state that since 1872 half-year by half-year the parish of Islington has been called upon to contribute to that common poor fund to about that extent, and she receives from the equalisation fund no less than 9 per cent.

13,364. But while these facts are important, why should they not be so? Surely the common poor fund is an endeavour to deal with the indoor pauperism of the metropolis, and the other is an endeavour to deal with something totally different? You would not surely expect from the beginning that there should be any relation necessarily between the sums received or paid by the parishes on these two bases?—But surely I think the idea, when the Equalisation of Rates Act was passed, was that you should tax the wealthy parishes to assist the poor parishes. I cannot conceive that there can be any better test as regards the wealth or poverty of a parish or district than its Metropolitan Common Poor Fund.

13,365. Let me suggest another test as to the wealth or poverty of a district, namely, the rateable value per head of the population?—I should decline absolutely to be bound by that test.

13,366. I am afraid that that is what the authors of the Equalisation of Rates Act rightly or wrongly took as the test?—Yes, they did.

13,367. Now, I think you have nothing more specially to say on the Equalisation of Rates Act beyond what is in your memorandum and what you have emphasised?—I do not know what the idea of the Commission is as to whether they intend printing the memoranda of the witnesses.

13,368. Your memorandum will be printed, so I do not think you need expand it. Have you any complaint to make of the 53,996*l.* for the county council, the 21,575*l.* for the police, the 54,566*l.* for the school board, and the 50,000*l.* odd for the common poor fund, in regard to those contributions being under outside management?—No.

13,369. You have suggested a board in connexion with appeals on rating; was that board that you suggested a central board in London to settle appeals or to make them; I mean, was it to be a judicial board to which appeals were to be referred, or was it to be a board which was to have the opportunity of objecting to the assessments in given parishes?—What I intended to imply was that it should be a board which should deal with the supervision of the work of the various assessment authorities throughout the metropolis.

13,370. Could you sketch for me in a moment what it would do? Is it to come into your parish and say to you: We must object to the rating of that individual property; and if you say we stick to our guns, then it is to say, we will appeal against you to a court—is that the idea?—I think so.

13,371. Where would that board get the funds for those appeals?—They might get their funds by being authorised to levy precepts as the other central authorities do at the present moment.

13,372. Do you think it would be a very wise step to make another precept levying authority?—I think it would be immaterial to the ratepayer whether the expenses of this central board were borne in that manner and were demanded from him in that way, or whether the expenditure of another body already in existence was increased sufficiently to allow of their performing that particular duty.

13,373. You see no disadvantage, do you, in the issuing of precepts by bodies who have not to collect the rates?—It has been a recognised principle which can be followed. So far as the local authorities are concerned, the fewer the better. Of course I can quite see that another course might be adopted, and I am not at all sure that it would not be a satisfactory one. That would be to place it in the hands of a Government department; for instance, throw the responsibility on the Local Government Board; just in the same way as, I take it, they preserve a check on the boards of guardians in regard to their expenditure out of the common poor fund, so the Local Government Board might be made responsible for seeing that the Valuation Act is properly applied in the various districts.

13,374. But that would not get rid of my difficulty of where the money is to come from, for the ordinary taxpayer would not like to pay for keeping the London rates in order, would he?—Perhaps not; but, of course, there is one point to be considered, namely, that the taxpayer is at present interested in seeing that the properties of the metropolis are properly valued.

13,375. Through the surveyor of taxes?—Through the surveyor.

13,376. You do not happen to know, do you, why the London County Council Bill for the amendment of the method of assessment in London failed to pass?—No, I do not; I think it was crowded out for want of time.

13,377. (Mr. Elliott.) Following up what Mr. Stuart has just now put to you with regard to the constitution of this central supervising authority, I gather that, in your opinion, it is absolutely necessary that the actual work of valuation should be local in the first instance?—I think it is desirable.

13,378. Then do you contemplate that the principal duty of the central or supervising authority should be the framing of regulations?—It is to see that the

A central valuation authority desirable in London to control various valuation authorities.

Mr. W. C.  
Leete.

25 Feb. '98

A central valuation authority desirable in London: Functions of such a body discussed, and what authorities should be represented. Question of appeals.

principles of the Valuation Act are not departed from. I will give just one instance. If one parish adds 10 per cent. to the rent in the case of leasehold properties in order to arrive at its gross value, and another parish adds only 5 per cent., an injustice is done by the parish that adds only 5 per cent. That actually, I believe, does occur in the present day. There are parishes in London, like Islington and Kensington, where the 10 per cent. is added, and there are parishes in the metropolis where I believe, as a rule, 5 per cent. only is added.

13,379. Do you think that in regard to the uniform application of principles of assessment to individual properties you would get what you want by adding some representatives of the central authority to the local authority, very much in the same way as the surveyor of taxes acts as the representative of the Imperial Exchequer now?—That was the suggestion that was put forward at the Conference, namely, that this county valuation committee, as it was termed, should have the power of sending representatives, not only to the meetings of the assessment committee, but to all meetings of the overseers. Many of us at that Conference thought that would be absolutely unworkable, and I believe so now. I think it would be absolutely ridiculous if I had to send to a central authority a copy of all my agenda of the meetings of my valuation and rating committee when they were discussing the matter of a valuation in a list. We thought that it would be sufficient if they had the same power as is given to the Government of allowing a representative at all meetings of the assessment committee. That, I think, would be perfectly right, but, of course, if that person came, then I think it ought to be so arranged that that person should not come in addition to the surveyor of taxes, but that he should take his place.

13,380. But you do not think that the substitution of the representative of the local authority for the representative of the Imperial Government would be satisfactory to the Imperial taxation authorities, do you?—That, of course, would be a matter for consideration between them.

13,381. Have you any doubt about it at all?—I do not suppose it would be satisfactory.

13,382. The two points that I want to put to you are these: The framing of general regulations is one thing, the application of those regulations is another; I want to know from you whether you will still allow the application of any general regulations that might be framed to be in the hands of the assessment committee?—Of the local authority?

13,383. Of the local authority as distinguished from the central authority?—Certainly.

13,384. But you would say that some central authority, either the Local Government Board or some other authority, might be authorised to prescribe general regulations where it was necessary to supplement the Act of Parliament?—Certainly. I think it would be perfectly competent, perfectly possible, to arrange that all copies of valuation lists prepared in a parish should be submitted to a supervising authority. That supervising authority would be able to check, by their officials, the work in that list, and if they saw any glaring cases where the principles of the Valuation Act had been departed from, they should be placed in such a position as would entitle them to raise an objection to that list, and to have that matter brought before another tribunal.

13,385. Is not that the application of the principles by a central authority? I understood you just now to say that you would prefer that the application of any general principles to particular properties should remain in the hands of the assessment committee?—Yes, I do think so as regards the work of detail.

13,386. But I understood you just now to say that the supervising authority should have power to examine the list in detail, and to make corrections?—I think they must do that, or else, how can they see whether the principles of the Valuation Act are being adhered to?

13,387. You do not think it would be sufficient to leave to the central authority, whether a Government department or some central municipal authority, the duty of prescribing the principles without, at the same time, vesting in them the power of seeing in detail that those principles were carried out?—I think that must be admitted.

13,388. With regard to the question of appeals, have you formed any idea as to what the proper tribunals for appeal should be in London?—I think the present difficulty is with regard to the appeals to special sessions. As you are aware, under the Valuation Act, in regard to any appeals which are made to special sessions, the court are entitled to allow those appeals, and to correct the valuation of the hereditaments brought before them, but their decisions are not allowed to have any effect on the totals of the valuation list, and, fortunately for the parishes, appeals to special sessions have been very few indeed. Why, I do not know. It appears to me that the county justices of a division sitting in the locality ought to have constituted a very desirable appeal tribunal; but they have not been made use of, and fortunately for the parishes, because, as I point out, the totals are not altered on the appeals to special sessions.

13,389. Supposing that under such a system as you have indicated, the assessment committee form one opinion as to the value of the property, and the supervising authority form another opinion, who should arbitrate between the two, or do you contemplate that the opinion of the supervising authority should hold good?—We decidedly claim that we should go before an impartial tribunal. That was one of the strong points that was fought out with regard to that Bill which has been referred to, because in the Bill, as originally drafted, the supervising authority had the power of veto. Our valuation list was to be submitted to this central authority, and they were thereupon to insert such a valuation as they might think expedient, and that was to have effect. That was very strongly protested against by all of the authorities in London, and in response to the very strong objection taken, the vetoing section of the Bill was withdrawn.

13,390. Then your opinion is that, on questions of fact, the decision of the assessment committee should, in the first instance, stand, subject to appeal, either by a supervising authority or by the individual ratepayer, to some impartial and judicial tribunal?—Quite so.

13,391. I do not know whether your attention has been at all drawn to the difference in the definition of gross value in the Income Tax Act and in the Valuation (Metropolis) Act?—I have not gone into it closely, but perhaps I may be allowed on that point to say this: My own desire is to see an amendment of the law, whereby the gross value and rateable value shall be done away with, and only one value shall be required to be entered in the rate book. I cannot help thinking myself that there is unnecessary confusion caused to the public as regards this gross value and rateable value, and that if we had one item—annual value—to take the place of both these, a very sensible and wise amendment would be effected. About the time that the surveyor of taxes or the Inland Revenue authorities are pressing their calls for income tax under Schedule A, and for the inhabited house duty, you would be surprised at the number of letters I receive, wanting to know how it is that the imperial authority bases its demand upon one amount, whereas the local authority bases its demand for rates upon another amount. I do not know whether the matter has been further complicated, but it has now been altered by the recent Order of the Inland Revenue authorities, whereby they make the deduction from our gross value to find their figures, on which they levy the income tax under Schedule A.

13,392. There is a fixed statutory deduction under the Act of 1894, is there not?—That is so.

13,393. You heard, I think, the evidence of the previous witness; at any rate, you heard some of the remarks which he made as to the under-valuation of certain parishes in London, and as to the failure on the part of some parishes to properly administer the Valuation Act. Would you, from your long experience of valuation matters, say whether, in your opinion, those complaints are justified?—I have no sufficient evidence to justify my making any such assertion.

13,394. Do you think any substantial inequity, as between parish and parish and ratepayer and ratepayer, has resulted under the system, as it was established in the Act of 1869?—I do not think there has, because I think if you found in possibly one case a parish had been under-assessed, in another case, in all probability, if you had a very close scrutiny, you would find that the parish was over-assessed. I take my own parish of Kensington. At the last quinquennial valuation, in

Mr. W. C.  
Leete.

25 Feb. '98

"Gross value" and "rateable value": "Annual value" should be substituted in rate-book.

A central valuation authority desirable in London to see that property is not under-valued.

Mr. W. C. Leete.  
25 Feb. '98

1895, we had to reduce the valuation on our ordinary house property by nearly 50,000*l.* My own experience justifies me in stating that to-day I believe Kensington stands over-assessed to even a larger extent than that—that is to say, that if a new quinquennial valuation list were made this year, we should find that that valuation list would be 50,000*l.* less than the one in force.

13,395. I will put it to you in this way: Do you consider that any evil of sufficient magnitude exists at the present time with regard to inequality of assessment and insufficiency of assessment in London as to render it necessary that some heroic measures should be taken to prevent it?—I do say this: that now that the common charges form such a substantial proportion of the rates levied, it must be conceded that there should be some authority which shall have supervising power to see that the local authorities do not under-assess. I am bound to say that, with the common charges staring one in the face, there is an undue temptation to a locality not to assess to the hilt, but rather to under-assess.

13,396. (Mr. Smith.) Do you know any reason why, in natural justice, the imperial taxation should be upon the gross, and the local taxation upon the net?—No.

13,397. Have you heard of any suggestion?—Never heard of one.

13,398. You gave an illustration just now of inequality between parishes in London, and you said that one parish was in the habit, properly enough, of adding 10 per cent. to the value of a leasehold house under the conditions you described, and another parish of adding 5 per cent.; do you know a good many where they do not add anything at all?—No, I do not.

13,399. Is there no part of London in which some addition would not be made to a leasehold house, where a tenant undertakes to repair?—I cannot imagine such a parish.

13,400. Is there no union in London—or perhaps I had better put it—is there no assessment committee which makes no addition in such a case?—I cannot imagine such a case.

13,401. (Mr. Stuart.) Perhaps we had better inform you that we have had direct evidence that the City of London does not add the 10 per cent.?—Then, I venture to submit that you have clear evidence before you that the Valuation Act of 1869 has been absolutely departed from.

13,402. (Mr. Smith.) My question was rather in reply to the suggestion of Mr. Elliott that everything is for the best in the best of all possible worlds, and I thought I could bring a stronger instance than your 10 per cent. and 5 per cent.—that I could bring an instance of comparison between 10 per cent. and nothing at all?—I was not aware of that case of the City.

13,403. (Mr. Dalton.) How would you determine the annual value for imperial and local purposes? You would not take the gross, and you would not take the present rateable value, I understand; then, what would you take?—I am not at all sure that the present rateable value would not be a proper amount to take as the annual value in the case of a house let to a tenant at a yearly rent, the landlord doing the repairs. But it would be, I take it, immaterial, as regards the principle, whether you took the gross or rateable, or whether you took something else. The position I am contending for is, that you should take one value, and that that should be the annual value, and that that annual value should be defined in the best manner possible. I leave it for better and more capable persons than myself to say what that annual value should be, but I can assume that it would affect the taxation least by taking the present rateable value, which has now been practically reached by the Government, so far as income tax under Schedule A is concerned, and which is only departed from in the case of inhabited house duty.

13,404. The Government allowance is very much less complicated than the allowance that you have in the Schedule to the Act of 1869, is it not?—I do not know what the Government allowance is.

13,405. In regard to the Government allowances—I think there are only one or two of them—they do not draw those narrow distinctions between different classes of property that you do in your Metropolitan

Valuation Act?—I know as regards the majority of the property it is one-sixth. The only difference between the local authorities and the Government department at the present moment is this, that we do not enter into shillings and pence, but take the pound above, whereas the Government, I believe, base their call upon the actual figures; that is to say, taking a gross of 100*l.*, we take the rateable to be 84*l.*, but the Government would make theirs 83*l.* 6*s.* 8*d.*, or whatever it may be.

13,406. May I put my question in this way: do you see any reason for those different scales of deduction that are set out in the Schedule to the Valuation (Metropolis) Act?—No, I do not.

13,407. You pointed out, I think, that there is a great loss to the rates in your district from the empty houses; that is rather due, is it not, to the high value of the houses that are empty than to the large number of unoccupied houses?—It is not altogether due to the high value; it is due to numbers as well as to value.

13,408. You are aware that in the City unoccupied properties are rated, I think, at a half of the rates?—Yes.

13,409. That, I understand is what you would propose to have in Kensington?—No, we do not propose that. I have touched upon that in paragraph 26 of my memorandum, and, without venturing to give an opinion, I have simply put down certain arguments which, in my humble judgment, can be adduced in favour of collecting some rates from empty houses.

13,410. I think you suggest there that the placing of some liability to contribute, at least in some proportion, to local taxation upon owners of empty property would tend to prevent properties being intentionally kept empty, and would serve also as an incentive to all owners to secure tenants for their houses?—I believe that.

13,411. It is a misfortune to a neighbourhood that houses should remain unoccupied merely because the owner is asking for a higher rent than he is likely to obtain?—Certainly.

13,412. And that has been recognised for a very large number of years in the City as regards the rates levied by the Commissioners of Sewers, has it not?—Yes.

13,413. I think, while you approved the action of the London County Council in certain matters in relation to the valuation of property, you did not approve of certain other action they have taken. Will you explain what is the action of which you disapprove?—The London County Council, without, of course, any authority at law, has attempted to exercise the powers of a supervising authority, and, in doing so, I venture to submit, they have produced a feeling of some friction as between the central authority (the County Council) and the local authorities. In the case of my own parish we have had communications from the Local Government and Taxation Committee of the Council, which I have read with some surprise and some regret, being desirous that, at least, so far as my authority is concerned, the relationship between the local authority and the County Council should be, certainly, of the most friendly description. I will give an illustration. Our supplemental valuation list is deposited; an official from the valuer's department comes down and examines that supplemental list. In due course I receive from the clerk of the Council a letter to the effect that the Local Government and Taxation Committee, having examined the supplemental list of the parish of Kensington, have noted a certain number of properties which are set forth in a schedule, with regard to which they ask the consideration of the assessment committee to the alternative values which they have placed against the said properties; and they go on to state that further information with regard to these properties can be obtained on application at the valuer's department of the County Council. In the case of my last supplemental list there were, I think, 24 such properties. Had the County Council or its officials had the knowledge that was in the minds of the overseers and assessment committee, not one of those representations would have been made. I take the first case, a house which we had put in the valuation list at 90*l.* per annum. The suggestion was that that value should stand at 93*l.*; the reason, I know, was that they had come down, and had seen that the property was held under a five years' agreement at 85*l.* a year, and they had jumped to the conclusion that it should be 85*l.*, plus 8*l.* added for repairs, thus making 93*l.* the gross value—not knowing

Empty houses: Losses in respect of. Suggested that they should be assessed to some extent. This procedure adopted in City of London.

London County Council: Actions of that body not always agreeable to local authorities.

Valuation in Metro- polis: Per- centages added to gross values. Alleged that nothing is added in City of London.

Gross value" and "rate- able value": Actual value should be substi- tuted.

Mr. W. C.  
Leete.  
25 Feb. '98

the fact, which was known to the local authority, that the five years' agreement contained covenants for only partial repairs being borne by the tenant, and not knowing the further fact that the two houses on either side—in fact, a block of houses on either side—were all assessed at 90*l.*, following the direction which had been laid down by the Conference that, where a row of houses structurally alike existed, neither the high rent nor the low rent should be taken, but that a mean should be taken in order that those properties might be assessed at one common amount. That is just an instance of what I may call the pettifogging dealings of the County Council with the work of the local authority. I venture to suggest that representations of that character savour of unnecessary interference with the work of a body of gentlemen who are elected, as I say, on a wider franchise than the County Council.

13,414. Do you think it is undesirable that centralisation should extend to details of that description?—I do.

13,415. You say in paragraph 12 of your memorandum that you feel sure the ends achieved have been in no way commensurate with the expense which the Council has incurred in this task. Do you know at all what that expense is?—No, I do not. I believe returns have been asked for; I do not know whether they have been obtained.\*

13,416. Coming next to the Equalisation of Rates Act, you would admit, I presume, that sanitary administration is a purpose to which, if possible, you should make the whole of London contribute to the expense in common, in the same way as they do to education and to the maintenance of the poor?—Yes, that is conceded.

13,417. In the case of the school board, you have one authority for the whole of London, but for sanitary purposes you would not, I presume, wish to have one authority for the whole of London?—No.

13,418. Therefore, if the different parts of London are to contribute to sanitary expenses, you must throw aside the question of the formation of one central authority?—Quite so.

13,419. What principle would you take in preference to the principle of the Equalization of Rates Act in order to effect that object?—It appears to me that it ought to be done by grants-in-aid in respect of the specific performance of duties.

13,420. If you do that, would not the result be that the more you spend the more you would get?—No, I want to limit that. Take, for instance, the removal of dust from the houses of a district. Parliament, very wisely, has said in the Public Health Act, 1891, that the dust shall be removed from all houses once a week. In certain parishes it may be the wish of the inhabitants that it should be removed three times a week, as in certain parts of Kensington. It might be desirable that some grant should be made to all districts to provide for the removal once a week; but it would be manifestly unfair if Kensington was entitled to remove, at the expense of the whole area, its dust three times a week, whilst Bethnal Green was content to remove it once a week. That is the difficulty that you would have to face, namely, the expenditure by the authorities, and what expenditure really applies to sanitary administration.

13,421. But the contribution under the Equalisation of Rates Act was kept well within the expenses of sanitary administration in each district, was it not?—I think not. It is with regard to the application of the grant that I fall foul of that Act. Instead of a carefully controlled administration as in the case of the common poor fund, where there are specific headings under which expenditure is to be made, and which are paid for out of the common fund, with an adequate check in the shape of an audit by the Local Government Board auditor, in the case of the equalisation of rates fund, you simply throw over to the parish of Islington a dole of 20,000*l.* per annum, making no provision that the expenditure by Islington of that 20,000*l.* shall be in any way checked. It may go to the reduction of existing rates; it may be spent on more efficiently carrying out the sanitary administration; or it may be spent on the brilliant illumination of the High Street by electric light. I cannot conceive of a more vague provision than that which is contained

in sub-section 6 of section I of the Equalisation of Rates Act with respect to the application of the sums paid to the sanitary authorities under that section.

13,422. Do you approve of the principle of a common contribution?—It is infinitely better than the principle laid down by the Equalisation of Rates Act.

13,423. I rather gather from the contrast that you drew between Islington and Hampstead and other districts that you thought that because one parish contributed to the common poor fund a considerable amount and a comparatively small amount to the equalisation fund, that was a proof that the Equalisation of Rates Act was bad: but take the parish of Islington, for example. You are aware that the parish of Islington in former years—I do not know whether it is so now—gave more outdoor relief and less indoor relief than certain other parishes in London?—No, I was not aware of that.

13,424. The consequence of that was that it received back less from the metropolitan common poor fund in proportion to its total expenditure on poor law relief than other parishes in which a different system was in force. Without going into the question of the merits of indoor relief and outdoor relief, you would admit that that would produce an inequality in the amount received from the fund and by the parish as compared with another parish which paid heavily to the indoor poor, and very little to the outdoor poor?—Yes, I follow the point.

13,425. You are aware, are you not, that when the Local Government Act was under discussion, and a similar proposal was made to apply the Metropolitan Common Poor Fund principle to the whole of England and Wales, it was rejected by the House of Commons on the ground that in some districts the practice was to give the majority of the relief in outdoor relief, and in others to give indoor relief, and that it would work, therefore, very unevenly. Without going into the question of which is the better system, would not that be an objection to the Metropolitan Common Poor Fund—that if a union spends all its rates, or practically all, on indoor pauperism, it will get a large grant, and that anything that it pays towards outdoor relief comes out of its own pocket?—Yes, and rightly so, I should say.

13,426. I do not want to go into the question whether it is right. You would expect, therefore, that when you apply a different principle under the Equalisation of Rates Act it will have different results, and that it does not necessarily follow that because Islington, according to your view, contributes too much to the outdoor relief, and too little to the indoor, therefore, when you come to divide a grant under the Equalisation of Rates Act, it should receive from that central relief fund in the same proportions as it has received its share from the common poor fund—you would not say they should necessarily go on all fours?—No; but before I could answer that point I should have to go into the question as to how far Islington's procedure under the common poor fund differed from Hampstead, St. Luke's, or other parishes. I might find that possibly the procedure of Islington followed very closely that of many of the other parishes, and, if so, then of course my argument would still stand.

13,427. But you have no evidence of that fact, I am sure?—No, I have no evidence that Islington has to any appreciable extent acted differently as regards the common poor fund from other metropolitan parishes.

13,428. You are not aware that it has been quoted, whether rightly or wrongly, by certain persons as a proof that outdoor relief is not so expensive as it is commonly considered?—No, I am not.

13,429. I do not wish to express an opinion, understand, upon the question of outdoor relief as against indoor relief, but what I want to protest against is, that it should be assumed that the principle of the Equalisation of Rates Act is necessarily wrong because Islington receives under the Equalisation of Rates Act, whereas it pays under the Metropolitan Common Poor Fund?—Of course, if I simply had the instance of Islington to depend upon I should not have so emphasized my figures as regards this comparison between the two funds; but I venture, leaving Islington out of the question, to submit to this Commission such figures as do show a most glaring disparity. I cannot think that the poor parishes really do derive the benefit from this Equalisation of Rates Act that it was hoped by the framers they would receive. I feel sure that the results

Equalisation of Rates Act in Metropolis, effect of.

of the application of the basis of the fund must have surprised the promoters of the measure.

13,430. On that we have not had the figures before us, but I think that we have been informed by the statistical officer of the London County Council that the effect of the Equalisation of Rates Act has been to equalise rates in the metropolis; I observe that in paragraphs 30 and 31 of your memorandum you distinctly state the contrary?—Yes, I distinctly join issue with him.

13,431. With regard to Islington and Camberwell, they are both districts, I think, are they not, in which the class of residents who live in them are not so wealthy as those who formerly lived in them?—I cannot speak for Camberwell. So far as Islington is concerned, I do not think there has been any very substantial change in the character of its residents. I speak, of course, only with knowledge acquired since

1883; but, having been a resident of the parish of Islington, I am surprised to find that they have to plead poverty.

Mr. W. C. Leete.  
25 Feb. '98

13,432. (Mr. Stuart.) We had evidence, you know, in the opposite sense from the vestry clerk of Islington. Have you anything more you would like to put before the Commission?—The only point—and it touches upon equalisation—that I wish to mention is one of those questions upon which equalisation might have been effected by the London County Council, but which they have not dealt with—the main road question.

13,433. You have dealt with that in your memorandum, have you not?—Yes, fully.

13,434. Let me correct one thing—the Equalisation of Rates Act was not the Act of the London County Council, it was the Act of Parliament?—Quite so, only it was supported by the London County Council.

The witness withdrew.

Adjourned till Thursday, March 10th, at 11.30.

**THIRTY-FOURTH DAY.**

Thursday, 10th March, 1898.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

SIR E. W. HAMILTON, K.C.B.  
H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq., C.B.

E. O. SMITH, Esq.  
The Right Hon. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*  
T. LLEWELYN DAVIES, Esq., *Assistant Secretary.*

Mr. W. H. Warner.  
10 Mar. '98

Mr. W. H. WARNER, called and examined.

13,435. (Chairman.) I understand you are a partner in the firm of Messrs. Lofts and Warner, Estate Agents and Surveyors?—Yes.

13,436. You have had a long experience in the firm, I think?—Yes, I have had over 30 years.

13,437. You deal largely with London property?—Yes, very largely; I think I might almost claim that we have had as much experience as any firm dealing with property in London.

13,438. In the first instance I want to get quite distinctly what you mean by two terms which you use in your memorandum\*—one "the ground lessee," and the other "the building lessee"; perhaps you would explain those terms?—I think, perhaps, those two terms are meant to be synonymous.

13,439. Then we are to take them as the same?—Of course there would be a variation in the terms; you might get a man who takes a piece of land, and then lets it out again.

13,440. That variation is exactly what I want to know; what do you mean by the term "ground lessee"?—I mean the person who takes the land from the landowner.

13,441. What do you mean by "the building lessee"?—The ground lessee would take from the owner, and pay all the rates and taxes, and the building lessee would do the same; so that for all practical purposes you might treat them as the same.

13,442. Do you know instances of there being both a ground lessee and what you call a building lessee upon the same property?—I know that such things do occur, but I do not know that I could give you an instance for the moment.

13,443. For the purpose of your memorandum, you mean the same thing by "ground lessee" as by "building lessee"?—Yes it is a fact that sometimes a builder will take from an owner a large tract of land to be built upon, and then he will sub-let it out again under the

same conditions as regards the payment of rates and taxes, only he parcels it out.

13,444. Then, on what does he get his profit?—He finances the builder, and that is one source of profit; and in another way he probably gets an improved ground rent.

13,445. The point being this, is it, that there may be more than one different interest between the ground landlord and the person who buys the house when built, and lives in it?—Yes, more than one.

13,446. Is that common?—It is very common, only I would say this, that in the end the intermediate man falls out.

13,447. Quite so: the original ground lessee, if he parts with his interest at all, makes a man who takes it from him contract to pay the rates and taxes?—The intermediate man falls out; for instance, I take a piece of land, we will say, some acres in extent, from A, who is the ground landlord; I parcel it out, and I finance a builder, and I undertake all the making of the roads—all those expenses I am responsible for—then I undertake to get for the man I let to, a direct lease from the ground landlord.

13,448. But before the intermediate man falls out, as you express it, am I right in supposing that the ground lessee, if he parts with his interest at all, insists on the man to whom he parts with his interests, taking his position as a payer of rates and taxes?—Yes, always.

13,449. So that the payment of rates and taxes is not divided, but always becomes an incident of the last holder of the land?—Yes, of the tenant of the landlord.

13,450. I should like to put one general question to you as to how far in your experience those who look for places of abode calculate the amount of the rates that they will have to pay as influencing them in a decision between one place and another?—Where things were equal, it would have the effect of sending a tenant to the district where the rates were least.

Mr. W. H. Warner.  
10 Mar. '98

Ground Lessee and Building Lessee: Definition of.

- Mr. W. H. Warner.**  
10 Mar. '98
- Rates, amount of: How far does amount of rates influence tenants in selecting particular localities, and to what extent are rates taken into consideration by ground landlord and building lessee when making their contracts.
- 13,451. What do you mean by things being equal; are you thinking of suitability for each purpose?—There comes in the question of situation very often. For instance, we will take Grosvenor Square and Portman Square: you may have two houses, one in each of those squares, very similar, and the rates and taxes per £ may be very similar, and yet it would not be either of those questions which would influence anybody going there. A man says I want to live in Grosvenor Square because I wish my address to be Grosvenor Square, or I prefer to live in Grosvenor Square because it is that side of Oxford Street.
- 13,452. No doubt, but taking it a little more widely than that, have you seen anything in your experience which leads you to think that as rates rise people move from one place to another to escape them?—I think that takes place in outside districts, say round about London, where the rents would be, perhaps, 50*l.* or 60*l.* a year.
- 13,453. I wish to exclude such special places as the City of London or Mayfair, because a certain class of people think they must live in Mayfair, and a certain other class must do business in the City of London, and therefore other considerations come in; but there are large classes of persons to whom it does not make much difference whether they live in, we will say, Hampstead or Fulham, or in districts which are not, so to speak, congested?—Yes, that is so.
- 13,454. Now, how far do you think the influence of the calculation as to the amount of rates comes in in the selection of abodes by such persons?—Shall I take this kind of instance? Supposing we say at Balham there were houses that could be let profitably at 50*l.* a year, and supposing that in the adjoining parish of Streatham there were also houses of a similar class to be let at 50*l.* a year; in each of those districts the man who had built the house would calculate that he ought to get a return for his outlay, say of 5 per cent., which would bring up the rent so that the house could be made to let at 50*l.* a year; but, supposing the rates in Balham were 3*s.* in the £, and the rates in Streatham were 6*s.* in the £, then people who wanted to take houses would prefer to go to Balham, and the consequence would be that the owner of the house at Streatham would have to bring down the income that he received from the outlay on his house so as to balance with the other.
- 13,455. That is the builder, the man who builds the house, would have to do it?—Yes, that is how it would apply. A tenant under those conditions would take his house in Balham, and the result would be that the man in Streatham would not be able to get such a good return for his money as the man in Balham.
- 13,456. I understand you to put to us that in a case like that the builder takes these things so carefully into calculation that the ground landlord gets less in the place where the rates are at the moment higher, or likely in the builder's opinion to become higher in the near future than is the case with the ground landlord where the rates are not so high?—Certainly.
- 13,457. You are not only, of course, an agent for properties in that state, but you have experience in dealing with properties after they have been some years built, and when they are changing hands as between tenants and owners of the leasehold?—Yes.
- 13,458. How far in their case does the influence of rates go?—I think it is always taken into consideration in every transaction that takes place with regard to the letting of a house.
- 13,459. It is, of course, obvious that after the house is built, if there is a rise in rates it falls upon the person who is the beneficial owner of the house at the moment that the rise takes place?—Yes. But in those sort of instances which you are sketching out to me, I anticipate you mean that one man has a house of 50*l.* a year, and for some reason perhaps, either from the outlay that he has made or something of the kind, it changes hands at a higher rent. Would that be what your question was indicating?
- 13,460. I was for the moment not thinking of the fluctuation in rent, which, of course, takes place sometimes and greatly complicates the possibility of making an accurate calculation. For the moment, so far as the fluctuation in value was concerned, I was leaving that out of account and dealing only with the question of the rise of the rates?—It would always influence it if the rates increased. It is known in certain districts that you can get a house for 60*l.* a year or 70*l.* a year,
- and if you were to increase the rates those rents would fall in proportion.
- 13,461. What I am leading up to is to get, in your opinion, on whom does the incidence of a rise in the rates really fall; we know, of course, that the owner of the leasehold pays them?—Yes, he does.
- 13,462. But how far does he succeed under any circumstances in shifting the incidence on to anybody else, and on to whom?—As soon as he has the opportunity of doing so he shifts it on to the person from whom he takes the house, unless some other reason springs up which gives an extra value to the house.
- 13,463. Would you say that in districts where houses are much sought after the owner of the houses has a greater facility for shifting the incidence on to the tenant and getting a rise in rent, but where it is a back-going district, so to speak, the incidence of the rate is more likely to fall upon the owner of the houses?—I think it comes into operation in both cases. I think it is always taken into consideration, even in those districts which you except—the Grosvenor Square neighbourhood and the City. It is always taken into consideration by the tenant. Of course I do not mean to say that there are not some people who are so foolish that they do not ask any questions at all, but you cannot prove a rule by such cases as that.
- 13,464. It would follow, I suppose, from what you have just said, that at the conclusion of a long lease of 80 or 90 years, when the ground landlord has to make a new bargain, the same causes that you put to us as having effect in the first building on the land would have effect upon the price that the landlord would get for any renewal of the lease?—Certainly.
- 13,465. You make a statement in paragraph 2 of your memorandum which I should rather like to have made more distinct, though I admit it is not absolutely relevant to the Inquiry. You say: "For instance, take Oxford Street where the rates are similar for both sides of the street, yet shops on the north side are much more valuable than on the south side"—why is that?—Because the English people always like to walk on the sunny side of the street—that is one reason. You will find that in nearly every principal town in England.
- 13,466. I thought that was probably the case; therefore a shopkeeper exhibiting his goods in the window can afford to pay a higher rent on the north side, because more people pass to see them?—Yes.
- 13,467. And you say that is not peculiar to Oxford Street, but it is a fortunate accident for those who own property on the north side of any street, and an unfortunate accident for the others who are on the opposite side?—Yes. It is a very curious thing that in almost every town in England you will find that the sunny side of the town, the western side, is generally better than the eastern side.
- 13,468. Are there no trades which are better on the south side of the street than the north?—I never heard of any.
- 13,469. For instance, if you were a fishmonger, would you take the sunny side of the street?—If I were a fishmonger I should want to have my shop where people would come to look at my fish. I think in Oxford Street you would find the fishmonger would give more for the north side than for the south side.
- 13,470. (*Mr. Wharton.*) In order to get rid of his wares?—Yes. With regard to a question which your Lordship was asking me just now, there is a remark in paragraph 9 of my memorandum which to some extent bears upon it. You were asking about the question of rates affecting the rentals. I think I have there pointed out that, taking the three elements that govern rental value, that which relates to the rates is an arbitrary payment, and the other two are matters of bargain.
- 13,471. (*Chairman.*) I followed that. In some way this is the sort of process: a man who is going to take land to build houses on calculates in his own mind roughly what he thinks he will be able to get for rent; then he has to think out what in that district the rates will be, and when he finds out what the rates will be upon that rent he then has to make up his mind what he is going to offer for the privilege of building on the land?—Yes.
- 13,472. What is the precise object with which you make this statement in paragraph 7: "I do not think the expenditure of money raised by rates has rendered property more valuable, as the expenditure in that

**Mr. W. H. Warner.**

10 Mar. '98

Rates, rise of: How far can occupier shift burden of increased rates upon owner.

Rent frequently higher on one side of a street than the other. Reasons for this.

Ground landlord and building lessee: To what extent do they take payment of rates into consideration when making their contracts.

Mr. W. H. Warner. "respect has probably been equal per foot frontage in rich and poor districts" P.—Because I think from what I have read of the opinions that have been given that it has been suggested that land in London has been enormously increased by money that has been spent out of the rates.

10 Mar. '98

Rates, expenditure of: How far does expenditure of rates benefit the property of the owner, and how far is it a benefit to the tenant, discussed.

13,473. Do you mean to put it to us that no expenditure of money raised by rates renders property more valuable?—No, I do not. I think some of the money has rendered property more valuable—that which applies directly to land—but then you cannot spread that over the whole thing. For instance, you take money spent in forming a new street, no doubt it has improved the value of property in the neighbourhood of that street up to a certain distance, but not all over London, not as regards land. It has been a benefit to the community.

13,474. Surely a well considered system of sewerage would render property more valuable, would it not?—Yes.

13,475. As put in your paper it is rather too broad a statement, and it can hardly stand?—What I meant to say was this—that it has not been more improved by that expenditure in the West End than it has in the East End.

13,476. Then you are on the much controverted question of betterment in that paragraph?—No. What I had in my mind was this—that granted that there was some improvement by reason of some expenditure raised from the rates, that improvement was not greater to the land, say, in the West End than in the East End. There is a corresponding benefit *pro rata*.

13,477. Is it this—that the higher the rate upon a particular property, the more it is benefited. I do not quite understand what your point is?—Supposing there is public expenditure which it is admitted has some benefit which might attach to the land, that does not attach to the land in a greater ratio per foot frontage in the West End than in the East End.

13,478. When you say "has rendered property" are you thinking only of the ground landlord's property?—Yes.

13,479. Any one reading that sentence, I think, would naturally think that "property" there meant rateable property?—I think I could carry it to the houses themselves.

13,480. Then I put it to you again. Does a well considered system of sewerage not render property more valuable?—Certainly, than property which is without sewerage.

13,481. It makes not only the houses which are upon it, but the land upon which the houses are built more valuable?—Really the interests of the landlord and of the man who puts the house on it run so close that they are almost identical in their proportion, because the one bears on the other. There are three quantities in a rent; one is the land; another is the building; and the other are the outgoings. That is the occupying rent. Numbers 1 and 2 run together very closely. In different districts you cannot fix any special rules—how much should go to one and how much to the other, because in certain parts the ground is worth as much as the houses or more, and in other places it is only worth perhaps a fifth as regards their proportion of the rental value.

13,482. Assume for the moment that after an area is built upon, improvements are effected in the sewerage, or in access, or in any other way which are paid for by the rates, during all the currency of the long lease the leaseholder pays those rates?—Yes.

13,483. And by so doing, at the end of the time he hands over a more valuable property to the landlord, does he not?—He has had his benefit from it.

13,484. No doubt, and I do not say that he has not bargained to do it; but as a matter of fact that is the effect, is it not?—Yes, I suppose in a measure it would be so. There would be this to say about it—that the tenant during a long lease had reaped the benefit of those rates. Either those rates are imposed upon him for a benefit which he has obtained, or else it is what you might call a robbery. If you impose a tax on a tenant like that, the supposition is that you impose it for a benefit that he is to receive; if not, it must be something which you take from him which is not fair.

13,485. I am not suggesting that anything is done to the leaseholder which is not in his bargain; I am only

stating that that is the effect of the bargain—is that not the case?—Yes, but on the other hand you see the landlord has only got a fixed benefit for a certain number of tied years and the tenant may reap the benefit of that extra value during his term.

13,486. Can you give me any indication of your opinion upon the very much controverted question—on whom does the rise of rate really fall?—I think that it falls upon the land and the building that is put upon it.

13,487. It clearly cannot fall on the land under the present system till the end of the lease?—Not if it is a long lease, not directly.

13,488. Then we get out of that for the moment; therefore it must be, must it not, between the owner of the leasehold and the occupier of the leasehold?—Yes.

13,489. On which of them does it fall and under what circumstances, in your opinion?—It falls upon the occupier in the first instance, for as long as he is unable to alter his tenancy, that is to say, if I take a house for 14 years, and I undertake to pay the rates and taxes; for 10 years we will say they are 5s. in the £—

13,490. I want you rather to make the expression quite clear; you say "if I take a house." I want you to distinguish between the owner of the leasehold and the occupier of a leasehold dwelling house?—I as an occupier of premises do not know whether they are leasehold or freehold. I am the occupier, the person who lives in them and pays the rates and taxes. I take a lease of those premises for 14 years, undertaking to pay all rates and taxes; for the first 10 years the rates and taxes are 5s. in the £; for the next four years they are 6s. in the £; as between the 10 years and the 14 years, that is during the four years, I have to bear the increase; but directly that tenancy ends I should go to my landlord, and I should say: "I will not pay you the same rent because the rates and taxes have been raised; and he would then have to reduce his rent."

13,491. Not necessarily, because he might say "All right, go on as you are, or else go; I can get a better rent from somebody else"?—That would be from other circumstances. To get at a point like this one must take things equal; you cannot bring in another set of circumstances which will influence that man. I am going upon the supposition that there are a great many parts of London where things are equal all over, large districts where a regular rent rules and where it is not in the power of the landlords to get this extra rent.

13,492. In that case you put it to me—and I am not inclined to disagree with you—that at the conclusion of the term of hiring the rise of the rate comes upon the owner of the fabric?—Yes.

13,493. Take another case, which is rather more complicated, but which is not that of a dwelling house; supposing the rates rise upon shop premises during the continuance of the lease, have you any opinion to express as to whether any part of the increase can be put off by the occupier upon those who do business with him and purchase his articles?—I should think that it is a thing that people constantly endeavour to do because that must take place in streets like Bond Street and Oxford Street.

13,494. I have no doubt they endeavour to do it, but what I want to get from you is whether they endeavour successfully, in your opinion?—For the moment only are they successful.

13,495. If they then charge such high rates for their articles, they gradually drive away custom?—Yes, you have the greatest possible instance of it close to you here. If it was not for that very circumstance, that large building, the Army and Navy Stores, would not be in such a very flourishing condition. I think myself that it is these high prices which are put upon articles we will say in Bond Street, and the principal streets where people go to shop in the West End, that has driven the people away from those shops to deal at the Stores, because they do endeavour to put something on.

13,496. Then you would say, I suppose, that when a shopkeeper begins to find that out he ultimately comes back upon the landlord, and says, "I cannot pay you so high a rent"?—Yes, and if he cannot recoup himself in another way he will come back to his landlord. In

Mr. W. H. Warner.

10 Mar. '98

Rates, a rise of: A rise in rates ultimately falls upon the land and the building upon it unless special circumstances exist.

Rates, a rise of: In case of shops in West End of London, the occupier will try and shift the burden upon his customers. Beyond a certain point, he cannot do this, owing to trade competition of co-operative stores, and he must then try and shift the burden on his landlord.

Mr. W. H. Warner.  
10 Mar. '98

Bond Street, rents no doubt have gone up to such a pitch, but I think that outside those districts there has been a very great depression in shop property for the simple reason that they are not able to put anything on to recoup their rents, because people go away directly they do that, and deal where that does not come into play. Small shop property is no doubt very depressed.

Ground landlord : Burden of increased rates ultimately falls on ground landlord.

13,497. (Mr. Elliott.) I want you to leave out of your mind, in any questions I put, any reference whatever to existing contracts, and to assume that no contracts are in existence?—That we start with an acre of land, that you own the acre, and that I am somebody else —

13,498. No, I do not go back quite so far as that. I want to take the case of property which has actually been erected, but in regard to which no contracts of tenancy exist. I take it there may be several interests in an ordinary property in London?—Yes.

13,499. There is the interest of the ground landlord?—Yes.

13,500. The interest possibly of a mortgagee?—I think you must leave him out.

13,501. Do you never have a mortgagee's interest?—Yes, but as dealing with anything affecting land, I do not think you must call into the question the mortgagee. The mortgage is a matter of bargain; I may borrow 100l. on a piece of land for convenience, or I may borrow 2,000l.

13,502. But in point of fact a portion of the annual value of the property does go to the mortgagee, does it not?—It goes through the hands of the owner of the land; it does not go direct to the mortgagee.

13,503. Assume that a person has built a house, and borrowed a portion of the money to build it, to that extent the house is not his, but the house is the property of the person from whom he has borrowed the money?—A mortgagor and a mortgagee are the same people in effect.

13,504. They each have an interest in the property?—They each have a similar interest. I mean that a mortgagee is a person who, say, owns half my land, but he holds it under the same conditions that I do, only I borrow half the money of him.

13,505. Leaving out, then, the question of the mortgagee in addition to the interest of the ground landlord, you may have the interest of one, two, or three, or possibly more leaseholders in succession?—Yes.

13,506. Are you at all familiar with the manner—I think you will be familiar with the manner—in which the burden of the property tax is divided amongst those different interests?—Yes.

13,507. It is divided by a system of deduction, is it not?—Yes.

13,508. And therefore, from the ground rent paid to the ground landlord, there is a deduction in respect of property tax, is there not?—The tenant pays it, and he could deduct it from the landlord. It always comes upon the landlord.

13,509. Each interest in its turn deducts property tax from what it pays?—For the simple convenience of payment and collection; it has no effect upon the property at all.

13,510. The amount of the ground rent is diminished by the amount of the property tax, is it not?—It is subject to it.

13,511. I want you to answer the question I put to you—the amount of the ground rent that the ground landlord receives is in fact diminished by the amount of the property tax?—Yes, in the same way as if you have your money invested somewhere else.

13,512. Therefore, all the world knows that the ground landlord does pay income tax?—Yes, just like any ordinary person. Everybody pays income tax whose income is high enough.

13,513. Your argument, from which I do not for a moment dissent, is, is it not, that the burden of the rates does fall, in fact, upon the ground landlord?—Yes, it comes back to him.

13,514. But the amount of his ground rent is diminished by the amount of the rates on the property?—Yes, it is influenced by that.

13,515. Leaving out of question any difficulty with regard to existing contracts, in regard to which I quite share your views, do you see any difficulty in the way

of providing in the case of some of the rates for the adoption of the same system of deduction that you have for the property tax?—I do not want to go into theories, I rather want to give my evidence on facts.

Mr. W. H. Warner.  
10 Mar. '98

13,516. I am asking you whether you see any practical difficulty?—I do not see why there should be any.

13,517. I was asking you whether you saw any difficulty in point of practice?—I think there would be a good many complications about it, because there are such a variety of interests. Let me ask you first of all whether you mean—

13,518. No, you must not ask me questions. I ask you whether you see any practical difficulty in the way of adopting the same system of deduction in regard to certain specified rates as is at present adopted in regard to the property tax?—I do not think I have gone into the point sufficiently to answer your question as you want me to answer it.

13,519. Do you find a general agreement with the views that you have expressed as to the burden upon the ground landlord of the rates at the present moment?—Yes, I think there is a general opinion that any increase of rating, generally speaking, falls back upon the land.

13,520. Do you think that is the view generally held by the ratepayers, that is by the persons who actually pay the rates to the rate collector?—I think it is probably not.

13,521. Supposing that you had some system of deduction, do you think it would then be pretty clear that the ground landlord did in fact bear a substantial burden?—I think they would think they were passing the burden on to somebody else. A man does not know how near he is to his ground landlord. An occupier you see may be four or five away from his ground landlord. He would think he was getting something out of the man to whom he paid the rent.

13,522. You are aware of course that there is a very considerable number of persons who have expressed the view that the ground landlord, at the present moment, does not bear any burden?—Yes.

13,523. And that he ought to bear a burden?—Yes, I am quite aware of that.

13,524. The whole purport of the evidence you have given to the Commission is that, in fact, he does bear a burden?—Yes.

13,525. Now, leaving out of question existing contracts, do you not think a certain advantage would arise if in lieu of the present indirect payment, there was a direct payment of the rates by the ground landlord, by a system of deduction, if you please?—I think it would lead to endless confusion.

13,526. Does it lead to endless confusion in the case of the property tax?—No, but I do not think you could bring it to the simple way in which the property tax is deducted.

13,527. (Mr. Smith.) We all know that you have a large experience in West End property. Have you also a large experience in property outside London?—Yes; my business is not in any way confined to the West End, or to London at all.

13,528. Your name seems familiar to me. You are aware probably that in the case of municipal improvements throughout the country, they are paid for by loans borrowed by the municipality from various persons?—Yes.

13,529. And that in the repayment, you pay back not only interest but capital?—Yes.

13,530. Have you ever considered that to the extent to which capital is repaid, the owner is directly benefited?—That, of course, depends a great deal upon what that expenditure is—whether it is of a permanent character.

13,531. Granted that it is an improvement to property, and the tenant repays both interest and capital, to the extent to which he repays capital, does he not benefit his landlord's property?—If you could show that at the end of a long term, there was some lasting benefit to the land; there is no doubt there must be some improvement in respect of that, but, on the other hand, I think, those who have paid for it have taken it into consideration.

13,532. Leases generally run for 21 years on house property, do they not?—7, 14, or 21 years.

Rates, expenditure of: How far does expenditure of rates benefit property of owners. Loans borrowed by municipality. Capital repaid from rates as well as interest.

Mr. W. H.  
Warner.

10 Mar. '98

Mr. W. H.  
Warner.

10 Mar. '98

13,533. Loans for the repayment of capital frequently run to 60 years, do they not?—Yes.

13,534. Then there must be some unexhausted improvement, to use an agricultural expression, to the benefit of the landlord?—The ground landlord, do you mean?

13,535. I am speaking of the simple owner of the land; we will cut out the intermediate people—you recognise that there is a distinction between the tenant paying the interest on the loan and the instalments of capital on the loan, do you not?—Yes.

13,536. With regard to London, I suppose, you would say that prudent people take rates into account, but what influences people in London more than anything else, is fashion, is it not, in selecting the situation of their residence?—Only in the case of a few—only in the case of those who can afford to pay for the fashion; certainly not, I think, in the case of the bulk of the inhabitants of London. With them, it is how cheap can they get a house.

13,537. With the bulk, no doubt, that is the case, but still, situation has more to do with it in London than elsewhere, has it not?—I should think not.

13,538. It has an enormous effect upon the letting value of property, has it not?—In certain districts.

13,539. For instance, the proximity of a park to a house is a great benefit, is it not?—Certainly.

13,540. However acquired—whether paid for by rates or whether paid for by the Imperial Government?—Yes.

13,541. But a house in Park Lane looking into Hyde Park, and a similar house in York Terrace looking into the Regent's Park, would let at very different figures, would they not? Supposing you could have a house nearly similar in Park Lane to one in York Terrace, should I be wrong in saying one would be worth twice as much as the other?—No, you would not.

13,542. (Mr. Clare.) I think I understood you plainly to express the opinion that rates affected the amount of the rent that an ordinary occupier of a house would be willing to pay?—Yes; that is to say, he takes into consideration what rates he has to pay.

13,543. Should I be putting it correctly by putting it this way—that if an ordinary person wishes to take a house to live in, he calculates that he can afford out of his income to pay so much in respect of his abode?—Yes.

13,544. He knows under existing conditions that he has to pay two things—namely, rent and rates?—Yes.

13,545. Therefore, if he goes into a neighbourhood where he knows that the rates, roughly speaking, on a particular kind of house, come to 20*l.* a year, and he only wants to pay 100*l.* a year in respect of his abode, he will not pay more than 80*l.* in rent?—No, the rates are fixed: I want you to keep that in mind in everything you are asking me. The rates are arbitrary, but rent is a free commodity. He cannot help himself as regards the payment of rates.

13,546. If a man is only prepared to put aside out of his income 100*l.* a year in respect of his abode, if he knows that he will have to pay 20*l.* a year in rates, he will only be willing to take a house which will cost him 80*l.* a year in rent?—That is right.

13,547. If he had to pay no rates at all, he would be willing to pay 100*l.* a year in rent?—Yes.

13,548. Allow me just to follow this out a little bit, to see if you and I are agreed. Suppose a piece of bare building land, and a builder who is prepared to negotiate for the purchase of it; did I understand you correctly to say that the consideration which would actuate him in fixing the price he would be willing to pay for the land, is what net profit could be made out of the land when it was developed?—Yes.

13,549. I will ask you to assume the case of a piece of building land on which 10 houses can be erected. Assume that each house will produce a rental of 80*l.* on the assumption that the rates are 20*l.* a year; that will produce a gross income of 800*l.* a year from the 10 houses when erected?—Yes.

13,550. Of course, a prudent owner would put aside a certain amount per annum for repairs, would he not, and empties?—Yes.

13,551. Taking that at 10 per cent., that would make a net revenue of 720*l.* from the 10 houses?—Yes.

13,552. The builder then calculates that when he has developed this land he can get a net income of 720*l.*, leaving his tenants to pay all the rates?—Yes.

13,553. I will just ask you to assume for a moment that each of these houses cost 1,000*l.* to build. What is a reasonable rate of interest for a man to require on bricks and mortar?—That is a very wide question.

13,554. Is it not a very usual thing to calculate six per cent. as the net return that a man ought to get as a speculative builder?—He ought to get that.

13,555. I will ask you to assume that he wishes to get 6 per cent. in this case; the builder wants, then, on his 10,000*l.*, 600*l.* a year net?—Am I to assume first of all that this house, which you say is 80*l.* a year, only cost 1,000*l.*?

13,556. I am asking you to assume that it cost 1,000*l.* to build, irrespective of the land—just for the sake of an easy calculation?—I cannot follow that calculation, because you are assuming that you are going to get 80*l.* for a 1,000*l.* outlay, that is 8 per cent. You must take it on equal grounds.

13,557. Pardon me, I assume that the house when built and occupied, which must involve the occupation both of the buildings and of the land, will produce 80*l.* a year?—Yes, with that I agree.

13,558. I want to get at the division between the ground landowner and the builder; the builder has spent 1,000*l.* on each house, that on 10 houses is 10,000*l.* I assume that he wants as a return for his investment 6 per cent. net on his money. That will mean that he will want 600*l.* a year out of 720*l.* net that he will get from the rents for himself?—Yes, assuming that they have only cost 1,000*l.*

13,559. I have asked you to assume that. Therefore, the price that the builder can afford to pay for the land is the difference between the 600*l.* a year he wants on his investment, and the net rental which the property when developed will produce?—Yes, that will be one way of looking at it; he could afford to pay that.

13,560. In the case I put to you, the builder will want 60*l.* per annum himself from each house, and if he gets 80*l.* net from the tenant he can then afford to pay 20*l.* a year to the ground landlord, as the ground rent for the land?—Yes.

13,561. And that is the way that he arrives at the price he can afford to pay for building land?—Yes, he ought to go on that sort of calculation.

13,562. Now I will ask you to follow me one step further. In arriving at this calculation, he has deducted from the ground rent paid to the landlord the 20*l.* for the rates, which he calculates the occupier will pay, has he not?—Yes.

13,563. By deducting the 20*l.* that the occupier thus pays from the 100*l.*, you get down to 80*l.*?—Yes.

13,564. Therefore, the whole of the 20*l.* which he calculates the occupier will have to pay has come out of the landlord's pocket when he sells the bare building land in the first instance?—If that 20*l.* had not to be deducted, he would have got 100*l.* instead of 80*l.*

13,565. The landlord would have got 20*l.* a year more rent?—And still your calculation would follow on; he would get the 60*l.*, and the landlord would get that 20*l.*

13,566. Plus the 20*l.* that the builder can pay him on the 80*l.* rent?—If that 20*l.* did not exist, and a man was willing to give 100*l.* a year for that house including his rates and taxes, and the builder is to be satisfied with 6 per cent. on his 1,000*l.*, as you say, he could then afford to give to the ground landlord that 20*l.*, and if he were satisfied with his 6 per cent. on his outlay, that 20*l.* would belong to the land.

13,567. That is exactly what I want to get at?—He cannot spend that money without he uses the land.

13,568. In that case I put it to you, that if no rates had existed in the district, the landlord would have got 40*l.* a year for his land instead of 20*l.*?—Yes, following that calculation.

13,569. Therefore, it is clear that so long as the rates do not exceed 20*l.* a year on that 80*l.* house, the whole of the rates are paid for by the ground landlord?—On that method of calculation, yes.

13,570. So that the tenant, having calculated that he would pay 20*l.* a year in rates, and only giving 80*l.* to his landlord, it does not make any difference to the

Rates: In London the amount of rates generally influences tenants in selecting their localities. Fashion is an element which only influences a few.

Ground landlord and building lessee. To what extent do they take payment of rates into consideration when making their contracts, and to what extent does the ground landlord bear the burden of rates.

Mr. W. H. Warner.  
10 Mar. '98

tenant whether he pays 80l. to the landlord and 20l. to the local authority, or whether he pays 100l. to the landlord and none to the local authority?—None, whatever.

13,571. And as that 20l. has fallen upon the ground landlord, as I have shown you in the original bargain, the only increased burden that falls upon the occupier is the extent to which the rates are increased beyond 20l. a year?—For his term.

13,572. So that if a tenant has a lease for 14 years, and at the end of, we will say, the third year, the rates have increased from 20l. up to 25l., the occupier really has to bear the whole of the increased burden of 5l. a year?—Yes, until he can re-adjust it; but that is his bargain.

13,573. Rates are regulated by the action of the local authorities, are they not?—Yes.

13,574. And, as a rule, we will assume that any expenditure out of the rates is in some shape or form for the benefit of the people living in the locality?—No, I will not go to that; I say that many of these are for the benefit of the community, not of the locality, but they are fastened on to the locality.

13,575. At any rate, the members of the local authority are elected by the occupiers of the houses who would have to pay the increased burden, if it is put upon them?—Yes.

13,576. The landlord has no voice in it?—No.

13,577. Therefore, in the case I have given you, the extra 5l. increase of rates has been put upon the house by the people whom the occupier and others have elected to regulate the financial matters in the locality?—Yes. I believe that is the only system by which it can be done.

13,578. (Sir Edward Hamilton.) I am sorry to say that I missed the early part of your evidence, but the general drift of it is, is it not, that you hold that the incidence of rates really falls a great deal more on the ground landlord, or rather the people who have superior interests in the land, than on the occupier?—Yes. The occupier, I consider, is the mere medium of the payment of it.

13,579. You hold with your large experience of all kinds of would-be occupiers that they really do take into account not only what they have to pay in respect of rates immediately, but what they would probably have to pay during, we will say, the course of their lease?—I think they do.

13,580. You think they do?—Yes; you see it is all a matter of bargain with them.

13,581. But of course an unforeseen increase of rates during the course of the occupier's lease, you would admit, must fall upon the occupier?—Yes. That is a risk you cannot help, and you take it. You run the same risk when you go and instruct your broker to buy you railway stock.

13,582. No doubt; I admit that?—You must run the risk, whether you are an occupier or a buyer of anything. There is no certainty in these days. The only certainty that I know is rent day.

13,583. Therefore, where rates are very oppressive, you would say that it is not the occupier that has got so much to complain of as the people who have superior interests in the land to him?—Yes, it falls back upon the land.

13,584. But it is a person who pays the tax, not the land—the land does not pay?—It is a person who takes the land—it runs to the land.

13,585. Supposing rates go up materially in a certain district; does that have an almost immediately adverse effect upon the price which you can obtain for the landlords, or for those who own houses?—They creep up so gradually that you do not get violent instances of that; you do not get rates jumping up immediately from 5s. to 7s.; supposing they were to do so, you would feel it at once.

13,586. I suppose there has been a very material increase of rates within your experience in certain districts with which you have had to deal?—Yes. There is one particularly that I have referred to in paragraph 6 of my memorandum, which is the district in which my office is. Between 1881 and 1898, the rates have risen from, I think, 3s. 7d. to 5s. 9d., and that in the face of a very large increased rateable value.

13,587. Are you referring to St. George's, Hanover Square?—Yes.

13,588. I suppose that within that period, which is a period of 17 years, rents have certainly not fallen, and their tendency has been to go up, notwithstanding the increase of rates?—No, certainly not.

13,589. (Chairman.) By "no," do you mean not fallen or not gone up?—They have not gone up. I am always arguing upon things that are equal. You cannot go and take a street under altered circumstances; take, for instance, Mount Street: the whole of Mount Street is rebuilt, but then the income Mount Street produces is larger, no doubt, but that is by reason of the expenditure on a different class of buildings. I can give you the figures about that, if you wish it. I have mentioned them in my memorandum.

13,590. (Sir Edward Hamilton.) I think they are in paragraph 7?—Yes, they are. But notwithstanding that increase of the sum to be rated on, the rates have gone up from 3s. 7d. to 5s. 9d. certainly, but Mount Street has derived no extra benefit by reason of that.

13,591. Take a house, we will say, in Grosvenor Street, which has been the same for the last 17 years: do you suppose that if there were so many years of the lease to run of that same house in 1881 and in 1898, that it would command no higher price now than it did in 1881, though the rates have gone up to a very material extent?—It does not command so high a rent.

13,592. It does not?—No, taking a similar house, I mean.

13,593. (Mr. Wharton.) You have already answered Sir Edward Hamilton on the subject of rates having risen in some parts of London; can you speak generally as to the rise of rates in the metropolitan area?—I have got a list here of what the rates are in a great many of the parishes, but I am afraid I cannot go back in point of time. It is very difficult to get these returns for any years back, but if it would be interesting at all I would be glad to hand in this paper, which shows what the rates are in the different parishes over a great portion of the metropolitan area.\*

13,594. Could you prepare us that information for certain specified periods?—No, I have taken the figures for the present time.

13,595. Could you ascertain for us, do you think, what the variation of rates quinquennially in, say, half a dozen different parts of London has been?—I think it could be procured, but it would take time to do it.

13,596. (Chairman.) The paper which you have referred to is the County of London Valuation in force on the 6th of April 1898?—Yes, that is the document, only my copy has got an addition to it in the margin; I have put there the rates in the £ in different unions.

13,597-8. (Mr. Wharton.) There has been a very large rise of rates in the last 20 years in the metropolitan area, has there not?—Yes.

13,599. Can you say, generally speaking, what that rise has been—from what to what?—The figures vary in different parishes, but I should say from between 4s. and 5s. up to between 6s. and 8s.

13,600. Varying, no doubt, considerably in various localities?—Yes; I see that I have extracted from somewhere or another the difference. In 1881 the gross value of the metropolis was 27,405,488l., and in 1897-98 it had risen to 43,452,597l. It would be exceedingly interesting if the data could be got showing exactly what the rates were in the different parishes in 1881, and comparing them with what they are now, and also taking during the same period what the outlay had been for the improvements which are chargeable upon the rates. In Mr. Harrison's evidence he gave it as being, between 1835 and 1888, 39,000,000l.†

13,601. Looking at the somewhat continuous rise of rates, has that altered the system of granting leases—

\* This information is contained in the Annual Returns of the London County Council of Rates made in the County of London.—To be obtained of P. S. King and Son, Great Smith Street, Westminster, S.W.

Rents have not gone up.

Rates in the Metropolis. Rise of rates during the last 20 years.

Rates: Rise of, in Metropolis. How far has it affected the desire to take leases.

Rates are imposed upon occupiers by local authorities, who are elected by occupiers.

Rates, burden of: Falls on ground landlord. The occupier is the medium who pays them.

Rates: Tenants take into consideration the present and prospective burden of rates.

Rates: Burden of, falls on ground landlord.

Rates in St. George's, Hanover Square, have considerably increased in recent years.

Mr. W. H. Warner.  
10 Mar. '98

Mr. W. H. Warner.  
10 Mar. '98

I mean, are people less inclined now than they were before to take leases, in the face of the possibility of having to pay as occupiers increased rates?—For building?

13,602. No. I am speaking of people occupying a house for a long term instead of taking it year by year?—I think if people could take houses year by year that they would much prefer to do so.

13,603. As I understood you to answer Lord Balfour, the two main guiding influences in the value of property are, in your opinion, the popularity of the locality and the question of the rates?—Yes.

13,604. In some cases people will take a house without regard to the rates, because they are determined to live in a certain locality?—Yes, in exceptional cases, that is so.

13,605. In other cases people are guided by the question of the rates?—Yes.

13,606. (Chairman.) I missed one point in your memorandum. You say in paragraph 12: "The question has been raised as to the rating of vacant land which has either directly or indirectly a building value, and statements are frequently made that land which is available for building purposes is withheld by the owners in order that it may obtain an enhanced value by reason of surrounding improvements created by the money of the ratepayers"?—Yes, I say that.

13,607. Without going into the allegation in the latter part of that quotation. I understand you there to express the opinion that it is, shall I say, inexpedient or unfair to attempt to rate vacant land?—As building land.

13,608. But, in any way, vacant land would not be now rated at all?—That is not producing anything at all.

13,609. Is it not? That is just the point. Is it not producing an increased value to the owner by reason of this waiting?—I do not think so.

13,610. Supposing a man demolishes a block of buildings at the end of a lease, and the adjoining block falls out five years later—a block absolutely adjoining—he thinks he can deal with the two blocks better as one at the end of the longest running lease (and, being a skilled person, probably his anticipation is correct) and that he can easily count upon the value of the earlier block increasing 10 per cent. during those five years; is it not fair that in return for that 10 per cent. he should pay something to the rates of the district?—But, taking that instance, the waiting is merely a matter of convenience to build two blocks together perhaps; he would be able to get his value at once if he chose.

13,611. It may be so; it may also be, may it not, to get an increased price?—I do not think it is.

13,612. You do not think so?—No, I do not think that obtains.

13,613. Not in your experience?—No, I know of cases to which you might refer at the present time, but the thing is only kept open for a mere matter of convenience.

13,614. Excuse me, I have no individual case in my mind, and I have no knowledge that would warrant me in putting one. Supposing a considerable block of houses comes down it increases (of course *pro rata*) the burden, for the time they are down, upon other properties in the parish?—Yes, that part does not contribute to the rate what it contributed before.

13,615. Why should it not contribute?—Because it is not deriving any occupation benefits.

13,616. But if the value of it is increasing, which I ask you to suppose is the case in some instances, is it true to say that it is not deriving benefit?—It is not deriving benefit by reason of occupation.

13,617. Is it not in a sense in the occupation of the man who is keeping it vacant?—Yes it is in his occupation, but to no immediate profit.

13,618. You are changing now; you use the words "no immediate profit." I assume that you find that owners of property look pretty sharply after their own interests, and that "very few owners," as you say in your own words, "are foolish enough to withhold land from tenants willing to take it for building purposes at its fair value"?—Yes, that is so.

13,619. You credit the owners as a class with having a pretty sharp eye for their own interests?—Yes.

13,620. If a man keeps land vacant, he does it for his own interest?—Yes, that must be so.

13,621. Then why should he not be rated upon it—I do not say upon the full value as if it had houses upon it—but why should he not pay something on it in return for that?—He does in a way pay, because if there is any enhanced value to him by reason of his keeping it, when it comes into operation that enhanced value is developed and contributes its *quota* towards the rating.

13,622. Do you put it to us that, got at in that way, that is a fair thing to the occupiers for the years in which it is vacant, because you will bear with me when I remind you that what underlies the question of rating is that each year is to stand upon its own footing, so to speak; the occupiers are here one year, and away another year, and the man who loses money by vacant land in 1895, may be anywhere in 1898 when the place is developed?—Still there is the land, and there is the value lying in the land, which will produce its *quota* towards the rating.

13,623. But to the relief of a wholly different set of occupiers?—Yes, that is so. I will not mention names, but we will take a place in London in which some houses are being pulled down, and the land has been taken into a garden. That land had a considerable building value in it, but by reason of its being taken down, it gave a larger rating power to other properties surrounding it, and so you could not rate that land on what somebody might have been willing to give for it, and yet you say, Why?

13,624. Now you are, if I may venture to say so, suggesting to me an argument, or an inference, which I did not intend to use?—Then I did not quite gather what you said.

13,625. I did not assume that the vacant land should be rated upon its full value, but I said, is it not right that it should pay something, because I understand you to express an opinion that it was not right that it should be rated at all?—That is so—as vacant land.

13,626. In other words, I wanted to find out whether your objection to rating vacant land was an abstract objection to the abstract unfairness of doing it, or to the difficulty of finding a test of its value—which is it?—My theory is that it should not be rated unless it is producing some direct income.

13,627. If I could convince you that it was producing some direct benefit to somebody, should not that person be rated?—I should be open to conviction.

13,628. (Mr. Clare.) May I just refer to the case of the Great Central Railway Company, which is now pulling down a large quantity of property in London. I do not know whether you are acquainted with the Acts of Parliament, and know that under the Lands Clauses Act if a railway company buys property for the purposes of their railway, and pulls it down, they have to continue to pay the poor rates on the assessable value of the property immediately before it is pulled down until their new works are finished?—Yes, but that is not vacant land.

13,629. You know that is the law, do you not?—Yes.

13,630. And that by custom Parliament invariably also inserts clauses in the railway Bills, compelling them in a like way to pay municipal and urban district rates?—Yes.

13,631. If a railway company pulling down a quantity of houses has to pay rates upon the old valuation until the new houses or new premises, whatever they may be, are built, why should not an individual or a syndicate, or a building company do the same?—In the railway instance, they are using the thing at once.

13,632. No, pardon me; sometimes it may take a railway some years to construct the line. The railway company, for the sake of argument, buy the whole side of a street and pull it down; they are compelled by law to pay the rates on the old assessment of that side of the street until their new buildings are up and the new buildings come into assessment. Do you see any reason why Parliament should not apply to the individual, to the syndicate, or to the building company, the same principles they apply to railway companies?—That seems to me to be a thing a little bit different, because the railway company is making immediate use of that.

13,633. I will put it again: A building company buys the whole side of a street and commences to pull

Vacant land; rating in respect of, discussed: It would be unfair to rate vacant land as building land. It does not derive any occupation benefits, and there is no immediate profit to the owner. Very few owners would withhold land from tenants willing to take it for building purposes.

Vacant land: Rating in respect of. Lands Clauses Act. Case of railway company having to pay rates in respect of property they have pulled down, and before they have rebuilt again. Difference in the position of a railway company and a private owner.

Mr. W. H.  
Warner.  
10 Mar. '98

the houses down; it takes them three years, we will say, before they have finished rebuilding that street, and before the houses come into assessment. If they were a railway company incorporated under Act of Parliament, they would have to pay rates on the old assessments of that property which they purchased until their new property came into assessment. I ask you, why should not that law be applied to the landowner, or the syndicate, or the building company, in the same way as to a railway company?—I do not know why it should or should not. I cannot answer the question.

13,634. (Mr. Elliott.) The railway company comes to Parliament for certain privileges in the one case, does it not?—Yes.

Rates, rise of: How it affects the working classes. Large proportion of houses in Metropolis are rented at less than 50l. a year.

13,635. The private owner does not come to Parliament for those privileges?—Yes; I think that would be the answer to the question—one gets some benefit and the other does not. I could give to the Commission a little instance here which might be interesting; it arises from my memorandum, but not directly by a question. I have prepared a table which goes to show how the increase of rating would bear upon the working classes who occupy the bulk of the small properties of London—the 30l. a year houses. It raises the old question how the increase of the rates would influence the ground landlord, the lessee, and the tenant as well. It shows that every 6d. you put on renders it necessary that the working classes should go further afield.

13,636. (Chairman.) But not the working classes more than anybody else, does it?—Yes.

13,637. Why?—You have before you some evidence from Mr. Harrison showing that the houses which were rated under 30l. a year were 30 per cent. of the whole, between 30l. and 40l. a year 23 per cent. of the whole, and between 40l. and 50l. a year 13 per cent. of the whole—that is 66 per cent.\*

The witness withdrew.

Adjourned till Thursday next at 11.30 o'clock.

## THIRTY-FIFTH DAY.

Thursday, 17th March 1898.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq., C.B.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*  
T. LLEWELYN DAVIES, Esq., *Assistant Secretary.*

Mr. WILLIAM HENRY BALDWIN CASTLE, called and examined.

Mr. W. H.  
B. Castle.  
17 Mar. '98

13,646. (Chairman.) You are the head of the firm of Castle and Son, your offices being at 40, Chancery Lane, and you yourself have personally been in practice for more than 30 years?—Yes.

13,647. During that time you have had a large experience in valuing for poor rate purposes, a good deal of exceptional property, such as railways, gas and water companies, tramways, mines, &c.?—Yes, all over England you may say.

13,648. It is upon your experience that you are willing to speak to us to-day?—Yes.

13,649. Speaking generally, in the first instance, do you think the present system of valuing this exceptional class of property is a satisfactory one?—That is rather a difficult question to answer. I do not think it is quite satisfactory.

13,650. What do you think are the chief disadvantages of it?—Do you mean, now, the exceptional properties,

13,638. Sixty-six per cent. of what?—66 per cent. of the whole of the houses in London are under 50l. a year.

13,639. You may develop any point you want to make, but I do not quite follow what you propose here?—If you take a house which is let at 30l. a year, which is the size of the largest number of houses in the Metropolis, and which is a house in which the landlord would do the repairs, that house would be rated at 24l. a year—

13,640. Why 24l.?—Because there is a deduction.

13,641. A deduction of what?—A deduction according to the Valuation (Metropolis) Act.

13,642. You are allowing for the deduction?—Yes.

13,643. Very well, go on?—The ordinary ground rent of such a house as that would be about 5l. a year, and the interest on the cost of that (350l.) at 5 per cent. would be 17l. 10s., the repairs and insurance amounting to about 6l. That would only leave a balance of 1l. 10s. to cover contingencies. The cost to a tenant of that house would be as follows:—Rent 30l., rates at 6s. in the £, 7l. 4s., water rate 1l., inhabited house duty, 7s. 6d., making a total of 38l. 11s. 6d., or about 15s. a week. That is too high for the ordinary labouring man to pay out of his wages.

13,644. Obviously, one can see that?—Then if you take the ordinary rent that he can pay, which is about 6s. a week, that would be paid in a house of two tenements, and would mean 12s. a week for a house which would give 26l. a year; the interest on 250l., which is the lowest price that you could get such a house for, would be 15l., rates and water, &c. 4l. 10s., repairs 5l., that is 24l. 10s., leaving only 1l. 10s. for ground rent.

13,645. What is the inference you want us to draw from that?—That if you increase the rates you would not be able to build houses for the working classes that would be fit for them to live in—if the rates go very much higher.

or do you mean the ordinary class of property, such as houses and shops.

13,651. I am not referring to houses and shops at all; I am taking you entirely on the exceptional classes of property which I mentioned a moment ago. I will take railways if you like as an instance, do you think the present system of valuing railways is satisfactory?—As far as it goes, I think it is.

13,652. But how far do you think it is satisfactory?—I do not see any better method of valuing them than the present method.

13,653. Do you not think that a parish, for example, is put at a disadvantage when it has to contend with a large railway company if that parish thinks the valuation is insufficient?—Of course there are difficulties at every step you take, but the question is how to avoid them.

Mr. W. H.  
Warner.  
10 Mar. '98

Mr. W. H.  
B. Castle.  
17 Mar. '98

Railways, valuation of: How far present system a satisfactory one.

M. W. H.  
B. Castle.

17 Mar. '98

13,654. Supposing a larger area was made responsible for the valuation in the first instance, such as an administrative county, do you not think that persons employed by the county would be better able to arrive at a fair value of a railway company—taking a larger length of mileage—than a parish can do?—I do not think the enlargement of the area would simplify the process of valuation of the railway if no other means were given to the valuers than there are at present.

13,655. Have you any other means you could suggest to give the valuer, speaking from your experience?—Under the County Rates Act the Committee have power to order a return from a railway company, but here parishes have no power at all; we simply apply for information, and it is generally refused.

Railways,  
valuation  
of: Process  
of valuation.  
Deductions.

13,656. When you are employed by a public authority to value their bit of railway, what is the first operation you go through?—We write a letter to the rating agent of the railway company, and we ask him for certain information, that is to say, we ask him for the length of the line in the parish, or rather to check our lengths; we also ask him for the gross receipts per mile, and the corresponding train miles, and we ask him for the half-yearly accounts, and for an order to view the stations. That is our first step.

13,657. Do you receive an answer to that which enables you to proceed further?—They generally send us the half year's accounts and the order to view, and they either check our lengths, or agree to our lengths. Then we have to work upon that with the general knowledge we possess, and to obtain the train miles from other sources. We are enabled to make a fairish valuation, I do not mean to say a correct valuation, because, of course, it is not quite correct, but a fair valuation.

13,658. Could you give me some idea of the sort of process which goes on in your own mind when you have to value a piece of railway. What are the considerations you, yourself, take into account?—Of course if we have made other valuations in the neighbourhood then we have some data to go upon, but if not we go down and investigate, to the best of our ability, the sort of traffic that passes over the line.

13,659. How do you estimate the traffic that passes over the line?—That is a matter of process, and I can hardly tell you how that is done. That is the outcome of a long experience.

13,660. Still you must see something, I suppose, to enable you to apply that experience, must you not?—Yes. We can get from the half-year's accounts a rough estimate of what the value per mile is over the whole line, and from local knowledge, which we have to acquire, we can then ascertain to the best of our ability whether the portion we are valuing is above or below the average.

13,661. What is the average?—The average is found out from the half year's accounts. The railway companies formerly used to keep their accounts a little differently to what they do now, but they always supply shareholders with the amount of train miles run during the year.

13,662. The railway companies have been here, and the rating agent of the Great Western Railway Company said that the railway companies have more to complain about as regards the system of arriving at the rateable value, than as to the total result. When he was asked to explain that, the question which was put to him by Lord Emlyn was this: "You have something you wish to say to us, have you not, with respect to the scale of deductions allowed to railways?" and the answer he gave was: "Yes, in dealing with our variations, as a rule, it is over the scale of deductions that the principal amount of contention arises; there are other questions, of course, as to the working expenses, but as a rule, the statutory deductions are the prominent source of trouble and expense and appeals, there is no doubt about that." Does the question of deductions come within your experience?—The whole contest between the parties is upon the deductions.

13,663. Have you any comment to make upon the statement of the rating agent of the Great Western Railway Company?—Yes, the whole subject of dispute between the two parties is what the deductions shall be. Perhaps I should explain the process.

13,664. That is exactly what I asked you to do some moments ago; I will just take it in your own way?—I did not quite understand what your Lordship meant.

The gross receipts are arrived at either by the companies sending them, or by estimates; we then take the half-year's accounts, and we proceed to subtract from them the average annual expense for locomotive power, carriages, wagons, general charges, traffic expenses, and incidentals, all which we find in the half-year's accounts. That deduction from the gross receipts leaves what we call the net receipts, and it is after you have arrived at the net receipts that the general dispute arises. They dispute, first, the tenant's capital and the allowances thereon, and they generally dispute what we call the landlord's statutable, that is, the amount of money required to keep the property in a state to command the rent. It is those three points on which nearly the whole of the contest arises.

13,665. Do you think it right that every individual parish should have to go through that process with a railway company, when surely it might be done upon a more comprehensive scale at the instance of a larger local body such as a county?—Of course that would be less expensive to the individual parish, because then the individual parish would only bear its proportion of the whole cost.

13,666. Do you see any objection to doing it in that way?—No, not at all.

13,667. Could you draw anything like a complete list with regard to the various items of deduction?—The railway companies claim, as far as my knowledge goes, from about 120 to 130 per cent. on what they call the gross receipts to estimate the tenant's working capital in the district. We, as parish valuers, dispute that point, and say that about 80 per cent. would be about right. They then claim 20 per cent. for the tenant's allowances: the universal rule of thumb for nearly all courts now is 17½ per cent., but that was fixed about 25 years ago, when money was at a very different value to what it is now. Nobody can get 5 per cent. for borrowed money, plus 10 per cent. for the use of the money—the same money, mind—and 2½ per cent. for risks and casualties.

13,668. Then, I understand, you are not satisfied that 17½ per cent. is the proper figure for tenant's allowances?—No, at a contest I should say 12½ per cent. would be quite sufficient.

13,669. Do you see any difficulty in fixing that generally, and so eliminating one source of dispute—say for the whole length of a railway, or for a railway line over, at any rate, a larger area than it is fixed now?—No, not if some reasonable figure could be arrived at between the parties.

13,670. Is there a uniformity with regard to the 17½ per cent. for tenant's allowances at the present time?—It is by rule.

13,671. Does it vary at all between one district and another?—No, the only case I know of where it has varied at all, is close by Poole, where they only gave 12½ per cent.; otherwise it is pretty well universal: in fact, it has been so universal that we have not cared to contest it.

13,672. Turning from railway companies, you have also experience about gas companies, I understand?—Yes.

13,673. Do you say that the present system of rating those companies is satisfactory?—I cannot suggest any better way.

13,674. Mr. Livesey, the chairman of the South Metropolitan Gas Company, said this to us: "The present system of rating public companies tends to excessive assessments, especially in the case of gas companies. The system is so unintelligible that none of the assessment committees even pretend to understand it; and in the event of an appeal to the sessions, unless the chairman is experienced in rating cases, it is as unintelligible and confusing to the court as it is to the assessment committees." The result is unequal and uncertain assessments." Do you support that statement, or do you wish to make any criticism of it?—It is a difficult statement to criticise, because, of course, it all depends upon the gentleman who is sitting in the chair. These cases are very complicated, and I can hardly explain the matter to you—even the judges of the land hardly understand it. To impart my knowledge to you would be a very difficult thing indeed to do.

13,675. I should have thought that, with your ability and experience, you would have been able to tell us a little more about it, because you say, "I think another

Railways,  
valuation  
of: 12½  
per cent.  
for tenant's  
allowances  
is sufficient.

Gas companies,  
valuation  
of: Discussion  
upon certain  
points raised by  
Mr. Livesey.

Mr. W. H.  
B. Castle.  
17 Mar. '98

"proof that the present state of the law does not press very hardly on any particular class of property is the few appeals we have to quarter sessions." Mr. Livesey's statement seems to imply that the confusion is so great, that it is not much use to appeal?—It is a very difficult matter for a gentleman who is not thoroughly conversant with the points, to hear half a dozen gentlemen on the one side, and half a dozen gentlemen on the other, swear diametrically opposite things, and then to know which is correct.

13,676. That is an incident of the present system?—Yes.

13,677. Is not that rather increased by the method of the valuers being paid by the result?—No, I think not, because the valuer is in the same position as an architect, or any other professional gentleman. He has his reputation at stake; he is not going to jeopardise his status by wrongfully advising his committee to do things which they should not do.

13,678. No; but still, without imputing anything wrongful to the expert, is it not within your experience that there is an extraordinary amount of difference between the opinions which two experts arrive at, sitting on each side of the table?—No doubt, there is.

13,679. Will you not go with me if I suggest that that is stimulated to some extent by the side on which they are retained?—Undoubtedly, but I do not think that the payment affects them. When you are on the side of a railway company, you have to contend to the best of your ability for what they wish to do, which is to reduce the assessment.

13,680. But in fact, on each side you do become an advocate rather than a witness?—Yes.

13,681. Mr. Livesey gave us an instance that has had some effect on our minds. He said: "Two gas companies supply the parish of Lewisham. The rating surveyor advising the assessment committee settled with the Crystal Palace District Gas Company at a rateable value of 4 per cent. on the receipts for gas in the parish, and the same surveyor at the same time claimed a rateable value of 21 per cent. on the receipts of the South Metropolitan Gas Company"—which, as you know, is Mr. Livesey's Company?—Yes, I know; I have acted for that Company.

13,682. "This was in 1895, on the 1894 figures in both cases?"—That is easily explainable.

13,683. I will let you see the whole thing, and then I will ask you for the explanation, because I want you to help me: "The price of gas of the Crystal Palace District Company was 2s. 8d. per 1,000 feet, and that of the South Metropolitan was 2s. 4d. per 1,000. The first-named Company paid 14s. 8.66d. per ton for its coals, and the last-named 10s. 6.56d.—the net cost of the former, after deducting the receipts for residuals, was 4s. 9.84d. per ton, and that of the latter was 1s. 4.34d." He goes on to say: "It is one of the defects of the present system that the better a company serves the consumers the higher it is assessed." Would you make any comment you like upon that?—Yes, that is due to the method of arriving at what a tenant would give for a property by taking the gross receipts, and deducting the working expenses. If the company has a large area, of course it can work cheaper than a company having a narrower area, and, therefore, to start with the net receipts would be considerably more per cent. on the gross receipts in the one case than in the other. A tenant coming in would give more for the larger area and the better worked company than for the smaller one.

13,684. Your argument confirms Mr. Livesey, as I expected it would. He goes on to say in other words just what you have said, "The receipts of the Crystal Palace Company in the parish were 37,800l., and the Company was assessed at 1,513l. Those of the South Metropolitan were 31,700l., and the same rating surveyor claimed 6,650l.," as the assessment. Mr. Livesey adds, "A system that permits such glaring inequalities cannot be other than unsatisfactory and wrong?"—That is his inference.

13,685. Yes, that is, and I put that as his inference avowedly, and I want to know what you have to say about it?—I do not think his inference is correct. If you are to take a tenancy from year to year, and you are to treat these monopolies—for they are monopolies—on the tenant's value principle, a tenant would give more, as I said just now, for the larger company, because his standing expenses you see would be the

same as with a smaller company; his director's fees would be pretty well the same, and so would his secretary and staff. It is like a man having two or three shops; he can work them better and more easily than he can if he only has one.

13,686. You mean, to put it in other words, that out of the gross receipts of 31,700l. for the South Metropolitan they would make a larger net profit than the Crystal Palace Company upon its gross receipt of 37,800l.?—Certainly. There is no doubt that Mr. Livesey has the reputation of working more cheaply in his gas company than any other company that I know of.

13,687. Quite so, but Mr. Livesey's point, I think, is this—that this class of property is, unlike people in other businesses, rated upon its profits. That I understand to be the point which he is condemning as unfair, and that is the point on which I want your comment?—As I said just now these companies are created by Act of Parliament, and they have a monopoly in a certain district to supply a certain article. If I am a butcher or a baker, or any other tradesman, I have competition next door to me, but these companies have no such competition, the only competition they have is the sliding scale.

13,688. You say, therefore, that because they are monopolies they should be rated on their profits, while a man who has not a monopoly should be rated on the value of the hereditaments that he occupies?—Certainly.

13,689. Have you had any experience of valuing electric lighting properties?—Yes, I am acting now for the Cambridge Electric Light Company.

13,690. Those who represented the electric light companies gave as their main point of objection to the present system its uncertainty and want of principle; is it your experience that the electric light companies are valued in the same way as gas companies?—Yes, exactly.

13,691. Upon their profits?—Yes.

13,692. Therefore the comments which apply to the one, would apply to the other equally?—They would apply to all public companies having a monopoly. "The great feature in the electric lighting companies is the deduction for statutable, because no one really knows the life of these things. A thing may be of great service to-day, and a new invention may come out, and the thing may be scrap iron to-morrow. Therefore they require very heavy statutable deductions, as we call them, and if the parish does not give them that, of course it is an injury to the company.

13,693. Do you think that the present system is satisfactory?—I think it works very well, and I do not know of any better one. Of course, there are always hardships everywhere.

13,694. The reason you give for saying that the present state of the law does not press hardly upon any particular class of property is the few appeals we have to quarter sessions; but if this method of valuing public companies has been settled as the law it would of course be no use to appeal to quarter sessions about it?—Not if we have statutory Parliamentary deductions.

13,695. If it has been settled at law that public companies are to be assessed upon their profits or what a tenant would give for them, it would on that point of course be no use to appeal to the courts?—No, but in arriving at what the tenant would give, it is not the method that is wrong, but it is the process of arriving at the method.

13,696. You see these people complain not only of the process of arriving at the method, but of the method itself?—Of course, I do not know what they think.

13,697. I understand you to say that you think the method is right?—The method is as near right as possible; right on its merits, I mean.

13,698. What makes you fix upon once in six years as the period in which a new valuation should take place in rural unions?—It is a perfectly arbitrary figure. In the metropolis it is every five years, and I thought that was too often for rural districts; I do not think they require it every five years, and so I said six.

13,699. Why take six?—It is simply a figure.

13,700. There is no reason for taking six, then?—No, but I thought 10 years too long.

Mr. W. H.  
B. Castle.  
17 Mar. '98

Gas companies and electric light companies, valuation of: Rating monopolies in respect of profits is a just system.

Re-valuation in rural districts should be made at intervals of about six years.

**Mr. W. H. B. Castle.** 13,701. Do I understand you to advocate the rating of Government and county property like ordinary properties?—Yes.

17 Mar. '98  
Government property and county property should be valued like any other class of property. Method of valuation of certain properties which are never sold or let.

13,702. Without for a moment saying that the present system is in all respects perfect, do you or do you not think there would be a risk of a small local authority endeavouring to mulct the Government as much as possible?—No. I do not think that is possible. The Government have an officer who looks after their interests—Mr. Vincent Griffiths, a very able man: I do not think he would allow anything of the kind.

13,703. Assuming that the position is that you are to take what the hypothetical tenant would give, how would you arrive at what a hypothetical tenant would give for a large Government building, such as the Foreign Office or the India Office?—We are thrown back then upon what we call a contractor's rent—that is, what sum of money would be expended by a contractor in replacing that building.

13,704. What rate of interest on the capital value would you take?—The usual rate for all ordinary property is 5 per cent. for the net.

13,705. When was that fixed as the usual rate?—Thirty years ago, I should think, by the London courts, and it has been adopted by everyone ever since; it used to be 4 per cent.

13,706. As the return from invested money decreases I suppose it would have some effect upon the rate, would it not, in your mind?—No, I think not; it might in certain properties, but I think, speaking generally, it would not, because you are taking a tenancy from year to year, and no man would invest his money in factory property, or that class of property, from year to year, without he could get a good return for his money, because he might have to go out of it, and then, of course, the money would be lost.

13,707. I should like to understand your position upon the, as you say, very vexed question of the rating of machinery; at present, is there any definite principle followed by the overseers as to what machinery is to be rated and what is not?—Universally so?

13,708. I am asking you, of course, within your experience?—Some unions do not follow it, and some unions do.

13,709. Do not follow what?—Do not follow any principle at all. I have been instructed to make two valuations, one including machinery and one without, and the committee have adopted the one without in several cases. If the manufacturers are in a majority on the Assessment Committee of course that has an effect.

13,710. If a question was referred to you between a Local Authority and a manufacturer, and you were told to arrive at the fair value of the property for rating purposes, what principle, as regards machinery would you yourself adopt?—I should go and inspect the machinery and see what I thought was fixed or applicable to the particular trade in question and necessary for that trade, and I should then take 5 per cent. for the net and  $7\frac{1}{2}$  per cent for the gross.

13,711. You say, "necessary for the trade." Do I understand you that you would take each trade separately and would reject the principle which has been sometimes followed, of taking the machinery which was so fixed to the structure as to be practically irremovable?—That law is obsolete now. The Chard case\* went further than that; the Chard case was the last case that was settled with regard to machinery.

13,712. I am not so much asking you as to the present state of the law; perhaps I did not put the question quite distinctly, I want to know what you think in the abstract is the fairest principle, even if it involve an alteration of the law?—I have given you an example in my proof which I think is a very good one, of a corn mill; the process that the corn goes through before it comes out in the form of flour and other residuals is explained there. The machines are a little bit heavier than this despatch box, but some of them are not very much. There are two or three cylinders about 10 or 12 inches long and about 8 inches in diameter; they are confined in a box and the corn passes through them and is ground; these rollers are mere chattels really, but still they are so essential to the trade of a miller that we take them into account.

13,713. But if the miller moved from one place to another, would he not take those machines with him?—Yes, he would, and then it would be no longer a mill.

13,714. Under those circumstances, do you adhere to your view that it is fair to include their capital value for rating purposes?—Yes, they are essentially mill property, and we are rating a mill, we are not rating a warehouse.

13,715. Would you rate a butcher upon the block, upon which he chops his meat?—No, I should not. There is a continuity here; there is a process going on. The corn is washed and dried and put into a hopper, and it passes through these different machines to make it into flour. You cannot cut a machine off and say: I will take it away, because, if you do, the process will be gone, and it would be no longer a flour mill. But you can take a butcher's block away, he is not obliged to use it. He can chop on his counter if he likes; there is no continuity of process there. It is a difficult question.

13,716. I fully appreciate that, but I do not quite appreciate the importance of what you term continuity as a principle?—Take the process of brewing. The water is boiled and the malt is boiled with the water. It is in a copper and the hops are put to it, and it passes through several processes before it comes into beer, but you could take the copper away.

13,717. Do you know any instance of a brewery being let as a brewery?—Yes, one or two.

13,718. Who supplies the coppers in those cases?—The landlord.

13,719. Does he?—Yes. These cases are very rare. There has only been one to my knowledge, and that was in Banbury.

13,720. Is there anything on the rating of public companies which I have missed, which you would like to impress upon us?—No, except that I think it would be an advantage if the Committee had power to request certain facts and figures to be given to them by the different companies. I think that it would be a very good thing if all the appellants had in their notice of objections to state what was the result they wished to arrive at.

13,721. On the question of appeals we know that the appeal in the first instance lies to the quarter sessions, and that on points of law there is an appeal to the High Court?—Yes, that is so.

13,722. Would you agree with some witnesses who have represented to us that the margin between fact and law in such cases is often very narrow and very difficult to determine?—It is very difficult.

13,723. Would you approve, or would you not approve of setting up a special tribunal, something upon the model of the Railway Commission, to decide all appeals in regard to the rating of this class of property, that is, of public companies, and doing away with the distinction of only allowing an appeal upon a point of law?—I think not. I do not think it would act, except for the benefit of the great companies and wealthy people; in fact the ordinary ratepayer would not attend, and he could not attend; the expenses are so great now that he would sooner pay.

13,724. I limited my question to the case of companies and businesses of this kind, and I did not intend to suggest to you that the individual householder should be asked to go to such a court; does that modify your view at all?—If we were obliged to go we should go, and if we had a choice of going, after having been put to the expense of obtaining two or three decisions of a court like the Railway Commissioners, I do not think one side or the other would ever go again.

13,725. Now, parting from public companies, and going to individual properties, there is one question which has been represented to us—you have metropolitan experience, I think?—Yes, I have.

13,726. It has been represented to us that the relations between what our witness called the site value upon which the structure was placed, and the value of the structure itself varied very much in different localities in the metropolis?—No doubt.

13,727. That is a fact within your knowledge?—Yes.

13,728. It has further been represented that in arriving at the rateable value from the gross value, if

**Mr. W. H. B. Castle.**

17 Mar. '98

Appeals: Special tribunal to hear rating appeals not desirable.

\* Gifford, Fox, & Co. v. The Chard Guardians (63 L.T. 249).

Mr. W. H. B. Castle.  
17 Mar. '98  
Site value and structural value : If maximum deductions in Metropolitan are always allowed without regard to relative value of site and structure injustice results, as land requires no deductions for repairs. There should be separate columns in the rate book for site value and structural value. Owner of site value would have to be given a power to appeal.

you uniformly deducted the amount provided by the statute as the maximum from both classes of houses, the one where there is a high site value, as well as the one where the site value is low, you do a great injustice in the respect that the deduction is far too high in the case where the site value is high ; what have you to say to that contention ?—It is quite correct.

13,729. Do you think it is a grievance which can be remedied ?—Yes.

13,730. In what way would you proceed to find the remedy ?—I would have two columns in the rate-book.

13,731. What would you call them ?—I would call one the column for site value, and the other the column for building value. You see, land does not require any repairing at all.

13,732. Quite so ; that is the contention. Would you have the difference inserted in every case in the rate-book ; would you have the two columns filled up in every case ?—No, not in regard to the small properties. I do not think they would require it. In the case of a house of 20*l.* a year which has a ground rent of 5*l.* the deduction would be so small an amount that I think you would complicate matters.

13,733. Clearly, if there were many hundreds of these cases, even if the individual value was small it would come, would it not, to a large sum in the aggregate ?—In a large metropolitan parish I do not think it would make much difference in regard to the house properties ; it is only in the wealthy West End where you get the big ground rents.

13,734. It would apply to the City as well as to the West End, would it not ?—Yes, it would apply to the City and the West End.

13,735. Would you make one law for the City and West End, and another for other classes of property ?—I think I would draw the line at 20*l.* houses ; I do not think I would go below 20*l.* gross.

13,736. But the 20*l.*, of course, would be a purely arbitrary figure ?—Yes.

13,737. Is it your proposal that in every case where the value of the hereditament is over 20*l.* there should be two columns, one to state the site value, and the other to state the structural value ?—I think that would be a very good plan.

13,738. How would you proceed to get at the difference ? Supposing you, in your own mind, had arrived at a gross value, as is done now for any large house or place of business, of 500*l.*, what would be the process which you would go through to separate the structural from the site value ?—I should have to measure up the building, and to find out what the building value was, and I should have to compare the site with other sites to ascertain what the site value was.

13,739. You would make a difference, of course, between whether the building was an old one or a new one ?—Not for rating purposes ; it would command just the same rent.

13,740. Would you make no difference for that ?—No. A house 100 years old, without the locality has gone down—and the locality may have altered the value of the house—is just the same to a tenant as a new house, a year old, because it is supposed to have been kept in a state to command the rent by the difference between the gross and the net.

13,741. One hundred years, of course, is a long time ?—Yes.

13,742. Supposing it was approaching the end of a lease which had been for 90 or 99 years, would there be no difficulty then in separating the site value from the structural value for rating purposes ?—I do not think so. Of course a man would have to use his ability to do it. It would not be a very extraordinary thing to do.

13,743. There would be considerable ground for differences of opinion between two experts on that matter ?—There generally is, I am afraid, on every point.

13,744. It would require individual dealing for every individual hereditament, would it not ?—Yes, more so than it would now, but once having settled it, of course there would be some data to go upon for any future valuations.

13,745. And, of course, you would allow an appeal upon both points, of site value and structural value ?—Yes.

13,746. By all the machinery which you have at the present time ?—Yes. When you find a building in the City which cost, perhaps, 10,000*l.* or 15,000*l.* to put up, and the value of the land is four or five times that amount, then to allow repairs on that site value, of course, is wrong.

13,747. (Mr. Elliott.) I gather from your memorandum that you have on very many occasions acted for local authorities in the matter of the assessment of railway properties ?—Yes.

13,748. Have you ever acted for railway companies ?—Yes.

13,749. Then your evidence is given based upon your experience not only as a valuer employed by the local authorities, but also as a valuer employed by the railway companies ?—Yes.

13,750. In other words, to use his Lordship's phrase, you are here rather as a witness than as an advocate ?—Yes.

13,751. Am I right in concluding that in regard to the assessment of railway companies at the present time you consider those companies are frequently under assessed ?—Well, they are not assessed to their full value.

13,752. And that the deductions allowed in arriving at the assessable value are, in your opinion, frequently excessive ?—I do not know that I can say "Yes" to that, I do not quite follow you.

13,753. Is not the whole gist of your evidence, with regard to the railway companies, that, owing to the percentages allowed at different stages, the result is to give an assessment which is lower than the assessable value, in your opinion, ought to be ?—No, I do not think so.

13,754. Do you think that the percentage, for instance, in respect of tenants' allowances is too much or too little ?—I think it is too much.

13,755. In other words, that the assessable value is too low ?—Yes, of course that would be the result.

13,756. To that extent the application of the present rules is defective ?—Of course, it is the ruling of the court ; it is not our ruling you know.

13,757. I am trying to get your opinion as to how it works out in practice. I understood you to say just now that the deduction from the net receipts in respect of tenants' allowances is excessive ?—We should contend that 12½ per cent. was quite sufficient, but the railway companies contend for more than 17½. As a rule, it is generally a give-and-take business ; we do not fix hard-and-fast rules in settling these matters.

13,758. But your view is based upon experience as a valuer for both sides, and speaking now, simply as a witness before this Commission, you say that the lower percentage ought to be taken rather than the higher ?—I think so, looking at the price of money now.

13,759. To what do you attribute that—to the greater power of the railway companies to fight these questions ?—No, I do not think so.

13,760. Do you think that the railway companies are in a better position than the local authorities to secure the adoption of their view of the case ?—No, not as regards the tenants' capital. Of course they have more power than an ordinary parish individually would have, because they have got all the system of the railway behind them.

13,761. Do you think that the parish authorities are a good match for the railway companies ?—By themselves, "no."

13,762. Is that one of the reasons why you would prefer to see the rating authority, in regard to railways at any rate, more powerful ?—Certainly.

13,763. Because then you would be more likely to get what, in your judgment, would be a fair assessment ?—I think so.

13,764. With regard to the power of the assessment committee to obtain information, are you as all familiar with the powers of the Commissioners of Taxes ?—I have heard what their power is, but I am not familiar with it.

Mr. W. H. B. Castle.

17 Mar. '98

Railway companies: Their property is sometimes undervalued. Reasons for this. 12½ per cent. for tenant's allowances is sufficient.

Mr. W. H.  
B. Castle.  
17 Mar. '98

13,765. Then you are not aware that the powers of the Commissioners of Taxes to obtain information are very much in excess of the powers of assessment committees?—I believe they are.

13,766. I gathered that your suggestion is that the power of the assessment committees to obtain information and to call for particulars should be extended?—Yes.

13,767. With regard to some replies that you gave to the Chairman as to the adoption of profits as a basis for arriving at the rateable value, the amount of the profits to be earned in any particular building, or from any particular undertaking would very much affect the rent to be paid, would it not?—No; you can earn thousands and thousands in a small office in Hatton Garden, but it would not affect the rent.

13,768. Take two railway companies?—A railway company of course is different.

13,769. That is to say, in order to arrive at the rent which the hypothetical tenant would be likely to give, you must take into account the profits which the tenant could realise by working that property?—Certainly; there is no other way of doing it that I know of.

13,770. Therefore you see nothing inequitable in taking profits as a starting point?—No, only I object to using the word "profit."

13,771. Whatever you like to call it?—We are supposed to allow the tenant his profit; I know the courts have strenuously set their face against the word "profit," in the sense in which you have just used it.

13,772. You see no objection to taking the difference between the receipts and the necessary expenses?—And allowances.

13,773. As the basis of arriving at the rateable value?—No, there are no other means.

13,774. With regard to the rating of machinery, are you familiar with the Bill recently presented to Parliament to amend the law on that subject?—Two or three Bills have been introduced, but I do not know of one now before the House; I have not seen it.

13,775. Are you in favour of an amendment of the law?—No, I cannot say that I am.

13,776. In other words, your opinion would be that the value of all machinery which continues as it were from the structure, should be included in the rateable value?—Yes, I think so. I think that if you are rating a flour mill you must rate it as a flour mill, and if you are rating an engineer's shop, you must rate it as an engineer's shop; it is not a warehouse you are rating.

13,777. But to take his Lordship's illustration, if you were to remove a butcher's block from his shop, it would still remain a butcher's shop?—Yes.

13,778. Whereas if you were to remove some of the smaller portions of the machinery of a flour mill, it would not then be a flour mill?—No, without some other process was invented.

13,779. With regard to the separation of site value from building value, I presume that that would be a very expensive process, would it not?—Of course it depends upon what the word "very" means. I do not think it would be very expensive. A man who was appointed to value a certain parish would have certain local knowledge. He would learn certain local facts which the "Builder and Surveyor" and other papers would give him from time to time, as regards what the cost of sites had been in the neighbourhood.

13,780. Take, for example, the case of a house, say, in Cadogan Place; the rent of that house is easily ascertainable, is it not?—Yes.

13,781. No expert assistance is required in order to arrive at the rateable value of that property?—If you base it on rent purely, no.

13,782. That is the present system, is it not?—No; I do not see how you can base owner's occupation on rent.

13,783. Do you think that the assessment committee at the present moment employs an expert valuer to value a house, say, in Cadogan Place?—I do not know whether the Chelsea committee have employed one, I do not think they have. I think they take the returns furnished under the Valuation (Metropolis) Act, and act upon those.

13,784. And they have access, have they not, to the Property Tax Assessments if the surveyor is represented?—The surveyor sits with them, he is present at all meetings.

13,785. If there were any attempt to separate the site value of a house in Cadogan Place from the building value of that house there would have to be something like an expert valuation of the respective interests would there not?—Without they adopted a rule of thumb. Of course the overseers of a parish are supposed to be cognisant of the value of their parish, and indeed they would know pretty well the value of the land.

13,786. Do you think they are competent to express an opinion as to the respective values of land, and of a building—of a house, say, in Cadogan Place?—I can hardly answer the question, it all depends on who the overseer was.

13,787. Anyhow the process of rating would be much more elaborate than it is at the present moment?—Entirely, but I think the result would pay for it you know. I think a parish would get a much greater benefit. Suppose you had a house of 500*l.* a year, and suppose, roughly speaking, you took it as 350*l.*, and 150*l.*, on the 350*l.* you would get a reduction of one sixth to arrive at the net, and the tenant would pay the 4*s.* or 5*s.* or 6*s.* in the pound on the reduced amount; but when you come to the site value there would be no deduction at all, so that the rates would be collected on the 150*l.* for the site, and on the 350*l.* less the sixth; but on the present scale they are only rated on the 500*l.* less the sixth, so that the parish would benefit by the rates on the difference between the two sums.

13,788. I quite follow that; but does that not assume that one sixth is always the deduction taken?—In house property, yes.

13,789. Is it necessary under the statute that one sixth should always be taken?—The Valuation (Metropolis) Act gives it as the maximum, but it is always adopted.

13,790. Then the present difficulty arises, does it not, now so much from the terms of the statute as from the practice of the assessment committee?—And the assessment committee, if the law was altered tomorrow, would adopt the easiest method of getting rid of the difficulty; they would not go round and value separately a new house, or an old house, or a medium house.

13,791. They might regard this expensive system of the separation of site value from building value merely as intended to effect a reduction in the percentage amounts allowed in the case of property of that kind?—I think so; but they would never adopt it.

13,792. But they could do so?—They could do so, but then of course the process would be nearly as expensive, because they would have to go round and view the house and say this house has been built 10 years, or this house has been built 20 years, and then you would get the anomaly of two houses paying the same rent, and there would be different deductions.

13,793. Supposing the assessment committee were to say, in the case of a house of the value of which you speak, we will not allow one sixth, we will only allow one eighth, would you not get substantially the same result?—No, without they allowed that one eighth to every house there would be a difficulty arising directly. You see you would have two houses of the same value, 500*l.* a year, one let to a tenant and one occupied by the owner, one might be built to-day and might be quite a new house, and the other might have been built 20 years ago. If the assessment committee were to go round and say we will allow this new house only an eighth, and the other a sixth, then a time would arrive when the new house would no longer be new, and would require the one-sixth allowance, then every year that house would be getting to a less value than it was before.

13,794. Would not that be equitable?—It might be equitable, but it would not be workable.

13,795. Would it not be as workable as this proposal to separate site values from building values?—I think not, because you might fix the site value for five years, at all events. The site value would not alter at all in five years, or very little.

13,796. In suggesting that the site value should be separated from the building value, is your only object

results  
would  
compen-  
sate for  
this.

*Mr. W. H. B. Castle.* that of rectifying the deduction allowed in the case of the properties you value?—That is all.

13,797. (*Mr. Smith.*) I understand you to say that whether the process of separating the site value from the hereditament value is expensive or not, it would pay for doing it?—I think so. I have not gone into the matter, and that is only my opinion.

13,798. You have taken the case of a house in Cadogan Square, where you have assumed that the site value was as 150l. and the value of the structure 350l.?—Of course that was only using figures as illustrations.

13,799. I say so, but it is conceivable that there are parts of London where the site value goes up to as much as 70 per cent. of the hereditament value?—I know site values where they are 300 per cent.

13,800. I was moderate then in saying 70 per cent.?—Yes.

13,801. I was alluding to a case in Old Bond Street, which was pointed out to us?—I think you will find that some of the Cornhill property is worth more than that.

13,802. So you think it, at all events, would pay for doing if the principle were right?—I think so.

13,803. I assume it is a thing that surveyors are in the habit of doing when they look at property?—No doubt they are; if you want to sell or let a property you would do it.

13,804. Now, going back to the question of the companies, you do not, as a rule, get the gross receipts from the companies?—No.

13,805. You have to work those out for yourself?—Yes.

13,806. There is just one point in your paper that I do not quite understand. I may be very dense; but you say that when you have got the gross receipts, "the companies claim 120 to 130 per cent. of these "gross receipts as representing the values of their "rolling stock"; how can they claim 120 or 130 per cent. of the gross receipts?—The old rule of thumb of years ago—and we generally go back to rules of thumb if we can—was that a pound of receipts required a pound to be expended in rolling stock.

13,807. That would be 100 per cent.?—Yes; then the companies thought they would like to have a little bit more than that, and they went to 120 and 130 per cent.

13,808. That leaves no value at all, does it?—Yes, because that only represents the value of the working stock, and on that stock you allow a certain per-centage.

13,809. Of course, otherwise it would be an absurdity, as there would be no value but a structural value?—Yes.

13,810. I understand you now?—On that stock you allow a certain per-centage.

13,811. And you confine it to the stock?—Yes.

13,812. Just one question as to a matter of practice. Is it usual for surveyors, gentlemen like yourself, to act indifferently for assessment committees and for these large companies?—Yes.

13,813. Both sides?—Yes.

13,814. There are not a number of gentlemen who habitually act for local authorities, and others, who support railway companies?—Of course we all have a bias. I suppose I may call myself a parish authority.

13,815. A local authority or an assessment committee surveyor?—Yes. Whenever I am called in by the railway companies I always tell them that my practice is so and so, and if I can be of any service to you, you can have me, but I am not going to cry hot and cold.

13,816. I thought so. I am not quite clear about your views on the question of the rating of machinery. You are satisfied with the existing law, I understood you to say?—It is judges' law, you know.

13,817. That is law generally in this country?—I mean to say the judges have laid it down, or they have built it up from time to time.

13,818. The Chard case\* is the best and the most recent, is it not?—The Chard case is the last.

13,819. Are you satisfied with the law as laid down by the judges at the present time?—Personally, I think the Chard case went a little bit too far.

13,820. Do you think it would justify the instance that you have put before us of the rating of all that movable machinery in the flour mill?—Yes.

13,821. You attach great importance to what you call continuity, that is, I take it, that the small machinery must have some relation to the large machinery?—Yes.

13,822. And all should have some reference to the process that you describe?—Yes, all should be working together.

13,823. Would you rate a lawyer in the Temple on his law books?—No, they are not of the same character as an engine.

13,824. Surely they are as necessary to the process of advising his clients, which is his business?—No, he could go around the corner and borrow another book.

13,825. So might your miller?—No, he could not.

13,826. If he had a mill as handy as chambers in the Temple he could?—No, he could not.

13,827. Could he not borrow those portable machines, then?—The other man could not spare the machine, and he could not detach it; there is no analogy in the case.

13,828. It is possible, I think, sometimes that two or three people want the same law book when they go to a library. There is one question you have not been asked, I think, by anyone, and that is as to the rating of water companies or corporation water supplies. Do you think that the method of rating those undertakings is satisfactory?—To my mind it does not make any difference who the owner is.

13,829. I am not laying stress upon that. Take the case, which is getting common now, of having a long aqueduct, we will say 100 miles of aqueduct with a supply reservoir at one end and a service reservoir at the other and a large town with distributing mains, do you think the present method is satisfactory?—I do not see any better one. I acted for a very large water company in Staffordshire where that took place.

13,830. Where an aqueduct, for instance, may be in tunnel to a great extent, do you not think the country parish get a great benefit out of that unnecessarily?—I do not think they do unnecessarily. Of course, the first principle of rating is the user of the land in the parish, and there must be a certain proportion of that user applicable to that particular parish, otherwise the company would not earn the money in the district of supply. There is no hardship to the water company, because before we attempt to distribute any profit in the parishes in which the receipts are earned, we make a deduction for all those outlying properties, and if, as Lord Esher said, they will not bear 5 per cent. you must take something less.

13,831. But that, perhaps, would rather justify you in drawing the distinction which you declined to draw just now between a water company working for profit and a local undertaking carried out by a municipality?—Though they do not work for profit directly, they do indirectly.

13,832. At all events, you are not prepared to recommend, I understand, any better method?—I do not see any better method.

13,833. (*Mr. Clare.*) May I just ask you one or two questions as to valuing ordinary house property. Supposing that there are two houses, newly erected, down at Chelsea on the Chelsea estate, both built exactly on the same plan and erected at the same time, would those houses ordinarily speaking be assessed at the same value?—They ought to be, if they were brick-for-brick, as we say.

13,834. Supposing in one house the electric light is laid on, and not in the other, would you alter the assessable value because the electric light is laid on?—I suppose the tenant would give more rent for it if the landlord had put it there.

13,835. It is not a question of what the particular tenant pays, it is a question of what would an ordinary tenant give to occupy the premises, is it not?—Of course, it is what a tenant would give, not what the tenant does give. Any tenant, without he had a peculiar idiosyncrasy against using electric light, would give more for it.

13,836. And the assessable value would be increased?—I think so, but it would be by a very trifling amount—I do not know what it would be.

*Mr. W. H. B. Castle.*

17 Mar. '98

The law and principles affecting the rating of machinery discussed.

Railways, valuation of: Gross receipts. Amount claimed for value of rolling stock.

Surveyors and their professional practice.

Machinery, valuation of: Considers that the case of Gifford, Fox, & Co. v. Chard Guardians went rather too far in the direction of rating machinery.

House property, valuation of: Decorations and furniture in a house do not add to its assessable value.

\* Gifford, Fox, & Co. v. The Chard Guardians (63 L.T. 249).

Mr. W. H.  
B. Castle.  
17 Mar. '98

13,837. Supposing a very rich man occupies one of these houses, and spends a large sum of money in affixing to the walls permanent decorations of a valuable character, would those decorations increase the assessable value of the house?—No.

13,838. Suppose, for instance that he has panel paintings and ceiling paintings of a very valuable character, would that increase the value?—No.

13,839. Surely that would prevent the tenant having to carry out decorations himself?—No, not of necessity, because the next man might come along and say, "What a daub that is! I will whitewash it."

13,840. Supposing that a house is perfectly decorated from top to bottom, do you not take that decoration to add to the value of the occupation for the purposes of the occupier?—Now you are assuming you do.

13,841. Yes, I am assuming you do?—Then, of course, the answer would be different. I do not think, if you ask me my opinion and my practice, that if I came in to value this building, and I found that an Italian artist had been employed to decorate these panels, and it had cost 1,500*l.*, that I should take any notice of that.

13,842. Then the mere fact that a house is fully furnished, so to speak, as regards decorations, and handsomely furnished, would not make any difference to the assessable value of the property?—I do not think so.

13,843. Just a question or two about machinery. Where do you draw the line between machinery that is rateable and machinery that is not?—Now you are asking a very difficult question: I cannot.

13,844. Supposing that a man chooses to build a mill, and he not only builds the fabric, but he fits it up with boilers, engines, and everything to give the necessary power to work the machinery for which the mill was built?—A very common practice.

13,845. Would you rate the machinery in a case like that?—Certainly.

13,846. Why?—Because it enhances the value of the property. He would get more rent for it.

13,847. Supposing, then, that the owner had not put in the machinery, but let the fabric without the machinery to a tenant, and the tenant put in the machinery, would you rate the machinery in that case?—The tenant would not put it in without he had a long lease or some holding upon the tenancy; of course, if it was annual value he would not put it in.

13,848. I do not want to ask you what a prudent tenant would do. I want to ask you this question: Assuming that the fabric is erected by the owner and that the machinery, whether wisely or not, is put in by the tenant, would you increase the assessable value of the factory because the tenant has added that machinery to it?—Certainly.

13,849. You would do so?—Yes.

13,850. Why?—Because it is there, and I should not inquire who put it there. It is there for the use of the hypothetical tenant, and he would pay more rent for it.

13,851. Then you draw no distinction between machinery put in by the landlord and machinery put in by the tenant, providing the building with the machinery in it would be more valuable to the hypothetical tenant than it would be without the machinery in it?—Certainly.

13,852. About this question of site value as separate from building value, who is going to pay the rates on the site value?—I suppose that is a matter of detail, but I think the landlord ought to.

13,853. At the present moment the occupier pays the rates?—He pays the rates for both.

13,854. And he has to pay upon the value of the occupation as it now stands?—Certainly.

13,855. Supposing that the site value at 3 per cent. comes to four or five times more than the rent he is actually paying, what do you think the occupier would say if he has to pay rates upon that?—Of course the hardship would be to existing tenancies, would it not? If it was a new tenancy a man would know what he was going to expect, and what he was going to pay, and would use his judgment accordingly. Of course it would be rather a difficult question to know how to divide the money.

13,856. Let me give you an illustration. Supposing that there is an old dwelling house with a large garden

round it, and the site value according to the ordinary valuation would be worth 300*l.* a year, but the house with the garden as it stands lets at 50*l.* a year, and the tenant is willing to take it because it is 50*l.* a year; do you think he would be willing to pay rates upon a basis of 350*l.*?—No I do not think he would.

13,857. Then, how are you going to arrange it?—He would not stop there if he had a means of getting out of it.

13,858. Then the result would be that the house would become vacant?—And then immediately after that the tenancy would be renewed by some other person paying a lower rent.

13,859. Pardon me, if the man who is paying 50*l.* a year finds that there is a site value of 300*l.* put upon his occupation on which he has to pay rates, I think we agreed a minute ago that he would at once give up his tenancy?—Yes, he would if he could.

13,860. Why should you suppose that another man would come in and be willing to pay that?—Of course he would come in on different terms, and he would know then what he had to pay.

13,861. I will assume that the landlord will say: You can come in and occupy it for no rent at all; do you think he would be willing to pay upon 300*l.* a year for a house that would be only worth 50*l.*?—Of course you are assuming a proposition, and then arguing upon it, you know.

13,862. I am assuming a proposition, and I want to argue from it. I am assuming that the site value is worth 300*l.* a year?—Of course you can assume anything.

13,863. (Chairman.) Do you put it as an impossible assumption?—I rather think it is. The site value is to be ascertained from the use to which it is put at present.

13,864. Are you prepared to say from your experience that such an hypothesis as Mr. Clare puts to you is impossible?—I do not say it is impossible.

13,865. (Mr. Clare.) I want to put this point to you; an old house with land surrounding it may now be let under existing conditions at 50*l.* a year; if you apply the site value, the annual assessment of the site value alone is 300*l.* a year; I think we agreed that the effect of putting that assessment upon the occupation would be that the tenant would leave the house?—I think so.

13,866. The result is that the occupation would become vacant?—Yes.

13,867. If it becomes vacant it does not become rateable?—No.

13,868. Therefore, by putting the site valuation on to this small occupation, the local authority instead of getting rates on the site value will get no rates at all?—For that period.

13,869. For the period it is vacant?—Yes.

13,870. And they will not get any rates until the property develops in order to enable the site value to be obtained?—No; I mean to say the landlord finding that he was losing his 50*l.* a year might say to a person: I will let you in at 25*l.*, and I will pay the rates upon the ground.

13,871. Let us take a concrete case. What would be the effect of putting a site value upon Holland House?—Of course, I have not got the figures before me, and I do not know what they are.

13,872. Supposing the effect was to put a rateable value on Holland House, and the Park surrounding it, of 50,000*l.* a year, and taking the rates on that as 15,000*l.* a year, it would be rather a large rental for a man to pay, would it not?—You are assuming that the rates would be the same upon the site value as they put upon the whole hereditament. We do not know how the Act may be framed; they might put a less value upon the site; many details might be gone into.

13,873. The effect of valuing site separate from buildings means that you have to assume that a man has spent money in developing it which as a matter of fact he has not; I merely want to point out to you that the effect of doing that must be necessarily to close a large amount of open spaces in your towns which at present remain open, because they are not assessed in that way?—I do not think it would have that effect, because, of course, the Building Act is in operation in all towns, and the local authorities would not pass the buildings if they were going to close up all the spaces—they would not do it.

Mr. W. H.  
B. Castle.

tween ma-  
chinery  
put in by  
the land-  
lord and  
by the  
tenant. If  
tenant put  
in ma-  
chinery,  
the assess-  
able value  
of the  
factory  
should be  
increased.

Site value  
and struc-  
tural value  
separately  
valued.  
Question  
as to how  
payment  
of rates  
would be  
divided.  
Effect of  
putting a  
rate upon  
site value  
of certain  
properties  
discussed.

*Mr. W. H. B. Castle.*  
17 Mar. '98  
13,874. I am not assuming that the spaces will be closed so as to infringe the Building Acts, but would it not be the fact that if you make a man pay rates upon the assumed value of the land surrounding his house, that many men will sell the land surrounding their houses rather than pay rates upon it?—I do not think we are quite at one. Is the selling value the site value?

13,875. The site value, I assume, is the value of the property, assuming it is developed in the way in which it is capable of being developed?—I do not think that is the same thing as site value, because if you take Cornhill, where every inch of ground is worth more gold than you can put upon it, as they say, and then you take Holland Park, which is not developed, which is utilised as a pleasure ground and so on, you are taking two localities which are hardly in the same category.

13,876. Do I understand that site value means not that you are going to take the value of the land, assuming it is developed separate from the building, but that you are merely going to take the value of the land for the purpose for which it is at present used?—That is what I should say. If you are going to take selling value then you are supposing that a man will do something else with the property, and you are taking it out of the particular category in which it now is, and altering the hereditament.

13,877. Supposing you are valuing an old dwelling-house which is rather out of repair, but which is let at a rent of 50*l.* a year, you would deduct a larger percentage, would you not, for outgoings than you would in the case of a newly-built office, we will say in Lawrence Lane?—Certainly.

13,878. Supposing you deducted 30 per cent. in one case, and 5 in the other, which is not, I think, an unfair proportion at present, that in itself would practically bring about what you want, namely, that you would deduct a smaller percentage from the larger rental in the city, because the cost of repairing that particular building works out, as a rule, to that smaller percentage?—No, I do not think it follows, for this reason, that practice and theory are so very different. What I might do, as an individual surveyor going to look at two individual properties, and what parish authorities would do, looking at a thousand, may be very different things.

13,879. I just want to ask you a few questions about county property, which you suggested should be rated. I do not quite understand the basis on which you would rate, we will say, a quarter sessions house?—The same as I should rate a bank or anything else. Those things are not in the market, and you cannot compare them with other properties of the same description. You are therefore thrown back upon what we call a contractor's rent.

13,880. Why should you go back to the contractor's rent; because I understand the basis of rating is the rent that the tenant will pay, not the interest that the landlord wants out of it?—I beg your pardon. The rent that the tenant will pay is what we want to arrive at, and the contractor's rent is one means of arriving at it.

13,881. Assume that a corporation owns a public building, which so far as market value is concerned is out of the market altogether, then you would have to take them as the hypothetical tenant?—You cannot exclude them, of course.

13,882. On what basis would you arrive at the rent that the corporation as the hypothetical tenant would pay for that building?—I do not see any different way than that in which you would treat anybody else. They have spent money, either advisedly or otherwise in erecting a certain hereditament, they have paid so much money for the site, or the site has been given to them just as in the case of other people, and I do not think that one should take them out of the category in which other people are placed.

13,883. I understand that you take 5 per cent. upon the capital cost?—I would not use the term capital cost. I prefer to use the term replacement cost.

13,884. But why 5 per cent.?—Simply because it has been the universal practice to do it.

13,885. Assume the case of a corporation; a corporation can borrow money at, we will say 2½ per cent. for the sake of easy calculation, and they can put by a sinking fund of another 1*s.* or 2*s.*, we will say; altogether

it will cost them 3½ per cent., and at the end of 50 years they will own the building. Why should you assume that if they can erect it, and in the course of 50 years also own the property without any debt upon it, that they would be willing to pay a higher rent than the interest and sinking fund would come to?—Because if you make any distinction in respect of a corporation or a wealthy person, you are creating a distinction between them and other ratepayers. If I am a rich man, or a public company having plenty of money, I can go into the market and borrow at a very low rate; but if I am an ordinary individual, if I go to my banker, and I want 1,000*l.* from him, he charges me 5 per cent, for it as a rule.

13,886. The ordinary individual does not come in in this case—there is only one possible tenant, and that is the corporation?—I do not see why you should make the distinction between a corporate body and anybody else. They could certainly borrow the money cheaper, no doubt about that; but if we go a step further back, and take the West Middlesex Case\* as our basis, where the courts laid down that a contractor was supposed to find the money to erect the building, then we must assume that no contractor, whether it be a corporate body or an individual, would be content with less than 5 per cent.

13,887. Do you not see that comes back to the old question, that you are basing the rent upon the return to the landowner, instead of basing the rent upon what a tenant would be willing to give?—Then, of course, you must know that there are two parties to every letting. There is a willing landlord and a willing tenant, and the surveyor has to go between the parties, and to say what is a fair rent that the tenant should pay, and what should be a fair recompense to the landlord for his outlay.

13,888. One word about corporation waterworks have you assessed corporation waterworks and valued them?—Yes.

13,889. I think you know that, as a rule, corporations are prohibited from what we call earning a profit?—Yes.

13,890. That is to say, they are allowed to raise a revenue, which is equal to interest, sinking fund, and working expenses?—Yes.

13,891. But beyond that they are not allowed to make any profit?—No; if they make a profit in any particular year they have to lower the rates.

13,892. How do you arrive at the rateable value in a case like that?—In the first place I cut out the sinking fund.

13,893. You do cut out the sinking fund?—Yes.

13,894. What do you start with?—I start with the water rentals.

13,895. The gross receipts?—Yes, then I take out the working expenses. I do not allow them any tenant's capital, because they cannot make a profit. Then, out of those expenses I take away the sinking fund, and that generally gives me rateable value.

13,896. We have agreed, I think, that the gross revenue that a corporation under such circumstances can raise consists of interest, sinking fund, and actual working expenses?—Yes. The interest and the sinking fund are the landlord's charges; they are the moneys that the landlord pays away after receiving his rent.

13,897. Suppose this case; suppose the corporation has got into the happy position that their sinking fund has paid off the whole of their debt, and that they have no interest to pay, no sinking fund to pay, and that they have simply working expenses to meet; how would you assess them?—I have never come across one; they are always borrowing fresh money.

13,898. Then you make your valuations fit in with the cases without any very good reason for it?—I do the best I can, of course, under the circumstances.

13,899. (*Mr. Arthur O'Connor.*) In reply to the Chairman you said that of course there are hardships everywhere?—Yes.

13,900. I suppose one of the objects of the appointment of this Commission is, if possible, to remove hardships, and you are here to help us if you can?—Yes.

13,901. You told us that in the rating laws there are all sorts of anomalies, and I see that the last book on "The Principles of Rating," by Boyle and Humphreys

*Mr. W. H. B. Castle.*

17 Mar. '98

Government property and county property or corporation property should be valued like any other class of property. Method of valuation of certain properties which are never sold or let. Ascertainment of contractor's rent.

Water-works of a corporation: Method of valuation.

Railways, principles affecting the valuation: How far should they be valued solely with reference to value of land.

\* R. v. West Middlesex Water Company (28 L.J., M.C., 136).

H. the. '98  
Davies, extends over 1,000 pages without counting the index, so that I think we may assume that the principles of rating are somewhat difficult to set forth in themselves and in their application?—It is the most difficult thing I know of.

13,902. It would be very desirable to simplify matters, if possible, because this affects every householder in the kingdom?—Yes.

13,903. Let me see if it is possible to arrive at some simple and just basis of universal applicability. Take the case of the railways; a railway is a monopoly for a certain purpose?—Yes.

13,904. It discharges a public service with, if possible, profit to the company?—Yes.

13,905. In order to enable it to do that it has a monopoly in the occupation of land from one end of its line to the other?—Yes.

13,906. In the course of its running it may pass through a parish where there is no station?—That is very often the case.

13,907. From that parish it has taken land of which it is in exclusive occupation?—Yes.

13,908. Is there any reason why, for the purpose of rating the railway in that parish, there should not be taken the value of the land occupied by the railway assessed according to the value of the adjoining land on either side of the line?—Yes.

13,909. That would not be just?—No.

13,910. Why?—Because the basis of all rating is land plus the value to which it is put.

13,911. I am not asking you what are the principles at present acted upon: I am asking you to start afresh, as a matter of first impression *prima facie*. Suppose we have to start some system of rating which should be fair all round. I put it to you that in the case of a railway running through a parish where it has no station, it would be fair to take the value of the land in the occupation of the railway as gauged by the value of the land on either side of it?—No, I think not.

13,912. What is your objection then?—It is worth more to the hypothetical tenant, that is, the railway company, than it would be if it was growing cabbages.

13,913. Now you are going back to the principle of rating as established by the Act of Elizabeth?—We must go back to something, you know.

13,914. Put out of your mind the hypothetical tenant; we are starting now as if no such things as rates had ever existed?—Then I should start immediately with the hypothetical tenant.

13,915. You would?—Yes. I say if you take the value of land you have to take its occupation value. What is that occupation? It is a railway and it is not cabbage land, it is not wheat sown land, it is not grass land—it is a railway. The next question I ask myself is—what railway; is it a main line railway, is it a branch line railway, or what is it? And so I go on gradually building up and building up, until I have ascertained what the value of the railway is by some process or another.

13,916. Now let us say that two men occupy adjoining pieces of ground and both apply their ground to the same purpose; one man manages well and makes a fortune and the other man manages ill and becomes a bankrupt; would you assess those two pieces of land at equal rates during the period of occupation?—During the whole period of occupation, or just when the man is going out?

13,917. During the whole time—supposing they are 20 years at it, and 20 years breaks one man and makes a fortune for the other, and they are following precisely the same industry?—Of course you must rate them from some definite period to some other definite period.

13,918. I will say from the year 1800 to the year 1900, a hundred years if you like?—The value of the occupation is the same to both parties.

13,919. Then you would assess them irrespective of the results, from a commercial point of view, to the individual?—Certainly.

13,920. If that is so, why should you not adopt the same principle with regard to a railway company and a cabbage ground?—I do not see the analogy.

13,921. If you say that the commercial results to the occupier do not furnish a proper ground for valuation,

why should you adopt it in the case of the railway?—I do adopt it in the case of a railway, that is just what I do do. Take two plots of ground, both growing cabbages, one man makes a fortune and the other does not, but each plot of ground, as cabbage ground, is worth the same. However, it does not follow, that because the value of the two plots as cabbage ground is the same, that the next plot, which is part of a railway, is the same.

13,922. Why should you alter your assessment of land in the occupation of an individual whether he be A or B, not according to the native absolute value of the land as land, but according to the value of the use which A or B may put his land to?—Because the occupation is not the same. No matter what the degree of improvement may be, if I improve land it has more value.

13,923. Certainly; then we may assume that two farmers show very different results in the matter of the improvement of land; one man scours his land and exhausts it, and the other keeps it in good heart, the land *ex hypothesi* at the beginning being of equal value to both; would you, because one man treats his land badly, assess him lower, and because the other man treats his land well assess him higher?—No, I should not. I should think both those farms, as letting farms, would be of the same value.

13,924. Railways, gas companies, electric lighting companies, and water companies are all things, which, to a certain extent have a monopoly, is that not so?—It is so.

13,925. Then in respect of them, I think you have already told us you hold that principles are applicable which are not applicable in the case of an ordinary commercial man like a tailor?—That is so.

13,926. You take their gross income—you do not like the word "profit"—as the basis of assessment?—Yes.

13,927. But you would not deal in the same way with a tailor in the Strand?—No.

13,928. What is the principle upon which you differentiate the two cases?—In the case of the tailor, as I said just now to his Lordship, anybody can come next door to him and open another tailor's shop and compete with him, but in the case of a railway company there is no such competition.

13,929. What is the ordinary connexion in your mind between adopting the system of assessing the gross takings and the fact of a monopoly?—I see no other method of arriving at what a monopoly is worth than what the tenant could make out of it.

13,930. In the case of a tailor you assess the site and his premises?—Yes.

13,931. Why cannot you adopt the same course in the case of a railway or a gasworks or an electric light works?—Because nearly all monopolies, taking it broadly, consist of two portions—what we call the directly contributing and the indirectly contributing portions. The indirectly contributing is treated very different to what the directly contributing is. You would assess a railway station, which is one of the indirectly contributing portions, at what it cost to put up, all ornamentation and that sort of thing left out. We have no other means of doing it, because railway stations are not in the market. We then assess the line of railway which is directly earning a profit on a different process because we have no means of separating that line and finding out what it is worth, except as a whole, to start with.

13,932. But you know what the premises of the railway from end to end consist of?—It consists of line and it consists of stations, and I say they both contribute to earning the passenger's money, the passenger goes into Euston Station and he gets out at Holyhead, or whatever station it may be, and he pays for the use of the two stations and the transit value—that is what he pays for. That money has got to be distributed between those two portions. He pays so much for the use of the stations—that you cannot find out—and he pays so much for his transit value, which you can find out because you can take his fare and you can divide it by the number of miles he has travelled, because each mile he goes he is supposed to drop a certain fare. The use of the station you cannot get at out of his fare, and therefore before you divide his fare to the parishes in which he is supposed to have dropped a certain portion as he goes along, you first eliminate from that fare a certain proportion for the use of the station.

Mr. W. H. B. Castle.

17 Mar. '98

Monopolies: Undertakings which have monopolies. Principles affecting the valuation.

Mr. W. H.  
B. Castle.  
17 Mar. '98

13,933. I do not see that that answer in any way explains the connexion between monopoly and the principle of assessing gross takings. As to your indirect and direct charges, surely the same remark is absolutely applicable with regard to a coat which you get from a tailor; you cannot tell how much goes in respect of the rent of his premises, how much goes in respect of the value of the cloth, and how much goes for his skill and the men he employs; there are always those varying considerations?—I really cannot say.

13,934. You have no principle to put before us to justify the distinction?—No, except that one is in the open market; anybody can be a tailor, and anybody can make the profit, if he has the customers to earn it.

13,935. Now with regard to your mill; you say that if machines of no very great weight are removed from the mill it ceases to be a mill?—Yes.

13,936. They are removable, they are chattels, personal property?—Yes, they are personal property.

13,937. Let us assume that instead of a mill we are dealing with a house which is built for habitation; that house has bedrooms and dining rooms; what would be the value of that house as a habitation if there are no beds in the bedrooms, and if there is no dining table and no seats in the dining rooms?—A man knows what he is doing if he takes a house like that.

13,938. You have already told us that he takes the mill with these movable things?—There is no analogy between the two things.

13,939. I want to know where the distinction is in principle?—There is no particular compulsion in having furniture in your house. You are not obliged to furnish your drawing room or your dining room unless you choose to do so, and if you do it you do it for your own comfort, but here in the case of the mill you cannot keep it as a mill without you do put these things in—there is no option.

13,940. I can scarcely conceive a man taking a house as a habitation for himself and his family without having beds to go to bed in, in it, and seats?—Perhaps not, but you are not bound to furnish all your rooms; you are not bound to furnish your attics, you are not bound to furnish your drawing room. It might be convenient for you to wait a little more time to furnish it properly.

13,941. I suppose you are not bound to have all these machines in a mill?—Everyone of them.

13,942. Could you not have only half the number?—Of course you could have half the number, and then it would be only half the value.

13,943. The same would be applicable to a house, I suppose?—No.

13,944. Now with regard to the case put to you by Mr. Clare, I think, of the landlord who, having a house worth 50*l.* on a piece of land worth 300*l.*, let it to a tenant for 50*l.* a year. Do you not think that, according to the ordinary experience of mankind, the man who wanted a house worth 50*l.* would only take as much of the ground as suited his purpose?—He would take the hereditament as it was, of course.

13,945. In the ordinary course of human experience, do you think that, as between landlord and tenant, the landlord, in the first place, would let a house with ground adjoining worth 300*l.* a year for 50*l.*?—No. It was the assumption that Mr. Clare put to me.

13,946. Do you think that a man, if he wanted a house worth only 50*l.*, would incur a liability in respect of a sum of 300*l.* a year for land which he did not want?—Of course he would not take it.

13,947. I suppose if he did want it, it would be worth his while to take it?—Of course, he would be the best judge of what it was worth his while to do.

13,948. Let us assume, also, that Mr. Clare's further deduction proved true, that the landlord was forced to sell the land in consequence of the high assessment, it is to be presumed that nobody would buy it whose purpose it did not answer to buy it?—Of course not. It would be in the market for anybody to buy who wanted it.

13,949. That is, there must be somebody whose while it would be worth to pay the assessment on it?—Certainly.

13,950. Do you not think that it would be a very good thing for the community that such land should get into the hands of a man who can utilise it, rather than

remain idle on the hands of a man who cannot?—Of course it would.

13,951. You say there is no difficulty in assessing the site value as distinct from the structural value, if competent persons are employed?—I should think not—any person of experience in the neighbourhood.

13,952. That could be done all through the country—in urban and rural districts?—It is done now in the case of farms; you divide the farm homestead from the lands.

13,953. It is, as a matter of fact, done in a very large number of cases in town and country at present?—I do not think you can say that, except for selling purposes or purchasing purposes.

13,954. Whatever the purpose may be the thing is done?—Yes it is, every day.

13,955. Putting aside all preconceived ideas arising from the existing system, supposing there was a system of rating the land and the land, only not including buildings of any kind or description, or improvements of any sort, would there be for that purpose any difficulty in ascertaining the site value of each particular parcel of land throughout the country—in the towns and rural districts?—Of course the value of the site would very materially differ with the uses that it was put to. If you take bare land to be used as bare land and kept as bare land, of course it would have no value at all, or next to no value.

13,956. That does not answer the question; that might be the result of the assessment; but could you surveyors take England as a whole, just as it stands, or lies, whatever the expression is, and value it parcel for parcel in respect of the land as distinguished from the buildings and the improvements upon it—could you do it?—It could be done.

13,957. It is, I suppose, not a very difficult thing to ascertain the value of land as land in town and country throughout the kingdom?—I do not think there is any very great difficulty about that.

13,958. Supposing that we have ascertained the value of every parcel of land as land, do you not then get a basis of rating which will be entirely free from all these anomalies and difficulties and contradictions which exist in the present rating system?—Are you going back to the time —

13,959. Is it so or not—would you not have then a plain groundwork to proceed upon for a simple, logical, and equitable distribution of the rates?—I do not see how it would be workable at all; I do not see how you could work it, because directly you have got a forest value for land, or whatever you may term it, an uncultivated value for land—directly you alter the occupation, of course, up goes the value and you destroy the first valuation.

13,960. That is to say from time to time the value of any particular parcel would altogether change with the circumstances?—Yes; if you put a railway across it, then, of course, it does change.

13,961. Then would it not be possible to have a re-valuation every seven or ten years?—That is what I suggested, only I suggested six years.

13,962. Supposing that we start in the year 1800 with a valuation of land such as you have said is perfectly practicable as land only, could there not be a re-assessment each ten years by the same surveyors or authorities as made the original valuation?—Yes; but then you see you are supposing first, a hypothesis which is not practicable. It is impossible to go and value land without the buildings; it is impossible to go and value the land without the railway on it, it would be impossible to value the land without the waterworks on it.

13,963. Do you say impossible or possible?—Impossible to value it as a whole without going into the particular value. The questions of the land value and the occupation of the land are so intermixed that I do not think you could get a broad sheet to work upon to build your assessable value up afterwards.

13,964. I think you have already mentioned that there was no difficulty for a qualified man to ascertain the site value of any particular parcel?—No, there is not.

13,965. The whole of England is made up of a number of parcels lying contiguous one to another, is that not so?—Yes.

13,966. And could not you, with regard to each particular parcel, each particular square of the chess

Mr. W. H.  
B. Castle.

Land as a basis for rating, apart from the uses to which it is put, discussed.

Machinery valuation of: Principles laid down for valuation. In some cases rateable machinery is personal property.

Site value and structural value of properties could be separately ascertained throughout the country.

*Mr. W. H. B. Castle.*  
17 Mar. '98  
board, ascertain what the site value is?—No, I could not. I should like to qualify my first answer, as it has rather led me into a difficulty, for this reason, that I could not *ab initio* value an acre of land utilised as a railway.

13,967. You could not what?—I could not value an acre of land used for a railway purpose.

13,968. Could you not for the purpose of valuing land, abstract it for the moment from the railway, and treat it as land—could you not conceive yourself making an estimate of the value of an acre of land which happens to have a railway running across it?—I can value an acre of land on both sides of the railway, but I could not fix the site value of an acre of railway land.

13,969. Now, let us suppose that you have three strips of land, each 20 yards wide; they run parallel one to another for a mile, down the centre one runs a railway; could you assess the value of number one on one side of the railway which is of this determined length and breadth?—Yes.

13,970. Could you ascertain the value of the similar one on the other side of the railway?—Yes.

13,971. Would it require a very large effort of imagination or calculation to suppose that the middle strip might be of corresponding value to the outer ones?—No, it would not; that is just where the

difficulty comes in, because it would not be of the same value.

13,972. I say abstracting the land from the railway, would it be difficult to put down the value of the middle strip as the same as that of the others?—If there was no railway there of course it would be of the same value.

13,973. Very well, that is abstracting the land from the railway. Then it would be possible to assess the value of the land as land in spite of the fact that there just happened to be a railway for the moment upon it?—I do not think you could do it.

13,974. You could not do it?—You could not do it.

13,975. (*Chairman.*) I think you told Mr. O'Connor that these machines in a flour mill were personal property?—I do not know that they are personal property; they are personal property, I suppose.

13,976. Of course, I need not ask any one of your experience whether you are aware that an Act is passed year by year exempting personal property from rating?—Yes, that may be so, but that would not take it out of the category in my mind.

13,977. You still think it right to rate it?—Yes.

13,978. (*Mr. Elliott.*) With reference to your replies to Mr. O'Connor, I merely want to ask you whether you can value land as land apart from the uses to which it either is or may be put?—No.

*Mr. W. H. B. Castle.*  
17 Mar. '98

Machinery, valuation of: Certain rateable machinery is personal property. Land cannot be a basis for rating apart from the uses to which it is put.

The witness withdrew.

Adjourned till to-morrow at 11.30 o'clock.

## THIRTY-SIXTH DAY.

Friday, 18th March 1898.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

G. H. MURRAY, Esq., C.B.

C. N. DALTON, Esq., C.B.

T. H. ELLIOTT, Esq., C.B.

ARTHUR O'CONNOR, Esq., M.P.

E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*

T. LEWELYN DAVIES, Esq., *Assistant Secretary.*

Mr. EDWARD JAMES CASTLE, Q.C., called and examined.

*Mr. E. J. Castle, Q.C.*  
18 Mar. '98

13,979. (*Chairman.*) You are a Queen's Counsel and Recorder of Bristol?—Yes.

13,980. You have from time to time devoted a large amount of attention to the law of rating?—I have.

13,981. I believe you wrote the volume of which I have a third edition in my hand, upon the Law and Practice of Rating?—Yes. The third edition differs very materially from the first.

13,982. In doing this, your attention was called to the rating of tithes, and in the first edition of your book you explain at some length how the present system of rating tithes was not really warranted by the Act of the 43rd of Elizabeth?—That is so.

13,983. I have not had an opportunity of seeing the first edition of your book, and therefore I was going to ask you whether there was much change between the first and third editions upon this subject?—Well, I thought it was too theoretical to put into a practical book, and I cut it out. I shall be glad to present the Commission with the first edition if they would like to have it.

13,984. We should like to have it very much, because it is an important subject, and we want to know as much about it as possible. I understand one of your main points is, that the owner of the tithe rentcharge has to some extent been placed in his present position by error?—Yes; I should like to put it in this way, that the tithe-owner, that is to say, the parson who takes the tithes, has been placed in this position by error.

13,985. Would you explain that to us—do you mean as an occupier?—Yes, as an occupier.

13,986. Would you develop that for us?—I will with pleasure. The Act of Elizabeth divides the persons to be rated into two classes: the first class is that "every inhabitant, parson, vicar, and other"—and the words "parson" and "vicar" there are used as names of particular inhabitants, which I will deal with directly—and "every occupier of lands, houses, tithes impropriate, appropriations of tithes, coal mines, or saleable underwoods in the said parish." Those are the actual words in the Act of Elizabeth. Now, a parson is not an occupier of land; I mean to say, except as regards his tithes, nor an occupier of a house or tithes impropriate, nor of appropriations of tithes, nor an occupier of coal mines or saleable underwoods, and, therefore, he is not necessarily an occupier in the meaning of those words; he is simply entitled to be taxed under the Act of Elizabeth as any other "inhabitant" of the parish.

13,987. That, of course, is an expression of opinion, and as such to be received with respect, but it is contrary to a long series of decisions?—So it is, and so far contrary to them, that as a practising lawyer and the author of a practice book I have taken it out; but I thought if the Commission considered there was any injustice with regard to the particular way in which a parson is now treated that it might be an opportunity for the Legislature to revert back to the original words of the Act of Elizabeth, and to say that as it crept in by misconception of the meaning of the words, it should

*Mr. E. J. Castle, Q.C.*  
18 Mar. '98

Clerical tithe owners: Position under 43rd of Elizabeth. Intention of the Act. The words "occupier" and "inhabitant."

Mr. E. J. Castle, Q.C.

18 Mar. '98

be altered. I thought this might be an opportunity for the Legislature to interfere, that is all. No court of law would do it, because the decisions are far too long and too universal. In Dalton's "County Justice," the law is laid down that every clergyman is to be rated for his glebes and tithes so long as they are in his own occupation, because the statute charges every occupier of tithes, &c., and the clergy are contained in these general words, unless particularly excepted. This has been decided for many years, and it is not for courts of law now to alter it.

Tithes impropriate and appropriations of tithes cannot be "occupied."

13,988. In one part of your memorandum you say that: "Whereas the country parson is not only rated for an invisible right"—what stress do you lay upon the adjective "invisible"?—All the rates for which a man is to be rated must be occupied in "visible property," those are the words used in the old cases. "Improprate hereditaments and easements," and those sort of things, are not liable to be rated. No person is liable to be rated without he occupies. You can occupy a chair, but not a balance at your banker's. It is something to fill—you cannot fill an invisible thing, and therefore the word "occupation" is wrongly applied to a tithe owner in any case. The sense of occupation is a physical occupation of visible property.

Poor Rate Exemption Act was unfair on the clerical tithe owner.

13,989. You think if his means and substance had been given up it would have been fair to give up the rating of the parson at the same time?—Look at the exemption by statute of personal property—and if my view is right it is a bit of one-sided legislation—I never saw such a one-sided piece of legislation as the 3 & 4 Vict. c. 89, intituled An Act to exempt until the 31st December, &c., inhabitants of parishes, townships, and villages from liability to be rated, as such, in respect of stock in trade and other property: "That from and after the passing of this Act it shall not be lawful for the overseers of any parish, township, or village to tax any inhabitant thereof, as such inhabitant, in respect of his ability derived from the profits of stock in trade or any other property, for or towards the relief of the poor: Provided always, that nothing in this Act contained shall in anywise affect the liability of any parson or vicar," so that the parson or vicar is the one man out of the whole parish of inhabitants that has his liability continued.

13,990. But his liability, I think I am right in saying, was distinctly laid upon him by a previous statute in the preceding reign, namely, 6 & 7 Will. IV. c. 71, in which occur these words: "And be it enacted, that every rentcharge payable as aforesaid instead of tithes shall be subject to all parliamentary, parochial, and county and other rates, charges, and assessments, in like manner as the tithes commuted for such rentcharge have heretofore been subject"—Certainly, if the tax was properly put upon the parsons' tithe before, it was continued by the Tithe Act of 1836. If the initial difficulty once existed, it survives.

13,991. Then assuming for the moment, as we must assume, that at present the parson, as we agree to call him, is properly rated, have you anything to say whether he is rated fairly with others, on the standard of what a hypothetical tenant would give for the property?—I think the courts of law are logical. If he is the occupier of his tithes I do not see how he can claim any deduction any more than from his glebe lands. I am speaking now legally. I do not see on what principle the owner of glebe lands who has to supply a curate could claim to treat his salary as a deduction from the rateable value of the glebe.

13,992. It has been suggested to us that if you are to take as a test what the hypothetical tenant would give—that while if it was a full 1,000*l.* a year the hypothetical tenant would give 1,000*l.* for it, less the cost of collection, yet, if attached to the 1,000*l.* a year there was the obligation to pay for or provide certain services, the hypothetical tenant would not give so much for the rentcharge, subject to those burdens and duties, as he would for an ordinary income?—That is perfectly true, and that to a certain extent is logical, but the courts have laid it down in other cases that you cannot deduct an obligation or make a deduction in respect of an obligation which is attached to any income, for this reason, that you must get that income from somewhere or other. If I go into the market for 1,000*l.* a year I have to pay 20,000*l.* for it; if I say I am willing to work the church, and I take the church, and if I am liable to taxes, that 1,000*l.* is subject to the deduction of the taxes. You do not

Tithe rentcharge, valuation of: How far the principle of letting value should be applied. Whether there should be deductions for personal services of clerical tithe owners.

take into account the fact that the man has to work the church; it is a consideration of the grant to him. That is what affects the minds of the court. In the history of the appropriation of tithes we know that they got into the hands of ecclesiastics, and after that into the hands of some of the great lords who had no correlative duties, and took the tithes as they were.

13,993. In that case the answer would be that it would not apply, because if they had not to perform those services the hypothetical tenant would give more nearly the nominal value?—I know what is passing through the minds of the court and the judges, and I cannot say that they are logically wrong. I think that that is a case in which the Legislature might well interfere and relieve the parson. One man has got glebe lands and another man has got a similar quantity of land which he has purchased, but the work of the parson of the church and of the landowner is different. In the former case the ecclesiastical duties are a consideration for the grant, and cannot be a deduction from the value.

13,994. You do not make any difference between the proceeds of glebe lands and tithe rentcharge?—Not if he is an occupier.

13,995. May I take you a step farther; apart from the question of logic, would you express an opinion as to whether you think it fair?—Most decidedly not; it is the most unjust thing I have ever known. A young fellow comes into the church and devotes himself to the service of religion, and then probably he has to find a lot of money out of his own pocket, and, in addition, he is rated for that which he ought not to be rated. It is most unfair, I think; but that is a question for the Legislature. I put in my memorandum that you relieve the ordinary churches in the towns, and you do not make the parson liable for pew rents; why make the parson liable for tithes in the country? They both hold a living, but one in London and the other in the country, and one is to be taxed and the other is not.

13,996. You are going to leave us a copy of the first edition of your book, and therefore I will not ask you questions on things which we can get out of the published volume, but is there any other point which has occurred to you, since writing your memorandum, that you would like to put before the Commission?—No, I think not. I should like to call attention to the previous Act of Elizabeth, because people talk about the Act of Elizabeth not knowing it followed a long series of Acts. There is the 39th of Elizabeth c. 3, that is four years before what is generally spoken of as the Act of Elizabeth, which enacts "That the churchwardens and four substantial householders, to be called overseers of the poor, and appointed by the justices of the peace at Easter, shall with the consent of two justices take order to set paupers to work, and to raise weekly, or otherwise by taxation of every inhabitant and every occupier of lands." Those are the only two classes mentioned in the 39th of Elizabeth. Thereupon the parson said that, under Magna Charta, he was not to be rated as an inhabitant. The matter was tried, and it was held that he was liable, and the 43rd of Elizabeth then used the words "parson, vicar, and other" to get rid of the difficulty, and they also put the other descriptions in—tithe, and so on.

13,997. (Mr. Elliott.) I understand from what you have just said that you are distinctly of opinion that the claim presented to us by the ecclesiastical owners of tithe rentcharge is an equitable one?—Clearly.

13,998. And that they have a strong claim to relief?—Yes, on two grounds.

13,999. You have, of course, considered the objections which have been presented to the grant of relief to the ecclesiastical owners of tithe rentcharge?—I do not know that I have, except that what is, and what is not is not—that is the only objection.

14,000. One of the objections which has been put forward in public controversy has been that in fixing the amount of rentcharge, an addition was made for the express purpose of enabling the rates to be paid. Have you considered that objection at all?—I should not think it is true, because the rates being then paid by the tithe-owner, the rentcharge would be valued under those conditions.

14,001. The validity of that objection would depend, would it not, upon what was done at the time of commutation?—Certainly, if the allowance was made to the parson, and he was paid more rentcharge because

Hereditary burdens upon tithe discussed.

he had to pay rates, it does not lie in his mouth to claim relief. He is not to get double relief.

14,002. Have you heard the answer to that argument?—No, I am not aware of it.

14,003. Then another objection which has been presented to the claim put forward by the ecclesiastical owners of tithe rentcharge has been that the maintenance of the poor is a hereditary burden upon tithe. What do you say to that?—It is a hereditary burden upon tithe; that is perfectly true. I have the statute, which says that the tithes are to provide for four things, I think it is—the parson, the repairs of the church, the poor, and something else—it is three or four things. That may be so. I have not considered that point. I should think that they do that by private charity.

14,004. That is an objection which has been presented to us, but it is not one that has received your special attention?—It is a new point to me. I daresay, if I could turn to it, I would be able to find it. I quote, on page 305 of my book, first edition, the 15th Richard II., chapter 6—“It is agreed that in every licence from henceforth to be made in Chancery of the appropriation of any parish church, it shall be expressly contained and comprised that the diocesan of the place, upon the appropriation of such churches, shall ordain, according to the value of such churches, a convenient sum of money to be paid and distributed yearly of the fruits and profits of the same churches, by those that shall have the said churches in proper use, and by their successors, to the poor parishioners of the said churches, in aid of their living and sustenance for ever.”

14,005. What I wanted to get from you was your opinion as to which of those two alternatives is the correct one. On the one hand it is argued that the rates charged on tithe rentcharge are in the strictly legal sense of the term charges upon that charge, and that the interest of the owner must be regarded as limited to the balance which remains after the rates have been paid; on the other hand, those who have presented their case to this Commission urge that a rate should be considered merely as a contribution of an owner of rentcharge towards local expenditure, and should be dealt with as such; with which of these views do you associate yourself?—The value of any property is the value less the rates. I only take it by analogy. Take two houses—one in Hanover Square and the other in Westminster—the rates are higher in Westminster than they are in Hanover Square; the house will let for less in Westminster, and therefore you take off the amount of the rates and taxes, tithes, or anything else, before you can ascertain what the value is.

14,006. Would you draw a distinction between that which is a legal charge upon the property, in other words, which is part and parcel of the full value of that property, and that which is simply a necessary outgoing?—I do not see any distinction. If necessary, in both cases, whether by statute or otherwise, the tenant has to pay them, and therefore he does not put the money in his pocket. Take the ordinary case of a railway; you always deduct the rates and taxes before ascertaining the value.

14,007. Supposing, for instance, that a property is subject to rentcharge, you would draw a distinction between that rentcharge and the rates chargeable upon the property, would you not—the two things are different from a legal point of view?—I do not quite catch what you mean. You know, if I have property subject to rentcharge, and have to pay rates and taxes upon the whole property, including the rentcharge—

14,008. I want, if I possibly can, to draw your attention to the difference between a legal charge upon the property, that which is in fact part and parcel of the full interest in the property, and a mere burden or outgoing in the nature of taxes or rates?—Like a jointure to your mother?

14,009. Like a jointure to your mother?—Yes.

14,010. Can it be fairly argued that the rates on a tithe rentcharge are in the nature of a jointure to your mother, or in the nature of an ordinary burden for taxes?—They are merely an ordinary burden of taxes; I do not see any distinction between them and anything else. The income tax is like a jointure to your mother. It is a distribution of the profits. Where they go to the law does not care. I should think that the rates and taxes are an incidence of the

occupation, which is not like the jointure to a mother, but like an ordinary fixed burden.

14,011. Then is it not equitable to consider the burden simply by a reference to its weight as compared with the full income of the owner of tithe rentcharge, without looking upon it as that portion of the rentcharge which belongs to the public?—No, I think you ought to take into account, to come back to the words of William IV., any outgoing in the rent he has to pay. He must take into account whether the rates are 3s. 6d. or 5s. 6d. in the £ in the parish, because he will know from that whether he can give a different amount as rent for the tithes. Therefore he must take it into account.

14,012. If I correctly follow your argument, you would say that in your view the rates upon the tithe rentcharge do not constitute anything in the nature of hereditary burden or legal charge upon the rentcharge?—My view is rather the other way; it is a hereditary burden in that sense. I do not quite follow what you mean.

14,013. Do I gather that you have not very fully considered the question?—It is a question which I ought to be able to answer. I think anybody giving a rent for the tithes must take into account the rates and taxes, and he would deduct those rates and taxes in his own mind in estimating his rent.

14,014. (Mr. Arthur O'Connor.) The question was whether you regard this as a hereditary charge?—Most decidedly not, for this reason: I do not think that the rates and taxes were imposed by the Act of Elizabeth in this sense, and therefore it is not a hereditary charge. I cannot understand the hereditary burden unless there is a succession of interest. There is no succession of interest between one parson and another—he does not succeed; he does not come in like the ordinary case where a man buys land or inherits it from his father—he only inherits what he gets. If he asks the public to relieve him he has no right to it, but each individual parson comes on his own merits, and there is no hereditary burden.

14,015. (Mr. Elliott.) You do not think that there is anything in the nature of such a charge as might be possessed by a younger son upon the property of his elder brother?—Not at all, unless it were given by statute.

14,016. And in your view it is not given by statute?—It is given by a misconception of the law. The parish have no right to look to the simple inhabitant at all now since the statute of Victoria.

14,017. With regard to what you said as to glebe lands, it is a fact, is it not, that glebe land obtained relief under the Agricultural Rating Act of two sessions ago?—That would be so; if it is used for agricultural purposes it gets relief, certainly.

14,018. Would not that, to some extent, remove the difficulty as to distinguishing tithe rentcharge from glebe lands?—I think the Government have a right to do what they like, but my notion, as a practical lawyer, is that every relief you give to every class of property you simply impose upon the neighbours, and I am not sure that the Government have properly relieved agricultural land—they have relieved it in one sense, but they have simply put it upon other property. That being the case I do not think you should extend the principle. Still, you have relieved agricultural land, and that may be a reason for relieving tithes.

14,019. But still you are distinctly of opinion that the ecclesiastical owner of tithe rentcharge has a claim to relief?—Yes, I think he is erroneously charged under this Act of Elizabeth. Every other inhabitant has been exempted by Statute, and why he should not be I cannot say.

14,020. But you bear in mind the fact that, in giving the parson relief, as you suggested, it would impose a permanent burden upon other owners of property?—Not a bit more than any other inhabitant. You take the inhabitants of a parish; you have got the man who takes a shop and carries on a big business and pays 40l. a year for the shop; the man next door opens a shop and almost fails. In the old days you would tax the rich trader, and the poor one would be let off—each man would pay on his ability. You have taken all that out by saying that no inhabitant is to be rated as such; and the relief of the tithes is only extending the principle to one more person, namely, the parson.

14,021. Supposing the Commission were to adopt your view and to propose that relief should be given to

Mr. E. J. Castle, Q.C.

18 Mar. '98

Hereditary burdens upon tithes discussed. Rates upon tithe rentcharge are not an hereditary burden.

Clerical tithe owners: Their position under 43rd of Elizabeth.

Mr. E. J.  
Castle,  
Q.C.

18 Mar. '98

the owner of tithe rentcharge, it would follow, would it not, that a deficiency would arise which would have to be made up by other classes of ratepayers?—Yes, I perfectly admit that, but as he is only one out of a very large class, all of which have been exempt, it is simply extending the exemption to this individual who has been left out in the cold.

14,022. The fact that you throw an additional burden upon other classes of ratepayers would not in the least degree modify your view in this respect?—No, if you are going to rate the personal property of the parson, why not the butcher?

Personal property, rating in respect of: Some reasons for discontinuance of the system.

14,023. Have you considered the possibility of rating the butcher in respect of his personal property?—Yes, if you can get at the thing. I can understand the difficulty, but that was not the reason why it was done; it was done because the occupier, being a hard headed man, thought when they rated personal property, he would be putting his hand in his own pocket, and when they rated the land he would put it into the landlord's pocket, therefore, he shifted the burden from himself. But the parson had no means of defending himself, or was shy, or did not like to say anything.

Tithe rent-charge, valuation of: Deductions. Beneficial occupation.

14,024. The parson has never ceased to urge that he was unjustly treated in this respect, has he?—Well, you see down to a certain time he was allowed deductions for his curates, and that sort of thing; and then the Marquis of Bute's case came on, in which the whole of the profits of the occupation was on the railway, and the whole of the profits went to the Marquis' trustees, and the railway was rated for them, although the Company did not get them; they said: You are in occupation of land, and must be rated accordingly. That started a new idea in the judicial minds, and they said: We do not know where the profits go, and the rates must be on the occupier.

Clerical tithe rent-charge should not be the subject of assessment. But clerical tithe owners only claim certain deductions.

14,025. Have you formed any idea as to the mode in which this relief could most properly be given?—Well, I see none of the parsons go beyond this, that personal expenses and certain deductions shall be made, so that they might divide the tithe into two-thirds and one-third. I would take the bull by the horns, and exclude it altogether, just as a church and a meeting-house and everything of that kind is excluded. If a person builds a chapel in London, and gets a license for the building, he may be a Baptist and make a good living out of it, and yet he pays nothing at all in the shape of rates for the building.

14,026. Has the lay impropiator the same claim to relief as the clerical propriator?—You must not use the words clerical propriator.

Lay tithe owners should be assessed in respect of their tithes.

14,027. Then let me put the question in a non-technical form: Do you think that the lay owner of tithe rentcharge, has the same claim to relief as the clerical owner of tithe rentcharge?—No, for two reasons; he is specially named in the Act of Elizabeth, and if you ask me I am conservative enough to think that tithes should belong to the parson.

14,028. I gathered that your view is that the Legislature should take the bull by the horns, as you say, and exempt from rating all tithe rentcharge in the ownership of the parson?—Yes, that which applies to his legitimate duties.

Tithe rent-charge, deductions in case of: What deductions used to be allowed; what are now allowed; and what should be allowed

14,029. Supposing that the Commission, or the Legislature, stopped a little short of that, do you see any possible alternative?—I think it would lead to endless confusion if you had to inquire into the circumstances of each parson, because some men will do the whole of the work, and another man will get three or four curates, and start the thing in a big way, and you can hardly tell what is right and wrong in the matter.

14,030. You do not see any rough-and-ready means of allowing a fixed sum?—It might be adopted, by giving something to the curate and something to the parson.

14,031. As to the question of deductions from tithe rentcharge in arriving at rateable value, could you tell me what are the deductions at present allowed?—I understand they are very simple—the cost of collection; I thought there was no other deduction allowed than the cost of collection—the cost of collection was always allowed. A lot of things used to be allowed. I have got the words, they are quoted at page 321 of my book: "In assessing a commutation tithe rent-charge of a benefice to the poor rate, deductions are

" to be allowed in respect of the expenses of collection, " including law expenses and losses by ultimate non-payment; but no allowance is to be made for the " personal services of the incumbent in discharging " the duties of his cure."

Mr. E. J.  
Castle,  
Q.C.

18 Mar. '98

14,032. Do you think it would be equitable that the repairs of the chancel should be allowed as a deduction?—Certainly, I would allow them all. I would allow everything, as it was just before the decision in *The Queen v. Goodchild*.\*

14,033. Would you deduct payments to Queen Anne's Bounty?—Yes, everything.

14,034. Would you allow deductions in respect of what is called the property tax?—Not the landlord's property tax. I do not see why the landlord's property tax should be deducted; the tenant's property tax should be deducted; the landlord's property tax is what he has got to pay out of his money; it is in the nature of an income tax.

14,035. Would you allow the deduction of the land tax?—No, I do not think he has any claim for the deduction of the land tax.

14,036. Supposing that a payment has to be made out of the income of a living in respect of what are called "daughter churches," would you allow a deduction in respect of those payments?—I have to consider that he is an occupier, and ought to be treated as an occupier; I should not allow anything. Formerly all ecclesiastical charges, first fruits and tenths, were allowed.

14,037. Those are allowed now?—They have been always allowed. This was the old law: "An allowance is to be made of any sum contributed by the incumbent " towards a district chapel in the parish, if not a " mere voluntary contribution; and a reasonable " allowance is also to be made for curate's stipend, " where the curate is not employed as a mere substitute of the incumbent."

14,038. I wanted to get you away from the law as it stands, in order to get your view as to what the law should be?—I think I stated it shortly that I would go back to what the law was as laid down before that last decision, which says there shall be no deduction at all, in *The Queen v. Goodchild*.\* The law was then very carefully laid down, as I have given it to you, and I would therefore rather go back to that.

14,039. (*Mr. Dalton*.) The owner's interest in the land is the value of the land less the tithes, is it not?—Yes.

Value of land and tithe: Position of owner and occupier.

14,040. Take the case where the owner is also the occupier, he is only rated upon the annual value of the land less the tithe is he not?—Where there is a tithe rentcharge?

14,041. Yes?—That was one of the points that came before me the other day, and that was my opinion, but they rather want to make out now that the tithe rentcharge is paid by the landlord, and that the tenant should be rated at the full value, and that he has nothing to do with the tithe rentcharge; that question of law has not been decided yet.

14,042. Supposing in such a case that the occupying owner pays on the full value of the land, then the tithe pays rates twice over?—That is their objection to it, and I gave an opinion that the tenant could deduct the rentcharge from the rateable value of the land, otherwise there would be the difficulty that you say. But I have discussed the matter with others, and I know that counsel have given opinions the other way.

14,043. But the usual practice is what I say?—There is no usual practice. It was only last year that it was passed. Previous to that the tithe rentcharge was deducted. But that would be my view.

14,044. It would be wrong to rate the tithe twice over, would it not?—Certainly.

14,045. Suppose, as you propose, the tithe in the hands of the parson was not rateable, would you then say it was a fair thing to rate the occupying owner on the full value of the land, when his interest was merely the value of the land less the tithe; should you, in other words, put the extra charge on the owner of that particular property, or on the general ratepayers of the parish?—I see what you mean. The tenant having to pay the tithe rentcharge, or the landlord for

Clerical tithe rent-charge if relieved from the payment of local rates. Under these circumstances

Mr. E. J. Castle, Q.C.

18 Mar. '98

the additional payment of rates should fall on the ratepayers generally.

Clerical tithe owner: No knowledge of how assessed during the seventeenth century.

Clerical tithe rent-charge: Should not be the subject of assessment. In what way would this affect the payment of rates in respect of land. Case where tithe forms a large proportion of rent of land.

Poor Rate Exemption Act, 1840 (3 & 4 Vict. c. 89). Position of clerical tithe owner under this Act.

him, you relieve the parson from rates; you have no business to put it upon the tenant. I should say that his rates ought not to be increased, but come on the general inhabitant.

14,016. That would be your proposal?—Yes. I have not carried out that detail in my mind, but that would be my proposal.

14,047. As a matter of fact, I suppose the value of the parson's income since the Act of Elizabeth has always been the value of the tithe less the rates—practically he has paid the rates, whether he ought not is another thing?—Yes.

14,048. That has continued from the time of Elizabeth until now?—Yes; I suppose so. I do not know whether it was continuing. The law is lost in a fog during the period between 1603 and 1700. In many cases personal property was still taxed, and I cannot tell whether the parson was taxed for his ability, so that if he had a large family he would pay so much less, and if he had a small family he would pay so much more, I cannot find what the practice was then. In 1730 it was laid down that he ought to be taxed upon his tithe, but during the transition stage you cannot say how taxes were levied, whether the parsons were taxed jointly with other inhabitants or not.

14,049. But certainly within the last 50 years or more that has been the case?—Yes, the last century you may say.

14,050. That is to say, the gross tithe has never been his income?—Yes.

14,051. You are aware of that?—I can see the answer, but what struck me was that he is not a corporation, at least in one sense he is a corporation sole; but each man comes forward and does not inherit. It is like the case of the eels, you know, they have been skinned so often that they must be accustomed to it. But that is no reason for continuing an injustice. To my mind it is very different to where a man buys property or inherits property; this is a man who comes into it in a different capacity.

14,052. If your proposal is that the parson is not to pay rates on his tithe, and the occupying owner or tenant of the land out of which the tithe comes is not to pay rates, the result would be, would it not, that a good deal of the value of the land will disappear from rating?—No, I do not think that, but if it is true it does not matter.

14,053. (Mr. Arthur O'Connor.) Do you assent to or dissent from that proposition?—I assent to this proposition, that if the rates on tithes are done away with, so far as the tithe rentcharge is not a part of the value of the land, that part of the value of the land will not be rated.

14,054. Then your answer is yes?—Yes. It was the great part that I objected to.

14,055. (Mr. Dalton.) In certain parts of the country, such as Essex, the tithe as compared with the rent is very high?—Yes.

14,056. In such a case as that, would not a very considerable portion of the land escape rating in a parish?—Yes, I can conceive it would, where it is very poor country, because the tithe has been fixed when farming was very prosperous.

14,057. Do you know whether when the Act for exempting personality from rating was passed, the case of the tithe owner was considered?—Yes, it must have been, because he is especially named in the Act, but he is not named, curiously enough, as the occupier of tithes, but simply as an inhabitant.

14,058. He was deliberately charged then?—He was deliberately exempted from the provisions of the Act: "Provided always that nothing in this Act contained shall in anywise affect the liability of any parson or vicar, or of any occupier of lands, houses," and so on; so that he was expressly by words exempted from the provisions of the Act.

14,059. While the Bill for that Act was passing through Parliament, there was comparatively little discussion upon it, but it was opposed by Mr. Goulburn, I think, on behalf of the tithe owners generally. Are you aware of that?—No. It was an annual Act; it was originally passed as a temporary Act, and it has been annually renewed.

14,060. Still it was the intention of Parliament at the time clearly not to exempt the parson from tithe?—It was the desire of Parliament to preserve the

liability of the parson, vicar, and occupier of any land that was continuing to be rated under the provisions of the Act. I do not think it was the intention to create a new liability, but that whatever liability there was should be continued.

14,061. Apart from the relief that you propose to give the parson, do you think that he has any right to have differential rating of tithe for all rates in the same way as for the general district rate?—That would be a means of giving some relief. It is only a means to an end.

14,062. But still there is a parliamentary precedent for that, so far as the general district rate is concerned?—Yes, but that has never been applied to the relief of the poor. There is no case that I know of where it has been applied to the relief of the poor. It is only given in the case of the district rate. Those who create the necessity for the district rate should bear the major proportion.

14,063. Has Parliament never applied the rule to the poor rate? In the case of the Agricultural Rates Act it applied it to agricultural land?—I was talking about the differential rating never being applied to the poor rate.

14,064. But the system of differential rating to agricultural land was applied by the Agricultural Rates Act?—Yes, but it is very much objected to by people who know anything about it.

14,065. Have you heard of any complaints of the tithe being only charged to the extent of one-fourth to the general district rate?—No.

14,066. It is rated on the fourth, like agricultural land and other property?—Well, I see the reason of that. Tithes do not create a necessity for watching and cleansing. It is an entirely different reason from giving relief.

14,067. What are the reasons why tithe has been rated only one-fourth—that it does not benefit by the expenditure?—Yes.

14,068. That is true with respect to other rates besides the general district rate; the county rate, and the highway rate, for example?—That would be so. In all those cases it is an incorporeal hereditament, which does not benefit, except indirectly. Farm produce cannot be sold unless you have highways. If agricultural produce cannot get to market it would rot in the fields.

14,069. You do not think that the precedent of the general district rating should be applied to the other rates?—No.

14,070. (Mr. Smith.) You go back to the Act of Elizabeth, and say that the parson in that Act was named in the category of "inhabitant and other"?—Yes.

14,071. And the "inhabitant and other" got his exemption from rating 60 years ago?—200 years ago by custom, and by statute 60 years ago. If you read the history of the thing you will find that the courts refused to issue a mandamus for the rating of personality.

14,072. You say, therefore, that in your opinion he was not an occupier of tithes inappropriate, nor of proportions of tithes?—Clearly not.

14,073. Would you define tithes inappropriate?—I have got it at pages 304 and 305 of the first edition of my book. I am quoting Blackstone: "From causes that are not necessary to enter upon here, the religious houses possessed themselves in a great measure of the advowsons of the church, and appropriated the benefice to the use of their own corporation, taking upon themselves the maintenance of the church, and providing for the poor, and the duties of the church. It appeared that, in order to do this effectually, it was necessary to obtain the King's licence, and to have the assent of the bishop. When the appropriation is thus made the appropriators and their successors are perpetual parsons of the church, and must sue and be sued," and so on. "When the monasteries were suppressed the appropriations which belonged to them were given to the King. And now many of the appropriations so vested in the Crown by the effect of these dissolutions were from time to time granted out by the Crown to subjects, and are now in the hands of lay persons—who are usually styled, by way of distinction, lay improPRIATORS."

14,074. That, I think, I was acquainted with, but I wanted to have a terse definition to distinguish between

Mr. E. J. Castle, Q.C.

18 Mar. '98

Clerical tithe owners: Differential rating in respect of tithe, how far possible.

Clerical tithe owners: Position under Act of Elizabeth.

Tithes inappropriate and proportions of tithes: Definition of.

*Mr. E. J. Castle, Q.C.*  
18 Mar. '98

tithes impropriate and appropriations of tithes?—Pro-  
priation of tithe is the case where an ecclesiastical body  
is in possession of tithes, and impropriate tithes where  
they are owned by a layman.

14,075. You think the parson should be the  
occupier, if you can use that term, but you would  
prefer not to use it, and you would say that he should  
be the owner of impropriate tithes?—Yes.

14,076. Would you offer no relief when this tithe  
rentcharge is in the hands of the layman?—No, I do  
not see any ground for it.

14,077. He is clearly within the statute of Elizabeth?  
—Yes.

Clerical  
tithe  
owners:  
Their posi-  
tion under  
Act of  
Elizabeth.

14,078. But your contention is that the parson in  
the former sentence is in the category of "inhabitant  
and other," and not an occupier?—Yes. In my book,  
at page 306, I quote the answer given by Sir Robert  
Heath in 1633 to questions put to him, and the answers  
were known as the "Resolutions of the Judges of  
Assize of 1633." The question put was this: "What  
proportion shall parsonages or tithes bear to the  
"taxation of the poor of the parish?" And the answer  
given by him is: "The parson or vicar presentative  
shall bear according to the reasonable value of his par-  
sonage, having consideration to the just deductions."

14,079. Following the contention that he is an  
occupier, he will be correctly rated at present?—Ac-  
cording to the view of the law, those things which are  
thrown upon the income—which do not earn the  
income—are not deductions from it.

14,080. I gathered from the general tone of your  
evidence that except on the principle of hard cases,  
which notoriously make bad law, you do not think there  
is much ground for the contention that he is entitled  
to deduct the value of the services, and so on?—Well,  
I should not like to put it that way. I did not mean  
to convey that impression. Applying the strict rules  
of law to this particular case, if he is an occupier of  
tithes he is not entitled by law. What the Legislature  
may do is another question; the Legislature may correct  
an injustice.

14,081. You put your claim rather on natural justice  
in the face of those long continued decisions?—I cannot  
get out of the words—he is not an occupier—and the  
words are so clear.

Clerical  
tithe rent-  
charge  
if relieved  
from rating  
would to  
some ex-  
tent relieve  
the land.

14,082. I hope I have given due weight to that point.  
Of course you have to face this difficulty, that at the  
time of the Act of Elizabeth tithes were almost univer-  
sally taken in kind?—Is it a difficulty?

14,083. As a matter of fact the tithe was taken in  
kind. Of course every occupier of real and visible  
property in the parish is at present rated, and pre-  
sumably is rated less the tithe?—Yes.

14,084. And therefore one-tenth of the produce of the  
land will be struck out of the account?—That would  
be so.

14,085. You cannot escape that?—I cannot escape  
that. That would be the result. If there were 10 fields  
of equal size and a parson took one of them, and if he  
had not to be rated for it, it would escape rating.

14,086. You know, do you not, that the case of the  
parson is one of grievous hardship, whatever may be  
devised for the relief of it?—Yes, I think that he was  
unpopular in taking the tithe in the form that he did,  
and his present condition would never have occurred  
if he had not done so.

14,087. But a very large proportion of his income is  
devoted to local burdens at the present time, is it not?  
—Yes. I know in some cases parsons cannot afford  
to live in the vicarages, the rates are so high.

Vicarages  
and par-  
sonages:  
Whether  
they are  
rightly  
rated.

14,088. Have you any experience of the Act in  
relation to a vicarage house?—I have known some-  
thing about it.

14,089. I think they are very slightly rated, are they  
not?—I do not think so. As regards the country houses,  
sometimes they tell me what they are rated for—30*l.*  
rate for a house of 100*l.* a year.

14,090. Do not you find that the clergyman's house  
is rated lightly, speaking generally?—They may be  
rated lightly right away in the country, but not near  
London.

14,091. They are rated at something like their rate-  
able value, you think?—Yes.

14,092. I asked you whether it was not a fact that  
the parsonage houses were rather lightly assessed in

consequence of a feeling that the parson paid away a  
good deal?—I do not think that. I think that all  
country houses are lightly assessed. I do not know why  
they are; as a rule that is my experience of them.

14,093. (*Mr. Murray.*) Do you see any way out of  
that difficulty that you alluded to just now, that if one  
field out of every 10 is to be exempt from rating the  
other nine must pay so much more?—No, I do not  
think that the nine need pay so much more, because it  
would be distributed over the whole of the parish,  
including the houses and everything. You would not  
take off that one tenth and put it on the other nine, but  
you would spread it over the parish.

14,094. That comes to the same thing; at any rate,  
the other ratepayers of the parish would have to pay?  
—It seems to me the same thing was done when they  
ceased to rate the butcher—in the old days the same  
thing took place; it is only extending the principle.

14,095. You would be prepared to face that difficulty?  
—I do not see why you should not. If a man pulls  
down a large house, and turns it into a chapel, he takes  
it out of rating, and puts the burden on the rest of the  
people. There was one house in Eaton Square, I think,  
that was turned into a chapel, and now it has been  
turned back into a private house.

14,096. This would be rather a larger measure than  
that, would not it?—I suppose it would be a larger  
case. In such a place as Essex a suggestion was made  
to meet that case, but the land there undoubtedly lets  
for anything; you can get it for nothing if you pay the  
rates and taxes. That is disturbing the equilibrium of  
property for some years; there might be some difficulty  
about that.

14,097. I am not quite sure that I gathered what  
distinction you draw between the owner of glebe and  
the owner of tithe rentcharge as regards this question?  
—I think the owner of tithe rentcharge is simply  
a man with a rentcharge. I have known a rentcharge  
in a glebe in the country, and you are not rated for  
that; if you have a mortgage you are not rated for it.

14,098. But you would relieve the owner of tithe  
rentcharge, and you would not relieve the owner of the  
glebe?—I do not see how you can, because the owner  
of the glebe is an occupier of land under the Act of  
Elizabeth, and unless you are prepared to alter the  
statute of Elizabeth I do not see how the owner of glebe  
could be relieved. If a man's money is in land he pays  
rates and taxes on it, and if he chooses to put it in the  
funds he does not.

14,099. You rest the case of the owner of the tithe  
rentcharge mainly on equitable considerations, and  
not on legal considerations?—Yes. I think there has  
been such a long course of decisions that you could not  
attempt to upset them in a court of law, but the Legis-  
lature might give relief. I think it is opening up a  
very broad question about the decaying agricultural  
industry, and that sort of thing—increasing the burdens  
of the poor landlord.

14,100. From an equitable point of view, ought not you  
to consider what is the nature of the bargain between  
the owner of the tithe rentcharge and the rest of the  
community. Supposing that he has accepted his  
tithe for a good many years, 60 at least, as rateable,  
what equitable ground is there now for relief at the  
expense of other people?—You suggest to me that he  
is a continuing individual; I cannot get that into my  
mind. The succession is one of disconnected individuals.  
Why should a young fellow going to Oxford now be  
bound by the act of some other person who died 40  
years ago. He looks forward, and he finds that he has  
been wrongly rated.

14,101. Ought not he to have looked into that before  
he accepted the tithe?—I do not think that he  
enters upon his duties as a matter of bargain. He is  
presented to a living, if he is lucky, and if not, he  
starves as a curate.

14,102. Is it equitable that having got the living on  
these terms he should try and shift the burden?—Do  
you mean if he has accepted the living on these terms,  
and now says come and relieve me?

