LIST OF WITNESSES EXAMINED DURING 1897, WITH DESCRIPTION	
ALPHABETICAL LIST OF WITNESSES EXAMINED DURING 1897	
MINUTES OF EVIDENCE	
GENERAL INDEX TO EVIDENCE	
INDEX TO EVIDENCE GIVEN BY EACH WITNESS	

**Terms of Reference to Royal Commission on Local Taxation.**

---

To inquire into the present system under which taxation is raised for local purposes, and report whether and how far all kinds of real and personal property contribute equitably to such taxation; and, if not, what alterations in the law are desirable in order to secure that result.

---

**LIST OF WITNESSES  
EXAMINED DURING 1897, WITH DESCRIPTION.**

Name.	Description.	Page of Minutes of Evidence.
1. Mr. JOHN FRANCIS ROTTON, Q.C.	Legal Adviser to the Local Government Board (England).	1
2. Mr. JAMES M. DODDS	Senior Clerk in the Scottish Office	14
3. Mr. HENRY A. ROBINSON	Member of the Local Government Board (Ireland).	22
4. Mr. RICHARD HILL DAWE	Town Clerk of the County Borough of Kingston-upon-Hull, and representative of the Association of Municipal Corporations.	36
5. Mr. ROBERT E. FOX	Town Clerk of the County Borough of Blackburn, and representative of the Association of Municipal Corporations.	49
6. Mr. WILLIAM JOHN JEEVES	Town Clerk of the County Borough of St. Helens, and representative of the Association of Municipal Corporations.	55
7. Mr. JOHN HENRY ELLIS	Town Clerk of the County Borough of Plymouth, and representative of the Association of Municipal Corporations.	68
8. Mr. WILLIAM CHARLES CRIPPS.	Town Clerk of the Borough of Tunbridge Wells, and representative of the Association of Municipal Corporations.	70
9. SIR HARRY BODKIN POLAND, Q.C.	-----	73 and 87
10. Mr. THOMAS RATCLIFFE ELLIS	Solicitor, Secretary to the Mining Association of Great Britain.	97
11. Mr. JOHN SANCROFT HOLMES	Landowner in Norfolk, Chairman of Loddon and Clavering Board of Guardians, and member of the Norfolk Chamber of Agriculture.	108
12. Mr. HENRY CALTHROP HOLL- WAY CALTHROP.	Landowner in Norfolk, and President of the Norfolk Chamber of Agriculture.	120
13. Mr. THOMAS HENRY HUBBARD	Tenant-farmer in Norfolk, Chairman of Mitford and Launditch Board of Guardians, and Vice-President of the Norfolk Chamber of Agriculture.	122
14. Mr. JOHN GEORGE BARTON	Commissioner of Valuation and Boundary Surveyor for Ireland.	125
15. Mr. WILLIAM MUNRO	Assessor of Railways and Canals for Scotland	136
16. Mr. HARRIS P. CLEAVER	Clerk to the Board of Guardians of West Derby Union, Lanes.	145
17. Mr. GEORGE HUMPHREYS- DAVIES.	Surveyor and Valuer in London and Manchester, and representative of the Machinery Users' Association.	151
18. Mr. CHARLES H. FOX	Director of a Limited Liability Woollen Company, Member of Westington Board of Guardians and Assessment Committee, and representative of the Machinery Users' Association.	164
19. Mr. DAVID HOWARD	Vice-President of the London Chamber of Commerce, a chemical manufacturer in Stratford, London, and representative of the Machinery Users' Association.	167