14,103. Yes?—I cannot say in that case that it is a  
bit more than if he had bought it. If a man is a pur-  
chaser of tithes you ought not to relieve him.

14,104. How can you distinguish between a man who  
gets a property by presentation, and one who gets it  
by devolution or purchase?—I think in one case it

Clerical  
tithe rent-  
charge: If  
relieved  
from the  
payment of  
local rates.  
Under  
these cir-  
cumstances  
the addi-  
tional pay-  
ment of  
rates  
should fall  
on rate-  
payers  
generally.

Clerical  
tithe  
owners  
should be  
given some  
relief by  
Legisla-  
ture as a  
matter of  
equity.

Mr. E. J. Castle, Q.C.  
18 Mar. '98

is a succession of interest, and he is bound by his predecessor in title, and in the other case he is not.

14,105. But either of them is free when he accepts the property?—It is all very well to say a man is free. A man chooses to become a parson; he has got religious ideas, and takes to them. He is not free,

he has no other career, and he must take what is offered to him. It is not a question of bargain and property; he thinks that he has got a duty to perform, and he accepts it; and I think everybody sees that it would be a kind and just thing to do to relieve him. I do not think you can put it higher than that.

Mr. E. J. Castle, Q.C.  
18 Mar. '98

The witness withdrew

The Rev. H. Macpherson, called and examined.

14,106. (Mr. Arthur O'Connor.) You are the honorary secretary of a federation to free clerical incomes from rates?—Yes.

14,107. We have before us a copy of a representation which was made by you to the Marquis of Salisbury on behalf of a number of beneficed clergymen of all ranks. I find that in that Memorial you have this sentence on the first page: "No other citizens receiving income " or wages for duty or work are rated on that income " or wages." As far as I can gather that is the principal point upon this first page of your memorandum. Do you wish to develop that to us at all?—I shall be glad to try to do so.

14,108. What would you have to say in support of that point?—All other persons who are paid in any shape or form for services which they render either to the State or to employers pay income tax on their income, but pay no rates at all on what they receive; they pay no rates whatever on it.

14,109. Can you give us an instance of any other class of persons who receive wages or income in return for services which issue out of land?—There are no services that issue out of land so far as I know, except those of the clergy, if that can be called issuing out of land.

14,110. Do tithes issue out of land?—When we are wanted to be rated we are called land, but when any relief is to be put upon land we are not called land.

14,111. But, as a matter of fact, do tithes issue out of land?—They are supposed to represent the produce of land—the proceeds of land.

14,112. They are paid in respect of land?—Yes.

14,113. Can you tell us of any other kind or class of wages other than tithes which are paid in respect of land?—No; all other persons who receive any income for work they do, such as Ministers of State, an officer, a lawyer, or anyone, pay income tax on that, so do we. We are also rated, and our income is available for taxation besides.

14,114. Supposing that instead of being paid as tithes the amount went into the hands of some other party, the fee simple owner for instance, would there be any rating of it direct, or indirect? Let us take a property, we will call it Whiteacre, which is worth 100*l.* a year gross; out of Whiteacre proceeds a certain amount of rating in respect of the full value,—whether it is paid by the occupier ultimately or by the owner, may be a matter of difference of opinion or of view, but at any rate, it is paid somehow or other. Now then, is there any reason why, if a portion, say, 30*l.* of that 100*l.* is paid in respect of tithe rentcharge, either to the clerical body, who are impropriators, or to a lay impropriator, or to a vicar, that sum of 30*l.* should escape rating?—Yes, it should escape rating as a matter of principle, because it represents pay for work done; the remaining 70*l.* represents nothing, whereas the clergyman is only an occupier—

14,115. The lay impropriator would not be giving service?—He would be giving no service.

14,116. Would a clerical impropriator give service other than as the vicar?—There would not be a clerical impropriator. No tithe is appropriated to the clergy except in respect to their incumbencies.

14,117. I am not speaking of an individual clergyman, but of a spiritual corporation?—You mean that if this 30*l.* were given to a spiritual corporation, would that corporation have to pay any rates upon it?

14,118. Do you think they ought to?—If they perform no duties for the 30*l.*, certainly.

14,119. And in the hands of a layman, they ought to pay rates, too?—Yes.

14,120. But in the hands of a vicar, you think they ought not?—No, because it is payment for work done, which he loses if he does not do the work.

14,121. He loses in its entirety?—If he does not perform the duties, he loses it.

14,122. That is the condition under which he takes it?—Yes.

14,123. When a particular vicar went into the post he at present occupies, did he or did he not take the tithe rentcharge subject to rating?—He was instituted to that vicarage or rectory knowing, or he might have known, that there was a rate on that tithe rentcharge but the fact of his knowing it, and putting up with it when tithe was at par, or a trifle under, does not at all affect the question as to whether it is right that that should be the only income in the world that is rated.

14,124. I am asking you as to facts. Did he or did he not take it liable to rates?—Yes, it would have rates upon it.

14,125. Then the liability to rates was part of the contract when he was instituted?—Could it be called a contract?

14,126. Well, if you do not like the term, amend it?—It is salary; there is no contract. He did not agree to pay the rates. Our point is this, that any income in this country which involves any duty in connexion with it is taxed for Imperial purposes, and not for local purposes. Our income is taxed for Imperial purposes and local, which is, we contend, absolutely unjust. The fact that when we were instituted to our livings we knew of them in no sense affects the point at all. I may know of an injustice, and it must be my duty to get that injustice remedied. I did not, by accepting it *pro tem.*, agree always to put up with that injustice; and our income being a variable income, and ever falling, so that every sovereign represents primarily only 13*s.*, and that 13*s.* being taxed for Imperial income tax at 8*d.* in the *l.*, and in addition we have what no other citizens have, who have work or duty to perform, rates on that 13*s.* (which represents our *l.*) varying in value from 2*s.* to 6*s.* in the *l.*, that is, 13*s.* on the depreciated *l.*, so that our nominal income of a sovereign comes down to under 10*s.* in many cases, which I venture to think have already been brought to notice by hundreds of our men, several of whom have written. I have a whole budget of cases here in point, and I have a great many more in my bag, and any number can be produced. This gives you an idea of what we are actually suffering. Here is one sent me by a well-known man, the rector of Harpenden. This is one of the livings which nominally are good livings. It figures at 846*l.* 2*s.* 5*d.* nominally; the amount received by the rector is 60*l.* 11*s.* 4*d.*, and we are supposed to put up with this.

14,127. That seems to be a very great disparity. Can you explain to us the exact significance of these figures which I hold in my hand. It is headed "Harpenden Rectory"?—He receives from tithes, less poor rate, pension, land tax, commission, and arrears, 252*l.* 6*s.* 7*d.*; the Assistant Clergy Fund, 116*l.* 16*s.*; on account of rent of fields, 10*l.*; and fees amounting to 22*l.* 17*s.* 2*d.*; making a total of 401*l.* 19*s.* 9*d.* On the side of out-goings, for an assistant clergyman, 304*l.* 11*s.* 8*d.*; Queen Anne's bounty, first fruits, 20*l.* 15*s.* 4*d.*; ditto, tenths, 2*l.* 2*s.* 7*d.*; insurance of the chancel and rectory, 5*l.* 3*s.* 9*d.*; income tax, 8*l.* 15*s.* 1*d.*; which leaves only a balance of net income of 60*l.* 11*s.* 4*d.* I doubt very much whether he is liable to pay that income tax. The letter is not for publication.

14,128. That is to say, out of a miscellaneous income of 400*l.*, over 300*l.* is paid to an assistant clergyman; is that so?—Yes.\*

\* The witness subsequently wrote: "The nominal income is 846*l.*, and that by tall in tithe, and by rates, land tax, costs of collection, pension to previous incumbent, comes down to 252*l.* His people find 116*l.* to Assistant Clergy Fund, and he pays 188*l.* himself to the assistant clergy, leaving between 60*l.* and 70*l.* for himself. The assistant clergy are necessary for the work of the parish." [See return furnished to the Commission by the Rector of Harpenden, pp. 348-9.]

Rev. H. Macpherson.

Clerical tithe owners accept their positions in the Church subject to a liability to pay rates.

Rector of Harpenden: His gross and net income.

Rev. H.  
Macpher-  
son.

18 Mar. '98

Clerical  
tithe rent-  
charge:  
Suggestion  
that it  
should be  
wholly  
exempted  
from being  
assessed to  
local rates.

14,129. Over three-quarters is paid to the assistant clergyman?—That is so.

14,130. (Mr. Murray.) Your claim is for total exemption of tithe rentcharge from rating?—Yes. On a matter of principle; it is payment for work done, or the income is lost. We want to be put on a level with other citizens.

14,131. Is that the view of the 2,000 memorialists?—That is the view of the Federation.

14,132. That has not been put forward before, I think; has it?—It has been in the memorial.

14,133. It has not been given to this Commission before, I think, at any rate?—Not that I know of.

14,134. We have had the case of the owners of tithe rentcharge stated, but they have never gone so far as that?—You refer to what is called a tithe owners' union—Mr. Peterson's.

14,135. And Mr. Stevens?—I do not know about it. This is a federation of 1,500 beneficed clergy, country clergy, who, as a matter of principle, in the words of the memorial, claim exemption from rating because our money is for work done.

14,136. Do you include the owners of glebe land?—They are already relieved by the Agricultural Rating Act temporarily for five years; but, of course, every glebe is for services rendered, and would fall in the same category. If the words "and glebe" were inserted after "Tithe Rentcharge" in the proposed Bill in the Memorial that would cover them. In either case it is payment for services, and should be freed from rates.

14,137. And you claim total exemption from that?—Yes, because they are payments for services. Of course, there are many collateral reasons; but poverty is no argument—we do not plead poverty, but we go on the principle of justice. We can prove that we have lost terribly by the Tithe Commutation Act. We can prove also that we bore those rates as long as tithe was anything like at par. But with tithe at 68*l.*, and that 68*l.* rated at from 2*s.* to 6*s.* in the £, it is a question of actual existence at this present moment. In the case of my own living, between 20 and 30 years ago the income of the living was worth between 400*l.* and 500*l.*, and now it is not worth half that; and that is rated. The Vicar of Portsea—and I mention the Vicar of Portsea because it is in to-day's papers—is represented as having a fat living of 1,000*l.* a year. He says: The income of my benefice is 1,000*l.* a year. I have 14 curates whom I have to keep to serve the churches and chapels in connexion with that large parish, and I get 340*l.*

14,138. Are not you leaving the question of principle on which you started?—Yes, I was only showing that this living, which is supposed to be a fat living, is reduced from 1,000*l.* to 340*l.* net income.

14,139. But your claim is, that both tithe rentcharge and glebe land should be exempted from all rating?—Yes, we inserted tithe rentcharge; we did not put the word "glebe"—that is for the Government to do.

14,140. Does it not follow, from the principle that you have laid down?—Yes, that would follow; but they are relieved, we are not. We were carefully left out of the Agricultural Rates Act because we were not land, and the only reason for rating us is that we are land; that is a flat contradiction.

14,141. You are asking for a total exemption?—As a matter of principle.

14,142. Those under the Agricultural Rates Act are not totally exempt?—No.

14,143. Would owners of tithe rentcharge be satisfied with the same relief?—I am not in a position to answer that question. The principle that we go upon is, that it is not right that we should be the only class to pay rates on income for work done; we say that we should be free.

14,144. And it follows from that that the glebe would be free?—It would.

14,145. That would mean a certain reduction in the rateable property of the parish?—It would be an instalment from Imperial funds; it would not be the cost of one battleship.

14,146. Why take it from Imperial funds?—Because we do not wish to increase the rates of others. It is an Imperial matter.

14,147. But I still do not see why it should be from Imperial funds?—We do not want to increase the rates

of other persons. We claim, as our income from land involves work, and no other income from land does involve any work, therefore our income should not be rated by a penny piece.

14,148. What I do not quite follow is, why the difference should be made out of Imperial funds?—Because it would be unjust to put it on the other owners of land—who pay rates as they do. They pay rates on their land; and it would be unjust that it should be added to them. When the Agricultural Rates Act relieved them, they were relieved from Imperial sources; it did not propose to inflict a burden upon other persons, though it does indirectly. Heaps of mens' rates have been increased by that Act. They, the landowners and occupiers relieved by that Act, were relieved from Imperial sources. This is a question of Imperial justice. Relief should come from Imperial expenditure, which would be a mere fleabite—half a million would do the whole thing.

14,149. Suppose the clergy, as you contend, had never been rated, on whom would the burdens then have fallen?—I cannot go into processes so far back as that, but I may say that it was never intended, even from the first, that the clergy should be rated except to the poor. We were rated only to the poor. Now we are rated to half a dozen other things besides. Any fresh thing that is put on the rates we are rated to. We are rated on the highways, though we have perhaps only a wheelbarrow, and we do not get the benefit of the rates on the highways the same as the butcher with his cart, and that kind of thing. Those people are the persons who get off scot free.\*

14,150. Still your contention is that you ought never to have been rated at all?—We should never have been rated as a matter of principle, and as a matter of ethics, if you are going into ethics.

14,151. If that principle had been admitted in the time of Elizabeth?—This would not have occurred.

14,152. Who would have had to pay the rates of which you would have been relieved?—If this question had occurred in the time of Elizabeth, the Parliament of Elizabeth would, doubtless, have provided for that.

14,153. Do you think it would have been provided for out of Imperial sources?—I cannot say, but I am sure that they never intended the clergy to be rated on their incomes.

14,154. (Mr. Smith.) Would you give us the population of the parish of which you gave us an illustration?—Which one do you refer to?

14,155. You only gave one, I think; it is the parish with a nominal income of 846*l.* a year, which was reduced by a very considerable amount?—I do not know the population of it, but there is a Clergy List in the next room, and that would give it to you in a moment.

14,156. Would you give me the name?—Of the rector?

14,157. No, the name of the parish. I rather prefer not to have names of individuals?—Harpenden.

14,158. Will the Clergy List give me the area of the parish?—Yes.

14,159. Is there more than one church in it, do you know?—I cannot tell you; I should say not.

14,160. Do you know anything as to the necessity of all this clerical assistance?—No.

14,161. Do you know nothing beyond the facts submitted to you?—That is so; he sent it to me thinking it might be possibly of use to the Royal Commission.

14,162. It would be of more use if we had all the facts before us. You have taken the case of professional incomes; it would be quite possible, would it not, for a professional man to pay all his income away in clerks' salaries?—Yes.

14,163. You recognise, do you not, that the total exemption of tithe from local taxation means taking practically one-tenth of the land out of local taxation?—One-tenth of the present value? No, it would not be a tenth of the present value of the land. The landowners are supposed to have gained two millions by the Tithe Commutation Act, but rents were very low then.

\* The witness subsequently wrote: "And we are rated on our incomes for schools, sanitary rates, and for county council rates besides. No other persons are rated on their incomes for all these, and no other persons who have to work for their incomes are rated at all."

18 Mar. '98

14,164. Pardon me, the clergy were quite satisfied with it up to about 20 years ago, were they not, because the balance was in their favour?—No, it would have been a good deal more. Rents were very low at the time of the Tithe Commutation Act, and they have gone up considerably since.

14,165. Assuming that the Tithe Commutation was a fair thing up to 20 years ago?—It was over the par value, and that, Mr. Gladstone says, should be accepted as the normal value of the tithe, and its value should be brought up to that.

14,166. I think you are the author of this letter to Lord Salisbury, are you not?—Yes.

14,167. (Mr. Dalton.) Your claim is to exempt the tithe which is in the hands of the parson, I think?—Yes, the person who has to perform the duty for it.

14,168. There is a great amount of tithe in the hands of the Ecclesiastical Commissioners which, I suppose, is paid to clergymen for the performance of similar services to those of a vicar; do you think that that should be exempt, too?—Those clergymen get their salaries free of all rates.

14,169. They get their salaries free, but they get a smaller salary in consequence of the Ecclesiastical Commissioners having to pay the rates upon the tithe?—I do not know whether they get a smaller or a greater salary.

14,170. If the rates are deducted from the tithe before it reaches the hands of the Ecclesiastical Commissioners, it is clear that the Ecclesiastical Commissioners have less to give in salaries to clergymen, is it not? I want to know how you would draw a distinction between the tithe in the hands of an ecclesiastical body, like the Ecclesiastical Commissioners, which is paid to the clergy in respect of services done, and the tithe which goes straight to the clergyman from the owner of the land?—I should say that the tithe in the hands of the Ecclesiastical Commissioners cannot claim exemption, because there is no duty performed for it by the Ecclesiastical Commissioners themselves.

14,171. It goes to the performance of a duty; it is merely that it has been taken, as if it were, from the parish, and handed over to the Ecclesiastical Commissioners to be given in the same way to other clergy who perform the duties. The Ecclesiastical Commissioners are merely a conduit pipe, are they not, for distributing the money; they are a body for distributing the tithe to clergymen for the same duties as those which are performed by the parsons who receive the tithe straight from the owner?—Yes, where they get the tithes, they would be receivers of the tithe.

14,172. Their income would be derived mainly from tithes and from land?—I cannot tell you all the sources of their income, but I have got it in the Clergyman's Legal Handbook.

14,173. (Mr. Arthur O'Connor.) I think the question put to you, is this: through the Ecclesiastical Commissioners, tithe or tithe rentcharge, or whatever you term it, is ultimately distributed as through a channel for clerical services; that is to say, it goes to the same purpose as the tithes which are paid to vicars, that is occupying clergy; therefore, what is your reason for suggesting that tithes which go to the occupying clergy direct should be free from rating, whereas those which are paid to the Ecclesiastical Commissioners, and go indirectly, should not be free from rating?—Because the Ecclesiastical Commissioners agree to the principle for which we are contending by paying the clergyman a salary which is unrated. Whether they pay rates or not, is not our affair. Our contention is that the man who does the work has no business to be rated on his pay for the work, in whatever shape they pay rates, whether it is from land or anything else.

14,174. (Mr. Dalton.) Then you do not consider that the tithe in the hands of the Ecclesiastical Commissioners has any claim whatever to be exempted from rating?—It is a matter for them to take up, so far as I am concerned.

14,175. It affects the Church manifestly to the same extent as the other income does. You would say the same, I suppose, about other endowments?—I cannot very well answer any questions for other people—I mean to say, questions that do not actually concern the clergy. We know our position and we know where we are. It is a matter of financial life and death for us. We should have borne with this to the Greek Kalenda

probably on the question of rates, if the tithe, as I have said, had stood at par or anywhere near par, but it having gone down to below 70 per cent., and we having lost over 30 per cent., and being asked to take 13s. for every nominal 1l., that has forced the question—is it right for us to be rated at all—why should we, of all people in the world, be rated and taxed?

14,176. I am not arguing that you should be rated?—And I am not meaning to say that you do.

14,177. I am inquiring whether the tithe in the hands of the Ecclesiastical Commissioners does not stand in the same category as the tithe paid direct to the occupying clergy, and whether the Ecclesiastical Commissioners have not a similar claim to that which you put forward?—I should say not. They are a public body that receives certain monies from various sources, and pays out certain incomes for duties done, and the persons who receive those incomes receive them for duties done, and should have their income free of rates like every other person. But whether the actual large body that gathers in this money from various sources should pay rates on it is a matter for other persons to judge; I really am not in a position to say.

14,178. Your answer would be the same, I suppose, for tithe held by —?—The lay improprator, for instance, is in quite a different category.

14,179. He performs no services?—He performs no services whatever; not only that, but you cannot sequester his tithe in order to make him repair the chancel even.

14,180. No services in that case are performed in respect of the tithe, but services are undoubtedly performed in respect of the tithe paid to the Ecclesiastical Commissioners—they are performed by the persons to whom the Ecclesiastical Commissioners pay the tithe?—They are performed mediately, but the question does not come in through the Ecclesiastical Commissioners; the question comes in through the man being instituted to the living, a vicarage or a rectory. The Ecclesiastical Commissioners do not figure in the matter, and they are not a party to this affair.

14,181. I will not pursue that question any further. You say: "At the Tithe Commutation Act no sum was added for rates"?—Yes.

14,182. What is your authority for that statement?—It is a matter of fact.

14,183. We have had considerable evidence before us to the contrary?—It probably would take this shape. It is not generally known that at the time of the Tithe Commutation Act, most of the tithes were leased by the parson to A.B., who paid him a certain sum for them. For instance, his tithe being estimated at the gross value of 100l., we will suppose, would be leased by him to A.B., who would give him 80l. or 90l. for it, and who would pay the rates. When the Tithe Commutation Act came to be passed, and rates were to be paid by the tithe-owner—who is not really an owner, for he is only an occupier for life, as a matter of fact—by the clergyman who is called the tithe-owner, of course, it is obvious that the difference paid in rates before by A.B. must be added to the amount received by the tithe receiver before. Where all the sums were added, so called, to the Tithe Commutation Act, that was merely a restoration to the tithe-owner of what was paid out in rates before by the person who received the tithe. It was preposterous to suppose that any landlord or anybody else would have made the clergy a present of something by the Tithe Commutation Act, because they would not have done it. It was really only adding what was subtracted before.

14,184. It was added to the net to make the gross?—Quite so.

14,185. Then, when in your letter to Lord Salisbury you say: "At the Tithe Commutation Act no sum was added for rates," you meant by that, "No sum was added to the gross tithe"?—If you go on you will see my letter says, "Tithe that was assessed at 100l. and rated was commuted on 100l. and rated still."

14,186. (Mr. Arthur O'Connor.) What does that mean?—That means that the gross value of tithe which first of all was 100l. would be let out to A.B., who paid 80l. to the parson. A.B. would make what he could out of the 80l.—the collection of the tithe was a thing that they made what they could out of; he would pay the rates on it which would be 20l.; then at the commutation the 20l. would be added to the 80l., and the parson would

18 Mar. '98

pay it; that is all. It is simply that the person who paid the rates was changed, and there is not a particle of addition anywhere.

14,187. Where is the injustice of that? What is it you complain of?—We do not complain of any injustice at all. But it is a popular fiction sometimes advanced that large sums of money were carefully presented to the clergy at the Tithe Commutation Act in order to enable them to pay rates in future; it was as if something was added to their 100l. of tithe which made it 110l. or 120l., and so a present was made to them.

14,188. I do not think that impression prevails on this Commission, at any rate?—It does prevail, and it is very necessary to combat it with the facts.

14,189. (Mr. Dalton.) Your position is that no sum was really added for rates, as the sum which was added was not added to the gross?—That is so.

14,190. You say, "Tithe was rated to poor only; now it is rated for poor, highway, schools, sanitary and county council experimental schemes"—that applies to other classes of property besides the tithe, does it not—it applies to all landed property, for instance?—Yes, all property which pays rates would still have to pay the rates on all the other things.

14,191. They as well as the tithe-owners have had those charges added?—Yes.

14,192. (Mr. Elliott.) I understand your contention is that the tithe rentcharge in the occupation of a clerical is to be regarded as salary?—Salary for service.

14,193. Who pays you that salary?—The tithe payers. Do you mean who are the actual individuals who pay

14,194. No; I take it that when anyone is in the receipt of a salary, that salary must be paid by some employer?—The tithe payers—not necessarily by an employer, need it be?

14,195. Your contention as presented to this Commission is, as I understand it, that the tithe rentcharge is not to be regarded as income from property but as a salary for services rendered?—We know perfectly well that tithe rentcharge or the tithe of the clergy is in a sense an endowment (like everything that is voted by Parliament—every vote is an endowment, only it is an annual one). The tithe is also an income for services. The source of the service or the people who pay it in no sense affects the argument.

14,196. Do you not feel that you are on very dangerous ground if you suggest that the tithe rentcharge is a mere salary and not income from property belonging to the Church?—A sum of money can be property if you like to term it so, and income or salary, too. It is a salary for work which is paid by the persons who have to pay the tithe. We are the owners of it for the time being, but if we cease to perform the duties in connexion with the work we are no longer the owners.

14,197. I will ask you, if possible, not to repeat your former answers, which I quite appreciate, and I am not asking these questions in anything but a sympathetic spirit?—I am sure of that.

14,198. But I do want to ask whether you regard the property from which this income is derived as being the property of the church?—It is the property of the Church in the original instance, certainly—and of the individual person.

14,199. Do you consider it to be the property of the Church now?—At this moment, do you mean?

14,200. At this moment, yes?—Certainly.

14,201. Then your wish would be, would it not, to see that property augmented in order that the income which goes to the incumbents of benefices may be augmented?—No, I would rather put it this way—that that property which belongs to the Church in individual places was never a general endowment. It is very often supposed that the Church was somehow or other generally endowed all over England; as a matter of fact, it was nothing of the kind. My contention is that that property which belongs to the Church in the respective individual parishes, being a source of subsistence for the clergyman for services which he has to perform, should be put in the same category as all other incomes are for any other services. If you want an employer, the State is an employer, for one—I put

it in that way, it is the State Church, so-called—the Church of England.\*

14,202. Then, adopting that last answer, would you suggest that the State should supplement the income which is at present received by the owners of tithe rentcharge?—Yes, by removing our injustice.

14,203. Do you anticipate any strong Parliamentary opposition to that proposal?—No. Every letter that we have from every Member of Parliament we have heard from is in sympathy. Men are only too glad to help if they only get a chance to do so. I am sure that if the Government knew of the support we receive from Members of Parliament who are anxious to see our grievances removed, it would be done.

14,204. (Mr. Arthur O'Connor.) You are speaking, I suppose, of those members of Parliament who answered your letters?—I am speaking of those who answered the letters of members of our Federation who wrote to them individually.

14,205. Can you tell what proportion of the House answered?—I cannot give you that at this moment. My house is nearly full of letters now—it is being filled up.

14,206. (Mr. Elliott.) Are you quite satisfied that a proposal to supplement the income of the Church from State sources would receive no strong opposition?—I would not for one moment put it that way, as supplementing the income of the Church. I do not suppose that that could be or would be a desirable thing to be brought forward. But it would be taking away a grievance from which one body of citizens is suffering and no other.

14,207. To follow the line that Mr. Murray suggested to you, someone would have to make up the deficiency in the rates, would they not?—Yes; we with other people who pay income tax.

14,208. Someone would have to bear an additional burden by reason of the relief which you were given?—The burden would be inappreciable; it would not be a halfpenny in the £, and I should be one of the payers.

14,209. I want you to answer me specifically. You cannot wish to contest, it is quite obvious, that to the extent to which relief was given to the owners of tithe rentcharge, an additional burden would have to be borne by other classes of the community?—The deficiency in our rates would have to be made up from Imperial sources, as in the case of the Agricultural Rates Act.

14,210. Then from Imperial sources an additional sum would have to be paid, as I take it, to the incumbents of benefices deriving an income from tithe rentcharge?—Yes, that is so.

14,211. And you defend that proposition of yours by the argument that services have to be rendered in respect of that income?—Yes, the nature of those services does not enter into the argument. Services have to be rendered which the law requires at present. When the Church is not established, then nothing will come in.

14,212. Supposing that it was argued in Parliament, that the incomes of these clerical titheowners whom we all know have suffered very much ought to be augmented, not by an additional burden upon other taxpayers, but by increased contributions at the hands of the wealthier supporters of the Church, what would your reply be?—The answer to that would be that it should be paid by the State, because the services at present are required by the State. We are in connexion with the State and we are required by law to do those services.

14,213. Going now to the particular form of relief, I understand that the suggestion which you make to the Commission is that the tithe rentcharge, which is the income of parochial incumbents should be altogether exempt from rating?—Yes.

14,214. Do you know whether that extreme view of the case is universally adopted, or do you think that a proposal which would have the effect of giving relief in the smaller benefices would be acceptable to those whom you represent?—We contend, of course, for the principle, and the principle is mere justice.

\* The witness subsequently wrote: "The property has a dual ownership—the Patron's and the Incumbent's. But the Incumbent cannot sell it like other property—he has a life-interest in it, contingent on duty. The State by Act of Parliament ousts him from it for neglecting the duty, which duty the State desires should be done. The person, therefore, who performs the duty should not be rated. The property is not the State's. To the Incumbent it is income for work, not property."

Rev. H. Macpherson.

18 Mar. '98

Clerical tithe owners are paid by tithe payer. Their income is derived from the property of the Church. Proposal that the State should supplement the property of the Church

Clerical tithe rentcharge: Suggestion that it should be wholly exempted from being assessed to local rates. How far a smaller measure of relief would be satisfactory discussed.

14,215. (Mr. Arthur O'Connor.) What principle?—The principle of not being rated on pay for work. If a proposal were made to relieve incomes below a certain value, of course, it would be generally very favourably received, but it would not touch the principle; it would be rather in the form of alms, as it were.

14,216. (Mr. Elliott.) I should not for myself have used the word "alms" in that connexion any more than I should use the word "alms" in respect of that relief which is given to the owners of small incomes under the Income Tax Acts. I wanted to know from you whether, after all the correspondence you have received, a proposal which would give relief to the smaller benefices would be regarded as a satisfactory solution of this question?—I think that a certain amount on all benefices, we will say, would be acceptable—not only the smaller ones, because it is not right, as a matter of principle, that the rich ones, if there are any rich ones left, of which I have grave doubts, should not also be relieved to the same extent *pro rata* as the smaller ones. For instance, a neighbour of mine, nine miles off, is supposed to have the richest living in Kent; he does not get 400*l.* for it, and it figures in the Clergy List as 1,500*l.*—that is the rector of Cliffe.

14,217. In the law, as it at present stands, there is no nice adjustment, as it were, is there, of income and duties in the Church?—No, any more than there is amongst officers, or amongst lawyers, or amongst other classes of the community. Amongst all there are very varying salaries, and it very often happens that the man who does the most work has the least salary.

14,218. But those who fix the salaries endeavour to do so by reference to the duties to be performed, do they not—they may make mistakes, but that is their endeavour, is it not?—By reference to the responsibility, I should have said.

14,219. What I really want to get at from you is whether you can say that in every case the whole of the income of the benefice must be regarded as a return for services rendered?—The whole of the income of the benefice is paid for services, certainly.

14,220. Now, supposing that by any reason there is a suspension of the incumbent of the benefice and the bishop is compelled to appoint a substitute, does that substitute get the whole income?—I cannot say that I am aware of that.

14,221. Are you acquainted with the scale of payments laid down in the Pluralities Act?—No, if a case happens such as you mention, it would be a matter more or less of agreement, I fancy, between the incumbent, the bishop and the substitute. The incumbent, for instance, could insist upon a trial or upon the whole salary, if he chose, and, therefore, if he agreed that a substitute should be paid, and that he should only receive part of the benefit, that would be a matter of agreement, would it not?

14,222. Are you aware that in the Pluralities Act a scale is laid down beyond which the bishop cannot go, and that in the case of a suspension or anything of that kind, the bishop is only entitled to appropriate, in order to secure the due performance of the duties of the benefice, a certain proportion of the living—are you not aware of that?—I know a case in point, in which a man, the curate in charge, did get so much a year.

14,223. In view of that provision in the Pluralities Act, do you not think there is something to be said in favour of the limitation of this relief to that maximum scale of payment which the bishop is authorised to appropriate in order to secure the due performance of the work of the living. Perhaps you have not considered that?—I see what you ask. My difficulty is this: certain incumbents, who have nominal incomes we will say—and they are not many—of 600*l.* or 700*l.*, finding that their incomes now have got down to 300*l.* and under, have written saying that they have heard from members of Parliament, and that they hope that the relief which is to be given is not going to be entirely a relief for the smaller livings.

14,224. That is scarcely an answer to the question. I am afraid the matter is somewhat complicated, and I may have been at fault in not putting it to you clearly. May I, if possible, interpret your own views. You think, as I understand, that in the case of every living some relief should be given?—Yes, certainly.

14,225. But you are not prepared to dissent from a proposition that the relief in the case of the larger benefices should be limited to some such scale of allow-

ances as that which is mentioned in the Pluralities Act?—That is so.

14,226. Do you think that some arrangement of that kind would be satisfactory to those whom you represent before us?—Anything would be satisfactory that would relieve our present distress—temporarily satisfactory, in any case—is that what you mean, or do you mean permanently satisfactory?

14,227. Permanently satisfactory?—That lies with the future.

14,228. But judging from the correspondence which you have had; supposing, for example, you have a living, say, of 500*l.* a year, and relief is given to the extent of, say, 150*l.* of that 500*l.*, would the incumbent of that benefice be satisfied that his claim had been fairly met?—I should think some of them would.

14,229. Would you yourself?—I should not come under the category of the 500*l.*

14,230. Is it difficult for you to imagine yourself in the possession of a benefice of 500*l.* a year?—I am afraid it is, because a living of 500*l.* would figure out at about 250*l.*

14,231. This matter is really important, because you come before us as representing, as I understand, some 1,500 or 2,000 beneficed clergy?—Yes, I do.

14,232. You ask us to adopt the principle that the whole of the tithe rentcharge should be regarded as non-rateable. Then I ask you, supposing that the Commission were unable to propose so extreme a measure, would there be a general satisfaction, so far as you can gather from your correspondents, if a certain fixed allowance, say, of 120*l.* or 150*l.* or 200*l.*, were deducted from all livings receiving income from tithe rentcharge?—We should be very thankful for it, of course.

14,233. Do you think that the agitation would disappear?—I cannot say that.

14,234. Would your association disband?—I cannot say that we should disband, because we might serve other useful purposes. But perhaps you are referring to the title?

14,235. I am referring to the title?—I cannot tell without knowing the views of the other men.

14,236. Then you have not been able to form an opinion on the subject?—I know their opinion from their letters.

14,237. And what is that?—They contend that we ought not to pay.

14,238. And you think nothing short of that would give them reasonable satisfaction?—We should take anything we can get, of course.

14,239. And ask for more?—We should be very thankful for anything; but do you know, and do the other gentlemen of this Commission actually know, the state of affairs at present? Look at the Pidler case.\*

14,240. (Mr. Arthur O'Connor.) I understand your position is this, that the community has decided that certain offices should be filled by certain reverend gentlemen with certain duties to discharge?—Yes.

14,241. Provision has been, at one time or another, made for those offices, and now, in consequence of a number of different causes, that provision is glaringly inadequate?—That is precisely the point.

14,242. And even such a relief as freedom from rating on all tithe rentcharge would be appreciable?—It would.

14,243. But if you cannot get relief in that particular way, you hope to get relief in some way or other?—Yes, that is so.

14,244. Better in that way than in no way?—Yes.

14,245. That is practically the pith of what you have to submit to us?—Yes. The tithe falling we cannot help; that is the fortune of war. It is very sad, but it is no argument that it has fallen. But the rates we can help—that is my contention—and those should be taken off. If you knew how these incomes have fallen—here is a pile of letters from which I could read you accounts of nominal incomes, and of all the various deductions—if you knew how they had fallen, I am sure no man would refuse to help us who could.

\* Heard at Litchington Petty Sessions on Saturday, November 13th 1897.

The witness withdrew.

Adjourned.

**NOTE.**—The Minutes of Evidence taken before the Commission on the 37th to the 42nd Days refers to the system under which taxation is raised for local purposes in Scotland, and will be found in Volume III.

## FORTY-THIRD DAY.

Wednesday, 18th May 1898.

At St. Stephen's House, Victoria Embankment, S.W.

PRESENT :

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

SIR E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq., C.B.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
THE RIGHT HON. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*  
T. LLEWELYN DAVIES, Esq., *Assistant Secretary.*

Sir CHARLES ELLIOTT called and examined.

Sir  
C. Elliott.  
18 May '98

18,139. (*Chairman.*) You are, as we know, a member of the London School Board, and you have been appointed by the Board to make some representations\* to us which are contained in this memorandum which I hold in my hand?—They are contained in that memorandum with one exception, which I wish leave to add, which was omitted by accident.

18,140. Certainly. The first subject on which you desire to make a representation is as to the grants which the School Board receives for pupils who take what may be summed up as the branch of domestic economy?—Yes.

18,141. Perhaps you would develop that and give us the reason?—The argument of the School Board is that whereas for the general purposes of elementary education the grants that are given bear a fairly definite relation to the expenditure, amounting in our case to 40 per cent. of the total cost of elementary education, the grants which are given for these special branches of cookery and so forth bear a considerably smaller proportion to the cost which the Board incurs. They ask that something like the same proportion may be arrived at in the grants that are given for these special branches of education. With regard to cookery, as is shown in my memorandum, the cost per child was actually 12s. 7d., and we get 3s. 9d. as the grant; the cost of the laundry work was in the same year 10s. 6d., but we get a grant which is considerably less—which is only about half the cookery grant.

18,142. What would you say to the objection which might be taken that these subjects were special for special training and were not of a general educational nature?—I should say that these subjects are extremely useful for the general development of the children and for their own training for their future life, and that they are really almost as important, if not quite as important, as the branches that are taught in the elementary schools after you have passed the first three elementary subjects of reading, writing, and arithmetic. Those, of course, must stand first, but there are a great many developments in elementary education, all of which are important for the general training of children in intelligence, habits of observation, and so forth.

18,143. But still not so distinctly specialised for the particular work of after-life as these—these are more like training for a special trade, are they not?—Hardly for a trade, because we do not find that our girls take employment as cooks or washerwomen in consequence of this training.

18,144. They are more like training for a trade as opposed to educational development, are they not?—I should be inclined to demur to that, and to say that they are necessary adjuncts to their lives as the useful wives of the husbands of the classes into which they will marry. That applies to the cookery and to the laundry. We take

the case of manual instruction as to which the grant is already fairly large, and we do not ask for any increase to it, we rather go on the parity of that example—that, as the Education Department grants us very nearly half the cost of the manual training for boys, so it might be reasonably expected to grant a similar proportion in the case of this very necessary instruction for girls. That refers to the case of the cookery and laundry alone.

18,145. What is the course in what you describe as housewifery, I am not familiar with it?—Housewifery is a new development which is only now beginning to take effect, and on which we have not hitherto spent very much. May I read an extract from the sub-committee's report on the subject: "Housewifery is a subject under Article 12 (f) in the New Code, without any prescribed length of course of instruction, scope, or details of work, or any other information for guidance. The Board are at present carrying on the first year's experiment in a course of domestic economy, amalgamating practically (1) cookery; (2) laundrywork; (3) domestic economy as a class subject for girls over Standard V., and (4) housewifery."

18,146. What is housewifery; what do you teach under it?—The management of a house. I think there are at present only three centres established. At each we have a kitchen, a scullery, a bed-room, and a sitting-room; the girls are taught the use of the kitchen, the cleaning up of the things in the scullery, the making of beds, and the sweeping out of a room, and things which will fit them for domestic service or for keeping their own houses or their husbands' houses clean in future life.

18,147. Have representations under any of the heads of which you have just been speaking been made to the Education Department?—We are preparing to make a representation to the Education Department. We have been consulting the other school boards in order to know how far they feel the shoe pinch in the same way that we do, and whether they are prepared to join with us. We have had answers from the majority of those that we have consulted implying that they are prepared to join with us, and we shall make a representation to the Education Department.

18,148. Touching the other two points in your memorandum, namely, the proposal to have an increase of the grant to those who are deaf and to those who are mentally deficient, what have you to say?—The case of the mentally deficient is a very strong one. At present we get no special grant for them. They are treated as a class in the infant department of the school, and we get exactly the same grant as infants get in an ordinary infants' department; that is to say, the maximum that can be got is 17s. per head as a grant and 10s. for attendance, whereas we have to employ specially trained teachers who are particularly skilled in the treatment of the children of this deficient class, and we have to keep the classes extremely

Sir  
C. Elliott.  
18 May '98

Grants received by London School Board for those who are deaf and dumb and mentally deficient said to be inadequate.

Sir  
C. Elliott.  
18 May '98

small. The classes are not allowed to exceed 20, and therefore the cost of teaching is very much greater.

18,149. How old do you keep children in the school whom you describe as mentally deficient?—I do not think there is any definite age. Of course we are governed by the age of 14; we cannot keep them beyond that.

18,150. You say you cannot keep them beyond that, but you can if they choose to attend, can you not—that is exactly what I was coming to, whether you were extending operations at all beyond the school age?—No, we are not.

18,151. There is no statutory objection to your doing so, though there might be some practical ones?—We should get no grant for them, because the grants are not given for children over the age of 14. These are mostly children who are unfit to be sent up at the age of seven or eight as infants are to the upper departments, and who are therefore kept under a special mistress; but if they are taken early they are very frequently so developed that they are able before they leave school to be passed up into the upper departments.

18,152. What do the Education Department say about that?—We have made no reference to the Education Department as yet about it.

18,153. When you talk of deaf children do you mean deaf and dumb?—Yes, deaf and dumb children, but the use of the word "dumb" is abandoned now because we teach almost all our children the oral system, and they do speak—they read your words off your lips, and they do answer you, not in pleasant tones, but in quite intelligible voices.

18,154. I suggest that those matters are rather for the Education Department than for this Commission, but I do not wish to absolutely preclude them?—It seemed to us possible that it might be so, but we thought that if your Commission was willing to give us a helping hand and to pronounce in favour of our contention it would very much strengthen us.

18,155. I have some little difficulty myself in bringing it within the reference, but we thought, on considering it, that a body such as the London School Board should not be shut out altogether, and therefore we proposed to take your statement. There is one other matter you wish to speak upon which you say is not embraced in this memorandum?—That is the case of the children of truant and industrial schools. That was omitted because I had not at the time I sent in my précis of evidence received the memorandum from the Industrial Schools Committee.

18,156. We had better take the truant schools first, I suppose, as they are more nearly allied to your general work in the rougher districts—for truant and industrial schools are not quite the same thing, are they?—They are not quite the same thing, but the line between them is extremely fine and difficult to distinguish and the treatment is practically the same.

18,157. Surely a child sent to an industrial school will not be so bad as a child sent to a reformatory—they go to a reformatory under a magistrate's order do they not?—Yes, they go under a magistrate's order, and the truants also.

18,158. The truant is not so distinctly confined by a magistrate's order to a school, is he?—I think so. He can only be sent by a magistrate's order. They are summoned for non-attendance, and when there is repeated non-attendance, instead of fining the parent up to the maximum of 5s. the magistrate gives orders that the child may be sent to a truant school. We find that the cost of our truant schools is very large. The average cost is about 19l.

18,159. Nineteen pounds per head?—Yes, 19l. 3s. 9½d. is the average amount expended.

18,160. Just let us have that quite distinct. What does that include, does it include the cost of buildings?—No, that includes only the maintenance. It is the cost of the boarding and of the establishment which run that up.

\* The witness has sent in the following statement:—

I submit the estimate, asked for by the Royal Commission, showing the aggregate cost of the concessions asked for by the London School Board as to grants in aid of different kinds of special instruction.

In column 4 I have entered the present rate of grant which may be secured, and in column 5 the grant which would be paid if all the children earned it. As a matter of fact the grant earned is somewhat less, as some of the children are disqualified under various rules. In the case of Industrial Schools the rate is a varying one, so the actual grant and its rate per head are entered.

18,161. In both truant and industrial schools do you board them entirely?—Yes, with the exception of one day industrial school in which we give them three meals in the day but do not keep them at night.

18,162. How many children have you in the district of the London School Board whom under the name either of the truant or of the industrial school system you board entirely?—916.

18,163. It is perhaps hardly germane to the inquiry, but I intended to ask the question: How far on you take them and what you do with them afterwards?—The children in the truant schools are sent there for three months and then they are discharged in the hope that they will attend better, with the result in many cases that they do attend better, in future. In the industrial schools the children are kept till they are of the age of 16, and then, as far as possible, we place them out in different kinds of employment in service, for instance, or in the case of our largest establishment, which is an industrial training ship, we make efforts to get them into the navy or into merchant vessels.

18,164. Have you girls as well as boys?—We have girls in one school now existing, and there is one that has just recently been opened.

18,165. What is your suggestion as regards the increase of grant to them?—At present we receive no grant from the Education Department, on account of either the boarding or the teaching of these children. The present payment from the Home Office averages 5l. 15s. 0d. per head; and our suggestion is that we might be allowed to retain this, and also to obtain from the Education Department a grant corresponding to the grant for elementary schools on account of their training in ordinary studies, and their special training in manual instruction.

18,166. Do you mean by that the Code Grant?—Yes.

18,167. And the fee grant?—Yes.

18,168. Is there any other point you want to bring to our notice?—There is only the point in paragraph 6 of my memorandum, which is, perhaps, hardly a matter I should trouble this Commission with, because it is more distinctly a matter for the Education Department.

18,169. I thought that was purely educational, and I think it is distinctly beyond our reference?—There is nothing else I wish to add.

18,170. (Mr. Elliott.) You mention in your memorandum that the Treasury grants are about 40 per cent. of the aggregate cost of education in London?—Yes, that is so.

18,171. Are you able to express to the Commission any opinion as to whether that proportion of the Treasury grant has given rise to any extravagance on the part of the spending authority?—I certainly do not think so, nor have I heard anything to indicate such a conclusion.

18,172. Are you aware that objection has generally been taken to Treasury subventions, even to the existing Treasury subventions, on the ground that they give rise to extravagance and looseness of expenditure on the part of the spending authority?—I can hardly conceive how that can apply to the education grant, because it is the same for all schools—voluntary schools and board schools alike. I do not think the most ardent economist can urge that there has been extravagance as a rule in our voluntary schools.

18,173. What would be the aggregate cost of the concessions which you propose in your memorandum; have you made any estimate?—I have not made an estimate, but I could very easily make a rough estimate if the Commission wish it.

18,174. (Chairman.) Perhaps when you get your proof to correct you will put it in?—I will.\*

18,175. (Mr. Elliott.) I suppose that your proposal is not one which would be limited in any way to the London School Board; and that it is one which could apply to school boards generally?—Yes, it would apply to all school boards.

Sir  
C. Elliott.  
18 May '98

Grants in respect of truant and industrial schools should be increased.

Government grants towards education have not led to extravagance.

The grounds for the rates requested in column 6 may be briefly recapitulated as follows:—

Cookery and Laundry—about half the rate of actual expenditure shown in column 3.  
Housewifery—the same rate as for cookery.  
Mentally Defective and Deaf—less than half the actual cost, but a moderate increase on the present grant.  
Industrial Schools—an addition of 1l. 15s. to the present grant, equal to about what a child would earn in an Elementary Day School, including the grant for Manual Instruction.

(Footnote continued on next page.)

Sir  
C. Elliott.  
18 May '98

18,176. Are the views which you have expressed on behalf of the London School Board generally held amongst the school boards of the country?—I can say nothing further than what I said to the Chairman just now. We have applied to, I think, 12 of the principal school boards, and we have received answers from nine. I think all those answers are favourable, and show an agreement with our views. We are waiting for replies to the rest.

18,177. Has the proposal been considered by the School Boards Association?—I am not aware whether it has.

18,178. The London School Board has not submitted it to that Association?—No; they have not.

18,179. (Mr. Clare.) I understand that the general effect of your evidence is that it is desirable to increase the Government subventions in aid of the local school board rates?—Yes.

18,180. With regard to the particular subjects that are mentioned in your memorandum, do they not come rather under the head of technical instruction?—The mentally deficient certainly do not, but the cookery and laundry do come under it in the same way as the manual instruction does, and the special grant for the deaf. I may explain that the present grant for the deaf is calculated in this way: three guineas a year for the elementary education, and two guineas a year extra if the child has received satisfactory instruction and made satisfactory progress in some course of manual instruction or industrial training.

18,181. I do not quite know how the technical instruction grants in London are distributed. Does the London School Board get the technical instruction money direct from the Government?—It is given from the Education Department under the rules of the Code. There are special grants given under the Code.

18,182. Is the technical instruction money administered then by the school board in London?—In the same way—

18,183. In the provinces it is administered under the control of the county councils by the different educational bodies?—I think you are referring to another class of technical education—to the education in technical schools, or to the Science and Art Department grants.

18,184. Yes, I am?—But these are not Science and Art Department grants.

18,185. Do you not think that the teaching of cookery and laundry would properly come under that category?—I should say not, and for this reason, that even the things which have hitherto come under that category, like drawing and manual training, have been taken over from the Science and Art Department by the Education Department within the current year.

18,186. It would be rather an extension of the principle of elementary education which the school boards were appointed to carry out?—In some points it may be considered so, and yet it is extremely elementary; it is not the kind of education which is required to fit them for a

special trade, but the kind of education which makes them useful citizens by training them to use their fingers, to observe with their eyes, and so on.

18,187. (Mr. Murray.) I do not quite understand on what principle you base your demand for an increased subvention from the Imperial Exchequer?—The principle is that whereas the Education Department gives us a certain definite proportion of our expenditure on elementary education, the proportion which the grant bears to the cost of these subsidiary branches, as they may be called, of education, is very much smaller; and we desire that in all cases the grant should bear something like the same proportion to the cost which is entailed in carrying out those branches.

18,188. But you do not suggest, do you, that the present subvention bears a definite relation to the gross expenditure?—It only bears a relation as an arithmetical fact.

18,189. There is no principle in it?—There is no principle involved in it; but I suppose in fixing it there must have been some principle, and the intention was that it should bear a large, and in fact a very considerable proportion to the minimum cost of education.

18,190. You do not suggest that the principle was that it should be one-half?—I should be inclined to think that if there was any principle it was something of that kind.

18,191. That, of course, would have very different effects in different localities?—Yes, necessarily. It would fall short of the half in localities where the cost of teaching is more expensive.

18,192. And would exceed it in others?—It would; and as a matter of fact it does exceed it in the case of many voluntary schools, some voluntary schools live entirely on their grants, or almost entirely.

18,193. Is that a principle which you think you can rely upon, namely, that the State ought to provide half the cost of education?—I should not be inclined to lay it down as an abstract principle, but rather to urge that if they do it in the great mass with regard to the main elements of education, they should carry it on to the subsidiary branches.

18,194. Without reference to the comparative extravagance or economy of particular school boards?—There would be reference to comparative extravagance if the grant were based on the average expenditure of all educating bodies. I do not advocate that it should be based on the London School Board expenditure in particular.

18,195. That is what you are asking for in this case?—Yes, that is what we are asking for in this case as a general idea—as an approximation—in the belief that the cost which we incur under those heads is about the average. But, as I mentioned just now, we are collecting information from other school boards, and I cannot definitely state that our impression is correct, though I believe it is.

18,196. (Chairman.) Is there anything else you wish to speak to us upon?—Nothing.

The witness withdrew.

FOOTNOTE—continued.

TABLE showing the COST OF PRESENT and PROPOSED GRANTS for SPECIAL INSTRUCTION by the LONDON SCHOOL BOARD.

Class.	Number of Children in 1896-7.	Actual Cost per Head in 1896-7.	Present Rate of Grant.	Total Grant at present Rate.	Proposed Rate of Grant.	Total Grant at proposed Rate.	Increase.
1.	2.	3.	4.	5.	6.	7.	8.
Cookery Centres	31,722	£ s. d. 0 12 7	£ s. d. 0 4 0	£ 6,344	£ s. d. 0 6 0	£ 9,516	£ 3,172
Laundry Centres	14,942	0 10 6	0 2 0	1,492	0 5 9	3,735	2,243
Housewifery Centres	1,000	No figures.	Nil.	Nil.	0 6 0	300	300
Mentally Defective Centres	731	9 17 8	1 7 0	987	3 0 0	2,193	1,206
Deaf Centres	425	19 2 7	3 3 0	1,342	5 5 0	2,236	894
Industrial Schools	916	19 3 9	5 15 0	5,285	7 10 0	6,870	1,585
Total	—	—	—	15,450	—	24,350	9,400

EXPLANATIONS.

Housewifery.—This system of instruction has lately been begun, and three centres only were opened in 1897-98. The figure in column 2 is an estimate of the number who may probably come under these centres.

Deaf Centres.—I have entered in column 4 only the grant for elementary education, not the additional 2l. 2s. which is given for manual

instruction, &c., which is not included either in the proposed grant in column 6.

Industrial Schools.—The present grant is at the rate of from 2s. to 3s. 6d. per child per week, varying according to age, period of detention, and section of Act under which detention is ordered. The figure in column 4 shows the actual total grant for the year 1896-97 divided by the number of children.

(Signed) C. A. ELLIOTT.  
13th October 1898.

Sir  
C. Elliott.  
18 May '98

Government Grants should be proportionate to the cost of carrying on the various branches of education.

Government grants in aid of School Board rates should be increased.

Mr. H.  
Morgan-  
Browne.

18 May '98

Mr. HUBERT MORGAN-BROWNE called and examined.

Mr. H.  
Morgan-  
Browne.

18 May '98

18,197. (Chairman.) You are a member, I understand, of the London School Board?—Yes.

18,198. And you appear to put in, along with Sir Charles Elliott, these resolutions\* which have been sent us by the clerk?—Yes.

18,199. I understand that the London School Board make themselves responsible as a school board for what is in the resolutions, but for nothing more?—Quite so.

18,200. Upon all other points, except what is actually contained in the resolutions, you appear as an individual?—Yes; that is so.

18,201. And you have prepared for us this memorandum† which I hold in my hand?—Yes.

18,202. If I understand rightly the point of your memorandum, it is, that all the Treasury contributions, what we call subventions, which are now given to London, should be given upon a wholly different principle, and should be given either upon population or upon a calculation of the money that is raised in London for the Treasury?—Yes; that it should be given, not upon population, but upon a calculation as to the amount contributed by the locality; that is to say, that the Treasury subventions which are in the nature of contributions to a locality for local purposes, should be contributed to that locality in proportion to the amount which that locality, treated as a locality, contributes to the Imperial Exchequer. The actual *raison d'être* of these Treasury subventions is that more money is raised by Imperial taxes for Imperial purposes than is required for those Imperial purposes, and the Treasury grants or Treasury subventions—that is to say, all the unearned grants, leaving out the specific grants paid for education according to results—are in the nature of a rebate of the money contributed by the taxpayer.

18,203. Where do you find that principle laid down?—I do not find it laid down at all. I am only saying that that is the practical result of the facts before us. So much money is contributed, say 90 millions is contributed for Imperial purposes by taxation.

18,204. Take education; do you apply that principle to education?—How do you mean do I apply it to education?

18,205. I suggest to you that the principle upon which the Treasury contributes to education is to secure and to give the Imperial authority a right to secure certain definite results in the interests of the whole community, and that it has no relation whatever to the amount which the locality raises?—I said so. I excepted the education grant which is paid according to results from that general statement. But there is another kind of education grant which has come within recent years, I mean the grant to voluntary schools, and the grant to necessitous board schools which has no relation to the amounts earned, and which is in the nature of a grant out of surplus.

18,206. Take it in another way. Take the police grant. Why should the police grant be distributed on the principles which you suggest rather than in order to secure a certain level of efficiency?—Is there a specific police grant?

18,207. Certainly?—But it comes in two or three places.

18,208. I am more familiar with Scotland than with England; there is a specific sum given for the police of Scotland, and I think I am right in saying that the police grant in England is practically half the expenditure, that is 10s. in the pound, and that in return for its being given, the local authority is bound to come up to a certain definite standard of efficiency as ascertained by Imperial officers?—But that, for instance, does not apply to the grant for the Royal Irish Constabulary in Ireland.

18,209. No; we must leave that out, I think, because we are upon England, at present. No doubt the Royal Irish Constabulary is exceptional, and there are great reasons for it, which I think we need not discuss. I will put it to you in your own way. Which of the grants do you think it would be fair to give back to the locality upon the principle that you suggest?—I say that all money contributed in the nature—

18,210. I wish to point out to you that education will not do, but I understand you still to want the education grant to be given on that principle?—Certainly; I think it ought to be. I do not agree with the present grant for education being on an earned basis, because the same amount of money which will earn efficiency in one locality will not earn efficiency in another. Owing to the

price of rents and other things connected with the centralization of wealth in London, the London School Board has to spend a great deal more to produce the same amount of efficiency among its scholars than a small local board in the provinces may have to spend, or than a country district may have to spend.

18,211. Then the test that you wish to take for an Imperial subvention is what the locality spends?—Or what the locality contributes to the Imperial revenues. That I take to be the test of what the locality should receive.

18,212. Surely what it contributes is what it spends—it must contribute what the elected body rates it for?—I mean what it contributes to the Imperial Exchequer.

18,213. Why is it fair to take London, which is the metropolis, and in which a great amount of receipts are taken, which really, although collected in London, are not contributed by Londoners?—I quite agree that those should be eliminated, and that can be done. A great many of our returns do show fairly what London pays. There are some other cases where a certain estimate has to be taken. There is no doubt, I believe, on the facts and figures where we can ascertain them accurately.

18,214. Just let us be quite certain; would you give the education grant upon that ground utterly regardless of the results the London School Board obtained?—I do not say that any education grant should be given utterly regardless of results, but I do say that in giving that grant regard should be had to the necessary expenditure by the locality in order to obtain a certain level of efficiency, my point being that some localities have to spend more to reach the same efficiency than other localities have to spend.

18,215. Do you think there are no compensating conditions in the locality?—I think not. I am not suggesting for one moment that the present system of general taxation presses heavily on a given locality; all I am saying is that you have a certain system of taxation, and you raise a certain amount of money—more money than you want; therefore, you return some of it to the localities for local purposes, as distinct from Imperial purposes. I say that those subventions are in the nature of a rebate from the money received for Imperial purposes, and should be returned in the proportion in which they were contributed by the given localities. I say the present earned grant for education presses with peculiar heaviness upon London. Take only the question of the enormous value of London sites. The amount which the London School Board has had to spend and has had to borrow in order to provide the schools for teaching in is altogether out of proportion to what has had to be spent or has had to be raised in other localities. Now, you may say that London is very much richer and can better afford it. That is perfectly true. But then London, as I say, contributes a great deal more. Under the present system London is pressed both ways. She contributes a great deal more to the Imperial taxes, and the very means which enable her to contribute more, namely, the centralization of wealth in London, puts up all kinds of prices—prices of site values, prices of rents, prices of salaries—and therefore causes her to spend a great deal more on education, or on other local purposes, than would be spent in other places. Yet she only receives back upon the same basis as a little country village in the county of Devon.

18,216. Does London spend more in proportion to its valuation? For instance, if you have a high valuation, as you point out, of course your rate per £ is less than if you have a low valuation; is the burden now borne by London more proportionately to the burden which is borne by property in other places?—The rates generally in London are certainly above the level of the rates in the provinces.

18,217. When you say rates, what do you mean?—I mean the rate in the £; I mean the proportion.

18,218. Surely such things as great metropolitan improvements and that sort of expenditure must be taken off when you are going to compare the rate per £ in London with the rate per £ in a country district?—Why should it be taken off because those very metropolitan improvements enable London to be what it is? They mean so much wealth to the community, and they enable London to pay heavier taxes, that is, to contribute more to the taxes. Take a great metropolitan improvement like the docks; the fact that London has spent all this money on the docks, makes London a very great port, which means that a great deal of Customs revenue comes into London which would otherwise be distributed elsewhere and paid by other merchants in other parts of the country. Therefore, London by means of these local

Government Grants should be contributed to a locality in proportion to the amount which that locality contributes to the Imperial Exchequer.

Government Grant in London in respect of education: The money which the London School Board has to spend is greater in proportion compared with other School Boards.

Mr. H. Morgan-Browne.

18 May '98

improvements is contributing to the general wealth of the Exchequer. All these great local improvements tend to make London a great wealth-producing machine from the point of view of the Exchequer.

18,219. The docks may, but do you think such a thing as the Embankment does?—The Embankment is beyond it, except in so far as it would facilitate traffic. Of course, all improvements have that object, or ought to have that object, of facilitating traffic and enabling people to move about. If you have got too small a city, the mere congestion of traffic is so much loss of time, and, therefore, so much loss of money to the merchants or other people living in that place.

18,220. For instance, take such a thing as the Customs; Mr. Murray knows much more about this than I do, and therefore, I shall just put but one question on it; you make a point of London's contribution to the Customs revenue, do you not?—Yes.

18,221. Surely you cannot credit that to London, because the taxes paid in London are really paid by consumers over practically the whole of the United Kingdom for some articles?—That is perfectly true, and if you will look at my estimate I do not think I have fallen into that mistake. I have practically estimated the contributions from the Customs on a population basis. England's proportion of the Customs revenue is 80 per cent., and England's proportion of the population is 78 per cent.; all I have done is to take London's proportion on a population basis of 80 per cent. instead of 78 per cent.

18,222. Then must you not go through the same process for every port, such as Glasgow, Bristol, and Liverpool?—As I am pointing out, I have really taken into consideration the fact that an enormous amount of the trade of the country passes through London; I have practically gone on the population basis.

18,223. I thought that a moment ago you told me it was not to be upon the population but upon the contribution?—Certainly, on the general principle; you are now taking me as to a specific detail about the Customs, and I say that the Customs is paid practically according to population; and that is perfectly right. Where do you suggest that I have gone beyond that position?

18,224. I was on paragraph 14, of your memorandum?—I say there that England contributes 80 per cent., although the proportion of the population is only 78 per cent. Then I have made a slight calculation, which I do not wish to press in any way, showing that an urban population does consume more of these dutiable articles than a rural population. Perhaps it would have been better not to have made that elaborate calculation; but the result makes a very slight difference to what it would have been if I had taken a pure population basis. As a matter of fact, in paragraph 22, I reckon that London contributes to the Customs revenue 12 per cent., and as London's population is 11·2 per cent. of the population of the United Kingdom, you see there is a very slight difference. I do not suggest that London does contribute very much more to the Customs revenue than she consumes; I suggest that she contributes a little more, which is represented by '8 per cent., which is nothing very large in the matter of the Customs revenue.

18,225. What then really is to be a test in your case if these calculations, such as the Customs, which I found in paragraph 14, are to be put on one side? What precisely is the test you want to see applied to the distribution of the Imperial subvention, so far as London is concerned?—I draw a distinction between earned grants and unearned grants.

18,226. Will you refer me to the place?—Paragraph 32 of my memorandum.

18,227. You must give me the details of those; what are earned grants and what are unearned grants?—As I say, practically the earned grants are the education grant, and, as you say, perhaps the police grant, so far as it applies; only, as I say, there is a good deal of the police grant that is not in the nature of an earned grant; there is, for instance, that very large sum paid to the Royal Irish Constabulary which, of course, comes into the local taxation for the United Kingdom. But putting aside that, dividing it into two grants, an unearned grant and an earned grant—

18,228. I am afraid I must ask you to give me, in the first instance, a list of all the grants which you put under the head of earned grants; then a list of those which you put under the head of unearned grants?—I do not know those at present in sufficient detail to give them.

18,229. How did you get at these figures which you give in the paragraph? Against the first you put 10,452,000?—Yes.

18,230. And against the second, the unearned grants, 12,648,000?—Yes.

18,231. There must have been some details got at which would add up to those totals?—Very good. The earned grant is 10,452,000, as shown in paragraph 25 B. (i), and is the total of the public education grants, and the grants from the Science and Art Department, which are made on a basis of results. The other total of 12,648,000 is made up, as you will see at paragraph 25B, of charges transferred from local funds, which includes the Royal Irish Constabulary, and other sums of that kind, the prisons grant, for instance, and which amounts to 2,943,000; then B (ii), which includes grants to voluntary schools and necessitous board schools, which are strictly unearned Treasury subventions, amounting to 726,000; and C, the sums now distributed under the head of the Local Taxation Account, amounting to 8,979,000.

18,232. Then in the earned grant, 10,452,000, there is nothing except the public education grants and the grants from the Science and Art Department?—Quite so.

18,233. It does not include the police?—No, it does not.

18,234. Do I understand you to press that the education grant should be given wholly in respect of London's proportion; and, if not wholly, in what proportion?—I suggest that the basis should be in proportion to London's general contribution to the taxation of the country.

18,235. No matter whether the schools were efficient or not?—I suggest that that should be the main basis of the calculation; it is more a political question whether it should be deemed expedient to have regard to efficiency and to give it to a certain extent by results; but it is not impossible to combine the two principles.

18,236. Surely the whole basis of the cost of education being put upon the Imperial Exchequer is that it is to a large extent an Imperial interest that the schools should be efficient, and to enable them to be efficient the Treasury comes in and gives a grant?—Very good. Then I suggest that there should be a combination of the two principles; that some basis should be taken by which regard should be had both to the efficiency to be produced by the money spent and to the necessary expenditure by the locality, in order to attain a certain uniform efficiency throughout the country. My point is, that to get efficiency represented by a grant of 20s. 6d. in London costs a great deal more per head per child, and necessarily costs more than to get an equal efficiency in the country districts.

18,237. You say "necessarily costs more"; that, of course, opens up a possible controversy?—Yes, it does.

18,238. I am far from giving a judgment upon it; but I suggest to you that under your principle of what costs more there would be a direct incentive to extravagance on the part of the local body?—I do not think it is any incentive to extravagance. If you have got to pay 5,000, or 6,000, for an acre of land instead of paying 500, or 600, no question of extravagance comes in there; you must get your acre of land if you are going to teach the children.

18,239. I suggest to you that that particular question of sites is compensated for by the fact that you have such a much greater relative proportion of rateable value on which to lay your rate per £?—That does not seem to me to meet the whole case. It is quite true you get a larger rateable value and you get more, but then that leaves out of consideration all the other circumstances which go to make that rateable value; it is not merely the site value, as I say, it is the centralization of wealth and it is the energy of the people of London that tend to make the cost of education greater.

18,240. However applied would not your principle have the effect of giving more to the locality in proportion to what it spends?—Yes, it would have that incidental effect, but it would not be based on that.

18,241. We will assume that it is not based on it, but if it has that effect, is that not in itself a baneful effect?—No, I do not think it is necessarily a baneful effect; it might become a baneful effect without proper safeguards and without proper checks.

18,242. What safeguards would you suggest?—I have not drawn up a new taxation scheme.

18,243. Let us take the unearned grant; the police according to your division must come under that unearned grant?—Yes, but I think the actual police grant would be

Mr. H. Morgan-Browne.

18 May '98

Government Grants should be contributed to a locality in proportion to the amount which that locality contributes to the Imperial Exchequer, regard also being had to efficiency. But such a system would result in the most necessitous district getting the smallest share.

Government Grants in Metropolitan: Distinction between earned and unearned grants.

Mr. H.  
Morgan-  
Browne.

a very small amount. The charge for prisons and reformatories amounts to 626,000*l.* for England and Wales; there, again, I have estimated that London's proportion of that is on a population basis.

18,244. Of course the London police is, to a certain extent exceptional?—For the London police there is a payment made which I have stated somewhere in my memorandum.

18,245. I think it is 150,000*l.*?—150,000*l.* is paid to the Receiver for the Metropolitan Police District, but, of course, that is much larger than the area of administrative London. Administrative London's share of that would be 117,000*l.*

18,246. (Mr. Murray.) Would not the result of the application of your principle be that the most necessitous district would get the least share of the Imperial subvention, and the richest district would get the most?—That would be so.

18,247. Is that a good principle for the distribution of the money?—It seems to me the only fair principle. I want to emphasise my point which is simply this: We raise 25*s.*, we will say, from every person in the kingdom for Imperial purposes—it works out to that—we spend 20*s.*, and we practically give back 5*s.* for local purposes; we say: “We do not want all this 25*s.*, here is 5*s.* for local purposes.” Now, I say it is not fair, if you get 25*s.* from one locality and 15*s.* from another, to give back 5*s.* to the locality which contributes 25*s.* and also 5*s.* to the locality which only contributes 15*s.* It ought to be in proportion. Five shillings is one-fifth of 25*s.*, and if you gave back 5*s.* to the 25*s.* locality and 3*s.* to the other that would be in strict proportion to what they had contributed. If we are going further and going to give special aid to localities, I think that that should be given on a totally different system. A special case should be made out for each special locality, if it is necessary, for instance, as in the case of Ireland, where it has been suggested that special aid should be granted. I do not consider that there is any claim in equity for any special treatment of a locality with regard to the taxation of the country; but it might be expedient. My point is altogether outside of that. I am simply saying that we get more money than we want for Imperial purposes, and we give back the surplus; I say as we give back that surplus it should be given back in strict proportion to the manner in which it is contributed, that is to say, so far as the Treasury subventions are in the nature of grants to localities.

18,248. Then, I say again, would that not result in the most necessitous district getting least and the least necessitous district getting most?—Absolutely, yes, but relatively they would get precisely the same.

18,249. Relatively to their contribution you mean?—Yes.

18,250. Take the case of a remote district in the north of Scotland with a school board rate of 8*s.* in the £, which I believe is possible, and a road rate of perhaps half as much; would it be fair that the assistance from the Exchequer should be proportioned to the contribution of that district to the Imperial revenue?—Of course, that case is simply met by this, that the education grant is really an Imperial matter; I do not at all hold with the present distribution of the grant in any way. I suggest that it should not be treated as a local grant at all, but that it should be an Imperial business, and in that case the whole difficulty about a particular education grant falls to the ground.

18,251. Take the grant-in-aid of the poor rate then?—There in the case of the poor rate, I certainly think that the contribution should only be made in proportion to the other contribution.

18,252. Not in proportion to the necessities of the district at all?—No, because, strictly speaking, the necessities ought to be in relation to the abilities to pay for the special necessity.

18,253. But the smaller the ability to pay probably the greater the poor rate would be, would that not be so in some cases at any rate?—No, I do not think that that at all follows. I do not think because a district has not got large concerns and is unable to contribute large sums to the Exchequer that there is more actual distress or more actual poverty in that locality, and I do not think it is generally found so; in fact, in the towns poverty is very often greater than in the country districts. In the rich towns there is generally a larger poor population, and more expenditure on the poor than in the country. So I do not think that that would follow at all.

18,254. You speak all through your paper of “London's contribution”; do you mean the contribution of Londoners?—I mean London as an administrative area—the County Council of London.

18,255. Of course the area does not contribute anything, it is the people?—It is only a convenient term to specify a given body of taxpayers.

18,256. Do you mean the people in it, or what do you mean by “London”?—I mean what is meant in the Blue Books where they put “the Metropolis.”

18,257. You say “London's contribution”?—Yes.

18,258. Does that mean the contribution of Londoners or of what?—All I know is that in the report of the Commissioners of Inland Revenue they give various schedules showing what is contributed by “the Metropolis” and the “Rest of the Country.” There is that distinction made.

18,259. I think they do not say what is “contributed” by it, do they?—I do not know the exact terms which they use, but they put the amount which is paid or received in the metropolis.

18,260. Is that quite the same thing?—Practically; I admit, of course, that it is not mathematically accurate, but it is practically so; however, I mean what they mean.

18,261. But you say something different?—I do not think I do. Have you got the reports of the Commissioners of Inland Revenue here or any of these Blue Books that I have referred to?

18,262. What they give is the Income Tax, for example, Schedule A. in London?—Quite so.

18,263. But is that the contribution of London?—To a very large extent, undoubtedly.

18,264. Is that to a large extent?—To an enormous extent.

18,265. Do you know to what extent?—No.

18,266. Is that not rather an important item to take into consideration?—No, I do not think it is. I think it is a detail which could be adjusted. Take Schedule D., Part II. (paragraph 18). Under that head the metropolis contributes, I think, 70 per cent. of the tax. But again, there is a more glaring instance; take Schedule C.; 98 per cent. of the assessment of the United Kingdom is paid in London, but I do not assume that 98 per cent. of that is paid by Londoners.

18,267. No, but you do assume that 40 per cent. is?—I do assume the 40 per cent., and I give my reasons. Certainly I have made an assumption, and I admit the estimate, but I have not slavishly followed those subdivisions because of course I know that they do not always represent the contribution of Londoners.

18,268. You say, for instance, “there is no Schedule C. for Scotland”?—Well?

18,269. Of course a large part of the revenue which is raised under Schedule C. is paid by Scotchmen?—It is not paid under Schedule C. at any rate.

18,270. Yes. Suppose a Scotch bank held a million of consols, the Income Tax on the dividends of those Consols would appear in Schedule C, but the company which pays it is Scotch?—Yes.

18,271. The shareholder of that company may be an Englishman?—Quite so.

18,272. That is rather an unsound basis to work upon, is it not?—Of course it would be unsound, but I have not worked upon that basis.

18,273. Have you made allowance for all those considerations?—I have tried to do so, and I suggest that I have. I have said that 98 per cent. of Schedule C is contributed in “the Metropolis”; if I had made the mistake you suggest I should have said that 98 per cent. of that was contributed by “Londoners.” I have said nothing of the kind. I have looked at other schedules and other circumstances, and have said that on those other schedules and on those other circumstances, I suggest that London's contribution will probably be found to be about 40 per cent.

18,274. Then I ask, how can you possibly tell?—Of course I am making an estimate. I have tried to make a reasonable estimate. I do not for one moment suggest that this is absolutely accurate, or that it is not open to modification in particulars. There is plenty of room for modification because I bring out a very striking result; I quite agree that it is capable of modification only with such materials as I had, without access to all official

18 May '98

documents and all that, I have made my estimate. Here you will find the reasons given. Take, for instance, paragraph 16. London pays 43·3 per cent. of the assessment to house duty (dwellings, &c.); London pays 43·2 per cent. of the net assessment to Income Tax, Schedule D., Part I.; and London pays 42·1 per cent. of the net assessment to Income Tax, Schedule E. All that means that large salaries and large incomes are concentrated in London, as we know to be the fact without going to these Blue Books, but here it is confirmed with per-centages running about 43 per cent.

18,275. Suppose a man lives at Sevenoaks and earns a hundred thousand a year in London; is he a Londoner?—I do not know.

18,276. I mean from your point of view, is he?—It does not matter to me what he is; I go where he pays his assessment. If he pays his assessment in London for my purposes he is a Londoner; if he pays it at Sevenoaks, he is a Sevenoaks man. I cannot go behind the official returns, I admit at once.

18,277. The fact that he pays his income tax in London —?—Surely we do not know that he pays his income tax in London.

18,278. We will assume that; how do you know that all this 40 per cent. which you put down to London is paid by Londoners?—I say I do not know; I only assume on the basis which I give here. For instance, London pays of the assessment to house duty (dwellings, &c.) 43·3 per cent. of the total amount paid in the country. That means that 43·3 per cent. of the assessment of large houses—and we generally understand by a large house a large income—is contributed by Londoners. Of course those houses are all in London, and the 43·3 per cent. does not include any houses in Sevenoaks.

18,279. But the owner of them may live somewhere else?—These are dwellings. At any rate, he lives a good deal of his time in London.

18,280. He may not live there at all?—Then he would not come under that head, because he would not have a dwelling to be assessed under the inhabited house duty in London.

18,281. Supposing a Frenchman owned a large block of buildings in London?—Yes, and lived in them?

18,282. No; lived in Paris?—Then, of course, he would not come under that assessment?

18,283. Yes, he would?—I beg your pardon; if he has not got a dwelling-house he would not come under the inhabited house duty; if he lived in Paris he would not touch that 43·3 per cent.

18,284. He would come under Schedule A.?—Of course he would, but there are other calculations upon Schedule A. I have not made the same calculation all through. You will find that for Schedule A. I have only made an estimate, I think, of 20 per cent., which is a very different thing altogether.

18,285. Then you have taken the Post-Office revenue, I see?—I take that not, of course, as taxation, but as showing the enormous commercial activity of London as a unit.

18,286. I think there is no doubt about that. Ought you not to consider how much it cost to earn that four and a half millions that London contributes to the Post Office?—Do you mean under the telegraphs?

18,287. Yes; take that under telegraphs?—That would, doubtless, all very properly come in if we were going to adjust the postal charges, or anything of the kind.

18,288. For instance, some people think that the telegraphs are run at a loss?—They are run at a loss, that is to say, at a direct commercial loss; whether it is a loss to the community is another thing.

18,289. Still you look upon that 962,000, which London contributes under that head as revenue?—In all my calculations I have left out the postal revenue strictly. I have only dealt with taxation. I have only put that in to show, as I say, the general concentration—that is my point—of wealth and commercial activity in this local unit, London.

18,290. Of that there can be no doubt; the question is, what proportion of the revenue is contributed by people who live in London?—Yes, that is it.

18,291. (Mr. Clare.) I understand that the result of your very careful investigations of Imperial and local finance is that you have come to the conclusion that London contributes to the Imperial Exchequer more, in

proportion, than it receives back, as compared with other parts of the country?—Quite so.

18,292. Having ascertained that fact, you suggest that the distribution of the Imperial subventions should be on that basis?—On the basis of contributions.

18,293. If on investigation of the figures it turned out that London would receive less on that basis than it is now receiving, would you have advocated it?—Certainly.

18,294. How is this principle consistent with the suggestion you made a short time ago, that as it costs in London more per head to give the same amount of efficiency of education, the education grant ought to be based upon expenditure?—I did not say that; I tried to say that that would be an incidental result of it.

18,295. Pardon me, no; if you argue, and I understood that you did argue, that the grant towards education in London ought to be increased because it costs more per head to educate a child in London efficiently than it does in other parts of the country, surely that is basing the distribution on expenditure?—No, I said that that was only a fair reason why it should be, or rather a good reason to give for the increase. I do not say that that should be the basis, and I do not try to suggest that.

18,296. Pardon me, if it is a good reason—because it costs in London more to educate a child than it does in the country—for giving London more money, how is that consistent with the reason that London is to have more money because it contributes more to the Imperial Exchequer?—I do not see the inconsistency.

18,297. Let us take a very ordinary case and apply it to a country district; suppose you have a rural parish with an important main road running through it, to which Government grants are applied in aid of the expenditure, that rural district would probably contribute little or nothing to the Imperial Exchequer, and how would you give back to that particular district its share of the Imperial subventions?—It seems to me that it should get it on the proportion of its contribution.

18,298. Who is to pay for the main road?—Is it your suggestion that the part of the main road that passes through that village benefits practically only that village?

18,299. No, I do not suggest anything of the kind. Half that cost now is practically paid out of the Imperial funds, is it not?—Yes.

18,300. I want to know whether you would abolish that system of paying half the cost of that main road towards the relief of the local rates, or whether you would give that particular locality its share of the Government subventions in proportion to the amount it contributes to the Imperial Exchequer?—I do not think that half the contribution is sufficient; much more than half the cost of a main road running through a little village belongs to the community rather than to the village.

18,301. I agree, but the amount that that locality would get if it is only to receive in proportion to what it contributes, would be far less than it now gets in the shape of half the cost of the main road?—That may be, but it would not be far less than a re-distribution would give it.

18,302. (Chairman.) How do you know that?—I am only suggesting that it probably would not be.

18,303. (Mr. Clare.) May I ask how you can have an equitable distribution other than the one you have suggested, namely, that the return from the Imperial Exchequer to the local exchequer is to be in proportion to the contribution by the locality to the Imperial Exchequer, if that is the basis which is to apply universally throughout the whole country?—That would certainly be the basis.

18,304. If the effect is then to place the rural district in a far worse position than it is now with regard to certain items of expenditure which are considered of more than local importance, do you consider that an equitable basis for a redistribution of the grant?—No; but then I do not suggest that we can make this change in the distribution of the grants without making corresponding changes. Therefore, the position would be with regard to the village thus: You say that at present a contribution of half the cost of the main road is a very considerable item towards the local expenditure of that locality, and you suggest that if we gave it a grant strictly in proportion to its contribution, it would get even less than half that amount now contributed nominally for the purposes of that road, and therefore it would be worsened by any such scheme. I agree, but then I say, if you are going to give to a locality in proportion to its contribution, you will have to take a thing like a main road entirely, or practically entirely, out of local control and expenditure.

Mr. H.  
Morgan-  
Browne.

Exche-  
quer.

Mr. H.  
Morgan-  
Broune.

18 May '98

18,305. In other words, in order to give a wider scheme by which London would get a larger proportion of the Imperial subventions than it does now, you would create an immense amount of injustice over the country which would have to be rectified by still further Imperial grants to make good the deficiency?—No, I simply suggest that there should be a redistribution, or rather a recasting of the system by which Treasury subventions are distributed to the localities.

18,306. May I ask a question about these earned grants and unearned grants? Can you mention to me a single item of local expenditure towards which the Imperial funds are applied which is not based upon either expenditure or earnings?—The grant under the Agricultural Rates Act is not based on earnings. There is no earned grant in that at all.

18,307. That does not come under this item, does it?—That comes under the 8,979,000l.

18,308. I am speaking now of paragraph 32 of your memorandum where you have got earned grant 10,452,000l. and unearned grant 12,648,000l. That 12,648,000l. includes the 8,979,000l. shown in paragraph 25. However there they all are—

18,309. Wait a second; we will leave the Agricultural Rates Act for a moment?—Very good; take another one.

18,310. Take the case of half the pay and clothing of the police based on numbers and efficiency; do you call that earned or unearned?—I have admitted that that ought perhaps to be put under the earned grant.

18,311. Take the case of half the salary of medical officers of health; do you call that earned?—That is not earned.

18,312. It is not?—No.

18,313. Does not a medical officer of health earn a salary?—Yes, he does, but the locality does not earn it from the Treasury.

18,314. The locality pays half, and the Government pays half?—Yes, but I do not call that an earned grant.

18,315. Take the case of the 4s. a week for lunatics in lunatic asylums?—That is not an earned grant. You have not got to produce any particular efficiency in your lunatics; the lunatic has not got to pass any examination.

18,316. You do not get the 4s. a week except your lunatics are in the asylum?—Of course not, but then, as I say, that is a grant of cash to keep up the asylum; there is no earned principle in that.

18,317. I must confess I think so?—I do not see any principle of earning in that grant.

18,318. (Chairman.) Should you not pay a grant on lunatics to the place where the lunatics happen unfortunately to be?—Yes, you should pay a grant. I am not objecting to the grant; I am only saying it is not an earned grant.

18,319. When we talk about an earned and an unearned grant, is not a lunatic grant earned in this sense, that the object of paying it from the Imperial funds is to secure humane and proper treatment for the lunatic to a great extent under Imperial regulations and supervision?—Quite so.

18,320. Would it not be a farce to give to a poor district which has many lunatics its contribution for lunatics upon the basis of what that district contributes to the Imperial Exchequer?—Of course, if you have got a large centre for lunatics to which lunatics from all over the country are sent, that simply complicates the matter. To show the distinction between an earned grant and an unearned grant I will take the case of a lunatic and of a child that is being educated. If the child does not attain a certain efficiency *ipso facto* the grant becomes less—the school does not get the same grant from the Imperial Exchequer; whereas the lunatic may be badly treated or may not be properly cared for but the grant will be the same until the state of affairs becomes so bad that there will be an inquiry and something will happen in that way.

18,321. Is that so, because if the treatment is not proper is there not power to cut the grant off?—I did not know that there was any.

18,322. (Mr. Clare.) There are the Lunacy Commissioners?—I was not aware of that power.

18,323. (Mr. Smith.) Are you acquainted with the Act known as the Equalisation of Rates Act in the Metropolis?—Yes.

18,324. Is not the principle of that Act that the richer parishes should assist the poorer in meeting their local

expenses?—Quite so; the principle of that Act is to treat London as a unit instead of a mass of units.

18,325. Do you not think that the present system of distribution of Exchequer grants is a practical extension of that principle to the whole country?—No; I do not think it is.

18,326. Do you not think that is the intention of Parliament?—I do not know the intention of Parliament. I do not think that is how it works out.

18,327. (Mr. Elliott.) I gather that the result of these very elaborate calculations which you have been good enough to make in this memorandum goes to show that London's contribution to the Imperial revenue is something over a fifth?—Yes.

18,328. I notice that Mr. Macnamara in his memorandum\* suggests that London contributes one-sixth?—Yes; may I say that really that suggestion of Mr. Macnamara's put me on the track. When I saw it I said I will work this out and see if it is a sixth, because I have seen, and of course many of you have seen various calculations from time to time of what London is contributing. I said I would go into the figures, and I took out this figure of a fifth.

18,329. It really does not affect your argument whether it is a fifth or a sixth?—No; it might be a fourth.

18,330. Your suggestion is—and we must all admit that it is an undoubted fact—that London contributes very heavily?—Yes.

18,331. More in proportion to its population than any other district in the country?—Just so.

18,332. I would suggest to you that the whole principle of the distribution of Exchequer grants at the present moment is that you cannot earmark the benefit received by the expenditure to the particular localities?—That you cannot do it.

18,333. That you cannot do it?—It is not done, you mean. No machinery is existing for doing it, except in the case of licenses; there is the machinery there, as they return actually the licenses raised in the locality; but practically there is no such machinery in other cases.

18,334. Would you agree that London's gain by expenditure on education is limited?—No; I do not think the benefit of expenditure on education in any locality is limited to the locality; I mean that it goes to the benefit of the community. That is why I think it ought to be purely an Imperial matter.

18,335. You would suggest that the whole cost of the education of the country should be a national charge?—Education should; I do not mean to include the making up of local roads, for instance.

18,336. You would suggest that the whole expenditure on education cannot be earmarked to particular localities, and that the benefit is so diffused as really to make it a matter of national importance?—I agree entirely with that.

18,337. That being the case would you go on further to say that if you could deal with administrative difficulties—the difficulties, that is to say, of securing economy on the part of the spending authorities—the whole burden of the cost of education should fall upon the Imperial Exchequer?—Most certainly, leaving always a certain amount perhaps to fall on the rates, but so adjusting it that we should not have the glaring anomalies of rates which we have now—in some places an education rate of half-a-crown and in others an education rate of 3d. That is where I say the present system presses hardly.

18,338. You would say that the whole wealth of the country ought to contribute to the expenditure on education?—Quite so.

18,339. It would entail the provision of means to prevent extravagance and poor administration?—Yes, entirely.

18,340. Would you apply that principle, which is an extremely important one to the expenditure on the maintenance of paupers?—I think so; I think it might go certainly to the question of the maintenance of paupers.

18,341. Would you again say that it is impossible, as it were, to earmark to particular localities the benefit derived by the maintenance of paupers?—Yes. Of course the only question that arises there is one relating to the whole question of our system of pauper administration, and I do not want to commit myself to anything about that.

Mr. H.  
Morgan-  
Broune.

18 May '98

The Metropolis contributes to the Imperial Exchequer more in proportion to its population than any other district in the country.

Education: Cost of should be borne by Imperial Exchequer.

Paupers: Maintenance of should be borne by Imperial Exchequer.

Mr. H. Morgan-Browne.

18 May '98

Police: Cost of should be borne to some extent by the locality.

Government Grants: Matters of Imperial concern should be paid for by Exchequer.

18,342. I do not want to press you to make any admission beyond what you wish, but would you go so far as to say that the responsibility of the care of the poor should be —?—A national concern?

18,343. Should be a national matter and not a matter for individual localities?—Yes, entirely.

18,344. I think you have already, in reply to Mr. Clare, suggested that in regard to main roads a similar principle should be adopted; would you apply that principle also to the police?—No. I think the police is more a local concern. The chief function of the police, I suppose, is to guard property and to protect persons, and, of course, the amount of police required must depend not only upon the population but upon the wealth of the district. I think that perhaps is more a matter of local concern.

18,345. But you would say that to some extent it is a matter of Imperial concern?—To some extent, yes, certainly.

18,346. Putting all these things together the result would be, would it not, to transfer from the local rates to the Imperial Exchequer a very considerable burden?—Certainly.

18,347. I would put it to you that the Treasury subventions at the present moment are a step in that direction?—Yes, they are, but a very faulty step.

18,348. Because they do not go far enough?—Not only that; they go too far in some places and not far enough in others. It is like a jagged advance. That is where it presses heavily on different localities.

18,349. Though you would suggest that the principle is sound enough?—So far as we can discern a general underlying principle, but I confess I do not see a general underlying principle in the different grants. Such a principle as you suggest, I think, would be welcomed. I think it would be an excellent underlying principle.

18,350. You have a considerable mass of expenditure I see, which you propose should be made a burden upon the Imperial Exchequer?—Quite so, and which is at present so, only it is distributed in an anomalous way. You see that the 23,000,000, spent on local matters is raised by Imperial taxes at present.

18,351. If effect were given to the principle that you have just now suggested the result would be, would it not, that the wealth of London would contribute more to these matters of national concern than it does at the present moment?—Undoubtedly. For instance, to strictly carry out these suggestions would entail further taxation to which again London would contribute its disproportionate share. London would not benefit to the full extent that appears here. That is quite clear. Of course, that is only an argument for a more equitable and, as I suggest, a more reasonable system of local taxation.

18,352. There would be a relief of London rates?—Yes.

18,353. But a still greater increased burden on London taxation?—Quite so, in common with the rest of the country.

18,354. I do not know that I need ask you any further question except this—you suggested that these Imperial subventions are in the nature of a rebate?—Yes, I did.

18,355. Or of a repayment of taxation?—Yes.

18,356. I do not know whether you could develop that at all. My own view would be that the Treasury subventions are a movement in the direction which you have just indicated to the Commission as being desirable and that they are not in the nature of a rebate?—It might be taken in that way, the important point being that granting that that is the movement, the movement should be carried on having in view that principle of rebate. Of course, until we actually consummate that movement while we are making approaches to it, unless we have some such idea of rebate in our minds, we are doing injustice to localities. Once we have adopted the principle and have put all these various things which we now treat as local concerns upon the Imperial Exchequer and have done it frankly, then it would not perhaps be so necessary to consider the question of the rebate; but while we are only doing it tentatively and while we are doing it so that one locality benefits at the expense of another locality, and so on, then I say it is essential that we should have regard to this principle of rebate namely that where we take a large amount of money from the taxpayers of a given locality, and where we take more than we want, if we have got money to return we should return it to the ratepayers of that locality in proportion to the amount which they contributed as taxpayers.

18,357. Does not that statement go in direct opposition to the view which you have previously indicated to me?—No, because on the general principle that you suggest of these local concerns being put on the Imperial taxes the adjustment for which I am contending would automatically come about. If all this was a matter of Imperial concern, very much more money would have to be raised by the country to meet the increased expenditure, and that being by a general system of taxation would fall with perfect equity upon the different localities. Therefore, if the things we now call the local services of London tend to swell Imperial expenditure, that would mean more taxes to be raised, and London would have to contribute a large share of those new taxes. The thing would adjust itself perfectly—do you follow me?

18,358. Yes, I think I do. Do I rightly interpret what you have said in this way—that you are of opinion that matters such as those we have mentioned, are matters of Imperial concern?—Yes.

18,359. Would you also say that in the necessities of the case, there must also be a very considerable element of local administration?—Yes.

18,360. That safeguard ought to be made to prevent foolish?—Or rash expenditure.

18,361. Or extravagant administration?—Yes.

18,362. But that a very substantial proportion of the expenditure should be met out of the Imperial Exchequer?—Yes, just so.

18,363. You would prefer, therefore, that in all Treasury subventions, regard should be had simply to the amount of the expenditure rather than to any other considerations, such as those which underlie the Local Government Act of 1888?—Certainly; always provided that sufficient checks and safeguards are provided as you suggest to prevent local extravagance.

18,364. But in these Treasury subventions the expenditure you say ought to be the test of contribution?—By expenditure, I mean the contribution. You see, it is the same thing; it is the money paid by the taxpayers.

18,365. I am using it in that sense?—Then, I say yes.

18,366. (Mr. Wharton.) As I take it, your evidence would come to this narrow point, that you are not in favour of subventions *quâ* subventions, but you would prefer a more simple method of a contribution from Imperial sources to the aid of local sources and under those circumstances you suggest that the education of the country should be an Imperial matter?—Yes.

18,367. And should not be made the subject of subventions?—Undoubtedly.

18,368. With regard to other matters which are now the subject of subventions, you probably would feel that it would be wise to adopt the same course?—To a very large extent.

18,369. And then that would bring about what you would probably consider to be desirable, that instead of having subventions at all which seems to be rather an invidious method?—Yes.

18,370. You would have certain things ear-marked as subjects for Imperial taxation?—Yes.

18,371. And certain things ear-marked as subjects for local taxation?—Certainly.

18,372. And that there should be no subvention in the one case or the other?—Yes, that is about what it comes to.

18,373. That is the result of your suggestion?—Yes. There would be a great simplification of national and local accounts.

18,374. (Chairman.) Have you got the first resolution of the London School Board in your hand?—Yes.

18,375. You observe there that the Board's resolution puts forward two principles, first, as to the cost, and, secondly (the one which evidently is the one which you mostly favour), as to the amount of the contributions to Imperial revenues being the test of receipts?—Yes.

18,376. It is quite obvious that these two principles are mutually irreconcilable?—I do not think that.

18,377. Cannot you conceive a district which contributes a great deal to the Imperial revenue and does not expend much upon education?—No, not very easily. By education, of course, you include voluntary school education as well as board-school education?

18,378. Of course?—You mean education generally?

18,379. Yes?—All districts ought to contribute, roughly, according to population.

Mr. H. Morgan-Browne.

18 May '98

Education: Government Grants. Principles on which the amount of contribution should be based.

Mr. H.  
Morgan-  
Browne.

18 May '98

Education:  
Increased  
Government  
Grants.  
Question  
of local  
control  
discussed,  
and of  
safeguards  
for careful  
local ad-  
ministra-  
tion.

18,380. London, it so happens, is expensive for education, and it also contributes a great deal?—Yes.

18,381. Therefore, so far as London is concerned, I concede to you that these two principles are not in London irreconcilable; but it does not follow that they are not irreconcilable in other places?—Do you mean to take the case of a country district?

18,382. I am taking you step by step. Because these two principles happen to tell in the same way in London it does not follow that they will tell in the same way universally over every other school board area?—I am bound to say I think they would in the long run; I do not say that one might not pick out a perfectly anomalous case where they would not, but I think that in the broad average of cases they would, and that where a community contributed more to Imperial taxes, living would be more expensive there, and all that is involved in an educational system would also be more expensive.

18,383. Which do you think the most important of these two principles?—I think the principle to which I am speaking is the more important, because it is the underlying principle.

18,384. The school board seem to take the other view by having put it first?—I am bound to say I do not see the conflict.

18,385. It is a question of importance?—Speaking of their importance, the first one is the more important from the point of view of a body like the school board because they are dealing specifically with education; but the other is the larger principle.

18,386. The first one of the two is a direct incentive to local extravagance, is it not?—No, I cannot agree to that.

18,387. Surely, if the cost is to be the test of the amount you are to get, the more you spend the more you will get from the other fund?—But then it does not follow that if you spend 10s. over and above some other body you are going to get a grant of 12s. Our point is that if we spend 10s. more we should get 10s. more. That does not encourage our extravagance because we get no benefit out of it. Again, there may be a further case; say we have to spend 10s. more and then you give us 8s. more; in that case, to my mind, there is still less inducement to local extravagance, but there is a still greater approach to equity. There are three alternatives.

18,388. Supposing we were to apply the principle which you have been advocating to such a district as West Ham, for example, would the contribution by the Imperial revenue to West Ham, taking it as a unit, not be very small when compared with the amount of education required?—Of course, West Ham is an extremely anomalous case. It ought to be within the area of the administrative county of London.

18,389. But, as a matter of fact, it is not?—That is so.

18,390. And therefore it must, in applying your principle, be regarded as a separate unit?—Yes.

18,391. Therefore does it not come to this, that your principle would not apply according to the units of administration into which the country is now divided?—I do not suggest that this principle, applied throughout the country, would not produce cases of hardship any more than any other general principle. It certainly would. In West Ham it would produce a very considerable hardship, I admit; and there are other places where there are heavy school board rates of 2s. 6d. or 2s. in the £. But then all that would be removed if the suggestion, which I want to press, were carried out, namely, that education should be made purely a matter of Imperial concern.

18,392. Is there to be no local administration?—Some local administration.

18,393. What do you mean by "Imperial concern"?—I mean that it should be paid for out of the taxes to a much larger extent than it is now, and that the earned grant should be very much reduced; I mean the amount that has to be earned. My point is that we can get efficiency with a much smaller incentive in the way of money than we have now.

18,394. You tempt me into a wide field there by that last answer, that it is to be much more a matter of Imperial concern?—Yes, I do.

18,395. Do I understand that there is to be a larger relative expenditure from Imperial sources, but that local administrators are still to spend that money?—I mean

this, that the money which should be contributed to education from Imperial sources should largely be, not on the basis of an earned grant, but on the basis of getting the work done, should be, in fact, on some other basis entirely; and that the amount which is to be dependent on the earning of the grant should be a smaller amount. There would still be room for fluctuations.

18,396. Does that not amount to this, that the Imperial Treasury is to pay, and that the local people are to spend?—Certainly.

18,397. That is what you put forward?—Not entirely, as I have pointed out.

18,398. But very much more largely than at present?—Yes. Of course, that is what they do in a great many cases at present; that is no new principle.

18,399. Naturally the incentive to economy would be proportionately taken away?—No, I do not agree.

18,400. Why not?—For this reason, because the money which the Imperial Exchequer contributes can be very clearly earmarked for certain fixed charges, in which there is no room for variation.

18,401. As for example?—As for example the cost of sites.

18,402. I beg your pardon, but that is not by any means a fixed charge, because it depends where you fix your building; suppose you take an expensive site fronting a main street, for which the Treasury is to pay; where is the check to come from?—The check can always come from the Education Department—the Imperial authorities—as at present.

18,403. Is it not better to have the check of economy?—There is the check there always in the Education Department. However there are a great many other fixed charges; there is a certain minimum of salaries which has always got to be paid; a certain number of teachers must be had for a certain number of children.

18,404. You suggest now that salaries are a fixed charge. I suggest to you that that charge varies almost more than any other according to the taste of the local body?—Would not this meet the case? We have had now sufficient experience to enable us to say that to educate children costs so much per head; a Commission could arrive at it.

18,405. Can you say that—it varies very much in London from other places?—I know, but for each locality we could arrive at a certain fixed charge which is what we may call a necessity.

18,406. How are you going to arrive at a fixed charge on the previous expenditure?—The previous expenditure is a guide, is it not?

18,407. The previous expenditure may have been under extravagant administration, or it may have been under economical administration; how are you going to apply that test?—Of course we cannot arrive at any certainty in these matters, but on broad principles we know that to educate a child costs so much, and that it will always cost so much, and will not cost less.

18,408. Are not the principles so broad that they are not capable of being reduced to any particular rule?—Not at all. I think that a certain grant could be made, for instance, per child, and that any further expenditure which might be necessary could be met out of the rates.

18,409. Is that not almost exactly what is done at the present time—there is a certain grant per child, is there not?—But then, as I say, it depends on earning it.

18,410. Only to a small extent, comparatively speaking?—It does not take into consideration the fact that in a given locality to get that minimum of efficiency you will have to spend more than you will have to spend in another locality. If you have got to spend 30s. to educate a child in London and 20s. in the country, the earned grant is the same for both.

18,411. I suggest to you—and this is the last question I put—that that consideration is better left to the locality, with all the incentives to economy which the dread of a rise in rates brings, rather than to run the risk of allowing a local body to expend money provided by the Imperial Treasury?—I do not agree. I should agree if that were to be wholly so, but then I do not suggest for one moment that the money to be contributed by the Imperial Exchequer should be the whole cost of education, because I quite agree with the suggestion made to me before that the checks and safeguards for local careful administration must be maintained.

The witness withdrew.

Mr. T. J.  
Mac-  
namara.

18 May '98

Mr. THOMAS JAMES MACNAMARA called and examined.

Mr. T. J.  
Mac-  
namara.

18 May '98

18,412. (Chairman.) Like Mr. Morgan-Browne, you are a member of the London School Board, and have been appointed by that body to place before us the resolutions\* contained in your memorandum?†—Yes.

18,413. I put the same question to you as I did to him; the Board, as a Board, is responsible for the resolutions that are passed, and not for any other development which you have been good enough to prepare for us?—That is so.

18,414. For all except the resolutions you appear as an individual to explain and elucidate them according to the view that you think the Board had in passing them, is that so?—Yes, that is so.

18,415. Which of these two principles mentioned in the first resolution do you desire to see prevail?—I want to develop the first myself more particularly, although I do not propose to discriminate between their importance on behalf of the school board.

18,416. You say you want more equitable relations to be "maintained between the proportion of the cost of "Elementary Education borne locally and centrally respectively"?—Yes.

18,417. Why do you select cost as the test upon which the Imperial contribution is to be given?—The cost of course is the ultimate financial burden to be borne in respect of education; that is why I select that.

18,418. I suggest to you that taking cost as the test is about the most efficient means you could devise of running the cost up greater than it need otherwise be?—I do not follow you. The education grant is administered as carefully as any grant I am acquainted with. The Education Department's regulations both in this country and in Scotland are exceedingly minute and detailed; the money is doled out in exceedingly small quantities for specific subjects, which are very carefully tested by the Department officials, who are many, and, compared with the administration of other Imperial subventions, I should have thought there is no grant made which is so carefully surrounded by safeguards as the education grant.

18,419. You would agree that that is a wise thing to do of course?—I think it is carried too far and on wrong lines at the present time.

18,420. Do you not think that every possible safeguard against extravagance should be adopted?—Yes, I do; but I think you may overdo your safeguards against extravagance. Let me say exactly what I mean. For instance, as you are aware, the education grants are paid out per subject in, as I say, very minute sums, with the ultimate result that you get the aim of managers to be the taking up of subjects which shall pay, rather than the wellbeing of the education of the locality, and of the children. That I do not think a desirable development.

18,421. Is that not a matter which it is within the competence of the school board to remedy if it likes?—No, because such a very considerable proportion of the money upon which education depends comes from the Imperial Exchequer, that, in the interest of the ratepayers the school boards, though they may agitate and send recommendations, must, more or less, fall in with the regulations prescribed by the Education Department in this country and Scotland.

18,422. Does not what you have just said amount to this: that there are certain subjects which pay the locality to take, and certain which do not, and, as all the subjects are paid for by the Imperial Treasury the local body takes up those subjects, and instructs its teachers to take up those subjects out of which it will get most money from the Imperial Treasury?—Yes; and that is not always in the interests of the children or of the education of the locality.

18,423. Is that not a very strong argument for some further safeguards against which I suggest to you is an abuse?—No, it is an argument in favour of safeguards along different lines.

18,424. I will take it that way. What safeguard do you suggest? As I understand Resolution I, the only test with which you are concerned is the cost; in other words the first part of the resolution means this: that the more the local board spends the greater the proportion they are to get out of the Imperial Treasury?—Yes.

18,425. Where does the safeguard for economy come in under that principle?—If you wish me to detail a statement of safeguards I should be prepared to do so at

considerable length. They would not be in some respects along the lines upon which the present Scotch and English education departments go, because I believe that those safeguards result in uneducational methods, in so far as they are an incentive to take up subjects which are paid for by detailed and minute sums of money. It would be possible, and easily possible to secure safeguards and general supervision of a close and effective character which would avoid the difficulty which I have tried to represent to you, and would still be thoroughly efficient in the way of anticipating and preventing extravagance and mal-administration.

18,426. I wish you would make it more distinct to me?—The particular safeguards that I mean?

18,427. Yes?—Then I should have to go into the question of the method of inspecting schools by the Education Department's officers, and to deal with their present methods, and how far they might be reformed. It is along the line of the method of inspecting schools by the Department's inspectors that I should wish to direct your attention. I would not propose that each of those subjects should be paid for by those minute sums, but that the general character of the education given should be under the close supervision of the Department's officers, who would be permitted to be in touch with it at any time they pleased and as often as they pleased.

18,428. What do you mean by close supervision? At present, you know, there are two systems, one an annual inspection, and the other a certain number of more or less surprise visits, the latter system being rather more in favour at the present moment than the former one?—Yes.

18,429. How much more close supervision do you suggest?—I do not want any more close supervision than the latter system which you have mentioned. I would not propose that the work of a school should be assessed upon the results of the children's efforts in individual subjects, but that the grant should be paid more in the nature of *per capita* payments; and still you would have efficient supervision without the danger to which I have already referred.

18,430. But the payment *per capita* does not carry you quite so far as the resolution, that it is to be in proportion to the cost?—May I with regard to this question of the cost of education call your attention to the position in which we are—perhaps I shall make myself clear then—We get about 7½ millions from the Imperial Exchequer, roughly, now for elementary education; we get only 5½ millions from the localities. That 5½ millions is raised—4½ millions of it in the form of compulsory rates—I am speaking of England Wales, not of Scotland—the remaining three-quarter millions being the result of private benevolence and charity. The 4½ millions compulsory local rate for education is only raised over two-thirds of the area, leaving the third area absolutely free of any compulsory local charge. The three-quarters of a million, charitable subventions are raised of course over the whole area, and in the absence of any detailed statement of facts as to how much each locality does raise in the way of charitable subventions, I may roughly say that that three-quarters of a million is raised over the whole country in a more or less even manner.

18,431. I think that is a large assumption, because I think people who desire to keep up their voluntary schools probably get the money from amongst their own immediate friends, practically to some extent for the sake of avoiding the school board rate; but I let that pass?—Would you suggest that there are more voluntary subscriptions in the non-school board districts than in the school board districts—speaking proportionately.

18,432. I think it would be impossible to say?—That is exactly what I say.

18,433. I suggest that where there are voluntary schools the people in the immediate neighbourhood contribute to those voluntary schools?—Yes, I know, but I said that in the absence of any particular statistics I would say roughly that the three-quarters of a million were raised over the whole country.

18,434. Very well; I will take that?—Now to get this you get one-third of the rateable value raising half the total amount raised locally under a compulsory rate, namely 2½ millions, and you would get that same third—roughly again—raising a third of the three-quarters of a million of voluntary subscriptions. I know these figures may be exposed to criticism, not being precise; but I have no statistics to go upon or I would have gone to them.

Education:  
Government  
Grants.  
The test  
of cost as

ministra-  
tion dis-  
cussed and  
of super-  
vision.

Education:  
Expendi-  
ture on.  
Amounts  
and how  
raised.

*Mr. T. J. Macnamara.*  
18 May '98

That gives 2½ millions from the local subscriptions and from the compulsory rates for the first third. The next third would raise necessarily the same—2½ millions under the compulsory tax and one-fourth of a million, as I suggest, voluntarily subscribed. The third third of the rateable value—and you can do it on rateable value on population or on area, as they are pretty much the same—raises nothing, I suggest, practically except a quarter of a million charitable subscriptions. What I want to get at is why this third third should get off with a tenth of the contribution which is raised by each of the two other thirds—nine-tenths of the amount in those cases being the result of a compulsory rate.

18,435. I suggest to you that one reason is that they manage their affairs more economically than the public bodies who have the rates to dip their hands into?—I suggest to you, or the other hand, that their schools are in a highly inefficient condition in many cases.

18,436. What have you to say to my first criticism? The point between us at this moment is that your board advocates cost as the test of contribution?—I am trying to get to that. Take the whole area of the country in the way I have described; we look at it and we find that you get one-third of the area contracting itself out of its local obligation—if you are going to continue to have a local obligation—for education, and raising a tenth of that raised by the rest; we find that area specially favoured by the Government to receive special contributions from the central Exchequer over and above, notwithstanding the fact that at present in many cases they raise nothing locally.

18,437. (*Mr. Arthur O'Connor.*) I am afraid I do not understand you. What do you mean by “contracting themselves out of their local obligations”?—I should like to explain from my point of view. I say you have got a compulsory local rate for education over two-thirds of the area, and, I say, that the other third of the area has no compulsory local rate.

18,438. That is to say, they have no compulsory legal obligation?—That is what I mean by compulsory local rate.

18,439. Then there is nothing to contract themselves out of?—They have specified their preference for a particular class of school.

18,440. Is there anything to contract themselves out of? If there is no obligation, how can they contract themselves out of it?—My contention is that the obligation to maintain education is a communal obligation.

18,441. That is another thing; that is a view; I only want to know the meaning you attach to the term?—The use of the term was a matter of my opinion and view on the whole question of the duty of the community towards education.

18,442. It represented a view, and not a thing—that is the point?—Exactly, naturally.

18,443. (*Chairman.*) Take the question of salaries, which, as we all know, is a large item in the maintenance and management of schools everywhere; if cost is the test what is to keep the locality from adding to the salaries of the teachers, knowing that in proportion as they add to them they will draw more from Imperial sources?—I do not think there is any serious danger in respect of that. The zeal on behalf of education amongst the British community, at any rate south of the Tweed, is not so very exciting as to make one contemplate that with any serious misgivings.

18,444. At the present time beyond the contribution from the Imperial fund, which is earned by certain known, pre-supposed, and laid-down conditions, any extravagance upon the part of the locality is visited upon that locality. Supposing the London School Board ran up their salaries to an extravagant figure at the present time, that would have to come out of the pocket of the London ratepayer?—Yes, partly.

18,445. Except for the small thing that he may earn out of the grant, it does so?—That is 28 per cent. of the whole, as I show.

18,446. If you can add on to the salaries of your teachers and feel that in proportion as you add on to the salaries without any necessary increase of efficiency so you will receive from the Exchequer, do you not take away one of the most important checks to such a course of action?—No; and I must add that it seems that we are overlooking another very important check, which is a most effective one. There is the appeal to the ratepayers and the public. My experience as a school board member is that on these occasions the school board candidate is face to face with

a very great zeal on behalf of economy amongst the mass of those to whom he has to appeal.

18,447. If you are going to take away —?—No, I am not going to take it away; they are going to elect the School Board as in the past.

18,448. (*Mr. Clare.*) What is the cost per head of educating a child by the London School Board?—I have not got the precise figure, but I fancy it is about 3*l.* 12*s.* 4*d.*—that is the “maintenance” charge.

18,449. Do you know what it is in the provinces?—Yes, of course I know that it is less than that.

18,450. Does that not account, then, for the discrepancy between the percentage that the fixed Government grant bears to the cost per head in the provinces and the cost per head under the London School Board?—Yes; but I would suggest that there are very good reasons that are local for the greater cost of education in London.

18,451. If you base the Government contributions upon cost what would then become of voluntary schools; how long would they live?—I do not think that the suggestion endangers the voluntary schools at all.

18,452. Surely if a school board has a local rate, plus the Imperial Exchequer at its back, and it knows that whatever it spends it will get half of it from the Government —?—I did not suggest half.

18,453. How could the voluntary schools live under such conditions?—Personally I look forward to the time when the income of schools of all kinds will be stable and certain and not depending upon the fluctuating chances of what I call charitable income.

18,454. In other words, the voluntary schools are to be abolished?—No, I did not say that, and I did not suggest that. If you reform the incidence of the local rate, that is, supposing you maintain a local rate, and collect it by counties, say, instead of collecting it over small areas, which makes the incidence exceedingly grievous, there is no reason why under certain conditions which would have to be satisfied, the county authorities should not open the voluntary schools, with the right to share in whatever might be raised locally in the way I have described—if you maintain the system of having a local charge.

18,455. (*Mr. Arthur O'Connor.*) As I understand it you are in favour of a larger grant from the Exchequer?—Yes.

18,456. Do you know the terms of reference to this Commission?—I have had them before me; but I have not got them before me at this moment.

18,457. We are to inquire into the equity of the incidence of local taxation as between real and personal property?—Yes.

18,458. Are you aware that of the money which comes into the Exchequer the larger amount is raised by indirect taxation?—I was not aware of that fact; but I accept your suggestion.

18,459. Would it make any difference in your view if you ascertained that it was not only so, but very largely so?—No; I do not know that it would.

18,460. Do you think that it might affect the view of this Commission?—I cannot say that, of course.

18,461. You see that if the fact is so, the contribution from the Exchequer being increased, would result in an increase of the contribution from indirect taxation?—Yes; that is so, if your premiss be correct.

18,462. And from personal property rather than from real property?—Accepting your premiss, that would be the result no doubt.

18,463. Then the correctness of the conclusion depends upon the accuracy of the premiss?—Yes.

18,464. I suppose you will accept the returns of the Treasury, and the Chancellor of the Exchequer's admissions?—I have already said I accept your view.

18,465. Assuming the correctness of that premiss with regard to the proportion of indirect to direct taxation, your proposal would involve an increasing contribution from personalty as compared with realty?—Yes, again accepting what you suggested to me as being the fact.

18,466. I postulate that?—I understand.

18,467. (*Mr. Smith.*) Have you any experience of the working of the poor law?—No, I have not.

18,468. You would hardly like to go so far, I suppose, as to make the amount of Imperial contribution to poor law administration depend upon the cost, would you?—I cannot say, because, as I say, I have no personal experience of the administration of the poor law.

*Mr. T. J. Macnamara.*

18 May '98

Education by London School Board: Cost per head.

Voluntary Schools: Their position if Government Grant for education given on basis of cost.

Imperial taxation: Amount of direct and indirect taxation.

Education, cost of: Govern-ment Grants. The test of cost as a basis. Question of safeguards for careful local administration discussed.

**Mr. T. J. Macnamara.** 18,469. Therefore you confine that principle to what you do know a great deal about, namely, education?—Yes.

18 May '98

Education:  
Cost of  
should  
be a more  
uniform  
charge.

18,470. (*Chairman.*) Is there any point on which we have not questioned you that you want to press upon us?—I should like to urge again, if we maintain a local rate, the necessity of collecting it in a more equitable manner. The Education Department's return will show you both in this country and in Scotland the grotesqueness of the incidence. To take the case of the London area; I have taken the school boards contiguous with the School Board for London. There are 20 of them, and there probably are some districts touching London which have no school board rate, but that I cannot say. At any rate, of the 20 school boards which touch London, one penny in the £ in one case brings in 23%, and the moneys which a penny in the £ would bring in range from that amount up to nearly 150,000% in the case of London in the centre; and the school board rate for these 20 districts which touch the London area ranges from 3½d. to 2s. 0½d.

Government  
Grants  
towards

18,471. What inference do you want to draw from that?—I want to suggest that we do want to have an equalisation of areas and an extension of the areas of collection in some way or other, to render the incidence of the cost

more equitable. Of course, I am one of those who believe strongly that we should throw a much larger proportion of the cost of education upon the central Exchequer.

18,472. You will not, I know, agree with me, but I suggest to you that the 3½d. rate may arise from the economy of the board which is managing the education in that district?—Yes, but I scarcely imagine, if that were so, and I do not admit it, that you would advocate the continuance of a so called economy of that sort?

18,473. Clearly?—You would?

18,474. Most certainly. I am all for giving every locality the benefit of its own economical administration?—Of course, my argument would be that the area is so small and the rateable value so poor or low that the people take an economical view from necessity and keep the thing down as low as possible because of the grievous burden which otherwise would fall upon them.

18,475. You do not, I think, regard economy as a virtue even in the abstract?—Oh, yes, most decidedly; I think efficiency is essential and economy desirable, if I may put it that way.

The witness withdrew.

Adjourned till to-morrow at 11.30 o'clock.

## FORTY-FOURTH DAY.

Thursday, 19th May 1898.

At St. Stephen's House, Victoria Embankment, S.W.

PRESENT:

THE RIGHT HON. SIR J. T. HIBBERT, *in the Chair.*

C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.

E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.  
THE RIGHT HON. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*  
T. LLEWELYN DAVIES, Esq., *Assistant Secretary.*

**Mr. C. W. Tagg.**

19 May '98

Camberwell parish:  
Number of assessments.

Valuation:  
System adopted in Camberwell.

Mr. CHARLES WILLIAM TAGG, called and examined.

18,476. (*Sir John Hibbert.*) You are, I believe, the vestry clerk to Camberwell?—Yes, I am vestry clerk, and also clerk to the overseers.

18,477. How long have you held that post?—I have been vestry clerk for about five years, but I have been in the service of the vestry for 18 years.

18,478. You have prepared for us a memorandum which I hold in my hand\*?—Yes.

18,479. Will you state what is the acreage of Camberwell and the number of assessments in the parish?—The area is 4,342 acres, and there are 40,241 assessments.

18,480. Do you know what the population of the parish is?—The estimated population at the present time I should say is about 275,000.

18,481. Have you taken part in the work of the assessment committee?—Yes, I am clerk to the assessment committee.

18,482. There has been a quinquennial valuation lately of the metropolis, has there not?—Yes, in 1895-96.

18,483. I presume that the statement in your memorandum, that the gross value of the parish is 1,408,870l. and the rateable value is 1,142,632l., is correct according to that valuation?—Yes.

18,484. I do not think now we need go into the system adopted in your district of making the valuation list; I presume it is very much the same as in other parishes, is it not?—We endeavour to follow the Act of Parliament.

18,485. Is there anything special with respect to the system that you would like to speak about?—No, there is nothing special at all.

18,486. Are you satisfied with the system you have adopted in preparing the valuation list so far as it goes?—Yes, I am satisfied with the system.

18,487. What part does the surveyor of taxes take with respect to the early portion of the system; does he intervene in any way?—He attends the meetings of the overseers when they make the first valuation for quinquennial purposes; that is, when they deal with the returns which have been received from the occupiers; they go through each return, and the surveyor of taxes is present with them.

18,488. The principles which you adopt in determining the gross and rateable value are according to the principles which were agreed to by the conference of metropolitan assessment authorities in 1893-94, are they not?—That is so.

18,489. Do you find that by the adoption of those principles by various committees throughout the metropolis, there has been a greater uniformity of assessment?—Of course I have no knowledge beyond Camberwell.

18,490. You have not paid any attention to other districts?—I have no opportunity for doing so, but I believe it has led to greater uniformity.

18,491. In respect to special properties, such as railways and manufactories, how do you rate those?—We employ a professional valuer for that purpose.

18,492. Have you had any appeals with respect to the railways?—We had no appeals on our special properties at the quinquennial. We had objections before the assessment committee, of course, but none of them went beyond that.

18,493. None of them went to the court?—Not to the Sessions.

18,494. I suppose you have the Poor Rate Assessment and Collection Act in operation in your parish?—Yes, we proceed under section 3.

**Mr. T. J. Macnamara.**

Collection of rates in Camberwell: Number of summonses issued.

Overseers should be appointed by Local Sanitary Authority, and not by justices.

Collection of rates and taxes in a local Sanitary Authority's district should be made by the collectors of that Authority.

18,495. What are the deductions you allow?—The deductions vary from 10 per cent. to 25 per cent.

18,496. Is that according to the class of property?—Yes. The overseers of Camberwell have dealt rather specially with this question of compounding.

18,497. Do the overseers decide upon the different classes of property as to what the amount of deduction should be, that is, between 10 and 25 per cent.?—Yes; the overseers enter into the agreement subject to the consent of the vestry.

18,498. They get the consent of the vestry after?—Yes, to affixing the seal to the agreement.

18,499. Is that quite within the powers of the Act?—I believe so. It has to be a composition allowance made with the consent of the vestry.

18,500. Is this classification system which you adopt, adopted in any other part of the metropolis, do you know?—I believe some other portions of the metropolis have followed us with regard to that. The rate of commission for compounding small property depends, of course, entirely upon the nature of the property and the tenants occupying it; it rises and falls, I mean, as it may be more or less near large works, for instance.

18,501. Do you vary the per-centage of deduction from year to year?—Yes, we do. I have recently given notice to terminate to a large number of compounding owners, and we are reducing the commission. The overseers made a special survey of the entire parish; they went through every street of the parish and inspected every house in it.

18,502. After that inspection did they decide as to which class the houses should be placed in?—Yes, and they also took note of the number of empties in such streets, and of the class of tenants.

18,503. Are you satisfied with the method of composition which you have adopted?—I am satisfied that that is the correct way of administering the present system.

18,504. Do you approve of the system of composition?—Yes, I say in my memorandum that I approve of the system, but, of course, the difficulty is to adjust the system to meet fairly the owner as well as the parish.

18,505. Do you have any difficulty in obtaining the rates from the owners?—We have difficulties, but not great difficulties, in obtaining the rates from the owners, and we should have still greater difficulties in obtaining them from the tenants. I may say that when we re-organised in Camberwell the system of compounding allowances, about four years ago, we had a very strong opposition from the owners on reducing the amount of discounts. We had deputation after deputation, and everybody prophesied that the whole system would be a failure, as no owners would enter into a compound agreement under the new scale. But they have all come in.

18,506. Under your system, have you been obliged to take out any large number of summonses against owners?—No, we very seldom summons any owners.

18,507. How do you in your parish collect your poor rates, and other rates?—We collect the whole of the local rates by one collector upon one demand note. I have brought some of our demand notes with me for your inspection.\*

18,508. How long has that method been in operation?—That method of collecting the whole of the rates together has been in operation since 1855, I think, when the Metropolis Management Act passed.

18,509. Your demand note, I suppose, shows the amount required for each special purpose?—Yes; I have several copies here. The different tints of paper represent the different compound deductions, that is, the different allowances to owners. That is done for the purpose of sorting them out more easily. The demand note, the receipt, and the counterfoil are all in one, as you will see. I may say that about four years ago I went to Birmingham and investigated the system of rate collection there, and that we have adopted some of their ideas.

18,510. Did you get some good hints in Birmingham?—We got some hints, and we adopted their system for the collection of rates, I mean to a certain extent—as far as the demand note goes—by making the demand note the receipt, and the counterfoil, all one.

18,511. That had not been in operation before in your parish, then?—No, the demand note was not attached to the receipt before; it was separate.

18,512. Do you find that you have many summonses to issue with respect to the rates which are not compounded for?—Yes, we have a great many summonses, but I have not the numbers with me.

18,513. Are they in thousands?—We have over 40,000 assessments, and I should think that for the quarter the summonses would run into, perhaps, 2,000. I think the explanation is that it is to a large extent due to the fact that there is only 6d. charged on the summonses, and a great many occupiers think it is worth while to wait and pay the extra 6d.; they have the use of the money practically for another month for 6d. Out of the number of summonses issued there are very few that attend the petty sessions, and those that do attend, in nine cases out of 10, only want further time.

18,514. Have you to issue many distress warrants?—Very few indeed.

18,515. Then the large number of summonses which you have does not eventually injure the amount of money which you receive from the ratepayers?—Not at all; it is not appreciable.

18,516. Have you any suggestion to make with respect to the matter of preparing the valuation list; would you continue it on the present principles which you adopt in your parish, or have you any improved plans to suggest?—In our parish we have the system that I suggest in my memorandum. I suggest that the overseers should be appointed direct by the local sanitary authority, and not by the justices.

18,517. That is under the Act of 1894?—Yes.

18,518. Have you applied to have that power given to you?—Yes, we have. We were the first London authority to get that power.

18,519. You have got it then?—I got it immediately the Act was passed; I got the first order.

18,520. Do you think that that system should be adopted generally?—I certainly do.

18,521. How would you appoint your assessment committees?—By the same authority—direct.

18,522. At the present moment you are the assessment committee of your parish, but you have a board of guardians also, I presume?—Yes, but they have nothing whatever to do with the assessment.

18,523. I was going to ask you that?—We are specially provided in the Metropolis Valuation Act to be a union—we are the Camberwell Union—and we appoint direct.

18,524. You have a suggestion to make, I believe, with respect to the collection of the rates and taxes, have you not?—Yes. I would suggest that the whole of the collection in a local sanitary authority's district should be carried out by the collectors for that local sanitary authority. I include the Queen's taxes and all charges on property and land apart from the income tax.

18,525. Would you include all Queen's taxes?—All excepting the personal income tax.

18,526. What Queen's taxes are there that you would deal with?—The inhabited house duty and the property tax.

18,527. Does not the same collector of the Imperial taxes now collect all those taxes?—Yes, but he collects income tax from very few compared with what he collects these other taxes from. In the other cases there has to be a demand note on every house. The collection of the local rates and taxes is more especially brought to my mind in the case of a house which I have down at Hastings. There there is one rate collector acting for the overseers for the poor rate; we have another rate collector acting for the corporation rates; there is another rate collector collecting the coal dues; and then, of course, there is the Queen's tax collector, who collects the house property assessment. I pay no income tax down there direct, because I pay that in London. It seems to me that practically the four men are doing the work that one man could do with one demand note, and that they are keeping two sets of books when one set of books would suffice.

18,528. (Mr Arthur O'Connor.) One system of machinery should be used to do all similar work?—Yes. There seems to be no difficulty in the Government saying to the local authorities, "We want you to raise so much in house duty, and we want you to raise so much in property tax for the next year." They could serve the precept in the same way as the school board, or the county council, or any other body that have power to raise rates, serve us with a precept to collect that amount. We simply print it on our demand note; we pay their amount into the Bank

Council  
was useful.

of England, and there is an end to the collection, and the ratepayer gets a receipt covering the whole. With regard to private income taxes, I mean taxes paid by a person on his personal income, I think that is a private matter that really ought only to be collected by the surveyor of taxes, and it should not be known to the local authority what a man is paying upon. That is a difficulty.

18,529. Now, in regard to the steps taken by assessment committees in London to secure uniformity of assessment throughout the metropolis, is there anything you want to emphasize in connexion with that?—No, what I have stated in my memorandum is what I really think. I think that that conference was of great use, and that the resolutions they came to would be good resolutions to guide in the collection of the rates. I cannot say whether they are all carried out by the people who were present at the conference.

18,530. You state that they have been generally adopted as a uniform basis of assessment?—Yes, I believe they have been, as far as I can ascertain but of course I have no real knowledge of that.

18,531. In your own parish of Camberwell, where they have been adopted, have you found that they are capable of easy application?—Yes. The professional appellants that come there produce the scale that was agreed to at the London County Council, and base there appeals upon that. They take that as a text upon which to appeal. I should like to say that only last week I heard this from an artist friend of mine: He was taking a studio in Chelsea, I think; the rent asked for was 100*l.* a year, and he said the rates would be rather heavy on that, but they said, "No, it is only rated at 36*l.*" That is a case where evidently they are not basing it on actual rents. Then he went to another studio in Kensington, and the house agent said, "It is 100*l.* a year," I think it was, but he added, "It is only rated at 34*l.*; the owner is on the "vestry, or is an overseer, or something of that sort."

18,532. That is a peculiar kind of property, is it not, and very often stands empty for a long time?—But if it is empty it is paying no rates.

18,533. Is it not in the case of compounding?—You cannot compound property of that character. The highest you can compound for in the metropolis is a rateable value of 20*l.*—small weekly property.

18,534. The studio is only a portion of the building, is it not?—It does not matter; if there is a beneficial occupation, whether it is a portion or not, it is separately assessed.

18,535. Is each particular studio separately assessed?—If it is separately occupied it should be.

18,536. Take, for instance, those studios in Kensington Road, which have a common entrance, but where there are a number of different studios in the building; is each of those separately assessed?—I am quite unable to say; but if there was a separate occupation, and a separate key to each, we should separately assess them actually on the rents that they are let for. We make no exception whatever.

18,537. Even where there is a common entrance door?—Certainly, where there is a common entrance, if there is a private beneficial occupation. The common entrance would only affect the question of voting, not the question of rating. I only heard of those two cases last week, which led me to think that it is not administered in all parts of London in that fair way in which it should be.

18,538. With regard to the deductions mentioned in paragraph 13, you state that the deductions allowed from the gross annual value for the purpose of arriving at the rateable value are the maximum allowances for five classes of the Third Schedule; why have they adopted the maximum?—They take it as a rule throughout that a proper allowance should be given.

18,539. Does not the very idea of maximum suggest a discretionary fixing according to circumstances?—Of course there is a discretionary fixing, but the difficulty would be that you would have then to deal with individuals. It is much better, I take it, between gross and rateable to take a maximum than to vary it with each individual case that comes up. That only applies to the difference between the gross and the rateable value.

18,540. Clearly, but the deductions allowed are the maximum allowances; that is your proposition?—Yes. If you have a copy of the County Council Conference Scale\* you will find that they have based it on that.

\* London County Council Return, Assessment Conference, 1893-94, Resolutions, &c. (No. 168).—P. S. King & Son, Great Smith Street, Westminster, S.W.

18,541. Does it mean that the maximum is allowed in each individual case?—Yes.

18,542. Do you think that that is a proper application of a scale which is admittedly a maximum?—I do, certainly.

18,543. Paragraph 10, I think, speaks for itself?—Yes. The one that was heard and the appeal allowed with costs was a very difficult question; it was whether certain premises were a factory or not, and it could only be decided on evidence.

18,544. Paragraph 21, in the same way, is merely a statement of fact?—That is so.

18,545. In regard to the Treasury contribution in Camberwell, what do you say as to its adequacy?—I saw Mr. Griffiths on that, and we agreed upon the figures together, and we took them on a fair basis.

18,546. Are the figures as high as would be taken in the case of private owners?—Quite. I was perfectly satisfied with the arrangement.

18,547. With regard to paragraph 22, you say that "empty property should bear some proportion of local taxation"?—Yes.

18,548. What is your argument upon that point. I see you cite a number of cases?—I have no argument beyond the fact that streets have to be lighted, and sewers have to be provided, and cleansing has to be done for houses whether they are occupied or not. Where there is a lot of new property built we have to construct new sewers, and light the thoroughfares, and, of course, until the houses are let there is no income whatever.

18,549. Is property in Camberwell going up in value or down?—The property up to 40*l.* a year is going up; I am speaking of residential property, but property beyond that I should think is not.

18,550. What do you say with regard to the large shops?—They are certainly going up in certain thoroughfares.

18,551. In other words, the value of it is like the grass that grows while the owner sleeps?—It certainly grows.

18,552. The property is in one or both of two men, the owner of the ground and the owner of the building?—Yes.

18,553. On whom would you place the charge?—I should place the charge on the person who is receiving the beneficial rent for such property.

18,554. The only beneficial rent in the case of an empty house would be the beneficial rent received by the ground owner?—He would be the person receiving it.

18,555. Would the increase in value which you speak of attach to the land or to the house?—I should say to the house. Of course, the land is increasing in value; it costs you more if you want to build.

18,556. The income of the ground landlord would presumably be fixed for a considerable number of years?—It certainly would be until you get to the termination of the leases.

18,557. You would, therefore, be putting a charge upon the ground landlord, whereas the benefit of the increasing value would accrue to the owner of the house?—Yes. I was dealing with local rates, and saying that persons who were receiving a beneficial rent from houses, that were enjoying the privileges of being lighted and sewered, and all that, should be the persons to be charged for local rates. I do not mind who it is.

18,558. Speaking of the private house rated at 67*l.*, which has been empty now for nine years, the owner living next door, you say the estimated loss to the parish is 190*l.* 19*s.*; but I suppose the loss to the owner is very much more than that?—It is wilful on the part of the owner, it is not on the part of the parish; the owner simply will not let the house. Those cases that I quote in my memorandum are not cases of houses that are not occupied because they are unable to get tenants; they are not occupied because the owners simply will not have tenants.

18,559. In other words, the owner is enjoying his property himself?—In his own way.

18,560. In his own peculiar way?—Yes, that is so. These are cases where the owners will not sell or let.

18,561. You would find it, perhaps, a little difficult to prove that an owner is unreasonably refusing to let?—There would be no difficulty in these cases, because I have tested them in each case.

18,562. You have not given what would be a sufficient inducement to the owner to part with the possession?—I have asked them what they would let the premises at, and they have refused to say, and have said they are not to let.

18,563. How do you account for that peculiar use of property?—The first three large shops is a case of a large company that are hoping in a few months, or perhaps a year or so, that their business will extend, and they wish to enlarge their business by opening these shops. In the case of the private house at 60L., that man bought that house for 1,500l. freehold; he has never occupied it for four or five years, and I do not know when he will. He keeps it empty. In the last case the man keeps the house empty because it is next door to him. I do not know whether he has had troublesome neighbours before, or what is the reason, but the fact remains, that he will not let it, and he will not let anybody live there.

18,564. He is using it as a buffer?—It certainly is a buffer against local rates.

Equalisation of rates is a good system.

18,565. What do you say shortly about the equalisation of rates, as being beneficial or otherwise to the localities?—I say that the present system is a good one. Perhaps that is because we get about the largest grant in the metropolis under it, as we do. I think the system of paying on rateable value and receiving on population is a good one, because where you have the very heavy poor population that we have (the bulk of the occupiers in our parish are rated under 20l. a year), you must have a great many more sanitary and public health concerns, which are very necessary, very heavy, and very expensive. It is for the good of the health of the metropolis that the Public Health Acts should be administered in the best possible way, and having not much regard to the cost.

Property: Increase in value of, owing to increase of population and of traffic facilities. Benefit to land-owners. The person who receives the greatest benefit out of property should pay the greatest proportion.

18,566. Would you say that the value of property in a place like Camberwell would increase *pari passu* with the increase of population in the district?—It would to the extent of weekly houses and small houses. I mean it is impossible in many parts of the parish for them to find any houses to occupy now.

18,567. Therefore there is a great demand?—The demand is very great, and, therefore, the rents go up with better means of transit.

18,568. Taking the district as a whole, irrespective, for the moment, of the different degrees of accommodation, should you say generally that the increase of population enhances the value of the district?—Yes, I do; and it has done so with the exception of the very large residential houses that I mentioned in the early part of my evidence, and they have gone down in value.

18,569. But, on the whole, the district has gone up?—On the whole, certainly.

18,570. To whom does that benefit of increased value throughout a district go. Does it go to the owners of the houses, or does it go to the owners of the land in greater part?—It goes to the owners of the houses of course, with the exception of where owners of land have leases falling in, or are letting leases on new ground rents, when the ground rents are increased.

18,571. And they are increased, I suppose, by considerable leaps and bounds, as the leases fall in?—Certainly they are.

18,572. That is to say, the immediate, and perhaps mere fractional benefit, goes to the owners of houses, that is the yearly increase or the increase coming every two or three years, and in the case of the owners of the land the benefit goes by greater bounds, but at longer intervals?—Yes, of course, where he has already let his land for long periods.

18,573. I suppose as the leases are running out with each year the interest of the landowner is increased?—It is.

18,574. So, that in one form or another, ultimately the increase goes to the landowner?—Yes, he is sure to win in the end.

18,575. And all that, you say, is attributable to the increase of the population?—To the increase of the population and to the increased traffic facilities.

18,576. That population not only lives there, but pays for the improvements, which themselves in turn enhance the value of all the property about?—Yes, they pay certainly.

18,577. Does it strike you as equitable that the population, which by its increase, and its requirements, and its whole expenditure increases the value of the district, should bear the greater portion of the ultimate charge, or would

you think it more equitable that the landowner who, in the end, gains all the advantage of the increased value should pay a portion of the charge?—Yes, I think the landowner should, but I think it requires most careful adjustment. You might be able to adjust certain payments to be made by him when he gets an increased rental on his leases falling in.

18,578. That goes to the question of the mode of charge, but you would assent to the general principle that the owner who ultimately derives the benefit should bear his portion of the burden?—The general principle that I stated earlier is, in my idea, that the person who receives the greatest benefit out of the property should pay the greatest proportion.

18,579. As I understand you, that person is the owner of the ground ultimately?—Yes, when it reaches him, but of course a lot of Camberwell was let in 1860 and 1864 at very low ground rents.

18,580. But with each year the interest of the landowner is rising?—It is increasing when he gets into possession.

18,581. What do you say about paragraph 11 in your memorandum, where you deal with the possible under-assessment?—I have given the figures as printed on the return. I did not work those out myself, but they were worked out in the office. Of course it does work against the parish.

18,582. Do you think your parish is under-assessed?—No, I am sure it is not under-assessed.

18,583. Is it over-assessed?—No, it is not over-assessed.

18,584. We may take Camberwell, then, as a model of a standard parish in the matter?—You can take Camberwell as having carried out the resolutions of the conference. That was what the conference decided to be a model, and we have carried those out.

18,585. What parts of London do you say are most under-assessed?—I have no means of saying that, and I have no means of ascertaining. I gave you two cases that I heard of incidentally last week.

18,586. But you do say that the rest of London is under-assessed?—No, I do not.

18,587. Another way of putting the same thing is to say "if London were fully assessed, instead of being under-assessed"?—Yes, I was asked if such a thing was to happen what would happen to Camberwell.

18,588. That is merely hypothetical?—That is only hypothetical. You, the Commission, asked that question.

18,589. Then paragraph 25 (iv.) deals with the question whether equality of assessment between parish and parish should not be secured at the cost of a central authority, and how such equality should be secured?—The answer is that byelaws should be framed.

18,590. There should be a central authority?—Certainly, and they should have power to enforce.

18,591. With regard to railways, water-mains, and property of that kind, you seemed to think that each parish should employ its own valuer?—I really am not very decided on the point.

18,592. You do not press that opinion?—No, that may be the proper system, but I really do not understand the best system for that.

18,593. I see that your assessment committee resolved this year that the clerk be instructed to suggest to this Commission "that the law should be so altered as to give "overseers and assessment committees the right to "demand, in the case of a change of occupation of a "hereditament during the quinquennial period, the same "facts as at the quinquennial valuation, and such demand "to include the amount of premium paid for licensed "premises." I suppose that means that you ought to have means of obtaining full information with regard to the actual facts?—Yes. We have had a great deal of difficulty with regard to assessing licensed premises, and, in fact, getting any information at all. They absolutely refuse to give us any information, and we do not seem to have any power to enforce section 57 of the Valuation (Metropolis) Act, which gives us power to compel owners and occupiers to give us certain information, the general idea seeming to be that that is for quinquennial purposes and not for supplemental valuations.

18,594. Then you also propose a local tax on advertising?—Yes. The Advertising Stations (Rating) Act, 1889, is, I suppose, about the worst Act of Parliament to administer which you could possibly find. You get an advertisement hoarding put up, and when you have found it it takes you three months to get it into a provisional

Mr. C. W.

19 May '98

Valuation in Camberwell is properly carried out.

Valuation in Metropolitan. There should be a central authority for purpose of securing uniformity.

Valuation in Metropolitan: Returns from occupiers should be obtainable at any time during quinquennial period in case of a change of tenancy.

Advertisements should be assessed to local rates.

**Mr. C. W. Tagg.**  
19 May '98

list, and very often it is gone by that time. Under the Act you have to ascertain the person "who shall permit the same to be used or, if he cannot be ascertained, the owner thereof." There is a definition of "owner." It is very difficult to find the person "who shall permit the same to be used." With our hoardings, when one sees them, we endeavour to obtain the name of the person who has permitted them to be used, and he is assessed, and then we find the man we have assessed is not the person at all, and we have to begin again and find the owner. It is a most difficult Act to administer.

18,595. (*Mr. Elliott.*) With regard to the resolutions of the conference, to which you refer in paragraph 7, as to the deductions to be allowed in arriving at the rateable value at present, I understood you to say that the maximum rates in the schedule to the Valuation (Metropolis) Act are adopted?—That is so.

18,596. But in Table B, to which you refer, I think the rates are not maximum rates in every case, are they?—Really I do not know. We take that Table B.

18,597. According to Table B the maximum rates are not allowed in every case?—We take Table B. I am not sure whether it is all maximum.

18,598. Do you think that it would be possible in an Act of Parliament to do more than prescribe maximum rates?—Do you mean between gross and rateable?

18,599. Maximum rates of deduction to arrive at rateable value?—No, I do not see how it could be.

18,600. Do you think that there must be discretion left to the local authorities to apply the maximum rates according to local variations and particular classes of property?—Yes.

18,601. Do you think that anything more could be done than is at present done on the Statute Book to guide local authorities in arriving at the rateable value?—Yes, by byelaws on the same lines as the resolutions adopted by the conference.

18,602. Do you think it would be better that those byelaws should continue to be byelaws to be made by the local authority, or should they be embodied in the Statute Book?—I should rather have them on the Statute Book.

18,603. In London what would be the authority which you would suggest should make such byelaws?—I am quite prepared for the county council to do it. I take the county authority everywhere.

18,604. Would you give any special representation to the district authorities for the purpose of considering what byelaws should be made?—No; of course the byelaws would have to be confirmed, and there would be an appeal against them, I take it, by the local authorities, to the Local Government Board, or whoever confirmed.

18,605. In constituting the central authority would you not obtain very valuable and special assistance by enlisting the assistance of members of the assessment committees?—Do you mean to make them form a central authority?

18,606. Yes?—You would, of course, get information, but there are a great number of assessment committees throughout London.

18,607. What I wanted to get from you was whether you think the central authority would be better composed of representatives of the county council as such, or whether a special central authority should be set up, on which the representatives of the district assessment committees should be included?—First of all we were speaking of byelaws, and who should make the byelaws, now you mean who should administer them.

18,608. No, I am speaking about who should make them?—Personally I am prepared to leave it to the county council, but they would get valuable information, of course, from the members of the assessment committees—the chairmen of the assessment committees, for instance.

18,609. Do you think better byelaws, or sounder byelaws, would be made by the London County Council as such, or by an authority in which were included representatives of the assessment committees?—I think really there would be very little difference if the whole of the representatives attended, but I would rather have byelaws made for the whole of London by one London authority. I think they would be fair.

18,610. When you say that the district committees should be appointed by the local sanitary authorities instead of by the unions, upon what do you base that opinion?—I do not quite follow what you mean.

18,611. You make that suggestion in paragraph 25 (iii.) and I want to get from you the reasons for that expression of opinion. Why do you think it would be better that the assessment committees should be appointed by the local sanitary authorities rather than by the poor-law guardians?—I suggest the local sanitary authority, and when I mention the local sanitary authority, of course I mean in boroughs the corporation, and in London the local authorities acting as the sanitary authorities. I consider that they are far more representative bodies than those appointed to administer the poor law. The persons who administer the poor law have really nothing to do but to act under the directions of the Local Government Board, as far as the administration goes, and to carry it out in that way; whereas the persons who are appointed on the sanitary authorities, such as the members of corporations in boroughs, are appointed on a far larger franchise, they have a far wider scope of duties, and are men, in my opinion, far more capable of carrying out assessment duties than are the members of the boards of guardians throughout the country.

18,612. You would say, then, that you are more likely to get good men, of high business qualifications, from the sanitary authorities—that is, in London, from the vestries—than you would get from the poor-law guardians, who would be elected mainly by reference to their qualifications for the administration of the poor law?—Certainly. I say you would get a far better type of man on the sanitary authorities throughout the country than you do on the boards of guardians, including London. In making this recommendation I meant it to apply outside London as well. You would get a different type of men altogether. Beyond that the poor-law guardians really have only to deal with the poor rate, while the local sanitary authorities have to deal with every other rate in their district.

18,613. In the case of Camberwell, which is the greater rate, the rate levied by the guardians, or the rate levied by the local sanitary authority?—The guardians rate in Camberwell—the poor rate—comes to a much higher precept.

18,614. What is the rate in the £ of the expenditure over which they have control?—The poor rate includes the expenditure of guardians of Camberwell, the Metropolitan Asylums Board, and the South Metropolitan District Schools. Those came to 11½d. in the £ in the half-year ending Lady Day, 1898. Then there are the Metropolitan Police Rate which was 2½d. —

18,615. (*Mr. Stuart.*) Is that a quarterly rate?—No, every six months. Then the London County Council precept, which was 7½d. in the £, the public libraries, ½d., and the public baths, ¾d. The poor rate, including all these, came to 1s. 11d. The vestry rates, including the School Board for London, came to 1s. 3d. in the £.

18,616. (*Mr. Elliott.*) With regard to your suggestion that there should be one value for all purposes, namely, the rateable value, and that gross value should be abolished, for what purposes is gross value at present used?—It is used by the surveyors of taxes in the collection of the Queen's taxes.

18,617. Have you calculated what the effect upon the Exchequer would be, if your suggestion were adopted?—No.

18,618. On what grounds do you make it?—I make it practically on administrative grounds. That we have to put in double the amount of figures, and do double the amount of work than there seems any real necessity for. We never touch gross value at all, beyond entering it in our books and totalling it.

18,619. Have you not looked upon the other side of the question, have you not considered the gap which would be caused in the tax revenue by the adoption of this suggestion?—I think that would very simply be met by the Revenue increasing their taxes in proportion to the difference between the gross and rateable. It is very easy to do that. They could levy an additional sum.

18,620. But you have not looked into the figures at all?—No, I did not think it was necessary, because they could levy it at an additional rate.

18,621. In other words, the rate in the £ for the house duty and the income tax might be increased?—By the proportion, certainly, if it is to be on the rateable value. It would make no difference whatever to the payer.

18,622. Do you not think it might be difficult, in the cases of both those taxes, to add such a proportion as would fill up the gap?—Not in making the original precept. The Government would simply estimate how much money they want, and how much tax is required to meet it.

**Mr. C. W. Tagg.**  
19 May '98

Assessment Committees should be appointed by Borough Authorities or the Sanitary Authorities, and not by Poor Law Authorities.

Rateable value instead of gross value should be adopted for all rating purposes. Suggestion discussed.

Mr. C. W.

Tagg.

19 May '98

Advertisements should be assessed to local rates.

Rateable value, instead of gross value, should be adopted for all rating purposes.

Collection of rates in Metropolitan System.

18,623. It would be a little difficult, would it not, to say that the income tax should be 8d. and some small fraction in the £ on the rateable value?—I do not think that is a difficulty at all.

18,624. With regard to your suggestion that there should be a stamp duty on advertisements, can you tell me what the receipt from rates on hoardings in Camberwell is?—No, I could not tell you; but it is not a large amount.

18,625. At what rates would you impose the stamp duties?—I should let the local authorities fix that entirely within their own areas. I know a great many local authorities whose districts are entirely disfigured by these hoardings, over which they have no control. I should fix a scale that would prevent people disfiguring places with those hoardings. That is for the local authority to decide.

18,626. Do you know of any precedent for this proposal so far as other countries are concerned?—I think in France they have a system something like that.

18,627. You have formed no idea of what revenue the Camberwell authority would be able to obtain in this way?—We should get a far better revenue than we get at present. Really, the action would be so much simpler; they would simply come to the local authority and get stamps for their bills and pay at once, and we should receive the money, and there would be no cost of collection.

18,628. Do you think there is any danger that in some districts posters might be taxed out of existence?—I should be very pleased to see that myself.

18,629. (Mr. Smith.) Just a word upon one of the last questions you answered. You suggested that there should be only one value for all purposes, and that the gross value should be abolished; and you, I think, said you did it for the convenience of office work; but can you tell me any reason in natural justice why the Imperial taxes should be collected on the gross and the local taxes on the net?—I have never been able to understand it myself.

18,630. Have you ever heard anybody give an explanation of it?—No. I have had a great deal of trouble, caused by ratepayers coming to see me and producing a demand note for Queen's taxes for one amount and ours for another, and I have, on many occasions, had to explain the difference.

18,631. In other words, if it is right and fair to make certain deductions in respect of certain classes of property to get at the actual as distinguished from the gross value, should that not apply equally to all kinds of taxation?—It should, in my opinion. The Government, a few years ago, partially recognised that by giving an allowance from the gross value for repairs.

18,632. But not to the same extent as the allowance is given in the case of local taxation?—No.

18,633. In other words, both principles cannot be right?—Certainly not. At present it is most confusing. The rateable value can be arrived at in precisely the same way.

18,634. I just want to ask you a question as to the issue of precepts and the collection of rates in the metropolis; are the county council precepts sent to the guardians in all cases?—Yes.

18,635. The school board comes to the vestry?—Direct.

18,636. And that is the distinction between the two?—Yes.

18,637. (Mr. Stuart.) That is the only exception is it not?—That is the only exception.

18,638. (Mr. Smith.) Are there any cases in London in which the overseers collect the poor rate and the vestry the general rate?—Yes, I think so. I believe it is so in Hammersmith, or Fulham, or somewhere there; I am not quite sure, but there are some cases in London.

18,639. Could you conveniently, for the purpose of our notes, let me know what those districts are?—I will endeavour to.

18,640. You have made a very valuable suggestion in paragraph 25 (iv.) of your memorandum, and I think your evidence went a little further than the memorandum. You propose for the country generally that byelaws should be framed by a central authority similar to those framed by the Assessment Conference in London, and that a central authority should be established for each county?—Yes.

18,641. That you propose to apply to the country generally?—That is so.

18,642. You said that in London you would be quite satisfied to leave it to the county council?—Yes.

18,643. But the county council means a good deal more in London, does it not, than the county council in the provinces; is not the county council in London almost in the nature of a municipality in some respects?—Of course I have had a great deal of experience of the county council in London, but I have not had any experience of a county council in the provinces.

18,644. A county council in an ordinary county merely takes the place of the old quarter sessions, does it not?—For most purposes, yes.

18,645. That is to say, it deals with the county rate, which is generally something about 4d., and it deals with the lunatic asylums, main roads, and police; and its whole rates will probably not be more than 6d. or 7d.?—That is so.

18,646. So that it is not in itself, except geographically, a very important body?—It is because of its geographical position that I suggest the county authority. I would make it a more important body.

18,647. Is it not a fact that the county council levies, as a rule, a rate in an English county, all told, of probably not much more than 6d.?—I really cannot say.

18,648. You do not know?—I do not.

18,649. You do know, I suppose, that the municipalities and urban sanitary authorities would levy rates, all told, to the amount of 5s. or 6s.?—Yes, I know they are very heavy.

18,650. Your suggestion distinctly is, then, that the county authority, whether it is purely county council or partly county council with other representatives of other bodies, should be a supervising authority?—Yes, with power to enforce.

18,651. With power to enforce?—That is the most important.

18,652. You would not propose to give it the administrative details of hearing appeals, would you, or of fixing individual assessments?—What appeals do you mean?

18,653. What we generally call appeals, I mean objections?—Yes, they could take the place of the Assessment Sessions.

18,654. But the Sessions is to be the Appeal Court?—Certainly.

18,655. You would not propose that the county authority should have administrative duties, such as are now vested in assessment committees?—Certainly not.

18,656. Do you not think it would be impossible for a county authority so to distribute themselves over their huge area for the purpose of hearing objections, as to make an effective tribunal?—I am quite sure it would. At the last Quinquennial we dealt with 2,376 appeals, and that took us 18 days, from 10 in the morning until about 10 at night.

18,657. Have you any experience of rural England, if I may so term it, I mean the country generally?—I have at Hastings, that is all.

18,658. Should you think, for instance, that the Sussex County Council could divide itself into sub-committees and sit all over the county for the purpose of dealing with individual objections?—No.

18,659. If such a suggestion were made to you would you say that it was an unpractical one?—Yes, I should say that the moving courts would not be very possible.

18,660. At the same time you have an opinion that the county council, or the county council with certain added members of representative bodies, would be a good supervising authority?—Certainly, but not to deal with appeals. My idea is to have an assessment committee as at present, appointed by the sanitary authority for the district.

18,661. I am very glad to hear you emphasise that. I see you state that you have a preference for an assessment committee elected by the sanitary authority over one elected by the guardians; but would you have any objection to an assessment committee elected by the two bodies combined?—It would be rather difficult to find two bodies combined, acting for the same area in the country, would it not?

18,662. Of course areas do cross occasionally, but, at all events where they are coterminous, would it not be desirable to have a body representing the guardians and also representing the sanitary authority, both being large spending bodies?—No. I would not, myself, have the guardians

Mr. C. W.

19 May '98

Central County Authority should exist in every county, including London, for the purpose of supervising matters relating to valuation and rating, with power to enforce its orders, but not to hear appeals.

Assessment Committees should be appointed by the Borough Authorities or Sanitary Authorities, and not by Guardians.

Mr. C. W.  
Tagg.  
19 May '98

deal with anything at all outside the poor law. I look upon them as poor-law guardians. I would make the municipalities of the boroughs, the sanitary authorities, act as the representatives for all other purposes within their area.

18,663. You are, perhaps, even more municipal than I am. I was only going to suggest that the guardians are at present the authority?—In some cases they are.

18,664. Throughout rural England they are?—Yes.

18,665. It would be letting them down a little easily, would it not, to give them a small share?—Yes. Still, at the same time, I think it is much better in dealing with these reforms to go straight away and deal with them as a whole, and not do it piecemeal and then have to amend it in a year or two, after we find it does not work.

Com-  
pounding.  
Same al-  
lowances  
should be  
given in  
case of  
poor and  
sanitary  
rates.

18,666. (Mr. Clare.) Just a question or two about the allowances you make in composition property in London. You compound up to 20l. a year, do you not?—Rateable value.

18,667. In your district do the overseers make the same allowances to the owners who agree to pay the poor rate in all cases on composition property, or do they draw a distinction between those which are worth, say, 20l., and those which are worth 10l.?—As I say in my memorandum, we schedule all property at certain per-centages. It depends upon what street they are in, in fact, it depends upon the locality entirely.

18,668. I misunderstood you; I thought that scheduling was done for the purposes of arriving at the rateable value, not for the purposes of the deductions to be allowed to owners if they paid the rates?—That scheduling is for the deductions.

18,669. I am speaking of the allowance which is made under the Poor Rate Assessment and Collection Act, 1869, to owners who agree with the vestry to pay the rates whether the property is occupied or not?—The compound allowance?

18,670. Yes?—That is what we schedule. We schedule streets of 10 per cent., 15 per cent., 20 per cent., and 25 per cent.; every house in the parish is scheduled, and I have a register of them showing the per-centages; so when an owner comes to me and says I want to compound for a house in such and such a road, I can at once see what is the per-centage.

18,671. What is the maximum amount of allowance you give to an owner in your district?—25 per cent.

18,672. That is the maximum allowed by the Act?—That is so.

18,673. What is the minimum?—10 per cent.

18,674. What allowance is to be given with respect to the vestry rates?—Precisely the same, it is on the one demand note.

18,675. Are all your vestry rates, then, collected together?—Yes, they are all collected together—there is one demand note.

18,676. Does the same law govern both?—Yes, the same precisely.

18,677. Are you aware that in the provinces the allowance under the Public Health Act can be as much as 50 per cent.?—I believe that is so.

18,678. Can you conceive any logical reason for giving an owner 50 per cent. upon sanitary rates and 25 per cent. upon poor rates?—No, it is very difficult to find any logic at all in country assessments. I have tried to understand them at Hastings, but I cannot make them out, and I have given it up now. I do not think there are any principles of assessment at all.

18,679. It does appear to you, then, from your experience on this subject, that whatever allowance is given for the poor rate, the same allowance should be given for the sanitary rates?—As I stated in my evidence, I would have one authority to collect all the rates in the district, and one commission allowed to owners if they compounded.

18,680. I think you said that at one time a general allowance of 25 per cent. was made all round, but that your authority, the Camberwell Vestry, had decided to alter that, and turn it into a sliding scale?—Yes. We have had a rough sliding scale for years; it has varied from 15 to 25 per cent., and it was not until four years ago that the overseers determined to survey the whole of the property in the parish, and schedule the houses, as they have done now.

Mr. C. W.  
Tagg.  
19 May '98

18,681. But the effect of that survey was that they came to the conclusion that they were making allowances which were unnecessary, and they reduced them?—Certainly.

18,682. And when they did that the owners protested, and declared the thing would be a failure?—They did.

18,683. As a matter of fact, has it turned out that, notwithstanding the protests of the owners, they have all come in and agreed to pay the composition?—Of course I cannot say they have all come in, but they have nearly all come in. The actual effect was that we saved a 2d. rate by doing it, as the 1d. produced so much more.

18,684. The fact that the owners had voluntarily agreed to pay the rates in full with the smaller deduction clearly proves what a benefit they had under the old arrangement?—They had too large a benefit.

18,685. I take it that if you wanted to levy an equal poundage rate over the whole of London it would be necessary that you should have the same system of allowances adopted in each rate-collecting area?—You could have the same system, but you would have to have the sliding scale. You must have regard to the nature of the property, and therefore you must have a sliding scale between the 10 per cent. and the 25 per cent., or whatever it is.

18,686. In order to levy an equal poundage rate, all properties of exactly the same character, no matter in which district they are situated, should be dealt with on exactly the same lines?—Certainly. There are two sections in the Act dealing with this, section 3 and section 4, and some of the local authorities in London act under section 4, which gives an allowance to the owners all round of so much.

18,687. With regard to the rating of empty property, it would be a little difficult, would it not, to draw a distinction between a man who wilfully keeps his house empty and a man who cannot let?—It would be very difficult.

18,688. In cases such as I am now going to describe, namely, where a large block of property is pulled down by either a company or a person for the purposes of re-erecting upon it other property, do you see anything unfair in the suggestion that the rates should be paid upon the old assessment until the new property comes into assessment?—No. That happens now with regard to companies or the London School Board; if they take property for demolition they have to pay the poor rate.

18,689. Those are only companies acting under the authority of a special Act?—In the case of any property demolished under the authority of an Act of Parliament they now have to pay the poor rate on the same amount, but not the general rates. That principle should certainly be extended to the general rates, because as other property is pulled down it goes out of rating.

18,690. Would it be a practicable scheme, in order to get some contribution from owners towards local expenditure, whether the property is occupied or not, to require that a certain proportion of all rates shall in every case be paid by the owner?—When you speak of the owner am I to take it that you mean the ground owner.

18,691. No, the person who is in receipt of the rack-rent?—Personally I can see no objection to the owner paying the whole of the rates on a property and charging it in the rent. I would rather see it in that way. Let him charge a rent in proportion. You may be quite sure that if the owner has to pay any proportion of the rates it will go on to the rent.

18,692. If the owner pays all the rates and the occupier sends the people into the local council to spend the money, it may come rather hard upon the owner?—Yes, but you may be sure that whatever an owner has to pay, the occupier will have to pay that sum to the owner.

18,693. Only when the re-arrangement of the rent can take place?—Of course you are speaking of rack-renting owners now, not ground-renting owners?

18,694. Yes?—The rack-rent is in many cases only on a yearly or three-yearly agreement, or on a seven years' lease. With regard to the ground-rents, where they run for 99 years, that would of course be very difficult.

18,695. (Mr. Stuart.) Have you read the Bill\* that was introduced into the House of Commons by Mr. Coben and myself in consequence of the conferences that took place?—Yes, I had a great deal to do with that Bill at the conference.

Property  
unoccupied  
should be  
assessed to  
local rates  
to some  
extent.

Valuation  
in Metro-  
polis:  
Uniformity  
of assess-  
ment desir-  
able.

Mr. C. W. Tagg. 18,696. Roughly speaking, do you approve of that Bill? —Yes; the conference amended that Bill to agree with its views, and very fully, if you remember?

18,697. Yes I do, and I wish to hear your evidence about it. That Bill goes a long way, I suppose, to meet your proposals in paragraph 25 (iv.)?—Yes, I should be very pleased to see that Bill carried through.

18,698. If I am not mistaken, we have had the same testimony from every London authority who has presented himself here?—As a matter of fact, you will remember that the Local Government and Taxation Committee submitted a draft Bill to the conference, and that the conference dealt very roughly with that draft Bill, so that the original parents of the Bill hardly knew it when it came out of the conference. I had something to do with it. The Bill as finally amended by the conference was improved a very great deal indeed.

18,699. And as introduced by Mr. Cohen and myself on behalf of the conference, or on behalf of the county council which adopted it?—Yes.

18,700. What do you suppose that that Bill would mainly secure?—The great thing that that Bill would secure would be equal rating throughout the metropolis, which we have not at the present time.

18,701. You mean equal assessment?—Certainly.

18,702. Then you go beyond that Bill; as I understand, there is an additional change in the machinery of sound assessment that you propose—namely, that the local sanitary authority in the metropolis should become practically the overseers and the assessment authority?—No; they should appoint the overseers and appoint the assessment authority. I would take everything away from the poor-law guardians and give the whole thing to the major authority; I call the major authority the sanitary authority in the district.

18,703. You would also make that same body the collector of the rates?—The collector of all the rates levied in the area.

18,704. So that all precepts from central bodies, and also precepts from the board of guardians, should be served upon that body?—Certainly.

18,705. With those changes, namely, the Bill of the conference passed into law and the change which you have just now indicated, you would feel fairly satisfied, would you, with the assessment of the metropolis?—Yes.

18,706. A suggestion was made that there might be a contingent of the board of guardians to act with the vestry in the matter; in the case of the metropolis, I take it that you see a difficulty in the want of their districts being conterminous?—That is so.

18,707. Would I be far wrong if I said that the vestry area and the board of guardians area is conterminous in less than half of the metropolis?—I should think it is. It is conterminous in Camberwell, but in very few other cases.

18,708. You are aware, are you not, that the proposals that you make outside and beyond the Bill that we have referred to actually exist as law in portions of the metropolis?—Which proposals are they?

18,709. I mean that in the parish of Shoreditch, for example, the vestry elects the overseers and collects the rates?—So we do in Camberwell.

18,710. So the position in Camberwell you are satisfied with so far?—Yes, I say it is the proper system that they should elect the overseers and the assessment committee, and be the collecting authority for the whole.

18,711. The power which you have in Camberwell, which they have in Shoreditch, and which exists in one or two other cases, is got by private Act of Parliament is it not?—No.

18,712. How was it got, then?—In regard to the appointment of the assessment committee, that was got under the Valuation (Metropolis) Act, which provided that there should be separate unions, and that they should appoint direct. Under the Act of 1894, the vestries have the power of obtaining an order from the Local Government Board of appointing overseers.

18,713. That was the clause I introduced into that Act, but they have not all taken advantage of that Act?—No; but there is no reason why they should not do so.

18,714. In order to obtain the application of the suggestion which you make about the vestry appointing the overseers and collecting the rates no further legislation is necessary?—For the collection of the rates, yes,

18,715. I thought that was what you said just now, that you could do it now by an Order under the Act of 1894?—That is the direct appointment of overseers without going to the justices. With regard to the collection of the rates, that is regulated in many parts of the metropolis by private Acts. In Camberwell we have an Act of 1833 which regulates that.

18,716. I think you misunderstood the question that I put a little before. It is owing to a private Act in Shoreditch, in Camberwell, and in other places, that you have those rate-collecting powers that you have?—Certainly. I beg your pardon, that was my mistake.

18,717. To make the appointment of overseers as you would desire it to be, as it is in Camberwell, and as it is in Shoreditch, no further legislation is necessary?—That is so.

18,718. But to secure the collection of the rates in the great number of parishes in London in which the local sanitary authority, as a matter of fact, does not collect the rates, an Act of Parliament would be necessary?—That would be so.

18,719. But with that Act of Parliament, and with the passage of the Bill introduced by Mr. Benjamin Cohen and myself, and with the adoption of the powers of the Act of 1894, you would say then that the system in London of assessment would be fairly satisfactory?—Yes, as far as I can see.

18,720. Now, I just wish to turn to another question beyond that. What did you say you now allowed in regard to compounding?—It varies from 10 per cent. to 25 per cent.

18,721. According to the character of the property, is it?—Yes.

18,722. Are you satisfied that the system of compounding is a more profitable system to the authorities than direct collection would be in the case of these properties?—I am sure of that. In the very worst class of property, where we allow 25 per cent., it would be quite impossible for us to collect the rates; I mean the tenants are in and out every week, and we should not have any opportunity of collecting our rates at all. As I mentioned in my memorandum, in some cases owners refuse to compound where they have a very bad class of tenants, and then we have to collect ourselves. We lose rates by that.

18,723. You have no power of compelling owners to compound, have you?—Under section 4 of the same Act we have power to make an allowance of 30 per cent. by rating all owners, but of course it is not worth that.

18,724. You think that that is too much?—It is too much. I say that if you can adjust a compounding allowance to an absolutely fair basis, then it is a proper system.

18,725. I see that your rateable value is 1,158,038; on what portion of that rateable value are the rates collected by the system of compounding; you can give it me roughly if you like?—Roughly speaking, I should say on half that amount.

18,726. And I presume a considerably greater number than half the occupiers?—Yes, certainly.

18,727. What proportion of the occupiers in number in Camberwell do you suppose come in as compounders?—I should say about 25,000.

18,728. Out of how many?—Out of 40,241 assessments.

18,729. That would be more than half?—Yes.

18,730. These people vote, of course, and elect the vestry amongst themselves?—Certainly.

18,731. In electing the vestry and the guardians for that part, they elect persons who raise the rates or lower the rates as the case may be?—Certainly.

18,732. As a matter of fact, I suppose you would admit that when the rates are raised a shilling or two, if it were so, these people's rent which they paid as compounding householders would rise?—Yes. I do not think there are any opportunities lost of raising rents. I do not think rents always follow rates. The rents depend on whether the houses are letting well in the district.

18,733. But I suppose you would take it as a general rule that if the rates were to rise a shilling next year there would be a tendency to raise the rents of these houses?—That is the usual thing. Landlords raise rents if they can.

18,734. Is it not more immediately acting than that?—No. If landlords can get more rent for their premises they raise the rent. It is exactly a question of supply and demand. In a good letting district they keep increasing the rents as fast as they can.

Mr. C. W. Tagg.

19 May '98

Assessment Committees and Overseers should be appointed by Borough Authorities or Sanitary Authorities.

Compounding in Camberwell: Compounding is a more profitable system to the Authorities than direct collection in case of worst class of properties.

Rent: How far influenced by a rise in rates.

Mr. C. W.  
Tagg.  
19 May '98

18,735. Do you mean that the landlord looks upon the rates that he has to pay under the system of compounding as one of his outgoings, like repairs, or anything else that he has to do, and that he tries to get that back from the tenants, and gets it back if he can?—He collects the rates he pays in the rent.

18,736. He tries to get it back in the rent?—Every landlord gets as much as he possibly can out of weekly property—he puts on as high a rental as he can.

18,737. If the vestry goes on raising rates by extra expenditure I presume that would be one of the causes why the landlord would go on raising the rent?—Yes, but our vestry have not raised the rates so much as other bodies in the metropolis in the last year.

18,738. I am sure your vestry in Camberwell does not, but just assume that case anywhere; I think you would say that what I put to you is perfectly clear?—Yes.

18,739. I want to know whether those 25,000 people, whom you have referred to as compound householders, and who vote and effect the action of the vestry, are aware of the fact, and recognise the fact, in your opinion, that the rise of the rates is the cause of the rise of their rent, or is one of the causes?—No. I do not think that the rent really goes much on rates. I think what goes to raise weekly rents, as I said before, is the question of what they can let their houses for. I believe a great many owners let houses at a little lower than the real rent if they have good, respectable people, that have been with them for sometime, and get their rents regularly every week.

18,740. I think you rather admitted—but do not admit it if I am wrong—that the rise of the amount of rates paid by the owner made him raise the rent; and in a previous answer you did say that if any rates were put upon the owner he would eventually raise the rent?—What I thought I said, or what I intended to say was, that owners of weekly property, as well as owners of other property, get the highest rents that they possibly can for these weekly houses, and, as you said, they look upon the rates as a necessary outgoing, in the same way that they do repairs and everything else.

18,741. I think you will find when you look at your evidence that you did say that if part of the rates were charged on the owner he would raise the rent?—I said that an owner would raise his rent for any excuse. He will get as much as he possibly can.

18,742. Would you say that a rise in the rates in Camberwell, or a fall in the rates in Camberwell, would not affect the rents charged by the compounding landlord?—I do not think it does at all. I believe an ordinary occupier (apart from an occupier of a weekly house), on going into a house does not look at what the rates are at all. He looks at the house, and if he thinks he is under an authority that do their work in a very good way, and that it is a good district to live in, he goes and lives there, and whether the rates are a penny or twopence more in the £ I do not think affects the occupier at all.

18,743. Do you mean if the compounding landlord, instead of getting 25 per cent. off from you, were to get 95 per cent. off from you, that he would not be able to let his house cheaper?—It would not make the slightest difference as to what he let the house for. He would let his house for whatever he could get for it. Whatever weekly rent he could get he would let his house for.

18,744. Supposing there were two houses next door, and both of them were empty, and there came people to seek for them, surely the man who got 95 per cent. off would be able to let his house cheaper, and, therefore, would get his house let?—I do not myself think that that regulates the rent. What regulates the rent of weekly property is what it will fetch.

18,745. Very well, I will not press you further?—That is my idea.

18,746. How long have you been at Camberwell?—18 or 19 years.

18,747. During that time have the rates for a given property of given value—upon a 150*l.* house say—risen or fallen?—They have risen.

18,748. Has rent risen or fallen?—I said in the earlier part of my evidence that the private houses about 60*l.* or 70*l.* a year have decreased, but that houses up to that have kept to about the same, or have improved; houses up to 40*l.* a year have certainly improved, and their rentals have gone up.

18,749. (Mr. Arthur O'Connor). I suppose when you say that the landlord will get as much as he can for his

property you would agree that if A, being landlord, and B, being tenant, and the tenement rented at 20*l.* paid to the landlord, the landlord paying no rates, the rate being 5*l.*, he would be able to get 25*l.* from the tenant if he, the landlord himself, paid the 5*l.* rates: supposing there is a tenant prepared to pay 25*l.* for rent and taxes, if the landlord pays the taxes—?—He would get so much a week more from the tenant.

18,750. Yes?—Certainly.

18,751. So far you would say it is true that the landlord's paying the rates would mean a higher payment by the tenant under the title of rent?—If a man pays his rates in his rent, certainly he pays more.

18,752. Whereas if he pays the rates he will stipulate for a lower rent?—Certainly.

18,753. (Mr. Elliott.) I rather gather from what you have said in reply to another member of the Commission that you have some knowledge of the conditions of the local government of Hastings?—Yes, I have.

18,754. Would you apply to Hastings some of the suggestions that are contained in your memorandum? By whom, for instance, would you propose that the assessment committee in Hastings should be appointed?—By the borough corporation.

18,755. Would you give any representation to the guardians on that assessment committee in Hastings?—No.

18,756. In Hastings by whom would you propose that the valuation lists should be prepared?—The overseers.

18,757. As at present?—They should be appointed direct. I think at present, speaking within the Borough, they have eleven parishes consisting of eleven sets of overseers. I would have overseers for the entire borough appointed by the authority to prepare the valuation lists.

18,758. Appointed by the corporation?—Certainly.

18,759. Then by whom would you propose that objections to the valuation lists should be heard?—They should be heard by the assessment committee.

18,760. What appeals would you propose should exist in those cases from the decision of the assessment committee?—The appeals would be to the Quarter Sessions unless there were this central county authority, and then I think I should let them appeal to them.

18,761. Supposing the assessment committee for the borough of Hastings declined to entertain an objection, would you give an appeal from the decision of the Hastings Assessment Committee to the East Sussex County Council?—Yes. Of course I am not dealing with divisions of county councils, I speak of the county authority.

18,762. You may take it that the East Sussex County Council is a county authority?—Certainly. I am not quite clear on the point whether the persons that make these byelaws, and have the right to enforce them, should be the people who should hear appeals beyond the assessment committee; I mean I would rather prefer the Court of Quarter Sessions as a judicial body to deal with those, because these rating appeals very often turn on points of law.

18,763. Do I gather, then, that you think that on the whole you would get a better appeal from the decision of the Hastings Borough Assessment Committee to Quarter Sessions, as at present, than to another administrative body?—No, I do not say that; that might be. I rather want the formation of byelaws by a county authority for assessment purposes, but I am not sure about the appeals.

18,764. I am asking you now in regard to the appeals, whether you think it would be better that an appeal against the decision of the assessment committee should go to another administrative body, like the county council, or to a judicial authority as at present, namely, the Quarter Sessions?—I rather favour a judicial body as far as the appeals go, I must say. When you are electing members of a corporation of a borough there is an immense lot of excitement, but you never hear of an election of the board of guardians that appoints the assessment committee. I have never voted for one, and I really do not know when an elector goes on. But for the corporation there is a keen fight, and all the best men, or those who are supposed to be the best men, get upon the corporation, and therefore I make them the authority.

18,765. Perhaps you can tell me what you think would be the view of those who are interested in local government in Hastings upon a proposal that they should be subject to the supervision of the East Sussex County

Mr. C. W.  
Tagg.  
19 May '98

Assessment committee in a borough should be appointed by corporation.

Central County Authority should exist for purpose of supervising matters relating to valuation. This proposal discussed.

*Mr. C. W. Tagg.*  
18 May '98  
Council, without any direct representation of their views on that supervising body?—The county authority would be an authority to make byelaws, which would have to be confirmed by the Local Government Board; then if the local authority wished to appeal against any of those byelaws they would have an opportunity of appealing to the Local Government Board on inquiry.

18,766. Then you contemplate that the county authority should not be a final authority, but that the district authority, in the case of the Hastings Town Council, should have a power of appeal to the Local Government Board?—Only on the confirmation of the byelaws that they have to carry out.

18,767. That would be the only duty which you propose to put on the county council, would it not?—Yes, and to see these byelaws are enforced.

18,768. That is, in other words, you would give them a power of appeal—of course to Quarter Sessions?—I would give them some means of enforcing in the same way as there are powers to enforce in the Bill Mr. Stuart spoke about for assessment in London—certain powers which the central authority have to enforce.

18,769. From your knowledge of municipal government in Hastings do you think that that arrangement would be acceptable to the municipal authorities?—I should think so.

18,770. If they had the power of appeal to the Local Government Board?—That is really on the byelaws they have to carry out.

18,771. Do you think they would demand that power of appeal to the Local Government Board?—They always appeal on all byelaws.

18,772. You would not propose that the decision of the East Sussex County Council should necessarily be binding on the Hastings County Council?—I would, as far as the administration of assessment work goes. The East Sussex authority would make byelaws for assessment purposes so that we should get them all carried out on the same lines throughout the county.

18,773. As I gather, your suggestion is that before those byelaws come into operation and become effective the

Hastings Town Council should have an opportunity of appealing to a central authority?—Yes, to the Local Government Board.

18,774. As against those byelaws?—Yes; they have against every byelaw, I may say, that is made.

18,775. (*Mr. Smith.*) Arising out of that illustration of Hastings, and dismissing your proposal for a moment, what would you say to a suggestion of this kind—that a county valuation authority should be appointed by the county council of Sussex and of the guardians in the county; that that valuation authority should divide itself into committees and sit all about the county, including the Borough of Hastings, and settle the valuation of Hastings and all the rest of the county, and hear all the appeals. What would you say to such a proposal?—I should not like the proposal at all.

18,776. Would it be practicable?—No, I think not.

18,777. Would Hastings like it?—The ratepayers would not, certainly. I would make the major authority for the borough the authority for all purposes.

18,778. Is it from your point of view, as a practical man, a conceivable solution of the question?—No; where you have travelling committees not many travel, and it would result in about two or three men hearing the appeals.

18,779. (*Mr. Stuart.*) There is a question I ought to have asked you before I left one branch of the subject: You have given a very clear and coherent scheme for the improvement of the assessment of the metropolis. Would I be right in supposing that the views which you have put forward are practically held by those as a whole who have gone into the subject?—I think so, but I have not had the privilege of listening to the evidence the other vestry clerks have given.

18,780. But you have spoken with many vestry clerks?—Certainly.

18,781. And you have spoken with many other people, and I know you yourself are very much interested in the question. Is it your report to us that these views practically overbear all other views as to the improvement of the assessment in London?—I am quite sure myself that that is the view of the permanent officials, if I may say so.

The witness withdrew.

Adjourned.

## FORTY-FIFTH DAY.

Wednesday, 8th June 1898.

At St. Stephen's House, Victoria Embankment, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

SIR E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.  
T. H. ELLIOTT, Esq., C.B.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
THE RIGHT HON. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*  
T. LLEWELYN DAVIES, Esq., *Assistant Secretary.*

The Rev. R. KENNEDY called and examined.\*

*Rev. R. Kennedy.*

8 June '98

18,782. (*Chairman.*) You are vicar of Wressell, in Yorkshire, I believe?—Yes.

18,783. I understand that you have been a beneficed clergyman for 23 years, and that you desire to put before us on behalf of yourself and others of the clergy the hardship which the rating of that portion of your income which is derived from tithe causes to you?—That is so.

18,784. Do you consider that your case is a fair sample of many others?—Yes.

18,785. I understand, that in this memorandum which you have prepared for us, you have shown the

effect which the Agricultural Rates Act has had upon your income from tithe?—Yes; but if you will permit me to say so, that return was made upon the value of tithes for this year, and accordingly will somewhat vary from the return which was sent on Friday.

18,786. I understand you to put forward the nominal income of your benefice from tithe as commuted at 96l. 6s. 5d.?—That is so, according to this year's value.

18,787. After payment of Imperial taxes, it is reduced to 93l. 2s. 2d.?—That is so.

18,788. You say next, that before the passing of the Agricultural Rates Act, this would have left, after deducting local rates, 84l. 1s. 8d.?—There is a slight inaccuracy there, because the rate, I was informed, was 1s. 10½d., but I unearthed the documents after-

*Mr. C. W. Tagg.*

18 May '98

Central County Authority could not hear appeals in different parts of the county.

\* A statement of the gross and net incomes, and of the percentage of rates paid to the net income of the Benefice of Wressell for the year 1897-8, will be found on pages 348-9.

*Rev. R. Kennedy.*

8 June '98

Agricultural Rates Act: Effect upon the income derived from tithe, of vicar of Wressell.

Rev. R.  
Kennedy.

8 June '98

wards and found it was 1s. 10d. in the £, so that it would be slightly increased.

18,789. You contend that after the passing of the Act, 31l. 9s. 6d. is all that is left; in other words, that you are 2l. 12s. 2d. worse than before, the rates upon the tithe having increased, as you say, from 1s. 10d. to 2s. 5d. in the £?—Yes.

18,790. Before we go into the inferences which may be drawn from that, just let us be quite sure that we agree upon the facts. Are these figures which you have given me in the print, the rating entirely upon the tithe without including anything for the house?—They do not include the house.

18,791. Have you examined it to see how far the alteration of your position for the worse is due to the operation of the Agricultural Rates Act or to the increase of rates not caused by that Act?—I have not looked into it very closely. All I can say is that the rates have increased to that amount. Since this information was sent to you, the rates have gone back again to about 1s. in the £ for the first call. Where it was 1s. 5d. immediately after the passing of the Agricultural Rates Act it has now gone back, I perceive, this year to 1s.

18,792. Do you know what the cause of the increase for that year from 1s. to 1s. 5d. was?—I have not the slightest idea. I do not know of any reason which could have produced such a state of things—anything different I mean.

18,793. Did it occur in parish rates or in the county rating?—I cannot say.

18,794. You say in your memorandum, that before the passing of the Act, the rate was so much, and afterwards it became 2s. 5d. in the £; can you tell me what local financial year you refer to?—In 1897-8, I think it was 2s. 5d.; it is stated accurately in the statement in full which I returned on Friday. Those figures show exactly the half year when the rise took place.

18,795. We will leave that over for the moment, and we will try and get the exact figure, because, of course, it is clearly to the interest of both of us that the figures which we put into the Report should be absolutely precise, and should not be capable of being broken down by anybody else when they come to be examined?—Yes, it is.

18,796. That is a common interest which we all have?—Yes, accordingly, I prefer to stand by the return which I made on Friday. I think it is in a very much better form.

18,797. When you tell us that nominally your tithe is 140l., what do you exactly mean?—That the value of the tithes in the first instance when they were computed was 140l., and that the said 140l. is now worth 96l. 6s. 5d.

18,798. Apart from the question whether your position has been prejudicially affected by recent legislation, there are other contentions put forward in the interest of the clergy on which I ask your observations. For example, it is often said that no other class is called upon to pay rates on income in the same way as you are?—That is true, so far as I know. I do not know another class that is so called upon.

18,799. On that point what is the suggestion which you think would be most welcome to the clergy as a method of finding relief?—The striking off of the tithe altogether.

18,800. Do you mean that it should not be rated at all?—That it should not be rated at all for services rendered.

18,801. Of course as there is a rate paid upon it now, if there was no rate upon the tithe in future somebody else would have to pay; what would be your suggestion to make up the deficiency?—The sum would be so infinitesimal that I should think it would make very little difference, but I can hardly make any suggestion.

18,802. That may be the case as far as your parish is concerned, but perhaps you will take it from me that in some cases, compared to the whole rateable value of the parish, the sum would not be infinitesimal; in some cases, therefore, your statement would not be accurate. Do you not think that if the other local ratepayers had to make up the deficiency there would be a good deal of complaint?—There might be complaint, but two wrongs never make one right, you know; and I think the wrong should be put right.

18,803. You know, of course, that tithe is one of the subjects which have universally been rated since there were local rates at all?—Just so.

18,804. Do not think I am expressing any opinion; but what do you say to the contention that while increases of rates, no doubt, press hardly upon the clergy, they accepted their position knowing the tithe was subject to rates, and that so far as the mere fact of their being rated is concerned they have no grievance? I want your answer to that?—Speaking for myself, I never had the smallest idea that tithe would go down to its present level. I am quite sure if I had I should not have accepted my position.

18,805. Have you any other answer?—I could qualify that to this extent by saying that I have really spent so much where I am that I should be very reluctant to leave it even if there was no income at all.

18,806. It has been suggested to us that as the basis of an assessment is what a hypothetical tenant will give for a property, and as the tithe when in the hands of a clerical owner has attached to it conditions which obviously lessen its value to him, a hypothetical tenant would not give so much for 100l. a year in tithe burdened by duties as he would if it was not burdened by those duties; what do you think of that contention?—I think it is a perfectly just one.

18,807. Do you not think that it is a contention which is more easily defended than the one which you put forward a moment ago, namely, that tithe should not be rated at all?—No, I still maintain the principle that for duties done tithe ought not to be rated.

18,808. Is that not just what I put to you—that in respect of personal services which have to be rendered, there is a case for exemption?—Yes.

18,809. Some people have also put forward the contention that there is a charge upon the clerical owner of the tithe for repairs to the chancel; what do you say to that?—Inasmuch as that does not apply to my case, I am not sufficiently acquainted with it.

18,810. You say one thing which I should like you to develop: "In respect of assessment of house, &c., "I have thought I have noticed that the man who "keeps his surroundings in proper order is assessed "higher than others, who with equal or even better "premises, are careless as to up-keep." What do you wish us to infer from that?—My opinion is, that in large country parishes where the power of assessment is in the hands of the farmers, they notice these things, and they pay far more attention to outward appearance than they do to the actual value of the premises. An individual who really cares to keep his surroundings in order [is mulcted accordingly considerably more than others who neglect to attend to them. As a commissioner of taxes, I was very much struck the other day with the assessor. He had put upon a house 5l. of his own accord. The case came before me, and I asked him why he had done this. He said he did not know; he supposed he thought it looked so much better, and he put the 5l. This applies to Imperial taxation, but the same thing applies more or less to local taxation.

18,811. If any owner of property thinks himself unfairly used he has, of course, the recognised method of objection first, and appeal afterwards, has he not?—He has; but, as a rule, the country clergy are not in a position to carry their case to appeal.

18,812. Perhaps I was wrong, but I thought the sentence had reference to property generally, not only to the property of the clergy?—I was speaking more particularly of my own case. It is my rule to keep things in such a way that if anything happened to me things would be all right and straight, and I know, unfortunately, that I have neighbours who act on the contrary principle.

18,813. Do you not think that if the basis which is laid down in the Acts for assessment is what a hypothetical tenant would give, that the hypothetical tenant would give more for a place which is in good order than for a place which is in bad order, and that, therefore, the special matter which you bring before us is really in conformity with the law?—Assuredly he would give more for a place which is well kept up, and so forth, but I submit that that is decidedly against a man keeping up a place. He might as well let it go.

Rev. R.  
Kennedy.

8 June '98

Tithe rent-charge should be valued upon the basis of what a hypothetical tenant would give for it. Upon this basis a deduction should be allowed for personal services.

Houses in country parishes, valuation of: It is said that farmers value premises well kept up higher than those badly kept up.

Clergy should not be rated in respect of income derived from tithe rent-charge paid for personal services.

Rev. R.  
Kennedy.

8 June '98

Agricultural Rates Act :  
Effect upon income derived from tithe of vicar of Wressell.

18,814. Perhaps I ought to ask you this one general question: Have I missed any point that you want to put before me?—No. I do not know that you have.

18,815. (*Mr. Wharton.*) Just now I think Lord Balfour alluded to the keeping up of the chancel; that would be in the case, I think, of those who own the great tithe?—Just so.

18,816. Not of those who own the small tithe?—That is so.

18,817. Do I understand correctly that your complaint is, that your rates have risen since the passing of the Agricultural Rates Act, 1896?—Yes.

18,818. When did the rates begin to rise?—It is all put there in the form before you, filled up by me exactly for each half year.

18,819. This is what we want to be sure of. Are you sure that that rise in the rates was owing to the operation of the Act, or was it owing to some other causes—sanitation, or increased school rates, or something of that sort?—Nothing of the kind; it seems to me to be due to expenses, or something of that kind.

18,820. Was there an extra rate placed upon any special property and placed upon your tithe?—No. The rate rose upon buildings, and tithe is now called "buildings" instead of "land."

18,821. Your suggestion, I take it, is that under that Act as the buildings are still rateable at their full value the rate on the buildings increased, and your tithe being partly derived from buildings the rate was increased owing to the rise of the rating on the buildings?—Just so.

18,822. (*Mr. Elliott.*) In addition to the tithe rentcharge what other income attaches to the benefice?—It is all in the return there.

18,823. You have some glebe land, have you not?—Yes; 18 acres.

18,824. Have you any sources of income other than glebe and tithe?—There is a small sum of money for land taken by the railway company—about 8*l.* a year, and a sum of 24*l.* added last year from Queen Anne's Bounty.

18,825. You have no seat rents or emoluments of that kind?—No.

18,826. With regard to the increase of rates, is it the fact that since the passing of the Agricultural Rates Act the actual payments made by you in respect of tithe rentcharge have increased?—Yes.

18,827. What was the amount of the rate paid by you in respect of your tithe rentcharge for the first half of the year 1897-8?—5*l.* 18*s.* 3*d.*

18,828. In the second half year of 1897-8 what was the amount?—4*l.* 3*s.* 6*d.*

18,829. Did you ever, in any previous half-year in recent years, pay so little as 4*l.* 3*s.* 6*d.*?—No; I should pay more than that in 1895-6 and 1896-7.

18,830. Taking the half of the year, have you ever paid so little in respect of any one half-year as 4*l.* 3*s.* 6*d.*?—No, apparently not, judging from the two previous half years.

18,831. Take the next half-year, what was the amount paid by you in the first half of the year 1898-9?—That is the one just paid.

18,832. Yes?—3*l.* 19*s.* 11*d.*

18,833. So far as these figures are concerned, is not that the lowest payment on record?—You must bear in mind that I had sat patiently for a great many years, and at last the straw was too heavy, and I appealed. Accordingly the assessment was altered to something more reasonable. It is a little unreasonable yet in my judgment, but more reasonable than it was.

18,834. Do you think that if you had appealed previously—and I quite appreciate the reasons which prompted you not to appeal—you would have been entitled, in your judgment, to the same relief that you have got now?—Yes.

18,835. Therefore, did not the higher payments in the previous years, to some extent, depend upon the fact that your assessment was excessive?—I think not, if you see the amount in the £ that was levied. In one case it was 1*s.* 10*d.*, in the previous year 1*s.* 8*d.*, and this year it is 2*s.* 5*d.*

18,836. In what year was it 2*s.* 5*d.*?—The one that we are speaking of—1897-8.

18,837. I think you said, in reply to his Lordship, that you had not gone into the causes of that heavy rate?—That is so.

18,838. Will you tell us what the rate in the £ is for the present year?—I was only called upon to pay the rate, I think it was, on Thursday morning, and this return came the same morning. It is a shilling in the £; I am happy to say 5*d.* less than it was in the corresponding period of 1897-8.

18,839. Then, at the moment, you are in the most favourable position, I take it, as regards rates that you have ever been in?—Yes, I was grateful to see it.

18,840. You are much the gainer at the present moment?—As far as the amount in the £ is concerned.

18,841. And as far as the actual payment, are you not?—No, the payment simply denotes so much less tithe.

18,842. The amount of the rates, as a matter of fact, is much less?—I do not think it is less at present; for instance, in 1895-6 it was 10*d.* in the £.

18,843. Still, you have got away from that heavy payment of 2*s.* 5*d.*?—Yes, I hope so, and that is why I state in this memorandum "I do not wish to commit myself to a statement that this will be a permanent increase. I do not know."

18,844. Apart from any question as to the effect of the Agricultural Rates Act, I take it that your grievance remains substantially the same?—Just so.

18,845. That so far as regards your receipts from tithe rentcharge no account is taken of the professional services you are required to render in return for that tithe rentcharge?—That is so.

18,846. With reference to a question that was put to you by his Lordship, is it within your knowledge that ever since the passing of the Tithe Commutation Act, the tithe owners have never ceased to urge their grievances in respect of this payment of rates?—So far as my knowledge goes, it has been so.

18,847. It is not a new grievance?—No, it is not a new grievance, in fact, I have signed several documents, in respect to it.

18,848. (*Mr. Smith.*) Suppose your income arose entirely from glebe land, instead of from tithe, would you still claim exemption from rates?—No.

18,849. What is the reason of the difference?—I look upon tithe as somewhat different to land, seeing that it has been given for the express purpose, in the first instance, of services.

18,850. Presumably glebe also?—I do not know; I cannot say. It may have been, and it may not in my case.

18,851. Do I understand you to claim total or partial exemption, that is to say, total exemption from tithe, whatever the amount, or partial exemption on some estimate of the value of the services?—I should be perfectly satisfied myself with the latter.

18,852. Your grievance, which we all understand, is accentuated by the very low average obtaining at the present moment for tithe rentcharge?—That is so.

18,853. That, of course, is a matter you understand that this Commission cannot deal with?—Yes, quite so.

18,854. (*Mr. Dalton.*) With reference to your table, I see you have put the gross income from the parsonage at 30*l.* a year, and the gross income from the glebe at 30*l.* also?—Yes.

18,855. When we come to the rateable value, which is the net income, the parsonage is put down at 34*l.* 10*s.*, and the glebe at 23*l.* 1*s.*?—That is so.

18,856. How do you account for that?—It is one of the mysteries of the local assessment committee. I think that is plain proof to you of the way that they deal with the land, and houses as opposed to land. You see, the assessment committee is formed in our case of farmers mostly, and it is to their benefit to keep down the rates upon land. Here is a case in point; they assess my land at 23*l.* 1*s.*, and I myself value it at 30*l.*

18,857. Have you appealed against this division of the assessment between the house and the glebe?—I did. Unfortunately I was unable to be present personally; I was laid up at the time.

Rev. R.  
Kennedy.

8 June '98

Tithe rentcharge, valuation of: Clerical tithe owners should not be rated in respect of income derived from tithe rentcharge received for personal services. A partial exemption sufficient. No claim made for a similar exemption in case of glebe land.

Land, valuation of: Assessment Committee of farmers value land at a low figure and houses at a high one.

Rates paid by the vicar of Wressell.

Rev. R. Kennedy.  
8 June '98

18,858. What did you propose to put it at then in your appeal?—I forget the exact sum, but I wanted it levelling; taking a fair average of my neighbours, I wanted mine put at about the same level. As a matter of fact, one neighbour is assessed at 40*l.* for his house, another at, I think, 34*l.* or 37*l.*, I am not quite sure which, and two are assessed at 20*l.* with equally good houses, and yet the assessment for myself with the greenhouses included amounts to 34*l.* 10*s.*: the house they have put at 27*l.*, as you will see, in the first part of 1897-8.

18,859. You regard these 18 acres as valuable as the house and greenhouse?—Quite as valuable.

Rates paid by the vicar of Wressell. Effect of Agricultural Rates Act on vicar's income.

18,860. Your rates on your glebe, of course, have diminished since the passing of the Agricultural Rates Act?—Yes.

18,861. You have got that relief?—Yes.

18,862. Taking the total rates that you have paid upon your income, I find that you paid in the year prior to the passing of the Agricultural Rates Act, 14*l.* 10*s.* 5*d.*, putting the two half-years together?—Yes.

18,863. And in the following year, which was an exceptional year, 15*l.* 2*s.* 4*d.*?—Between that period I had appealed.

18,864. Yes, but you paid, therefore, in that year 12*s.* more in rates than you had paid in the preceding year?—Yes, about that.

18,865. This year, apparently, you would pay considerably less, if we may judge from this table?—It is going back to about the same level as 1895-6, to its normal condition.

18,866. Slightly under that, is it not?—Well, a shilling under, or 1*s.* 2*d.* under; the rates paid in each half-year of 1895-6 were 6*l.* 7*s.* 2*d.*, and for the first half of the present year they are 6*l.* 6*s.*

18,867. Taking the last two years, the practice seems to have been in your parish to raise a higher rate in the first half-year than in the second?—That is the mystery.

18,868. That is a common practice, is it not, in the country?—In this particular instance the rise was so great and there was no apparent cause for it.

18,869. I will come to that in a moment. As a general rule in your neighbourhood, do they have a heavier rate in the first half-year than in the second?—I can hardly tell from this return. It was not so in 1895-6 I see, but it was so in 1896-7, and possibly will be the same this year.

18,870. But, at any rate, whether it is lower or the same, it is improbable that in the second half-year you will have a higher rate than you had in the first half-year?—Our first half, I fancy, will be the higher.

18,871. If that be the case, your rates will have fallen since the passing of the Agricultural Rates Act considerably more than they rose in that exceptional first year?—I do not think so.

18,872. May I take the figures? They rose in the first year 12*s.* according to this table?—But you are ignoring the fact that I appeared before the assessment committee, and had the assessments considerably reduced.

18,873. I am only speaking at the moment of the total amount raised. If your rates this year come to 12 guineas, six guineas the first half-year, and we will assume they will be the same in the next, you will be paying 2*l.* 10*s.* less than you did last year?—Yes, due to reduced assessment and value of tithe.

18,874. And as last year you paid 12*s.* more than you did before the passing of the Agricultural Rates Act, you will be paying about 38*s.* less than you did before the Act passed?—I should do with the assessment upon 1*l.* land going only at one half.

18,875. You have gained on the land?—Yes, together with the reduced assessment upon the house and grounds.

18,876. Do you consider your parsonage is too highly rated?—I do, as compared with my neighbours.

18,877. What do you say with regard to the glebe?—The glebe is, in my judgment, under-assessed.

18,878. Then, although you are over-assessed in the one, you are under-assessed in the other?—Yes, that may be; that is so, in fact. I am not assessed at all lower, you must understand, than my neighbours.

18,879. (Mr. Murray.) Your claim is for total exemption, I understand?—Yes, as far as the tithe goes.

18,880. Would you extend that to tithe in the hands of the Ecclesiastical Commissioners?—No.

18,881. Only to tithe in the hands of clerical tithe owners?—That is so; tithe in the hands of those who perform the duties.

18,882. It would be rather difficult to distinguish tithe paid to the Ecclesiastical Commissioners from other tithe, would it not?—I should think not.

18,883. You do not extend that claim to the glebe?—No.

18,884. You are aware that tithe has been subject to this liability for, at least, 300 years?—So far as the poor is concerned.

18,885. Then you are seeking to alter an arrangement which has got a very long prescription at any rate?—Even if it was brought back to what it originally was, it would be something better, but in the course of time they have added one thing and another—I think the district rates include highways and all kinds of things in addition to the poor.

18,886. If you begin to alter or remove liabilities of that kind, will you not raise a series of other questions; for instance, this: Can you distinguish between the liability of tithe to rating and the liability of land to tithe?—I take my ground upon the distinct injustice of calling upon a man to pay upon that which he does duty for, and I say that he should not be called upon, no matter how long it has been done.

18,887. Do you think that the landowner could not make out on some other ground an almost equally good claim to be relieved from tithes altogether?—I think he would find it difficult.

18,888. He might, for instance, say that the value of his land had diminished very largely?—I should ask him what duty he does for it.

18,889. He might not admit that that had anything to do with it?—I could not help that.

18,890. I did not gather, from your answer to the Chairman, on whose shoulders you proposed to shift this burden?—I do not think that is a matter for me at all. It is a matter for the authorities and the House of Commons, I should think.

18,891. What is your suggestion?—I should like to think it out well before making any suggestion. To begin with, I have a very great reluctance to ask for any public grant. That I should very much object to. I was surprised with what the Chairman said, that there were parishes where it would make a very great difference. My experience is that it would make an infinitesimal difference in my parish, and would be hardly felt at all.

18,892. But, infinitesimal or not, it amounts to something, or you would not want to get rid of it, I suppose?—As far as amount is concerned, in my case it is not a serious matter. It is more a matter of justice which makes me contend against it.

18,893. But apart from the question of justice, who is to take the burden which you think you ought to be relieved of?—I would rather be excused from giving an opinion at present.

18,894. (Chairman.) Is there anything that you want to add that we have missed?—No.

Rev. R. Kennedy.

8 June '98

Glebe land is under-valued by farmers on Assessment Committee, and parsonage house over-valued.

Tithe rent-charge, valuation of: Clerical tithe owners should not be rated in respect of tithe rent-charge received for personal services. But no opinion expressed as to who should pay the deficiency in rates caused by such a deduction. No claim made for exemption in respect of glebe land.

The witness withdrew.

Rev. E.  
Lodwick  
Ellis.

The Rev. E. LODWICK ELLIS called and examined.\*

Lodwick  
Ellis.

8 June '98

Agricultural Rates Act: Effect upon income of vicar of Bettws-yn-Rhôs. Asserted that rates would have been less if Act had not been passed.

18,895. (Chairman.) You are vicar of Bettws-yn-Rhôs, near Abergele, Denbighshire?—Yes.

18,896. How long have you been there?—I have only been since last autumn in that parish.

18,897. You divide your memorandum into two parts—the first with regard to the tithe rentcharge in your parish, and the second as to the effect of the Agricultural Rates Act?—Quite so.

18,898. We will begin with the first. You give figures relating to your parish, showing that the computed value of the tithe rentcharge is 399*l.* 6*s.* 2*d.*?—That is so.

18,899. And the value of last year 279*l.* 2*s.* 2*d.*?—That is so.

18,900. From which there are deductions for Imperial taxes of 9*l.* 5*s.* 9*d.*?—Yes.

18,901. For local rates for the half-year, March 1897, 12*l.* 4*s.* 10*d.*; for the half-year ending September 1897, 17*l.* 9*s.* 8*d.*; for the collection of the tithe, 8*l.* 8*s.*; and for compulsory insurance, 30*s.*; making a total of 48*l.* 18*s.* 3*d.*?—That is so.

18,902. So that, to make it complete, the net value for 1897 which remained to you was 230*l.* 3*s.* 10*d.*?—That is so, from the tithe.

18,903. Before we go into the special matter of the Agricultural Rates Act, what is the suggestion which you wish to put before the Commission in regard to these figures?—With regard to the rating of the tithe, I express my own opinion, as well as that of the clergy of our deanery, which is that we look upon tithe certainly as different from other property. We do not ask the Commission to recommend a total exemption of the tithe from rates, inasmuch as we think that the clergy have a special right to the tithe as a freehold property; consequently we cannot ask that the tithe should be entirely exempted from rates. But we certainly think that a greater concession ought to be made to the tithe owners, inasmuch as tithe, in the first instance, was rated because it was considered as land, therefore we consider that any concession that is made to land ought to be made to tithe. That is our first point. Then, taking into consideration that tithe is paid to us—the clergy—for duties performed, we think that some lower rate of rating should be adopted than there is at the present.

18,904. Let me have it quite distinct. When you say a lower rate of rating, do you mean a lower rate per £, or that a deduction should be made off the gross value before you get to the value on which you are to be rated?—I think there is a suggestion in my memorandum that there should be an allowance analogous to the income tax for the first 160*l.* of income from tithe.

18,905. Just tell us what are the arguments which you, and those for whom you speak, advance in favour of that proposition?—We say that every other body of men, as well as all other professional men, as far as we are aware, do not pay rates upon their incomes, and we think we have a right as citizens to claim an exemption from being rated upon the income for which we perform duties.

18,906. Those are, of course, two distinct lines of argument. With regard to the first, what do you say to the contention that tithe, rightly or wrongly, is one of the classes of property that is specifically mentioned in the Act of Elizabeth and has been rated ever since that time?—For the poor rates?

18,907. Yes, for the poor rate, but every other parish rate is collected practically on the same basis. I would put this question to you: Do you draw a distinction between poor rates and other rates?—We do.

18,908. Will you develop that for me?—I wish to point out that, speaking for myself, I am of the opinion that the tithes ought to be rated for the poor, but when they are rated for all other schemes I think it comes very heavily upon us—rather unduly heavily.

18,909. Do you think it is the case that the annual value of the tithe being easily ascertained the owner of the tithe is rated more up to the gross value than the owner of any other class of property?—I think so.

18,910. With regard to the Agricultural Rates Act, I think you are in the fortunate position of not putting

forward any suggestion to us that that Act has been harmful to you?—I do not think so.

18,911. Then just let us see whether I have got the facts right. Will you look at the return which you have sent in? For the year 1895-6, taking the two half-years together, the rate in the £ in your case was 2*s.* 4*d.*, was it not?—Quite so.

18,912. In the next year, 1896-7, it was 1*s.* 9*d.*?—Quite so.

18,913. And for the last full complete year, 1897-8, it was 2*s.* 2*d.*?—2*s.*

18,914. Under those circumstances, and with those figures, will you explain to me how the Agricultural Rates Act has done you harm?—I think, if we go back to 1895-6, we shall find then that the reason for the rates being so high that year would be that there was 20*l.* in connexion with the expenses under the County Councils Act; consequently the rate was 2*s.* 4*d.* in the £, and the total rates paid upon my incumbency amounted to 32*l.* 15*s.* 1*d.* for the year 1895-6. Then take the year 1896-7, when the rate for the first half-year was 10*d.*, and for the other half 11*d.*, which would be 1*s.* 9*d.* My total rates for that year would be 23*l.* 18*s.* 9*d.* Then take 1897-8, the year in which the Agricultural Rates Act came into force, we shall find that my total rates were 23*l.* 4*s.* 6*d.* Now take the present half-year—

18,915. I think we had better let it remain at that, for the moment, because we have not got a complete year, and there will obviously be a possible fallacy if we take a half-year, because the first half-year is almost always the larger of the two. We had better go on those two years?—Very well, my Lord, we will take the two years 1896-7 and 1897-8. This is how I make it out that the Agricultural Rates Act has increased the burden in my parish. The total rateable value of the parish is 4,675*l.*, the assessable value of houses, &c. is 1,635*l.*, and the rateable value of land is 3,040*l.*, which at a half is 1,520*l.*, which would make the present total assessable value of the parish 3,155*l.* The average annual expenditure for the three years ended Lady-day 1897 for the parish council expenses, assistant overseers' salary, parliamentary registration, and overseers' expenses, is 55*l.* No grant under the Agricultural Rates Act is received in respect of these expenses, although agricultural land is rated at one-half only as compared with houses, &c. The result is that the ratepayers of Bettws occupying property not benefited by the Agricultural Rates Act have to make up the deficiency, and an additional rate of 1½*d.* in the £ is necessary to produce this amount. A rate of 2½*d.* in the £ would have been sufficient to raise 55*l.* if made on the rateable value, whereas a rate of 4½*d.* is necessary on the assessable value.

18,916. What you put before us then is this, that although your rate per £ in 1897-8 was 2*s.* as against 2*s.* 4*d.* in the year before the Agricultural Rates Act passed, if the Agricultural Rates Act had not been passed your rate would not have amounted to 2*s.* in the £?—I do not mean to say that. I mean to say that my rates could not have been as much, for the rating would have been upon the rateable value of the parish instead of upon the assessable value of the parish.

18,917. I think that is exactly what I said, although, perhaps, I spoke too quickly. As a matter of fact, your rate in 1897-8 was 2*s.* in the £?—No.

18,918. But when I said 2*s.* 2*d.* you corrected me and said it was 2*s.* I must go through it again. In 1897-8, for the first half-year it was 1*s.* 4*d.* in the £?—Upon the buildings.

18,919. Upon everything, was it not—tithe and buildings both?—No.

18,920. I can only read your own figures?—Quite so; that is on the form, but this form has not divided it. For the first half-year it was 1*s.* 4*d.* upon the tithes and buildings and 8*d.* upon the land; and then for the second half it was 8*d.* upon the tithes and buildings and 4*d.* upon the land. There is a different rating in those two half-years.

18,921. That is not what is in the return, and I got the figure from you before, I thought accurately. What was, in your opinion, as a matter of fact, the gross rate upon your tithe for the last year, 1897-8?—Do you ask what is my opinion as to whether it has been increased or not.

\* A statement of the gross and net incomes, and of the per-centage of rates paid to the net income of the Benefice of Bettws-yn-Rhôs for the year 1897-8, will be found on pages 348-9.

The rent-charge, value of in the parish of Bettws-yn-Rhôs.

Tithe rent-charge, valuation of: Clerical tithe owners should be allowed a deduction of 160*l.* in respect of personal services.

Tithe rent-charge should be assessed to poor rate, but not to other rates.

Tithe rent-charge, valuation of: Tithe rentcharge is valued too highly.

Rev. E.  
Lodwick  
Ellis.

8 June '98

18,922. I want to know what it was, as a matter of fact; what did you pay per £ on your tithe in the last full year?—The first half of the last year I paid 1s. 4d. upon the tithe; and in the second half of the year, 8d.

18,923. Then your rate was 2s. in the £, as I put it to you?—Very well.

18,924. Was it not?—Yes.

18,925. Do I understand your contention to be that if the Agricultural Rates Act had not been passed your rate per £ in that year would have been less than 2s.?—Quite so.

18,926. By how much?—1½d. in the £.

18,927. And that arises from those particular charges for which you say an allowance was not made in the Agricultural Rates Act?—Quite so.

18,928. (Mr. Elliott.) In this return you give us the amount of rates paid in respect of tithe rentcharge for the half-year ending September 1897, and for the half-year ending October 1898. Could you give me the corresponding amount for the half-year ending September 1898?—The same, I have just paid it, 17l. 9s. 8d.

18,929. The amount for the two half-years was the same?—Yes.

18,930. With regard to many of the purposes for which those local rates are levied, do you consider that they are levied for purposes which go to the improvement of property; take, for instance, the sanitary expenditure in your district?—There is no sanitary expenditure at all.

18,931. Is there no sanitary expenditure at all in respect of the district in which your parish is comprised?—There has not been.

18,932. I take it that your grievance is not one which has come into existence by reason of the passing of the Agricultural Rates Act, is it?—To some extent.

18,933. Yes; but was there not a substantial grievance long before the Agricultural Rates Act was passed?—Quite so.

18,934. Are you aware that that grievance has been urged by tithe owners ever since the passing of the Tithe Commutation Act?—As far as our district is concerned, I think it has.

18,935. You would say, would you not, that the passing of the Agricultural Rates Act has had the effect of, to some extent, accentuating the pre-existing grievance?—I think I have proved it pretty well by the figures I have given.

18,936. I take it that that is the limit of your objection to the Agricultural Rates Act, that you do not demur to the general principle of that Act, but simply to the indirect effect that it has had in accentuating your particular grievance?—It has accentuated our grievance, and I think it has been an injustice to the clergy with regard to the tithe. Inasmuch as the tithe was rated as land before, why are we not benefited by the Act?

18,937. To the extent, would you say, of 1½d. in the £?—No, to the extent that the land has been.

18,938. But I understood you to say, in reply to his Lordship, that the effect of the Act has been that you are paying a rate of about 1½d. in the £ more than you otherwise would have been paying?—As far as the Act is concerned, quite so.

18,939. But supposing the Act had not been passed, your grievance would still have existed, and the substantial character of that grievance has not been very much affected?—Not at all.

18,940. (Mr. Smith.) Are there any private houses in your parish apart from the occupation of land?—Apart from any occupation of land in connexion with them there are very few.

18,941. Of course they have been prejudiced to the same extent that you have by the passing of the Agricultural Rates Act?—Yes.

18,942. I rather understood you to say that you thought tithe ought to be subject to the poor rate, did you not?—I did say that.

18,943. What other rate do you complain of particularly?—Every expense of the county councils, of the parish councils, and of the parish meetings.

18,944. Is it not extremely difficult to draw a distinction? You say you have no sanitary rate; is it not possible that if you had a sanitary rate you might have a little less poor rate? Such things as hospitals, for instance, save a great many people from pauperism?—Yes, I am rather afraid the next year will bring us some sanitary expenses, though.

18,945. (Mr. Dalton.) Can you say how much of this 2s. in the £ is for the relief of the poor in your parish?—No, I have not worked that out.

18,946. Would you say the bulk of it is?—In the year 1897-8 the guardians' call was 168l. for the whole year. I have not worked it out really; I could work it out, but I did not think of it.

18,947. That would represent the bulk of your rates, would it not?—It would represent the bulk of our rates.

18,948. Then I understand you to say that as regards the bulk of your rates, you agree that the tithe rentcharge should remain liable to them?—That would be a concession in our favour, certainly.

18,949. No, because I understand you to say that you think the tithe rentcharge should still remain rateable to the relief of the poor?—Yes.

18,950. As the rates raised for the relief of the poor are the bulk of the rates raised in your parish, consequently your claim for relief not extending to those rates does not extend to the bulk of the rates in your parish?—Not to the bulk; but it would be a concession in our favour.

18,951. As regards the rates that have been raised in your parish, they seem to have been very unevenly raised during the last few years. In the year 1895-6 they were 2s. 4d. in the £, in the following year 1s. 9d., and they then went to 2s., at which amount they have since remained; and taking the average of the two years before the Agricultural Rates Act came into force the rate was 2s. 0½d.; it came to 4s. 1d. for the two, one year being 1s. 9d. and the other 2s. 4d., so that the average of the two years was 2s. 0½d., but since then it is 2s.?—Still we must take into consideration that in 1895-6 there are expenses to the amount of 20l. in connexion with the county councils.

18,952. What rate does that represent in the parish, a very small rate, does it not? That will not account for the difference between 1s. 9d. and the 2s. 4d., will it; there is a difference of 7d. there?—Quite so.

18,953. The 20l. for this particular expenditure would not represent a rate of 7d. in the £. It rather looks, from the figures, as if you had raised too big a rate for 1895-6, the result of which was you had a small rate in the following year, namely, 1s. 9d., is that not so?—I do not think there is such a vast difference in the demand for the two years, is there.

18,954. It is 2s. 4d. one year and 1s. 9d. the other—that is a very considerable difference. I do not think the figures you have given us as to the extra expenditure in the former year amount to anything like 7d. in the £ on the rates, do they? You say there was an exceptional call for 20l., but that would be only something like a 1d. rate, would it not? It rather looks as if the collectors had got behindhand and then raised a higher rate than was necessary, the result of which was that in the following year the rate fell, and it has since returned to the average of 2s. in the £?—I see the guardians demand for the first half of the year 1895-6 was 184l., and that it was 136l. for the second half-year.

18,955. You do not know whether it was raised to make good a deficiency?—I cannot say; I was not in the parish at that time.

18,956. You have become more regular in the rates since; you have got in each of the last two years a rate of 2s. in the £, which is about the average of the two preceding years, only a halfpenny less. Those figures do not seem to point to the conclusion that the Agricultural Rates Act has made much difference in the rating of your parish?—All the difference it has made is what I have given to the Chairman.

18,957. What is that?—1½d. in the £.

18,958. Three halfpence in the £ for what?—For the last half year, and for this half-year too.

18,959. What authority raises that?—It is to meet the parish council expenses and overseers' salary, and so on.

Rev. E.  
Lodwick  
Ellis.

8 June '92

Rates paid by vicar of Bettws-y-n-Rhds. Effect of Agricultural Rates Act.

Rates paid by vicar of Bettws-y-n-Rhds.

Agricultural Rates Act is said to have prejudiced clerical tithe owners to some extent, though their substantial grievance existed before the Act.

Tithe rentcharge should be assessed to poor rate, but not to other rates.

Rev. E.  
Lodwick  
Ellis.

8 June '98

18,960. Are those steady and regular expenses?—These are regular expenses. The assistant overseer's salary, for instance, is 32*l.*, and there are 10 guineas allowed for the jury list, and so on, making 42*l.* 10*s.*

18,961. Is that pretty well the average?—That is the average of his expenses. Then there are the parish council expenses, the registration, and incidental expenses, and those are, on an average, the same, I should say.

18,962. What rate in the £ is required for 42*l.* 10*s.*?—I have not worked it out.

18,963. Should you say that is 1½*d.*?—No, I took the average total expenses for those various things to be 55*l.* for the last three years.

18,964. I understood just now that it was 42*l.* 10*s.*?—For the overseers only.

18,965. And the parish council?—The total for the last three years of the parish council's expenses, the assistant overseer's salary, and the parliamentary registration and other incidental expenses is 55*l.*

18,966. Fifty-five pounds a year?—Yes.

18,967. That requires what rate?—1½*d.* in the £.

18,968. A rate of 1½*d.*?—Yes, upon the assessable value of the parish.

18,969. What would be required upon the rateable value?—2½*d.*

18,970. Then you do not get an additional rate of 1½*d.*? What is the additional rate you get?—That is the additional rate; a rate of 2½*d.* in the £ would have been sufficient to raise 55*l.*, if made on the rateable value, whereas a rate of 4½*d.* is necessary on the assessable value.

18,971. (Sir Edward Hamilton.) I think you point out in your memorandum that your rate has risen since the passing of the Agricultural Rates Act?—Yes.

The witness withdrew.

The Rev. J. MANNERS SMITH called and examined.\*

18,978. (Chairman.) You are rector of Barnardiston in Suffolk, I believe?—Yes.

18,979. I understand from the figures connected with your parish that it is one of the districts which has suffered most severely by agricultural depression?—Yes, I think that is so.

18,980. I understand that the rates in your parish have, as a matter of fact, risen very much during the last three years?—Very much indeed in my case, if that is what you mean.

18,981. I mean in the parish as a whole?—I have not gone into how the rates in the parish as a whole have risen.

18,982. You know, from your own circumstance, that in the year 1895-6, the poor rate levied was 4*s.* 1*d.* in the £, was it not?—Yes, and in addition to that there was a highway rate of 10*d.*—4*s.* 11*d.* would be more correct.

18,983. I want to keep them separate if I can; 4*s.* 1*d.* was the poor rate, was it not?—It was the parish rate for the poor and the school.

18,984. In the following year that parish and school rate had risen to 4*s.* 4*d.*?—Yes.

18,985. In the next year it had risen to 6*s.* 8*d.*?—Yes, exclusive of the highway rate.

18,986. I want to ask you, before going into it in detail, whether you are able to tell me what is the cause of that rise in the rate?—The cause is that the farmers practically assess themselves, as they form the assessment committee, and their assessments have gone down to considerably below what they used to be.

18,987. Do you know whether the gross amount spent upon the poor is or is not larger in the last of the three years?—I do not know; I could not say that.

18,988. Do you attribute the increase of rate per £ to the lowering of the assessment in the parish?—To the lowering of the assessment in the parish on the agricultural land purely.

18,989. In regard to everybody?—Except the clergyman.

\* A statement of the gross and net income, and of the per-centage of rates paid to the net income of the Benefice of Barnardiston, for the year 1897-8, will be found on pages 348-9.

18,972. I do not think I quite understood from what you said on that point whether you attributed that to the passing of the Act itself, or whether it was merely accidental?—I attribute it to the passing of the Act.

18,973. I do not quite follow how it was; do you consider that the passing of the Act itself made the rates rise in your own particular case?—It has made them rise to the extent of 1½*d.* in the £.

18,974. How far do you attribute it to the passing of the Act, or how far do you consider it to be a purely accidental rise that would have taken place had there been no Agricultural Rates Act passed?—May I put it in this way? The rise upon the tithes and the buildings is due to the non-provision made by the Agricultural Rates Act. The Agricultural Rates Act makes no provision for these expenses in the parish, therefore the higher rate upon which the tithe and buildings is rated causes the rise in the amount of rates which I pay. I think that is clear.

18,975. Then you suggest in the concluding paragraph of your memorandum an exemption of the first 160*l.* of income?—Quite so.

18,976. Have you any view as to how the deficiency to rates by such exemption should be made good whether it should fall on the Imperial exchequer, or whether it should fall on the local ratepayers?—I think that one class of the community have received a concession from the exchequer, namely, the landholders, and I do not see why the tithe owners should not also receive a concession from their hands as another section of the community.

18,977. Therefore you contemplated when you made the suggestion of exemption that it should be the Imperial Exchequer which should make it good?—Yes.

Rev. E.  
Lodwick  
Ellis.

8 June '98

Tithe rent-charge, valuation of: Clerical tithe owners should be allowed a deduction of 160*l.* in respect of personal services, and the deficiency in the rates should be paid by the Exchequer.

Rev. J.  
Manners  
Smith.

18,990. In fact, on those who own land as opposed to those who own houses?—As opposed to those who own houses and tithe.

18,991. Do you mean a decrease in the assessment of agricultural land consequent upon the Agricultural Rates Act, or do you mean a decrease in the assessment on account of the subjects being of less value?—On account of the farmers claiming that they are of less value.

18,992. So that, apart from the operation of the Agricultural Rates Act, there was a decrease in the total assessment value of the parish?—Yes, a considerable decrease.

18,993. Can you give me the figures; leave out of account the Agricultural Rates Act for a moment?—In 1895-6 the rateable value of the agricultural land was 719*l.*, and in 1898 the rateable value is 400*l.* 10*s.*\*

18,994. So that, apart from any Act of Parliament, by the mere operation of fresh valuations the agricultural land in your parish has gone down from 719*l.* to a little over 400*l.*?—Yes, that is so.\*

18,995. Am I right in saying that the total annual value of property in your parish at the present time is 713*l.*?—713*l.*, including tithe and land.

18,996. And of that 713*l.*, 109*l.* is rector's tithe?—Yes.

18,997. Therefore, the rector's tithe in that parish amounts to rather less than one-sixth of the total valuation of the parish?—Yes.

18,998. It is quite clear, is it not, from that statement, that if the rector's tithe were to be excused from rates, and no outside contribution given, it would result in a very large increase of burden to the other owners of property in the parish?—If the relief to the tithe owner had to be paid locally it would.

18,999. I understand that the contention which you put before us in your memorandum is that the farmers in whose hands the assessment is very largely placed do not make such accurate returns of the value of land as they are enabled to get of the value of the tithe?—

\* The witness states that 719*l.* was the total rateable value of the parish in 1895-6, and not the rateable value of the agricultural land only.

Rates of rector of Barnardiston have risen in recent years. District has suffered from agricultural depression.

Land, valuation of: Assessment Committee of farmers value land at a low figure, which is the cause of rise in rates in respect of rector's tithe.

Tithe rent-charge in Barnardiston parish: If rector paid no rates in respect of his tithe, owners of other property in the parish would have a large increase in rates. Land, valuation of: Under-valuation by Assessment Committee of farmers.

Rev. J.  
Manners  
Smith.

8 June '98

No. Their returns in some cases are totally inaccurate, I feel sure; I can give you a case of a farm of 288 acres assessed at 39l.

19,000. Was it a let farm?—Yes.

19,001. What was the rent?—I do not know, and I cannot say.

19,002. Do you know whether it was more than 39l.?—No, I do not.

19,003. Then for all you know it may have been a fair return?—I thought the Assessment Act did not allow that if there was no rent paid there should be no return made. I thought it had to be valued according to what it ought to let at.

19,004. No doubt that is one of the conditions; there is the power so to value. I do not want to go widely into it, but you would probably agree with me that assuming there was no reason to suspect collusion between the owner and the occupier, the rent that was paid one year with the other would be a pretty fair index of the value, would it not?—I think the assessment committee have done this. I think they have subtracted the tithe from what was paid twice over; that is my opinion. Even then it would not be high enough if that were what was done.

19,005. I would like you to tell me what is the particular remedy which you yourself would propose?—I think most of the clergy would be quite content if they were treated as other agricultural owners are treated in respect of relief to their rates. If we were relieved to the extent of half our rates by money from the Imperial Exchequer we should be quite content.

19,006. What are the arguments upon which you would rely to defend that suggestion?—That tithe is of the nature of land.

19,007. In the respect that it pays land tax?—Certainly, for one thing. It is almost laid down in the claim for land tax that it is land, or of the nature of land. If it is not land, why does it pay?

19,008. Of course you would not go the length, as I understand, of those who urge—and there have been some—that upon the value of the glebe the parson should be treated in any way different from any other owner or occupier of land?—He should be treated just the same as other owners.

19,009. What do you say to the suggestion which you heard made this morning, and which has been made before, that there should be a definite deduction made from the value of tithe in respect of the personal and professional services which should be rendered?—I think it is very fair, and if you had not now given me the opportunity, I was going to suggest, that in respect of professional services certainly we should be excused rating, unless we are relieved in the way I suggest.

19,010. I understand from that answer that you do not ask for both methods of relief?—I would not ask for both, but I will not say that it would not be just to ask.

19,011. I want your opinion?—I think that that part of the endowment that we own in respect of which duties are performed, and in respect of which, in our absence, we should have to pay for the duties to be performed. I think that should be deducted from whatever tithe is owned before there is ever a rate made upon it.

19,012. Do you put that forward as an alternative suggestion, or as being an addition to what you suggested a moment ago, namely, that tithe was like agricultural land?—I should put it forward as an alternative suggestion.

19,013. Which do you propose; which do you think would be the most easy to defend; perhaps I should ask you which do you think would be most agreeable to the great body of those for whom you speak?—I think the most agreeable would be to be relieved in the same way that agricultural occupiers are relieved.

19,014. (Mr. Wharton.) Would you be satisfied to adopt the proposition that was made by the last witness, that instead of the tithes being entirely exempted for local purposes the first 160l. of your income from tithes should be exempted for local rates, as in the case of income tax; do you think that that would be a satisfactory method of dealing with the matter?—It would be very good as an alternative suggestion, but it would be one that I should only rely on if the others broke down.

19,015. Do you think that would be a fair method of dealing with it; do you think that would be a fair relief?—In some cases I do not think it would; in the case of a large tithe owner it would be unfair.

19,016. You probably would think that the large tithe owner, unless he has special claims upon him, would not be so much justified in seeking relief as the small tithe owner, or as the man with a small income?—Yes. I confess it never occurred to me, but it seems a very good idea.

19,017. On the whole you would be prepared to receive the suggestion made by Mr. Ellis, that the first 160l. in the income should be exempt from any rating, as in the case of the income tax?—Yes; that is a very good idea.

19,018. (Mr. Elliott.) There has been a large increase, has there not, in the expenses of the school board in your parish?—I am not quite sure. That is on the return, I think, that I have made.

19,019. According to the statement before me, the amount raised for school board expenditure was 20l. in each of the half years in 1895-6; 26l. 6s. 8d. in each of the half years in 1896-7, and no less than 38l. 16s. 10d. in each of the half years in 1897-8—almost double what it was in 1895-6?—Yes. I think I can explain that. It is in consequence of the inspector refusing a certain grant. There is a grant made if a parish is under 200, and there is also a grant made if a parish is under 300. In the last two years I believe we have lost one of these grants because the inspector said the school was near enough to a school in a neighbouring parish, so as not to entitle it to receive any grant in respect of the population being under, I think, 300.

19,020. That, I gather, is one of the principal causes which has led to the serious increase of rates in your parish?—Yes.

19,021. It is quite clear, is it not, that the school board expenditure in your parish has almost doubled in those two years?—Yes, it has.

19,022. Therefore, you may take it that that is one of the principal causes of the increase in the rates. Perhaps you will fill in that answer when you get the proof of your evidence?—Yes, I will do so.

19,023. With regard to the preference you express for the system of relief given in the Agricultural Rates Act, have you considered at all that the principle of assessing at one-half only applies to agricultural land *quæ* land, and does not extend to land which is covered even by farm buildings? Your tithe rentcharge is payable, is it not, not only in respect of agricultural land, but in respect of land covered by agricultural buildings?—That does not refer to the tithe, does it?

19,024. But the tithe is payable in respect of both classes of property?—I think I had better put it in this way—the tithe, I know, is referred to as a hereditament, is it not?

19,025. I wanted to ascertain from you whether you had considered the practical difficulties which would attend the adoption of the suggestion for which you expressed preference; are you aware that there are practical difficulties in the way?—The difficulties in the way of giving a grant from the Imperial exchequer are certainly great, but they are not impracticable, I think.

19,026. Supposing that you were willing to take from me the fact that there are serious practical difficulties in the way of treating tithe rentcharge in the same way as agricultural land is treated, apart from agricultural buildings, would not that affect the preference you express in favour of one system rather than the other?—If the difficulties could not be got over.

19,027. (Mr. Smith.) Arising out of that question, would you not prefer, if you could get it, a permanent deduction on account of services, rather than to be classed with agricultural land in an Act that, after all, is only temporary?—Is it so, that the Agricultural Rates Act is only temporary?

19,028. It is only temporary?—I should prefer, of the other two alternatives, that which was recommended by Mr. Ellis.

19,029. That was the 160l. deduction, was it not?—Yes.

Rev. J.  
Manners  
Smith.

rates in :  
Rise in  
School  
Board rate  
in recent  
years.

Agricultural Rates Act :  
Suggested difficulties in applying the principle of this Act to case of tithe rentcharge.

Tithe rentcharge, valuation of : Clerical tithe owners should be allowed a deduction of 160l. in respect of personal services.

Tithe rentcharge, valuation of : Clerical tithe owners would be content if they were relieved to the extent of half their rates, or alternatively a deduction should be made from the valuation of tithe rentcharge in respect of personal services.

Tithe rentcharge, valuation of : Clerical tithe owners should be allowed a deduction of 160l. in respect of personal services.

Rev. J.  
Manners  
Smith.

8 June '98

19,030. Now, on that would you suggest that that should apply to glebe where the value of the living was entirely confined to glebe?—No; I am perfectly contented, as far as the glebe is concerned, to be treated like any other landowner.

19,031. I want to know, when the Act is temporary, how is the landowner affected—what benefit does the landowner get if the tenant pays less rates?—I mean the occupier; I ought to have said that.

19,032. We are told, you know, that the Agricultural Rates Act does not, as long as it is temporary, benefit landowners?—That is so.

19,033. (Mr. Dalton.) Yours is a very exceptional parish, is it not—a very small parish to start with?—It is very small.

19,034. With a very small rateable value?—Yes.

19,035. In a district which has suffered very much from agricultural depression?—Quite so.

19,036. In the neighbouring parish, would the rates be as enormously high, as they appear to be, from this return, in your parish?—No, they would not. I know of no parish around, on any side of my parish, that at all compares with mine in the heaviness of its rating.

19,037. That I should expect. You have very little rateable value as compared with population in your parish, I presume?—We have 180 people.

19,038. And an assessable value of about 700*l.*?—713*l.*

19,039. It always happens in such a case as that, does it not, that the rates must get very high?—Yes, but not so enormously high as in my case.

19,040. I am only trying to get at the causes which have led to this enormously high rate in the *£*. I understand last year that it was 6*s.* 8*d.* in the *£* without including the highway rate, which was 1*s.* 8*d.*?—Yes, which brings it to 8*s.* 4*d.*

19,041. You would agree, would you not, that there must be a very small number of agricultural parishes in the country where the rate is anything like 8*s.* 4*d.* in the *£*. I think you say even in your own district, which is a very depressed district, there are no other parishes where the rate is equally high?—It is not so very depressed that the assessable value should be so low as this. I say the assessable value should be much higher; I say a good many of the farmers should be put up.

19,042. Even if it were doubled, you would still have a very small rateable value?—Yes.

19,043. So far as your high rates are due to the wrong assessment, that would be put right by an alteration of the law of valuation, I presume?—Yes.

19,044. Is the land tax in your parish high?—I am not sure, because we all pay the same now, 1*s.*

19,045. Have you got any relief from your land tax?—We got some relief in the land tax.

19,046. By the recent Act?—By the recent Act on taxation.

19,047. Then it was a high rate?—It was 3*s.* 3*d.* in the *£*.

19,048. That has been reduced to 1*s.*, has it?—Yes.

19,049. That has been some relief to you?—That has been some relief.

19,050. You have got no parish council and no expenses for parish meetings, I think?—That is so.

19,051. You have got a very high school board rate and a very high highway rate?—Yes.

19,052. I should imagine from these figures a high county rate, too, have you not?—I have not gone into that.

19,053. "Other purposes"?—Is that the county rate?

19,054. That would include the county rate?—I could not say, without comparing it with the other parishes, whether it is high.

19,055. Do you think it is a case for merging your parish with a neighbouring parish for the purpose of rating?—It would be very little relief.

19,056. I should have thought, if the neighbouring parishes were so much lower in their rates and yours was so very high, there would be a considerable relief to you?—I do not know exactly what is the rating of the neighbouring parishes.

19,057. You are quite sure that it is nothing like 8*s.* 4*d.* in the *£*?—Quite sure.

19,058. (Mr. Arthur O'Connor.) I suppose, if it is possible to effect any relief for the clergy in regard to this matter, it is advisable to find out what is the most practicable way, what is the direction of least resistance, and therefore we must consider whether the cases put forward are the best for the cause. What is the size of your parish?—About 1,100 acres.

19,059. What is the population?—181.

19,060. Are they all belonging to your flock?—Not all.

19,061. What proportion?—I should say three-fourths.

19,062. That would be 135. What acreage do you occupy in the parish?—Merely the glebe land and house—5 acres.

19,063. What is the average assessment of the acreage generally, is it about 6*s.* 8*d.* or 7*s.*, or 8*s.* an acre?—I can hardly say.

19,064. What did you tell us it was on the whole?—400*l.* 10*s.*

19,065. What is your ground assessed at?—I have not the figures, exactly, of that.

19,066. Break up the charge which is put upon you, and say how much you think goes to the land, and how much to the buildings?—I cannot give you that.

19,067. What are you assessed at altogether—10 guineas, is it not?—Yes, 10 guineas for the glebe land.

19,068. You occupy 13 acres, do you not?—No.

19,069. Or is it 21 acres?—That land is let.

19,070. Let?—It is let to a tenant.

19,071. Then you are a landlord?—Yes, a landlord of that.

19,072. Then you have a beneficial occupation, whether by yourself or your tenant, of 21 acres?—Yes, exactly. I did not know that that was what you were asking.

19,073. Would you mind saying what rent you get for that?—I could tell you—9*l.* 10*s.*

19,074. And your income is 170*l.* from tithe?—That is the gross income.

19,075. Is it not 250*l.*, gross?—250*l.* commuted, but then, calculating it out as to the averages, for this year it is 170*l.*

19,076. Or 174*l.*?—It is 171*l.* this year; it was 174*l.* last.

19,077. Let us consider for a moment land as a divisible whole. It may be in the hands of the fee-simple owner, who occupies it himself?—Yes.

19,078. In that case, what would be the charge; it would be about 8*s.* an acre, would it not?—Do you mean the land of the whole parish?

19,079. Take any piece of land in your parish; it might be in the hands of the fee-simple owner in occupation, or it might be that he let it; and then it would be in the occupation of one and in the ownership of the other, would it not?—Yes.

19,080. Still, in either case, directly or indirectly, it would be charged with this 8*s.* per acre?—Yes, I suppose it would; I do not know.

19,081. Supposing that out of this interest in land there is carved what is called tithe, I suppose you would say that that is just as much interest in land as the rent received, or as the beneficial occupation of the occupier?—Yes.

19,082. Now, when relief is given to an agricultural tenant permanently, I suppose we may say that the landlord, being aware of it, takes it into account in the figure which he is willing to receive as rent? If the rates are low the rent, taken generally, would be somewhat higher; and if the rates are high, the rent would be somewhat lower, is that not so?—I am afraid I do not quite understand that.

19,083. Is not that rather elementary?—I do not understand it.

19,084. Supposing a landlord has 100 acres to let, practically not rated at all, he would be able to let that at a greater advantage, would he not, than if it was very heavily rated?—Of course; I understand you now.

8 June '98

19,085. So that, as between occupier and landlord, the Agricultural Rates Act of last year, or the year before, gives a very substantial advantage?—To either owner or occupier?

19,086. Or to their united interest, however it may be distributed?—Yes, I quite see that.

19,087. The tithe interest gets no relief at all?—No relief whatever.

19,088. You represent, therefore, an interest in land, or arising out of land, which gets no relief, whereas as between the owner and the occupier there is a substantial relief, and so far you stand at a disadvantage with other land interests?—That is quite true.

19,089. You talk about income for services rendered being rated. I suppose you do not object to pay your income tax, like any other citizen?—Not at all.

19,090. The services which you render; to whom are they rendered?—It is rather difficult to say.

19,091. They are rendered to your parish, are they not?—Yes, to the parish.

19,092. The services which you get paid for are services which are rendered to the parish of which you are the incumbent?—Yes.

19,093. You do not seek to get relief from the income tax on the ground of your being a clergyman?—Not at all.

19,094. But with regard to local rates you say, "This portion of the community you are rating is the very portion of the community to which I am rendering the services for which I get my stipend"?—Yes.

19,095. "And then they come and rate me in addition to exacting my services"?—Yes, exactly.

19,096. Now as to the possibility of getting relief; supposing it was suggested that there should be a considerable deduction from your portion of the local burden, would not the proposal necessarily involve a corresponding increase on the rest of the local community?—Not on the local community; on the community at large.

19,097. I assume it was made by local arrangements?—Yes, it would then.

19,098. Do you not think that that would provoke an immediate outcry?—Yes, there would be much opposition.

19,099. Not only among the 60 people of your local community who do not belong to your communion, but also possibly a certain amount of unrest and dissatisfaction among the 135 who do?—Yes, it would cause great dissatisfaction all round.

19,100. Now that is a thing which you would be very anxious to avoid, I suppose?—Quite so.

19,101. On the other hand, supposing an application of any form or description was made to Parliament for central relief, do you not think that again would raise a general commotion throughout the country?—It would seem so from the arguments which have been uttered publicly lately.

19,102. Apart from the question of equity of relief, in what direction do you think it is possible to move for the purpose of securing relief so as to provoke the least possible unrest and dissatisfaction?—Perhaps one of those two alternative suggestions that were made as alternative to the one, that we should receive relief from the exchequer; either that we should receive the same kind of relief that a man with a small income receives in respect of income tax, or that our money for professional services should be deducted from the rateable value before the rate is made.

19,103. Let me see how that works out; I do not quite understand it. What is the deduction that you propose in respect of your services?—Count the number of services and charge what we should have to pay for services if they were taken—a guinea a service I should say.

19,104. Do you mean a service in the church?—Yes.

19,105. Is not your service very much more extensive than that?—Yes.

19,106. Have you not a general moral charge of the parish?—Yes.

19,107. Have you not to find out when the last baby in the parish was vaccinated, and to know what happens in every house in the parish?—Quite so. The reason I missed that point was because I was thinking more of the services as being the most important. We feel called upon to give many things—jelly, soup, and even wine—to any parishioner who requires it.

19,108. Take the whole of the services, what deduction would you propose to make; that is what I want to understand?—What I should have to pay someone to take my place in my absence, about 150*l.* a year.

19,109. That includes the occupation of the parsonage?—Yes, I should think so.

19,110. Of course you would be gone altogether then?—In my case it would be so. I cannot help my case working out in that way.

19,111. (*Chairman.*) Is there anything else you would like to add?—There was a question asked about the rating having been charged on tithe rentcharge since the time of Elizabeth. It has been suggested in another place that when the Commutation Act was passed our grievances were thought of then. I should like to point out what I believe is really the case, that when the Act was passed the framers of that Act adopted the sliding scale for tithe rentcharge, with the idea of protecting us. I suppose, because it was thought that gold might depreciate in value, and that the value of corn and cereals was a more stable standard than the value of gold. It has not protected our interests in anything like the way the framers of the Bill desired it should do.

19,112. Is there any other thing you want to add on that?—Another thing, the case has not been put strongly enough to square with my case. It was stated in one important speech, made in public some little time ago, that the rating sometimes has been as high as a third of the gross value. Last year my rating amounted to 8*s.* 4*d.* in the *£*, which is considerably more than a third of the gross value.

19,113. (*Mr. Dalton.*) From these figures it appears that there has been a very great reduction in the rateable value of the agricultural land in your parish, as a whole, during the last few years?—Yes.\*

19,114. But no reduction in the rateable value of your glebe; that seems to have remained the same through all the years?—That is so. It is rated too highly now, I think.\*

19,115. Why was it not reduced when the agricultural land was reduced in rateable value; did you make any application?—No, I did not make any application.\*

19,116. Is that the reason, do you think?—It is difficult to say. There is a prejudice throughout the parish against reducing rates on a small piece of land, whereas the large pieces of land get a good deal of relief.\*

19,117. (*Mr. Elliott.*) Supposing it were necessary for the Bishop to appoint anyone to take charge of your benefice, what would be the minimum stipend which he would have to pay to the curate under the Pluralities Act?—I do not know the Pluralities Act well enough to answer. It would be two-thirds, I think.

19,118. (*Mr. Arthur O'Connor.*) May I take it that your professional income, as the clergyman of this parish, is equal to about 30*s.* per head of your congregation, one way and the other?—No, certainly not.

19,119. How much is it?—I could work it out. My income for this year, after deducting every outgoing, is a little under 100*l.*

19,120. What do you mean by outgoing, because after all an income is only meant to be spent?—I mean taxes and rates; you see, you are not taking account of taxes here.

Rev. J.  
Manners  
Smith.

8 June '98

The Tithe Act, 1836, has not protected the interests of the clergy as much as was intended.

Rev. E.  
Molloy.

8 June '98

8 June '98

19,121. (Chairman.) You are the rector of Keyston, in the county of Huntingdon, are you not?—Yes.

19,122. This memorandum, which I hold in my hand, is the one you have returned to us?—Yes.

19,123. Since sending in those figures, you have, like the other gentlemen who have been here to-day, filled up for us an additional return in the last few days?—Yes.

19,124. There are one or two points in that which I do not quite understand. For instance, unless there is some mistake, the rateable value of your parsonage house is put in at double the gross value. How does that come about?—I do not intend that. The rateable value is 30*l.* a year.

19,125. But in the column which you head "Gross Income," you enter it at 15*l.*?—That is for each half year, and dividing it. That is done in arriving at the value of the whole living for one half year.

19,126. Take it at that; is the gross value of it the same as the rateable value; surely you are allowed something for repairs, are you not, off the gross before you get the rateable value?—I know 30*l.* a year is the rateable value, and I believe the gross value is 35*l.* now that I think of it, but I am rated on 30*l.*

19,127. I do not know whether you will be able to give me any information upon it—perhaps it is beyond your province—but from the figures referring to your parish, I understand that land appears to have been relieved to the extent of 103*l.* a year under the Agricultural Rates Act, but that the Government contribution has only amounted to 78*l.* Are you well enough up in that figure to be able to explain that to me?—Yes.

19,128. Will you kindly do so?—At the time the Act was passed, the clerk was directed to send in the average rates for three years. That average was 10*l.*, but since then the rates have increased to 14*l.* I am a member of the district council, and a member of the board of guardians, and for this year it is 14*l.* where it was 10*l.* There has been an increase in the expenditure, and the result is that there is 4*l.* difference.

19,129. That is the half-yearly rate you are giving me now?—That is for everything except poor rate, I believe. The district council expenses, at least, so I understand, instead of being 10*l.* are 14*l.*

19,130. I do not think you and the overseers quite agree as to the figures?—I got my figures from his books. It is the clerk to the board of guardians who told me of the figures of 10*l.* and of 14*l.* They were three lean years for which the average was taken; since then the expenditure has increased, several large payments having been made out of income from rates. The 10*l.* refers to expenses of the poor. The cost of new board room, laundries, &c. which was taken into account since the Act has increased it to 14*l.*

19,131. The figure of 10*l.* does not happen to appear in either of the returns. The rate in the *£*, as given by you, for the year 1895-6, is 2*s.* 5*d.*, and that agrees with the overseer's; in the year 1896-7 the rate in the *£* leviable is given by you as 2*s.* 9*d.*, and that agrees; but in the next year, 1897-8, the figure, as given by you, differs?—I have actually paid rates as high as 3*s.* 1*d.*, and I proved that to the assessment committee when I was getting my assessment reduced. But there is a deficiency in the Thrapston Union.

19,132. Can you analyse that for me, so as to make it plain to me whether that increase has arisen from an increase of expenditure, or from an increase consequent upon the passing of the Agricultural Rates Act?—Any deficiency between the money paid in by the Government to the union and the money returned to the farmers has to be met by the owners of houses, and by the owner of the tithe rentcharge.

19,133. How did that deficiency arise?—Because, unfortunately, the three years preceding the passing of the Act were economical years, and since then the expenditure has increased in the union generally.

19,134. Under what heads has it increased?—Of course there are those expenses for parish councils, for overseers, and those things that are not met by the Act. Those things, I believe, as was explained by another witness, are extras.

19,135. Have you a parish council in your parish?—No, but we have got a parish meeting, and the rates are increased on their account. They, without any authority, put footpaths in the parish, with the result that the extra charge amounts to about 2*d.* in the *£* to me, and only 1*d.* to the farmers.

19,136. Then I understand that the discrepancy has arisen from increase of expenditure?—Generally in the union.

19,137. That increase of expenditure, of course, would have taken place, whether the Agricultural Rates Act had passed or not—it is independent of it?—I should think that the farmers are more inclined to spend money when they do not have to pay back so much of it; in fact, I am nearly sure they are. If you have only to pay 1*d.* in the *£* with spending 40*l.* or 50*l.* you are more likely to spend 40*l.* or 50*l.* than you are if you pay 2*d.* in the *£*.

19,138. Are they the real controllers of the expenditure?—Absolutely.

19,139. They are not in a majority, are they?—They are in the Thrapston Union.

19,140. Are they in the majority as voters to the district council, because it is a district council?—The agricultural interest is altogether in the majority. There are very few gentry in the county.

19,141. Does that apply to the union and to the district council alike?—Yes, they are conterminous.

19,142. You have also procured for us a return from the rector of Molesworth?—Yes.

19,143. If you cannot answer the question, of course you will say so, but how is it that the tithe rentcharge in his return is stated to be rated at 32*l.*, when it only produces 23*l.* 15*s.*, while on the other hand the glebe land is stated to bring in a rent of 80*l.*, but is only rated at 13*l.* 15*s.* 6*d.*?—I am afraid I could not tell you that. I do not think the tithe rentcharge—and I confine myself to that—is rated at 32*l.* That must be a mistake, 23*l.* 4*s.* 3*d.* is the gross value in 1897.

19,144. Perhaps you would not mind having that cleared up for us?—Yes, I will.\*

19,145. In that case, if the figures are right, the rector of Molesworth would derive more than half his income from the glebe, and not from tithe rentcharge?—Yes.

19,146. In which case, of course, he would be a gainer under the Agricultural Rates Act, and not a loser?—Yes, he would be a gainer as far as the rates on nine acres went.

19,147. But you cannot clear that up at the moment?—I cannot. I know what the rates paid were. The rates were 5*l.* 6*s.* 8*d.*, and that was 22 per cent of the gross.

19,148. What is the suggestion which you would like to make to us as the remedy for what you feel to be a grievance?—I think the clergy should be allowed the same as the income tax, *pro rata*; that is, incomes under 400*l.* so much; incomes over 400*l.* so much.

19,149. What are the arguments by which you would defend that suggestion, if it was attacked?—I do not think this tithe should be treated as land. Farmers are assessed on their rent, that is, the rack rent. What is left after the farmer's profit and expenses goes to the landlord, and that is rack rent. That is taken as the basis of their assessment, whereas the gross tithe, which is for some purposes treated as land, is taken as the basis of assessment, without any question of profits at all.

19,150. How does that bear upon the suggestion which you made, that there was to be a *pro rata* deduction from your income before the rates were laid on?—I think, as a matter of justice, the rates ought to be taken off the tithe altogether, if it could be done from Imperial sources. Of course I am sure there would be an uproar in the parish if it were taken off local assessment. As a rule, the clergy are the largest ratepayers in the parish; for instance, I pay for rates within 30*s.* a quarter of what a man who owns a large property of 700 or 800 acres does.

\* The witness subsequently wrote: "The greater portion of the glebe is let, and the tenant pays the rates on that. The 13*l.* 15*s.* 6*d.* is the rateable value of the nine acres in the rector's own occupation. The gross rent of the glebe is really 102*l.* 10*s.*"  
The Molesworth tithe rentcharge is rated at the original value, and has never been altered although the value has fallen about 10*l.*

\* A statement of the gross and net incomes, and of the per-centage of rates paid to the net income of the Benefices of Keyston and Molesworth, for the year 1897-8, will be found on pages 348-9.

would be  
opposition  
to this by  
the other  
ratepayers.

Rev. E.  
Molloy.

8 June '98

19,151. You realise that that would be said to be exempting tithe from a burden which it has borne since the time of the Act of Elizabeth?—Yes, but I do not think it ever was intended to bear the burden it is bearing now. The poor rate pure and simple would not be so heavy, but then we have to pay highway rate, and so on.

19,152-3. Do not understand that I am expressing my opinion—I am only putting these questions to try and elicit your view?—Yes, I quite see that, it has always been rated.

19,154. And it has been rated first to poor rates and subsequently to other rates, as they were put on ever since that time?—Yes, I admit that, of course.

19,155. Then the suggestion you make would be a new departure taken at the present time?—Yes, it would decidedly.

19,156. Do you think the present time is favourable for making such a suggestion as that?—I think it is, because the farmers have certainly got a measure of relief; it may be only temporary, but still it will affect them for the next three or four years.

19,157. Your suggestion was, if you will excuse me for reminding you, that tithe rentcharge should be relieved altogether?—Yes.

19,158. Whatever we may say of the Agricultural Rates Act, it does not relieve the farmer altogether?—No, it only relieves him of half.

19,159. Does that consideration modify your former answer?—I say, as a matter of justice, I should think it ought to be exempt altogether, but as a matter of fact, I feel that the clergy would be satisfied if they were allowed for their services a deduction from the assessment before the assessable value was arrived at.

19,160. (*Mr. Dalton.*) I think you said that the expenditure had increased of late years?—Yes, the expenditure has.

19,161. According to the table which we have here the amount of rates raised seems to have diminished in the parish, but that, I presume, is due to the fact that a certain part of the deficiency has been met by this Government grant?—Yes, it has.

19,162. I think you said that the Government grant did not cover the whole of the present deficiency?—It does not cover it.

19,163. Are you clear as to that?—Quite certain, because I have made inquiry from the clerk of the union.

19,164. Are you aware that one part of the Government grant goes to the county council, one part to the board of guardians, one to the rural district council, one to the school board, and so on?—Yes.

19,165. Where have you made the inquiry as to the deficiency being made good—of all those authorities, or only of the guardians?—From the clerk of the guardians, the district council, and the school board—he is the same person.

19,166. He would be aware of the deficiency in the rates and of the amount of the Government grant for the guardians, and the rural district council?—Yes.

19,167. Has he taken into account the grant that is paid to the county council?—I am afraid I cannot answer that.

19,168. Of course he himself raises the rates for the county council, but the grant is paid to the county council, and therefore they ask for fewer rates. Judging from this return which I have here, the amount of rates raised for "Other purposes," which would include the county council, seems to have diminished. That rather points to the conclusion that the Government grant paid to the county council has been left out of your calculations; but you cannot say how that is?—I cannot say how that is.

19,169. Possibly you can ascertain that when you are correcting your evidence?—Yes, I might be able to do so.

19,170. Your glebe is 28 acres, is it not?—Yes.

19,171. Is that let?—That is let.

19,172. At what rent?—It brings in a little over a pound an acre and I pay the taxes.

19,173. On that, I presume, you gained by the passing of the Agricultural Rates Act?—Yes, I gained half the rates.

19,174. Taking the total of your rates in the year before the passing of the Agricultural Rates Act, you paid 38*l.* 13*s.* 4½*d.*, I think, adding the two half-years together?—Yes.\*

19,175. The following year, 40*l.* 2*s.* 10½*d.*?—Yes.\*

19,176. A rise of about 30*s.*?—On a reduced assessment.\*

19,177. No doubt, but I presume there are other reduced assessments in the parish, are there not?—Yes, of course the farmers all keep theirs right.

19,178. Taking the first half-year of the present year the rates seem to have fallen?—Yes, they have fallen a little; the next half may be heavier. We are never sure which is the heavier.

19,179. Has not an estimate been made by the guardians for the total year yet?—That estimate I speak of, as showing a difference between 10*d.* and 14*d.*

19,180. Have you got any knowledge as to what the rate for the next half will be?—I am afraid that it will be more, because I was at the meeting when it was struck.

19,181. Has there been any complaint of the manner in which the valuation of your property and of the property of the rest of the parish is arrived at?—No, I think not, not as to the rates.

19,182. Do you think in your district it is tolerably fair?—I think it is very fair. I think the assessment committee understand land, but they certainly know nothing about tithe.

19,183. Do they over-assess your tithe?—They do not understand anything at all about it. Fortunately the chairman is in my parish, and I have made him understand that there should be certain deductions off tithe, and the result is that I have had mine reduced in five years. A tithe that is nominally worth 385*l.* as the total apportionment, I have had reduced from 265*l.* to 204*l.*, a matter of 61*l.*

19,184. I was going to say that it appears in this table to have been reduced in each of the last three years?—Yes, as I appeal every year. By law the assessment committee are bound to make that alteration themselves, but they never do. That is the reason Mr. Clarkson's of Molesworth has never been altered, because he has not appealed. He is a man of private means, and does not care to do so.

19,185. He can appeal?—Yes, he can, if he likes. As a matter of fact the assessment committee should do it without any action on the part of the tithe-owner.

19,186. But when application is made to them, you agree that they do it?—Yes, since I have put it into their heads that they ought to do so.

19,187. Coming to the figures of the rector of Molesworth, he has a very large glebe of 285 acres, let at a very low rent?—It is only prairie land, and worth very little; it is poor land. It is only worth 102*l.* 10*s.* gross rental.

19,188. Is that land that has gone down to grass?—It has gone down; it has depreciated; the whole parish has depreciated.

19,189. Is it contended that he has lost by the Agricultural Rates Act?—No, I should think not. He has lost on his tithe, which, of course, is only a small thing. You may see that the difference between the percentage of rates paid to gross value in 1895 and 1897 is 6 per cent.

19,190. Then these figures in your memorandum show the percentage on the gross rental of the rates?—That is percentage on the gross value of the tithe.

19,191. Only the tithe?—That total in my printed memorandum only refers to the tithe.

19,192. Then in his case, as against his increased rate on the tithe, he has got a considerable reduction on his land?—Yes. The reduction is only on the nine acres, the tenants pay rates on the glebe and get back half.

19,193. So that his living has not suffered by the Agricultural Rates Act, but has on the whole gained?—Yes. Of course it has suffered on account of the depression. It was worth 400*l.*, and it is only worth about 5*l.* a year now.†

\* These figures refer to the calendar years 1896 and 1897.

† The witness subsequently wrote:—"This was brought about by the farmer who held the Molesworth glebe becoming bankrupt and paying no rent. Some of the glebe is still unlet."

glebe land  
let.

Agricultural Rates  
Act: Benefit derived  
as regards  
glebe land.

Rev. E. Molloy.

8 June '98

19,194. That is not a matter of rating?—No; the last two or three years has not made any difference.

19,195. Many other rural rectors are in the same condition, I presume?—Yes, with regard to the land.

19,196. They have benefited from the Agricultural Rates Act?—In a small way they have.

19,197. When they have got a big glebe, it is in a large way?—If they have got it let, their tenant gets the advantage. As a matter of fact I know Mr. Clarkson has not had any rent at all.

19,198. He does not occupy it himself?—No, he does not occupy it himself.

19,199. The reason I asked the question with regard to the rector of Molesworth was, because it was under that column stated as to be the value of the glebe if occupied by the incumbent?—He has certain fields in his own hands.

19,200. (Chairman.) Is there anything you would like to add?—I should just like to point out that there is a very great discrepancy between the rates in different places with regard to tithe rentcharge. For instance, there is one parish, Old Weston, in the Thrapston Union, where the total apportionment is of the value of 435*l.* a year, and where the rates for last year were 37*l.*, whereas there is a living of similar value, a rectory in the union of Huntingdon, worth 431*l.* a year, with the rates only 22*l.* a year.

Tithe rent-charge, valuation of: Varies in different parishes.

Rev. R. F. McLeod.

North Fambridge parish, rates in and particulars of the value of the living. Statistics handed in by rector. Effect of Agricul-Rates Act.

The Rev. R. F. McLeod called and examined.\*

19,207. (Chairman.) You are, I understand, the Rector of North Fambridge, in Essex?—Yes.

19,208. And you also hold the position, if I do not misunderstand matters, of overseer of the parish?—Yes.

19,209. Therefore, you have appended your signature to both the papers which we asked you to fill up, so as to get the exact facts before us?—Yes.

19,210. I venture to think, and I give you the chance of correcting me if I am wrong, that, probably quite unwittingly, some of your figures are not correct. If you will look at the footnote to that one of your papers which you have signed as overseer, you will see the statement that you put before us is that the Agricultural Rates Act has caused a deficit to the ratepayers of the parish other than the occupiers of agricultural land to the amount of 15*l.* 2*s.* 2*d.*; is that not so?—Yes.

19,211. In arriving at that calculation, have you not omitted to take into account the grant to the county councils and the grant in respect of school board expenditure?—Yes, that has been omitted.

19,212. So that if those two sums were added, there would be 11*l.* 9*s.* to come off that 15*l.*?—Under what head would that be?

19,213. I want to see if I am right—I think I am?—I can give you the figures for the school board.

19,214. What are they?—3*l.* 12*s.* 11*d.* per half-year.

19,215. 7*l.* 6*s.* in the year?—Yes.

19,216. And the county council grant is 4*l.* 3*s.*?—Yes, that would be the 11*l.* 9*s.*

19,217. So that really, as a matter of fact, the deficit which at the utmost can be attributed to the Act is 3*l.* 10*l.*?—Yes, that would be right.

19,218. Independently of that, the rates have increased by about 2*d.* in the *£* from other causes?—The rates have increased?

19,219. Yes, have they not?—Unfortunately, this table does not go back far enough. If it went back another year, it would show the very considerable increase of 40 per cent. in the rates. In 1893-4, and for some years previously, the rates for the year amounted to 4*s.* 4*d.* in the *£*. They have steadily risen since then and are now 6*s.* 1*d.* in the *£*.

19,220. Do I understand that the object of your evidence is to show that the Agricultural Rates Act has injured the parish; of course, the test year is the year 1895-6?—Yes; but there is an additional thing that has thrown a burden upon the parish, and that is the great reduction in the assessments on the land.

\* A statement of the gross and net incomes, and of the per-centage of rates paid to the net income of the Benefice of North Fambridge, for the year 1897-8, will be found on pages 348-9.

Rev. E. Molloy.

8 June '98

19,201. That arises, does it not, from the administration?—Yes.

19,202. Of course in that respect, be it right or wrong, to rate tithe rentcharge, that is simply what happens in the case of the owner or occupier of any other class of property?—Yes, precisely; it has to do with the incidence of taxation altogether all over the country.

19,203. You would not be surprised if you compared the rates upon any other class of property, as between one district and another, to find the same discrepancy?—No, I should not.

19,204. Is there any other point?—There was a question asked the first witness with regard to the chancels. Some of us have to pay a great deal under that head. For instance, in the last five years I have paid to the Queen Anne's Bounty 122*l.* 3*s.*; a part of that is for the paying of a debt on the chancel for which really I was not responsible. That is owing to the Dilapidation Act. Of course it comes as a hardship upon the clergy, and I still have to go on paying that.

Tithe rent-charge, valuation of: No deduction allowed for repairs to chancel.

19,205. That deduction is not allowed to you in calculating the difference between the gross and the rateable value?—No, it is not allowed, and they will not allow that.

19,206. Is there any other point?—No, I do not think that there is anything else.

The witness withdrew.

Rev. R. F. McLeod.

19,221. How much is that? Can you give me the valuation figures for the two years?—Yes, I can give you those figures. For the parish in 1890 the total assessment was 1,075*l.*; in 1892 it was 1,046*l.*; in 1893, 956*l.*; in 1894, 839*l.*; in 1895, 823*l.*; in 1896, 789*l.*; and this year there is something more to come off, which I have not reckoned in, because it has been reduced since I sent in my return. In 1898 it is 755*l.*

19,222. Of course, that obviously proceeds from causes which, however regrettable in themselves, are not in any way dependent upon the Agricultural Rates Act?—Yes, that is so.

19,223. To go to your figures which you have signed as Rector; I do not understand how you come to put the gross value of the parsonage house at 2*l.* less than the rateable value?—I deducted the insurance from that.

19,224. Surely the rateable value must be less than the gross value?—Yes, the rateable value is less than the gross value.

19,225. But in your memorandum it is given at 2*l.* higher; can you explain that to me?—Under the parsonage house I gave the gross income on the basis of the rateable value. The rateable is 2*l.*

19,226. You have got the tables before you, have you not?—Yes.

19,227. If you would look at the first heading upon the left-hand side of your table—"Gross Income from Rateable Property"—under that one of the items, you will see, is parsonage house, 20*l.* for the year?—Yes.

19,228. In the next column is the rateable value of the same property, of which you have just given the gross income, and under that heading the parsonage house is stated at 22*l.* for the half-year?—Yes.

19,229. That is what I want to have explained to me, because that looks as if in each of the half-years you reckoned the rateable value of the parsonage house at 12*l.* more than the gross, and I cannot quite understand it?—The error is mine. It should have been half that, because that is the assessment for the year. It should be 11*l.* for each half-year.

19,230. You will observe, on carrying your eye down, that 22*l.* is stated for the half-year in every case?—Yes, that is a clerical error; it should be 11*l.* in each case.

19,231. Taking it at 22*l.* for the year, even that is 2*l.* more than the gross value, and I cannot understand that?—It is the gross income; I reckon, taking off from the 22*l.* what I paid for insurance, that would reduce it to the gross income.

19,232. Is there nothing allowed from the gross income for repairs, before you get to the rateable value?

*Rev. R. F. McLeod*—I do not think so. Things are done in a very haphazard way in the parish with regard to assessments.

19,233. But you are overseer?—I am overseer, but then I practically have nothing to do with it, because it is in the hands of the assessment committee, who are composed of farmers.

19,234. Is everybody else's house entered the same for the rateable value as for the gross?—No; there is a difference between the gross assessment and the rateable assessment.

19,235. You still do not explain to me why the parsonage is entered at a rateable value, which is the same or higher than the gross?—I may say, if the form had said that I was to give the gross assessment I should have given it, but I took it to mean the gross income—that is to say, what is the value of the house to me.

19,236. (*Mr. Elliott.*) What is the gross estimated rental on the parsonage house for the purposes of the poor rate?—I think it is 25*l.*

19,237. I notice in the first section of your memorandum that you give the rates applicable to the tithe rentcharge as 5*l.* 12*s.* 5*d.*; does that not include the rates applicable to the parsonage house?—Yes, that includes the rates on tithe, and the rates on the house as well.

19,238. Is it well to put the rates on the parsonage house in juxta-position with the income from the tithe?—I thought it was intended to show what the actual income of the benefice was.

19,239. Are the rates from the parsonage house a matter of deduction in arriving at the net value of the tithe?—No.

19,240. You have included the rates?—I have given it differently in the other statement.

19,241. In the printed memorandum you have included the rates for the house?—Yes; there is an error in that.

19,242. That 5*l.* 12*s.* 5*d.* should be 50*l.*?—Yes.

19,243. The rates that you have paid have fallen since the Agricultural Rates Act, have they not? Take the year preceding the passing of the Act. According to this table you paid 58*l.* 5*s.* 6*d.* for two half-years, is that not correct?—Yes.

19,244. In the following year, 56*l.* 14*s.* 9*d.*?—Yes.

19,245. And in the following half-year, 22*l.* 8*s.*?—Yes.

19,246. It looks as if you have not been injured by the passing of the Act, does it not, if the rates have fallen since?—Yes; but although the amount of rates paid by me has actually fallen, that is due to the fact that my assessment happens to have been lowered.

19,247. In what way have you been injured by the passing of the Act?—I understand your figures are put forward to show that the passing of the Act has injured you. You are paying less?—Only less since the date from which these figures start; from the year previous to that I paid more.

19,248. In an earlier year, 1894-5, you paid more; but what bearing has that on the question whether you have been hurt or not by the passing of the Agricultural Rates Act?—I do not contend that the Agricultural Rates Act has done any special hardship to me.

19,249. You agree that it has not?—Yes.

19,250. (*Mr. Smith.*) The rates in your parish are exceedingly high?—Very high indeed.

19,251. And the total rateable value of the parish is very low indeed?—Very.

19,252. I suppose you have got a very small parish; what is the population?—The population is, nominally, 150.

19,253. And the acreage?—We have 1,208 acres of agricultural land; and, with roads and everything else, 1,235 acres.

19,254. That would be a small parish?—Yes, it is small.

19,255. What is the rateable value of the whole parish?—755*l.* at the present time.

19,256. That is a very small rateable value for the parish, is it not?—Very. It is unfairly assessed. There is no doubt about that.

19,257. Unfairly assessed?—Yes; that is to say, it is assessed at the rate of about 2*s.* 7*d.* an acre.

19,258. What does it let for an acre?—I cannot tell you what it lets for, because I have no information on that point; and with regard to the chief farms, the owners occupy them.

19,259. What is your glebe land rated at—how much an acre?—My glebe land is rated at about 3*s.* 6*d.* an acre.

19,260. Do you think that is more or less than its value?—If the whole of the parish were properly assessed, it is less than its value—considerably.

19,261. Then this very high rate in the £ appears to some extent to be caused by the rateable value of the parish not being as large as it should be?—Yes, that is the case; the rates would not be so high then.

19,262. And they would not be so high with a proper valuation?—No.

19,263. What is the land-tax in your parish?—Last year I paid 10*l.*

19,264. What is it in the £?—Is. in the £.

19,265. What was it before the late Act?—2*s.* 4*d.*

19,266. Then you got more than half of it knocked off by that Act?—Yes, which was a gain. Still, that has gone in increased rates.

19,267. I am not saying that you are not hardly treated; but you have had that relief from recent legislation, and I understand you to agree that the Agricultural Rates Act has not added to your burdens?—It has not.

19,268. (*Mr. Arthur O'Connor.*) The gross value of your tithe is 244*l.*?—Not of the tithe, that is including the glebe and dividends from the Court of Chancery.

19,269. Those are only 5*l.* and 6*l.*, the gross value of the tithe is 233*l.* really?—Yes.

19,270. And it costs you 11*l.* to get it in?—That is including insurance as well, and the percentage.

19,271. How do you get it in?—Through the Tithe Rentcharge Owners' Union.

19,272. And they charge you 11*l.* for getting in 233*l.*, including insurance?—Yes.

19,273. Your parish has 150 inhabitants, has it?—Yes.

19,274. And most of the land is occupied by the owners?—Not the whole of it, the large farms are occupied by the owners.

19,275. A large proportion?—Yes, a large proportion.

19,276. Are all the 150 your flock?—No, but there are only about 10 who are not.

19,277. Does this glebe represent the whole of your income—there is the parsonage house, have you anything else?—No, nothing else.

19,278. 250*l.* for 140 people—it comes to something short of 2*l.* a head of your flock, does it not?—No, not the net value.

19,279. 140 is the number of people?—Yes, but the net value of the benefice is somewhere about 168*l.*

19,280. Then it is about 1*l.* 3*s.* a head?—Yes, about that.

19,281. What have you got to say about the "Assessment of the Parish to Local Rates," which is one of the items on your printed memorandum, what does that mean?—That means that I can give the total assessment of the parish.

19,282. What is it?—755*l.*

19,283. Then what is the assessment on agricultural land?—146*l.*

19,284. What is the assessment of the rector?—192*l.*

19,285. That is including tithe?—That is the total tithe and house; the tithe alone is 169*l.*

19,286. Then what is the proportion the assessment of the tithe rentcharge bears to the total assessment on agricultural land?—I am assessed at 33*l.* more than the whole of the 1,200 acres of agricultural land.

19,287. The whole of how many?—The whole of the parish—1,208 acres. I am assessed at 33*l.* more than the whole parish; that is on the agricultural land.

19,288. The next section in your memorandum is headed "Comparison of the Rector's Rating with that on the Three Chief Farms in the Parish"; what do you wish to say upon that?—As to the extent of the farms,

*Rev. R. F. McLeod.*

8 June '98

Agricultural Rates Act has not been a hardship on rector of North Fambridge.

Titherecharge, cost of collection.

North Fambridge parish: Particulars of the value of the living.

Tithe rentcharge, valuation of compared with that of agricultural land in parish of North Fambridge.

Agricultural Rates Act has not been a hardship on rector of North Fambridge.

North Fambridge parish, rates in are very high.

North Fambridge parish, valuations in are said to be unfair.

*Rev. R. F. McLeod.* one is 537 acres and the other 135 acres. The present rateable value of the first is 72*l.* 10*s.*, and of the second 21*l.*

8 June '98

19,289. You say "three chief farms"—you have not given me the other one?—The other at present is under water, and therefore I omit it.

19,290. It is under water?—Yes, through the bursting of the river wall. The assessment has gone down, so it was no use introducing that.

19,291. What is the "assessment on each compared with that on the tithe rentcharge"?—One is less than half the assessment on the tithe rentcharge, and the other is one-eighth the assessment on the tithe rentcharge.

19,292. Then what is the amount of rates paid by each of these farms?—For each half of last year on the first one, six guineas; on the second one, 1*l.* 11*s.* 6*d.*; and on the tithe rentcharge by the rector, 25*l.*, or twice each of these amounts for the whole year.

19,293. Do you know the rents of the farms?—No, because they are in the occupation of the owners; but the owner of one has told me that his land is well worth 2*l.* an acre. It is assessed at 2*s.* 7½*d.*

19,294. Worth 2*l.* an acre?—Yes; it is the best land in the neighbourhood.

19,295. The farmers themselves form the assessment committee?—Yes.

Land, valuation of: Assessment Committee of farmers value land at a low figure, and their interests conflict with their duty. This is a cause of rise in rates in respect of rector's tithe.

19,296. Do you suggest that as between you and them their interest is in conflict with their duty?—There is no doubt, I think.

19,297. Your next heading is "Comparison of Amount paid in Rates with Nominal Income." What do you say about that?—I pay nearly one-fourth of my gross income to local rates, and, in addition, I pay 10*l.* to land-tax.

19,298. What do the farmers pay?—They pay 1*s.* in the £ to Land Tax, I think, but on their low assessment it comes to very little indeed.

19,299. You pay a quarter of your gross income in rates?—Yes.

19,300. What proportion of their income do you say they pay in rates, comparing income with income, because you must compare like with like?—One paid six guineas each half year of last year on a farm of 537 acres, and three guineas on the farm buildings: that is only 18*l.* 18*s.* a year to local rates, while the rector paid 56*l.* for the same period.

19,301. You say you pay one-fourth of your gross income, as I understand you, in rates; what proportion of their gross income do they pay in rates?—That is rather a difficult question to answer. It is a difficult thing to get at a farmer's income.

19,302. You put down here the word "comparison," and I thought you were prepared to give it to us?—I meant a comparison with my own nominal income only.

19,303. You say next, "Land is not assessed at its full annual value"—and details of that you have given us?—I might say with regard to that, that the assessment has gone down 300*l.*, the rates have gone up 40 per cent., and with an increase of rates of 40 per cent., the farmers are paying 60 per cent. less rates than they did in 1893.

19,304. The burden has been shifted from them to you in part?—Yes; I pay a fourth of every reduction.

19,305. Would you just elucidate that proposition you have on the next page of your memorandum—"As a matter of simple justice either all incomes, from whatever source arising, should be assessed to local rates or clerical incomes should be freed from such assessment." Would you, for the purpose of rating, compare the income of a medical man, for instance, in the neighbourhood with a clerical income, seeing that the income of the medical man arises exclusively from personal services paid in personalty—in cash?—I will take a hypothetical instance—

19,306. He may not occupy any land at all except that upon which his house is built?—Yes, and under those circumstances, of course, he only pays rates on his house or, to be exact, on the land that his house is upon.

19,307. Do you suggest that he should pay on his income?—I think, as a matter of common justice, every income ought to be rated, if one class of income is rated, whether drawn from land or otherwise.

19,308. But the local authorities are concerned with land in their locality?—Yes.

19,309. And that is what they have to deal with?—Yes.

19,310. Then if a man, without occupying any land except the house or the room in which he lived, went to live in a parish, and spent his income there, you would rate him for coming?—Certainly.

19,311. Even although his coming might benefit the parish?—I think everybody in the State ought to pay rates, and not only on land. All personal income should be rated if one class is rated—that is, if the clergy continue to be rated on their incomes. Taking the figures altogether, I believe about three-fifths of the payers of income tax in the United Kingdom do not pay anything to local taxation.

19,312. Is a clergyman rated in respect of his income, other than that which he derives from the land of the parish?—No, I think not.

19,313. Supposing a clergyman writes books and makes 200*l.* a year, is he rated on that?—No, he is not rated on that.

19,314. He is rated on that which he draws from the land in the parish?—Yes.

19,315. If, therefore, the incomes derived from all the land in the parish are rated similarly, your grievance would go from that point?—No; I think that if all incomes, from whatever source derived, were rated, then he would be rated upon the writing of his books, and should be so. Either all rates should be taken off the incomes of the clergy from tithe rentcharge, or everybody should be rated on their incomes.

19,316. At present income, as such, is not rated except in so far as it is derived from the land in the locality?—Yes, but the sole income of a large number of the clergy is derived from tithe rentcharge.

19,317. Rating land or the income arising from land is an intelligible principle, at any rate?—Yes.

19,318. And that is the principle which is now in force; but rating income, other than that which is derived from land, is not in force?—That is so.

19,319. So that, as an occupier of land, you are not treated differently from other people?—Pardon me, yes. I mean to say the income of the benefice is for a particular and special purpose; and if a man happens to write books or to earn something in any other way, that does not touch the case at all, because he could not do anything further to increase his income from the land, and he is rated on that income for services performed.

19,320. A farmer occupies the land in order to perform a special service, too—to wit, to produce food for mankind?—Yes.

19,321. A clergyman supplies something which is not quite so material, but both of them occupy land?—Yes.

19,322. Both of them have income derived from the occupation of land?—Yes.

19,323. Both are rated in respect of their occupation?—Yes, but while the clergy are rated on 1½*th* of the produce of the land, the farmer is not rated on the other 1½*ths*. He should be so rated to put the two cases on an equality.

19,324. So far, in principle, what difference is there?—But, then, in perfect justice, the farmer ought to be rated upon his income. The farmer should be rated on his income the same as the clergyman is. That would be justice; at present it is not justice.

19,325. But the farmer makes his income?—The farmer makes his income; and so does the clergyman make his income by work or duty performed.

19,326. But not in respect of the land?—No, not in respect of the land; but the income is given for a particular duty.

19,327. He gets paid for his services?—Yes.

19,328. And he has a benefit in connexion with the land—the farmer's income arises from his industry in connexion with the land; but the clergyman's industry is in another direction?—Yes. The clergyman would be very glad indeed if his extra work could increase his income the same as the farmer's does.

19,329. That is another point?—In perfect justice, the farmer ought to be rated on his income if the clergyman is.

*Rev. R. F. McLeod.*

8 June '98

Income, rating in respect of from whatever source would be a fair system. The clergy are at the present time rated in respect of their incomes.

*Rev. R. F. McLeod.*  
8 June '98  
Land, valuation of: Assessment Committee of farmers value land at a low figure.

19,330. (*Chairman.*) Your point, as I understand the matter, is this, that although the income of the clergyman is derived from land, he has to do for it certain services which are an inseparable incident to the enjoyment of the income, and which, if they were attached to other incomes from land, would diminish its letting value, which is the test of the value of property for rating purposes; is that so?—Yes, I believe so.

19,331. (*Mr. Smith.*) You have given us some most startling evidence of under-assessment in your parish. You are the overseer, I think?—Yes.

19,332. Do you value this land at that low valuation yourself?—No, I do not.

19,333. Do you value it at what you consider the proper valuation?—I have no power. I appealed against it some years ago, and the Assessment Committee was simply guided by one particular farmer.

19,334. Do you ever make a new valuation list?—That is what I am pressing for at the present time.

19,335. How long is it since you made one?—A new complete valuation list was made in 1894 or 1895.

19,336. Were you in office at that time?—No, not as overseer.

19,337. You consider, as overseer, there is most urgent necessity for a new one?—I do; and I have pressed that upon the Assessment Committee. I have asked them, if they do grant it, that they will not allow any of the local people to take any part in the assessment.

19,338. Do you ever see the Surveyor of Taxes in your district?—No.

19,339. He is satisfied to take the valuation of this Assessment Committee?—I suppose so.

19,340. The gross?—I presume so.

19,341. Do you ever hear that the County Council complain of the valuation of your parish as regards the basis?—No, never: I have heard no complaints.

19,342. (*Mr. Dalton.*) Do they adopt the same basis for county rate purposes?—Yes.

19,343. Is the county rate valuation the same as your own local valuation?—Yes, because the county rate is sent on to the guardians, and they send it on to the overseers.

19,344. Have they a separate county rate basis of their own?—Yes; but it is much about the same.

19,345. Do they enter that at the same amount as your guardians do?—Just about the same.

19,346. (*Mr. Smith.*) Would you mind telling me what class of people own this land—does it belong to farmers?—Yes, farmers.

19,347. They are not hereditary proprietors?—No, it is land that they bought when it was down in value.

19,348. They bought it when it was down in value, and they keep it down?—They have not only kept it down, but they are continually forcing it down.

19,349. I think you gave us one case—I do not want names—of land that the owner admitted was worth 2*l.* an acre, but which was valued at 2*s.* odd?—2*s.* 7*d.*

19,350. (*Chairman.*) Is there anything you want to add?—No, nothing more.

The witness withdrew.

Adjourned.

## FORTY-SIXTH DAY.

Thursday, 23rd June 1898.

At St. Stephens House, Victoria Embankment, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.  
C. A. CRIPPS, Esq., Q.C., M.P.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*  
T. LLEWELYN DAVIES, Esq., *Assistant Secretary.*

Mr. ROBERT VIGERS called and examined.

19,351. (*Chairman.*) You are professionally engaged as a valuer and surveyor in London, as I know?—Yes, and I am president of the Surveyors' Institution at this time.

19,352. You have some opinions and suggestions to put before us, I understand, with regard to the subject which is remitted to the Commission?—I have been in practice for a great many years, and I have had a very large business in connexion with rating all descriptions of property—public companies, railways, gas companies, and water companies. I assume that I have been asked to come here more especially to answer questions with reference to the subject than in order that I should broach any subjects of my own.

19,353. Let us take, in the first instance, that matter which you have yourself mentioned, the rating of railways and other trading properties; I understand you to say that you think there is no difficulty in dealing with them if they are taken before the proper tribunal?—That is my opinion. I think that the mode of rating railways is a very proper one, with one exception that I would make, that is, that a company, which is mainly rated upon the rent it would produce by finding out

what profits a tenant could make, is dealt with by the various parishes in small sections, and sometimes a difficulty arises in dealing with these small sections; but if the railway was rated as a whole, and then fairly divided amongst the parishes upon the parochial principle, I do not think there would be any difficulty at all.

19,354. Do you think that suggestion which you have just made, and which has been put before us by other witnesses, would be a distinct improvement upon the present system?—I think it would be an advantage to the parishes, as they would get their fair share of the rateable value, and I think it would be an advantage to the company, because it would only be dividing the whole rateable value of the property. Now a parish rates the small section that may be in the parish, and to avoid an expensive contest the railway company will give way, and does give way in the several parishes, and if you make up a total of the whole, it comes to a very large rating of the one property.

19,355. You would not put it the other way—that the parish fears to contend with a large corporation, and sometimes does not get its full amount?—That

Railways,  
valuation  
of: Method  
of valuation.  
Amount of  
deductions  
allowed.

may happen, but my experience is that it is the other way; and I represent at the present time entirely the rating of the Chatham and Dover Railway, the Metropolitan District Railway, and some other railways, and I act for the large companies generally.

19,356. But apart from the question of the method of arriving at the valuation, have you anything to say to us as to the principles which you think ought to be taken into account in calculating the value?—No, I think the basis of the whole valuation is taken upon a fair principle. The only questions that arise, in my experience, are as to what the deductions should be. There has been, for a great many years, a deduction made of  $17\frac{1}{2}$  per cent. for the tenant's profit, interest upon capital, and contingencies.

19,357. Would you have any objection to stating first, so that we may have it in your own words distinctly upon the notes, what, if you had to value such a subject as the Chatham and Dover Railway or any large railway, is the process which you would go through to arrive at a fair valuation before dividing it amongst the various local authorities interested?—I should take the gross earnings, and I should deduct all the proper charges for working and producing those gross earnings.

19,358. Would you get those two figures from their balance-sheet?—Those two figures can be got from the balance-sheet in most cases.

19,359. What next would you do after that?—Then I should take  $17\frac{1}{2}$  per cent. upon the earnings to cover the 10 per cent. that the tenant would expect for his profit, the 5 per cent. which is the interest upon capital, and the  $2\frac{1}{2}$  per cent. for contingencies.

19,360. (Mr. Cripps.) Would you take that on gross earnings, or what?—I say that you would take the  $17\frac{1}{2}$  per cent. upon the balance after you had deducted the proper charges from the gross earnings.

19,361. (Chairman.) Would the remainder be the cumulo valuation of the subject for assessing purposes?—I think it would.

19,362. And that would be the figure which you would proceed to divide amongst the various local authorities interested?—Yes, based upon the parochial earnings principle, which the railway company follow to show what is earned in each parish.

19,363. I would like to understand that: How can they tell, for instance, what is earned on the Metropolitan District Railway in the different parishes it runs through?—They do that now by dividing it up; for instance, a ticket issued on the railway is divided up according to the parishes it goes through.

19,364. According to the length of line which is in each parish?—Yes.

19,365. What is done about the stations?—The stations are always valued separately.

19,366. I want to get you to explain to me the whole process. We have got to the point that off the gross earnings the working expenses would be taken, and off the remainder  $17\frac{1}{2}$  per cent. ?—Yes.

19,367. Was that to be the sum upon which the railway company as an undertaking was to be rated?—Yes; then if the stations are valued separately you deduct the value of the stations from that gross sum.

19,368. On what principle would you proceed in settling the value of the stations?—According to what it would cost to produce such a station.

19,369. (Mr. Cripps.) You would take structural value, in fact?—Yes.

19,370. (Chairman.) Would you take, not what it did cost, but what you say it ought to cost?—What it did cost or what is its fair value at the time you make the valuation.

19,371. Could you conceive a set of circumstances under which the stations as a whole, valued in that way, would eat into the whole sum which the railway company has to pay, and leave very little for the parishes in which there are no stations?—Yes. Years since, when I first had to deal with the Chatham and Dover Railway Company, they did not earn enough to pay their expenses, but then the parishes all got the value of the stations, because they kept those separate.

19,372. When the Chatham and Dover was not paying its expenses what was it rated upon?—It was rated on nominal sums, which represented in most cases out of the London district the value of the land upon which the railway stood.

19,373. (Mr. Cripps.) It was paying its debentures, was it not?—No, not at that time.

19,374. (Chairman.) That is very largely the existing practice, as I understand, as to the amount on which the railway company is to be rated?—Yes, I think so. I am representing a small railway called the East and West Junction, which is a junction between the North-Western and the Midland. They do not earn enough now to pay their expenses. The parishes have all rated that railway. Every parish that it goes through has got a rateable value based upon the cost of the structure of the stations, and a sum for the land that it passes through.

19,375. Have you anything to say as to the principles which would guide you in valuing such undertakings as either a gasworks, or docks, or electric lighting companies?—As to how they should be dealt with, supposing we disagreed, do you mean, in order to arrive at a settlement between the parties representing the two sides, the dock company and the parishes?

19,376. I will put the question in another way. Would you think it desirable that a central authority should act in valuing such undertakings as I have indicated?—Yes, certainly; but it should be a central authority represented by men who have some knowledge of dealing with such things. For instance, I have for a great many years represented the Gas Light and Coke Company, which is the largest gas company in London; that is dealt with in the way that I have said I think railways should be dealt with, that is, by ascertaining the value of the whole concern, and then dividing it up amongst the parishes. But where there is a difference of opinion, I do not think we have any satisfactory court to go to to settle that, and my experience is that it is a very indifferent way in which it is dealt with now. A man very learned in the law is not a good man for dealing with commercial undertakings; it wants someone who is in the habit of dealing with such things.

19,377. Apart from the valuing authority, would you like to see a central body analogous to the constitution of the Railway Commission appointed for the decision of rating appeals in all cases of public companies, such as railway companies and gas companies?—Yes, and for other things too. Properties, for instance, are valued, beginning at the basis, by the assessment committee or the overseers; and you find—at least that is what my experience teaches me—that a row of houses practically all the same are put at different values. Take houses here in London, and you will find that a large house is put at a certain figure, and an adjoining one, which is smaller, has a much larger valuation put upon it. All those things are very inconsistent, and they create a great deal of trouble and expense. There is a row of houses at Lancaster Gate. All the houses are very much alike you will find, although there may be a small difference between them; in many of the cases there the smaller houses are put at larger amounts for rating purposes.

19,378. If you have to value a gas company fairly both to the gas company and to the different local authorities concerned, what is the principle upon which you would proceed to divide between the local authorities the gross amount at which the gas company should be rated?—It should be based upon the earnings in the parish. I should always keep to the earnings in every parish.

19,379. Why the earnings?—I do not think there is any other basis. It is the gas consumed in the parish which forms the basis of the value.

19,380. I want you to get rid, in your own mind, of the fact that a certain thing is done now under decisions of the courts; I am going behind that, and I want to know what, in your opinion, is the best system—not what is the effect of the present system?—I think the best system is to divide it according to the gross rental income of the parish. If there is a main now passing through a parish which is not tapped to supply, that main is rated upon its gross structural value beside the earnings in the parish.

19,381. Are you aware that Mr. Livesey, the Chairman of the South Metropolitan Gas Company, has been before us and made serious complaints of the effects of the very system which you are recommending?—No.

19,382. I am sure that, with your knowledge, you will be able to take it in if I read you these sentences; if not, I will give you the print in your own hand. He

23 June '98

Effect of this system upon South Metropolitan Gas Company and Crystal Palace Company.

says: "The result is unequal and uncertain assessments." "To show the inequality of this system, two gas companies supply the parish of Lewisham. The rating surveyor advising the assessment committee settled with the Crystal Palace District Gas Company at a rateable value of 4 per cent. on the receipts for gas in the parish, and the same surveyor at the same time claimed a rateable value of 21 per cent., reduced, on appeal to the committee, to 16½ per cent., on the receipts of the South Metropolitan Gas Company. . . . The price of the gas of the Crystal Palace District Gas Company was 2s. 8d. per 1,000 feet, and that of the South Metropolitan was 2s. 4d. per 1,000. The first-named company paid 14s. 8'66d. per ton for its coals, and the last-named 10s. 6'56d.—the net cost of the former, after deducting the receipts for residuals, was 4s. 9'84d. per ton, and that of the latter was 1s. 4'34d. I have always found that a low net cost for coal means a high assessment. It is one of the defects of the present system that the better a company serves the consumers the higher it is assessed. The profit per 1,000 feet was 9½d. for the Crystal Palace and 11½d. for the South Metropolitan. If 4 per cent. was right with a profit of 9½d. per 1,000, 5 per cent., and not 21 per cent., would be right for a profit of 11½d. per 1,000. The receipts of the Crystal Palace Company in the parish were 37,800l., and the company was assessed at 1,513l. Those of the South Metropolitan were 31,700l., and the same rating surveyor claimed 6,650l. A system that permits such glaring inequalities cannot be other than unsatisfactory and wrong?"—You say the Crystal Palace Company got a settlement with the surveyor; was it the same surveyor, does he say?

19,383. Mr. Livesey says so?—Then I cannot account for it at all.

19,384. (Mr. Cripps.) Does not Mr. Livesey's statement come to this—I have only been listening to it, and I have not read it—that in that you arrive at what the hypothetical tenant would give by means of the earnings, the more prosperous the company the larger amount the hypothetical tenant would give?—Yes.

19,385. Therefore you would rate it at a higher figure?—Yes.

19,386. (Chairman.) Is that what you say in answer to that?—Yes, certainly. The Crystal Palace Company is a small concern, and does not make such a good profit, and would not get such a liberal tenant as the South Metropolitan.

19,387. That throws us back upon the question of whether, in your opinion, the idea of the hypothetical tenant is the right idea in the abstract?—I have never been able to form any other better opinion than that I have always acted upon it, and have got for the Gas Light and Coke Company very reasonable and fair arrangements with the parishes. I have acted now for more than 20 years for them. The only contest we have had was about five years ago. We were very uncertain as to the way in which the matter was dealt with in the court. We had been for years making arrangements with the parishes which came out, although it was worked out at an average rateable value of somewhere between 9 and 10 per cent. upon their gross earnings; but then it went to the court against my advice, and the company were put up to 15 per cent. At the last Quinquennial I had to do the same thing again for them, and I have got them back again to what was fair—that is, between 9 and 10 per cent.

19,388. (Mr. Cripps.) You stated that at the present time all these companies are rated on the basis of what a hypothetical tenant would give?—Yes.

19,389. Supposing we are to have equality in local taxation, if you can apply that principle fairly would that bring about equality as between these big public companies and the ordinary landowner?—Yes, I think so.

19,390. It is really applying, though it is a somewhat complicated process, to these big public companies exactly the same principle as you apply to the ordinary landowner?—Yes, I think so.

19,391. I need hardly ask you, that in your view of course equality is the most essential element in rating matters?—Yes, it is.

19,392. Of course, as we know, in order to arrive at what the hypothetical tenant would give, you start from the gross earnings?—Yes.

19,393. In reference to what Mr. Livesey has said, the more prosperous the company the more a tenant is likely to give for it?—Yes.

19,394. Then, you say quite fairly, that you take off from the gross earnings the working charges?—Yes.

19,395. But I did not quite follow you after that; the difficulty in these cases, and what causes so much complication, is to ascertain what the tenant's capital would be?—Yes.

19,396. I understood you to say that the tenant's capital would be taken by deducting the working charges from the gross earnings, but that is not so, is it?—It is now.

19,397. Not in all cases?—With railway companies, yes.

19,398. Very good; you say it is so. I will take a gas company, as that is a very good illustration?—A gas company is different, because you can get at the capital.

19,399. Or a dock company?—The dock company the same.

19,400. Therefore, what you say about working charges and gross earnings would not apply to a gas company or to a dock company?—No.

19,401. You have, as I know, had a great deal to do with the big dock companies in London?—Yes.

19,402. One of the most complicated matters which leads really to the greatest expense, as a rule, is to arrive at this element of tenants' capital, is it not?—Yes, there is always a very great difference of opinion about it.

19,403. I mean it is a matter on which people of the highest expert views very often differ considerably?—Yes.

19,404. Now, I should like to ask you this, because I think this is the first important point; can you make any suggestion for arriving at the tenant's capital as regards companies generally, apart from these expensive inquiries which are now gone through?—No; take, for instance, the dock companies; you are bound to make a valuation of what the capital comes to, and you are obliged to value all the working stock; I do not know any other way of getting at it.

19,405. You do not think there is any short cut, I was going to say, but you do not think there is any way of getting at it except by this method of valuation?—I think not.

19,406. Take, for instance, the case of the dock companies; perhaps, in order to arrive at a portion of the tenant's capital, for an individual parish you might get figures about as high as this table?—Yes, you get very large figures.

19,407. Very large indeed; and that is one of the great elements of expense?—Yes.

19,408. You do not see any way of getting rid of that expense?—I do not see how you are to avoid it. The dock companies, you know, as a rule keep a valuation of that kind.

19,409. Yes, but then their view may not be accepted by the parish?—That is it.

19,410. Of course, if this arriving at the tenant's capital which we have to get at is a matter of expense, you could very much diminish that by rating the industrial concern as a whole?—Yes, and then dividing it.

19,411. I mean the expense is very much increased by having to go through this process for each parish?—Certainly.

19,412. And also you get a great deal of complication by having to go through this process for each parish?—You get a great deal of complication by dividing it up.

19,413. Is there any reason, in your opinion, why all these big public companies should not in the first instance be rated as a whole, and then the amounts allocated?—I know of none.

19,414. I will go a little further than that. Do you think it would be a great advantage, judging from your experience, to have these big public companies rated as a whole, and then the amount allocated between the different local authorities?—I think it would.

19,415. I think it is pretty obvious—I am putting this to you—that if it could be done in that way, a very

Mr. R. Vigers.

23 June '98

Companies, such as dock, gas, and railway companies. Method of arriving at tenant's capital. Difficulties of ascertaining this.

Companies, such as dock, gas, and railway companies. It would save much expense if they were valued as a whole, and then the valuation allocated to various parishes according to amounts earned in them.

Mr. R. Vigers.

large amount of expense might be saved in the aggregate?—A very large amount.

June '98

19,416. You would get the tenant's capital once for all, and there would be an end of your trouble?—You see in a long line of railway you would only have one valuation to settle, and then you would only have the division according to its earning powers in each parish.

19,417. To value in one parish you have got to go through the whole expense theoretically of obtaining the value of the whole, plus the difficulty which arises from having, after that, to separate it out for the particular parish?—Yes.

19,418. Take the London and North-Western Railway; you might have 50 or 60 cases, whereas one could be dealt with more easily?—Yes.

19,419. There is one other point you have mentioned. As regards the court, you have a view that these valuation matters should be dealt with by someone who is not learned in the law?—I think, you know, that it should be a court, because there are legal questions always arising necessarily; but it wants someone associated with that court who knows something about commercial matters to deal with those things.

19,420. From your experience, the matters which come before courts of law in these rating cases are all matters of principle, are they not—they are not matters of figures? I am talking about the High Court?—When a thing gets up to the High Court, I suppose it is all a matter of law then.

19,421. Therefore, so far as the High Court is concerned, where these questions of principle and law are raised I suppose you have no suggestion to make, and that you would not supersede the High Court in any sense?—No, certainly not.

19,422. We begin from the assistant overseer and go up to the assessment committee, and then we get, of course, the appeal from the assessment committee to the court of quarter sessions?—Yes.

19,423. It is at that point, as I understood you, that you would like some difference in the court?—Yes.

19,424. Do I follow you that instead of the court of quarter sessions you would have some court in which there was a considerable element of valuation experience?—Yes.

19,425. Can you make any suggestions as to what you would desire?—No, I would rather not make any suggestion about that.

19,426. As regards illustrations of difference in rating, I think you gave an illustration with reference to Lancaster Gate?—Yes.

19,427. Does that difference, which of course results in inequality, arise from the parish areas which are utilised now for rating purposes?—No, I imagine it arises practically from someone making the first valuation who does not go sufficiently into detail.

19,428. Supposing two houses in Lancaster Gate—taking your illustration—came under the same rating authority and were dealt with by the same court, why should you get inequality?—I cannot understand it. I have tried to get them equal, but I have not succeeded.

19,429. I mean, there can be no reason, in principle, why you should have inequality?—There can be no reason. It is because of that that I think you want a court composed of people who are competent to understand such matters.

19,430. As you have told us you have had experience—and really I know an enormous experience—in all rating questions in all parts of the country, not merely in London?—Yes.

19,431. As regards the present areas, the parish area and the union area, do you think you would get better equality of rating by having those areas enlarged?—The larger the area you bring to be dealt with by one mind, I say the greater equality you will get.

19,432. Supposing you were taking a county area instead of a union area, do you think you would be more likely to get equality as regards all properties in the county?—Yes, certainly.

19,433. And that would be, in your opinion, an important reform?—I should think it would.

19,434. About the most important matter is, is it not, to get equality?—Yes, you want to get equality.

19,435. (Mr. Clara.) Applying the principle of one authority over the whole county of London, do you

think it is possible that you can create an assessment body that would undertake the detailed assessment of the whole of the properties in the county of London. Would it not be necessary to subdivide the county up for the purposes of the detailed assessment?—I do not think you would get an unpaid committee who would take the trouble to do it. That is how it is now; we have got an unpaid committee to begin with to make these valuations, and that is, of course, why there is the inconsistency.

19,436. Do you not think the desired result would be attained if there was a central body to lay down the general principles which the subordinate bodies were to carry out?—That would assist, but it is in the detail where the great difference is. They may carry out possibly, or be supposed to carry out the same principle, but it is not carried out, because it is done by someone who does not take the trouble to see that two houses are alike and to put them at the same price.

19,437. Assuming that professional experts were engaged in each district of a county, we will say, to prepare the valuation list in accordance with instructions given from the central body, do you not think that that would tend to bring about uniformity of assessment?—No doubt it should, and I think it would.

19,438. It would be absolutely impossible for one man to supervise the detailed assessment of the whole area of the county?—Yes.

19,439. In any case it must be subdivided?—It must be subdivided in certain cases, but the larger the divisions you make, the better you will get your valuation made.

19,440. Take the county of Lancaster: do you think it possible for any one man to value the whole of the county of Lancaster?—Yes, one man could take the lead, and could value the whole.

19,441. With regard to the railways, I understand you would suggest that it would be advisable to abolish the parochial principle of assessment, and to create some body managing a much larger area for the purpose of valuing railways; would you suggest that there should be a Government valuation for the whole kingdom of each railway, or that there should be a valuation carried out, we will say, by some county authority?—It could hardly be done by a county authority when the railways go into so many counties. I would take the railway as a whole, as a going concern.

19,442. Would you suggest, then, that there should be a Government valuation of all railways, and such like properties, throughout the whole kingdom?—Yes.

19,443. And a subdivision by the Government authority of the total assessment among the different parishes?—This might be done after arriving at that figure. A railway company might be called upon to divide the whole of the earnings of the line into its parishes, and then upon that basis the whole thing could be divided without difficulty, and each parish would get its fair proportion of the gross earnings of the one machinery.

19,444. You quoted a case, I think, of a railway company that was not able to earn sufficient gross receipts to pay its working expenses?—Yes.

19,445. Was that company assessed at any rateable value at all?—Yes, it is assessed now; it passes through some 10 or 12 different parishes, and it is assessed in each parish.

19,446. But at the time that its gross receipts were not equal to its working expenses was the assessment placed upon that undertaking on the basis that some hypothetical tenant would give a rent for it?—Yes, the parishes have all put a value upon it. They valued the stations—the structures—at what it would cost to build them, and they have put an imaginary figure of several hundred pounds upon each parish, which amounts to a very large sum as a whole, and there is no profit at all.

19,447. Of course, the stations are always assessed separately, but taking the ordinary line, how did they arrive at a valuation of a line where the working expenses are in excess of the gross receipts?—I cannot tell you. I am acting for the railway company, and I am going to appear before the tribunal to see what we can do with it.

19,448. As a matter of fact, they do arrive at the conclusion that a tenant would be found to pay rent for a thing which is a losing concern?—Yes, they do.

Mr. R. Vigers.

23 June '98

Professional valuers, rather than unpaid committees, should act under orders of central authority.

Railways and other large companies of a certain class, valuation of: Desirable that they should be valued as a whole, and the valuation subsequently allocated to various parishes.

Railways, valuation of: Principles of valuation. Case of a railway losing money.

Mr. R.  
Vigers.

23 June '98

19,449. Then, if by good management and careful working, the directors of the railway are able to turn that losing concern into a profitable undertaking, I understand the rateable value is then based upon the profits earned?—Yes, upon what the tenant would pay for coming in to occupy that railway upon the chance of earning that profit—how much rent he would give for it.

19,450. In other words, the intellect and capacity of the management is taxed for the purpose of the local rates?—I do not think you could quite put that construction upon it.

19,451. We will take the case of a railway which is a losing concern under a given management; a change of management takes place, and it is converted into a paying concern; is not the natural conclusion to be arrived at that it is the ability and capacity of the new management that has brought about that change of circumstances?—In that way, yes, certainly.

19,452. If the result of that change is to increase the rateable value, does it not follow that the rateable value has been based upon the product of the intellect and capacity of the people who manage the railway?—Yes, if you separate it in that way. But you see the difficulty is to see what a tenant would give for the right to work the railway without having some knowledge as to what its earning power will be, because you may have the same expenditure on this railway that I am talking about, in forming the machine, as you have expended on the North-Eastern Railway for the same number of miles, but the North-Eastern is in a place where it will earn money, and the other has been placed in a position where it cannot earn money. It is not the management that makes the difference; it is that the line is in such a district that there is no traffic for it.

19,453. Supposing you take the case of a parish where to commence with there is no railway, and a railway comes and occupies a quantity of land in that parish, which might otherwise be available, we will say, for building or some other purpose; if that railway is badly managed, and is a losing concern, and it should happen to turn out that the valuation of the railway, treated as a losing concern, is less than the value of the land they occupy would have been if it had been utilized for some other purpose, is not that a hardship upon the remaining ratepayers of the parish?—Yes; but it shows that you have constructed and spent a large sum of money that is useless, the same as you might build a house that will not let or a factory that will not let.

19,454. Do you think it would be at all a fair suggestion that if the railway company occupies land in the parish that you should take the value of the land plus the expenditure that they have incurred upon it, and then take a certain rate of interest upon that as representing the rateable value of the undertaking in that parish?—If that was the general way of rating railways it would be a very good thing for the railway companies and a very bad thing for the parishes.

19,455. Do you think it is unfair as between one set of ratepayers in a parish and another that a company comes in and occupies some land which is producing to them some rateable value, and the company not only pay upon that rateable value, but in addition they pay upon the capital they have expended upon it; is there anything unfair to the rest of the ratepayers in that?—I think it would be very hard upon the company, when they had created a railway that did not earn anything, that they should be rated upon it.

19,456. But is it not equally hard upon the others?—That they should be rated for the land, I admit. They have occupied the land, and they should be rated for the land. In acting for a railway company, I never refuse to pay for the rateable value of the land on what it is worth.

19,457. Take the case of a corporation waterworks; we will say a reservoir, for instance, which supplies the waterworks, is rated at far more than the value of the land oftentimes?—I have had a great deal to do with water companies. A reservoir is rated at what the land is worth for any purpose with the cost of the structure—the cost of the reservoir—added to it.

19,458. That is exactly the point; when you have arrived at the capital cost of the undertaking, you then take a certain per-centage to arrive at what you call the hypothetical rent?—Yes.

19,459. And after making certain deductions you arrive at the rateable value?—Yes.

19,460. Why should you draw a distinction between the case of the waterworks and the case of the railway company?—If the water company was not paying, and you could not find a tenant to give you a rent for it, I should not charge it.

19,461. (Mr. Cripps.) Is that quite accurate? Do you not deal with the reservoir just in the same way as you do with the stations of the railway company?—Exactly.

19,462. (Mr. Clare.) But it is part of the whole undertaking?—Yes.

19,463. They take the whole undertaking and they arrive at the capital cost and then they take the reservoirs?—The value of the reservoir is deducted from the gross earnings of a water company, the same as a station is deducted from the railway earnings.

19,464. (Mr. Cripps.) It is just the same principle in both cases?—Precisely the same principle.

19,465. (Mr. Clare.) How is the 17½ per cent. for tenant's capital arrived at?—It has been my practice to take, as I said before, the 10 per cent., the 5 per cent., and the 2½ per cent.—making 17½ per cent.

19,466. The 10 per cent. for personal services?—Yes.

19,467. The 5 per cent. for interest on capital?—Yes.

19,468. And the 2½ per cent. for contingencies?—Yes.

19,469. Therefore, in the case of railways a deduction is always made in respect of the personal services which have to be rendered in order to earn the profit?—Yes, it is supposed that a man would not take the responsibility of working a large concern of the sort without getting 10 per cent. upon his capital.

19,470. You take the gross receipts, and from the gross receipts you deduct the working expenses?—Yes.

19,471. Which gives the net receipts?—Yes.

19,472. Why have the net receipts any relation to the capital that a tenant has to employ in rolling stock and machinery to work an undertaking like a railway?—It is a rough way of getting at it without putting the parishes and the railway company to the expense of making a valuation of the whole stock.

19,473. I see; it is a compromise to save expense?—It is a compromise. It has been found so often to be so near the amount that it is adopted.

19,474. But really theoretically the 17½ per cent. is based upon capital which you calculate the tenant would have to use in rolling stock and other things to work the line?—Yes.

19,475. (Mr. Dalton.) With regard to this 10 per cent. for personal services, is that for the personal services of the directors?—No; it is for the tenant who is going to work the concern; he wants 10 per cent. upon his capital for his own personal supervision and the use of that capital.

19,476. I suppose the salaries of the persons whose personal services are employed in the carrying on of the undertaking have already been deducted under the head of "expenses of working," have they not?—Yes, the salaries of the staff, which a man if he was the head of an establishment would have to pay, have been deducted.

19,477. Do you think that if the undertaking was put up to auction nobody would bid for it unless in addition to the costs and the salaries of all the persons who are employed, including the directors, they were allowed 10 per cent. upon the whole of this huge capital for personal services?—Not for personal services; it is for the use of capital, because the man has got to buy all the rolling stock and all the engines—he has got to pay for every bit of movable plant.

19,478. That 10 per cent., then, is the rate of interest on his capital?—Yes, and for the supervision.

19,479. And the supervision is accounted for, is it not, under the "expenses of working"?—There must be a head to every establishment.

19,480. Is not that expense charged too, under "salaries"?—Yes, and the services of officers.

19,481. And of directors?—Yes.

19,482. Then who else practically exercises any supervision?—If you were going in as tenant you would want the supervision.

Mr. R.  
Vigers.

23 June '98

Railways,

19,483. Yes, but the directors represent the supervision, do they not?—You would want to supervise the directors.

19,484. As a matter of fact, I suppose the shareholders supervise them, not the hypothetical tenant?—He is a hypothetical tenant, and you never even found the tenant; and I have never found a railway sold by auction.

19,485. Ten per cent. is allowed on the capital for this item of personal services and another 5 per cent. for interest, is it not—that is 15 per cent.?—Yes, there is that 15 per cent. and the 2½ per cent. for risks and casualties—accidents.

19,486. Do you think that with a well established railway company, if it was put up to auction, you could not get better terms than that?—I think not.

19,487. How many years purchase of the rateable value of a company would a railway generally fetch if another company was put forward to work it?—I am not able to answer that question at all.

19,488. You know the rateable value of your companies, I suppose?—The capital is divided into various classes of capital—there are first, second, and third, and sometimes fourth charges. It is impossible for me to arrive at anything from that.

19,489. Do you think that these deductions, amounting to 17½ per cent., should be made statutory deductions, and that any directions should be laid down in the Act with regard to them?—No, I think the matter wants fairly considering at the time. It used to be more. When I first had to do with it they used to make a larger allowance, but now in some cases it is contested that 12½ per cent. is enough. I do not think it is; I have adopted 17½ per cent. both for parishes and for companies; I think that is a fair thing.

19,490. Is 17½ per cent. the amount usual throughout the country?—Yes.

19,491. I mean, is it the practice to allow that?—I say it has been the general practice, but there are some people now raising the question and contending that it ought to be reduced.

19,492. With regard to these houses in Lancaster Gate, have you got the details?—No, I cannot give you the details.

19,493. I suppose the surveyor of taxes has had a word in the valuation of them, has he not?—The way I imagine that it arises in some cases, is that a man who is rated at a moderate sum does not take the trouble to take any notice of it at all, whether it is too high or not, but he pays upon it; and then another man who is put higher, say, feels aggrieved, and he goes before the assessment committee, but does not get any relief, so that the two are left.

19,494. Does not the surveyor of taxes look after the man who is under-assessed?—He should do so.

19,495. We have had it represented that the surveyor of taxes' services are very valuable in that direction?—He should do it you know.

19,496. He, of course, is a paid official?—Yes, and he should do it.

19,497. I rather understood you to say that these irregularities in the valuation in London were due to the fact that there was an unpaid committee?—I think they are.

19,498. But they have the paid surveyor of taxes there?—If the question is raised he may look into it.

19,499. Do you think he does not raise it of his own accord?—I should not think he had got the time. I have never found him raise it.

19,500. (Chairman.) There is one other subject on which I understand you wish to speak to the Commission, and that is as to the proposal which has been made in various quarters, both in public and before this Commission, with regard to imposing a tax upon the values of sites as distinct from the structural value of buildings; is that not so?—Yes. What I gather is that it is suggested that a site value should always be put in the valuation list dividing the whole value, into site value, and value of buildings.

19,501. That is one suggestion which has been made to us; what have you to say in regard to that?—I say that it is almost an impossibility to deal with it in that way. I will give you a case now that I cannot see my way how it is to be dealt with. A site value is fixed at 900*l.* a year—these are absolute figures I am giving you

—after the lease is granted at 900*l.* a year, a man has spent a very large sum of money upon putting up very costly buildings that will produce 26,000*l.* a year, and he immediately sells the ground rent for 3,000*l.* a year. If you are to charge the landowner with the site value it is 3,000*l.* a year, but he is only getting 900*l.*

19,502. What I thought you were rather speaking to when you first began was as to the possibility, and, if possible, the advisability, of separating the present value of any subject into the two component parts of structural value and site value. One suggestion which is made to us is to value the structure as it stands, and then to consider what remains over between that sum and the whole entry in the assessment roll as the site value; what have you to say to the possibility of getting at the separation in that way?—You could separate them in that way, but it would be very unfair to charge the landlord or the landowner with the whole of that.

19,503. Just let us go step by step; I wanted to know whether you think that, as a matter of valuation, that is or is not a practical proposal—we will deal in a moment with whether it is advisable?—It can be done, certainly.

19,504. Do you think it would or would not be a matter of difficulty?—There is no difficulty in separating the value of the structure from that of the land, but in some cases this difficulty would arise: the structure may be placed in the wrong position; for instance, you may get a large house built in a neighbourhood which is not suited for it; you would not get the fair rent for that structure, and the land would be worth more without the structure than it is with it. I do not see how you are going to make that as a general rule. Take a house that is in its proper place, you can separate then the value of the structure from that of the land—take this house, for instance.

19,505. The particular witness who made the suggestion that I endeavoured to convey to you had this very largely in his mind: he said that according to the law there was a certain maximum scale of deductions, and that some authorities in London, if not all of them, gave the maximum scale of deductions without regard to the circumstances of the individual property. He pointed out to us that if that was done in two districts, such as the City of London and Bond Street, where sites were very valuable as compared with structure, and if it was also done in places where the structure was probably of more value than the site, such as outlying places at Fulham, or places long built over, and just south of the Thames, then the giving of the maximum scale of deductions in both cases wrought injustice in the respect that the district in which there was high site value, which was not, in his opinion, entitled to deduction, got a benefit at the expense of the other district. What have you to say to that?—I say that it is very inconsistent if they do adopt that plan, and he is quite correct.

19,506. Do you know, as a matter of fact, whether it is not the case that that plan is largely adopted?—In many parishes, yes, it is.

19,507. And you would condemn it?—Yes.

19,508. What do you suggest in its place?—To deal with it fairly would be to make the deduction for repairs upon the structural value only.

19,509. For that purpose you would, of course, have to separate the one from the other?—Yes, and there is no difficulty in it.

19,510. Apart from that, do you wish to express any opinion upon the propriety or the fairness of imposing a rate upon site values, or as I suppose it may be more usually expressed, upon the ground rent?—Yes. If the division was made at a time when both the owner and the lessee are free agents, then I do not see any objection to divide it, or for the landlord to pay rates upon a certain proportion of the value of the property. But there is this difficulty, that there is no ground rent created, according to my experience, but what is of very much greater value before half the lease has run out than when it was first granted; and the tenant is getting the whole of that benefit, and the landlord gets none of that benefit. I could give you an instance in the City of London where a ground rent was granted for 99 years at 100*l.* a year, the tenant put on a building that would produce another 100*l.* a year for the structure, that is 200*l.* a year; when 40 years of that lease had run out the house was let at 600*l.* a year. In that case the landlord only got 100*l.* a year for his site

Mr. R.  
Vigers.

23 June '98

Deductions in Metropolis: Maximum scale is largely adopted, and is not a fair system.

Site values: Objections to rating in respect of site values.

23 June '98

Valuation: Inequalities in valuations in metropolis.

Site value and structural value can be valued separately, if the building is suitably situated.

Mr. R.  
Vigers.

25 June '98

for the remaining 50 years, while the tenant was receiving the improved value of the site. Now that goes on constantly everywhere, and you will find that when a 99 years' lease has run out, that is upon ordinary property, with the generality of property, the land is worth more to clear it and to put a new building upon than it was at the beginning of the lease.

19,511. Then I put to you this question: Is your objection to the proposal on account of its unfairness, or on the ground of the difficulty of putting the burden proposed to be laid upon the proper shoulders?—I say both. The landlord invests his money at small interest upon a property that is safe and certain, and not to be dealt with in any way. He has got that certain income. The tenant besides has to invest his money, and should get a larger interest, because he has to stand all the contingencies—he has to meet them.

Building lessees entering into a contract for a long series of years take the question of rates into consideration.

19,512. Some witnesses have told us this—and I think, from your professional experience, you would be able to express an opinion upon it which would be of value to us: They have said that when an estate is either put out for building for the first time, or the leases have run out and a site is cleared for the building for the second term, intending offerers for the right of building upon it go through this calculation in their minds:—They look at the area and the situation, and the advantages, what it will cost them to build a suitable structure upon it, what they would be able to get for it as an outlay, and with the assumption that the rates will be so much in the £; they then offer to the ground landlord what they think they can fairly afford to give, and their offer would be different if they were not to be saddled with the payment of the rates. In the first instance I ask you: Do you confirm the view that that is a calculation which prudent men of business go through when they are going to enter on such a transaction?—Yes, and that is clearly shown by the fact that land in a parish where rates are low will fetch a greater price per foot than where they are high.

19,513. Do you think that those who are undertaking a building lease for a long series of years make that consideration a prominent one in their calculation?—I have no doubt they do.

19,514. Is that one, at any rate, of the reasons on account of which you have just said you think it unfair to interfere with the incidence of rates in the middle of a contract?—Yes. You will find in every case that a man takes a piece of ground undertaking to pay all the charges that may be put upon it, and the moment he has made his expenditure he could create a much larger ground rent than he is paying.

19,515. I do not quite follow that?—A man takes a piece of ground, as I have shown you by this instance just now, at 900*l.* a year from the freeholder. The moment he has purchased that 900*l.* a year, and has put up his building, he creates a ground rent for a lease of 99 years, and he sells that ground rent at 3,000*l.* a year. The landlord only gets the 900*l.*, while the tenant who has created the improved ground rent, and pays the 900*l.* a year, sells it for 3,000*l.* a year.

19,516. Some people have urged that, notwithstanding what has been said against it, that it is fair to impose a rate upon ground values for this reason, that if the leaseholders chose to combine they could dispose of the property in a better way than they do by maintaining the old buildings; have you any comment to make upon that?—That the leaseholders could?

19,517. That all having an interest in the land could, whether the first or the second leaseholder or the ground landlord?—Probably if they were to combine they could, but you have got to get them to combine. Another difficulty is that the ground rent may be in the hands of trustees where no combination can be made. Most of our ground rents are in the hands of trusts in some way or other, who could not make any combination.

19,518. I suppose you would agree that the determination of a person holding one leasehold interest in a large area standing out and not being removed would operate in one or two ways—either he would prevent a combination of the others, or he would by standing out force a larger price to be paid to him than the intrinsic worth of his interest?—He might do so. I do not see how you are to deal with it.

19,519. (Mr. Daltor.) Every scheme for rating site values must involve an alteration of existing contracts, must it not?—Yes.

19,520. And it will have a most serious effect upon recent contracts, I presume?—It will be very serious indeed for the ground rents to be charged with a tax, I was going to say, but if there is no fixed ground rent—if both parties are free—then if you like to fix a tax upon the ground rent, I do not see any objection to it.

19,521. I understand the proposal to rate site values is that the rating is to be universal over an area, and that it is not to be confined to cases where the owners and occupiers are free to enter into their own contracts?—Yes, I gather so.

19,522. What would be the result of upsetting a contract for a building lease that was entered into a couple of years ago, where all the rates were taken into account—you say that they invariably do take them into account?—Yes.

19,523. In London the average rates are about 6*s.* 8*d.* in the £, are they not?—Yes.

19,524. That would be about 33 per cent.?—Yes.

19,525. It would be equivalent to putting that additional charge upon the man who has just entered into the contract, would it not?—Upon the owner, yes.

19,526. It would be making a present of that to the tenant?—Yes.

19,527. Who, you say, generally makes the most out of these bargains?—He is sure to get a profit out of the landlord; the landlord never gets the full ground rent.

19,528. If you go further back a long way, it would not be so serious; if you have got a building lease 80 years old, and the owner is coming into his reversion shortly, he would have an additional rate put upon him for a limited period—for the remaining 19 years of the lease?—Yes, but the site value would, in all probability, be about three or four times as much as the ground rent he was receiving, so you take the whole of his rent away from him.

19,529. I do not think that any of the proposals that have been made to us have been that he should pay the whole of the site value; they have been that he should pay a proportion of it, that is to say, the proportion that his ground rent bore to the site value?—I think it would be a very great pity that we should introduce such an element into the value of property. It would create quite a revolution.

19,530. I am asking these questions to draw attention to the fact that it is the owners who have entered into recent contracts who would suffer the most. The owner who had entered into a recent contract would suffer far more than the owner who entered into a contract 80 or 90 years ago, and would only pay it for a short period?—He would pay it for a short period under that lease, but he would continue to pay it, as it would always be a charge upon his property when it came into his possession when the leases were out.

19,531. When the leases were out, it would not matter to him whether you called it site value or not?—I say make them free agents, and then I do not mind if you put a tax on it; but all the while there is an existing lease I think it is a great hardship, and it would be a most serious thing for charitable institutions and educational institutions, where all their money is invested in ground rents, or nearly all.

19,532. What would be the cost, do you imagine, of separating site value from structural value as compared with the present cost?—You see you would be obliged to have somebody who is able to value the building and the structure, to tell you what it would cost to build the structure.

19,533. That is for every property?—Every house.

19,534. Would you require a skilled valuer?—Yes, certainly.

19,535. The cost, I suppose, in London, would be very great?—Yes.

19,536. And there would be a great number of disputed cases, I suppose?—Yes, I should think so.

19,537. And a great deal of litigation?—A great deal of litigation, I should think.

19,538. You cannot form any estimate at all what it would cost?—No.

19,539. (Mr. Clare.) You gave a case where a piece of land was sold by an owner at a ground rent of 900*l.* a year?—Yes.

Mr. R.  
Vigers.

23 June '98

Site values: Rating in respect of site values, though not objectionable, if the parties to a bargain were free, would involve an alteration in existing contracts in the fixing of which the question of rates has been taken into account. It would be making a present to the tenant, who in any case usually makes a better bargain.

Site value and structural value: Separate valuation in metropolis would cost a considerable sum and lead to litigation.

Mr. R. Vigers.

23 June '98

Site values, rating in respect of: If owner of site value sells a site for a capital sum instead of taking a ground rent, he escapes taxation.

19,540. That 900*l.* a year would be based on the fact that the purchaser for the 99 years, we will say, had calculated that he would have to pay all rates and outgoings on the buildings that he contemplated erecting?—Yes.

19,541. And that after calculating what those buildings would produce, and what all those undertakings would come to, he would come to the conclusion that he could afford to pay 900*l.* a year to the landowner for the land?—Yes.

19,542. I will just assume, for the sake of argument, that the 900*l.* a year was the rent arrived at on the basis of a capital of about 22,000*l.*; if site values are to be separated from the value of the site and buildings altogether, and the rates on the site values are to be divided between the persons who have a direct interest in the site, then the original vendor of the property for 900*l.* a year would have to pay his share of the rates, would he not, on the 900*l.* a year?—Yes, if that is understood.

19,543. If that is so?—I understood the suggestion was, that it was not to be the ground rent or the rent that was paid or received by anybody, it is the site value at the time that the assessment is made.

19,544. In either case it will answer my purpose. In this particular case the original vendor would have at any rate to pay some rates, either based upon the proportion of 900*l.* a year, as compared to the annual value of the total site value, or he would have to pay the whole of the rates on the site value. But supposing that vendor gave an undertaking—instead of the undertaking which he practically did give—not to ask the purchaser for his purchase money at all for the 99 years on the condition that the purchaser agreed to pay him an annuity of 4 per cent. upon the capital sum, and gave him the whole property back again at the end of 99 years; or supposing that instead of that, the original vendor had received his 22,000*l.* down, he would pocket that money, and he would escape all liability to rates on the basis of rating site value?—Yes.

19,545. So that if one man chooses to agree with the purchaser never to ask him to pay his purchase money, but to say I will accept a ground rent for 99 years instead of you giving me any capital sum, he is to be taxed; but if he says to the purchaser, "No, I will not accept the ground rent, but I will have your purchase money down," he escapes altogether?—Yes.

19,546. And that you think is equitable?—No, I do not think it is equitable.

19,547. (Mr. Arthur O'Connor.) I gather that you in matters of fact have very full information, and that your judgment has been matured by long experience?—Yes.

19,548. Would you kindly tell me what you think to be the true fundamental principle which ought to be kept in view in rating?—In rating house property?

19,549. In rating generally—in making local rates?—I think that you cannot do better than rely upon what a tenant would pay for a property.

19,550. Then it is property that is to be rated?—Yes.

19,551. And only property?—And only property.

19,552. When you say that property should be rated, what do you understand by "property"?—The property that produces an income, either represented by a tenant going in, or by self-occupation—personal occupation.

19,553. Would you include a labourer's tools which produce his income as property?—No; they are chattels.

19,554. Then by property you mean real property?—Yes, I mean real property.

19,555. Should you include in real property, houses as well as land?—Yes.

19,556. Can you tell me any distinction in principle between a house, which is an artificial thing, and the tools of a man's trade, which are equally artificial?—The only difference is that the house is more permanent.

19,557. Is immovable?—Yes, but tools are here to day and broken before the day is out and good for nothing; they are chattels that are worth nothing then.

19,558. Even a house deteriorates in time, and has to be repaired?—Yes.

19,559. Whereas in the instances that you gave us just now, in spite of the deterioration of a house, the total

value went up because the site value increased?—Yes. The materials in most places, if they are in a fair position, do not alter in value at all; if there is any alteration it is a slight decrease as they get older. The difference of the value of property all falls upon the site.

19,560. While the site value will increase, I will not say automatically, but by reason of exterior circumstances, the house has to be kept up by constant and steady expenditure at its original value?—Yes.

19,561. There is therefore a difference between the site and the house?—Yes.

19,562. Do you think that the present system of rating is perfect?—No.

19,563. There is room for alteration?—There is room for improvement in most things.

19,564. The improvement involves alteration. Now, can you conceive any alteration which shall not alter the incidence in some respect or other of the burden of rating, so that some persons now burdened should be relieved, and other persons less burdened at present should be more burdened?—Not fairly.

19,565. Any alteration must involve relief to some and further burdens to others?—No; I say that if the thing is properly rated, in many cases it would increase the rateable value of the property, and not decrease it. I say that there is a great deal of property in London which is not rated at its full value.

19,566. Then those who own that property would be further burdened as compared with what they now are?—Yes, exactly; and should be.

19,567. That is what I was putting to you—any ideal system of rating would involve some change which would relieve some persons and burden others?—No; for instance, it would not relieve the owner of the ground to increase the rateable value of the tenants' interest, because the landlord must remain.

19,568. Would any improvement in rating, or in the system of rating, relieve anybody?—Yes, because there are some who are rated too high.

19,569. Would any improvement or alteration of the existing system, so as to make it ideally perfect, impose any more burden than now falls upon anybody?—Yes; those who are rated at too small a sum would be rated at a larger sum, and those who are rated too high would be reduced.

19,570. Precisely; then an ideal system of rating would involve the relief of some and the further burdening of others?—Yes.

19,571. You have been asked about existing contracts; would you, by reason of the existence of the multiplicity of present contracts, say that you cannot proceed to any alteration of rating because thereby you might be interfering with existing contracts?—I think you should not.

19,572. Now with regard to the site value: you told us that land let for 900*l.* to one who expends capital and labour upon it, is afterwards, or may be afterwards, let by him at an improved ground rent of 3,000*l.*?—Yes.

19,573. What is it that he lets?—He simply creates a ground rent upon the site; a ground rent secured by having a large expenditure upon buildings.

19,574. What is it he lets?—He lets land and buildings together for 99 years at 3,000*l.* a year.

19,575. What did he lease?—He leased the land alone for 900*l.* a year.

19,576. Then he does not let the same as he takes in lease?—No.

19,577. He lets something more?—He lets the same piece of ground secured by the building that he has put upon it, but he takes the whole income of the land and buildings for the 99 years, subject to the 3,000*l.* a year rent.

19,578. I only want to get your assent, or dissent, to that proposition—that the man who pays 900*l.* a year for the land, and having built a house, and then raises a rent of 3,000*l.*, is letting the land plus the house; whereas he leased from the original lessor only the land?—Yes, one was an unsecured ground rent and the other is a secured ground rent.

19,579. Apart from the security, what the man is letting in the one case is something more than he himself has taken under lease in the first instance?—

Mr. R. Vigers.

23 June '98

Site values: Their values increase owing to increase in population and trade.

Valuation: Principles to be observed in making valuations.

Mr. R. Vigers.

23 June '98

Yes; as I say, one is secured and the other is unsecured.

19,580. What is it that causes this increase in ground rents in 40 years after the 100*l.* lease was made?—Increase of population; change in the value of property in the district.

19,581. By reason of increase of population?—Chiefly; and then expansion of trade absorbs more of the land.

19,582. By population you mean the community in and around the site the value of which is so enhanced?—Yes.

19,583. Not the action of the landlord exclusively or the action of the tenant exclusively?—No.

19,584. The community, therefore, may be looked upon as having caused or originated or developed that increased value?—Yes.

19,585. Then, there would be no injustice in point of principle in saying that the community ought to have an interest in that value which they have so caused or created?—I do not think I can go so far as that.

19,586. Let us take this case of the property which has cost 26,000*l.* to build on land let at 900*l.* a year, and which is now relet in its entirety at 3,000*l.* a year, and valued at what shall we say?—It is worth 30 years' purchase.

19,587. I mean valued for rating purposes; what would you say would be the rateable value of this property which is now let, site and building, for 3,000*l.* a year?—I have not made out that calculation, because it is subject to rates and taxes; the tenants pay all the rates and taxes.

19,588. But the property as it stands, what would you say it should fairly be valued at for rating purposes when it is let at this improved ground rent of 3,000*l.* a year? I ask you because you have technical knowledge and I have none; I am only seeking information?—Do you mean what should be the proportion of the ground rateable and of the building.

19,589. No, I am taking the whole concern which is rented at 3,000*l.* a year; at what do you think it should be rated?—It is the piece of ground only that is let at 3,000*l.* a year.

19,590. With the building on it?—Yes, but then there is a building rent besides to be rated. The building itself fetches something over 12,000*l.* a year in rents.

19,591. I only want to get some figures, it does not matter to me what they are?—I cannot say without going carefully into the valuation, because you have got to make deductions for keeping up the property, and you have got to make deductions for rates and taxes.

19,592. There is no very great difficulty about it I suppose?—I should not like you to publish figures as mine unless I had done them carefully.

19,593. I only ask for approximative figures or suggestive figures?—I should think very probably the rateable value of the whole thing is something like 10,000*l.* a year, but still I cannot give you that as an absolute figure—it is a rough guess.

19,594. Make it 8,000*l.* or anything you like, it does not matter to me what it is, I only want to get the principle, not the particular case. Now this being rated at 10,000*l.* a year, we will say the original ground landlord gets only 900*l.* a year?—Yes.

19,595. The interest in the land or the property which you say ought to be rated, and is presumably rated fairly at 10,000*l.* a year, is divided between the original ground landlord, the recipient of the 900*l.*, and other persons?—Yes.

19,596. Would there be any inequity in causing the burden of rating to fall upon him and those other persons in proportion to their several interests?—Yes, because when the rent was fixed at 900*l.* it was assumed that the lessee would pay the whole rates and taxes.

19,597. Would there be an agreement to that effect in the lease?—Yes, that clause is in the lease.

19,598. Very well; then the landlord is protected by that clause in his lease?—Yes, he is now.

19,599. The rates are to be paid by the persons who are interested in the property, whether they be ground landlords originally or owners of improved ground rent or lessees of the buildings or sub-lessees; between them somehow or other the community, or the local

authorities, have a right to expect the rates upon a fair valuation?—Yes, but there is no right to charge the landlord, the owner of the ground, with any of it.

19,600. The burden is distributed among those who are interested in the property?—Yes.

19,601. We will come to details afterwards. As between the persons who are so interested the particular point where the burden of rating should rest can be a matter of agreement and contract between them, can it not?—It is now.

19,602. Then it can be?—Yes, if they are all free agents.

19,603. Certainly. Where, then, is the difficulty about rating property, if those who are interested agree among themselves as to the incidence of the burden?—I say there is no difficulty if they are all free agents.

19,604. The site value must come into the valuation?—Yes.

19,605. The owner of a beneficial lease is in reality enjoying part of the ownership of the land?—Yes.

19,606. The landlord may have the thin milk at the bottom, but the cream goes to the person at any rate who is the beneficial leaseholder?—Yes, he has to run the risk. The property may increase in value or decrease, but he has to run that risk, and therefore he deals with a property where there is a greater risk about it.

19,607. The tenant has got it if he has got a long lease?—The tenant has got it.

19,608. Is there any reason that you can see why an existing tenant of a beneficial lease, and really enjoying for the time at any rate the increased value of the site, should not be rated in respect of that?—No, I say that he should be, and I have said so.

19,609. Now, for purposes of deduction on account of repairs and other things, you hold that the deduction should be made in respect only of the buildings?—Certainly, the land cannot require any repairing.

19,610. Clearly; and you tell us that there can be no practical difficulty in ascertaining the value of the structure for purposes of estimating the deductions?—No difficulty.

19,611. (*Mr. Cripps.*) Of course you do not suggest for a moment that any class of property, whether we call it site value or not, should escape its proper incidence of taxation?—No, certainly not.

19,612. What you have been dealing with is the question of fairness between the contracting parties and the question of convenience as regards ascertaining value?—Yes.

19,613. Just one question I want to ask you, first of all, as regards the illustration you gave. You gave the illustration of land let for which the ground rent to the landlord who let it in the first instance was 900*l.* a year?—Yes.

19,614. You then said very expensive buildings were erected, and I think as much as 26,000*l.* spent on them?—Yes.

19,615. After you have spent that sum on a site you can get a larger ground rent?—Yes.

19,616. It is not a question after you have constructed your buildings of letting the buildings and site at a larger value, but, as a fact, you have created an actually larger ground rent than was created in the first instance by the landlord?—Yes.

19,617. In each case you are dealing with precisely the same property, namely, the rental of a piece of land in the one instance fixed at 900*l.* a year, and subsequently fixed at 3,000*l.* a year?—Yes; and the reason is that the 3,000*l.* a year is secured by the buildings put upon it.

19,618. May I put it to you that it is one of the commonest methods of developing property in towns, that a man should get, we will say, property and pay 100*l.* a year ground rent—I will take it in that way—put buildings upon it so as to create an enhanced ground rent which he can sell or let, leaving a sum of money in his own hands as between the new ground rent and his obligations to the ground landlord?—Yes, it is frequently dealt with in that way. Another way in which it is frequently dealt with is this. It is an important question in dealing with ground rents. I can give you an instance in the City where a man is a freeholder carrying on a very large business; he builds

Mr. R. Vigers.

23 June '98

Building lessees for a series of years take the question of rates into consideration.

Values of sites and structures can be separated.

A site value secured by buildings upon it is more valuable than one without buildings.

Mr. R. Vigers.

Mr. R. Vigers.

23 June '98

his own warehouse and factory on his own freehold; after he has built this place he says, "Now I will grant a 90 years' lease, to somebody at a ground rent, and I will take that 90 years' lease and I will sell the ground rent at 30 years' purchase." He can realise a very much larger ground rent after a building is put up than he could when it was vacant ground, because he lets in trustees who will come and deal for it, but who could not deal with an unsecured rent.

19,619. Of course to a business man who wants his money for business purposes that is a very convenient method of proceeding very often?—Yes. He sells the ground rent to pay 3 per cent., or 3½ per cent., and he can get the money in his business to earn 10 or 15 or 20 per cent. if he is fortunate. It is constantly done in the City of London.

19,620. Now I want to go to another point. You said you thought there would be no difficulty in separating the value of a structure from the value of the land?—Yes.

19,621. First of all let me put this to you—I think it was put by Mr. Dalton, but I want to put it again to lead up to another question—that would mean a double valuation as regards each property?—Yes.

19,622. Then take the case of Bond Street that has been referred to; as we know, where you have shops in a street the principle of rating is that you neither go into the value of the land nor into the value of the structure, but you take the rental from the adjoining properties?—Yes.

19,623. As a matter of convenience, and in the way of the saving of expense, that is of enormous importance?—It is an enormous saving to the parishes.

19,624. Directly you come to the question of the valuation of structure or the valuation of site you introduce a complicated problem instead of a very easy one?—Yes. I looked at it that the question was put to me was—Was there any practical difficulty in doing it? You can do it easily, but it is not at all advisable that it should be done.

19,625. You would know from your experience that directly you get to a structural value or a valuation of land as apart from taking the rental of adjoining properties, then you get the difficulty, and it is in those cases you get contest?—Yes.

19,626. Now it was suggested to you as regards the matter of difficulty, that there might be a reason for rating site values apart from building values because the deductions to be made, we will say, in Bond Street, ought not to be the same as the deductions in Fulham?—Clearly.

19,627. There can be no question, I think, about that?—No question, I think.

19,628. Suppose you had one rating authority dealing with, we will say, Fulham and Bond Street, and which had a knowledge of rating subjects, would there be the slightest difficulty in adjusting the deductions to the conditions of the two cases?—I think not.

19,629. If you had a sufficiently large area in order to adjust the deductions in that way, would there be the slightest unfairness?—No, I think it would be a very fair way of dealing with it.

19,630. I would just like to ask you one other question as regards the ground rent point. You say that if people were free agents so far as the relationship between owner and occupier is concerned it would not make any difference if they knew what the principle was?—No, certainly not.

19,631. But where there is an existing contractual relationship as between the two parties, that is between the owner and the occupier, you think it would be unfair to upset that by altering the principle of rating? I think it would be very unfair, and I think it would be impolitic. I think it would be a great mistake to damage a valuable security that is dealt with now at the very highest possible price because it is so secure.

19,632. I do not think anyone would question that if two people were contracting in the first instance they would contract in reference to their liabilities?—Certainly they would.

19,633. You say it is unnecessary and unfair to upset the relationship of contract between owner and occupier; do you think that the rating authority would get any benefit from it?—No, they would rather suffer, I think, because they might be put to a greater expense.

19,634. In your view would they get a larger property on which to place the rating if they separated site value from building value?—I think not. You have only got land and the materials.

19,635. In your view at the present time do they get, under existing systems, if the principle is properly applied, the full value by combining what is called site value with building value?—Yes, certainly.

19,636. Have you considered the question of the rating of vacant land?—Yes.

19,637. What is your view on that?—I do not think it would be wise to rate vacant land as building land. I have heard it suggested that that is one idea. A house has got a large area of land for instance, and the difficulty is in giving that house only a small part of the land upon which it stands as its value, and then valuing the other as building land. You destroy the house directly.

19,638. Questions were asked you about the adjustment of burdens, and taking the burden off one man and putting it on to another; would the right principle in your view be to equalise the burden so as to get as nearly as possible an absolute equality?—You see the owner and the lessee —

19,639. Not between the owner and the lessee, I am taking the point generally?—Generally over the country?

19,640. Yes?—Certainly.

19,641. That would be the principle at which, I think, you would aim, would it not?—Yes, I will tell you where I think there is one thing that is very unfair. My experience leads me to deal with both East End property and West End property. You will find if you examine it as I have done that in the East End a property is very highly assessed by the assessment committees, which tends to reduce the poundage; and going further west you will find there is a marked difference, and that you will get very moderate assessments compared with the East End assessments—which increases the poundage and makes the two look a little more equal. I think if that was done by one mind fairly, the East End would get relief and the West End would suffer for it—where they should.

19,642. That comes to what you have expressed before—that by getting a larger area you are more likely to get real equality?—Yes, it is so.

19,643. (Mr. Smith.) I think the effect of your evidence is, first, that you must respect existing contracts?—Yes.

19,644. You suggest, I think, that the proper time to rate a ground landlord is when the lease falls in?—Yes.

19,645. And that principle would apply to all subordinate interests?—Yes.

19,646. Just one word as to vacant land. We have had a suggestion made to us that the proper way to rate vacant land is to let the owner put his own price upon it, rate him at 4 per cent. on the price he puts upon it, subject to the condition that the local authority can always take to it at that price. What do you say to that proposition?—I do not think that is a good proposition at all. What I gather, in my mind, is this, that the reason for wishing to rate this vacant land is that they should get a bigger rate upon a man's meadows and gardens nearly into towns

19,647. And growing into value?—And growing into value; that is what I think is intended. Directly you begin to value the land as having any building value in it, you must destroy the house, as you could not have the house and the land existing at the same time. So that what they gain in one way they would lose in another. There is another great advantage I see. It is a lung of the country where a man will go to that expense and see his land unoccupied for the benefit of everybody.

19,648. You have taken rather a favourable instance; might you not take the case of a man leaving a quarter of an acre of land a desert in the middle of a town, hoping to get a better price?—Yes, but I do not know how you are going to deal with a man who is so inconsistent. It is a sort of dog-in-the-manger business. You must legislate for him specially.

19,649. You find people of that class in all towns, do you not, in your experience?—I do not know of one now in London.

Vacant land, objections to rating in respect of.

Areas for valuation purposes should be large in Metropolitan, to secure greater equalities in assessments.

Site values, rating in respect of: Existing contracts should be respected.

Vacant land, rating in respect of: Objections to such a system. People do not hold vacant land in London until a rise in value.

23 June '98

Site and structural value: A separate valuation is not advisable, as it would involve a double valuation. The present system is the most economical.

Relative values of sites and buildings vary in different parts of Metropolitan. A valuation authority over a sufficiently large area could adjust the deductions.

Site values, rating in respect of would be unfair to owners in case of existing contracts; it also would be impolitic to damage a valuable security, and rating authorities would not benefit on account of the expense.

*Mr. R. Vigers.*

19,650. (*Mr. Elliott.*) You have made some very serious statements with regard to the inequalities of assessment in London?—Yes.

23 June '98

19,651. You are, of course, familiar with the safeguards against inequalities provided by the Valuation (Metropolis) Act?—Yes.

Metro-  
polis, valuation in:  
Existing inequalities in assessment. Desirable for assessment committees to more frequently employ professional valuers.

19,652. Is it your view that the inequalities to which you have referred arise from the deficient administration of the Act, or do they arise from inherent deficiencies in the Act?—I think if the Act was set in motion properly that they would be met. I think there are plenty of means of meeting them, but if a man is rated at a small sum he keeps quiet.

19,653. Do you think that any amendment of the law as set out in the Valuation (Metropolis) Act is necessary to prevent these inequalities?—The valuation, I say, instead of being made by gentlemen who sit round a table at the assessment committees or by the overseers, should be made by men whose business it is to go and see how the houses are rated and whether they are properly rated.

19,654. Then you suggest that a substantial change of the law is necessary to prevent these inequalities?—No; they have means of doing it—they have means of sending men there now.

19,655. I want to get quite clearly from you whether you think an alteration in the law as embodied in the Valuation (Metropolis) Act is necessary; or whether the inequalities could be redressed, the law standing exactly as it is?—I think the law standing as it is would be sufficient, if, instead of trying to make these valuations themselves, they were to get somebody who understood it to do the work for them.

19,656. Would you suggest that the existing assessment committees should more frequently employ a professional valuer?—Yes, for instance, houses; if that had been done when the first buildings were put up, instead of leaving it to chance to say what the sum should be, it would have been done for ever; it does not want to be done every year, or every quinquennial assessment.

19,657. I want to get from you, quite explicitly and clearly, whether you consider that in order to prevent the occurrence of such inequalities as those to which you have referred, any alteration in the law is necessary?—I do not think it is, as far as I understand the law.

19,658. You are aware, of course, that the surveyors of taxes—the Imperial officers—have very extensive powers under that Act?—Yes, they generally sit with the assessment committee, but they seldom take any part in what is going on I think.

19,659. Is that within your personal knowledge?—Yes; they are satisfied with what the assessment committee do.

19,660. Are you aware that a very great deal of work is done by the surveyors of taxes in examining the returns of rent with the assessments?—I do not know; of course I have no means of knowing that.

19,661. Of course you are aware that you are making very serious charges against the surveyors of taxes?—No. I say before the assessment committee according to my experience—and I have been very often before most of the assessment committees—they take very little part in what is passing; whether they do when I am not in the room of course I cannot tell.

19,662. You are aware that for every pound by which property is under-valued the Imperial Exchequer loses 8d. in the pound income tax, and a certain amount in the pound house duty?—Yes.

19,663. Therefore the inaction of the surveyors to which you refer results, and must result, if you are correct, in a very substantial loss to the Exchequer?—As I say, while I am in the room I do not see that they take very much part in it; of course it may be done while I am not there.

Areas for valuation in Metro-  
polis:  
One valuation authority desirable.

19,664. Then you mentioned the East End and the West End, and you also mentioned the case of Fulham and Bond Street, and I think some of your replies to the questions that have been put to you may leave it to be inferred that you are in favour of one valuation authority for the whole of London?—I should think if you could have one valuation authority for the whole of London it would make it more equitable, and would be a very great advantage.

19,665. What would you suggest should be the constitution of that valuation authority?—I said I should not like to suggest what that should be.

19,666. Do you think it should be the London County Council?—I should think they have got enough to do without having that. It should be an independent authority, something after the Railway Commission.

19,667. Do you think if you had a valuation authority for the whole of the county of London you would really get sufficient local knowledge and information to enable all the assessments to be properly made?—Yes.

19,668-9. With regard to the evidence that you have given as to the taxation of what you call site value or ground value, have you ever considered a proposal that there should be a duty paid on the determination of a beneficial lease?—A duty paid by the owner.

19,670. By the owner?—When the leases have expired, yes. I do not see any objection to his paying if you let him have the land free to do as he likes with it and relet it. He may take a part of the burden himself or he may take the whole burden himself.

19,671. When a lease falls in, say, of an important London property the owner of the land does then come into possession of a substantial increase of income, does he not?—He comes into what is mostly the value of his own land at that particular time when he comes into it, and which the lessee has enjoyed for the greater part of the 99 years.

19,672. He finds himself in a very favourable position as compared with his position before the determination of the lease?—Yes. When he granted the lease he granted it at the time's price, and as it increased the lessee enjoyed the benefit of the increased value of land for the whole of the term.

19,673. Do you not think that would be a very good time for the community to step in and claim some contribution towards public purposes?—If they like to put a tax then upon the ground rents that the man creates there is no objection to it.

19,674. They might put a tax on the new lease, might they not?—Yes, when the man grants the new lease they might say that he is to pay so much—a tax upon the value of the ground; then he will know how to fix the ground rent to the tenant.

19,675. It might be a lump sum down—a stamp duty on the new lease, might it not?—I do not think that would answer at all, because it would be very hard indeed upon some men; they would not have the money, and they would be obliged to sell the land to pay the duty.

19,676. But they are coming into a very substantial increase in the value of their property, are they not?—Yes, but many of those men who come in for it have not much money in their pockets, and they would have to sell the land to pay the duty.

19,677. You suggested in reply to a question that you thought, if I understood you rightly, that the whole burden of local public expenditure should fall upon the owners of property or upon the owners and occupiers of property?—Upon the persons who are enjoying the benefit of the property, yes.

19,678. Is that really a sound principle upon which to base a theory of local taxation?—I think so.

19,679. At the present moment are you aware that a substantial contribution is made out of the beer and spirit duties to the purposes of local taxation?—I do not see how.

19,680. You have never thought of the possibility of consumers contributing to local taxation as they do in France?—No.

19,681. (*Mr. Dalton.*) I think you spoke of the high rateable value of the East End as compared with that of the West End; is not that mainly due to these deductions to arrive at the rateable value that are made in respect of the site value in the West End, the site value in the East End being not so great?—No; I am dealing with the figures before the deductions are made.

19,682. With the gross values?—Yes.

19,683. How does that come about? Surely the gross value is to a great extent the actual rent paid, is it not?—No, it is so in a very few cases really.

19,684. It approximates to it does it not?—It is more often something more.

*Mr. R. Vigers.*

23 June '98

Site values, taxation in respect of: Policy of making an owner pay a duty when a lease falls in, or on re-letting discussed.

Local Taxation: Who should be assessed?

Metro-  
polis, valuation in: In East End the gross value is often in excess of actual rent. This is not the case in West End.

Mr. R. Vigers.  
23 June '98

19,685. (Chairman.) You do not mean that what is paid is more than the gross value?—No, but the gross value is more than the rent paid very often indeed. You see leases are obtained sometimes by paying down a premium, and it would not be right to be always guided by the rent; you want to know what the property really is.

19,686. (Mr. Dalton.) I quite agree that it is so in exceptional cases?—In a great many cases.

19,687. I was speaking generally of the property in the East End; do you consider that the gross value is in excess of the actual rent?—Yes, in many cases.

19,688. And in the West End it is not?—I do not know any such case at the West End.

19,689. Are you in favour of the scale of deductions which is laid down by the Valuation (Metropolis) Act?—No.

19,690. Do you approve of it?—No, I think it is very inconsistent in some cases; I think it gives a larger deduction than fairly could be claimed.

The witness withdrew.

Mr. HENRY GEORGE HILLS called and examined.

19,698. (Chairman.) You are clerk to the Board of Works for the Wandsworth District?—Yes.

19,699. You can easily understand that we have had a considerable amount of evidence from various authorities in the metropolis, including clerks of vestries, and from the London County Council and other bodies; I do not therefore propose to take you over the whole of the subject. In the course of our inquiry, Mr. James Stuart pointed out to us that while we had had evidence from those who were interested in parishes which formed a union by themselves, we had not been made aware of all the difficulties which are felt by those whose union is not comprised in one parish, and Mr. Stuart suggested that you should be called. I understand that you have been clerk to the Board of Works for 18 years?—Yes.

19,700. And that your district comprises the parishes of Clapham, Putney, Streatham, Tooting Graveney, and Wandsworth?—Yes.

19,701. The area of the district is about 14½ square miles, its rateable value is 1,311,416l., and the population, which at the census of 1896 was 187,264, is now estimated to be at least 200,000?—That is so.

19,702. Your district forms part of the Wandsworth and Clapham Union?—That is so. Perhaps I might say here that the parish of Battersea—that is, the other parish which, added to ourselves, forms the union—formerly formed part of the district of the board, but was disconnected from the board in 1888.

19,703. Your board, as I understand, is really formed for sanitary purposes rather than for other purposes?—Yes, but it is the highway, lighting, and sewer authority also; that is to say, we discharge the same duties as the vestry in such a parish as Islington discharges, with the exception that we have nothing to do with the rating.

19,704. As far as expenditure is concerned, it is charged to the respective parishes in which the works are executed, with the exception of what is called the establishment expenditure and the school board precepts?—That is so.

19,705. Of course of those two things the school board precepts are by far the larger in amount and in importance?—Yes, by far; they form between one-third and one-fourth of the sum raised by the district board—for the general rate, that is.

19,706. The money which is required is raised by the orders made by the board upon the overseers of the parishes in your district?—Yes.

19,707. You add a table to your memorandum which shows the amount per pound of the rates in the different parishes in the district for a series of years past?—Yes. That shows, of course, that the rates differ in the respective parishes. That is why I mentioned the fact that we charge the expenditure for each parish to that particular parish. In some of the districts in London that is not the case, and I believe they apportion the expenditure in accordance with the rateable value; but in our district each parish bears its own burdens,

19,691. It is a scale of maximum deductions?—Yes.

19,692. But it is usually adopted as the actual scale of deduction?—It is mostly adopted. Sometimes you do not get it.

19,693. Should you say that, on the whole, it has done more harm than good?—I am not able to say that.

19,694. Then you have no opinion to express as to whether, in the rest of the country there should be such a scale or not?—It is a very difficult scale to manage—very difficult. The last part of the scale is, that public companies should be dealt with according to the circumstances of the case.

19,695. It does not deal with those except in that general way?—That is so.

19,696. Have you got any criticism as to the different per-centages it allows in those cases with which it does deal?—It takes off a per-centage on land where there cannot be any loss, and I think that ought not to be.

19,697. You think it should be amended?—I think it should be.

Mr. R. Vigers.  
23 June '98

Deductions in Metropolis: Deductions in case of site values should not be made.

Mr. H. G. Hills.

Mr. H. G. Hills.

bears the burden of its own expenditure, and it is not apportioned according to rateable value.

Wandsworth District Board of Works: Area and duties of Board described.

Collection of rates should be made by one collector under one Authority.

Wandsworth District: Statistics showing rates in the pound in the different parishes. Each parish

Mr. H. G.  
Hills.

23 June '98

19,717. And you would appoint the assessment committee by the district board?—I think the district board should appoint the assessment committee; that is done in the larger parishes in London, such as Islington.

19,718. Is that only done in the parishes in which the union is conterminous with the parish?—It is only done in those parishes where it is conterminous, I should say.

19,719. Would it not, then, be a retrograde step to make a new authority for the appointment of the overseers and the assessment committees, which is not necessarily larger than the union?—There is that objection, I must say; but the point appears to me that the guardians are only there to administer the poor law, and that they have nothing to do with the ordinary municipal laws.

19,720. But they are an important body as an expending body, and ought they not to have the responsibility of collecting the rates too?—They are not so important, I think, in that respect as the district board. They raise a large sum, but a very large part of that consists of precepts from the county council and the Metropolitan Asylums Board.

19,721. I do not mind indicating to you that I think it would be desirable that the collection of the rates should be in the hands of the largest possible authority which extends over the largest possible district?—Yes, I think there is a very considerable force in that opinion too, but I think if the area of the union under the guardians is conterminous with the area of the ordinary municipal authority, then the municipal authority should appoint the rate collectors, and should have the management of the collection of rates. That is not so in the Wandsworth district at present, it is true.

19,722. I understand that your main point, apart from the question as between municipal authority and board of guardians, is this, that a considerable saving could be effected if there were more conjunction of the collection of rates in one hand?—Yes, quite so.

19,723. Would you like the London County Council to control or supervise existing authorities in the metropolis for the appointment of local officers?—No.

19,724. Have you made any estimate of the saving which you think could be effected by having only one collector instead of the two which you have mentioned?—No, I have not.

19,725. Upon the other point, at which I partially stopped you, if I understand paragraphs 12 and 13 of your memorandum correctly, you raise some objection to the operation of the Equalisation of Rates Act?—Yes. At present the Equalisation of Rates Act does not have the effect in some cases of equalising the rates; it has an exactly contrary effect.

19,726. I should like to have that made clear; I do not quite follow that?—For instance, in the year 1896-7, in Islington, the whole of the rates amounted to 5s. 6½d. in the pound; Islington had received from the Equalisation of Rates Act, 3¼d., so that had they received nothing their rates would have been 5s. 9¼d. The rates in St. Giles' in the same year amounted to 6s. 6d.; St. Giles' had paid to the fund under the Equalisation of Rates Act about 1½d. in the pound, so that their rates would have been, without the operation of the Equalisation of Rates Fund, 6s. 4½d. Therefore, by the operation of the Act the rates of Islington were reduced from 5s. 9¼d. to 5s. 6½d. and those of St. Giles' were increased from 6s. 4½d. to 6s. 6d.

19,727. What was the reason of that?—Because of the population—the population in Islington being much greater in proportion to the rateable value than was the case in St. Giles's. It does not appear to be justice that a parish where the rates are 6s. 4½d. should help a parish where the rates are only 5s. 9¼d.

19,728. Do you know any other instances in which the Act has worked in the same way?—Yes, there are some other cases. In St. Olave, Southwark, the rates in 1896-7 were, in one parish, 6s. 5d., and in the other parishes, 6s. 0½d. and those parishes had to pay about 3¼d. in the pound to the equalisation fund.

19,729. The same principle of calculating it, partly according to population, obtains in your district as well, I suppose?—Yes, exactly.

19,730. If that question of population was eliminated, would your district get more than it does at the present

time?—I have not considered that question. Of course it is the question of population only upon which the fund is distributed at present; it is raised according to the rateable value and distributed according to the population. What I think is that there should be some other element taken into account.

19,731. How does that operate unjustly in the case of the parishes of Islington and St. Giles's?—Because the population is smaller in the one case in proportion to the rateable value than in the other. A 6d. rate is raised for the year upon the rateable value, and the money thus raised is distributed according to population; therefore, the places where the rateable value is high and the population low have to contribute towards the parishes where it is the reverse.

19,732. I do not object to that, do you?—It does not act fairly. I would not object to it if it acted fairly but it seems to me in some cases not to act fairly.

19,733. I may not be able to grasp it, but I do not see how the operation of that principle which you have just put forward raises the rate in a parish?—It does indeed. In the case I mentioned, in St. Giles's, the actual rate was 6s. 6d., but that included 1½d. which they had had to pay towards the Equalisation of Rates Fund.

19,734. (Mr. Arthur O'Connor.) Is that St. Giles's in the East?—No, it is St. Giles's, Bloomsbury. What I think is that some other element should be taken into consideration besides population.

19,735. (Chairman.) What element should you suggest?—I think the amount of rates should be taken into consideration.

19,736. Would that not be a direct premium upon extravagance?—To some extent. A parish would rather spend 1,000l. in its own improvements than contribute 100l. towards other parishes in London, no doubt; but if it were only taken to a slight amount I think it would have a beneficial effect—at all events it seems to me that there are cases of injustice such as that I have mentioned which ought to be met in some way. I do not complain on the part of my own district, because our rates are not exceptionally heavy, though we are above the average, and we do receive from the fund. But in looking at the operation of the Act I notice these points, and they appear to me to be unjust. There is one other point in connexion with the Act which I might mention, which the Wandsworth District Board called the attention of Parliament to in a petition at the time the Equalisation of Rates Act was under consideration, and before it was passed: that is, that the fund is distributed to such a district as ours—to Wandsworth—not to each parish separately, but the parishes are merged in one district in distributing the fund, and it would have acted in this way in that particular year. Our district consists of five parishes, Capham, Putney, Streatham, Tooting, and Wandsworth. If each of those parishes had been treated separately, and if they had not formed part of a district, Clapham would have received under the fund 1,697l.; Putney would have paid to the fund 657l.; Streatham would have paid to the fund 131l.; Tooting would have received from the fund 437l., and the parish of Wandsworth would have received 2,093l.; that is, three of the parishes would have received and two of them would have paid. But in dealing with the fund in accordance with the provisions of the Act, the county council subtract from the total of those three sums the parishes should receive, that is 4,227l., the total of the sums which would have been paid by the two parishes, that is, 788l.; and pay the board the difference; that is, the board receives 3,439l. What the district board suggested at the time was that these parishes should be treated separately; in other words, that there should be paid to the board 4,227l., which would have been credited to those three parishes, and that the county council should have required from the two parishes of Putney and Streatham the sums of 657l. and 131l.; as a matter of fact, instead of Putney paying 657l., it received 389l.

19,737. Of course if every parish in your district was to be treated separately, every parish would have to be treated separately in the Metropolis?—Yes, no doubt.

19,738. Have you upon that basis made any calculation whether your parishes would have gained or lost?—It would have had the same result, because the other districts would have been treated in the same way.

Equalisation  
of Rates  
Act:  
Effect  
upon rates  
in certain  
parishes.  
Suggested  
alterations  
in Act.

Mr. H. G.  
Hills.

23 June '98

Mr. H. G.  
Hills.

23 June '98

19,739. How do you know it would have been the same—because the calculation might have been different for other districts?—If each parish were treated separately the result would be the same. Each parish is treated separately in making the calculation, but in paying the money the sums which would be paid by two of the parishes if they were separate is deducted from the gross amount paid to our board.

19,740. (*Mr. Arthur O'Connor.*) What is the date of that paper to which you have been referring?—This is a copy of the petition presented by the board to Parliament for an alteration of the Equalisation of Rates Act.

19,741. The date, please?—It is 1894.

19,742. Four years ago?—Yes.

19,743. Those figures would not apply now?—No, but the same principle exactly would apply now.

19,744. (*Chairman.*) Have you any objection in practice to the operation of the Valuation (Metropolis) Act?—No, I think not.

19,745. What do you say about the incorporation in it of a maximum scale of deduction?—I have had no actual experience either in valuing or of being a member or an officer of the assessment committee, and I am afraid my opinion would not be of very much value.

19,746. (*Mr. Elliott.*) With regard to the appointment of assessment committees, your suggestion is that there should be an assessment committee for the five parishes included in the Wandsworth District and a second assessment committee for the remaining parish, I think, Battersea?—Of course that could not be carried out unless there was some re-arrangement of districts beforehand. I could not suggest it as the union now stands. Why I mentioned it also is this, that there is now a proposal under consideration for the parish of Battersea being separated from the Wandsworth and Clapham Union.

19,747. At present there is one assessment committee, is there not, for the Wandsworth and Clapham Union, which comprises six parishes?—Yes, that is so.

19,748. Do you think that is a good arrangement?—I think so far as the district is concerned it is not a bad arrangement, certainly.

19,749. Do you think you would gain anything by the appointment of more assessment committees in your union?—I think not.

19,750. I do not quite understand, then, why you made the suggestion in paragraph 9 of your memorandum?—Only because I think as a principle the assessment committee should be appointed by the municipal body, and not by the board of guardians. It would make it uniform then for the whole of London.

19,751. Then you would have as many assessment committees as you have municipal bodies?—Yes, quite so.

19,752. Would you propose to go further in the opposite direction; would you propose to have an assessment committee for more than one municipal body?—I think municipal bodies might possibly be combined for that purpose.

19,753. Would you think it desirable to have one assessment authority for the whole of London?—No, I think not.

19,754. On what grounds?—I think it would be much too large a district. I think you would not then get that local knowledge which is now given with so much benefit to the assessment committees in valuation.

19,755. Would you say that the area for which an assessment authority should be appointed should be neither too large nor too small?—Yes, it should be certainly not nearly so large as London.

19,756. And not nearly so small as a single parish?—With a large parish, such as Islington, I think that an assessment committee might fairly work.

19,757. Of course, you are within the limits of the metropolis, are you not?—Yes.

19,758. Then the surveyor of taxes plays an important part in regard to the assessment?—Yes, he attends the meetings of the committee, I believe; I do not attend them, as I am not an officer of the assessment committee.

19,759. In your capacity as clerk to the district board of works, has any complaint reached you, or are

you aware of any complaints of the assessments in your district?—No.

19,760. Do you think that the system, as at present worked, is really an equitable system of assessment?—Yes, I think fairly so. I have no doubt that, owing to the conferences which have taken place between the assessment authorities of late, there is a greater uniformity of assessment than was the case even a few years ago.

19,761. You do not regard it, then, as necessary for the purpose of securing equality that there should be an assessment authority for the whole of London?—No, I do not.

19,762. (*Mr. Smith.*) Do you attribute to any extent the improvement in the assessment to the supervisory powers that the London County Council have exercised of late?—I attribute it to the conference, rather, which the county council called.

19,763. Those powers, I believe, have no legal operation; but have they had an effect, do you think, in bringing about uniformity?—I think they probably have had a beneficial effect.

19,764. I see you express, in paragraph 9 of your memorandum, a strong opinion that assessment committees should be appointed by the local authorities, and not by boards of guardians; could you tell me at all what are the respective amounts of the rates levied by the different bodies? What do your district board rates amount to all told in the pound?—Our rates are the general and sewers and the lighting.

19,765. Never mind that, I want the amount in the pound altogether?—It would be about 3s. 0d. or 3s. 2d.

19,766. And the union rates?—Much about the same—perhaps rather more.

19,767. Then there is not much difference on that ground?—No, I think not.

19,768. I suppose the origin of the union area being taken as the area for valuation purposes was that it was at that time the body levying the major amount of rates in the district?—Certainly; the poor rate was at that time the rate, as it were. Under the Railway Clauses Act, for instance, the poor rate only is mentioned as the rate that a railway company has to pay when taking property temporarily out of rating.

19,769. There is no necessary analogy, in your opinion is there, between the levying of a rate, not the poor rate, and the making of a valuation list?—Certainly not.

19,770. You incline to the opinion that the municipal authority is the better authority for the purposes of valuation?—Certainly.

19,771. I presume, looking to the progressive rate at which these charges are increasing, that you will soon be levying the major amount of the rates?—There can be no doubt of that, I think.

19,772. (*Mr. Arthur O'Connor.*) Will you kindly look at the tables accompanying your memorandum\*? Following upon the questions which Mr. Smith has just put to you, am I right in assuming that the office of the guardians in raising a large portion of the poor rate is purely ministerial?—Quite so. It includes the London County Council and the Metropolitan Common Poor Fund.

19,773. And the school board?—No, the school board is included in our rate—the general rate.

19,774. Take the case of Clapham, where in 1897 the poor rate was 3s. 7d.; what was the poor rate proper?—I am afraid I cannot answer that question.

19,775. Generally for your district, can you say what is the proportion of precept to charge included in the poor rate?—With regard to the poor rate I have no actual experience; but I have before me a demand note for the parish of Wandsworth for the rates for six months from the 29th September 1897 to the 25th March 1898.

19,776. The total rate there was what?—The total rate was 1s. 10d. in the £.

19,777. That is for the half year?—Yes.

19,778. That would be 3s. 8d. would it not?—Yes, that is so. It says that the expenditure over which the guardians have control is 7,708£; and the expenditure over which the guardians have no control is 15,551£.—

Mr. H. G.  
Hills.

23 June '98

Metropolis, valuation in: Conferences promoted by London County Council have been beneficial.

Assessment Committees should be appointed by Local Authorities, and not by Boards of Guardians.

Clapham, Streatham, and Wandsworth: Rates in.

Mr. H. G.  
Hills.

23 June '98

so there is twice as much expenditure outside their control as under their control.

19,779. That is to say, that 3s. 8d. in the year includes two-thirds of the amount which is raised by precept?—That is so.

19,780. And the poor rate proper is only one-third?—Yes.

19,781. Or about 1s. 2d. or 1s. 2½d.?—That is so.

19,782. I suppose any other authority could, for the purpose of raising the money, discharge the ministerial duties just as well as the guardians?—Certainly.

19,783. Then we shall have to transfer from the 3s. 8d., 2s. 4d. or 2s. 5d. to the other side of the account?—Yes.

19,784. And from the 6s. 6d. (the total) we deduct 1s. 2½d., which is very little more than a sixth part of the total charge on account of poor rate proper?—Yes, that is so. I may state that until the county council was formed under the Local Government Act, ten years ago, the precepts of the Metropolitan Board of Works were always issued to us, but under that Act it was held that they must be issued to the guardians.

19,785. Now then, from another point of view, you have, I see, five parishes in your district?—Yes.

19,786. And you have served in your present office, or one cognate to it, for over 20 years?—Yes.

19,787. Do you remember Streatham 30 years ago?—No, I do not remember it more than 20 years.

19,788. Am I right in saying that in 20 years Streatham has been very extensively built over and developed?—Quite so. It has changed from a country place to a town.

19,789. The value of land in Streatham for building and other purposes has gone up very much during the last 20 years?—It must have increased enormously.

19,790. The value of land in Clapham has not advanced at the same rate?—Not at the same rate.

19,791. I notice that in Clapham your total rate for 1897 was 6s. 6d.?—Yes, that is so.

19,792. In Streatham they were a little more?—Yes.

19,793. Your sewers and lighting rates are higher in Streatham than they are in Clapham?—There is not a very great deal of difference.