Name.	Description.	Page of Minutes of Evidence.	Page of Index to Evidence.
20. Mr. JOHN NORTH - -	Clerk to the Board of Guardians and to the Assessment Committee of Aston Union, Warwickshire.	168	489
21. Mr. FRANK CROWDER HETT	Clerk to the Board of Guardians and to the Assessment Committee of Gleanford Brigg Union, Lincolnshire.	169	489
22. Mr. JOSEPH PEACE - -	Clerk to the Board of Guardians of Dewsbury Union, Yorks, W.R.	173	490
23. Mr. SYDNEY MORSE - -	Solicitor, Chairman of the Electrical Trade Section and of the Rating Committee of the London Chamber of Commerce.	175	490
24. Mr. ROOKES EVELYN BELL CROMPTON.	Representative of the London Chamber of Commerce, Past-President of the Institution of Electrical Engineers, Chief Engineer to the Kensington and Knightsbridge Electric Lighting Company, and Managing Director of Crompton and Company, Electrical Engineers of London and Chelmsford.	184	491
25. Mr. HORATIO JOHN ADAMSON	Representative of the London Chamber of Commerce, and Director of John Howell and Company, Limited, wholesale warehousemen, St. Paul's Churchyard.	187	491
26. Mr. ALFRED TOWNSEND COBBOLD.	Clerk to the Assessment Committee of Samford Union, Suffolk, Deputy Clerk of the Peace for Suffolk, Deputy Clerk to the East and West Suffolk County Councils and the Suffolk Joint Committee, and Clerk to the Suffolk County Rate Basis Committee.	191	491
27. Mr. WILLIAM WARD DUFFIELD	Clerk to the Board of Guardians of Chelmsford Union, Essex, and Clerk to the District Council.	197	492
28. Mr. JOHN WILLIAM BOOTYMAN ANDERSON.	Chairman of the Board of Guardians of Morpeth Union, Northumberland.	199	492
29. The Rev. CHARLES THEOBALD	Rector of Lasham, and Representative of the Parliamentary Committee of the Diocese of Winchester.	201	493
30. The Rev. DAVID JONES DAVIES.	Rector of North Benfleet, Essex - -	205	493
31. Mr. FREDERIC CAMPBELL HULTON.	Clerk of the Peace and of the Council of the County of Lancaster, and representative of the County Councils Association.	208	493
32. Mr. FREDERIC MERRIFIELD -	Clerk of the Peace and of the Councils of the Counties of East Sussex and West Sussex, and representative of the County Councils Association.	218	494
33. Mr. EDWARD WOLLASTON NADIR KNOCKEL.	Town Clerk of the Borough of Dover, and representative of the Association of Municipal Corporations.	221	495
34. Mr. GEORGE SWAINSON, F.L.S.	Treasurer of the County Borough of Bolton	224	495
35. Mr. ARTHUR JOHN HARRIS -	Clerk to the Assessment Committee of Cardiff Union, Glam.	229	496
36. Mr. GEORGE NORTON - -	President of the Liverpool Land and House Owners' Association.	230	496

Name.	Description.	Page of Minutes of Evidence.	Page of Index to Evidence.
37. Mr. CHARLES WATKINS	Representative of the United Property Owners and Ratepayers' Association of Great Britain.	235	496
38. Mr. ROBERT ALFRED BELLWOOD.	General Secretary of the United Property Owners and Ratepayers' Association of Great Britain.	239	497
39. Mr. WILLIAM KING	Secretary of the Southport and District Property Owners and Ratepayers' Association.	241	497
40. Mr. JOSEPH STEVENSON HORN	Clerk to the Board of Guardians of Burnley Union, Lancs.	243	497
41. Mr. ELIAS HENRY DAVIES	Chairman of the Assessment Committee of Pontypridd Union, Glam.	248	498
42. Mr. TOM CUTTER	Clerk to the Board of Guardians and to the Assessment Committee of Woolwich Union, London, and Representative of the Union and Rural District Clerks' Association.	250	498
43. Mr. ARTHUR FREDERICK VULLJAMY.	Clerk to the Board of Guardians of Ipswich Union, Suffolk, and President of the Union and Rural District Clerks' Association.	253	498
44. Mr. SYDNEY J. ELSOM	Member for West Dean on Gloucestershire County Council, Chairman of the West Dean Rural District Council, Vice-Chairman of the Forest of Dean School Board, and Chairman of the Parish Council of West Dean.	258	499
45. Mr. ALFRED DUDLEY CLARKE	Land Agent, and Representative of the Worcestershire Chamber of Agriculture.	261	499
46. Mr. WILFRED L. DODGSON	Representative of the Shropshire Chamber of Agriculture.	269	499
47. Mr. WILLIAM EVE	Fellow of the Surveyors' Institution and Honorary Examiner at that Institution on the subject of Parochial Assessments, and Representative of the London Farmers' Club.	273	500
48. Mr. ALBERT PELL	Representative of the Local Taxation Committee.	280	500
49. Mr. WILLIAM CUTLACK LITTLE, J.P.	Tenant farmer and landowner. Representative of the London Farmers' Club, Chairman of the County Council for the Isle of Ely and of the Income Tax and Land Tax Commissioners for a large district in the Isle of Ely.	286	501
50. Mr. EDWARD WHITTRED ILTYD PETERSON.	Secretary and Solicitor to the Tithe Rentcharge Owners' Union.	293	501
51. The Rev. EDWARD FRANCIS GEPP, M.A., J.P.	Vicar of High Easter, Essex, Member of the Council of the Tithe Rentcharge Owners' Union, Deputy Chairman of Quarter Sessions, and Alderman of the Essex County Council.	302	502
52. The Rev. CHARLES ABBOTT STEVENS.	Vicar of Portslade, near Brighton, and formerly Secretary of the Committee which conducted the Hackney cases.	306	502
53. Mr. GEORGE LAURENCE GOMME.	Statistical Officer of the London County Council.	308	503