19,794. But they are higher?—Yes.

19,795. They are twice as high as regards the sewers rate, 3d. against 1½d.?—Yes. Perhaps I might explain that that is caused by the fact that we have not quite paid off the loans in Streatham which were raised 30 years ago. When the Wandsworth District was first formed there were no sewers whatever in the district, and we raised a large amount, 70,000l. or 80,000l., and we have been paying that off. We have paid that off in Clapham, and Streatham is just paying the last off.

19,796. The Streatham people have had to pay that?—Yes.

19,797. And that has been raised from the occupiers?—Yes.

19,798. The value of land in Streatham has been going up very much?—Very much indeed.

19,799. The freeholders interest therefore has been developed in Streatham during the last 20 or 30 years?—Yes.

19,800. At the expense of the occupiers?—In that way, no doubt. With regard to the value of land, I should think the value of land in Clapham has also increased, but not to the same extent.

19,801. Take Streatham then, which is the simpler instance; the fact is that the value of land in Streatham has during the last generation gone up immensely?—Yes.

19,802. And chiefly at the expense of the occupier?—The rates have been paid by the occupiers, of course.

19,803. And they pay the rents too, presumably, do they not?—Yes, no doubt.

19,804. I suppose that the occupiers are not the parents of the increased population?—No, they are mostly persons who come into the suburbs.

19,805. It is the increasing population which has developed the value of the land at Streatham as an area?—No doubt.

Land in  
Streatham  
and Clap-  
ham has  
gone up in  
value  
owing to  
increase of  
population.

19,806. Would you have any difficulty in Streatham, do you think, for the purpose of rating, in distinguishing between the value or the structural cost of buildings and the value of the land as enhanced?—I must say that I have never been able to see my way to do that. I am not engaged in the valuation of property.

19,807. I will not carry it further after that answer. Now with regard to another matter. You have given us figures with regard to Islington and St. Giles's, especially with reference to the Equalisation of Rates Act; do you think that that Equalisation of Rates Act was based upon a sound principle or assumption?—I do not think it was entirely, but I must say that it has worked fairly satisfactorily.

19,808. Have you ever heard it suggested that the valuations in the East End of London are very much higher, having regard to the true value of the property, than the valuations in the West End of London, having regard to the true value of the property there?—I have heard it suggested, but I do not know that it is the fact.

19,809. Would you be prepared to deny it?—I cannot say that; the fact is, I do not know.

19,810. Assuming that the valuations in the East End of London are, as compared with the true value of the property, very high, as compared with the valuations in the West End of London, which are comparatively low, having regard to the true value of the property there, would you not say that by reason of such over or comparative over valuation in the East End the Equalisation of Rates Act is worked out upon false premises?—Unfair, certainly; it would act unfairly if that were so.

19,811. Assuming the facts to be as I have stated them?—Assuming the facts to be so.

19,812. The object of the Act is missed then?—Yes, to some extent.

19,813. In Streatham would you say that your valuation is high or low as compared with the true value of the property?—So far as I know, it is valued fairly.

19,814. Would you say the same of all the parishes of your district?—Yes, certainly.

19,815. Comparing with the valuation in your district, the valuation in Islington and St. Giles's, do you think that the same standard of value is used for valuation purposes?—I cannot say.

19,816. And you could not say either with regard to the East End?—No.

19,817. But your own valuation, at any rate, is not too high?—I believe it is done fairly well, as well as it can be done by the overseers and the assessment committee.

19,818. (Mr. Clare.) I understand, if I have followed your evidence correctly, that you say that the valuations of the parishes in your district are fair, and that there is nothing to complain about?—So far as I know.

19,819. Those valuations have been made by the assessment committees appointed by the boards of guardians since 1862, have they not?—Yes.

19,820. Why is there any necessity, then, to transfer the business of the present assessment committees, who, as I understand you to say, do their work well, and have been in power since 1862, to the Wandsworth District Board?—It is only because I think the Wandsworth District Board is the municipal authority. The guardians have nothing to do except to administer the poor law; the district board, on the other hand, has numerous laws to administer.

19,821. Taking the poor rate as representing, roughly speaking, about half of the total rates —?—Not as administered; the poor rate includes so many precepts from the county council and other bodies. The poor rate over which the guardians themselves have control, is but a small part of it.

19,822. I will put it in another way. Taking the rates collected by the Wandsworth Board of Guardians as representing slightly more than one-half of the total rates levied in the area, why would you transfer the whole of the powers of the assessment committee, which you admit have been well carried out, to the Wandsworth District Board without giving the board of guardians and these other rating authorities some representation on that assessment committee?—I should have no objection to the board of guardians having a

authority.

representation, but it seems to me that the municipal authority is the proper authority to have the management of the rating.

19,823. Supposing I put it in another way: do you see any objection to the assessment committee being formed partly of representatives of the board of guardians, partly of representatives of the urban district council?—Not at all.

19,824. Do you think that would be a satisfactory solution of the difficulty?—I do not think any difficulty exists now; in fact, my suggestion is to make it uniform throughout London. There are many large parishes in London where the municipal authority appoints the assessment committee, and it appears to me that that is the proper authority, and that if it is to be uniform, they should be the authority to appoint them all.

19,825. Do you see any practical objection, or any theoretical objection, to a body being formed for the purpose of making the assessments, composed partly of representatives of the board of guardians and partly of representatives of the district board?—None whatever.

19,826. In your district is all the expenditure made with respect to particular parishes?—Yes; that is in so far as my district board is concerned.

19,827. Is there any general expenditure incurred by the district board which is levied equally over the whole of the parishes in their district?—Only the establishment charges, which amount to about 5,000*l.* a year.

19,828. Is that all?—Yes.

19,829. As I understand, the whole of your district gets a substantial benefit from the Equalisation of Rates Act of 1894?—Yes.

19,830. But have you calculated that if the money which is distributed under that Act was distributed in some other way, you would get the larger benefit?—The district itself, as a whole, would not, but three of the parishes would get a benefit, and the two others would lose.

19,831. Why should your council suggest that three should get a larger benefit, and the other two should

The witness withdrew.

lose something?—Because that would be the way in which they would be treated if they were separate parishes. The district board has always acted upon the principle that each parish should bear its own burden.

19,832. I presume the three that would benefit have the largest number of representatives on the board?—No.

19,833. Is that not so?—No, but they have the largest population.

19,834. (*Chairman.*) Is there anything further that you wish to bring before us?—I should like to mention with regard to the Agricultural Rates Act—it did not occur to me at the time I sent in my memorandum—that the district board rather object to the working of the Agricultural Rates Act of 1896 in their district. The Agricultural Rates Act provides that agricultural land shall be charged at only half the rate, and then a grant is received from the Treasury by the spending authority. The general rate includes the school board rate, and the other part of the rate is for the expenses of the district board. The school board is within the meaning of the Act a spending authority, but the district board is not a spending authority within the meaning of the Act. The consequence is that the school board get from the Government a grant in respect of the loss which is sustained owing to the reduced receipts from their part of the general rate, but the district board gets nothing.

19,835. To what extent are the district board a spending authority?—They spend the whole of the general rate with the exception of that part which is paid to the school board.

19,836. Assuming your contention to be correct, to put it into figures, what does it mean to your district?—About 300*l.* a year.

19,837. What would that mean per *£*?—A very small amount. We wrote to the Local Government Board, but they came to the conclusion that we were not a spending authority within the meaning of the Act, and though the board regretted their decision, we did not think it was worth while to take further steps in the matter.

Mr. W. ARTHUR DARBISHIRE called and examined.

19,838. (*Chairman.*) I think you have communicated to your member of Parliament, Mr. Bryn Roberts, your desire to appear before this Commission?—I have.

19,839. And he communicated with me?—Yes, I understand so.

19,840. You are managing director of a slate quarry in the county of Carnarvon?—I am.

19,841. It is as to the mode of assessing slate quarries for rating purposes that you wish to speak to us to-day, I believe?—If you please.

19,842. I understand that you complain of the system as erroneous in respect that the rating authorities settle a royalty per ton for each quarry, and take that as the rateable value for the year?—They do.

19,843. You consider that incorrect?—I do, because the persons who assess this rate are people who are ignorant of the technicalities of a slate quarry. They go upon the principle of screwing up in good times and thus making an income tax upon our profits, so to speak.

19,844. Is it not what the hypothetical tenant will give for the property one year with another?—If that principle were adhered to a very different result would come out.

19,845. Is it not adhered to?—No. Slate quarries are taken on lease for a term of years at a payment which is agreed upon between the person who takes the quarry and the person who lets it as what would be a fair division of the result of working a quarry during 21 years. If in bad times there is no result, or nothing whatever comes out of the quarry, except what is sufficient to maintain it in a lettable position, it does not seem fair that that rent which is actually paid, and which one cannot get out of it, should be put down as the rent which anybody coming to the property afresh would pay.

19,846. It is quite clear in such a case as you put that the rent will cease to be paid at the end of a term

of years?—I am referring to the period of the lease. I take the rateable value to be assessed upon what a prospective tenant coming to the place would be willing to give for it as it stood.

19,847. If a rating authority has the actual bargain between two sane and responsible persons, the one to give so much to the other for a certain subject, do you think it is possible that any principle will be laid down which will go behind that arrangement?—Yes, because nothing whatever is allowed off that for the maintenance of the property in its lettable value.

19,848. By your lease you are bound to maintain in addition to paying rent, are you not?—You are bound to maintain it in a certain condition, yes; but the rating authority goes beyond that and says, if you make a better profit out of it one year, the letting value is greater than what you have agreed to pay.

19,849. Is your complaint this, that if more would be paid than the rent, you are rated upon the higher sum, whereas if you do not make the rent you are still rated upon the rent?—My complaint is, that when times are good we are rated at the price of the day. I am giving my own example here. My extreme royalty is 2*s.* 6*d.* a ton, but because the time is good I am rated this last year at 2*s.* 8*d.*, and I am going to be rated at 3*s.* next year.

19,850. In other words, in good times the tenant will give more for the subject than in bad times?—Very well; but in bad times he ought to be rated on what he will give then.

19,851. Is he not?—No, that is just the point.

19,852. Let me understand the point. If the royalty falls below the dead rent, that is the fixed rent, then are you rated on the fixed rent?—Yes.

19,853. Is your complaint this, then, that the royalty of the year, if it is taken in one year, ought to be taken in every year, or else the fixed rent should be taken

Mr. H. G. Hills.

23 June '98

Agricultural Rates Act, 1896: Objections to Act.

Mr. W. A. Darbishire

23 June '98

Slate quarries: Suggested system of valuation.

*Mr. W. A. Darbishire*  
23 June '98

every year?—My complaint is this, that the principle of the rating is entirely lost sight of. I am giving my own example in my own quarry. For 16 years the expense of keeping the property in lettable order was so great that there was actually no return whatever, and yet there was no deduction for any expense of keeping the property in lettable order, which I maintain ought to be allowed off the rent which has been fixed. Worse than that, having paid the 16 years when there was no result, now that times are good my rateable value is fixed higher than the rent that I am actually paying per ton. In fact, they go upon a sort of income tax upon my returns.

19,854. Have you appealed or made any objection?—No, I have not yet.

19,855. Upon your showing I am bound to say it seems to me a case for consideration on the merits as an individual case rather than a case for breaking down any principle?—I may be quite wrong, but I thought possibly this Commission would lay down a few broad lines for rating authorities to adopt.

19,856. I will take you on that. Assume that we are beginning with a clean slate, and going to have a reform, what is the principle upon which, in your opinion, slate quarries ought to be rated?—They ought to be rated upon such a rent as will be what the tenant would give after having had to keep his property in reasonably good order, and that, further, a very considerable portion of what he pays as royalty or dead rent should be taken as the rateable value of the owner's property instead of the tenant's property.

19,857. It does not much matter for the purpose which we are discussing, does it, whether the owner or occupier pays, because if the bargain is that the occupier has to pay the rates he gives the owner a less rent than he would if the owner paid the rate?—Yes, that is so.

19,858. As a matter of fact, I do not see that your principle which you suggested just now in reply to my question materially differs from what is the present state of the law, with this exception—that the rating authority presumes that you and your landlord have agreed upon what is the fair value of the quarry one year with another, and have taken that as the sum on which to rate you?—My idea is that a great part of what is paid as royalty or dead rent is a payment for raw material which the landlord sells to the tenant.

19,859. I understand that point, and I think it has been put to us by the owners of coal mines; it is that it is unfair to rate upon the royalty on the ground that to get the royalty you are actually consuming the property. Is that your point?—Yes, that is the point that I have raised here too. We have agreed to pay, say, 2s. a ton to the landlord for the use of any of his consumable property that we can get hold of. It is a purchase money.

19,860. Do you think that if the rating authority find that two people have made a bargain over a period of years, the one to pay the other, we will say, 500l. for the use of a subject, that they can go behind that fact and rate upon some other principle?—No. You say it is for the use of this property, but we pay for more than that—we pay for the purchase of this property. Part of my point is that we pay in the royalty a purchase money for the raw material, besides a sum for the use of the property which is there indicated.

19,861. In so far as you are paying for the corpus—for the subject itself—allowance ought to be made for that in the rent. Is that your point?—That is my point.

19,862. I understand from another passage in a communication that you have made to us, that you object to the method by which the result is arrived at—in other words, that you object to the employment of a professional valuer, and his being paid as a fee a per-centage on the amount of the assessment which he realises?—That is so.

19,863. Is that common in your district?—Yes, it is the usual system now with respect to slate quarries, but not with respect to anything else.

19,864. Is there any other point that I have not touched upon that you would like to speak about?—I do not think there is, but I wish to enforce that idea that the slate quarry material—the raw rock—is a purchased material by the lessee from the lessor. There is a very considerable portion of the rent which

is paid as purchase money for raw material which belongs to the lessor.

19,865. (*Mr. Dalton.*) After a time your slate quarry will be exhausted, I presume?—In about 200 years, yes.

19,866. Whenever that time comes, the rest of the ratepayers of the parish will lose any contribution whatever from that property?—They will when there is no more raw material to use up.

19,867. You are in the same position as any other ratepayer who has exhausted a property in the parish?—Certainly.

19,868. You will be striking it ultimately with sterility?—Yes.

19,869. Do you not think the other ratepayers have a right during the period that you are using up that property to have a contribution in respect of all that is taken away?—Yes, but not from the lessee.

19,870. That is another matter. I want first of all to get at the point whether you consider that the other ratepayers are entitled, whilst that property is being exhausted to rate it on its annual value. It has an increased annual value, because at the end of a certain number of years the property will vanish. Do you consider, therefore, that the other ratepayers have a right to charge on its full annual value—I am leaving out of account the question as between the lessor and lessee for the moment?—If there were a million tons of slate to be got out for a certain number of years, the ratepayers have a right to be paid upon that, but they have not a right to be paid upon the full actual value. They have a right to be paid upon what it would be worth after there had been money spent upon it to get the slate out.

19,871. That is another point?—I mean on the value to a manufacturer.

19,872. As regards the exhaustion of the property you do not think it is unfair that they should receive on the whole of the value less the cost of getting it out, do you?—No, I do not.

19,873. The next point that arises is whether the rate should be borne by the lessor or by the lessee; that, I suppose, is taken into account when they make their bargain together, is it not?—Yes, the lessee pays all the rates.

19,874. I suppose if he did not pay all the rates he would have to pay a higher royalty?—Yes, certainly.

19,875. You do not stand in that respect, as an owner of a slate quarry, in any other position than that of an owner of a house. It may be very fair to divide the rates between owner and occupier, but there is no stronger reason for doing it in the one case than for doing it in the other, is there?—I do not quite follow you there.

19,876. Why should an owner pay the rates in the case of a slate quarry and the occupier pay the rates in the case of other property?—The rates are at present being paid on the profits of manufacture—on an industry. They are not paid upon the actual value of the staff, the raw material of slate at all. They are paid upon the industry of turning the slate into a saleable article.

19,877. I do not quite understand what your proposal is as regards the rating of this property in the future. What is your practical recommendation?—My recommendation is that the dead rent should be taken as the rateable value.

19,878. What is the dead rent?—That is the minimum rent which has been agreed upon between the tenant and the landlord.

19,879. It is not the actual rent; it is the minimum rent?—Yes, it is the minimum rent.

19,880. You take that as the rateable value?—I do; that is what I believe to be correct.

19,881. And nothing else?—Nothing else, except taking out of that what the landlord would set aside as his sinking fund and adding to it the machinery, the use of which is given to the lessee.

19,882. Would that on the whole give you more than the dead rent or less than the dead rent?—It may give you a little more or a little less, but it is a different principle altogether.

19,883. You propose to rate it on a totally different principle to that principle on which you would rate any other property?—No; I maintain that would be the same principle as far as I understand.

*Mr. W. A. Darbishire*

Slate quarries: The money paid to lessor as rent is said to be partly purchase money for part of the owner's property, and as such should not be a subject for assessment. This point discussed.

Slate quarries: The money paid to lessor as rent is said to be partly purchase money for part of the owner's property, and as such should not be a subject for assessment.

Professional valuers should not be paid a fee dependent upon amount of assessment.

Slate quarries: Suggested system of valuation. The minimum rent should be taken as the basis.

Mr. W. A.  
Darbishire  
23 June '98

19,884. You do not have a minimum rent and a maximum rent in the case of other properties?—You do not have a rent varying according to the profits. If you take a house you do not vary the rent according to the profit; it is a fixed rent. Is that not so?

19,885. You would rate the quarries at the minimum rent. Is that it?—Yes, that is so.

19,886. (Mr. Clare.) The ordinary terms upon which a quarry or a coal mine is let by an owner to a lessee is that the lessee undertakes to pay a certain nominal or fixed rent, and, in addition, a certain royalty per ton on either the coal or the stone raised?—Yes, that is so.

19,887. And if the royalties exceed the dead rent, then he pays the royalties, but he does not pay the dead rent?—Yes, quite so.

19,888. That is the actual method by which almost all rents are paid in respect of the use of quarries or coal mines?—In respect of slate quarries, yes; I do not know anything about coal mines.

19,889. If an assessment committee is trying to find out what rent a hypothetical tenant would pay for a quarry, do you think they are very far wrong in adopting the principle that is universally adopted in practice between owners and lessees?—No, they are not.

19,890. Having ascertained in that method the rent which a hypothetical tenant would pay, then all they have to do is to make the statutory deductions which are required by the law in order to arrive at the rateable value?—I do not think so. The rating varies from year to year almost.

19,891. They do take it?—No.

19,892. Pardon me; the rent that you will pay as lessee to your landlord depends upon the number of tons of slate that you take out of your quarry and you pay according to a fixed royalty?—Yes.

19,893. If you take out 100,000 tons in any one year you pay more rent than if you take out 50,000 tons?—Yes.

19,894. If it is the universal practice between owners and lessees to adopt that method for ascertaining the rent which the lessee should pay, why should it not be the right method for an assessment committee to adopt in endeavouring to arrive at what, in their opinion, a hypothetical tenant would pay for the same quarry in any particular year?—Because one bargain is made for 21 years at the minimum, or at least for a large number of years, and the other is made for one year only.

19,895. I am not assuming that the assessment committee adopt the same royalty per ton, but that they simply adopt the same principle—namely, that they have to ascertain what royalty a tenant would pay, we

will say, this year for the purpose of occupying your quarry and getting all the stone he can out of it?—The case seems to me quite different. The assessment committee fix every year what they consider a fair rent that anybody would give for it during that year, but the bargain between the lessor and the lessee is how much he would pay for the 21 years, and he divides it in instalments over the 21 years. His annual payment is an instalment of the rent.

19,896. In ascertaining what rent you would be willing to pay, we will say this year, for the quarry that you occupy, are the assessment committee right in principle in making their calculation on the basis that you would be willing to pay a certain royalty for every ton of slate raised?—No, they are not; certainly not.

19,897. Then why did you adopt it in the bargain which you made with your owner?—Because I pay it in instalments extending over 21 years. If I am going to pay 1,000*l.* a year rent, that means 21,000*l.* to be paid for the property I am going to get hold of, and I am going to pay him in instalments over the 21 years; but if the assessment committee comes to me and says you ought to pay 2,000*l.* instead of 1,000*l.*, that is quite wrong. If they found that I would not have paid 100*l.* in a particular year, they ought to assess me at the 100*l.*

19,898. Supposing they come to the conclusion that you are paying 500*l.*, and that you ought only to pay 400*l.* you would not object to it; or supposing they come to the conclusion that you ought to pay 500*l.* to your landlord, and you only pay 400*l.*, you would not object to that also?—No, certainly not; they should do nothing of the kind. For 16 years nobody would have paid 500*l.* for my quarry.

19,899. (Mr. Smith.) May I ask in what union your quarry is situated?—It is in Liandwrog Parish, I think, in the Carnarvon Union.

19,900. And the assessment committee would be the assessment committee of that union?—They would be the guardians of the Carnarvon Union.

19,901. They would form the assessment committee?—Yes.

19,902. Why have you not made an objection?—Of course I shall do so, there is no doubt.

19,903. It would have strengthened your case if you had made it first?—Do you think so.

19,904. We should know then what they had done?—I want to know your opinion as being an authoritative opinion to settle these things in a friendly manner.

19,905. The law has pointed out to you the remedy, and you have not taken it apparently?—Yes, that is so.

19,906. (Chairman.) Have we missed anything you would like to say?—No, I think not.

Witness withdrew.

Adjourned till to-morrow at 11.30.

## FORTY-SEVENTH DAY.

Friday, 24th June 1898.

At St. Stephen's House, Victoria Embankment, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH (Chairman).

SIR E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., Secretary.  
T. LLEWELYN DAVIES, Esq., Assistant Secretary.

Mr. B. F. C. COSTELLOE, called and examined.

Mr.  
B. F. C.  
Costelloe.  
24 June '98

19,907. (Chairman.) I understand that you appear on behalf of the London County Council in regard to certain resolutions which the County Council has passed bearing upon the subject of our inquiry?—I do; but I should first of all mention, for the sake of exactness,

a small difficulty which has arisen (I think only a small one), and that is that the final resolutions which are mentioned in the memorandum\* I have handed in,

Mr. W. A.  
Darbishire

Resolutions passed by the London County Council with reference to local taxation to be submitted to the Commission.

concerning the relation of London to Imperial contributions, were not reached at the last meeting of the County Council, and remain, therefore, blocked for the moment. I have no reason to suppose that there is any serious adverse comment upon them, but if the Commission will kindly take anything I say as regards that matter, subject to what the Council may ultimately resolve, I think no practical inconvenience will arise.

19,908. Those are the resolutions, are they, which are printed on page 308 and onwards of your memorandum?—No; the resolutions from page 308 onwards are long since passed by the Council, but the Commission will observe that one of the original resolutions (k) was referred back for further consideration as to the exact form in which we ought to state to this Commission our desire as regards the ultimate relations of London to Imperial contributions.

19,909. I have just at this moment had put into my hand a letter, which is in the following terms. I will ask you whether it bears upon the point you are now referring to:—"Sir,—Referring to my letter of the 11th instant, forwarding proof of evidence to be given on behalf of the Council before the Royal Commission on Local Taxation by Mr. Costelloe, I have to inform you that the Council at its meeting on Tuesday last, the 21st instant, postponed the consideration of the following recommendations which the Local Government and Taxation Committee advised should be substituted for their original recommendation (k).—(i.) That it is desirable that taxation arising from local sources should be devoted to local purposes, and that the inhabited house duty is one of those taxes which should be transferred accordingly to the counties. (ii.) That certain services now administered and paid for locally are so far of national concern that the burden ought to be borne by the nation. I am, sir, your obedient servant, Charles John Stewart"—That is so. I was not aware that the Clerk to the Council had given formal notice; and, therefore, I desired to set myself right in the commencement of what I had to say. I may say that I have reason to suppose that no serious contest will arise, but it so happens that the report bringing up these final recommendations of the Local Government and Taxation Committee was not reached until after seven o'clock; and, therefore, it stood blocked for consideration at some future time.

19,910. Then we may take the points in your memorandum in the first instance, and deal with these resolutions afterwards?—If you please.

19,911. The resolutions, which are the important part of this memorandum, are those which are to be found, I think, in paragraph 25, are they not?—That is the chain of resolutions which my committee originally brought up, and which, with the exception just mentioned, were passed by the Council as the basis of the evidence I was to give on their behalf. The suspended resolutions you will see in paragraph 27.

19,912. They are those which have just been read?—Yes.

19,913. The point of the first three resolutions is that a new source of revenue for local purposes should be obtained by means of some direct charge upon owners of site values; that it be termed the owners' tax; and that all persons deriving a revenue, or use equivalent to revenue from the value of a site, be liable to pay such charge?—That is so.

19,914. Does that amount to more than this; that all who are owners of site values, whoever they may be, are to pay?—The object underlying those three resolutions is the object which I have set out more at length in another part of the memorandum that I handed in; namely, that there should be a transference of what I may call the immediate incidence (to avoid unnecessary argument) of a certain part of local taxation from the occupier to the owner—meaning by the owner, the owner of site values, and meaning by site values any rent or use equivalent to a rent arising out of the value of the site, as distinguished from all buildings or structures that may have been put upon it by the direct employment of capital.

19,915. There are two points underlying that; first that there should be a transfer, and then the person to whom it should be transferred?—That is so.

19,916. What are the grounds which make you think that the transfer is a fair one?—They are shortly these; that in the view of the Council it is expedient that the

entire cost of such expenditure for administration and improvement as is borne locally, ought no longer to be taken out of the pockets of the occupying ratepayers as at present, and that at least a considerable proportion of it ought to be borne directly by the owners of site values, because in our opinion the system of taking it all directly out of the pocket of the occupying ratepayer does, in fact, bear unjustly and very onerously upon him, and because it produces a very great resistance on the part of the occupying ratepayers to every form of progress or improvement, however desirable for the community at large that improvement or reform may be.

19,917. Just let us take that in detail. In the first place you assume that the charges existing come out of the occupier's pocket; let us be quite clear what we mean by occupier, because, of course, it is the leaseholder rather, is it not?—I should not say so. I am quite aware—and it is necessary at some point of the argument to discuss it—that the complex leasehold tenure in London raises great difficulties in the argument and in practice, but for the present purpose of clear statement, I should like to keep distinct the conception of the occupier and the owner, as we understand them.

19,918. Would you, in order that we may put it on the notes, so that there may be no after dispute about it, define for me the meaning that you attach first to the word "occupier," and then to the word "owner"?—I am much obliged to you for putting it in that form, because it enables me to clear up my meaning. The previous question, which was interrupted by my remark, was, in what sense does the present rate come out of the occupier's pocket? I should prefer, for the momentary purpose, to define "occupier" as the person out of whose pocket it comes according to the existing law, that is to say, the person from whom, in fact, it is collected. He is at the present time in the ordinary case the tenant who pays the rack rent subject to the well-known exception in the case of houses let in rooms or flats, or other structures of special kinds.

19,919. Do not let us complicate it with that for the moment; let us, for the purpose of definition, take the simplest case of the man who rents a whole house for either residential or business purposes?—That is what I should prefer to do for the clearness of the argument. In that case the immediate occupier, the person who actually does rent and occupy, is the person from whom the rate is at present collected. Defining the occupier in that way, the next question is to define the owner. In London, by reason of the leasehold tenure, the "owner" is a very complicated personality. There are often, in London, by reason of leasehold transactions, three or four layers of persons, who among them, from our point of view, make up the owner. It is by no means true to suppose that the owner of the ultimate freehold is, for the purposes of this argument, the owner. In many cases a large part of the beneficial advantage or profit of the site values may be in the hands of intermediate persons: but we do not, for the present purpose, need to discuss exactly how the site values in any particular case may be held. The Council did not desire to put to this Commission anything further upon that point than the resolution (c), namely, that all persons deriving a revenue or use equivalent to revenue from the value of a site, shall be considered to be the "owner" for this purpose.

19,920. Very well, we will take it at that for the moment—I have some questions to put about that by and by, but taking it that way is that the transfer which you advocate?—That is the transfer.

19,921. The question I want to ask before we go further is, what are the grounds which make you think that to be a fair transfer?—In the first place, that the present system bears unjustly upon the occupier as a matter of financial equity between contributaries, or possible contributaries, to the public charge. That is, if you please, partly an economic proposition. In the second place, that the present system makes against the good government of the community, and the execution of improvements which may be extremely necessary for the interest of the whole community, because it produces an extreme opposition to any expenditure of money whatever, however good.

19,922. In other words, the man who has contracted with the superior upon the basis of the rates being 2s. 6d. in the £, objects very strongly when they become 3s. or 3s. 6d.?—I do not know that I should accept the proposition that he has contracted on the

Mr.  
B. F. C.  
Costelloe.

24 June '98

Owner and occupier: Definition of these words.

Site values: Persons deriving revenues from site values should be assessed in respect of their several interests in them to local rates. Reasons for this suggestion.

Site values: Owners of site values, that is, all persons deriving revenues from site values, should be assessed in respect of them to local rates. Expenses of administration and cost of improvements should not fall principally upon occupiers.

Mr.  
B. F. C.  
Costelloe.

1 June '98

Rates in London : Lessees in London cannot make any precise calculation when making a bargain as to what the rates are or will be. They therefore made a blind bargain.

The State in deciding upon whom the burden of taxation should fall could rightfully ignore existing contracts as to payment of rates without giving compensation.

basis of their being 2s. 6d. in the £. I have always, myself, thought—and here, of course, in details I must speak for myself, because I cannot profess to have the authority of the council for every detail of the argument, but I think I substantially represent the view of the majority—I have always, myself, thought that the contracts of tenancy in London are not, in fact, made upon any clear or definite view of what the rates are, or are likely to be, because, in the circumstances of London rating, I think it is nearly impossible for everybody—certainly impossible for anybody, except a very skilled land agent—to find out what the rates of a given house are, or are going to be.

19,923. Certainly, what they are going to be is undoubtedly more difficult?—I mean it in this sense: that, as a matter of fact, even if you had the means of ascertaining what the aggregate rate in a particular area was last year, the rates vary from year to year, apart from their general tendency to increase, in such an extraordinary way that it is very fallacious to assume any exact figure as the rating of any house.

19,924. Quite so, but as between the two parties to the bargain, the bargain which the one man takes upon his shoulders, rightly or wrongly, but which, as a fact, he does take, is that he is to pay the rates?—Certainly, and part of my argument on the subject is that that is a blind bargain.

19,925. In entering into that bargain he is aware that rates are more likely to rise than they are to fall?—No doubt, but, as I say, part of my argument, and part of our view is, that he is entering on a blind bargain, and even that the tenant does not always see exactly how far it is a blind bargain. In the result, the tenant almost always finds that he has not foreseen even the inevitable rises of rate, and therefore he, assuming, whatever the economists may think, that these rises of the rate do come out of his pocket, and out of his living, constantly resists, and constantly, in all our experience, has resisted even the most necessary and important elements of public charge, such elementary expenditure as, for instance, that of public health.

19,926. I understand that, I think, as an argument for preventing such a bargain in future contracts—but I am not quite sure that I appreciate it as an argument for interfering with contracts which are already running their course?—I am obliged for the suggestion, because, of course, that element of the argument will also require to be dealt with at some point of the discussion. But, if I may say so, the difficulty of the discussion is that different classes of considerations are constantly interlacing in any discussion about the incidence of London rates. We have in the council always held—there is nothing about it in these expressed resolutions, but I am speaking from knowledge of the previous discussions on the subject—we have always held that the question of contracts, past or future, resolves itself into this—that it is the right, unquestionably, and we believe also, unquestionably, the duty of Parliament to say, when it imposes any public charge, upon whom, and, upon what interest, it desires that charge to fall; and that when it has so decided, it is nugatory for the subject to attempt to violently change the incidence of that charge by contract, as in the case of the income tax, and that the State can provide, and rightly does provide, for the nullity of any contract affecting to create such a transfer.

19,927. Without compensation?—Without compensation. In the case of the income tax, it was distinctly agreed—and this is the common basis on which we all proceed—that any contract affecting the charge and incidence of Schedule A. of the income tax is void. All we have proposed to do is to suggest that, if in the wisdom of Parliament a transfer of local charges should now take place, contracts ought not to be allowed to interfere with that.

19,928. Even in the case of a public body, either the London County Council, or the Birmingham Town Council, or the Liverpool Town Council, which, having cleared a site and let it out for building six months ago, upon the basis of existing charges amounting to so much in the pound, would that not annul that bargain, and transfer a part of the charge to the person with whom it has made its bargain?—I think I may clear a difficulty which lies behind that question, because, so far as our proposals are concerned, I do not think anything we are proposing here is at all practically likely to cut away any large proportion of the charges which

people contemplated in, for example, the great bulk of existing leasehold contracts.

19,929. Do not let us be dragged away by the great bulk of leasehold contracts, because, if I understand your resolutions aright, and we will take them in detail by and by, their object is to transfer a burden, commencing at the rate of 6d. per £ per annum, at once?—6d. per £ on the site values.

19,930. And to put it upon the owners of the site value?—I may at once make that clear, and I think it will help the Commission if I do. The effect of such a charge upon the owners of site values as 6d. in the £ on site values, would certainly not be to lessen to any great extent the burden falling upon the ordinary occupier. What it would do, would be to prevent that burden from increasing. My own immediate and most urgent object, speaking for myself, is not so much to cut away existing established burdens, although I think there is a case for relieving them, as to prevent them from constantly increasing. It is the constant increment of burdens on the occupier that is the real difficulty.

19,931. *Pro tanto*, an initial burden of 6d. in the £ would, by the gross amount raised from it, diminish the burden upon the shoulders of those who are at present contracting to carry it?—May I put it in this way? It would diminish what would otherwise be a burden, but the difficulty is that the burden upon the occupiers is a constantly increasing burden, and the object of the policy which I have in my mind is to stop that constantly increasing burden, which, I think, is inequitable, and which, in so far as it touches contract, arises from a blind contract.

19,932. Would you give the owners of site values votes?—I think it has not been the general policy of Parliament in modern times to set up a property vote of that kind, but I regard it as a very immaterial question. The effect would be very small, and I should have no particular objection to it myself.

19,933. In other words, you would be providing for yourselves a means of taxing a body of persons who would have no opportunity of resisting?—I think, as a matter of fact, the owners at present do vote, and that there are very few owners who would pay this tax who are not at present voters for the County Council, and, as a matter of fact, very influential voters. However, I do not desire myself to put forward anything here; our Council has not resolved upon that, and, therefore, do not desire to put forward any strong opinion either way.

19,934. You do not propose to stop at the 6d. in the £?—No, but I say frankly to the Commission, as I have always said in the Council, that I do not regard it as possible or desirable to make a revolution in the occupier's charge. If I had the power to take off 3s. of the 6s. the occupier at present bears—if I had the power to do that next year, I should not do it, because I think the ultimate effect would not be to the advantage of the occupier, and I think it would produce such dislocation, including an enormous dislocation in rent, as would be highly to the detriment of the community.

19,935. Do you not think that, having once placed this weapon in the hands of the spending authority, there would be a very great temptation to its constituents to be always transferring a constantly increasing share of the burden which, apparently, must rest upon the shoulders of one or other of them?—It is for exactly that reason that the resolution which deals with quantity, that is (*f*), which was the subject of close consideration, both in the committee and in the council, has put in, explicitly, a reference to Parliament, to determine the nature and extent of any rise that might be allowed if such a scheme were started. It is not in the contemplation of the council that a scheme should be suggested which would commence at 6d., and would promptly rise to an amount sufficient to pay the whole, or half, of the total local expenditure of London. It is of the essence of this scheme, I think, that it is a moderate scheme, and I present it to the Commission as a scheme which really would do no harm to anybody. It would lay a small charge upon the owners of the site values, mainly for the purpose of providing against new expenditure and it would place that charge upon them in respect of expenditure from which they derive an actual pecuniary profit, for which at present they pay nothing. To that extent it would alter their position; but I am confident, myself, that if this Commission were to report in favour of such a scheme, and if Parliament were to give effect to it, the

Site values: Rating owners in respect of site values at the rate of 6d. in the £ would relieve occupiers from an increase in their present burdens which they contracted to pay by a blind bargain.

Site values, rating in respect of: Owners should be assessed commencing at the rate of 6d. in the £ and Parliament should fix a limit. The present maximum might perhaps be fixed at 2s. in the £. Question of interfering with contracts discussed. Distinction might be drawn between present and future contracts.

Mr.  
B. F. C.  
Costelloe.  
—

owners of site values in London would certainly not discover that any important change had taken place in their situation. Nothing would have happened more serious than this, that in future they would be obliged to contribute directly to certain elements of public expenditure which would go to their own direct advantage.

19,936. At the same time, they would have no guarantee against the rapid increase of this burden?—The words of the resolution to which I have just referred, (f), were that the Commission “be asked to recommend that such owners’ tax commence at the rate of 6d. in the £ per annum”—that is upon the valuation of the site values, of course, and not upon the present rateable value—“and rise gradually to such sum as Parliament may determine.”

19,937. I noticed those words, and I want to know whether for each increase of  $\frac{1}{2}$ d. you are going back to Parliament?—No; the idea was this—of course, now again, the Commission will understand that in many of these points I am obliged to state my own view which, perhaps, travels in detail beyond what I have direct authority for.

19,938. We understand that perfectly?—Saving that, I may say the idea was this—that, commencing with a strictly moderate amount like 6d. upon the site values valuation, it is our desire, if possible, to obtain power from Parliament to increase that owners’ tax, from time to time, especially as new expenditure for the benefit of owners may have to be incurred—such, for example, as the new bridges or the Strand improvement; but we should be quite willing to have it put upon us that it should not be increased by a larger amount than so much in each year, and we invite the determination by Parliament of a maximum to which, without further Acts of Parliament, it should not go.

19,939. Will you give me your idea of the maximum and the period over which it might be spread?—I have not authority to speak on that. I can only say that the sum which has been discussed as the present maximum, so to speak, has been some such sum as 2s. in the £ on site values. Of course, I do not suggest that as an ultimate maximum, by any means, but if this were an experimental scheme, and if, by a gradual progress, an owner’s tax had mounted up to 1s. 6d. or 2s. in the £, and no trouble had arisen thereby, then, no doubt, we would suppose that the wisdom of some future Parliament might give some further latitude.

19,940. Quite so; I am not going to ask you whether you would go up to the whole length of 20s. in the £, unless you wish to express an opinion upon it; but some of my Scottish friends have told the Commission, quite frankly, that they would take 20s. in the £ in the course of a few years?—I am much more moderate than that; I am quite willing to leave it to the wisdom of future generations to say whether they will municipalize the site values of London. There are theoretic arguments concerning it which do not seem to me to touch immediate politics. I do not myself propose anything like a tax going up to 20s. in the £.

19,941. Would you agree with me that if the thin end of the wedge to the extent of 2s. in the £ was once inserted, it would be a comparatively easy thing to do, and very difficult to resist driving home the wedge to the full extent of 20s. in the £?—Respectfully, I should certainly not agree with that proposition. My own experience of these things, short as it is, leads me to see that the power of resistance possessed by people like the owners of site values, as a whole, is amply sufficient to protect them from anything very excessive; not merely now, but even in all periods of English history that I can force, I do not think they run any risk whatever. I think this is an equitable charge, and I think it is quite possible that Parliament, within some reasonable limit of time, may adopt such a principle; but I think that whenever it is adopted it will be adopted gradually, and it will be adopted as a very moderate measure, and I myself, if I were a large owner of site values, should not be in the least afraid of its exceeding that moderate measure—in fact, I think I should welcome it.

19,942. At the same time, you would not be surprised to hear that the owners of site values are, as a matter of fact, a good deal afraid of it?—Of course, I do not wish to mention names, but I only know that some very important members of that class who have discussed it with myself have told me, frankly, that they consider it is very foolish to take that line, because they consider it makes for their own safety rather than against them,

and I, myself, think it does. I think the chance of anything like a dangerous agitation for the municipalization of site values would be immensely decreased by the creation of a reasonable tax for municipal purposes upon them.

19,943. I want a clear answer to this question: Do you, or do you not, make any difference between interfering with freedom to make contracts in the future and interfering with contracts which are now running their course?—I admit a difference, but I bear in mind that even Mr. Goschen did not draw a hard and fast line. He himself proposed to interfere, to a certain extent, with contracts running their course—in 1869 I think it was—when the matter arose in a very embryonic stage in Parliament. I quite appreciate that there is a difference between what you may allow in future contracts and what you may do with reference to present contracts. I do not think, so far as concerns any moderate scheme such as this which is here proposed, that there is any cause for raising the question of the present contracts. But if I had to draw a Bill I should be quite willing to consider whether there could be any difference made as between existing and future contracts, because I admit the principle is different. I think that Parliament may say, and ought to say in the most absolute way, that when it has determined that a charge shall fall, say, on the owner of site values, any future contract which professes to alter that incidence shall be absolutely void, just as it has done, as I have said, with regard to the income tax. But as regards the bearing of such a charge upon running contracts, and whether any exemption or compensation was to be given to persons who might be supposed to be damaged under running contracts, that is another matter and is a mere question of practical expediency. I think it is not a matter for a clause in the Bill so much as for adjustment in the burden. As regards that, all I say is that I do not think this scheme gives cause for any such adjustment of the burden in the practical equities of the system.

19,944. Has the question of making a difference between future and present contracts been discussed by the London County Council?—Many times.

19,945. What has been the result?—I think, practically, I may say that what I have just said is the upshot of the general view.

19,946. That ends the questions I want to put to you as to the expediency of the transfer. I now turn rather to the next point, as to upon whose shoulders the transfer is to be made. I observe that the expression in your resolution is “some direct charge upon owners of site values”?—Yes.

19,947. And that is explained—so far as it is explained—by the words, “All persons deriving a revenue” or use equivalent to revenue from the value of a “site”?—That is so.

19,948. Do you suggest to us that a machinery can be devised which will throw the charge upon the right persons with anything like substantial accuracy?—I do. When you put to me the words “substantial accuracy,” of course, I guard myself against suggesting that anything like mathematical minuteness can be obtained in matters of taxation of this kind. The State does not obtain it in the Death Duties or in the income tax, or in anything else; but with substantial accuracy in the practical sense, that is to say, that the great bulk of the persons who ought to bear such a charge can be made to bear it, and that they can be made to bear it with rough justice in the proper proportions is, I think, perfectly practicable.

19,949. This is one of the points, I understand, upon which the advocates of this new burden have been themselves—and I think are still—considerably divided?—It is perfectly true that they have been divided upon it, because we have, at Spring Gardens, all of us, been thinking out and threshing out this question for many years, and it is our habit there frankly to state our different views. There is nothing in the nature of party allegiance of a very strict character in these matters. We all state our different views, both in private and in the Council, and thresh them out. Consequently, it has been publicly notorious that there have been differences between some of us and between some who take a leading part in the discussions as to exactly how such a thing could be done.

19,950. And you will understand that probably the same or similar differences of opinion are not unlikely to be reflected amongst us who are sitting around this

table; therefore, the questions that I am putting to you are questions, not for my own individual information, but for the use of the whole Commission when we come to discuss what we shall and what we shall not be able to recommend?—I am much obliged. I was going to complete my answer by saying that I do think that the differences of view which prevailed at an earlier time have largely been solved, and, I think, that amongst those who form opinion on this matter among the majority of the Council, there is now not any very great difference as to how they would propose in detail to work this scheme if the scheme were started at all.

19,951. I do not understand that in the resolutions which are put before us as resolutions of the Council any scheme is foreshadowed?—No, that was deliberately excluded after consideration, partly because we thought that it was travelling beyond the province of the Council to attempt anything like drafting a Bill, inasmuch as what we desired was to raise the discussion of the principle in a broad form of policy, and we regarded it as, of course, the right and the duty of this Commission to report to Her Majesty an opinion on policy which would be independent of questions of detail.

19,952. Quite so; but I think we shall be expected to go a little further, and that, probably, if we make a recommendation as a matter of general policy that a thing shall be done, we shall be expected at any rate to consider, and possibly to indicate in what way the thing can be carried out as a practical measure; at least I should go this length, that I do not think we should be quite doing our duty unless we made an effort in that direction. Therefore, I am anxious to get from you an indication either of the views which you yourself hold on the subject, or which you know are held by those who think with you on the main question?—I am entirely at the service of the Commission as regards any such matter; only, as you have kindly reminded me at the outset, the Council has reserved itself from making any recommendations, or from instructing me to make any suggestions on its behalf as to a detailed scheme.

19,953. I call your attention to paragraph 23 of your memorandum, in which you say: "I do not think it is necessary for me to trouble the Commission with the later proceedings, as they are recorded on the minutes of the Council." Of course, we can hardly regard the minutes of the London County Council as before us unless we get them stated upon our notes; and, therefore, I ask you whether that paragraph refers, or includes in its reference, the discussion upon the report of the resolutions which were passed in November 1892?—I have not the minutes before me, but I have no doubt it does include that amongst other discussions upon this subject.

19,954. I have what I think is a correct copy of a minute; perhaps you will look at it, and if so, we will have it read and put upon the notes (*handing document to witness*)?—The copy handed to me appears to be an extract from the Minutes of the London County Council of the 29th November 1892. At page 1124, dealing with a report of the Local Government and Taxation Committee, dated November 16th, 1892, the extract is as follows:—"Recommendation (A.) 'That it is imperative that the relief of the occupying ratepayers of London from the increase of charge should be secured in the next Session by the provision of some new source of revenue, such as, by way of illustration, a municipal death duty, rent duty, or special rate on ground values.' On the motion to adopt the above recommendation—'Amendment moved by Mr. Stuart, seconded by the Vice-Chairman of the Council, That it is imperative that the relief of the occupying ratepayers of London from the increase of charge should be secured in the next Session by the provision of some new source of revenue; that in the opinion of the Council the most equitable method of securing this relief is by the taxation of the ground values of London, and subject to the ultimate settlement of this question, some immediate relief might be obtained by an interim special rate on ground values, rent duty, or municipal death duty.' I perfectly recollect the discussion to which you call my attention by that extract, and I am quite willing, if it is desired, to explain the matter in any way.

19,955. If you wish to make any explanation about it, I should like to hear it?—The explanation is

very simple. The amendment which was moved by Mr. Stuart and seconded by the then Vice-Chairman of the Council was what I may call a friendly amendment to remove certain difficulties which some members of the majority had in accepting the precise words of the Local Government and Taxation Committee's recommendation at the time. I do not think if the members of the Commission look at the two recommendations they will find any material difference between them. The second one was merely intended to avoid committing people at that time to matters beyond what was the amount of agreement among us.

19,956. In this Commission we have had various suggestions put before us, and, as I understand it, there are two methods by which the general object is sought to be obtained—one by a taxation of the ground rent as it is received year by year, and the other by a taxation of what is called site value. I thought, perhaps erroneously, that the division of opinion between the supporters of the motion and of the amendment was really a division of opinion upon those lines?—I think not. If I remember it accurately, in both of these forms of words three possible methods of arriving at a taxation of site values were meant to be indicated. They are indicated with slightly different degrees of emphasis in the two forms of words, but they appear textually in both. One is called a municipal death duty, another is called a rent duty, and the third is called a special rate on ground values. It would perhaps be useful to the Commission if I were to state what the difference was, broadly speaking, between these three conceptions.

19,957. I think we may leave out for the moment, if you please, the municipal death duty. I think that would complicate our present point, but I will take it if you wish afterwards. The point I am on just now is the difference between the two others you have just mentioned?—As you please, but I think I should prefer, if you will allow me, to say a word about the municipal death duties also.

19,958. Before your evidence closes you may do so, but I would rather not have it mixed up at this moment with the others, because it is really quite a different question?—I will follow that intimation, but it had a certain connexion at this time with the movement here, and, without complicating the evidence, I think I should like to give you what the connexion was. I will commence with the rent duty and the special rate on ground values. What the rent duty meant was a scheme which was avowedly a rough and ready scheme which the council annexed to its Strand Improvement Bill in a previous session. In the Strand Improvement Bill of 1893, the Council proposed to Parliament that it should be allowed to obtain funds for that improvement from the owners of site values, on the ground that that was the kind of improvement which largely went to benefit the owners of site values generally. I do not mean that one particular improvement benefited all site values, but that such improvements, taken in the gross, did benefit site values, and therefore there was an equitable reason for raising an Improvements Fund by that kind of contribution. But at that time, in order to provide the most simple and obvious means of raising such a revenue we, my Committee and the Parliamentary Committee, went and negotiated with Somerset House, and by the leave of the Chancellor of the Exchequer, Somerset House agreed with us for the carrying out of a practical scheme if Parliament should give authority to raise the tax. That scheme was this: that an owner's improvement charge (as I think it was broadly called) should be raised in London from all persons who paid the Schedule A income tax; that it should be treated for all purposes as if it was an addition to the Schedule A income tax; that it should be raised by the Somerset House collectors upon the same demand notes, and in every way under the same sanctions as if it was an Imperial tax, but that they should raise that second portion as collectors for the London authority and should, subject to the cost of collection, hand over a quarterly cheque to the Council.

19,959. Was that your scheme?—That was our scheme; largely that was my own scheme.

19,960. That was your own scheme, which was embodied in a report, was it not?—It obtained the approval of the council, not exactly as an ultimate, but as a rough and ready and a practical way of doing this thing, and we put it into a Bill which was introduced on the authority of the council into Parliament.

Site values, taxation in respect of: Scheme of London County Council that an owner's improvement charge should be raised from all persons who pay income tax (Schedule A.) by Somerset House collectors.

Site values, taxation in respect of: Scheme of London County Council that an owner's improvement charge should be raised from all persons who pay income tax (Schedule A.) by Somerset House collectors.

Mr. B. F. C. Costelloe. 19,961. Just give me the date so that I may know when it was?—I have a bad memory for dates: I think it was the Bill of 1893.

24 June '97 (Mr. Stuart.) It was introduced in March 1893; I have got it before me, and it was sanctioned by the Council in November 1892.

(Witness.) Yes, that is this very time we are speaking of, as November 16, 1892, is the date of the extract from the committee's report put to me by the Chairman. It was at that very time that the form of the Bill was under discussion for the purpose of the November notices. As a matter of fact the Bill was brought in, and the history of the Bill was this; that it was ultimately stopped on Standing Orders in the House of Commons by the ruling of the then Speaker that a Bill of this kind, proposing a change of financial incidence of such importance in London, was a matter which could only be proceeded with by public Bill; and therefore the Bill, which was in the form of a private Bill, was ruled out of order and could proceed no further, with the result that the particular Strand Improvement for that year dropped for defect of funds.

19,962. (Chairman.) Would you describe that as a scheme for taxing site values?—I should, certainly; but, for the purpose of distinction, that is described in these resolutions which you put to me as rent duty. That formula is merely used there for the purpose of distinguishing that method of raising the money from other possible methods.

19,963. They are two distinct lines of action, are they not—the raising of revenue from a rent duty, and the raising of revenue from a site value?—Yes, theoretically they are distinct.

19,964. Practically the machinery required for putting them into practice would be a very different thing, according to whichever of the two systems was ultimately adopted by the County Council or by Parliament?—No doubt the machinery is distinct. When I said that this was not the ultimate method, but was a rough and practical method, what I meant was this, as was in all our minds at the time: that this, which I may call, for shortness, rent duty, does not exclude from the burden certain elements of rent which belong to the building value; that is to say, this rent duty calls for an even poundage contribution from every receiver of rent right back to the owner of the freehold, and thereby it does strike building value as well as site value. That is the defect of the scheme; but its merit is that it gives a perfectly simple and tight machinery, and as we proved could, with the assent of Somerset House, be worked out in practice without the smallest alteration of the existing machinery of collection beyond the printing of a few extra words on a demand note.

19,965. I will just put one more question upon it. What I want to know is this: Is it the terms of that Bill which the County Council recommend to us, or is it some scheme of taxing site value that you are here to support?—I am here to support a scheme for taxing site value, and I do not propose any rent duty as being the same thing as a site value tax, because, as I have just stated, clearly it is not economically in its incidence the same thing; but I would infinitely sooner, and I think the Council would infinitely sooner, have that than nothing at all.

19,966. I fully expected you to say that. But I want to know which of the two it is you would recommend—whether you would still recommend a rent duty as a rough and ready and temporary measure, with a view of afterwards coming to site value taxation, or whether you would wish us to leave out of sight the rent duty, and to fix our attention upon the site value scheme?—I certainly am recommending the site value scheme, in the proper sense of the word; but I should say, to be exact, that I by no means, myself, leave out of account, even now, the rent duty as a rough and ready measure for immediate purposes. I would much sooner get a rent duty as a means of obtaining revenue for immediate purposes out of a pocket other than the occupier's pocket, than get nothing, and I think the Council would.

19,967. You yourself did not think a tax upon rent values so satisfactory as the scheme which is described as site values?—Quite so.

19,968. Would you put before the Commission your idea of how a site value tax could be worked, as a matter of practice?—I think the machinery is not so very different from that which I have been suggesting;

in fact, I myself think the machinery of the income tax could be adopted even for that. Practically, it amounts to this: you would, first of all, require to have an assessment of the sites values—

19,969. I want to make it quite clear; it is really only for the purpose of elucidation. When you use the term site value, at the moment you are contemplating a tax upon the value of a site, whether it is covered by buildings, or whether it has been cleared and is going to be covered by buildings?—Certainly, as I was on the point of going on to explain.

19,970. I can understand more easily the machinery in the case when the site is vacant and going to be covered with buildings; but I want you to explain it to me in your own words, please, first one and then the other, or both together, as suits you best?—If you please. I mentioned in the memorandum I handed in, and I hope I may refer to it for completeness—

19,971. Certainly, I want you to do so?—That at a very early stage—the earliest stage, in fact, of these discussions in the Council—the late Mr. William Saunders and others, who took strong views about the land question, procured the appointment of a special committee on the valuation of land. It was appointed in virtue of a notice of motion on the 14th February 1889, which was in the following terms:—“That a committee be appointed to consider the best method of ascertaining the value of land throughout the metropolitan area, irrespective of the value of buildings and of improvements made by the owners.” On the 18th June 1889 this land valuation committee reported, and circulated copies of their report and of the evidence to the members of the Council, and it was considered at various times. I think copies of it have been supplied to the members of the Commission as an historical document. To put it shortly, the effect of that report, which has been confirmed by much subsequent consideration of the subject, was to convince us that there was really no material difficulty in ascertaining the site value, as distinct from the building value, whether the site was built upon or not. In consequence of that report, and the subsequent discussions, I have always, myself, been accustomed in the local government committee to define site value as the “cleared value” of a site. If the structures had happened to be burnt down, and the site were now to be sold in that condition at Tokenhouse Yard, the price it would fetch is what I mean by the site value.

19,972. But, then, if the building is not burnt down, the site value may, so to speak, be dormant, may it not?—Nothing may be being got from it because the buildings upon it, at the moment, may not be capable of utilising it as a matter of annual revenue to its full capacity?—They may not be capable of utilising the site value to its full capacity at the moment; sometimes that is undoubtedly so.

19,973. Or nearly to its full capacity?—I should hesitate to say that. Of course, the Council's valuer is much more competent to speak about that than I am in detail, and he has devoted a large consideration to this particular branch of the subject. I believe it is his opinion, and it certainly has always been the opinion of the local government committee, that there would be no material injustice in putting into a site values column a series of values, ascertained on the basis I have suggested, against every tenement in London, and that the owner in the composite sense I described (that is to say the owners of all the interests defined in recommendation (c))—that the owner, in that sense, does obtain, broadly speaking, the benefit of a value represented by that figure. There are marginal cases where he does not, but, taking the broad case, I believe he does or could receive that benefit.

19,974. Who do you mean by the owner in that context?—I mean the aggregate of the persons deriving a revenue, or use equivalent to a revenue, from the value of that site.

19,975. (Mr. Arthur O'Connor.) The ownership, however represented, of the entire interest?—Yes, precisely.

19,976. (Chairman.) Mr. Murray suggests what position would the mortgagee hold?—I do not take the mortgagee into account, and I do not know that Parliament has ever taken him into account in questions of taxation.

19,977. I take that from you, for the moment?—I do not know what would happen if you took the mortgagee in.

Mr. B. F. C. Costelloe.

Site and  
structural  
value :  
Method of  
separating  
values.

Site value,  
taxation in  
respect of :  
Possible  
hardship  
to owner  
at end of a  
lease of  
buildings  
that are  
old.

19,978. As to the question of the possibility of separating the structural from the site value, we have had evidence that, by the use of experts, it could probably be done, so far as the existing structure and existing site are concerned; and the valuer of your county council told us that the way in which he would do it would be to value the structure, but subtract the value of the structure from the total valuation, making the balance the value of the site?—I have not the evidence given here by the Council's valuer before me, but I cannot say that that was what I understood to be the valuer's view.

19,979. I think I have repeated it with substantial accuracy; but that is really not material, because the point that I want to put to you is this: Is it not possible that towards the end of a lease, when the buildings are very old, they do not, to any real extent, utilise the value of the site; that if you are going to estimate the site value for purposes of taxation in the way that you suggest, you may possibly be putting a burden upon the individual whom you describe as the owner greater than the amount he is annually drawing from the property?—In a marginal case, I quite concede it may be so. I do not suggest, as I said, that in this, or in any matter of taxation, can you get more than a rough equity; but in the case supposed, if there was any such very great disproportion between the immediate revenue and the possible revenue to be obtained by putting the site to its highest utility, it would obviously be to the interest of the freeholder to buy out the small balance of his lease and any syndicate, for example, dealing with the property would certainly do so.

19,980. But would that not put the power into any one occupant of a considerable block to put the owner in this dilemma—either that he must buy him out at a very large price, an unduly large price, or that the negotiations must fail?—That is what happens at present. When he wants to utilise the site, of course, the fact that the site value may be very high in comparison with the present rent, whether you tax the site values or not, gives the holders of existing leasehold interests a certain pull. But I do not think the question of putting a tax on site values would make any material difference to that situation. If the disproportion is very great it would pay the freeholder to clear out the interests, and, as I say, any syndicate dealing with the property in the syndicate fashion would certainly do so, and they are now doing so, I suppose, in London every day.

Site values,  
taxation in  
respect of :  
Scheme for  
distributing  
charge  
amongst  
owners of  
the various  
interests.

19,981. Now, I want to ask you a question as to how you are going to distribute the tax on site values in the case of sites which are built over when the value is in different hands?—Always saving the proposition that the Council does not propose at this stage to commit itself to a scheme for that purpose, I would suggest this as my personal view—that it is possible to obtain, and even easy to obtain, the true site value in the sense which I have defined. Any competent valuer can tell you what the site of this house would fetch at Tokenhouse Yard, within a very moderate margin, if this particular structure were burnt down. I believe I am perfectly safe in saying that. I believe, as a matter of fact, the valuers of London, as a whole, know with extraordinary exactness—it surprises me that they do know it with such extraordinary exactness—what the sites in London, as such, would fetch in that way.

19,982. You would not be surprised to hear, that when they give evidence as experts, they differ very widely as to what the value is?—I would admit that the evidence of a gentleman, as an expert, when he is a witness in the box, might be different from his opinion when advising a client.

19,983. Bear in mind that all this must be subject to appeal, and that our friends the experts will come in in the case of an appeal being taken from one tribunal to another?—Yes, I quite bear in mind that there is that difficulty, but I only reply, if I may, that that difficulty applies just as much to the rateable value, as at present assessed, as it does to the site value. Precisely the same considerations arise, and the two matters would, no doubt, proceed together in any future valuation. But assuming that you have a statement of the site values in a column in the assessment list, I think that it is then quite possible to divide each of these up, with a very close approximation to truth, amongst the different owners of interest in the property. The method I should propose for it personally is roughly to take the value of the site in

comparison with the existing rateable value—and a system which I cannot, without much verbiage, explain to the Commission, has, in fact, been suggested by Mr. Harper and myself at an earlier stage of these proceedings to the Council—by which you could give each payer of the rent a right to deduct from the person to whom he paid his rent the owner's tax or rate upon so many pounds in each case. I ought to say that Mr. Harper at a previous stage of these proceedings—I can give the Commission the papers if necessary—did draw up a very ingenious scheme by which it was quite possible to take the site value simply as an ordinary rate from the ratepayer, and to transfer back a certain number of pence in the £, somewhat after the manner in which the Schedule A. (Income Tax) is now transferred back, and to grade that in such a way as practically to reach each person who had the benefit of site values in his hand. Practically, to put it shortly, the method is to collect the owner's rate from the occupier, and to give him and each superior payer of rent a right to deduct that number of pence in the £ upon such and such a proportion of his rent from the person above him. The method I speak of was set out in a report of Mr. Harper to the Local Government Committee, of which I was at that time Chairman, dated the 11th December 1893.

19,984. Can I have that report?—Certainly.\* If the Chairman desires me to go into it at length, I would rather, if I might, do that when I have had a further opportunity of refreshing my memory, because I have not refreshed my memory for this purpose as to the exact details of this or any other detailed scheme, as the Council did not propose that I should give evidence of that nature on its behalf.

19,985. I would not think of asking you to go through that report at once, but I think it would be a valuable thing for us to have handed in. I want to ask you a question upon what you have just said. Of course in some cases the site values, as you propose to define them and to deal with them, would be potential, or, perhaps, capital value rather than annual revenue?—Undoubtedly.

19,986. If Mr. Harper is right in saying that it would be so in 30 per cent. of the cases in London—it would come to a considerable number in the aggregate, would it not?—I did not understand that that was the interpretation of Mr. Harper's opinion, that it would be capital value in the case of 30 per cent. Mr. Harper's 30 per cent., as I understand, refers to cases in which, deducting the value of the buildings from the present rateable value, you would come to a figure which would not be the true site value; in a large proportion of those 30 per cent. the site value would really be a value realised by revenue or use in one form or another—or at least a value realisable immediately.

19,987. I am quite content to take it in Mr. Harper's own words. In the third paragraph of his report, which you have just handed to me, I find these words: "When it is considered that in London there are vast numbers of buildings which do not utilise their sites in the best way or to the full extent (many being quite incompatible with, and encumbered upon, the sites they occupy) the practical impossibility of dividing rateable value accurately into two independent factors, one of which shall represent an assessment of the building, will be more completely realised. These considerations induced me to abandon the attempt to proceed by making a separate estimate of the building value?"—That exactly explains what we were just considering a moment ago. That is Mr. Harper's statement of the impossibility of taking the rateable value as a total, and then dividing that sum into two factors, one to represent land and the other to represent buildings. It is his argument for saying that you must leave the rateable value where it is, and go and have a separate valuation of the site, and then you must establish some equation between these two figures by an independent assessment for the purposes of deduction or transfer as between one interest in the land and another.

19,988. I will not ask you to commit yourself to the proportion of 70 and 30 per cent. respectively; but

\* The witness handed in the Report on the Rules for Deduction of the Value of the London County Council to the Local Government and Taxation Committee of the Council, dated 11th December 1893, also a report by the Local Government and Taxation Committee of the London County Council on the subject of the Rating of Land Values dated 29th November 1893 (No. 127).

you will agree with me I gather that whenever it is the case that the value of a cleared site exceeds the proportion of the annual revenue from it, which the owner, as we now describe him, gets, your scheme would not work fairly?—No, I do not admit that. In those conditions I quite fall in with the phrase you put to me a moment ago, that it would in that case have relation to a capital value rather than to an income value; but I should not in the least, myself, say that for that reason it did not work fairly. I see no reason myself why there should be a rigid exclusion of capital values from taxation, and that, indeed, is one reason why I have always myself kept a municipal death duty in view as one method of carrying out this policy.

19,989. How would you deal with those cases in which the value as ascertained, if it were a cleared site, does exceed the amount which the conjoint owners of the ground rent are getting?—I think that in those cases it would be perfectly fair to put a moderate charge, which is all it will be, upon them in relation to the true site value. If that puts a little extra pressure on some owners, to utilise the property for its highest economic utility, I think that would be a public advantage. I do not think it is at all desirable that so many sites in London should be at a low economic utility as the case is at present. That is largely the fault of the extremely complicated leasehold tenure, which makes it very difficult for anybody to utilise an old site. But I think a little extra pressure in that direction would do no harm, and that that is all it would do. Perhaps, before you pass from that, if you will permit me to do so, I may hand you, along with the reports, a paper which I find here in the same bundle, which is the Bill to authorise the improvement rent or charge which I referred to a moment ago.\*

London  
Owners  
Improvement  
Rate  
Bill, 1893.

19,990. Is this the Bill which was prepared in 1893?—Yes.

19,991. (Mr. Stuart.) That is, it was presented to Parliament in 1893?—Yes.

19,992. (Chairman.) Mr. Stuart has shown it to me more than once, but I should like to have a copy?—As I put Mr. Harper's report in for its historical interest, I should like to put that in also.

Site values,  
taxation in  
respect of:  
Rating in  
respect of  
capital  
value and  
income  
value.  
Owners  
should be  
made to  
contribute  
in respect  
of in-  
creased  
capital  
value,  
which is  
largely due  
to public  
expendi-  
ture,  
through a  
municipal  
death duty.

19,993. Before I pass from the first five resolutions, I will ask you whether there is anything more you wish to say upon them?—May I by your leave just say a word or two personally about the municipal death duty? At the time of this discussion in November 1892, and throughout the whole of these proceedings, I, and I think most members of the Council who are thinking about this matter, have been of opinion that ultimately it is necessary to bear in mind taxation upon capital values as well as taxation upon revenue, if you are really going to make a full and fair share of the public burden fall upon the owners of site values. Without desiring at the present moment—because, of course, I have no explicit mandate from the Council on the subject at this moment—to propose anything expressly, I should wish to say that the possibility of a municipal death duty cannot, in my opinion, be left out of the account as an element in an ultimate scheme; that is to say, I do not believe that you will be able to get, or even that it will be expedient, to press for so full a contribution in the way of a tax on revenue from owners of site values as would really do justice between them and the occupiers. I put it to myself in this way—that the total building estate called London rises in value, practically, with every year, and that when successions fall in, say once in every 20 years, it is demonstrable that that building estate has very largely increased in pure site value in the interval.

19,994. I want you to make it quite clear, in potential value, or in value which is going into the beneficiary's pocket?—In value which is being obtained as a profit. I think, if I may say so, it simplifies the theoretical considerations in this matter if one can consider London as one building estate—if you can think of it as a building estate owned by one millionaire, for example. In that case, when that building estate passed by succession from one generation of owners to another, I think it is demonstrable that the site value of it, apart from the buildings, would be found at every succession to have enormously increased. It appears to me quite clear that that increase of value is due, not to the owners or to any expenditure of capital

on their part, but to the labour of the community, and very largely to the actual expenditure of money upon local government and municipal improvements. I do regard that increment of value—that capital increment of value, if that is the only way we can get at it—as the natural fund from which to aid the local expenditure. I regard the whole local expenditure, and I make no exception, as expenditure which goes to create that increment of value. If you are dealing with questions of how you can raise that local expenditure equitably, I think it is quite unjust to take it all out of the occupier's pocket, as is done now. I think that the natural way of redressing that injustice is to find a means of taking some of it out of the increment of value which the expenditure itself creates. I think, myself, that you will not finally do that until you come to a municipal death duty, but that you can make an approach to it by methods of annual taxation.

19,995. One might agree to that, I think, as a general statement without its committing one to a particular scheme of how any part of that can be got for the community with fairness to individual interests?—I do not think the difficulties of machinery will be found to be any worse in this question of taxation than they are in all questions of taxation. I desire to repeat that all methods of taxation are rough and ready methods, such as the income tax.

19,996. I suggest to you on the moment that, supposing the average succession is at intervals of 30 or 25 years, and the building lease, as we know, usually lasts from 75 to 100 years, it is possible that throughout the tenure of three or four individual owners no actual increase of return to each of them may have been got from this estate, although it has passed two or three times from one hand to the other by death; what would you do in a case of that kind?—In that case, if I had to do with a scheme for a municipal death duty, I should treat the matter exactly as it stands—that is to say, the site values would be increasing in value, but that increase might belong not to the succession of the freeholder but perhaps to the succession of the beneficial leaseholder, and if it did it should be valued accordingly. The freeholder has a reversion and towards the end of the lease that reversion rises enormously in value. When that reversion does become valuable let it be so assessed. So long as the rest of the site value is going into the pockets of the leaseholder let it be assessed on his succession. Somebody succeeds to it whatever the details may be.

19,997. Do I understand that you would not assess in a municipal death duty any value which was not actually obtainable in annual revenue?—No. I should make that a strict matter of valuation of the succession, whatever it truly is.

19,998. I pass to the resolution (f.). As I understand it, it seems to imply that site values have not in the past, and do not, as a matter of fact, now bear their fair share of expenditure?—That is so; that is a proposition I should strongly press on the Commission.

19,999. I should like to know upon what ground that assumption is based?—The main ground is the ground I have just put for another purpose, namely, that the whole of local expenditure, including both expenditure on improvements and expenditure on government, seems to me to help towards the pecuniary profit of the owner of site values in the end; and, as I have explained, I distinctly hold the view that the rate now raised to defray that expenditure does onerously fall very largely upon the occupier and not upon the owner. That is my first argument.

20,000. I suppose that you would give me the same answer if I suggest to you that the interest that is to pay the rates has bargained to do it, and that that does not affect your view of the matter?—I think that it is the business of the State to lay a contribution where the State intends that contribution to fall. I think it is also the business of the State to take such reasonable precautions as may be possible to see that that intention is not defeated by contract, but if economic laws, or anything uncontrollable, ultimately does alter the incidence, then that cannot be helped. I think in this case it is possible to put the incidence in such a way that it will fall where you intend it to fall; but even if it were proved to me that that might not be so, that would not alter my view. I think it is highly against the public interest that the incidence should now appear to fall exclusively upon the occupier, partly because that raises the enormous resistance on the part of the occupier, as I said, to every sort of

Mr.

provements.

\* The witness handed in a Bill to authorise an improvement rate or charge in the Administrative County of London, called the London Owners Improvement Rate Bill.

Mr.  
B. F. C.  
Costelloe.

24 June '98

improvement, even what is for the elementary public good. Since ever I have been concerned with London politics, which is a good many years now, I have never known any improvement of any kind which was not met by an immediate ratepayers' agitation. If the ratepayer does not bear the burden, why is he such a fool as to resist the improvement? Any improvement, in some sense, improves his conditions of life, undoubtedly. If that improvement is economically paid for by his landlord, why is the ratepayer of London—a very shrewd and determined person—so foolish as to resist all these expenditures?

20,001. May it not possibly be that, after all, he is the best judge of his own wishes and desires in the matter?—I think so; and that is exactly my point. I think he is the best judge, and I think the fact that he opposes these expenditures proves that, in fact, he largely bears them. The first strand of my argument, of course, is the proposition that in the existing state of things a great deal of the burden presses upon the occupier. I know that it is contended by some economists that theoretically we ought to suppose that it falls upon the owner. I have never been able to see my way to agree with that conclusion, and my main argument against it is the fact that the occupier constantly behaves as if the burden fell on him, and that every time a penny is put on any rate the occupier immediately protests, even, as I say, where the penny is put on for the purposes of public health, education, and other matters in which the occupier has an obvious immediate interest.

20,002. May it not be the case that the first incidence does fall upon the man who pays it until he has an opportunity of revising his contract, and that then in the end it falls upon the interest behind him?—If that were so, I do not think the ratepayers' opposition would be at all of the nature that it is.

20,003. Do you not think so?—I think not. Take, for example, the education rate. Certainly the ordinary London occupier has got great advantages of a sort out of the Education Acts—out of free education and other matters of that kind; nevertheless, every rise of the education rate has been met with constant and furious resistance by the ratepayers—so much so, that notoriously everybody about the School Board, and any member connected with it, is in a state of blue fear at every prospect of the rate rising even by a penny. I do not think that is a conceivable state of things if, in point of fact, the occupier does not bear the incidence.

20,004. You are not a member of the School Board?—Unfortunately I am.

20,005. Even though you are I will not be tempted into a discussion of why the ratepayer objects to the education expenditure. But I suggest to you, as a matter of fact, that the occupier—the ratepayer really—should be allowed to judge whether he would have his improvement and pay for it, or not, and that it is not a sound suggestion to put it upon a small minority who will have no power of resistance?—That raises the question, of course, of the representation of owners. As I have said, I do not desire to express any strong opinion concerning that. I would much sooner have an owner's rate conjoined with any artificial representation of owners which Parliament thought fit to impose, than I would go without an owner's rate at all. But I was not suggesting in the least that the occupier was not a proper judge of expenditure. I was only using the occupier's conduct, his unvarying conduct in London, as one of the reasons which causes me to believe that the present incidence is upon the occupier. If it is conceded that to any important extent the present incidence is upon the occupier, then it appears to me clear that it ought not to be upon him, because, as a matter of fact, the owner is the person who gets an enormous amount of the pecuniary advantage.

20,006. Are there any other matters in these following resolutions on which you wish to say anything. I do not propose to ask you any questions upon them, because so far as I have paid attention to them, they are matters which have been brought fully before us by other witnesses; and I simply take it that these are resolutions which are passed by the Council and are expressing their view. If there are any of them, except those which you have just mentioned, that you want to speak on, I shall be glad to hear you?—The subsequent resolutions in my memorandum raise, amongst other things, the enormously important question of the Exchequer contributions, as to which I should

certainly wish to say something to the Commission, subject to the difficulty I have already mentioned, that the final resolutions of the Committee have not yet been passed by the Council.

20,007. That matter has been gone into so very fully in Mr. Gomme's examination, that I hesitate to ask you any questions except this: that if there is any particular point on which you want to lay emphasis, I think the Commission would be glad to hear it?—I did not propose in the least to go over again the figures which Mr. Gomme put to the Commission as regards the unfairness, as we take it, of the way in which London is at present treated. I am quite content to leave that point where he left it.

20,008. That is Resolution (j.), is it not?—No, I think not. Resolution (j.) is intended to be read with the two resolutions in paragraph 27, which happen to be at the present moment suspended. These three resolutions together are intended to suggest to this Commission a very much larger question. Resolution (j.) runs as follows: "That, as the present system of Exchequer contributions from the taxpayer to the ratepayer by means of the Exchequer grants appears to operate so as to withdraw from Londoners more than it returns to them, no system of Exchequer contributions distributed to the whole country upon the present basis of division ought to be accepted on behalf of London." That is an attack, not upon any question of the fairness of the existing distribution, but upon the whole system of Exchequer contributions as they stand from the point of view of London, because it is our opinion that you could not give any practicable grant from Exchequer contributions to the London ratepayer which would not arithmetically work out to the disadvantage of London for the simple reason that in our view London would always pay (say) 25s. of such contribution for every 20s. that it received. Therefore, in that respect, from the arithmetical point of view, we are disposed to attack the whole arrangement, and my committee, and I believe the Council, are very strongly of opinion that for other wider reasons also, the whole system of Exchequer contributions, as it is now arranged, is vicious and works very much to the disadvantage of the Metropolis in particular.

20,009. (Mr. Arthur O'Connor.) And of every other large city as compared with a smaller city?—And of every other large city also as compared, I should rather say, with the country districts.

20,010. (Chairman.) And I understand that, holding that opinion, Resolutions (i.) and (ii.), in paragraph 27, are outlines of the methods that you would suggest in place of them?—Yes, it is an outline of the methods.

20,011. Resolution (j.) really in great part is relative to the exhaustive calculations which Mr. Gomme put before us, is it not?—I have seen Mr. Gomme's evidence given before this Commission, and I have no doubt he touched upon this subject, but this resolution, I think, goes further. I do not know if I made myself clear just now. Mr. Gomme's evidence was mainly directed to saying that if there were to be Exchequer contributions distributed on any quota, the present quota was unjust to London. That is to say that the relief to its local taxation which London now was supposed to get out of the Exchequer contributions, assuming an Exchequer contribution to be a relief, was the wrong proportion—that country districts, for instance, got a very large relief on a certain basis of calculation, and that London got a very small one. With that I entirely associate myself. Of course, I have been through these figures *ad nauseam*, and I entirely think that that case is made out; but I did not wish to travel over that ground again before this Commission. Resolution (j.) deals with more than that.

20,012. Shall we take the first of the two resolutions in paragraph 27 now?—May I say a word on (j.) first? As I say, (j.) goes further. (j.) lays down, not only that proposition, but a more fundamental proposition; namely, that if you take out of Imperial taxation any grant which is assumed to be a grant in aid to the local taxation of London, you will fail, no matter on what practicable basis you distribute it, because in order to pay 20s. to the ratepayer of London you will have to take 25s. from the taxpayer of London. Whatever you do, practically you will fall into that dilemma. That is the suggestion.

20,013. I do not quite follow that—perhaps you will explain it to me?—I would put it, I think, in this way:

Mr.  
B. F. C.  
Costelloe.

24 June '98

Incidence  
of local  
taxation  
discussed.  
Suggested  
that the  
larger bur-  
den of  
rates falls  
on the  
occupier.

Exchequer  
contribu-  
tions:  
Present  
system of  
distribu-  
tion said to  
be unfair  
to London.  
Other  
methods of  
distribu-  
tion sug-  
gested.

Mr.  
B. F. C.  
Costelloe.  
24 June '98

The conception of grants-in-aid was that you can from some external fund relieve the payer of local rates. I suppose that, undoubtedly, it started from the persons interested in rural rates who desired to relieve a pressure assumed to act upon agriculture. It was supposed that you had some external fund from which you could relieve them, and I think in their case it was in a sense true; but the external fund there was the urban taxpayer. When you come to London and suggest that you are going to relieve the London occupier by such a grant, you will inevitably by the force of the situation relieve him out of his own pocket, because there is no other fund—the fund does not come out of the sky; it comes out of the pockets of the contributories.

20,014. I beg your pardon, but Imperial taxation is not, even assuming your premises, drawn only from urban pockets?—No. The question in substance is with whom, with what other citizens I am to share a certain public burden. That is what it always comes to. If you propose to relieve me as a ratepayer in Westminster, what you are really proposing to do is not to give me money out of some external source; you are in the end proposing to cause me to share my present burden with a certain number of other people. If you rid the London ratepayers as a whole of 20 per cent. of their present charges, and put them on Imperial taxation, the result of that is to put them back on the London ratepayer, or to put them back upon a class of people, the London contributories generally, who are much the same thing as the London ratepayer in the end, or who come to the same thing for the purposes of equity, with this difference: that, as a rule, London will pay more by any such contribution than it will get; that is, the London taxpayer will pay more to any fund of this kind than the London ratepayer will get out of it. Therefore, from the London point of view, the game is not worth the candle.

20,015. Of course, from that point of view we should require to have accurately defined who the London taxpayer is, and to find out whether he does pay more than his fair share?—Yes, on that head, of course, you have a vast quantity of figures from Mr. Gomme, as to which I should put it in this way, I think: If you are going to raise money in order that the Imperial Exchequer may make a grant to certain ratepayers, you will in effect raise that upon those elements of Imperial taxation which, according to our present policy, are capable of change. We do not at the present moment raise money by Customs revenue or Excise revenue, except in a very limited number of ways. We do not alter the great majority of our sources of revenue to any material extent unless it be by relieving them. Excepting in so far as we might meet excess charges out of the income tax, a burden thrown upon the Imperial Exchequer chiefly appears to me to have the effect of preventing the remission of certain forms of charge, which would otherwise be remitted—take, for instance, such things as the tobacco duty which has just been remitted, and the tea duty which a large number of people are desiring to remit.

20,016. (Mr. Arthur O'Connor.) Which is indirect taxation?—It is. Therefore, I come to this, that practically, any million that you place upon the Exchequer will be borne in the end either by the income tax payers, or by the consumers of matters such as I have mentioned, which practically are consumed chiefly by the poor.

20,017. (Chairman.) Then, of course, we are thrown back upon the consideration whether the objects to which the Imperial subventions are given are, or are not, matters of Imperial or local concern?—Partly. I was coming to that point if I may, and that is germane to the resolutions in paragraph 27; but I had not, in my own argument quite arrived at that, because the point I was desiring to direct attention to was that the proposition was in the first place, how to relieve the ratepayer. If you are going to relieve the ratepayer—the occupying householder and the occupying shop-keeper, for that is what it comes to—if you are going to relieve him of a million by raising that million from the income tax, and from the consumers of tea and tobacco, then it seems to me that so far from effecting any relief, you are effecting an extra injustice; you are putting taxation which may be badly borne at present upon a class of people who are still less proper to bear it.

20,018. Obviously, I let you make that statement, but I am not going to argue it in the form of question

and answer?—I am much obliged to you for allowing me to make the statement. Of course, I am quite aware that it is a contentious statement, and I put it strongly, because I think it is the general view of my Committee, and indeed of the Council, that that is a statement which we desire to press on the Commission.

20,019. But obviously it is rather a matter of argument, and one to be dealt with, if we deal with it at all, in a report rather than in question and answer with a witness across the table?—If you please.

20,020. Now we will take the first two resolutions?—The first of those two resolutions which at the present moment have not got the final sanction of the Council, is: "That it is desirable that taxation arising from local sources should be devoted to local purposes, and that the inhabited house duty is one of those taxes which should be transferred accordingly to the counties." The policy or purpose lying behind that resolution I take to be this: If there be a radical vice in the present system of Exchequer grants, naturally no one would propose to remedy that by abolishing Exchequer grants, and putting the whole of these millions back at once upon the occupying ratepayer. That obviously would not suit any of the purposes or policy that we have in view, because one of our great objects is to relieve the occupying ratepayer of what we think to be now a very unjust burden, and a very galling burden. The question then is what alternative is possible. Looking very carefully around the subject, it seemed to us that the only view we could suggest to this Commission was that instead of raising money from the Imperial contributories—that is to say, as we take it, from indirect taxation and income tax—instead of raising money in that way, and professing to pay it in lump sums allocated on some basis (which is almost inevitably a bad basis) to the relief of rates, we consider that it would be a much more sound policy to endeavour to distinguish between local revenue and Imperial revenue with more exactness than is done at present. At the present moment there is practically no attempt at a logical distinction between Imperial and local revenue. The whole thing has grown up haphazard. This particular tax, for instance, the inhabited house duty, which seems to us to be obviously a local tax, is at the present moment considered as part of the Imperial revenue. In our view it would be desirable to substitute for the present system of Exchequer grants a plan of discrimination between revenue which is in principle local, and revenue which is in principle Imperial. We think it would be possible to carry out a scheme upon that basis which would not damnify the occupying ratepayer, as compared with the present system which happens to have grown up, and which would be in principle and in ultimate effect very much better for every public purpose. That is the view of policy which lies behind the resolution in paragraph 27 of my memorandum.

20,021. You can hardly separate (i.) from (ii.) can you?—The two stand together: they are meant, of course, to be portions of the same policy.

20,022. I mean, if you are going to adopt the policy at all, you must really make up your mind, and we must all make up our minds, which services are local and which are of national concern?—I quite think so.

20,023. Do you not think the real controversy will come upon that point?—I do not suggest that that is at all an easy point. I am well aware that we are taking a great responsibility when we raise so large a question, but as a matter of fact we have been driven to that, not by any desire on our part to propose large changes, because these are largely outside the scope of our immediate consideration, but because of the difficulties of the present system which is put upon us.

20,024. You will take it from me, I have not a doubt without the slightest difficulty, that we have had gentlemen before us who have taken the most diverse views upon these questions, and according as their interest may lead them, they suggested that first one charge and then the other—some taking one and some another—are of Imperial rather than of local concern; there is no sort of agreement in the views which have been put before us in that matter?—Unfortunately I think in that, as in the case of land values, we suffer from the fact that those who have the conduct of affairs and of the policy of the country have devoted very little consideration to it at present. We have had the advantage in my Committee, for instance, of the assistance in the discussion of these very resolutions of Lord Welby, and Mr. Shaw Lefevre, and others who have had large

Mr.  
B. F. C.  
Costelloe.  
24 June '98

Exchequer contributions should be abolished, and taxes, which are really in the nature of local and not Imperial revenue, should be retained by the local authorities. The burden of certain services now paid for locally should be borne by the nation, but there would have to be a clear understanding as to what are local and what are national services.

Mr.  
B. F. C.  
Costelloe.

24 June '98

Expenditure on certain services should be met from Imperial sources. Question of control discussed, and how far Exchequer grants for certain purposes would lead to extravagance.

experience of affairs; and I think it is the general opinion of them all that up till now there has not been any serious attempt either to discriminate local revenue from Imperial revenue, or to discriminate local services from Imperial services.

20,025. Do you think, for example, that the cost of public elementary education is a matter of Imperial or of local concern?—At the present moment it appears to be the policy of Parliament to treat it as a matter of Imperial concern. Practically Parliament is bearing the great bulk of the cost of local education.

20,026. Of course, I was not so much wanting a statement from you of what is the policy of Parliament as trying to get your view—which do you think it is?—I am inclined to think myself that public expenditure on education is a charge mainly of Imperial concern.

20,027. The support of the poor, for example—which do you put that under?—I should say myself that that is mainly an Imperial concern also.

20,028. To be administered Imperially?—I am of opinion that practically it is administered Imperially. The powers of the Local Government Board are so large that you have all the difficulties of an Imperial bureaucracy imposed upon the poor law system. Of course, when you ask me whether a thing is to be administered Imperially, that raises a new set of considerations. I think it is quite possible that the bulk of a charge may be borne Imperially, and that yet you may give considerable powers of detailed administration to localities. I myself should suggest that that is probably the soundest policy, although I do not wish to speak with confidence on these high matters. But it must not be taken that I propose, because I say a charge is to be borne imperially, that therefore every detail of the administration of that charge should be governed from Whitehall by methods of bureaucratic control without local administration.

20,029. Do you really contemplate a system of poor law relief in which the payments shall be regulated locally and found Imperially?—To a large extent I do. I do not at all see that it is impossible to devise such a system.

20,030. Where do you think your safeguard for due economy in such a system would lie?—I do not wish to answer in any discourteous form, but the answer that occurs to me is that the mischiefs to economy in the present system of Exchequer grants are to my mind incalculably greater than they would be on such a plan.

20,031. I was thinking only of the Poor Law; do you condemn any particular Exchequer grant in regard to the Poor Law?—One of the difficulties of the Exchequer grants is that they are not in regard to anything in particular—they are a lump sum.

20,032. I beg your pardon; I think that is not an accurate answer. I think they are nearly all, if not all, ear-marked?—That is not how I conceive them at all. As I understand the situation, certain grants are issued out of the Exchequer in lump sums which are supposed to have relation to previous grants-in-aid.

20,033. But is that accurate as regards the Poor Law?—I speak subject to correction, but I am nearly sure.

20,034. I am sure you have given that answer without due consideration?—I do not profess at all to be an expert, and it is possible I may be in error. As I understand the situation, the grants that are made, for instance, to the London County Council out of the Exchequer fund are not ear-marked, except in this sense, that we are bound to pay 4*l.* per head for in-door poor to the Boards of Guardians in London. That, again, is a lump sum.

20,035. Are you speaking of the Imperial grant or of the grant under the Metropolitan Common Poor Fund?—No, I was speaking of the Imperial grant. I did not understand you were putting the Metropolitan Common Poor Fund to me.

20,036. We were led into this from a general question which I put, whether the administration of the Poor Law was to be of Imperial or of local concern; surely you would not put to me that, because the Imperial Exchequer gives 4*l.* per head for in-door poor, that that is a temptation to extravagance?—I would rather illustrate what I mean with reference to the present grants by taking a different one, and one that

has been very popular, and, therefore, will not be contentious—that is the Technical Education grant. My view is, with every desire to assist technical education, that the fact of giving a large sum of money to the county councils out of the blue sky, with the general direction that they might spend it on technical education, has led to very great extravagance indeed, and to very ill-considered expenditure.

20,037. I am not sure that I disagree?—I merely suggest that as an illustration.

20,038. Is there any other matter on those two resolutions that you want to speak to?—I do not think so. Everything I desire to say in that regard is expressed in the memorandum.

20,039. (*Mr. Murray.*) Would it suit your purpose if the new owners' tax was limited to what you have described as any "increase of burden or expenditure on new services"?—I think that would be a very great improvement on the present situation. I say, frankly, that if the constant pressure to increase the burden were taken off the occupying ratepayer, and if it were possible to take off him also a certain reasonable amount of the recent increase from which he has suffered within the last few years, I myself should hardly propose to go further, for I should be practically content with such a scheme as would produce that effect.

20,040. It would relieve you, would it not, of the enormous difficulty of interfering with existing contracts?—It would.

20,041. To some extent, at any rate?—I am putting this scheme to the Commission as an extremely moderate scheme. I do not wish to put this in any confiscatory form at all. The object is to prevent a constantly increasing burden which, I think, at the present moment is working a very great hardship to certain people who can ill bear it.

20,042. I suppose you mean those words "new services" to apply both to increased burdens and to expenditure?—Yes.

20,043. You do not mean increase of burden or "expenditure for new services"?—It is intended to apply to both. But perhaps I ought to say that "new services" may convey to the minds of the Commission a narrower meaning than they do to us. We mean by "new services" new public benefits of any kind—it may be a great improvement of an existing service, such as the Fire Brigade, for instance.

20,044. Would you propose to limit the owner's tax to the tax on his beneficial interest in the site value? Suppose, for instance, that the site value was larger than his actual revenue?—I regard that really as a detail for the drafting of the Bill. I do not wish to express any hard and fast view about it. If any form of site value was considered to be so remote from practical realization, that it would be unjust to lay this burden on it, I should have no objection to see that exempted from the burden. It is really a matter which would arise when the discussion of the machinery, such as Lord Balfour put to me, came up. It would be a question whether upon the particular owner's interest, you were to put the full theoretic value of that interest in the site as a basis of contribution, or whether you were to take some lower figure, because he could not himself realize the full theoretic value.

20,045. Would it not be reasonable to limit it to his actual benefit?—I do not follow that. When you say "actual benefit," might I say that you beg the question. The real question is, I think, as the Chairman put to me, whether his benefit takes the form of an annual revenue, or whether it takes a capital form. If you were to have no tax upon site values, except a tax raised annually, then I think it would be necessary, in order to do anything like justice, to take in certain elements of value, which now are in what you may call a capital form. If I had also a capital tax like the Municipal Death Duty, or had it in prospect, my view about that would very much alter. That is exactly the reason why I said, in answer to the Chairman, that, in my own view, I do not think the scheme will be ultimately complete until you have both forms. Of course, I do not anticipate, without a considerable time elapsing, a complete scheme, but as I look at the theory of the thing in my own mind, I keep that in view, although for present purposes I am quite content to have a rough and ready scheme, which will be some instalment of substantial justice and relief.

Mr.  
B. F. C.  
Costelloe.

24 June '98

Site values: If owners of site values were taxed for the purpose of contributing towards increase of expenditure on new services it would be sufficient.

Site values, taxation in respect of of: Rating in respect of capital value and income value. Owners should contribute in respect of increased capital value through a municipal death duty.

Mr.  
B. F. C.  
Costelloe.

4 June '98

Site values,  
taxation in  
respect of:  
Scheme for distribu-  
ting charge amongst  
owners of  
the various  
interests.

Mort-  
gagees:  
Their in-  
terests can-  
not be con-  
sidered in  
questions  
of rating.

Rates in  
London:  
Lessees in  
London  
cannot  
make any  
precise calcu-  
lation as  
to what the  
rates are  
or will be.  
They  
therefore  
make a  
blind barg-  
ain.

20,046. When you speak of all persons deriving a revenue, would you include a lessor for 999 years?—Yes, certainly. I include all freehold and leasehold interests amongst persons deriving a revenue. The lessor for 999 years is the owner of a ground rent if he has leased for any substantial rent.

20,047. You see, you are proposing to value his site, after five hundred years say, at some quite different value?—Yes, but as will be seen by the report which the Chairman asked me to hand to him as to one of the methods proposed, it is not proposed to put upon the owner of the ground rent, anything seriously different from a site values tax upon the amount of his ground rent. If the lessor for 999 years was only receiving 10*l.*, then he would only pay ten sixpences, whoever else pays the rest, unless his reversion has come within such a range of time as would make that also a proper element of valuation.

20,048. Then what have you to say to the mortgagee who was mentioned before?—I confess I do not see any way to take the mortgagee into account at all in questions of taxation. I do not see how it is possible to do it.

20,049. He is rather an important element, is he not, in any question of ground rents?—As I understand it, you do not take a mortgagee into account in other questions of taxation, and you do not take him into account in rates.

20,050. Do you not take him into account in the income tax?—I am not competent to say exactly how that works out, but you certainly do not take him into account in connexion with rates.

20,051. Obviously, for a very good reason, but in the case of Schedule A. (Income Tax), of course, he is taken into account in respect of his interest?—I should be quite content, as I have said, as far as that is concerned, for rough and immediate purposes, to follow the general analogy of Schedule A. (Income Tax) so far as it will lead me.

20,052. That would include the mortgagee?—I do not wish to commit myself finally on that, because I cannot say that I have fully thought out that particular difficulty. Broadly speaking, I have always thought that the basis of Schedule A. (Income Tax) is a very convenient basis to start from, and that with few modifications it would lead one a long way.

20,053. You have mentioned a blind bargain very often. By a blind bargain, do you mean that the man who made it was blind?—I mean that the circumstances of the case do not allow the London occupier to forecast in any reasonable way what these burdens are likely to amount to.

20,054. But he knows what they are at the moment, at any rate?—Roughly. I think you would find very few people who rent a house in London who do know accurately what they are at the moment. I certainly have never done so when I rented a house.

20,055. Do you not think it is a usual practice, when people are going to rent houses, to find out what the rates are likely to be?—I am afraid that since I became Chairman of the Local Government Committee, and have inspected statistics of this matter, I do not believe much in their discovering what the rates are likely to be. The tables of rates in London vary from year to year, and from area to area, in a wildly erratic way. It is perfectly possible that you may have—I will not say in this spot, but in the houses that we are looking at across the river—the rates next year is more than the rates this year, and that the year after that they may be 4*d.* less than they are this year. It is extremely difficult to tell. There are tables which I could give the Commission, if necessary—I do not know whether Mr. Gomme has actually given them—in which we have plotted out by diagram\* the variations in rates in the various areas of London for the purpose of showing amongst other things this eccentricity. I am sure they would surprise the Commission. The difficulty is that the aggregate rating of that warehouse over the river is a matter which depends upon the expenditure, possibly, of 12 different authorities. The possibility of discovering exactly what has had to be contributed last year is difficult in itself, but supposing you arrive at that, that gives you nothing except the vaguest clue to what will be required this

year, even apart from the general tendency of rates to increase in London.

20,056. Have you thought of the practical difficulties of putting in a column of site values?—Yes, indeed; we have had to think of that very closely and minutely, because in the discussions in the Committee and in the Council these practical difficulties have constantly been pressed upon us by the opponents of the scheme, vary fairly and naturally and, I think, very usefully, because the result has been to show that it can be done.

20,057. What do you think it would cost for the first valuation?—I do not think the cost of valuation is at all a serious element. The present valuation of London ought to cost a great deal more than it does at present in order to be fairly done. We have had a large experience of that also at the Council. For instance, the valuation of public-house property in London—at any rate until lately—has been a wide departure from the intentions of the law. You must, in fact, in order to do your valuation at all decently, employ a certain amount of expert skill; and practically all valuation authorities are now coming to do so, owing to a certain tendency of late to improve these matters and to put them on a fair basis. Assuming that your valuation authority has the necessary expert assistance for its present duties, I think the extra cost of assessing the site values column may be neglected.

20,058. But surely it involves, practically, the re-valuation of every hereditament in London?—I do not think so.

20,059. Of course, there is all the difference in the world, is there not, between the present valuation for rateable purposes and the new valuation which you propose? One is based on an actual fact, which is rent, and the other is based on a pure hypothesis, which is the value of the site cleared from the buildings?—I am afraid I should not accept that statement as to the existing valuation. I know nothing more hypothetical and more difficult than a true adjustment of a rateable value of the ordinary London house under the present law. We have had immense experience of it in my Committee, because we have exercised a certain oversight over it.

20,060. Still, you have a certain basis to go upon there, and you have no basis at all in estimating the site value?—The present rent, of course, is not the correct basis to start from for rateable value; it is the fair rent—the rent which could, one year with another, be obtained for the property, which is the basis they ought to start from. Taking London properties all over, the ascertainment of that figure is not, practically, more difficult than the ascertainment of what the site would sell for at Tokenhouse Yard if the building were burned down. I should say, on the whole, it is often easier to ascertain the site value than to ascertain the rent which is supposed to be the basis of the valuation now.

20,061. Except that, in one case, you have the fact of the rent that is paid and in the other you have no basis at all?—Take the case of a board school and a public building.

20,062. (Chairman.) One moment. I think I may ask you to answer the question first, and then give your explanation?—I beg your pardon; I was intending to do so, but I was framing my sentence badly. What I should have said was that, in many cases at present you have got no rent which is paid at all, and in very many others you have a rent which is the wrong rent. There are many classes of property in which you cannot even start from any rental figure, and where you have a rent—for instance, a leasehold rent—that very often is a misleading element rather than an assistance to the valuation, as we found to our cost when we had much litigation with St. George's, Hanover Square, and Marylebone, and of course, in the case of the City. The most extraordinary difficulties arise as to what you are to do with the rent. In the case of school boards, vestry halls, and public buildings of all kinds, very great difficulties arise. I know that it is commonly supposed that the existing system of valuation is comparatively simple, and that the proposed system of site values valuation would be comparatively difficult, but I am sure that is a fallacy. As a matter of fact, assuming, as I said, that the existing valuation authorities had the expert assistance which they ought to have for the present purpose, and

Mr.  
B. F. C.  
Costelloe.

were doing their present duty efficiently, I think, after the first valuation, the difficulties introduced by valuing the site would be entirely negligible.

20,063. (Mr. Murray.) When you say the site value is to be the value if let for building, for how long a lease do you mean?—"If let for building by an owner in fee" was meant, I think, to assume the ordinary building lease. I should have no objection to, say, a 99 years' lease. The object of these words was not so much to define the length of lease as to define the kind of valuation which we were supposing. As we cannot take the capital value of the site, as we cannot take the capital sum which it would fetch at Tokenhouse Yard, it is necessary to take some annual equivalent, and for that, of course, you might take so much per cent. upon the capital or you might apply various other tests. The test which we proposed to apply to it, is what it would turn into as a building ground-rent in the ordinary practice of London business.

20,064. Do you think that dividing a tax between the owner and occupier would tend to economy in expenditure or otherwise?—Do you mean in the method proposed by our proposals now?

20,065. Assuming that the occupier has not got to bear the whole burden in the first instance, at any rate, then do you think that what you propose would tend to the economical administration of the rates or otherwise?—I do not think there would be any loss of check over economy of administration by that process. I think what would happen would be that a certain amount of money would be spent on purposes that are highly to the public interest and highly remunerative to the community, which are now stopped. I do not call that stoppage economy. For instance, to neglect a necessary expenditure on public health is a kind of thing which many people might call economy, but I am afraid I should call it wastefulness.

20,066. But it would lead to increased expenditure, you think?—I think it is quite possible that it might lead to a little more expenditure in certain ways, though I doubt even that, because the pressure of public opinion, and the mere necessities of the case, are driving all public bodies to spend most of the money which they would have to spend anyhow. I think the chief way in which it would increase expenditure is that it would increase London improvements. I do not think that in things like sanitary expenditure and lighting and fire brigade, and all those other matters, it would accelerate expenditure to any appreciable extent now. I believe now the occupier is being driven to pay for these things, and is grumbling so much because he has to do it; but I think in such matters as London improvements, and, perhaps, in such matters as parks, there might be more expenditure under the new system than there is under the present one.

20,067. You do not think that grumbling exercises a restraining influence on those who hold the purse?—I am afraid I do not think it usefully does so. I am afraid that has not been my experience of it. I think the economy comes in at all the wrong points, so to speak. Where there is real wasteful expenditure, and still more where there is any tendency towards corrupt expenditure, I think that is managed in spite of the ratepayer.

20,068. (Mr. Dalton.) Since Mr. Harper gave us his evidence as to the probable cost of a site value assessment in London, we have had some evidence from a gentleman who has assured us that in each case it would be necessary to employ a professional valuer for the purpose of ascertaining the site value of each separate property; do you agree that that would be the case?—I do not know at present who gave the evidence; but I assume that he was an opponent of the taxation of site values. I think it is quite ridiculous to suggest that you would require a separate valuer's valuation for each property.

20,069. I did not mean a separate valuer's valuation but a separate valuation for each property in London?—Clearly, in one sense, there would require to be a separate valuation, because each property would have to be valued. My contemplation is that each assessing authority would have some valuer attached to it, as it ought to have for the purpose of its present duties, and that it would be the duty of that valuer, who would, I assume, be employed at a salary, to put into the primary list the site values which he put on each property in the district. Undoubtedly that would involve a certain expense at the first assessment; but I

think that a local valuer, acquainted with the values of property in the district, would find no difficulty in putting down an approximately right amount against each tenement. If it were appealed against, of course, it would follow the usual course that it takes now.

20,070. Would it not be necessary to have a survey of the site in each case, to see what the site really consisted of as regards each property?—I do not profess to speak as an expert, but I can hardly suppose that it would. I think what would happen would be that the assessment authority, the valuation authority, would have the power of entry, and that their officer would go and see what the property consisted of.

20,071. What the site was?—Yes. I do not suppose that he would arrive at exactitude. I presume that what would actually happen is that he would put a moderate value upon the site so as to be within the mark; I do not, myself, anticipate that you would get the actual true site values until several quinquennial valuations after the first one.

20,072. In certain parts of London every square foot of site is of very great value, is it not—take the City?—But those are also the parts of London in which the precise delimitation of each site is easiest got at.

20,073. Still, if you take the City of London, and take the site value of each property in that, you would agree that it would be necessary to go with a considerable amount of accuracy into the survey of the site?—I know, of course, that there are ordnance maps at the present moment, on a great scale, which give you all those sites, for example, in the City, with great exactitude, subject to such corrections as are necessary for changes in building. I should say that any of the assessment authorities in the City employing a competent city valuer would find no material difficulty in saying very fairly what the site values were. We have had occasion to go into it ourselves, because we questioned the city valuation some years ago. We employed, on behalf of the Council, three valuers of eminence in the City to advise us as to the question whether certain large ranges of contested assessments in the City were, on the present basis, right or not. Practically they had, in every case, to value the site, and I never understood that the smallest difficulty was experienced in arriving at any rate at an approximate valuation.

20,074. I am not suggesting that there is any difficulty if you spend enough money, but it is the question of cost I am on; in the City, I understand, in some parts the annual site value is worth 2*l.* or 3*l.* per square foot?—No doubt, and more than that.

20,075. I suppose you would require to have a very accurate survey of the site there?—I suggest to you that what will happen will be that the authority which gets out the primary valuation list will put down a great deal less than any possible site value, and that they will only arrive at the true site value after the process of sundry quinquennial valuations. I feel quite certain that that is what will happen in the City.

20,076. Could you give us the number of separate properties that would have to be valued for the purpose of this site duty in London?—The number is very large.

20,077. Would it come to a million?—I do not know offhand what the number is.

20,078. I have here the Statistical Abstract for 1897, prepared by the London County Council. Taking the County Council figures, I find that the total number of houses simply, inhabited and uninhabited in 1896, the latest date that I have got here, is 596,000; can you say whether that includes warehouses and properties which would not usually be regarded as houses?—I know it is very difficult to find exactly what a house in that column means; but that would include warehouses, I believe, and shops, and all other things of that kind. I should think that, upon the basis you give me now, the number of tenements to be rated is much less than a million.

20,079. Supposing it was 750,000—I rather think that the figures we had just now, brought up the total valuation as costing 50,000*l.*; that would be rather less than 2*s.* apiece for each of those properties of every description?—I think it is fallacious to take them as if there was an independent valuation of each property. Take the ordinary streets of residential houses in London, in which one house is much like another, even if there are small incidental differences. I take it that

Mr.  
B. F. C.  
Costelloe.

24 June '98

24 June '98

Division of rates between owner and occupier would probably lead to increased expenditure upon certain objects.

Site values could be ascertained without much difficulty in London notwithstanding the large number of properties to be valued.

Mr.  
B. F. C.  
Costelloe.  
24 June '98

what would happen would be that the valuer attached to the assessment authority would, after inspecting those properties in the ordinary course of his duty, put down a gross and rateable value on the present basis, and that he would put down a moderate figure which would practically be the same for each house in the street as corresponding to what he considered to be the site value. I think that that would, as I say, hardly add to the labour necessary for making a just valuation of the gross and rateable value on the present basis.

20,080. You think the site values of those houses could be arrived at at the rate of about 2s. or 3s. apiece throughout the whole of London?—Mr. Harper is much more competent to say what the cost of the valuation would be than I am; but the proposition does not deter me.

20,081. (Mr. Arthur O'Connor.) It would, I suppose, only be a matter of area with reference to frontage?—In the case of the ordinary houses in the street, I should say that anybody who is competent to be the valuer of the local authority could run out what the site value of those houses would be in a few minutes for each ordinary street.

20,082. (Mr. Dalton.) Could you get merely a plan giving you the scale of area of each house in a street for anything like 2s. or 3s. apiece?—I do not think you would require it. The existing ordnance maps, which show the property, would be amply sufficient in all ordinary cases. Of course, I am not suggesting that that is sufficient in cases where properties of immense value, in Cornhill, for instance, dovetail in and out in the back premises. There, a somewhat further valuation would be required. Perhaps, in certain cases, it might be necessary to survey, but I very much doubt whether there is any case, even in the City, in which there is not within the reach of the valuation authority a quite easy means of putting before an expert valuer the materials for assessing a reasonable site value. I think the difficulty would be cut short, as I say, by putting a moderate value on in the first instance, and letting it settle itself in the course of time.

Site values should be assessed to some extent to local taxes, irrespective of existing contracts. The State imposes burdens by legislation irrespective of existing contracts.

20,083. With respect to the question of existing contracts, is it possible to have a tax upon site value, and yet to maintain existing contracts?—I think it is.

20,084. What would be the practical effect of that—you would begin in a small way, I suppose, then?—I would begin in a small way. May I say that, at the present moment, it seems to me that practically you have very little regard to existing contracts. A person who took a lease of any house in London in 1869 contracted to pay rates and taxes. At that time nobody understood, or supposed in any way, that the State was going to take up the enormous burden of the charge of national education. When Parliament did so, in 1870, it was then commonly supposed that the charge for national education would run to a maximum of about 3d. in the £. Since then we know that it has run to something much nearer to 1s. Nobody ever discussed the effect on existing contracts when the State embarked on these large liabilities. They were imposed without a thought upon the occupying shopkeepers, on what I take to be the perfectly fallacious argument that the tenant had contracted to pay all the rates and taxes, whatever they might be. The result is that you are putting upon that tenant a burden which he never contemplated in any way, and could not have foreseen. I think that was a much more violent dealing with the equities as between the parties to the existing contract than anything that would happen under my scheme.

Site values, taxation in respect of: Case of existing contracts discussed.

20,085. May we work out the case of the existing contracts as between the ground landlord and the other owners?—If you please.

20,086. We had a case yesterday in evidence in which the original ground landlord gets 900l. a year for his ground rent; the improved ground rent which the witness called the secured ground rent is 3,000l. a year when the house is built upon it and the rent of the house is, I think, 16,000l. a year?—It is evident from the figures that this is rather an exceptional case, but still I will endeavour to follow it.

20,087. That was the case he gave us—900l. for the original ground rent, 3,000l. for the improved ground rent, and 16,000l. for the rack rent. Having a contract of that kind, supposing it was near its termination, the man who would be coming into the biggest property and would gain most by the improvements would be the ground landlord, who at present receives 900l. a year?—Yes.

20,088. (Chairman.) Do you assent to that?—If his reversion were close upon falling in.

20,089. (Mr. Dalton.) I am taking that case of its being close upon falling in?—No doubt he has an extremely valuable property promising to come to him at once.

20,090. In a case of that kind, where the ground landlord has a small immediate interest, and is going to get a very large prospective gain, he is the man you want to reach by your legislation, is he not?—I do not want to reach him any more than I want to reach any other owner of site values, but I certainly want to reach him. I certainly want to make him contribute his fair share, if I can, in relief of the occupying ratepayer.

20,091. He is the man who has gained the greatest advantage by these improvements, and this local expenditure for the last 40 or 50 years?—He is one of the men, no doubt.

20,092. He is the man who is about now at the present time, when you put the taxation upon him, to reap the most, and he is the man whom you will hurt least by this legislation?—I do not quite perceive that inference.

20,093. If you upset existing contracts and bring in this legislation as to site value, will not the effect be that the older the contract is the less you will injure the ground landlord who entered into it?—I cannot answer that question directly, because I think it contains what I may call a hidden fallacy. You suggest that the older the contract is the less you will injure the ground landlord. My object is not to attack the ground landlord any more than any other owner of site values. One of my personal differences from some of my friends in this matter has been that I have always opposed the idea that the person to be shot at was the ground landlord exclusively. If the ground landlord was in the position—I mention the name without any invidiousness—of Lord Cadogan, whose leases have been actually falling in, and he is getting the full benefit of his reversion, then he does, broadly speaking, roughly represent site value; but that is not the usual London case. In the usual London case the ground landlord ought to contribute for some interest, in some cases for a considerable interest, in which the value of his approaching reversion should be taken into account; but the ground landlord whose reversion is postponed for a practically indefinite time to come, and who is only receiving a small sum at present, is the person who would not, in my view, contribute to a site value tax, except to a moderate amount.

20,094. (Mr. Arthur O'Connor.) It can only be *pro tanto*?—Yes.

20,095. (Mr. Dalton.) The man whose reversion is about to fall in would only contribute *pro tanto*. That is the question. If the ground landlord at this time has 5l. a year he would only pay the 6d. in the £ upon that 5l., would he?—No. I have already said that I would take the near and valuable reversion into account in assessing, the charge on such a man, if I could; but, no doubt, until his reversion falls in he will escape to a certain extent, whatever you do. When his reversion falls in, if I may again take the instance of the Cadogan estate, and he turns his reversion into a rack rental, practically then, of course, he would pay a site value tax upon the whole of that rack rental unless he is able, by some economic operation, to get rid of it.

20,096. But he would be able to calculate when this reversion falls in the present rates whatever they are—you say 6s. 8d. in the £. If it is a 99 years' lease which is just falling in, the rates in the £ when he entered into his old contract were probably under 2s.?—No doubt they were low.

20,097. Ninety-nine years ago the rates were, of course, very low?—No doubt.

20,098. Therefore, he will have a full opportunity when the existing contracts have expired; and you will not hurt him much. His lease has got three years to run, and at the end of that time he will be able to enter into a new bargain. But take the case of a man who entered into his contract two years ago. He took into account then, as I understand you to say he does, the rates for the time being payable on the premises, and he will have to pay this increased taxation on the site value for the next 96 years; he will be a man who will be most seriously hit by this arrangement of upsetting existing contracts, will he not?—I do not think

Mr.

Municipal death duty is desirable as well as taxation in respect of site values

Mr.  
B. F. C.  
Costelloe.

24 June '98

even he will be hit in any way that he can complain of. It may be quite true that as between him and other owners of ground rents they may be able to relieve themselves of some portions of the burdens sooner than he will—that may be so; but that assumes that the owner can put such a charge back on the rent, and that is a moot point. I do not admit that he can really do so. But if there be any disparity in the end, I only return to my proposition that no system of taxation is otherwise than roughly accurate. But it seems to me, if I may say so, that the drift of those questions is to suggest exactly what I suggested myself, namely, that no system by assessing a site values contribution exclusively upon annual value will exhaust the subject. I myself quite agree that in order to exhaust the subject and do something like economic justice you want something in the nature of a municipal death duty as well. I do not press that expressly at the present moment, partly because the Council has not resolved upon it, partly because I see myself perfectly well that we are not likely to have a new Death Duties Bill within the next few sessions of Parliament. But, upon the theoretic question, I quite agree that in order to complete the contribution of site value you want a capital charge as well as an annual value.

20,099. Apart from the question of completion, a municipal death duty has this great advantage over taxing the site value, has it not, that you would not upset a single existing contract, and you would not have any of these expensive valuations of site values?—If I saw any practical chance of persuading Parliament to bring in a municipal death duty, I should consider it in many ways the best thing to do. I, in fact, suggested that to persons responsible for Imperial taxation many years ago, but unfortunately the Chancellor of the Exchequer and Parliament have not seen their way to enter into that line at present.

20,100. (Mr. Stuart.) They wanted the money for themselves?—Precisely.

20,101. (Mr. Dalton.) Speaking generally, a man would prefer that his heir should be taxed than that he should himself be taxed?—I think that there is immense cogency in that proposition, and I have often pressed it upon my friends.

20,102. Would you not prefer, if you could get it, a municipal death duty to a taxation of site values?—Speaking as a representative of the Council, I am not empowered to say that; because the Council has not resolved upon such a scheme; but I am prepared to go so far as to say what I have already said, that, I think, for the complete settlement of the question you want both.

20,103. If you think that Parliament would not now agree to an addition to the death duties, because the owners have been so hardly hit by the death duties of late years, would not the same consideration apply to any legislation for imposing upon those owners an annual charge in respect of site values?—I think not. I do not think anybody suggests that the owners of site values in London have really been hardly hit by the death duties. I do not know that I should agree that that proposition was accurate concerning any owners; but certainly concerning London owners, whose property is constantly increasing in value at a rapid rate, I do not think they have anything grave to complain of at present.

20,104. In the way of death duties?—In the way of death duties, or anything else, I think they have the pall of the market at the present moment.

20,105. What is the particular objection to putting another death duty upon them?—If this Commission sees its way to report in favour of that to Parliament, I certainly shall by no means oppose it.

20,106. On the matter of Exchequer contributions, perhaps I may ask you a question or two. Do you agree, generally, with Mr. Gomme's evidence on that point?—Yes; I have read the chief points of his evidence, and I think I agree with it entirely.

20,107. There is one passage in your memorandum for which I have not been able to find the corresponding passage in Mr. Gomme's. You say: "As Mr. Gomme has already brought out in his evidence, we consider that London is at the present moment suffering by an inequitable apportionment upon the present grants to the extent of about 450,000*l.* a year"?—When I put that into my memorandum I had not before me the actual evidence which Mr. Gomme had given to this

Commission, but I was thinking of the reports which he had made from time to time to the Local Government Committee, in which I understood that, roughly speaking, was the figure at which he put the inequality.

20,108. Mr. Gomme put in certain papers before this Commission, and I have read his evidence, and I am now going to quote from Mr. Gomme's evidence—?—I do not profess to be competent, of course, to check these figures with the statistical ability and completeness with which Mr. Gomme has been able to deal with them; I can only say that, generally, I agree.

20,109. I should not ask you the question, except that I understand your memorandum is going into one of our appendices; therefore, I thought proper to ask upon it. Mr. Gomme made a proposition to us; his recommendation, I think, was that instead of the estate duty and the beer and spirit duties, in respect of which the London County Council consider that they are under a disadvantage, they should have transferred to them the inhabited house duty and the land tax. The result of that would be that London, in the distribution of these grants, would receive the licences which are locally collected in London, the inhabited house duty which is locally collected in London; and, I think, the figures included also the redeemed land tax, which was originally payable in London, but which is not now payable, having been redeemed. I will read you what he said. I asked him at Question 8997, "Have you worked out the effect as regards London and the rest of the country, if these suggestions of yours were adopted?"—and he said—"I have, as a matter of fact, worked out what it would be, retaining the licences, and substituting for the probate duty and the beer and spirit duties the inhabited house duty and the land tax." That would be giving to London the taxes locally collected in substitution for the present taxes, as to which they complain, I think, that they do not receive the right amount. Now, go to Question 9000: "Have you calculated to what extent?"—(A.) I have calculated that, Supposing you do that, London would, in the end, receive 160,000*l.* more a year than she does at the present moment, and the rest of the country would receive 121,000*l.* less than it does at the present moment." I rather take it from that, that the grievance of London as to the present distribution of the grant is that it gets 160,000*l.* too little?—No, I do not think so. I do not think that was Mr. Gomme's own intention in giving that evidence. The figure of "inequality" he has always given is very much larger. The Commission will observe that in giving that evidence—I do not know at what precise date it was given—but Mr. Gomme was basing that upon what was the then recommendation of my Committee, namely, the recommendation (k), which was subsequently, under criticism directed from many points of view—even contrary points of view—taken back by the Committee for reconsideration, and which has now been eliminated in favour of the two propositions which I call the suspended propositions, as to which I think the Council will agree with the recommendations of the Committee, but which do not attempt the same definiteness, let us say, as was originally attempted. The official recommendation (k) was made, I may say, largely upon Mr. Gomme's own suggestion in his report to the Committee. But the point of that original recommendation (k) which was ultimately referred back was not in reality to redress the existing financial inequality. What was to be done in the way of redressing the financial inequality as between London and the rest of the country was left unsettled by that arrangement; but what was pressed upon my Committee—in fact, very strongly and cogently by Mr. Gomme himself—was that this method of transferring the inhabited house duty and the land tax in place of certain existing grants would put the thing upon a more logical basis, and would, as a matter of fact, appear to give London a small advantage which, so far as figures are concerned, we always held to be much too small. The intention of that plan, in a word, was, not to redress financial inequality, as Mr. Dalton appears to put it to me, but to make a suggestion as to the way in which the allocation of local revenue could be, to a certain extent, carried out. The Council referred that back, and I do not myself dissent in the least from the reference back. I think the further consideration has been very useful to us. We do not now propose that scheme at all. What we do propose is the broad principle of a suggested policy, alternative to the present grants,

Mr.  
B. F. C.  
Costelloe.

24 June '98

Exchequer contributions: Results of present system upon Metropolitan and suggested alterations in system. Suggested that taxes now collected locally should be retained by local authorities in lieu of present Exchequer contributions.

Mr.  
B. F. C.  
Costelloe.

24 June '98

which I have endeavoured to put in my evidence-in-chief, by saying that we should desire to see local and Imperial revenue discriminated on better principles than at present, and local and Imperial charges discriminated also. What the precise financial result of that on London might be in the way of redressing inequality is, of course, a matter which must depend on what scheme commends itself to Parliament.

Exchequer contributions: Under present system it is suggested that Metropolitan gets too little, but present system is objected to, and there should be a new basis.

20,110. Coming to resolution (j) which has been based by the Council on the report of the Local Taxation Committee, I see we have these words:—"That as the present system of Exchequer contributions from the taxpayer to the ratepayer, by means of the Exchequer grants, appears to operate so as to withdraw from Londoners more than it returns to them, no system of Exchequer contributions distributed to the whole country upon the present basis of division ought to be accepted on behalf of London." That rather seems to imply that what would be fair would be to give London what is collected in London, and because the present system does not give London what is collected in London, you say that that is unfair. Now, Mr. Gomme's proposal was that you should give to London what was collected in London—that you should give them the licences, the inhabited house duty, and the land tax; supposing that was done, what unfairness would there be to London?—The unfairness, then, would depend upon the other horn of the difficulty, namely, the allocation of the local charge. If you discriminate what was truly local revenue from Imperial revenue, that element of the equation might be as near correctness as we can get it for London; but in order to have justice for London, you will also have to discriminate what was truly an Imperial charge, as compared with a local charge. But, if I may say so, the fallacy in such a question seems to me to lie further back. I tried to explain, in answer to the questions of the Chairman, that the two branches of our case ought to be kept entirely distinct. If you are going on with the present policy of Exchequer contributions, we say we get 400,000*l.* odd too little upon what we take to be an equitable basis as between ourselves and other areas; but we now go further, and we say we do not want you to go on the basis of Exchequer contributions at all.

20,111. What do you consider the equitable basis to go upon—population?—No; certainly not.

20,112. What is the basis? What is it that you actually wish to have done to put London on a fair footing in regard to these Exchequer contribution grants and the rest of the country?—I find it very difficult to address my mind clearly to that proposition, because of the very illogical nature of the present system, if I may be permitted to say so; but, if I can do so, I think what I should answer is this:—"That the first question you have to settle is which areas are really suffering from an excessive burden of local rating, and that, as between such areas, if Exchequer contributions are a relief, they ought to be a relief upon some proportionate basis relative to the excessive pressure in each area. My view is, that the present system relieves, to an enormous extent, the rural areas, and, so far as I have been able to see from the returns (from one return, in particular, with which Mr. Dalton's name is closely connected), and from other evidence at the Local Government Board, I do not consider that the rural areas ought to have been relieved, or now ought to be relieved at all in that respect. I do not consider that they were under any excessive pressure of rating or under any pressure of rating at all. They were actually in a condition of falling rates, whereas other areas, urban areas in particular, and London in particular, were under the pressure of a very considerable rise in rates—and severe rates too.

20,113. Do you think that that considerable pressure in various areas is due to the large population in those areas?—I do not think so. That is one element amongst many others, but I think the pressure in urban areas as contrasted with rural areas is a matter of what I am accustomed to call civilisation. It is because of the demand for better government and better services of all kinds, which we now call upon public authorities to fulfil in ways that our fathers did not consider necessary. That applies to London more keenly than it applies to any part of the country, it seems to me, because the demands upon us for arrears of public work and for various new services, in the sense which I interpreted the words just now, are endless.

20,114. If we are to go into the question of redistributing these Exchequer contribution grants, what line

do you propose that we should take?—Frankly, I consider that it is hopeless to redistribute the Exchequer grants; but if you compel me to answer as to what I should do if I were cornered, and obliged to propose such a scheme, I should say take those areas in which, at present, the pressure of local taxation can really be said to be excessive and growing, and relieve them in proportion, as far as possible, to the excess.

20,115. Are you taking the whole of the local taxation, or the local taxation which does not improve the value of the property? Are you taking, for example, the poor rate expenditure or merely the expenditure for street improvements and things of that character?—I do not see that any such distinction ought to be made. I have already said that I think all local expenditure, in the long run, improves the value of property; it may improve it in differing degrees, but I think all local expenditure does go to the improvement, in the end, of site values.

20,116. Do you say that of the Poor Law expenditure and the School Board expenditure?—I think so, distinctly. I think it is obviously true that, if you set up an extremely efficient educational system in a particular town, you will improve the rents obtainable for houses in that town.

20,117. Take St. George's, Hanover Square, which, I believe, does not have a school board; to what extent are you improving the value of property in St. George's, Hanover Square, by the education rate that you place upon it?—I respectfully suggest that St. George's, Hanover Square, has a school board, and a most efficient one.

20,118. (Mr. Stuart.) Mr. Dalton meant to put in the word school—school board school?—I mean that it has the benefit of the school board to this enormous extent, that all the difficulties which poverty and ignorance would produce in a community like London are taken away, and, *pro tanto*, the residential advantages of the best residential sites in St. George's, Hanover Square, are, I think, enormously increased. If it was merely the additional security for public safety, the advantage to rents in St. George's, Hanover Square, is immense, in my opinion. As my memorandum suggests, in the early days, when we were discussing Lord Hobhouse's memorandum, I began, like many other people, to endeavour to discriminate those elements of local taxation which went to the benefit of the occupier and those which went to the benefit of the owner, and in early days I supposed that you could, to a large extent, discriminate. But the more I have considered the question the less do I find it possible to make any such discrimination. The occupier does get specific advantages, of course, from various things, but in the end it is impossible, I think, to set your finger on any element of local taxation and say that the site values do not derive advantage from that.

20,119. (Mr. Dalton.) They derive some advantage, and the question is whether they derive advantage to the extent of the whole expenditure?—I do not suggest that they derive advantage in all cases in the same proportion.

20,120. I rather understood you to say that the whole of the local expenditure in London goes to the improvement of property in London?—More or less.

20,121. You would not say that the improvement is equivalent to the expenditure?—No.

20,122. They may have more or less improvement?—The improvement may, in particular cases, far exceed the expenditure.

20,123. And in others?—And in others it may be only a small proportion. There is no arithmetical relation between the two.

20,124. Can you make any suggestion to us as to what we should do to remove what the London County Council consider the grievance that they suffer under now as regards the Exchequer contribution grants?—My answer to that is, that the first suggestion I should make is to terminate the Agricultural Rates Act, or rather to report against its continuance. I regard that as putting the final load upon the urban ratepayer for what I consider the unjust and unnecessary relief of the rural ratepayer. As between ratepayers, it seems to me that that is one of the most grievous elements of the burden from which we suffer, or rather that it largely increases and intensifies a burden from which we suffered already; but if you ask me to go beyond and say apart from that specific question how you could

Mr.  
B. F. C.  
Costelloe.

24 June '98

Expenditure of rates upon all objects ultimately benefits site values to some extent.

Agricultural Rates Act, 1896, is unjust to the urban ratepayers.

Mr.  
B. F. C.  
Castelloe.

24 June '98

Exchequer contributions: If the present system is retained, they should be so distributed, that the areas where the pressure of local taxation is greatest should be given the greatest amount of relief.

adjust the Exchequer contributions so as to relieve London, I frankly do not believe it is possible to do it, for the reason that I mentioned in my examination-in-chief, namely, that everything that you take out of the Exchequer is taken from London to a larger extent than it is ever likely to be given to London. But saving that again—the argument is so complex that I can only put it into two or three degrees—saving that element, I should say that the method of redress would be a method which would give a much larger proportion of Exchequer relief to urban communities, and to London in particular, and I should be inclined to make it, to some extent, proportional to the existing pressure of local taxation, that is to say, a place where local taxation at the present moment was 20 per cent. of the rateable value, I should relieve in some ratio to that, and a place where it was 10 per cent. of the rateable value, I should relieve by half as much, or by not more than half, and a place where it was 30 per cent. of the rateable value, I should relieve by a proportionately greater amount.

20,125. (Chairman.) Utterly regardless of the care and economy with which the local authority has administered its trust?—I do not in the least think that the differences in the pressure of local taxation depend upon care and economy. I think that if you go into that, the average of economy is much the same all over the country. I do not in the least believe that there is any true distinction between one set of communities who are extravagant, and another set of communities who are not. In many cases high expenditure means high economy. There are many municipalities, for instance, which spend in rates more than London does. I think that is not because they are less economical; I think it is because they are better economists. They have, in many cases, set up remunerative undertakings which we would be very fortunate if we had been able to set up in London, and which would have been largely to our ultimate benefit.

20,126. I do not want to intervene, but would not the poor law expenditure in various districts directly contradict that proposition?—The poor relief expenditure is no doubt an element in which that proposition would have to be varied. I am, myself, no advocate for reckless poor law expenditure, and I should be glad to see more control than even at present exists. Wherever poor law extravagance can be alleged I should desire to modify my answer so far as that is concerned; but in matters of municipal expenditure, which is what I chiefly had in mind, I do not think there is any material difference between the economy of one district and another. I think the districts of low expenditure are, as a rule, districts of bad economy.

20,127. (Mr. Dalton.) It has been suggested to us by previous witnesses, and I think it is suggested by the London County Council, that the inhabited house duty should be transferred to the local authorities, and that pauper lunatics should be made a charge upon the Imperial Exchequer; if those two concessions were made, do you think that that would meet the grievance of London?—I cannot say that I think that it would meet it. I think in both cases it would be a desirable thing *pro tanto*, and from the point of view of London, quite a right thing.

20,128. (Mr. Clare.) I am afraid I do not quite understand what the scheme of the London County Council is. Is its object to provide a new fund for the council to spend without increasing the burden of the present ratepayers?—The first object is to provide a fund from which necessary expenditure can be defrayed without increasing the burden of the ratepayers. I suggested that I thought it would be desirable that that fund should also, to a certain extent, relieve the present burden, because the increases I am contending against have been going on for many years past.

20,129. Pardon me, the two things are somewhat distinct, I think. If the object is, as I understand, by throwing a tax upon what you may call owner as distinguished from occupier, in order to raise an additional fund to meet what I will admit is necessary expenditure on the part of the County Council, in addition to the expenditure which is now met by the ordinary ratepayers, it must follow that, in order to do that you must create, so to speak, a new property to tax?—I do not admit that.

20,130. I will give you an illustration of what I mean. I will assume that property is now assessed at 100% a year, and that produces roughly towards the local expenditure, we will say, 33% a year; that 33% a

year will still be continued to be paid by the occupier, but in addition to that you want to get out of that property something from the owner?—Subject to the fact that I should like to make the 33% a year a little less.

20,131. I will assume that you keep the present rates of the occupier stable. In addition to that 33% a year, which you want to get from the occupier, you also want to get something more—we will say 7% a year more—from the owner in respect of the same property?—That would be so.

20,132. It therefore follows that if this tax is to be levied with reference to the assessable value, that the assessable value of this property will be 100% a year to the occupier, and we will say whatever you like—50% a year to the owner?—I follow.

20,133. Therefore the effect of the scheme, as I understand it, is this, that for every property which is now assessed for 100% a year, you will put on an additional assessment—just for the sake of the figure—of 50% a year we will say, on which the owner will pay rates instead of the occupier?—I follow the statement, but I do not think it quite corresponds to the way I understand the scheme, because I think that the statement is leaving out of account the fact that what really pays is not property, but people.

20,134. But in respect of their property?—You may say in respect of it, but that is merely a basis of assessing or distributing contributions. To my mind the only fundamental or real way of looking at things like rates, is to consider that a total sum of eight or ten millions a year is taken out of some pockets or other in London; my view is that at the present moment you take it all out of the pocket of the person called the occupier, and that a considerable part of it, or of any increased sum, ought to come out of the pocket of another person called the owner.

20,135. Yes, but you can easily see there is a great distinction. You come to the conclusion that at the present time the burden of taxation is unfair upon the occupier?—Yes.

20,136. And, therefore, that burden of taxation ought to be distributed between him and the owner?—Yes.

20,137. That is a case where you leave the assessment at 100% a year, but in the case that I mentioned the 33% a year will be divided between the occupier and the owner—that is one proposition?—I quite follow now.

20,138. It is quite another proposition to leave the occupier in the position he is now, and to say in order to meet further expenditure we will create a new property on which we will tax the owner?—I quite follow, but the objection I am taking, if I may, is to the phrase "create a new property."

20,139. Create a new subject of taxation?—A new species of taxation if you like. I think that it does not, in my thinking about it, tend to clearness in my mind, to regard all these charges as charges upon some specific property or some specific assessment. That is only an arithmetical method of distributing the quotas of a total sum, and the real question to be considered is, who pays the sum? If I am right in supposing that the occupier does, out of his living, pay at any rate the increases that are now going on, then it is surely quite legitimate in me to say I think it concerns public policy that these increases should be no longer paid by the occupiers, but should be paid by somebody else—the precise machinery of assessment by which you make the other person pay is a detail.

20,140. This point is not a matter of detail that I am upon. I want to know whether the scheme is for the purpose of relieving the occupier of a burden that he now carries by partially distributing it between him and his owner, or whether it is to leave the occupier where he is and to make the owner find the increased expenditure?—In that form I can directly answer the question. The main object is to relieve the occupier from increases of charge. But the scheme in my view includes a means by which a certain amount of his present charge may be transferred. I do not think a very large amount can practically be transferred, and I prefer to put it in the form of saying that the increases of recent years might be transferred as well as the increases of future years.

20,141. Why, if you think the burden of taxation on the occupier at the present moment is unduly heavy, do you pick upon the owner of the site value as being the person who ought to relieve him of that charge?—Because if I am right the whole local expenditure does

Mr.  
B. F. C.  
Castelloe.

24 June '98

the occupiers, who at present pay, at any rate primarily, the whole rates in the Metropolis.

Mr.  
E. F. C.  
Costelloe.

24 June '98

go more or less to create a constant increment of that very site value.

20,142. That is what I wanted to understand; then your justification for your scheme is, as far as I understand it, this, that as the local expenditure which the occupier now entirely bears, has a tendency to bring about what we call an unearned increment to the site value, therefore, when you look round as to who should fairly relieve the occupier of some of his burden, you fix upon the owner of the site value as the person fairly entitled to be taxed?—I should say that is a very exact statement of what is in my mind.

Site values are said never to be diminished in value owing to local expenditure, except perhaps in exceptional cases, and this is also true as regards composition property.

20,143. Assuming that the local expenditure, which I think you will admit is at the present moment under the control of the occupier—that is to say, he elects the people who vote the money—assuming that that local expenditure has the effect of diminishing the site value, do you still consider it fair and equitable that the owner should be taxed for the relief of the occupier?—Broadly speaking, I do not admit that the local expenditure ever diminishes the site value. I have never seen it so.

20,144. I will give you an illustration, not a detailed one, but one that often occurs. Take the case of your Strand Improvement. The fact of making a broad thoroughfare for the purposes of traffic from point A to point B, where one does not now exist, or only exists to a minor degree, will have a tendency to attract traffic into that street, and divert it from other streets: you will admit that, I presume?—No, I cannot say that I do admit it. Except marginal and accidental cases of individual properties, which I leave out of account when considering a broad system of taxation, I have never known any case in which a great improvement in London did anything else than increase all the site values in London which were within reach of that improvement. If you take the aggregate improvements in London since the Metropolitan Board of Works came, including the Embankment, I am prepared to say, and I can give you the figures to show it, that the effect in the way of increasing the site values of London is enormous. Yet the owners of site values have at present paid directly nothing to those improvements.

20,145. Do you think no case can be shown where the site values of properties even in London have gone down?—I had some time ago, in connexion with the Local Government Committee, to inspect returns of, I think, all the Valuation Lists of all the London valuation areas, which are very numerous, at all the quinquennial periods reaching back to about 1840. In that table there was hardly a single instance in which the consecutive figures did not show an increase.

20,146. I admit that that may be so as regards London, but we are now dealing with the general principle as affecting the whole country. If your scheme, which involves the taxation of owners, is based upon the fact that it is fair to do it, because the owners get some increased value given to their property by reason of that local expenditure; does it in your mind equally follow that it would be equitable, assuming that that local expenditure—I only ask you to assume it—has the effect in any particular cases of diminishing the site value, that your scheme should be equally applied to that case?—I can only look at it broadly, and I cannot conceive such a case arising. If it were proved to me that it did arise, I should endeavour to consider it, but I have never seen such a case.

20,147. Let me take the case of composition property. In composition property the owners pay all the rates whether the property is occupied or not, do they not?—I am afraid in London the effect of compounding is very mischievous from my point of view. The owners do pay all the rates at present, or rather they pay all the rates less 30 per cent.

20,148. As a matter of law, and as a matter of practice, the owners of composition property pay all the rates whether the property is occupied or not?—Such rates as are levied, yes.

20,149. They are therefore really in the position of occupiers?—They are *pro tanto*.

20,150. You propose, then, in addition to the rates which the owners pay for the occupiers now, that they should also pay an additional tax upon what you call the site values of their property?—To them it would make no difference whatever, no more than it would to any of us who happened to be occupying freeholders of our own house. We should have to pay out of one pocket, or out of the other, a certain proportion of the

local expenditure of London; if we did not have to pay it as an owner's rate, then we should have to pay it as an occupier's rate; it would amount to precisely the same thing as far as that is concerned.

20,151. Do you not think in the case of composition property, which to a large extent comprises property which is gradually growing into what we may call insanitary property, that the effect of local expenditure generally is rather to diminish the value of that property than to increase it?—No, if you are thinking of site values, I think you will perceive it is the exact reverse. The buildings may become less valuable to the house-knacker if the sanitary authority does its duty, but by that very process the value of the site becomes more important to the freeholder, or to the owner of the site value, whoever he may be. Nothing better could happen to Lady Henry Somerset, for instance, who is a large owner in Somers Town, than to have an immense quantity of property in that neighbourhood absolutely condemned by the magistrate.

20,152. You are assuming, of course, that increase of value goes on wherever insanitary property is pulled down?—That is certainly our experience in London.

20,153. Now I want to ask you one question about the practical method of laying your rate. I understand you propose that there should be a rate, we will say, from 6d. up to 2s. in the pound levied upon owners of site values?—2s. is not fixed in the Council's resolution, but I was talking of it as a suggested figure.

20,154. Whatever it may be, the tenant should pay the rate in the first instance?—Yes.

20,155. He should be entitled to deduct all that he pays from his immediate landowner, that is to say, from the man to whom he pays his rack-rent?—Unless it appears that the tenant is himself the owner of the site values, which may be in a few cases so.

20,156. That the tenant should be able to deduct all the rate that he pays from his immediate landowner; that that owner should then be able to deduct a proportionate part of the rate from anybody else to whom he pays the ground rent?—Yes, precisely.

20,157. And in that way you will collect your rate?—That is exactly so; in outline that is the scheme.

20,158. Assuming that a lease is granted in the first instance on a ground rent, then there is an improved rent, and then possibly another improved rent, and then we come to the occupier—your scheme works out in that way, I think?—Yes.

20,159. Supposing, instead of having the ground rent to start with, an owner of property sells the property for a 99 years' lease for 10,000l. cash down, and grants a lease; then the original lessee sells that lease for a premium, and subject to an improved rent, of, we will say, 100l. a year for the remainder of the 99 years; and I will ask you to assume that the site value of that leasehold is worth 1,000l. a year, on which you want to get, say, 2s. in the pound from the owners as you call it, that is to say, from all persons interested in the property other than the occupier. Who are you going to get your rates of 100l. from?—The difficulty suggested appears to be that a part of the interest in the site value has been sold for cash, instead of being converted into a rent.

20,160. Yes?—I do not ignore the difficulty, but my answer is that in questions of taxation, you never can take account of sales, and you must leave that to the parties concerned. At the present moment a man may fine upon a lease if he likes, and thereby escape his income tax, Schedule A. You can only get at such operations by some form of capital tax, and the ultimate result of anything of that kind would be to drive you back on to the municipal death duties.

20,161. Whom would you tax in the shape of the reversioner expectant on the determination of the lease of 99 years. We will say, for instance, that there is 50 years still to run, that the reversioner has no interest whatever, and will never receive a penny from that property for 50 years. I will assume that the present tenant for life of the reversion will not live for 50 years; is it fair to tax for him some possible increment of rise in that property which will arise afterwards, but of which he will never enjoy a farthing?—I am perfectly prepared to admit that there are difficulties in exactly adjusting any fair method of valuation.

20,162. Pardon me; we want you to suggest a fair method of valuation?—I have put in to the Chairman, although I have not gone through them in detail.

Mr.  
E. F. C.  
Costelloe.

24 June '98

Site values taxation in respect of: Suggested that tenant should pay in first instance and deduct the amount from his immediate landlord and that that owner should then deduct a proportionate part of the rate from anyone else. But where part of the interest in the site value has been sold for cash instead of being converted into rent, the seller escapes assessment to local rates.

Mr.  
B. F. C.  
Costelloe.

24 June '98

certain suggested rules and plans which may be right or wrong, but which, at any rate, have been all carefully considered in the process of endeavouring to carry out the scheme.

20,163. I am afraid I am rather dense, but I want to try and get into what I call my mind the scheme for working this out. If the owner had originally accepted a ground rent of 500*l.* a year, this resolution, which I quite follow, says that everybody who receives a certain rent out of that property should be made to pay his fair proportion of the owners' tax, and therefore you would reach him?—Yes.

20,164. But if, instead of the original owner taking the ground rent of 500*l.* a year, he accepts 10,000*l.* down, what then?—If he accepts 10,000*l.* down, and takes a peppercorn for 99 years, I am afraid he may escape this tax, and he will escape it also if he sells his interest not for 99 years but for ever.

20,165. I will assume those two operations have occurred with regard to two properties exactly adjoining. In the case of the one property, where the ground rent of 500*l.* a year is reserved, it bears a tax upon 500*l.* a year, which the other property, where there is no ground rent reserved, does not bear at all?—If you ask me, I say frankly I do not see any means by which in these operations you can produce a precisely identical result from the taxation. That is one of those matters in which I think taxation is incompetent to do mathematical justice.

20,166. There would be a great many anomalies in carrying out the scheme?—There would be about as many anomalies as there are in the Income Tax.

Division of rates between owner and occupier. Question of interference with existing contracts discussed.

20,167. Now, as to the justice of dividing the rates between the occupier and the owner when the occupier has already covenanted to pay all the rates, whatever they may be. If you are going to interfere with existing contracts, and, by Parliamentary authority, authorise the tenant or lessee to break his contract by paying to his owner, as really in effect it is, less than he has contracted to pay, do you not think it would be equally fair to give to the owner an opportunity of saying: "If I do not like to accept that deduction I shall have the power of determining the contract 'altogether'?"—As a lawyer, I do not admit the suggestion that the payment would be less than he had contracted to pay. The original contract was, as all contracts are, subject to such provisions as Parliament may in future make. It is out of the power of the subject to say: "Parliament shall not make me pay a tax."

20,168. When you enter into a contract you do so, as a rule, with regard to existing laws?—Certainly, and you take your chance of future amendments of those laws.

20,169. Supposing I contract with you to do certain work, and to take for it a lump sum; do you think, if you lose money, it would be fair for Parliament to interfere in your favour at the end of the contract; or, if you make money, do you think it would be fair for Parliament to interfere in order to make it up to me?—In that case, of course, I should not think so; it is not fair. But I do not think that that is an analogy to the present case. A contract has been entered into to pay all future rates and taxes, but a similar contract might perfectly well have been entered into 10 years before the Income Tax was created, and no Parliamentary authority would ever have suggested that the incidence of the Income Tax should be interfered with because a person had chosen to say, 10 years before, that he was not going to pay the Income Tax, Schedule A., if it should be created. Such a contract is an incompetent contract.

20,170. A contract is entered into which, at the present time, seems to bear somewhat harshly on the occupier. Parliament says to the occupier: "We will alter that contract in your favour." Of course, in this question we have generally considered it is a question between the rich owner and the poor occupier; but let us consider the question of a rich shop-keeping occupier and of a very poor owner, whose sole means of existence is the small rent he will get from his property; why should you interfere to help the rich occupier against the poor owner, and not allow the poor owner to terminate his contract, when it would be an advantage to him to do it?—If any equity is shown which makes it necessary to interfere with existing contracts in any way in consequence of an owners' tax, I have nothing to say against it. I have no doubt that Parliament will

provide amply against any such difficulty if it arises. But I do not myself think that it will arise. Whether the owner is rich or whether the owner is poor is, to my mind, perfectly immaterial. I am not suggesting this as a question between rich and poor. I am suggesting it as a question of occupiers—of shopkeepers and householders, the bulk of whom are certainly severely pressed by the present burdens—but that is immaterial. I am suggesting that an inequitable state of things exists as between that class and the class of owners who, I suggest, got the advantage of an expenditure to which they do not contribute.

20,171. Do you not think it would be fair to say that if the existing contract seems to be, somehow or other, inequitable, you should give both sides the right of terminating it, if they choose, or of continuing under such conditions as they choose?—If I had the responsibility of bringing in a Bill, I certainly should not put such a clause into it with my present lights; but that is, of course, for Parliament to determine when the Bill comes in. In my opinion, a contract to compel an occupier to pay all future taxes and assessments in the form in which conveyancers have practically put it into all leases is a contract that everybody who has to do with it ought to know is incompetent against Parliament. It clearly is so by law.

20,172. (Chairman.) On the income tax analogy, if a company contracts to pay me my dividends, free of income tax, would you think it right to put another income tax on my dividends?—I think it would be perfectly within the right of Parliament.

20,173. Although I made that bargain in advance?—Certainly, if there were reasons of public policy why the receivers of dividends should pay an income tax out of the dividends they receive. I do not think in the case supposed it would make very much odds, because they practically pay the income tax all the same, whether the company pays it for them, or whether they pay it themselves individually. Arithmetically, it would make no difference. They divide the profits of the company, and whether income tax is paid before or after the deduction is perfectly immaterial, I think, in that particular case. But, no matter what case you put of a contract, I should confidently say, as a lawyer, if I may, that any contract to settle in advance the incidence of taxation which Parliament may impose, is an incompetent contract as against Parliament, and that the person who has made that contract has not the remotest reason to complain if Parliament alters it afterwards.

20,174. (Mr. Stuart.) In connexion with this matter of contracts, which Mr. Clare has put before you, you are aware, are you not, that Mr. Goschen in his Bill of 1870, which, I think, was the date, dealt with the question of existing contracts, and interfered with them?—I refer to it in my evidence, I think, as the Bill of 1869—no doubt, I was referring to the same matter.

20,175. I will not go into the matter, because, it can be seen that it is a little complicated. However, the matter of existing contracts was then dealt with in a Bill which proposed to halve the rates in future between owner and occupier. I think there was a question put by Mr. Murray to you, which suggested the limitation of the new rate, which you would suggest on the owners of site values to the increase of future taxation?—Yes.

20,176. I think he asked you whether that would obliterate the difficulty of existing contracts. I do not know that it would obliterate it, but it would meet part of the difficulty which Mr. Clare suggested?—Of course, if the difficulty of existing contracts is fatal, it practically ties the hands of Parliament against any change of incidence whatever. To relieve a man from future charges which under the ordinary course of his lease he would have had to pay is not any less an interference with his contract than to relieve him of charges which he is at present paying.

20,177. I want to raise the point, also raised by Mr. Clare, about an owner who had taken a large sum instead of an annual rental. You have mentioned the desirability of dealing with this question of the taxation of site values by more than one method at the same time; and you have mentioned the question of the death duties?—I think myself that it is highly important that there should be a variety in the sources of local taxation, and that they should not be all left to one method.

Mr.  
B. F. C.  
Costelloe.

24 June '98

Municipal death duty is desirable as well as taxation in respect of site values.

Mr.  
B. F. C.  
Costelloe.

24 June '98

20,178. I want to ask you whether taxation by a death duty is not one form of a wider method and that is a duty or tax imposed at the transfer; and whether that has presented itself to you as a reasonable means of dealing with the question of the difficulty which Mr. Clare has suggested?—I think there are some foreign systems of taxation in which transfer dues are used in such a way. I do not speak confidently nor have I worked out what the effect of such a plan would be. I should prefer to put it briefly, that, in my opinion, taxation on incomes derived from such dues ought, in my view, to be supplemented by taxation on capital assessments of the values.

20,179. Following out this subject—I am not quite sure whether it is in your memorandum or not—but have you had before you the question of the possibility of dealing with the death duties upon real property in a town, by giving to the town a share of the National death duty so far as it was raised in that town—I think the French call it *Centimes additionels*?—I should like to distinguish. A share of the actual death duties raised by the Imperial authority is in my mind a different thing to what we used call in the Committee *Centimes additionels*. My conception of the way in which it might practically be done is this—that after the Chancellor of the Exchequer has levied for Imperial purposes such death duties as he may think expedient, there might be power to a municipal body, a county council, or a town council, or what you like, to impose under the authority of Parliament a small additional death duty upon all successions arising within their particular area, of course, upon immovable property. Such a plan would be analogous to the system on which local and Imperial revenue is worked in many foreign countries, notably in France, and for that reason we have sometimes talked of it as the method of *Centimes additionels*. In Paris, for instance, the tax collection levied so much, say a franc per cent., as *Impôt Foncier* or the other great taxes for national purposes, and so many *centimes additionels* on the very same assessment for the Paris local budget.

Site values  
in London,  
taxation in  
respect of:  
Various  
suggestions  
made by  
London  
County  
Council.

20,180. Turning to the method of the proposals for the direct taxation of site values, we have had in the London County Council several schemes before us not necessarily voted on by the Council, but there have been several schemes before us, have there not?—There have been really only three, I think. There was the question of rent duty, which I described and as to which I have put in the Bill, which was avowedly merely a rough and ready plan for immediate purposes; there was the question of the scheme as to which Mr. Harper's report is in; and there was an alternative method of sending back the site values duty which would have made it fall far more severely upon the ultimate ground owner. These, I think, are the only alternative methods that there have been.

20,181. There was a fourth, of which I will remind you in a moment. Let me just ask you one question about each of these three schemes. What is called the rent duty scheme, and which has been mentioned to the Commission, was a means of throwing back a portion of the rates in precisely the same method and precisely to the same proportionate extent as the landlords' income tax is thrown back?—Precisely. It was intended to be a sort of *Centimes additionels* upon the landlords' income tax.

20,182. In that case it would have been a tax thrown back partly upon the building value and partly upon the site value?—Yes.

20,183. It was a tax on site value, complicated by a tax on something else?—Yes.

20,184. In the next place there was proposed the system of ascertaining what the site value was, and of putting a tax on that, and letting an occupier subtract from his landlord, and so on backwards, a share of the site value proportionate to his rent, minus that site value?—That was so.

20,185. That was a proposal made by Mr. Fletcher Moulton?—Yes. I have never myself seen that proposal very closely worked out, but I believe that was Mr. Moulton's view.

20,186. You can accept that from me for the moment, and then follow it out. The difficulty that that proposal landed those who considered it carefully in was this—that site value plus building value did not together make up rateable value?—Quite so. That is the reason why I may say I have never myself gone closely into that, because it seemed to me, as Mr. Harper said, in the words that the Chairman read, to be a false plan,

and, ultimately, an unworkable plan, to take the rateable value as a given total, and then to try and divide that total into two elements, one of which should be site and the other should be building.

20,187. The consequence was that Mr. Harper, being totally opposed to the idea that site value plus building value was together equal to rateable value, proposed a somewhat different scheme, which was this: that the rateable value should be found for each set of premises, that the site value should be found, and that the one should be subtracted from the other, and a difference got, which he denominated the balance?—Yes, that was so—that not being in fact the building value, but being a method of calculation.

20,188. Quite right. Then, that a tax being placed upon the site value for each tenement, and the occupier paying it, he and all the others beyond him towards the final ground landlord should be permitted to subtract from the rent that they paid the site value tax upon the difference between the rent they paid and that balance?—That is exactly the scheme in the paper I have handed in.

20,189. That was meant to avoid that difficulty of site value and building value not being the two constituents of rateable value?—Yes; and also to provide a perfectly simple arithmetical plan by which a roughly correct amount could be handed back.

20,190. Now there was a fourth scheme, in which, for improvements of a permanent character, the whole cost should be thrown back upon the receiver of the ultimate ground rent?—Yes, that was so.

20,191. A cruder plan, which was argued for upon the basis that the permanent improvement really benefited the permanent landlord?—That plan was argued for, if I remember rightly, chiefly upon the analogy of a charge placed in settled property upon the interest which ultimately was to obtain the benefit of the charge.

20,192. Putting aside that plan, which had a specific object, am I not right in saying that the other three plans which I have endeavoured very shortly to call your attention to are really the gradual development of an idea into greater accuracy?—Entirely. I said myself, and I think I am right in saying, that there is now very little difference among us at the county council as to what is, broadly speaking, the way to do it, if it is to be done.

20,193. Is it, then, a fair representation of that state of things to say that the supporters of the taxation of site values cannot agree among themselves?—I am not conscious at the moment of any disagreement among us—certainly of no material disagreement.

20,194. And if they could not agree amongst themselves more nearly than those three schemes, would it be extraordinary in any sense in dealing with this difficult question?—I venture to say that I think, as I have said already, that the fact that we have disagreed to some extent is an earnest of our honest desire to work out the difficulties by independent views. I think we have arrived practically at an equality.

20,195. You do not imagine, do you, that any system of taxing site values will be free from anomalies, any more than any other system of taxation?—I think that those who oppose the creation of any system of site values have very naturally directed public attention to certain anomalies as a means of defeating the general scheme; but I can only say that any tax that exists in this country or in any other could be defeated by similar arguments, and most of them could be defeated by arguments much more cogent than those.

20,196. Let us take, rapidly, one or two other points. You have spoken of the site values of London; you are aware that the London County Council's valuer has stated, for each parish and union in London, what he believes to be the site values of that parish and union?—That, I think, was upon the rough basis which we discussed earlier in the day.

20,197. It was go upon a rough basis, at any rate?—Yes.

20,198. He makes the total to be just over 15,000,000l. per annum?—We broadly go at the council, and have gone for some time, on the view that 15,000,000l. would roughly represent the site value of London. It is arrived at by various different methods of calculation, but I think most people who have tried seriously to work it out come to the conclusion that that is an approximate figure.

Mr.  
B. F. C.  
Costelloe.

24 June '98

Site values  
in Metro-  
polis:  
Their ap-  
proximate  
amount  
and total  
amount of  
local ex-  
penditure.

Mr. B. F. C. Costelloe.  
24 June '98  
Site values, taxation of: To what extent should owners be taxed discussed.

20,199. You know what the total expenditure in London is now, do you not?—Somewhere over 10,000,000l.

20,200. And you have had it suggested to you that it might be the object of those who are seeking to tax site values to raise that tax to 20s. in the £. If that tax were raised to 20s. in the £, am I right in what I have said to you that it would produce half as much again as is required for the expenditure of London?—Obviously; but I think it is preposterous really to suggest, except for the purposes of a joke, that any of us are proposing a 20s. in the £ tax.

20,201. I wished to put it in that way because it is so inconceivably improbable?—Certainly; I myself think so.

20,202. (Chairman.) Would you say how far you would go?—I have said quite frankly that we discussed, and I myself strongly favoured, in the committee and in the council, the suggestion of an immediate limit of 2s. I do not myself suppose that either we would desire to pass, or that any Parliament would allow us to pass, some limit of that kind for very many years to come, and it would only be passed at any period if it turned out in practice that the tax in question was equitable, and did not put any intolerable or unjust burden upon the owners of site values.

20,203. (Mr. Stuart.) Is it not part of your argument that the expenditure which the public are called upon to make, unless it be utterly regardless and careless, goes very largely to raise the values of sites?—In my opinion, any such tax as we propose now would never do more than countervail the increase of site values which will happen in London within the same tract of time, whether you put this tax on or not. So far from confiscating existing site values, it will be as much as ever can be done by any taxation to prevent the site values from growing larger.

20,204. In two of the three schemes which I have asked you about, it is necessary to ascertain by valuation what the site values are, is it not?—Yes.

20,205. I want to know whether you agree with this statement of the County Council valuer, put in his answer to Question 12,576 to this Commission. The question is: "In forming a valuation of the site, would you have to do anything more difficult than has to be done just now in forming the rateable value?" and the answer is: "On the contrary, I should have to do something simpler. For myself, if I had to value London, I would much prefer to value it in sites than in hereditaments. I could do it more quickly, more cheaply, and, I believe, more accurately, than is to say, I could obtain greater uniformity." Do you agree with that answer?—From my knowledge of London valuation I think that is entirely true.

20,206. Are you aware that the valuer has stated to us, in his answers to Questions 12,572 and 12,573, the method by which he would conduct the valuation?—I believe so.

20,207. You have referred to the question of Exchequer contributions. Is it not the case that what you want us to understand is this, that you have two objections to the existing state of things: the first is, that London is not adequately relieved thereby in proportion to the other parts of the country; and the second, that you think the method of Exchequer contributions in itself a bad method?—It is so. London is not adequately relieved, if you call this a relief. I seriously doubt whether, from the point of view of London, it can properly be called a relief at all.

20,208. When you propose such a thing as the handing over of the inhabited house duty to localities, you propose that for both reasons—first, because it has not the evil of the present Exchequer contributions; and, secondly, because, so far as densely inhabited places are concerned, it would tend somewhat to redress what you regard as the inequality?—It would tend in that direction. I ought to say, of course, what I did not say before, although I think it is expressed in my memorandum, that in talking of transferring the inhabited house duty, I keep in view that it would be necessary to have some machinery made for improving the methods of the inhabited house duty, which is at present a somewhat ill-constructed tax.

20,209. Then, I want to ask you another question about these Exchequer contributions: in the first place, they are largely given, I do not say entirely, but largely out of the estate duties—the death duties on real estate?—They are said to be given out of these death

duties; but I, of course, demur to the idea that they come out of any specific fund; they come out of the general taxation of the country.

20,210. Your position about that is this: that if these remissions to local taxation had not been paid out of Imperial taxes, then it would have been possible for the Chancellor of the Exchequer to have remitted certain taxes?—My own personal view is, as far as I can judge the situation, that if these Exchequer grants had not been created and developed as they have been, we should probably at this moment, all other things being equal, have had the tea duty, in great part, if not wholly remitted, and have had the income tax also reduced.

20,211. Then, what you say is, that really the relief from local taxation is coming out of the pockets of the persons who pay those taxes that you have now specified?—Precisely; I know that that is the opinion of higher financial authorities than I can pretend to be.

20,212. (Chairman.) Why is it fairer to say that it comes out of the pockets of those persons than out of the estate duty; if it comes out of the general taxation of the country, why say in the next breath that it comes out of a special form of that taxation?—I was referring to what I had said to you in an earlier answer, namely, that every additional million raised for the Exchequer comes, in fact, out of those portions of the revenue of the country which, according to our financial system, are really subject to change.

20,213. How old are the death duties as at present existing?—I think, if I may say so, that the alteration in the death duties would have happened quite independently of the exact amount of Imperial taxation.

20,214. They are subject to change, at any rate, if they were only brought in in 1894?—They are subject to change, but I think that change was a change which was due to come by reason of general financial considerations of a wider kind. I think that now, if next year the Chancellor of the Exchequer discovered that it was unnecessary to raise the total amount which now goes in Exchequer contribution grants for whatever reason, the effect of that on the taxation of the country would practically be certain to be an effect on the income tax or on the indirect taxation paid by the consumers. I may be wrong, but that is my view.

20,215. (Mr. Stuart.) I do not wish to argue it, but what you say is, that charges in London which ought to be placed upon the owners of site values are really paid by Exchequer contributions, which come out of the pockets of those who pay income tax and tea duty?—I do think that if we had not had this apparent but really fallacious relief, the pressure for the creation of some owners' rate would have been infinitely greater than it is now.

20,216. (Mr. Smith.) Of the three methods of charging owners, I think you have practically abandoned the first, namely, the suggestion of a rent duty?—I cannot say that I have abandoned it, for this reason—that it may perfectly be possible to carry through Parliament a simple method as far as collection is concerned, even if it is not theoretically exact. That may prove to be easier than to carry through a method which is more economically correct, but has more complicated machinery.

20,217. You do not put it forward as the best solution of the question?—I do not put it forward as the ultimate solution, and I do not put it forward at all at this moment, because the Council has not resolved upon it in these resolutions.

20,218. It is surely open to the grave objection that it strikes twice over so much of the value of the property as belongs to the building or the improvement?—No doubt, but my own view, if you ask me personally, is that that is rather an economic objection than a practical one, and that the mischievous effect of that would not be serious within any limits that we are talking of.

20,219. You are practically rating the building value twice over?—Undoubtedly, it contains an element of economic vice. May I say, following that out, that I would make the same comment upon the suggestion you put to me as to rating the same elements twice over that I made just now, in answer, I think, to Mr. Clare, namely, that in my mind it is not so much a question of putting a tax upon a given property, or a given element of value; it really is a question of whose pocket it comes out of.

Mr. B. F. C. Costelloe.

24 June '98

Exchequer contributions: If they had not been made, certain taxes would have been reduced or remitted.

Site values would be quite easy to value in Metropolis.

Exchequer contributions: Under present system it is suggested that Metropolis gets too little, but present system is objected to and there should be a new basis.

Owners of site values, method of taxing: Rating twice over in respect of building value.

Mr  
B. F. C.  
Costelloe.

24 June '98

Site values,  
taxation in  
respect of :  
How far  
should the  
capital  
value as  
compared  
with the  
annual  
value be  
considered.

20,220. We should all agree that persons are taxed, and not things. With regard to the second proposal, of taxing site values, you admitted, I think, that the site value might, in many cases, be enormously in excess of the present value of both land and buildings?—In some cases, which are not very many, in London.

20,221. Supposing you have got an old house with 20 years' lease to run upon it, in a good situation, it is obvious that the site value is worth a great deal more than the house and land together?—If you are referring to the annual value of the house and the land, no doubt that may be so. I was thinking of the capital value, in the answer I gave you just now.

20,222. At present our whole system of taxation is based upon annual value as opposed to capital value, is it not?—May I say that I never realized exactly why that is acknowledged as a canon; it seems to me that that is, to a large extent, a financial superstition. I am quite aware that there are objections to capital taxes on certain grounds—for instance, in America—but I have never seen that there was any fundamental reason for insisting on them.

20,223. One obvious difficulty that occurs to me is that a man may nominally own the capital, and not have the income?—He can always sell it.

20,224. He cannot always redeem the lease; he cannot always buy the lease?—If it has a capital value he can always sell that capital value at Tokenhouse Yard, and put the money into any form of investment which will give him an income, if he prefers it in that way.

20,225. You suggested this morning that the first process would be to buy up his leaseholder?—If I was in that position I should try to buy up my leaseholder, and if I could not buy up my leaseholder I should syndicate my property, which I think the London landowner generally does. He turns it into cash if it is possible to do so, and once it is turned into cash, of course he gets an income from it.

20,226. But he would only get it by selling the property. In ascertaining the real site value you propose that the site is to be assumed to be occupied with the most suitable buildings, having regard to its position theoretically?—Yes, broadly speaking.

20,227. Is there not some danger that in that process you may overestimate the demand for particular kinds of property?—I have great confidence, for example, in the valuer who serves us at the Council. I think he would be able to give you, concerning the value of this site, a perfectly fair estimate of what that value represents, taking into account, of course, amongst other elements of valuation, the possibility that if he was thinking of this as a site for a hotel there might easily be too many hotels.

20,228. I quite agree to that if he were only going to value one site, but when you have imposed upon him the duty of valuing every site in London it becomes an immense problem whether you can always allocate to the particular site a particular kind of property?—I suggest that that makes the problem easier and not more difficult, because if he were dealing with one site he would naturally have in his view, if he were valuing it for a seller, the very best utility to which it could be put, even if, as a matter of fact, that could not be duplicated all round the neighbourhood.

20,229. Would you suggest that it is more easy to dispose of all the property that London contains than of a single isolated property?—No, but I suggest that it is more easy to value it for the purposes of taxation, and it is less hard upon the owner, because the elements of difficulty would certainly be taken in to the advantage of the owner.

20,230. When you are putting hypothetical values upon property, is there not such a thing to consider as the glut of the market?—My suggestion is that it will be considered—and that it will be even over considered. My suggestion is that so far from having excessive site values put for these reasons on the owners, all these reasons will tend to depress the site value valuation, and we will not get enough.

20,231. You have confidence in your valuer?—I do not put it as confidence in any individual valuer. The practical method of valuation, as no doubt the Commission know, will be that the official who has to draw up the list will put in a primary figure. I think the whole pressure of things will lead him to put in a low primary figure, and then the owner will not appeal against that, because it is too low. If by any chance the expert valuer puts in a figure that is too high, the owner will appeal against it, and in practice, get it reduced.

20,232. In other words, if you had only one property in Bond Street to value, upon your hypothetical basis you would probably put a very much higher value than if you had the whole of Bond Street to consider?—Precisely; I quite think that is how it will work.

20,233. Just one word about the inhabited house duty. I suppose, apart from all your views as to the justice or injustice of Exchequer contributions, it does so happen that the inhabited house duty would be an enormous advantage to London, would it not, as apart from the rest of the country?—And to all other municipalities.

20,234. Is that so. Have you worked out those figures at all?—To a certain extent they have been worked out in the Committee.

20,235. Does not almost every man of great wealth and position occupy a house in London for a certain period of the year?—A considerable number do.

20,236. Does that apply to any other town in the country?—I have not got them before me, but I think that if you take the figures you will find that this is the result: that the transfer of the inhabited house duty, even levied as it is at present, would, broadly, be a large benefit to all the municipalities—of course, in somewhat varying degrees; but that what I may call a rectified inhabited house duty, an inhabited house duty as any commission of experts would probably rectify the tax now, would still more act evenly as an advantage to municipal areas as against the rural districts.

20,237. I do not quite understand what you mean by a rectified inhabited house duty; the inhabited house duty is based upon Schedule A. of the income tax, is it not?—Yes, but the system of exemptions and so on dislocates it a good deal.

20,238. Do you propose to alter that?—Yes, but I do not wish for the moment to go into it in detail.

20,239. There have been some quite recent alterations?—There have been, but I understood it was practically conceded that it still wanted a good deal of alteration.

20,240. You can conceive, can you not, that standing alone, the selection of the inhabited house duty would not be particularly favourable, say to a small manufacturing town where residence is not very desirable?—I have not figures of that kind before me, but no doubt I could refer to them. As far as that is concerned, of course, it is not the only transfer I am thinking of, but I do think that that particular transfer would have this result, that it would to a large extent rectify the balance as between urban and rural areas considered as being total blocks; and that is the rectification which seems to me most urgent at the moment.

Mr.  
B. F. C.  
Costelloe.

24 June '98

Inhabited  
house duty  
if remitted  
to municipal  
authorities  
would be  
a great  
advantage  
to them.

The witness withdrew.

Adjourned till Thursday next, at 2 o'clock.

**FORTY-EIGHTH DAY.**

Thursday, 30th June 1898.

**At St. Stephen's House, Victoria Embankment, S.W.**

PRESENT :

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. C. B. STUART-WORTLEY, Q.C., M.P.  
 Sir E. W. HAMILTON, K.C.B.  
 G. H. MURRAY, Esq., C.B.  
 C. N. DALTON, Esq., C.B.

C. A. CRIPPS, Esq., Q.C., M.P.  
 T. H. ELLIOTT, Esq., C.B.  
 ARTHUR O'CONNOR, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. B. F. C. COSTELLOE, re-called and further examined.

Mr. B. F. C. Costelloe.  
 30 June '98  
 Resolutions passed by the London County Council, to be submitted to the Commission.

Mr. B. F. C. Costelloe.  
 30 June '98

Statistics showing alterations in amount of rates payable in Metropolis.  
 Additional revenue from new sources, namely, in respect of site values, required by London County Council for new improvements, and also some re-adjustment of existing burdens on the rate-payers.

Lessees in Metropolis cannot accurately estimate the rates payable when making a contract. They enter into a blind bargain.

20,241. (*Chairman.*) I understand that since you were here last week the resolutions on which you were questioned, which you told us had not then been accepted by the London County Council, but which were to be put before the Council in place of resolution (k) have now been by a large majority adopted by the London County Council?—Yes. Since I was here last these resolutions have been considered in the County Council, and the two substituted resolutions which I mentioned provisionally last time have been accepted by the County Council, not exactly unanimously but with, I may say, practical unanimity. I think I may say, as I said last time, that there was no material difference of opinion about them. Some dissent was expressed as regards the wording of the second one, and a division was taken in which, I think, a minority of 13 voted against the acceptance of it as it stood, but there was no serious dissent expressed other than the suggestion that it would be desirable to make the recommendation more definite than it is as to the particular services to be transferred.

20,249. You think then that on political grounds it is better that taxation should appear to be borne by the persons who actually bear it?—I do not know if I should call the ground political, but I think it is clearly desirable that it should so appear; in other words, where the apparent incidence causes a hardship to be felt by one class of persons, and the actual incidence casts a burden upon another, you double the friction and difficulty of raising revenue.

20,250. On the other hand, if I may put to you a hypothesis, which you will accept for the sake of question and answer, would there not be a danger supposing that the owners actually bore all the rates, in the occupiers, who are the spending power, knowing that that was so?—It seems to me you cannot escape the dilemma. If it is contended that at the present moment the owners effectively bear the burden, then that danger now exists; if the owners do not at present bear the burden, I think it is just that they should at any rate bear a reasonable share of it.

20,242. With that exception the position is unchanged?—Yes, except that, if I may, I should like to put in this diagram. I promised on the last occasion to produce certain statistics concerning the rapid and unexpected alterations of rating in the London parishes, which, as I suggest, make it extremely difficult for a tenant taking a tenancy to forecast the rates exactly (*handing in diagram*).\*

20,251. At the present moment is it so obvious to the occupiers that the owners bear a substantial part of the burden, as it would be under the scheme that you propound?—I suggest to you that the dilemma has arisen, whatever the economics may be, and that the only feasible answer to the occupier's demand to have the owner bear directly some portion of the charge, is the assertion that the owner bears it now. If the occupier does not believe that, the occupier will insist that the owner shall bear it; if the occupier does believe it, then the state of things which you suggest of the occupier spending the owner's money has already arisen.

20,243. (*Mr. Elliott.*) Am I right in gathering from your evidence the other day that the County Council has from the commencement found itself hampered by difficulties in raising revenue?—The County Council has always found a great difficulty in, for example, undertaking desirable arterial improvements in London from the fear of the consequences that would arise from any heavy rise of rate.

20,252. With regard to the actual and not the apparent incidence of the rates, would you say, speaking generally, that when the owner of a site leases it, the lessee takes into account the amount of the rates in fixing the rent that he pays?—I think only in an illusory sense. As I said the other day, I think he takes into account, roughly, a certain body of what he takes to be the settled rates. I think, in various typical London areas, he reckons that the rates are 5s. in the £ or 6s. in the £. As a matter of fact, in the present state of things, they always turn out to be a great deal more than he reckons for, because the amount is constantly increasing in fact, and must increase.

20,244. May I put it in this way, that you would like to find yourself in the position of a Chancellor of the Exchequer who, having additional revenue to raise, is free to choose that source of revenue which he considers most equitable?—Yes; that is most important. We desire a variety of sources of revenue instead of having to take it all out of the same pocket.

20,253. Would you say that a lessee always underestimates the amount of the rates that he is called upon to pay?—That is part of what I meant by saying, on the other occasion, that he entered into a blind bargain.

20,245. In addition to the means of raising additional revenue, I understand that you also desire to adjust what you consider to be existing inequalities of burden?—Yes, to a reasonable degree.

20,254. But still, in respect of the rates that he knows already to exist, he is guided, is he not, by the amount of those rates in estimating the rent that he will pay for the land?—I would concede that he must in some way take whatever he knows he will pay into account.

20,246. And you have deliberately selected a tax on ground values as being, in your judgment, the most equitable means of raising additional revenue and of adjusting existing inequalities?—That is so.

20,247. Does not that proposal of yours—I am sure you will agree that is so—involve an examination of the position as regards existing burdens upon owners and occupiers?—No doubt.

20,255. With regard to the increases of rates in recent years, would you not say that it is the case, that as fast as new rates come into existence, or increases of rates come into existence, new bargains are made with regard to the letting of land, which enables the lessee to take into account the rates in fixing his rent?—I have always thought that that was, if I may say so, a very fallacious argument. What happens in

20,248. And, indeed, upon all classes of the community?—No doubt, except that, as I said before and I should desire to say again, even if you convinced me that the economic incidence, from a theoretic point of view, worked out in some more equitable way, it seems to me that the apparent incidence itself is a cardinal reason for changing the present system.

\* See London County Council Return. London Statistics, 1892-93 (No. 129), p. 254. P. S. King and Son, Great Smith Street, Westminster, S.W.

Mr.  
B. F. C.  
Costelloe.  
30 June '98

practice is this. I take a house. I may take it on a 7, 14 or 21 years' tenancy. I may take it on a three years' agreement, or I may take it on a still lesser tenure. But I take that house because it suits me to live in a particular place, and because I can, on the whole, manage to get a bargain with my landlord which I consider tolerable. Once I am there, my main object is, to stay there undisturbed. It is wholly unheard of, I think, in London, that either a resident or a shopkeeper finding that the rates have gone up upon him since he made his bargain—finding, for instance, that the School Board rate has risen from nothing, or from 2d. or 3d. to 8d. or 9d.—then goes to his landlord and says: You must reduce my rent; the rates of this place are more than I bargained for. That is not what happens in practical life.

20,256. Is that not the case as between the owner of a house and the tenant rather than the case between the owner of the land and the lessee of the land?—The case between the owner of the freehold and the owner of the various leasehold interests in the London tenure is, no doubt, a different case, but it seems to me to be, in a sense, a stronger one; that is to say, the bargain then is a bargain further back in the past, when the present state of things was still less understood or contemplated, and the profit from the present state of things as the reversion comes nearer to falling in, is more and more an unearned and undeserved profit, which goes straight into the pocket of the owner of the freehold without his paying for it.

20,257. But, still, bargains in respect of land are being constantly made, are they not?—Of course, it is a shifting boundary, like the shore of the sea.

20,258. I think you mentioned, the other day, the Cadogan Estate; you would agree, of course, that in the case of the Cadogan Estate the whole arrangements between the owner of the land and the lessees have been recently revised?—That is so, and the owner of that estate has, under the operation of the present system, obtained in cash at rack rents, practically the benefit of an immense amount of the local expenditure, which has been incurred since 1855, which he and his predecessors have not, in fact, contributed anything to at all. They did not contribute anything to it under their existing leases, because these leases were entered into long before these burdens were in contemplation. Their tenants have practically paid the cost, and they have entered into the profit. That seems to me to be a cardinal case of the injustice with which the system works when you consider the owner of the land and the existing leaseholders.

20,259. Now, in regard to those recent bargains between the owner of the Cadogan Estate and the lessees of the land, would you not say that it is clear that the lessees in estimating the amount of the rent which they can pay for the future use of the land have taken into account, perhaps, not all the possibilities of rating, but at any rate the existing rates and taxes?—The way I look at these new bargains is, that they are commencing again the same kind of vicious bargain which has worked so badly on the last leases. It is perfectly true that the tenant knows that he is entering on an inconvenient tenure, and it is perfectly true, I suppose, that he tries to drive some kind of bargain in which the rating of Chelsea comes into account in a way, but I say, whatever he may do with the money valuation, the bargain is a blind bargain, and is bound to work out badly and against the public interest.

20,260. Supposing there were no rates at all, you would admit, would you not, that the rents which the owner of the Cadogan Estate would have received would have been larger than they are?—No doubt.

20,261. I was interested in the statement you made in the course of your examination-in-chief as to the benefits derived from public expenditure, such as that of the London County Council. I think I am right in stating that you said that the whole of that expenditure went ultimately to the improvement of property?—I know no item of expenditure of the Council which does not, in my opinion, go sooner or later to the improvement of the property, not necessarily to the whole extent of the expenditure, but to a material extent.

20,262. The benefit of the public expenditure does not simply result in the improvement of the property, does it?—No, I quite agree that the occupier gets certain advantages out of it for the purpose of his life. How

far these in themselves in the long run go to increase the desirability of the site and the possibility of getting rent out of that very occupier, is another point. But I am not anxious to press that myself. I am willing to take it, as a practical man, that the occupier gets some advantage out of it, but I think that the owner, nevertheless, gets the chief advantage out of it.

20,263. In speaking of property in that connexion, do you refer simply to rateable property?—May I ask, in contradistinction to what.

20,264. In contradistinction to property which is not rated. I will take, for example, a public-house; would you say that the growth of the community, the prosperity and the well-being of that community would go simply to the improvement of the ground-value there, or that it would go to the benefit not only of the owner of the site, but also of the owner of the house, and of the publican himself?—When I say that it goes to the benefit of the owner, as I did just now, I am thinking of the distinction between immovables and movables in the full sense of the words. Whatever property is locally fixed, I consider broadly as immovable. To a certain extent that may even cover the goodwill of a business in certain exceptional cases, and, properly speaking, of course, it covers land and houses. These interests, which are immovable in that sense, and are fixed in a certain locality, seem to me, all of them, to benefit in the long run from the expenditure in question.

20,265. Yes, but the owners of that property are not the only persons benefited by the expenditure?—No, I admit that the occupier gets some benefit from it.

20,266. And the person who is not an occupier, I suppose you would say?—When I say an occupier gets some benefit, I ought to say the population gets some benefit. The inhabitants of London, the residents in London as a whole, do get a benefit from the better civilisation, and so on, which may be treated as a distinct item.

20,267. Assuming that you were in a position which the County Council would wish to find themselves in, that is, the position of a Chancellor of the Exchequer having to raise a revenue by various means of taxation, you would not propose to raise your whole local expenditure by means of the taxation of owners, would you?—No, I certainly should not, myself.

20,268. You simply say that in distributing that burden, a somewhat larger share should be borne by the owners of a site than is at present the case?—I have always myself carefully restricted any form of words that I had to do with as a declaration of policy, so as to say that the owner should in my opinion be asked to contribute his fair share. I am quite willing to leave it to the ultimate development of the questions and to the experimental development of the tax to settle what is the reasonable adjustment in the end between a direct burden on the owner, and a burden falling upon the occupier.

20,269. Are there any other directions in which, if you were in the position of a Chancellor of the Exchequer in regard to London taxation, you would propose the revision of the existing system?—The resolution (i) of which we are speaking, suggests what I think is a very material point, namely, that instead of doles, if I may say so, crudely handed out of the Exchequer, out of the national money in general, it would be much wiser to allocate certain sources of revenue, distinguishing those that are local from those that are imperial, in order (apart altogether from the question of a direct burden upon owners) to ease the situation in the very way which you indicate to me, namely, that it would give us various sources of revenue. I should, myself, hope that in the end, at all events, if not in the beginning, Parliament, in transferring a tax like the inhabited house duty, or even in transferring licence duties, would be content to allow a locality like London to have a certain limited means of altering the adjustment of its taxes.

20,270. Do you see any room for indirect taxation in a model method of raising local revenues?—I should certainly say not as regards local revenues. Indirect taxation as it works, for instance, in France and in Italy, in the shape of the octroi duties, seems to me to be the most anti-modern and the most undesirable of all possible methods of raising local revenue. I have always wondered why the very extreme reformers in Paris are so extremely slow to touch it.

20,271. Apart from the question of the benefits which property derives, you would, I suppose, agree

Mr.  
B. F. C.  
Costelloe.  
30 June '98

Cadogan estate in Metro- polis. Owner of the site values is said to have reaped the benefit of a large amount of local expenditure. Lessees making recent contracts make blind bargains.

Owners of site values should contribute towards local taxation to some extent.

Exchequer contributions: Present system undesirable. It would be more desirable to allocate certain sources of revenue, distinguishing those which are local and those which are Imperial.

Expenditure of rates upon all objects ultimately benefits site values to some extent, though occupier gets some advantage.

Mr.  
B. F. C.  
Costelloe.

30 June '98

Personal  
property  
cannot be  
assessed to  
local rates.

that there is a personal benefit? You can conceive, can you not, of a person owning no property at all who, nevertheless, by the expenditure on police and in many other directions, derives a substantial benefit from local taxation?—You say owning no property, but of course everybody who is a resident in London, is either in the position of an owner or an occupier or both as regards something; he may be a dependent occupier, he may be a member of a family, and therefore not particularly the rate-paying occupier, but still, in some way or other, if he is a resident at all, he must either be an occupier or an owner, or both. Apart from that interest in the local community, a man may, of course, have business relations here, or he may have investments which in some way depend upon the locality's prosperity, that is to say, he may be interested in London in respect of his personality, so to speak, in respect of his dividend-bearing or profit-bearing personal capital. In that respect I started out myself on this discussion with an open mind as to whether it was not desirable to make personality contribute, but after a very careful investigation of the matter in our committee we were driven absolutely to the conclusion that you could not localise personality in such a sense as to make it equitable or practicable to compel it to contribute to local sources, and therefore I am obliged to desert that.

20,272. Do you think that the value of an occupation always affords an equitable test of the ability of the occupier to pay, leaving out now the question of the taxation of the owner's property?—Certainly not. I have a very strong opinion upon that subject. I consider that the adoption of that rough and ready method of dividing up the proportion of the local charge as between different ratepayers, was a very unfortunate test to select, and that it has worked out very unfortunately. There is no doubt that, considering occupiers solely, and leaving the owner's question out of account, and leaving other sources of revenue out of account, if you consider that 10 millions had to be raised in London from occupying ratepayers in certain proportions, the way in which we now apportion it, that is, in proportion to the rateable value of their houses, is a most inequitable way of dividing up that 10 millions as between man and man.

20,273. Have you any suggestions with regard to an improvement of that system?—The Council has not resolved upon that, and, therefore, I am chary of putting anything before the Commission otherwise than as a purely personal view. I do not suggest that I have at all satisfied myself, even as a matter of personal view, of what I shall ultimately say. We are only at the beginning of that consideration, although it is a very important one. To take one point only, I am inclined to think that, in the long run, the proportion to be borne by different tenements (apart altogether from the question of the direct burden on the owner) will be divided up, not according to the present rateable value so much as according to the present site values. I think you will find that it is quite a possible view that, in the end, the site values column which we propose will come to be not only the measure of the owner's rate, but also the measure of the occupier's rate. There are many other reforms to be kept in view as well, in arriving at any just apportionment as between occupier and occupier, and I do not suggest that I have got to the end of the question, by any means.

20,274. Your idea then, would be, that the value of the site does of itself constitute, not only a test of the ability of the owner to contribute, but also a test of the ability of the occupier to contribute?—No, I do not mean that; that is a respect in which I say there remain further questions to be considered, which are very difficult. As between tenement and tenement I think there would be advantages in estimating the assessable value of each tenement, not by the present measure, which is the rent it will bear from year to year, but by the site value measure, that is to say, that tenements bearing a high site value, such as tenements in the City, ought to bear, even in the shape of an occupier's rate, a higher proportion than tenements upon the outskirts, which have a practically vanishing site values estimate, but which now bear a considerable proportion of the rates, because of the building value which is put upon them. I think that the present system, as a matter of fact, tends in a certain way to discourage building on the outskirts, and in a way which is hardly fair to the various interests concerned. As to the question of a man's ability to pay towards local taxation, one cannot consider that strictly without

going into the whole question, of where the incidence of the rate falls. If the full incidence of the rate fall on the occupier, then it would be necessary probably to discriminate very widely. It would be necessary to distinguish, as the Inhabited House Duty tried, in a crude way, to do between business premises and residential premises, because, no doubt, the matter bears in an entirely different way. It would be necessary also to distinguish between premises of small value and premises of high value. It would be necessary to graduate, in fact. All these questions would arise if the Commission supposed that the whole burden of local taxation fell upon the occupier; but that raises a very wide question, and I do not at this moment propose to try to get at the bottom of it.

20,275. I think the London County Council is now committed to the proposal for the transfer of the House Duty?—In so far as that is carried in the resolution (i) which has just been approved.

20,276. I think, also, that in your own memorandum you suggest, or at any rate refer, with approval to the proposal for the transfer of the Land Tax?—I think that it would be desirable, for many reasons, to transfer it, but I see very great practical difficulties, and I do not propose to press that upon the Commission, because the Council has not explicitly resolved upon it, and by referring back, recommendation (k), it may be supposed to have expressed a doubt upon it.

20,277. I rather wanted to obtain your personal view as to whether there is any ground upon which the House Duty should be transferred, which would not equally apply to the Land Tax?—I do not think there is, except the grounds of practical ease and expediency, and the possibility that a radically revised Land Tax might some day be wanted as a means of national revenue. It would be much simpler to transfer the Inhabited House Duty than it would be to transfer the Land Tax, all things considered, but I do not suggest that the two are theoretically in any different position.

20,278. I understood your proposal for the transfer of the House Duty was based on the principle that it was essentially a local tax?—Quite so.

20,279. That would apply equally, would it not, to the Land Tax?—It may be so.

20,280. With regard to the transfer of the burden of certain public services, I gather that, as yet, the resolution of the County Council is very general on that subject?—It is.

20,281. And that the County Council have not committed themselves to any particular proposal under that head?—In the discussion on Tuesday upon that subject, I was asked what proposals I intended to put before the Commission, and I said that I did not propose to put before the Commission, as representing the Council, any specific proposals for transfer, because I did not think the time was ripe for doing so, but I suggested a thing which has been mentioned, the charge for pauper lunatics, for example. I did not gather that that met with any dissent. I fancy there are certain charges which the Council would be willing to define if the policy in general were accepted.

20,282. Would you assent to this as a general proposition, that where the benefit of any expenditure is national, the burden should be national so long as it can be nationalised consistent with due economy and care in the administration?—Yes. I think that formula very fairly represents my view. I think you have two things to consider: first of all, what is the benefit of the expenditure, or the object with which the expenditure is raised? That may be either wholly national or wholly local, or it may be mainly national or mainly local. It is a question of drawing the line. Then you have the question of the administration. In so far as national charge involves national administration, which I do not think it does completely, but in so far as it does involve it, there may be great practical difficulties in managing bureaucratically certain branches of the service.

20,283. You have spoken in rather emphatic terms of the extravagant tendency of the Exchequer grants. Do you draw any distinction between what one may call appropriated and unappropriated grants?—In the end I do not. I think all those things are mere words. If you pay a lump sum out of the Exchequer to a local authority, then so far as the local authority's economy is concerned you give them a windfall, a thing which comes to them out of the sky, and I think that does

distinctly tend towards extravagance. If you were to select a certain service and state that, subject to Imperial audit or some sort of control, the nation will pay some large proportion or even the whole of what that service costs in this locality, that is an entirely different thing.

20,284. Would you say that the grant given under the Local Government Act of 1888 of 4s. a week for the maintenance of each pauper lunatic tends to extravagance?—Yes, I think even that does. If the nation took over the charge of pauper lunatics as a whole, and controlled it by any system of audit or check, then I think such a subvention for local purposes would not tend to extravagance; but if they pay a lump sum, as I say, out of the sky to a body which thinks constantly of the question of a rise or fall of rates, then I think that practically acts as an inducement to extravagance.

20,285. I presume then that you would say generally that no safeguards can be devised which would prevent grants to local taxation out of the Exchequer from having an extravagant tendency?—I know of no such safeguards. For instance, the grant partly depends upon the number of lunatics; that obviously acts as an inducement to the receiving authority to what I may call, manufacture lunatics—that is to say, to put people into the category of lunatics who may otherwise be more conveniently treated as being members of the ordinary community. The dividing line between a lunatic and a sane person is a movable one, and I believe that, as a matter of fact, there is substantial reason for what I am saying—that cases have occurred in which it has seemed good to local authorities to have more lunatics than they need have.

20,286. I think you have more than once expressed to the Commission your view that no system of contributions from the Exchequer could be devised which would not result in more being contributed by the London taxpayer than the London ratepayer receives?—You may take it that that is the settled view of all of us in the Council after fully going into the matter.

20,287. Is not the whole fundamental principle underlying these Exchequer contributions this: that the wealthier portions of the community should relieve the poorer portion?—I never understood that that was the principle underlying the Exchequer contributions; if it was so, I am afraid I should quarrel no less strongly with the present system of distribution.

20,288. Are not these Exchequer contributions with regard to Imperial and local taxation, very much in the same category as your endeavours to make the wealthy parishes contribute to the poorer parishes by means of the Metropolitan Common Poor Fund and other funds of that description?—I certainly do not think they are, and if they were so intended they are very far from realising their object. You have to consider what is the meaning of wealth and poverty for that purpose. In London we regard it as clear that the accidental circumstance that large bodies of administration are managed locally does cause the poor districts to a large extent to have to bear their own burdens out of their own poverty; and for the purpose of remedying that we have endeavoured to what is called "equalise," which simply means to cause the general community of London to bear in common a little more of expenditure which really is for the common good. That policy if it were applied to national affairs would tend to exactly what I suggest, namely, to set apart those purposes which are national and distinguish them from those that are local.

20,289. Supposing that that policy were carried into effect, it would follow, would it not, that the large towns with wealthy communities would contribute more than they do now, whereas the poorer districts would contribute less?—No, not just that—with submission. The wealthy communities would contribute more than they do now to national purposes, but that I should have no objection to; that is, through the income tax, the death duties, and everything else worked in that way. If there was discrimination between national objects and local objects. I entirely agree that the wealthy community should contribute more towards the common objects.

20,290. (Mr. Arthur O'Connor.) With regard to the death duties, have the County Council agreed to any resolutions?—Not specifically.

20,291. Then perhaps we may regard them as not within the purview of practical politics, and drop them?—That depends upon the view that Parliament takes. I do not myself entirely rule them out; but for present purposes I do not insist upon them further.

20,292. You were asked about the interest of lessor and lessee; I suppose that it often happens that when a property is divided by lease between a lessor and a lessee sometimes one of the two parties buys up the interest of the other?—That happens.

20,293. The lessor may obtain a surrender of the lease, or the lessee may get a release?—Clearly.

20,294. In either case it is very easy for both parties to agree as to the value of the interest of the one or the other which is to be bought up?—I do not think there is any difficulty in valuing a leasehold interest in London.

20,295. It is a very common thing to have to distinguish in every day life between the interest of the ground landlord and the interest of his lessee?—We have to do it constantly in compensation cases.

20,296. I mean it is nothing new, and in every single day of the week all the year round it is being done all round?—It is. The valuation of interests in the nature of leasehold interests, or ground interests, or site values, I should venture to say was a commoner thing in the ordinary business practice of London than the valuation of the ideal rent obtainable for a tenement such as is now commonly supposed in the assessment at the quinquennial period.

20,297. I presume with regard to your evidence generally that you have been endeavouring to present to us general principles rather than to make those principles clearly apply to every possible circumstance and detail which may be suggested to you?—I strongly desire to say that I think in this matter, as in all other matters of taxation, you must not expect to arrive at more than a rough result. If the result you can arrive at will be a great deal better than the present result, that is a sufficient justification.

20,298. With regard to the cases which were suggested to you of difficulty or apparent inequity, I suppose that you would agree that it is possible to suggest cruces to any proposed scheme of taxation, local or Imperial?—I know nothing as to which you could suggest more than the income tax.

20,299. And that no possible scheme that the wit of man could devise would fail to be open to certain objections of a particular application?—No doubt.

20,300. Now, with regard to the distribution of the interests in property, real or personal, or freehold or leasehold, I suppose that that would always be controlled by the contracts entered into between the parties?—My view about contracts of that kind is that parties are perfectly free to make contracts as between themselves, but that they cannot by that means oust the competence, and, indeed, the duty of the State, to put fresh charges where it intends those charges to lie; and that if the State exercises that duty that gives no claim either to a cry of unfairness, or to a demand for compensation.

20,301. So that if the State, or for local purposes the municipality or local authority, levied a tax or a rate which was not contemplated at the time of a contract made between the two parties, there would be no reason why that tax or rate should not be levied and the parties left to adjustment as between themselves according to the terms of their contract of the incidence of the burden?—That is our view; and in so far as we can see, that is in practice what the State itself does. There may perfectly well be traders dealing in a commodity and making very close and speculative dealings upon it ahead of next year's Budget, but the Chancellor of the Exchequer never takes into account the fact that he may be deranging the agreements between those contracting persons if he puts a tax upon a particular commodity.

20,302. When the imposition of the estate duty began there was no special provision with regard to the purchases already effected of reversionary interests?—No: nor, for instance, as regards the charges in the nature of rentcharges, or anything else which might affect the property. Nor, of course, to take another historic instance, was there any consideration of mortgages when the Law of Landlord and Tenant in Ireland was radically altered, and much of the alleged difficulty

Mr.  
B. F. C.  
Costelloe.

30 June '98

Leasehold interests in Metropolitan are quite easy to value.

Existing contracts are not regarded by Parliament when legislating, and no claim for compensation arises.

Exchequer contributions: A system could not be devised which would secure to the London ratepayer more than they would contribute.

If expenditure on national and local objects could be distinguished, the wealthier communities would contribute more than they do now towards objects which had been nationalised.

Mr.  
B. F. C.  
Castelloe.

30 June '98

which has fallen on certain classes in view of that Parliamentary change was not due to the change itself, but to the fact that the mortgages and other charges remained unaltered. The State never, as I take it, takes these considerations into account because it cannot. If a man sells a property or an interest in property, he sells it as it stands, and the buyer takes his chance of what the State may within its competence do afterwards to change the nature of that interest.

Site values,  
taxation in  
respect of:  
Owners of  
the various  
interests  
should be  
assessed to  
local rates.

20,303. I do not know whether I quite appreciate the force and scope of your evidence upon the site value taxation or rating, but am I right in putting it in this way, that if the full value of the interest in land is divided among a number of parties, as original freeholder, owner of improved ground rents, sub-lessee, and puisne-lessee, the rate or tax which you would suggest ought to be levied upon that interest as a whole would be distributed among the parties who are benefited just as, we will say, the bark of a tree which is thicker on the trunk, and narrower and thinner on the branches, and thinner still on the twigs, is distributed throughout the corpus of the tree?—It would be distributed—

20,304. In proportion to the interest?—Yes, as equitably as it is possible to distribute it in proportion to the interests in the site value, endeavouring to leave out of account such interests as may have arisen out of the actual expenditure of capital which we call building value.

20,305. I was speaking only of site value, or intended to. Where assessment could not fix to each sub-division of the interest the proper apportionment, that would be a matter of adjustment as between the parties concerned under the contracts?—I think it is perfectly possible to form a practical scheme starting from the general principle of the Schedule A of the Income Tax by which a method of deduction would arrive at an equitable result as between the parties.

20,306. You were asked also, I remember, the other day about land which though valuable from the point of view of site merely was yet not so valuable as it might be by reason of the dilapidated or unsuitable premises in the way of buildings which had been put upon it?—There are such cases.

20,307. So that land badly occupied is practically depreciated in value, as where it may be necessary in order to utilise a property to its full site value to remove existing encumbrances?—Yes, but I may say that in the London case, I do not gather from the experts that the mere necessity of removing the existing encumbrances is ever very material: considering the use to which you can put building materials and other matters, the actual cost of removing a building is a trifle in comparison to any large gain in the way of obtaining the full site value.

20,308. That is only a question of degree?—Yes.

20,309. But whether the degree be high or low, is it not a matter of fact, which depends on appreciation and estimate?—If it were considered equitable to allow for that, it is perfectly possible to do it.

20,310. There is only one other point which I want to ask you about, which is in reference to an expression you made use of just now as to the house duty and the land tax. I do not know whether I was mistaken, but I gathered that you said there was no essential difference or no difference of principle, between house duty and the land tax; I suggest to you that a house duty is a duty upon something which is of human creation, as the result of industry, and that a land tax is a tax upon something which is not of human creation?—I did not in the least mean to suggest that there was no difference in the position of the two taxes. From that point of view I feel very strongly, of course, that there is. But the question that was put to me by Mr. Elliott, as I understood it, was whether, from the point of view of distributing between the local and Imperial revenue there was any difference in theory between the two, and I assented to his proposition that the reasons which caused me to say that the inhabited house duty might be considered a local revenue, might equally cause me to say that the land tax might be considered a local revenue—in principle; namely, that it was raised wholly upon localized property.

20,311. You would be prepared to say, perhaps, that, given a house duty, it would be proper to appropriate it for local purposes?—That is what I mean.

20,312. And given a land tax, it might, perhaps, be more proper to appropriate it, in the first instance, at any rate, for national purposes?—That, of course, might well be contended, but the land tax as it at present exists—the small land tax now existing—

20,313. I was not talking of the absurdity which now exists?—That was what I had in my mind.

20,314. A thing which was founded on a set of circumstances existing 200 years ago—No, we are serious; but I was talking of a land tax, a land tax which is of equal incidence throughout, that, I suppose, would be a matter first of all of Imperial charge and Imperial appropriation?—It is because I foresee that the present rather absurd land tax need not be expected to last very long that I do not make any suggestions myself about it. I think the Council rather withheld its idea of making any suggestion that the land tax should be transferred to local revenue on partly the same ground. I think that whole chapter had better be left to develop as it may.

20,315. (*Mr. Cripps.*) I see that in dealing with these site values, you were looking for what you call a new source of revenue?—That is so.

20,316. When you talk about this as a new source of revenue, do you mean that you would leave the existing charges as they are, and then add your idea of the site value tax as an additional source of revenue?—I endeavoured to make that clear, I think, when I was last before the Commission, in this way:—My first and most urgent desire is to prevent the increase of burden which now falls upon the occupier, and which, as regards these growing increments of rates, seems to me to come out of his living in most cases—that is my first and most urgent desire. Next to that, I desire to take off as far as reasonably can be managed the recent burdens of the same kind which have been put upon him. That is the reason why I talk of a new source of revenue, contemplating that what may be called the bulk of the standing rate will remain unchanged.

20,317. I want to ask you this—it is only to understand what you mean—do you want to get a new source in the sense that whereas you are now raising £x, you want to raise £x + £y, in order to carry out certain improvements?—We certainly shall have to raise £x + £y. I do not contemplate that the new source of revenue will materially increase our expenditure. I think our expenditure is increasing and has got to increase because the public demands have increased.

20,318. I do not want to argue that: if you do not mind I will assume that: I only want to get the basis of your opinion. In dealing with your new source of revenue do you mean to get what I call the £y in addition to the £x which you are now obtaining?—Yes.

20,319. You call this an owner's tax; forgive me if I duplicate a question in leading up to another, because I was not here the other day. I do not quite appreciate what you mean by the word owner there; do you mean the freeholder?—We have defined him in (c.) of the resolutions before you as including "all persons deriving a revenue, or use equivalent to revenue, from the value of a site."

20,320. I will just ask you this in order to found another question. Take the case where you have four or five different people with different assessments as regards ground rent from the same piece of land, you would call all of those owners, would you?—I do not quite follow how that would be.

20,321. You would have it in this way—we will say a freeholder lets his land at a ground rent of 5*l.* a year, the next man finds he has made a good bargain and lets it at 10*l.* a year, and I will take a third man to whom he lets it at 15*l.* a year, and so on?—Supposing no house to have been built?

20,322. Yes, even supposing no house to have been built?—I call all those people collectively the owner. The first man is the owner in respect of the 5*l.* a year, the second is the owner in respect of another 5*l.* as the differential profit, and the third man is the owner in respect of a third 5*l.* of the total site value, which you have supposed at 15*l.*

20,323. Take the first man; he is getting 5*l.* a year, in accordance with your resolution (e) would you rate him on the annual rent which at the time of the valuation might reasonably be obtained for the land as a

3 June '98

cleared site? Would you rate him on the 20*l.* a year or the 15*l.* a year, whatever it might be?—It is not contemplated that he would be an individual rated upon any such assessment. The contemplation is that the tenement would be put in the rating list as it now is against a certain rateable value, and that in a further column of the valuation list against that tenement would be put a site value.

20,324. I want to take this test case, I want to appreciate how you would work it out. Take the man who is getting 5*l.* a year, but at the time of a valuation his property might reasonably pay a rental of 20*l.* which might reasonably be obtained for the land as a cleared site; would you rate him on 20*l.*?—I would rate the property on 20*l.* and he would pay the tax only on 5*l.*

20,325. And you would adjust the rest between the other parties?—Yes. In the case supposed apparently there are four people who would be profiting to the extent of 5*l.* a-piece; there would be an occupier who had got a financial profit of the difference between 15*l.* and 20*l.*, and there would be three other persons who would be actually receiving an actual cash rent of 5*l.* each.

20,326. Do I understand that you would never rate a man on your principle of site value?—Beyond the amount that he is either actually or potentially receiving.

20,327. "Potentially," excuse me, I think is rather an awkward word. Would you ever rate him beyond the amount which he is actually receiving?—In the case we are discussing it would be a question of each person being rated on exactly what he was receiving. The reason why I used the word "potential," if you will permit me to say so, was in order to cover the words "use equivalent to revenue." Plenty of people in London are obtaining an advantage from a site which is not received in cash.

20,328. I will assume a man who has got no other interest in a site value, using your expression, except what he receives in cash?—Then his share of the burden will be determined by what he receives in cash.

20,329. And you only rate him, take an ordinary case, we will say, on the £*x* a year for the money that he is receiving?—Certainly.

20,330. I understand the basis of your opinion as regards site value is in order to get a fair adjustment between the owner and the occupier?—That is the first point.

20,331. The second point—I will ask you just a question or two about it—would be to get what you call a new source of revenue, I suppose?—Yes.

20,332. Now, let me ask you first of all as between the owner and the occupier; I will take a very simple case. Suppose a man has taken a piece of ground for 99 years, and he pays 5*l.* a year for that, but afterwards the value of the site goes up very much, and keeps on increasing during the 99 years; who gets the benefit of that during the continuance of the lease—the owner or the occupier?—To a certain extent, both. It is an arithmetical calculation not altogether difficult. The owner gets the benefit of improved site value in the sense that he will come into the reversion at a certain future period, and as the 99 years runs off the benefit of his reversion increases constantly. In the meanwhile, and saving that fraction, the leaseholder gets the benefit.

20,333. I will deal with that in a moment; assuming a fair contract between the parties has given him 5*l.* as the right sum to receive for a ground rent, and the man gets it at that rate for 99 years, if that property goes up in value, surely, during the pendency of the 99 years—I will deal with your question of when it comes to an end—the occupier is getting the constant benefit of the rise in the site value, is he not?—Not without the exception I was just endeavouring to state, because, if, for example, you take the period when the lease has run for 89 years, and when the owner's reversion is within ten years, the owner can turn the benefit of his site value into his own pocket by selling his reversion in Tokenhouse Yard.

20,334. Yes, he could in that way, and I will come to that in a moment; but during the continuance or pendency of the lease, why does not the occupier during the 99 years, that is, so long as his term runs, get the full benefit of the increased value—he does,

does he not?—I do not think he ever can be said to get the whole, except in the very earliest stages, when you may neglect an infinitesimal amount which I regard as the owner's share. I do not think the leasee ever gets the full benefit of the value; but it is practically easy to ascertain exactly, as I think Mr. O'Connor put to me, what he does get. You can suppose the leasehold interest to be sold at Tokenhouse Yard and the owner's freehold interest to be sold at Tokenhouse Yard, and the two between them, taking out the building interest, will represent exactly the site value.

20,335. I think that is not quite exactly the question I asked you, as you will see if you think for a moment. Of course, during the pendency of the lease the site value may be going up, and at the end of the lease that is a benefit to the freeholder—everyone admits that; but during the pendency of that 99 years why does not the man get the full benefit of the rise in site value for that period—of course, not for all time, but for the 99 years he gets it?—It may be that I am at cross purposes as regards words, but I am using the term "full benefit" as including not merely the income benefit but the capital benefit.

20,336. Let me go back to the capital for the moment; of course you have got to capitalise it on the leasehold table, and not on the freehold table—everyone knows that; but suppose a man has got a property, and he says, "I will let an interest in the land for 99 years," and during the period of that 99 years' interest the site value goes up; why does he not, during the 99 years, get the whole benefit? Of course there is the reversionary benefit, but that is a different thing; it is the occupier who gets the full benefit during the 99 years?—The occupier gets the benefit of a certain amount of value in this particular year, but that benefit, being a vanishing benefit, must be treated for the purposes of bearing a burden on a wholly different table or basis from that on which you treat the owner's benefit.

20,337. Let me take it on the illustration which you gave us; it is very easily done, as you say, in compensation cases. Suppose a man has got the benefit of what is sometimes called an improved ground rent for 99 years, or for some smaller term; you can perfectly well ascertain that on a given table?—Certainly.

20,338. And if it is a question of compensation, buy out the man?—Once you introduce the tables the thing really becomes simple. I am only safeguarding myself from that point of view.

20,339. The table is only an example or illustration of what I mean—that for the 99 years he is entitled to the whole benefit of any rise there may be in the site value?—If we are speaking of the whole benefit from year to year, without having regard to the fact that it is a temporary or perishing interest, no doubt he is entitled to it.

20,340. And he gets it?—He gets it.

20,341. Now, let me go to the reversionary question?—I do not, in the least, suggest that the leaseholder should get off paying his proper proportion of the site value in respect of what he gets.

20,342. Let me deal with that from the two points of view, because I want to deal with it. So far as the occupier is concerned during the pendency of his lease, you do not think that he is unfairly rated at the present time, if he is rated on what I may call the site value plus the building value, or the two combined?—I certainly do.

20,343. Why?—Because he has to pay for the whole cost of public improvements a large portion of the benefit of which go to quite different people altogether.

20,344. I think that is another point, and I will come to that in a moment; but during the pendency of his lease, if he gets the full benefit of the site value, if he is getting another 15*l.* a year, or whatever it is, because the site value is going up, surely it is right, during the pendency of the lease, that he should be taxed on that amount—you do it yourself, as I understand, distributing as you do the word "owner"?—But then I am supposing, to begin with, that we have to distinguish between the rate that is to be put on the site *qua* occupier and the share of local burdens that is to be put direct upon the owner. In so far as the occupier is the owner, as he sometimes is, no doubt a distribution will have to be made. I should suggest—

capital  
value, as  
well as the  
income  
value of  
their in-  
terests.

20,345. I do not want to argue the point. The other point I want to ask you about is this. Of course, at the end of the time, as you say, when the reversionary value falls in, there may have been an increment in the value to the owner?—There always is, practically.

20,346. You say there always is; I should not say that was always true. Of course, in some places, land may go up, or may go down in value; but that, very probably, would not be the case with London?—I think I mentioned, on the last occasion, that I once had to go through an immense list of London valuations, and there practically was no valuation list where there was not a rise.

20,347. Practically, an immediately increased value goes to the owner who is in possession, and of course then, whether as regards rating, the owner, or as regards the relation between him and the occupier, the burden would fall on him, no doubt?—I should put the burden upon him before it falls in possession, because I would insist, if I may, upon taking account of his values which are capital values, as well as of his income values.

20,348. Very well; then you anticipate, in the sense of making a man realise the value of his property, we will say, 40 or 50, or 20, or 30 years before he otherwise would?—I do not make him realise at all. If he prefers to leave it in its present state of investment he can. I only say that is an element of wealth which has gone to his use, because he can, whenever he chooses, put it into cash; and, inasmuch as it is an element of wealth, it seems to me to be one of those sources which are open to be made contributable to the public burden.

20,349. Why should you anticipate the time?—He has got it now. I demur to saying that I anticipate the time. That is exactly, if I may respectfully say so, my difficulty with the line suggested in your questions.

20,350. During the pendency of the lease, you get it from the occupier now, but at the end of the lease, you will get it from the owner together with the increment; why do you want to anticipate the time, or to alter the relationship that now exists between owner and occupier, by which you get the full value between the two, why do you want to alter that by anticipation or anything of that kind?—I may be wrong, but I respectfully think that that question does not at all represent the suggestion that we are making.

20,351. Why not?—Because we are proposing, apart from the existing occupiers, that you should raise what we call a new source of revenue. That new source of revenue will go upon a certain total element of wealth, which we call the site value, and that site value is, as a matter of fact, distributed among various hands. I say as regards this particular source of revenue that we are now talking about, that a site values tax, in whatever form you put it, ought to be distributed among the different persons who obtain the value or revenue or use equivalent to revenue, and in dealing with the case you suggest, I am suggesting that it is inaccurate to say that we anticipate, because we consider as part of the owner's interest a thing which, at present, he possesses, although he may only be able to realise it in a capital sum.

20,352. May I remind you of what you told me was your basis, when I asked you at first—that you never want to put the site value above the amount a man is actually receiving? If you go upon that, which I thought was your first principle, of course you anticipate?—No. In the case you put to me of the three 5*l.*, where the whole value of the site is at present being taken in cash and realised in income, then, of course, that simple rule will satisfy the matter perfectly.

20,353. Supposing, according to the terms which you granted to him when I asked you—I am taking a very simple case of a freeholder, and one occupier under him for a long time—supposing you never want to take from the freeholder more than the original 5*l.* a year, do you not rate him on more than the original 5*l.* that is paid to him? Surely that is quite inconsistent with your view of the value accruing during the pendency of the term to the owner? You cannot have it both ways?—The problem you were putting to me, was a case at the starting out of a site before even the house had been built. In that case, where practically all the reversions were cast into the distant future, no question of capital values would arise, but the existing interest in the site value would be perfectly fairly estimated at four 5*l.*

20,354. Surely you cannot have it both ways, you would either have to rate a man on what he is receiving that is the 5*l.* a year, I put it to you, or else you would have to rate a man who is only receiving 5*l.* a year on some very much larger sum, because in the course of years he was going to receive some reversionary value, you cannot have it both ways—which way would you put it?—I would put it in the second way, but I do not consider it is a fair way of stating it, to say that in the course of years he is going to receive a reversionary value, because I put it to you that he has the reversionary value now for what it will sell for.

20,355. We will say the rates are 5*s.* in the £—and that is not an unfair proportion to take—and that the man is getting 5*l.* a year?—The owner's rate will not be 5*s.* in the £.

20,356. But take it as things are for the moment. Take it that the rates are about 5*s.* in the £, would you want to put a rate upon this new site value? The man is getting, we will say, 5*l.* a year, but the thing has gone up, we will say, to 100*l.* a year—that is not unlikely—you would then rate him on a higher figure than his entire income—a great deal?—No.

20,357. Why not?—I do not understand that I ever would rate him on more than his income.

20,358. Surely if you once leave rating him on what he is actually receiving, you might very soon arrive at that result in a place like London?—In the first place, the value would only in an inconceivable case have risen to 100*l.* a year, except a building has been put on the ground.

20,359. No. I could give instances where it has risen that quite apart from buildings?—Of course, on the system which the Council has proposed, he would never get rated in any case on more than he was getting.

20,360. If he would never be rated on more than he was getting, what becomes of your idea of anticipating value?—He would never be made to pay on more than the 5*l.* he was getting, if it was paid by a system of deductions.

20,361. Certainly. Suppose the man is getting 5*l.* a year, and you rate him at 5*s.* in the £ upon 100*l.*, you would rate him on more than he was getting?—I do not think, with submission, that that is a conceivable case, because, apart from the machinery by which it is proposed to do it, it seems to me to frame itself in this way—if a man has parted with land for a long term of years, reserving a rent of 5*l.* a year to himself, and in the course of the term that land rises in value to 100*l.* a year, that 100*l.* will be a present value received by the leaseholder, and the 100*l.* a year will also be apparently the total measure of the site value assessment. In that case the owner's tax upon that particular tenement will be 5*s.* upon 100*l.*, that is to say, will be 20*l.*, but the great bulk of that 20*l.*, in the case supposed, would be paid by the leaseholder, probably 18*l.* or 19*l.* of it.

20,362. Then, in other words—I want to follow this—you do not propose to anticipate what I may call the reversionary value, and if you do not propose to anticipate the reversionary value, is not that inconsistent with the other branch of your argument?—No. I did not understand that I had just now admitted that I did not propose to anticipate it. I say the distribution of the total 20*l.* of owner's rate between those two interests would be in my view proportionate to what the interests really are worth; but in the case you are putting, the leaseholder's interest in the site value would be vastly more than the owner's would be even if we had taken the owner's reversion fairly into account.

20,363. I am assuming, for the moment, that there are only two parties. Supposing you are only going to rate an owner on the 5*l.*, and nothing more—I mean to say the original owner of the freehold—the question which you have raised, that towards the end of the term his interest becomes more valuable, and, therefore, you are not anticipating value, but you ought to rate him upon it, would never arise, because it would be inconsistent with the other position?—I think, perhaps, the matter could have been explained more easily if I had been able to put before you the scheme which was put in personally by me, which the County Council had framed at a previous time, for doing this thing practically, because that would remove a great many of the difficulties which seem to be arising. The point is not that the owner is rated upon any 5*l.*, or upon any sum properly speaking. What happens is that the tenement is rated on a site value of say, 100*l.*, that then

Mr.

Mr.  
B. F. C.  
Costelloe.  
30 June '98

2s. in the £ or 6d. in the £, as we propose, is taken upon that; so, if we suppose that we put it at 1s. in the £, which is all that is proposed at the present moment, that would be merely a matter of 5l. a year; but the bulk of that 5l. a year would, in the case supposed, go upon the leaseholder, and a certain equitable portion of it would go upon the owner of the ground rent. But on our scheme, as it has practically been worked out, it is quite inconceivable that, in any case, the owner of the ground rent would have to pay any serious amount in such a case, even if you take his reversion into account.

20,364. Let me ask you one other question—although I do not want to detain you unnecessarily. Apart from the vacant land point, which I admit is quite a different point, would you get any greater value, in your opinion, for rating purposes, by separating site value and building value, from what you would by combining the two, and if so, why?—I do not propose to separate them in that sense. I propose to leave the rateable value column where it is for the purposes of the occupier's rate, and I propose to add a separate column to the rate book, to be called site value, for the purposes of the owner's rate.

20,365. Apart from putting a new rate upon the owner, what you call a new source of income, you would not raise, would you, the general assessable value which you would raise the rates on merely by separating site value and building value?—No, but it must be remembered that we do not propose to divide the present rateable value into a site value and a building value, as I have already explained in answer to Mr. Stuart.

20,366. Therefore you would only separate them in order to put a rate upon the owner?—That is the whole object; that is what I mean by calling it a new source of revenue.

20,367. And you would do that quite irrespective of what you have told us of any arrangement between the owner on the one side, and the occupier on the other?—I do not myself see that there is any ground in equity to interfere with such a rate, if Parliament chose to impose it, by reason of past or future contracts.

20,368. Let me put it to you in this way—supposing it is more convenient for business purposes that the rate should be thrown upon the occupier or the non-freeholder; what benefit does the community get by upsetting that, and throwing it on the one party rather than on the other?—My answer would be the analogy, as I said previously, of the income tax.

20,369. Never mind about analogies for the moment. Supposing, as a business matter, it is more convenient as a question of contract to throw the rates on one party rather than on another, what does the community get by upsetting that arrangement?—I think the community suffers most grievously from that very arrangement at the present time. I think the community has the highest interest in upsetting that arrangement.

20,370. Why; I do not quite follow that?—Because at the present moment that produces a state of things which causes the whole local expenditure to be borne, apparently at least, by a class of people who do not get a large portion of the advantage of it, and that state of things produces a constant resistance on the part of the occupiers against even the most necessary improvements and developments in municipal service.

20,371. Is it not an admirable safeguard that a large number of people have to pay the rate themselves instead of getting the rate from a smaller number of people in which case they would be likely to be extravagant, because they have not got to put their hands into their own pockets?—As I say, I do not think the present system operates as a check upon extravagance. I think what it does is to operate as a check upon actual municipal services; it certainly operates as a severe check upon the creation of structural improvements in London, and I think it has operated in my experience of London affairs as a check upon everything, including public health.

20,372. Supposing for the moment we had had the other system of rates in England, and it had all been upon the owner?—I do not propose that.

20,373. Assuming that—I want to take the test; do you not think the tendency towards extravagance would have been very much greater than it is now, and that the real safeguard is the number of people who feel the rate because the occupiers pay it?—I do not think so in the least myself. I think that if the occupier did not feel that it was coming out of his own livelihood,

he would have every inducement to send up the expenditure.

20,374. Do you want to increase the expenditure of London?—I do not want to, but I regard it as inevitable.

20,375. And regarding it as inevitable you think there would be less friction if the owner pays than if the occupier pays?—No I think—

20,376. Is that not what you told me—less friction if the owner paid than if the occupier paid?—No. I think there would be less friction if the owner paid his share; there would be less friction, because the removal of an injustice always produces less friction; but it is not from the point of view of friction I am chiefly thinking of it. I do not want the people to die in the alleys because the occupier thinks he is paying too much rates.

20,377. No one would desire that?—No one wants that.

20,378. And I do not think it is true myself; but, however, no one, of course, would desire it. Is not the real safeguard I was going to say, I mean the only safeguard you get in these rating matters that the occupiers, that is the larger number of people, have to pay the burden if they carry out various municipal arrangements, whatever they may be, which cost money?—I think that that has never in my experience operated as a real check upon extravagance. I think it has constantly operated as a check upon very useful public work. Where you have a corrupt body which is actually extravagant and does over-pay contractors and allow officials to steal, and things of that sort, I have never found the ratepayers' check very effective there; in fact, you will generally find there is a ratepayers' association at the back of the ring.

20,379. I am not dealing with the source of extravagance like that, and I am not suggesting anything of that kind. I put it to you: Supposing, instead of your 6d. on the owner you were to put 2d. on every occupier, do you not think that that would be a far greater test of whether the people really wanted to spend the money or not?—No, I think there would be much more resistance to the spending of the money; but I do not think it would be a fair test as to whether the money ought to be spent.

20,380. No, no; but surely the people who are the proper people to decide that, as much as possible in a place like London, are the occupiers—they are just the very people?—I do not think so. If you have, for example, the question of making great arterial improvements, the occupiers who pay for them do not get the main benefit out of them. They go, to a very large extent, to improve the values of the building estate called London. You have a state of things under which the Embankment, for instance, was built out of the pockets of the occupiers, and the chief money advantage from that went to the profit of the great building estates that bordered upon it. Such a situation is, to my mind, I deliberately say, scandalous, and I should not be at all surprised if in the course of time it leads to greater friction than it has already.

20,381. (Mr. Arthur O'Connor.) I presume that where land is let on a terminal lease with an increasing site value the freeholder's interest is an increasing interest viewed from the capital standpoint, and that apart from the present improvement in the site value the leaseholder's is a diminishing interest?—That is so.

20,382. If the freeholder wants to realise his increasing interest, he has to discount his prospective profit?—That is what it comes to practically; he has to sell it, or suppose it sold.

20,383. And he discounts an interest or a property which is not otherwise in hand?—That is my conception.

20,384. From the point of view of principle, it is necessary to distinguish between a reversionary interest and an interest which is in hand?—Yes.

20,385. As I understand your position, the increasing site value is *ex hypothesi* distributed, somehow or other, in the shape of interest in hand in the one party, and the reversionary interest in another party?—That is so. I only want to arrive at an equitable assessment and an equitable distribution of the whole total sum between these two interests.

20,386. From the point of view of the taxing or rating authority, the distribution of the charge as between the parties, reversionary and in immediate

possession, is a matter with which they are not concerned?—That is so.

20,387. As a rating authority they are not concerned; it is a matter for contractual distribution between the parties who divide the interest between them?—I am only concerned to put forward a scheme which so far as I see will equitably divide it between the interests. If they choose to alter these interests afterwards by any legal contract that is quite fair.

20,388. Your position is that of the County Council—a rating authority or a charging authority?—Yes.

20,389. Are you concerned as such with the details of equitable distribution as between the charges?—Of course, as we are asking for a new source of revenue, we are anxious to show that it will fall more equitably than the present one. That is the point of view from which I put it.

20,390. Are you, or are you not, anxious to interfere with the terms and the covenants of the contracts existing already between the parties between whom its improved value is distributed?—No, I do not propose to alter them at all.

20,391. So that, if, as between them jointly, the burden imposed is borne, you are content, from the point of view of the rating authority, to leave the incidence to be adjusted according to their contractual relations?—Excepting this, that I quite propose that if an owner's tax is created, and if it is part of the conception of that tax that a certain share of it, say *l.* 10s., out of a total of 20*l.*, shall go upon the freeholder, then the Act of Parliament shall be strong enough to put it upon him notwithstanding the fact that he has 50 years ago contracted with the leaseholder to bear all the rates and taxes.

20,392. Neither the County Council nor a Royal Commission could interfere with the power of Parliament; but let us suppose that an interest in land is like a knife with a handle and a blade; the handle is limited—that is the freeholder's part, but the blade is constantly growing—a curious knife; it is generally the other way—but supposing that the leaseholder is enjoying for the present a constantly increasing share of the total improved site value, do you not think it is fair that he should also bear that portion that he represents of the burden on the total interest which is increasing?—Certainly, and that is my proposal. That is the way in which the scheme which I put before the Chairman would work.

20,393. In so far as it is necessary for the carrying out of your present statement you are desirous of modifying, if it is necessary, anything you have already said?—As I understand it, that is not inconsistent with what I have already said.

20,394. At any rate, if it should appear to others to be inconsistent, you wish your later utterance to be taken as the expression of your opinion?—I think my later utterance is correct.

20,395. (Sir Edward Hamilton.) I think in your memorandum you object very much to the principle on which the Exchequer grants were allocated in 1888?—Yes, we feel that that is a great grievance.

20,396. On the ground that it was an inequitable allocation towards London?—That is what first called our attention to it, but we now have more ample objections.

20,397. Do you consider that those inequalities have become more marked now than they were in 1888?—We think they are growing inequalities.

20,398. They are growing?—Yes. Of course we have various other objections, as I think I put to the Commission. There is also this consideration, that the yield that comes to us just now is extremely accidental, and we cannot forecast our own Budget because we do not know how many millionaires will die in the year.

20,399. You advocate the transfer of the inhabited house duty from the Imperial Government to the local authorities?—I give that as an instance.

20,400. Supposing that that was done, may I take it, that what you would advocate would be, not merely the transfer of a duty in the same way as the licence duties are now handed over, but that it should be constituted a local tax, that is to say, that the local authorities should have power, not only to collect, but also to levy whatever rate they please?—I do not suppose Parliament will go so far as that. In the first

instance, I propose that it should be constituted a local tax and that the local authorities should have power to levy it, and that Parliament, within limits to be fixed in the Act, should allow us to exercise a certain discretion as to grading it, for instance, and other things of that kind. As to the amount to be levied, I do not propose that it should be at our pleasure to levy either a penny or a shilling on the inhabited house duty as we might think fit. I assume Parliament would leave it where it is, subject to defined powers of modification.

20,401. Supposing Parliament were to hand you over the tax and give you a certain discretion within reasonable limits as regards the rate that should be levied, it would not differ very much from an ordinary rate—true, you might grade it, but you might grade an ordinary rate too?—That would put into our local budget a tax which people now have to pay in addition to the rates.

20,402. No doubt?—And of course the fact that London would gain a certain financial benefit by that, would relieve us to that extent.

20,403. But it would be the same thing to the London taxpayer, that is to say, supposing he is paying the inhabited house duty and a rate, it would be the same thing if Parliament were to repeal the inhabited house duty and you were in its place to levy a new sort of rate which might be a graded one?—Theoretically, it might be much the same, but I say in practice I would much rather have the inhabited house duty, because of the superstition that prevails against the increase of rate. I think we would have far more friction if Parliament repealed the inhabited house duty and left us to raise a rate in place of it.

20,404. I think, in your memorandum, you refer to there being a great many inequalities in the inhabited house duty, or you say that it requires reform—I forget the expression used. What were the special points you had in view in regard to the reformation of the tax?—I do not profess to have a scheme of reformation to propose to the Commission, but the exemption of certain properties and the grading of the tax upon different classes of rents seems to us at present to be rather haphazard; and there has been a strong feeling in the Council at the time when this was discussed in earlier years in favour of reforming these things; so much so, that some members of great weight on the Council objected altogether to apply for the transfer of the inhabited house duty on the ground that its application was so awkward and unsatisfactory. For instance, we quite feel in London, as I think everybody is aware, that the total exemption of business premises from the inhabited house duty produces a very unfortunate result, and that large numbers of business premises in London are left without a certain amount of residential facilities, which would be very convenient from many points of view, simply because, if even a single bed were put up in any back office, the whole block might have to pay inhabited house duty. That is only an instance of the many difficulties which arise in the present cast-iron system.

20,405. (Chairman.) I think you may take that as absolutely established?—I understand that everybody concurs in the view that it does need reform.

20,406. (Sir Edward Hamilton.) I think you said also that you calculated that for every pound practically contributed out of the Exchequer to London local taxation, about 25s. would come out of the pockets of the Londoners?—I do not mean those to be exact figures; I mean that we contribute more than we get.

20,407. I suppose you consider that that basis is extremely hypothetical?—I can only say that many of us, looking at it from different points of view, and trying to work out the figures on our own account, all arrived concurrently at that same result.

20,408. I do not see how you could proceed to work it out at all?—It is, no doubt, a largely conjectural view; but I base it upon the assumption that the taxation which is to be raised for the purpose of making grants to local expenditure is raised, as I said upon a previous occasion, upon the variable elements of taxation.

20,409. Take, for instance, the income tax. The income tax is mainly collected in London, no matter upon whom it is levied?—Of course, we are not taking into account the whole income tax collected in London, as if it was London income tax.

Mr.  
B. F. C.  
Castellae.

30 June'98

Inhabited house duty: Exemption of business premises produces unfortunate results.

Exchequer contributions: Present system an inequitable one for London as regards the distribution. Also the amount is uncertain.

Inhabited house duty should be a source of local revenue.

Exchequer contributions: London contributes more to Exchequer contributions than London receives from them.

Mr.  
B. F. C.  
Costelloe.  
30 June '98

20,410. You are not?—No, certainly not. In making any estimate, we are endeavouring to consider what is the London income properly so called. Of course, that is, obviously, very difficult to decide; and one must take a rough measure.

20,411. Then, again, the London consumption of articles which pay duties must be purely hypothetical?—Yes, but you will have certain measures which you can take; for instance, the consumption of such a thing as tea varies roughly as the population.

20,412. (Mr. Dalton.) You consider that the tendency of Government grants is to extravagance?—Of what I call lump sum grants; what I call, in the slang phrase, doles. I do not think that the taking over of a service as a Government charge with some proper oversight would necessarily mean extravagance.

20,413. You consider that the transfer of the licences and of a share of the probate duty tends to extravagance, because that is what London receives?—I think, so far as it has had any effect, it has tended to extravagance.

20,414. Would not that objection apply equally to a transfer of the house duty?—I do not think so because when a local authority is made responsible for raising the money that it spends then I think it looks at its budget in a different way from what it does if it is only responsible for raising a certain amount of the money that it spends, and then has an endowment of a few millions to play with.

20,415. Then you think if London has to collect its licences instead of having them collected by the Government—?—I think that would make a considerable difference—even that.

20,416. That would make a difference?—Yes, I think all these things which are transferred as local charges ought to be collected locally; I see no reason whatever why they should not be.

20,417. You do not think that the owner's rate would lead to extravagance?—I do not think it would. I do not think myself that the owner's rate would do any more than carry certain necessary reforms of public works such as improvements which are now stopped for want of it. If you call that extravagance of course it would lead to it.

20,418. I rather want to get at what you define as extravagance?—I think extravagance with reference to these two arguments is a wholly different thing. If there were a certain amount of money raised from the owner's interest no doubt the local authority would be criticised severely if that sum of money were not spent in a fair or economical way, and I think the owners are quite able to bring very severe pressure to bear. But what happens is that if you throw the whisky money, for instance, into the lap of the local authorities and ask them to do something for technical education, they become anxious to spend the whole of that money even if they do not spend it upon things that they specially require.

20,419. Would not the same thing apply if you throw the house duty into their hands?—I think if they were responsible for raising it, it would be a very different thing.

20,420. Otherwise, you would agree that there would be no difference?—I think I should agree that the transfer of a duty, if it was a block of Imperial revenue, would not be very materially different from the transfer of a million.

20,421. You are not in favour of a transfer of the house duty, so long as the Government collect it; you think it would be fraught with very serious consequences in the way of extravagance?—I do not propose the transfer of the inhabited house duty so long as the Government collect it. As I say, I do not think the Council has ever quite desired to see the present house duty transferred as it is.

20,422. (Chairman.) There is one thing I am not able yet to get quite in my mind, that is, what you propose to do with the potential value of a site which is not—owing to the character of the buildings upon it—wholly utilised at the present time by all the interests which utilise it taken together?—I am glad to have a chance of clearing that up if I can. I propose in the first place to assess the total true value of the site as if it were to be sold by an absolute owner as a cleared site at Tokenhouse Yard; and I propose to state that in the form of an annual figure, merely for convenience—the measure is in reality a capital sum. Then I propose

to ascertain by any simple machinery in what hands and in what proportions that capital value at present stands. If it is shown that a portion of it is not in anybody's hand, and cannot truly be realised either in capital or in income, then I am quite prepared to agree that that proportion might be left out of account, and that there should be a deduction.

20,423. You have got to a point, and I want to interpose a question there. Do you propose to rate under this owner's tax a part of the site value, which, while it is in somebody's hands is not producing at the moment to that person a revenue?—Yes, if it is producing what I call a use equivalent to a revenue, if it is producing to him wealth, whether in the form of an annual rent or in the form of a realisable capital sum then I think that is an element of the wealth of the community which is a very proper subject for taxation.

20,424. To-day you have said that as a test the value of the houses occupied as between man and man was inequitable as a basis of rating?—Yes, and I do think so.

20,425. Why do you say that?—For example, many people in the community are compelled by their occupation, notoriously doctors, to live in houses which do not at all correspond with their available wealth or taxable capacity as between them and their neighbours. A doctor in many parts of London is practically living in a house which is rented and rated at the same amount as the houses of people with a much larger income than he.

20,426. More so than a man who for the sake of pushing his business occupies a frontage in an expensive street?—If you pass to business premises the inequalities are still greater. For example, there are certain forms of business which force people to use warehouses which require very much room, and which can only be carried on by occupying very large warehouse premises in highly-assessed portions of the City, but which are not more remunerative than their neighbours' business which requires less warehouse accommodation; or than, say, a stockbroker who only requires two or three rooms. In these cases a business bringing in no greater profit than its neighbour may have to undergo very much larger rateable burdens.

20,427. That, of course, leads me to this general question—I will assume for a moment that the test as at present employed is not mathematically accurate, but what I want you to say to me is what better test do you suggest?—I do not say that I have worked out a substituted system. I think the vice of the system really arises because it was supposed in the first instance that the house in which a man lived or the property which he occupied was a measure of his income as between him and his neighbours. I do not think that is true. In order now to arrive at any more just apportionment of the local revenue it would be necessary to go into the very difficult questions of incidence as between one class and another; for example, the incidence of the rates put upon residential property is entirely different in my opinion from the incidence of the rates put upon business property.

20,428. Why?—Because the business man can to a certain extent pass on his rating burdens to the consumer, whereas the householder has to pay for them out of his living. I am speaking, of course, in each case of the burden which falls on the occupier.

20,429. If the house occupier feels the rates oppressive he moves elsewhere, does he not?—Wherever he moves he has to pay a certain contribution to the local expenditure, and unless he can transfer that to the owner behind him he pays it out of his living. Now the business man has two alternatives—he has the owner behind him, and he has the consumer in front of him. However, I do not in the least profess that I have worked out that question, and I did not propose really to attempt to lay before the Commission anything about it.

20,430. Is there anything more unfair than the incidence of the income tax upon a man who has a large family and a man who has no children?—Taxable capacity as regards income tax is a very difficult thing to ascertain. I should say that the income tax on unearned incomes ought to be put on a different footing from the income tax on earned incomes, and so on.

20,431. Do not let us mix it up with unearned and earned income, although I admit that that is a point

Mr.  
B. F. C.  
Costelloe.  
30 June '98

Value of the occupation of the occupier is not an equitable basis for local taxation. It is not a measure of a man's income compared with that of his neighbours.

Incidence of rates upon owners of residential property and business property is different, because the business man can pass on the burden of his rates to consumers to some extent.

Exchequer contributions in the form of grants in lump sums tend towards extravagance, but if local authorities are made responsible for raising revenue, there is not the tendency to extravagance.

Site values, taxation in respect of: Method of assessing value of various interests in a site in the hands of different persons, whether in the form of rent or of a realisable capital sum.

practice of  
rating or  
taxing a  
man upon  
this basis.

which is well worth consideration. Take the income tax, in both cases on a capitalised income; do not let us have the double divergence between the two cases you referred to. Is it not the case that a man with a dozen children would have a greater difficulty in paying his income tax than the man with the same income, derived from the same sources—the same railway company, if you like—who has only a family of two children?—No doubt, but you will observe that the difficulty as between family and family applies to rating equally with the income tax; the difficulties I have been suggesting are peculiar to rating.

20,432. My point in putting the question is not that there is no difficulty, but that the difficulties are of such a nature that no scheme which the wit of man can devise will get over them; and I suggest to you that house value, rough and ready though it may be, is the best test of rating which can be devised. If you can give me a better, do so?—No. I did not propose to suggest to the Commission an alternative to the ordinary assessment on rateable value for the purpose of the occupier's rate. What I am proposing to do is to add to that a new source of revenue which I hope will have at any rate some elements of equity to redress the balance.

20,433. To refer to a point which, I think, has not been before us yet; you have been good enough to hand in a diagram which is a diagram apparently of the rating inequalities of the London parishes?—Yes.\*

20,434. I understand that you have put upon it four lines of a different character—there are two red lines and two black lines, one of each colour being dotted, and the lines show the level of rates upon various London parishes for the four years, 1890, 1891, 1892, and 1893?—That is so.

20,435. What is it that you want to use this diagram as demonstrating?—I think I promised on the last occasion that I would produce some figures in support of my statement that the rates in particular London parishes oscillated suddenly and sharply even between one year and another. That diagram was not got out for that particular purpose, but to illustrate the inequalities as between parish and parish. Incidentally, however, it shows graphically for various parishes by the intervals between the different lines the very great oscillations which happened from year to year.

20,436. As between parish and parish it has some striking features, but I understand it to be put in as an attempt upon your part to break down the contention that a man who is making a contract with his ground landlord can approximately calculate what he is going to pay?—Yes, that was the object of the evidence.

20,437. On that I suggest to you that over a series of years even upon this diagram it is quite simple to average what he will have to pay one year with another?—I have also put in a statistical abstract which gives you the figures more in detail, and, if necessary, I could take out individual cases. I think, broadly speaking, I may say this, upon these figures—that it is quite possible that I may ascertain what the rates are in a particular parish this year; it is not easy to ascertain even that correctly because the ascertainment of these aggregate figures causes great labour and trouble even to our expert statistical department; but if one ascertains correctly what the rates in a particular parish are this year, it is perfectly possible that the total rates next year might be a 1s. more, and that the total rates the year after that might be 4d. less.

\* See London County Council Return, London Statistics, 1892-3 (No. 129), p. 254. P. S. King and Son, Great Smith Street, Westminster, S.W.

20,438. Might be 6d. or 8d. less, or whatever they are?—Yes.

20,439. The man knows that they will fluctuate, we will say, to take a figure, between 4s. and 6s.?—There are none so low as 4s., but there are many of them far higher than 6s.

20,440. Do not let us go into whether they are lower than 4s.; I will take your own figures—what will they fluctuate between?—As a matter of fact they fluctuate in the London districts, between 4s. 6d. and close on 8s.

20,441. They fluctuate between 4s. 6d. and 8s., which is the extremity of the fluctuation between one year and another?—Yes.

20,442. Over a period of years, it would be pretty safe for him in one parish or another to say that it would be 5s. 6d., or whatever figure his experience leads him to suggest?—I think he would find it very difficult to make a correct average, and I think, in practice, he does not succeed in doing so.

20,443. I do not know that it is quite germane to the inquiry—I think perhaps it is—but you might tell me if you can, why, as between 1890 and 1893 there has been such a very violent fluctuation in the rates in Bermondsey?—I have heard some explanation, but I do not exactly recollect it. I think it was a matter of poor law administration. That fluctuation, I think, was a case of what is constantly the cause of fluctuations, namely, that a local authority for one reason or another, over-estimates a particular precept in a particular year, and then very large sums fall into balance. You see there are several different rates and precepts being collected, and if there happens to be an over-estimation on three or four of them, a very large sum may fall into balance one year, and the rate may suddenly break down.

20,444. With one or two exceptions, this diagram would show that Parish A. always has a higher rate than Parish B.; in other words that the relative burden is about the same as between parish and parish?—Yes, the order of parishes in height of rating does not alter on the whole, but it sometimes alters very greatly in individual cases. Bermondsey, for instance, I think changed its place in the total list very sharply—I mean it was moved up several places in the list, between one year and the next.

20,445. That is occasional, but the general impression given to my mind by this diagram is, that for some reason or other—probably there is an explanation of it—the ratings of the different parishes bear the same ratio to one another in different years?—Broadly, the poor parishes are the parishes which are highly rated.

20,446. That would make it, therefore, relatively easy for an experienced man to calculate what the rates would be over a series of years?—I do not suggest that he is absolutely without a guide, but I suggest that he cannot do it with any approach to accuracy, and, in fact, he does not.

20,447. I must ask you one general question. Is there any point that you want to mention, or any explanation you want to give after considering the question?—Thank you very much, I do not think so. If I might look at the print, when I have it, so as to see whether I have exactly expressed myself in answer to Mr. Cripps and Mr. Arthur O'Connor, I should be obliged if I might make any note or correction.

20,448. Proofs will be sent to you, of course. We are very much obliged to you for the trouble you have taken?—And I am very much obliged indeed to the Commission for its trouble and its patience.

The witness withdrew.

Adjourned.

Mr.  
B. F. C.  
Castelloe.

30 June '98

## FORTY-NINTH DAY.

Thursday, 21st July 1898.

At St. Stephen's House, Victoria Embankment, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. J. B. BALFOUR, Q.C., M.P.  
The Right Hon. Sir J. T. HIBBERT.  
Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.

C. A. CRIPPS, Esq., Q.C., M.P.  
T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*  
T. LLEWELYN DAVIES, Esq., *Assistant Secretary.*

Mr. E. V.  
Huxtable.

21 July '98

Mr. EDMUND VICTOR HUXTABLE called and examined.

Mr. E. V.  
Huxtable.

21 July '98

20,449. (*Chairman.*) You are manager, I understand, of the Assessment Department of Messrs. Rexworthy, Barnard, and Company, Solicitors to the City of London Union, the parish of St. Pancras, Holborn Union, and other metropolitan and provincial authorities?—Yes, that is so.

20,450. You have had the conduct of assessment appeals for the last 14 years, and have had a wide experience, being engaged on appeals against both quinquennial and other valuation lists; on appeals against totals for the city of London and Holborn Unions against the London County Council; on appeals against the assessment of railway companies lines and stations, gas, telephone, hydraulic power, and other companies' works, mains, &c.; public and semi-public buildings, including workhouses, free libraries, drill halls, properties coming under local Acts; livery halls, exchanges, licensed premises, banks, insurance companies, and other properties; and you have also had experience of the proceedings on objection and on valuations of property for rating purposes?—Yes.

20,451. You have been good enough to prepare this memorandum\* which I hold in my hand?—Yes.

20,452. As regards all the matters under division 1, the commission do not propose to go through them as a matter of question and answer. If you choose to send in a written paper upon them we will consider what you have got to say, but we cannot go into those matters by question and answer?—Of course we are called here, as I think you will quite agree, to rebut an allegation made against us.

20,453. No, indeed you are not called here for anything of the kind, you are called here to give evidence on the matters within the terms of the reference to the Commission?—True. I realise what is required of me.

20,454. We do not at all admit that you are here to rebut anything that has been said, and we shall ask you such questions as we choose?—Certainly; I am quite ready to answer any question; but will you permit me to say that I am representing the rating authorities of the City of London, and there are reasons why we should go into Division 1. Of course if you put it so strongly that you will not do so, I am bound to observe your ruling.

20,455. No, I did not say that: I said that under all the headings under Division 1, if you choose to send in a written paper it shall be printed and circulated, and considered by the commission?—If you please.

20,456. But we consider those matters are unsuitable for question and answer over the table, and not likely to be useful if dealt with in that way?—I presume that Division 1 will be published.

20,457. What you send in may or may not be published according to what we decide when we see it; but taking your memorandum as printed, Division 1 would be quite useless to be printed as it stands because it simply is a *précis* of what you want to say?—That is true, I know; but of course I could not possibly within the time granted go into all the details, and I thought if I were to take those heads, and take them briefly, I should be able to submit to you what we have to say upon them.

20,458. I cannot take it, we have considered the matter before and we cannot take this in question and answer?—Then I will take Division 2.

20,459. I am going to ask you some questions on Division 2. In the first part of Division 2 by sub-head (a). I understand you wish to reply to allegations that the only district in which it would be fair to say that under-assessments were prevalent was within the City of London. I do not think it is necessary to ask you whether it is the only district, it will be sufficient for you to tell us whether in your opinion under-assessments do or do not prevail within the City of London?—Exactly. Of course I am of opinion, and distinctly of opinion, that they do not prevail within the City of London; on the contrary, that the City of London in the case of many properties is over assessed on the assumption, as I have put it under another division of this memorandum which you no doubt have read.

20,460. I will take it in any order that you like, but it seems to me to come suitably under division 2 (a). We had better take it now, and if we find under another heading that there is a possibility of going over the same ground I can stop you then?—Exactly. Might I just briefly say how this charge of under assessment of 700,000*l.* is divided? Of course the evidence has been put before me, and the language used was that for all causes, the City of London was under assessed to the extent of 700,000*l.* On analysing that, I find on the evidence tendered to me that 250,000*l.* represents the estimated annual loss through the alleged practice of the City of London Assessment Committee in taking the rack rent reserved on repairing leases as the gross value, this practice, it is alleged, being confined to the City; and that 450,000*l.* represents the estimated annual loss arising from the subtraction of the maximum of 16½ in the case of repairing leases and the subtraction of the maxima in classes 1 to 8 of the 3rd schedule of the Act of 1869.

20,461. I think we had better deal with the matter under those heads first, please, but I do not hold a strong opinion on that, and I will take it in any order you like?—Those figures which I have given you, I think, represent the actual analysis of the allocation of the 700,000*l.*

20,462. The first point which you wish to make, I understand, is that there are certain features which distinguish City properties from properties within all other Metropolitan rating districts?—Yes.

20,463. The first has regard to the character of the population?—Yes.

20,464. What do you say about that?—That the City differs from all other rating districts; for with the exception of occupation by caretakers and housekeepers and residents in the few City hotels (not including public-houses and other licensed premises within the centre of the City), there is practically no residential property in the City. The residential or sleeping population is now about 30,000.

20,465. What do you found upon that as making a difference for rating purposes, as far as annual value is concerned?—This clear distinction is founded upon the fact, that commercial property cannot be treated on the same basis as residential property.

Memorandum prepared on behalf of the Corporation of the City of London.

Under-valuation in the City of London is thought not to generally exist.

Mr. E. V. Hurtable.  
21 July '98

20,466. Where do you get authority for that?—Is there anything in the rating law which makes a difference between what you call commercial property and residential property?—Are they not both to be judged by the standard of what the hypothetical tenant will give one year with another?—Exactly.

20,467. Then I do not quite follow what the difference is that you wish to make?—I think when we get further in the proof you will perceive it.

20,468. Make it clear to me in your own words, please?—I have taken it at a later stage, and I had hoped to be able to show it at a later stage.

20,469. Then, I take this Division 2 (b) and I have no objection to printing that as your answer; but I want to understand upon which of those points you rely. I want you to explain to me why any of the statements which you make under Division 2 (b) make a difference in principle in your valuation?—Shall we take each class of property as in the classes 1 to 11 of the third Schedule of the Act of 1869, and I will endeavour to show the distinctions? I will take Class 1, there it is 25 per cent., or one fourth deduction; of that class of property we have practically none within the City.

20,470. How much have you?—About 11,000*l.* worth in rateable value.

20,471. I think we may leave that out of account, may we not?—You may leave that out of account, with this exception, that the Act of 1869 provides that you shall have uniformity of rating throughout the metropolis, and if other districts applied certain rules and those rules deal very favourably with that particular class of property, and that particular class of property predominates within those districts, it is obvious that uniformity will not be obtained, and, on the other hand, the City will suffer proportionately to its lack of property in that particular class.

20,472. So far as that particular class of property is concerned?—Yes.

20,473. What is the next?—If you will take Class 2, you will see that has a deduction of 20 per cent. The same reasoning will apply to that; and as to Class 3, the same reasoning will apply.

23,474. One moment, how much have you of Class 2, because you see you have joined up Classes 1 to 4 in your 240,000*l.* of rateable value?—Yes. Of course if I could be permitted to go through the extraordinary conditions of city property and show you how, for assessment purposes, it has no comparison whatever with any other portion of the metropolis you would perceive the difficulty of arriving at any approximate figure.

20,475. Those are the points that I want you to make out; I am quite prepared to give you any opportunity of making them out; that is what I want you to do?—I have made them out in their order in my proof, and I am not taking them now, because I am simply going from one head of the proof to the other, and I am not confining myself to any portion of it. But I do state that most distinctly as a fact which is, I believe, easily provable, that residential property within certain districts is not to be taken on the same basis as residential property within other districts; and that commercial property is not to be taken upon the same basis as residential property, and cannot be taken for assessment purposes upon the same basis; that is to say, in ascertaining the annual value which a tenant will give under the fourth section of the Act of 1869 you cannot apply the same rules, and the Quarter Sessions could not and do not apply the same rules in the one case as in the other.

20,476. I do not so much for our present purpose mind what they do, what I want is to get from you the principles which you think they ought to adopt?—Could we take these points in their order? I have dealt with repairing leases under Division 4, for instance, and I have dealt with other properties in other divisions, and I am quite prepared to go through those divisions in their order, and to endeavour to satisfy your Lordship that what I contend is correct.

20,477. I want you to take it in your own order; I will take any order you may like to give it me in?—Of course you will quite understand that we came here simply and solely with the object of showing, granted that the Act of 1869 requires uniformity of rating, that uniformity of rating under that Act is throughout the

Metropolis and not within districts; and that, therefore, we are endeavouring in the City and for our own local purposes to arrive at the peculiar value of property within our peculiar district, and we can only do so, I think, by taking these points in their order. I will take them as briefly as I can.

20,478. I cannot help thinking that you are rather mistaking the object with which we are sitting here. We are not sitting here to judge whether you or the County Council are right in the past, or whether the Conference Resolutions, to which we have often had reference made, are in themselves wise. What we have to decide is what are the principles upon which valuation ought to be conducted?—I quite realise that, but of course I quite realise also that the reason why we come here is practically because the allegations made against us are based upon the Conference Resolutions.

20,479. I wish you would get rid of the idea of allegations made against you, and that we are sitting here to decide disputes?—No, I know you are not.

20,480. One moment, or to hear discussions between you and the County Council. We have nothing to do with that, we are here to ask your opinion purely upon general principles, and then to apply those principles. We are not going to say whether in the past the contentions of the County Council or of the City have been, as to any particular detail, right or wrong?—I am very glad, as I would rather not go into that subject at all; but if you would just allow me to take Division 2, and take each class of property mentioned there in their order, I will endeavour to show under each class what we do.

20,481. Which letter under Division 2?—It commences at Division 2 (b).

20,482. If we print that Division 2 (b) there is no necessity for our going into it over the table, is there, by question and answer?—I wish only to explain, and I daresay I might be able to explain, why they differ for assessment purposes, and how difficult it would be to apply any other method of valuation to it, either a site value method or any other that can be mentioned; that is all.

20,483. Will you call my attention to the part of Division 2 (b) which you wish now to amplify?—Yes. I think I have dealt with them in subsequent divisions.

20,484. You must excuse me for saying that I am really endeavouring to meet your view; but when I ask you to amplify Division 2 (b) you say you have dealt with it in subsequent sections; if you will assume for the moment that Division 2 (b) is going to be printed as it stands, then will you call my attention to anything in Division 2 (b) which you want to amplify?—In Division 2 (b) there is the sentence commencing "In considering the value of City buildings for assessment purposes, the witness will show that the great majority of City buildings are devoted to banks, insurance companies, mercantile companies, and wholesale firms, and to professional and commercial men occupying offices,"—and you might add "and to licensed premises." That is the character of property within the City. Then I have shown as regards retail shopkeepers that there is a distinction between shopkeepers within the City and without the City. As regards hotels —

Rateable property in the City of London, character of.

20,485. Just wait a moment. What is the distinction between retail shopkeeping in the City and outside the City which you want to emphasize?—This: that presuming we have to assess a building of which the ground-floor in the City is devoted to shopkeeping purposes, the remainder of the building is devoted to offices and other commercial and professional purposes, the rent paid under the lease in a case like that would be no criterion whatever of annual value.

20,486. The rent paid under what lease?—Under the lease of the owner—the occupying owner, in some cases—of the whole of the building.

20,487. Of the retail ground floor?—Possibly in his case he might not occupy at all; but he might farm the whole of the building. Presuming that the occupier of the ground floor is the lessee, the rent under his lease will in no way represent the annual value of the building, or be any criterion of the annual value of the building.

20,488. Just for our guidance assume that there is a building in a good thoroughfare of the City, the ground floor of which is in the hands of a retail dealer, the basement being let for some other purpose, and that

Mr. E. V. Huxtable. there are three or four stories above let for various business purposes?—Yes.

21 July '98 20,489. Give us a description of how the valuation of that whole structure is arrived at, and then how it is divided between the different occupying persons?—It is not divided. That is exactly the point.

20,490. I want you to explain it to me?—Yes, and I will in a few words. As to the absolute distinction between flats and property let in the City to tenants, as you no doubt are aware, under the Tontine case, and *Allchurch v. Hendon*, and *Rouse v. the City of London Union*, the distinction lies simply in this: that you have to rate the owner if he is the ratepayer, or the occupier, whoever pays the rent under the lease; and you have not to divide the assessments as you would in the case of flats. In the case of flats each tenement is a separate and distinct occupation, and the tenant of that particular occupation is rateable therefor. In the case of offices he is not, for the reasons given in the Tontine case, and in *Rouse v. the City of London*, that the key of the front door is not in the hands of the tenant, who has to leave that building at 6 o'clock or 7 o'clock, as may be, in the evening. That is the reason why the courts have made a clear distinction between property let out in offices, and property let out in flats.

20,491. Assuming a structure such as I indicated a moment ago; I want to know, in the first place, whose name appears upon the valuation roll, from whom you have to collect the rates?—Either the owners or the lessees of the building.

20,492. And he is a sort of farmer of the rest of the building?—He is.

20,493. I can quite understand the difficulty that he may have in sub-dividing as between his different occupying lessees; but what is not present to my mind is, why the fact that that building is so divided makes a difference to the local authority in arriving at the gross sum at which the building is to be entered?—The difficulty must arise naturally in considering what must be allowed for empties in endeavouring to ascertain the annual rental value; what must be allowed for repairs; and what must be allowed for renewals and other expenses, from the gross sum received, and not the sum paid under the lease.

20,494. It is quite clear, I presume, that under all these things what you allow cannot exceed the maximum?—No. If you look to the note to the Third Schedule of the Act of 1869—and I have no doubt you know it—you will see that it was considered by the framers of that Act that such tenement property should be taken right out of the ordinary maximum classes and included in the classes 9, 10, and 11 in that schedule. That being the case, there being no maximum, and for other reasons I have given in my memorandum, city property has no relation, no comparison of value to property either held on lease or freehold, residential, or commercial, within any other district of the Metropolis.

20,495. Do you put it to us that there is no other property held on the same sort of basis, such, for example, as offices and large buildings in a place like Victoria Street, Westminster?—No, they are flats. I daresay in some of those cases it is possible that they may not be, but in nearly all cases they pay inhabited house duty you will find.

20,496. (Mr. Elliott.) Take Palace Chambers near here, a building which is all offices?—It may be so, I have no doubt. In the City, of course, it would not pay the occupier to pay the inhabited house duty in order to have a caretaker upon the premises.

20,497. (Chairman.) I think on that point we see your contention, but we pass no judgment upon it, of course, at the present time. Is there any other point, as you go on through Division 2 (b), that you wish to amplify?—Of course, I only amplify it for the purpose of my case; I come here simply for that.

20,498. For the purpose of what?—For the purpose of my case. I come here simply to show the Commission the practical difficulties which the City has to contend with. I know the object of your Commission, but of course I wish it to be regarded that I come here for that primarily, my Lord, with all respect.

20,499. You come here primarily to tell us the particular circumstances of the City and the difficulties which you encounter?—Yes, exactly.

20,500. And in doing that you have drawn up this memorandum, Division 2 (b) of which we are on at the present moment?—Yes.

Mr. E. V. Huxtable. 21 July '98 20,501. With the exception which we have already dealt with is there anything further that you want to amplify?—I would rather like to amplify this sentence in paragraph 4 of Division 2 (b)—“That in other cases (in certain classes of property peculiar to and common in the City, i.e., the buildings which are mainly devoted to the letting of floors for offices and general commercial purposes, but include halls, machinery, lifts, safe deposits, licensed premises, easements and other rateable hereditaments, and which are generally owned by public companies)” —

20,502. I can quite see a difficulty there; when you have to value a place like a safe deposit company how do you proceed at the present time?—As regards safe deposits, with two exceptions, I think, in the City, they are generally confined to properties of this description and the whole building would be taken, that is to say, the hypothetical tenant, we presume, would take the whole building, safe deposits, licensed premises, and what not. He being the occupier we assess the whole building upon the revenue, that is to say taking rentals received first, then deducting the outgoings, we find practically what is the annual value.

20,503. What is the test which you apply when you want to enter the value of a new building of this class in your assessment roll?—The test we apply is what we assume the annual tenant would give for the building, upon the basis of the annual rent received, and we take certain per-centages from those annual rents received to find the rateable value.

20,504. Have you the power of compelling a statement from the reputed owner of what he gets?—Yes, under section 57 of the Act of 1869.

20,505. You can get that?—We can get that, but we have immense difficulty in some cases.

20,506. What difficulties are there?—We have had immense difficulty. We get returns which are not absolutely correct. In properties of that description it is quite easy for a tenant to make a statement which is not quite absolutely correct, and which does affect the value.

20,507. On that can you suggest to me any further precautions which the legislature might take by putting further reasonable powers into your hands, to enable you to get more accurate returns?—I can only suggest that the legislature should endeavour to do so. We find that it is a very important and a very serious matter in the City, inasmuch as we have to incur great expense to ascertain what the actual sums received are. I have not given the subject very much consideration, but I think if we could compel the companies to supply us always with their balance sheets—and these are nearly all in the hands of the companies—or with an absolute statement, we should get a very much better approximate value.

20,508. You would approve of that?—I certainly should approve of that.

20,509. And your assessment committees would approve of it?—I think so. I can hardly mention the number of that class of buildings we have in the City. Some tenement buildings, I daresay, would represent perhaps 300, or 400, or 500 offices, and we have any quantity of them. Practically, the City is made up of them. All the big buildings in the City are so sublet, practically, except in the case of banks and insurance offices.

20,510. When you go to a new building for the purpose of valuing it, do you ever estimate the cost which it has taken to produce the building as a test of value?—It would, generally speaking, be a very poor criterion of what the hypothetical tenant would pay in the City.

20,511. I did not ask you whether it was a good one or not; I asked you whether you endeavoured to estimate it in that way?—In some cases. Owing to the extraordinary demand for particular properties within the very centre of the City they are nearly all in the hands of freeholders. Of course, you know it is a principle that so far as the poorer districts are concerned, properties are held on short tenancies, and, so far as the richer districts are concerned, they are all long tenancies, that is to say, for commercial purposes. It is a principle; so that the nearer you get to the City the longer the tenancy, and when you get to the very heart of the City you will find that practically the parishes within the very centre of the City are all freeholds, and generally in the hands of the occupier; so that one has to take a per-centage.

Mr. E. V. Huxtable. 21 July '98 Certain properties in the City of London, valuation of.

City of  
London,  
valuationMethod  
of valuation  
in  
respect of  
certain  
properties.

20,512. I know about a case of my own knowledge; I do not know exactly what the rateable value at the present time is, but I have been concerned within the last two or three years in buying a site in Bishopsgate Street and on that erecting a large building for the Bank of Scotland. We are the freeholders. Do you know the building?—I had it in assessment some few years ago.

20,513. It was a completely new building from foundation to roof. We bought the site from various holders, and united them and built the whole thing, and we are the absolute owners. We let out the upper part of the building to other tenancies. Could you describe to me how when that building was put up for the first time you and your officers proceeded to arrive at the annual value?—Of course, our officers would go over the building and they would endeavour to ascertain to what uses it would be put—that is to say, whether the Bank would use the whole of the building or only portions of it. Perhaps I ought to say that in such a case I think, first, they would take as a rough figure the value of the structure and the value of the site.

20,514. Then they would do exactly what I suggested to you—they would endeavour to ascertain what was the cost of producing the building, including site and structure?—Yes.

20,515. And then see how far that was a criterion of value?—So far; and then they would add to that a consideration of the profit a hypothetical tenant would make upon those sublets.

20,516. Then, what deductions would you proceed to make from that?—In those cases if it were sublet into, say, two or three floors, we should make the deductions from the estimated aggregate values for the necessary outgoings. I should say, perhaps, that we never have an absolute figure in the City, because it all depends upon the amount of the actual sublets.

20,517. Your maximum for a case of that kind would be 16½, would it not?—It would if not underlet, but may I say that we should consider that on a 4 per cent. and a 5 per cent. basis—that is, we consider the maximum of 16½ on the 4 per cent. and the 5 per cent. There is a great distinction between freehold property or property, perhaps, of any description in the City and property outside the City. There is only one class of tenant for the Bank of Scotland, and that is a man who borrows money at 3 per cent. and purchases on that basis. We have to consider that fact. In the suburbs a man would want at least 6 or 7 per cent. for the same class of building as an investment.

20,518. Now I have, perhaps, wandered away from Division 2 (b), but I want to exhaust in examination-in-chief your own points that you desire to put before us on Division 2 (b), before I ask you any questions of my own?—I think that in stating the fact of the property being invariably freehold or held on long tenancies, the prevalence of fancy values and underlets, and the fact that the rates of interest on investment differ from the rates outside, and that the rentals received in the case of underlets are inclusive rents—that I am stating facts which practically include the main distinctions between the City and other districts of the Metropolis.

20,519. Is there anything else on Division 2 (b) that you want to amplify, assuming as I said before, that Division 2 (b) will be printed as you put it in?—I do not know that I have much to add to Division 2 (b), except as to site and building values.

Under-  
valuation  
in the  
City is  
said not to  
exist.  
Method of  
valuation.

20,520. As you mentioned a few moments ago, one of the suggestions made to us in regard to the alleged under-valuation of the City is because you do not follow the practice it is said of adding 10 per cent. to the rack rent of leasehold premises to arrive at the gross value as is stated to be done in other unions?—As is stated to be done in other unions, yes. Of course that is a point that I have dealt with as it is stated to be done in other unions under Division 1 of my proof. I absolutely deny that it is done as alleged, and that if it is done at all it is contrary to the Act; in the City we have little or any property to which such a rule would apply.

20,521. I do not ask you that—that is for us. What I ask you now is to tell us the practice in the City, and why and how you justify it?—In the City the repairs perhaps in some cases would not be more than 2½ per cent. on the rack rent.

20,522. Surely that must be a very extreme case?—No, why? The class of property in the City is of a very

distinct character from property without the City. If you take Winchester House, for instance—and that is only a type of hundreds of others—I mean, of course there are thousands of little items of renewals in Winchester House, and thousands of other considerations—I say thousands because I feel I ought to say thousands—a great number of other considerations which the landlord would have to consider under section 4 of the Act of 1869 as “other expenses,” and which would not apply at all to property without the City. But as regards actual repairs such buildings within the City would require little repair, because they are either composed of marble or stone, or some solid material.

20,523. I am asking you for information, and I am not attempting to criticise. I want to know whether experience has shown that as low a rate as 2½ per cent. is in any case a really fair one to take?—It all depends, of course, on the age of the building—it must, necessarily. In the City, in some parishes, the buildings are very old and are a different class of building. They are not fitted for modern requirements, and the result is naturally that 2½ per cent. or any other percentage will not apply. But for the new buildings of the character of which I have just spoken, such as Winchester House, and the banks and insurance offices, within the centre of the City, 2½ per cent. I daresay would be about the figure.

20,524. That, you see, is not quite an answer to the question I asked. I asked whether you know whether any case had been carefully and critically examined with a view of proving to demonstration that 2½ per cent. was over three or four years a fair figure to take?—I will give you an absolute case that I had at the last quinquennial.

20,525. Very well, the figure struck me as a very low one?—I will give you the actual case. I have here some schedules that I wanted to put in, that apply to properties let out in offices in the City. One is a comparative schedule of the total deductions for all outgoings allowed by appellant's and respondent's witnesses in their estimates showing the per-centages on gross rentals received from under-lettings. These are calculations we have to go into for assessment, and I will put them in a moment. Another is a schedule of repairs, estimates, and per-centages of allocation, and a schedule of the average rates and tithes.

20,526. Would you just let me see one of those papers? I will take any one that you think answers my question?—Here is one which has reference to the repairs (*handing a schedule to his Lordship*).

20,527. I will just keep that and examine it with reference to that question by-and-by. Now upon Division 3 (a). I understand that the main point there really is a general statement, and it deals with the adoption of the practice by all the metropolitan authorities of allowing the maximum instead of the actual per-centage for repairs?—Yes.

20,528. I do not know that I need take you through (a) in detail, because (b) though it is another sub-head is really an amplification of (a) is it not?—Yes. I quite agree as regards (a). I only wanted to show that it was the universal practice through the metropolis; that was all.

20,529. That I think you may assume that we know—that is, that we are told that, and it is one of the points upon which I shall ask you some questions in a moment, whether it is a proper course to take; but I do not go into that now, because I want you to give us your own statement first under Division 3 (b) to which I have now come. You say you will tender evidence upon the general practice of the allowance of the maximum deduction for statutable historically considered?—Yes.

20,530. Now will you give us your evidence?—Of course, as you are aware—and as most people are aware, before the Act of 1869, the metropolis, so far as the appeals are concerned, was divided up into divisions, that is to say, there were four quarter sessions and the practice differed at each court.

20,531. Need we go into the history?—No.

20,532. What is the real point of this?—The fact is that before 1869, of course, there was extraordinary divergence—some parishes allowed from 5 to 20 and 80 per cent.

20,533. We need not go behind the Act of 1869, I think, because that is the ruling Act, and the Act of

Mr. E. V.  
Hurttable.

21 July '98

Deductions: The maximum deductions generally allowed in the Metropolis. Difficulty of adopting any other course.

*Mr. E. V. Huxtable.* 1869 lays down that there shall be certain maximum deductions?—Yes.

21 July '98

20,534. Now do you think that it was the intention of Parliament that these maximum deductions should be taken, as you have just told us they practically are, as the average rate of deduction?—I think the framers of the Act were acquainted with the fact that those maximum deductions had been found in practice—that a certain figure had been used all through the metropolis. I know as a fact—I mean I know it was stated by the late Mr. Gibb, M.P.,—the clerk to the Assessment Committee of the Vestry of St. Pancras and a client of our firm—a man who was very well acquainted with it—that assessment committees within the metropolis before the Act of 1869 used to discuss these questions among themselves, and they used to come to certain decisions as to what they should allow. That must have been in the minds of the framers of the Act of 1869. There was always a rigid deduction, although those deductions did not quite agree, perhaps, in the different districts.

20,535. You may not agree with me in this, but my reading of the Act would certainly be that Parliament meant these to be deductions beyond which the local authorities should not go, but that within those maxima a reasonable discretion should be exercised?—Yes.

20,536. That is the way in which I should be inclined to put it?—I quite agree.

20,537. Very well; then I ask you whether you think the present practice in the metropolis carries out that intention?—I think that the main object of the Act of 1869, if I may say so, was under section 4, to find the rateable value, and that the question of the maximum deduction can be considered in ascertaining the rateable value.

20,538. Do you think that it is, as a matter of practical working, right to take a maximum scale and apply it all over every class of property, or do you think it is a practical thing to do to consider properties upon their merits?—I think it is impossible to tie any rating authority to a rigid rule.

20,539. Why?—I have got a number of reasons here somewhere, but I am out of my order.

20,540. They are not printed, I think, are they?—No; I did not wish to go into it.

20,541. I think if you would kindly give us them now we should be obliged?—I will give you a number of reasons in a moment—the practical reasons for the adoption of that—reasons general to the metropolis and reasons special to the city.

20,541A. It is exactly those points that I want to get from you, and I will take them, please, in your own language and in your own way, first one and then the other?—As regards the first, the question is the question of the time which the assessment committees have to prepare their list. It is quite obvious that if they have, as they have now, but a very short time to send their lists in—they have a matter of two or three months to go through these lists—that it would be impossible for them to go into every individual case. That is a general reason applicable to the whole metropolis. Then I know that the committees have thought that if it were allowed uniformly through the metropolis, no great harm would be done. Then the next consideration has been "what are repairs and what are renewals?" There is a very great difficulty in ascertaining what repairs are and what renewals are very often, especially in the case of public-houses, and in the case of underlets. Then another consideration is the differing rates of insurance, and of course there are distinctions, too, between commercial and residential property. Again in the cases of property of similar class in varying conditions of repair, the Committee argue,—if we take into account the true rateable value, which is the main consideration,—it would be less if the property were in bad repair. Supposing we had a property, and the occupier allowed it to get into a bad state of repair; the first thing he would do would be to go to the assessment committee, and he would say, "Now here is my house, which is in a very bad condition; I shall want at least 20 per cent. knocked off on that account"—thus reducing the rateable value. Then he would say, "I require also 16½ deductions, because of the condition of the house."

20,542. I am not going to argue it with you, but do you not think the answer to that contention is simplicity itself; that all this time while your house has been going into bad repair you have been getting the

maximum deduction, which you ought not to have had if you are not spending it? You have been putting into your pocket all this time a much higher rent than you were being rated upon, and therefore now that your house is in bad repair on account of your own carelessness and bad management, you are not to come to us and ask us to allow you to profit by it?—How would it apply in the case of, we will say, weekly property and property of that description?

20,543. I am far from saying that there are not difficulties, but I am rather trying to elicit from you the reasons. I understand there is a great deal to be said on your side, but I am anxious to elicit from you the reasons which convince anyone of your experience that a certain dead level of deductions is fairer than a consideration of each case on its merits?—I think, taking everything into consideration, you would find after all that you would be bound in practice to come back to the fact that you would have to allow a rigid figure.

20,544. On account of the practical difficulty of carrying out any other system?—That is one of the reasons.

20,545. Will you go on and exhaust your reasons?—Taking the case of leases, it is assumed that the gross value can always be accurately ascertained by the rating authority if sufficient inquiry is made before the rateable value is determined; and secondly, that the outgoing and statutable deductions in regard to rateable value can also be absolutely determined in every property. From the mere fact that the county council have in their suggestions allowed a figure of 10 per cent. after the conference had thoroughly discussed that question, it is clear that the main feeling in the metropolis is that the actual figure could not be ascertained practically in any case, but that you must apply a rigid figure. I am not maintaining that it is right, of course.

20,546. Is there anything else; are those all the general reasons, or are there any others, general to the metropolis, that you want to put before us?—I think perhaps, some parishes might take advantage of the Equalisation of Rates Act if you once gave them discretion. They would say, we have exercised our discretion, and we think it was a case in which we should be allowed the 16½rds. Supposing one parish did actually apply the true figure, it would be very difficult for that parish, on appealing, to show that the figure actually allowed by this other parish was not the true figure; indeed, it would be practically impossible to show it.

20,547. I will not argue the point with you; is there any other reason?—Of course great difficulties would arise without uniformity of conditions. It is practically impossible to have uniformity of conditions throughout the metropolis. You have to take some sort of figure in every district in the metropolis. I presume the rating authorities do make some allowances for the peculiar conditions of property within each district. Although they do deduct the 16½rds, they do in finding the rateable value take into account the conditions of the particular neighbourhood, so that, in fact, although they apply the rigid 16½rds, they have considered it in first ascertaining the annual value.

20,548. Is there any other reason—I am anxious that you should go on and give it me in your own language?—Of course in some cases the gross value is purely a secondary figure, that is to say, you have to find the rateable value first. In other cases it is easy enough to find the gross value first. I can quite imagine difficulties arising in adding to the rateable value the actual sum for repairs, renewals, and other expenses to find the gross value.

20,549. Have you any other general reasons?—No, I do not know of any other.

20,550. Are there any reasons special to the City?—Yes. Of course in the City the majority of the properties come under Classes 9, 10, and 11, but in ordinary cases of repairing leases in the City, on a person, for instance, taking a building on lease, we have to consider that there would be entirely distinct considerations from taking a building on lease without the City and in the suburbs. Those in the suburbs, an annual tenant would, we will say, pay 100l. a year, on an annual tenancy, and he would get those premises on lease for 90l. a year, whereas in the City the exact contrary would be the figure he would pay 100l. a year on an annual tenancy and 110l. a year on a lease, simply because of the peculiar demand in the City for property on lease of long tenure and because of the slow and sure increase of value in the City.

*Mr. E. V. Huxtable.*

21 July '98

Mr. E. V. Huxtable. 20,551. Is there any other?—I cannot think of any others beyond those I have given; there may be others.

21 July '98  
Site value and buildings, valuation of in the City, in the case of freehold and leasehold property.  
20,552. I want to ask you your opinion upon this; it has been suggested to us, as a reason against one dead-level of maximum deductions in every case, that thereby the richer districts of the metropolis, not the City alone, but the richer districts, such as Bond Street, and so on, get an undue advantage over the poorer districts on this ground, that where the site value bulks very largely in the gross value, a maximum deduction of 16 per cent. from the whole value gives a totally unfair and wholly unfair rateable value, because the site value bulking largely as compared with the structural value, and costing nothing for repairs, the rateable value of the whole tenement is unduly run down?—Yes, I am aware of that allegation.

20,553. What have you to say to that?—In the City we do recognise the fact that the ground rent and the rack-rent represent not the same proportion as they do outside the City. In some cases within the City we know that the ground rent is equal to, and in some cases even exceeds the rack-rent; and we have to take that fact into consideration, and we do take that fact into consideration. In the case of freehold properties we take a very high per-centage—we take 4 per cent. and 5 per cent.

20,554. Four cent. and 5 per cent. on what?—4 per cent. on land, and 5 per cent. on the building.

20,555. From what—you must develop it, as I do not quite understand it?—Pardon me; in the case of buildings, we will say occupied by the owner, where we have no other means of ascertaining the annual value, we take as a basis 4 per cent. and 5 per cent. to ascertain the annual value.

20,556. Four per cent. and 5 per cent. on what?—4 per cent. on the land and 5 per cent. on the building.

20,557. How do you arrive, then, at the value of the land as distinct from the value of the buildings; what is the process?—We have a system in the City. But, of course, because of the peculiar speculative character of property in the City, there is no general criterion of the value of land there. Thus, in Cornhill land might sell at 40l. a foot, and possibly within two years we might hear of the sale of the site of the next building, or a building in the near neighbourhood, at 60l. a foot. Those buildings might practically be of the same description, and the site might be, as a valuer would put it, of the same value practically; and there can be no reason for the difference, except the peculiar demand of the tenant and the fancy price given.

20,558. Can you show me the entry in one of your assessment rolls in which one of these buildings with an extremely high site value has been dealt with in the manner you describe. I should like it illustrated by means of an example?—I have not the valuation lists here. I do not know that it is necessary, but I can give you the case of the Sun Fire Insurance or the Alliance Insurance or of those places which are in Cornhill, or in Threadneedle Street.

20,559. You have just explained how you dealt with the circumstances of one particular class of cases, but I do not think your answer covers the whole ground; can you give me any further information?—Yes. We find sometimes that in the case of leaseholds the rent is not a criterion, and there we do apply the principle of a per-centage of so much upon the land and so much upon the building. It all depends, of course, upon the length of lease and possibly the rapidly increasing value of property within that district.

20,560. I still think you have not quite grasped my difficulty. I do not think we need for this purpose deal with the question of whether the rent reserved in the lease is a fair criterion of value or not. I will take the case of a leasehold building, in which we will assume that the rent is a fair criterion, and that the rent as a fair criterion is properly entered to give us the gross value; but it is a case in which the site value is double the structural value. How in such a case, if it occurred in the City, would you deal with the claim of the person who has to pay the rates for a deduction of 16 per cent.?—We should deal with it in this way: Supposing it was a leasehold we could look at the lease. With leaseholds where the site value so far exceeds the structural value, we always find that the rent included in the lease is what is termed a future rent, that is to say, they are all long leaseholds in such cases, for reasons which I can give if you wish; and the

landlord, when he is dealing with the tenant, says, Now I shall take into consideration the fact that this site will be worth 50 per cent. more in 20 years time, and I therefore, in giving you this long lease, shall include that consideration in the rent under the lease.

20,561. Still I am afraid I have failed absolutely to make myself clear?—I am sorry if I have not made myself clear.

20,562. You have not touched my point yet. You have not told me how, assuming all the facts that you have just mentioned, you would deal with that gentleman's interest in a property in getting at its rateable value?—It does not seem to me to matter a bit what the bargain between the landlord and tenant is for this particular purpose.

20,563. You are going to take off the occupying tenants' rent against his rateable value, 16 per cent.?—Yes, we deduct that from the gross value.

20,564. Now I want to know why and how you would justify that in the case of a property in which the site value bears, as you say, a very large proportion to the whole?—We do take off the 16 per cent., but we make the gross value larger than we should if it were an ordinary case, where the rack-rent is in a reasonable proportion, a fifth, we will say, of the total value.

20,565. (Mr. Arthur O'Connor.) That means that you do not stick to the figures?—Yes, that is exactly what we do mean; we do not stick to the figures, and we cannot stick to the figures; I mean to say that where the rent under the lease is no criterion, we have to assume other considerations.

20,566. (Chairman.) Then although you do not make an individual consideration of the case in the way in which the Act contemplates, you put forward to us that you do make an individual consideration of each case?—Yes.

20,567. Does not that break down your argument that the labour of making an individual consideration in every case is too great to be gone into?—I think not.

20,568. Why not?—I think not. In the City we can pretty well accurately ascertain what the true annual value is from the figures which we have at our command; we can practically ascertain the true annual value in our own way, whereas it would be practically impossible to continually revise the actual but shifting figures for renewals and other expenses; this has been demonstrated in actual practice. Of course I do not know whether it is incident to this particular subject, but there is the question of difficulties again. In perhaps two thirds of the buildings in the City which are held upon lease, the landlord also pays the rates and taxes, and of course that immediately takes away from the consideration of rent as being a criterion.

20,569. That brings in a different set of considerations, but it does not seem to touch the particular point on which I was at the moment?—No. I only wish to speak to the difficulties in the City.

20,570. There have been other suggestions made, one of which struck me very much, and it touches the point that is mentioned in the earlier part of your memorandum, namely, that you have 112 parishes within the area of the City?—Yes.

20,571. And for each of those, or for nearly all of them, you have, I suppose, assessment committees?—No; overseers.

20,572. Not now?—They never had assessment committees, always overseers.

20,573. But the overseers are different functionaries?—They prepare the valuation list and send it to the assessment committee of the City.

20,574. Would it not be desirable to have fewer different authorities?—Of course, as regards the City, I recognise the manifold difficulties that the overseers have to put up with, I think we should find if you made the union, say, the unit —

20,575. I did not suggest the union?—I can only think that is the assumption.

20,576. I did not suggest the union, but I want your opinion upon the point I have put to you?—I should hardly like to say that it would be an improvement.

20,577. Not when you find that the parish is so small that one structure sometimes has to be valued in three different parishes?—I realise that difficulty, and I have

Mr. E. V. Huxtable.

21 July '98

One valuation authority for the City would be undesirable.

Mr. E. V.  
Huxtable.  
21 July '98

put it, but now that we have reduced that question to, as I say, a system, we have, with all our experience at our hand, been able to pretty well discover what the allocation should be.

20,578. What would you urge against the proposal to have one valuation authority for the City—I am not at this moment indicating any particular authority, but what are the considerations that you would urge if I were to suggest to you that it would be a practical useful measure of reform to have one valuation authority to value all the properties within the area of the City?—I should say that, because of the peculiar character of the properties in the City, and of the varying peculiarities in the several districts in the City, it would be practically impossible, except at immense expense and labour, to improve the present method. I should certainly say so.

20,579. Do you know what the cost of the present system is to the City?—I could not say, simply on this ground, that I should have to take a long average. You see for the 1890 valuation we had to incur many thousands of pounds costs on the county council totals appeals and on the big monopoly appeals. We bring them into assessment every quinquennial and we test them.

20,580. Has that suggestion, so far as you know, ever been made the subject of discussion, that one authority might be responsible for the valuation of all the City properties?—It has not been made within my experience. If I understand your question, it has not been brought before my notice.

20,581. I think I am right, that the remaining parts of division 3 (c) and (d) deal with questions relating to these metropolitan conferences?—Yes.

20,582. If you want to amplify that part, and make any statement with regard to that, I think you must do that in writing, please?—Yes.

20,583. I think the same applies to division 4 (a) and (b)?—Yes, I was only going to refer to certain *obiter dicta* of Sir Peter Edlin on the totals appeals. I was only going to suggest that of course I came here to show the conditions in the City, and that Sir Peter Edlin did take into consideration in the court of quarter sessions totals fact that leaseholds devoted to commercial purposes are to be taken on a different basis to leaseholds devoted to residential uses.

20,584. Anything that Sir Peter Edlin said will stand in his own language, which, if reported, you can refer to?—It is not reported; it is *obiter dicta* from the county council totals cases, and is important because it dealt definitely with a very large question—it is printed, and has been circulated.

20,585. I do not propose to take Sir Peter Edlin's *dicta*, whether *obiter* or otherwise, in evidence?—Thank you; you realise my difficulty I think.

20,586. Yes, I realise that. Is there anything under division 4 (c) that you want to press upon us?—No; that deals with the difficulties within the City, and the peculiar character of City property, and the impossibility of applying any general rule.

20,587. There are so many references and cross-references in this memorandum that I have some difficulty in taking them, perhaps, in the precise order that you would like me to take them; but I am attracted by a reference under division 5 of your paper, saying, "Witness will, if desired, make certain suggestions as to the enlargement of the powers of the surveyors." I should be glad to take that from you now if that would be convenient?—As regards the surveyors, I think if the powers that we give them by courtesy in the City at the present time could be made statutory it would be advisable and beneficial. There are eight districts in the City, and the surveyors of taxes of those districts are always invited to attend the meetings of the assessment committee and the meetings of the overseers. We find that they assist us very much, especially in certain classes of property, in ascertaining the annual values. We think if that could be made statutory it would be beneficial.

20,588. Perhaps you would outline to me in your own way precisely the powers which you would give to the surveyors?—I should give them the right to attend the meetings of the overseers on the preparation of the valuation lists. That would be the first thing.

20,589. Only to attend?—To attend and to assist the overseers in arriving at the annual value.

20,590. I want to know precisely what you mean by "assist"—do you mean to give advice which may or may not be rejected, or to take any part in the proceedings, and to have a right of appeal? I want you to give me in your own way the precise position that you would assign to the surveyor?—Of course I have my own personal opinion. They have the power of appeal, as you are aware, now, but it is not exercised very often. They should have enlarged powers, as I have indicated. I cannot say any more than that they should simply have the power of discussing with the overseers, and that they should be called upon as a duty to attend those meetings of the overseers.

20,591. I go now to division 7, and I wish to know whether there is anything under that division that you wish to impress upon us. I think we have covered most of the ground, but I am not quite sure?—That is a statement that I came here simply to rebut. That is all I have to say upon it, unless you wish to ask me any questions.

20,592. We have had it, I think, practically incidentally in the course of our other questions, have we not?—Possibly, yes.

20,593. Now is your time, if you think I have not given you an opportunity?—This refers to special properties. If you wish me to describe the peculiarities of those particular properties within the City, I should be happy to do so.

20,594. I want you to do it in your own words?—If you wish me to describe them, I will.

20,595. I do not quite know what you mean?—Taking them in their order in the case of, we will say, properties including machinery, of course there are difficulties in ascertaining the valuation of properties, including machinery. The number of decisions on the point you are well aware of. In the City there is a distinct peculiarity, because we have so many newspaper-producing buildings, and they have to have so much of their machinery lying idle. The "Daily Telegraph," I believe, has 100,000L worth of machinery lying idle, waiting for breakdowns. Of course you cannot take that upon the same principle as ordinary cases of coarse machinery. You cannot assess the machinery in those buildings in the City, the machinery being valuable and the buildings practically of no value, upon the same basis as you would machinery outside, where the machinery is of quite secondary value to the building. No per-centage principle of assessment could be applied. Then, in the case of licensed premises, it has been laid down, I think, pretty distinctly, that in an ordinary case of a public-house, there is practically no goodwill. As you are aware, an ordinary publican advertises the fact that there is a change of proprietorship immediately he comes into the property, but that is not so in the City, because the licensed premises within the City, including restaurants, eating houses, and all licensed premises, in fact, supply food with the intoxicating liquors, and then there comes in a very important question of goodwill. So we have to take licensed premises upon principles which would not apply without the City. In the case of public buildings occupied by public bodies, from which no profit accrues—and you are aware the City has a number of livery halls and exchanges, and other properties of that character—we have to take into account very special and peculiar considerations.

20,596. I can easily understand there are special difficulties in valuing that class of property?—And then in such large undertakings as come within classes 10 and 11 of the Act of 1869, we have very peculiar considerations on the assessment of telephone wires, for instance, and the mileage principle as applied to telephone wires or to railways.

20,597. There is no greater difficulty in valuing a telephone wire in the City than in the rest of London?—Yes.

20,598. Is there?—Yes.

20,599. Why?—Because of the number of messages travelling over these wires in the City, and the fact that the City contains the centre of the system to which all lines converge.

20,600. But that is a matter of the number of messages wherever the wire is situated; why is it more difficult because the wire is in the City to value it?—Because without the City one wire will do the work,

Mr. E. V.  
Huxtable.  
21 July '98

Machinery valuation of, in the City : Machinery lying idle.

Licensed premises, valuation of, in the City.

Telephone wires, valuation of in the City.

Surveyors of taxes should have statutory powers to attend meetings of overseers and of assessment committees.

Mr. E. V.  
Hustable.

21 July '98

but within the City you have to have 40 wires, and the difficulty is to distribute the earning power of the wires.

20,601. Supposing there are other districts, as I know there are, where you have 40 wires, or a very large number of wires, why is it more difficult to value a telephone wire because it happens to be within the precincts of the City rather than in Liverpool or Sheffield?—How are you going to apply the mileage principle or the profit principle.

20,602. I am not saying we are going to apply a mileage principle; I ask you, is it more difficult to value a telephone wire in the City than in Liverpool?—Yes, it is more difficult. We had the case of the National Telephone Company before the sessions in 1890, and we found, and the court found it practically impossible to apply any mileage principle to the assessment.

20,603. That is on the mileage principle, but it is more difficult to value on the mileage principle in the City than in Liverpool?—I am not acquainted with Liverpool.

20,604. Or Bond Street?—I should say certainly, yes.

20,605. Why?—Because of the difficulty of ascertaining the mileage and the profit earned upon these wires.

20,606. But do you put it to me that because a wire is situated in the City, that the mere fact of that wire being in the City makes your arithmetical calculations more difficult to go through?—How are you going to find, in cases like that, the relative value of the wires? There is the relative value of the wires without the City on the whole system to the wires within the City. You have to ascertain the value of the wires within the City, and the feeding value of wires without the City despite the parochial principle. Then when you have such a number of wires within the City, and you have to consider what the hypothetical tenant would have to pay to maintain those wires, and to repair and renew them, and infinite considerations and difficulties arise, such as the question of private wires and their varieties, which we have to take into account on assessment.

20,607. I am not going to take up time; if you put it to me that in your opinion, because a wire is in the City it is found more difficult to value, I can only take that as your opinion?—Yes, it is my distinct opinion, and it is the distinct opinion of the Court of Quarter Sessions that the parochial principle is hardly applicable to such a case.

20,608. One other matter which I have to put to you, which I see clearly from the next part of your memorandum you have seen, is that which was suggested to us on behalf of the County Council—that one cause of the City escaping a burden which it ought to bear, was that certain rates amounting to 13s. 10<sup>1</sup>/<sub>2</sub>d. per 100l. were not levied in the City; I think that is what you deal with under Division 8 of your paper?—Yes.

20,609. Would you kindly state to us, as I think you are prepared to do, the view of the City upon that particular point?—I have no view beside what I have stated in this memorandum; that is the actual fact.

20,610. But I do not quite gather from what is here—excuse me for saying so—what your contention is; whether you admit that you escape the rate, and say that it is justifiable and proper that you ought to escape it, or whether it is your contention that you do not escape the rate?—It is not for me say whether it is justifiable or proper; the only point is what is the rate in the £ now. The rate in the £ in 1892 was a certain figure, I believe 12 decimal something.

20,611. The mere amount of the rate—whether it is such and such a decimal figure—does not seem to me to matter. You say in your paper that “such exemptions are in connexion with the following matters,” and then you mention lunatics, industrial schools, prison pensions, and go on with a dozen other things afterwards, and then you say “that these costs, charges, and expenses are provided for in the City, either out of the City's cash, or by rate levied by the City union authorities, or the corporation, either by means of a county rate or by the consolidated rate”?—Yes.

20,612. If I understand that rightly, it means that whatever the rate per £ of these exemptions, it is a charge which you ought not to be subject to, because you pay it for yourselves; is that the point?—My point is, that it was well considered on the passing of

the Act of 1888, and we were exempted under that Act. We do, as you will observe, pay out of the City's cash, or by rate, for the maintenance of those particular objects.

20,613. I gather that there is some contention in the matter which I do not fully understand, and I wish you to make it as plain to me as you possibly can?—We have no contention. We simply state that as a fact, and we are perfectly willing to discuss it with the County Council.

20,614. I take the answer: I do not want to interfere in any contest between you and the County Council upon the subject?—No, I am sure not.

20,615. The statement made to us was that a rate was levied in all parts of London except the City, and that the City escaping, that consequently throws on the rest of the county a proportionately larger sum. Now it may be right or it may be wrong that you should escape the charge—I express no opinion on that—but that statement having been made, I wanted to give you an opportunity of stating to us the reason why the City thought the existing position fair?—The City have been into this question once on a Commission of Inquiry, and they are not prepared to go into this question exhaustively now. If, of course, it was in your view not fair, we can only state the absolute facts as they appear in this proof, but we are not here to express an opinion upon it.

20,616. (Sir John Hibbert.) You have stated very fully your opinion that the City, *per se*, cannot be valued quite in the same way as other parts of the metropolis?—Yes. I have limited my evidence to distinct comparisons.

20,617. In coming to that conclusion are you aware that even beyond the metropolis, outside the metropolis, we will say in Manchester or Liverpool, the same difficulties would prevail in those towns as to valuation which you have stated to prevail with respect to the City?—I have no doubt that, proportionately and relatively, difficulties would arise in big towns and cities as in the City of London.

20,618. Take the case of Manchester; there is a very large day population who do not live in that place, just like there is with respect to the City?—Yes.

20,619. You would admit that the same difficulties might occur there?—They might occur there.

20,620. Do you, from the view you take, consider that it is necessary or desirable to have a special law to meet the difficulties of the City?—I think that the law might, perhaps, be amended.

20,621. Do you mean amended so as to meet the particular case of the City of London?—I think that the Third Schedule to the Act of 1869 might be amended so as to include special properties which might not have been in the minds of the framers of that Act.

20,622. You suggest rather that the number of cases of special properties that are already in the schedule might be increased in an amended schedule?—Although I should be loth to say that, seeing that it is necessary to maintain simplicity as far as possible, yet at the same time it does appeal to me so strongly in practice that I think the Third Schedule should be amended.

20,623. Are not some of your difficulties rather sentimental than otherwise? Take the case you have mentioned of buildings where newspapers are printed; does not that apply to buildings outside the City also?—Relatively, yes, of course.

20,624. Does it not apply to every large town in the country?—Yes, it is possible.

20,625. How do the Inland Revenue obtain their assessment for gross value? Have they the same difficulty that you say there is with respect to obtaining the rateable value?—Of course they do meet with difficulties, and in the City I am sure they give special attention to ascertaining the true gross value.

20,626. Is there any great difference between the gross value for property tax purposes and your gross? Is it the same list that is taken?—I think under the Act it is so. I am only speaking of the practical difficulties of the assessment committee—I come here to speak of them—in ascertaining the annual value of peculiar properties which are not held as in the ordinary cases outside the City boundaries, that is all.

20,627. Do you think they ought to be treated rather under the general law?—I think some of them ought

from the  
payment  
of certain  
rates.

**Mr. E. V. Huxtable.** to be treated generally. I think consideration might be given to the peculiarly regular distribution of the various classes of property defined in the Third Schedule to the Act of 1869 throughout the metropolis.

21 July '98

20,628. I presume you would not object to the same principle being adopted if there was any fresh principle admitted that should rule generally all over the metropolis, and should not be provided merely for the City?—Of course if I answered and said yes, I quite realise what it would mean. I can only say that I think the Third Schedule of the Act of 1869 might be amended.

20,629. Of course if that was amended it would apply to the whole of the metropolis?—It would apply to the whole of the metropolis; and it should apply to the peculiar conditions of the City.

20,630. You have 112 parishes in the City—I suppose each of those parishes appoints an overseer?—Yes, two overseers.

20,631. Have you, then, 224 overseers who take the first part in the preparation of the assessment list?—Yes.

20,632. How many assessment committees have you?—One assessment committee.

20,633. (*Mr. Elliott.*) You have suggested that the surveyors of taxes should have statutory powers to attend the meetings of the overseers and of the assessment committees; is that the only additional power which you would give to surveyors of taxes?—I think that would be sufficient to carry out the object of the Act.

20,634. Do you think that the absence of that power has in the past in any way impaired the ability of the surveyors of taxes to protect the revenue?—No, I should not like to go so far as that, because my experience is more particularly limited to unions in which they have given by courtesy as full power as they can to the surveyor of taxes.

20,635. Then is it your opinion that the surveyors of taxes in the City of London have been able to protect the revenue by securing a satisfactory gross valuation?—Most distinctly, yes. They are particularly active within the City.

20,636. In division 5 (b) of your memorandum you undertake to give evidence within your own knowledge as to the statement that the surveyors of taxes have been unable to protect the revenue adequately?—Yes.

20,637. And you state that you will give us the result of inquiries that you have made?—Yes.

20,638. Will you tell us what that evidence is, and what those inquiries are?—Of course, I can find no basis for the statement. I have made inquiries of surveyors of taxes and at the union offices, and I can find no basis for it.

20,639. The inquiries that you refer to in this memorandum, then, are inquiries which you addressed to surveyors of taxes?—Yes.

20,640. Have you made specific inquiries of all the eight surveyors of taxes in the City?—I have not. I have made special inquiry at the City of London Union, and I requested them to make inquiry, and in some cases they have done so; I think that has been the result.

20,641. Have you inquired of any of the surveyors of taxes on that point?—Not personally; not of any.

20,642. Then is the evidence that you refer to there simply the fact that you have made inquiry at the City of London Union?—Yes.

20,643. And that the officials of the City of London Union have told you that there is no truth in the allegation?—They told me that they specially made inquiry of surveyors. When I went up to make this inquiry it happened that there was a surveyor of taxes there—I have forgotten his name—and the inquiry was made of him while I was present. Then I specially requested the assistant clerk to the assessment committee to make inquiry of the surveyors of taxes.

20,644. I understand, then, that you have ascertained in this indirect fashion that the surveyors of taxes are of opinion that they have been able adequately to protect the revenue?—The only thing is, I think I should have heard of it if they had made any complaint

originally. You see I am continually at the City of London Union on assessment committee business.

**Mr. E. V. Huxtable.**

21 July '98

20,645. Surveyors of taxes have considerable powers of appeal if they consider assessments are insufficient, have they not?—Yes, certainly.

20,646. You refer us to certain appeals that surveyors have made?—Yes; a long while ago upon questions of principle they did appeal, I believe, in two or three cases.

20,647. Is it within your knowledge that surveyors of taxes have, during the last few years, considered it necessary to appeal from the decision of the assessment committee?—Not within the last few years.

20,648. (*Mr. Smith.*) Would you tell me if you know what are the steps taken by the overseers in these 112 parishes to value property; do they employ a professional valuer?—Not in all cases; in some cases, yes.

20,649. Then is it amateur valuation by the overseers in the City of London?—Certainly in some cases; of course they have special qualifications.

20,650. What sort of qualifications?—They are men who are generally acquainted with the peculiar value of the properties in their particular districts.

20,651. And they are assisted by the surveyor?—And they are assisted by the surveyor of taxes.

20,652. You have, as you have told Sir John Hibbert, 224 overseers to the square mile?—That is a fact.

20,653. What should you say to one qualified valuer valuing the whole of the City?—I should say that we should get into no end of confusion and difficulty. I can hardly realise how one valuer, or even, I should like to say, six valuers, could value the City and actually ascertain the true value.

20,654. What is the total rateable value of the City—about 4½ millions is it not?—Yes.

20,655. That is about the rateable value of Glasgow, is it not?—Yes.

20,656. And of course the area of the City is very much smaller than that of Glasgow?—Yes it is.

20,657. Would you be surprised to hear that one valuer values Glasgow?—I am aware of that.

20,658. But you think it would be impossible in the City?—I think it would be impossible in the City for one valuer to do the work properly.

20,659. Although the area is much smaller and the total rateable value about the same?—Yes, I think so, because of the never-ending variation of the descriptions of property within the City and the peculiar incidents of value.

20,660. You think that 224 overseers would do it better?—I think so, and the cost of course would be very much less.

20,661. But when we are talking of the City of London assessment, cost hardly enters into the question, does it, if you get results?—If you get results I agree.

20,662. And that applies to valuation generally, does it not—it is always worth doing if you gain an important increase in assessment?—Yes, granted that.

20,663. Then, we may dismiss cost under the circumstances, I think. How many valuers should you say, from your experience, would be required to value the City of London?—I should like to answer that question in this fashion; I have had a great experience of valuers, and I find, on questions of appeal, that if we instruct, say, three valuers to give independent valuations those valuations all differ.

20,664. That is natural, and that is familiar to all of us?—They do differ, and it is familiar, as you say.

20,665. We all know that, but that is not my question you see. You admit, I suppose, that some number of valuers could value even the City of London?—Certainly.

20,666. What number?—I have not given it much consideration, but, considering the amount of labour the assessment committee and the overseers have to devote to it, perhaps a dozen.

20,667. You think a dozen?—I think a dozen, perhaps, could do it properly.

20,668. Can you give me any reason why it should take a dozen in London for the same valuation over a less area, and only one in Glasgow?—I can only speak, of course, from my experience of the difficulties we

City of London, valuation of could not be made by one surveyor as in Glasgow.

Surveyors of taxes should have statutory powers to attend the meetings of overseers and of assessment committees. Surveyors of taxes in the City protect the interests of the Inland Revenue satisfactorily.

Mr. E. V.  
Huxtable.  
21 July '98

have in arriving at the true annual value. I should imagine that those valuers would have the same difficulties. I know that it takes us sometimes to value one building a very considerable time, and I do not think under those circumstances I could say less than a dozen.

20,669. You think a dozen might do it?—I think a dozen might do it, but I should not like to say.

20,670. (Mr. Cripps.) Just following out this question for a moment, why are there greater variations of property in the City than there would be in Glasgow?—I think I have shown them.

20,671. Might I just go through the list, in order not to trouble you again: rating of machinery arises equally in both; licensed houses in both; printing in both, and telephones in both?—That is true, but I think those are only a few of the divergencies.

20,672. I think I took down all you specially mentioned?—That is because we went to division 7, the other divergencies are suggested in division 2 of my memorandum.

20,673. Can you suggest any difficulty in the valuation of property in the City that would not arise in such a place as Glasgow?—Yes, exclusive of distinctions of tenure and those I have enumerated, others arising out of the questions of site value, and the speculative character of property in the City. For instance, there are 112 parishes now, and I made out a while ago a list of the varying values of those parishes within 10 years; I found that in some parishes the site values (for those values have again to be sub-divided into houses) have altered considerably within special areas of a few yards.

20,674. That would be just the same in a place like Glasgow, would it not?—I hardly think so, because of the speculative character of it in some parishes of the City of London. Yet people invest their money in sites in the centre of the City just as they invest their money in Consols.

20,675. Do you really suggest that it is more difficult to value ground property in the City than in any other big town?—I do, certainly there would be some comparison to the City in the heart of big towns.

20,676. Very well, I take your suggestion. When you talk about the surveyor attending the overseers, do you mean he is to attend these 224 overseers?—Yes.

20,677. And when he attends them, in what position is he to attend these 224 overseers?—Personally, I should like to give him some statutory power of voting upon the decisions of the overseers. Of course he would have only one vote, I realise, but at the same time there are only two overseers.

20,678. Then you would give him a power, I understand, of going to the two overseers and being outvoted by them; that is the most you would do?—Would you give him a sort of fiat power?

20,679. No, I would not; I think it is ridiculous, I tell you, the whole system. I would never allow the surveyor to go to the overseer; I think it is an absurd suggestion myself. What I want to see is how you would carry it out?—You say the system is absurd; I cannot admit that, because that is the very basis of it.

20,680. I mean the system of the surveyor attending these overseers?—He does assist the overseers in arriving at the valuation in the City. There is no doubt his assistance is of great value.

20,681. Now, we talk about the valuation authority apart from the preparation of the lists of the overseers; you only have one valuation authority in the City, have you?—We only have one valuation authority.

20,682. I want to ask you one other question. I think that there was a slight misapprehension about it. The Chairman asked you, as regards the different rating deduction in proportion to whether the site value bulked larger in the total value than structural value?—Yes.

20,683. Now, the cases you gave of structural valuation, and then 5 per cent., and ground valuation, and then 4 per cent., were only, I think, cases of exceptional properties?—Well, I should hardly say that. Exceptional properties, did you say?

20,684. Yes?—But the City is composed of so many exceptional properties.

20,685. You know perfectly well that in the ordinary case in the City, as elsewhere, you take the rental as the test, and the courts have held that you cannot take

any other test in the case of ordinary property?—Pardon me; do you say the rating courts have held that you cannot take any other test in the case of ordinary property?

23,686. Yes, unless there is something exceptional?—That is the point; it is exceptional. Do you mean a rental test under a lease or an annual tenancy, or do you mean that rents received from underlets should be the basis?

20,687. Really you must know perfectly well that rent is never taken other than as a basis, whether in the City or elsewhere?—As an element.

20,688. Yes, as an element; but we are not discussing that; there is no difference between the City and elsewhere in that respect?—No.

20,689. In the City you take the rental, or annual value, as the basis, except in the case of exceptional properties, where you have to take the structural valuation and the valuation of the land?—Yes, where properties are not underlet, but where properties are not underlet of course, we have to consider the fact that in the City a great majority of the property is freehold.

20,690. I do not think myself that has any materiality; but I want to ask you this: Where you take the valuation in the ordinary way—which is what the Chairman asked you, including structural value and site value—when you take the annual value, do you make the 16½ deduction in all cases?—In all cases.

20,691. Therefore you do not make any distinction in those cases as to whether the site value is high or low?—We consider that in the fact that we allow 5 per cent. and 4 per cent.; we consider the 16½ in that.

20,692. That is a different matter; put aside those cases where you take structural value and site value, and take the case where you take annual value in the ordinary way, and you take a per-centage deduction of 16½; you do not there take into consideration whether the site value is high or low?—No.

20,693. You make a deduction on the whole?—We take the figure at 16½, certainly.

20,694. On the whole?—On the whole; we certainly do it.

20,695. Therefore the real answer is that you do not consider whether the site value is high or low in those cases at all?—That is exactly where I disagree. We do consider it, and we take it into account in ascertaining first the gross value.

20,696. Yes, but you do not follow my question. Suppose you have got two annual values of 100*l.* a year each, I will say, and in one case 75*l.* of that is site value and 25*l.* structural value, and in the other case 75*l.* is structural value and 25*l.* site value—do you take the 16½ deduction in both cases?—I do not think we have such a case in the City.

20,697. I am assuming that, and I am asking you about an extreme case. You take the 16½ deduction in either case, quite irrespective of whether the site value bulks largely or does not?—That would be the practice in the metropolis, would it not?

20,698. You do it as a fact in the City?—Of course, I have to say —

20,699. But answer the question—you do it as a fact?—We allow the 16½ per cent.

20,700. As a fact?—As a figure.

20,701. Quite irrespective of whether the site value is 75 per cent., or whether the site value is only 25 per cent.?—Of course, I do understand your questions. I say we do take into account the fact that the site value does in the City exceed largely the ordinary proportion of the total value.

20,702. Excuse me, because I want to make this clear—put out of sight structural value and site value in exceptional cases, and take an annual value case. I will take it at 100*l.* a year, because that is sufficient for my purpose; you would take 16½ per cent. off, whether the site value is 75 per cent. of that, or whether it is only 25 per cent. of that, and you would make no difference?—We should use that figure, of course.

20,703. In other words, you do not take that point into consideration at all in making your deduction?—That is exactly where I cannot agree with you. We do take it into account in first ascertaining the gross value.

Mr. E. V.  
Huxtable,  
21 July '98

Deductions in the City of London are made without regard to the proportionate value of site and structure.

Site values, valuation of in the City of London said to be more difficult than in other towns.

Surveyors of taxes should have statutory powers to attend meetings of overseers.

City of London, valuation in: Rental value is the basis, except in the case of exceptional properties.

Mr. E. V.  
Hurstable.  
21 July '98

20,704. Of course, everyone knows that, but not in making the deduction?—If you mean to suggest that we allow the maximum, certainly we allow the maximum.

20,705. And in making the deduction it makes no difference whether the site value is high or low?—In making the deduction we allow the 16 $\frac{2}{3}$ .

20,706. And it makes no difference whatever whether the site value is high or low as regards deduction—that is so?—As you put it.

20,707. That is the fact?—That is as you put it.

20,708. (Mr. Arthur O'Connor.) The City is a wonderful place?—Well, I do not know, of course, what your experience may be of the City, with all respect, but I should rather incline to think for assessment purposes it is a wonderful place.

20,709. I notice that you are managing clerk to a firm of solicitors in the City, and that you have had experience of valuation and of appeals against valuation?—Yes.

20,710. In respect, among other things, of livery halls?—Yes.

20,711. They have not got any livery halls in Glasgow, have they?—I do not remember suggesting that they had.

20,712. London is different from Glasgow?—Yes, certainly; and of course there are many other distinctions, but it is not necessary for the purpose of this evidence to go into them.

20,713. I suppose that London consists of an area, and of men that frequent it, and of the structures they put upon it?—I presume so.

20,714. You tell us that, when buildings in the hands of a freeholder have to be valued, you distinguish between the value of the ground on which they are and the value of the buildings themselves?—We take into consideration the fact that the site value exceeds the ordinary proportions of the suburban total value of the structure and the site.

20,715. I understood you to say—I do not know whether I put it rightly, but to put it in my own way—that when buildings were in the hands of a freeholder, you had to consider the value of the site and the value of the buildings, and you make different deductions—4 per cent. in the one case, and 5 per cent. in the other?—No. To ascertain the actual annual value, we take 4 per cent. upon the value of the land and 5 per cent. upon the value of the building, although the purchaser would have bought it on a 3 per cent. basis.

20,716. How do you take 4 per cent. on the value of the land, and 5 per cent. on the value of the building, if you do not realise in your own mind, at any rate for the moment, what is the value of the land and what is the value of the building?—We do endeavour to ascertain the value of the land and the value of the buildings.

20,717. That is all I want to know?—As an element.

20,718. Quite so. You do, at any rate for the moment, satisfy your own mind that you can arrive at some reasonable estimate of the value of the land, and some reasonable estimate of the value of the building?—Of course we are in such cases bound to take that view, because there is no other criterion of value; and we do it in such cases.

20,719. I only want to get language which we can all understand, yes or no. In the case of land and buildings in the hand of the freeholder, you do for some purpose or other distinguish between the value of the land and the value of the buildings?—Yes, certainly.

20,720. Then is it conceivably possible to do that for every parcel in the City of London?—It is conceivably possible.

20,721. There is, at any rate, a hypothetical value of land as distinguished from the value of the buildings?—Yes.

20,722. I suppose it does not cost any more to put up a particular structure in London than it would to put up a similar structure elsewhere as far as the materials go?—No, not much more.

20,723. The difference consists in the very high site value of the City of London?—Yes, certainly.

20,724. In fact if you could have something like a map drawn upon the hydrographer's plan you might

have indications of levels of values in which the City of London would appear quite a pinnacle or a peak, so high is the value?—Yes, but that is speaking very broadly. You say you put it as a pinnacle or a peak. There is no question that in the City of London as compared with other districts the site values would be enormous, but then there are districts in the City which have to be again sub-divided.

20,725. Certain parts of the City are more valuable than others?—Much more; and they are fluctuating continually.

20,726. I think we may take it as a very elementary proposition that just as in the whole of London some parts, including the City, are more valuable than others, so in the City itself there are parts more valuable than other parts of the City?—Yes, the only difference is in the fluctuating value.

20,727. No doubt there has been great difference in the valuation from 100 years ago as compared with now; from 50 years ago as compared with now, and from 20 years ago as compared with now, and even as between different parts of the City from time to time there is a different relative value?—Yes, different relative values at different times; that is to say, a parish which would have been relatively poor 20 years ago in site values would be very rich now, and *per contra*.

20,728. But would it pass the wit of experienced gentlemen in the City of London to ascertain from time to time and put down what the values are?—I think it is possible.

20,729. After all there is a valuation in the City of London, is there not?—Truly.

20,730. Is it right or is it wrong?—I should say that it is right; there might be small divergencies.

20,731. Then the thing is done; and, if it is already done, where is the difficulty?—I do not know if I understand your question. Do you mean to say that the total rateable value arrived at could be subdivided into structural and site value?

20,732. I do not quite understand what you have come here to tell us. This is a Royal Commission appointed to inquire into the equity of the incidence of local taxation between real and personal property; and I have got before me here a memorandum which must have involved an enormous industry, and bespeaks great acquaintance with the subject; but having looked through it—it is my fault, I am sure—I do not understand what you have come here to tell us?—I came here—and I did not wish to speak of it—simply to meet allegations primarily, with all due respect.

20,733. What is the issue that you are concerned with?—The issue is simply this; that allegations have been made against the City rating authorities as based upon certain conference resolutions, in fact absolutely in accord with those conference resolutions.

20,734. As between real and personal property, and the incidence of local taxation upon those two classes of property, what have you to tell us?—Very little.

20,735. (Mr. Murray.) By the City you mean the area within the City boundary?—Within the City boundaries. I am not speaking of the Temples, though we of course assess the Temples.

20,736. Then you draw a distinction between property in Fleet Street and property in the Strand?—No. Our system is practically in accord with them as between Fleet Street and the Strand district, that is to say, between the City in Fleet Street and the Strand district. We allow practically the same per-centages in the case of ordinary repairing leases.

20,737. Then the distinction you draw is not between the City and the area outside it?—It is as between the City and the majority of the districts outside the metropolis, broadly speaking. Of course there is no question that in Bond Street or Piccadilly, or in any of those areas, you will find that the proportion of the site value very much exceeds the structural value.

20,738. When you say the occupations of professional and commercial men in the City differ from the occupations of professional and commercial men outside it, do you mean that the occupations of professional and commercial men in the Strand differ from the occupations of professional men in Fleet Street?—No, I do not say so. I was speaking, as I said, of the Metropolis generally as regards the occupations.

21 July '98

Winchester House, valuation of: Method of valuation. Site value and structural value. Repairs and renewals.

20,739. You would not say, for instance, that a bank in the city ought to be valued on a different principle from a bank in Regent Street?—Not at all.

20,740. Without going into any controversial matter, what is your practice as regards repairing leases?—I must introduce the difficulty again, because of course it is the thing that we have to consider always. In three cases out of five in the case of repairing leases, the landlord pays the rates and taxes and does the repairs. Then we have to consider in the question of underlets that in some of the under-tenancies the tenant would do the repairs, and in other cases the landlord would do the repairs. Then buildings are again sub-divided into tenancies, some part of the building being held on lease and some held on annual tenancy. And there are other considerations of the character I have already referred to which, when we are dealing with the whole building, will not enable us to take the rent paid under the lease into consideration as a criterion of rateable value. Thus, if I may bring this in—the structural value of the building in the case of a freehold building, to go to that for a moment—and the value of the land would not be a criterion of the rent, which the hypothetical tenant would pay.

20,741. Very likely not. Take a place like Winchester House which you mentioned?—Yes, that is a typical case.

20,742. How do you set about valuing that?—We take first the whole of the revenue, the profit of the building, from which we make the necessary deductions. If I may mention the rental, Winchester House is held upon a ground rental of 21,000*l.*

20,743. What is it valued at?—I think it is valued at something like 23,000*l.* or 24,000*l.* As I will explain in a moment, that 21,000*l.* in no way represents the true value of the land. We had that case at the sessions, and we had our own valuers, and you may be sure we should endeavour to support our values. Winchester House is owned by a company. The building is put in the balance sheet at, I think, 250,000*l.*, but any builder would undertake to erect that building tomorrow for, I daresay, 170,000*l.* or 180,000*l.* and we have to consider that fact.

20,744. Do you mean that here is the case of a building, the ground rent of which is 21,000*l.*, and the rateable value of which stands at 23,000*l.*?—Yes, but I am not sure about the 23,000*l.*; it may be 25,000*l.* I am only dealing with the question of principle. There is not the least question—and I can give you the papers and show it to you most clearly and distinctly—that if we took the structural value of that building and the ground rental, we should not arrive at anything like the figure which we have arrived at in putting it at 25,000*l.* We put it at 25,000*l.* and they appealed.

20,745. But how is it that the hypothetical tenant is only prepared to give 3,000*l.* or 4,000*l.* for the structure?—Simply and solely because that 21,000*l.* ground rental is not a true figure of value. They were originally the freeholders of that building, and they entered into an arrangement with the Ecclesiastical Commissioners, by which they paid a sum of 21,000*l.*, but that 21,000*l.* does not represent the true figure.

20,746. It is an actual payment at any rate?—It is an actual figure, but our valuers could not take it into account when we went to the sessions, we should have obviously if we could. We have to consider those things, and I should be pleased to give the Commission our reasons, but I would rather not.

20,747. (Mr. Arthur O'Connor.) They were originally the freeholders; then they took it into their heads to pay the Ecclesiastical Commissioners 21,000*l.* a year—what for?—They disposed of their freehold interest, I presume. It was some arrangement made for company purposes, and not as the hypothetical tenant would have done.

20,748. (Mr. Murray.) At any rate, here you have the fact that somebody or other, or some company or other, take the site on which Winchester House is built, paid somebody else 21,000*l.* a year for the use of it, and erected on it a building which, I suppose must have cost a quarter of a million?—No, it did not.

20,749. Put it anything you like?—I believe they paid, as a matter of fact, but I am not quite sure, 280,000*l.*

20,750. For the building?—Yes. The hypothetical tenant coming into that building would say naturally

enough: What can I derive as rental revenue from this building? He would find that the total revenue produced from the building would be if all the offices were let, perhaps 29,000*l.*, out of which he would have to allow for empties, for repairs, renewals, maintenance management, and so on, which would be a very large figure. That is the true value of the building—what he would derive in profit if he sub-let it.

20,751. (Chairman.) Is the 25,000*l.* the gross or the rateable value?—I meant the rateable value.

20,752. What is the gross?—The gross might be something like a sixth more; I could not say—Mr. Barnett can answer that question better.

20,753. (Mr. Murray.) Did you not say that the repairs on buildings of that kind are a very low percentage?—The repairs are, but then the renewals are very large and so are other expenses.

20,754. What is the difference between repairs and renewals?—Take a building of that description, it is a difficult question sometimes to ascertain what repairs and renewals are. Supposing a tenant goes out; the landlord has to go in and pull down all the partitions in that particular office, and paint it up and prepare it for the incoming tenant. Of course these tenants are continually going in and out. A tenant may sell the lease of his offices in that building in times of prosperity to, perhaps, some gold mining company or something of that sort if there is a boom on at such a time. The newcomer takes on the lease, of course, and he pays a premium for it, and then the office, perhaps has to be all renewed, altered, and so on. In the cases of outgoing tenants, of course the landlord has continual considerations of that kind. In Winchester House, of course, everyone of these considerations will appeal to you in a moment. For instance they have a great safe deposit there. They have built that safe deposit in the bowels of the earth, and the result is that all the locks have to be oiled every morning because they are damp. Those are all considerations which the hypothetical tenant would have to take into account, and they are very important in the aggregate. Those safes cost some 40,000*l.* or 50,000*l.*, I daresay.

20,755. In arriving at the gross value of a structure of that kind, do you take into account the fact that the repairs would be very low?—We take into account in those cases, the actual figures from the balance sheets if we can obtain them.

20,756. And those you find are very low?—In some cases low.

20,757. I mean in a case like Winchester House?—In Winchester House I should say the repairs would be low, but the other expenses would be very high, of course.

20,758. But you still allow them the 16½ per cent. though?—No, we take all those cases, of course, as we are directed to take them under the third schedule, on the peculiar features of the building. We might certainly allow the 16½, because we are entitled to take what figure we think is right, under the note to the third schedule, it being tenement property.

20,759. Is not the result this: that where the repairs are very low, the allowance of the maximum deduction gives the occupier a great advantage?—You see there are so many allowances in cases of that kind in the way of empties and so on that you would have to include. You cannot apply the ordinary principle of deduction in a repairing lease to any case of that kind.

20,760. (Sir John Hibbert.) What was the result of the appeal with respect to Winchester House?—It went into court and then they drew out of it; they did not appear as a matter of fact.

20,761. They did not appear?—They practically did not appear.

20,762. Therefore the assessment remained as it was?—Yes.

20,763. (Mr. Cripps.) Do you say that Winchester House would come under the exceptional buildings in the third schedule?—Yes, certainly.

20,764. Was it so treated, in fact?—As a fact, I think positively that it was so treated.

20,765. You have told us already that you treated it on the basis of annual value, not on structure and site value, but that you treated it on the basis of annual value?—They took it on the basis of annual value of course in accordance with the Act.

Mr. E. V.  
Hurtable.

21 July '98

**Mr. E. V. Huxtable.** 20,766. Mr. Barnett will tell us whether the 16½ deduction was made or not; you could not tell us?—I could not tell you; I do not quite remember what the per-centage was.

Deductions allowed in case of certain leasehold premises in the City.

20,767. (*Chairman.*) You remember that when we were on the point of what should be the addition to leasehold premises to get the rack rent, you were good enough to hand to me over the table this schedule which I hold in my hand, in defence of your suggestion that 2½ per cent. and 2⅓ per cent. would be sufficient in certain cases?—Yes, in certain cases.

20,768. This schedule, which I have now had the opportunity of examining, contains three columns which give the estimates of three different gentlemen who have been employed to provide those estimates?—Yes.

20,769. They give, in the case of certain tenements in six different parishes, per-centages, each gentleman having independently valued each tenement?—Yes.

20,770. I see they vary in the case of their valuations between from 7½ per cent. to 2½ per cent.?—Yes.

20,771. Just as you would expect?—Just as you would expect.

20,772. The extreme difference which I notice in any one case is as between 7½ per cent. and 4·40 per cent.?—The individual surveyors differed very much more than that originally, but when we came together, and we discussed, of course, the question—as you know in those cases one has to prepare for the sessions, and we cannot have too much divergence—the surveyors gave way on certain points; they had certain views. It was a question of averages, whether they should take 21 years, or whether they should take a shorter period.

20,773. This is headed "A schedule of comparative estimates by respondent's committee's witnesses of repairs," and these, I understand, from your last answer, were three gentlemen employed by the respondent committee to go independently over the properties, and they differed in the first instance more than is shown on this table?—Yes.

20,774. This table was ultimately put before the tribunal on appeal?—Yes.

20,775. Even after consultation they differed as much in one case as between 7½ per cent. on 5,019l. and 4·40 per cent. on 4,994l.?—Yes.

20,776. It is only, therefore, in one or two cases that an individual surveyor went as low as 2½ per cent.?—

The witness withdrew.

**Mr. WILLIAM HENRY WAGSTAFF** called and examined.

20,783. (*Chairman.*) You are, I understand, vice-chairman of the City of London Union Assessment Committee; you have been a member of that committee for nine years; you are a member of the City Corporation, and you have had a large experience in the valuing of all classes of City property extending over a period of about 40 years?—Yes. May I be allowed just to preface what I have to say by this—that although I am a willing witness here to-day, I am but a layman, and I find myself in the position I am here for the first time in my life. I purpose, therefore, to confine such evidence as I can give within my proof.\* That must not be taken as any desire to withhold or to make light of anything. The experts that you have here will answer any questions, I am quite sure, that you may propose to give, and I trust it will not be considered in any sense discourteous, if you put questions to me outside my proof, if I should think well to decline to answer them.

20,784. Certainly not; we greatly appreciate that statement; that is exactly the position which we wish every witness would take up; people should only speak of things which are absolutely within their personal knowledge?—I am naturally nervous in such a case as this.

20,785. I meet you at once, and say that we thoroughly appreciate and understand the position you occupy, and approve of it?—Thank you.

20,786. The first point with regard to your memorandum on which it occurs to me to be necessary to put any question is one which we incidentally touched this morning, namely, that the City of London comprises

Possibly. I think two or three of those buildings were old buildings; in other cases they were only sublet to three or four tenants, which makes, of course, all the difference.

20,777. Having put those preamble questions to get at the facts, the important question for me to ask you is, what were the class of properties to which these figures refer? Of course we only get the name of the parish in each case in this table?—They are all cases of buildings underlet—in one case underlet to four tenants, in other cases to a large number of tenants.

20,778. I mean, what were they used for; were they all used for the same purposes?—They were all used as Winchester House is used, for all kinds of purposes—commercial and professional.

20,779. Then you would say, I suppose, that none of these properties are subject to the wear and tear of a residential property?—I should hardly like to say that; of course, with some of these properties there would be a great deal of wear and tear. I can hardly draw a comparison.

20,780. Then perhaps you will not like to answer this question, if so, you will say so. What are the questions which guide these experts in putting the estimated per-centage for repairs so low as this?—If you will look at another schedule, you will find that other reductions are so great that the repairs are quite a secondary consideration in such properties. We have to take into account not what the repairs are alone, but we have to take into account also the renewals, and other expenses, which are very great within the City, but which are not outside the City.

20,781. The difference, you see, between repair and renewal is somewhat technical; I should have thought one year with another that repair and renewal was precisely the same thing?—Would you mind looking at the table of per-centages claimed by the appellant, not in that schedule, but in another one. I think you will see that they claim something like 50 per cent. under the Act, instead of 16½.

20,782. For what?—For repairs, management, maintenance, renewals, &c., and they give their reasons for that. We allowed something varying between 30 to 35 per cent. in those six cases for the actual figures and outgoings which the hypothetical tenant would have to pay if he took this peculiar property. You will find it in another schedule, and, of course, that makes quite a distinction. I will hand in the return I am now referring to.)

112 parishes, and for assessment purposes, all these parishes are represented by separate bodies of overseers?—That is so.

20,787. There are two to each parish, and they are elected year after year, and in the preparation of the several lists it is the practice of such overseers to view the properties and discuss the values or alterations of value. I suggest to you that to have so many overseers for so small an area, though great in value, is an unnecessary multiplication of authority?—I think not. I think it is a most important thing that we should have gentlemen whose area of supervision is very small, so that it comes in this way that where gentlemen are elected year after year, as they are if they attend to their work and are found capable, they absolutely come to know the peculiarities, and the work of every particular property in every parish, and it seems to me that nothing can be better as an evidence of value than the decisions of such as those.

20,788. I need not, of course, ask you this: The overseers do not give anything like their whole time to the work?—That I am not prepared to say. I do know that they do other parochial work besides this, but to what extent I cannot say.

20,789. Do you not think that, considering the great interests involved in the City, it would be desirable to have a few persons—I especially reserve the number—of the very highest standing to give their whole time to the work, and value the properties in the City upon one system under the authority of the assessment committee?—I think not. My experience of gentlemen who may be called experts—of course, I am not alluding to any gentleman here—is that when we have

**Mr. E. V. Huxtable.**  
21 July '98

**Mr. W. H. Wagstaff.**

City of London, valuation authority in: The number of parishes and of overseers. The present system in the City thought to be the best. Expert valuers instead of overseer thought to be undesirable.

Mr. W. H.  
Wagstaff.  
21 July '98

to call in experts, as a rule they invariably differ with regard to the valuation, and if you have three or four experts on one side and three or four experts on the other, the result is that you are obliged to judge between them, for they in no sense agree.

20,790. I quite agree. I heard it said the other day that an expert was like an Oriental, that he gave you exactly the answer to a question which he thought you wanted him to give. If you start an expert to give a fair valuation, do you not think you would get it from him fairly?—I think that the expert would undoubtedly give his opinion according to his views of the case, but it is surprising how professional gentlemen do differ.

20,791. Only when they are paid to differ, is that not so?—You have the same case with solicitors—they are all alike. Take the case of Queen's Counsel—they are all alike; they all differ—or else, why is it that one set are employed on one side and another on the other, whose evidence is directly contrary the one to the other.

20,792. (Mr. Cripps.) They argue; they do not give evidence.—They endeavour to impress.

Surveyors of taxes give material assistance to the assessment committee in the City of London. There would be no objection to giving them statutory powers.

20,793. (Chairman.) The next point in your memorandum is one which is of very great importance, and that is the precise position which the surveyors of taxes ought to occupy in regard to the valuation?—Do you put it, ought to occupy, or do occupy?

20,794. I put it, ought to occupy—I purposely avoid the other point, because we have had it in evidence already?—I think I must give my own version of that.

20,795. If you please?—I think the "ought to occupy" is really what they do occupy in the City. Their position is this: So far as I know—and I believe I am stating that which is absolutely correct—the overseers in the preparation of the lists at the quinquennial, say, always invite the surveyors of taxes to meet them to assist in the preparation of those lists; whether they do so or do not I do not know, but I take it for granted that they do. Then the lists come before the assessment committee, and we have the overseers present; we have the assistant overseer, who is another official; very often we have the rate collectors there; and we have the surveyors of taxes there. We are obliged as a committee to judge of the value of the evidence between these gentlemen. It may be taken for granted at once that unless a man is a thoroughly incompetent man, the overseer, in the particular parish allocated to him, does know a great deal about the value of property in his particular district. The surveyors of taxes are there, and they take part in the debates; they put questions to those who are there to appeal against the amount that is allocated to them, and they assist, and materially assist, the assessment committee in the work that is before them. These surveyors of taxes have sent to them, always before the meetings, printed lists and the paper of business for the day. They have time, therefore, to get themselves up in any particular property, and if they see that a certain property is coming on of which they have any information, they take care to produce that information. They constantly produce at our meetings cuttings from newspapers of changes of property at the Mart, and otherwise, and in every way they assist the committee. There are cases, but they have been very rare—I do not think we have had one in my experience—in which the surveyors of taxes have differed on questions of great importance with the assessment committee, and they have been so satisfied about their own view of the case that they have taken us to the sessions, and there, in one or two cases—but only in one or two—they have beaten us on appeal.

20,796. As I understand it, you value the influence of the surveyors of taxes in the valuation?—We do.

20,797. Would you object to giving them the position by statute which they now only occupy by courtesy?—Not in the least, but I may say that if it is a question of an alteration in the law, it is scarcely necessary, for I never was present at an assessment committee meeting but what the surveyors of taxes were there, and I never was present but what they had some information to give: so that, to make it a statutory obligation on their part to be there would not advance the thing much, because there they are.

20,798. You must bear in mind, however—just let me call your attention to this—that all assessment committees may not be so courteous and so wise as

yours—others might resent the advice and influence of the surveyors of taxes; would it not be, therefore, as a mere matter of general policy, not specially regarding the City of London, desirable to give the surveyor of taxes a more definite status than he has at the present time?—I can say, on the part of the assessment committee, that we should have no objection to that whatever.

20,799. As I understand, it would make no difference?—It would make no difference. I have never been present when there have been no surveyors of taxes there. There are nearly always two; sometimes three or four. It happens in this way: There are eight of these gentlemen having reference to the City of London, and there are eight districts which are divided amongst these eight surveyors. It sometimes happens that the cases we have to take will, on one particular day, lie in several parishes, and then the gentlemen representing those parishes are always there.

20,800. You give in your memorandum, a list which shows the number of objections to the valuation lists which were taken in the years from 1893 to 1898?—That is so.

20,801. We see the number of those that objected; are you able to tell us how many of those objections went on ultimately to appeals?—I could have prepared myself with that if I had known the question was going to be put, but I am afraid I could not say now.

20,802. Would you have any objection, when you get your proof for correction, to add another column giving the number of appeals that there were in each of these years, as well as the objections?—Not the least.

20,803. Do you think that the assessment committees have sufficient power at the present time of getting returns giving the particulars showing the annual value of the premises?—I do.

20,804. They have sufficient power?—I do think so. We have the power under the Act, that if information is withheld, we practically surcharge them; we put the valuation at a very great figure, and we throw upon them the onus of showing that we are wrong.

20,805. You quite agree with me that it is an obligation which ought to be put compulsorily upon the owner of premises, that he should give any information as to facts which are desirable in the public interest?—I do, but that is rather a sweeping question. There might be questions put in there of an inquisitorial character that, perhaps, ought not to be answered. Generally speaking, I may say that I do think that suggestion of yours would be a very good one.

20,806. (Mr. Arthur O'Connor.) You mean the power might be abused to ask questions which were not material?—That is what I really do mean.

20,807. (Chairman.) I meant to limit, and I think I did limit, my questions to those which were material to the public interest?—I did not understand you; I assent to that thoroughly.

20,808. With that limitation, you would agree with me?—I do.

20,809. (Mr. Balfour.) I suppose what you are pointing to is, searching into the profits of a man's business, or something of that kind?—I think so.

20,810. Something not pertinent to the valuation of the hereditament?—Sometimes there is the question of a lease, and all that kind of thing, whereby somebody might come behind your back and take a lease over your head, and so forth.

20,811. (Sir John Hibbert.) What is the general status of your overseers; what is the position which they hold in social life?—I could not tell you that.

20,812. Cannot you tell with respect to any particular one—you must know a great number of them?—I know several who are very respectable men; that is the only answer I can give you. What kind of answer do you wish?

20,813. What station in society do they hold?—I could not say.

20,814. Would they be men engaged in business?—Yes.

20,815. Some of them?—Yes.

20,816. What would be the generality of the occupations of them?—I do not think anyone could answer that question.

Mr. W. H.  
Wagstaff.

Overseers in the City of London. Their social status.

Mr. W. H.  
Wagstaff.

21 July '98

20,817. I suppose you are aware that in many districts overseers are very often very uneducated persons. I want to know whether that is the case in the City of London?—I have no such knowledge; I do not know any uneducated overseer.

20,818. I am speaking of the country, of course; but you do not know that that applies to the City of London?—No. I believe they are all educated men so far as I have had to do with them.

20,819. Are these overseers generally re-elected from year to year; do they hold office for some years?—There are several names sent up every year to the justices of the peace.

20,820. That sending up to the justices is done away with now, is it not?—I am not aware that it is.

20,821. It is?—Then I withdraw that. In answering your question I do say that they are elected year after year, provided they will stand, if the parishioners have confidence in them.

20,822. And there is a certain advantage in having men who have some experience to guide them?—A great advantage.

20,823. Do you consider that experts, if they were appointed to do the valuations, might differ?—I do not think they would do it nearly so well, if you ask me the question straight.

20,824. Is it not much more likely that 224 men would differ?—I think not, because you see they do not differ about the same property, and it is generally understood throughout entire London what the system is. You know they have to compare one property with another; they know that at No. 100 the valuation is so much, and that this property, No. 102, is about the same size, and they know that they cannot differ very much if the property is of the same description.

20,825. That may be quite true with respect to the particular properties in a particular parish which the two overseers have to assess, but is there the same likelihood that the whole number of overseers throughout the whole City of London would act upon one uniform basis of assessment?—I think so; you must remember that the area of the City is not large. Some idea may be had of the way in which the assessment committee do their work by the fact that it is within a prescribed area that never increases, but our valuations are always going up.

20,826. Do these overseers ever meet together as a body to confer?—Not to my knowledge, but that I do not know about.

20,827. Each two men act upon their own views?—I think so, but then you must remember that their views are not necessarily carried out at the assessment committee. I have told you already that we have the surveyors of taxes, and we have 12 gentlemen on the assessment committee who at all events are supposed to be respectable men with a knowledge of property.

20,828. You, from your knowledge, and having been vice-chairman so long of the assessment committee, would know whether there is very much difference in the mode of assessment of these different overseers?—I do not think there is.

20,829. Therefore, you seem to be satisfied with the system as it exists?—I am. I believe it is the best that could be devised.

20,830. Whatever is the best?—Yes, if you want to get the full information out.

20,831. (Mr. Elliott.) The overseers are not paid at all, are they?—They are not.

20,832. They are paid no remuneration for their personal services?—None, nor are the assessment committee—I might throw that in.

20,833. I am quite aware of that. I understood you to say just now that in your experience, as chairman of the assessment committee whose duty it is to revise the valuations put upon property in the first instance by the overseers, you do not find any remarkable differences in the principles adopted by the overseers in those small parishes?—We do not.

20,834. And that, even if you had found that, an equalising influence would also be brought to bear by the surveyors of taxes?—And by ourselves.

20,835. Now with regard to the surveyors of taxes, it has been suggested to me that the surveyors of taxes are not so keen before the assessment committee in getting equitable assessments to the income tax,

Schedule A. as they otherwise would be, because when they get to the Schedule D. assessments they only deduct from the receipts of the firm the Schedule A. assessment, and not the actual rent paid; is that your experience?—My experience is that they are sufficiently keen always. They never allow a case to pass if, in their judgment, they think it is in any sense under-assessed—never.

20,836. Then may I take it that in your experience you have found that the surveyors of taxes have used every possible effort to get equitable and proper and sufficient assessments to the income tax under Schedule A.?—I have no hesitation in saying yes, most emphatically, to that.

20,837. (Mr. Smith.) Is there very much competition for this office of overseer?—I should say not, for this reason: that a man has to give up a very great deal of his time without pay.

20,838. Is it considered a desirable office?—I assume it is considered a desirable office by those who take it; it puts them perhaps for the time being in a position of influence, but it is not an office I should like for myself I should say.

20,839. The influence being that they assess their neighbours' property?—They perform a public duty in assessing that; but as I said before you must remember that their assessment is not the law—that is only an evidence of value.

20,840. If you were going to buy or sell City property, would you prefer the opinion of an amateur or of an expert?—That would vastly depend upon the amateur. I know many amateurs that are better than experts. I am a builder myself, and therefore I have, or ought to have, a tolerable notion of the value of property in the City of London, seeing that I carry on business where I was born, and follow the business that my father carried on in the same premises.

20,841. You would probably be able to dispense with the opinion of either?—I think I could, without casting any reflection.

20,842. (Mr. Arthur O'Connor.) Among the 224 overseers in the City you probably are personally acquainted with several?—I am.

20,843. I will ask you to think of one—I do not want his name, but think of one?—For what purpose?

20,844. For the purpose of telling me what his occupation is?—I do not think I can answer that question.

20,845. Not one out of the 224?—I do not think I can. I meet a gentleman there time after time, and I see that he acts as a gentleman, and I see that he has got his brains about him and knows what he is about, and that is sufficient for me.

20,846. I do not mean that. Of the 224 overseers I ask you to select any single one that you know without telling me who he is, or his name, and then to tell me what is his occupation in life apart from his being overseer?—That I cannot answer because I do not think I know; I think I can fairly say that I do not think I know the occupation of one single overseer.

20,847. Now we will take this nameless and unknown overseer; he is a gentleman who works without pay, is that so?—So far as I know he is.

20,848. He has to give a great deal of time and personal service to the work of overseeing, whatever that may be?—He does.

20,849. According to the ordinary standard of human conduct, what would be the consideration actuating him?—I cannot say. You might almost as well ask me in what way I was actuated by being a member of the assessment committee. I like the work very well, and although it takes up a great deal of time, I am ready to give my time for the benefit of my fellow citizens.

20,850. I understand these overseers are elected by the several parishes?—They are.

20,851. The parishes being on the average less than five acres?—You have got to divide 668 by 112, and there you have it.

20,852. (Mr. Smith.) It is about three acres to an overseer, there being two overseers in a parish?—Yes. There is no harm in that.

20,853. (Mr. Arthur O'Connor.) No, I am trying to ascertain the facts, you are not on the defensive?—No,

Mr. W. H.  
Wagstaff.

Schedule  
A.

Mr. W. H. Wagstaff. I am here to tell the truth; you are asking my opinion on certain things, and I am endeavouring to the best of my ability to give it.

21 July '98  
20,854. These gentlemen represent, in twos, areas on an average of between five and six acres?—Yes.

20,855. And they are elected officers?—They are.

20,856. They are generally elected and re-elected year after year, as I understand?—That is so.

20,857. They presumably give satisfaction to their constituents?—That is the presumption.

20,858. Their constituents being people whose property they have to value?—That is so.

20,859. Do you know any of those overseers to be owners of property in the City?—I do not.

20,860. The constituents of the overseers would be owners of property in many cases?—Of course, but that surely is nothing against public men.

20,861. I am not concerned with inferences, but only with facts?—But there is something behind the question you know—I cannot help seeing that.

20,862. The union assessment committee of the City of London consists of—how many gentlemen?—Twelve.

20,863. Of whom you know at least one?—Of whom I know all.

20,864. Would you mind telling me whether you own any property in the City of London?—I do.

20,865. The surveyors of taxes have sometimes appealed, have they not?—They have.

20,866. Sometimes they have been successful?—They have, but not in my time.

20,867. Have they appealed often in your time?—Not at all, that I am aware of.

20,868. Then they have never been unsuccessful in your time either?—No.

20,869. Is it conceivable that if the surveyors of taxes, who apparently have abstained from appealing recently, do not get it in meal they may get it in malt?—I should be sorry to say that of any gentleman unless I had evidence of it.

20,870. No, it is not a question of their personal interests?—Having reference to the character of these gentlemen, I should say it is not conceivable.

20,871. I am afraid you misunderstand my question, let me explain it to you: the surveyor of taxes has his duty to perform to the Exchequer?—I presume so.

20,872. Supposing he thinks, if I appeal on this point I may or may not win, but if I do not get it in the shape of a collection under one schedule I may get it in the shape of a collection under another schedule; then his object as an official, and a faithful and honourable official, may be equally well attained?—I do not think any such idea would influence the mind of any of the surveyors of taxes that I know. I believe them to be a set of perfectly honourable men, and I do not think they would be led astray in that way at all.

20,873. I am glad we agree as to the honourable character of the surveyors of taxes, and let there be no mistake about that, only they are concerned with protecting the public revenue?—Undoubtedly.

20,874. And if it comes into the public Exchequer by one conduit pipe rather than another, so long as they see that it comes there, do you not think they, as honourable officials, discharge their duty equally well?—No, I do not; because I think they are there to have an opinion of their own as honourable men, and if they saw an assessment that was put down in a way that they did not think was the correct way, they would speak about it, and speak very loudly, and make them-

selves heard. I have always found that. I do not think they would be influenced in any way such as you apparently suggest—I do not think they would.

20,875. At any rate, we have arrived at this position, that the valuation in the City is made immediately by means of overseers, who are elected and re-elected by the 112 parishes, they being persons as to whom you cannot tell us whether they possess property or not?—I cannot tell you that.

20,876. But whose constituents are to a large extent owners of property?—And whose constituents, I take it, are generally absolutely satisfied with them or they would not elect them again.

20,877. That is part of my hypothesis; and over them is a union assessment committee, of whom the majority are property owners?—Their property may not lie in the City. I do not know anything about my friends in that respect, their property may lie outside the City.

20,878. So far as you can speak from personal knowledge in your own case?—Yes, I speak of my own case. I do not know enough of my neighbour to know whether he has got property in the City. I do not even know it at all.

20,879. Confining yourself to that which is within your own personal knowledge, the union assessment committee in your own person is so far constituted of at least a property owner?—I think if you were to take 12 respectable gentlemen from any source you would find that they were all property owners, I think so.

20,880. Certainly; I only want to get the situation. Supposing you found in regard to an area outside the City of London with whose assessment, at any rate, you were indirectly concerned, so that if they were assessed very low, you in the City would have to pay a little more, but if they were assessed very high, you in the City would have to pay a little less, would you not think it a reasonable ground for criticism if you found that the gentlemen concerned with the assessment and collection of taxes in that area were men whose interest as owners did not quite jump with their duty as overseers?—I never concern myself about other people's business. I have got nothing to do with property outside the City; it does not concern me the least bit as to whether property outside the City is over-assessed or under-assessed—I never give it a thought.

20,881. Then I should be right in this conclusion, at any rate, that your last answer was not a direct answer to my last question?—Show me where, please.

20,882. I asked you whether you would consider that it was reasonable that you should form an opinion as to the conflict between the interest and the duty of the ratepayer and the overseers in an area outside the City which might compete with you in hearing a common burden?—I say that is a subject that I have never thought out at all.

20,883. Then I am right in saying that you did not answer my question directly?—I answer it fully and fairly, and say that that is a matter that does not concern me, and I do not trouble myself about it.

20,884. And that you consider a direct answer?—I do.

20,885. Now if the surveyors of taxes are gentlemen whose information is so valuable (and as to that we agree), and who are such honourable men that they will insist upon the exact carrying out of the law according to the facts known to them and in the past have been very useful, do you not think it might be an advantage to secure their position under the provisions of a statute?—I think, if I am right, that is a question which the Chairman has already put to me, and I have answered in the affirmative.

The witness withdrew.

Mr. WALTER BARNETT called and examined.

20,886. (Chairman.) Your office is in Winchester House in the City of London, and you are an architect and surveyor?—Yes.

20,887. And a valuer to the assessment committee of the City of London Union?—In some cases, not in all cases.

20,888. You have had an experience of 30 years in the valuation of property in the Metropolis, and more

particularly you have devoted yourself to the valuing of property for rating purposes within the City of London District?—Yes, I have within the last 20 years.

20,889. What is the City of London District?—The City of London District properly should be called the City of London.

20,890. In addition to that you have valued hereditaments for rating purposes within other unions and

Overseers in the City of London and the members of the assessment committee perform their duties satisfactorily.

Surveyors of taxes in the City of London: There would be no objection to giving them statutory powers.

Mr. W. Barnett.

Mr. W. Barnett.

Mr. W. Barnett.  
21 July '98

The City of London is said to be a district of exceptional character for the purposes of valuation, chiefly owing to the high value of the land. Illustrations of properties of an exceptional character. The sum which a purchaser will give in the City for a ground rent with a good lessee.

parishes, such as the City of London; St. Mary Abbot's, Kensington; St. Leonard's, Shoreditch; St. Margaret and St. John, Westminster; St. George's, Hanover Square; and Holborn?—Yes, and some of the other outlying parishes immediately around.

20,891. You think there are peculiar incidents of value arising upon the assessment of buildings, more particularly with reference to tenure, user, and the character of the structure in those districts?—I know of no place including Glasgow, which I know, which is on all-fours with the City of London itself. I know of no place so expensive to start with.

20,892. (Mr. Balfour.) So expensive?—So highly expensive—I mean the rent.

20,893. Costly to build do you mean?—I refer to the cost of the ground mainly. Of course it is more costly to build in the City of London than it would be in Glasgow, for instance.

20,894. (Chairman.) You offer us information\* upon what you describe yourself as certain peculiar incidents of value arising upon the assessment of these buildings, and more particularly with reference to tenure, user, and character of the structures?—First may I put this, my Lord, as to the price. For instance, take a site in Cornhill; take a property that was quite recently sold, the lessee of which is a client of mine, Sir Samuel Montagu, who is a member of the House. He is the lessee; he took it for some purpose that he does not need it for now, and hence he does not occupy it, but he has to pay under this covenant a ground rent of, I think, 1,150*l.* a year; the Liverpool and London and Globe, next door, buy that at 42 years purchase. As a pure matter of fact, the whole rental is not the ground rent, but then they have got Sir Samuel Montagu for 69 years as tenant.

20,895. You say the whole rental is not the ground rent, what do you mean by the whole rental?—I mean that the rack rental of the building from the various tenants, after paying the rates and taxes, and the outgoings, would not equal the ground rent.

20,896. Is not the inference from that that the purchaser of the right to receive the ground rent made a bad bargain?—No, I think the inference is this: that the particular purchaser said: Well, at any rate, for 69 years I have got a certain 1,150*l.* a year, because the building may be empty, the building may be full, it may tumble down, anything may happen, but that lessee of mine will always be able to pay me that ground rent.

20,897. (Mr. Arthur O'Connor.) Is that not an exceptional case?—Not at all; I could tell you of just the same sort of cases up and down Lombard Street. Where you have got an exceptional lessee, a man in buying the property will say to himself: I shall have this man's 1,150*l.* a year, that is absolutely safe, and I do not mind. I could have got that if I put it into consols, but I have got a man at the back of me who is equal to consols. With these things in the City you will find fancy prices given that I take it you will find nowhere else, because of the peculiarity of the people who are the lessees.

20,898. (Chairman.) Just let us work that out; there is a particular building in Cornhill of which you say the ground rent is 1,150*l.*?—Yes.

20,899. Do you know what the rent of that building is for occupancy at the present time?—I have the schedule in my office, I had it sent from the Bank as I now have to do business with it.

20,900. What is it? Have you any objections to say?—[I am speaking now from memory, but I will give it you as near as I can. Practically the total rent is something like 1,480*l.*—in round figures, say 1,500*l.* per annum.

20,901. Is that what appears in the column under gross rental?—That is what Sir Samuel receives as gross rental.

20,902. Is that what appears in the column under gross rental?—Yes; and what he absolutely receives. That occurs in his rent book.

20,903. Just wait one moment. What is the process by which that sum gets into the column of gross rental in your valuation list?—I am not speaking of the valuation book; this came from Sir Samuel's rent book, showing the rent that he receives.

20,904. Is this 1,480*l.* the sum which appears in the gross rental column?—Yes, that is so.

20,905. Then that is put there by the overseers under the supervision of the assessment committee?—I beg your pardon. It is put by the person who collects his rents. Do you see I am telling you now that I am acting for him in that very matter.

20,906. I think we are at cross purposes, because I am not on the question of what Sir Samuel receives, I am on the question of what appears in the gross rental column in the rate book?—I had a copy of the return; in fact, I have it at the office. I could not tell you what that return is, but you may take it at 1,480*l.*

20,907. Now we are getting near at one, what I want to make sure of is that the entry which appears in the rate book is the entry which ought to appear there—not whether it corresponds with what Sir Samuel receives, but whether in the opinion, first, of the overseers and then of the assessment committee, that is a right entry to appear in that column?—I understand.

20,908. (Mr. Arthur O'Connor.) How does it get there, that is the question?—I will tell you exactly how it got there. The rent got there from the return which the firm made.

20,909. (Sir John Hibbert.) And which they are obliged to send?—They are supposed to be obliged to do it but they do not always send.

20,910. (Chairman.) The firm makes the return but do I understand that the overseers always accept that return blindly, or do they use their own judgment?—I am not an overseer, but I act as surveyor to some of the overseers. I should say that in the case of a respectable, responsible firm, an insurance company or a bank, in 19 cases out of 20 if the people made a return the overseers would look at their names and say: That man makes a good return, he would not make a false one.

20,911. Assuming the ground rent to be 1,150*l.*, can you tell me whether the balance between that and what appears in the return made by the firm bears any relation to the fair annual value of the structure?—Yes, it is as much as Sir Samuel can get.

20,912. It is as much as he gets for the whole subject? Yes.

20,913. Site and structure together?—Yes, with the tenants in it.

20,914. My question was, if you will try and follow me, whether the balance between the ground rent and what Sir Samuel gets, assuming both to be correct, bears any fair proportion to what you would consider to be the value of the structure?—*Qua* land and buildings—that is, taking the land with the buildings? You must take the land as well, because it may be a bad building; you must take it as you find it, if I am following you.

20,915. You give a building, and I want your opinion whether the difference between what is paid as ground rent and what is received in gross in any way corresponds to, or represents, what is the value of the structure?—The ground rent and the rackrent received, after deducting from such rack rent the rates, taxes, and outgoings which the lessee is bound to bear, show a *minus* and not a *plus* figure. I think that is a straight answer.

20,916. You have not now answered my question. We are dealing, not with deductions or anything else, we are dealing with two figures—what is paid in ground rent, and what is paid in gross?—What is received in gross.

20,917. What is paid—it must be paid if received, surely?—Paid to the other man, surely.

20,918. Why split straws of that sort? I say we are dealing with two figures, one of which is ground rent and the other of which is paid in gross, or—if you choose to put it so, received in gross—I will give you that for the value of it; I want to know whether, subtracting one figure from the other, you can say you cannot find any relation between the balance that remains and the value of what in your opinion is the value of the structure?—After paying the necessary outgoings, none.

20,919. Can you before paying the necessary outgoings?—Yes, a difference of between 350*l.* and 400*l.* a year. The remainder goes in rates and taxes, the necessary external repairs, maintenance, housekeeper, lights on the staircases, and so on.

Mr. W. Barnett.  
21 July '98

Mr. W.  
Barnett.

21 July '98

20,920. Do you put that forward as a case which is of common occurrence or in any way exceptional?—If I may be allowed to suggest that I just quoted that to show what a purchaser in the City—and I take it that it would apply not to one case but to many—what a purchaser will give in the City for what he considers a ground rent with a very good lease. My answer is that he will give 40 years' purchase. I cannot conceive of that price being got elsewhere—in fact, I have never heard of property being sold at that price in any city barring the City of London.

20,921. Does that not convey the idea to your mind that for some reason or the other, the sum paid for the ground rent is greatly in excess in proportion to the gross sum received?—It is in excess, and in excess of its true value.

20,922. So far the man who purchases the ground rent, of course, puts himself in the position of being the lessee of an annuity of so many hundreds a year for the term for which the lease will run?—Precisely.

20,923. Then your inference from that would be that unless more can be got from it at the end of the term, the ground rent would go down?—Unless Cornhill ground increases in value, or appreciates to the extent of 30 per cent. at the end of that 69 years, the man will have nothing more than what he originally bought—perhaps, if it depreciates, less.

20,924. We started with paragraph 2 in your memorandum; is there any other peculiar incident of value arising upon the assessment of the buildings with which you are acquainted that you want to put before us?—The instance was given, earlier in the day, of Winchester House, and the ground rent there was quoted.

20,925. Just wait one moment—I will exhaust the general question first; are there any other peculiar incidents that you want to put before us?—Generally it is that a person, or a company, or a firm, wants some given area for some special purpose in some given locality, and I will quote to you one instance which took place with some corporation property only some few weeks since, at the corner of London Wall, opposite Moorgate Street Station. I am not at liberty to say exactly what the corporation valuers put it at, although I happen to know what they did put it at. They put it at something like 3,000*l.* per annum less than it absolutely fetched at auction, because the bidding all ceased at 5,000*l.*; but there were two people present who thought they wanted it, and both for special purposes, and they deliberately bid from 5,000*l.* a year, when all the other bidding ceased, to 7,100*l.*

20,926. And of course, it ought to be rated at 7,100*l.*?—The ground rent paid—if you will excuse me—is not always a true criterion of value. Supposing, for arguments sake, you cover that with buildings.

20,927. If an individual is, or a firm or a company, are willing to give 7,100*l.* a year for a building, why should they not be rated upon that sum?—Supposing they have no sub-tenants they should, the *prima facie* supposition would be that that is the true value. It is not such a question as Mr. Cripps put. The whole question boils itself down, if there is a rental, to how much the man can make upon it—how much he gets by the rental. You will remember that Mr. Cripps asked that question very pertinently. Supposing those people, for argument's sake, build this place and occupied it wholly themselves, although the 7,100*l.* per annum may be a great deal too much, if I were valuing that for the given parish, or if I were valuing it for the assessment committee, or for any person at all, I should be bound to take the ground rent, and I should take the outlay upon the total structure, and I should call that the value.

20,928. In other words, you would take a less sum for this particular purpose than the holders of the property for the time are willing to give in the open market?—No, I beg your pardon. I have just said that, supposing there is no question of rental from underlets, and they come in and occupy it, I should take the rental they pay plus a per-centage on the outlay they put upon that land, and that I should call the value.

20,929. I understood you to say that a particular property had been run up to 7,100*l.* a year?—To 7,100*l.* from less than 5,000*l.* after the ceasing of the bids.

20,930. Would your valuation upon the system that you indicate to us come out to be less or more than that 7,100*l.*?—More, unless it was let off in tenancies and

produced less money. I think you will understand it in a minute. Supposing, for argument's sake, a person takes that and changes his mind, and does not want it for his own purpose, but puts up a block of shops and offices; he then comes before the particular overseers or assessment committee—it does not matter where—and he is asked for a schedule of his rent; he says, "Gentlemen, there are my rents; I have every-thing there; I have received 10,000*l.* per annum." You look at those rents, and you verify one or two of them, and you come to the conclusion that is all he is getting—10,000*l.* a year. Out of that you naturally ask, "Well, what have you to pay Mr. Smith or 'Mr. Jones'?"—"I have to pay all rates and taxes." "What do they come to?"—"6*s.* in the pound." "Water rate?"—"Yes." "Lighting for your stair-cases?"—"Yes." "Housekeeper?"—"Yes." "What does that come to, roughly?"—"Well, that comes to, roughly, 3,000*l.* a year."

20,931. Now, you are going to the rateable?—Now, I am going back to this question, that supposing you finally get a property—I do not mind what it costs you, or what it did not cost you, and you let it off in tenements, and you let it off for as much as you can get, then they can only rate that property at as much money as you put net into your pocket.

20,932. I cannot help thinking that you are mixing up two cases, the case of the man who is occupying his own property and the case of a man who is not; but I shall not go further into it?—I was trying really to separate them, because supposing he holds out for the sake of a given purpose, then under those special circumstances you are bound practically to take it at what it has cost him; but supposing he lets it off, and he can only get so much per annum out of it, then you cannot rate him on more than he puts net into his pocket.

20,933. What have you to say about these livery halls, upon which we have had one or two questions already?—I have got a list here. I do not know whether you would like to see the rating of them.

20,934. No, I cannot judge of that?—There are 38 of them altogether.

20,935. Because a building is a livery hall that does not make any more difficulty in valuing it than there is in valuing any other large hall in the occupation of the owner, or for which he does not pay a rent, does it?—I am inclined to think it would, for this reason—it is not built for commercial purposes, it is not used for commercial purposes, and it is only used from 12 to 15 times a year all told. I cannot quite see how that is going to be put down as a dividend-earning concern or as a profit-earning concern.

20,936. If a man chooses to keep a big building, and only uses it 15 times a year, it is a luxury, and why should he not be rated on the value of it?—It would be a very difficult matter then, because, I take it, you would have to find a tenant for these halls as they are and in accordance with their Charter and to find somebody who wanted them there.

20,937. Is there any greater difficulty in assessing the value of the thing that is called a livery hall rather than a large Government office, for example?—If you will excuse me, I should say all the difference in the world, because you could not possibly find a tenant for a livery hall, except for the same purpose, unless you pulled it down and put something else there.

20,938. (Sir John Hibbert.) Could you not use it as a store?—In the City?

20,939. Yes?—We should not want 38 stores in the City; there are plenty there now.

20,940. (Chairman.) You were going to say something to us about Winchester House—what was it?—That belonged to two gentlemen; it was their freehold, and I had the original valuing of it as between them. It was built at a most extravagant cost, and a great deal of money one way and another was wasted on it. Perhaps you have the misfortune to know what a day account is in a building job; if so, you know that that is wholly wasted money, because it simply means pulling down something that you have already put up. There was a day account there through one mistake or another. Unfortunately, I was the measuring surveyor, and I hope it was not my mistake. There was a day account alone of 40,000*l.* or 50,000*l.* Anybody would have to write that off their balance sheet as dead money; any gentleman who has ever built knows that.

Mr. W.  
Barnett.

Barnett.

21 July '98

20,941. I do not think we need go into those details. The point that struck the Commission about Winchester House was that a building erected upon a site, the ground rent of which was 21,000*l.* was valued at 23,000*l.*; if you could explain to us the process by which the authorities are convinced that that is fair and right, I think you would help us?—This was a created ground rent. The building was put up upon two pieces of freehold, three-fifths of which belonged to the late Sir John Pender, and the other two-fifths to Mr. Leopold Salomons. It was Sir John's own freehold, so there was no question of ground rent there. When that building was finished, I was asked to do one of two things—either to borrow sufficient money to pay off the whole thing or to find some other means of doing it. I found the latter means by creating a ground rent, and we borrowed more money than it wholly cost by way of creating a lease. We created that with the Ecclesiastical Commissioners, and I made the bargain for Sir John. They were going to borrow less money than that absolutely produced. It produces within a thousand or two of half a million, and they were content to borrow less money than that. Then you asked me how these figures were arrived at. These figures were arrived at in this way. I produced—and I act still for the company who now own this block—a schedule of the whole of our lettings and the whole of our outgoings for an average of five years. We do not receive enough to pay our ground rent and the whole of our outgoings and leave us a profit, hence the present assessment. I think that is clear, is it not?

20,942. Yes, I have followed it?—That is, when we have paid all out we stand at nothing at all; we have got nothing to receive.

20,943. (Mr. Elliott.) The case of Winchester House is essentially the same as the one you just gave us as regards Sir Samuel Montagu, is it not?—It is a very similar instance. I could give you some more.

20,944. They are both cases, are they not, in which you would value on different principles according to circumstances? Supposing that this property in Winchester House were occupied as a whole by a lessee, you would then, in addition to the ground rent, take a certain per-centage on the capital value?—Yes, I should; I tried to explain that I should, but it would be the true ground value of course.

20,945. But if let out to a large number of individual occupiers you simply take the aggregate of those rents, and after deduction of the necessary outgoings, get at your rateable value, which may or may not be less than the actual ground rent paid?—That is exactly so.

20,946. Can you justify those two separate principles of assessment under the law of rating as it stands?—Only in this way. That the man who is going to occupy and hold the place himself, if he chooses to take for his own special purpose a lease of a fictitious value, I would come to the conclusion that he would have to pay for it, but it might not be supported on appeal.

20,947. Are you entitled to do that under the law as it stands?—If one could get proved to one by a person that he had given a great deal more than he ought he would be entitled really to have it reduced, although there would be a great difficulty in getting it reduced before the Assessment Committee.

20,948. Are you justified in making the distinction? Ought you not to look to the value of that building to the hypothetical tenant, taking it one year with another?—You should; I entirely agree that you ought to look to the value of that building, and see how much it would let for year by year to some person other than yourself.

20,949. Then you would agree with me that it is not that there is an under-assessment in the case of such a property as Winchester House, or as the property which you mentioned as having been bought by Sir Samuel Montagu, but that there is an over-assessment in cases in which a person, possibly for his own convenience and advantage, gives what you would regard as a fictitious value, and agrees to pay an entirely fictitious ground rent?—I know of several such cases in the City besides those I have quoted, exactly on all-fours with them. I cannot agree that there is an under or over assessment as stated in the question.

20,950. (Mr. Smith.) Your evidence, after all, only comes to this, does it not, that it is a question of degree; it is not only in the City of London that people give extravagant prices for particular places?—Possibly that

would be so, but it would be done to a bigger extent in the City.

20,951. I say it is a question of degree?—That would be so, they will do the same thing in Birmingham, or Newcastle, or anywhere else.

20,952. I wanted to ask you one question about some of these City parishes. The Bank of England is in three parishes, is it not?—Yes.

20,953. How many acres does it cover?—I think it is five or six acres.

20,954. (Mr. Arthur O'Connor.) The Bank of England covers six acres?—Over five, it is somewhere about five acres, I think.

20,955. (Mr. Smith.) How are the overseers elected in the case of the Bank of England, extending over three parishes?—The Bank exists under a charter, but is rated under special private Acts of Parliament. I can tell you about two of them, one of them has to be the clerk for the time being of the Mercers Company.

20,956. That is Mr. Watney, is it not?—That is Mr. John Watney; another has to be the Governor for the time being of the Bank of England.

20,957. But he has to assess his own property?—Yes, in accordance with the private Acts of Parliament. The other one has to be the churchwarden of the adjoining parish. That used to be the doctor who used to live in the street there—in Bank Buildings.

20,958. St. Christopher-le-Stock or St. Bartholomew's?—I think it is St. Christopher-le-Stock.

20,959. It practically comes to this: that the Governor of the Bank of England assesses his own property?—I beg your pardon—I want to be absolutely accurate; it is the chief cashier for the time being, and the chief cashier when I had to do with it was Mr. May. The three are the chief cashier for the time being, the clerk to the Mercers' Company, and the churchwarden of the adjoining parish.

20,960. Notwithstanding the evidence of the last witness that is hardly an ideal system of valuation, is it?—I am told that the Bank is rated under special private Acts of Parliament, and I am told that these Acts cannot be interfered with.

20,961. That is another question, but apart from the charter it is hardly an ideal system, is it?—If they had no special Acts I should not say it was altogether a perfect system of rating it.

20,962. (Mr. Arthur O'Connor.) When you say the Bank of England covers five acres, do you not mean the Bank of England property?—No, I mean only the Bank.

20,963. The building?—Yes. It is surrounded by four streets, and—I think I am right—it is either just under or just over five acres. It is a prodigious frontage—four streets, you know.

20,964. I am acquainted with it, but then does not the Bank own the Bank Buildings and the National Debt Office?—Yes.

20,965. Have you included all that?—No, I am only just taking the square block that is surrounded by the four streets. They own, as a pure matter of fact, all that side of the street, the London Joint Stock Bank being at present their tenants—they own all the left-hand side and most of the side at the back.

20,966. (Mr. Balfour.) Could you tell us what it is rated at?—55,000*l.*, I think.

20,967. (Mr. Arthur O'Connor.) I want you to enable me to do full justice to your position, and therefore I will ask you, if you will, to put in a short statement exactly of the predominant idea which you want to present to us. You come here to give us evidence; now what is the thing that you want to urge upon us, what is the kernel of your evidence that you want us to appreciate?—That you cannot take the City and put it on all-fours with any other portion of the metropolis. I know the whole of it, including St. George's, Hanover Square, which is the next most valuable, and you cannot compare the City to any such place.

20,968. When you have said that, what then?—And then because of the peculiarities of a man taking a block of buildings on lease, or putting them up on lease he lets them off as he best can and the lettings of that particular block or of the particular blocks. There are some men who own 100,000*l.* a year in the

Mr. W.  
Barnett.

Bank of  
England :  
The system  
under  
which the  
Bank is  
valued.

The City  
of London  
is said to  
be a district  
of an  
exceptional  
character  
for the  
purposes of  
valuation.

Difference  
in the  
method of  
valuation  
of a property  
occupied by  
the purchaser  
and occupied  
by his  
lessee.  
The proper  
basis  
is the value  
of the property  
to a hypothetical  
tenant.

Mr. W.  
Barnett.  
21 July '98

City of London alone, one of them I know for whom I act, that particular income is dependent entirely upon commercial prosperity, upon the fact of things being good upon the Stock Exchange, and upon the fact of things being good generally. But a time of depression comes, and I will take now that valuation of Copthall House, which did belong to Messrs. Tubbs, Lewis, & Co. Five years ago that Copthall House had not 200*l.* worth a year of tenants in it, but during the last two years, because of this boom on the market, and one thing and another, it has all been filled up. You have to take all that into account in the case of that one house, Copthall House.

20,969. I suppose it is conceivable that in times of agricultural depression the value of land in Essex might go down?—Unfortunately, to my knowledge, it did.

20,970. Therefore those considerations are not altogether confined to the City of London?—They are not, except that the area is smaller, not greater, and in the one case they are fluctuations, and in the other depression in value.

20,971. Is there anything else that you want us to bear in mind?—I do not know more particularly that there is; but may I make one statement in so far as the election of these overseers is concerned? I know some of them, very few I was going to say, but I do know some few. When it is suggested that they are elected by the ratepayers I should like to say that they are elected, rather, by the people who are on the rate books. That is, you take a given parish, being a liveryman, which of course I am, naturally, does not give you the right to vote for an overseer or churchwarden; it only gives you the right to vote for a member of Parliament. To have the right to vote for the local officers, for the churchwardens and overseers, you must be on the rate book. The people who are on the rate book are in no sense or form ratepayers, I happen to be one, but I am only one, perhaps, out of five hundred. They are legally lodgers. For instance, in St. Peter le Poor—that is the parish I am in—there are about 600 people, and of those 600 you will not find six who are property owners—they are only lodgers but of course they occupy valuable tenement offices and floors.