Name.	Description.	Page of Minutes of Evidence.	Page of Index to Evidence.
54. Mr. HARRY EDWARD JONES	Representative of the Commercial Gas Company and other Gas Companies.	326	505
55. Mr. GEORGE LIVESEY	Chairman of the South Metropolitan Gas Company and of the Crystal Palace District Gas Company.	334	505
56. Mr. CHARLES CROWTHER SMITH.	Secretary of the Southampton Gas Light and Coke Company.	337	506
57. Mr. HARRY WILKINS	Secretary of the Lambeth Waterworks Company.	341	506
58. Captain ERNEST GEORGE PRETYMAN, M.P.	Member of the Local Taxation Committee	343	506
59. Mr. SAMUEL ROWLANDSON	Tenant-farmer in Durham and North Riding of Yorkshire, Member of the Business Committee of the Central Chamber of Agriculture, Vice-Chairman of the North Riding County Council, of the Board of Guardians of the Darlington Union, Commissioner of Taxes for the County of Durham, Chairman of the Croft District Council and of the Barton Parish Council.	359	507
60. Mr. GABRIEL PRIOR GOLDNEY	Remembrancer of the City of London	363	507
61. Mr. JOHN RICHMOND COOPER	Town Clerk of the County Borough of Walsall.	368	508
62. Mr. CLARE SEWELL READ	Tenant-farmer. County Councillor in Norfolk, and Representative of the London Farmers' Club.	372	508
63. Mr. ROBERT HENRY REW	Secretary of the Central Chamber of Agriculture and of the Local Taxation Committee, and late an Assistant Commissioner of the Royal Commission on Agriculture.	379	509
64. Mr. A. G. BOSCAWEN, M.P.	Member of the Church Committee of the House of Commons.	394	510
65. Mr. ALFRED DE BOCK PORTER, C.B.	Secretary to the Ecclesiastical Commissioners.	398	510
66. Mr. ARTHUR F. JEFFREYS, M.P.	Alderman of Hants County Council and Member of Assessment Committee, Member of Basingstoke District Council and Board of Guardians, Chairman of Bentworth Parish Council, Overseer of Bradley Parish, Member of the Council and of the Business Committee of the Central Chamber of Agriculture.	404	511
67. Mr. PHILIP RANDOLL SMITH	Rating Agent to the Great Western Railway Company, and Representative of the Railway Companies' Association.	410	511
68. Mr. WILLIAM PERCY PAINE	Rating Surveyor to the Midland Railway Company, Professional Associate of the Surveyors' Institution, Chairman of the Railway Rating Surveyors' Association, and Representative of the Railway Companies' Association.	424	512
69. Mr. SAMUEL MOWBRAY HOWARD.	Rating Agent to the London and North-Western Railway Company, and Representative of the Railway Companies' Association.	428	513

# MINUTES OF EVIDENCE

TAKEN BEFORE THE

## ROYAL COMMISSION

ON

# LOCAL TAXATION.

### FIRST DAY.

Thursday, 11th March 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

THE VISCOUNT EMLYN.