20,972. (Sir John Hibbert.) How would they appear on the rate book—as lodgers?—Yes. When you divide up the rent, you get them all above the valuation. In these buildings the total rents may be about 10,000*l.*, and if you have only 50 tenants they all come above the valuation, and you put them all on to the list. It was

taken up to the Court of Appeal, I believe, on that very subject.

20,973. (Mr. Arthur O'Connor.) How many of these lodgers or other people on the valuation list attend as a rule at the election of an overseer; have you ever been to the election of an overseer?—Yes, several times.

20,974. How many attended?—The last time I went to St. Peter le Poor I think there were about 30.

20,975. Mostly lodgers?—They are tenants; I call them lodgers because they do not own the piece.

20,976. Was it exclusively the lodgers or the non-tenants who attended?—There was only one property owner. You wanted to know who were overseers; I will give you the name of one, Mr. Sheppard, of Sheppard, Pelley, Scott, & Co., stockbrokers, he happens to be the churchwarden, and he was there among the number. He is not a lodger because he owns his own freehold.

20,977. He was quite remarkable and remarked?—He was not.

20,978. Has there been any contest?—Yes.

20,979. On that particular occasion?—Yes, as to who should be churchwarden and overseer.

20,980. There was a contest for the overseer?—Only by show of hands in the room; you know we do not go to a poll on that.

20,981. The same gentleman was re-elected, was he not?—Mr. Sheppard was at my suggestion re-elected.

20,982. Is there any other point that you wish to impress upon us?—No. As to that question of the assistance of the surveyors of taxes, they always have a right to appeal, and they do appeal.

20,983. If you have no other point, let me ask you are those cases of Winchester House, the Montagu interest, and the other which you told us about of the 3,000*l.*, the 5,000*l.*, and the 8,000*l.* a year, to be taken as specimens of the condition of things in the City of London generally?—No. I think I stated to the Chairman that they are to be taken as an example of some, and that I could quote others of my own knowledge—they are not generally the case of course.

20,984. Would those cases specified, and the others which you might mention, represent the normal condition of things or the exceptions?—The exceptions, undoubtedly.

20,985. Then we can regard them as exceptions?—Undoubtedly.

The witness withdrew.

Adjourned.

Mr. W.  
Barnett.  
21 July '98

Winchester House, valuation of: This is a case of an exceptional character.

# I.—GENERAL INDEX TO EVIDENCE.

THE FIGURES REFER TO THE NUMBERED QUESTIONS IN THE MINUTES OF EVIDENCE.

Index  
to Evidence.

## ABILITY TO PAY, TAXATION UPON PRINCIPLE OF:

Difficulties of rating or taxing a man upon this basis (Mr. Costelloe), 20,431-2.

## ADVERTISEMENTS, RATING IN RESPECT OF:

Rating in respect of advertisements on omnibuses suggested (Mr. Dethridge), 12,959-61, 12,968.

Rating in respect of posters and wall advertisements suggested (Mr. Dethridge), 12,998-9; (Mr. Tagg), 18,594, 18,624-8.

Suggested duties on advertisements should be raised by Imperial authorities, and distributed to localities according to rateable value (Mr. Dethridge), 12,964-6.

## AGRICULTURAL LAND, VALUATION OF:

Assessment committee of farmers value land at a low figure and houses at a high one (Rev. R. Kennedy), 18,854-9.

Barnardiston. Assessment Committee of farmers put a low valuation on land (Rev. J. Manners Smith), 18,986-94, 18,999-19,004, 19,113-7.

North Fambridge. Assessment Committee of farmers value land at a low figure, and their interests conflict with their duty (Rev. R. F. McLeod), 19,292-304, 19,330-49.

## AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16):

Is greatly appreciated by the agricultural interest and has demonstrated the inequalities in rating, (Mr. Male), 11,990-6.

Objections to the Act (Mr. Hills), 19,834-7.

Is unjust to the urban ratepayers (Mr. Costelloe), 20,124.

Benefits the landed interest but not the tithe owners, (Rev. J. Manners Smith), 19,084-8.

Effect upon the income derived from tithe of the vicar of Wressell (Rev. R. Kennedy), 18,785-97; 18,815-26; 18,860-74.

Effect upon the income of the Vicar of Bettws-yn-Rhŷs. Asserted that the rates would have been less if the Act had not been passed (Rev. E. Lodwick Ellis), 18,911-27; 18,945-74.

Benefit derived by Rector of Keyston as regards glebe land (Rev. Eben Molloy), 19,170-7.

Effect upon the Rector of Molesworth, who has a large amount of glebe land let (Rev. Eben Molloy), 19,187-99.

Effect of Act in the Parish of North Fambridge (Rev. R. F. McLeod), 19,210-49.

Act has not been a hardship on the Rector of North Fambridge (Rev. R. F. McLeod), 19,243-9; 19,263-7.

## APPEALS (VALUATION):

### (a.) To Sessions.

Power of appeal. Appeal to Special Sessions might be abolished (Mr. Male), 11,820-2; 11,891-908.

There are too many appeal courts. Quarter Sessions should be the only appeal court (Mr. Male), 11,971-6.

Constitution of the London Quarter Sessions is satisfactory, but they are overburdened with work (Mr. Harper), 12,270-3.

Quarter Sessions unsatisfactory tribunals (Mr. Dewey), 13,050.

Quarter sessions not a satisfactory tribunal. A special tribunal desirable (Mr. Vallance), 12,901-12.

Courts of Quarter Sessions should be superseded by a Special Tribunal having commercial and rating knowledge to hear appeals. This would secure greater uniformity in valuation (Mr. Vigers), 19,419-29.

A central authority analogous to that of the Railway Commission should be constituted to hear rating appeals (Mr. Vigers), 19,377.

## APPEALS (VALUATION)—cont.

Number of, in London (Mr. Male), 11,909-15.

Insufficiency of powers of appeal in Metropolis against totals of parishes (Mr. Dewey), 13,004-6.

Appeals from Assessment Committee in Whitechapel, very few in number (Mr. Vallance), 12,758-60.

Power of one union in Metropolis to appeal against the totals of another should be extended to the rest of the country (Mr. Clark), 12,073-6.

Against site value. See under "SITE VALUE AND STRUCTURAL VALUE."

Powers of London County Council. See under "LONDON COUNTY COUNCIL."

### (b.) To higher Courts.

Appeal court analogous in its constitution to Railway Commission would be advantageous (Mr. Male), 11,977.

Special tribunal to hear rating appeals not desirable (Mr. W. H. B. Castle), 13,720-5.

## ASSESSMENT COMMITTEES:

### (a.) In England and Wales (except the Metropolis).

Should be appointed by the Borough Authorities and not by the Poor Law authorities (Mr. Tagg), 18,611-5, 18,661-5, 18,702-19, 18,753-62.

District Commissioners of Taxes, but not Surveyors of Taxes, should be *ex officio* members of Assessment Committees (Mr. Male), 11,859-63; 11,920-3. Surveyors should attend all meetings, 11,859-63.

### (b.) In the Metropolis.

Committees should be appointed by the Municipal Authorities and not by the Board of Guardians (Mr. Tagg), 18,611-5, 18,661-5, 18,702-19; (Mr. Hills), 19,746-58, 19,764-71. Or they might be composed partly of representatives of the Board of Guardians and partly of the Municipal Authority, 19,820-33.

London County Council should be represented upon Committees (Mr. Male), 11,841-2; 11,940-1; (Mr. Clark), 12,086-92; (Mr. Vallance), 12,769-70; but should have no authority over the committees, (Mr. Male), 11,853-6.

London County Council should be given a *locus standi* on assessment committees with powers similar to those of the surveyors of taxes (Mr. Vallance), 12,695-9, 12,741-7, 12,750. This arrangement should include provisional valuations, 12,695-9. Question as to whether their duties would clash, 12,741-7.

Desirable for District Commissioners of Income Tax and county councillors to be members of assessment committees (Mr. Male), 11,818-9.

Vestry clerks are customarily invited to conference with assessment committees before the lists are prepared by the overseers, in order to secure uniformity (Mr. Vallance), 12,669-72.

Islington. Committee is appointed by the Vestry, (Mr. Dewey), 13,119-30.

City of London. Number of Members of Committee (Mr. Wagstaff), 20,862-4; Committee perform their duties satisfactorily, 20,875-84.

## ASSESSMENT CONFERENCES OF LONDON COUNTY COUNCIL:

Conferences of representatives of assessment committees in the metropolis convened by London County Council (Mr. Male), 11,916-9.

Conferences were beneficial (Mr. Male), 11,849-50; (Mr. Leete), 13,249-52; (Mr. Hills), 19,759-63.

Conferences created greater uniformity in the system of valuation in London (Mr. Harper), 12,144; (Mr. Vallance), 12,704-12; (Mr. Dewey), 13,065-6, 13,196; and have increased the rateable value, 13,096-9; (Mr. Tagg), 18,529-37.

Assessment conference, 1893-4. Return by London County Council containing certain resolutions passed (Mr. Harper), 12,194-9.

**BANKS, VALUATION OF:**

Suggested by London County Council that certain banks in the City of London are undervalued (Mr. Harper), 12,217-23.

Bank of England. System under which it is valued (Mr. Barnett), 20,952-66; suggested by London County Council that it is undervalued (Mr. Harper), 12,205-16.

**BARNARDISTON PARISH (SUFFOLK):**

Parish has a high rate in the £. The district has suffered from agricultural depression (Rev. J. Manners Smith), 18,980-5, 19,033-57.

Rise in the school board rates in recent years (Rev. J. Manners Smith), 19,018-22.

Assessment Committee of farmers put a low valuation on land (Rev. J. Manners Smith), 18,986-94, 18,999-19,004, 19,113-7.

**BARNARDISTON (SUFFOLK), RECTOR OF:**

Evidence of the Rector (Rev. J. Manners Smith), 18,978-19,120.

Value of Living (Rev. J. Manners Smith), 19,058-83, 19,118-20.

Rates in respect of Rector's tithe have increased owing to agricultural depression and to Assessment Committee of farmers putting a low valuation upon land (Rev. J. Manners Smith), 18,980-94.

If the Rector paid no rates in respect of his tithe, owners of other property in the parish would have a large increase in rates (Rev. J. Manners Smith), 18,995-8.

**BARNETT, Mr. W., Valuer to the Assessment Committee of the City of London Union, Evidence of, 20,885-985.****BENEFITS DERIVED FROM EXPENDITURE OF LOCAL AUTHORITIES:**

How far does expenditure of rates benefit the property of the owner, and how far is it a benefit to the tenant discussed. At the end of the lease the landlord may get the advantage of the improvements, but the tenant has the advantage during his term (Mr. Warner), 13,472-85.

How far does expenditure of rates benefit property of owners. Loans borrowed by municipality and capital repaid from rates as well as interest (Mr. Warner), 13,527-35.

Expenditure of rates upon all objects ultimately benefits site values to some extent though the occupier gets some advantages (Mr. Costelloe), 20,115-23, 20,261-6.

Rates in St. George's, Hanover Square, have considerably increased in recent years. Rents have not gone up (Mr. Warner), 13,586-92.

**BETTWS-YN-RHÔS (DENBIGH), VICAR OF:**

Evidence of the Vicar (Rev. E. Lodwick Ellis), 18,895-977.

Value of tithe rentcharge, (Rev. E. Lodwick Ellis), 18,898-902.

Rates paid by (Rev. E. Lodwick Ellis), 18,928-32; 18,945-74.

Effect of Agricultural Rates Act, 1896, upon Vicar's income. Asserted that the rates would have been less if the Act had not been passed (Rev. E. Lodwick Ellis), 18,911-27, 18,945-74.

**BUILDING LAND. (See under "LAND (BUILDING).")****BUILDING LESSEE:**

Definition of (Mr. Warner), 13,438-49.

(See also under "INCIDENCE OF LOCAL TAXATION.")

**CADOGAN ESTATE IN THE METROPOLIS:**

The owner of the site values is said to have reaped the benefit of a large amount of local expenditure (Mr. Costelloe), 20,258-60.

**CAMBERWELL PARISH:**

Evidence of the Vestry Clerk (Mr. Tagg), 18,476-781.

Valuation. System adopted (Mr. Tagg), 18,484-93. Valuation in, is properly carried out (Mr. Tagg), 18,581-8.

Number of Assessments (Mr. Tagg), 18,479-83.

Compounding in (Mr. Tagg), 18,494-506.

Government property. Treasury contributions are adequate (Mr. Tagg), 18,545-6.

**CANALS, VALUATION OF:**

Discussed (Mr. Dethridge), 12,933-9.

CASTLE, Mr. E. J., Q.C., Recorder of Bristol. Evidence of, 13,979-14,105.

CASTLE, Mr. W. H. B., of the firm of Castle & Son, Surveyors and Valuers, Evidence of, 13,646-978.

**CITY OF LONDON:**

Evidence of the Manager of the Assessment Department of the Solicitors to the City of London Union (Mr. Huxtable), 20,449-782.

Evidence of the Vice-Chairman of the City of London Union Assessment Committee (Mr. Wagstaff), 20,783-885.

Evidence of the Valuer to the Assessment Committee of the City of London Union (Mr. Barnett), 20,885-985.

Memorandum prepared on behalf of the Corporation (Mr. Huxtable), 20,451-3.

Valuation of certain properties (Mr. Huxtable), 20,502-27. Licensed houses, 20,595.

Rental value is the basis except in the case of exceptional properties (Mr. Huxtable), 20,682-9.

Objections to Valuation Lists in certain years (Mr. Wagstaff), 20,800-2.

Exemption of City from the payment of certain rates (Mr. Huxtable), 20,608-15.

**(a.) Allegation of Under-valuation.**

Under-valuation is prevalent (Mr. Harper), 12,169-72. Estimated extent of under-valuation (Mr. Clark), 12,040-5.

Properties undervalued (Mr. Male), 11,8024-; 11,824-34.

Alleged by London County Council that certain property is undervalued (Mr. Harper), 12,233-48.

Under-valuation due to the interpretation by the assessment committee of a "reasonable rent." Rack-rent should be taken as the basis (Mr. Male), 11,882-90; (Mr. Clark), 12,039.

Property would be adequately valued if the London County Council had representation on assessment committee and "rack-rent" was the basis for valuation (Mr. Male), 11,864-9.

Under-valuation is thought not generally to exist (Mr. Huxtable), 20,459-83; 20,520-7.

Suggested by London County Council that certain banks and buildings are undervalued (Mr. Harper), 12,205-23.

Bank of England, system under which valued (Mr. Barnett), 20,952-66. Suggested by London County Council that it is undervalued (Mr. Harper), 12,205-16.

10 per cent. not added to rents reserved under repairing leases to arrive at gross value, as in other parts of the metropolis (Mr. Leete), 13,398-402. Loss of rateable value owing to this (Mr. Harper), 12,121-9.

Deductions allowed in case of certain leasehold property (Mr. Huxtable), 20,767-82.

Site value and structural value. Effect of present system of making deductions in arriving at rateable value (Mr. Clark), 12,055-8.

Deductions are made without regard to the proportionate value of site and structure (Mr. Huxtable), 20,690-707.

Valuation of site and of buildings in the case of freehold and leasehold property (Mr. Huxtable), 20,552-69.

**(b.) Exceptional Character of City Property.**

Character of rateable property (Mr. Huxtable), 20,484-501.

The City is said to be a district of an exceptional character for the purposes of valuation, chiefly owing to the high value of land (Mr. Barnett), 20,967-82. Illustration of properties of an exceptional character. The sum which a purchaser will give in the City for a ground rent with a good lessee, 20,889-923.

Property sometimes fetches fancy prices owing to purchasers requiring it for a special purpose in a particular area. Difference in the method of valuing such a property if occupied by the purchaser, or if sub-let by him (Mr. Barnett), 20,924-32.

Valuation of site values said to be more difficult than in other towns (Mr. Huxtable), 20,670-5.

Valuation of machinery in City. Machinery lying idle (Mr. Huxtable), 20,595.

Index  
to  
Evidence.

CITY OF LONDON—*cont.*(c.) *Valuation Authorities.*

Valuation authorities. The number of parishes and of overseers. The present system thought to be the best. Expert valuers instead of overseers thought to be undesirable (Mr. Wagstaff), 20,786-92; 20,823-30.

Assessment Committee. Number of members (Mr. Wagstaff), 20,862-4. Committee perform their duties satisfactorily, 20,875-84.

One valuation authority would be undesirable (Mr. Huxtable), 20,570-86.

Valuation of the City of London could not be made by one surveyor as in Glasgow (Mr. Huxtable), 20,648-69.

Surveyors of Taxes protect the interests of the inland revenue satisfactorily (Mr. Huxtable), 20,633-47; (Mr. Wagstaff), 20,831-6; 20,865-74. They give material assistance to the assessment committee, 20,793-9; 20,831-6.

## CLAPHAM PARISH:

Land has gone up in value owing to the increase of population (Mr. Hills), 19,798-806.

Rates in (Mr. Hills), 19,772-97.

CLARK, MR. B., Surveyor of Taxes, Evidence of, 12,001-92.

## CLUBS, VALUATION OF:

Alterations in assessment of certain clubs in London suggested by London County Council (Mr. Harper), 12,496-506.

COLLECTION OF RATES. (*See under "LEVYING AND COLLECTION OF RATES."*)

## COMPOUNDING:

The primary object of the system was convenience of collection (Mr. Vallance), 12,786-8.

System is convenient, but prevents the poor from feeling the pressure of rates (Mr. Vallance), 12,846-50.

Compounding is a more profitable system to the authorities than direct collection in the case of the worst class of properties (Mr. Tagg), 18,720-30.

If abolished would lead to difficulties in the collection of rates (Mr. Dewey), 13,078-82.

A uniform practice should be made compulsory (Mr. Vallance), 12,690-1.

The same allowances should be given in case of poor and sanitary rates (Mr. Tagg), 18,666-86.

Tenement houses should be compounded for (Mr. Dewey), 13,226-38.

System adopted in Camberwell (Mr. Tagg), 18,494-506.

Islington, practice in (Mr. Dewey), 13,057; 13,071-5; 13,203-9.

In Kensington (Mr. Leete), 13,262-4; 13,310-3.

Whitechapel, practice in (Mr. Vallance), 12,689.

## CORPORATION PROPERTY, VALUATION OF:

Should be valued like any other class of property (Mr. W. H. B. Castle), 13,879-87.

COSTELLOE, MR. B. F. C., Chairman of the Local Government and Taxation Committee of the London County Council, Evidence of, 19,907-20,448.

## COUNTY PROPERTY, VALUATION OF:

Should be valued like any other class of property (Mr. W. H. B. Castle), 13,701-6; 13,879-87.

## CYCLES, DUTIES ON:

Registration tax proposed (Mr. Dethridge), 12,947-52; 12,968; 12,992-7. Should carts and horses also be taxed, 12,992-7.

Suggested duties should be raised by Imperial authorities, and distributed to localities according to rateable value (Mr. Dethridge), 12,964-6.

DARBISHIRE, MR. W. A., Managing Director of Penyrsedd Slate Quarry, in the parish of Llandwrog, Carnarvonshire. Evidence of, 19,838-906.

DEDUCTIONS FOR REPAIRS, INSURANCE, &c., TO ARRIVE AT RATEABLE VALUE. (*See under "REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE," also "LEASEHOLD PROPERTY" and "SITE VALUE AND STRUCTURAL VALUE."*)

## DEMAND NOTES AND RECEIPT FORMS:

Uniformity desirable. Actual purposes for which the rates are levied should be specified (Mr. Dewey), 13,212-25.

DETHRIDGE, MR. F., Vestry Clerk of the parish of Paddington, Evidence of, 12,914-13,000.

DEWEY, MR. W. F., Vestry Clerk of the parish of Islington, Evidence of, 13,001-241.

## DIVISION OF RATES BETWEEN OWNER AND OCCUPIER:

Would probably lead to increased expenditure upon certain objects (Mr. Costelloe), 20,064-7.

Question of interference with existing contracts discussed (Mr. Costelloe), 20,167-76.

## DOCKS, VALUATION OF:

Method of arriving at the tenant's capital. Difficulties of ascertaining this (Mr. Vigers), 19,395-409.

It would save much expense if they were valued as a whole, and then the valuation allocated to the various parishes according to the amounts earned in them (Mr. Vigers), 19,410-8.

## ECCLESIASTICAL COMMISSIONERS:

Tithe rentcharge in the hands of the Ecclesiastical Commissioners. Whether it should be exempted from being assessed to local rates discussed (Rev. H. Macpherson), 14,168-80.

## EDUCATION, COST OF:

Amount and how raised (Mr. Macnamara), 18,430-42. Should be a more uniform charge (Mr. Macnamara), 18,470.

Should be made a national charge. Question of administration (Mr. Dethridge), 12,976-7; (Mr. Morgan-Browne), 18,335-9.

Cost per head to the London School Board (Mr. Macnamara), 18,448-50.

The money which the London School Board has to spend is greater in proportion compared with other school boards (Mr. Morgan-Browne), 18,215-24; 18,335-9.

Barnardiston. Rise in the school board rates in recent years (Rev. J. Manners Smith), 19,018-22.

## EDUCATION GRANTS:

Government Grants towards education have not led to extravagance (Sir C. Elliott), 18,170-8.

Grants in respect of truant and industrial schools should be increased (Sir C. Elliott), 18,155-69.

Government Grants in aid of School Board rates should be increased (Sir C. Elliott), 18,179-86.

Question of local control discussed, and of safeguards for careful local administration (Mr. Morgan-Browne), 18,395-411.

Principles on which the amount of contribution should be based (Mr. Morgan-Browne), 18,374-94.

Government Grants should be proportionate to the cost of carrying on the various branches of education (Sir C. Elliott), 18,187-95.

Test of cost as a basis of distribution discussed. Question of local control discussed, and of safeguards for careful local administration (Mr. Macnamara), 18,415-29; 18,443-7; 18,471-5.

Position of voluntary schools if the Government Grant for education given on the basis of cost (Mr. Macnamara), 18,451-4.

Proportion obtained by London (Mr. Gomme), 12,623-6.

Grants received by London School Board for pupils learning certain branches of domestic economy said to be inadequate (Sir C. Elliott), 18,140-7.

Grants received by London School Board for those who are deaf and dumb, and mentally deficient said to be inadequate (Sir C. Elliott), 18,148-54.

## ELECTRIC LIGHT UNDERTAKINGS, VALUATION OF:

A central authority desirable (Mr. Dewey), 13,048-9.

Rating in respect of profits is a just system (Mr. W. H. B. Castle), 13,687-97.

ELLIOTT, SIR CHARLES, Member of the London School Board, Evidence of, 18,139-96.

ELLIS, REV. E. LODWICK, Vicar of Bettws-yn-Rhôs (Denbigh). Evidence of, 18,895-977.

EQUALISATION OF RATES ACT. (*See under "LONDON (EQUALISATION OF RATES) ACT."*)

**FREEHOLD PROPERTY, VALUATION OF:**

Under-valuation said to be prevalent in Metropolis (Mr. Harper), 12,130-1.

**GAS LIGHT AND COKE COMPANY:**

Appeal by (Mr. Dewey), 13,050; 13,061-2.

**GAS UNDERTAKINGS, VALUATION OF:**

Divergence in valuation (Mr. Harper), 12,338-44.

Rating in respect of profits is a just system (Mr. W. H. B. Castle), 13,687-97.

Valuation on the basis of what a hypothetical tenant would give. Effect of this system upon the South Metropolitan Gas Company, and the Crystal Palace Company (Mr. Vigers), 19,381-94.

Method of arriving at the tenant's capital. Difficulties of ascertaining this (Mr. Vigers), 19,395-409.

It would save much expense if they were valued as a whole, and then the valuation allocated to the various parishes according to the amounts earned in them (Mr. Vigers), 19,375-6; 19,378-80; 19,410-8.

A central authority desirable (Mr. Dewey), 13,048-9. Discussion upon certain points raised by Mr. Livesey (Mr. W. H. B. Castle), 13,672-86.

**GIFFORD, FOX, & Co. v. THE CHARD GUARDIANS (63 L.T., 249):**

Witness considers that the case of Gifford, Fox, & Co. went rather too far in the direction of rating machinery (Mr. W. H. B. Castle), 13,816-32.

**GLEBE LAND, RATING IN RESPECT OF:**

Suggestion that it should be wholly exempted from being assessed to local rates and the deficiency arising therefrom paid out of the Exchequer (Rev. H. Macpherson), 14,143-8.

No claim made by clerical tithe owners for exemption from rates on income derived from glebe land (Rev. R. Kennedy), 18,844-53; 18,879-93.

**GOMME, MR. G. L., Statistical Officer of the London County Council, Evidence of, 12,606-66.****GOVERNMENT PROPERTY, VALUATION OF:**

Basis of present contribution still too low (Mr. Harper), 12,135-7.

Should be valued in the same way as other property (Mr. Harper), 12,135-7; 12,327-35; (Mr. W. H. B. Castle), 13,701-6; 13,879-87.

Camberwell. Treasury contributions adequate (Mr. Tagg), 18,545-6.

Whitechapel. Valuation is very fair. The property would be very difficult for the assessment committee to value, and the Treasury valuation is preferable (Mr. Vallance), 12,891-5.

**GROSS VALUE:**

Definitions of, in Income Tax Act and Valuation (Metropolis) Act (Mr. Dewey), 13,174-80.

Difficulty of rating on gross value on account of the different classes of property and their condition (Mr. Vallance), 12,783-5.

Rating on gross value would be unfair in some cases (Mr. Vallance), 12,761-8.

Abolition of, suggested for rating purposes (Mr. Harper), 12,346-53.

Abolition of gross value and adoption of rateable value for all rating purposes. The suggestion discussed (Mr. Tagg), 18,629-33.

**GROUND LANDLORD. (See under "INCIDENCE OF LOCAL TAXATION.")****GROUND LESSEE:**

Definition of (Mr. Warner), 13,438-49.

**GROUND RENTS:**

Ground rent continues to be paid, but it is not rated when leasehold property is vacant (Mr. Vallance), 12,876-8.

Whitechapel. Ground rents have gone up owing to increase of population (Mr. Vallance), 12,865-75.

**HARPENDEN, BENEFICE OF:**

Gross and net income (Rev. H. Macpherson), 14,126-9; 14,157-62.

**HARPER, MR. E. J., Assistant Valuer to the London County Council, Evidence of, 12,093-605.****HILLS, MR. H. G., Clerk to the Wandsworth District Board of Works, Evidence of, 19,698-837.**

**HUXTABLE, MR. E. V., Manager of the Assessment Department of the Solicitors to the City of London Union, Evidence of, 20,449-782.**

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

Proportion of expenditure borne by such contributions in different districts. Purposes of expenditure should be taken into consideration (Mr. Gomme), 12,627-34; 12,659-66.

Distinction between earned and unearned grants (Mr. Morgan Browne), 18,225-33; 18,306-26.

Grants in lump sums tend towards local extravagance (Mr. Costelloe), 20,283-5. But if local authorities are made responsible for raising revenue, there is not the tendency to extravagance, 20,412-21.

Objection to present system owing to uncertainty of amounts (Mr. Costelloe), 20,395-8.

The basis on which they should be distributed discussed. The rural areas said to be relieved to an excessive amount under the present system. The areas where the pressure of local taxation is greatest should be given the greatest amount of relief (Mr. Costelloe), 20,111-4.

If the present system is retained, they should be so distributed that the areas where the pressure of local taxation is greatest should be given the greatest amount of relief (Mr. Costelloe), 20,124-7.

Exchequer contributions should be abolished, and taxes which are really in the nature of local, and not Imperial revenue, should be retained by the local authorities. The burden of certain services now paid for locally should be borne by the nation, but there would have to be a clear understanding as to what are local and what are national services (Mr. Costelloe), 20,020-4; 20,106-9; 20,269-70.

Government grants should be contributed to a locality in proportion to the amount which that locality contributes to the Imperial Exchequer (Mr. Morgan Browne), 18,202-14; 18,234-53; 18,303-5. Regard also being had to efficiency. But such a system would result in the most necessitous district getting the smallest share, 18,234-53.

If they had not been made, certain taxes would have been reduced or remitted (Mr. Costelloe), 20,210-5.

*Position of London.*

Results of the present system upon the Metropolis, and suggested alterations in the system. Suggested that the taxes now collected locally should be retained by the local authorities in lieu of the present Exchequer contributions (Mr. Costelloe), 20,106-9.

Under the present system it is suggested that the Metropolis gets too little, but the present system is objected to, and there should be a new basis (Mr. Costelloe), 20,006-19; 20,110; 20,207-9; 20,395-8.

London contributes more to Exchequer contributions than London receives from them (Mr. Costelloe), 20,406-11.

The Metropolis receives back a less proportion of its contributions to the Imperial Exchequer than do other parts of the country (Mr. Morgan Browne), 18,291-9.

A system could not be devised which would secure to the London ratepayer more than they would contribute (Mr. Costelloe), 20,286-7.

(See also under "EDUCATION GRANTS.")

**IMPERIAL AND LOCAL SERVICES, EXPENDITURE UPON. (See under "LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON.")****IMPERIAL TAXATION:**

Amount of direct and indirect taxation (Mr. Macnamara), 18,455-69.

Abolition of gross value and adoption of rateable value. The suggestion discussed (Mr. Tagg), 18,616-23; 18,629-33.

Exchequer contributions should be abolished and taxes which are really in the nature of local and not Imperial revenue should be retained by the local authorities. The burden of certain services now paid for locally should be borne by the nation, but there would have to be a clear understanding as to what are local and what are national services (Mr. Costelloe), 20,020-4; 20,106-9; 20,269-70.

Amount contributed from the Metropolis (Mr. Morgan-Browne), 18,254-90.

**IMPERIAL TAXATION—cont.**

The Metropolis contributes to the Imperial Exchequer more in proportion to its population than any other district in the country (Mr. Morgan-Browne), 18,327-34.

**IMPERIAL TAXES, COLLECTION OF:**

Size of survey districts outside Metropolis (Mr. Male), 11,857-8.

In a local sanitary authority's district the collection should be made by the collectors of that authority (Mr. Tagg), 18,524-8.

**INCIDENCE OF LOCAL TAXATION:**

Incidence of urban rates as between owners and occupiers (Mr. Harper), 12,535.

Tenants take into consideration the present and prospective burden of rates (Mr. Warner), 13,579-82.

To what extent do ground landlord and building lessee take payment of rates into consideration when making their contracts, and to what extent does the ground landlord bear the burden of rates (Mr. Warner), 13,450-6; 13,470-1; 13,548-72.

An increase of rates falls on the occupier during his term; but such increased rates are imposed by the representatives of the occupiers (Mr. Warner), 13,571-7.

How far can the occupier shift the burden of increased rates upon the owner (Mr. Warner), 13,457-64.

The burden of rates ultimately falls on the ground landlord. The occupier is the medium who pays them (Mr. Warner), 13,456; 13,486-92; 13,497-526; 13,578; 13,583-5.

Whether taxation should be placed upon owner or occupier (Mr. Tagg), 18,549-57.

Property. Increase in the value of, owing to increase of population and of traffic facilities. Benefit to landowners. The person who receives the greatest benefit out of property should pay the greatest proportion (Mr. Tagg), 18,566-80.

Rent. How far influenced by a rise in rates (Mr. Tagg), 18,731-52.

Building lessees entering into a contract for a long series of years take the question of rates into consideration (Mr. Vigers), 19,512-8; 19,586-608.

Who should be assessed (Mr. Vigers), 19,677-80.

How far the burden of rates is borne by occupiers and by owners (Mr. Costelloe), 20,001-5; 20,247-51.

Owners of site values benefit from the expenditure of public money on their properties, and yet the rates largely fall on the occupiers. At any rate, the incidence should not appear to fall exclusively on the occupiers, as it induces them to resist expenditure on improvements (Mr. Costelloe), 19,998-20,001.

Present system of rating occupiers and not owners causes a constant resistance to even necessary expenditure by the occupiers, as they feel they do not get a large portion of the advantage of the expenditure. There would be less friction if the owner paid a share (Mr. Costelloe), 20,364-80.

Value of the occupation of the occupier is not an equitable basis for local taxation. It is not a measure of a man's income compared with that of his neighbours (Mr. Costelloe), 20,272-4; 20,424-7. The element of the site value should be a greater factor. If the incidence of the rate fell on the occupier, it would be necessary to graduate, 20,272-4.

Additional revenue from new sources, namely, in respect of site values, required by London County Council for new improvements, and also some readjustment of existing burdens on the ratepayers (Mr. Costelloe), 20,243-6.

Incidence of rates upon owners of residential property and business property is different, because the business man can pass on the burden of his rates to consumers to some extent (Mr. Costelloe), 20,427-30.

**INCOME TAX IN AID OF LOCAL EXPENDITURE:**

Rating on income. How to be effected in case of persons resident in more than one place (Mr. Dethridge), 12,953-6.

**INDUSTRIAL SCHOOLS. (See under "EDUCATION.")****INHABITED HOUSE DUTY:**

Should be handed over to local authorities (Mr. Dethridge), 12,968.

Should be utilised for local purposes, being essentially a local tax (Mr. Costelloe), 20,275-80; 20,310-4; 20,399-403.

If remitted to municipal authorities, would be a great advantage to them (Mr. Costelloe), 20,233-40.

Exemption of business premises, produces unfortunate results (Mr. Costelloe), 20,404-5.

**INLAND REVENUE:**

Evidence of Mr. W. Male, Inspector of Taxes, 11,774-12,000.

Evidence of Mr. R. Clark, Surveyor of Taxes, 12,001-92.

Powers of appeal, how far exercised (Mr. Harper), 12,274-9.

**INSURANCE, DEDUCTIONS TO ARRIVE AT RATEABLE VALUE. (See under "REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE.")****ISLINGTON PARISH:**

Evidence of the Vestry Clerk (Mr. Dewey), 13,001-241.

Parish is not in any Union, and maintains its own poor (Mr. Dewey), 13,012-4.

Assessment Committee is appointed by the Vestry, and the Vestry are the overseers (Mr. Dewey), 13,118-30.

Valuation of property comparatively an easy matter (Mr. Dewey), 13,189-91.

Effect upon Islington of under-valuation to the extent of 100,000*l.* in other parts of London (Mr. Dewey), 13,090-2.

Bates in Islington. Classes of ratepayers (Mr. Dewey), 13,142-59.

Tendency of rates to rise or fall in the last 30 years (Mr. Dewey), 13,104-8.

Compounding, practice in Islington (Mr. Dewey), 13,057; 13,071-5; 13,203-9.

Collection of rates. Comparison between Kensington and Islington. Number of committals to prison (Mr. Leete), 13,273-80.

Collection of rates made quarterly and has satisfactory results (Mr. Dewey), 13,058-60; 13,076-7; 13,142-9; 13,210-11.

Separation of site value from gross value is practicable (Mr. Dewey), 13,092-3.

**KENNEDY, Rev. W., Vicar of Wressell (Yorks),**  
Evidence of, 18,782-894.

**KENSINGTON PARISH**

Evidence of the Vestry Clerk (Mr. Leete), 13,242-434.

Parish is not in any Union and maintains its own poor (Mr. Leete), 13,244-5.

Vestry act as overseers (Mr. Leete), 13,244; 13,291.

Areas and powers of overseers (Mr. Leete), 13,290-7.

Preparation of valuation lists (Mr. Leete), 13,246-8.

Principles adopted in arriving at gross value (Mr. Leete), 13,254.

The maximum deductions for repairs, insurance, &c., are made (Mr. Leete), 13,259-61.

Licensed houses, valuation of (Mr. Leete), 13,255-8.

Purposes for which rates are levied and the authorities who expend them (Mr. Leete), 13,326-43.

Classes of ratepayers (Mr. Leete), 13,271-2.

Rateable value of empty property (Mr. Leete), 13,305-9.

Levying and collection of rates. All rates collected by the vestry. Purposes for which the rates are levied, and the authorities who expend them (Mr. Leete), 13,314-43. Rates collected half-yearly, 13,265-70. Empty houses, losses, arrears, &c., 13,281. Comparison between Kensington and Islington. Number of committals to prison, 13,273-80.

Compounding (Mr. Leete), 13,262-4; 13,310-3.

**KEYSTON (HUNTS), RECTOR OF:**

Evidence of the Rector (Rev. Eben Molloy), 19,121-206.

Particulars of Living. Statistics handed in by Rector (Rev. Eben Molloy), 19,124-41.

Benefit derived under Agricultural Rates Act by Rector as regards glebe land (Rev. Eben Molloy), 19,170-7.

**KEYSTON PARISH (HUNTS):**

Rates in Keyston (Rev. Eben Molloy), 19,124-41; 19,160-9; 19,178-86.

**LAND (BUILDING) VACANT, RATING IN RESPECT OF:**

Vacant land should be assessed to local rates to some extent (Mr. Harper), 12,481-3.

Objections to this (Mr. Vigers), 19,636-40. People do not hold vacant land in London until a rise in value, 19,646-9.

It would be unfair to rate vacant land as building land. It does not derive any occupation benefits, and there is no immediate profit to the owner. Very few owners would withhold land from tenants willing to take it for building purposes (Mr. Warner), 13,606-27.

Lands Clauses Act. Case of railway company having to pay rates in respect of property they have pulled down and before they have rebuilt again. Difference in the position of a railway company and private owner (Mr. Warner), 13,628-34.

**LAND TAX:**

Should be utilized for local purposes (Mr. Costelloe), 20,275-80; 20,310-4.

Valuation list in London should apply to land tax (Mr. Clark), 12,018-20.

**LEASEHOLD PROPERTY IN THE METROPOLIS, VALUATION OF:**

Addition of 10 per cent. to rents reserved under repairing leases to arrive at gross value, and deduction of one-sixth to arrive at rateable value. Extent of under-assessment due to this cause (Mr. Harper), 12,115-20; 12,313-26.

Addition of 10 per cent. for repairs, a fair proportion (Mr. Male), 11,942-9.

Practice of adding 10 per cent. to gross value and deducting 16 per cent. gives unnecessary trouble (Mr. Dewey), 13,135-41.

Rack-rent, method of arriving at (Mr. Male), 11,796-801.

Rent is the best evidence of rateable value of property let on repairing leases. Proportion of properties let on repairing leases in the Metropolis (Mr. Harper), 12,484-91.

Question of deductions for repairs, &c. in cases where site value exceeds the value of the whole hereditament (Mr. Harper), 12,456-76.

Property held under repairing leases. Deduction in respect of the sinking fund necessary to keep the premises in a position to command the rent (Mr. Harper), 12,477-80.

Alleged that nothing is added to rent reserved in the City of London (Mr. Leete), 13,398-402. Loss of rateable value owing to this (Mr. Harper), 12,121-9.

City of London. Deductions allowed in case of certain leasehold property (Mr. Huxtable), 20,767-82.

Leasehold interests are quite easy to value (Mr. Costelloe), 20,292-9.

**LEASEHOLD PROPERTY, POSITION OF LESSEES AND LESSORS WITH REGARD TO LOCAL TAXATION:**

Lessees in London cannot make any precise calculation when making a bargain as to what the rates are or will be. They therefore make a blind bargain (Mr. Costelloe), 19,923-5; 20,053-5; 20,252-60.

(See also under "INCIDENCE OF LOCAL TAXATION," "SITE VALUES, TAXATION IN RESPECT OF.")

**LEETE, Mr. W. C., Vestry Clerk of the Parish of Kensington, Evidence of, 13,242-434.****LEVYING AND COLLECTION OF RATES:**

Collection of rates should be made by one collector under one authority (Mr. Hills), 19,711-24.

Collection of rates and taxes in a local sanitary authority's district should be made by the collectors of that authority (Mr. Tagg), 18,524-8.

System in the Metropolis (Mr. Tagg), 18,634-9.

System in Camberwell. All rates collected on one demand note by one collector (Mr. Tagg), 18,507-11.

Camberwell. Number of summonses issued (Mr. Tagg), 18,512-5.

Kensington, all rates collected by the vestry. Purposes for which the rates are levied, and the authorities who expend them (Mr. Leete), 13,314-43.

**LEVYING AND COLLECTION OF RATES—cont.**

Kensington, rates collected half-yearly (Mr. Leete), 13,265-70.

Kensington, empty houses, losses, arrears, &c. (Mr. Leete), 13,281.

Comparison between Kensington and Islington. Number of committals to prison (Mr. Leete), 13,273-80.

Islington. Collection of rates made quarterly and has satisfactory results (Mr. Dewey), 13,058-60; 13,076-7; 13,142-9; 13,210-1.

**LICENSED HOUSES IN THE METROPOLIS VALUATION OF:**

System in London (Mr. Male), 11,799.

Return by London County Council giving particulars of (Mr. Harper), 12,258-9.

Under-valuation said to be prevalent (Mr. Harper), 12,130-1.

Half the premium now treated as capitalised rent (Mr. Harper), 12,138-9.

Whitechapel. They are not undervalued. Tied houses difficult to value (Mr. Vallance), 12,899-901. In Kensington (Mr. Leete), 13,255-8.

In City of London (Mr. Huxtable), 20,595.

**LIVERY HALLS IN CITY OF LONDON:**

Valuation of (Mr. Barnett), 20,933-9.

**LOANS RAISED BY LOCAL AUTHORITIES:**

Loans to Local Authorities by Trustees of Savings Banks suggested (Mr. Dethridge), 12,944-6; 12,969.

Loans are made to local authorities by the Government at 2½ per cent. (Mr. Dethridge), 12,962-3.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON:**

Matters of Imperial concern should be paid for by the Exchequer (Mr. Morgan-Browne), 18,346-73.

Expenditure on certain services should be met from Imperial sources. Question of control discussed, and how far Exchequer Grants for certain purposes would lead to extravagance (Mr. Costelloe), 20,025-38; 20,281-2.

Exchequer contributions should be abolished, and taxes which are really in the nature of Local and not Imperial revenue should be retained by the Local Authorities. The burden of certain services now paid for locally should be borne by the nation, but there would have to be a clear understanding as to what are local and what are national services (Mr. Costelloe), 20,020-4.

If expenditure on national and local objects could be distinguished, the wealthier communities would contribute more than they do now towards objects which had been nationalised (Mr. Costelloe), 20,288-91.

**LOCAL TAXATION (ENGLAND) ACCOUNT:**

Principles upon which grants under Local Government Act, 1888, were allocated (Mr. Gomme), 12,635-41.

**LONDON COUNTY COUNCIL:**

Evidence of the Assistant Valuer (Mr. Harper), 12,093-605.

Evidence of the Statistical Officer (Mr. Gomme), 12,606-66.

Evidence of Mr. B. F. C. Costelloe, 19,907-20,448.

Resolutions passed by the Council with reference to local taxation to be submitted to the Commission (Mr. Costelloe), 19,907-12; 19,954-7; 20,180-95; 20,241.

Council's powers of appeal (Mr. Harper), 12,224-32.

Have rights of appeal against valuation only as rate-payers (Mr. Clark), 12,063-5.

Powers of appeal against valuation discussed (Mr. Clark), 12,078-92.

Council should have power to make objections and to appeal in every parish (Mr. Harper), 12,163-8.

Alterations in assessments suggested by London County Council. Return giving particulars of (Mr. Harper), 12,201-4; 12,267-9; 12,491-512.

Objections to certain valuations made by London County Council. Return giving particulars of (Mr. Harper), 12,251-7.

An improvement in the valuation of the Metropolis has taken place, and is due to the action of the London County Council (Mr. Harper), 12,153-62; 12,523-5.

Their influence has been beneficial to assessment committees (Mr. Vallance), 12,854-60.

**LONDON COUNTY COUNCIL—cont.**

Their intervention regarded as essential for the purpose of obtaining uniformity in valuation (Mr. Vallance), 12,704-12.

Should be given a *locus standi* on assessment committees with powers similar to those of the surveyors of taxes (Mr. Vallance), 12,695-9; 12,741-7; 12,750. This arrangement should include provisional valuations, 12,695-9. Question as to whether their duties would clash, 12,741-7.

Should undertake and defend the valuation of "special properties," and should make the initial valuation of large undertakings such as railways (Mr. Vallance), 12,702-3.

The actions of the Council not always agreeable to local authorities (Mr. Leete), 13,413-5.

See also under ("ASSESSMENT CONFERENCES OF LONDON COUNTY COUNCIL," "BANKS, VALUATION OF," "CITY OF LONDON," "LICENSED HOUSES IN THE METROPOLIS, VALUATION OF," "LONDON VALUATION AND ASSESSMENT BILL," "SCHOOLS, VALUATION OF.")

**LONDON (EQUALISATION OF RATES) ACT, 1894 (57 & 58 Vict. c. 53):**

Not beneficial (Mr. Dethridge), 12,930-3.

Equalisation of rates is a good system (Mr. Tagg), 18,565.

Its operation and results discussed (Mr. Dewey), 13,051-6; 13,109-17; 13,152-9; (Mr. Leete), 13,422-34.

Effect upon the rates in certain parishes. Suggested alterations in the Act (Mr. Hills), 19,725-43.

Basis of contribution discussed (Mr. Leete), 13,344-51; 13,361-8; 13,422-9.

Suggested that contributions from fund should be given in respect of specific services (Mr. Leete), 13,416-21.

Reasons for different results of Metropolitan Common Poor Fund and Equalisation Fund (Mr. Leete), 13,361-4; 13,423-9.

Would work unfairly if valuations in the East-end of London were higher than in the West-end (Mr. Hills), 19,807-19.

**LONDON OWNERS' IMPROVEMENT RATE BILL, 1893:**

Scheme embodied in Bill introduced by the London County Council with regard to rent duty (Mr. Costelloe), 19,954-7; 19,990-2.

**LONDON SCHOOL BOARD:**

Evidence of Sir Charles Elliott, 18,139-96.

Evidence of Mr. H. Morgan-Browne, 18,197-411.

Evidence of Mr. T. J. Macnamara, 18,412-75.

(See under "EDUCATION.")

**LONDON VALUATION AND ASSESSMENT BILL:**

Bill introduced by London County Council to amend the system of valuation in London (Mr. Dewey), 13,063-70.

Approval of its provisions except that the County Valuation Committee should consist of the London County Council (Mr. Leete), 13,284-9.

Clause relating to occupiers form of return (Mr. Harper), 12,101-3.

**LUNATICS, MAINTENANCE OF**

Expenditure on, should be borne by the Exchequer (Mr. Costelloe), 20,281-2.

**MACHINERY AND PLANT, RATING IN RESPECT OF:**

Law in respect to valuation of machinery (Mr. Harper), 12,132-4.

Principle laid down for valuation (Mr. W. H. B. Castle), 13,774-8; 13,935-43.

Method of valuation and principles adopted. The law and principles affecting the rating of machinery discussed (Mr. W. H. B. Castle), 13,707-19; 13,816-32.

No distinction drawn between machinery put in by the landlord and by the tenant. If the tenant put in machinery, the assessable value of the factory should be increased (Mr. W. H. B. Castle), 13,843-51.

Witness considers that the case of Gifford, Fox & Co. went rather too far in the direction of rating machinery (Mr. W. H. B. Castle), 13,816-32.

In some case rateable machinery is personal property (Mr. W. H. B. Castle), 13,935-43; 13,975-7.

Valuation of machinery in the City of London, machinery lying idle (Mr. Huxtable), 20,595.

**MACNAMARA, Mr. T. J.,** Member of the London School Board, Evidence of, 18,412-75.

**MACPHERSON, Rev. H.,** Vicar of Grayne, Rochester, and Honorary Secretary of the Federation to Free Clerical Incomes from Rates, Evidence of, 14,106-245.

**MALE, Mr. W.,** Inspector of Taxes, Evidence of, 11,774-12,000.

**McLEOD, Rev. R. F.,** Rector of North Fambridge (Essex), Evidence of, 19,207-350.

**METROPOLIS:**

Rateable value of properties increasing (Mr. Dewey), 13,095-100.

Common rates in the county of London form a large proportion of total (Mr. Harper), 12,148-9, 12,513-4.

Common charges, great increase of (Mr. Dewey), 13,008.

The amount of rates generally influences the tenants in selecting their localities. Fashion is an element which only influences a few (Mr. Warner), 13,536-47.

How far does the amount of rates influence tenants in selecting particular localities (Mr. Warner), 13,450-6.

Rise of rates during the last 20 years (Mr. Warner), 13,593-600. How far has it affected the desire to take leases, 13,601-5.

How a rise in rates affects the working classes. Large proportion of houses in the Metropolis are rented at less than 50l. a year (Mr. Warner), 13,635-45.

Diagram showing the oscillations of the rates in various parishes from year to year, and thus demonstrating the difficulties of ascertaining what the rates are likely to be (Mr. Costelloe), 20,242; 20,433-46.

Approximate amount of site values and the total amount of local expenditure (Mr. Costelloe), 20,196-9.

(See also under the various subjects and districts.)

**MOLESWORTH (HUNTS), RECTOR OF:**

Particulars of the Living (Rev. Eben Molloy), 19,142-7.

Effect of Agricultural Rates Act, 1896, upon rector who has a large amount of glebe land let (Rev. Eben Molloy), 19,187-99.

**MOLLOY, Rev. EBEN:** Rector of Keyston (Hunts): Evidence of, 19,121-206.

**MORGAN-BROWNE, Mr. H.,** Member of the London School Board: Evidence of, 18,197-411.

**MORTGAGEES:**

Their interests cannot be considered in questions of rating (Mr. Costelloe), 20,048-52.

**MUNICIPAL DEATH DUTY:**

Desirable, as well as taxation in respect of site values (Mr. Costelloe), 20,098-105; 20,177-9.

Taxation in respect of site values. Rating in respect of capital value and income value. Owners should be made to contribute in respect of increased capital value, which is largely due to public expenditure through a Municipal Death Duty (Mr. Costelloe), 19,993-7; 20,044-5.

**NORTH FAMBRIDGE (ESSEX), RECTOR OF:**

Evidence of the Rector (Rev. R. F. McLeod), 19,207-350.

Particulars of the value of the Living. Statistics handed in by the Rector (Rev. R. F. McLeod), 19,210-42; 19,273-80.

Assessment Committee of farmers value land at a low figure and their interests conflict with their duty. This is a cause of the rise in rates in respect of the Rector's Tithe (Rev. R. F. McLeod), 19,292-304.

Agricultural Rates Act has not been a hardship on the Rector of North Fambridge (Rev. R. F. McLeod), 19,243-9; 19,263-7.

Cost of collection of tithe rentcharge belonging to Rector of North Fambridge (Rev. R. F. McLeod), 19,268-72.

Valuation of tithe rentcharge compared with that of agricultural land in the Parish of North Fambridge (Rev. R. F. McLeod), 19,281-91.

**NORTH FAMBURIDGE PARISH (ESSEX):**

- Particulars of Parish (Rev. R. F. McLeod), 19,273-80.  
Rates in the Parish. Statistics handed in by Rector (Rev. R. F. McLeod), 19,210-42.  
Rates are very high (Rev. R. F. McLeod), 19,250-5.  
Valuations are said to be unfair (Rev. R. F. McLeod), 19,256-62.  
Assessment Committee of farmers value land at a low figure, and their interests conflict with their duty (Rev. R. F. McLeod), 19,292-304; 19,330-49.  
Effect of Agricultural Rates Act in the Parish of North Famburidge (Rev. R. F. McLeod), 19,210-49.

**OVERSEERS AND ASSISTANT OVERSEERS:**

- Desirable that the local authorities should be made the overseers in all cases. Powers of Local Government Board (Mr. Dewey), 13,118-30; 13,239-41.  
Overseers should be appointed by the local sanitary authority and not by the justices (Mr. Tagg), 18,516-23; 18,702-19.  
City of London, social status of Overseers (Mr. Wagstaff), 20,811-22. Their position and the scope of their duties, 20,837-61. They perform their duties satisfactorily, 20,875-84.

**PADDINGTON:**

- Evidence of the Vestry Clerk (Mr. Dethridge), 12,914-13,000.  
Rates in £ (Mr. Dethridge), 12,970-5.  
Maximum rate of deductions adopted. Peculiarities of separate hereditaments, including variations of site value, are not now considered; but there would be no objection to going more into detail (Mr. Dethridge), 12,917-29.

**PARKS (ROYAL).—BENEFIT DERIVED BY LONDON:**

- Royal parks in and around London. Cost of (Mr. Gomme), 12,607-9.  
Suburban parks a benefit to London (Mr. Gomme), 12,610-3.  
Parks outside the town sometimes acquired by municipalities (Mr. Gomme), 12,657-8.

**PARSONAGE HOUSES, VALUATION OF:**

- Whether they are lightly rated (Mr. E. J. Castle, Q.C.), 14,088-92.

**PERSONAL PROPERTY, RATING IN RESPECT OF:**

- Some reasons for discontinuance of the system (Mr. E. J. Castle, Q.C.), 14,023.  
Cannot be assessed to local rates (Mr. Costelloe), 20,271.

**POLICE, COST OF:**

- Should be borne to some extent by the locality (Mr. Morgan Browne), 18,344-5.  
Metropolitan police, percentage of Exchequer contributions to amounts obtained from rates (Mr. Gomme), 12,614-22; 12,642-56.

**POOR RATE EXEMPTION ACT, 1840 (3 & 4 Vict. c. 89):**

- Position of clerical tithe owners under this Act (Mr. E. J. Castle, Q.C.), 14,057-60.  
Was unfair on the clerical tithe owner (Mr. E. J. Castle, Q.C.), 13,989-90.

**POOR RELIEF ACT, 1601 (43 Eliz. c. 2):**

- Position of clerical tithe owners under Act (Mr. E. J. Castle, Q.C.), 13,982-7; 13,996; 14,019-22; 14,070-2; 14,078-81.  
Intention of the Act, the words "Occupier" and "Inhabitant" (Mr. E. J. Castle, Q.C.), 13,982-7.

**POOR RELIEF, EXPENDITURE UPON:**

- Should be made a national charge. Question of administration (Mr. Dethridge), 12,976-80; (Mr. Morgan-Browne), 18,340-3.

**PROVISIONAL LISTS. (See under "VALUATION IN THE METROPOLIS.—SYSTEM.")****QUARTER SESSIONS. (See under "APPEALS (VALUATION).")****QUINQUENNIAL LISTS. (See under "VALUATION IN THE METROPOLIS.—SYSTEM.")****RACK-RENT:**

- Definition of (Mr. Male), 11,783-5.  
Method of arriving at, in case of leasehold property (Mr. Male), 11,796-801.

**RAILWAYS, VALUATION OF:**

- Process of valuation. Deductions (Mr. W. H. B. Castle), 13,656-67.  
How far present system a satisfactory one (Mr. W. H. B. Castle), 13,651-5.  
Principles affecting the valuation. How far should they be valued solely with reference to the value of land (Mr. W. H. B. Castle), 13,899-923.  
Case of a railway losing money (Mr. Vigers), 19,444-64.  
Principle of present system is the only one which could be adopted (Mr. W. H. B. Castle), 13,767-73.  
Gross receipts. Amount claimed for value of rolling stock (Mr. W. H. B. Castle), 13,804-11.  
Method of valuation. Amount of deductions allowed (Mr. Vigers), 19,356-64. 17½ per cent. usually deducted for tenant's allowances, 19,465-91.  
Method of arriving at the tenant's capital. Difficulties of ascertaining this (Mr. Vigers), 19,395-409.  
12½ per cent. for tenant's allowances is sufficient (Mr. W. H. B. Castle), 13,668-71; 13,747-66.  
The property of railway companies is sometimes undervalued. Reasons for this (Mr. W. H. B. Castle), 13,747-66.  
Stations. Method of valuation (Mr. Vigers), 19,365-74.  
Valuation according to what a tenant would give for a portion of the railway in each parish, not suitable. It would save much expense if railways were valued as a whole, and the valuation then divided upon the parochial earnings system (Mr. Vigers), 19,353-5; 19,410-8; 19,441-3.  
Valuation by a local authority representing a larger area than the parish would be more economical (Mr. W. H. B. Castle), 13,685-6.  
Should be valued by a central body (Mr. Harper), 12,336-7; (Mr. Dewey), 13,048-9.  
Division of valuation between different local authorities (Mr. Harper), 12,345.

**RENT DUTY:**

- Scheme embodied in a Bill introduced by London County Council with regard to rent duty (Mr. Costelloe), 19,954-7.  
Rent duty and special rate on ground values. Distinction between (Mr. Costelloe), 19,954-7; 19,962-4.  
Taxation in respect of site values is preferable (Mr. Costelloe), 19,965-8.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE:***(a.) Generally.*

- Desirable to obtain uniformity in a rating area. How to ascertain rateable value (Mr. Male), 11,873-81.  
Variations in deductions are necessary for fairness between different properties, especially where proportion of site value to total value differs (Mr. Vallance), 12,813-21.  
Valuation authority should have discretion as to allowance for deductions (Mr. Vallance), 12,794-8.

*(b.) In the Metropolis.*

- Question of deductions discussed (Mr. Clark), 12,046-54.  
Maximum scale in force in London (Mr. Male), 11,835-40.  
Deductions from gross value are almost uniformly fixed at maximum. They are not always justifiable (Mr. Vallance), 12,680-4; (Mr. Vigers), 19,505-9.  
Difficulty of adopting any other course (Mr. Huxtable), 20,529-51.  
The maximum deductions are allowed in London under the Valuation (Metropolis) Act, but it would not be possible to do more than prescribe maximum rates in an Act of Parliament as local authorities must be given some discretion in the matter (Mr. Tagg), 18,538-44; 18,595-600.  
Whether the maximum deductions should be allowed in cases where the site value forms a large proportion of the total value (Mr. Dewey), 13,026-34; 13,085-94. It would entail a great deal of work to make varying deductions (Mr. Dewey), 13,026-34.  
Deductions alleged to be sometimes in excess of the legal maximum. Reasons for this (Mr. Vallance), 12,717-22; (Mr. Dewey), 13,019-21.  
If the maximum deductions in the Metropolis are always allowed without regard to relative value of site and structure, unjust results, as the land requires no deductions for repairs. There should

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE—cont.**

- be separate columns in the rate book for site value and structural value. Owner of site value would have to be given a power to appeal (Mr. W. H. B. Castle), 13,726-46.
- As deductions for repairs only apply to structural value and not to site value, inequalities are caused in the Metropolis if the maximum deductions in the Valuation (Metropolis) Act, are always allowed (Mr. Harper), 12,441-55; 12,526-32.
- Deduction of one-sixth almost universal in practice, but this practice is not a satisfactory one. Deductions should be calculated upon structural value alone and not upon total gross value (Mr. Harper), 12,104-11.
- A uniform allowance objectionable because of the variations in the proportion of site value to structural value (Mr. Harper), 12,389-96.
- Deductions in case of site values should not be made (Mr. Vigers), 19,689-97.
- Extent of under-assessment owing to full deduction being made, without regard to value of site (Mr. Harper), 12,112-4; 12,304-12; 12,536-60. Method of estimating the total site value of the Metropolis (Mr. Harper), 12,306-12.
- Suggested method of making deductions in cases when the site value forms a large proportion of the total value (Mr. Harper), 12,542-60.
- It would be possible to fix lower amounts than the maximum which would more fairly represent the cost of repairs, especially where the site value is relatively high (Mr. Vallance), 12,685-8.
- Relative values of sites and buildings vary in different parts of the Metropolis. A valuation authority over a sufficiently large area could adjust the deductions (Mr. Vigers), 19,626-9.
- How far possible and desirable to separate site value and structural value. Suggested difficulties. Question of the proper deductions to make to arrive at rateable value (Mr. Harper), 12,280-303.
- Method of determining site value and structural value discussed (Mr. Harper) 12,367-88.
- To value site and structure separately would be a much more elaborate process than obtains at present for the valuation of properties, but the results would compensate for this (Mr. W. H. B. Castle), 13,779-803.
- Site value and structural value. Deductions which should be made in arriving at rateable value. How the present system affects the city of London (Mr. Clark), 12,055-8.
- City of London. Deductions are made without regard to the proportionate value of site and structure (Mr. Huxtable), 20,690-707.
- City of London. Valuation of site and of buildings in the case of freehold and leasehold property (Mr. Huxtable), 20,552-69.
- Whitechapel. Maximum would not have been allowed to the extent it has were it not that there is so little diversity of property (Mr. Vallance), 12,896-8.
- Paddington. Maximum rate adopted. Peculiarities of separate hereditaments, including variations of site value, are not now considered; but there would be no objection to going more into detail (Mr. Dethridge), 12,917-29.
- Islington. Separation of site value from gross value is practicable (Mr. Dewey), 13,092-3.
- Kensington. The maximum deductions are made (Mr. Leete), 13,259-61.

**RETURNS BY OWNERS AND OCCUPIERS:**

- Assessment committees should have power to call for information from companies (Mr. W. H. B. Castle), 13,720; 13,764-6.
- In Metropolis returns are very valuable (Mr. Dewey), 13,198-201; and should be obtainable at any time during the quinquennial period (Mr. Harper), 12,200; (Mr. Tagg), 18,593. The present powers of Assessment Committee said to be sufficient (Mr. Wagstaff), 20,803-10.
- Returns issued to occupiers in Metropolis inapplicable to some classes of property (Mr. Harper), 12,100.
- Returns by occupiers for Quinquennial Valuation in the Metropolis frequently not made. Penalty not enforced (Mr. Clark), 12,030-6.
- Power to obtain returns from owners and occupiers as in Metropolis, should be extended to rest of country (Mr. Dewey), 13,199-202.

**ROADS (MAIN), EXPENDITURE UPON:**

A larger proportion of the cost should be borne by the Imperial Exchequer (Mr. Morgan-Browne), 18,300-2.

**SCHOOL BOARD RATES:**

See under "EDUCATION, COST OF."

**SCHOOLS, VALUATION OF:**

Return by London County Council giving particulars of (Mr. Harper), 12,249-50.

**SHOPS, INCIDENCE OF RATES:**

In case of shops in the West End of London, the occupier will try and shift the burden of a rise of rates upon his customers. Beyond a certain point, he cannot do this, owing to trade competition of co-operative stores, and he must then try and shift the burden on his landlord (Mr. Warner), 13,493-6.

**SITE VALUE AND STRUCTURAL VALUE:**

- How far possible to make a separate valuation, (Mr. Warner), 13,561-77.
- Method of separating values (Mr. Costelloe), 19,978.
- Site value and structural value of properties could be separately ascertained throughout the country, (Mr. W. H. B. Castle), 13,944-57; (Mr. Vigers), 19,609-10; (Mr. Huxtable), 20,708-34.
- It is possible to make a separate valuation, but it would provoke litigation, and is not a system upon which the Legislature should insist (Mr. Male), 11,978-89.
- Can be valued separately if the building is suitably situated (Mr. Vigers), 19,500-4.
- Determination of rateable value of structure by reference to capital cost (Mr. Harper), 12,578-92.
- If separate valuation made, the owner of the site value should be given a power to appeal (Mr. Harper), 12,597-8.
- A separate valuation is not advisable, as it would involve a double valuation. The present system is the most economical (Mr. Vigers), 19,620-5.
- Separate valuation in the Metropolis would cost a considerable sum, and lead to litigation (Mr. Vigers), 19,532-8.
- Very difficult, perhaps impossible, to value separately (Mr. Leete), 13,352-60.
- Variations of site values (Mr. Harper), 12,398-406.
- Causes of increase in site values (Mr. Harper), 12,407-19.
- The use of a site does not affect its value (Mr. Harper), 12,420-40.
- Site values increase owing to increase in population and trade (Mr. Vigers), 19,571-85.
- A site value secured by buildings upon it is more valuable than one without buildings (Mr. Vigers), 19,611-9.
- City of London. Valuation of site values said to be more difficult than in other towns (Mr. Huxtable), 20,670-5.

**SITE VALUES, TAXATION IN RESPECT OF:**

(a) *Reasons for or against the Suggestion.*

- Taxation in respect of, how far desirable and practicable (Mr. Dewey), 13,039-44.
- Objections to taxation in respect of site values (Mr. Vigers), 19,510-1.
- Owners of site values benefit from the expenditure of public money on their properties, and yet the rates largely fall on the occupiers. At any rate the burden should not appear to fall exclusively on the occupiers, as it induces them to resist expenditure on improvements (Mr. Costelloe), 19,988-20,001.
- Expenditure of rates upon all objects ultimately benefits site values to some extent, though the occupier gets some advantages (Mr. Costelloe), 20,115-23; 20,261-6.
- Owners of site values, that is, all persons deriving revenues from site values, should be assessed in respect of them to local rates. The expenses of administration and cost of improvements should not fall principally upon the occupiers (Mr. Costelloe), 19,913-7; 19,920-2.
- Site values are said never to be diminished in value, owing to local expenditure, except perhaps in exceptional cases, and this is also true as regards composition property (Mr. Costelloe), 20,143-52.
- The system would secure a fair adjustment between owner and occupier. Question as to how far the rise in value of a site benefits owner and occupier respectively during the continuance of a lease (Mr. Costelloe), 20,330-44.

SITE VALUES, TAXATION IN RESPECT OF—*cont.*

Rating owners in respect of site values at the rate of 6*d.* in the £. would relieve occupiers from an increase in their present burdens, which they contracted to pay by a blind bargain (Mr. Costelloe), 19,929-33.

Method of taxing owners of site values. Rating twice over in respect of the building value (Mr. Costelloe), 20,216-9.

Possible hardship to owner at end of a lease if buildings are old (Mr. Costelloe), 19,979-80.

Is preferable to a rent duty (Mr. Costelloe), 19,965-8.

(b.) *Case of existing Contracts.*

Case of existing contracts discussed (Mr. Costelloe), 20,085-97. Distinction might be drawn between present and future contracts, 19,934-45.

Site values should be assessed to some extent to local rates irrespective of existing contracts. The State imposes burdens by legislation irrespective of existing contracts, and no claim for compensation arises (Mr. Costelloe), 19,926-8; 20,083-4; 20,300-2.

Existing contracts should be respected (Mr. Vigers), 19,642-5.

Taxation in respect of site values, though not objectionable if the parties to a bargain were free, would involve an alteration in existing contracts, in fixing which the question of rates has been taken into account. It would be making a present to the tenant, who, in any case, usually makes the better bargain (Mr. Vigers), 19,519-31.

Taxation in respect of site values would be unfair to owners in the case of existing contracts; it also would be impolitic to damage a valuable security, and rating authorities would not benefit on account of the expense (Mr. Vigers), 19,630-5.

(c.) *Definitions.*

Site values (Mr. Costelloe), 19,969-77.

Owner (Mr. Costelloe), 19,918-9; 19,969-77.

Occupier (Mr. Costelloe), 19,918-9.

Distinction between rent duty and special rate on ground values (Mr. Costelloe), 19,954-7; 19,962-4.

(d.) *Ascertainment of Site Values.*

Difficulties and expense of making a site valuation in London discussed (Mr. Costelloe), 20,056-63.

Site values could be ascertained without much difficulty in London, notwithstanding the large number of properties to be valued (Mr. Costelloe), 20,068-82; 20,204-6.

(e.) *Capital and Income Value.*

How far should the capital value, as compared with the annual value, be considered (Mr. Costelloe), 19,985-9; 20,220-32.

Owners should be made to contribute in respect of increased capital value which is largely due to public expenditure through a municipal death duty (Mr. Costelloe), 19,993-7; 20,044-5; 20,098-105; 20,177-9; 20,345-63.

Method of assessing the value of the various interests in a site in the hands of different persons, whether in the form of rent or of a realisable capital sum (Mr. Costelloe), 20,381-94; 20,422-3.

Policy of making an owner pay a duty when a lease falls in, or on reletting, discussed (Mr. Vigers), 19,668-76.

(f.) *Method of Imposition.*

Owners of the various interests should contribute towards local taxation to some extent (Mr. Costelloe), 20,200-3; 20,267-8; 20,303-9. Upon what principle this should be done discussed, 20,320-9.

Quite practicable to carry out in detail (Mr. Costelloe), 19,946-53.

Scheme for distributing charge amongst the owners of the various interests (Mr. Costelloe), 19,981-4; 20,046-7.

Recommendation of the London County Council and scheme embodied in a Bill introduced by them with regard to rent duty (Mr. Costelloe), 19,954-7; 19,990-2; 20,180-95.

Scheme of London County Council that an owner's improvement charge should be raised from all persons who pay Income Tax (Schedule A.) by Somerset House collectors (Mr. Costelloe), 19,958-61.

Suggested that the tenant should pay in the first instance and deduct the amount from his immediate

SITE VALUES, TAXATION IN RESPECT OF—*cont.*

landlord, and that that owner should then deduct a proportionate part of the rate from anyone else. But where part of the interest in the site value has been sold for cash, instead of being converted into rent, the seller escapes assessment to local rates (Mr. Vigers), 19,539-46; (Mr. Costelloe), 20,153-66.

Owners should be assessed, commencing at the rate of 6*d.* in the £, and Parliament should fix a limit. The present maximum might, perhaps, be fixed at 2*s.* in the £ (Mr. Costelloe), 19,934-45.

The income tax system of deduction would cause confusion if applied to rates (Mr. Warner), 13,508-26.

Question as to how the suggested payment of rates upon site values would be divided. Effect of putting a rate upon site value of certain properties discussed (Mr. W. H. B. Castle), 13,852-78.

(g.) *Purposes to which Tax should be devoted.*

Suggestion made in order to provide a fund for new expenditure from a class of persons whose property is benefited by expenditure, namely, owners, and also for decreasing existing burdens of the occupiers who at present pay, at any rate primarily, the whole rates in the Metropolis (Mr. Costelloe), 20,128-42; 20,243-6.

Desirable in order to obtain a new source of revenue. The increase of burdens falling on the occupier could be relieved, and some of the recent burdens put upon him could be taken off (Mr. Costelloe), 20,315-9.

If owners of site values were taxed for the purpose of contributing towards increase of expenditure on new services it would be sufficient (Mr. Costelloe), 20,039-43.

## SLATE QUARRIES, VALUATION OF :

Method of valuation. A royalty per ton taken for each quarry (Mr. Darbshire), 19,842-4.

The money paid to the lessor as rent is said to be partly purchase money for part of the owner's property, and as such should not be a subject for assessment (Mr. Darbshire), 19,858-61; 19,864-76.

Valuation on the basis of dead rent and royalty per ton. Objections raised to this system (Mr. Darbshire), 19,886-905.

Suggested system of valuation (Mr. Darbshire), 19,853-7. The minimum rent should be taken as the basis (Mr. Darbshire), 19,877-85.

Should be valued according to what a tenant would give at the present time (Mr. Darbshire), 19,845-52.

SMITH, REV. J. MANNERS. Rector of Barnardiston (Suffolk), Evidence of, 18,978-19,120.

## STRAND UNION :

Property would be adequately valued if the London County Council had representation on assessment committees, and "rack-rent" was the basis for valuation (Mr. Male), 11,864-9.

## STREATHAM PARISH :

Land has gone up in value owing to the increase of population (Mr. Hills), 19,798-806.

Rates in (Mr. Hills), 19,772-97.

## SUPPLEMENTAL LISTS. (See under "VALUATION IN THE METROPOLIS.—SYSTEM.")

## SURVEYORS AND VALUERS :

Evidence of the Assistant Valuer to the London County Council (Mr. Harper) 12,093-605.

Evidence of Mr. W. H. Warner, of Messrs. Lofts and Warner, Estate Agents and Surveyors, 13,425-645.

Evidence of Mr. W. H. B. Castle, of the firm of Castle & Son, Surveyors and Valuers, 13,646-978.

Evidence of Mr. R. Vigers, Valuer and Surveyor and President of the Surveyors' Institution, 19,351-697.

Evidence of Mr. Barnett, Valuer to the Assessment Committee of the City of London Union, 20,886-985.

Their professional practice (Mr. W. H. B. Castle), 13,812-5.

Desirable for assessment committees in Metropolis to more frequently employ professional valuers (Mr. Vigers), 19,650-63.

Professional valuers to act under the orders of the central authority, preferable to valuation by unpaid committees (Mr. Vigers), 19,430-40.

Professional valuers should not be paid a fee dependent upon the amount of assessment (Mr. Darbshire), 19,862-3.

Index  
to Evidence.

## SURVEYORS OF TAXES:

(a.) *In England and Wales (except the Metropolis).*  
Size of districts (Mr. Male), 11,857-8.

(b.) *In the Metropolis.*

Evidence of Mr. R. Clark, Surveyor of Taxes, 12,001-92.  
Their powers, action, and influence in regard to valuation (Mr. Harper), 12,515-22.  
Their intervention in valuation tends to create uniformity (Mr. Harper), 12,143.  
Power to insert gross value in the valuation list (Mr. Male), 11,931-9.  
Intervention by, in valuation. His influence is great and very useful (Mr. Vallance), 12,673-9.  
To what extent does he attend proceedings of assessment committees (Mr. Vallance), 12,713-6.  
His position as regards valuation should be more defined and extended (Mr. Male), 11,808-11.  
His attendance at all meetings of valuation authorities, generally speaking, would prevent serious wrong being done by those authorities (Mr. Leete), 13,282-3.  
Should be present with the overseers in preparing the valuation lists (Mr. Male), 11,924-30.  
Should attend all meetings of assessment committees (Mr. Male), 11,859-63.  
Should have statutory powers to attend meetings of overseers and of assessment committees (Mr. Huxtable), 20,587-94; 20,633-47; 20,676-81; (Mr. Wagstaff), 20,793-9; 20,885.  
His position as regards valuation would not be so strong if he were a member of an assessment committee (Mr. Male), 11,812-6.  
Objections to surveyors' valuations. Surveyor often makes a settlement when facts are brought to his notice (Mr. Vallance), 12,748-9.  
City of London. Surveyors protect the interests of the inland revenue satisfactorily (Mr. Huxtable), 20,633-47; (Mr. Wagstaff), 20,831-6; 20,865-74. They give material assistance to the assessment committee, 20,793-9; 20,831-6.

TAGG; Mr. C. W., Vestry Clerk of the parish of Camberwell, Evidence of, 18,476-781.

## TELEPHONE WIRES, VALUATION OF:

A central authority desirable (Mr. Dewey), 13,048-9.  
Telephone wires in the City of London (Mr. Huxtable), 20,596-607.

## TITHE ACT, 1236 (6 &amp; 7 Will. 4., c. 71):

The question as to whether rates were added to ascertain amount of commuted tithes discussed (Mr. E. J. Castle, Q.C.), 14,000-2.  
No sum was added when tithes were commuted representing the amount of rates payable by clerical tithe owners (Rev. H. Macpherson), 14,181-91.  
How far beneficial to land owners and clergy (Rev. H. Macpherson), 14,163-7.  
Has not protected the interests of the clergy as much as was intended (Rev. J. Manners Smith), 19,111-2.

## TITHE AND TITHE RENTCHARGE:

(a.) *Liability of Owners to be rated in respect thereof.*

Position of clerical tithe owners under 39 Eliz., c. 3. and 43 Eliz., c. 2. (Mr. E. J. Castle, Q.C.), 13,996.  
Position of clerical tithe owners under 43 Eliz., c. 2. Intention of the Act. The words "Occupier" and "Inhabitant" (Mr. E. J. Castle, Q.C.), 13,982-7; 14,019-22; 14,070-2; 14,078-81.  
Clerical tithe owners. No knowledge of how assessed during the 17th century (Mr. E. J. Castle, Q.C.), 14,048-50.  
Clerical tithe rentcharge was not intended to be assessed to local rates, except as regards the Poor Rate (Rev. H. Macpherson), 14,149-56; (Rev. E. Lodwick Ellis), 18,906-8; 18,942-4.  
Clerical tithe owners said to pay rates in respect of income received for their services (Rev. H. Macpherson), 14,107-22.  
Poor Rate Exemption Act, 1840. Position of clerical tithe owners under this Act (Mr. E. J. Castle, Q.C.), 14,057-60.  
Poor Rate Exemption Act, 1840, was unfair on the clerical tithe owner (Mr. E. J. Castle, Q.C.), 13,989-90.

## TITHE AND TITHE RENTCHARGE—cont.

Clerical tithe owners. Differential rating in respect of tithe, how far possible (Mr. E. J. Castle, Q.C.), 14,061-9.  
Hereditary burdens upon tithe discussed (Mr. E. J. Castle, Q.C.), 14,003-13. Rates upon tithe rentcharge are not an hereditary burden 14,014-8.  
Rating in respect of income from whatever source would be a fair system. The clergy are at the present time rated in respect of their incomes (Rev. R. F. McLeod), 19,305-29.  
Clerical tithe owners accept their positions in the Church subject to a liability to pay rates (Rev. H. Macpherson), 14,123-6.  
Clerical tithe owners should be given some relief by the Legislature as a matter of equity (Mr. E. J. Castle, Q.C.), 14,097-105.  
Clerical tithe rentcharge if relieved from the payment of local rates. Under these circumstances the additional payment of rates should fall on the ratepayers generally (Mr. E. J. Castle, Q.C.), 14,045-7; 14,093-6.  
Clerical tithe rentcharge should not be the subject of assessment. But clerical tithe owners only claim certain deductions (Mr. E. J. Castle, Q.C.), 14,025-6.  
Clerical tithe rentcharge should not be the subject of assessment. In what way would this affect the payment of rates in respect of land? Case where the tithe forms a large proportion of the rent of land (Mr. E. J. Castle, Q.C.), 14,051-6.  
Clerical tithe rentcharge. Suggestion that it should be wholly exempted from being assessed to local rates (Rev. H. Macpherson), 14,130-42, and the deficiency arising therefrom paid out of the Exchequer, 14,134-8.  
Clerical tithe rentcharge. Suggestion that it should be wholly exempted from being assessed to local rates. How far a smaller measure of relief would be satisfactory discussed (Rev. H. Macpherson), 14,213-45.  
Clerical tithe owners should be relieved of rates altogether, but the clergy would be satisfied if they were allowed a deduction of 160% in respect of personal services. But there would be opposition to this by the other ratepayers (Rev. Eben Molloy), 19,143-59.

(b.) *Valuation of Tithe Rentcharge.*

The present system is unfair (Mr. E. J. Castle, Q.C.), 13,995; 13,997-9.  
How far the principle of letting value should be applied (Mr. E. J. Castle, Q.C.), 13,991-4.  
Deductions. Beneficial occupation (Mr. E. J. Castle, Q.C.), 14,024.  
What deductions used to be allowed, what are now allowed, and what should be allowed (Mr. E. J. Castle, Q.C.), 14,029-38.  
Tithe rentcharge should be valued upon the basis of what a hypothetical tenant would give for it (Rev. R. Kennedy), 18,806-9.  
Tithe rentcharge is valued too highly (Rev. E. Lodwick Ellis), 18,909-10.  
Agricultural Rates Act said to have prejudiced clerical tithe owners to some extent, though their substantial grievance existed before the Act (Rev. E. Lodwick Ellis), 18,933-41.  
System varies in different parishes (Rev. Eben Molloy), 19,200-3.  
Clerical tithe owners would be content if they were relieved to the extent of half their rates, or alternatively a deduction should be made from the valuation of the tithe rentcharge in respect of personal services (Rev. J. Manners Smith), 19,005-13.

(c.) *Deductions for Personal Services.*

Whether there should be deductions for personal services of clerical tithe owners (Mr. E. J. Castle, Q.C.), 13,991-4.  
On the basis of what a hypothetical tenant would give for tithe rentcharge, a deduction should be allowed for personal services (Rev. R. Kennedy), 18,806-9.  
The clergy should not be rated in respect of income derived from tithe rentcharge paid for personal services (Rev. R. Kennedy), 18,798-805. A partial exemption sufficient, 18,844-53. No opinion expressed as to who should pay the deficiency in rates caused by such a deduction, 18,879-93.

**TITHE AND TITHE RENTCHARGE—cont.**

Clerical tithe owners should be allowed a deduction of 160l. in respect of personal services (Rev. E. Lodwick Ellis), 18,903-5. Deficiency in the rates thus caused should be paid by the Exchequer, 18,975-7.

A deduction should be made from the valuation of tithe rentcharge in respect of personal services, or else clerical tithe owners should be relieved of half their rates (Rev. J. Manners Smith), 19,005-13.

Clerical tithe owners should be allowed a deduction of 150l. or 160l. for personal services. But whether the deficiency in rates was paid locally or out of the Exchequer, there would be opposition to such a suggestion (Rev. J. Manners Smith), 19,014-7; 19,027-32; 19,089-110.

Clerical tithe owners should be relieved of rates altogether, but the clergy would be satisfied if they were allowed a deduction of 160l. in respect of personal services. But there would be opposition to this by the other ratepayers (Rev. Eben Molloy), 19,148-59.

*(d.) Deductions in respect of Chancel Repairs.*

No deduction allowed (Rev. Eben Molloy), 19,204-5.

*(e.) Deductions in respect of Costs of Collection.*

Cost of collection of tithe rentcharge belonging to Rector of North Farnbridge (Rev. R. F. McLeod), 19,268-72.

*(f.) Relative Positions of Lay and Clerical Tithe Owners.*

Tithes inappropriate and propriations of tithes. Definition of (Mr. E. J. Castle, Q.C.), 14,073-7.

Tithes inappropriate and propriations of tithes cannot be "occupied" (Mr. E. J. Castle, Q.C.), 13,988.

Lay tithe owners should be assessed in respect of their tithes (Mr. E. J. Castle, Q.C.), 14,027-8.

*(g.) Relative Positions of Tithe and Land.*

Value of land and tithe. Position of owner and occupier (Mr. E. J. Castle, Q.C.), 14,039-44.

Clerical tithe rentcharge, if relieved from rating, would to some extent relieve the land (Mr. E. J. Castle, Q.C.), 14,082-7.

Suggested difficulties in applying the principle of Agricultural Rates Act to case of tithe rentcharge (Rev. J. Manners Smith), 19,023-6.

Valuation of tithe rentcharge compared with that of agricultural land in the Parish of North Farnbridge (Rev. R. F. McLeod), 19,281-91.

*(h.) Payment of Tithes.*

Clerical tithe owners are paid by the tithe payers. Their income is derived from the property of the Church. Proposal that the State should supplement the property of the Church. (Rev. H. Macpherson), 14,192-212.

**TRADE:**

Registration fees suggested (Mr. Dethridge), 12,957-8; 12,968.

**TRAMWAYS, VALUATION OF:**

A central authority desirable (Mr. Dewey), 13,048-9.

**TRUANT SCHOOLS. (See under "EDUCATION.")****UNOCCUPIED PROPERTY, RATING IN RESPECT OF:**

Suggested that they should be assessed to some extent. This procedure is adopted in the City of London (Mr. Leete), 13,407-12; (Mr. Tagg), 13,547-8; 13,558-64; 13,687-94.

Undesirable, but the owners of the sites might be taxed (Mr. Dewey), 13,035-8.

"Empties." Loss on this property is often considerable (Mr. Vallance), 12,840-5.

How far consistent with the principle of rating according to the valuation of the occupation as a measure of ability to pay (Mr. Vallance), 12,789-93.

Is fair in principle but difficult to carry out (Mr. Vallance), 12,700.

Difficulties of rating owner (Mr. Vallance), 12,773-82.

Should such property be subject to all rates. Difficulties of the question (Mr. Vallance), 12,726-9.

Metropolis. Should the loss due to the exemption of empty property be borne by the metropolis as a whole (Mr. Dewey), 13,071-5.

Metropolis. Divergence in practice of including new properties in valuation list (Mr. Leete), 13,302.

**UNOCCUPIED PROPERTY, RATING IN RESPECT OF—cont.**

Metropolis. Suggested that the loss due to the exemption of empty houses should be made a common charge throughout the metropolis (Mr. Leete), 13,300-4.

Kensington. Rateable value of empty property (Mr. Leete), 13,305-9.

VALLANCE, Mr. W., Clerk to the Whitechapel Board of Guardians, Evidence of, 12,667-913.

**VALUATION IN ENGLAND AND SCOTLAND, SYSTEMS COMPARED:**

Scottish system of valuation a good one and would be a desirable one for England, particularly with reference to local taxation, but the initial difficulty of carrying it into effect would be great (Mr. Clark), 12,021-5.

Scottish system of obtaining returns from owners (Mr. Clark), 12,037-8.

**VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS), AREAS AND AUTHORITIES:**

The question of areas discussed (Mr. Male), 11,950-65.

Area of poor law union a satisfactory one for purposes of valuation (Mr. Male), 11,870-2, 11,950-65.

Union areas preferable to county areas (Mr. Male), 11,851-2.

Area for purposes of valuation should be the union with an appeal to a County Authority (Mr. Clark), 12,071-2.

Areas of poor law union and tax districts should be continuous (Mr. Clark), 12,077.

Area of an administrative county not a practicable one for purposes of valuation (Mr. Male), 11,950-65; but preferable if it were practicable, 11,966-70.

Central county authority should exist in every county for the purpose of supervising matters relating to valuation and rating with power to enforce its orders, but not to hear appeals (Mr. Tagg), 18,640-60; 18,763-74.

**VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS); SYSTEM:**

More inequalities exist as regards rateable value than gross value (Mr. Clark), 12,026-9.

Valuation of property in hands of owners compared with valuation of property in hands of tenants, (Mr. Clark), 12,007-13.

Valuation (Metropolis) Act should be extended to the rest of the country (Mr. Male), 11,843-7; (Mr. Clark), 12,066-70; but it requires certain amendments, 12,059-62.

Valuation in rural districts should be made at intervals of about six years (Mr. W. H. B. Castle), 13,698-700.

It is said that in country parishes the Assessment Committees, which are mainly composed of farmers, value premises well kept up higher than those badly kept up (Rev. R. Kennedy), 18,810-4.

Under-valuation, allegations of. See under "AGRICULTURAL LAND, VALUATION OF", "BARNARDISTON PARISH (SUFFOLK)", "NORTH FARNBRIDGE PARISH (ESSEX)", "RAILWAYS, VALUATION OF", and "WHESELL (YORKS), VICAR OF."

See also under "APPEALS (VALUATION)", "REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE."

**VALUATION IN THE METROPOLIS AND THE REST OF ENGLAND AND WALES:**

House property. Decorations and furniture in a house do not add to its assessable value (Mr. W. H. B. Castle), 13,833-42.

Land as a basis for rating apart from the uses to which it is put discussed (Mr. W. H. B. Castle), 13,958-74.

Land cannot be a basis for rating apart from the uses to which it is put (Mr. W. H. B. Castle), 978.

The County area, as the unit for valuation purposes, would secure greater uniformity than the Union areas. The County would have to be divided into sub-divisions, the larger the better (Mr. Vigers), 19,430-40.

Principles to be observed in making valuations (Mr. Vigers), 19,547-70.

Levying of all taxes, Imperial and Local, on a uniform value discussed (Mr. Harper), 12,354-62.

Valuation for Income Tax and for local rates outside the metropolis varies considerably, and this is not

VALUATION IN THE METROPOLIS AND THE REST OF ENGLAND AND WALES—*cont.*

- the case in the metropolis. Reasons for this (Mr. Harper), 12,183-7.
- Valuation in the metropolis and in the country compared (Mr. Male), 11,999-12,000.
- Advantages of the London system compared with that in the rest of the country (Mr. Male), 11,788-91.
- Valuation for Imperial taxes; reasonable rent the basis in London, rack-rent the basis outside London (Mr. Male), 11,778-86.
- Difference in the method of valuation of a property occupied by the purchaser and occupied by his lessee. The proper basis is the value of the property to a hypothetical tenant (Mr. Barnett), 20,943-51.

## VALUATION IN THE METROPOLIS, AREAS AND AUTHORITIES :

- Areas for purposes of valuation discussed (Mr. Dewey), 13,009-18; (Mr. Hills), 19,746-58.
- The union a better area than the parish (Mr. Vallance), 12,851-3.
- The union a better area than the county or the parish. Abolition of overseers (Mr. Vallance), 12,808-12.
- The union and not the parish is practically the unit for valuation (Mr. Vallance), 12,693-4. The preliminary stages of valuation should be entrusted to the union authorities, and greater uniformity would be obtained, 12,693-4; 12,723-5. Question of compensation of assistant overseers in case of transfer of their duties to unions, 12,723-5.
- Areas for Imperial and Local purposes not being conterminous is a drawback (Mr. Harper), 12,098-9.
- Areas should be large in order to secure greater equalities in assessments (Mr. Vigers), 19,641.
- One valuation authority desirable (Mr. Vigers), 19,664-7.
- Question whether the union or the parish should be the unit for valuation. If the union areas were adopted, overseers would be abolished and a skilled valuer appointed to assist the assessment committee. The union authority would levy and collect the rates (Mr. Vallance), 12,730-40.
- Suggestion that the Valuation (Metropolis) Act should be administered by an independent body or official for the whole county (Mr. Dewey), 13,007-8.
- Central representative authority desirable to control the various valuation authorities (Mr. Leete), 13,253; 13,369-76; 13,393-5; (Mr. Dewey), 13,181-4; 13,194-6.
- Central authority other than the London County Council desirable to control the various valuation authorities (Mr. Dewey), 13,181-8.
- County valuation authority desirable for supervision, but not to perform actual work of valuation (Mr. Leete), 13,297-9.
- Central valuation authority desirable. Functions of such a body discussed and what authorities should be represented. Question of appeals (Mr. Leete), 13,377-90.
- London County Council or a central authority should give directions with regard to the system of valuation, and should make the initial valuation of special properties (Mr. Vallance), 12,799-803.
- Central county authority should exist for the purpose of supervising matters relating to valuation and rating, with power to enforce its orders, but not to hear appeals (Mr. Tagg), 18,589-92; 18,640-60; 18,763-78.
- Byelaws should be framed by a central body such as the County Council (Mr. Tagg), 18,601-10.
- Centralisation of valuation undesirable. Ratepayers already sufficiently protected (Mr. Dethridge), 12,934-40.
- Revision of, by a central authority would lead to friction. At most the County Council might be allowed to appeal to a conference of the chairmen of all the assessment committees in the metropolis (Mr. Dethridge), 12,941-3.
- Existing state of things on the whole satisfactory (Mr. Dethridge), 12,967.

## VALUATION IN THE METROPOLIS, SYSTEM :

- "Gross value" and "rateable value." "Annual value" should be substituted in rate book (Mr. Leete), 13,391-2; 13,403-6.

VALUATION IN THE METROPOLIS, AREAS AND AUTHORITIES—*cont.*

- The term "actual rack rent" should be substituted for "reasonable rent" (Mr. Male), 11,792-5; (Mr. Clark), 12,014-7.
- Differences of practice in various parishes (Mr. Dewey), 13,007-8; (Mr. Vigers), 19,492-9; 19,650-63.
- Systems adopted in arriving at rateable value in different parishes (Mr. Dewey), 13,019-25.
- Under-valuation of one area increases the burden of the common rates in other areas (Mr. Vallance), 12,822-8.
- More inequalities exist as regards rateable values than as regards gross values. Question of deductions discussed (Mr. Clark), 12,046-54.
- London is the only county exempted from the operation of the County Rates Act (Mr. Harper), 12,140-2; 12,145-7.
- Valuations of several parishes are not subject to adequate supervision (Mr. Dewey), 13,003-5.
- Uniformity of assessment desirable (Mr. Tagg), 18,695-701.
- There should be the same power in the metropolis of making a county rate basis for the County of London as is vested in county councils outside the metropolis (Mr. Harper), 12,150-2; 12,260-6.
- A county rate basis would not necessarily involve an additional valuation (Mr. Harper), 12,533-4.
- Quinquennial valuation compulsory (Mr. Male), 11,787.
- Quinquennial valuation. How far did the Act intend that the valuation of property should be fixed for five years (Mr. Dewey), 13,045-7.
- Quinquennial valuation should fix valuation of property for five years (Mr. Dewey), 13,083-4; 13,160-7; 13,197-8.
- Provisional and Supplemental Lists (Mr. Male), 11,805-7.
- No power to include in Provisional or Supplemental Lists properties inadvertently omitted from the Quinquennial List (Mr. Male), 11,997-8.
- Notice of objections by surveyors of taxes to occupiers and by occupiers to surveyors (Mr. Male), 11,817.
- Valuation list should apply to Land Tax (Mr. Clark), 12,018-20.
- Cost of valuation (Mr. Harper), 12,593-6; 12,599-605.
- In the East-end the gross value is often in excess of the actual rent. This is not the case in the West-end (Mr. Vigers), 19,681-8.
- Rapid growth of values in London produces inequalities (Mr. Harper), 12,188-9.
- Under-valuation in cases of freeholds occupied by owners, licensed premises, and certain large undertakings (Mr. Harper), 12,180-1.
- The Government benefits by an increase in the gross value (Mr. Dewey), 13,099.
- Under-valuation, allegations of. *See under* "BANKS, VALUATION OF," "CITY OF LONDON," "CLUBS, VALUATION OF," "FREEHOLD PROPERTY, VALUATION OF," "GOVERNMENT PROPERTY, VALUATION OF," "LEASEHOLD PROPERTY IN THE METROPOLIS, VALUATION OF," "LICENSED HOUSES IN THE METROPOLIS, VALUATION OF," "LONDON COUNTY COUNCIL," "REPAIRS INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE," "STRAND UNION," and "VALUATION OF SPECIAL CLASSES OF PROPERTY."
- (*See also under* "APPEALS (VALUATION)"; "REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE"; "SURVEYORS OF TAXES.")
- VALUATION (METROPOLIS) ACT, 1869 (32 & 33 Vict. c. 67) :
- Its operation satisfactory (Mr. Hills), 19,744-5.
- Requires certain amendments (Mr. Clark), 12,059-62.
- Defects in the Act (Mr. Dewey), 13,003.
- Operation of the Act is not altogether satisfactory (Mr. Dewey), 13,192-3.
- Has hardly fulfilled the intention of the Legislature (Mr. Dewey), 13,168-73.
- VALUATION (METROPOLIS) BILLS OF 1893 AND 1894. (*See under* "LONDON VALUATION AND ASSESSMENT BILL.")
- VALUATION OF SPECIAL CLASSES OF PROPERTY :
- (a.) *Generally.*
- A central authority desirable (Mr. Dewey), 13,048-9.
- Undertakings which have monopolies. Principles affecting the valuation of (Mr. W. H. B. Castle), 13,687-97; 13,924-34.

**VALUATION OF SPECIAL CLASSES OF PROPERTY—cont.**

Method of valuation of certain properties which are never sold or let (Mr. W. H. B. Castle), 13,701-6; 13,879-87.

Ascertainment of contractor's rent (Mr. W. H. B. Castle), 13,879-87.

*(b.) In the Metropolis.*

Should be made by a central authority. On what basis and principle they should be dealt with (Mr. Harper), 12,173-82.

The London County Council should undertake and defend the valuation of "special properties" and should make the initial valuation of large undertakings such as railways (Mr. Vallance), 12,702-3.

The London County Council or a central authority should make the initial valuation of special properties (Mr. Vallance), 12,799-803.

Desirable that large companies of a certain class should be valued as a whole and the valuation subsequently allocated to the various parishes (Mr. Vigers), 19,441-3.

Companies, such as dock, gas, and railway. Method of arriving at the tenant's capital. Difficulties of ascertaining this (Mr. Vigers), 19,395-409.

Buildings used for public local purposes. Return by London County Council giving particulars of (Mr. Harper), 12,190-3.

Difficulties of valuing special classes of property in the City of London also occur in other large towns (Mr. Huxtable), 20,616-32; and in other parts of the metropolis, 20,735-9.

**VALUE OF PROPERTY, VARIATION IN:**

Rent frequently higher on one side of a street than the other. Reasons for this (Mr. Warner), 13,465-9.

**VALUERS:**

(See under "SURVEYORS AND VALUERS.")

**VESTRY CLERKS IN THE METROPOLIS:**

Are customarily invited to conference with assessment committees before the lists are prepared by the overseers in order to secure uniformity (Mr. Vallance), 12,669-72.

**VIGERS, MR. B.,** Valuer and Surveyor, and President of the Surveyors' Institution, Evidence of, 19,351-697.

**VOLUNTARY SCHOOLS.** (See under "EDUCATION.")

**VOLUNTEER HEADQUARTERS:**

Are exempt from rating (Mr. Dethridge), 12,981-2.

**WAGSTAFF, MR. W. H.,** Vice-Chairman of the City of London Union Assessment Committee, Evidence of, 20,783-885.

**WANDSWORTH PARISH:**

Rates in (Mr. Hills), 19,772-97.

**WANDSWORTH SANITARY DISTRICT:**

Evidence of the Clerk to the Board of Works (Mr. Hills), 19,698-837.

Area and duties of Board of Works described (Mr. Hills), 19,700-6.

**WANDSWORTH SANITARY DISTRICT—cont.**

Statistics showing rates in the £ in the different parishes. Each parish bears the burden of its own expenditure, and it is not apportioned according to rateable value (Mr. Hills), 19,707-10.

**WARNER, MR. W. H.,** of Messrs. Lofts and Warner, Estate Agents and Surveyors, Evidence of, 13,435-645.

**WATER RATES:**

Increase in the rateable value of property benefits companies (Mr. Dewey), 13,101-3.

Water companies' charges have increased, owing to rise of rateable value, and this is unfair (Mr. Vallance), 12,861-4.

**WATER UNDERTAKINGS, VALUATION OF:**

A central authority desirable (Mr. Dewey), 13,048-9.

Waterworks of a corporation. Method of valuation (Mr. W. H. B. Castle), 13,828-32; 13,888-98.

**WHITECHAPEL UNION:**

Evidence of the Clerk to the Board of Guardians (Mr. W. Vallance), 12,667-913.

Rateable value of properties has risen in the last 30 years, and the rates in the £ have risen slightly (Mr. Vallance), 12,829-36.

Rent has increased in the last 30 years. Reasons for this (Mr. Vallance), 12,837-8.

Ground rents have gone up, owing to increase of population (Mr. Vallance), 12,865-75.

Value of property has not been diminished by the rise in rates (Mr. Vallance), 12,839.

Valuation of Government property is very fair. The property would be very difficult for the assessment committee to value, and the Treasury valuation is preferable (Mr. Vallance), 12,891-5.

Maximum deductions would not have been allowed to the extent they have were it not that there is so little diversity of property (Mr. Vallance), 12,896-8.

Number of objections heard by assessment committee at last quinquennial valuation was 1,184 on 10,672 assessments (Mr. Vallance), 12,752-7.

Appeals from assessment committee very few in number (Mr. Vallance), 12,758-60.

Compounding (Mr. Vallance), 12,689.

Licensed houses are not undervalued. Tied houses difficult to value (Mr. Vallance), 12,899-901.

**WINCHESTER HOUSE, IN THE CITY OF LONDON, VALUATION:**

Method of valuing site value and structural value. Repairs and renewals (Mr. Huxtable), 20,740-66; (Mr. Barnett), 20,940-2. This is a case of an exceptional character, 20,983-5.

**WRBSELL (YORKS), VICAR OF:**

Evidence of the Vicar (Rev. R. Kennedy), 18,782-894. Rates paid by (Rev. R. Kennedy), 18,827-43; 18,860-74.

Glebe land is under-valued by the farmers on assessment committee. The parsonage house is over-valued (Rev. R. Kennedy), 18,875-8.

Effect upon his income derived from tithe (Rev. R. Kennedy), 18,785-97; 18,815-26; 18,860-74.

Index  
to Evidence.

## II.—INDEX TO EVIDENCE GIVEN BY EACH WITNESS.

THE FIGURES REFER TO THE NUMBERED QUESTIONS IN THE MINUTES OF EVIDENCE.

Index  
to Evidence.

- 1.—**Mr. W. MALE**, Inspector of Taxes. (Questions 11,774-12,000.)
- AGRICULTURAL RATES ACT, 1896** (59 & 60 Vict. c. 16):  
Is greatly appreciated by the agricultural interest and has demonstrated the inequalities in rating, 11,990-6.
- APPEALS (VALUATION):**  
Power of appeal. Appeal to Special Sessions might be abolished, 11,820-2; 11,891-908.  
There are too many appeal courts. Quarter Sessions should be the only appeal court, 11,971-6.  
Number of, in London, 11,909-15.  
Appeal court analogous in its constitution to Railway Commission would be advantageous, 11,977.
- ASSESSMENT COMMITTEES:**  
(a.) *In England and Wales (except the Metropolis).*  
District Commissioners of Taxes, but not Surveyors of Taxes, should be *ex officio* members of Assessment Committees, 11,859-63; 11,920-3. Surveyors should attend all meetings, 11,859-63.  
(b.) *In the Metropolis.*  
Desirable for District Commissioners of Income Tax and county councillors to be members of assessment committees, 11,818-9.  
London County Council should be represented upon committees, 11,841-2; 11,940-1; but should have no authority over the committees, 11,853-6.
- ASSESSMENT CONFERENCES OF LONDON COUNTY COUNCIL:**  
Conferences of representatives of assessment committees in the metropolis convened by London County Council, 11,916-9.  
Have been beneficial, 11,848-50.
- CITY OF LONDON:**  
Properties undervalued, 11,802-4; 11,824-34.  
Under-valuation due to the interpretation by the assessment committee of a "reasonable rent." Rack-rent should be taken as the basis, 11,882-90.  
Property would be adequately valued if the London County Council had representation on assessment committee and "rack-rent" was the basis for valuation, 11,864-9.
- IMPERIAL TAXES:**  
Size of survey districts outside Metropolis, 11,857-8.
- LEASEHOLD PROPERTY IN THE METROPOLIS, VALUATION OF:**  
Rack-rent, method of arriving at, 11,796-801.  
Addition of 10 per cent. for repairs, a fair proportion, 11,942-9.
- LICENSED HOUSES, VALUATION OF:**  
System in London, 11,799.
- RACK-RENT:**  
Definition of, 11,783-5.  
Method of arriving at, in case of leasehold property, 11,796-801.
- REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE:**  
Desirable to obtain uniformity in a rating area. How to ascertain rateable value, 11,873-81.  
Maximum scale in force in London, 11,835-40.
- SITE VALUE AND STRUCTURAL VALUE:**  
It is possible to make a separate valuation, but it would provoke litigation, and is not a system upon which the Legislature should insist, 11,978-89.
- STRAND UNION:**  
Property would be adequately valued if the London County Council had representation on assessment committees, and "rack-rent" was the basis for valuation, 11,864-9.
- SURVEYORS OF TAXES:**  
(a.) *In England and Wales (except the Metropolis).*  
Size of districts, 11,857-8.  
(b.) *In the Metropolis.*  
Power to insert gross value in the valuation list, 11,931-9.  
His position as regards valuation should be more defined and extended, 11,808-11.  
Should be present with the overseers in preparing the valuation lists, 11,924-30.  
Should attend all meetings of assessment committees, 11,859-63.  
His position as regards valuation would not be so strong if he were a member of an assessment committee, 11,812-6.
- VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS), AREAS:**  
The question of areas discussed, 11,950-65.  
Area of poor law union a satisfactory one for purposes of valuation, 11,870-2; 11,950-65.  
Union areas preferable to county areas, 11,851-2.  
Area of an administrative county not a practicable one for purposes of valuation, 11,950-65; but preferable if it were practicable, 11,966-70.
- VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS), SYSTEM:**  
Valuation (Metropolis) Act should be extended to the rest of the country, 11,843-7.
- VALUATION IN THE METROPOLIS AND THE REST OF ENGLAND AND WALES:**  
Valuation in the metropolis and in the country compared, 11,999-12,000.  
Advantages of the London system compared with that in the rest of the country, 11,788-91.  
Valuation for Imperial taxes; reasonable rent the basis in London, rack-rent the basis outside London, 11,778-86.
- VALUATION IN THE METROPOLIS, SYSTEM:**  
Quinquennial valuation compulsory, 11,787.  
Notice of objections by surveyors of taxes to occupiers and by occupiers to surveyors, 11,817.  
Provisional and supplemental lists, 11,805-7.  
No power to include in Provisional or Supplemental Lists properties inadvertently omitted from the Quinquennial List, 11,997-8.  
The term "actual rack-rent" should be substituted for "reasonable rent," 11,792-5.
- 2.—**Mr. H. CLARK**, Surveyor of Taxes. (Questions 12,001-12,092.)
- APPEALS (VALUATION):**  
Power of one union in Metropolis to appeal against the totals of another should be extended to the rest of the country, 12,073-6.
- ASSESSMENT COMMITTEES IN THE METROPOLIS:**  
London County Council should be represented upon committees, 12,086-92.
- CITY OF LONDON:**  
Site value and structural value. Effect of present system of making deductions in arriving at rateable value, 12,055-8.  
Estimated extent of under-valuation, 12,040-5.  
The valuation would be higher if rack-rent were taken as the basis, 12,039.
- LAND TAX:**  
Valuation list in London should apply to Land Tax, 12,018-20.

**LONDON COUNTY COUNCIL:**

Have rights of appeal against valuation only as rate-payers, 12,063-5.  
Powers of appeal against valuation discussed, 12,078-92.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE IN THE METROPOLIS:**

Question of deductions discussed, 12,046-54.  
Site value and structural value. Deductions which should be made in arriving at rateable value. How the present system affects the city of London, 12,055-8.

**VALUATION IN ENGLAND AND SCOTLAND, SYSTEMS COMPARED:**

Scottish system of valuation a good one and would be a desirable one for England, particularly with reference to local taxation, but the initial difficulty of carrying it into effect would be great, 12,021-5.  
Scottish system of obtaining returns from owners, 12,037-8.

**VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS), AREAS:**

Area for purposes of valuation should be the union with an appeal to a County Authority, 12,071-2.  
Areas of poor law union and tax districts should be conterminous, 12,077.

**VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS), SYSTEM:**

More inequalities exist as regards rateable value than gross value, 12,026-9.  
Valuation of property in hands of owners compared with valuation of property in hands of tenants, 12,007-13.  
Valuation (Metropolis) Act should be extended to the rest of the country, 12,066-70; but it requires certain amendments, 12,059-62.

**VALUATION IN THE METROPOLIS, SYSTEM:**

Returns by occupiers for quinquennial valuation frequently not made. Penalty not enforced, 12,030-6.  
More inequalities exist as regards rateable values than as regards gross values. Question of deductions discussed, 12,046-54.  
The term actual rack-rent should be substituted for reasonable rent, 12,014-7.  
Valuation list should apply to Land Tax, 12,018-20.

**VALUATION (METROPOLIS) ACT, 1869 (32 & 33 Vict. c. 67):**

Requires certain amendments, 12,059-62.

**3.—Mr. EDGAR JOSIAH HARPER, Assistant Valuer to the London County Council. (Questions 12,093-12,605.)****APPEALS (VALUATION) TO SESSIONS:**

Constitution of the London Quarter Sessions is satisfactory, but they are overburdened with work, 12,270-3.  
Against site value. See under "Site value and structural value."

**ASSESSMENT CONFERENCES OF LONDON COUNTY COUNCIL:**

Assessment conference, 1893-4. Return by London County Council containing certain resolutions passed, 12,194-9.  
Their influence has tended to secure greater uniformity in valuation, 12,144.

**BANKS, VALUATION OF:**

Suggested by London County Council that certain banks in the City of London are undervalued, 12,217-23.  
Bank of England. Suggested by London County Council that it is undervalued, 12,205-16.

**CITY OF LONDON:**

Under-valuation is prevalent, 12,169-72.  
Alleged by London County Council that certain property is undervalued, 12,233-48.  
Suggested by London County Council that certain banks and buildings are undervalued, 12,205-23.

**CLUBS, VALUATION OF:**

Alterations in assessment of certain clubs in London suggested by London County Council, 12,496-506.

**FREEHOLD PROPERTY, VALUATION OF:**

Under-valuation said to be prevalent in Metropolis, 12,130-1.

**GAS UNDERTAKINGS, VALUATION OF:**

Divergence in valuation, 12,338-44.

**GOVERNMENT PROPERTY, VALUATION OF:**

Basis of present contribution still too low, 12,135-7.  
Should be valued in the same way as other property, 12,135-7, 12,327-35.

**GROSS VALUE:**

Abolition of suggested for rating purposes, 12,346-53.

**INCIDENCE OF LOCAL TAXATION:**

Incidence of urban rates as between owners and occupiers, 12,535.

**INLAND REVENUE:**

Powers of Appeal, how far exercised, 12,274-9.

**LAND (BUILDING) VACANT, RATING IN RESPECT OF:**

Vacant land should be assessed to local rates to some extent, 12,481-3.

**LEASEHOLD PROPERTY IN THE METROPOLIS, VALUATION OF:**

Addition of 10 per cent. to rents reserved under repairing leases to arrive at gross value, and deduction of one-sixth to arrive at rateable value. Extent of under-assessment due to this cause, 12,115-20, 12,313-26.  
Rent is the best evidence of rateable value of property let on repairing leases. Proportion of properties let on repairing leases in the Metropolis, 12,484-91.  
Question of deductions for repairs, &c. in cases where site value exceeds the value of the whole hereditament, 12,456-76.  
Property held under repairing leases. Deduction in respect of the sinking fund necessary to keep the premises in a position to command the rent, 12,477-80.  
10 per cent. not added to rents reserved under repairing leases to arrive at gross value, as in other parts of the Metropolis. Loss of rateable value owing to this, 12,121-9.

**LICENSED HOUSES IN THE METROPOLIS, VALUATION OF:**

Return by London County Council giving particulars of, 12,258-9.  
Under-valuation said to be prevalent, 12,130-1.  
Half the premium now treated as capitalised rent, 12,138-9.

**LONDON COUNTY COUNCIL:**

Alterations in assessments suggested by London County Council. Return giving particulars of, 12,201-4, 12,267-9, 12,491-512.  
Objections to certain valuations made by London County Council. Return giving particulars of, 12,251-7.  
An improvement in the valuation of the Metropolis has taken place, and is due to the action of the London County Council, 12,153-62, 12,523-5.  
Council's powers of Appeal, 12,224-32.  
Council should have power to make objections and to appeal in every parish, 12,163-8.

**LONDON VALUATION AND ASSESSMENT BILL:**

Clause relating to occupiers form of return, 12,101-3.

**MACHINERY AND PLANT, RATING IN RESPECT OF:**

Law in respect to valuation of machinery, 12,132-4.

**MEMORANDUM BY MR. E. J. HARPER:**

Contents, 12,097.

**METROPOLIS:**

Common rates in the County of London form a large proportion of total, 12,148-9, 12,513-4.

**RAILWAYS, VALUATION OF:**

Division of valuation between different local authorities, 12,345.  
Should be valued by a central body, 12,336-7.

Index  
to Evidence.

## REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE IN THE METROPOLIS:

As deductions for repairs only apply to structural value and not to site value, inequalities are caused in the Metropolis if the maximum deductions in the Valuation (Metropolis) Act, are always allowed, 12,441-55, 12,526-32.

Deduction of one-sixth almost universal in practice, but this practice is not a satisfactory one. Deductions should be calculated upon structural value alone and not upon total gross value, 12,104-11.

Extent of under-assessment owing to full deduction being made, without regard to value of site, 12,112-4, 12,304-12, 12,536-60. Method of estimating the total site value of the Metropolis, 12,306-12.

A uniform allowance objectionable because of the variations in the proportion of site value to structural value, 12,389-96.

Suggested method of making deductions in cases where site value forms a large proportion of the total value, 12,542-60.

How far possible and desirable to separate site value and structural value. Suggested difficulties. Question of the proper deductions to make to arrive at rateable value, 12,280-303.

Method of determining site value and structural value discussed, 12,367-88.

## SCHOOLS, VALUATION OF:

Return by London County Council giving particulars of, 12,249-50.

## SITE VALUE AND STRUCTURAL VALUE:

How far possible to make a separate valuation, 13,561-77.

Determination of rateable value of structure by reference to capital cost, 12,578-92.

If separate valuation made, the owner of the site value should be given a power to appeal, 12,597-8.

See also under "LEASEHOLD PROPERTY, VALUATION OF," and "REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE."

## SITE VALUES:

Variations of site values, 12,393-406.

Causes of increase, 12,407-19.

The use of a site does not affect its value, 12,420-40.

## SURVEYORS OF TAXES IN THE METROPOLIS:

Their powers, action, and influence in regard to valuation, 12,515-22.

Their intervention in valuation tends to create uniformity, 12,143.

## VALUATION IN THE METROPOLIS, AND THE REST OF ENGLAND AND WALES:

Valuation for Income Tax and for local rates outside the Metropolis varies considerably, and this is not the case in the Metropolis. Reasons for this, 12,183-7.

Levying of all taxes, Imperial and Local, on a uniform value discussed, 12,354-62.

## VALUATION IN THE METROPOLIS, AREAS:

Areas for Imperial and Local purposes not being conterminous is a drawback, 12,098-9.

## VALUATION IN THE METROPOLIS, SYSTEM:

Returns issued to occupiers are inapplicable to some classes of property, 12,100.

Provisional and Supplemental valuations. Occupiers returns should be compulsory, 12,200.

London is the only county exempted from the operation of the County Rates Act, 12,140-2, 12,145-7.

There should be the same power in the Metropolis of making a county rate basis for the County of London as is vested in County Councils outside the Metropolis, 12,150-2, 12,260-6.

A county rate basis would not necessarily involve an additional valuation, 12,533-4.

Rapid growth of values in London produces inequalities, 12,188-9.

Under-valuation in cases of freeholds occupied by owners, licensed premises, and certain large undertakings, 12,130-1.

Cost of valuation, 12,593-6, 12,599-605.

## VALUATION OF SPECIAL CLASSES OF PROPERTY IN THE METROPOLIS:

Buildings used for public local purposes. Return by London County Council giving particulars of, 12,190-3.

Should be made by a central authority. On what basis and principle they should be dealt with, 12,173-82.

## 4.—Mr. GEORGE LAURENCE GOMME, Statistical Officer of the London County Council. (Questions 12,606-12,666.)

### EDUCATION GRANTS:

Proportion obtained by London, 12,623-6.

### IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:

Proportion of expenditure borne by such contributions in different districts. Purposes of expenditure should be taken into consideration, 12,627-34, 12,659-66.

### LOCAL TAXATION (ENGLAND) ACCOUNT:

Principles upon which grants under Local Government Act, 1888, were allocated, 12,635-41.

### PARKS (ROYAL).—BENEFIT DERIVED BY LONDON:

Royal parks in and around London. Cost of, 12,607-9.

Suburban parks a benefit to London, 12,610-3.

Parks outside the town sometimes acquired by municipalities, 12,657-8.

### POLICE (METROPOLITAN), COST OF:

Percentage of Exchequer contributions to amounts obtained from rates, 12,614-22, 12,642-56.

## 5.—Mr. W. VALLANCE, Clerk to the Whitechapel Board of Guardians. (Questions 12,667-12,913.)

### APPEALS (VALUATION) TO SESSIONS:

Appeals from Assessment Committee in Whitechapel, very few in number, 12,758-60.

Quarter sessions not a satisfactory tribunal. A special tribunal desirable, 12,901-12.

### ASSESSMENT COMMITTEES IN THE METROPOLIS:

Vestry clerks are customarily invited to conference with assessment committees before the lists are prepared by the overseers, in order to secure uniformity, 12,669-72.

Representation of London County Council on assessment committees would be useful, 12,769-70.

London County Council should be given a *locus standi* on assessment committees with powers similar to those of the surveyors of taxes, 12,695-9, 12,741-7, 12,750. This arrangement should include provisional valuations, 12,695-9. Question as to whether their duties would clash, 12,741-7.

### ASSESSMENT CONFERENCES OF LONDON COUNTY COUNCIL:

Conferences promoted by the London County Council with reference to questions of assessment very useful, 12,704-12.

### COMPOUNDING:

Whitechapel, practice in, 12,689.

The primary object of the system was convenience of collection, 12,786-8.

A uniform practice should be made compulsory, 12,690-1.

System is convenient, but prevents the poor from feeling the pressure of rates, 12,846-50.

### GOVERNMENT PROPERTY, VALUATION OF:

Whitechapel. Valuation is very fair. The property would be very difficult for the assessment committee to value, and the Treasury valuation is preferable, 12,891-5.

### GROSS VALUE, RATING ON:

Difficulty of doing this on account of the different classes of property and their condition, 12,783-5. Would be unfair in some cases, 12,761-8.

**GROUND RENTS:**

Ground rent continues to be paid, but it is not rated when leasehold property is vacant, 12,876-8. Whitechapel. Ground rents have gone up owing to increase of population, 12,865-75.

**LICENSED HOUSES, VALUATION OF:**

Whitechapel. They are not undervalued. Tied houses difficult to value, 12,899-901.

**LONDON COUNTY COUNCIL:**

Their influence has been beneficial to assessment committees, 12,854-60.

Their intervention regarded as essential for the purpose of obtaining uniformity in valuation, 12,704-12.

Should be given a *locus standi* on assessment committees with powers similar to those of the surveyors of taxes, 12,695-9, 12,741-7, 12,750. This arrangement should include provisional valuations, 12,695-9. Question as to whether their duties would clash, 12,741-7.

Should undertake and defend the valuation of "special properties" and should make the initial valuation of large undertakings such as railways, 12,702-3.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE:***(a) Generally.*

Variations in deductions are necessary for fairness between different properties, especially where proportion of site value to total value differs, 12,813-21.

Valuation authority should have discretion as to allowance for deductions, 12,794-8.

*(b) In the Metropolis.*

Deductions from gross value are almost uniformly fixed at maximum. They are not always justifiable 12,680-4.

Deductions alleged to be sometimes in excess of the legal maximum. Reasons for this, 12,717-22.

Whitechapel. Maximum would not have been allowed to the extent it has were it not that there is so little diversity of property, 12,896-8.

It would be possible to fix lower amounts than the maximum which would more fairly represent the cost of repairs, especially where the site value is relatively high, 12,685-8.

**SURVEYORS OF TAXES IN THE METROPOLIS:**

Intervention by in Valuation. His influence is great and very useful, 12,673-9.

To what extent does he attend proceedings of assessment committees, 12,713-6.

Objections to surveyors' valuations. Surveyor often makes a settlement when facts are brought to his notice, 12,748-9.

**UNOCCUPIED PROPERTY, RATING IN RESPECT OF:**

"Empties." Loss on this property is often considerable, 12,840-5.

How far consistent with the principle of rating according to the valuation of the occupation as measure of ability to pay, 12,789-93.

Is fair in principle but difficult to carry out, 12,700.

Difficulties of rating owner, 12,773-82.

Should such property be subject to all rates. Difficulties of the question, 12,726-9.

**VALUATION IN THE METROPOLIS, AREAS AND AUTHORITIES:**

Question whether the union or the parish should be the unit for valuation. If the union areas were adopted, overseers would be abolished and a skilled valuer appointed to assist the assessment committee. The union authority would levy and collect the rates, 12,730-40.

The union a better area than the parish, 12,851-3.

The union a better area than the county or the parish. Abolition of overseers, 12,808-12.

The union and not the parish is practically the unit for valuation, 12,693-4. The preliminary stages of valuation should be entrusted to the union authorities, and greater uniformity would be obtained, 12,693-4, 12,723-5. Question of compensation of assistant overseers in case of transfer of their duties to unions, 12,723-5.

London County Council or a central authority should give directions with regard to the system of valuation and should make the initial valuation of special properties, 12,799-803.

**VALUATION IN THE METROPOLIS, SYSTEM:**

Under-valuation of one area increases the burden of the common rates in other areas, 12,822-8.

**VALUATION OF SPECIAL CLASSES OF PROPERTY IN THE METROPOLIS:**

The London County Council should undertake and defend the valuation of "special properties" and should make the initial valuation of large undertakings such as railways, 12,702-3.

The London County Council or a central authority should make the initial valuation of special properties, 12,799-803.

**VESTRY CLERKS IN THE METROPOLIS:**

Are customarily invited to conference with assessment committees before the lists are prepared by the overseers in order to secure uniformity, 12,669-72.

**WATER RATES:**

Water companies charges have increased owing to rise of rateable value and this is unfair, 12,861-4.

**WHITECHAPEL UNION:**

Rateable value of properties has risen in the last thirty years, and the rates in the £ have risen slightly, 12,829-36.

Rent has increased in the last thirty years. Reasons for this, 12,837-8.

Value of property has not been diminished by the rise in rates, 12,839.

Number of objections heard by assessment committee at last quinquennial valuation was 1184 on 10,672 assessments, 12,752-7.

6.—Mr. **FRANK DETHRIDGE**, Vestry Clerk of the parish of Faddington. (Questions 12,914-13,000.)

**ADVERTISEMENTS, RATING IN RESPECT OF:**

Rating in respect of advertisements on omnibuses suggested, 12,959-61, 12,968.

Rating in respect of posters and wall advertisements suggested, 12,998-9.

Suggested duties on advertisements should be raised by Imperial authorities, and distributed to localities according to rateable value, 12,964-6.

**CANALS, VALUATION OF:**

Discussed, 12,983-9.

**CYCLES, DUTIES ON:**

Registration tax proposed, 12,947-52, 12,968, 12,992-7.

Should carts and horses also be taxed, 12,992-7.

Suggested duties should be raised by Imperial authorities, and distributed to localities according to rateable value, 12,964-6.

**EDUCATION, COST OF:**

Should be made a national charge. Question of administration, 12,976-7.

**INCOME TAX IN AID OF LOCAL EXPENDITURE:**

Rating on income. How to be effected in case of persons resident in more than one place, 12,953-6.

**INHABITED HOUSE DUTY:**

Should be handed over to local authorities, 12,968.

**LOANS RAISED BY LOCAL AUTHORITIES:**

Loans to Local Authorities by Trustees of Savings Banks suggested, 12,944-6, 12,969.

Loans are made to local authorities by the Government at 2½ per cent., 12,962-3.

**LONDON (EQUALISATION OF RATES) ACT, 1894, (57 & 58 Vict. c. 53):**

Not beneficial, 12,930-3.

**PADDINGTON—RATES IN £:**

12,970-5.

**POOR RELIEF, EXPENDITURE UPON:**

Should be made a national charge. Question of administration, 12,976-80.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE:**

Paddington. Maximum rate adopted. Peculiarities of separate hereditaments, including variations of site value, are not now considered; but there would be no objection to going more into detail, 12,917-29.

**TRADE:**

Registration fees suggested, 12,957-8, 12,968.

**VALUATION IN THE METROPOLIS:**

Centralisation of valuation undesirable. Ratepayers already sufficiently protected, 12,934-40.

Revision of by a central authority would lead to friction. At most the County Council might be allowed to appeal to a conference of the chairmen of all the assessment committees in the Metropolis, 12,941-3

Existing state of things on the whole satisfactory, 12,967.

**VOLUNTEER HEADQUARTERS:**

Are exempt from rating, 12,981-2.

7.—Mr. **WILLIAM FRANCIS DEWEY**, Vestry Clerk of the parish of Islington. (Questions 13,001-13,241.)

**APPEALS (VALUATION) TO SESSIONS:**

Insufficiency of powers of appeal in Metropolis against totals of parishes, 13,004-6.

Quarter Sessions unsatisfactory tribunals, 13,050.

**ASSESSMENT COMMITTEES:**

Islington. Committee is appointed by the Vestry, 13,118-30.

**ASSESSMENT CONFERENCES OF LONDON COUNTY COUNCIL:**

Conferences created greater uniformity in the system of valuation in London, 13,065-6, 13,196, and have increased the rateable value, 13,096-8.

**COMPOUNDING:**

If abolished would lead to difficulties in the collection of rates, 13,078-82.

Tenement houses should be compounded for, 13,226-38.

Islington, Practice in, 13,057, 13,071-5, 13,203-9.

**DEMAND NOTES AND RECEIPT FORMS:**

Uniformity desirable. Actual purposes for which the rates are levied should be specified, 13,212-25.

**ELECTRIC LIGHT UNDERTAKINGS, VALUATION OF:**

A central authority desirable, 13,048-9.

**GAS LIGHT AND COKE CO.**

Appeal by, 13,050, 13,061-2.

**GAS UNDERTAKINGS, VALUATION OF**

A central authority desirable, 13,048-9.

**GROSS VALUE:**

Definitions of, in Income Tax Act and Valuation (Metropolis) Act, 13,174-80.

**ISLINGTON PARISH:**

Parish is not in any Union, and maintains its own poor, 13,012-4.

Assessment Committee is appointed by the Vestry, and the Vestry are the overseers, 13,118-30.

Valuation of property comparatively an easy matter, 13,189-91.

Effect upon Islington of under-valuation to the extent of 100,000*l.* in other parts of London, 13,090-2.

Rates in Islington. Classes of ratepayers, 13,142-59.

Tendency of rates to rise or fall in the last 30 years, 13,104-8.

**LEASEHOLD PROPERTY IN THE METROPOLIS, VALUATION OF:**

Practice of adding 10 per cent. to gross value and deducting 16 per cent. gives unnecessary trouble, 13,135-41.

**LEVYING AND COLLECTION OF RATES:**

Islington. Collection of rates made quarterly and has satisfactory results, 13,058-60, 13,076-7, 13,142-9, 13,210-1.

**LONDON (EQUALISATION OF RATES) ACT, 1894 (57 & 58 Vict. c. 53).**

Its operation and results discussed, 13,051-6, 13,109-17, 13,152-9.

**LONDON VALUATION AND ASSESSMENT BILL:**

Bill introduced by London County Council to amend the system of valuation in London, 13,063-70.

**METROPOLIS:**

Rateable value of properties increasing, 13,095-100.

Common charges, great increase of, 13,008.

**OVERSEERS:**

Desirable that the local authorities should be made the overseers in all cases. Powers of Local Government Board, 13,118-30, 13,239-41.

**RAILWAYS, VALUATION OF:**

A central authority desirable, 13,048-9.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE IN THE METROPOLIS:**

Alleged that legal maximum is sometimes exceeded. Reasons for this, 13,019-21.

Whether the maximum deductions should be allowed in cases where the site value forms a large proportion of the total value, 13,026-34, 13,085-94. It would entail a great deal of work to make varying deductions, 13,026-34.

Islington. Separation of site value from gross value is practicable, 13,092-3.

**RETURNS BY OWNERS AND OCCUPIERS:**

Returns obtainable in the Metropolis are very valuable, 13,198-201.

Power to obtain returns from owners and occupiers, as in metropolis, should be extended to the rest of the country, 13,199-202.

**SITE VALUES:**

Rating in respect of, how far desirable and practicable, 13,039-44.

**TELEPHONES, VALUATION OF:**

A central authority desirable, 13,048-9.

**TRAMWAYS, VALUATION OF:**

A central authority desirable, 13,048-9.

**UNOCCUPIED PROPERTY, RATING IN RESPECT OF:**

Is undesirable, but the owners of the sites might be taxed, 13,035-8.

Metropolis. Should the loss due to the exemption of empty property be borne by the metropolis as a whole, 13,071-5.

**VALUATION IN THE METROPOLIS, AREAS AND AUTHORITIES:**

Areas for purposes of valuation discussed, 13,009-18.

Suggestion that the Valuation (Metropolis) Act should be administered by an independent body or official for the whole county, 13,007-8.

Central authority desirable to control the various valuation authorities, 13,131-4, 13,194-6.

Central authority other than the London County Council desirable to control the various valuation authorities, 13,181-8.

**VALUATION IN THE METROPOLIS, SYSTEM:**

Differences of practice in various parishes, 13,007-8.

System adopted in arriving at rateable value in different parishes, 13,019-25.

Valuations of several parishes are not subject to adequate supervision, 13,003-5.

The Government benefits by an increase in the gross value, 13,099.

Quinquennial Valuation. How far did the Act intend that the valuation of property should be fixed for five years, 13,045-7.

Quinquennial Valuation should fix valuation of property for five years, 13,083-4, 13,160-7, 13,197-8.

**VALUATION METROPOLIS ACT, 1869 (32 & 33 Vict. c. 67):**

Defects in the Act, 13,003.

Operation of the Act is not altogether satisfactory, 13,192-3.

Has hardly fulfilled the intention of the Legislature, 13,168-73.

**VALUATION OF SPECIAL CLASSES OF PROPERTY:**

A central authority desirable, 13,048-9.

**WATER RATES:**

Increase in the rateable value of property benefits companies, 13,101-3.

**WATER UNDERTAKINGS, VALUATION OF:**

A central authority desirable, 13,048-9.

8.—**Mr. WILLIAM CHAMBERS LEETE**, Vestry Clerk of the parish of Kensington (Questions 13,242-13,434).

**ASSESSMENT CONFERENCES OF LONDON COUNTY COUNCIL:**

Conferences were beneficial, 13,249-52.

**COMPOUNDING:**

In Kensington, 13,262-4, 13,310-3.

**KENSINGTON:**

Parish is not in any Union and maintains its own poor, 13,244-5.

Vestry act as overseers, 13,244, 13,291.

Areas and powers of overseers, 13,290-7.

Preparation of valuation lists, 13,246-8.

Principles adopted in arriving at gross value, 13,254.

Purposes for which rates are levied and the authorities who expend them, 13,326-43.

Classes of ratepayers, 13,271-2.

**LEASEHOLD PROPERTY IN THE METROPOLIS, VALUATION OF:**

Ascertainment of gross value. Alleged that nothing is added to rent reserved in the City of London, 13,398-402.

**LEVYING AND COLLECTION OF RATES:**

Kensington, all rates collected by the vestry.

Purposes for which the rates are levied, and the authorities who expend them, 13,314-43.

Kensington, rates collected half-yearly, 13,265-70.

Kensington, empty houses, losses, arrears, &c, 13,281.

Comparison between Kensington and Islington.

Number of committals to prison, 13,273-80.

**LICENSED HOUSES, VALUATION OF:**

In Kensington, 13,255-8.

**LONDON COUNTY COUNCIL:**

The actions of that body not always agreeable to local authorities, 13,413-5.

**LONDON (EQUALISATION OF RATES) ACT, 1894 (57 & 58 Vict. c. 53.):**

Basis of contribution discussed, 13,344-51, 13,361-8, 13,422-9.

Effect of Act, 13,422-34.

Suggested that contributions from fund should be given in respect of specific services, 13,416-21.

Reasons for different results of Metropolitan Common Poor Fund and Equalisation Fund, 13,361-4, 13,423-9.

**LONDON VALUATION AND ASSESSMENT BILL:**

Approval of its provisions except that the County Valuation Committee should consist of the London County Council, 13,284-9.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE:**

Kensington. The maximum deductions are made, 13,259-61.

**SITE VALUE AND STRUCTURAL VALUE:**

Very difficult, perhaps impossible, to value separately, 13,352-60.

**SURVEYORS OF TAXES IN THE METROPOLIS:**

His attendance at all meetings of valuation authorities, generally speaking, would prevent serious wrong being done by those authorities, 13,282-3.

**UNOCCUPIED PROPERTY, RATING IN RESPECT OF:**

Suggested that it should be assessed to some extent. This procedure is adopted in the City of London, 13,407-12.

Metropolis. Divergence in practice of including new properties in valuation list, 13,302.

**UNOCCUPIED PROPERTY, RATING IN RESPECT OF—cont.**

Metropolis. Suggested that the loss due to the exemption of empty houses should be made a common charge throughout the Metropolis, 13,300-4.

Kensington. Rateable value of empty property, 13,305-9.

**VALUATION IN THE METROPOLIS, AREAS AND AUTHORITIES:**

Central representative authority desirable to control the various valuation authorities, 13,253, 13,369-76, 13,393-5.

County valuation authority desirable for supervision, but not to perform actual work of valuation, 13,297-9.

Central valuation authority desirable. Functions of such a body discussed and what authorities should be represented. Question of appeals, 13,377-90.

**VALUATION IN THE METROPOLIS, SYSTEM:**

"Gross value" and "rateable value." "Annual value" should be substituted in rate book, 13,391-2, 13,403-6.

9.—**Mr. W. H. WARNER**, of Messrs. Lofts and Warner, Estate Agents and Surveyors. (Questions 13,435-13,645.)

**BENEFITS DERIVED FROM EXPENDITURE OF LOCAL AUTHORITIES:**

How far does expenditure of rates benefit the property of the owner, and how far is it a benefit to the tenant discussed. At the end of the lease the landlord may get the advantage of the improvements, but the tenant has the advantage during his term, 13,472-85.

How far does expenditure of rates benefit property of owners. Loans borrowed by municipality and capital repaid from rates as well as interest, 13,527-35.

Rates in St. George's, Hanover Square, have considerably increased in recent years. Rents have not gone up, 13,586-92.

**BUILDING LESSEE:**

Definition of, 13,438-49.

**GROUND LESSEE:**

Definition of, 13,438-49.

**INCIDENCE OF LOCAL TAXATION:**

Tenants take into consideration the present and prospective burden of rates, 13,579-82.

To what extent do ground landlord and building lessee take payment of rates into consideration when making their contracts, and to what extent does the ground landlord bear the burden of rates, 13,450-6, 13,470-1, 13,548-72.

An increase of rates falls on the occupier during his term; but such increased rates are imposed by the representatives of the occupiers, 13,571-7.

How far can the occupier shift the burden of increased rates upon the owner, 13,457-64.

The burden of rates ultimately falls on the ground landlord. The occupier is the medium who pays them, 13,456, 13,486-92, 13,497-526, 13,578, 13,583-5.

**LAND (BUILDING) VACANT, RATING IN RESPECT OF:**

It would be unfair to rate vacant land as building land. It does not derive any occupation benefits, and there is no immediate profit to the owner. Very few owners would withhold land from tenants willing to take it for building purposes, 13,606-27.

Lands Clauses Act. Case of railway company having to pay rates in respect of property they have pulled down and before they have rebuilt again. Difference in the position of a railway company and private owner, 13,628-34.

**METROPOLIS:**

The amount of rates generally influences the tenants in selecting their localities. Fashion is an element which only influences a few, 13,536-47.

How far does the amount of rates influence tenants in selecting particular localities, 13,450-6.

Rise of rates during the last 20 years, 13,593-600.

How far has it affected the desire to take leases, 13,601-5.

**METROPOLIS--cont.**

How a rise in rates affects the working classes. Large proportion of houses in the Metropolis are rented at less than 50l. a year, 13,635-45.

**SHOPS, INCIDENCE OF RATES:**

In case of shops in the West End of London, the occupier will try and shift the burden of a rise of rates upon his customers. Beyond a certain point, he cannot do this, owing to trade competition of co-operative stores, and he must then try and shift the burden on his landlord, 13,493-6.

**SITE VALUES, TAXATION IN RESPECT OF:**

The income tax system of deduction would cause confusion if applied to rates, 13,508-26.

**VALUE OF PROPERTY, VARIATION IN:**

Rent frequently higher on one side of a street than the other. Reasons for this, 13,465-9.

10.—Mr. **W. H. B. CASTLE**, of the Firm of Castle and Son, Surveyors and Valuers. (Questions 13,646-13,978.)

**APPEALS (VALUATION):**

Special tribunal to hear rating appeals not desirable, 13,720-5.

**CORPORATION PROPERTY, VALUATION OF:**

Should be valued like any other class of property, 13,879-87.

**COUNTY PROPERTY, VALUATION OF:**

Should be valued like any other class of property, 13,701-6, 13,879-87.

**ELECTRIC LIGHT UNDERTAKINGS, VALUATION OF:**

Rating in respect of profits is a just system, 13,687-97.

**GAS UNDERTAKINGS, VALUATION OF:**

Rating in respect of profits is a just system, 13,687-97.

Discussion upon certain points raised by Mr. Livesey, 13,672-86.

**GIFFORD, FOX & Co. v. THE CHARD GUARDIANS (63 L.T., 249):**

Witness considers that the case of Gifford, Fox & Co. went rather too far in the direction of rating machinery, 13,816-32.

**GOVERNMENT PROPERTY, VALUATION OF:**

Should be valued like any other class of property, 13,701-6, 13,879-87.

**MACHINERY AND PLANT, RATING IN RESPECT OF:**

Principle laid down for valuation, 13,774-8, 13,935-43.

Method of valuation and principles adopted. The law and principles affecting the rating of machinery discussed, 13,707-19, 13,816-32.

No distinction drawn between machinery put in by the landlord and by the tenant. If the tenant put in machinery, the assessable value of the factory should be increased, 13,843-51.

Witness considers that the case of Gifford, Fox & Co. went rather too far in the direction of rating machinery, 13,816-32.

In some case rateable machinery is personal property, 13,935-43, 13,975-7.

**RAILWAYS, VALUATION OF:**

Process of valuation. Deductions, 13,656-67.

How far present system a satisfactory one, 13,651-5.

Principles affecting the valuation. How far should they be valued solely with reference to the value of land, 13,899-923.

Principle of present system is the only one which could be adopted, 13,767-73.

Gross receipts. Amount claimed for value of rolling stock, 13,804-11.

12½ per cent. for tenant's allowances is sufficient, 13,668-71, 13,747-66.

The property of railway companies is sometimes undervalued. Reasons for this, 13,747-66.

Valuation by a local parish representing a larger area than the parish would be more economical, 13,665-6.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE IN THE METROPOLIS:**

If the maximum deductions in the Metropolis are always allowed without regard to relative value of site and structure, injustice results, as the land requires no deductions for repairs. There should be separate columns in the rate book for site value and structural value. Owner of site value would have to be given a power to appeal, 13,726-46.

To value site and structure separately would be a much more elaborate process than obtains at present for the valuation of properties, but the results would compensate for this, 13,779-803.

**RETURNS BY COMPANIES:**

Assessment committees should have power to call for information from companies, 13,720, 13,764-6.

**SITE VALUE AND STRUCTURAL VALUE:**

Site value and structural value of properties could be separately ascertained throughout the country, 13,944-57.

**SITE VALUES, TAXATION IN RESPECT OF:**

Question as to how the suggested payment of rates upon site values would be divided. Effect of putting a rate upon site value of certain properties discussed, 13,852-78.

**SURVEYORS AND VALUERS:**

Their professional practice, 13,812-5.

**VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS), SYSTEM:**

Valuation in rural districts should be made at intervals of about six years, 13,698-700.

**VALUATION IN THE METROPOLIS AND THE REST OF ENGLAND AND WALES:**

House property. Decorations and furniture in a house do not add to its assessable value, 13,833-42.

Land as a basis for rating apart from the uses to which it is put discussed, 13,958-74.

Land cannot be a basis for rating apart from the uses to which it is put, 13,978.

**VALUATION OF SPECIAL CLASSES OF PROPERTY:**

Undertakings which have monopolies. Principles affecting the valuation of, 13,687-97, 13,924-34.

Method of valuation of certain properties which are never sold or let, 13,701-6, 13,879-87.

Ascertainment of contractor's rent, 13,879-87.

**WATER UNDERTAKINGS, VALUATION OF:**

Waterworks of a Corporation. Method of valuation, 13,828-32, 13,886-98.

11.—Mr. **EDWIN JAMES CASTLE, Q.C.**, Recorder of Bristol. (Questions 13,979-14,105.)

**PARSONAGE HOUSES, VALUATION OF:**

Whether they are lightly rated, 14,088-92.

**PERSONAL PROPERTY, RATING IN RESPECT OF:**

Some reasons for discontinuance of the system, 14,023.

**POOR RATE EXEMPTION ACT, 1840 (3 & 4 Vict. c. 89):**

Position of clerical tithe owners under this Act, 14,057-60.

Was unfair on the clerical tithe owner, 13,989-90.

**POOR RELIEF ACT, 1601 (43 Eliz. c. 2):**

Position of clerical tithe owners under Act, 13,982-7, 13,996, 14,019-22, 14,070-2, 14,078-81.

Intention of the Act, the words "Occupier" and "Inhabitant," 13,982-7.

**TITHE ACT, 1836 (6 & 7 Will. IV. c. 71):**

The question as to whether rates were added to ascertain amount of commuted tithes discussed, 14,000-2.

**TITHE AND TITHE RENTCHARGE:**

- (a.) *Liability of Owners to be rated in respect thereof.*  
 Position of clerical tithe owners under 39 Eliz., c. 3. and 43 Eliz., c. 2., 13,996.  
 Position of clerical tithe owners under 43 Eliz., c. 2. Intention of the Act. The words "Occupier" and "Inhabitant," 13,982-7, 14,019-22, 14,070-2, 14,078-51.  
 Clerical tithe owners. No knowledge of how assessed during the 17th century, 14,048-50.  
 Poor Rate Exemption Act, 1840. Position of clerical tithe owners under this Act, 14,057-60.  
 Poor Rate Exemption Act, 1840, was unfair on the clerical tithe owner, 13,989-90.  
 Clerical tithe owners. Differential rating in respect of tithe, how far possible, 14,061-9.  
 Hereditary burdens upon tithe discussed, 14,003-13. Rates upon tithe rentcharge are not an hereditary burden, 14,014-8.  
 Clerical tithe owners should be given some relief by the Legislature as a matter of equity, 14,097-105.  
 Clerical tithe rentcharge if relieved from the payment of local rates. Under these circumstances the additional payment of rates should fall on the ratepayers generally, 14,045-7, 14,093-6.  
 Clerical tithe rentcharge should not be the subject of assessment. But clerical tithe owners only claim certain deductions, 14,025-6.  
 Clerical tithe rentcharge should not be the subject of assessment. In what way would this affect the payment of rates in respect of land? Case where the tithe forms a large proportion of the rent of land, 14,051-6.

(b.) *Valuation of Tithe Rentcharge.*

- The present system is unfair, 13,995, 13,997-9.  
 How far the principle of letting value should be applied, 13,991-4.  
 Deductions. Beneficial occupation, 14,024.  
 What deductions used to be allowed, what are now allowed, and what should be allowed, 14,029-38.

(c.) *Deductions for Personal Services.*

- Whether there should be deductions for personal services of clerical tithe owners, 13,991-4.

(d.) *Relative Positions of Lay and Clerical Tithe Owners.*

- Tithes inappropriate and propriations of tithes. Definition of, 14,073-7.  
 Tithes inappropriate and propriations of tithes cannot be "occupied," 13,988.  
 Lay tithe owners should be assessed in respect of their tithes, 14,027-8.

(e.) *Relative Positions of Tithe and Land.*

- Value of land and tithe. Position of owner and occupier, 14,039-44.  
 Clerical tithe rentcharge if relieved from rating, would to some extent relieve the land, 14,082-7.

12.—Rev. **H. MACPHERSON**, Vicar of Grayne, Rochester, and Honorary Secretary of the Federation to Free Clerical Incomes from Rates. (Questions 14,106-14,245.)

**ECCLESIASTICAL COMMISSIONERS:**

- Tithe rentcharge in the hands of the Ecclesiastical Commissioners. Whether it should be exempted from being assessed to local rates discussed, 14,168-80.

**GLEBE LAND, RATING IN RESPECT OF:**

- Suggestion that it should be wholly exempted from being assessed to local rates and the deficiency arising therefrom paid out of the Exchequer, 14,143-8.

**HARPENDEN, BENEFICE OF:**

- Gross and net income, 14,126-9, 14,157-62.

**TITHE ACT, 1836 (6 & 7 Will. IV., c. 71):**

- How far beneficial to land owners and clergy, 14,163-7.  
 No sum was added when tithes were commuted representing the amount of rates payable by clerical tithe owners, 14,181-91.

**TITHE AND TITHE RENTCHARGE:**

- (a.) *Liability of Owners to be rated in respect thereof.*  
 Clerical tithe rentcharge was not intended to be assessed to local rates, except as regards the Poor Rate, 14,149-56.  
 Clerical tithe owners said to pay rates in respect of income received for their services, 14,107-22.  
 Clerical tithe rentcharge. Suggestion that it should be wholly exempted from being assessed to local rates, 14,130-42, and the deficiency arising therefrom paid out of the Exchequer, 14,143-8.  
 Clerical tithe rentcharge. Suggestion that it should be wholly exempted from being assessed to local rates. How far a smaller measure of relief would be satisfactory discussed, 14,213-45.  
 Clerical tithe owners accept their positions in the Church subject to a liability to pay rates, 14,123-6.

(b.) *Payment of Tithes.*

- Clerical tithe owners are paid by the tithe payers. Their income is derived from the property of the Church. Proposal that the State should supplement the property of the Church, 14,192-212.

13.—**Sir CHARLES ELLIOTT**, Member of the London School Board. (Questions 18,139-18,196.)

**EDUCATION GRANTS:**

- Government Grants towards education have not led to extravagance, 18,170-8.  
 Grants in respect of truant and industrial schools should be increased, 18,155-69.  
 Government Grants in aid of School Board rates should be increased, 18,179-86.  
 Government Grants should be proportionate to the cost of carrying on the various branches of education, 18,187-95.  
 Grants received by London School Board for pupils learning certain branches of domestic economy said to be inadequate, 18,140-7.  
 Grants received by London School Board for those who are deaf and dumb and mentally deficient said to be inadequate, 18,148-54.

14.—**Mr. HUBERT MORGAN - BROWNE**, Member of the London School Board. (Questions 18,197-18,411.)

**EDUCATION, COST OF.**

- The money which the London School Board has to spend is greater in proportion compared with other school boards, 18,215-24.  
 Should be borne by the Imperial Exchequer, 18,335-9.

**EDUCATION GRANTS:**

- Principles on which the amount of contribution should be based, 18,374-94.  
 Increase of grants. Question of local control discussed, and of safeguards for careful local administration, 18,395-411.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

- Distinction between earned and unearned grants, 18,225-33, 18,306-26.  
 Government Grants should be contributed to a locality in proportion to the amount which that locality contributes to the Imperial Exchequer, 18,202-14, 18,234-53, 18,303-5. Regard also being had to efficiency. But such a system would result in the most necessitous district getting the smallest share, 18,234-53.  
 The Metropolis receives back a less proportion of its contributions to the Imperial Exchequer than do other parts of the country, 18,291-9.

**IMPERIAL TAXATION:**

- Amount contributed from the Metropolis, 18,254-90.  
 The Metropolis contributes to the Imperial Exchequer more in proportion to its population than any other district in the country, 18,327-34.

**LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON:**

- Matters of Imperial concern should be paid for by the Exchequer, 18,346-73.

Index  
to Evidence.

**POLICE, COST OF:**

Should be borne to some extent by the locality, 18,344-5.

**POOR RELIEF, EXPENDITURE UPON:**

Should be borne by the Imperial Exchequer, 18,340-3.

**ROADS (MAIN) EXPENDITURE UPON:**

A larger proportion of the cost should be borne by the Imperial Exchequer, 18,300-2.

15.—**Mr. THOMAS JAMES MACNAMARA**, Member of the London School Board. (Questions 18,412-18,475.)

**EDUCATION, COST OF:**

Amount and how raised, 18,430-42.  
Should be a more uniform charge, 18,470.  
Cost per head to the London School Board, 18,448-50.

**EDUCATION GRANTS:**

Test of cost as a basis of distribution discussed.  
Question of local control discussed, and of safeguards for careful local administration, 18,415-29, 18,443-7, 18,471-5.  
Position of voluntary schools if the Government Grant for education given on the basis of cost, 18,451-4.

**IMPERIAL TAXATION:**

Amount of direct and indirect taxation, 18,455-69.

16.—**Mr. CHARLES WILLIAM TAGG**, Vestry Clerk of the parish of Camberwell. (Questions 18,476-18,781.)

**ADVERTISEMENTS, RATING IN RESPECT OF:**

Advertisements should be assessed to local rates, 18,594, 18,624-8.

**ASSESSMENT COMMITTEES:**

(a.) *In England and Wales (except the Metropolis).*  
Should be appointed by the Borough Authorities and not by the Poor Law authorities, 18,611-5, 18,661-5, 18,702-19, 18,753-62.  
(b.) *In the Metropolis.*  
Should be appointed by the Sanitary Authorities and not by the Poor Law authorities, 18,611-5, 18,661-5, 18,702-19.

**ASSESSMENT CONFERENCE OF LONDON COUNTY COUNCIL:**

Valuation. Uniformity of, in London. Conference was useful, 18,529-37.

**CAMBERWELL PARISH:**

Valuation. System adopted, 18,484-93.  
Valuation in, is properly carried out, 18,581-8.  
Number of Assessments, 18,479-83.

**COMPOUNDING:**

Compounding is a more profitable system to the authorities than direct collection in the case of the worst class of properties, 18,720-30.  
The same allowances should be given in case of poor and sanitary rates, 18,666-86.  
System adopted in Camberwell, 18,494-506.

**GOVERNMENT PROPERTY, VALUATION OF:**

Camberwell. Treasury contributions adequate, 18,545-6.

**GROSS VALUE:**

Abolition of gross value and adoption of rateable value for all rating purposes. The suggestion discussed, 18,616-23, 18,629-33.

**IMPERIAL TAXATION:**

Abolition of gross value and adoption of rateable value. The suggestion discussed, 18,616-23, 18,629-33.

**IMPERIAL TAXES, COLLECTION OF:**

In a local sanitary authority's district the collection should be made by the collectors of that authority, 18,534-8.

**INCIDENCE OF LOCAL TAXATION:**

Whether taxation should be placed upon owner or occupier, 18,549-57.  
Property. Increase in the value of, owing to increase of population and of traffic facilities. Benefit to landowners. The person who receives the greatest benefit out of property should pay the greatest proportion, 18,566-80.  
Rent. How far influenced by a rise in rates, 18,731-52.

**LEVYING AND COLLECTION OF RATES:**

Collection of rates and taxes in a local sanitary authority's district should be made by the collectors of that authority, 18,524-8.  
System in the Metropolis, 18,634-9.  
System in Camberwell. All rates collected on one demand note by one collector, 18,507-11.  
Camberwell. Number of summonses issued, 18,512-5.

**LONDON (EQUALISATION OF RATES) ACT,**

1894 (57 & 58 Vict. c. 53.):  
Equalisation of rates is a good system, 18,565.

**OVERSEERS:**

Overseers should be appointed by the local sanitary authority and not by the justices, 18,516-23, 18,702-19.

**REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE IN THE METROPOLIS:**

The maximum deductions are allowed in London under the Valuation (Metropolis) Act, but it would not be possible to do more than prescribe maximum rates in an Act of Parliament as local authorities must be given some discretion in the matter, 18,538-44, 18,595-600.

**RETURNS BY OWNERS AND OCCUPIERS IN THE METROPOLIS:**

Returns from occupiers should be obtainable at any time during the quinquennial period in the case of a change of tenancy, 18,593.

**UNOCCUPIED PROPERTY, RATING IN RESPECT OF:**

Should be assessed to local rates to some extent, 18,547-8, 18,558-64, 18,687-94.

**VALUATION IN ENGLAND AND WALES (EXCEPT THE METROPOLIS), AREAS AND AUTHORITIES:**

Central county authority should exist in every county for the purpose of supervising matters relating to valuation and rating with power to enforce its orders, but not to hear appeals, 18,640-60, 18,763-78.

**VALUATION IN THE METROPOLIS, AREAS AND AUTHORITIES:**

Central county authority should exist for the purpose of supervising matters relating to valuation and rating with power to enforce its orders, but not to hear appeals, 18,589-22, 18,640-60, 18,763-78.  
Byelaws should be framed by a central body such as the county council, 18,601-10.

**VALUATION IN THE METROPOLIS, SYSTEM:**

Uniformity of assessment desirable, 18,695-701.

17.—**Rev. R. KENNEDY**, Vicar of Wressell, Yorks. (Questions 18,782-18,894.)

**AGRICULTURAL LAND, VALUATION OF:**

Assessment committee of farmers value land at a low figure and houses at a high one, 18,854-9.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16.).**

Effect upon the income derived from tithe of the vicar of Wressell, 18,785-97, 18,815-26, 18,860-74.

**GLEBE LAND, RATING IN RESPECT OF:**

No claim made by clerical tithe owners for exemption from rates on income derived from glebe land, 18,844-53, 18,879-93.

## TITHE AND TITHE RENTCHARGE:

*(a.) Valuation.*

Tithe rentcharge should be valued upon the basis of what a hypothetical tenant would give for it, 18,806-9.

*(b.) Deductions for Personal Services.*

On the basis of what a hypothetical tenant would give for tithe rentcharge, a deduction should be allowed for personal services, 18,806-9.

The clergy should not be rated in respect of income derived from tithe rentcharge paid for personal services, 18,798-805. A partial exemption sufficient, 18,844-53. No opinion expressed as to who should pay the deficiency in rates caused by such a deduction, 18,879-93.

## VALUATION IN ENGLAND AND WALES, SYSTEM:

It is said that in country parishes the Assessment Committees, which are mainly composed of farmers, value premises well kept up higher than those badly kept up, 18,810-4.

## WRESSELL (YORKS), VICAR OF:

Rates paid by, 18,827-43, 18,860-74.  
Glebe land is under-valued by the farmers on Assessment Committee. The parsonage house is over-valued, 18,875-8.

18.—Rev. **E. LODWICK ELLIS**, Vicar of Bettws-yn-Rhôs, Denbigh. (Questions 18,895-18,977).

## AGRICULTURAL RATES ACT, 1896 (59 &amp; 60 Vict. c. 16.):

Effect upon the income of the Vicar of Bettws-yn-Rhôs. Asserted that the rates would have been less if the Act had not been passed, 18,911-27, 18,945-74.

## BETTWS-YN-RHÔS (DENBIGH), VICAR OF

Value of tithe rentcharge, 18,898-902.  
Rates paid by, 18,928-32, 18,945-74.

## TITHE AND TITHE RENTCHARGE:

*(a.) Liability of Owners to be rated in respect thereof.*  
Tithe rentcharge should be assessed to the poor rate but not to other rates, 18,906-8, 18,942-4.

*(b.) Valuation.*

Tithe rentcharge is valued too highly, 18,909-10.  
Agricultural Rates Act said to have prejudiced clerical tithe owners to some extent, though their substantial grievance existed before the Act, 18,933-41.

*(c.) Deductions for Personal Services.*

Clerical tithe-owners should be allowed a deduction of 160*l.* in respect of personal services, 18,903-5.  
Deficiency in the rates thus caused should be paid by the Exchequer, 18,975-7.

19.—Rev. **J. MANNERS SMITH**, Rector of Barnardiston, Suffolk. (Questions 18,978-19,120.)

## AGRICULTURAL LAND, VALUATION OF:

Barnardiston. Assessment Committee of farmers put a low valuation on land, 18,986-94, 18,999-19,004, 19,113-7.

## AGRICULTURAL RATES ACT, 1896 (59 &amp; 60 Vict. c. 16.):

Benefits the landed interest but not the tithe owners, 19,084-8.

## BARNARDISTON PARISH (SUFFOLK):

Parish has a high rate in the £. The district has suffered from agricultural depression, 18,930-5, 19,033-57.

## BARNARDISTON (SUFFOLK), RECTOR OF:

Value of Living, 19,058-83, 19,118-20.  
Rates in respect of Rector's tithe have increased owing to agricultural depression and to Assessment Committee of farmers putting a low valuation upon land, 18,980-94.  
If the Rector paid no rates in respect of his tithe, owners of other property in the parish would have a large increase in rates, 18,995-8.

## EDUCATION, COST OF:

Barnardiston. Rise in the school board rates in recent years, 19,018-22.

## TITHE ACT, 1836 (6 &amp; 7 Will. IV. c. 71.):

Has not protected the interests of the clergy as much as was intended, 19,111-2.

## TITHE AND TITHE RENTCHARGE:

*(a.) Valuation.*

Clerical tithe owners would be content if they were relieved to the extent of half their rates, or alternatively a deduction should be made from the valuation of the tithe rentcharge in respect of personal services, 19,005-13.

*(b.) Deductions for Personal Services.*

A deduction should be made from the valuation of tithe rentcharge in respect of personal services, or else clerical tithe owners should be relieved of half their rates, 19,005-13.

Clerical tithe owners should be allowed a deduction of 150*l.* or 160*l.* for personal services. But whether the deficiency in rates was paid locally or out of the Exchequer, there would be opposition to such a suggestion, 19,014-7, 19,027-32, 19,089-110.

*(c.) Relative positions of Tithe and Land.*

Suggested difficulties in applying the principle of Agricultural Rates Act to case of tithe rentcharge, 19,023-6.

20.—Rev. **EBEN MOLLOY**, Rector of Keyston, Hunts. (Questions 19,121-19,206.)

## AGRICULTURAL RATES ACT, 1896 (59 &amp; 60 Vict. c. 16.):

Benefit derived by Rector of Keyston as regards glebe land, 19,170-7.

Effect upon the Rector of Molesworth, who has a large amount of glebe land let, 19,187-99.

## KEYSTON (HUNTS), RECTOR OF:

Particulars of Living. Statistics handed in by Rector, 19,124-41.

## KEYSTON PARISH (HUNTS):

Rates in Keyston, 19,124-41, 19,160-9, 19,178-86.

## MOLESWORTH (HUNTS), RECTOR OF:

Particulars of the Living, 19,142-7.

## TITHE AND TITHE RENTCHARGE:

*(a.) Liability of owners to be rated in respect thereof.*

Clerical tithe owners should be relieved of rates altogether, but the clergy would be satisfied if they were allowed a deduction of 160*l.* in respect of personal services. But there would be opposition to this by the other ratepayers, 19,148-59.

*(b.) Valuation.*

Varies in different parishes, 19,200-3.

*(c.) Deductions in respect of Personal Services.*

Clerical tithe owners should be relieved of rates altogether, but the clergy would be satisfied if they were allowed a deduction of 160*l.* in respect of personal services. But there would be opposition to this by the other ratepayers, 19,148-59.

*(d.) Deductions in respect of Chancel Repairs.*

No deduction allowed, 19,204-5.

21.—Rev. **R. F. McLEOD**, Rector of North Fambridge, Essex. (Questions 19,207-19,350.)

## AGRICULTURAL LAND, VALUATION OF:

North Fambridge. Assessment Committee of farmers value land at a low figure, and their interests conflict with their duty, 19,292-304, 19,330-49.

## AGRICULTURAL RATES ACT, 1896 (59 &amp; 60 Vict. c. 16.):

Effect of Act in the Parish of North Fambridge, 19,210-49.

Act has not been a hardship on the Rector of North Fambridge, 19,243-9, 19,263-7.

**NORTH FAMBRIIDGE, (ESSEX), RECTOR OF:**  
Particulars of the value of the Living. Statistics handed in by the Rector, 19,210-42, 19,273-80.  
Assessment Committee of farmers value land at a low figure and their interests conflict with their duty. This is a cause of the rise in rates in respect of the Rector's Tithe, 19,292-304.

**NORTH FAMBRIIDGE PARISH, (ESSEX):**  
Particulars of Parish, 19,273-80.  
Rates in the Parish. Statistics handed in by Rector, 19,210-42.  
Rates are very high, 19,250-5.  
Valuations are said to be unfair, 19,256-62.

#### TITHE AND TITHE RENTCHARGE:

(a.) *Liability of Owners to be rated in respect thereof.*  
Rating in respect of income from whatever source would be a fair system. The clergy are at the present time rated in respect of their incomes, 19,305-29.

(b.) *Deductions in respect of Costs of Collection.*  
Cost of collection of tithe rentcharge belonging to Rector of North Fambbridge, 19,268-72.

(c.) *Relative Positions of Tithe and Land.*  
Valuation of tithe rentcharge compared with that of agricultural land in the Parish of North Fambbridge, 19,281-91.

22.—Mr. **ROBERT VIGERS**, Valuer and Surveyor, and President of the Surveyors' Institution. (Questions 19,351-19,697.)

#### APPEALS (VALUATION) TO SESSIONS:

Courts of Quarter Sessions should be superseded by a Special Tribunal having commercial and rating knowledge to hear appeals. This would secure greater uniformity in valuation, 19,419-29.

A central authority analogous to that of the Railway Commission should be constituted to hear rating appeals, 19,377.

#### DOCKS, VALUATION OF:

Method of arriving at the tenant's capital. Difficulties of ascertaining this, 19,395-409.

It would save much expense if they were valued as a whole, and then the valuation allocated to the various parishes according to the amounts earned in them, 19,410-8.

#### GAS UNDERTAKINGS, VALUATION OF:

Valuation on the basis of what a hypothetical tenant would give. Effect of this system upon the South Metropolitan Gas Company, and the Crystal Palace Company, 19,381-94.

Method of arriving at the tenant's capital. Difficulties of ascertaining this, 19,395-409.

It would save much expense if they were valued as a whole, and then the valuation allocated to the various parishes according to the amounts earned in them, 19,375-6, 19,378-80, 19,410-8.

#### INCIDENCE OF LOCAL TAXATION:

Building lessees entering into a contract for a long series of years take the question of rates into consideration, 19,512-8, 19,586-608.

Who should be assessed, 19,677-80.

#### LAND (BUILDING), VACANT, RATING IN RESPECT OF:

Objections to this, 19,636-40. People do not hold vacant land in London until a rise in value, 19,646-9.

#### RAILWAYS, VALUATION OF:

Method of valuation. Amount of deductions allowed, 19,356-64. 17½ per cent. usually deducted for tenant's allowances, 19,465-91.

Method of arriving at the tenant's capital. Difficulties of ascertaining this, 19,395-409.

Principles of valuation. Case of a railway losing money, 19,444-64.

Valuation according to what a tenant would give for a portion of the railway in each parish, not suitable. It would save much expense if railways were valued as a whole, and the valuation then divided upon the parochial earnings system, 19,353-5, 19,410-8, 19,441-3.

Stations. Method of valuation, 19,365-74.

#### REPAIRS, INSURANCE, &c., DEDUCTIONS TO ARRIVE AT RATEABLE VALUE IN THE METROPOLIS:

Maximum scale in the Metropolis is largely adopted, and is not a fair system, 19,505-9.

Deductions in case of site values should not be made, 19,689-97.

Relative values of sites and buildings vary in different parts of the Metropolis. A valuation authority over a sufficiently large area could adjust the deductions, 19,626-9.

#### SITE VALUE AND STRUCTURAL VALUE:

Values of sites and structures can be separated, 19,609-10.

Can be valued separately if the building is suitably situated, 19,500-4.

A separate valuation is not advisable, as it would involve a double valuation. The present system is the most economical, 19,620-5.

Separate valuation in the Metropolis would cost a considerable sum, and lead to litigation, 19,532-8.

#### SITE VALUES:

Their values increase owing to increase in population and trade, 19,571-85.

A site value secured by buildings upon it is more valuable than one without buildings, 19,611-9.

Objections to rating in respect of site values, 19,510-1. If owner of site value sells a site for a capital sum instead of taking a ground rent he escapes taxation, 19,539-46.

Existing contracts should be respected, 19,642-5.

Rating in respect of site values, though not objectionable if the parties to a bargain were free, would involve an alteration in existing contracts, in fixing which the question of rates has been taken into account. It would be making a present to the tenant, who, in any case, usually makes the better bargain, 19,519-31.

Rating in respect of site values would be unfair to owners in the case of existing contracts; it also would be impolitic to damage a valuable security, and rating authorities would not benefit on account of the expense, 19,630-5.

Policy of making an owner pay a duty when a lease falls in, or on reletting, discussed, 19,663-76.

#### SURVEYORS AND VALUERS:

Desirable for assessment committees in Metropolis to more frequently employ professional valuers, 19,650-63.

Professional valuers to act under the orders of the Central Authority, preferable to valuation by unpaid committees, 19,430-40.

#### VALUATION IN THE METROPOLIS AND THE REST OF ENGLAND AND WALES:

The County area, as the unit for valuation purposes, would secure greater uniformity than the Union areas. The County would have to be divided into sub-divisions, the larger the better, 19,430-40.

Principles to be observed in making valuations, 19,547-70.

#### VALUATION IN THE METROPOLIS, AREAS AND AUTHORITIES:

One valuation authority desirable, 19,664-7.

Areas should be large in order to secure greater equalities in assessments, 19,641.

#### VALUATION IN THE METROPOLIS, SYSTEM:

Inequalities in valuations, 19,492-9, 19,550-63.

In the East-end the gross value is often in excess of the actual rent. This is not the case in the West-end, 19,681-8.

#### VALUATION OF SPECIAL CLASSES OF PROPERTY:

Desirable that large companies of a certain class should be valued as a whole and the valuation subsequently allocated to the various parishes, 19,441-3.

Companies, such as dock, gas, and railway. Method of arriving at the tenant's capital. Difficulties of ascertaining this, 19,395-409.

23.—Mr. **HENRY GEORGE HILLS**, Clerk to the Wandsworth District Board of Works. (Questions 19,698-19,837.)

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16):**  
Objections to the Act, 19,834-7.

**ASSESSMENT COMMITTEES IN THE METROPOLIS:**

Committees should be appointed by the Municipal Authorities and not by the Board of Guardians, 19,746-58, 19,764-71. Or they might be composed partly of representatives of the Board of Guardians and partly of the Municipal Authority, 19,820-33.

**ASSESSMENT CONFERENCE OF LONDON COUNTY COUNCIL:**

Conferences have been beneficial, 19,759-63.

**CLAPHAM PARISH:**

Land has gone up in value owing to the increase of population, 19,798-806.  
Rates in, 19,772-97.

**LEVYING AND COLLECTION OF RATES:**

Collection of rates should be made by one collector under one authority, 19,711-24.

**LONDON (EQUALISATION OF RATES) ACT, 1894 (57 & 58 Vict. c. 53.):**

Effect upon the rates in certain parishes. Suggested alterations in the Act, 19,725-43.

Would work unfairly if valuations in the East-end of London were higher than in the West-end, 19,807-19.

**STREATHAM PARISH:**

Land has gone up in value owing to the increase of population, 19,798-806.  
Rates in, 19,772-97.

**VALUATION IN THE METROPOLIS, AREAS:**

Areas for the purpose of valuation, 19,746-58.

**VALUATION (METROPOLIS) ACT, 1869 (32 & 33 Vict. c. 67.):**

Its operation satisfactory, 19,744-5.

**WANDSWORTH PARISH:**

Rates in, 19,772-97.

**WANDSWORTH SANITARY DISTRICT:**

Area and duties of Board of Works described, 19,700-6.

Statistics showing rates in the £ in the different parishes. Each parish bears the burden of its own expenditure and it is not apportioned according to rateable value, 19,707-10.

4.—Mr. **W. ARTHUR DARBISHIRE**, Managing Director of Penyrsedd Slate Quarry, in the Parish of Llandwrog, Carnarvonshire (Questions 19,838-19,906).

**SLATE QUARRIES, VALUATION OF:**

Method of valuation. A royalty per ton taken for each quarry, 19,842-4.

The money paid to the lessor as rent is said to be partly purchase money for part of the owner's property, and as such should not be a subject for assessment, 19,858-61, 19,864-76.

Valuation on the basis of dead rent and royalty per ton. Objections raised to this system, 19,886-905.

Suggested system of valuation, 19,853-7. The minimum rent should be taken as the basis, 19,877-85.

Should be valued according to what a tenant would give at the present time, 19,845-52.

**SURVEYORS AND VALUERS:**

Professional valuers should not be paid a fee dependent upon the amount of assessment, 19,862-3.

25.—Mr. **B. F. C. COSTELLOE**, Chairman of the Local Government and Taxation Committee of the London County Council (Questions 19,917-20,448).

**ABILITY TO PAY, TAXATION UPON PRINCIPLE OF:**

Difficulties of rating or taxing a year upon this basis, 20,431-2.

**AGRICULTURAL RATES ACT, 1896 (59 & 60 Vict. c. 16):**

Is unjust to the urban ratepayers, 20,124.

**BENEFITS DERIVED FROM EXPENDITURE OF LOCAL AUTHORITIES:**

Expenditure of rates upon all objects ultimately benefits site values to some extent, though the occupier gets some advantages, 20,115-23, 20,261-6.

**CADOGAN ESTATE IN THE METROPOLIS:**

The owner of the site values is said to have reaped the benefit of a large amount of local expenditure, 20,258-60.

**DIVISION OF RATES BETWEEN OWNER AND OCCUPIER:**

Would probably lead to increased expenditure upon certain objects, 20,064-7.

Question of interference with existing contracts discussed, 20,167-76.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

Grants in lump sums tend towards local extravagance, 20,283-5. But if local authorities are made responsible for raising revenue there is not the tendency to extravagance, 20,412-21.

Objection to present system owing to uncertainty of amounts, 20,395-8.

The basis on which they should be distributed discussed. The rural areas said to be relieved to an excessive amount under the present system. The areas where the pressure of local taxation is greatest should be given the greatest amount of relief, 20,111-4.

If the present system is retained, they should be so distributed that the areas where the pressure of local taxation is greatest should be given the greatest amount of relief, 20,124-7.

Exchequer Contributions should be abolished, and taxes which are really in the nature of local and not Imperial revenue, should be retained by the Local Authorities. The burden of certain services now paid for locally should be borne by the nation, but there would have to be a clear understanding as to what are local and what are national services, 20,020-4, 20,106-9, 20,269-70.

If they had not been made certain taxes would have been reduced or remitted, 20,210-5.

*Position of London.*

Results of the present system upon the Metropolis and suggested alterations in the system. Suggested that the taxes now collected locally should be retained by the local authorities in lieu of the present Exchequer Contributions, 20,106-9.

Under the present system it is suggested that the Metropolis gets too little, but the present system is objected to, and there should be a new basis, 20,006-19, 20,110, 20,207-9, 20,395-8.

London contributes more to Exchequer Contributions than London receives from them, 20,406-11.

A system could not be devised which would secure the London ratepayer more than they would contribute, 20,286-7.

**IMPERIAL TAXATION:**

Exchequer Contributions should be abolished, and taxes which are really in the nature of local and not Imperial revenue should be retained by the local authorities. The burden of certain services now paid for locally should be borne by the nation, but there would have to be a clear understanding as to what are local and what are national services, 20,020-4, 20,106-9, 20,269-70.

**INCIDENCE OF LOCAL TAXATION:**

How far the burden of rates is borne by occupiers and by owners, 20,001-5, 20,247-51.

Owners of site values benefit from the expenditure of public money on their properties, and yet the rates largely fall on the occupiers. At any rate, the incidence should not appear to fall exclusively on the occupiers as it induces them to resist expenditure on improvements, 19,998-20,001.

Present system of rating, occupiers, and not owners, causes a constant resistance to even necessary expenditure by the occupiers as they feel they do not get a large portion of the advantage of the expenditure. There would be less friction if the owner paid a share, 20,364-80.

Index  
to Evidence.

INCIDENCE OF LOCAL TAXATION—*cont.*

Value of the occupation of the occupier is not an equitable basis for local taxation. It is not a measure of a man's income compared with that of his neighbours, 20,272-4, 20,424-7. The element of the site value should be a greater factor. If the incidence of the rate fell on the occupier, it would be necessary to graduate, 20,272-4.

Additional revenue from new sources, namely, in respect of site values, required by London County Council for new improvements and also some re-adjustment of existing burdens on the ratopayers, 20,243-6.

Incidence of rates upon owners of residential property and business property is different, because the business man can pass on the burden of his rates to consumers to some extent, 20,427-30.

INHABITED HOUSE DUTY:

Should be utilized for local purposes, being essentially a local tax, 20,275-80, 20,310-4, 20,399-403.

If remitted to municipal authorities would be a great advantage to them, 20,233-40.

Exemption of business premises produces unfortunate results, 20,404-5.

LAND TAX:

Should be utilized for local purposes, 20,275-80, 20,310-4.

LEASEHOLD PROPERTY, POSITION OF LESSEES AND LESSORS WITH REGARD TO LOCAL TAXATION:

Lessees in London cannot make any precise calculation when making a bargain as to what the rates are or will be. They therefore make a blind bargain, 19,923-5, 20,053-5, 20,252-60.

LEASEHOLD PROPERTY, VALUATION OF:

Leasehold interests in the Metropolis are quite easy to value, 20,292-9.

LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON:

Expenditure on certain services should be met from Imperial sources. Question of control discussed, and how far Exchequer Grants for certain purposes would lead to extravagance, 20,025-38, 20,281-2.

Exchequer Contributions should be abolished, and taxes which are really in the nature of local and not Imperial revenue should be retained by the local authorities. The burden of certain services now paid for locally should be borne by the nation, but there would have to be a clear understanding as to what are local and what are national services, 20,020-4.

If expenditure on national and local objects could be distinguished, the wealthier communities would contribute more than they do now towards objects which had been nationalised, 20,288-9N.

LONDON COUNTY COUNCIL:

Resolutions passed by the Council with reference to local taxation to be submitted to the Commission, 19,907-12, 19,954-7, 20,180-95, 20,241.

LONDON OWNERS' IMPROVEMENT BILL, 1893:

Scheme embodied in Bill introduced by the London County Council with regard to rent duty, 19,954-19,990-2.

LUNATICS, MAINTENANCE OF:

Expenditure on should be borne by the Exchequer, 20,281-2.

METROPOLIS:

Diagram showing the oscillations of the rates in various parishes from year to year, and thus demonstrating the difficulties of ascertaining what the rates are likely to be, 20,242, 20,433-46.

Approximate amount of site values and the total amount of local expenditure, 20,196-9.

MORTGAGEES:

Their interests cannot be considered in questions of rating, 20,048-52.

MUNICIPAL DEATH DUTY:

Desirable as well as taxation in respect of site values, 20,098-105, 20,177-9.

Taxation in respect of site values. Rating in respect of capital value and income value. Owners should be made to contribute in respect of increased capital value which is largely due to public expenditure through a Municipal Death Duty, 19,993-7, 20,044-5.

PERSONAL PROPERTY, RATING IN RESPECT OF:

Cannot be assessed to local rates, 20,271.

RENT DUTY:

Scheme embodied in a Bill introduced by London County Council with regard to rent duty, 19,954-7.

Rent duty and special rate on ground values. Distinction between, 19,954-7, 19,962-4.

Taxation in respect of site values is preferable, 19,965-8.

SITE VALUE AND STRUCTURAL VALUE:

Method of separating values, 19,978.

SITE VALUES, TAXATION IN RESPECT OF:

(a.) *Reasons for the Suggestion.*

Owners of site values benefit from the expenditure public money on their properties, and yet the rates largely fall on the occupiers. At any rate, the burden should not appear to fall exclusively on the occupiers, as it induces them to resist expenditure on improvements, 19,998-20,001.

Expenditure of rates upon all objects ultimately benefits site values to some extent, though the occupier gets some advantages, 20,115-23, 20,261-6.

Owners of site values, that is, all persons deriving revenues from site values, should be assessed in respect of them to local rates. The expenses of administration and cost of improvements should not fall principally upon the occupiers, 19,913-7, 19,920-2.

Site values are said never to be diminished in value owing to local expenditure, except perhaps in exceptional cases, and this is also true as regards composition property, 20,143-52.

The system would secure a fair adjustment between owner and occupier. Question as to how far the rise in value of a site benefits owner and occupier respectively during the continuance of a lease, 20,330-44.

Rating owners in respect of site values at the rate of 6d. in the £ would relieve occupiers from an increase in their present burdens which they contracted to pay by a blind bargain, 19,929-33.

Method of taxing owners of site values. Rating twice over in respect of the building value, 20,216-9.

Possible hardship to owner at end of a lease if buildings are old, 19,979-80.

Is preferable to a rent duty, 19,965-8.

(b.) *Case of Existing Contracts.*

Case of existing contracts discussed, 20,085-97. Distinction might be drawn between present and future contracts, 19,934-45.

Site values should be assessed to some extent to local rates irrespective of existing contracts. The State imposes burdens by legislation irrespective of existing contracts, and no claim for compensation arises, 19,926-8, 20,083-4, 20,300-2.

(c.) *Definitions.*

Site values, 19,969-77.

Owner, 19,918-9, 19,969-77.

Occupier, 19,918-9.

Distinction between rent and special rate on ground values, 19,962-4.

Ascertainment of Site Values.

Difficulties and expense of making a site valuation in London discussed, 20,056-63.

Site values could be ascertained without much difficulty in London notwithstanding the large number of properties to be valued, 20,068-82, 20,204-6.

SITE VALUES, TAXATION IN RESPECT OF—cont.

(e.) Capital and Income Value.

How far should the capital value, as compared with the annual value, be considered, 19,985-9, 20,220-32. Owners should be made to contribute in respect of increased capital value, which is largely due to public expenditure through a Municipal Death Duty, 19,993-7. 20,044-5, 20,098-105, 20,177-9, 20,345-63.

Method of assessing the value of the various interests in a site in the hands of different persons, whether in the form of rent or of a realisable capital sum, 20,381-94, 20,422-3.

(f.) Method of Imposition.

Owners of the various interests should contribute towards local taxation to some extent, 20,200-3, 20,267-8, 20,303-9. Upon what principle this should be done, discussed, 20,320-9.

Quite practicable to carry out in detail, 19,946-53.

Scheme for distributing charge amongst the owners of the various interests, 19,981-4, 20,046-7.

Recommendations of the London County Council and scheme embodied in a Bill introduced by them with regard to rent duty, 19,954-7, 19,990-2, 20,180-95.

Scheme of London County Council that an owner's improvement charge should be raised from all persons who pay income tax (Schedule A.) by Somerset House collectors, 19,958-61.

Suggested that the tenant should pay in the first instance, and deduct the amount from his immediate landlord; and that that owner should then deduct a proportionate part of the rate from anyone else. But where part of the interest in the site value has been sold for cash, instead of being converted into rent, the seller escapes assessment to local rates, 20,153-66.

Owners should be assessed, commencing at the rate of 6d. in the £, and Parliament should fix a limit. The present maximum might perhaps be fixed at 2s. in the £, 19,934-45.

(g.) Purposes to which Tax should be devoted.

Suggestion made in order to provide a fund for new expenditure from a class of persons whose property is benefited by expenditure, namely, owners; and also for decreasing existing burdens of the occupiers who at present pay, at any rate primarily, the whole rates in the Metropolis, 20,128-42, 20,243-6.

Desirable in order to obtain a new source of revenue. The increase of burdens falling on the occupier could be relieved, and some of the recent burdens put upon him could be taken off, 20,315-9.

If owners of site values were taxed for the purpose of contributing towards increase of expenditure on new services, it would be sufficient, 20,039-43.

26—Mr. EDMUND VICTOR HUXTABLE, Manager of the Assessment Department of the Solicitors to the City of London Union. (Questions 449-20,782.)

CITY OF LONDON:

Memorandum prepared on behalf of the Corporation, 20,451-8.

Under-valuation is thought not generally to exist, 20,459-83, 20,520-7.

Character of rateable property, 20,484-501.

Valuation of certain properties, 20,502-11, 20,512-27,4.

Rental value is the basis, except in the case of exceptional properties, 20,682-9.

One valuation authority would be undesirable, 20,570-86.

Valuation of the City of London could not be made by one surveyor, as in Glasgow, 20,648-69.

Exemption of City from the payment of certain rates, 20,608-15.

LEASEHOLD PROPERTY, VALUATION

City of London. Deductions allowed in respect of certain leasehold property, 20,767-82.

## APPENDIX TO VOL. II. OF MINUTES OF EVIDENCE

## APPENDIX I.

**Memorandum prepared for the Commission by Mr. Edgar Josiah Harper, Assistant Valuer to the London County Council.**  
 [See *MINUTES OF EVIDENCE, QUESTIONS 12,093-12,605.*]

## APP. I.

I.—*Introductory.*

## Introductory.

1. The experience of the witness in matters of local taxation extends over a period of between 19 and 20 years; but up to 1890 it was confined solely to the rating of properties belonging to the Council and their predecessors. In that year, however, the Council initiated a course of action designed to promote uniformity of practice in the assessment of rateable hereditaments throughout the metropolis, the results of which have affected districts outside as well as inside the county boundary. The conduct of the practical part of this work has been delegated to witness by the head of the Council's estates and valuation department, and he has thus been brought closely in contact with the local rating authorities, throughout the metropolis and beyond it, during the last six or seven years.

II.—*Assessment machinery under the Valuation (Metropolis) Act, 1869.*

2. The great and increasing pressure of the burden of local taxation renders it most important that the assessment or measure by which such taxation is distributed between the payers should be correctly ascertained in accordance with a uniform practice. Members of the Commission are no doubt generally familiar with the methods of assessment; but a short account of the machinery and practice is inserted here in order to render this statement of the subject complete. So far as London is concerned parts of the Union Assessment Committee Act, 1862, and of the Union Assessment Committee Amendment Act, 1864, are repealed; and the remainder of these Acts is incorporated with the Valuation (Metropolis) Act, 1869, which governs the practice of assessment in the metropolis, the area of which as defined by that Act differs slightly from the area of the administrative county of London; the hamlet of Penge being excluded from the former and included in the latter. A complete revaluation of all the rateable hereditaments in the metropolis takes place once in every five years. The scheme of the Act was to complete the whole process of such revaluation between the 6th April of one year and the 5th April of the next. The first stage in the preparation of the new, or what is generally termed the "quinquennial", valuation list is the sending, in the month of February preceding the assessment year, to the overseers of each parish by the surveyor of taxes for the district, of a sufficient number of printed forms of return which the overseers, within a month of receiving them, have to serve upon every person liable to be charged with any rate or tax on the basis of the valuation list. Each person receiving a form is required to fill up the return and send it back to the overseers within 21 days after service, and is liable to a penalty for default. The form in which this return is issued from Somerset House will be found in Schedule I. (p. 249). With the material furnished by the returns and information otherwise obtained, the overseers (or the vestry clerk and rate collectors in their name) prepare the quinquennial valuation list, which should be deposited before the 1st June of the assessment year by the ratepayers, and public notice given of the deposit by placards on the doors. In addition to this notice the overseers are required to serve on the

Preparation of quinquennial valuation list by overseers.

occupier a notice of the gross and rateable values inserted by them in the valuation list relative to any hereditament not previously assessed or assessed at a higher value than in the previous valuation list. At the same time that the original list is deposited, a duplicate has to be sent to the surveyor of taxes for the district, whose duty it is to insert in the duplicate the amount in his opinion of the gross value of each hereditament where such amount differs from that inserted by the overseers. He is bound to transmit this duplicate to the assessment committee within 28 days of its receipt, the overseers having to transmit the original valuation list to the assessment committee not sooner than 14 nor later than 17 days after public notice is given of its deposit. The transfer of the lists from the office of the overseers to that of the assessment committee does not, however, interfere with the ratepayers' rights of inspection and taking copies or extracts. A dissatisfied ratepayer must give notice of objection before the expiration of 25 days after the list is deposited, and his right of objection is not limited to the case of the hereditament he occupies, but extends to any assessment by which he feels himself aggrieved. The overseers have the right of objecting to the valuation list of any parish in the same union as their own, if they consider that their parish is aggrieved. Notice of objection by the surveyor of taxes or by the overseers need not be given more than seven days before the meeting at which objections to the list will be heard by the assessment committee.

3. The primary duty of the assessment committee is to revise the whole of the valuation list or lists sent to them for that purpose. They are supposed to complete this revision before the 1st October, or little more than three months from the time limited for ratepayers' notices of objection. So numerous, as a rule, are these objections upon the quinquennial valuation list, that the revision of assessments not objected to sometimes becomes, perforce, a matter of form; and several of the London assessment committees have failed to complete even the hearing of all objections within the time limited by the Act. In the event of the failure of the overseers to prepare proper valuation lists, the assessment committee are required to appoint some person to make a valuation list; and they may, with the consent of the appointing board of guardians, engage a skilled valuer to assist them. The former course is not often resorted to, but the latter is frequently adopted in large and difficult cases. When the revision of the valuation list has been completed by the assessment committee, it is sent to the overseers to be re-deposited for inspection; and, as in the case of the first deposit, public notice of the re-deposit has to be given by the overseers and special notices to occupiers in the cases of properties newly inserted or increased in assessment by the assessment committee. The committee must appoint a day not less than 14 nor more than 28 days after such re-deposit for hearing objections to the alterations made in the list by them, and no objection to an assessment which has not been altered can be entertained on re-deposit. After hearing these objections it is the duty of the assessment committee to finally approve the valuation list; to send the original back to the overseers and the duplicate to the clerk of the London County Council before the 1st November. After the totals have been extracted, printed and sent out, this duplicate is returned to the assessment committee.

Functions  
of assess-  
ment com-  
mittee.

4. Overseers, surveyors of taxes, and ratepayers, if parties to the objection, may appeal to special sessions against any decision of an assessment committee by which they feel aggrieved; and notice of appeal to special sessions may be given on or before 21st November. These sessions should be held and all appeals to them determined between the 30th November and the ensuing 1st January. The overseers (with the consent of their vestry), the surveyor of taxes and ratepayers, may appeal to Quarter Sessions against any decision of the assessment committee on an objection to which the appellant was a party. Parties to appeals to special sessions may also, if dissatisfied with the decision of that court, appeal therefrom to Quarter Sessions. Beyond Quarter Sessions there is no appeal on questions of fact, but only on questions of law. Notice of appeal to Quarter Sessions must be given on or before the 14th January, and the Justices are directed to hold their sessions at such a time as will enable them to determine all appeals before the ensuing 31st March. The valuation list, as settled after all these proceedings, is made conclusive by the Act of 1869 for the purpose of all rates, and also for Inhabited House Duty and Income Tax (Schedules A. and B.).

Appeals to  
sessions.

5. The title of the statute of 1869 describes it as "An Act to provide for uniformity in the assessment of rateable property in the Metropolis." The provision in this respect is, however, incomplete. Dealing first with machinery only, it may be pointed out that, in the case of a union of parishes for poor law purposes, the assessment committee appointed by the guardians of the union exercises a controlling or revising

Uniformity  
of practice.

APP. I.

authority over the overseers (or the body discharging the functions of overseers) of each parish ; and the various parishes within the union, having the right of objection against each other's lists, are in a position to check one another. When a parish is not in union, there is no such effective check. Only a very small per-centage of cases forms the subject of appeals to sessions and the machinery of appealing against totals (*i.e.*, against the whole list) in any particular parish has been found too cumbrous. But in parishes not in union it may, and sometimes does, happen that the vestry both discharge the functions of overseers, appointing a valuation committee to supervise the preparation of the list, and also elect the assessment committee from their own body. Under these circumstances there is not the same check as exists in the case of parishes in union ; although the work in most of these large parishes—vast as it is—has been admirably managed.

Functions of  
the surveyor  
of taxes.

6. The introduction of the surveyor of taxes into the proceedings was no doubt primarily due to the fact that the valuation list is made conclusive as the basis of charge for certain imperial taxes. But it is probable that his influence was intended to apply also in the direction of uniformity of practice. The surveyors of taxes are no doubt bound by certain general regulations issued from Somerset House ; and although they have no direct power over rateable value, section 53 of the Act places them in a very strong position by providing that, when they give notice of objection or appeal, the amount specified in their notice as being the gross value of the hereditament shall be inserted by the assessment committee or sessions, unless it is proved to their satisfaction that such amount ought not to be inserted. Moreover, as a general rule, surveyors of taxes are invited by the various assessment committees in London to attend their meetings and express their views upon cases coming before them. No doubt considerable benefit arises in ordinary cases from the action of surveyors of taxes ; but in dealing with large and difficult cases they do not always possess adequate means of arriving at a proper valuation, nor have they funds at their disposal to enable them to carry an appeal to sessions. They are further handicapped by the size of their districts, which often brings them into contact with several assessment committees.

Effect of the  
system upon  
precept rates.

7. The practical result of the present system is, subject to the exception of the small minority of cases which are dealt with by special and quarter sessions, that each assessment committee fixes the basis on which its own parish or parishes contribute to all precepts issued in respect of rates which run throughout the metropolis. The only exception is the Hamlet of Penge, in whose sole case the County Council are obliged to call into operation the whole of the machinery of the County Rate Act. This machinery, being in existence, might well be used in the interest of uniformity throughout the metropolis.

Time allowed  
for making  
and revising  
valuation  
list.

8. The times limited by the Act have been held to be directory only, and not mandatory ; and, although efforts are made to keep within these limits, several parishes and unions are usually unable to complete their work within the appointed time. In the quinquennial valuation of 1895-96, the assessment committee of the City of London Union had not finally approved their valuation lists until March 1896, or four months late. But, although individual parishes and unions have to cope with an enormous amount of work in a limited period, objections are, as a rule, quickly disposed of ; and it is in the Court of Quarter Sessions that the great block occurs. Dissatisfied objectors before the 30 different assessment committees having jurisdiction in the metropolis have the right to appear before quarter sessions, and a considerable number of them do so. The two months allowed under the statute for disposing of these appeals by the London Quarter Sessions is ridiculously inadequate for the quinquennial year, as may be gathered from the fact that the appeals arising upon the last quinquennial valuation, though they should have been disposed of by the 31st March, 1896, have not all been dealt with up to the present time (June 1897).

Returns  
required  
from rate-  
payers.

9. The latest form of return issued by the Inland Revenue Office (*vide* Schedule I., p. 249), while it omits none of the important points, and as a rule expresses its questions in a way to make them clear to the ratepayer, does not, in witness' opinion, ask questions sufficiently specific under head No. 7. It is material to know not simply the general conditions of the tenancy agreement or lease, but exactly the date of commencement and length of the term granted, and whether the agreement or lease provides for any (and what) variation of rent in the future, and under what circumstances ; also, if a premium were paid, the amount of such premium. Provision should

also be made for obtaining full particulars of any works or other expenditure undertaken by the tenant or lessee, either in consideration of the granting of the tenancy or lease or otherwise. But there is an important and ever-increasing class of hereditaments to which the present form of return is entirely inapplicable, viz., railways, canals, tramways, and other profit-earning undertakings usually managed by public companies. It is necessary for anyone valuing undertakings of this character to have either access to the books of the companies or copious extracts from them. Whether the case would best be met by requiring such companies to allow rating authorities access to their books at reasonable times, or by requiring them to furnish such statistics and particulars as may be necessary, is a matter to be precisely determined after ascertaining the opinions of the companies themselves on the point; but some means of obtaining the necessary data is essential. At the present time overseers and assessment committees are almost at the mercy of the companies in the matter, and are compelled to proceed practically in the dark, unless the companies are willing, as a matter of grace, to furnish them with the required particulars.

APP. I.

10. The ordinary ratepayer does not exercise the rights he possesses of objecting before the assessment committee, or appealing to sessions, against the inequitable assessment of properties other than his own, although it is clear that if such properties are under valued he has to bear a greater burden than would otherwise be the case. But while ratepayers are usually keen in the protection of their interests so far as the assessment of their own hereditament is concerned, they shrink from adopting a course of action which takes the form of an attack on a fellow ratepayer.

Ratepayer's rights of objection and appeal.

11. The quinquennial valuation list, when settled, comes into force, both as the basis of precepts and of the charges made upon individual ratepayers, on the first day of the assessment year succeeding that on which it is made, viz., April 6. It fixes the assessment of all hereditaments comprised in it for a period of five years. But if during that period new premises are built, or existing properties are altered or added to, or if a hereditament is from any cause increased or reduced in value, the necessary additions to and alterations in the assessment can be made by an interim procedure which is as follows—The overseers may, and on the written request of the assessment committee, surveyor of taxes or any ratepayer of the union are compelled to, prepare and send to the assessment committee a provisional list containing the gross and rateable value of any hereditaments which have been increased or reduced in value. On receipt of the list the clerk of the assessment committee has to serve a copy of it on the surveyor of taxes, and on every ratepayer affected a copy of so much of it as affects him. Objections to this list may be made to the assessment committee in the ordinary way; but the time allowed is much shorter, and there is no appeal from the decision of the assessment committee on a provisional list, which comes into force for the purpose of the collection of rates on the date when a copy of the list is served upon the ratepayer. Any apparent injustice in forbidding appeals to sessions is obviated by the privilege given to objectors of obtaining a proportionate rebate in respect of rates overpaid if they succeed in obtaining a reduction of assessment on the next annual revision of the valuation list.

Provisional lists.

12. In each of the four years between two quinquennial valuations a supplemental valuation list is prepared, and to its preparation the same procedure applies as to the quinquennial valuation list. A supplemental valuation list is supposed to include the assessments of all hereditaments erected and alterations which have taken place during the preceding assessment year. It becomes in practice an amalgamation of the provisional lists of the previous year, and every ratepayer is thus offered a second opportunity of objecting to an assessment altered between two quinquennial years. Like the quinquennial, the supplemental valuation list affects totals as well as individual assessments, and only comes into force on the first day of the year following that in which it is made.

Supplemental valuation list.

13. Some curious results are possible from this method of revising the assessment of London property. Speaking strictly, if a hereditament were fit for occupation on the 6th April 1895, and had not been fit on the previous day, it should have been excluded from the Quinquennial Valuation List of 1895-96, and have formed the subject of a provisional list, which would remain in force as the basis for the collection of rates until the 5th April 1897. The hereditament would of course be inserted in the supplemental valuation list for the year commencing April 6th, 1896, but that list would not come into force until the following year. During the whole of that period the parish would be in receipt of the full rates in respect of the hereditament, but none

Effects of the present system of revision.

APP. I.

of the authorities issuing precepts based upon totals would receive any proportion of these rates. The parish authorities thus derive a considerable advantage from this part of the assessment machinery. There can be no doubt that the compulsory revaluation of all London hereditaments once in five years has had a beneficial effect in promoting uniformity of practice; and the principle of periodical revaluation might with advantage be extended. On the other hand, the provisions of the Act of 1869 as to the intervening periods are not so elastic as the interests of the ratepayers and the local authorities require. It has been found extremely difficult to prove, to the satisfaction of the Courts, that an assessment should be increased during the currency of the quinquennial valuation list, although there may be no doubt that the value of the hereditament has been enhanced. This difficulty arises from the fact that it must be proved that the increase in value has taken place *during the previous year, i.e., the year ending April 5th.* The effect of a gradual increase in value is of course seen when a change of tenancy or ownership takes place; but it is impossible to prove that the enhancement of value took place either at or immediately before the change of tenancy or ownership: it may well have been going on for some considerable time. Practically it is found that, unless an increase in value can be ascribed to a structural alteration or some event which indisputably occurred in the preceding assessment year, it is useless to attempt to increase the assessment. On the other hand, when reductions in value take place the local assessing authorities are in the habit of conceding the point in order to avoid inflicting hardship on individual ratepayers; so that on the whole the result is that the provisions affecting alterations in value during the period intervening between two quinquennial years act almost entirely in one direction, viz., that of reduction, and not at all in the direction of increase. This remark is confined, of course, to the case of properties existing at the date of the previous quinquennial valuation.

### III.—Method of determining Annual Value.

14. According to the rating statutes there are two kinds of annual value. These are arrived at in accordance with provisions contained in the Act of 1869 and set out in Schedule II. (p. 251). Before attempting a description of the various methods in vogue for applying the definition of gross value to the extremely varied classes of hereditament found in the metropolis, it will be convenient to explain the effect of the scale of deductions prescribed under the Third Schedule to the Act. Section 52 provides that the deduction shall not exceed this scale; and the heading of the scale itself is "*maximum rate of deductions.*" Notwithstanding, however, the obvious intention of the legislature that the per-centages of deduction shall be regarded as *maxima*, it would be difficult to find a single case in the first seven classes where the maximum per-centage of deduction had not been applied—of course disregarding fractions of a £. In class 8 the one-third deduction is so great that it is not invariably made, even in the class of cases specified in the schedule; while classes 9, 10, and 11 are dealt with in such a way that each case must of necessity be settled on its merits.

15. There is a very good reason why, as a general rule, properties under 40% gross value should have the benefit of a larger per-centage of deduction than those above that amount, and similarly with regard to properties below and above 20%. It is notorious that the tenants of properties of these values shift their abodes with comparative frequency, and are more or less destructive in their habits; and that therefore (especially as regards those below 20%) the expenditure upon decorative and sanitary repairs is an element of risk much larger than in other classes of property. But, of course, in the metropolis the great bulk of property (both as to quantity and value) falls under the head of class 3 in the schedule, where the maximum deduction prescribed is 16 $\frac{2}{3}$  per cent. or  $\frac{1}{3}$ th. No doubt this proportion was intended as a reasonable approximation to the highest probable annual average cost of repairs, insurance, and the other expenses necessary to maintain the hereditament in a state to command the rent. But the variation of circumstances between different classes of property in London is far too wide for an average or a maximum rate of deduction to be universally applied with equity. This will be apparent from an inspection of the table and diagram in Schedule III. (p. 251) which deals with eight typical cases selected from various parts of London to illustrate the difficulty. It is obvious that the annual average cost of repairs and insurance applies almost wholly to structure, and does not affect the site upon which the structure stands. As the values of these two elements do not bear a constant proportion to each other, the deduction of a constant proportion of the gross value (which includes both structure and site) must be

Gross and rateable value—Scale of deductions.

Effect of differences in the proportion between land value and building value.

productive of inequitable results. These results will be apprehended almost at a glance from the diagram in Schedule III, where the operation of the present method of deduction is shown in cases of varying proportion of value between site and structure. It will be seen that, while the actual deduction is one sixth of the gross value in every one of the eight cases, it amounts to more than 130 per cent. of the structural value in one case—obviously far more than the average annual cost of repairs, insurance, &c.

APP. I.

16. It will be noticed (Schedule II., p. 251) that the definition of gross value proceeds on the hypothesis of an offer to take a hereditament on a tenancy, at an annual rent which is supposed to be computed by taking one year with another. This has been generally interpreted to mean an ordinary tenancy from year to year. As a very large proportion of hereditaments in the metropolis are let on tenancies other than those from year to year, it becomes necessary, in dealing with leases and other tenures, to reduce them as far as practicable to the level of a yearly tenancy. In the cases of weekly and monthly rents and also in the case of flats, the rents usually include several items which are excluded from the statutory definition, *e.g.*, taxes, local rates, water rate, services of caretaker, &c.; and all such items have, of course, to be eliminated before arriving at the gross value. But after their elimination it may fairly be contended that a landlord would expect, and a tenant would be willing to give a slightly higher rent for a hereditament when it is paid at more frequent intervals and the tenancy could be more readily determined. It is quite possible, however, that this remark may not apply to every such case.

Yearly and other short tenancies.

17. In the case of leasehold hereditaments, a class comprising most of the valuable property in London, it is generally considered by experts that if the rent is a fair rack rent, the tenant bearing the cost of repairs and insurance, the amount of the rent should be regarded as the rateable value; and such a conclusion would tend to place hereditaments occupied by leaseholders on the same plane as hereditaments occupied by yearly tenants. Unfortunately, however, it has been the practice in some parts of London to treat leasehold rack rents as equivalent to gross value, making the full deduction of one sixth to arrive at the rateable value: while in other districts 5 per cent. or 10 per cent. has been added to the leasehold rack rent in order to produce the gross value; but in no district with which witness is acquainted has it hitherto been the practice to add to the leasehold rack rent an amount equivalent to the maximum deduction prescribed by the Third Schedule to the Act. A certain amount of this irregularity has already been removed, and it is now the general practice to add 10 per cent. to leasehold rack rents and call the result gross value. Thus a house let on repairing lease at a rack rent of 100*l.* per annum would be assessed at 110*l.* gross, 92*l.* rateable; whereas an exactly similar house next door let on a yearly tenancy would probably produce 120*l.* per annum, and would be assessed at 120*l.* gross, 100*l.* rateable. The result of this practice is that hereditaments let on yearly and other short tenancies are, as a rule, assessed on a somewhat higher scale than those occupied by leaseholders.

Leasehold tenures.

18. Coming to properties which are not let, either on lease or otherwise, but are for various reasons used or occupied by the owner, the difficulty of applying the statutory definition of annual value increases. In a considerable proportion of occupying owners' cases the premises are such as are unlikely to be let; and the valuation of such properties for assessment has to proceed on the basis of assuming a tenancy and a tenant, and calculating the rent which such a hypothetical tenant (generally the actual owner) would give, by taking a per-centage upon the capital value of the hereditament. This course is open to considerable risk, for it involves either (*a*) the making of an estimate by a competent surveyor at each quinquennial valuation—a costly process—or (*b*) accepting such statements of cost as can be furnished to represent the value. No doubt in the majority of cases the latter alternative is adopted to save expense; it is, however, obvious in many cases that original cost furnishes no real guide to present value. There is no doubt exceptional difficulty in assessing property of this class, and, more particularly in the case of large assessments, the desire to avoid litigation often leads to the adoption of a standard of assessment lower than the normal.

Occupying owners—The hypothetical tenant theory

19. The anomalies found in assessing machinery—or rather in increasing the rateable value of hereditaments because of the enhancement due to the presence of machinery—furnish another illustration of the difficulty of applying the statutory definition of gross value. It would be a task of extreme difficulty for one tribunal, under the present state of the law, to assess equitably all hereditaments in the metropolis which include machinery; but where there are no less than thirty tribunals inequalities are inevitable. A large number of decisions have been given by the High Court on these matters: but

Hereditaments which include machinery.

App. I.

owing to the great variety of circumstances which may arise in cases of this kind, it is extremely difficult to apply previous decisions, which deal with the special circumstances of one particular case, to the later and different circumstances of another. At the present time, in cases of this kind, overseers and assessment committees are without any guide beyond that supplied by the decisions of the courts—necessarily expressed in highly technical language. The result is considerable divergence of practice, machinery being sometimes disregarded in making assessments.

Licensed premises.

20. There is a special difficulty in the assessment of licensed premises owing to the practice which prevails in the trade of fixing the rent at a round sum (generally 100*l.*) which does not in any way represent the value of the premises, the balance of rental value being usually capitalised as a premium. Such premiums frequently take the form of the mere transfer of a debt from the outgoing to the incoming lessee. Premiums are sometimes paid in the case of ordinary property, but they are practically the rule in the case of licensed premises. The existence of the premium item in public-house transactions causes two difficulties. The first is the separation of the premium between the two elements which undoubtedly enter into its composition, viz. (a) goodwill of trade, which is of course not assessable, and (b) capitalised rent. Until recently there was great variation in the methods adopted in different parishes in making this division: some ignoring premium payments altogether; some making an arbitrary addition to the rent without any special calculation; some taking one third and some one half of the premium as the proportion representing capitalised rental value. Now, however, one half is becoming the general rule throughout the metropolis; but it is obvious that it is a purely arbitrary one, and does not always produce equality. The second difficulty is that which arises in converting the proportion of premium, when thus determined, into its annual equivalent. A rough and ready custom of taking 5 per cent. upon the amount, irrespective of the length of lease, and adding it to the rent was in vogue some years ago, and is continued even now in some parishes. Of course the proportion should vary according to the length of the term in respect of which the premium is paid. A table to facilitate this calculation, first issued by the Greenwich Union Assessment Committee, is now in circulation among rating authorities, and its adoption is thus becoming general. Hotels, although coming under the general head of licensed premises, should fall within the category of "profit-earning undertakings" and be assessed on the hypothetical tenant basis, the problem being—"Given the amount of net profits earned by the hotel, what proportion of these profits would probably be paid by a hypothetical tenant of the hotel as rent?" Any answer to this question must be, more or less, a matter of opinion rather than fact. Theatres are probably assessed on a somewhat similar basis: but clubs—which can hardly be correctly called profit-earning—are mostly assessed upon their structural value.

Public buildings and works—Structural value.

21. There has been considerable want of uniformity in past years in the various methods adopted for assessing public buildings and works, *i.e.*, properties occupied for public purposes from which no private profit accrues; such as workhouses, public offices, free libraries, public baths and washhouses, pumping stations, dust destructors, and schools. It is now generally admitted that the hypothetical tenant theory must be applied in cases of this kind; but until ten years ago such properties were in some parishes assessed either at nominal figures or not at all. Opinions differ as to the proper rate of interest which should be applied to the structural value of such properties (when obtained) in order to produce its equivalent in annual value. During the last ten or twelve years cases have been fought on this point by several public authorities, including the School Board for London and the London County Council, with the result of reducing the 5 per cent., which was previously the ordinary rate of interest, to one varying from 3 to 4 per cent. In connexion with the quinquennial valuation of 1895–96 a return showing the assessments of properties of this class was prepared in the Estates and Valuation Department of the Council's offices.\*

Hereditaments extending into more than one parish.

22. Perhaps the most difficult cases to deal with are those hereditaments which extend into or through more than one parish, such as railways, tramways, canals, docks, gas and water works, electric lighting works and undertakings, hydraulic power works, telegraphs, telephones, &c. As in the case of hotels, the process is to find the amount of net profit actually earned, and then determine what proportion of this a hypothetical tenant would give as rent to a hypothetical landlord. As, however, each parish makes a separate assessment of the portion of the

\* London County Council Quinquennial Valuation, 1896, Return of Assessment of Buildings used for Public Purposes, except Government property and schools (No. 297). P. S. King & Son, Great Smith Street, Westminster, S.W.

undertaking within its area, the amount of extra work involved in apportionment and duplication is very great. It will be seen that the process, although complicated, is practically limited to the basis of profit actually earned, not profit which might be earned by the best possible administration. This, no doubt, introduces serious possibilities of inequality, even as between hereditaments of this character; a badly-managed railway, which pays little or nothing, being assessed at simply nominal sums, whereas a thoroughly well-managed line has, in consequence of its good management, to pay rates on very much higher assessments; and this though the value of the land occupied may be greater in the former case than in the latter. It must also be remembered that the companies which usually own and administer such undertakings as these are as a rule wealthy and prosperous, and can afford to spend considerable sums in litigating rating questions with the local authorities. This fact often deters overseers and assessment committees from increasing the assessment of such properties, especially in the absence of the necessary particulars relative to the net earnings within the parish. Of course the most important point in this connexion is the inevitable want of uniformity between the assessment of such undertakings as these and that of ordinary hereditaments. Practically they are assessed upon profits; a more or less arbitrary proportion of the profits which happen to be earned during any particular period being taken as the basis of annual value. In parishes which include a considerable proportion of hereditaments of this class it is easy to see that a reduction of the profits made by these undertakings might mean a considerable additional rating burden to ordinary ratepayers. The extent and importance of this question may be gathered from the fact that the rateable value of this class of hereditament in London amounts to 3,865,861*l.* or 10·7 per cent. of the total rateable value. In the income tax return these compound undertakings are included under Schedule D. (profits), so that the extreme difficulty of dealing with them on the basis of annual value is recognised by the Imperial authorities.

APP. I.

23. The contributions by the Government in lieu of rates upon their property are calculated upon annual values fixed by the Treasury valuer; and, as there is no provision for a quinquennial revaluation of Government property, the tendency inevitably is for its valuation not to keep pace with that of other property. There does not appear to be any practical check upon the figures of the Treasury valuer. There are obvious advantages in the direction of uniformity to be derived from subjecting Government property to assessment in the usual way under the Act. The property of all other public authorities in London is subject to that process, and the Government's is the only exception. The Council's valuer recently made estimates of the values of the *sites only* of certain properties belonging to the Government, selected as typical cases, with the following result—

Government property.

## IV.—Valuation List Totals.

24. Special importance attaches to the totals of the valuation list in each parish. It is not the practice to cast these totals until the assessment committee has concluded its labours; and the total then arrived at is an arithmetical total of all the figures in each of the two columns. But if any alterations be made in individual assessments, either by

Their importance as a separate entity.

\* Including the new National Portrait Gallery.

APP. I.

Special Sessions or Quarter Sessions, the total arrived at by the assessment committee remains unaltered. It is thus frequently the case that the totals, which form the basis of apportionment in the case of all precepts, are not the arithmetical totals of the individual assessments in the list. A formal appeal against totals has to be lodged by some body or person aggrieved before even Quarter Sessions have jurisdiction to deal with this anomaly; and the business of Quarter Sessions, especially in quinquennial years, is increased by the fact that the overseers of some parishes (and no doubt the practice will soon become general) wait until all the individual appeals affecting their parish have been dealt with, and then obtain the special consent of the Court (being out of time) to lodge an appeal against totals, in order to obtain such an alteration as will bring them into arithmetical accord with the figures in the list as altered on appeal. But if this cumbrous process is not undertaken the totals as first fixed by the assessment committee remain a separate entity, notwithstanding the fact that the assessment of individual hereditaments may have been largely varied as the result of appeals.

25. As the statute provides (section 51) that in making a valuation list the overseers shall include every hereditament in their parish, it is necessary for them to assess unoccupied property. The assessed values of unoccupied property therefore form part of the totals arrived at by the assessment committee, although no rates can be recovered in respect of it. On all precepts, however, the parish has to contribute in respect of this unoccupied property without abatement or deduction; and as the only means of defraying this charge, it has perforce to be spread over the occupied property. So far as precept rates are concerned the effect is to place a specially heavy burden upon those parishes which include declining districts where houses are going out of occupation, or new districts where large areas of building land are being covered with houses.

26. Section 133 of the Lands Clauses Consolidation Act, 1845, throws upon promoters of undertakings proceeding under that Act, the liability to make good the deficiency of poor's rate charged upon any lands of which they may become possessed until their works are completed and assessed. At the time the Lands Clauses Act was passed this was no doubt a salutary provision to prevent serious injury being inflicted upon individual parishes by large clearances of property for railway and other works. It was well adapted to meet the circumstances of the time when it was passed, for the poor's rate then represented the bulk of local taxation, and was almost entirely devoted to poor relief. Since that time, however, changes have taken place. Through the operation of the Metropolitan Common Poor fund and the Local Government Act, 1888, only a comparatively small margin of the actual expenses of poor relief remains a charge upon the individual parish. The bulk of it is practically reduced to a common charge over the whole of the metropolis. The poor's rate now, also, includes various precept rates, such as the police and county rates, raised by an equal pound rate over the whole metropolis. As the properties acquired for the undertakings referred to are demolished, their assessments are of course excluded from the valuation list, and therefore ultimately from the totals upon which all precept rates (including the equalised portion of the poor's rate) are calculated. Thus it is not the individual parish, but the whole metropolis which suffers from clearances of this kind; but the metropolis has no remedy in the matter, while the parish retains the old remedy conferred upon it by the Act of 1845, receives the whole deficiency in the nominal poor's rate, and thus obtains a profit which can be carried to the relief of its general expenditure. The London County Council, the Local Government Board, and the Receiver for the Metropolitan Police District obtain no part of this deficiency, either in the shape of county rate, the equalised portion of the poor's rate or police rate. On the other hand, it must be pointed out that section 133 does not refer to the general, sewers, or other local rates, in respect of which the individual parish suffers to some extent during the clearance of ground, and has no remedy—a position which the metropolis as a whole shares.

#### V.—*Summary of Assessment Inequalities and their Causes.*

27. It now becomes desirable to summarise the inequalities resulting from the present system of assessment in London and the method of administering it. These inequalities may be divided between those affecting individual ratepayers and those affecting separate rating areas; and it will be useful to subdivide them also into inequalities which result from the system as prescribed by statute, and those which are only due to defective methods of administration.

Effects of including unoccupied property.

Effects of section 133 of the Lands Clauses Consolidation Act, 1845.

## (a.) Inequalities as between ratepayers in the same parish—

## (1.) Arising from statute—

The assessment of profit-earning undertakings according to a proportion of their net profits, arbitrarily taken to represent annual value.

The assessment of large and valuable properties by means of a percentage on capital or "structural" value.

The want of a simple and uniform method of assessing hereditaments which include machinery.

The fixing of the basis of the Government contribution in lieu of rates by the Treasury valuer without appeal.

The additional burden borne by ratepayers in consequence of exemptions from assessment and inability to charge empty property.

## (2.) Arising from defects in administration—

The deduction from gross value of the maximum per-centage allowed by the Act, irrespective of differing circumstances.

The assessment of leasehold and freehold properties generally on a lower scale than those occupied by yearly, monthly and weekly tenants.

The frequent under-assessment of licensed premises.

APP. I.

Inequalities as between ratepayers in the same parish.

## (b.) Inequalities as between separate rating areas—

## (1.) Arising from statute—

The omission of the hamlet of Penge from the operation of the Valuation (Metropolis) Act, 1869.

The absence of the means of checking, by the overseers of other parishes, or otherwise, the preparation of the valuation list in the case of parishes not in union.

The power of local assessment committees to fix the valuation list totals, which are the basis of all precept rates.

The absence of a power to include new and altered property in the quinquennial or supplemental valuation list during the process of revision.

The operation of section 133 of the Lands Clauses Consolidation Act, 1845.

All inequalities enumerated under (a) (1) also differentiate between separate rating areas.

## (2.) Arising from defects in administration—

All inequalities enumerated under (a) (2) also differentiate between separate rating areas.

Inequalities as between separate rating areas.

28. Apart, however, from actual inequalities which are injurious to ratepayers and rating areas, the present system throws an unnecessarily large amount of work upon the officials of local authorities. This remark applies mainly to two points. The first is that each parish, if it is to make a proper valuation of any railway or other similar undertaking, has to go through practically the whole of the company's books for a very considerable number of items in order to be in a position to apportion the exact share of net profits earned in the particular parish in accordance with what is known in the Courts as the "parochial principle." Co-operation between parishes with a view to avoiding this difficulty is not always possible, though it sometimes takes place. The system which prevails in Scotland appears to witness not only less cumbrous in this respect, but also likely to produce more equitable, or at least more uniform, results. That system consists in the appointment of one expert to value all such undertakings throughout the whole kingdom of Scotland, and to apportion his valuation between the various districts. The second point is the procedure which renders two columns of annual value necessary in the valuation list, viz., gross and rateable. All local rates are levied on the basis of rateable value; income tax, schedules A. and B., formerly levied on gross value, is now charged upon that value only after making (under the Finance Act, 1894) a deduction which in principle entirely resembles, and in practice only differs slightly from, the deduction prescribed by section 52 of the Valuation (Metropolis) Act, 1869. Thus gross value as originally assessed remains the basis of charge in the case of one impost only, viz., inhabited house duty. Under these circumstances there should be no serious practical difficulty in abolishing gross value altogether, and making the rateable or net annual value the sole basis for Imperial taxes as well as local rates. This would save some labour, and at the same time do away with the whole series of difficult questions which arise in

Unnecessary labour in consequence of duplication of work and otherwise.

APP. I.

relation to the scale of deductions. But a more important objection of principle applies to the use of gross value as a basis of taxation, viz., that it includes a sum which is *not income* to the owner, but outgoing, *i.e.*, the average annual cost of repairs, insurance, and any other expenses necessary to maintain the hereditament in a state to command the rent.

VI.—*Recent attempts to obtain a nearer approach to Uniformity of Practice.*

Action of  
the London  
County  
Council.

29. When the London County Council was created under the Local Government Act, 1888, it was notorious that considerable inequalities of assessment were to be found in different parts of the metropolis; and the transfer under that Act of the duty of printing the totals of the valuation lists of the metropolis from the clerk to the Metropolitan Asylums Board to the clerk of the London County Council gave rise to the impression that the Council would be in a position to deal in some way with these inequalities. Accordingly, when Mr. Andrew Young, F.S.I., valuer to the Council, was appointed head of the Estates and Valuation Department in 1890, the definition of his duties included the following:—

- “ To advise on the assessments for rating of property belonging to the Council and (with the assistance of the solicitor when necessary) conduct all objections and appeals against assessments.
- “ To examine the valuation lists of the several parishes as prepared under the Valuation (Metropolis) Act, and support objections with a view of promoting such uniformity of practice among assessment committees as will secure a fair basis of contribution to metropolitan rates between one parish and another.
- “ To value Government property with reference to the contributions made in lieu of rates in respect of such property.”

Assessment  
conference  
of 1890.

30. When the time came for work in connexion with the quinquennial valuation which commenced in February, 1890, the best means of proceeding with the question was discussed by the Council's Local Government and Taxation Committee, and it was then realised that the duty transferred to the Council was simply that of registering and printing the totals. They had no special power to deal with questions of practice beyond that arising from the facts that they happened to be ratepayers in nearly all the large parishes in the metropolis, and that, in common with other bodies levying precepts or requiring contributions payable out of rates, they possessed the right of appealing against the totals of the valuation lists according to which such precepts and contributions are apportioned. The Local Government and Taxation Committee therefore invited all the assessment committees in the metropolis to appoint representatives to attend a conference at Spring Gardens in the summer of 1890; and at this conference questions relative to matters of practice and the closer approximation to uniformity of assessments were discussed, and a series of resolutions passed dealing with the methods of assessing various classes of property. These resolutions were, by order of the Council, circulated among assessment committees in July 1890. At that time the whole of the work of preparing the quinquennial valuation lists by the overseers had been completed; and therefore the resolutions of the conference, although used by many of the assessment committees as a basis for the consideration of objections, were disregarded by others on the ground that it would be unfair to the overseers to interfere with the basis on which an enormous amount of work had been done, on account of decisions which had not been promulgated when the work was in hand.

The Coun-  
cil's appeals  
against  
totals.

31. Shortly stated, the result of all these proceedings was some advance upon the previous state of things, but considerable departures from the principles of uniformity were apparent. The Council were urged from several quarters, and especially by those parishes whose lists had been most carefully prepared, to take action with a view to removing the inequalities which admittedly prevailed. The matter was discussed in the Local Government and Taxation Committee on many occasions, and also in the Council, with the result that as a first step notices of objection were given under a special resolution of the Council, in a series of cases of under-assessment selected by the then deputy-chairman. Owing to the shortness of time, only a few cases could be dealt with in this manner, but as further inquiries and observation brought to light the localities in which under assessment prevailed, and the various classes of error which had crept into the valuation lists, a large amount of information was accumulated (generally with the assistance of the local officials); and after fully

considering this information, the Local Government and Taxation Committee recommended the Council to lodge formal appeals to Quarter Sessions against the totals of the valuation lists in five unions and seven parishes on various grounds, which are set out in tabular form in Schedule IV. (p. 252). The precedent for this course was found in the action of the Fulham Union in the quinquennial valuation of 1885-86, when they appealed against the totals of the valuation list of Kensington, on the ground of general under-valuation. After a technical point taken by Kensington had been overruled by the High Court, the appeal in that case was settled by agreement. Several parish authorities, having that case in view, and being aware of serious under-assessment in other parishes, would have been prepared themselves to take action on totals but for the fact that they considered the Council, as representing the whole of the ratepayers of the metropolis, the proper authority to bear the expense of appeals whose object was to rectify inequalities in the general interest of the ratepayers. As will be seen from the table in Schedule IV., most of these appeals were, after negotiation, settled by agreement on amicable terms. The three cases largest in amount were contested by the respondents, and, after great delays in the Court of Quarter Sessions (due to the congestion of business), a point of law was taken in one of these cases, and carried to the House of Lords, whose decision was practically to the effect that appeals against totals were not the proper means of rectifying inequalities which arise from the under-assessment of individual hereditaments, however extensive the inequalities may be. The result of this judgment was the technical failure of these three large appeals, but the direction of public attention to the under-assessment prevailing in the districts concerned no doubt had a salutary effect.

32. In order to have ample time for the discussion of the many technical questions involved, and to ensure that the resulting resolutions should be circulated in good time before the 1895-96 quinquennial valuation, another assessment conference was held at Spring Gardens in 1893. On this occasion representatives from the overseers as well as from the assessment committees were invited to meet the Local Government and Taxation Committee, and a printed verbatim report of the proceedings of this conference exists.\* The resolutions passed by them respecting the assessment of property under the Valuation (Metropolis) Act, 1869, have also been issued.† These resolutions are now generally applied in assessment work throughout the metropolis, except perhaps in the City of London Union, in parts of which considerable under-assessment may still be found. There are unusual difficulties in assessment work in the City, owing to the high values prevalent, the smallness of the parishes, the consequent number of officials engaged, and the frequent division of hereditaments between two or more parishes.

Assessment conference of 1893.

33. During recent years the Council have rarely proceeded by way of objection and appeal, but usually by a less formal and more amicable procedure under which they are sometimes invited by the overseers to meet them upon the preparation of the valuation lists with a view to arriving at a general agreement at the first stage of the valuation. Where this course is not adopted by the overseers, or if it fails to produce satisfactory results, it is usual to forward to the assessment committee concerned a list of cases to which the Council invite their special attention for specified reasons. Most assessment committees invite an official from the estates and valuation department of the Council to be present at their meetings, either throughout the valuation or when these special cases are considered. The result of this procedure in the quinquennial valuation of 1895-6 showed very satisfactory results, though the difficulty of dealing with such a vast number of hereditaments in the time allowed by the statute renders it impossible to avoid irregularity of every kind. A large proportion of the direct results of the Council's action along these lines in the assessment year 1895-96 has been embodied in several returns presented to the Council.‡ Perhaps the most striking figures in these returns are those relating to the assessment of licensed premises, which show a net increase of 254,735*l.* gross value, 212,235*l.* rateable value, over the figures of 1894-95.

Subsequent action of the Council.

APP. I.

The Valuation (Metropolis) Amendment Bill.

34. All the desirable results above mentioned have been achieved by combined action (on the part of the Council and the local authorities) which has no foundation in law ; and there was a general consensus of opinion at the 1893 conference in favour of providing a legal basis for such action in the future. A bill drafted for this purpose by the Council's parliamentary agent was very fully discussed at the later meetings of the conference ; and, although considerable changes in machinery were proposed in the bill as originally drafted, large modifications have since been made, and the latest form of the bill represents a compromise which is generally supported by rating authorities in the metropolis.\* Being an amendment of a public Act, it was impossible for the Council to promote the measure as a private bill, and it had perforce to be introduced into the House of Commons by private members. Owing to the great pressure of other public business and the operation of the forms of the House, it has hitherto failed to pass into law. It proceeds on the basis of repealing the whole of the existing assessment legislation relating to London and consolidating the law by re-enacting the bulk of the provisions of the Union Assessment Committee Acts, and the Valuation (Metropolis) Act, 1869. The principal new provisions introduced are—

- (1.) Valuation lists to be made in triplicate, one copy being sent to the Council for their use.
- (2.) Power to representatives of the Council to attend meetings of the assessment committees and overseers without the right of voting.
- (3.) Power to the Council to object and appeal, whether ratepayers in a particular parish or not.
- (4.) Returns to be made by occupiers in the case of provisional and supplemental lists.
- (5.) The Council to convene periodical conferences of overseers and assessment committees.

The effect of this bill, if passed, would be to obtain legislative endorsement of the position at present occupied by the Council as an intermediary between the various assessing authorities in the metropolis ; their principal business being to assist in obtaining uniformity in the practice and procedure of valuation.

#### VII. — *Assessment machinery and practice in the provinces.*

Differences between London and the provinces.

35. A comparison between assessment practice in London and the provinces respectively is important, because of the facts that certain local charges are shared between the metropolis and circumjacent districts and that annual value is used as a basis for part of the taxation out of which Imperial grants in aid of local taxation are paid. Assessment practice in the provinces is governed by the Union Assessment Acts, 1862 to 1880. The most important comparison lies in the fact that there is no provision for a periodical re-valuation of hereditaments in the provinces. Consequently there is a risk, under lax administration, of old values being carried forward from year to year. If values are falling this tendency is corrected by objections from the ratepayers ; but if, on the other hand, rentals increase, the probability is, under such circumstances, that under-assessment and a certain amount of inequality will result. The check furnished in London by the co-operation of the surveyor of taxes with the parish authorities in the preparation of the valuation lists is usually absent in the provinces ; and the fact that under-assessment is largely prevalent, at least in some districts, is shown by the following figures for the year 1894-95, extracted from p. 118 of the Report of the Inland Revenue Commissioners for 1895-96—

	Metropolis.	Rest of England.
	£	£
Gross annual value of rated property assessed to income tax, Schedule A. - - - - -	37,343,553	135,308,897
Gross annual value of the same property for local rates - - - - -	37,343,553	127,286,856
Difference - - - - -	Nil	8,022,041

\* London Valuation and Assessment Bill, No. 141 of Session of 1896.

As local rates are calculated on the net rateable value, and not on the gross, the under-assessment of the provinces as compared with the metropolis is probably, in round figures, an annual sum of seven millions. The details of assessment machinery differ to some extent from those prevailing in London, being on the whole more elastic. The exact points of difference will be seen on reference to the table in Schedule V. (p. 252). There being no scale of deductions prescribed in the Union Assessment Acts, all the difficult questions which in London are governed by the scale in the third schedule to the Act of 1869 are left in the provinces to the discretion of the local authorities; and, there being no sufficient channel of communication to promote uniformity between different districts, differences of practice on this point are frequent. Moreover, in the provinces, assessment committees have not quite the same power of fixing the basis or total rateable value upon which each parish in their union has to contribute to precept rates. Under the provisions of the County Rate Act, 1852, this duty, in the case of the county rate, devolves upon the county councils, who are not in any way bound to accept the arithmetical total of the valuation list as settled by the assessment committee and altered by sessions after appeals.

APP. I.

36. There is an important point which may here be conveniently alluded to, arising from the fact that the County Quarter Sessions is the final tribunal on all questions of fact in assessment matters. Where one public authority is in occupation of property situate in the rating area of another, it is of course probable that the assessment committee will endeavour to place a full valuation upon such property. If the districts of both bodies concerned are situate in the same county, the Court of Quarter Sessions is of course the proper tribunal to settle a difference of opinion on the point, if it arises. But where the property of any public body is situate in a county other than its own, the Court of Quarter Sessions, composed as it invariably is of representative men interested in the work of the county, have so direct an interest in making the assessment of such property as high as possible that it is hardly prudent to place them in the position of final judges upon a case in which their public interest lies wholly on one side. No doubt the Courts of Quarter Sessions as a rule are found superior to considerations of this kind; but it would be more satisfactory if cases of this class could be dealt with by a different tribunal.

Jurisdiction of the Court of Quarter Sessions in certain cases.

37. To complete this short statement of the provincial side of the question, it should be added that in several parishes and unions (especially those within greater London) the example of the London assessment committees is being followed to a considerable extent; and the assistance of the London County Council has been sought by officers of provincial parishes and unions, who have decided to take action with a view to rectifying errors in assessment. The Eastbourne Board of Guardians recently appointed a valuer to assist their assessment committee; and among the facts laid before them by the assessment committee to justify the appointment, was a statement that, as regards 46 selected properties, situate in all parts of the town, although their total rent was 6,926*l.*, they were rated at 2,297*l.*, whereas the rateable value should have been 5,741*l.* In the districts adjacent to London the class of property now attracting the more particular attention of overseers is licensed property. Their action is no doubt partly due to the rapid increase which has taken place during the last two years in the value of this class of property.

Recent action of some local rating authorities.

#### VIII.—*Inequalities between the metropolis and other districts which share local taxation with it.*

38. It will now be convenient to summarise the inequalities arising outside the metropolis, as has already been done in the case of those arising within it. The following statement does not include all the rating inequalities which exist, but deals only with those due either to the law or practice governing the methods of assessment. They are divided into five sections, viz.:—

Summary of inequalities due to the law and practice of assessment.

(a.) Between the County of London and the City of London—

Local taxation shared: general county rate, rate for the common poor fund, equalisation rate, School Board rate and the rate of the Metropolitan Asylums Board.

Inequality due to the under-assessment of property in the City of London.

(b.) Between the metropolis as defined by the Valuation Act, 1869, and the hamlet of Penge—

Local taxation shared: general and special county rates, equalisation rate, School Board rate, and police rate.

APP. I.

Inequality due to the fact that the county rate basis (fixed by the London County Council) does not necessarily coincide with the poor rate valuation (determined by the Croydon Union Assessment Committee).

(c.) Between the Administrative County of London and the circumjacent districts using the main drainage system—

Local taxation shared: cost of the main drainage system—not necessarily on the basis of rateable value.

Inequality due to the differences in assessment practice between London and the provinces.

(d.) Between the Administrative County of London and the rest of the Metropolitan Police district—

Local taxation shared: police rate.

Inequality due to the differences in assessment practice between London and the provinces.

(e.) Between the Administrative County of London and the rest of England and Wales—

Taxation shared: payments towards Imperial grants in aid.

Inequality—so far as the payments are based on annual value—due to the differences in assessment practice between London and the provinces.

Shifting of real property values during this century.

39. In this connexion it should be pointed out that the comparison between the assessment of London and that of the provinces is only one phase of the wider comparison between urban and rural property in England and Wales. No consideration of the assessment question can be complete if it does not take account of the shifting of what may be called the "centre of gravity" of property values during the century. This shifting has been literally enormous, as will be seen from the table in Schedule VI. (p. 253), which is compiled from reports prepared by Mr. Goschen in 1871, and Sir H. H. Fowler in 1893. From this it will be seen that whereas agricultural lands represented 75 per cent. of the value of real property at the beginning of the century, they now stand for only  $17\frac{2}{3}$  per cent.; while urban property (included under the generic title of houses) which was a little more than  $15\frac{1}{2}$  per cent. of the total at the beginning of the century, is now 58·7 per cent. The introduction of railways and other properties assessed according to profits has still further disturbed the balance. But it must be remembered, in considering the table in question, that the figures are the annual assessments to income tax, which in the case of railway and other properties come under Schedule D., and therefore include the whole of the profits, and not simply that proportion which is arbitrarily taken as representing annual value. Applying this point specially to the case of the metropolis, although it is impossible (owing to the want of statistics of rateable value) to go back to the beginning of the century, it may be stated that the increase in rateable value of urban property, which has been so marked during the century, has since 1868 proceeded at a greater rate in London than in the rest of England and Wales, as will be seen from the following table:—

*Rateable Value—Poor Rate Valuation.*

Date.	London.	Rest of England and Wales.	Total.
1868 - -	£ 16,946,114	£ 83,722,584	£ 100,668,698
1895 - -	34,307,741	128,532,224	162,839,965
Increase per cent. -	102·45	53·52	61·76

SCHEDULE I.—PARTICULARS to be RENDERED under the VALUATION (METROPOLIS) ACT, 1869, 32 & 33 VICT. c. 67, by every OCCUPIER of RATEABLE PROPERTY in the METROPOLIS.

APP. I.

(See pp. 234, 236, pars. 2 & 9, and Minutes of Evidence, Question 12,100.)

1. Name of the parish in which the Property is situate Street, or Road, &c. - - - - - Number of House - - - - - If not numbered, name by which known - - Whether occupied with or without Stables, or other Premises, as part of the same Property - The quantity of Land (if any) and how used -	
2. Full Christian and Surname of Occupier - -	
3. Name and Address of Owner or Immediate Lessor - - - - - If not known, Name and Address of the Person to whom the rent is paid.	
4. Whether the property is occupied as a Private residence, or partly as a Dwelling-house and partly as a Shop, Counting-house, Warehouse, or Manufactory, &c. - - - - - Or, as an Hotel, Inn, Beerhouse, Coffee-House, or House for the Sale of Refreshments - - Or solely for Trade or Business purposes, with no person, other than a menial or Domestic Servant, or a person of similar grade employed as Caretaker, residing on the Premises for the Protection thereof Number of Rooms set apart for the use of the Caretaker (if any) and on which floor - -	
5. If the occupation is in respect only of part of a House, or Premises, state the extent, and on which floor or floors - - - - -	
6. Whether the Property is held under Lease or Agree- ment for a period of years - - - - - Or by the Year, Quarter, Month, or Week - -	
7. Date of Lease or Agreement, and whether granted for any consideration in money, in addition to the Rent, or upon any condition as to laying out money in improvements - - - - -	
8. Amount of Rent - - - - -	£ per
9. If the Occupier is the Owner, or has purchased the Lease, the Annual Value must be stated; i.e., the Sum for which the Property is worth to be Let by the year, the Owner keeping it in repair - -	} Annual Value £
10. Amount of Land Tax (if any) - - - - - Amount of Tithe Rentcharge or of any Rate or Assessment in lieu of Tithes paid in the year 1894 Amount of Sewers Rate - - - - -	Land Tax £ } Tithe Rentcharge or pay- } £ } ment in lieu of Tithes - } Sewers Rate £
11. Whether all or any of the above-named charges on the Property are borne by the Owner or by the Occupier - - - - -	
12. Whether all usual Tenants' Rates and Taxes are paid and borne by the Occupier - - - - -	
13. Whether the Owner undertakes to bear the cost of repairs, Insurance, and other expenses necessary to maintain the property - - - - -	

## DECLARATION.

I hereby declare that the foregoing particulars are in every respect justly and truly stated according to the best of my knowledge and belief.

Dated this \_\_\_\_\_ day of \_\_\_\_\_ 1895.

## SCALES OF DEDUCTION

NOTE.— BLUE color indicates site value  
 RED ..... structural value  
 HATCHING ..... deduction in respect of repairs, insurance, &c.

SCHEDULE II.—DEFINITIONS of ANNUAL VALUE and SCALE of DEDUCTIONS IN VALUATION (METROPOLIS) ACT, 1869, 32 & 33 VICT., c. 67.

APP. I.

(See pp. 238-9, pars. 14 and 16; Schedule III. below; and Minutes of Evidence, Questions 12,104-14, 12,526-32.)

I.—Definitions of Annual Value.

The term "gross value" means the annual rent which a tenant might reasonably be expected, taking one year with another, to pay for an hereditament, if the tenant undertook to pay all usual tenant's rates and taxes, and tithe commutation rentcharge, if any, and if the landlord undertook to bear the costs of the repairs and insurance, and the other expenses, if any, necessary to maintain the hereditament in a state to command that rent. S. 4.

The term "rateable value" means the gross value, after deducting therefrom the probable annual average cost of the repairs, insurance, and other expenses as aforesaid.

The per-centage or rate of deductions to be made from the gross value in calculating the rateable value for the purposes of this Act shall not exceed the amounts in the third schedule to this Act, so far as the same are applicable. S. 52.

II.—Scale of Deductions.

Schedule showing the several classes into which the hereditaments inserted in a valuation list under this Act are to be divided:— Third Schedule.

		Maximum Rate of Deductions.
		Per cent. or Proportion.
Class 1.	Houses and buildings, or either of them, without land other than gardens where the gross value is under 20 <i>l.</i>	25 or $\frac{1}{4}$ th
" 2.	Houses and buildings without land other than gardens and pleasure grounds valued therewith for the purpose of inhabited house duty where the gross value is 20 <i>l.</i> and under 40 <i>l.</i>	20 or $\frac{1}{6}$ th
" 3.	Houses and buildings without land other than gardens and pleasure grounds valued therewith for the purpose of inhabited house duty where the gross value is 40 <i>l.</i> or upwards	16 $\frac{2}{3}$ or $\frac{1}{3}$ th
" 4.	Buildings without land which are not liable to inhabited house duty and are of a gross value of 20 <i>l.</i> and under 40 <i>l.</i>	20 or $\frac{1}{6}$ th
" 5.	Buildings without land which are not liable to inhabited house duty and are of a gross value of 40 <i>l.</i> or upwards	16 $\frac{2}{3}$ or $\frac{1}{6}$ th.
" 6.	Land with buildings not houses	10 or $\frac{1}{10}$ th
" 7.	Land without buildings	5 or $\frac{1}{20}$ th
" 8.	Mills and manufactories	33 $\frac{1}{3}$ or $\frac{1}{3}$ rd
" 9.	Tithes, tithe commutation rentcharge, and other payments in lieu of tithe	To be determined in each case according to the circumstances and the general principles of law.
" 10.	Railways, canals, docks, tolls, waterworks, and gasworks	
" 11.	Rateable hereditaments not included in any of the foregoing classes	

The maximum rate of deductions prescribed in this schedule shall not apply to houses or buildings let out in separate tenements, but the rate of deductions in such cases shall be determined as in classes 9, 10, and 11

SCHEDULE III.—TABLE and DIAGRAM illustrating the EFFECT of indiscriminately ALLOWING the MAXIMUM RATE of DEDUCTION in the case of ordinary hereditaments exceeding £40 gross value.

(See p. 238, par. 15; Schedule II. above; and Minutes of Evidence, Questions 12,110-4, 12,280-312, 12,367-89, 12,424-40, 12,445-76, 12,536-60.)

No. on Diagram.	Locality.	Gross Annual Value.	Site Value.	Per-centage of Site Value to Gross Annual Value.	Per-centage of Structural Value to Gross Annual Value.	Per-centage of Statutory Allowance (16 $\frac{2}{3}$ per cent. of g.a.v.) for Repairs, &c., to Structural Value.
1	Fulham	£ 44	£ 7	15.9	67.5	24.6
2	Regent's Park	300	60	20.0	63.4	26.3
3	Islington	216	55	25.4	58.0	28.7
4	Blackfriars	185	55	29.7	53.7	31.0
5	Marylebone	288	110	38.2	45.2	36.9
6	Charing Cross	13,500	7,000	51.8	31.6	52.7
7	Cheapside	2,000	1,350	67.5	15.9	104.8
8	Old Bond Street	990	700	70.7	12.7	131.2

A comparison of the per-centages will be most easily made by reference to the accompanying diagram. In two cases the deduction for repairs, insurance, and other expenses necessary to maintain the hereditament in a state to command the rent, actually exceeds that part of the annual value ascribed to the structure; a result which is a practical *reductio ad absurdum*.

APP. I. SCHEDULE IV.—APPEALS against TOTALS in the QUINQUENNIAL VALUATION LISTS, 1891, by the LONDON COUNTY COUNCIL.

(See p. 244, par. 31, and Minutes of Evidence, Questions 12,224-32.)

Valuation Lists appealed against.	Increases sought.		Grounds of Appeal.	Result of Appeal.		Remarks.
	Gross.	Rateable.		Gross.	Rateable.	
Lambeth, St. Mary	£ 7,340	£ 26,433	Omission of property; under-assessment of public buildings; no account taken of value of Government property; deductions in excess of maxima allowed by 3rd schedule to Act.	£ 7,340	£ 12,244	By consent.
Mile End Old Town	258	215	No account taken of value of Government property.	258	215	By consent.
St. George-in-the-East	5,000	6,300	Omission of schools; general under-assessment; deductions in excess of maxima allowed by 3rd schedule to Act.	2,100	2,750	By consent.
St. Giles and St. George, Bloomsbury.	13,488	11,230	Omission of property; general under-assessment.	6,590	5,500	By consent.
St. Marylebone	126,431	106,865	General under-assessment; insufficient added to rents on lease; premiums of licensed premises not properly taken into consideration.	—	—	Appeal abandoned without costs.
Shoreditch	—	6,775	Deductions in excess of maxima allowed by 3rd schedule to Act.	—	3,900	By consent.
Holborn Union	39,500	31,800	General under-assessment; deductions in excess of maxima allowed by 3rd schedule to Act.	12,000	10,000	By consent.
St. George's Union— St. George, Hanover Square.	260,076	200,134	General under-assessment; premiums of licensed premises not properly taken into consideration; insufficient added to rents on lease.	—	—	Judgment of House of Lords against Council with costs.
St. Olave's Union	17,135	13,576	Omission of public property; general under-assessment; error in cast.	1,050	875	By consent.
St. Saviour's Union	1,489	1,236	Omission of property; general under-assessment.	—	—	Withdrawn by consent.
Stepney Union	—	3,254	Deductions in excess of maxima allowed by 3rd schedule to Act.	—	1,128	By consent.
City of London Union	417,202	353,603	General under-assessment; no account taken of City Corporation police stations; errors in cast.	—	2,874	Appeal as to errors in cast allowed; appeal dismissed on all other grounds.

SCHEDULE V.—ASSESSMENT PROCEDURE in the PROVINCES compared with that in LONDON. (See p. 246, par. 35.)

Procedure.	THE PROVINCES.	LONDON.	
	New and Supplemental Lists.	Quinquennial and Supplemental Lists.	Provisional Lists.

Notice of re-deposit to be given.	On the Sunday following re-deposit.	On the Sunday following re-deposit.	—	
Day to be fixed for hearing objections on re-deposit.	Not less than 7, and not more than 14, days from re-deposit	Not less than 14, and not more than 28, days from re-deposit.	—	
List to be finally approved and returned to overseers.	No date fixed	Before 1st of November (copies also to clerk, London County Council).	No date fixed.	
Totals to be sent out	In the month of December—to clerk of the peace only.	Before 1st of December, to all bodies specified in section 17 of Act of 1869.	—	
<i>Appeals to Sessions—</i> Special—Notices to be given Sessions to be held	7 days before sessions Four times a year	On or before 21st of November Between November 30th and January 1st.	None allowed.	
Quarter—Notices to be given Sessions to be held	At least 28 days 14 clear days before sessions In January, April, July, and October.	No period limited. On or before January 14th. Between February 1st and March 31st.	—	
Notice of meeting	—	At least 10 days.	—	
List comes into operation	When approved and delivered to the overseers.	April 6th	On the date of service of notice on the occupier.	

## SCHEDULE VI.—GROSS ANNUAL ASSESSMENTS to INCOME TAX of LANDS, HOUSES, RAILWAYS, and OTHER PROPERTIES in ENGLAND and WALES, and Percentage of each to Total. (See p. 248, par. 39.)

Year ending April 5th.	Schedule A.		Schedule D.		Total.	Per-centage of Total of			
	Agricultural Lands.	Houses.	Railways.	Other Properties.		Agricultural lands.	Houses.	Railways.	Other Properties.
1798	£ 30,000,000	£ 6,250,000	—	£ 3,750,000	£ 40,000,000	75·00	15·62	—	9·38
1814	37,063,000	14,895,000	—	1,537,000	53,495,000	69·28	27·84	—	2·88
1843	42,127,000	35,556,000	2,417,000	5,701,000	85,802,000	49·10	41·44	2·82	6·64
1860	42,994,000	48,779,000	10,732,000	9,575,000	112,082,000	38·36	43·52	9·58	8·54
1870	48,481,000	70,949,000	17,644,000	9,765,000	146,839,000	33·02	48·32	12·01	6·65
1880	52,474,000	100,080,000	24,853,000	18,526,000	195,933,000	26·78	51·08	12·68	9·46
1885	48,326,000	112,791,000	28,191,000	20,486,000	209,794,000	23·04	53·76	13·44	9·76
1890	42,235,000	123,721,000	30,774,000	22,824,000	219,554,000	19·24	56·35	14·02	10·39
1895	40,236,000	133,512,000	28,355,000	25,389,000	227,492,000	17·68	58·70	12·46	11·16

NOTE.—The figures for 1798 are not actual returns, but estimates prepared by Mr. Pitt.

The first column, "Agricultural lands," includes not only lands which are or could be used for agricultural purposes, but also ornamental grounds and parks and open spaces vested in local authorities, gardens attached to houses when exceeding one acre in extent, farm houses and farm buildings, tithes rentcharges, tithes not arising from lands, and a number of smaller items. The second column, "Houses," includes, broadly, all town buildings, whether used for residential or business purposes, together with the land used in connexion with them. The third heading, "Railways," speaks for itself; and the "Other properties," in the fourth column, comprise quarries, mines, ironworks, gas works, salt springs or works, alum works, waterworks, canals, fishings and shootings, markets, tolls, &c., &c.

## APPENDIX II.

**Memorandum by Mr. George Laurence Gomme, Statistical Officer of the London County Council on the Tables handed to him by the Chairman of the Commission during his Examination in June 1897.** [See Tables on pp. 259-61, and also MINUTES OF EVIDENCE, VOL. I., QUESTIONS 8878, 8905, 8959, 8965, 9101. FOR THE EXAMINATION OF THE WITNESS UPON THE MEMORANDUM see QUESTIONS 12,606-12,666 IN THIS VOLUME.]

## I. MEMORANDUM.

A.—*Exchequer Contributions, 1895-6, &c.*

The figures in column 1 of Lord Balfour's return, No. 1, agree with those given in the Council's return, "*Exchequer Contributions, 1893-4*,"\* p. 15, columns 19-21, and throw no further light on London's position. The percentage of London to the total, 18·4, also agrees with that on p. 3 of the Council's return, column 19, which is for 1893-4; but no later information is given as to rates raised. The proportion of local taxation borne by grants, 13·7 per cent. in London as compared with 17·67 per cent. in the whole country, therefore remains undisputed.

The figures as to education grants do not agree with those in Part II. of the Council's return, as they include grants to voluntary schools and exclude science and art grants. They show London, however, in a much worse position as regards total grants (including education) than is shown in the Council's return, for instead of 19·61 per cent. of the total (p. 8, column 45), London is shown to get only 15·9 per cent. of the total.

In respect of this table, therefore, there is nothing which leads me to consider my figures are in any way incorrect; but on the contrary I am led to believe that my conclusions are confirmed where the same basis is used, and are not invalidated in the case of the education grant, where a different basis is used.

The cost of the Royal parks, quoted as a note to Table I. at 102,466*l.*, is not the cost of London parks only, but of all the Royal parks in the kingdom. The following table gives the Government estimated cost of the parks for 1897-8, the total net cost being 102,000*l.* :—

*Royal Parks—Estimated Cost, 1897-8†.*

APP. II.

Imperial grants, proportion received by London and rest of England and Wales.

Royal parks, Cost of, in relation to Imperial grants received by London.

Of the total cost, only 59,276*l.* is in respect of parks in London, 30,554*l.* is in respect of parks in the county of Surrey, 7,621*l.* in respect of parks in the county of Middlesex, and 9,319*l.* in Scotland. It will thus be seen that the benefit which London receives from the Royal parks is not so great as was suggested to me in my previous examination. It cannot be suggested that parks outside London should be paid for by London. All that London would do to serve her own interests would be to secure parks within her own area, and therefore the inclusion of such places as Richmond Park and Kew Gardens as properly a London charge is not admissible. In any case they cannot be considered as a benefit conferred upon London by the Government as a set off against the position occupied by London in respect of grants from the Imperial Exchequer, because in apportioning the grants the Exchequer deals separately with the county of Middlesex and the county of Surrey, and these parks should be credited to the counties in which they are situated.

Another point put to me was that the capital cost of the parks would be very considerable if London had to provide them for herself, but in answer to this, I would submit that the Government have not been charged with any capital cost for the parks; one, Hyde Park, having been public ground for all time, and the others being parks attached to the palaces of the sovereign. In the case of Regent's Park there was also some sort of public right in Marylebone Fields, which were formed into part of the park. It appears therefore that the suggestion of the capital cost of these parks being entered as a benefit to London in favour of the Government cannot be substantiated.

These views are entirely independent of what has already been expressed in my evidence on the general question of Exchequer grants, and I only put them forward in order to place before the Commission the other view of the case which may be taken upon the specific question of the amount of benefit conferred by the Royal parks upon London.

In Tables II. and III. the questions of dividing the grants according to rateable value and according to population are raised. These points have already been dealt with in my evidence before the Commission.\*

#### B.—Police—Exchequer Contributions and Rates.

There is a preliminary observation which I should like to make with reference to the police grants as they appear in Lord Balfour's tables. It was put to me in examination by Lord Balfour that the cost of a service was not a safe or wise basis upon which to make grants from the Exchequer to local taxation, and I endorsed that view.† But the police grant is based upon the cost of service, and the criticism that it tells favourably to London is one which I am prepared to hear is the case, and if other grants were similarly apportioned London would be much better off.

Proportion of London's share of Exchequer contributions received by London County Council and by Metropolitan Police.

But the criticism on Lord Balfour's table goes far beyond this point. The proportion of the cost of the police borne by Exchequer contributions is no criterion of the treatment of London in regard to Exchequer contributions. The cost of the Metropolitan Police borne by Exchequer contributions (except as regards the pension grant) falls upon the metropolitan counties and not upon the Government Exchequer contributions, that is to say, the counties pay to the police, out of the Exchequer grants allotted to them, an annual sum which increases according to rateable value. Therefore the element which governs the proportion between London and the rest of the country is not the amount received by the police but the amounts received by the counties. It is a complaint of the London County Council that whereas by the Act of 1888 the contributions to London became a fixed proportion of a total sum, the amount required to be paid to the police out of that fixed proportion goes on increasing from year to year in proportion to rateable value. (See Return, *Exchequer Contributions*, 1893-4, p. iv.)

The following table shows this position. If, as is suggested in Lord Balfour's memorandum, the police receive Exchequer contributions nearly equal to the local rates raised, the fact remains that the Exchequer contributions falling to other local authorities touched by the police district are proportionately decreased:—

Metropolitan  
Police and  
other  
districts.  
Percentage of  
Exchequer  
contributions  
to rates.

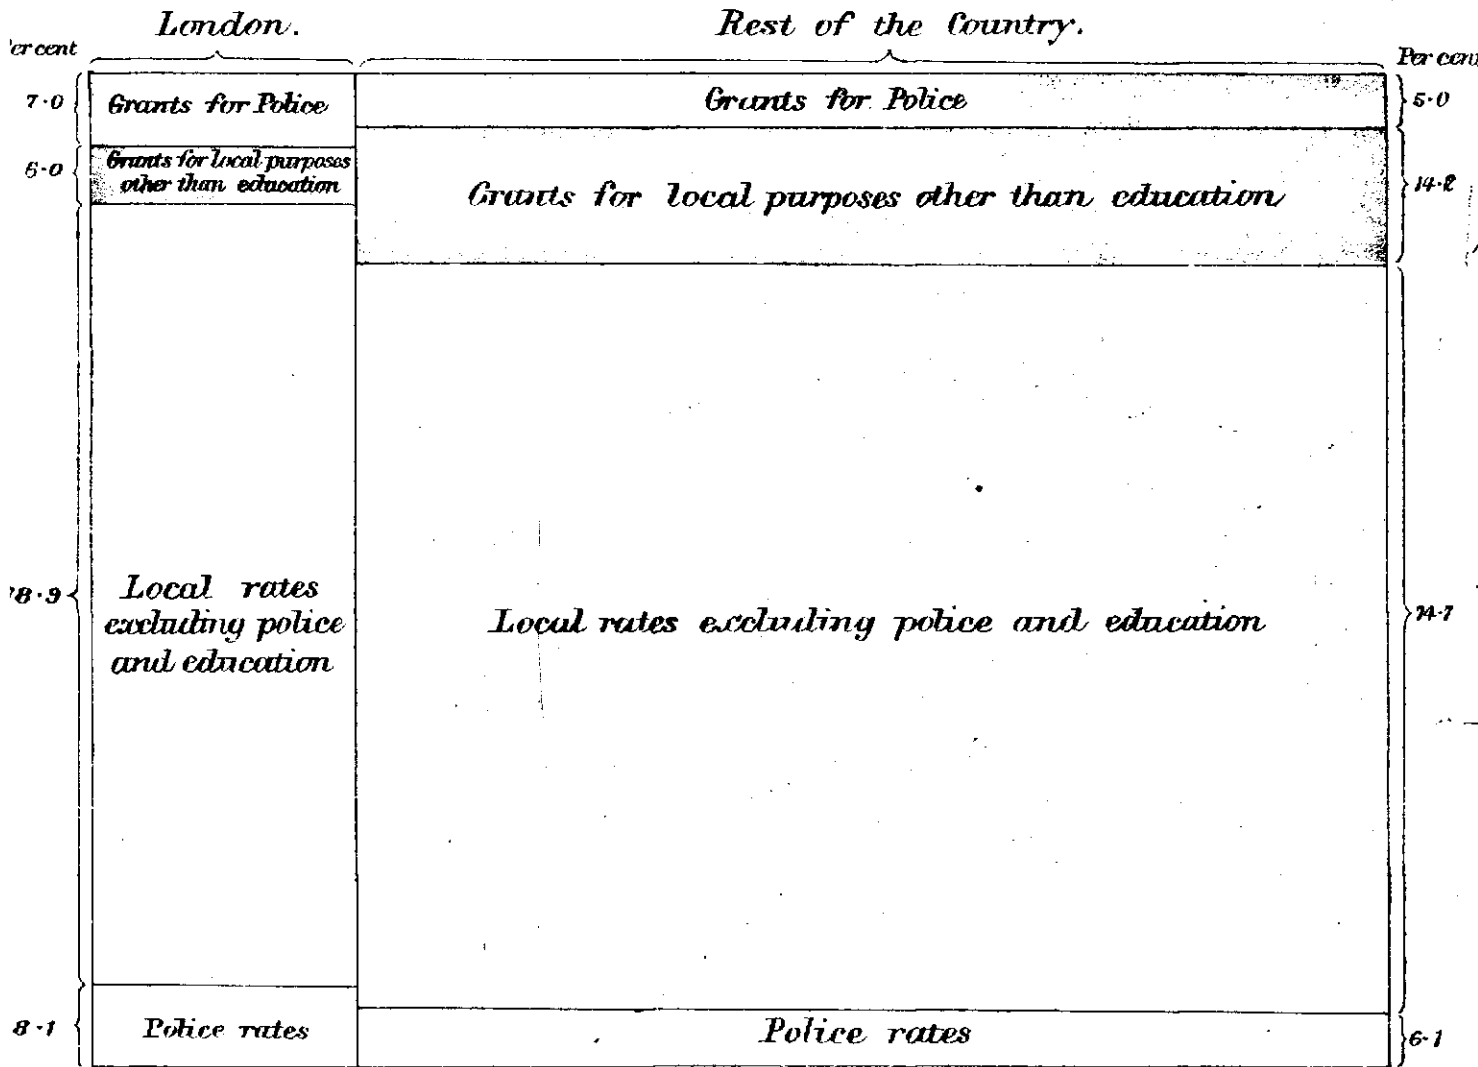

Lord Balfour's memorandum compares the percentage of Exchequer contributions to police rates. This comparison does not appear to me to be the correct one, and in my return on *Exchequer Contributions* I have adopted local taxation as the proper basis of comparison.

Apart from the basis of comparison, however, I would point out that Lord Balfour's calculation has not taken count of two important factors. These are, first, that the Metropolitan Police levy indirect taxation, in the form of public carriage and other licenses, amounting in all to 37,176*l.* in 1895-6; when this is taken into consideration the percentage to rates would be only 94·6 instead of 99. Secondly, there are the rates levied in the City of London to be considered. A note in Lord Balfour's memorandum states that these amounted in 1895-6 to 94,759*l.* These rates are levied in the administrative county of London without any corresponding grant from the Exchequer, and in estimating the position of London from the point of view of police rates and police grants, it is obvious that so important a part of London police finance cannot be omitted. When this element is taken into account the percentage of Exchequer grants to rates in London would be 85, as the equivalent to the 83 in the rest of the country. A further criticism, however, occurs here, namely, that portions of the Metropolitan Police district are not in the county of London, and the rates and grants in respect of these portions should be calculated as for the rest of the country. Making this adjustment the 83 per cent. for the rest of the country in Lord Balfour's

## ROYAL COMMISSION ON LOCAL TAXATION.

**DIAGRAM** Showing, for the year 1893-4, the proportion of "local taxation" borne by Exchequer contributions and by local rates in London and in the rest of England and Wales, distinguishing the contributions and rates for police purposes.

*Base line in proportion to rateable value.*

*County Hall,*  
*Spring Gardens S.W.*  
*July 1897.*

table becomes 85, and the 99 per cent. of London becomes 81. Therefore the true relationship of grants to rates in respect of the police is 81 per cent. in London as compared with 85 in the rest of the country, instead of 99 per cent. in London and 83 in the rest of the country.\*

There is also another consideration which should be taken account of here. It is true that the proportion of the amount of police expenditure borne by Exchequer contributions to the amount borne by rates is 81 per cent. in London as compared with 85 per cent. in the rest of England; but it must be borne in mind that the police expenditure forms only a small portion of the total local expenditure and it is therefore ineffectual to compare the police figures without at the same time comparing the figures relating to other services. In 1893-4, the last year for which the figures are available, the rates for police purposes formed only 8 per cent. of the total rates raised, and the effect of the Exchequer contributions as regards other services is therefore far more important. Turning then to the other services (excluding education), we find that the proportion of Exchequer contributions to rates was only 8 per cent. in London as compared with 19 per cent. in the rest of the country. Adding the two together we find that the percentages of all grants to rates (excluding education) was 15 per cent. in London as compared with 24 per cent. in the rest of the country.

The accompanying diagram illustrates this point. It shows (i.) the proportion of local taxation borne by rates and grants respectively in London and in the rest of the

Police and other services. Ratio of grants to rates in London and rest of England and Wales.

### C.—Education Grants.

Education Grants. Proportion received by London and rest of England and Wales.

The figures given by Lord Balfour include board and voluntary schools and, being later than any published, cannot be verified, but the proportion of London to the rest of England appears to be about the same as in previous years. In my evidence I have included the grant to voluntary schools under the heading of taxation in the hands of private bodies,\* and this distinction seems to me an important one in considering the effect of a grant based on results. London's proportion is low as regards education grants generally, because these are practically dependent upon the number of scholars in the schools, and this again is dependent upon population. The proportion of London's population to that of the whole country was in 1891 14·6 per cent., while the proportion of children in average attendance at board and voluntary elementary schools in 1894-5 was only 13·3 per cent., which practically corresponds to the proportion of education grants. The proportion of children aged between 5 and 15 in London in 1891 was 13·2 per cent., so that it would appear that in respect of education London receives its due proportion of a national tax.

Education being a service which is carried out over the whole country with a considerable amount of uniformity, this basis of apportionment may be considered to fairly meet the needs of the several counties and boroughs. But no such general system can apply to many other services which are far more extensive and costly in urban districts than in rural, and to the needs of which therefore the test of population, or, indeed, any scale involving uniform application, is not a true guide.

### Generally.

Summary of principal points in evidence.

I should like to take this opportunity of summarising the principal points to which my evidence has been directed. They are these :—

First, that the incidence of taxation in London is unduly burdensome upon some parts of London by reason, partly of different administrative action in different rating areas, and partly of special causes due to the present state of the law with regard to rating. The former is a matter for the rating authorities themselves, and could be

\* See Part II., of Appendix to Vol. I. of Minutes of Evidence, p. 230.

removed by them if it were necessary; the latter is forced upon the rating authorities, and can only be removed by fresh legislation. This then is, I presume, the point for consideration by the Commission.

Secondly, that the present system of making grants from Imperial Exchequer, while retaining for imperial purposes certain taxes levied upon local property, is injurious to London, and contains false principles of taxation. This can only be remedied by legislation, and the lines best adapted for the purpose are suggested in my evidence-in-chief, if the Commission would consider this part of the subject.

Thirdly, that certain services, police, education and poor law, contain such large elements of national character as opposed to local character that they should be met by some process of equalising the rate burden over the whole country (as suggested in my evidence-in-chief) to the benefit of those urban districts which, like London, are now unduly affected by the heavy charge caused by these services.

G. L. GOMME,

*Statistical Officer of the London County Council.*

II.—TABLES HANDED TO THE WITNESS BY THE CHAIRMAN OF THE COMMISSION DURING HIS EXAMINATION IN JUNE 1897.

## APPENDIX III.

Memorandum prepared for the Commission by Mr. William Francis Dewey, Vestry Clerk of the Parish of St. Mary, Islington. [See MINUTES OF EVIDENCE, QUESTIONS 13,001-13,241.]

*Introductory.*

I am the Vestry Clerk, and Clerk to the Vestry of the parish of St. Mary, Islington. I am also Clerk to the Assessment Committee. I was appointed Vestry Clerk in 1883, having previously from 1869 been the Chief (or Assistant Vestry) Clerk.

APP. III.

1. Islington is a single parish, not in union. It contains 3,109 statute acres, and about 45,000 rateable hereditaments, and is divided into 11 wards and 13 rate-collecting districts. The population at the census of 1895 was 336,764. It is now estimated at 342,000. The rateable value as shown by the Supplemental Valuation List which comes into force on April 6th, 1898, is 1,798,927*l*. It is governed for all except poor law, education, and county purposes by the Vestry created under the Metropolis Management Act of 1855, and now elected pursuant to the provisions of the Local Government Act of 1894. The Vestry make and collect all rates by virtue of the Islington Local Act of 1857 (20 & 21 Vict. c. 118). They are the overseers for the purpose of "compounding" under the Poor Rate Assessment and Collection Act, 1869, and they appoint the Assessment Committee of the parish pursuant to the Valuation (Metropolis) Act, 1869.

Islington, area, population, rateable value, and functions of Vestry.

I.—*System adopted in making the Valuation List.*

2. In February of each quinquennial year a skeleton list for each collecting district, containing the rateable hereditaments in the district, their extent and description, their existing gross values, and the names of the occupiers, all extracted from the rate books then in force, is prepared. About the same time the forms supplied by the Inland Revenue\* under the Valuation (Metropolis) Act are served by each of the 13 collectors at each rateable hereditament throughout his district, 44,352 such forms being thus delivered in 1895, of which 36,552 came back in the shape of returns on first issue. To meet the cases of houses empty at first service, or changes of tenancy, a second issue is served in March or April on all houses from which no returns have been received, 7,800 being so served in 1895, from which further returns to the extent of 3,750 were received. The contents of these returns as regards the names of the occupier and owner, rent paid, conditions of tenancy, &c., are entered in the skeleton list as they are received. The skeleton or draft list is then dealt with by a Valuation Committee appointed by the Vestry, who, with the assistance and advice of the collectors,

Islington, preparation of Valuation List.

\* See pp. 249-50.

## APP. III.

settle the gross values. In doing this they have regard not only to the rent paid, the terms of the lease, and other conditions of tenancy, but, and this applies especially where houses are occupied by the owners, to the rents paid or values established in the case of adjoining properties of a similar character, particularly as regards blocks or terraces of houses. In the case of public-houses they take the rent, plus a varying percentage on half the premium, plus 10 per cent. for repairs, as representing the gross value. In the case of railways, tramways, gas and water undertakings, &c., the rent which a hypothetical tenant would give is calculated upon the most recent accounts, the necessary allowances being made not only for working expenses but for what are termed statutory allowances, occupiers' profit, repairs, and depreciation on a liberal scale. Certain exceptional properties, such as hospitals, Board schools, workhouses, baths and washhouses, and other parochial buildings where there is practically no beneficial occupation are, as a rule, assessed upon a rateable value calculated at 3 per cent. upon the cost of the land and buildings. In many cases the Committee view the properties, especially where alterations have recently taken or are taking place, or where doubt exists. The determination of the class and the rate of deduction per cent., and the consequent calculation of the rateable value is then carried out by experienced clerks in accordance with Schedule 3 of the Valuation Act, 1869 (the Committee reserving to themselves the settling of the rate of deduction per cent. in manufactories and in the case of special properties) and these having been entered in the skeleton list, a fair copy in duplicate is made. The Committee are guided in their dealing with various classes of property by the regulations agreed to by a conference convened by the London County Council in 1893.\* These regulations incorporate a scale showing the rates of deduction per cent., and the rateable value calculated in accordance with Schedule 3 of the Valuation (Metropolis) Act, which had been in use in Islington since the passing of that Act. Where increases upon the gross or rateable values existing in the current rate books appear in the list, notices of such increases are served upon the premises, 9,246 such notices being served in 1895. A copy of the list is then deposited with the surveyor of taxes, and a notice is published that the other copy may be inspected at the Vestry Hall within certain limits as to time prescribed by the Valuation Act.

## II.—Principles adopted by the Assessment Committee in dealing with the Valuation Lists.

3. The list having been deposited is (so to speak) out of the hands of the vestry as overseers, and is subsequently dealt with by the Assessment Committee. This Assessment Committee is appointed annually by the Vestry pursuant to the Valuation (Metropolis) Act of 1869. Having regard to the number of objections to the list received within the statutory limit, the Assessment Committee fix and publish their dates for hearing such objections. The objections to the Quinquennial Valuation List of 1895 received up to July 3rd of that year, the last day appointed for receiving them, numbered 2,935; 604 were received subsequently, but were, notwithstanding, dealt with by the Committee. With the exceptions to be hereafter mentioned, and in a few other rare cases, the Committee of their own motion make no alteration in the list. Where, however, an objection is heard to one of a block of similar properties, the Committee, if satisfied that it should be reduced, do not hesitate to reduce in a like manner, if there be no objection, the values of the similar properties adjoining, even though they be empty. Nor do they hesitate to raise assessments where from evidence tendered upon an objection with a view to reduction, it appears that the assessment is too low. In dealing with objections the Assessment Committee follow much the same principles with regard to different kinds of property as have been already referred to as governing the Valuation Committee acting as overseers. The regulations already mentioned as having been agreed to at a conference convened by the London County Council are adhered to so far as circumstances permit. I would here refer to a class of property omitted in speaking of the work of the Valuation Committee. I mean weekly property, whether let in separate rooms or otherwise, and where a non-resident landlord pays all rates. In Islington the rule is to double the weekly shillings in rent and consider the result as the gross value in pounds per annum. Thus 10s. per week becomes a gross value of 20l. This it will be seen is the same result as is arrived at by following the calculations in Tables V. or VI. of the regulations referred to. The Committee frequently view property before deciding upon an objection.

Notices to occupiers of increases in valuation.

Islington, principles observed by Assessment Committee when hearing objections. Resolutions of London County Council Conference are observed.

III.—*Action of Surveyors of Taxes.*

APP. III.

4. By arrangement the surveyors of taxes sit with the Assessment Committee on the hearing of objections, and express their views but do not vote. Objections to the list by the surveyors of taxes and the formal proceedings consequent thereon are rendered unnecessary by an understanding that all alterations of assessment desired by the surveyors shall be the subject of conference, when, if the Committee are satisfied there are *prima facie* grounds for them, they adopt them as their own, and serve notices of them upon the occupiers accordingly. The Committee, as the result of suggestions by the surveyors of taxes, increased the gross and rateable values in the list as deposited by the overseers by 2,561*l.* gross and 2,138*l.* rateable value.

Islington, Surveyor of Taxes sits with Assessment Committee when hearing objections.

IV.—*Number of Objections heard by the Assessment Committee : Number of Appeals heard against their decisions, &c.*

5. The Committee sat on 33 days in 1895 to hear objections, the sittings usually commencing at 10.30 a.m. and frequently not terminating until a late hour in the evening ; 3,175 objections were dealt with at these hearings, in 1,353 cases the assessments being reduced, in 309 increased, and in the remainder the overseers' values were confirmed. The result of the Committee's alterations was to reduce the gross value in the list from 2,144,321*l.* to 2,133,790*l.*, and the rateable value from 1,780,347*l.* to 1,771,420*l.* One appeal to petty sessions and 11 to quarter sessions were lodged against the Committee's decisions. These were principally on behalf of public companies, public houses, and large assessments. The result of these appeals, eight of which were settled out of Court, was further to reduce the totals of the valuation list by 733*l.* gross and 682*l.* rateable values.

Islington, number of objections and appeals, and total results.

V.—*Steps taken with a view to securing uniformity of Assessment throughout the Metropolis.*

6. I have already referred to certain regulations adopted at a conference convened by the London County Council in 1893-94. This conference was the outcome of a conference of Assessment Committees of the Metropolis convened by the same authority in 1890. I took part as representing the Assessment Committee of Islington at both these conferences, and the want of uniformity in the administration of the Valuation (Metropolis) Act, 1869, by both overseers and Assessment Committees was the theme of discussion at both. It was apparent not only that different practices prevailed as regards fixing the gross values, especially where properties were let on lease or occupied by the owners, or, on the other hand, let at weekly rents, including rates and taxes, but that even in arriving at the rateable values certain parishes paid little or no attention to the limits of deduction laid down by Schedule 3 to the Valuation (Metropolis) Act. It also transpired that there was great difference in practice as regards the insertion of empties, parochial buildings, and charitable institutions in the list, and while certain parishes inserted the two latter at nominal values, others did not insert them at all. Among the results of these conferences was the agreement as to the regulations already referred to, including the scale for rates of deduction per cent., and rateable values prepared in accordance with Schedule III. of the Valuation (Metropolis) Act. A further result was the introduction of a Bill\* by the London County Council in 1893 and 1894 for "better securing uniformity in the valuation and assessment of rateable property in the administrative county of London ; to establish a tribunal to deal with assessment appeals ; and for other purposes." One of the defects of the Act of 1869 is that it makes very slight provision for the supervising or controlling of local authorities in assessing themselves to common charges. The opportunities afforded for inspection of and objection to the lists of other parishes by it are utterly useless, and I do not think that, with one exception, they have ever been put into force. A further difficulty is the practice of the Court of Quarter Sessions as regards appeals against totals. The Bill in question sought to give some control in the matter to the London County Council by enabling them to make byelaws binding on overseers and Assessment Committees, and to be represented at meetings of overseers and Assessment Committees, by the provision of a triplicate Valuation List for consideration by a Valuation Committee of the Council, and also made provision for the creation of what may be termed Courts of Summary Valuation. The Bill, however, though revived in 1896,†

APP. III.

—  
London  
County  
Council,  
enter ob-  
jections to  
certain  
Valuation  
Lists.

ultimately dropped through. I am not aware that, beyond the regulations before-mentioned, any steps are taken to ensure uniformity in the preparation of the Valuation Lists, except perhaps that in certain cases the London County Council, where they have a *locus standi* as ratepayers, enter objections to lists where apparent irregularities have occurred.

VI.—*As to changes in the Method of preparing the Valuation List and in the Authority who should discharge that Duty, &c.*

Valuation in  
metropolis  
should be  
administered  
by an inde-  
pendent  
body for  
the whole  
county. In-  
justice  
caused by  
present  
system.

7. After considerable experience of the disadvantages attendant on the present administration of the Valuation Act, and having regard to the fact that the proportion of county and other central or consolidated charges out of every 100*l.* raised by way of local taxation has increased since 1869 in the County of London from 33 per cent. to 67 per cent. (or in some parishes more), I have come to the conclusion that the Valuation Act should be administered by an independent body or official for the whole county, or that each body of overseers and each Assessment Committee, in dealing with its own Valuation List, should have upon it representatives from other bodies of overseers and Assessment Committees in the county; but, failing either of these suggestions being adopted, I certainly think some control in the matter should be given to the London County Council, or to some central authority. I pointed out in a report upon the above Bill, which I submitted to my Assessment Committee in 1893, the opportunities for under-assessment afforded by the present system, and the difficulty of detecting it or of dealing with it when detected, in words which I will venture to quote. Referring to the bodies represented at the Conference I said:—

“They differed, even at the Conference, on such points as whether they may or may not exceed the maximum deductions from gross to arrive at rateable; whether the rent paid under lease is the equivalent of the gross or of the rateable value; and as to whether ‘empties’ should or should not be included in the Valuation List; and as to whether town halls, baths, and washhouses, and other parochial buildings are required to be rated; and it need hardly be pointed out that if this was so at a conference, how much more likely they would be, when preparing the Valuation Lists or hearing appeals by their own ratepayers, to construe these and other points in their own favour. The temptation to do this is, it will be remembered, much greater now than when the Act was passed. The common charges then only amounted to about one-third of the total amount collected in the shape of rates, while in the current year they amount to about three-fifths. The reduction of the rateable value by even a pound upon each hereditament is a very simple matter, and one not likely to attract attention outside. It tends to satisfy the ratepayer who is appealing, but, if carried out systematically, it results in the reduction of the basis of contribution in a parish of the size of Islington by 40,000*l.* It need hardly be added that, under the present system, it is almost as difficult for the parishes which are being injured by these and similar practices to detect them, especially during a quinquennial year, as it is easy to put them into practice; and that it is even more difficult to prove a series of minute under-valuations in the present Court of Quarter Sessions, the maxim *de minimis non curat lex* having full weight there as elsewhere.”

VII.—*Valuation of Railways, Water Mains, &c.*

Valuation of  
railways, gas  
and water-  
works, &c.  
A central  
authority  
specially  
desirable to  
deal with  
such  
properties.

8. A point which certainly requires immediate attention is the necessity for one common or central valuation for the whole county of such rateable hereditaments as railways, tramways, gas and water works, electric lighting undertakings, telephones, &c., and the apportionment by the same authority of the value of the whole among the several parishes entitled to share it. The absurdity of the present mode of procedure could not be better illustrated than by reference to the appeals of the Gas Light and Coke Company against a number of Metropolitan Valuation Lists in 1891–2, as to which I will quote from some remarks made by me at the Surveyors’ Institute in December 1893, in dealing with a paper read by Mr. Castle, Q.C., upon the Bill of the London County Council previously referred to. I said:—

“Another point of equal importance to which I had expected the paper would have referred more fully, is the necessity for what I would venture to call summary valuation courts in connexion with the quinquennial valuation. That there exists at present a very able court, presided over by a judge of very great ability, no one doubts; but such is its procedure that very costly litigation results in no

“ enunciation of principle which would be useful in guiding overseers or Assessment Committees. I might illustrate this by referring to the recent appeals of the Gas Light and Coke Company against a number of Valuation Lists. The appeals lasted 23 days, extending over a period of 18 months; 15 or 20 counsel were engaged, and probably a larger number of expert witnesses; and the costs of all parties have been estimated to amount to about 30,000*l.* The expert witnesses on either side gave very widely-differing estimates of value, and in the result it might almost be imagined that the court in fixing the value of the Company's mains and works took the figure halfway between the extreme on the one side and the extreme on the other. In the end, nothing but the most barren results have been the outcome of this enormous expenditure of time, trouble, and money.”

APP. III.

### VIII.—*Effect upon Islington of Under-assessment in other Parishes in the Metropolis.*

9. I have reason to believe that Islington has suffered greatly in the past from the failure on the part of other parishes to properly administer the Valuation Act. In my remarks in 1893 at the Surveyors' Institution before referred to, I called attention to the fact that the London County Council in 1891 had entered appeals against under assessments in certain Metropolitan Valuation Lists to the extent of 737,379*l.* These appeals, I may mention, were never heard upon their merits, the County Council being restrained by the High Court from proceeding with them, on the ground that the appeals were not in reality against “ totals ” but against individual assessments. Before, however, the restraining order was issued the Council had settled certain appeals out of Court, and these resulted in an increase in the rateable value of eight parishes to the extent of 36,612*l.* I pointed out at the time that an under-assessment of nearly three-quarters of a million was equivalent to an over-payment on the part of Islington to county and central charges of 5,000*l.* per annum, or 25,000*l.* during the quinquennial period. An under-assessment of 100,000*l.* at the present time would represent an over-payment of 1,090*l.* per annum, equivalent to a rate of one-seventh of a penny in the pound on the part of the parish of Islington.

Under-assessment in metropolis.

Islington would lose 1,090*l.* per annum if other parishes were under-assessed by 100,000*l.*

### IX.—*Method of levying and collecting Rates.*

10. In Islington the rates are made and collected by the vestry under the powers of the Islington Local Acts of 1824 and 1857 (5 Geo. 4. c. 125 and 20 & 21 Vict. c. 118). By the former the old open vestry were authorised to make certain rates once a year, or oftener if necessary, but the collection was in the hands of the trustees of the parish. The Metropolis Management Act of 1855 transferred the powers of the open vestry as to the making of the rates to the vestry constituted by that Act, and by the later parish Act of 1857 the powers of appointing collectors and for the recovery of the rates previously vested in trustees were also transferred to the vestry as constituted under the Metropolis Management Act. One of the advantages of the latter Act is that it recognises one justice of the peace as sufficient for hearing and adjudicating upon warrants for the enforcement of the rate. In practice the vestry now make the following rates half-yearly, viz. :—From Lady Day to Michaelmas and from Michaelmas to Lady Day—“ Poor ” (including guardians, county council, police, and Metropolitan Asylums Board charges), “ General ” (including vestry administration, highways, and school board charges), “ Lighting ” and “ Sewers ”—but exercising the powers given by sec. 15 of the Poor Rate Assessment and Collection Act of 1869, they make each half-year's rates payable in two quarterly instalments. The rates for the year now ending amount to 5*s.* 8*d.* in the £, of which 2*s.* 9½*d.* was levied in February 1897 for the half-year to Michaelmas 1897, and made payable by two quarterly instalments due on April 1st and July 1st, of 1*s.* 4½*d.* and 1*s.* 5*d.* respectively, and 2*s.* 10½*d.* in August 1897, payable in like manner on October 1st and January 1st by instalments of 1*s.* 5*d.* and 1*s.* 5½*d.* respectively.

Islington, rates are made and collected by the Vestry, and are made half-yearly and collected quarterly.

11. As before mentioned, the parish is divided into 13 collecting districts, each averaging about 3,200 rateable hereditaments, including “ empties ” and “ compounds.” The collector makes two calls (where the rate is not paid on the first) each quarter. After delivering his second call towards the end of the second month of each quarter he issues summonses, which are heard during the first and second weeks of the third month of the quarter. One shilling is charged under the local Acts for each summons, but, notwithstanding this, a large number of summonses (over 6,000) are issued per quarter. The greater part of the persons summoned pay upon the issue of the summons, the remainder, with the exception of the small number excused on account

Islington, number of rate summonses issued.

## APP. JII.

Quarter's rates practically collected within the quarter.

Percentage of losses.

of poverty, have a week or two's time granted, but all are required to pay before the end of the quarter. So that, as a matter of fact, the whole of each quarter's rates are collected (with very few arrears outstanding) within the quarter. Owing to this prompt collection and enforcement of the rates the avoidable losses are extremely small and the hardships to individuals scarcely appreciable. This may be illustrated by the following extract from the vestry's annual report for the year ended Lady Day 1897:—

"The total debit, or amount to be collected, during the year was 494,628*l.* 1*s.* 7*d.* Of this amount 480,265*l.* 19*s.* 3*d.* was actually collected, and 177*l.* 9*s.* 3*d.* was carried forward as recoverable arrears. The remainder (14,184*l.* 13*s.* 1*d.*) is accounted for principally by empty property, and, to some extent, by allowances for reduced assessments, commission to owners, rates excused, and 'runs.' These last two items, which are practically the bad debts of the vestry, amounted to 747*l.* 6*s.* 2*d.* only, or less than  $\frac{1}{2}$ *d.* in the  $\pounds$  of the total debit.

"During the past year the average number of empties per quarter has been 876, as against 1,130 for last year, and 1,342 for the year 1894-5.

"The following table gives details in regard to empties and losses generally:—

Year ending Lady Day.	Amount to be collected.	Amount collected to audit.	Total amount uncollected (including arrears).	Percentage of amount uncollected.	"Empties," Reduced Assessments, Commission, &c.	Percentage of "Empties," &c.	"Runs" and excused.	Percentage of "Runs" and excused.	Recoverable arrears carried forward.
1897	£ 494,628	£ 480,266	£ 14,362	2·90	£ 12,726	2·57	£ 1,459	·295	£ 177
1896	485,251	466,586	18,665	3·84	16,747	3·45	1,678	·346	240

"During the year 25,149 summonses were issued for the recovery of rates, an average of 6,287 per quarter. This is an increase of 440 upon the figures of last year, which were 222 less than those for the year 1894-5. The average number of persons who appeared each quarter before the justices to ask for time was 1,223 only, the remainder treating the summons simply as the final demand for payment; 3,154 warrants of distress were issued, but in 200 cases only was it found necessary to levy, the rates being mostly paid to the broker upon application. In 20 cases goods have been removed and sold. Committal warrants were obtained in 81 cases, and of these 39 paid prior to arrest, 27 absconded or died, 12 were conveyed to Holloway Prison, and three warrants were outstanding at the end of the year."

12. It will be seen from these figures that the avoidable losses, that is excluding "empties," reduced assessments, and commission, amount to less than 3 per cent., or under 6*s.* in every 100*l.* I doubt whether so low a record is to be obtained in any other parish of the kingdom.

13. The vestry, as overseers, enter into agreements with owners under section 3 of the Poor Rate Assessment and Collection Act, 1869. Before doing so, however, they ascertain from the rate collectors what are the circumstances attending the collection, and it by no means follows that they enter into agreements as regards all the property in the parish coming within the limits of the section. In very few cases do they allow the maximum (25 per cent.) permitted by the section—15 per cent. is the usual rate of deduction allowed. The number of agreements in existence at Lady Day 1897 was 230, covering 3,049 rateable hereditaments of a rateable value of 35,712*l.*

14. It will be gathered from what I have said that I do not think that any change is necessary as to the authority by whom the rates are collected in Islington. I am of opinion, however, that the body entrusted with the making and collection of rates should in all cases be a body directly elected by and responsible to the ratepayers, and not, as in some parishes, a limited and comparatively irresponsible number of overseers or trustees.

### X. Properties exempted from payment of Rates.

15. The only properties exempted by Statute are, as far as I know, churches and chapels, ambassadors' houses, and drill halls, and, by a recent Statute,\* voluntary schools and the offices attached. The vestry have the power to excuse payment of

Islington, Vestry allow compounding in certain cases, the usual deduction being 15 per cent.

Islington, collection of rates. No change necessary.

Exemption of churches, drill hall, schools, and partially the Regent's

\* 60 Vict. c. 5.

rates by Sunday and ragged schools, but there are no hereditaments occupied solely for these purposes in Islington. The Regent's Canal, which passes through Islington, is partially exempt from rates, in that it is only liable to be assessed under a special Act, upon its value, as agricultural land. Crown and Government property, although not rateable, contributes to the rates, the contribution being equivalent to the rates for the time being upon an agreed rateable value. In my opinion all exemptions from liability to pay rates are unwise, and should be abolished.

APP. III.  
Canal. All exemptions should be abolished.

#### XI. *Liability of empty property to be Rated.*

16. I am unable to make up my mind that the advantages to be gained from rating empty property in Islington at least, would at the present time outweigh the disadvantages. The percentage of "empties" in 1897 was slightly over 2 per cent. on the rateable value, and is therefore not a heavy item. On the other hand, the leaseholds of many of these "empties" are no doubt owned by persons of comparatively moderate means, whom it would be a hardship to charge with rates at a time when, from their property being unlet, they would be least in a position to meet them. Nor do I understand that any great advantage is alleged to be derived by the owner of an empty house from the expenditure of the rates. *Qua* owner of an empty house he neither benefits by poor relief, board schools, highways, sewers, sanitation, nor to any extent by lighting or police. It may no doubt be said that there is a beneficial occupation of the land upon which an empty house stands so long as a ground rent is paid, and so far it might not be unjust that the annual value of the site should be assessed and rated, but if this were done I think the receiver and not the payer of the ground rent should be made liable to pay the rates to be levied.

Empty property. Hardship to owner, if rated.

Questions of advantages derived by such property from expenditure of rates.

#### XII. *Whether the effect of the Equalisation of Rates Act is beneficial to the localities as a whole.*

17. Upon this point I hesitate to express an opinion. That the parish of Islington has benefited, is, I suppose, not to be doubted. I will however submit some figures. Islington has received since the date of the passing of the Equalisation Act larger net grants from the fund owing to its population than any other parish in the metropolis, with the exception of Camberwell. In 1895-6 the net grant amounted to over 21,739*l.*, and in 1896-7 to over 23,196*l.* As a rate of 1*d.* in the £ in Islington is estimated to raise about 7,320*l.*, it follows that these grants were each equivalent to a rate of about 3*d.* in the £. The rates, however, in Islington have not decreased in proportion. In 1894-5 they amounted to 5*s.* 8½*d.*, in 1895-6 to 5*s.* 7½*d.*, and in 1896-7 to 5*s.* 6½*d.* in the £, while during the current year, with a net grant from the fund of 23,505*l.*, they have gone up to 5*s.* 8*d.* in the £. Islington has never been a highly rated parish from the rate in the £ point of view. There are some 76 or 77 parishes, exclusive of the City, in the county of London, the rates of which varied in 1895-6 from 4*s.* 9*d.* (St. James, Westminster) to 8*s.* 5*d.* (Rotherhithe) in the £. Islington was the lowest but five of these, with 5*s.* 7½*d.* in the £. This was no doubt to some extent due to the twofold action of the Equalisation Fund during that year; but for many years previously Islington had always been among the 10 or 12 lowest rated parishes in the metropolis.

Equalisation of Rates Act. Rates in Islington have not decreased in proportion to benefit received from Equalisation Fund.

#### XIII. *Suggested improvements in the present system of levying and collecting Rates.*

18.—(1.) I attach the utmost importance to a quarterly collection of the rates, and to the quarter's rates being collected, and if necessary enforced, within the quarter. Not only are the losses from "runs," "excuses," &c., considerably minimised by this mode of collection, but less hardship is felt by persons of moderate or small incomes in meeting the demands of the collector, and, if the system adopted in Islington of compelling each collector to close his quarterly account before the collecting books for the next quarter are handed to him is followed, a great temptation to irregularity is avoided. I may instance the fact that in 1878, the year immediately before the adoption of this system in Islington the avoidable losses on a possible debit of 238,000*l.* were 9 (or 18*s.*) per cent., while in 1897 with a possible debit of 495,000*l.*, the avoidable losses are, as previously stated, under 3 (or 6*s.*) per cent.

Quarterly collection of rates advisable.

## APP. III.

Uniformity in demand notes and rate receipts. Purposes of rates should be made clearer.

(2.) I would suggest there should be more uniformity in the county of London, at all events, in the forms of rate demands and rate receipts; and, to make the demands more explicit and intelligible to those to whom they are addressed, and thus save unnecessary trouble to the officials who have to explain them, I am of opinion that names more definitely conveying the purposes of the rates should be substituted for those now in use, some of which, such as the "poor" and "general," having at present little signification. I submit the following:—

- (a.) Poor rate to meet the precept of the guardians.
- (b.) Asylums rate to meet the precept of the Metropolitan Asylums Board.
- (c.) County rate to meet the precept of the County Council.
- (d.) Education rate to meet the precept of the School Board.
- (e.) Police rate to meet the precept of the Commissioner of Police.
- (f.) District rate to defray the expenses of the Local Authority.

There is no necessity, so far as I am aware, for retaining the present names on the ground of "incidence," as the incidence of all rates in the metropolis is practically the same.

All precepts should be sent to body acting as overseers.

(3.) I would further suggest that all precepts for payment out of the rates should be addressed and sent direct to the body acting as overseers (the precepts of the London County Council are required by the Local Government Act of 1888 to be sent to the guardians), so that that body may be enabled to make the best financial arrangements possible for the preparation of their estimates and the making and levying of the rates at the earliest possible date.

Tenement houses, whether occupiers or landlords liable for payment of rates. The law on this point should be made clearer.

(4.) Finally, I would call attention to a difficulty in connexion with the collection and recovery of rates on a certain class of property, which, although it has not yet to any extent affected Islington, appears to be spreading in certain parts of the metropolis. I allude to the rates upon what are commonly known as "let-out" or "tenement" houses—houses which are occupied by two or more families, although there is no structural separation or special accommodation for such a purpose, and which are so let out by non-resident landlords. Where such houses are assessed at under 20*l.*, there need be no difficulty, as the non-resident landlords might be rated under and pursuant to the Poor Rate Assessment and Collection Act, 1869. The large proportion of such houses, however, not only in Islington, but in other parts of London are assessed at over 20*l.*, and consequently do not come within the before-mentioned Act. No one of the occupiers can be rated for the whole hereditament, because no one of them occupies it, neither owing to the short and continually changing character of their occupation, does it seem desirable, even if possible, that the one hereditament should be broken up into several separate ratings or assessments. I am aware that numerous legal decisions have been given during the past 10 or 12 years, which appear to point to its being the duty of the overseers so to rate the separate occupations; but if these decisions are carefully examined, it will, I think, be seen that the question before the courts was, in almost every case one of registration rather than of rating. It has always appeared to me that the apparent difficulty is met by the proviso contained in section 7 of the Representation of the People Act, 1867. Section 7, it will be remembered, repealed the compounding provisions of Sturges Bourne's, and other similar Acts, but contained the following exception:—"Where the dwelling-house or tenement shall be wholly let out in apartments or lodgings not separately rated, the owner of such dwelling-house or tenement shall be rated in respect thereof to the Poor Rate." This has never, to my knowledge been repealed, and having regard to the recognition by section 9 (2) of the Representation of the People Act, 1894, of "dwelling-houses," in respect of which the owner or some person other than the occupier, is rated or liable to be rated, I have never felt any hesitation in advising my vestry that they have the power in the case of such houses to rate the non-resident landlords, and this has always been, and is at the present time, done in Islington. Having regard, however, to the difficulties met with in other parishes, and to the opinions of eminent legal authorities upon the point, it seems very desirable that, if necessary, it should be made clear by legislation.

## APPENDIX IV.

Memorandum prepared for the Commission by Mr. Wm. Chambers Leete, Vestry Clerk of Kensington. [See MINUTES OF EVIDENCE, QUESTIONS 13,242-13,434.]

*Introductory.*

APP. IV.

I have had nearly 20 years' official experience of work performed by Metropolitan Local Authorities.

From 1883 to 1889 I held the position of Chief Clerk or Assistant Vestry Clerk under the Vestry of Islington, an authority exercising jurisdiction over one of the largest parishes in the Metropolis, and, in fact, in the United Kingdom.

Since 1889 I have occupied the position which I at present hold as Vestry Clerk of Kensington. Both the Vestry of Kensington and the Vestry of Islington act as overseers for the making and collecting of the Poor Rate in their respective parishes.

It may be expedient that I should preface my evidence by the statement that I am speaking in my individual capacity, and not as giving expression to the views of the Vestry of Kensington.

I have been furnished with a series of points\* upon which the Commission desire to have information, and it occurs to me that it will be convenient that I should, as far as practicable, deal with these points *seriatim*.

I.—*The System adopted in making the Valuation List.*

1. The parish of Kensington being a union within itself, the Vestry appoint the Assessment Committee, and I, as Vestry Clerk, act as Clerk to that Committee.

Vestry of Kensington are Overseers for valuation purposes and appoint Assessment Committee.

2. The Vestry of Kensington being, as before stated, the overseers for valuation and rating purposes, the actual duty of making the Valuation List is deputed to a committee consisting of 32 members of the Vestry, with the six chairmen of the other Standing Committees, and the churchwardens and overseers appointed by the justices (if vestrymen) as *ex officio* members.

3. The parish is divided into nine districts for rate-collecting purposes, and the Valuation List is made up in nine parts corresponding with those districts. It will be readily understood that the labour involved in the preparation of the Valuation List, containing some 24,000 rateable hereditaments, is very onerous, and looking to the time in which that work has to be completed, a considerable tax is imposed upon the members of the Valuation and Rating Committee at this particular period. The course which has been followed by the Vestry's Valuation and Rating Committee at the last two quinquennial periods has been to divide themselves into three sub-committees, each sub-committee taking three collecting districts. At the meetings of these sub-committees the rate collector of the district was required to attend to furnish such information as was in his possession as regards the properties dealt with. Although by statute no right is given to the surveyor of taxes to be represented at meetings of the overseers, it has been found in practice convenient to admit the attendance of a representative of the surveyor of taxes to the meetings of the Valuation and Rating Committee when making a Valuation List, and to consider any representations made by him relative to the valuation placed upon any particular hereditament. This course has undoubtedly had the effect of considerably reducing the number of objections which might otherwise have been lodged with the Assessment Committee in respect of the Valuation List. The assistance of an expert valuer is engaged to advise the Committee in valuing the undertakings of the several public companies and other special properties in the parish.

Vestry appoints a Committee for preparation of Valuation List. Procedure of Committee.

Surveyor of Taxes attends meetings of Committee.

Special properties valued by an expert valuer.

4. Upon the Valuation List being completed, the same is submitted to and approved by the Vestry prior to its deposit and transmission to the Assessment Committee.

5. The work connected with the preparation of the Supplemental and Provisional Valuation Lists made during the quinquennial period is also carried out by the same Committee, subject to the Lists prepared by them being approved by the Vestry.

Provisional and Supplemental Lists.

## APP. IV.

II.—*The Principles adopted by the Assessment Committee in dealing with the Valuation List and determining the Gross Estimated Rental and Rateable Value of different Classes of Property.*

6. In order that the principles to be followed by the overseers in making, and by the Assessment Committee in revising, the Valuation List may be consistent the one with the other, it has been found expedient at the last two quinquennial periods for the Vestry's Valuation and Rating Committee to meet the Assessment Committee in conference, and to consider with them as to the procedure to be adopted by the respective committees, and to lay down general rules for their guidance. This course has undoubtedly tended to diminish the labours of the Assessment Committee in revising the list.

7. At the last of such conferences, namely, that held in 1895, the committees had the benefit of having before them the resolutions which had been passed at the conference between the Local Government and Taxation Committee of the London County Council and the Assessment Authorities of the Metropolis in 1893-94,\* to which, no doubt, the attention of the Commissioners has already been called, and came to the conclusion that such resolutions might safely be taken for the guidance of the two bodies in connexion with the quinquennial work.

8. In brief, in Kensington, the following principles are adopted :—

- (a.) That in the case of quarterly or annual tenants, or where the property is held under three years' agreements with no liability upon the tenant for repairs, the rent is taken as the gross value.
- (b.) That where property is held on agreement or lease, which throws the responsibility for repairs upon the occupier, 10 per cent. is added to the rent to arrive at the gross value.
- (c.) That in the case of freehold properties where no assistance is derived from the letting value of similar property, 4 per cent. on the value of the land, together with 5 or 6 per cent. on the value of the building, is taken as the gross value.
- (d.) That as regards the assessing of public-houses, no properties present greater difficulties to the overseers and Assessment Committee in arriving at the proper gross and rateable values to be placed thereon ; as a general practice the course laid down in the resolutions of the conference referred to is adopted.
- (e.) That as regards the deduction to be made from the gross value to arrive at the rateable value, in Kensington, as, I believe, in every other metropolitan parish, the *maximum* deduction as laid down in the Third Schedule of the Valuation (Metropolis) Act, 1869, is allowed in each case.

III.—*The Action taken by the Surveyor of Taxes under the Valuation (Metropolis) Act, and its result on the Valuations.*

9. As already mentioned, the practice is to allow the attendance of the surveyor of taxes at the meetings of the Valuation and Rating Committee at the initial stage of the preparation of the quinquennial valuation list, a course which has led to the objections raised on behalf of the Crown being reduced to a minimum. At the last quinquennial valuation 32 objections were lodged by the surveyor of taxes upon the deposit of the list, no less than 30 referring to the valuations placed upon public-house property. As a result of the hearing by the Committee of these objections, in eight cases the valuations placed on the properties were increased to the amounts suggested by the surveyor. In nine other cases the valuations placed upon the hereditaments by the overseers were somewhat increased, but not to the amounts desired by the surveyor of taxes, and in 12 cases the overseers' valuations were confirmed or the objections withdrawn. In three cases the Committee decided, after considering the evidence put forward by the surveyor of taxes, and by the occupiers of the premises, to dismiss the objection, and to reduce the valuation slightly below the overseers' figures.

IV.—*Objections before Assessment Committee and Appeals to Sessions.*

10. The number of objections received from ratepayers at the Quinquennial Valuation of the parish in 1895 was 3,250. The first meeting of the Committee held to consider such objections was on the 27th June, and between that date and the 30th September

\* London County Council Return, Assessment Conference, 1893-94, Resolutions, &c. (No. 168).—P. S. King and Son, Great Smith Street, Westminster, S.W.

Valuation and Rating Committee meet Assessment Committee in conference, the resolutions of the Assessment Conference convened by the London County Council being followed.

Principles adopted in arriving at gross value of various classes of property.

Maximum deductions allowed in arriving at rateable value.

Objections by Surveyor of Taxes. Assessment Committee's decisions.

Number of objections and appeals. Results of appeals.

no less than 46 meetings were held by the Committee. Two notices of appeal were given to the special sessions, in one of which cases the Committee allowed a slight reduction and the appeal was withdrawn; in the other case the appeal was not proceeded with. Six notices of appeal to quarter sessions were given, three relating to undertakings of the Water Companies having areas of supply in the parish, and one to the cemetery at Kensal Green. Only two related to ordinary hereditaments. I hand in a statement showing the result of these appeals,\* which will enable the Commissioners to see that of those appeals settled by consent no serious departure was made from the valuations placed upon them by the parish authorities.

V.—*Suggestions for securing Uniformity of Valuation throughout the Metropolis.*

11. With regard to the preparation of the Valuation Lists, and the authorities discharging that duty, I have no changes to suggest, but I recognise that it is essential that uniformity should prevail as regards the principles to be followed by the various assessing authorities in arriving at the valuation of properties in their districts, and that some central authority should be vested with certain powers which should tend to promote that uniformity.

Central authority for making regulations as to valuation desirable.

12. The present position of matters as regards the intervention of the London County Council in valuation matters without any direct statutory authority I consider to be eminently unsatisfactory. I refer to the action taken by the Council in their attempts to supervise and control the work of the various assessment authorities. I do not ignore the fact that some good may have resulted from the Council's action, but I feel quite sure the ends achieved have been in no way commensurate with the expense which the Council has incurred in its self-imposed task, whilst its action has undoubtedly tended to create an unfortunate feeling of friction as between the Council as one of the central authorities and the various rating authorities.

London County Council. Intervention of, in valuation has produced some good, but expense has been too great and Council's action has created friction.

13. The most politic step taken by the Council in this matter was, in my judgment, the convening of the Conferences of the various assessment authorities in 1890 and 1893-94, as no doubt the effect of these Conferences did tend to promote, to an appreciable extent, that uniformity of assessment throughout the Metropolis which is so much to be desired.

I may state that, as one who took part in the last Conference, and in the consideration of the Bill for the amendment of the Valuation (Metropolis) Act, 1869, which was then brought forward, and which the Local Government and Taxation Committee of the Council were at that time desirous of promoting in Parliament, in the main I approve of the changes proposed under that Bill as it left the hands of the Conference. The Bill embodying the proposals of the Conference was introduced in the House of Commons in the Session of 1894.†

Valuation (Metropolis) Amendment Bill in the main satisfactory.

14. I venture to suggest that considerable care will have to be exercised in granting to a central authority the necessary supervising power, so as to ensure that there will be the minimum degree of interference with the powers at present vested in the various assessment authorities.

Central authority for valuation purposes discussed.

† Valuation (Metropolis) Amendment Bill, No. 130 of Session of 1894.

## APP. IV.

15 In respect of the undertakings of the public companies, the idea which found favour at the Assessment Conference before referred to was that a separate Valuation List, containing the gross and rateable values respectively of all of such undertakings as might be situate in two or more parishes, should be prepared by the central authority, and that the values appearing in the list should then be apportioned by the central authority between the several parishes in which the undertakings were situate, and the amount so apportioned entered in the Valuation Lists of such parishes.

Whilst there is no doubt much to be said for this procedure, I am not certain that it would result in the rating of the said undertakings being more efficiently or more equitably carried out than is the case under the existing procedure.

VI.—*The Method of levying and collecting Rates.*

16. In Kensington the rates are ascertained and made half-yearly, in the early part of April and October, and are for the period from Lady-day to Michaelmas and from Michaelmas to Lady-day respectively.

Kensington, like many other of the metropolitan parishes, has its own local Acts, and it is one of these local Acts which prescribes the procedure followed by the vestry in collecting the rates.

I venture to hand in a copy of regulations\* laid down by my vestry for the guidance of the rate collectors of the parish, which will show the successive steps taken in the collection of rates, and from a perusal of which it will be seen that the various processes for the recovery of the rates are resorted to before the expiration of the half year for which the rates are made.

17. I have not assumed that any purpose would be served by giving statistics as regards the amount of rates levied in the parish of Kensington, but it occurs to me that the following particulars as to the per-centage of rates collected, the per-centage of rates lost on empty houses, and the per-centage discharged as irrecoverable from various causes for the last three years may be of interest:—

Year.	Collected.	Empty Houses.	Commission allowed to Owners under 32 & 33 Vict. c. 41. s. 4.	Discharged for runs, poverty, and otherwise irrecoverable.	Recoverable Arrears carried forward.
1896-97 - - -	92.36	6.47	0.51	0.42	0.24
1895-96 - - -	90.70	7.96	0.51	0.45	0.38
1894-95 - - -	90.29	8.19	0.50	0.54	0.48

18. The number of summonses issued in the parish in connexion with the recovery of rates during the year ended Lady-day last was 5,168. In 1,379 cases distress warrants had to be issued, and in 139 cases the extreme course of applying for the committal of the person rated had to be resorted to. These figures may be regarded as in no way abnormal, but on the contrary as representing the average annual number.

\* COPY of REGULATIONS laid down by the Vestry of Saint Mary Abbots, Kensington, for the guidance of the Rate Collectors in the collection of Rates for the Parish.

(a) That the Collectors be required to issue the whole of the demand notes for their respective Districts within eight weeks from the making and allowance of the Rate.

(b) That they be required to make their second calls or personal applications for payment of Rates throughout the whole of their respective districts within thirteen weeks from the making and the allowance of the Rate.

(c) That they be required to issue the "final notices" under the hand of the Vestry Clerk not later than the 25th July and 25th January, to all persons who have not paid the rates.

(d) That immediately after the issue of the final notices, arrangements be made by the Vestry Clerk for the holding of the Half-yearly Rate Sessions for the granting of distress warrants for the recovery of Rates from those persons against whom summonses have to be issued.

(e) That the Collectors be required to see that the distress warrants which are issued are executed with all promptitude, and that warrants with regard to which "nulla bona" returns have to be made are returned to the Vestry Clerk within one month from the close of the half year, with a view to the directions of the Finance Committee being taken as regards the issue of warrants of committal against the parties in default.

(f) That in special cases the Collectors shall report the facts to the Finance Committee immediately upon the failure to execute the warrant of distress, with a view to warrants of committal being obtained and put in force prior to the close of the half year.

WM. CHAMBERS LEETE,  
Vestry Clerk.

29th July 1896.

In Kensington rates are made and collected half-yearly. Procedure for collection.

Per-centage of rates uncollected from various causes.

Number of summonses and warrants issued.

VII.—*Composition Allowances and Deductions.*

APP. IV.

Compounding controlled by Overseers.

Compounding is compulsory in Kensington and the owners of a large proportion of compounded properties are voluntarily rated whether the properties be occupied or not. Amount of further deductions allowed in these cases.

19. Dealing with this point, it should be noted that the provisions of sections 3 and 4 of the Poor Rate Assessment and Collection Act, 1869, which relate to composition allowances and abatements or deductions in regard to rates levied, are put in operation by the overseers, and that the action of the overseers relative thereto is in no way controlled by the Assessment Committee, the matter being one relating purely to the collection of rates, and not to the assessment upon which the rates shall be levied.

20. In Kensington section 4 of the Poor Rate Assessment and Collection Act was adopted shortly after the passing of the Act, and has been in force ever since. Under this section, as the Commissioners are no doubt aware, the overseers are empowered, in the case of all properties of a rateable value of 20*l.* or under, to rate the owners, it being a condition that an abatement or deduction of 15 per cent. shall be allowed from the amount of the rate levied on such owners. Under the same section of the Act provision is also made whereby the owner of any such rateable hereditament may give notice to the overseers of his willingness to be rated for the property, whether occupied or not, and in any such event the overseers may make a further abatement or deduction not exceeding 15 per cent. In practice my vestry deal with these notices upon their merits, and allow such a further abatement as the circumstances may in each case justify.

21. As reference is made to composition allowances, I may point out that such allowances are made under section 3 of the Act, the provisions of which cannot be operative in a parish where section 4 has been adopted by the vestry.

22. The number of properties in the parish of Kensington rated at 20*l.* and under to which section 4 of the Act of 1869 applies at the present time is 2,765, being 11 per cent. of the rateable hereditaments of the parish. The number of such properties in respect of which the owners are voluntarily rated for the properties, whether the same be occupied or not, is 2,193, the deductions allowed beyond the statutory 15 per cent. being 5 per cent. in the case of 356 properties, 10 per cent. in the case of 452 properties, and 15 per cent. in the case of 1,385 properties.

VIII.—*Properties exempted from payment of Rates.*

23. The following classes of property are exempt from rates :—

(a.) Rates are not paid on empty houses, *i.e.*, houses which are unfurnished and unoccupied, although the premises are included in the Valuation List. Apart from consideration of equity the legal cause of rates not being paid on empty houses is that there is no occupier within the meaning of the statute of Elizabeth. It is unnecessary for me, I take it, to enter upon the legal question whether, in the case where a caretaker lives in a house that is otherwise empty, the owner is rateable. The authorities on the point conflict, but it appears to be good law that the caretaker is not an occupier who can be rated.

Exempted properties. Empty houses.

(b.) Property in the occupation of the Crown is not rated. It is the practice of the Treasury to make contributions in aid of local rates in respect of this property. The values placed upon it are settled by an official of the Treasury, after hearing the views of the vestry. The difficulty of obtaining what my vestry and what other authorities considered adequate contributions has led to the question being discussed in Parliament, with the result that recently the valuation of Government property in the Metropolis upon which the contributions of the Government are based has been appreciably increased.

Government property. Contribution made by Treasury in lieu of rates.

(c.) By an Act of 1833 (3 & 4 Will. IV. c. 30) no person is to be rated in respect of any church or chapel exclusively appropriated to public religious worship.

Churches and chapels.

(d.) Under an Act of 1869 (32 & 33 Vict. c. 40) every rating authority may, but need not, exempt Sunday schools or ragged schools from any rate, the authority have power to levy.

Sunday and ragged schools.

(e.) By the Voluntary Schools Act, 1897 (60 Vict. c. 5), voluntary elementary schools are exempt from being assessed or rated to or for any local rate, except to the extent of any profit derived from the letting thereof.

Voluntary elementary schools.

(f.) By an Act of 1843 (6 & 7 Vict. c. 36) no person is rateable in respect of land, houses, or buildings belonging to any society instituted for the purposes of science, literature, or the fine arts exclusively occupied for carrying

Scientific, Literary, &amp;c. Societies.

## APP. IV.

into effect its purposes, provided that the society is supported wholly or partly by annual voluntary contributions, and may not make any dividend, and provided that the society has obtained a certificate from the central office constituted under the Friendly Societies Act, 1875 (38 & 39 Vict. c. 68).

- (g.) By the Agricultural Rates Act, 1896 (59 & 60 Vict. c. 16), the occupiers of agricultural land pay half only of the rates in respect of such land for a period of five years from the 31st March 1897. The Act does not apply to any rate to which the occupier of agricultural land is liable, as compared with occupiers of other hereditaments, to be assessed or to pay in the proportion of one half or less than one half. In connexion with the Agricultural Rates Act, I may mention that the vestry, not being included among the authorities to whom the amount lost by the provisions of the Act is to be repaid by the Treasury out of the Local Taxation Account, actually lose a small sum annually in respect of the General Rate. The guardians being among the authorities referred to, the amount lost on the Poor Rate is recovered.
- (h.) Rates are not recoverable from ambassadors or other public ministers of any foreign prince or State in respect of property occupied by them, although the property is included in the Valuation List. This rule follows from the Statute of 1708 (7 Anne, c. 12), under which, in effect, diplomatic agents are privileged from all liability to be sued in civil actions. In the case of some legations the rates are paid by the Treasury as a matter of grace, in accordance, as I understand, with some international custom.
- (i.) Parks and open spaces are exempt from being rated.
- (j.) By the Volunteer Act, 1863 (26 & 27 Vict. c. 65. s. 26), storehouses appointed under that Act for the safe keeping of the arms, ammunition, or stores of a volunteer corps are exempt from local rates. Since the passing of the Act it has, moreover, been decided that premises occupied by a volunteer corps, even though not falling within the Act, are exempt from rating, by reason of their being Government property.

24. I have now, I think, mentioned the principal cases where either property is exempt from rating or rates are not recoverable in respect of property which is included in the Valuation List, but there may be cases of special exemptions conferred by local Acts with which I am not acquainted. Moreover, questions of the rateability of various classes of hereditaments have frequently been before the courts, and with those cases the time at my disposal has not permitted me to deal.

25. From the foregoing statement it will appear that exemptions from rates are divided into two main classes: (1) where property is entirely exempt from rating, and (2) where property is included in the Valuation List, but the rates in whole or in part are not recoverable. The first kind comprises (a) Government property, (b) churches and chapels, (c) Sunday and ragged schools, (d) voluntary elementary schools, (e) literary and scientific institutions, (f) parks and open spaces, and (g) volunteer storehouses. The second kind comprises (a) empty houses, (b) agricultural land, and (c) foreign embassies. An important difference between the cases of empty houses and foreign embassies and the others arises from the fact that in the former cases an inequitable distribution of rates levied by central bodies and paid out of local rates takes place as between the various parishes and districts. For instance, two parishes assessed at 100,000*l.* would contribute the same amount to central taxation, but if in the one case the property included in the Valuation List from which rates were not recoverable amounted to 10 per cent. of the whole and in the other only to 5 per cent. of the whole, it is obvious that the ratepayers of the former parish are burdened with a larger amount than in equity they should bear as regards common charges. This is a practical hardship, and one which is severely felt by my parish, where the amount of empty property and other property included in the Valuation List but not yielding rates is greater than in most of the other metropolitan parishes. I may point out to the Commissioners that this grievance as regards empty properties was considered at the Conference of Metropolitan rating authorities with the Local Government and Taxation Committee of the London County Council in 1893-94, it appearing from a return submitted to such conference that in some parishes the properties were assessed as soon as structurally completed, whilst in others they were not assessed until occupied, in defiance of the law as laid down in *Regina v. Overseers of Malden* (L.R. 4 Q.B. 326), and the Conference, in passing a resolution to the effect that all hereditaments structurally completed and ready for occupation although not occupied should be

Agricultural land. Partial exemption of.

Parks, &c. Volunteer headquarters.

Inequitable distribution of the burden of rates levied by central bodies caused by certain properties that are exempt from the payment of rates being included in the Valuation List.

included in the Valuation List, expressed the opinion that to encourage uniformity of practice in this respect allowances should be made by the central authorities in their precepts for the value of the unoccupied property in the parish or district in the previous year, and that the law should be amended to allow of this being done.\* I venture to submit this point as one of some importance, and worthy of consideration by your Commissioners. With regard to the embassies and Government property, whilst much has recently been done by the Treasury to lessen the inequity under which the metropolitan parishes suffer, I do not consider that the present position as regards these properties can be regarded as satisfactory. In the case of the embassies it is true that the Treasury, in response to pressure brought to bear upon them, have recently conceded the principle that the rates on certain of those properties should be borne by the Imperial Exchequer, but this is only done in regard to the legations of those countries which, as I understand, come under some arrangement made with the Foreign Office. It appears to be not too much for the local authorities to ask that if on international grounds the representatives of foreign powers are granted exemption from the payment of rates on the houses they occupy, the loss which accrues shall not be borne by the ratepayers of the parish in which the rateable property is situate, but shall be met by the Imperial Exchequer. Dealing with the second class of property in which the Government are interested, viz., the property actually occupied by them, which at present is not strictly speaking rateable, but which in deference to public opinion has been treated as such by the Government paying contributions in lieu of rates thereon, I am at a loss to perceive any valid grounds why these properties should not be assessed by the authorities, and consider that legislation with that object is needed.

APP. IV.

Loss caused by exemption of embassies should be borne by Exchequer. This is done in certain cases.

Government property should be valued by the local authorities.

#### IX.—*Whether Empty Property should be liable for any portion of the Rates.*

26. The question as to whether empty properties should be called upon to contribute towards local rates has frequently been raised, and there is, no doubt, much to be said on both sides of the subject. Without venturing to go so far as to express a decided opinion upon the question, I may, perhaps, point out some of the arguments which may, it seems to me, be adduced in favour of empty properties being called upon to make at least some contribution towards local rates—

Empty properties. Arguments in favour of the payment of some portion of the rates.

- (a.) That the principle has been conceded in the past by the Legislature in various statutes that empty houses should be assessed at half the rate, and that owners should be rated therefor to that extent.
- (b.) That this principle has also been followed in the Water Companies' Acts, power being given to the companies to levy half rate on empty properties.
- (c.) That a hardship is undoubtedly inflicted upon the rated occupiers of a parish being called upon to pay the rates upon the unoccupied properties therein, particularly as regards the proportion of rates raised to meet the expenditure of the Central Authorities.
- (d.) That whilst it is recognised that properties when empty do not require the services of the Local Authority to any appreciable extent, they may be said to receive benefit from such services as the maintenance of the highways, the lighting and sewerage of the streets, and the police.
- (e.) That the placing of some liability to contribute, at least in some proportion, to local taxation upon owners of empty properties would, it is suggested, tend to prevent properties being intentionally kept "empty," and would serve also as an incentive to all owners to secure tenants for their houses.

#### X.—*Whether the System of the Equalisation of Rates is beneficial to the Localities as a whole.*

27. The question here raised is one upon which I venture to submit a great deal of misapprehension exists, and is one also which requires to be approached and dealt with in a most judicial manner.

That in the peculiar circumstances of the parishes of the Metropolis there must be certain expenditure in the administration of its affairs, whether such administration is carried out by a central authority or by a local authority, which should be borne equally by the rateable occupiers of the whole administrative county of London, no

Local expenditure in Metropolis.

\* See London County Council Return, Assessment Conference, 1893-94, Resolutions, &c. (No. 168).  
—P. S. King & Son, Great Smith Street, Westminster, S.W.

## APP. IV.

Certain expenditure should be a common charge over the whole county.

Common charges. Richer districts contribute more than poorer districts.

London (Equalisation of Rates) Act, 1894, not satisfactory.

person who has given any consideration to the question will dispute. The principle has been widely recognised in regard to the Metropolitan Common Poor Fund, the expenditure of the London County Council, the Metropolitan Asylums Board, the School Board for London, and the Metropolitan Police. It has been still further extended by the London (Equalisation of Rates) Act, 1894, upon the working of which, I shall desire presently to somewhat enlarge.

28. I ask permission in the first place to point out a fact which, of course, ought to be apparent to everybody, but to which I consider sufficient importance is not attached, viz., that, by reason of the fact that all the expenditure of the central bodies is apportioned among the various parishes and districts on the basis of their rateable value, there is much more than equalisation of rates effected, and that is, the ratepayer of the parish or district in which "rents are high," whether he be a wealthy resident occupying a mansion, or a clerk or artisan occupying an 8 or 10 roomed house, is called upon to assist by contribution the ratepayer of the parish or district in which "lower rents" prevail. I may perhaps be allowed to make my point clearer by a simple example.

29. Two persons whose circumstances shall be equally good have eight-roomed houses affording exactly similar accommodation, the one in Kensington and the other in Islington. In the one case a rent of 50*l.* is paid, and in the other the rent is 40*l.* The Kensington ratepayer not only pays an equal rate in the £ with the Islington ratepayer, but he has to pay that rate on the increased amount at which he is assessed by reason of his higher rent. I recognise that the retort to this may be that the rent must be taken as evidence of the extent of capacity to bear taxation, and that a departure from this long accepted principle would necessitate the entire overhauling of the incidence of local taxation. My reply is that a complete overhauling of the incidence of local taxation is needed.

30. Dealing with the London (Equalisation of Rates) Act, 1894, I have no hesitation in pronouncing it a crude attempt to give effect to a principle in favour of which much may be said, but it is an attempt which in its actual operation has, I venture to submit, failed to achieve the object for which the Act was passed.

I have not, up to the present, discovered anyone who could tender any valid arguments in support of the crude method followed in regard to the distribution of the rate levied under this Act.

31. If it is suggested that the Act was to assist to equalise the actual rates in the £ levied in the various metropolitan parishes and districts, a reference to the last returns published by the Statistical Office of the London County Council will prove that it has been abortive in this respect.

32. If, on the other hand, the object of the Act is to provide that contributions should be paid by the richer parishes to meet the expenditure of the poorer parishes, then again a reference to the published returns setting forth the grants paid from the fund will show that the parishes receiving the largest grants are not the poor parishes of the East End, but such parishes as Camberwell and Islington, which parishes, until the Act was passed, had certainly never been regarded as too poor to pay for their own local services.

33. In my opinion the basis of population does not afford a satisfactory criterion of the comparative need of a district of assistance from other districts. And if a comparison be made between the results of the system adopted for the purposes of the Metropolitan Common Poor Fund, and for the purposes of the London Equalisation of Rates Act, it will be at once seen that a very great disparity exists in regard to the districts which respectively pay and receive.

The case of Islington is the greatest anomaly, that parish having always been a contributor to the Metropolitan Common Poor Fund, whereas it is the recipient of the largest grant under the Equalisation of Rates Act.

34. Another serious blot in the Act is the vagueness of its provisions as to the application of the grants made to the various receiving parishes and districts. Anything more crude than the provisions of section 1 (sub-section 6) of the Act I cannot well imagine. When one compares the provisions of this Act with those of the Metropolitan Poor Act, 1867, the contrast is most striking, and is not, I venture to think, favourable to the more recent handiwork of the Legislature.

Whilst it is true that an account of the expenditure under the heads to which the grant is to be applied has to be furnished by the sanitary authority to the Local Government Board, I do not consider that adequate security is provided by the Act

Equalisation Fund. Distribution according to population not satisfactory.

London (Equalisation of Rates) Act, 1894. Provision as to application of grants not sufficiently specific.

that the grants made shall be wisely and legitimately expended. If Kensington is called upon to contribute to the expense of Islington's local administration, may the former parish not in justice ask to have some better assurance than is provided under the Act as regards the due application of the contribution?

35. One matter which has been left in abeyance by the London County Council is the main road question, in regard to which I would submit that if the Council had carried out its duty under the Local Government Act, something perfectly legitimate and equitable in the direction of equalising the burdens of the various districts of the metropolis might have been effected.

36. It appears to me that, looking to the intercommunication as regards traffic which exists between the various parts of the Metropolis, substantial grants in aid from a common fund should be made to the various road authorities. I speak of grants in aid rather than the payment to the authorities of the actual expenditure incurred by them in the maintenance of the main roads in their district, as it will readily be appreciated that if the latter course were adopted it would almost of necessity lead to an unduly extravagant expenditure of the rates by the withdrawal of all incentive to study economy in the maintenance of the roads of any particular district. Another feature, of course, is the difference of material of which the roadways are formed; for instance, it may be found to serve all purposes that certain roads in particular districts should be paved with granite setts, and the said roadways would, in all probability, whilst the maintenance of such roads is defrayed by the particular district continue so to be paved. But if the maintenance of the said roads was made a charge upon a common fund and the district was contributing to the cost of more expensive description of roadways in other parishes, it is not unreasonable to assume that the residents of the districts with cubed roads would speedily require that all such roads should be paved with the latest improved paving material as were roads in other districts.

37. To meet this difficulty it appears to me that the proper course to pursue would be to take the minimum cost of the maintenance of a highway constructed with the most economical material in good and substantial repair as the basis of the grant, leaving it to the road authorities to indulge in such extra expenditure on their roads as the exigencies of their particular district might demand.

38. I trust that in bringing this matter before the Commission I shall not be thought to be digressing too much, but the point I desire to submit is that it is in this direction that equalisation should be effected rather than in the way it is attempted to be done under the London (Equalisation of Rates) Act, 1894.

I have only instanced the expenditure on main roads, but there are, of course, other items of expenditure of the local authority to which the same principle could be applied.

The great difficulty to be overcome is, of course, placing some check or control upon the expenditure to be borne by the Common Fund, and to institute this check without unduly hampering the local authorities in the administration of their municipal affairs.

## APPENDIX V.

**Memorandum prepared for the Commission by Mr. W. H. Warner, of Messrs. Lofts and Warner, Estate Agents and Surveyors.**  
[See MINUTES OF EVIDENCE, QUESTIONS 13,435-13,645.]

1. It is almost invariably the custom of tenants taking houses for a term at rentals, or even when buying, to inquire what the probable amount of the local rates and Imperial taxes will be—

The real occupation rental paid for houses is that which includes the sum payable for local rates and taxes.

A person taking, for investment, a plot of land on which to build a house would estimate—

1. The ground rent.
2. A fair interest on his outlay.
3. The rates and taxes payable in respect of the occupation.

APP. IV.

Equalisation of burdens in Metropolis. This might be satisfactorily accomplished by making substantial grants in aid of the maintenance of main roads from a common fund.

APP. V.

Ground lessee estimates ground rent, interest on outlay, and rates and taxes, when taking land.

APP. V.

The total would be such sum as he could expect to receive if he undertook all burdens.

The amount of ground rent plus the interest on outlay required would be the guiding factor in the assessment for local rates.

It is usual for the ground lessee to undertake to pay the ground rent free from all local rates and taxes, and he fully understands this as part of his bargain, and in making his calculation for the return of his outlay this is fully taken into consideration, and he takes the risk of a rise or fall in his return by reason of a decrease or increase in local burdens. Similarly, as an investor in, say railway stock, takes the risk of a rise or fall in dividends by reason of unforeseen circumstances.

In the case of flats, which are being largely built in the present day, it is one of the elements of attraction that the rents paid include all rates and taxes, and, before a builder takes a plot of land upon which to build flats, he carefully considers and calculates whether he can so arrange the flats as to obtain rents to cover all the burdens beyond such interest as he hopes to receive for his outlay.

The rent alone is not the only factor in the letting value of houses.

2. I do not think the question of the rates being high or low affects the occupier so much as the owner, as in districts where the houses are similar, and there are no special attractions, the occupier would give the least rent to the owner in the district where the rates were highest, and *vice versa*.

Rental value is governed by three sets of circumstances:—

1. Situation.
2. Character of building, and its adaptability to the requirements of its position.
3. The outgoings for rates, &c. which would be payable by the occupier.

In circumstances that were similar in other respects, the amount receivable in respect of Nos. 1 and 2 would be affected by the amount, more or less, of No. 3. As the higher the local burdens for rates were the less would be the return to the owner under Nos. 1 and 2.

Speaking generally, it would be difficult to say that higher or lower rates by themselves govern rent, as other circumstances are much more important factors. For instance, take Oxford Street, where the rates are similar for both sides of the street, yet shops on the north side are much more valuable than on the south side, and there are many instances where buildings, side by side, of equal cost produce very different rents by reason of one set of premises being better arranged for the requirements of the neighbourhood than the other.

3. As regards the incidence of local rates present and ultimate:

(a.) When a tenant takes a house on an ordinary lease, say, 7, 14, or 21 years (which he can usually break at the end of the 7th or 14th year), he calculates what the rates and taxes will amount to in addition to the rent he pays to the owner, and, if the rates were to increase abnormally, he would in all probability re-adjust his rent at the earliest period of termination of his lease and ask for a reduction of rent, and, unless the owner felt he could maintain the original rent in the face of increased taxation, he would have to submit to a lower rent. This is a transaction which frequently takes place from causes other than increased taxation.

(b.) In the case of a leaseholder who takes a plot of land and builds his own house, or who buys a house on long lease subject to a ground rent which is paid to the ground landlord free from rates and taxes, his position is that of a buyer of a class of investment subject to the risk of being better or worse, in the same way as an investor in railway stock would be by reason of the increase or decrease of burdens which might affect his dividend. If there was a large increase of rates he would be much more affected by the difference in the return on his outlay than by the slight increase in the value of the site.

(c.) The building lessee is a person who most frequently takes land on building leases for the purposes of investment and speculation, in the hope of obtaining a profit on expenditure on land so taken. His principle would be to consider whether, subject to the condition of his taking it with the burden of paying the rates and taxes which would arise in respect of his expenditure, as well as on those in respect of the ground rent, he could obtain such a return for his expenditure as would satisfy him, and the price he would pay for the land as rent would be guided by such considerations. In most instances this would be the guiding influence, whether the land was taken for the purposes of an occupying lessee or a speculative builder, and in forming his estimate he

Owners receive lower rents in districts where rates are high.

Incidence of local taxation as between owners and occupiers.

would consider if he could obtain a rent (or price which would be guided by rent) to cover the ground rent and the rates and taxes (whether paid by him or the tenant) and leave a margin of sufficient profit for his expenditure.

This is exemplified in the cases of builders erecting flats, when the question of local taxation has to be carefully considered, as rates and taxes are universally paid by the landlord.

In the case of the builder who builds houses to sell, he estimates the ground rent he will pay in proportion to the rental value of the houses to be built, which would be influenced by the amount per poundage (more or less) of the local burdens.

- (d.) The ground landlord. The rent to be received by the owner of land available for building is entirely guided by the class of property that can be profitably erected on the land, and this must be guided by the return that can be obtained plus the local burdens, that is, the rental value.

4. Land as building land cannot produce any value for rent, unless there is a demand for its development for the purpose of erecting buildings, and it is this demand which gives it a rental value according to its situation, and assuming two plots of land of similar value, one liable to and the other free from rates and taxes, the rental value of the latter would be increased to the owner by the amount of the rates and taxes that the former was subject to.

Vacant building land, rating in respect of.

The value of land in most cities increases in the inverse ratio to its distance from that part of the city which has most attractions for commercial or residential purposes, and this would govern its value to a far greater extent than the incidence of higher or lower taxes.

Position of land in a city governs value to a greater extent than rates.

5. So far as the proportion of rates to rents is concerned, going back to 1881, I find in St. George's Union the rates were then 3s. 7½d. in the £, or, about 20 per cent., and they are now, in 1898, 5s. 9d. in the £ in one parish, and 5s. 6d. in two parishes, or nearly 29 per cent. and 27.5 per cent. respectively.

Proportion of rates to rents.

As the rates exist at present there is not a wide divergence in the principal unions, and they seem to bear no regular proportion to the rateable values of the districts.

The net result is, that in most of the parishes, in any particular street where the houses are of similar value the rates absorb the rental value of one house out of three.

Such a condition, if continued, is likely to paralyse the investment of money in building operations, and it must tend sooner or later to the substitution of bad building for good, as it practically amounts to a tax of about 3 per cent. on outlay before any return can be obtained for the capital expended on the buildings, and this, in the face, too, of the constantly increasing cost of labour and materials.

6. In 1881 the rateable value of St. George's Union was 2,098,902l., and the rates 3s. 7½d. in the £.

Increase in rates has a tendency to reduce rents.

In 1898 the rateable value is 2,875,166l. and the rates 5s. 9d. in the £ in one parish, and 5s. 6d. in the other two.

Where other circumstances have not increased the value of property in the union, I think that the increase of the rates has reduced the rental values to a considerable extent, and that the tendency has been for tenants to seek residences in districts where, the rents being lower, the taxes are correspondingly less in bulk.

In many cases, owing to the method of assessment, occupying owners are assessed at rental values beyond the actual letting value of the premises they occupy.

7. I do not think the expenditure of money raised by rates has rendered property more valuable, as the expenditure in that respect has probably been equal per foot frontage in rich and poor districts.

The adaptation of property to requirements has increased value more than expenditure from rates.

What has increased rents in many districts is adaptation of the properties to suit the requirements of the community who for various causes affect those districts.

For instance, I could quote a street in the West End which has recently been rebuilt. In 1881 the gross rateable value was 21,340l. In 1898 the rateable value is 35,167l., and yet there has not been any increased expenditure falling on the rates, as, although the street has been widened by the landlord giving up a large slice of land (worth about 50,000l.), the parish authorities have invariably made the tenants pay the cost of making up the additional roadway and pavement. The increased rental value has been created by the tenants improving the buildings under building leases, and probably not one of them is dissatisfied with his bargain.

APP. V. I may here remark that on the expiration of the old leases it was open to the owner to have possessed himself of the property, worth about 20,000*l.* a year, instead of, as now, only receiving a ground rent of about 8,000*l.* a year, and so obtaining a capitalised value of only about 250,000*l.* instead of about 500,000*l.*

At the same time it cannot be argued that an outlay on the improvement of an important thoroughfare does not increase the letting value of adjoining property; but this would not apply as regards property in general, as the principal benefit would accrue to the community using such thoroughfare.

Ground values, rating of, in case of existing contracts.

8. It is quite impossible to define what is real ground value in the case of buildings and land, where the actual ground rent is not taken as the basis of such value, and any division of the rates on this basis would only be the means of transferring money from the pocket of one man who had made his bargain, to the pocket of the man with whom he had made it.

It is a common occurrence for A. to let land to B. at a fixed rent, say 100*l.*, free from rates and taxes, with the option to B. to purchase at a fixed number of years' purchase, and after having erected suitable premises, B. exercises his option. He then sells to C. a ground rent secured on the premises at 300*l.* a year free from rates and taxes, and to D. the property subject to such ground rent. D. buys the property on a basis to return him, say 5 per cent. on his outlay; but the ground rent of 300*l.* covers more than the rental value of the bare land without the building; and C. looks upon it as a secure investment, as, after D. has secured to himself all the interest for which he bargained, there is a prospect to C. of a reversion to a higher rental, say 80 or 90 years hence.

Assuming D. is enabled to deduct from the sum he pays to C. a proportion of the rates and taxes, he profits by that transaction to C.'s loss. C. deducts from B. the proportion of rates and taxes on the amount he pays B. at B.'s loss.

This is distinctly an unfair transaction, and the occupier who pays the rent for his holding, probably benefits nothing by the transaction.

In this case, what can be taken as the true ground value?

9. As regards the three elements of rental value, viz. :—1. Lands, 2. Buildings, 3. Local burdens, the fact of the latter being an arbitrary sum of so much in the £ upon the rental value based upon the combination of the two former, which are matters of free bargain, has such a guiding influence, that according as No. 3 rises or falls, it must have a corresponding influence on Nos. 1 and 2.

10. As a further instance showing the injustice of taxing ground rents, which are a form of investment secured by free bargain between two parties, each being fully aware of the transaction they enter into, and the bargain being largely influenced by demand and supply, I will give the following figures :—

Two people, A. and B., have a sum of 20,000*l.* for investment; A. decides to purchase freehold ground rents, and invest his money so as to give him a return of 3½ per cent., viz.—

Two people, A. and B., have a sum of 20,000 <i>l.</i> for investment; A. decides to purchase freehold ground rents, and invest his money so as to give him a return of 3½ per cent., viz.—	£700
This being his income, he considers he can take a house at a rental of	£100
Rates and taxes amount to 6 <i>s.</i> in the £ -	30
	130

A.'s income to live on - - - - - £570

£ s.

His ground rents are charged with rates and taxes 6*s.* in the £ on £700 - - - - - 210 0

but as he can deduct from his rent of 100*l.* a year the rates in respect of the amount of the ground value of such occupation rent, say 25*l.*, at 6*s.* - - - - - 7 10

202 10

he has therefore deducted from his income - - - - - 202 10

£367 10

His net income is therefore reduced to

	£	s.	
B. invests his 20,000 <i>l.</i> in railway debenture stock to pay him 3½ per cent.			700 0
	£	s.	
This being his income, he considers he can take a house at a rental of			100 0
Taxes amount to 6 <i>s.</i>			30 0
			<hr/> 130 0
But as he is allowed to deduct for ground value, as in A.'s case			7 10
			<hr/> 122 10
He only pays			
Net income			<hr/> <u>£577 10</u>

He therefore has an income of 577*l.* 10*s.*, as against A.'s income, of 367*l.* 10*s.*

Of course, had A. any conception he would be arbitrarily taxed on his investment to the extent shown, he would not have paid so much for the income he was to receive.

11. I am of opinion that a taxation of ground rents would confer no benefit on the occupiers of houses who have always in their own hands the settlement of how much they will or will not pay for houses or properties they choose to occupy, and that such a tax would only injure one class of investor to the advantage of the other, and not benefit the general community. Ground values, rating of, would be an injustice.

As regards the proposed taxation of ground rents, a quotation from John Stuart Mill would not be inappropriate. In book 5, chapter 2, section 3 of the Principles of Political Economy (volume 3, page 356 of the second edition) John Stuart Mill uses the following language with regard to an inclusive tax on what is called realised property; such as, for instance, ground rents:—

“Except the proposal of applying a sponge to the National Debt no such palpable violation of common honesty has found sufficient support in this country during the present generation to be regarded as within the domain of discussion . . . The burthen thus exclusively thrown on the owners of the smaller portion of the wealth of the community would not even be a burthen on that class of persons in perpetual succession, but would fall exclusively upon those who happened to compose it when the tax was laid on.” (That is to say, owners of ground rents.) “As land and those particular securities would thenceforth yield a smaller net income relatively to the general interest of capital and to the profits of trade, the balance would rectify itself by a permanent depreciation of those kinds of property. Future buyers would acquire land and securities at a reduction of price equivalent to the peculiar tax, which tax they would therefore escape from paying, while the original possessors would remain burthened with it even after parting with the property, since they would have sold their land or securities at a loss of value equivalent to the fee simple of the tax. Its imposition would thus be tantamount to the confiscation for public uses of a per-centage of their property equal to the per-centage laid on their income by the tax.”

12. The question has been raised as to the rating of vacant land which has either directly or indirectly a building value, and statements are frequently made that land which is available for building purposes is withheld by the owners in order that it may obtain an enhanced value by reason of surrounding improvements created by the money of the ratepayers. Vacant building land, rating in respect of, discussed.

My experience is that very few owners are foolish enough to withhold land from tenants willing to take it for building purposes at its fair value, taking into consideration all surrounding circumstances, and in the few cases there may be of lands so withheld, it is to the loss of that owner.

It is impossible for any owner of land in the neighbourhood of any town to force his land into the market as building land, and change it from agricultural land into building land, unless there is a demand for such a change by reason of the requirements of the community, and many an owner to my knowledge has suffered great loss in his anxiety to anticipate public demand by large expenditure in making roads and sewers with the hope of attracting builders to develop the land, and it is not an

APP. V.

unusual sight to see such roads grown over with grass and almost obliterated before a development arrives, and all this means loss of interest and capital to such owner.

Unless land which becomes building land has accidentally a frontage to a public road, all the outlay of making roads and sewers for its development falls upon the owner, as the parish will never take over such roads and sewers until they are made up and completed at the owner's expense, and they will not usually take them over until some buildings are erected to create a rating value towards the expenses of maintaining the same.

Expenditure of rates on improvements follows the development of building land and does not precede it.

13. It is the requirements of an ever increasing population which alone give a building value to land in the neighbourhood of large towns, and as a rule money expended from the rates does not take place until after a building value has been created by such requirement, and such expenditure only follows upon success of a speculation jointly shared by the owner of the land and his building tenant, and it cannot be contended that public expenditure thrown upon the rates is the pioneer to the development of increased value to an owner by the conversion of agricultural land near a town to building land.

Many a prudent man buys land near a large town at a price to give him a nominal return, in the hopes that in the progress of time he may reap a benefit, similarly as another man buys railway stock paying little or no dividend at a price bringing him little or no immediate return, in the hopes of an increased value by reason of the probable requirements of the public at some date rendering such line a profitable undertaking.

When such land becomes building land it contributes its fair quota to the rates so soon as building operations take place upon it until when the owner can get no adequate return in the shape of rental.

Assuming even the case of a man owning land in a neighbourhood where he could obtain a fair return for his capital, but preferring to allow it to lay idle, what reason is there in this instance to tax him for an investment upon which he obtains no return, more than in the case of a man who chooses to take 10,000*l.* in gold and store it in his cellar in the hope that in the course of time each £ will be more valuable than at the time it was incarcerated. In each case, so soon as the capital value is utilised for profit it contributes its quota of taxation.

Properties having only a latent value should not be rated.

14. So far as the law at present stands, taxes are only chargeable upon capital (whether employed in land, houses, or trade) which can be shown to return a profit, and not on dormant or latent value, or otherwise you might as well rate land under which coal was lying, but which there was no immediate opportunity of bringing to useful purposes, but which had a latent value (which the owner had probably paid for), dependable upon the requirements of an increased population or the probable failing of existing coal supplies at present worked on a profitable basis.

## APPENDIX VI.

**Resolutions of the London School Board handed in on behalf of that body by Sir Charles Elliott, Mr. H. Morgan-Browne, and Mr. T. J. Macnamara.** [*See MINUTES OF EVIDENCE, QUESTIONS 18,139-18,475.*]

- APP. VI.
1. That such reforms may be instituted as to secure that more equitable relations may be maintained between the proportion of the cost of Elementary Education borne locally and centrally respectively; and that such reforms shall provide for an equitable relation between London and the rest of the Country as regards Contributions to Imperial Revenues and Receipts from Treasury Subventions.
  2. That the Treasury be recommended to assist more adequately in support of the obligations thrown upon School Boards in respect of certain specific classes of children, especially, as a result of legislation, in respect of Blind and Deaf children and children in Truant and Industrial Schools.
  3. That the School Board Rate should be so levied as to include some direct charge on the Owners of Site Values.
  4. That it is in the interests of the Ratepayers that the system of Assessment for rating purposes should in all cases be equitable and uniform.

## APP. VII.

## SCOTLAND.

Population in Burghs of 10,000 inhabitants and over :—

	In 1881.	In 1891.	Increase in 10 Years.
	1,640,000	1,995,000	21 per cent.

Assuming for the five years 1891-96 an increase of 9 per cent., this will give us an urban population for Scotland in 1896 of 2,175,000.

## IRELAND.

In Ireland, although the general population has decreased, the urban population has probably increased.

Population in Towns of 10,000 inhabitants :—

	In 1881.	In 1891.	Increase in 10 Years.
	810,000	845,000	35,000

Assuming for the five years 1891-96 an increase of 10,000, we have 855,000 in 1896.

Thus the urban population of the United Kingdom for 1896 may be estimated at 22,750,000, or 57·5 per cent. of the total.

3. The urban population of England and Wales (19,720,000) for 1896 represents 64 per cent. of the total population of England and Wales in 1896 (30,750,000).

4. The population of London, 4,433,000, represents :—

11·2	per cent.	of the population of the United Kingdom.
14·4	"	" " " England and Wales.
19·5	"	" " urban population of the United Kingdom.
22·5	"	" " " England and Wales.

5. Various estimates of the rateable value of London, in relation to that of the United Kingdom, are :—

[i.] Valuation for Poor Rate, showing :—

	United Kingdom.	London.	London's per-centage.
Gross Estimated Rental	£ 289,100,000	£ 42,300,000	17·6
Net Rateable Value	205,500,000	34,700,000	17·0

[ii.] Valuation for Income Tax Schedule A., showing gross annual value of property assessed :—

	United Kingdom.	London.	London's per-centage.
Gross Annual Value	£ 210,600,000	£ 38,200,000	18·1

1891, p. 327.

L.S., p. 147.

I.R.R.,  
p. 127.

6. Various estimates of the rateable value of London, in relation to that of England and Wales, are :— APP. VII.

[i.] Valuation for Poor Rate, showing :— I.R.R.,  
p. 127.

	England and Wales.	London.	London's per-centage.
Gross Estimated Rental . . . . .	£ 199,400,000	£ 42,300,000	21·2
Net Rateable Value . . . . .	165,800,000	34,700,000	21·0

[ii.] Valuation for Income Tax, Schedule A., showing gross annual value of property assessed :—

	England and Wales.	London.	London's per-centage.
Gross Annual Value . . . . .	£ 175,900,000	£ 38,200,000	21·7

7. London's proportion of the net annual value of the property charged under Income Tax, Schedule A. :— I.R.R.,  
p. 125.

	£		
London . . . . .	31,900,000		
United Kingdom . . . . .	159,700,000	-	London's per-centage 20·0
England and Wales . . . . .	132,800,000	-	" " 24·0

8. London's proportion of the Gross Assessments to Income Tax, Schedule A. (Houses, Tenements, &c. only). I.R.R.,  
p. 125.

	£		
London . . . . .	37,900,000		
United Kingdom . . . . .	154,500,000	-	London's per-centage 24·5
England and Wales . . . . .	135,900,000	-	" " 28·0

9. London's proportion of the annual value of premises charged to inhabited house duty. I.R.R.,  
p. 154.

[i.] Shops, Warehouses, &c. :—

	£		
London . . . . .	6,738,700		
Great Britain . . . . .	21,917,000	-	London's per-centage 30·7
England and Wales . . . . .	21,335,000	-	" " 31·6

[ii.] Dwelling-houses, &c. :—

	£		
London . . . . .	19,317,000		
Great Britain . . . . .	48,249,000	-	London's per-centage 40·0
England and Wales . . . . .	44,590,000	-	" " 43·3

10. London's proportion of the Assessment to Income Tax, Schedule D, Part I. (Trades and Professions). I.R.R.,  
p. 138.

[i.] Gross Assessment :—

	£		
London . . . . .	55,800,000		
United Kingdom . . . . .	170,300,000	-	London's per-centage 32·7
England and Wales . . . . .	146,500,000	-	" " 38·0

[ii.] Net Assessment :—

	£		
London . . . . .	45,400,000		
United Kingdom . . . . .	121,000,000	-	London's per-centage 37·5
England and Wales . . . . .	105,100,000	-	" " 43·2

**11. London's proportion of the Assessment to Income Tax, Schedule E. (Salaries of employees of corporate bodies, &c.).**

APP. VII.  
I.B.R.,  
p. 143.

	United Kingdom.	London.	London's per-centage.
Gross Assessment - - - -	£ 35,800,000	£ 13,400,000	37·4
Net Assessment	23,200,000	9,800,000	42·1

**12. The net amount raised by Imperial taxes and the Postal Services in 1895-96 was as follows:—**

	Imperial Account.	Local Taxation Account.	Total.
	£	£	£
C.R., p. 25. Customs - - - - -	20,762,000	203,000	20,965,000
I.R.R., p. 2. Excise - - - - -	26,827,000	4,768,000	31,595,000
" Death Duties - - - - -	11,640,000	2,449,000	14,089,000
" Stamps - - - - -	7,339,000	—	7,339,000
" Income Tax - - - - -	15,983,000	—	15,983,000
" Land Tax - - - - -	1,020,000	—	1,020,000
" House Duty - - - - -	1,487,000	—	1,487,000
P.O.R., p. 25. Post Office - - - - -	11,760,000	—	11,760,000
" Telegraphs - - - - -	2,880,000	—	2,880,000
S.A., p. 32. Total - - - - -	99,698,000	7,420,000	107,118,000

S.A., p. 9. Besides the above amounts, further revenues were received into the Exchequer from Crown lands, Suez Canal Shares and Miscellaneous to the amount of £2,638,000. Moreover, the above £99,698,000 represents net receipts for Exchequer Account; the actual payments into the Exchequer on account of the items which make up this sum were £99,336,000.

**13. The question which it is first proposed to discuss here is what may be reasonably estimated to be London's contribution to the total of £107,118,000, shown in paragraph 12.**

C.R., p. 19. **14. London's contribution to the Customs revenue.** In the first place England and Wales paid £16,978,000 out of £21,240,000 gross Customs revenue received; that is to say, 80 per cent., although the proportion of population is only 78 per cent. (see above paragraph 1). The next point is that an urban population certainly consumes more tea, spirits, wine and tobacco in proportion than a rural population. What the true proportion is it is impossible to say, it is therefore necessary to make a rough estimate. The £20,965,000 net produce of the Customs is made up as follows:—

	£
C.R., p. 25. Tea - - - - -	3,746,000
S.A., p. 32. Wine and spirits - - - - -	5,675,000
Tobacco - - - - -	10,749,000
	£20,170,000
Other articles - - - - -	795,000
	£20,965,000

Practically, then, whatever proportion we assume as London's consumption of tea, wine and spirits, and tobacco, we may equally assume for the whole of the Customs, as the other articles form a very small per-centage of the total. We will assume then that in proportion an urban population consumes 10 per cent. more of dutiable articles than a rural population, in other words we assume that the 64 per cent. of urban population in England and Wales consume 66 per cent. of the Customs articles, and, therefore, contributes 66 per cent. of the Customs revenue paid by England and Wales, leaving the

remaining 34 per cent. to be consumed and paid for respectively by the 36 per cent. of rural population. These figures are reached as follows:—

If 64 urbans consume on the average 10 per cent. more individually than 36 rustics, their respective shares of a common fund would be:—

$$\frac{64 \times 11}{(64 \times 11) + (36 \times 10)} \quad \text{and} \quad \frac{36 \times 10}{(64 \times 11) + (36 \times 10)} =$$

$$\frac{704}{1064} \quad \text{and} \quad \frac{360}{1064}$$

These fractions represent .661 and .339, respectively, hence 66 and 34 per cent. as above.

Now England's share (80 per cent.) of the Customs Revenue = £16,772,000.

The share of the urban population of England and Wales out of this (66 per cent.) = £11,070,000.

And London's share of this on a population basis (22.5 per cent., see above par. 4) = £2,491,000.

15. London's contribution to the Excise Revenue. The Excise Revenue is made up I.R.R., p. 10. as follows:—

	£
Beer duty	11,131,000
Spirit duty	16,380,000
Licenses	3,818,000
Railway passenger duty	260,000
Sundries	6,000
	£31,595,000

On the question of the consumption of drink there is strong corroboration of the assumption that the town consumes more in proportion than the country, in the fact that on the basis of the census population of 1891 charges of drunkenness in 1896 were made in the following proportions in different parts of England and Wales:—

*Proceedings for Drunkenness in 1896:—*

District.	Pop. Census, 1891.	Proportion of Cases.
London (Met. Pol. Dist.)	5,714,000	1 in 145 of population.
Northern Counties	10,686,000	1 „ 120 „
The rest of England and Wales	12,681,000	1 „ 227 „

M.P.R., p. 58.  
P.R., pp. 252-257.

We shall therefore continue to assume that the 64 per cent. urban population of England and Wales consume 66 per cent. of dutiable articles consumed in their part of the United Kingdom.

*With regard to Beer*, England's share of the quantity retained for Home consumption in 1895-96 was 28,518,000 barrels out of a total of 32,971,000, or 86.4 per cent. (see I.R.R., p. 14. p. 10 of Mr. Bateman's recent return on Alcoholic Beverages). Upon this England paid in duty £9,627,000.

*With regard to Spirits*, England's share of the quantity retained for Home consumption as beverage was 20,376,000 gallons out of a total of 31,088,000 gallons, or only 66 per cent.: and 66 per cent. of the Spirit Duty = £10,811,000. I.R.R., p. 25.

England's share then of the Beer and Spirit Duties amounts to £20,438,000. Of this the urban population contributes 66 per cent. (see above, paragraph 14) or £13,489,000; and of this again London contributes 22.5 per cent. (see above paragraph 4), that is £3,035,000.

*With regard to Licenses*, London paid £439,000, or 13.4 per cent. of the total L.S., p. 55. paid by England and Wales.

*With regard to the Passenger Duty*, only £30,000 of the total came from urban traffic in England, of this London's share (22.5 per cent.) is about £7,000.

*With regard to Miscellaneous*, England pays about five-sixths of it, of which London's share is about £1,000.

a proportion of about 70 per cent. ; but in Part II. of this Schedule the assessment is no guide to the actual contributions of Londoners ; and for this part we must estimate 37·5 per cent. of the tax paid in the United Kingdom. APP. VII.  
Para. 10.

Under Part I. (trades and professions only) London's net assessment represents 15·2 per cent. of the total assessment for Schedule D. throughout the United Kingdom.

Under Part II. the net assessments for the United Kingdom represent 59½ per cent. of the total net assessments for Schedule D.

Consequently, London's contribution under Schedule D. is :—

Part I. 15·2 per cent of tax paid, <i>i.e.</i> :—£8,587,000 =	£ 1,305,000
Part II. 37·5 per cent of 59·5 per cent. of tax paid in the United Kingdom.	
59·5 per cent. of £8,587,000 =	£5,109,000
37·5 per cent. of £5,109,000 =	1,916,000
London's contribution under Schedule D.	<b>£3,221,000</b>

*Under Schedule E.*—Under salaries of employees of corporate bodies London's net assessment = 26·7 per cent. of the total assessment for the United Kingdom under the Schedule (£9,767,000 out of £36,643,000) ; and 26·7 per cent. of the total tax paid (£1,124,000) = **£300,000.** I.R.R.,  
p. 143.  
I.R.R.,  
p. 115.

Assuming for the other part of Schedule E. (Salaries of Public Officers, &c.), that London pays in the same proportion as for the first part, *i.e.*, on 42·1 per cent. of the net assessment for the United Kingdom, London's contribution under the whole of Schedule E. will be 42·1 per cent. of the tax paid. Para. 11 (ii.)

42·1 per cent. of £1,124,000 = **£473,000.**

Hence, London's contribution to the Income Tax is as follows :—

	Total Produce of Tax.	London's Rate of Contribution.	London's Payment.
Schedule A.	£ 4,794,000	20 per cent.	£ 959,000
" B.	178,000	—	1,000
" C.	1,300,000	40 per cent.	520,000
" D.	8,587,000 [= 37·5 %]	{ Pt. I. 15·2 % Pt. II. 37·5 % of 59·5 %	1,305,000 1,916,000
" E.	1,124,000	42·1 per cent.	473,000
	£15,983,000	32 per cent.	<b>£5,174,000</b>

19. To the Land Tax London's contribution is insignificant and may be neglected.

20. London's contribution to the Inhabited House Duty.

London's per-centage of the duty paid on shops, &c., is 30·7 per cent. of the amount paid by Great Britain, and 40 per cent. of the amount paid on dwellings, &c.

The produce of the tax on shops = about 25 per cent., and that of the tax on dwellings = about 75 per cent. of the total (£1,487,000). We have, therefore :— I.R.R.,  
p. 155.  
I.R.R.,  
p. 153.

30·7 per cent. of 25 per cent. of £1,487,000 =	£ 114,000
40        "        75        "        1,487,000 =	446,000
	<b>£560,000</b>

21. London's contribution to the Postal services.

Of the letters delivered in the United Kingdom 1895-6 (1,834,000,000) London received 537,500,000, or 30 per cent. P.O.R., p. 43.

Of the telegrams forwarded in the United Kingdom 1895-6 (78,839,000) London sent 27,025,000, or 34 per cent. P.O.R., p. 74.

We shall therefore estimate London's contribution to the Postal and Telegraph revenue at 30 per cent. of the former, and 34 per cent. of the latter.

30 per cent. of £11,760,000 =	£ 3,528,000
34 per cent. of £2,880,000 =	962,000
	<b>£4,490,000</b>

P.O.R., p. 25.

APP. VII. 22. London's contribution to Imperial revenue may therefore be estimated as follows:—

	Total Revenue.	London's Share.	Per Cent.
	£	£	
(i.) Customs - - - - -	20,965,000	2,491,000	12·0
(ii.) Excise - - - - -	31,595,000	3,482,000	11·0
(iii.) Death Duties - - - - -	14,089,000	4,459,000	31·6
(iv.) Stamps - - - - -	7,339,000	2,650,000	36·0
(v.) Income Tax - - - - -	15,985,000	5,174,000	32·0
(vi.) Land Tax - - - - -	1,020,000	-	-
(vii.) House Duty - - - - -	1,487,000	560,000	37·6
(viii.) Post Office - - - - -	11,760,000	3,528,000	30·0
(ix.) Telegraph - - - - -	2,850,000	962,000	34·0
<b>Total - - - - -</b>	<b>£107,118,000</b>	<b>£23,306,000</b>	<b>21·75</b>

23. If, now, we analyse the results obtained in the preceding paragraph we have:—

	Total Revenue.	London's Share.	Per Cent.
	£	£	
Indirect Taxation (i. and ii.) (57 per cent. of total).	52,560,000	5,973,000	11·4
Direct Taxation (iii. to vii.) (43 per cent. of total)	39,918,000	12,843,000	32·2
<b>Total taxation - - - - - £</b>	<b>92,478,000</b>	<b>18,816,000</b>	<b>20·34</b>

## II. London's Receipts from Treasury Subventions.

24. We come now to the estimate of what London receives in the way of subventions from the Treasury. In the foregoing calculations to determine the amount of London's contribution to Imperial Revenues, the year 1895-6 was taken as a basis, because it is the latest year for which certain details of the accounts are available. The following calculations are based for the most part upon the estimates for 1897-8. With regard to London's contributions to the Exchequer, there has been no material change in taxation since 1895-6 to vitiate the estimate arrived at in paragraph 23 above; but with regard to London's receipts from the Exchequer, recent legislation has materially affected London's proportionate share of Treasury subventions in relation to the rest of the United Kingdom.

25. The total contributions from the Exchequer in aid of Local Taxation were estimated as follows for 1897-8:—

	£
C.S. Est. Abst., p. xiv. A. Charges transferred from Local Funds, &c. (excluding rates on Government property) - - - - -	2,943,000
C.S. Est. Abst., p. viii. B. (i.) Public Education, and Grants from Science and Art Department - - - - -	10,452,000
F.S., p. 6. (ii.) Grants to Voluntary Schools and Necessitous Board Schools - - - - -	726,000
C. Local Taxation Account (Budget statement of Chancellor of Exchequer, 29th April 1897) - - - - -	8,979,000
<b>Total - - - - -</b>	<b>£23,100,000</b>

C.S. Est. Abst. pp. xii. and xiii. 26. With regard to A—Certain payments for Rates on Government property, amounting to £414,000 are not included as not properly speaking a subvention of any kind.

With regard to B (i.)—In the total of £10,452,000, some £326,000 of grants to the British Museum, National Galleries, &c., is not included, as these grants are for national rather than local purposes. These two sums—£10,452,000 and £326,000—make up the total of £10,778,000 shown at p. viii. of the C.S. Est. Abst. already cited.

A.R.B., p. 3. With regard to C—This sum includes the amount payable to local authorities under the Agricultural Rates Act of 1896; England's share for 1897-8 being £1,333,000.

**27. Charges transferred from Local Funds**—England's share of the total of £2,943,000 is £772,000, made up as follows:— APP. VII.

	£	
Diseases of Animals	22,000	
Poor Law Unions, County Councils, &c.	59,000	
Criminal Prosecutions	18,000	
Metropolitan Police	6,000	
Prisons, Reformatories, &c.	626,000	C.S. Est. Abst.
School Boards	41,000	
	£772,000	

From this, London may be said to benefit to the extent of £96,000, *i.e.*, £6,000 for the Metropolitan Police and £90,000 for prisons and reformatories (being in proportion to population—14·4 per cent. of the total for England and Wales). Consequently, London's receipts under this form of Treasury subventions may be estimated at **£96,000**, or 3·2 per cent. of the total received by the United Kingdom. Para. 4.

**28. Public Education and Grants from Science and Art Department.**—(i.) Of the total amount, £10,452,000, England's share is £8,117,000. Here, again, London would practically benefit in proportion to population. [For instance, in 1895-6 the London School Board, with 416,000 children in average attendance, or 9·4 per cent. of the total number of children in average attendance at Public Elementary Schools in England and Wales (4,423,000), received in fee and annual grants (day schools) £607,000, or 9·5 per cent. of the total amount of these grants received in England and Wales (£6,368,000).] Consequently, London's receipts from the Treasury under this head (including, of course, the grants received by non-Board Schools) may be estimated at 14·4 per cent. of £8,117,000, or **£1,169,000**, or 11·2 per cent. of the total for the United Kingdom. (ii.) Of the £726,000, £110,000 goes to necessitous Board Schools, and of this, London gets nothing; of the remainder, £616,000 for Voluntary Schools, it may be estimated that London will receive at the rate of 5s. 9d. per head of, say, 228,000 children in average attendance at Voluntary Schools, or **£65,000**. Therefore London receives from the Treasury in aid of public education **£1,234,000**, representing 11 per cent. of the total grant made, namely, £11,178,000. L.S.B.R.,  
p. 18.  
Ed. R., p. li.  
L.S.B.R.,  
p. 168.  
Ed. R., p. li.  
Para. 4.  
L.S.B.R.,  
p. 18.

**29. Local Taxation Account.**—A Parliamentary Return (No. 370 of 1897) shows that England received in 1896-7 £6,277,000 in the form of Treasury subventions on this account. A table at the end of the Finance Accounts 1896-7 shows that England received £6,991,000 on this account. The difference is in the Estate Duty, and practically represents the amount contributed by the Government under the Agricultural Rates Act, included in the latter sum, but not accounted for in the L.T.A. Return above quoted. L.T.A.,  
p. 23.  
F.A., p. 101.

The estimate under "Local Taxation Account," for the United Kingdom 1897-8 of £8,979,000 represents an increase of £730,000 upon the payments for 1896-7 (£8,249,000). This is practically entirely due to the operation of the Agricultural Rates Act, 1896. We shall, therefore, take the actual payments made in 1896-7 on Local Taxation Account (excluding those under the Agricultural Rates Act) as the estimate for 1897-8. With regard to payments under the Agricultural Rates Act, there is another return showing the amounts payable to each spending authority in England and Wales (No. 369 of 1897). We have, therefore, to consider (i.) Local Taxation Account proper, and (ii.) Agricultural Rates Act, 1896. Para. 25.  
F.A., p. 101.

(1.) London's receipts (based on actuals for 1896-7) may be estimated as follows:—

	£	
Local Taxation Licence Duties	452,000	L.T.A., p. 4. L.T.A., p. 4.
Share of Estate Duty	381,000	
Share of Customs and Excise Duties—		
Portion of £150,000 paid to Metropolitan Police	£	L.T.A., p. 19, note §.
Pension Fund	117,000	
Share of residue	185,000	L.T.A., p. 19.
	302,000	
	<b>£1,135,000</b>	

APP. VII.

(ii.) According to the return already cited, London's exact share of the grant under the Agricultural Rates Act, 1896 (approaching £2,000,000) is as follows:—

	£	s.	d.
A.A.R., p. 4. London County Council	931	10	2
A.A.R., pp. 9 Metropolitan Boards of Guardians	184	15	0
-11. 78 per cent. of amount paid to Receiver for Metropolitan			
A.R.R., p. 11. Police District (£4,389 14s. 8d.)	3,424	0	0
L.T.A., p. 19, note §. [N.B.—£117,000 = 78 per cent. of £150,000.]			
A.R.R., p. 18. London School Board	705	10	0
	<b>£5,245</b>	<b>15</b>	<b>2</b>

that is to say, in round numbers, **£5,000** out of £1,333,000 for England and Wales.

Therefore, we may estimate London's receipts out of the total Treasury Grants on Local Taxation Account (including those under the Agricultural Rates Act) at **£1,140,000**, or **12·7** per cent. of the total (£8,979,000).

**30.** Summarising the last three paragraphs, we have London's total estimated receipts from Treasury subventions in 1897-98:—

	Total Grants.	London's Receipts.	Per cent. of Total.
	£	£	£
Charges transferred from Local Funds	2,943,000	96,000	3·2
Education Grants	11,178,000	1,234,000	11·0
Local Taxation Account	8,979,000	1,140,000	12·7
<b>Total</b>	<b>23,100,000</b>	<b>2,470,000</b>	<b>10·7</b>

**31.** The contrast between London's contribution to Imperial Revenues and London's receipts from Treasury subventions, as here estimated, is striking in whatever way the figures are examined. Here are the foregoing calculations brought to a point:—

	London pays	London receives
Para. 22. To Imperial Revenues	- 21·75 %	From Imperial Grants
Para. 23. " Taxation	- 20·34 %	(above par. 30)
		- 10·7 %

**32.** But the above comparison is the least favourable to London's reasonable claim to more liberal treatment by the Treasury. When we come to analyse the Treasury subventions we find them to be of two chief kinds—earned grant, and unearned grant. To the former class belong the Education Grants dependent on results (including the Fee Grant, which is conditional on the abolition of fees); to the latter class belong all other grants or payments made on local account. We may, therefore, divide the grants as follows:—

	Total.	London's Portion.	Per cent. of Total.
	£	£	
Para. 28(i.) (Treasury subventions)			
Paras. 28(ii.) & 30. Earned grant	10,452,000	1,169,000	11·2
Unearned grant	12,648,000	1,301,000	10·3

**33.** We have now the material for a double antithesis:—

	London pays	London receives
	<i>Of Indirect Taxation</i>	<i>Of Earned Grant</i>
Para. 23. London pays as she consumes	11·4 per cent.	London receives as she earns
		11·2 per cent.
	<i>Of direct Taxation</i>	<i>Of Treasury Subventions</i>
Para. 23. London pays out of pocket	32·2 per cent.	London receives
		10·3 per cent.

34. There are, of course, many other points worth looking into, but the chief point is that upon the foregoing facts and estimates London receives far less assistance from the Imperial Exchequer than she is entitled to on the basis of her contributions towards Imperial Revenues. Translated into money, we may put the matter thus.

APP. VII.

35. Taking the contrast as shown in paragraph 31 as our basis, we have:—

	£	
Total subventions from Treasury	23,100,000	Para. 25.
London's share according to Taxation (20·34 per cent.)	4,698,000	Para. 23.
„ actual receipts (10·7 per cent.)	2,470,000	Para. 30.
Further subvention to which London is entitled	<u>£2,228,000</u>	

This is equivalent to a rate of nearly **1s. 3d. in the £.** Of this, upon the basis of the existing distribution of the grants, Education should receive about half, or £1,114,000, of which about two-thirds, or **£743,000**, should go in reduction of the School Board Rate, reducing the same by **5d. in the £.**

36. Taking the contrast as shown in paragraph 33 as our basis, we have:—

	£	
Total subventions from Treasury (unearned grant)	12,648,000	Para. 32.
London's share according to direct taxation (32·2 per cent.)	4,072,000	Para. 23.
London's actual receipts (10·3 per cent.)	1,301,000	Para. 32.
Further subvention to which London is entitled	<u>£2,771,000</u>	

This is equivalent to a rate of over **1s. 6d. in the £.**

## APPENDIX VIII.

Memorandum prepared for the Commission by Mr. T. J. Macnamara, Member of the London School Board. [See MINUTES OF EVIDENCE, QUESTIONS 18,412-18,475.]

### I. On Resolution I. of the Board.

APP. VIII.

“That such reforms may be instituted as to secure that more equitable relations may be maintained between the proportion of the cost of Elementary Education borne locally and centrally respectively; and that such reforms shall provide for an equitable relation between London and the rest of the Country as regards Contributions to Imperial Revenues and Receipts from Treasury Subventions.”

Resolution I.

1. I wish to point out that according to the Appendix (p. 558) to the Report of the Committee of Council on Education for 1896-97, the aggregate amount raised from the local rates by school boards in England and Wales for the year ended September 29th 1896, was 4,571,260*l.* 12*s.* 8*d.* During the same period the total amount of Exchequer Grants received (including 22,582*l.* 19*s.* 8*d.* received by school boards from either town or county councils under the Technical Instruction Act, 1889) was 3,172,120*l.* 14*s.* 5*d.* According to the same Report the amount raised from the local rates in London during the same period was 1,728,162*l.* 0*s.* 2*d.* and received from the Imperial Exchequer 657,491*l.* 16*s.* Subtracting these amounts from the aggregates for England and Wales, it appears that England and Wales,

Exchequer Grants.  
Proportion of expenditure on education met by grants smaller in London than in rest of England and Wales.

APP. VIII.

excluding London, raised 2,843,098*l.* 12*s.* 6*d.* for local rates and received 2,514,628*l.* 18*s.* 5*d.* from the Imperial Exchequer. *This gives a percentage of nearly 53 borne by the local rates and of just over 47 borne by the Imperial Exchequer. The percentages for London alone are 72 per cent. borne by the local rates and 28 per cent. borne by the Imperial Exchequer. These ratios have been fairly constant for the last five years.*

Exchequer Grants. London contributes one-sixth of Exchequer income, but does not receive back one-sixth of grants under Agricultural Rates Act and Voluntary Schools Act.

2. The disproportion, as far as London is concerned, between the amounts raised locally and contributed from central sources is intensified as the result of recent legislation. Of the total Exchequer Grant payable under the Agricultural Rates Act, a moderate computation—based upon the estimate that London contributes one-sixth of the Exchequer income—gives London's contribution at 375,000*l.* per annum. In return for this contribution London receives for the current year Exchequer Grants of, say, 5,000*l.* on behalf of agricultural land within its municipal area. Again, under the Voluntary Schools Act, a sum of 710,685*l.* is to be disbursed this year in the form of special aid to the Managers of Voluntary Schools. Of this total, London—upon the same estimate—contributes, roughly, 123,200*l.*, and receives back on behalf of the voluntary schools within its own area, at the rate of 5*s.* 9*d.* per head of the children in the schools, a sum of 44,725*l.* It should be observed that the net loss here (over 78,000*l.*) is distributed as special aid from the Imperial Exchequer to schools situated in districts *which, in many cases, raise absolutely nothing locally for education, and, in the great majority of cases, contribute altogether insignificant amounts from their local resources.*

Exchequer Grants. Necessitous School Boards relieved from Imperial funds to which London contributes, but receives nothing under this head in return.

3. The matter is rendered even more unfair from the point of view of London from the fact that under the Necessitous School Boards Act of 1897 London is compelled to contribute to the relief of local rates in provincial school board districts a sum estimated at 22,000*l.* a year, receiving nothing in relief of local taxation itself in return. In this connexion it is worthy of note that of the 2,493 school boards in the country, 794—according to Parliamentary Paper [C-8422] 1897—receive special aid from the Imperial Exchequer in relief of local taxation, either under the Necessitous School Boards Act or under section 97 of the Act of 1870; *and of these 794 no fewer than 520 are rated, for school purposes, lower than London, whilst in 75 of the cases of the school boards receiving such special consideration from the Imperial Exchequer the rate is either under, or does not exceed, 6d in the £.*

## II. On Resolution III. of the Board.

Resolution III.

“That the School Board Rate should be so levied as to include some direct charge on the Owners of Site Values.”

Site values, taxation of, for education purposes desirable. System in force in Scotland.

It has no doubt been represented to the Commission that the site value of London during the past 66 years has increased from 3,000,000*l.* in 1830 to 15,096,620*l.* in 1896 (*see Report by Valuer to L.C.C., 18th January 1897*). This is the property which it is now proposed—as is the case already in Scotland—to bring under direct contribution to the school charge. I need not remind the Commission that on the 8th March 1895 a motion for the taxation of ground values was adopted by the House of Commons, without a division, in the following terms:—

“That no system of taxation can be equitable unless it includes the direct assessment of the enhanced value of land due to the increase of population and wealth and the growth of towns.”

The subject is admittedly a difficult one. There seems to be no means of gauging how far, in the long run, if at all, the owner is rendered contributory to local taxation; and it is of course open to argument that the taxation of site values will come back upon the occupier in the shape of increased rent. But it must be pointed out that the school board rate is the creation of the past 27 years, and that there must be a vast number of leases drawn before 1870, and still running, *where clearly the whole burden of the rate falls upon the occupier.*

In Scotland, as I have said, the obligation of the owner is directly fixed. Section 44 of the Scotch Education Act of 1872 reads as follows (the italics being mine):—

“Any sum required to meet a deficiency in the school fund, whether for satisfying present or future liabilities, shall be provided by means of a local rate within the parish or burgh in the school fund of which the deficiency exists.”

"The school board of each parish and burgh shall annually, and not later than the twelfth day of June in each year, certify to the parochial board or other authority charged with the duty of levying the assessment for relief of the poor in such parish or burgh the amount of the deficiency in the school fund required to be provided by means of a local rate, and the said parochial board or other authority is hereby authorised and required to add the same under the name of "school rate" to the next assessment for relief of the poor, and to lay on and assess the same, *one half upon the owners and the other half on the occupiers of all lands and heritages*, and to levy and collect the same along with the assessment for relief of the poor when that assessment is so imposed and levied, and to pay over the amount to the school board . . ."

For London the only authoritative specific suggestions already made, so far as I can gather, are :--

- (a.) That the term "Site Value" be defined as follows:—"The annual rent which at the time of valuation might reasonably be obtained for the land comprised in any hereditament, as a cleared site, if let for building by an owner in fee; or, if the land be not built on or let for building, a proportion equal to 4 per cent. of the price which, at the time of valuation, might reasonably be obtained for the land by such owner."
- (b.) That the tax should commence at a rate of one shilling in the pound upon the Site Value assessments.
- (c.) That the L.C.C. should be empowered to alter the tax from time to time by an amount not exceeding 2d. in any one year, so that the rate shall not exceed two shillings in the whole.

Site values.  
taxation of.  
Definition  
of "Site  
Value" and  
suggested  
scheme for  
taxation.

These are the fundamental suggestions of the L.C.C. Local Government and Taxation Committee of 29th November 1893.

### III. On Resolution IV. of the Board.

"That it is in the interests of the Ratepayers that the system of Assessment for rating purposes should in all cases be equitable and uniform."

Resolution  
IV.

The Members of the Commission will be aware, of course, that certain classes of property are allowed partial or total exemption from rating—a circumstance which, I need not add, increases the burden upon the properties fully rated.

Exemptions  
from rating  
increase the  
burdens  
falling upon  
other proper-  
ties.  
Properties  
exempt.

These consist of :--

- (a.) Properties at and below 20*l.* in value, which are allowed a deduction of 15 per cent. from the rates when the rates are paid by the landlord, and a further deduction up to a maximum of 15 per cent. if the rates are paid whether the premises are occupied or empty.
- (b.) Property not occupied, which in the city of London is exempt to the extent of half; in the rest of London wholly exempt.
- (c.) Land in respect of which only two-thirds of the sewers rate is levied, and certain other property, chiefly land, in respect of which only one-fourth of the lighting rate is levied.
- (d.) Certain classes of property exempt from rating by statute.

It is impossible to ascertain with absolute accuracy the aggregate value which wholly or partially escapes rating in London; but a County Council Return\* shows that under (a.) the rateable value which may be exempt—and the great bulk of which, no doubt, is exempt—amounts to 554,380*l.* Under (b.) unoccupied properties on April 1896 were valued at 1,162,395*l.* Under (d.) there are a variety of properties partially or wholly exempt under a considerable number of statutes, and I take the last only—the Voluntary Schools Act—under which properties of the rateable value in 1896 of 27,612*l.* are now exempt from rating.

\* See App. (Part II.) to Vol. I. of Minutes of Evidence, pp. 282-292.

## APPENDIX IX.

**Memorandum prepared for the Commission by Mr. Charles William Tagg, Clerk to the Camberwell Vestry. [See MINUTES OF EVIDENCE, QUESTIONS 18,476-18,781.]**

## APP. IX.

Camberwell.  
Gross and  
Rateable  
Value and  
Rates levied  
and collected.

1. The parish of Camberwell has an area of 4,342 acres, and has 40,241 assessments. The gross and rateable value, according to the last quinquennial valuation list, was as follows:—

	£	s.	d.
Gross value	1,408,870	3	0
Rateable value	1,142,632	0	0

The rates for the year ending March 1897 were:—

Poor rate at 4s. 4d. in the £.

Vestry rates at 2s. 8d. in the £.

The amount actually collected for same period was:—

	£	s.	d.
Poor rate	236,917	10	9½
Vestry rates	145,783	17	7½

I.—*System adopted in making the Valuation List.*

Camberwell  
parish is an  
independent  
poor law and  
sanitary  
area.

2. The parish of Camberwell is a separate parish (not in union) for local government purposes, having a vestry constituted under Schedule A. of the Metropolis Management Act, 1855, and is a separate parish for assessment and rating purposes, having an assessment committee appointed under section 5 of the Valuation (Metropolis) Act, 1869.

Preparation  
of Valuation  
List and  
hearing of  
objections to  
List.

3. In the quinquennial year, returns are issued to the occupiers of property in the parish in the month of February in accordance with section 56 of the Valuation (Metropolis) Act, 1869. From these returns the overseers make and deposit the valuation list before the 1st of June. Notice of the deposit is given upon the church and chapel doors, and in every case of an increase in the gross and rateable values of any hereditament or insertion of any hereditament not previously assessed, notice is sent to the occupier. The overseers, within 14 days of the notice of deposit, transmit the same to the assessment committee. At any time after the deposit of the list, and before the expiration of 25 days after the notice of the deposit, any person who may feel himself aggrieved by the valuation list on the ground of unfairness or incorrectness in the valuation of any hereditaments included therein, or on the ground of the omission of any rateable hereditament therefrom, may give to the committee and the overseers a notice in writing of his objection, specifying the grounds thereof, and where the ground of any objection shall be unfairness or incorrectness in the valuation of any hereditament, in respect of which any person other than the person objecting is liable to be rated on the omission of such hereditament, also give notice in writing of such objection, and of the ground thereof, to such other person. The surveyor of taxes for the district also has the same right of objection to the valuation list for his district.

4. The committee then fix the times for hearing objections to the list, and notice of the same is given by the overseers in the same manner in which notice of the deposit of the list is given. The committee then hear and determine the objections, and make such alterations, insertions, and corrections in the list as they deem necessary, and approve the valuation list under the hands of three members of the committee present at the meeting at which the same is approved.

Valuation  
List, re-de-  
posit of, and  
hearing of  
subsequent  
objections.

5. Where the committee make any alteration in the valuation of any hereditaments included in the list, or insert any hereditament omitted therefrom, the list is re-deposited with the overseers, who give notice thereof in the same manner as in the first deposit of the list, the notice specifying the time the assessment committee will meet for hearing objections to the alterations, of which objections seven days' notice must be given by the objector.

6. The committee then hear the objections on the re-deposit, and, having determined such objections, finally approve the valuation list under the signatures of three

APP. IX.

members present at the meeting. A duplicate of the list is then sent to the clerk to the London County Council before the 1st November in the same year.

Ascertainment of gross and rateable values.

7. The principles adopted by the assessment committee of the parish of Camberwell for determining the gross and rateable values of the different classes of property are those framed and adopted by the conference of metropolitan assessment authorities in 1893-94.\*

Special properties, valuation of.

8. Special properties, such as railways, water and gas works, manufactories, &c. are valued by a professional valuer. I think the present practice of each parish employing its own valuer to value these properties for their respective parishes would be more beneficial to the local authorities.

Surveyor of Taxes. Action taken by Surveyor.

9. The surveyor of taxes for the two districts comprised in the parish of Camberwell attend the meetings of the assessment committee which are held for hearing objections to the valuation lists, and generally assist the committee in its duties in revising the lists. Where the surveyor of taxes has knowledge of the increase in the value of any hereditament in his district, notice thereof is sent to the overseers with a request to insert the same in a provisional list, and notice to this effect is also sent to the assessment committee.

Objections and appeals, number of.

10. The number of objections heard at the last quinquennial valuation was 2,376, the hearing of which occupied 18 days. There were nine appeals against the decision of the Assessment Committee, of which eight were settled out of court, and the remaining one was heard and the appeal allowed with costs.

Under-assessment in Metropolis. Effect on Camberwell if other districts under-assessed.

11. If the county of London (excluding Camberwell) were under-assessed to the extent of 100,000*l.*, there would be a total deficiency on a 1*s.* central rate of 5,000*l.* This would have to be met by the whole of London, and Camberwell would contribute its proportion, thus:—

$$\begin{array}{r} \text{£} \\ \text{(Camberwell)} \quad - \quad - \quad 1,158,038 \\ \text{(London)} \quad - \quad - \quad 36,098,722 \end{array} \times 5000 = 160\text{l.}$$

Another way of putting the same thing is to say that if London were fully assessed, instead of being under-assessed, a rate of only 11·97*d.* would have to be levied instead of a rate of 1*s.*, which would be a relief of 03*d.* in the £ to Camberwell (160*l.*).

The central rates for the current year amount to 4*s.* 3·07*d.* in the £, and on these the deficiency would be equal to a rate of 14*d.* instead of 03*d.*, and the extra charge on Camberwell would be 682*l.* instead of 160*l.* for every 100,000*l.* under-assessment.

## II.—Steps taken with a view to securing Uniformity of Assessment throughout the Metropolis.

Assessment Conference of London County Council. Overseers and Assessment Committee of Camberwell have adopted regulations drawn up by Conference.

12. The assessment committees in the metropolis feeling the urgent need of uniformity of the methods of assessing property, a Conference of the metropolitan assessment authorities was convened at the instance of the London County Council, for the purpose of promoting uniformity in assessments. The Conference was composed of representatives of assessment committees and overseers of the county of London and the members of the Local Government and Taxation Committee of the London County Council; 56 parishes were represented by overseers and 20 assessment committees at the conference, which met at Spring Gardens, and sat from March 1893 to March 1894. The Conference prepared rules and regulations\* for the guidance of overseers and assessment committees throughout the metropolis, which have been generally adopted as a uniform basis of assessment by the various assessment and rating authorities. The overseers and assessment committee of the parish of Camberwell have adopted the regulations as a basis of assessing property in the parish.

13. As regards the deductions allowed from the gross annual value for the purpose of arriving at the rateable value, these are shown in Table B, adopted by the Conference of rating authorities, and are the maximum allowances for classes 1, 2, 3, 4, and 5 of the third schedule of the Valuation (Metropolis) Act, 1869. As far as I know, the deductions allowed under the above schedule are uniformly adopted.

\* London County Council Return. Assessment Conference, 1893-94, Resolutions, &c. (No. 168).—P. S. King and Son, Great Smith Street, Westminster, S.W.

APP. IX.

III.—Method of levying and collecting Rates.

Camberwell. Rates made half-yearly and collected quarterly. Poor Rate and Vestry Rates.

14. The overseers make a poor rate, and sewers, lighting, and general rates for the period of half-a-year, payable by two quarterly instalments. The rate is allowed by two justices of the peace. Publication of the rate is made on the Sunday next following the making by affixing notices to the doors of the churches and chapels in the parish. Books containing between 200 and 300 demand notes\* and receipts attached are issued

\*The following is a copy of the Demand Note in use :—

District No. Demand for Rates, which must be produced on payment

PARISH OF CAMBERWELL.

Mr.

The Overseers of the Poor demand payment of the Poor and other Rates, made the 15th April 1898 (for the half-year ending Michaelmas, 1898), as below, now due from you :

Rateable Value, 38l.		£	s.	d.	
Amount of Poor Rate at 2s. in the Pound	-	-	3	16	0
Amount of Vestry Rate at 1s. 4d. in the Pound	-	-	2	10	8
			<u>6</u>	<u>6</u>	<u>8</u>

Particulars of the Rate, or purposes for which the same has been made at 3s. 4d. in the Pound.

Poor Rate.		£	s.	d.		
Guardians of Camberwell	(estimated)	37,352	19	5	} Estimated at in the £	1s. 0½d.

Do. do. Lighting do.		7,489	11	7		
Do. do. General do.		35,064	18	9		
*School Board for London do. do.		27,684	16	8		
		<u>£71,270</u>	<u>5</u>	<u>10</u>	7¾d.	1s. 2d.
					6¼d.	1s. 4d.

Total for Half-year - 3s. 4d.

The sum of 11,240l. 1s. 9d. is the estimated amount to be received by the Vestry of Camberwell from the London County Council out of the Equalisation Fund authorised by the London (Equalisation of Rates) Act, 1894. The amount of the Rate hereby demanded is by reason of such receipt less to the extent of about 2½d. in the £ than it otherwise would have been.

The Overseers are the Collecting Authority, those items marked thus \* do not bear any part of the cost of collection.

The rates may, if desired, be paid in two equal instalments, viz. : on the 19th April 1898, and the 28th June 1898.

Office Hours - - - { Tuesday Morning, 9 to 12.  
Thursday Afternoon, 3 to 8.

Collector :

The occupier of any rateable hereditament let to him for a term not exceeding three months shall be entitled to deduct the amount paid by him in respect of any Poor Rate assessed upon such hereditament from the rent due or accruing due to the owners, and every such payment shall be a valid discharge of the rent to the extent of the rate so paid.—The Poor Rate Assessment and Collection Act, 1869. Sec. 1.

Owners of small property who have undertaken to pay the rates in lieu of the occupiers will, on making default in the payment of one or more instalments, determine any existing agreement with the Overseers.

Ratepayers are particularly requested to see that they obtain an Official Receipt bearing a number corresponding with the number on this Demand Note, and also the official impress. No other form of receipt will be acknowledged by the Overseers.

Ratepayers moving from one part of the Parish to another are requested to inform the Overseers of the same forthwith, in order that their names may not be struck off the List of Voters. Removals from any part of the County of London into this Parish should also be notified.

A Stamped Envelope must be sent in all cases where a receipt or an answer is required from the Collector. Cheques to be crossed "London Joint Stock Bank (Peckham Branch)," and made payable to the order of the Collector.

The attention of the parishioners is directed to the following :—

FINE ART GALLERY AND MUSEUM, Peckham Road, S.E.,  
Open daily, 2 p.m. to 10 p.m.; Sundays, 3 p.m. to 9 p.m.

CAMBERWELL SCHOOL OF ARTS AND CRAFTS, Peckham Road, S.E.,  
For prospectus and particulars apply Headmaster.

PUBLIC LIBRARIES, "Central," Peckham Road; "Livesey," Old Kent Road; "Dulwich," Lordship Lane; "Nunhead," Gordon Road; "Minet," Knatchbull Road; and Neate Street (temporary).

PUBLIC BATHS, "Camberwell," Camberwell Green; "Dulwich," Goose Green.

PUBLIC WASHHOUSES, Harvey Road, Camberwell Green.

to the rate collectors, comprising the amounts of the poor and general rates payable in respect of each hereditament, and showing the various rates in detail. There are 13 collectors of rates, who collect both poor and general rates.

15. The collector detaches the demand note and serves the same upon the occupier of the property described thereon. Upon payment of the rates the receipt is then detached, leaving only a counterfoil in the book. At the close of the rate these books containing the counterfoils are sent to the rating office, and the rate books are then posted up therefrom.

Sums payable to various authorities therefrom.

16. In cases where the rates remain unpaid upon a certain date in each quarter, summonses are issued requiring the persons whose rates are unpaid to attend before two justices of the peace in petty sessions to show cause. An order is then made by the justices for payment to be made within seven or ten days. If the rates are still unpaid at the expiration of that time, and sufficient cause has not been shown why the rate should not be paid, warrants are signed by the justices for the recovery of the rates by distress, and if no sufficient distress can be obtained proceedings for a commitment are commenced, and a warrant signed accordingly.

Summonses and warrants. Cases where issued.

#### IV.—*Composition Allowances and Deductions.*

17. The commission allowances made to owners for compounding the rates is made by agreement with the overseers under section 3 of the Poor Rate Assessment and Collection Act, 1869, and varies from 10 per cent. to 25 per cent. according to the class of property, the maximum rateable value of compounded hereditaments being 20*l*. The total amount of commission allowed on property in the parish for the year 1896 was as follows:—

Compounding in Camberwell. Voluntary system in force. Allowances vary from 10 to 25 per cent.

	£	s.	d.
Poor rate - - - - -	7,463	7	6½
Vestry rates - - - - -	4,591	19	2½
	<u>£12,055</u>	<u>6</u>	<u>9</u>

The per-centage allowances are all fixed after the overseers have viewed, and regard is paid both to the situation and letting capability of the street.

18. In Camberwell, as in most other districts, the property that can be compounded varies greatly in character, and during the last four years it has been found that the only just way of dealing with this is to schedule all property at a certain per-centage, which must vary from time to time as districts rise and fall.

19. Composition allowances are advisable both for the parish and the owner when the right amount can be fixed, as the difficulty of collecting the rates from the very poor tenant who cannot pay his rent is very great, and entails much loss. Owners who have bad tenants frequently refuse to pay the rates, in order that the local authority should press for payment and rid them of such tenants.

20. With reference to uniformity in the compounding system, it was one of the questions set down for consideration at the London County Council Conference, but was finally voted out on the ground that the subject did not bear on the question of assessment, and was not really within the scope of the purposes for which the Conference was convened.

#### V.—*Properties exempted from Payment of Rates.*

21. Local rates are not paid in respect of the following properties situated in the parish of Camberwell:—

Exempted properties in Camberwell.

- (i.) Properties in the occupation of the Crown, viz., Lambeth County Court, three Post Offices, and the Inland Revenue Office. The Treasury makes a grant in lieu of rates in respect of these properties which is equivalent to the loss sustained by the parish by their exemption.
- (ii.) Properties under the control of the London County Council, viz., Peckham Rye Park and Keepers' Lodges, Dulwich Park and Keepers' Lodges, Myatts Park and Keepers' Lodges, and the Coroner's Court and Caretaker's Rooms.

## APP. IX.

- (iii.) Properties under the control of the local authority, viz., five public libraries, and the Fine Art Gallery and Technical Institute.
- (iv.) Miscellaneous properties, viz., Drill Hall (1st Surrey Rifles), Churches and chapels used for religious worship, Sunday and Ragged Schools, and Voluntary Schools.

VI.—*Whether Empty Property should be liable for any Portion of the Rates.*

Empty property should bear some proportion of rates.

22. "Empty" property should bear some proportion of local taxation. In many cases property is kept empty for various reasons, as in this parish we have now a large limited company keeping three large shops, of average value of 170*l.* each, empty until the extension of the company's business requires them to open. Another case of an owner who has kept a private house rated at 60*l.* empty since October 1889 with a view of ultimately retiring into it; he would not sell or let; estimated loss in rates, 161*l.* 10*s.* Another private house rated at 67*l.*, empty since October 1889, owner lives next door, estimated loss to parish 190*l.* 19*s.* Other cases could be given.

VII.—*Whether the System of the Equalisation of Rates is beneficial to the Localities as a whole.*

Equalisation of rates in Metropolis. Extension of system desirable.

23. In my opinion it is a system for equitably apportioning the rating burdens over the whole of the Metropolitan parishes. I think the principle should be extended in the direction suggested by the following resolution which was moved by myself, and adopted by the Conference of representatives of vestries and district boards on local government held at the London County Council in 1896:—

That the Council be requested to have a return prepared to show—(1) the gradual extension of the principle of equalisation of local expenditure in the Metropolis, and the extent to which such principle has now reached; (2) the effect of further equalising local expenditure by a system of grant from the county funds in payment of half the salaries and superannuation of all officials employed by vestries and district boards, an agreed sum per square yard for repairs and cleansing of public highways, and per yard run for repairs and cleansing of sewers, an agreed sum per tenement in respect of dust collecting, the entire cost of public lighting, one-half the charge in respect of debt incurred for sewers, paving, and local improvements, the entire costs of burial boards, public libraries, baths and washhouses; and (3) the effect of equalising the whole of the local expenditure by vestries and district boards with the exception of such special expenditure as that for church rates and other purely parochial functions which do not extend to more than one parish.

VIII.—*Suggestions for securing Uniformity of Valuation and Collection throughout the Metropolis, and for the rating of Advertising Stations.*

Returns as to rent paid. Further powers should be given to valuation authorities.

24. The assessment committee of the parish of Camberwell, on the 27th January 1898, passed the following resolution:—That the clerk be instructed to suggest to the Royal Commission on Local Taxation that the law should be so altered as to give overseers and assessment committees the right to demand, in the case of a change of occupation of a hereditament during the quinquennial period, the same facts as at the quinquennial valuation, and such demand to include the amount of premium paid for licensed premises.

Suggestions as to system of valuation and collection.

25. I also suggest—

- (i.) That there should be one value for all purposes, viz., the rateable value, and the gross value should be abolished.
- (ii.) That the overseers, instead of being appointed by the justices, should be directly appointed by the local sanitary authority as under the Local Government Act, 1894.
- (iii.) That assessment committees should be appointed by the same, viz., local sanitary authority, instead of by the unions as at present in many cases.
- (iv.) That for the purpose of obtaining uniformity in the methods of assessing property in the Metropolis, byelaws should be framed by a central authority similar to those framed by the Assessment Conference of 1893-4, and

that a central authority should be established for each county, who shall form the court for assessment appeals, and also enforce the general byelaws.

(v.) That the collection of all rates upon land or property should be carried out by officers directly appointed by the local sanitary authority, and that the separate collection by Queen's-tax collectors, guardians, overseers, and other collectors, should be abolished, but that the income tax on profits and income should be collected through the surveyor of taxes direct.

(vi.) That the Advertising Stations (Rating) Act, 1889 (52 & 53 Vict. c. 27.) should be repealed, and that all advertisements for posting on hoardings, &c. should bear a stamp of the local authority, for which the local authority should make a scale of charges according to the size and character of the advertisements, the person advertising, and not the bill poster, to be made liable for the charges. The local authority would thus be able to control the advertisements posted on the advertising stations, within the area under its jurisdiction, and the difficulty experienced under section 2 of the above Act, viz., that of finding the person in receipt of the rack rent of the lands or premises used for advertising purposes, would be abolished.

alterations.

## APPENDIX X.

**Memorandum prepared for the Commission by Mr. Henry George Hills, Clerk to the Board of Works for the Wandsworth District.** [See MINUTES OF EVIDENCE, QUESTIONS 19,698-19,837.]

### APP. X.

1. I have been Clerk to the Board of Works for the Wandsworth District for 13 years, and was for the previous nine years Assistant Clerk to the Board. The district comprises the parishes of Clapham, Putney, Streatham, Tooting Graveney, and Wandsworth. The area of the district is 9,285 acres (about 14½ square miles). The rateable value is 1,311,416*l*. The population at the Census of 1896 was 187,264. The population is now at least 200,000. The district forms part of the Wandsworth and Clapham Union, which comprises the five parishes above mentioned and the parish of Battersea.

Wandsworth  
Sanitary  
District.  
Area, rate-  
able value,  
population,  
&c.

2. The expenditure of the District Board of Works is charged to the respective parishes in which the works are executed, with the exception of the establishment expenditure and the School Board precepts. These are charged in proportion to the rateable values of the respective parishes. The establishment expenditure is less than one-thirtieth of the expenditure of the Board, exclusive of the School Board precepts. The School Board precepts amount to between one-third and one-fourth of the Board's expenditure.

Expenses of  
District  
Board and  
School  
Board.  
Method of  
apportioning  
between  
parishes.

3. The money required for the expenditure of the Board is raised by orders made by the Board upon the overseers of the several parishes in the district, and includes the general, the sewers, and the lighting rates. The rates are made and collected by the overseers. The poor rates are also made and collected by the overseers, but the orders for the poor rates are made upon the overseers by the guardians of the union.

Precepts of  
Local Au-  
thorities  
issued to  
Overseers.

4. A statement showing the rates made in the several parishes in the district during the last eight years is given in Table A.

Rates made  
in 1890-97.

**APP. X.**  
**Collection of rates.**

5. The collectors of the general, sewers, and lighting rates are appointed by the overseers and the collectors of the poor rates by the guardians of the union, except in those cases where all the rates are collected by the same collector, when the appointment of collector is made by the guardians and the overseers jointly. In two of the parishes in the district the poor rate is collected by one collector, and the general, sewers, and lighting rates by another collector. In the three other parishes the same collector collects all the rates.

6. I am of opinion that in every case all the rates should be collected by one collector.

7. The overseers pay over to the District Board the balances of the general, sewers, and lighting rates remaining in hand after payment of the amounts of the orders upon them and the cost of collection.

**Valuation lists, Preparation of.**

8. The District Board has nothing to do with the preparation of the valuation lists nor with the assessment of property. The valuation lists are prepared by the overseers, and the assessment committee is appointed by the Board of Guardians.

**Assessment Committees, Appointment of.**

9. I am of opinion that the assessment committees should be appointed by the local authorities and not by boards of guardians. In many of the larger parishes of London the assessment committee is appointed by the vestry, and this change would make the system uniform.

**Precepts should be served upon District Board.**

10. I am of opinion that the precepts of the London County Council, and all other precepts requiring the payment of money to be raised by rates, should be served upon the District Board, and that the only authority to serve precepts upon the overseers should be the District Board, in order that that Board should have official cognizance of all moneys raised by rates in the district.

**Overseers, Appointment of.**

11. The overseers of the several parishes in the district, with the exception of one parish, are appointed by the respective vestries. The overseers of the parish in question are appointed by the justices of the division from a list of persons nominated by the vestry of the parish. I think that the vestries should appoint the overseers in every case.

**London (Equalisation of Rates) Act. Further extension of principle not desirable.**

12. I am of opinion that the London (Equalisation of Rates) Act, 1894, has acted beneficially to the localities as a whole, but I am not in favour of an extension of the system upon the basis of that Act. Table B gives a statement of the sums received by the Board of Works for the Wandsworth District under that Act. The amount received last year was equal to a rate of about  $1\frac{1}{2}d.$  in the £. The School Board precepts have increased during the last four years  $2d.$  in the £, whilst the general rate (which includes the School Board precepts) has increased on the average of the several parishes in the district about four-fifths of a penny in the £ during that time. The general rate would therefore have increased over  $2d.$  in the £ had it not been for the operation of the Equalisation of Rates Act.

**Under-assessment in London. Effect upon Wandsworth.**

13. If other parishes in London are under-assessed to the extent of 100,000*l.*, the effect would be that the Wandsworth District Board would be called upon to pay, according to the latest figures, about 170*l.* a year less to the School Board, and would receive about 110*l.* a year more from the Equalisation of Rates Fund. This is in respect of the general rate only, and does not take into account many large sums which are raised by the overseers, but do not pass through the hands of the District Board, and which are based upon rateable value, as, for instance, the precepts of the London County Council, the Police, and the payments to the Metropolitan Common Poor Fund.

**Valuation (Metropolis) Bill, 1894.\***

14. The Board of Works for the Wandsworth District considered the Valuation (Metropolis) Bill, which was promoted by the London County Council in the Session of 1894, for better securing uniformity in the valuation and assessment of rateable property in London, and approved of the principle of the Bill.

TABLE A., showing the AMOUNT in the £ of the respective RATES therein mentioned which have been levied by the OVERSEERS of the several PARISHES in the WANDSWORTH DISTRICT during the last eight years, viz. :—

## APPENDIX XI.

**Memorandum prepared for the Commission by Mr. B. F. C. Costelloe, on behalf of the London County Council.—[See MINUTES OF EVIDENCE, QUESTIONS 19,907-20,448.]**

APP. XI.

1. I am, and have for many years been, the chairman of the Local Government and Taxation Committee of the London County Council, in which office I succeeded Lord Farrer, then Sir Thomas Farrer, in the year 1890. With certain intervals I have occupied that position ever since. I have consequently had an intimate and continuous acquaintance with the proceedings and discussions which have taken place in the Council upon the question of taxation in its reference to London during the whole of the Council's existence.

2. Even before I stood as a candidate for the first Council, I had long taken a special interest in all matters which concern the land question. This subject, especially in its bearing upon the manner in which the local revenue of London ought to be raised, was a prominent topic in the first Council election, and has continued to be an important question in all subsequent elections. As a consequence the matter has been almost continuously before the Council itself in one form or another.

3. At and before the time of the election of the first Council the form in which it was commonly referred to in public utterances was "the taxation of ground rents," and it was undoubtedly felt at that time as a grievance that the large ground owners of London were in no way contributing to the very great and growing cost of London administration and improvement, which was being paid out of the pockets of the occupying ratepayers. At that time the question had not been thought out in all its bearings; but the grievance I refer to was a kind of object-lesson, which directed attention and stimulated closer inquiry. At the same time the efforts of a small but energetic party who held extreme views about the land question (such as Mr. William Saunders, the late M.P. for Walworth) pressed upon the consideration of certain sections of the public, and in particular of the first Council, the whole question of the unearned increment of London land, and of the injustice alleged to attend the present system of tenure. As a result of these forces two movements developed in the first Council. One movement proceeded from what I may call the more moderate party of reformers, represented by men like Lord Hobhouse, who were convinced that the present system of the incidence of local taxation in London was wrong, but who were not convinced of the desirability of such drastic changes as were suggested by the more extreme party. The result of this movement was a report, to which I shall refer presently, brought up to the Council from the sub-committee of the Local Government Committee, of which Lord Hobhouse was chairman. That sub-committee had been appointed when Sir Thomas Farrer was chairman of the Local Government Committee, but its sittings continued after I was appointed chairman on the transference of Sir Thomas Farrer to the chairmanship of the Standing Committee in September 1890, I having, in fact, served as vice-chairman from July; and it therefore fell to me formally to bring up the report, although I have never considered myself in fact responsible for it, and was not even at that time in agreement with many of its conclusions. For the sake, however, of completing the history of the transaction as it concerns the London County Council, I propose to put in a copy of this report, and shall presently describe the proceedings which took place upon it.

4. During the same period a converging movement was initiated by the more extreme party, who, although they were aware that they could not entirely carry the Council with them in any very radical policy, were yet anxious to lay the foundations for future action in Parliament. At their instance a special committee was appointed in relation to the valuation of land, under the chairmanship of Mr. J. F. Torr, now recorder of Deal, to which I shall refer presently.

5. This special committee sat for a considerable time, and took evidence both from the officials of the Council and others, their practical object being to determine the question whether it was really possible to separate, for the purposes of assessment with a view to local taxation, the ground values of London tenements from what I may call the building values. It was at that time contended, and still is contended, though I think more faintly, that the value of the site as such, and the value of the buildings upon it, are so inextricably bound up in the present assessments by which a gross and

Taxation in respect of Site Values. History of Report to London County Council from sub-committee of Local Government Committee in 1891.

Site value and structural value, separation of.

Land Valuation Committee of London County Council reported in 1889 that this was possible.

rateable value are arrived at, that it is really impossible to frame, on reasonable principles, any separate assessment of ground or site values such as all advocates of any taxation of such values presuppose. The Council's Special Committee on Valuation reported on the 18th June 1889 that such an operation had been proved to be perfectly possible by the evidence given before them. The history of these matters as it appears on the face of the minutes is as follows:—

6. One of the earliest motions carried when the first Council was definitely constituted was one by Mr. Saunders for the appointment of a Committee on the valuation of land. The notice was given on the 14th February 1889 in these terms:—"That a Committee be appointed to consider the best method of ascertaining the value of land throughout the metropolitan area, irrespective of the value of buildings and of improvements made by the owners."

7. On the 18th June 1889 this Land Valuation Committee reported and circulated copies of their report and the evidence to the members of the Council, and shortly afterwards it was resolved (on the 9th July 1889) that the report should be considered when the report from the Local Government and Taxation Committee on the same subject should come up for consideration. That report was the report of the parallel inquiry which had already been begun by what we called Lord Hobhouse's Sub-Committee.

8. The report of Lord Hobhouse's Sub-Committee was brought up by the Local Government Committee to the Council on the 7th July 1891. It was not set out in the report of the committee, but was printed and circulated as a separate document to the members of Council. The only recommendations which the Local Government Committee expressly made on their own responsibility were—(a) "that the Council do accept this report as an exposition of many questions relating to local taxation in London, and as propounding principles of reform worthy of the attention of Parliament;" (b) "that the report and the accompanying papers be sent to the Local Government Board, the vestries and district boards, the City Commissioners of Sewers, the boards of guardians, the London School Board, and the Asylums Board." On the date in question the consideration of it was deferred for a fortnight, and on the 21st July it was resolved, on the motion of Mr. Saunders, seconded by Mr. Fleming Williams: "That the reception of this report be deferred until after the recess; that it be then considered in connexion with the report of the Land Valuation Committee, the consideration of which was deferred by the Council on the 9th July 1889, and that in the meantime the chairman of the Local Government and Taxation Committee be requested to prepare a summary of the report of the Land Valuation Committee, and that a copy of such summary be sent to each member of the Council." It came up accordingly on the 29th September, when it was specially appointed to be taken at the meeting of the 20th October. A further adjournment by reason of pressure of business took place until the 3rd November.

London County Council. Proceedings on reports of Local Government and Land Valuation Committees.

9. As the debate promised to occupy too much time for an ordinary meeting, it was, on my motion, resolved, upon the principle we usually adopted in those days with important theoretical subjects, that a special meeting of the Council should be held on the 13th November, for the purpose of resuming this debate, and of considering the Land Valuation Committee's report as well.

10. On the 13th November the debate proceeded accordingly, when the formal recommendation of the Local Government Committee just quoted was not considered to be satisfactory, and an amendment was moved by Mr. Stuart, and seconded by Lord Compton, to the recommendation (a) in the following terms: "That the Council is of opinion that the existing system of local taxation in the Metropolis unduly favours owners at the expense of occupiers, and that it is urgently necessary that this injustice should be redressed." For this motion, I myself, as well as the whole of the Progressives present, including Lord Hobhouse, voted; and it was carried accordingly by 59 votes to 17 on a division, this being, so far as I know, the first time that the Council had had a formal division on the subject. On being put as a substantive motion, an amendment was moved by Mr. Antrobus, and seconded by Mr. Lemon (both Moderates), to insert after the word "that," and before the words "it is urgently necessary," the following words: "subject to equitable arrangements as regards existing contracts." This amendment, after debate, was lost, and a division was not claimed. A further Moderate amendment was then moved by Mr. Beresford Hope, seconded by Dr. Forman, to add the following words to the motion:—"And that at the same time such alterations should be made in the constitution of the bodies administering the rates as will secure a direct representation to the owners adequate to the immediate interest in local expenditure which they

Amendments moved to Report of Local Government Committee.

APP. XI. "will acquire." This was lost by 48 to 20 on a division, and Mr. Stuart's words were then carried as a substantive motion.

11. He thereupon moved a further motion in the following words:—"That the Council, while recognising the advisability of dividing urban local taxation between the occupiers and other interests, is of opinion that the proportion of local taxation in the Metropolis which is borne by the capital value derived from the special advantages of London land, or its annual value, ought to be largely increased." On this a further debate arose, and it was ultimately decided, as the Council had been sitting for the customary four hours, that the debate should be adjourned.

12. I ought, perhaps, to add that at the same meeting there stood for consideration a motion by one of the Moderate whips—"That the Council do petition Parliament that, with a view to lessening the pressure of direct taxation on the London ratepayers, the London coal duties should be re-imposed." The debate on this was adjourned likewise; but I may say generally that, although many motions for this purpose were made and pressed, they were never received with any favour by the Council.

13. On the 8th December the consideration of these bracketed reports on taxation again came up, but it was deferred by reason of the pressure of ordinary business until after the Christmas recess.

14. On the 2nd February 1892 the Local Government Report came up again, when, upon Mr. Stuart's rider just referred to, Mr. Beachcroft moved a comprehensive amendment in the following words—"That, as it is most undesirable that any scheme should be formulated which has not been well matured, the proposal in the first motion be in the first instance referred to the Local Government and Taxation Committee for consideration, with instructions to report fully thereon, indicating both the method of valuation proposed and the machinery for its adoption. That it be also an instruction to the Local Government and Taxation Committee to consider the proposal that the inhabited house duty levied in the county of London should be substituted for the share of the probate duty now received from the Exchequer Contribution Account, so that the ratepayers would derive the benefit which would accrue to them from such an arrangement, and to report thereon at an early date." Lord Rosebery, as chairman, having ruled that the second part of this amendment was not in order as an amendment, and could only be put as an original motion, Mr. Beachcroft, on behalf of the Moderates, withdrew that portion, and the amendment, as altered, was put and declared to be lost without a division. Thereupon a further amendment was moved by Mr. Lloyd, and seconded by Mr. Campbell, in the following words:—"That the true policy is to consider all capital expenditure of a permanent character as appertaining to the owner, the interest and principal being repayable by him; and for the safeguarding of his property it should be provided that the owner should be made an elector; that before any capital outlay is made the sanction of Parliament or the Local Government Board should be obtained; and that the maximum limit of the rate to be levied for the above purposes should not exceed 6*d.* in the £." But this received little support, and was lost without a division, and Mr. Stuart's further words were thereupon carried.

15. Upon recommendation (b) as to the circulation of the report to the different bodies concerned, an amendment was then moved by Lord Monkswell, seconded by Mr. Hopkins—"That the following be added to the motion—'with an intimation that so far as regards the division of the rates between owner and occupier the Council accepts the report as propounding principles of reform worthy of the attention of Parliament.'"

16. After debate, this amendment was by leave withdrawn, and the recommendation (b) in the original form was put and carried—the object, in fact, being to avoid committing the Council expressly to each of the definite proposals embodied in Lord Hobhouse's report, while expressing a broad approval of it.

17. The report of the Special Committee on the Valuation of Land was then taken up, and their specific conclusions were put to the Council in the following form—(a) Your committee recommend the appointment of a Central Assessment Committee under the direction of the County Council—this might be, if thought desirable, a sub-committee of the Local Government and Taxation Committee; (b) the Central Assessment Committee should have the same powers as the surveyor of taxes under the Act of 1869, together with other powers giving them authority to secure through the local assessment committees uniformity of assessment throughout the Metropolis, and the separate assessment of all land in the county irrespective of buildings and improvements; (c) the Central Assessment Committee should be authorised to appoint an assessment clerk to act as their agent, whose duty it would be to see that valuations or assessments for

rates were made throughout the Metropolis on a uniform basis with power to appeal against inadequate valuations, and to secure the taxation of valuation bills where the charges appear to be excessive. (d) While the committee believe that even under existing Acts all land ought to be rated on its value, and adhere to the reasons set forth in paragraph 36 of this report, they recognise the fact that land not yet built upon has not in practice been rated according to its value, and they therefore propose that legal advice should be taken as to whether, under all the circumstances, such practice is legal and can only be altered by new legislation, and in the event of counsel advising that such legislation is required, your committee recommend that application be made to Parliament to obtain powers authorising rating authorities and assessment committees to calculate for rating purposes, not only the annual rent, but also the capital value of land, and to assess the property either on the rent, 'which a tenant might reasonably be expected to pay,' or on a statutory per-centage of the capital value. (e) Your committee further recommend that this report be referred to the Parliamentary Committee with instructions to take measures for obtaining from Parliament, during the present session, such powers as may be required to carry out the foregoing recommendations, and that for their guidance they be authorised to take the advice of counsel."

Land not yet built upon. Recommendations of Land Valuation Committee as to rating in respect of.

18. On the motion that recommendation (a) be adopted, a Moderate amendment was moved and seconded to defer the consideration of the report for three months. This was lost, but immediately afterwards an amendment by Lord Hobhouse was carried, that the report be referred to the County Rate Committee, which is a special committee existing for the purpose of carrying out the assessment of Penge, by reason of the peculiarities of the legal situation of that extraordinary hamlet. That committee was already considering under a special reference from the Council the operation of the Valuation of the Metropolis Act, 1869, which has, from the commencement, been the subject of much anxious consideration in the Council by reason of the fact that, when the Council came into existence, the assessments of different parishes were found to be vitiated by somewhat gross inequalities, which, as a very large and increasing amount of the total expenditure comes out of a common purse, was felt to be not only unjust but very detrimental to the government of London. The proposals of the Valuation of Land Committee as to some central assessment machinery therefore fell naturally within the reference which the County Rate Committee was at that time considering. The County Rate Committee reported from time to time upon various matters which concerned the general valuation question, deferring for the moment the question of the special valuation of land. Ultimately, however, they brought up a final report upon the matter, and this report was in effect adopted by the Council.

Central Assessment Committee. Proposal referred to County Rate Committee.

19. I find also that the Council on 6th December 1892 passed the following resolution:—  
 "That the Government be urged to introduce forthwith an amendment of the Valuation (Metropolis) Act, which shall provide, among other things, that a new valuation of the Metropolis under the Amending Act shall be commenced immediately, without waiting for the quinquennial term, and that in this new valuation the value of land be stated separately from buildings or other improvements."

20. I think the result of this report, after the effect of it had matured in the minds of those on the Council who took an interest in the question, was to establish a basis for a consideration of the question of the reform of London taxation upon bolder lines than those indicated in the propositions of Lord Hobhouse, and opinion gradually formed itself upon the lines which are now generally accepted by the Progressive party in London, and which are no longer, in my opinion, absolutely opposed by the more reasonable members of the Moderate party itself.

Reform of London taxation. Policy of Progressive party.

21. I should say, speaking for myself, that this policy may be fairly defined by saying:—  
 (1) That the entire cost of such expenditure for administration and improvement as is borne locally ought no longer to be taken out of the pockets of the occupying ratepayers as it is at present. (2) That at least a considerable proportion of it ought to be borne directly by the owners of site values. (3) That no mere system of division of rates between owner and occupier, such as was contemplated by Lord Hobhouse, will really be satisfactory. (4) That the present system of grants in aid of the occupiers' rates out of the Imperial Exchequer is not satisfactory from the point of view of the proposed reform, and is subject, in fact, to the gravest criticism from all points of view.

22. It is obvious that such proposals raise very large and difficult questions, and the history of the later discussions in the Council has, in fact, largely been concerned with clearing up ambiguities and disputed details, and obtaining, under the pressure of hostile criticism, a more exact definition of the objects sought.

APP. XI.

Report of  
Local Govern-  
ment and  
Taxation Com-  
mittee to  
Council in  
November  
1897.

23. I do not think it is necessary for me to trouble the Commission with the later proceedings, as they are recorded on the minutes of the Council, inasmuch as the late and the present Council have formulated with sufficient exactitude the basis on which they desire me to give evidence before the Commission in the resolutions which have been adopted upon the report of my committee which was originally brought up on the 16th of November 1897, and has been under discussion at several meetings of the Council between that date and the present time. I propose to put in a complete extract from the minutes of the Council as to the proceedings which have taken place upon this report,\* and it is only fair that I should make it clearly understood that, so far as I am to speak on behalf of the Council, I do not consider myself entitled to do more than explain and defend, so far as it may be in my power, the policy which is expressed in these acts of the Council itself. The Commission will observe that I am instructed to submit the Council's specific resolutions, which I now beg to do, and to give evidence in support of them, and that these resolutions have been approved "as forming the basis of the evidence as to the policy to be submitted to the Royal Commission" by me on its behalf. It is true that in the course of the past proceedings of the Council, efforts have been made to express the policy of placing a direct charge upon owners of site values in a still more definite and detailed form, and I myself, in consequence of the very exhaustive discussion to which such proposals have from time to time been submitted, have necessarily formed certain conclusions as to the methods by which such policy could be carried out. I do not understand, however, that it would be appropriate at this stage for the Council or for me to suggest anything in the nature of a basis for a Draft Bill. In any case it was definitely the intention of the Council that it should not be understood to take that responsibility. The object of the Council, as I understand it, is to call attention to certain grave injustice from which it believes London to be suffering at the present time in the matter of taxation, and to submit certain recommendations as to the policy in favour of which it would wish the Royal Commission to report.

24. I need not say that I am at the disposal of the Commission if they should wish me to elucidate any of the points set out in the extracts from the minutes of the Council which I now present, and that the Council leaves me entirely free to answer, upon my own responsibility, any questions which the members of the Commission may think fit to put to me, so long as it is clearly understood that if I travel outside the matters covered by the resolutions I commit myself only.

25. The minutes on which I appear before the Commission are submitted in the addendum\* to this statement. The following are the resolutions passed by the Council on the report of the Committee:—

(a.) That it is advisable that a new source of revenue should be obtained by means of some direct charge upon owners of site values.

(b.) That this charge be termed "owners' tax."

(c.) That all persons deriving a revenue, or use equivalent to revenue, from the value of a site, be liable to pay such charge.

(d.) That the site value of every property be assessed and entered in the valuation list.

(e.) That the site value be the annual rent which at the time of valuation might reasonably be obtained for the land as a cleared site if let for building by an owner in fee, subject to equitable reduction in exceptional cases in which the full site value thus defined is not being enjoyed or obtained by any person or persons.

(f.) *As amended by the Council.*—That in view of the fact that considerable expenditure has been incurred from public funds which has largely contributed to the increase of site value, the Royal Commission be asked to recommend that such owners' tax commence at the rate of 6d. in the £ per annum, and rise gradually to such sum as Parliament may determine, and that any increase of burden or expenditure for new services should be equitably shared between the present rate on occupiers and the proposed owners' tax.

(g.) That any existing or future contract or agreement by which an owner purports to exempt himself from the owner's tax, or to cause it to be paid by any other person in his stead be invalid.

(h.) That vacant land and empty property shall be liable to pay the owner's tax upon the site value as appearing in the valuation list.

(i.) *As amended by the Council.*—That a certain share of the estate duty now levied on London property should be allocated to London local taxation, and that evidence be submitted in support of the proposal.

Report of  
Local Govern-  
ment and  
Taxation Com-  
mittee. Reso-  
lutions of  
Council  
thereon.

\* See page 321.

(j.) That, as the present system of Exchequer contributions from the taxpayer to the ratepayer by means of the Exchequer grants appears to operate so as to withdraw from Londoners more than it returns to them, no system of Exchequer contributions distributed to the whole country upon the present basis of division ought to be accepted on behalf of London.

(l.) That it is desirable that the question of requiring the owners of empty tenements to pay (as is done in the City of London with regard to the sewers rate) the whole or part of the ordinary rates should be raised in connexion with the evidence to be given before the Royal Commission.

(m.) That having regard to the impossibility of locating all movable property, no suggestion be made to the Commission with regard to the local rating of such property.

(n.) That the foregoing resolutions be approved as forming a basis of the evidence as to policy to be submitted to the Royal Commission on Local Taxation now sitting, and that the chairman of the Local Government and Taxation Committee (Mr. Costelloe) be appointed to submit and give evidence in support of such resolutions; and that attention be called to the unequal grants to schools under the Voluntary Schools Act, 1897, and to the very serious wrong done to London and other urban districts by the Agricultural Rates Act, 1896, and that, in the opinion of the Council, it would be most unjust to renew that Act in 1901.

26. The following recommendation of the Committee was referred back for further consideration:—

(k.) That it is desirable to substitute as local revenue the inhabited house duty and land tax in London and other counties (adjusted as suggested in the statistical officer's memorandum) for the share of probate duty and beer and spirit duties now transferred, and that in that event it will be desirable that county councils should have power to propose from time to time, subject to approval of Parliament, schemes for amending the present incidence of inhabited house duty.

Resolution as to certain taxation arising from local sources, and as to certain services of national concern.

27. The following resolutions were subsequently passed by the Committee, and will be submitted to the Council on the 21st instant in substitution for recommendation (k):—

“(i.) That it is desirable that taxation arising from local sources should be devoted to local purposes, and that the inhabited house duty is one of those taxes which should be transferred accordingly to the counties.

“(ii.) That certain services now administered and paid for locally are so far of national concern that the burden ought to be borne by the nation.”

28. These extracts from the minutes show that upon the question dealt with by recommendation (k) in our original report, it was, with my entire approval, considered best that we should take the proposal back for further consideration, and that the proposals which will be submitted to the Council on 21st June will, if passed by the Council, be substituted for the recommendation (k) of our original report, but are to be read in other respects as if they formed part of that report itself. It will be seen, of course, that they do not profess to commit the Council to a proposition equally definite with that which was contained in the original recommendation (k); but that specific proposal was in fact subjected to strong criticism from different points of view, and it was ultimately considered by my committee that in this matter also it was hardly the duty of the Council to go further than a statement of the principles of policy which, as it appears to them, ought to guide those who are responsible for dealing with the question.

29. I need scarcely add that my committee and the Council have borne in mind the circumstance that Mr. Gomme and Mr. Harper, as the officers of the Council concerned, have already given evidence before the Commission. The prints of that evidence have been in the consideration of the committee during the subsequent discussions as to policy, and I may add that these officers have been of constant assistance to us during the whole course of the Council's discussion upon this subject.

30. If I have so far made clear to the Commission the position which I am authorised to take as a witness on behalf of the Council, I should now wish to summarise what I understand to be the policy which I am here to recommend. For this purpose it is necessary first to say that I regard the present position of local taxation in this country as deplorably chaotic, and I do not find that there is any serious difference as to this among those who are interested in the subject. It appears to me that there is no serious attempt made to distinguish those heads of charge which ought

Imperial contributions in aid of Local Taxation. Gradual development of the present system. Position of London and other urban

## APP. XI.

districts and rural districts under this system.

to be borne locally from those which ought to be borne by the nation, and that there is also no serious attempt to discriminate between the kinds of revenue which ought to be collected and used locally and those which ought to be collected and used by the State. So far as I can see the present financial situation is a mere accident. Ever since the poor law of Elizabeth made the rates a stereotyped and more or less convenient machinery for local charge, everything which had to be paid for locally appears to have been thrown upon the rates without further consideration. On the other hand, the incidence of the rates themselves, which were originally meant to fall upon the inhabitants of each parish, according to their "ability" to give alms for the support of the poor, has been altered by a gradual movement which it is unnecessary to detail, until it has become a charge taken from the occupiers of lands and tenements, in proportion to a highly artificial standard called rateable value, which itself is by no means justly assessed in practice. In the course of the present century a great body of new or increased charges has in this way been thrown upon a single class of contributions, with the result that, after the fall produced by the reform of the poor law, the rates both in town and in country have been supposed to be rising in a very threatening manner. The volume and the effect of these increases of charge were different in rural and in urban districts; but, by reason of the operations of the Exchequer to which I will refer, it is now quite clear that there has not been any grave increase of the burthens supported by the ratepayers in rural areas, although there has been, and probably will continue to be, a great increase in the charges falling on the ratepayers of urban or semi-urban districts. The opinion in rural districts, however, appears always to have been that the rates operated as a disadvantage to agriculture. I do not know whether the parties concerned made it clear to themselves whether it was the landlord that was supposed to be damnified, or the farmer, or the consumer, or the agricultural labourer, or all of them. I think it was supposed in a vague way that the agricultural interest stood to suffer by a rise of rates, and that it was important, therefore, to prevent the rates from rising. Whether this be a correct account of the pressure or not, there certainly was a pressure from the agricultural and territorial interest, which resulted in producing a belief in the minds of successive Chancellors of the Exchequer that it was necessary for the Exchequer to come to the aid of the local ratepayers, especially in counties, by making grants in aid. It would be beside the point if I were to attempt to follow this question further than to remark that, down to 1888, Exchequer grants were in the nature of contributions by the Treasury to local authorities of the whole or of some part of the cost of certain services locally administered. The selection of these services was to my mind very curious, and I cannot, even with the assistance of Lord Welby, who has been considering this matter with us in committee, discover any principle which seems to have guided it. It is an additional complication that there was no rule as to whether the whole, or half, or any other proportion, should be contributed. The system, however, might have been adjusted upon consistent and intelligible lines but for the revolution which took place in 1888. At that time it was resolved to increase very considerably the subventions which were to be made by the Exchequer to the ratepayer, but unfortunately it was also decided that this should be done upon a new principle which, in our opinion, was much worse than the former one; that is, it was proposed to hand over *en bloc* a large amount of Exchequer moneys to be distributed among the county councils according to a certain fixed ratio. This ratio was, be it observed, quite independent of what the future needs of the various localities might be; inasmuch as the quotas were fixed, subject to certain small exceptions, by reference to the amount of the grants in aid which the different authorities had received from the discontinued grants in the years ending with 1887-88. This system was applied to the estate and customs and excise duties, although a different system was applied to the licences, in respect of which the amount collected in each area was allotted to it. The result of this arrangement, as Mr. Gomme has already explained to the Commission, was that, on both branches of the account London lost in comparison with other parts of the country; but as Mr. Gomme has given full evidence upon this branch of the subject, I do not propose to go into it again, except to say that this financial injury to London has been for years keenly felt as a grievance by both parties on the Council, and that the deficit so produced has greatly hampered the progress of London improvements of all kinds. The point which I have to bring out, and which concerns, as the Commission will observe, the proposals (Nos. i. and ii.) which will be submitted to the Council on 21st June in substitution for the original recommendation (*k*), and also the original recommendation (*j*), which was previously adopted, is of a twofold character. In the first place, the

Council desires to point out that any such Exchequer grant, even if it were more justly distributed, tends to act as a contribution from urban to rural districts, and from London to the rest of the country; and, secondly, that any such system of distributing a fixed sum according to fixed ratios, independent of local contributions or requirements, is unreasonable in itself and is particularly detrimental to the Metropolis.

31. I desire, however, to go further, and in this respect also I think I express the opinion of the Council. I submit that, in so far as the principle of the Exchequer grants, in anything like their present form, operate to transfer charges from the ratepayers of the community to the taxpayers of the community, it is open to the gravest objection. It is quite clear that the immense amount of money now transferred to the local taxation account comes out of somebody's pocket. It will be generally agreed that the relief to the ratepayers effected by the Exchequer grants is not effected at the expense of the people who pay the licences or the estate and customs and excise duties, or the beer and spirit money. In order to find out who pays it, it is clearly necessary to inquire what would have happened if it had not been transferred to the county councils. Obviously some portion of the existing Imperial revenue would have been unnecessary, and taxation to that extent would have been remitted. What particular taxation this might be is a matter of opinion, but I think it is sufficiently clear, under present conditions of financial public opinion, that it would have been either the income tax or duties such as tea duty, which stand in the way of a free breakfast table, or both. If that be true the relief to the persons who bear the rates has been provided either by the income tax payers, which, as a matter of hardship, means the lower, middle, and professional classes, or by the people who pay the duty on tea, which, as a matter of hardship, means the poor. In either event it is quite clear that the relief will have been provided by the urban population, and in far more than proportionate measure by the population of London itself.

Imperial contributions in aid of Local Taxation. Principle open to gravest objection. Source of contributions discussed.

32. It is unnecessary for me here to go into the other grave objections, from the strictly financial point of view, to the system of Exchequer doles, which have been urged forcibly by Lord Farrer and others, and which are, I think, shared by many of the financial experts on the County Council. I desire only on this head to express my belief in the great importance of observing, wherever possible, the principle that those who control local expenditure should be visibly responsible for levying the revenue out of which it is defrayed. I am quite aware that it is not possible to apply this rule with absolute rigidity, but I think that so wide a departure from it as is presented by the present system of Exchequer grants is very mischievous indeed.

33. Speaking for myself, I am of opinion that the sudden handing over to the county councils of the wine and spirit duties, with a general suggestion that they should be applied to technical education, was a singularly unfortunate operation. To throw into the lap of a number of bodies, which up to that time had no duties in the matter of technical education, a large amount of money which came to them practically as a windfall, was, I think, to make it certain that a good deal of the funds would be applied without adequate consideration of the needs and possibilities of each locality. I remember that in London we were very severely criticised because we refused to make immediate grants of large sums of money to deserving institutions, more or less at haphazard, and because we insisted upon first of all having a complete report upon the condition of London from the technical education point of view, and a scheme as to what could and should be done to make permanent improvement.

Wine and spirit duties. Objection to the purpose to which the contributions received by the county councils are applied.

34. The Council is of opinion that it is desirable that taxation arising from local sources should be devoted to local purposes, and also that there are certain services, now administered and paid for locally which are of such a character that the cost of them ought to be borne by the nation.

35. In other words, we submit that the arrangement of 1888 is indefensible, and ought to be radically altered, and we strongly hope that this Commission will report against its continuance upon its present basis. The Council has not, of course, sent me to suggest in any way that the whole of the Exchequer money should be taken away and nothing given in its place. That is an inconceivable result. We do not, however, consider it our duty to make proposals as to any detailed scheme in substitution, but the resolutions are meant to indicate that it is desirable to maintain the principle of local responsibility, and that it is desirable to classify to a much further extent than is at present attempted, both the revenue which should be local rather than Imperial and the charges which should be local rather than Imperial. I am not directed by the Council to submit to the Commission the details of such a classification, and although I am at liberty to express my own personal views on the subject, I do not feel that I am competent to do so with any authority. Mr. Gomme has already made, of his own motion, certain suggestions which have appeared in the minutes of his evidence. I

Imperial contributions in aid of Local Taxation. Reform of the principle desired. Suggested classification of charges which should be local rather than Imperial. Character of certain services, and the control thereof discussed.

APP. XI.

have not heard this discussed specifically by my colleagues, and should not be justified in suggesting to this Commission that the County Council as a whole would commit itself, without much more consideration, to such large proposals as the nationalization of the entire cost of education and of the poor law. As a matter of fact such a proposal was made by a Moderate member during the discussion of my resolutions, but I stated to the Council that I considered it too large and revolutionary to put forward in this connexion, and it was formally negatived. At the same time I should say that many members of the Council, myself included, are prepared to consider the possibility of very large changes in such directions, inasmuch as we feel that there is at present an extraordinary want of common sense in the methods by which the costs of these great services are met. Mr. Gomme also suggested the expenditure on lunatics. This head of charge, as well as the somewhat kindred one of industrial and reformatory schools, are expenses which were mentioned to my committee by Lord Welby in the course of the discussion, he being in fact strongly in favour of immediate action for the purpose of putting an end to the present arrangement of Exchequer doles, and of substituting for it, so far as may be, the principle of taking over charges of general concern, to be borne upon Imperial funds. I ought to say, of course, that the Council as a whole has not discussed in detail such questions as those concerning lunatics and industrial schools, and even my committee did not come to any vote upon the subject. But I think I am justified in saying that proposals of this kind would probably be acceptable to the majority of the Council. I myself can see no reason why such charges as the entire cost of the registration of voters and of elections of all kinds, the registration of births and deaths, the salaries of medical officers of health and sanitary inspectors, together with the cost of such services as vaccination, and in fact the entire charge of dealing with the stamping out of infectious disease, and many other matters of the like character, should not be defrayed out of the Imperial funds. Where the infectious disease is an agricultural matter, like pleuro-pneumonia or swine fever, the Government insists on administering the necessary funds, and not only pays for it out of Imperial moneys, but charges it against local taxation account, to the very great disadvantage of London; but where it is a question of taking precautions against cholera, or small-pox, or scarlet fever, which are quite as little local in their incidence, the Government leaves the whole cost of them to be borne by the ratepayer, and contents itself with putting on a certain amount of incidental pressure, according to circumstances, to see that he does not scamp the expense. The Commission will remember that, among the discontinued grants in respect of which the Exchequer doles are now made, there was a proportion of the charge for lunatics, the whole of the cost of criminal prosecutions, a certain fraction, which was, roughly, one half, of the cost of the police, a small proportion of the poor law charges, and certain payments in respect of main roads, vaccinators, and registrars of births and deaths. It appears to me, as I have already said, that this classification of charges cannot have proceeded upon any intelligible principle. It must be remembered, as a further item, that the operation of the Education Acts has been to throw the cost of education in part upon Imperial funds and in part, where there happens to be a school board, upon the local rates. Another case which is in point is one of those mentioned to us by Lord Welby, namely, the transference of the prisons from the county justices to the Imperial funds. I mention this, however, chiefly for the purpose of pointing out that there are two ways in which a burden may be transferred. When the prisons became a matter of Imperial rather than of local charge the whole administration of them was taken out of local hands and entrusted to the Home Office. When criminal prosecutions were dealt with in the same way the administration remained in local hands, although the entire cost was borne by the State. I think the County Council would be very jealous of any re-arrangement which would unduly extend the control of the Imperial bureaucracy over matters which are now managed locally. So far as poor law items are concerned, the question, in a sense, does not arise, because the power of the Local Government Board over poor law administration is, even under the present system, paramount. There would, therefore, be comparative simplicity in transferring to a national account such items of poor law charge as might be considered appropriate, just as for intra-metropolitan purposes, large sections of the poor law expenditure, although incurred locally, are transferred to a general metropolitan common poor fund.

36. I myself see no reason why such services as the care of lunatics and industrial and reformatory children might not be paid for out of the national account, without any great increase of the State supervision which is now for other reasons exercised over these institutions, and without any material diminution of local interest and local autonomy in these matters. But, as I have said, I do not pretend to work out a scheme of

apportionment. I desire rather to put forward the principle as an alternative to the present system of doles, and as one which, so far as it can be applied, is vastly preferable.

37. I may add that I do not see any reason why it should not be arranged, in cases where it might be supposed there would be any difficulty in the way of control, that the Exchequer should defray a fixed proportion, say, at least one half, of charges which are largely National in character. Such a principle has, in fact, long been applied to the important question of police, as to which I may say that we in London have long been convinced that we are not receiving from the Government as much as we might reasonably expect, especially as in our case the Government retains in its hands the entire administration of the force and the entire control of what we regard as its somewhat extravagant expenditure.

38. By way of concluding what I have to say on this part of the subject I may add that it was proposed in the committee, but not pressed, that we should append to our recommendations to the Council a specific suggestion that the contributions of the National Government towards any services, the burden of which was to be nationally borne, should be voted annually by Parliament upon defined conditions.

39. I do not know that I can properly add more upon this branch of the subject, and I turn therefore to the question of the possibility of distinguishing between national and local sources of revenue.

40. At the present moment no source of revenue appears to be regarded as local except the rates. Even the licences, the yield of which has been apportioned county by county, are still collected absolutely by the Government, and are regarded as a part of the Imperial subvention to local burdens. Such taxes as the inhabited house duty and the land tax seem to be just as local in their incidence as the rates are, yet they are also regarded as matters of exclusively Imperial concern. The original recommendation (*k*), put forward by my committee in the first report, proceeded upon the view that it was desirable, apart from any question of redressing the pecuniary injustice which is now done to London, to place the classification of Imperial and local revenue upon a reasonable and intelligible basis, and it was in this view that Mr. Gomme had proposed that the inhabited house duty and the land tax, subject to certain adjustments, should be substituted for the share of probate duty and beer and spirit duties now transferred. The object of this was not the financial gain, although the effect would have been to redress the present adverse balance against London to a slight extent. The object aimed at was to substitute for funds which are absolutely Imperial other funds which are local in their incidence, and to ask at the same time that there should be some reasonable measure of local control over the collection and graduation of such contributions. That recommendation, however, was not passed, and in fact I myself did not press it for various reasons, into which it is unnecessary to enter; but in the new resolutions which were subsequently brought up it will be observed that we still look to the inhabited house duty as one of the sources of revenue arising locally which we consider ought to be transferred to the counties. The omission of the land tax from this second resolution was probably due in large part to the well-known difficulty of dealing with that tax at all in any way that will be satisfactory, but it must not be supposed that the committee or the Council are inclined to negative the proposition that land tax is a source of revenue which might reasonably be claimed for local purposes. As regards both the inhabited house duty and the land tax there has long been a difficulty in inducing Progressive members of the County Council to look upon them kindly as transferable contributions, because it was felt that the details of the principles on which they are at present levied are open to very grave criticism. It will be observed that it was specifically proposed in our original resolution (*k*) that the County Council should have power to propose from time to time, subject to the approval of Parliament, schemes for amending the inhabited house duty. This suggestion, which proceeded from the late Mr. Charles Harrison, has, I find, given occasion to misconception. There was no idea whatever of attempting to place the inhabited house duty upon anybody except the occupier, but it was felt that the existing system of graduations and exemptions is most unsatisfactory, and it was considered at the time that it was fair to allow the local authorities the opportunity at least of proposing such amendments as they considered expedient. That proposition, however, is not any part of the evidence which I have to lay before the Commission, and I do not propose personally to insist upon it. I would myself much rather see the inhabited house duty properly reformed by a general Act, and see it then transferred for all purposes, including that of collection, to the category of local revenue.

Imperial contributions in aid of Local Taxation.

Reform of the principle desired.

Suggested classification of revenue, which should be local rather than Imperial.

Appropriation of certain Imperial taxes, such as the Inhabited House Duty, for local purposes, discussed.

APP. XI.

41. I am perfectly aware that it will be said that the transfer of the inhabited house duty to local revenue would give an enormous advantage to London as compared with other parts of the country. I do not perceive that that is any objection as things at present stand. As Mr. Gomme has already brought out in his evidence, we consider that London is at the present moment suffering by an inequitable apportionment upon the present grants to the extent of about £450,000 a year. Anything that London will gain by the transference of the inhabited house duty, as compared with other areas, would be much less than enough to redress this balance, but I would desire to point out that the figures upon which it is at present suggested that London would get too much, are figures based entirely upon the present system of collecting the tax. If the tax were collected and graduated in a more reasonable way the effect would, I think, clearly be that all urban areas would get more from it in proportion to their urban character, and that rural areas in proportion to their rural character would obtain less. This, however, is exactly, in my opinion, what ought to happen. The problem is, I take it, to do something which will prevent the growing pressure of local burdens from falling too bitterly upon the local "ratepayer," whoever, in the long run, he may prove to be. There is not the smallest doubt, in my opinion, that this pressure of local burdens tends to press more and more heavily upon urban populations, and presses in fact the more severely the more populous the district becomes. The pressure represents, in fact, the increasing necessities of the complex civilisation and administration of a congested community. If anything is to be done to "relieve rates" it is precisely in the great populous centres that it should be done most liberally. Hitherto the exact opposite is what has happened, and I am particularly bound to mention to the Commission the familiar complaint that by the operation of the Agricultural Rates Act, an enormous extra injustice, as between the rural districts and the urban districts, of which London is the chief, has been done. We assume that the appointment of the Commission is not wholly unconnected with the situation created by the enactment for temporary purposes of the Agricultural Rates Act. The Council entirely objects, without, I think, any serious division of opinion, to the re-enactment of that much criticised measure, when its original term expires, unless it is accompanied by the provision of some real and effective equivalent for the advantage of the urban population. In that case, as, we think, most unjustifiably, a grant was made out of the Exchequer—that is, broadly speaking, out of the pockets of the urban taxpayers—for the purpose of relieving rates in purely rural areas, where there does not seem to us to be any serious need of relief. Without at present discussing whether that relief went to the owner or occupier, we consider that, as between ratepayer and ratepayer, the urban communities were very badly treated by that transaction, and London, of course, suffered vastly more than any other. We distinctly desire to protest against the re-enactment of that statute at all. If it is to be re-enacted the injustice as between ratepayer and ratepayer ought at least, in our opinion, to be rectified by providing compensation which will work out to the benefit of urban communities in general and the Metropolis in particular.

42. I desire to say distinctly, and here I speak on behalf of the Council, that no such compensation will be obtained merely by giving in aid of London rates any Exchequer dole, such as those which are now received. We have gone into this question fully, and we are convinced that such a transaction would mean that for every 100,000*l.* London received, London would probably have to pay at least 125,000*l.* or 150,000*l.* If it is said that in any case the London ratepayer would be relieved at the expense of some other class, we answer that, so far we can ascertain it, the class who would contribute such a sum of money includes the whole of the London ratepayers and a large number of other persons, most of whom ought by no means to be further burdened. In fact, we do not believe that the ordinary London ratepayer, who feels the existing pressure, would, if all the facts were known, gain anything by such a transaction at all.

43. In other words, if it is proposed to continue the Agricultural Rates Act, and to give London any compensation for the contribution which she has thereby to pay to the counties, it appears to be only by some such process as the transfer of the inhabited house duty that effective compensation can be provided. That operation would at least have the effect of retaining in London for London purposes a considerable quantity of London money, which is now spent for the purposes of the whole country. That operation, if it were not countervailed by anything else, would to some extent rectify the account. I say if it were not countervailed—for it is plain that, if the Imperial taxation created to replace the inhabited house duty were such as to fall heavily on the mass of the people, London might lose again.

Agricultural Rates Act, 1896, is an injustice to London, and should not be re-enacted unless compensation, such as the transfer of the Inhabited House Duty, be given to London.

44. Having dealt with the two latest resolutions of the Council and with recommendation (j), which is connected with them, I come back more conveniently to consider the others. But I ought first to consider recommendations (i) and (m), which are logically connected with this part of the argument. It will be observed that in recommendation (i) the committee originally proposed that the Royal Commission should be informed that the Council is in favour of a municipal death duty upon immovable property held by individuals within a county with an analogous charge upon such property when it is invested in bodies corporate or unincorporate. As the resolution was not carried in that form I need not now discuss the concluding words of the proposal, which were introduced in the committee by the late Mr. Charles Harrison for the purpose of suggesting a means by which property not held in the names of individuals could be put upon a footing of equality with that which is so held. I may say, however, that broadly speaking, the purpose of that original recommendation was simply to place before this Commission, and to keep in view for further action the fact that the majority of the London County Council had always regarded favourably the idea of a municipal death duty as an alternative or an addition to any taxation of land values which could be levied upon annual revenues. Personally, I have always been in favour of this plan, and I believe that for many purposes it would be both economically and practically desirable. We were all aware, however, that the recent change in the death duties might be said to have placed upon that form of taxation as high a contribution as it can at the moment be expected to bear, and that in any case a proposal to place upon the death duties any further charge at the present time would not be likely to be received with favour by Parliament. It was proposed, accordingly, in the Council to modify the wording and to submit that a certain share of the estate duty now levied on London property should be allocated to local taxation, and I submit that proposition accordingly. The amended words did not, of course, traverse the original proposition, namely, that it is desirable, if and when it may be possible, that there should be a municipal death duty upon immovable property in the county, by which I mean that in addition to whatever death duty is required by the Imperial Exchequer there should be a certain levy, corresponding to the system known in France of *centimes additionnelles*, the proceeds of which should go to local revenue. I may shortly say that the theory of this proposal is that all immovable property in such a place as London is continually deriving a certain unearned increment of value from the collective exertions of the community, and that on every succession to such property that unearned increment passes to and is realised by a fresh person in whom it was in no way vested before. It would appear, therefore, to be very just and to be very free from all avoidable elements of hardship if the local community, which has really created that value, were enabled to take, by way of taxation, a reasonable share of it to defray the local expenses of improvement and administration out of which the increment in question has grown. The amendment as now passed is less definite, but I understand it to mean that, for the purpose of rectifying to some extent the present injustice to London, the Exchequer should relinquish in behalf of London, and, *pari passu*, I presume of other municipalities, a share of the estate duty which arises locally, on the theory that that ought to be considered, at least in part, as local revenue.

45. Recommendation (m) requires a word of explanation. The Sub-Committee of the Local Government Committee, which elaborated, after very long and mature discussion, the system of the original recommendations, was pressed by the Moderate members to consider as favourably as possible the proposals for some system for the rating of personalty, which, as it was suggested, had been in the minds of some of those who suggested the appointment of the Royal Commission. Accordingly (without, I think, any bias against such an idea) our sub-committee devoted its efforts for a considerable time to the endeavour to see whether there was any practicable means by which realised personal property other than immovables could be made subject to any form of rating. We were not unaware that it was the original intention of the poor law of Elizabeth that personalty capable of being considered as local should be taken into assessment, and that in fact it was so taken into account in the earlier period, both in England and in Scotland. I may say that members of both sides of opinion went into the discussion with every desire to find some way in which persons who chanced to occupy rateable property of relatively small value, but who enjoyed enormous revenues from accumulated personalty, might be made to contribute more than they do to local purposes; but, after full discussion, we came unanimously to the conclusion that no method had been suggested by which all personalty could possibly be referred to one or other of the local areas, and we also concluded that to allocate certain forms of personalty, which

APP. XI.

Estate duty.

Council  
resolved that  
this would be  
untenable,  
owing to the  
impossibility  
of allocating  
certain forms  
of personalty.

A. P. XI. by accident might be ascribed to a particular place, while other forms of personalty escaped, would be untenable. We therefore come to the negative conclusion which is expressed in recommendation (m), and which passed the Council *nemine dissentiente*.

46. I have now, I think, laid before the Commission as much as it is my duty to say upon the first head of my evidence, which I may describe as the criticism of the present system of Exchequer doles, as it affects London, and the principles upon which any alternative suggestions should rest.

47. I may now return to the other subject with which these resolutions are concerned, namely, the question of a possible reform of the existing system of local contribution by the introduction of the principle of the taxation of land values.

48. I am aware that the Commission has invited a large number of statements from professional economists as to the theoretical questions touching the incidence of taxation. But I desire to say at once I do not consider myself authorised to give evidence on behalf of the Council as to the political economy of the subject. I will state shortly the outlines of such personal views as I hold by way of explanation of my position, but I have no pretension to speak as an expert on the subject. I believe that it is a fallacy to suppose that the incidence of taxation is the same under such conditions as prevail in London as it is under such conditions as prevail for agricultural English land. Where the pull of the market is against the landlord, and where the amount of the rates is practically a settled and well-known charge, I concede that on the contract for a simple tenancy the amount of the rates must be considered as diminishing the rent which the landlord will be able to get. I presume it is true, not only in theory but in practice, that if the settled charge in the way of rates had been 20% less, the landlord would probably have been able to get about 20% more for his farm. This proposition seems to have dominated the views of professed economists upon the subject of the incidence of rates to what I believe to be a fallacious extent. I do not consider that the proposition is fairly applicable to the conditions under which the occupying ratepayer lives in London. I do not believe it is applicable to other urban districts either; but I do not desire to speak in detail as to these, because the facts are not within my knowledge. As regards London, I consider that it is entirely untrue in practice to say that either a residential occupier, or an occupier of business premises, or a shopkeeper, does in fact deduct from the rent he is prepared to pay the real amount of the burden in the way of rates, which afterwards in practice falls on him. I think there are many reasons why this is so, but I am content for my own part to take it as a fact. It seems to me to be sufficiently proved by the circumstance that the London ratepayers have always during the time I have had anything to do with London affairs protested constantly and bitterly against every increase of rates, even where the increase was for objects which would be pecuniarily beneficial to themselves. Unless they are dominated by a universal folly, it is clear that they would be very willing to see large public benefits, such as education, or sanitation, or improvements in their own neighbourhood, effected out of the rates, if they believed that in practice the burden of the rates fell, not upon themselves, but upon their natural enemy, the landlord. Even if the increase of rates were for objects not beneficial to them personally, I fail to understand why their opposition to rising rates should be so keen and constant as it is—they being, for the most part, shrewd business men—if that increase of burden is, in fact, indifferent to them and concerns only the persons to whom they have to pay rent. In fact, the whole theory of local administration has gone upon the idea that the proper check upon local extravagance is to give control to the occupying ratepayers who have to pay the money. And in the County Council and elsewhere, any proposals to transfer the payment of any part of it, so as to be a direct charge upon owners, are constantly met by the proposal that in that case the owners whose money is being spent ought to be directly represented. It appears to me that if the theory of incidence, to which I am objecting, were correct, the occupying ratepayers would never have been the appropriate persons to trust with the prevention of extravagance, and that the claim of owners to be represented directly, if it is followed at all, would be at least as valid when the payments are immediately made by the occupying ratepayer as it would be if the payments were visibly made by the owner himself. For these and other kindred reasons I take it that it is the common sense of the business community that an increasing burden of rates in London is a matter which concerns the occupiers, and that these increases, in fact, come out of their pockets. If I am asked to suggest an economic explanation as to the reason why, I can only say that it appears to me that the rent of London is very largely not an economic rent, but that the actual amount which a landlord gets, or which a tenant is willing to pay for a particular tenement in the way of rent, is determined by a multitude

Incidence of Local Taxation in urban and rural districts. Generally speaking, the burden of taxation falls upon the landlord in rural districts. In urban districts, where rates are constantly increasing, such increases become a burden on the occupier.

of give-and-take considerations very difficult to analyse, the pull of the market being as a rule against the tenant.

49. It is also, I think, obvious to anyone acquainted with London local government statistics, that no ordinary tenant in negotiating even for a three years' agreement can tell with any approach to correctness what his aggregate payments in way of rates are likely to be. The number of authorities upon whose expenditure the charge depends is sometimes as many as 12, and the variations in the amounts of their payments from year to year is often extraordinary. In my belief the practical effect is that the tenant, so far as he attempts to estimate the rates at all, usually under-estimates even the present charge, and probably fails to allow for the probabilities of increase. As a matter of fact the aggregate charge of rates has tended during the whole of the present generation to rise progressively. The rise, however, has not been even, nor has it been predictable. On the contrary, in many cases, such as the well-known case of the School Board rate, a new charge has arisen without any warning by the passing of an Act of Parliament, accepted in part upon official assurance and general *bonâ fide* belief that the burden would only amount to two or three pence in the £, and yet that specific charge has rapidly run up to three or four times that amount. In like manner the initiation of a policy, such as that of dealing with infectious disease through the machinery of the Metropolitan Asylums Board, has come about under circumstances in which even experts were not fully aware of what was being done, and has initiated a source of expenditure which, in a few years, to the surprise of all parties concerned, has grown to be a large extra in addition to the rates previously thought of. The new services laid upon the County Council, both at the commencement of its work and under subsequent Acts, are other instances of the same thing, and as regards even the ordinary expenditure of vestries and boards of guardians there has been a continuous, but never quite clearly understood, demand for new services and new expenditure on public objects, the financial effect of which I venture to say no one—not even the expert officials of the authorities concerned—has at any time been able to forecast. The ultimate result of it is, to my mind, that even the cleverest business man cannot successfully tell to-day what the aggregate burden of his rates on a particular house, or warehouse, or shop, will turn out to be five years hence. I believe that in practice he does not seriously estimate it at all. In any case I am quite confident that these continual increases of charge by reason either of increased efficiency and cost of administration, or of specific new services discharged by public authority, or of great structural improvements, such as streets, embankments, bridges, and drains, do in fact come out of the pockets of the occupiers, and out of their living, and that they cannot be fairly considered as being borne in any intelligible sense by the receivers of rent.

50. Whether my personal views on the theory of the matter are accurate or not, there is undoubtedly a strong demand in London that some part of the constantly increasing burdens which are now laid upon the occupying ratepayers should be obviated by providing some form of direct charge upon owners of land values. It is argued by us, and I think it is the opinion of the great bulk of the ratepayers of London who give any thought to the question, that the improvements which are paid for by the increments of rate in question, go to produce in the last resort an increase of rent and an unearned increment of capital value which pass into the pockets of the owners. The occupiers feel, as I have said, that the moneys so expended do not come out of the pockets of the owners, but do come out of the living of the occupiers themselves, and they consider this a flagrant injustice. Especially is this felt, and I think most reasonably, by the great body of small shopkeepers and other struggling occupiers of business premises, and by all those upon whom occupying rates fall most heavily, such as persons—doctors, for instance—who are obliged to live in houses of comparatively high rateable value, or who are tethered by their occupations to particular localities. I have never seen any valid answer to these arguments myself, but even if the arguments were not wholly true, there is a second line of argument, which for the present purpose is equally effective.

51. We have long urged it is not merely the theoretic or ultimate incidence of a tax with which Parliament ought to be concerned, inasmuch as the apparent incidence of it is itself unimportant. It would seem to be the duty of the State to place any burden of taxation where it intends that burden to fall. If the persons from whom the money is now immediately collected feel it as a grievance that they should be charged, it is no answer to their grievance to tell them that the State really intends somebody else to pay through the operation of certain much disputed and by no means obvious economic forces. If, therefore, it is conceded, as I think it must be conceded, that the improvements produced by much of, if not by all, the kinds of expenditure of

Expenditure out of rates upon improvements produces an unearned increment of capital value, and should be met by a direct charge upon owners of land values.

APP. XI.

which I am speaking really go to the profit of the class of owners, and if it is held that it is just, and that it is the intention of the State, and that it is the effect of the present system that the owners should bear the burden, then I see no answer to the proposition that there ought to be found, if possible, some means of making it obvious that the burden does so fall.

52. If there were no other reason for this, it is plainly undesirable that there should be two different classes, each of which is alleging that it suffers from the same charge. Such a system doubles the irksomeness of taxation. But in addition it has what to my mind is an even worse result; it doubles the opposition to every item of useful or even necessary expenditure. Since I have known London politics there has been no circumstance so patent as the constant resistance offered by the ratepayers themselves, purely on the ground of expense, to everything in the nature of municipal civilisation. It is only with the greatest difficulty, and after long argument, that the most obvious improvements in the public service can be carried through, because you are met at every point by the plea that the burden of the rates is too heavy, and that the small shopkeeper cannot stand any increase. It is perfectly obvious to everybody concerned with London government that the one danger which every London authority seeks to avoid is the danger of being charged with increasing the rates. The danger of neglecting the public health, or the public safety, or the public service in general, is absolutely unimportant compared to the danger of alarming the ratepayers. It appears to me that this condition of things is barbarous, and I am quite certain that it makes against good government in the very gravest way. It is alleged, of course, that it is a great check upon extravagance. It has never appeared to me that it really acts in that direction, but even if it did the benefit of checking occasional waste is altogether counterbalanced by the mischief of checking every sort of improvement, even where the expenditure of the money involved would amply repay the community. Of course the resistance of the occupying ratepayers is not the only force which makes in this direction, and so far as I have observed, the influence of the owners in London is thrown, although less markedly, in the same direction.

53. I have said that a means of placing a direct charge upon owners ought to be found if it be possible, and, in fact, much of the discussion in the Council upon this subject has turned solely upon the question of possibility and of method. There are members of the Moderate party who frankly admit the argument in favour of a direct charge on owners, although they object in detail to the methods which we propose. I am myself perfectly satisfied that it is not only possible but easy to place a direct charge on owners if Parliament chooses to do so. It is not part of my commission from the Council at the moment to propose detailed machinery—the Council has already suggested more than one method. In my view the question of possibility was settled when the machinery for the scheduling of the income tax was devised. We are all of us accustomed to the operation of that system by which for many years money which is intended to be borne, and which undoubtedly is borne, as a direct tax by the landlord, is collected with perfect simplicity from the tenant, under special provisions by which he can transfer the burden. The amount of that burden has been very variable, and it has been often, and is now, very considerable in amount. I have never heard any person, economist or other, suggest that the effective burden of it comes out of anything else than the owner's rental income. The system was safeguarded by Parliament, with the common consent of all parties, by effective provisions, which rendered all contracts for changing the incidence void, and it was applied without any regard to existing conditions of tenure. I have never seen any answer to the proposition that, if this could be done with the income tax, something analogous could be done whenever Parliament chooses to levy a rate which is intended to be a direct charge coming out of rent receivable by owners.

54. I am aware that it is said on the part of the owner's advocates that if such a charge is put upon them they will succeed in transferring it to the tenant. I do not myself believe this, either as an economic or a practical proposition, provided always that the operation is carried out in an intelligent manner; but I add in reply two considerations: in the first place, if the owner's argument be true, it entirely negatives their other contention that the present rates are borne, not by the occupier, but by the owner himself. In the second place, if the argument be true it destroys itself, since the owner cannot be damnified by placing such a direct charge upon him, if, as a matter of fact, he sees his way to getting rid of it.

55. With these observations I desire to pass to the consideration of the practical scheme which the Council has adopted. The Commission will observe in the first place that the scheme is intended to create a fund which shall be kept separate from existing

Opposition to useful or even necessary expenditure out of rates comes from both occupiers and owners.

Taxation in respect of Site Values. Method of carrying out. Adoption of income tax system suggested. Possibility of owners transferring the charge to their tenants.

Taxation in respect of Site Values. Charge should begin

rates. It is intended to relieve the local budget in such a way that the pressing demands for great metropolitan improvements and other increments of expense can be duly met without increasing the burden on the occupying ratepayers at all. Such a fund should also have the effect of relieving the existing ratepayers from some part at all events of the unfair burdens laid upon them by the growing increments of recent years. It would still leave them undoubtedly with a large burden of rate. Where the dividing line should be drawn is to my mind a matter that can only be decided hereafter. I am personally of opinion that to attempt any too revolutionary a change would not be advisable, not merely because of the friction and resentment which it would provoke, but also because it might bring about a rent struggle between landlords and tenants in London on a large scale, the effect of which would be very unfortunate. If the new charge were to begin at a small figure, and to increase gradually to a reasonable amount, it would in my personal opinion have no appreciable effect on rents at all, and would amount to nothing more than a very fair and moderate contribution on the part of a class who at present receive the profits of public expenditure without paying anything like their share towards it.

56. By way of further explanation of the first series of the Council's resolutions, I ought to add that the difficulties of Londontenure make it obviously less simple than it would otherwise be to say in any case who is exactly the owner of the site value. What I call, for the sake of clearness, the site value, is defined in the Council's resolution as being the annual equivalent of the capital value which the site in question would fetch at Tokenhouse Yard, if for any reason the premises upon it were cleared away, as, for example, if they had been burnt to the ground. This is my own definition, and after most exhaustive discussions in the committee and the Council, I am convinced that it is a reasonable and correct statement in a practical form of the value which ought to be taxed. It is intended to represent the value of that parcel of ground considered as a site, and without regard to the structures which happen in fact to have been placed upon it. These structures may or may not be the ones most suitable to utilise the advantages of the site. But, apart from that consideration, these structures themselves represent the capital which has been expended upon it by some one in the ordinary course of business, and in consideration of a business return. Whatever in the rents actually derived from the site is attributable to the builder's capital and operations I call building value. That is as a matter of fact wrapped up in practice with an entirely different element, attributable merely to the advantages of that parcel of land situated where it is, resulting from the congregation of other people to the greatest centre of exchanges in the world, and from the common enterprise of the community so formed. This second element has grown up from what is often called "prairie value" to the fabulous sums which a cleared site will now fetch in the neighbourhood of the Bank. It grows in that way apart altogether from the exertions of the owner. It may be sold of course from time to time, but when I speak of "the owner" I am thinking of him in the abstract as representing the whole series of persons who hold, or have held, the legal estate in that parcel of land which our system of law recognises as a form of private property.

57. For the purposes of my argument, as I have already suggested, it is immaterial whether you consider that site value as a capital sum or as an annual rent. I do not wish to enter into the controversy as to the expediency of placing taxation on income rather than on capital. I should for myself be quite content if the community could levy by taxation a proper share of that constantly increasing urban site value by some municipal death duty, such as I have already described. That, however, is not for the moment in question, and I think that in any case it would be better to carry out such an operation as the direct taxation of land values by two concurrent methods, each of them moderate in its effect, rather than by one which would be necessarily more drastic.

58. Taking the site value, then, as represented by a certain portion of the rent in practice receivable in respect of the site and the structures upon it, the next question that arises is, Who ought to be considered the owner of it? The Council has resolved expressly that all those who derive a rental value out of it should bear whatever may be their equitable share. In other words, it is not merely the owner of the freehold reversion—who has in many cases only a small ground rent, and whose ultimate interest, valuable as it is, may be postponed for many years—who is to be charged under the Council's scheme. He will have to pay his share, which can be handed back to him by appropriate machinery. But if it should be true that some of the intermediate leaseholders, or even the occupying tenant himself, are in fact receiving a rent, or a use equivalent to rent, which is applicable not to building value but to the site value, it is

APP. XI.

with a small figure. Application of fund to be raised thereby.

Taxation in respect of Site Values. Definition of "site value." Suggestion that tax should be laid partly on capital value by means of a municipal death duty, and partly on annual value.

Taxation in respect of Site Values. Who are to be considered the owners?

APP. XI. these persons who are intended to bear in like manner some equitable share of the owner's rate.

59. Beyond this statement of principle the Council does not at this moment desire to go. I may add that in former discussions very detailed schemes have been drawn up and proposed, but they must be regarded for the present purpose merely as materials for discussion, and the Council has never at any time professed to determine finally what might be the best theoretic or the easiest practical machinery.

60. With these observations I may leave the main resolutions of the Council to speak for themselves, subject to any questions which the Commission may desire to put to me upon them, and I therefore submit them formally—

That it is advisable that a new source of revenue should be obtained by means of some direct charge upon owners of site values.

That this charge be termed "owners' tax."

That all persons deriving a revenue, or use equivalent to revenue, from the value of a site, be liable to pay such charge.

That the site value of every property be assessed and entered in the valuation list.

That the site value be the annual rent which at the time of valuation might reasonably be obtained for the land as a cleared site if let for building by an owner in fee, subject to equitable reduction in exceptional cases in which the full site value thus defined is not being enjoyed or obtained by any person or persons.

That in view of the fact that considerable expenditure has been incurred from public funds which has largely contributed to the increase of site value, the Royal Commission be asked to recommend that such owners' tax commence at the rate of 6*d.* in the £ per annum, and rise gradually to such sum as Parliament may determine, and that any increase of burden or expenditure for new services should be equitably shared between the present rate on occupiers and the proposed owners' tax.

That any existing or future contract or agreement by which an owner purports to exempt himself from the owner's tax, or to cause it to be paid by any other person in his stead, be invalid.

61. The other resolutions, which are as follows—

That vacant land and empty property shall be liable to pay the owner's tax upon the site value as appearing in the valuation list.

That it is desirable that the question of requiring the owners of empty tenements to pay (as is done in the City of London with regard to the sewers rate) the whole or part of the ordinary rates should be raised in connexion with the evidence to be given before the Royal Commission,

are, as the Commission will observe, of a subsidiary character, and I do not know that I need at this stage offer detailed observations upon them. The Council has always been of opinion that the existing system of assessment in London does not take adequate account of the actual value of spaces of ground which are not covered with buildings or used for purposes of real economic utility. The question originally arose in the first Council over what was called the Holland Park case. It was contended by Mr. Saunders, and by a great number of the County Committee, that the assessment, according to the then existing practice, of large pleasure grounds like Holland Park was ridiculously low, considering the fact that, whatever rental might be obtainable for Holland House and the park for use in its present state as a dwelling, the actual value of the land in question was enormous, and a corresponding annual value might be obtained for it if the owner chose to sell it. It was answered, apart from technical arguments, that it was undesirable to drive open spaces of this kind into building. It has always seemed to me that the reply was irresistible—that open spaces held for private use and pleasure are not in the same category as public open spaces at all, and that in so far as it is desirable (as it clearly is) that spaces should be kept free from building for the public advantage, it is the obvious course, and in the end much the cheaper one, that these spaces should be acquired by the public and managed for the public utility.

62. The majority of the Council have always said that they were perfectly willing to assent to the treatment of open spaces in private hands, such as, for instance, the open spaces of the Temple, as proper to be regarded for assessment purposes as *quasi* public, wherever the legal owners were willing to allow reasonable public access. The whole question, however, is only indirectly connected with the present inquiry.

63. The Commission will also observe that the present exemption from local charge of empty houses is dealt with in the resolutions of the Council and in the report of the

Taxation in respect of site values. Resolutions of London County Council thereon.

Vacant land and empty property. Rating in respect of. Holland Park case.

committee by which they are prefaced. I do not think it is necessary at this stage to enter further into this branch of the subject, as to which, in my opinion, the Council is practically unanimous. I have never myself had any serious reason for continuing the present exemption of empty houses from local charge.

64. As regards the vacant land upon the borders of the building area, including building estates ripening for building value, a further series of considerations arise. It has undoubtedly been the general opinion of the Council for a long time that it is undesirable to allow speculators to hold land of this kind for indefinite periods in order that they may obtain higher prices for it when the land is, under the present system of assessment, practically unburdened with any contribution to the municipal expenses. This is obviously a strong case in which the municipal expenditure actually goes to create site values in the hands of a man who proposes to pocket the unearned increment, and does not bear his share of the burden. I am aware that it has been suggested in the later stages of the discussion that the sudden imposition of the entire local taxation upon small houses as soon as they are built on such estates acts as a check on building; and, speaking for myself, I am inclined to believe that theoretically it would have been a wiser plan to distribute the whole rating, whether it has to be paid by the occupier or the owner, between the different tenements in the Metropolis, not, as at present, according to their rateable value, but rather according to their site value. In other words, I think there is a considerable argument against including in any assessment for rating the building value which represents a return upon the investment of capital in providing accommodation. I state this view because it has been a matter of discussion, but I desire to make it perfectly clear that it has been in no sense adopted by the Council, and that I myself do not propose that any action should now be taken upon the subject. The considerations in question do not in my view in any way negative the argument that, while the present system of assessments according to rateable value is maintained, it is an injustice that speculators should be allowed to hold land which is more or less available for building within the metropolitan area, free of any reasonable contribution to metropolitan charges, not only because that arrangement appears to me to be financially unjust, but also because they are by that means induced or enabled to keep land out of the market for long periods of time, which would, if it were brought into building, tend by its competition to reduce the general level of rent in London—a circumstance most urgently to be desired, inasmuch as the housing problem is in my opinion the most grave of all those with which the Council has to deal.

B. F. C. COSTELLOE.

Spring Gardens, S.W.,

### ADDENDUM.

EXTRACTS FROM THE MINUTES OF THE LONDON COUNTY COUNCIL OF 7TH DECEMBER 1897,  
AND 1ST AND 8TH FEBRUARY 1898.

#### Report of the Local Government and Taxation Committee.

10th November 1897.

#### *New Sources of Revenue.*

1. On 26th March 1895 the Council passed the following resolution — “That, having regard to the urgent need of relief for the occupying ratepayer, the Local Government Committee be instructed to consider and report without delay as to the best means of speedily obtaining new sources of revenue, including in their consideration the rating of land values and the necessity of directing the immediate attention of Her Majesty’s Government to the great injustice done to London by the unfair allotment of the Exchequer grants and by the inadequate assessment of Government property for the purpose of contributions to the local rates.”

Since that date, however, the Council will doubtless remember that a Royal Commission has been appointed, the reference to which is—“To inquire into the present system under which taxation is raised for local purposes, and report whether

don County  
Council.

APP. XI. " and how far all kinds of real and personal property contribute equitably to such  
 " taxation, and if not, what alterations in the law are desirable in order to secure that  
 " result."

Report of  
 Local Govern-  
 ment and  
 Taxation  
 Committee  
 of London  
 County  
 Council.

We have endeavoured to deal simultaneously with these two cognate but distinct matters, but our proceedings on the former and more exhaustive branch have been dislocated and interrupted for several months past by the necessity of considering what immediate policy is to be advanced for the practical purposes of the Commission.

On 6th April last we reported that we had carefully considered the question of the evidence to be submitted to the Commission, and that we were of opinion that the Council's evidence might be submitted in two sections—

- (i.) Evidence to be given by the officers of the Council as to statistics showing the present distribution of local taxation as it concerns London, and as to the existing arrangements which govern such distribution.
- (ii.) Such evidence as the Council may resolve to offer as to policy by way of criticism of the present arrangements or by way of proposals tending to their amendment.

Under the first head the Statistical Officer and the Assistant Valuer were instructed to give evidence and the evidence of the former has been in part taken, and a memorandum thereof is now circulated to the Council.

It now appears to be our duty on the one hand to suggest some means of "obtaining new sources of revenue," by which phrase, according to the terms of the Council's resolution, it was intended that the rating of land values should be included. On the other hand it is our duty, and it has now become our immediate object, to make proposals to the Council as to what evidence could or should be tendered to the Royal Commission on Local Taxation on the part of the Council as to the questions of policy which arise under the Commission's reference—that is, in effect, as to the reforms which the Council might wish to propose in relation to the present system under which local taxation is raised. It will be evident that these two branches of the subject could not be properly treated in the same way, and the difficulties concerning our labours have been greatly increased by the fact that we were necessarily working on two different lines at once. For the present purpose it may be taken that we are reporting solely from the point of view of the proposals which we consider that the Council might submit by way of evidence on policy to the Royal Commission.

We submit recommendations which we propose should be laid before the Commission, and we have given instructions for all the documents considered by us in connexion with the whole subject to be sent to each member of the Council.

#### *A.—Local Taxation of Land Values.*

Our first recommendations relate, as will be seen, to the question of the rating of land values. It will also be observed that this matter is not only one which in our judgment may now properly be submitted to the Royal Commission as a proposal for a reform of the present system of local taxation, but that it is also a matter on which by the reference of 26th March 1895, following upon many previous resolutions, the Council has long since decided. Our main duty in the matter would seem to be that of putting into shape for the present purpose, as a basis of evidence to be tendered to the Commission, such proposals as will submit the local taxation of land values in an intelligible form for their consideration. We do not consider it proper for us at the present stage to put these proposals into the form of heads for a Draft Bill, or to recommend to the Council the precise machinery by which such a tax might be collected from the proper persons. If the Royal Commission declines to entertain the proposal at all, it would be evidently useless for the Council to elaborate a detailed plan. If on the contrary the Commission desires that such details should be furnished, it remains perfectly open for the Council to consider and decide upon them if it should think fit. Neither has it been considered either necessary or proper to submit to the Council what may be called an economic treatise upon the extremely complicated and much disputed question of the ultimate incidence of rating under the present or any other system. It is well known that opinions are divided, not merely among members of the Council, but also among theoretic economists, as to this matter, which is in the end a question not of opinion or policy, but of science.

In the view presented in this report, however, the solution of it is not really relevant to the question at issue. Whether the ultimate burden of the London rates falls exclusively upon the occupier or exclusively upon the owner, or in varying proportions upon the one and the other, it appears to us that there is as a matter of policy "urgent

“need of relief for the occupying ratepayer.” It equally appears that the present system by which the whole of the local rates comes immediately out of his pocket without any direct means by which (as in the case of the landlord’s property tax) he can visibly and certainly transfer the burden, is not only inexpedient but unjust. It is certain that a large body of persons of very varying opinions, not merely as to the incidence of taxation, but as to political questions generally, are agreed that this system, which is a mere accident in itself, is not desirable, and ought not to continue.

If this be so the duty of the Council would seem to be to recommend some new form of local taxation which can be placed in a direct, or practically direct, manner upon the owners as distinguished from the occupiers.

In considering this problem it is obviously necessary first of all to consider who are “the owners.” In the consideration of this subject, which has now extended for many years, it appears to be generally agreed, that “the owners” ought to be understood as meaning those persons who are in possession of some value or interest which arises out of the site value (*i.e.*, the value of the ground regarded simply as a site) as distinguished from the intrinsic value of the buildings (*i.e.*, the portion, if any, of the actual value of any premises which is attributable to the capital expended upon them in erections of any kind). It was in the attempt to work out this distinction that the definition of site value which is set out in recommendation (e) was arrived at. It is admitted that under that or any other system of definition there may be exceptional cases in which what is called the site value is to some extent unrealisable. We are of opinion, and we have recommended that machinery should be provided for equitable reduction in such cases; but exactly how they should be met, what cases should be provided for, and to what tribunal they should be referred, appear to us to be matters of detail which can only be dealt with in the drafting of a Bill, and after the many general questions of machinery and collection have been determined.

The definition of site value has been criticised on the ground that in some instances the value indicated would not practically take the form of an obtainable annual rent, although it might exist in the shape of a capital value which could be practically realised at Tokenhouse Yard. We think that even if this objection applied to any large number of cases, it would not afford any reason against the imposition of the tax proposed. It is, however, necessary to add that the proposal for a so-called owners’ tax does not pretend to be, any more than any existing tax pretends to be, a mathematically correct apportionment of burdens. It is submitted in the belief that while it would afford a material relief to the occupiers at present suffering from continual increase of taxation, it would on the other hand place upon “the owners” who would bear it, a contribution which will not exceed the share of the cost of administering and improving London which they may justly be expected to bear directly.

Who are “owners” in this sense we have defined in principle in our recommendation (c). For distributing the proportionate shares among the persons who satisfy this definition in each case under the absurdly complex conditions of London tenure, machinery will of course be required. Until the principle is accepted it seems to us that it is not the duty of the Council to express any view as to which machinery is the most appropriate. Many schemes have already been proposed, some of which are set out in the papers now circulated. We have not rediscussed them at the present stage, but we are satisfied that if the principles now recommended are adopted as a basis for legislation, there will be no serious difficulty in devising the necessary details.

The position may be summed up as follows—the occupying ratepayer is justly complaining of a continually increasing burden. He feels that this increase does come out of his living, and that much of the fruit of it goes into the owners’ pocket. Whatever the abstract economics may be, this is a grave and urgent social grievance. It can be redressed only by making owners as such pay their share. This can be done if Parliament so resolves. The Council’s present duty is therefore, in our opinion, to propose this to the Commission, and we recommend—

- (a.) That it is advisable that a new source of revenue should be obtained by means of some direct charge upon owners of site values.
- (b.) That this charge be termed “owners’ tax.”
- (c.) That all persons deriving a revenue, or use equivalent to revenue, from the value of a site, be liable to pay such charge.
- (d.) That the site value of every property be assessed and entered in the valuation list.
- (e.) That the site value be the annual rent which at the time of valuation might reasonably be obtained for the land as a cleared site if let for building by an

owner in fee, subject to equitable reduction in exceptional cases in which the full site value thus defined is not being enjoyed or obtained by any person or persons.

(f.) That in view of the fact that considerable expenditure has been incurred from public funds which has largely contributed to the increase of site value, the Royal Commission be asked to recommend that such owners' tax commence at the rate of 6*d.* in the £, and rise gradually to such sum as Parliament may determine, and that any increase of burden or expenditure for new services should be equitably shared between the present rate on occupiers and the proposed owners' tax.

(g.) That any existing or future contract or agreement by which an owner purports to exempt himself from the owners' tax, or to cause it to be paid by any other person in his stead, be invalid.

As supplementary to the above recommendations we considered—(i.) a suggestion for payment of an owner's tax upon vacant land and empty property, and (ii.) as to a proposal for the imposition of a municipal death duty or other equivalent charge on immovable property within the county. It may be pointed out that both these reforms have in previous times been endorsed by the Council.

With regard to (i.) it is well known that the system of local taxation in London always proceeded, until about the year 1855, on the footing that the owner of empty houses derived a large benefit in many ways from the local administration, and that he ought to pay at least a mitigated rate, being generally half the rate usually levied. It is clear that the exemption of empty houses from rating tempts the owner to hold them for a higher rent, and thereby seriously tends to raise the standard of rent all over the Metropolis. Since the pressure of rent in London is a very grave social question, it would appear that the change which was effected about 1855 by exempting empty properties from all local charge was most undesirable. It is well known that that change was never in fact made in the City, and that empty property in the City continues to pay half the sewer rates to this day. It is worth while to add that the present exemption of empty property produces very serious friction and irritation as between the local authorities in London and the central authorities, and is largely responsible for the great variation between the apparent amount in the pound of the central precepts and the amounts in the pound which are locally levied in order to cover them. As regards the proposal that vacant land should bear the owner's tax, that would appear also to require little comment. The proposal was originally made by the Housing Commission presided over by the Prince of Wales. The present arrangement would seem to be indefensible. It exempts from contribution to local charge either lands within the area of continuous building, which the owner chooses to keep out of their ordinary economic use, or lands upon the fringe of the building area which, by the direct effect of the administration and improvement of London, are endowed in the hands of some speculative holder with a rapidly increasing unearned increment. The reason why vacant land, either in the heart of London or on the outskirts, is not at present bearing any real share of local burdens, is probably the theory that it can only be rated in respect of some annual value which it is actually producing. It would appear that this is a very fallacious argument—not only because in most cases the owner is simply foregoing a possible annual value because he is obtaining at the same time a greater capital increment, but also because in many cases, such as that of the Council's sewage works, enormous rating charges are laid under the present law upon tenements which produce no annual income at all. As regards the much discussed case of large gardens or parks at present held with houses in districts within the building area, the Council has long affirmed that there is no reason why the owners of private pleasure grounds, who decline to allow the public any access, should not be reasonably assessed upon an annual figure having some relation to the true value of the land which they choose to keep out of its reasonable economic use, especially as that choice has the indirect result of raising the rents of London and further increasing the difficulties of the problem of housing the population. If it be said that many of these grounds ought not to be forced into the builders' hands—which is quite true—the answer is that it would be cheaper and more just to buy them for public use.

With regard to (ii.), as to the imposition of what has been commonly called a "municipal death duty," we considered it our duty to submit to the Commission the fact that the Council had already proposed such a plan, as a means of intercepting at death some portion of the constant increase of site values in London, to relieve the ratepayers from some part of the burden of the taxation which goes to produce that increment of value itself. In view of the fact that the Imperial death duties have lately been so largely increased, we recognise that the proposal is not likely at the present moment to be effective; but the possibility should be borne in mind, inasmuch

as it is not likely that any owner's charge, taking the form of an annual rate, will contribute as much out of the unearned increment of site value as the occupying ratepayers might reasonably propose. We have therefore resolved merely that the proposal should be laid before the Royal Commission, as being a possible supplement to any form of owners' rate. We have also adopted a further suggestion which is connected with this one. The Corporate Property Duty was devised as some equivalent, in the case of corporations, for the succession duty paid by individuals. A great part of the immovable property in London is held by corporations, which never die. At present, by reason of various exemptions, such as that of the enormous London property of the Ecclesiastical Commissioners, the duty only produces (even for the Exchequer) the ludicrously small amount of 33,000*l.* If it were extended on just principles, we think that the Council ought to share in the revenue, and that it might afford a further considerable relief to the occupying ratepayers. We recommend—

(*h.*) That vacant land and empty property shall be liable to pay the owners' tax upon the site value as appearing in the valuation list.

(*i.*) That the Royal Commission on Local Taxation should also be informed that the Council is in favour of a municipal death duty upon immovable property held by individuals within the county with an analogous charge on such property when it is vested in bodies corporate or unincorporate.

#### *B.—Revision of Exchequer Contributions.*

It has long been our opinion that London is unfairly treated with regard to the present system of making grants from the Imperial funds in aid of local taxation, and, under this head of the Council's reference, we submit a return prepared in continuation of a previous return, showing the relationship of London to other counties and county boroughs in respect of rateable value, rates raised and contributions received from Imperial taxes for the year 1893–94, and in respect of the proportions of local taxation borne by Imperial taxes and by rates. This return contains ample proof that the process of Exchequer contributions does not in effect relieve the London ratepayer or, to speak more exactly, the inhabitants of London at all. It is included among the documents now sent out to members with this report.

On the principle that grants from Imperial taxation should be and are in fact intended to be in accordance with the necessities of each locality, London suffers considerably by the present system, as the statistical officer has demonstrated. Seven years have elapsed since the present apportionment of local taxation grants came into operation, and as five years is the period fixed upon in the Local Government Act of 1888 for a revision of the basis of payments from county councils to local authorities within the counties, it is all the more urgently necessary to London that a revision of the basis of grants from the local taxation fund to the counties should take place. If it can be shown that such a revision could be effected without any disturbance to Imperial finance, upon a principle admitted to be sound by the best economic authorities, and with perfect fairness to each county, and if, in addition to these considerations, the yield of certain strictly local taxes could be substituted for an apportionment of Imperial taxes, there is no reason why London should be content to wait during an indefinite period for redress.

We are satisfied that such a reform is possible on the lines set forth in the statistical officer's report on New Sources of Revenue, now before the Council, and after exhaustive discussion of the suggestion there made, we have decided to ask the Council to submit it to the Commission in the form set out in our recommendation (*k.*).

Previous proposals of this nature have frequently been objected to on the ground that the present incidence of the inhabited house duty is very defective, and that the Council would desire that it should be largely altered if it were to become a portion of its own revenues. It is for this reason that the final clause has been added to recommendation (*k.*). We therefore recommend—

(*j.*) That, as the present system of Exchequer contributions from the taxpayer to the ratepayer by means of the Exchequer grants appears to operate so as to withdraw from Londoners more than it returns to them, no system of Exchequer contributions distributed to the whole country upon the present basis of division ought to be accepted on behalf of London.

(k.) That it is desirable to substitute as local revenue the inhabited house duty and land tax in London and other counties (adjusted as suggested in the statistical officer's memorandum) for the share of probate duty and beer and spirit duties now transferred, and that in that event it will be desirable that county councils should have power to propose from time to time, subject to approval of Parliament, schemes for amending the present incidence of inhabited house duty.

*C.—Rating or Partial Rating of Empty Tenements.*

It will be observed that the following recommendation is not inconsistent with recommendation (h), although it proposes that a second system of rating of empty tenements should be submitted to the Commission. Even if the Commission declines to entertain the general proposals for taxation of site values, the arguments for the rating or partial rating of empty houses, which have been stated above, will remain unaffected. We recommend—

(l.) That it is desirable that the question of requiring the owners of empty tenements to pay (as is done in the City of London with regard to the sewers rate) the whole or part of the ordinary rates should be raised in connexion with the evidence to be given before the Royal Commission.

*D.—Rating of Movable Property.*

It is unnecessary to discuss at length the following negative recommendation as regards the local rating of personal property. It is well known that in connexion with the appointment of the Royal Commission, suggestions were current as regards some possible rating of what is roughly called "personalty," and we came, after careful consideration to the conclusion that no such schemes were practicable or expedient. We recommend—

(m.) That having regard to the impossibility of locating all movable property, no suggestion be made to the Commission with regard to the local rating of such property.

We have not at present proceeded further in the detailed consideration of any of the above proposals, and we are of opinion that it is unnecessary to do so until the Council is informed how far, if at all, the Royal Commission is prepared to enter into or recommend any of the suggested reforms. We recommend—

(n.) That the foregoing recommendations be approved as forming a basis of the evidence as to policy to be submitted to the Royal Commission on Local Taxation now sitting, and that the chairman of the Local Government and Taxation Committee (Mr. Costelloe) be appointed to submit and give evidence in support of such recommendations.

B. F. C. COSTELLOE,  
*Chairman.*

RESOLVED—That the report be received.

(1a.) On the motion to adopt recommendation No. 1 (a) :

Amendment moved by Mr. Harris, seconded by Sir Harry Poland—That, with a view to the Royal Commission framing proposals for alterations in the law in the event of its coming to the conclusion that "site values" do not contribute equitably to taxation, the recommendations of the Committee under section A, viz., (a) to (i) of this report, be submitted to the Commission as suggestions for its consideration, and that there also be submitted to the Commission the report of the statistical officer bearing on the question whether and how far all kinds of property contribute equitably to taxation, and the report of the valuer upon the incidence of rates as between owners and occupiers.

After debate and a resolution that the question be now put,

Amendment put to the vote, and, the Council having divided (at 6.16 p.m.), there appeared :—

Beachcroft, R. M. ( <i>V.C.</i> )	Gooding, R.	Porter, J. B.
Boulnois, C.	Goulding, E. A.	Probyn, Lt.-Col. C.
Bull, W. J.	Harris, Sir G. D.	Robinson, R. A.
Campbell, C. H.	Harris, H. P. ( <i>Teller</i> ).	Rotton, Lt.-Col. A.
Campbell, Col. F.	Haydon, W.	Urquhart, W.
Chapman, C. M.	Hayter, L. H.	Westacott, T. B.
Clarke, Henry.	Hubbard, Hon. E.	Wetenhall, W. J.
Corbett, T. L.	Jerome, C.	White, E.
Dimsdale, Sir J. C.	Legge, Hon. H.	White, J. ( <i>Teller</i> ).
Dixon, J.	Longstaff, G. B.	Whitmore, C. A.
Dumphreys, J. M. T.	Lushington, Sir G.	Williams, D.
Elliott, G. S.	Matthews, W.	Wilson, Sir A.
Emden, T. W. L.	Middleton, R. W. E.	

Motion declared to be carried.

RESOLVED—That it is advisable that a new source of revenue should be obtained by means of some direct charge upon owners of site values.

(1 *b* and *c*.) RESOLVED—That the several recommendations of the Committee, Nos. 1 (*b*) and (*c*), be adopted.

(1 *d*.) On the motion to adopt the recommendation of the Committee, No. 1 (*d*),

Amendment moved by Lt.-Col. Ford:—That the following words be added: “As a separate and distinct class of assessable hereditament, and when so entered as such shall be in common with all other hereditaments entered in such valuation list subject to all taxation, and not merely to a particular surtax upon the Landlords Property Tax of any fixed or given amount on all persons from the occupier down to the first landlord and regardless of the tenement being used as a shop or as a house.”

The amendment was not seconded.

After debate,

Motion put.

A division having been demanded and granted, but tellers for the “Noes” not being nominated,

Motion declared to be carried.

RESOLVED.—That the site value of every property be assessed and entered in the valuation list.

(1 *e*.) Motion made—That the recommendation of the Committee, No. 1 (*e*), be adopted.

After debate,

Motion made—That the recommendation of the Committee, No. 1 (*e*), be adopted.

After debate,

Motion put and declared to be carried.

RESOLVED accordingly.

(1 *f*.) On the motion to adopt the recommendation of the Committee, No. 1 (*f*).

Amendment moved by Col. Hughes, seconded by Dr. Gooding—That the words “per annum” be inserted before the word “and” in line 3.

The Chairman of the Committee having intimated his willingness to accept the amendment,

Amendment put and declared to be carried.

After debate,

Original motion, as amended, put and declared to be carried.

RESOLVED—That in view of the fact that considerable expenditure has been incurred from public funds which has largely contributed to the increase of site value, the Royal Commission be asked to recommend that such owners' tax commence at the rate of 6*d*. in the £ per annum, and rise gradually to such a sum as Parliament may determine, and that any increase of burden or expenditure for new services should be equitably shared between the present rate on occupiers and the proposed owners' tax.

(1 *g*.) On the motion to adopt the recommendation of the Committee, No. 1 (*g*),

Amendment moved by Mr. Westacott, seconded by Mr. Cohen—That the words “existing or” be omitted from line 1.

After debate,

Amendment put and declared to be lost.

Original motion carried.

RESOLVED—That any existing or future contract or agreement by which an owner purports to exempt himself from the owner's tax, or to cause it to be paid by any other person in his stead, be invalid.

(1 *h.*) Motion made—That the recommendation of the Committee, No. 1 (*h.*), be adopted.

Motion put to the vote, and, the Council having divided (at 4.42 p.m.), there appeared—

Emden, T. W. L.	Lushington, Sir G.	Whitmore, C. A.
Fardell, Sir T. G.	Matthews, W.	Williams, T. W.

Motion declared to be carried.

RESOLVED.—That vacant land and empty property shall be liable to pay the owner's tax upon the site value as appearing in the valuation list.

(1 *i.*) On the motion to adopt the recommendation of the Committee, No. 1 (*i.*),

Amendment, moved by the Vice-Chairman of the Council, seconded by Mr. Fletcher—That the recommendation be referred back to the Committee with an instruction to consider and report whether in lieu of informing the Royal Commission that the Council is in favour of a municipal death duty, it would not be preferable to suggest that a certain share of the estate duty now levied on London property should be allocated to London local taxation.

Amendment put and declared to be carried.

On its being put as a substantive motion,

APP. XI.  
Extract from  
Minutes of  
London County  
Council.

Amendment moved by Mr. Cornwall, seconded by Mr. N. W. Hubbard—That all words after the word "That" in line 1 down to and including the word "that" in line 4 be omitted.

Amendment put and declared to be carried.

On the motion as amended being put,

It was agreed that the following words should be added to the motion—"and that evidence be submitted in support of the proposal."

Motion as altered put and declared to be carried.

RESOLVED—That a certain share of the estate duty now levied on London property should be allocated to London local taxation, and that evidence be submitted in support of the proposal.

(1 *j.*) RESOLVED—That the recommendation of the Committee, No. 1 (*j.*), be adopted.

(1 *k.*) On the motion to adopt the recommendation of the Committee, No. 1 (*k.*),

Amendment moved by Mr. Shaw Lefevre, seconded by Lt.-Col. Ford—That the recommendation be referred back to the Committee.

After debate,

Amendment put to the vote, and, the Council having divided (at 4.30 p.m.), there appeared—

*For the Amendment—50.*

Amendment declared to be carried. Carried also as a substantive motion.

RESOLVED—That the recommendation be referred back to the Committee.

(1 *l.*) RESOLVED—That the recommendation of the Committee, No. 1 (*l.*), be adopted.

(1 *m.*) On the motion to adopt the recommendation of the Committee, No. 1 (*m.*).

Amendment moved by Mr. Urquhart, seconded by Mr. Bicker-Caarten—That all words after the word "That" in line 1 be omitted, and that the following be added—  
 "in order to afford substantial relief to the occupying ratepayer, a suggestion be made to the Royal Commission that all classes of property yielding rent or interest should contribute equitably towards such portions of local taxation as are expended on education and the maintenance of the poor."

APP. XI.

Extract from  
Minutes of  
London County  
Council.

After debate,

Amendment put and declared to be lost.

Original motion carried.

RESOLVED accordingly.

(1 *n.*) The Chairman of the Committee altered recommendation No. 1 (*n.*) as follows—That the foregoing resolutions, together with those passed by the Council on 7th December last and 1st February, be approved as forming a basis of the evidence as to policy to be submitted to the Royal Commission on Local Taxation now sitting, and that the Chairman of the Local Government and Taxation Committee (Mr. Costelloe) be appointed to submit and give evidence in support of such resolutions.

On the motion to adopt the recommendation as altered,—

Amendment moved by Mr. Porter, seconded by Mr. C. H. Campbell—That the Chairman of the Local Government and Taxation Committee (Mr. Costelloe) be named to give evidence upon the resolutions passed by the Council, but so as not to commit the Council in any way to views other than those expressed in the Council's resolutions.

Amendment put and declared to be lost.

Amendment moved by Lieut.-Col. Ford, seconded by Mr. Organ—That the following words be inserted after the word "resolutions" in line 2—"together with the suggestion contained in the resolution of the Council of 13th April last as to whether, in view of the action of Parliament in granting out of the Imperial revenues money in relief of local rates in agricultural districts, it was advisable that representations should be made to Parliament with a view to a grant in aid of London rates, having regard to the very exceptional conditions appertaining to the metropolis of the empire."

After discussion,

Amendment by leave withdrawn.

Amendment moved by Mr. Shaw Lefevre, seconded by Earl Russell—That the following words be added—"and that attention be called to the unequal grants to schools under the Voluntary Schools Act, 1897, and to the very serious wrong done to London and other urban districts by the Agricultural Rates Act, 1896, and that in the opinion of the Council it would be most unjust to renew that Act in 1901."

After debate,

Amendment put to the vote, and, the Council having divided (at 5.20 p.m.), there appeared—

*For the Amendment—49.*

Original motion as amended carried.

RESOLVED.—That the foregoing resolutions, together with those passed by the Council on 7th December last and 1st February, be approved as forming a basis of the evidence as to policy to be submitted to the Royal Commission on Local Taxation now sitting, and that the chairman of the Local Government and Taxation Committee (Mr. Costelloe) be appointed to submit and give evidence in support of such resolutions; and that attention be called to the unequal grants to schools under the Voluntary Schools Act, 1897, and to the very serious wrong done to London and other urban districts by the Agricultural Rates Act, 1896, and that in the opinion of the Council it would be most unjust to renew that Act in 1901.

## APPENDIX XII.

**Memorandum prepared for the Commission by Mr. Edmund Victor Huxtable, on behalf of the Corporation of London, and the City Rating Authorities. [See MINUTES OF EVIDENCE, QUESTIONS 20,449-20,782.]**

## APP. XII.

1. Witness is Manager of the Assessment Department of Messrs. Rexworthy, Barnard & Co., solicitors to the City of London Union, the Parish of St. Pancras, Holborn Union, and other Metropolitan and Provincial Authorities. He has had the conduct of Assessment Appeals for the last 14 years. He has had wide experience, having been engaged on Appeals against both Quinquennial and other Valuation Lists; on Appeals against Totals for the City of London and Holborn Unions against the London County Council: on Appeals against the Assessment of Railway Companies' Lines and Stations; Gas, Telephone, Hydraulic Power, and other Companies' Works, Mains, &c.; Public and semi-public Buildings, including Workhouses, Free Libraries, Drill Halls, properties coming under Local Acts, Livery Halls, Exchanges, Licensed premises, Banks, Insurance Companies' and other properties. He has also wide experience of the proceedings on objection and on valuations of property for rating purposes.

Div. 2 (a).  
City of  
London:  
Allegation  
of under-  
assessment.

2. The Witness will reply to the allegations that the only district in which it would be fair to say that under-assessments were prevalent was within the City of London, and to the assertion that such under-valuation results in a loss of at least 700,000*l.* per annum, by evidence giving a brief general description of the character of property in the City.

Under this head, the Witness proposes to point out certain features which distinguish City properties within the City District from properties within all other Metropolitan Rating Districts, and upon which consideration no general criterion of value for rating purposes is applicable, and the Witness will show that on account of such peculiar features, City property cannot be included in any general allegation of under-assess-

ment, or any allegation which is based upon some general principle of valuation. Such features, peculiar to the City, arise (1) out of the character of the population, (2) of the trading, and its concentration into a small area, and into special centres within that area, (3) out of the character of the buildings, the occupation and the occupiers, the tenure and their suitability for purposes which the exigencies of trade have forced upon them, all such peculiarities being based upon an exceptional demand for property within a limited area.

APP. XII.

3. The City differs from all other Rating Districts; for, with the exception of occupation by caretakers and housekeepers and residents in the few City Hotels (not including Public Houses and other licensed premises), there is practically no residential property in the City. The residential or sleeping population is now about 30,000. The day or business population has been ascertained by the Day Census, taken by the Corporation of London, to be upwards of 300,000, whilst the number of persons resorting to the City in one day is upwards of 1,100,000.

Div. 2 (b).  
City of  
London:  
Character of  
property,  
population,  
&c.

There are about 6,000 buildings within the City. These buildings are distributed over 668 acres—the area of the City. Practically all the property in the City area is devoted to business purposes.

4. In considering the value of City buildings for Assessment purposes, the Witness will show—

That the great majority of City buildings are devoted to Banks, Insurance Companies, Mercantile Companies and wholesale Firms, and to professional and commercial men occupying offices; and these occupations differ in their character from occupations for commercial and professional purposes without the City:

That property mainly devoted to retail shopkeeping in the City bears little resemblance to property of this description without the City, in that the upper floors of buildings with shops in the City are not as in other districts occupied by the shopkeeper for residential purposes:

That, with the exception of Hotels, the trading in all classes is confined to certain hours of the day, there being practically no night trading, with the exception of certain licensed and other premises where they do no day trading, and in others where they do all night and all day trading:

That the occupiers are in practically all cases men of credit and reliable tenants:

That it is absolutely essential to their business that they shall retain their premises, and unlike occupiers of residential property or even many occupiers of premises devoted to commercial pursuits in other districts, they would in the very great majority of cases suffer severe loss by removal:

That, except in particular spots where sole occupation is essential, particularly in the case of Banks, Insurance Offices and trading Corporations, a large proportion of the buildings are sub-divided floor by floor, and generally again sub-divided into offices or rooms occupied by different tenants, such rooms or offices being also in many cases occupied jointly:

That in a number of cases the basements of such buildings are now generally so occupied, and in many cases the roofs are utilised for various purposes, such as telephone wires and call wires:

That in certain cases the building is occupied floor by floor by several tenants, who are devoted to one commercial or professional pursuit:

That in other cases the building is occupied floor by floor by tenants devoted to various trades and businesses, with varying deductions and allowances to the occupier or hypothetical tenant under the Act:

That in other cases (in certain classes of property peculiar to and common in the City, *i.e.*, buildings which are mainly devoted to the letting of floors for offices and general commercial purposes, but include Halls, machinery, lifts, Safe deposits, Licensed premises, easements and other rateable hereditaments and which are generally owned by public companies), on account of the character of the property and the occupation, the buildings have as a result of certain legal decisions to be rated upon exceptional considerations of value:

That the population being a day population, the occupier does not exist in the great majority of cases in the sense of his being a resident, and that in the case of a very large proportion of rated property within the City, the owner (either occupier for business purposes or not) is the ratepayer:

That in consequence of the peculiar character of the tenancies, the great proportion of the buildings represent and produce a revenue to the rated owner and occupier which is considered on the determination of the annual value:

APP. XII.

That the buildings generally within the City are either Freehold or Leasehold, few buildings being held on annual tenancy; there are very few quarterly, monthly or weekly tenancies; if any exist, they would apply to small properties bordering upon poorer districts:

That the buildings held on Freehold or Leasehold tenure are, however, sub-divided into leasehold and annual under tenancies; such leases varying as to term of tenancy and covenants, and proportion of rental value:

That there is no district in the Metropolis where the diversity of structure is so pronounced.

Unlike the majority of Metropolitan Districts, where the rows of houses in a street, and even streets themselves, are alike brick for brick, and there are only minor considerations to affect the value, practically each house in the City differs in character from its neighbour, and a number of considerations often arise upon the user and the value of occupation to the particular tenant within the City area generally, or in special spots, which affect the question of annual value.

Another distinction is in the number of Livery Halls to be found within the City, and the peculiar character of this class of property for assessment purposes.

5. Excluding churches, chapels and other places of worship, there are certain descriptions of property exempt by law from assessment in the City, and which are peculiar to the City. Witness will refer to these properties, and remark upon the action taken thereon by the Assessment Committee of the City of London Union.

6. He will also refer to such special properties as licensed premises and hereditaments falling under Classes 8, 9, 10 and 11 of the 3rd Schedule to the Act of 1869. Witness will show in his evidence under Division 6 how these properties differ for assessment purposes from other properties of the same description or class without the City area.

Upon the question of site or land values, and the proportion of ground value to structural value, and ground rent to rack rent, this Witness will also show certain distinctions between the City and outlying districts.

He will deal with the peculiar incidents of value arising in the cases of Leasehold properties within the City under Division 4 of his proof.

The Witness will subsequently deal with the varying rates of repairs and insurance, and exceptional outgoings and expenses within the City, in which that district differs from the majority of Metropolitan Districts.

Another distinction arises out of the well-known fact that the City area is studded with special centres for the transaction of particular pursuits, professional and commercial. Thus one district may be wholly devoted to Stockbroking, another to dry goods and drapery, another to the legal profession, another to Banking and Insurance, another to Shipping Agents, another to Newspapers, another to Markets for meat, poultry, fish or vegetables, and so on; and for which reason, and in consequence of abnormal demands and limited accommodation, certain difficulties arise on the estimates of the annual value for assessment purposes in numerous cases.

Another distinction arises from the fact that, from various causes, some of which cannot be defined, the value of City property is subject to extraordinary fluctuations in particular areas at irregular periods, and which are more or less temporary; these fluctuations being much greater in the City than elsewhere. This is often a serious consideration on the determining of the annual value.

Another distinction which constantly arises in the City is accounted for by the fact that, although the City covers such a small area, it comprises some 112 parishes. Very often the Committee have to assess buildings which are situate in two and three and even more parishes; this arises more especially in the case of Banks or large blocks of buildings devoted to offices. In allocating the gross and rateable values in these cases, the rent of the whole building must be (of necessity) one consideration only.

Other questions have to be taken into account on the assumption that the hypothetical tenant would rent the whole building, viz., that the value of one portion is relative to the other, but the contribution, each to each, varies, owing to the distribution of frontage, the position of the lifts, and the number and position of halls, passages, &c.; and these considerations are again relative to the question of empties, and the proportionate costs of upkeep and the distribution of the charge for rates and tithes.

7. Hereditaments within the City fall almost without exception within Classes 5, 9, 10, and 11 of the 3rd Schedule to the Act of 1869. On the other hand, other classes in which the maximum deductions are high, are (practically) absent from the City Valuation Lists.

City of  
London:  
Exempted  
properties.

Licensed  
premises,  
and other  
special pro-  
perties:  
Valuation of.

City of  
London:

value of  
property in

8. The following table\* shows very broadly the approximate values of all classes of houses and buildings within the City:—

APP. XII,  
each class referred to in Schedule to Valuation (Metropolis) Act.

	Maximum rate of Deduction.	Rateable Value.
Class 1 - - - -	25 per cent. or $\frac{1}{4}$	240,000
" 2 - - - -	20 " " $\frac{1}{5}$	
" 3 - - - -	16 $\frac{2}{3}$ " " $\frac{1}{6}$	
" 4 - - - -	20 " " $\frac{1}{5}$	
" 5 - - - -	16 $\frac{2}{3}$ " " $\frac{1}{6}$	3,693,500
" 6 - - - -	10 " " $\frac{1}{10}$	
" 7 - - - -	5 " " $\frac{1}{20}$	—
" 8 - - - -	33 $\frac{1}{3}$ " " $\frac{1}{3}$	63,500
Classes 9, 10 and 11 no maximum. Special Properties -	-	575,750

9. Witness will explain the practice adopted by the City of London Union Assessment Committee on the assessment of property and their reasons therefor. The particular allowances in each case are referred to under the consideration of the several classes and descriptions of property in other Divisions of this proof, and will, it is contended, be found to be consistent with the peculiar conditions and incidents of value obtaining in the City.

10. Generally, the Witness will give evidence as to the employment of valuers by the Overseers and Assessment Committee; the action taken by the Surveyors of Taxes in the City; the methods adopted by the Overseers and the Surveyors of Taxes for ascertaining values; the special qualifications of such Overseers, Committee, Surveyors of Taxes, and of the Valuers; the number of objections received, the number of Appeals to the Committee's decisions; and will refer to the following Schedule of increases in the Valuation Lists since 1881:—

City of London: Gross and Rateable value from 1882 to 1898.

#### SCHEDULE OF REVISIONS SINCE 1881.

Year.	Gross Value.	Rateable Value.	Year.	Gross Value.	Rateable Value.
	£ s. d.	£ s. d.		£ s. d.	£ s. d.
1882 -	4,210,660 10 0	3,566,394 16 0	1891 -	4,933,909 0 0	4,100,798 10 0
1883 -	4,242,496 10 0	3,593,062 6 0	1892 -	4,971,187 0 0	4,132,222 10 0
1884 -	4,280,612 0 0	3,617,820 8 6	1893 -	5,022,847 0 0	4,175,613 10 0
1885 -	4,358,044 0 0	3,658,447 8 6	1894 -	5,056,276 10 0	4,202,345 0 0
1886 -	4,510,753 0 0	3,754,241 16 6	1895 -	5,086,178 10 0	4,229,750 15 0
1887 -	4,527,859 18 0	3,767,321 16 6	1896 -	5,361,441 10 0	4,492,827 0 0
1888 -	4,602,096 18 0	3,828,228 16 6	1897 -	5,364,067 0 0	4,496,269 0 0
1889 -	4,634,637 18 0	3,860,759 6 6	1898 -	5,423,566 10 0	4,572,296 0 0
1890 -	4,672,820 18 0	3,884,183 6 6			

11. The Witness will give evidence generally with reference to the basis of the charge of under-assessment in the City of London, and will refer to the statements of previous witnesses under this head, and comment on the lack of evidence tendered in support of the charge.

City of London: Allegation of under-assessment.

He will also give evidence as to the qualifications of witnesses making the charge, impersonally considered; the source of such charge with reference to the County Council Appeal against City Totals in 1890-91; and with reference to the individual cases set out in support of such appeal. He will also read extracts from evidence given and statements made, and *obiter dicta* of the Court of Assessment Sessions on these Appeals; and will also give evidence as to the method adopted by the County Council in obtaining evidence to support their Appeal in 1890-91, and in support of this charge.

12. The Witness will tender evidence on behalf of the City Rating Authorities upon the general charge of under-assessment throughout the Metropolis (and including the City), arising from the practice of allowing the maximum statutory deductions on the determination of the annual value of certain classes of property specified in the Third Schedule to the Valuation (Metropolis) Act, 1869, as follows:—

Div 3 (a).  
Repairs, Insurance, &c.: Deductions for Allowance of maximum deductions.

\* Owing to certain reasons which witness will give, it is estimated that to obtain the actual figures under these separate classes would take at least four months.

APP. XII.

As to the adoption of the practice by all Metropolitan Authorities of allowing the maximum instead of the actual per-centage for repairs, insurance, and other expenses. Under this head, Witness will tender evidence to prove that there can be no doubt that it is the universal practice of the Rating Authorities throughout the Metropolis and in Urban Districts outside that area where Schedule 3 of the Act of 1869 has been adopted to allow the maximum deductions under that Schedule:

That the Court of Quarter Sessions also allow such maxima in practice, except on property coming under Class 8; and that such practice was adopted by the London County Council in their Appeals.

The Witness will also tender evidence drawn from the Report of the Conference proceedings that Resolutions 3, 4, and 6 of the Conference Resolutions were settled on the basis of maximum deductions being allowed after a discussion of the question of the true allowance for statutable.

Div. 3 (b).

13. The Witness will tender evidence upon the general practice of the allowance of the maximum deductions for Statutables, historically considered, with an explanation of the reason of the adoption of the practice, and deal with a consideration of various Valuation Acts, and of the reading of the 3rd Schedule with certain sections of the Act of 1869, and of precedents thereon, as follows:—

Evidence as to the practice of the Metropolitan Rating Authorities upon the matter of allowance, before the Act of 1869; with reference to the County Rate Act of 1852; to the Valuation Acts of 1862, 1864, and local Acts (Metropolitan), under which Metropolitan parishes made their Assessments:

To certain remarks of Mr. Gathorne Hardy on the introduction of the Valuation (Metropolis) Act, 1869:

To the Act of 1869:

To the object of that Act and the basis of value under that Act:

To sections 4-52 and the 3rd Schedule of the 1869 Act:

To the note to such schedule:

To the practice adopted in certain Metropolitan parishes after the passing of the 1869 Act:

To reference thereto by Authorities:

To the case of the Holborn Union Assessment Committee *v.* Waterlow and Son, at the first Court of General Assessment Sessions in 1871:

To the practice of the Assessment and Quarter Sessions since that date, as to the allowance for statutable deductions, except in Class 8.

To the practical reasons for the adoption of the practice at the present time, and thereunder:

(a.) Reasons general to the Metropolis.

(b.) Reasons special to the City—and including a brief consideration of what the “repairs, insurance, and other expenses, if any (including renewals), necessary to maintain the hereditament in a state to command the rent”—consist:

The Witness will refer to the printed proceedings of the Conference under this head.

Div. 3 (c).

14. The Witness will tender evidence upon a consideration of the adoption of the principle of actual outgoings for Statutables, as applied generally to certain descriptions of property in the Metropolis, and within the City area, and to all classes of property enumerated in the 3rd Schedule to the Act of 1869, as applied to—

Weekly and monthly tenancies—Resolution (1) of Conference proceedings.

Property held on Lease - - - (3) ”

” Freeholds - - - (4) ”

Rows of similar houses - - - (5) ”

Licensed premises - - - (6) ”

Special properties - - - (8) ”

As applied to all classes of property within Schedule 3 of the Act of 1869 upon which Witness will comment.

As applied to properties underlet, under which Witness will draw certain comparisons between the City and other districts of the Metropolis.

Witness will refer to *Reg. v. St. Georges Union, Allchurch and Hendon, Allan and Liverpool, Horton and Walsall*, and other precedents under this head; and will give hypothetical cases to show the basis of the general adoption of a fixed standard of deduction.

Div. 3 (d).

15. The Witness will tender evidence upon a consideration of the recommendation of the Conference, that with respect to the deductions shown in Table B. annexed to the Conference Resolutions (being the maxima allowed by the Act in respect to

Classes 1 to 5 in the 3rd Schedule of the Valuation (Metropolis) Act, 1869), such maxima ought not to be allowed in full, where the site value exceeds one third of the total value, and specially with reference to the application of this recommendation to property within the City of London—and thereunder Witness will show that :

- (1) The recommendation referred to under this head is the result of actual resolution of the Conference.
- (2) The maximum deductions set out in the 3rd Schedule to the Act of 1869 are practically allowed throughout the Metropolis.
- (3) Will comment: (a) On the indefiniteness of language in the Resolution; (b) On the effect of its limitation to properties where the site value exceeds one third of the total value; (c) On the effect of its application in connexion with certain other Resolutions of the Conference; (d) On the effect of its limited application to Classes 1 to 5 of the 3rd Schedule of the Act of 1869; (e) On the effect of its limited application to land covered with buildings.
- (4) The Witness will read extracts from the Conference proceedings on the framing of the Resolution as to its object, and submit conclusions on the application of the Resolution: (a) To certain districts; (b) To properties held under certain tenures in specified districts, and generally; (c) To certain classes and descriptions of buildings; (d) To hereditaments occupied by certain classes of ratepayers.
- (5) The Witness will comment on the application of the principle of determining the site value for the purpose of ascertaining the true statutable deductions, whatever the relation of the site value to the total value: (a) Generally; (b) Considered in connexion with the Metropolitan practice of allowing the maximum deductions; (c) Considered in relation to the object of the Act of 1869, and with reference to Section 4 of that Act; (d) Considered briefly in relation to the theory of the sub-division of the site and structural value for assessment purposes.

Under this head, the Witness will explain that, although the City Assessment Committee do not recognise the separate assessment of site value as a principle, they do recognise the fact that the maximum deduction is allowed by them, and they do provide therefor on revision of the Valuation Lists.

16. The Witness will tender evidence in reply to the specific charge of under-assessment as applicable solely to the City district in the case of Repairing Leases, in determining the value of which description of property it is alleged, that, since the Resolution of the first Assessment Conference in 1890, promoted by the London County Council, an addition of 10 per cent. of the rent reserved under an ordinary Repairing Lease to such rent to find the gross value has been made with practical uniformity in all Metropolitan Districts, except the City of London.

*Div. 4 (a)*  
Repairing  
Leases:  
Addition to  
rent reserved  
to ascertain  
gross value.

(1) By evidence *generally* in rebuttal of the allegation, and

On a reference to short heads of evidence to be put in and given in reply to charges under Division 1, Sections (a), (b), (c), (d), and under this Division of his proof.

On a reference to the total value of the City, as set out in the Schedule put in under this Division (allegation C), head 4, as to the total value of property within the City, and the total value of property held on repairing lease with a reference to the estimates tendered by three witnesses before this Commission.

(2) Further evidence will be tendered in reply to the above charge.

On a reference to the Report of the Conference proceedings on the discussion and settlement of the form of Resolution 3, and thereunder;

On a reference to the Conference proceedings in 1890;

On a reference to, and consideration of, various amendments which were proposed to be made to Conference Resolution 3 during the 1893-94 Conference, but which were not carried;

On a consideration of a Schedule put in by the Chairman, on March 20th, 1893—p. 9 of the Conference proceedings—containing the answers returned by the Metropolitan Rating Authorities to the London County Council at the time of the convention of that Conference, in reply to the question as to what per-centage addition was adopted in their respective Districts in the case of Repairing Leases to find the Gross Value from the Rack rent;

On a reference to opinions expressed by the Chairman and by certain Delegates at the Conferences 1890, 1893-94, as to the application of the Resolution.

APP. XII.

(3) Further evidence will be tendered by the Witness in reply to the above allegation :—

On a consideration of the relative maximum deductions under certain classes of the 3rd Schedule to the Valuation (Metropolis) Act, 1869, with practical application to the Conference Resolution 3, and as applicable to Leasehold property within and without the City ;

On a consideration of the relative maximum deductions under Classes 1, 2, 3, 4, 5, 6 and 8 of the 3rd Schedule to the Act of 1869 ;

On a consideration of the application of the Conference Resolution 3 to Classes 1 to 5 of the 3rd Schedule only, omitting Classes 6 and 8 in such Schedule.

(4) With reference to the evidence given in Division 1, contention C of this proof, as to the distribution of various descriptions and classes of property into various districts or areas of the Metropolis, the Witness will show :—

- (1) A similar general distribution with particular regard to leasehold tenures throughout the Metropolis.
- (2) That such distribution depends upon certain demands of particular occupiers, the credit of such occupiers and the character of the occupation.
- (3) That the contention that the rack rental is a criterion of the Rateable Value under Section 4 of the Act of 1869 is illusory.
- (4) Further evidence will be tendered to show that no inference can be drawn of the creation of a principle capable of general application from the fact that the Resolution does apply to particular properties.
- (5) Witness will give hypothetical and actual cases within his own knowledge of properties let on lease in certain districts and within the City, in demonstration of the above facts and contentions.
- (6) Further evidence will be tendered in reply to the above allegation, and with reference to the theory of taxation of ground values ; so far as such theory is incident to the allegations of under-assessment within the City.

Div. 4 (b).

17. Witness will reply to the charge that the City Rating Authorities alone take the amount of the rack rent under lease as the gross value, and tender evidence in rebuttal of the charge contained in such clause, viz. :—

(1.) Evidence drawn from an examination of City Valuation Lists by the Witness, and information supplied him thereon.

(2.) On a reference to Division 1, Sections (a), (b), (c), and (d), of this proof, and allegation A of this Division.

(3.) On a consideration of legal precedents of Appeals to Assessment Sessions and Quarter Sessions, with reference to the principle of the addition of 10 per cent. to the rent to find the gross value, and thereunder with reference to certain statements made by Delegates at the 1893-4 Conference.

(4.) On a consideration of certain *obiter dicta* of Sir Peter Edlin on the 'Totals Appeals of the London County Council in 1893-4, and generally within the knowledge of the Witness.

Div. 4 (c).

Metropolitan  
Common  
Poor Fund.  
Effect of  
under-asses-  
ment upon  
Fund.

18. Witness will tender evidence in reply to the allegations as to the annual loss to the Metropolitan Common Fund through the alleged practice of the City Rating Authorities, as follows :—

(1.) Witness will refer to the Estimates before referred to of the annual loss under this head, owing to the alleged adoption by all Metropolitan Authorities outside the City of the 1893-4, Conference Resolution 3. And to the Schedule put in under this Division.

(2.) Witness will also refer to the following short statement of the different descriptions of leaseholds for assessment purposes, *i.e.*, of dwelling-houses under Classes 2 and 3 of the 3rd Schedule to the 1869 Act, buildings under Classes 4, 5, 6, and mills and factories under Class 8, and will show that for assessment purposes and on the test of beneficial occupation, all these classes have to be considered with reference to the district, the demand for property held under leasehold tenure, and on the differing deductions for Statutables. And thereunder Witness will show that such classes are capable of a variety of further sub-divisions for assessment purposes on account of the character of the occupation, whether residential or commercial, or both, and on account of considerations arising out of (1) the description (ordinary repairing building or renewed), and (2) the length of the term of or the covenants in the Lease, and (3) the position and structural quality of the building, for the purpose to which it is put, and whether such building is occupied by under-tenants, and, if so, whether such occupation is residential or commercial, or both.

19. Witness will, as in head 3 of Section *a* of this Division, give hypothetical and actual cases within his own knowledge of properties let on lease in certain districts and within the City, in demonstration of the above facts and contentions, and will refer to the Conference proceedings under this head. APP. XII.

20. He will also make a short statement with reference to certain questions of value generally incident to the determination of the assessment of Leasehold property within the City arising out of the peculiar features of tenure, user and character of structure, with a general comparison of the maintenance and other expenses within and without the City, with a Schedule, and thereunder will refer to certain questions of value for rating purposes arising out of the following considerations:—

General considerations—

The demand for property devoted to commercial purposes within a limited area and within fixed centres of special trades within that area.

Fluctuations of value general to the City and special to Districts therein, created by frequent abnormal demands for particular properties at particular periods.

The necessity for a fixed and stable tenure of long duration; there being no migratory residential population.

From various causes striking diversities in structural values, and thereunder, the unsuitability of buildings or their failure for the commercial purposes for which they are used or for which they have been designed.

Special considerations arising on covenants (restrictive or otherwise) in certain leases on the length of the term, and when created:—

The user for commercial purposes peculiar to the City; and thereunder considerations of the case of leasehold properties underlet.

On a general comparison of the maintenance expenses within and without the City.

21. The Witness will also refer to the expenses which are considered for rating purposes to be borne by the Landlord in their order:—

(1.) Repairs.—Under which head he will broadly compare the per-centages within and without the City. Repairs,  
Insurance,  
&c.: Deductions for.

(2.) Insurance.—Special features within certain City Districts and comparative per-centages.

(3.) Renewals.—Features peculiar to City property and the per-centages within and without the City.

(4.) Other expenses.—Under this head general and special outgoings peculiar to City properties, and certain burdens cast upon the Landlord arising out of the fact that the Landlord pays the rates and tithes in certain properties held upon lease.

22. The Witness will briefly compare the additional burdens to the present heavy rates which would be created in the City District with the additional burden in other Metropolitan Districts, and comment thereon. The Witness will demonstrate the application of Conference Resolutions 3 and 7 to the rating properties held under freehold, leasehold, and annual tenancies in certain portions of the City, and will refer to the methods adopted by the City of London Union Assessment Committee on the conflicting considerations set out in this and other Divisions of this proof; the basis being the beneficial occupation to the annual tenant.

23. The Witness will tender further evidence in reply, and will produce a Schedule of Totals of aggregate values of buildings within the City, divided into broad classes, and showing the rateable values of buildings held on repairing lease. Class 5 applies to the majority of buildings in the City (of the gross value of 40*l.* and upwards), and includes freeholds, leaseholds, and buildings held under ordinary tenancy. These several tenures are on broad bases approximately estimated at the following annual values:— City of London :  
Rateable value of property held under freehold, leasehold, and ordinary tenancies.

	Rateable Value.
	£
Freeholds	2,017,000
Leaseholds	1,890,000
Ordinary tenancies	90,000

24. The Witness will tender evidence with reference to certain alleged causes of under-assessment, mainly consisting of stated defects of law and practice, and relative to the main charges of general (Metropolitan) and specific (City) under-assessment; and under this head will submit evidence as to the form of the occupier's return. Div. 5 (a).

## APP. XII.

25. The Witness will put in form of return in ordinary use, and will refer to Section 57 of the Act of 1869. He will also refer to the practice of the City Assessment Committee in ordinary cases, and with reference to properties coming under Classes 9, 10, and 11 of the Third Schedule to the Act of 1869; and will give his experience of the present practice in calling for returns as required by the Act, and will, if desired, make certain suggestions upon Sections 55, 56, and 57 of the Act of 1869, and with reference to the form of the return.

Surveyors of Taxes :  
Powers and duties.

26. Witness will give evidence as to the position, powers, and duties of the Surveyors of Taxes; and will refer to Sections 8, 12, 19, and 32 of the Act of 1869; to the attendance of the Surveyors of Taxes on the preparation of the valuation lists, and the practice in the City; to the attendance of the Surveyors of Taxes on the hearing of objections before the Assessment Committee, and the practice in the City; and to certain Appeals by Surveyors of Taxes to the Assessment Sessions.

27. Witness will, if desired, make certain suggestions as to the enlargement of the powers of the Surveyors.

County Council :  
Position and duties.

28. Witness will, if desired, refer generally to the position and duties of the County Council under the Act of 1869 and the Act of 1888; and will comment, if desired, on the question whether the Council should be represented *ex-officio* or otherwise on the hearing of objections or in addition or substitution for this suggestion should have the power as a Central Authority to issue byelaws. He will also comment, if desired, on the question whether their present powers of objection shall be extended to all classes of property or to special classes of property in any District.

Quarter Sessions not adequate to cope with number of appeals.

29. He will comment, if desired, on his view of the adequacy of the present Court of Quarter Sessions to cope with the cases brought before it on appeal against the Metropolitan Valuation Lists, such comments being based on his experience and on a consideration of the number and character of appeals to the Quarter Sessions in 1891-1896, and with reference to the effect of the Act of 1888, and with reference to the time devoted to the hearing of such appeals by the Court of Quarter Sessions.

30. The Witness will also, if desired, comment briefly on the Machinery for making assessment and appeals against the Rate before 1869 under the Acts of 1862, 1864, or local Acts; and will refer to the jurisdiction of the four Courts of Quarter Sessions before 1869; to the jurisdiction of the Assessment Sessions given by the Act of 1869; to the appointment of Assessment Committees; to the appointment of a Central Assessment Committee or of a Valuation Board to secure uniformity of action between Districts, with a comparison of the present power of appeal of parish against parish, and to a suggested special power in such Central Committee to object to the assessment of certain classes of hereditaments.

31. He will likewise refer to Section 24 of the Act of 1869 and Section 42 (10) of the Local Government Act, 1888, especially with reference:—

- (1) To the alterations of the character of the Courts for hearing Appeals;
- (2) To the places for hearing Appeals under Section 29 of the Act of 1869 and the present place appointed for hearing such Appeals;
- (3) To the representation of the City of London upon the hearing of Appeals under the Act of 1869 and the Act of 1888.

Also with reference to the establishment of a Special Court for hearing Appeals; to the establishment of Commissioners to hear Appeals; and with reference to the arguments put forward from time to time by the County Council, that they should be empowered to make a basis for the County Rate under similar conditions and powers to those in the County Rate Act of 1852; with reference to the ground of this suggestion and with reference to the working of the Act of 1852 in the Metropolis.

Div. 5 (b).  
Properties where site value bears a high proportion of total value :  
Valuation of.

32. The Witness will give evidence in reply to a specific but minor charge, applying solely to the City, and incident to the alleged causes of under-assessment before referred to in this Division, viz. :—“ That the Surveyor of Taxes has been unable to raise the City Valuation in respect to Properties where the Site Value is enormous compared with the value of the Structure, because the City Committee have preferred to be guided by the opinion of experts of the highest standing.”

33. The Witness will give evidence within his own knowledge upon this statement and upon the result of inquiries he has made; to an examination of this statement as to the practical object of any such protest; and briefly with reference to the basis of

value under the Valuation Acts and the method and order in which the annual Gross and Rateable Values are directed to be obtained under such Acts. Also to certain Appeals of Surveyors of Taxes to the Assessment Sessions.

34. The Witness will tender evidence in support of a proposition (based on a comparison of the per-centage allowances in certain of the Conference Resolutions and other considerations with the practice and methods of the City of London Rating Authorities) of over-valuation in certain classes of property within the City area, and a probable unequal proportion of contribution to the Central Authority by the City of London District for the Common Rates of the Metropolis.

Div. 6.  
City of  
London:  
Overvalua-  
tion in.

(1.) As to the rating of Unoccupied Property, he will give evidence with reference to—(a) Certain local Acts applying to the rating of unoccupied property in the Metropolis, and will tender evidence as to the application of such Acts by the Rating Authorities; (b) With reference to the approximate number of buildings unoccupied, quantity of land uncovered and the rateable value of unoccupied properties in the several Rating Districts of the Metropolis—and the comparative periods of *non user* in the several Districts—for rating purposes; (c) With reference to the assessment of the various kinds of vacant land for assessment purposes; (d) With reference to the assessment of empty buildings—ready for occupation but not occupied—or buildings partially occupied—and with reference to Resolution 11 of the Conference 1893-4 and the Conference proceedings; (e) With reference to the action taken by the Rating Authorities in the several Districts and by the City on the assessment of the above-named descriptions of property.

(2.) With reference to Properties specially exempt from rating (wholly or partially) by Statute. With reference to Resolution 10 of the Conference 1893-94. With reference to the action taken by the Rating Authorities of the City of London Union.

(3.) With reference to properties coming within Resolution 1 of the Conference 1893-94; the per-centage of this class of property within and without the City; to the total value in each District; and with reference to the deductions and allowances under such Resolution and within Witness's knowledge. And upon the question of Equalisation within Districts—the practice of the City Rating Authorities compared to other Rating Authorities of the Metropolis under 32 & 33 Vict. c. 41 (Compounding with Owners).

(4.) With reference to the deductions and allowances under Resolution 1 of the Conference 1893-94 in the case of Artizans' dwellings and thereunder:—

On a consideration of the assessment of buildings and houses let out in separate tenements:—For residential purposes—Lodgings, Flats.

For business purposes—Offices, Warehouses.

For various purposes—Residential and Commercial.

With a consideration of a rough division into Districts of these special properties:

With a consideration of the deductions and allowances made by the several Metropolitan Assessment Committees in respect to properties so sub-let:

With a consideration of the note to the Third Schedule to the Act of 1869:

With a consideration of various legal precedents as to the method of rating such premises, and the ratepayer designated by such precedents:

With (briefly) a further consideration of the working of the Equalisation of Rates Act, 1894, in respect of such properties.

(5.) Evidence upon Resolution 3 of the Conference proceedings (the test of the annual value in the case of Leaseholds) has been dealt with under Division 4 of this proof.

(6.) Witness will give evidence as to Resolution 4 (the test of annual value in the case of Freeholds) and thereunder with reference to the case of Freehold buildings partly or wholly occupied by the owner, and rated therefor or for part of such buildings. With a comparison of the per-centage of the ground rent to the capital value of site—within and without the City—and a consideration of the reasons for such variance. The structural value of buildings—within and without the City—and the per-centages determined in such Resolution compared with the per-centages adopted in the City—and on special consideration incident to the estimate of annual value of Freeholds in the City referred to in Division 2 of this proof.

(7.) Witness will give evidence as to resolution 5 of under-assessment in the case of rows of similar houses without the City—the rule having no practical application within the City.

(8.) Witness will give evidence as to Resolution 6 as to the general character of licensed premises within the City compared with licensed premises in other Districts, as stated

APP. XII. in Division 2 of this proof. And under this head Witness will give evidence with reference to the per-centages commonly employed by the Assessment Committee to determine the gross value in the case of Public Houses and as applied to other licensed premises, to indicate the gross value and the reasons therefor. Upon a consideration of the value of the *goodwill* in the case of certain licensed premises within the City and in other Districts, with a further consideration of the estimate of what is due to the licence and what to the goodwill out of the premium paid. Upon a consideration of certain legal precedents.

(9.) Witness will give evidence upon Resolution 7, and will refer to Division 3 (d) of these proofs, and the explanation that while the City of London Rating Authorities do not recognise the separate assessment of site value as a matter of principle, they do take the question of the proportion of site value to structural value into account in estimating the annual value of City property. That Resolution 7 does not provide for the districts where the site value does not exceed one-third of the total value, but represents from one-third to one-sixth of the total value, and in which cases no consideration is to be given to the relative value of the site to the total value.

(10.) Witness will give evidence upon Resolution 8, and the application within the City of the principle stated under Resolution 7 to property of a special character and the per-centages generally taken in determining the annual value, compared with the per-centages recommended in the Conference Resolution.

(11.) Witness will also tender evidence drawn from preceding Divisions of these proofs. Evidence based upon the general practice of allowance of the maxima in Classes 1 to 5 specially, and generally in certain other Classes of the 3rd Schedule to the Act of 1869.

(12.) Evidence as to the practice of Metropolitan Authorities in rating Class 8 (Machinery) and Classes 10 and 11, considered in relation to certain distinctions arising from :—(a) The character of such property in the City compared with other Districts in the Metropolis; (b) The distribution of such classes of property throughout the Metropolis; (c) The action taken by the City Rating Authorities as compared with other Metropolitan Authorities on the rating of certain classes.

(13) The Witness will also tender evidence upon assumed estimates of the value of building land sites—where land covered—and where land uncovered—with a comparison between certain Districts and the City.

Div. 7.  
Under-  
assessment  
in the Metro-  
polis.

35. The Witness will also tender evidence on behalf of the City Rating Authorities, with reference to certain general charges of under-assessment in specified descriptions of property, as applied to the whole of the Metropolis and including the City;—

- (a) In the case of freehold properties occupied by the owner;
- (b) In the case of properties including machinery;
- (c) In the case of licensed premises;
- (d) In the case of public buildings occupied by public bodies, and from which no private profit accrues;
- (e) In such large undertakings as tramways, canals, docks, gas and water works.

Witness will comment on the fact that no evidence (as far as he is aware) has been tendered in support of this allegation.

Witness assumes the charge is based upon certain difficulties, as stated at the Conference proceedings, as to some of these classes of property in estimating the annual values. Witness will refer thereto, and draw conclusions therefrom, as to the premises upon which the charge is based.

Witness will upon this charge of general under-assessment draw attention to the alleged acceptance of the Conference Resolutions 1890, 1893-94, by other Metropolitan Authorities, and the Conference Proceedings.

Witness will refer to Divisions 2 and 6 of this proof :—As to the peculiar character of properties within the City. As to the action taken by the Rating Authorities. To certain precedents on value of these classes of property.

Div. 8.  
Rates in  
City of  
London :  
Allegation  
that City  
escapes a  
portion of  
the rates  
levied upon

36. Witness will tender evidence in connexion with an allegation that, owing to certain differentiation in rates between Metropolitan Districts, the City of London escapes a rate of 13s. 10d. per 100l. of rateable value, thus throwing upon the rest of the County a proportionately larger contribution.

He will prove that by the Local Government Act, 1888, Sec. 41 (Sub.-sec. 3), the City parishes are exempt from assessment to the Special County Rate of the London County Council in respect of certain contributions from which those parishes were exempt at the date of the passing of the Act.

That such exemptions are in connexion with the following matters:—Lunatics—City of London Asylum. Industrial Schools. Prison Pensions. Asylum and Industrial School Pensions. Housing of the Poor. Maintenance of Bridges. Maintenance of Pauper Lunatics. The Office of City Coroner (Inquests and Charges). Inspection of Weights and Measures. The Petroleum Acts. The Shop Hours Act. Gas Meter Testing. The Explosives Act. The Medical Officer of Health. Dangerous Structures.

APP. XII.  
—  
other dis-  
tricts in  
Metropolis.

That these costs, charges and expenses are provided for in the City either out of the City's Cash or by rate levied by the City Union Authorities or the Corporation, either by means of a County rate (as in the case of the enlargement of the City of London Lunatic Asylum), or by the Consolidated Rate.

That although the City parishes do not admit any liability under the Act of 1888 to contribute to the County Rate in respect of the expenses incurred and sums paid by the County Council with reference to the registration of County Voters, or the expenses incurred by the County Council under the Electric Lighting Acts for lighting when the County Council is acting as Local Authority in respect of roads under their control; [the cost of Electric Lighting was cast upon the County Council by a series of Provisional Orders made by the Board of Trade in 1889, and confirmed by Parliament after the passing of the Local Government Act;] yet in accordance with an Agreement entered into with the London County Council in 1891 (and after both Authorities had taken the opinion of their respective Counsel), they do now contribute.

That due allowance does not appear to have been made in the estimate put before Witness and given in evidence before the Commissioners, for the fact that even if City Ratepayers were to contribute to the General Rate in the same proportion as those outside the City for the special expenses now borne by the City Ratepayer—as before detailed—the City assessment being about one seventh of that of the whole of the Metropolis, six-sevenths of that amount would still have to be borne by those who now bear the whole amount. To this burden would have to be added the cost of such special expenses for maintenance of these administrative purposes within the City, which would then naturally increase the present General County expenses and the General County Rate to the extent of the cost within the City.

That, moreover, one of the results of the exemption of the City Ratepayers from bearing the burden of some of the items of special City expenses, which are voluntarily undertaken by the Corporation, and which are provided for out of corporate funds, is to raise the rental value of City property in proportion to such exemption, and consequently to increase its annual value for assessment purposes and the City's burden for the general County Rate, the result being a proportionate diminution of contribution for such purposes by other Metropolitan Districts.

That without taking the last argument into account, the actual loss to other Metropolitan Districts upon the figures for the year 1892 was carefully worked out for the purposes of the Royal Commission on Unification in 1892, and amounted to 0·29 of a penny, or a fraction over a farthing in the pound.

That when Mr. Gomme, the Statistical Officer of the County Council, was being examined before the Royal Commission on Unification in 1893, he admitted, in reply to a question from Mr. Homewood Crawford, one of the Royal Commissioners (Q. 4342), that, taking the two previous years (1891 and 1892), no financial benefit whatever would have accrued to the County of London by amalgamation with the City.

That if the London County Council really desire to arrange, on a fair basis, for a cessation of the whole or any of the exemptions before detailed, full power is given by the Local Government Act of 1888, section 41 (7), for an Agreement being come to between the London County Council and the Common Council having this object in view.

That the Corporation would be perfectly willing to discuss any proposals for a solution of the question.

That the London County Council up to the present have, however, shown no desire for even a Conference on the subject.

## APPENDIX XIII.

**Memorandum prepared for the Commission by Mr. William Henry Wagstaff on behalf of the Corporation of London, and the City Rating Authorities.** [See *MINUTES OF EVIDENCE, QUESTIONS 20,783-20,885.*]

APP. XIII.

1. Witness is Vice-Chairman of the City of London Union Assessment Committee; and has been a member of that Committee for the past nine years. He is a Member of the Corporation of London, and has had wide experience of values of all classes of City property extending over a period of 40 years. He will tender evidence with reference to the constitution, powers, and work of the City Rating Authorities, and as to their practice and labours in the preparation, examination, and final revision of the Valuation Lists.

City of London.  
Two Overseers to each parish.

2. The area of the City is 668 acres. The City of London comprises 112 parishes. For assessment purposes all these parishes are represented by separate bodies of Overseers. These Overseers are elected by the several Vestries. There are two Overseers to each parish. They are invariably elected year after year. These Overseers are officially represented in each parish.

Valuation Lists, preparation of. Surveyors of Taxes assist Overseers.

On the preparation of the several lists it is the practice of such Overseers to view the properties, and discuss values or alterations of value. On such preparation of lists (Quinquennial or otherwise), the Surveyors of Taxes for the several districts (there are eight Surveyors' districts within the City area) are invited to attend the Meetings of the Overseers to discuss the figures, and it may be said that they always avail themselves of the opportunity to assist, and they undoubtedly do materially assist the Overseers.

The Surveyors of Taxes in the City Districts specially devote themselves to the published records (Newspapers, &c.) of sales of property, or transfers, &c., within their districts. It is also the practice of the various Clerks and Overseers to note such changes, and the area, in all cases, being limited, very little escapes these authorities.

The Surveyors of Taxes for the several districts are occasionally changed by the Inland Revenue Authorities.

Assessment Committee. Constitution and extent of work.

3. The Assessment Committee of the City of London Union is a body of 12 Members of the Board of Guardians, and is elected each year by the Board. The Members of this Committee are re-elected year by year as a rule. This is necessary in consequence of the difficulties of assessment of City Property, and the never-ending general and local peculiarities, and some experience is required, even although they generally have a wide acquaintance with City values. The Committee meet once a fortnight all through the four years preceding the Quinquennial period, to hear objections to provisional lists. In the Quinquennial year the Committee meet from four to five times each week, and very often sit to hear objections from 10 o'clock until 7 o'clock, without pause. The Members of the Committee are not in any way recompensed for their labours.

City of London. Number of objections and appeals.

4. Because of the infinite variety of buildings and tenures, and of the large annual values of city properties, the record of work done each year is greater than that of any other Union or Parish in the Metropolis. There are about 12,995 assessed hereditaments in the City.

The following table shows the number of objections to the Valuation Lists heard by the Committee, and the number of appeals against the Lists:—

Year.	Number of objections to Valuation Lists.	Number of Appeals.
1893	1,133	—
1894	1,257	—
1895	1,740	1
1896	3,361	18
1897	1,119	—
1898	1,831	—

5. The Surveyors of Taxes are always present at the meetings of the City Assessment Committee. They have notice sent to them of every meeting of the Committee by the Clerk, with a copy of the agenda of the various properties and objections to be taken. They take an active part in the debates, and volunteer information and suggestions which are invariably adopted and acted upon—generally speaking both parties possessing local knowledge—and the Committees and Surveyors work amicably together.

APP. XIII.  
—  
Surveyors of Taxes attend meetings of Assessment Committee. Surveyors should have statutory power to attend all meetings of Overseers and Assessment Committee.

Although the Committee generally fall in with the views of the Surveyors of Taxes, there have been a few cases of properties of large annual value with complicated considerations, upon which the Committee and the Surveyors have not been able to agree. In these cases they have appealed to the Sessions, and on one, or perhaps two occasions, have been successful.

6. The City Assessment Committee would not object to a change in the law giving the Surveyor of Taxes Statutory power to attend the Overseers' meetings and the meetings of the Assessment Committee.

7. The general practice of the City Assessment Committee in ascertaining the annual value does not differ from that of other Districts, but in one particular the Committee exercise a vigorous rule. When the Quinquennial Valuation has to be made, each owner or occupier is called on to make a return, giving particulars showing the annual value of his premises. All cases of refusal or neglect to comply with the request to furnish such return are brought to the notice of the Committee.

Returns by owners and occupiers. If no return furnished valuation is increased.

In such cases the Committee consider that such refusal or neglect is *prima facie* evidence of an attempt to evade—they take the fact into account on examination of the Overseers' figures and always insert a higher figure in the Valuation List as the decision of the Committee and give the Ratepayer notice of such increase.

8. As soon as the returns with answers to the questions therein are sent to the Overseers they examine them with the Surveyor of Taxes, go into the figures and pass them on to the Assessment Committee, together with a statement as to what they consider should be.

In the returns presented by the City of London Committee, there is a column for the owners' or occupiers' own figure and another for the Overseers' Valuation. In some cases fair returns are made and the figures agree. In other cases the Overseers are not satisfied that the return is sufficient and their figure is a higher one. If the two valuations differ the case goes through the ordeal of a careful investigation by the Assessment Committee and the Surveyor of Taxes.

9. If the Assessment Committee confirm the increase made by the Overseers on the return, notice is sent to the Owner of the amount of the increase made, and if he agrees the thing is at an end. If he disagrees with the valuation, he gives notice and is called before the Committee to object. If the decision of the Committee does not satisfy him, he has a right of appeal to the Sessions.

Objections and appeals.

10. Ordinarily the returns work satisfactorily, but the City Committee would not object to an amendment of Secs. 57 and 58 of the Valuation (Metropolis) Act, 1869, by making the Sections more drastic or giving the Committee some statutory power of surcharge.

11. Generally the City Assessment Committee are uniquely favoured in their means of procuring evidence of the true annual value of the several hereditaments.

As to the buildings, owing to the small area of the City, their comparatively small number, and the constant revision of values by the Overseers and Members of the Committee, and the active interest taken by the Surveyors of Taxes, the Committee have been enabled to attain in course of time a peculiar local knowledge of almost each house.

City of London Assessment Committee have special facilities for obtaining information.

Moreover, as applicable to all classes of property, owing to the general high values prevailing, the objections are nearly always supported by expert witnesses, and in a great number of cases also both the Overseers and the Committee employ valuers.

In this respect the Committee have more means of obtaining information than the other Metropolitan Rating Authorities.

## APPENDIX XIV.

**Memorandum prepared for the Commission by Mr. Walter Barnett on behalf of the Corporation of London and the City Rating Authorities.**—[See *MINUTES OF EVIDENCE, QUESTIONS 20,886–20,985.*]

APP. XIV.

1. Witness is an Architect and Surveyor and is Valuer to the Assessment Committee of the City of London Union, and has had an experience of 30 years in the valuation of property in the Metropolis, and will prove that for the last 20 years he has devoted himself more particularly to the valuing of property for rating purposes within the City of London District.

He has valued the great majority of hereditaments for rating purposes within, among others, the Districts of the following Metropolitan Unions and Parishes:—City of London; St. Mary Abbots, Kensington; St. Leonard's Shoreditch; St. Margaret and St. John, Westminster; and Holborn.

*Div. 9.*  
Banks and  
Insurance  
Offices in  
City of  
London,  
Valuation of.

2. Upon the charge of under-assessment as applicable solely to the City in the case of Banks, Insurance Offices, and Public Buildings (including Livery Halls, &c.) Witness will tender evidence as to certain peculiar incidents of value arising upon the assessment of these buildings, and more particularly with reference to the tenure, user and the character of the structures.

3. With regard first to Banks and Insurance Offices, he will state that he is not aware of any evidence in support of the statement that these properties are generally under-assessed. The great majority of these properties are situate in the central parishes of the City of London Union. Generally speaking, these buildings represent the finest character of structures devoted to commercial purposes. The buildings generally are situate in the finest positions, and occupy the most valuable sites within the City area. There are very few, if any, of these buildings which are not occupied by the owners. The freeholds are in the majority of cases owned by the occupiers. In other cases the occupiers hold on long leaseholds.

4. Owing to particular advantages of a position within what is termed the Banking area, the most inflated and fancy prices are paid in some cases by tenants who require them for their particular purposes, and to remain in the same locality as that in which they have for years carried on business. It does not follow, as is clearly shown in the cases of mortgages by the purchaser or lessees, that the cost price represents the true value, or is a criterion of the annual value.

5. Banks and Insurance Companies' properties have been the subject of continual revision by the various Overseers and the Assessment Committee of the City of London Union, assisted in some cases by expert evidence; and in a number of cases the figures have been actually settled on appeal to the Sessions.

6. With reference to certain legal precedents, Witness will refer to decided cases at the Assessment and Quarter Sessions of the County of London, as to the basis of value in these particular cases, and will show that the peculiar considerations incident to the occupation and tenure of these properties have been taken into account by the Court on appeal.

Livery Halls,  
Valuation of.

7. With reference to the charge generally, this Witness will give numerous instances of actual cases within his own knowledge, where, owing to the exigencies of the

particular business and the requirements of the particular tenant, prices have been paid to secure a site, or for the renewal of a lease, which represent no real or just criterion of the true value.

8. Upon the charge of under-assessment as regards Livery Halls, Witness will prove that there are 33 of these Halls within the City of London, some of which are situate in the main streets, but the great majority are to be found in less frequented thoroughfares.

9. In the great number of cases, the Livery Hall is on an upper floor, the ground floors being utilised for shops, &c., which are of course brought into assessment. The Halls are used for the meetings of the Companies and for philanthropic purposes, and sometimes are lent, but in no case for money payment. In most cases the Halls would not be used more than from 12 to 15 times in the year for the purposes of the Company or otherwise, and in all cases the user would be intermittent and infrequent.

10. If the Halls were put up for letting, the fact that they are useful for one purpose only—and that is the one for which they are used—would first arise. It is true the buildings in which these Halls are found, occupy a large area of ground and take up, in some cases, important positions in the City, and no doubt the land on which some of these buildings are erected is of high value.

11. There are Halls on which large sums have been expended in decoration; but it has been laid down in numerous precedents that such properties could not be assessed on the same basis as a building where the same sum has been expended with the object of producing a revenue.

A large portion of the outlay has in every case been spent in ornamentation and elaborate decoration, and in many cases decorative work representative of the objects of the Company, which would not add to the letting value to the hypothetical tenant. In cases where you have a piece of land, which, as a clear site, would be of great value, and a costly non-revenue-producing building upon it, that building would have to be removed, and its cost sacrificed before the letting value of the land could be secured.

If these buildings in which the various Halls are found were pulled down, and offices, banks, or warehouses erected on the site, the valuation would probably be much heavier than the present figure; but until confiscatory powers are obtained the buildings are not likely to be used for any such purposes.

12. Witness has examined some of the figures placed against these buildings in the London County Council's Appeal against City Totals in 1890-91, and he can only assume that the method of valuation has been to take the interior decoration as if the money expended on these buildings had been invested originally with an eye to profit. Legally, this position is untenable, and it must be borne in mind, from inquiries made, that many of them can only be used for the purposes of meetings of the particular company.

Witness will tender evidence and give details as to the assessment of certain properties appearing in the City Valuation Lists, and quoted in support of the general charge of under-assessment within the City of London District:—

\* Compiled from information supplied by the Incumbents and the Overseers or Assistant Overseers of the Parishes.

† The gross value of the Tithe Rentcharge is that calculated from the Tithe averages for the year. The Incumbent states that owing to inundation through the bursting of the sea-wall he has only received 197l. 13s. 7d. for the year 1897-8.

‡ There is no Parsonage House attached to this Benefice, and the rates paid by the Incumbent on the house in which he lives are not included in Queen Anne's Bounty.

§ For Poor and Highway Rates only; the whole of the Tithe Rentcharge was not rated to the Lighting Rate.

¶ Includes repayment of principal and interest on loan from Queen Anne's Bounty.

\*\* First and second half-years respectively.

APPENDIX XV.

OUTGOINGS, NET INCOME, RATEABLE VALUE upon which the Rates were paid, and the PER-CENTAGE of Rates to Net Income for the Year 1897-98.\*

When the Incumbent, the rates are added to the gross estimated rental; if the Glebe is let, and the Incumbent pays the rates, the rent received in the last case the reason for so including the rates is that presumably some portion falls upon the incumbent, although the whole of them may not be paid. The net income in column 19 is strictly correct. It may also be noted that the Houses attached to the Benefices are not always commensurate with the rates.

OUTGOINGS.								Net Income after deduction of outgoings, that is, col. 6 less col. 18.	Rateable Value upon which Rates shown in cols. 7, 8, and 9 were Paid.	Per-centage of Rates (col. 10) to Net Income (col. 19).

\* Including Tithe Rentcharge of the commuted value of 5l. rated in the parish of Southery.  
 † Including the Drainage Tax.  
 ‡ Rateable value is 21l. 11s. 6d. above the net income, the reason being that the Glebe land, farmhouse, buildings, and cottages were let for four years and the rateable value thereof in 1897-98 was 23l. 10s. above the rent received.  
 § For Rate in this parish was 6s. 8d. in the £ in the year 1897-98, and the Highway Rate was 1s. 8d., making a total rate levied of 8s. 4d.  
 ¶ From October 6, 1899, there will be an addition to the Incumbent's income of 24l. from Queen Anne's Bounty. The gross estimated value of the Parsonage House as given in the Valuation List is 40l., but the Incumbent states that he considers that not more than 27l. could be let for the house if let, the tenant paying the rates.

APPENDIX XVI.

STATEMENT showing for the YEAR 1896 the GROSS INCOME from all Sources (excluding the Value of the Parsonage House) and the OUTGOINGS of CERTAIN BENEFICES where the Rates, Curates' Stipends, or other necessary Outgoings reduce the Gross Income to a small Amount.  
 (Extracted from the Memorandum prepared for the Commission by Mr. A. G. Boscawen, M.P., representing the Church Committee in the House of Commons.  
 See Part II. of Appendix to Vol. I. of Minutes of Evidence, pp. 349 to 354.)