THE RIGHT HON. C. B. STUART-WORTLEY, Q.C., M.P.

SIR E. W. HAMILTON, K.C.B.

C. N. DALTON, Esq., C.B.

H. E. CLARE, Esq.

T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.

E. O. SMITH, Esq.

JAMES STUART, Esq., M.P.

J. L. WHARTON, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

MR. JOHN FRANCIS ROTTON, Q.C., called and examined.

Mr. J. F.  
Rotton,  
Q.C.

11 Mar. '97

Memorandum prepared by Local Government Board. Scope of, and contents.

1. (*Chairman.*) You have been legal adviser to the Local Government Board for the past 14 years?—That is so.

2. Previously to that appointment were you an Assistant Secretary to the Board?—Yes, for about six years.

3. I believe you have at the request of the Commission and on behalf of the Local Government Board, prepared and handed to us this memorandum which I hold in my hand?—It was not prepared by me, but of course it was seen by me and therefore I am responsible for it.

4. I understand that you are here rather to give us information as to facts and existing circumstances and conditions than to express any opinion in favour of one reform or another, or indeed to make any suggestions for the future?—That is so. I have not any instructions as to the recommendations which the Board might be prepared at some future time to give, and therefore I should prefer, of course, not to express any opinions with regard to that part of the subject.

5. Taking the memorandum itself it is divided into two parts, is it not, one of which is a statement as to the statutory provisions relating to the general principles and machinery of valuation for assessment to local rates, and the properties which are assessed to such rates in England and Wales?—That is so.

6. The second division shows, with respect to local rates in England and Wales the several rates leviable, the purposes for which they are raised, the Local Authorities who expend them, the properties which are assessed to them, whether the rates are paid by the

owners or occupiers, and whether they are raised on the full annual value of the properties, and if not, on what portion of such value, and after what deductions if any?—That is so; and there is a third division showing the purposes for which new or additional local taxation has been authorised by Parliament to be raised in England and Wales since the year 1869.

7. I do not propose to take you at length through the various paragraphs, because I think they are so drawn up as to be in themselves practically a complete statement of the information which you can supply to us. The second paragraph gives us a statement of what is called rateable value, does it not?—Yes.

8. And then you proceed to tell us the places in which the Union Assessment Acts are in force, that is practically throughout the whole of England and Wales with some exceptions, amongst which exceptions, however, the Metropolis is included?—In the Metropolis it is varied in some considerable particulars by the Metropolis (Valuation) Act. The Union Assessment Acts are in force to a certain extent in the Metropolis, but subject to the provisions of the Metropolis (Valuation) Act.

9. Are the excepted places excepted for any particular reason common to them all, or is their exception accidental?—The exception arises from these circumstances. The Act originally applied merely to unions formed under the Poor Law Act of 1835; it did not apply either to parishes which were not in unions, or to incorporations of parishes under local Acts, but a power was given by, I think, the Act of 1864—by one of the Acts at all events—to the Poor Law Board to apply it to parishes on application, and to incorporations. These

lists.  
Union and  
County.

excepted places remain; they are certain parishes which have not applied and to which it has not been made applicable, and certain surviving incorporations—the greater number of the incorporations under local Acts having been cleared away, these are the surviving incorporations to which the Act has not been made applicable. Therefore it is a mere historical ground on which these exceptions depend.

10. I understand the effect of the statement to be this: That you have for local rating purposes in England two distinct lists, one the valuation list of the boards of guardians formed by the Union Assessment Committee, and the other the basis of assessment for county purposes?—That is so.

11. And in your memorandum you describe to us fully how these two lists are respectively made up?—That is so.

12. Have you anything with regard to them to add which may have occurred to you since your memorandum was printed?—I have not anything to add, but perhaps as you have referred to the two lists it would be well for me to call attention to the fact that those two lists are essentially different, the list formed by the Union Assessment Committees, the valuation list, so-called, being a list which contains the values of the several hereditaments which are to be rated, whereas the county basis is merely a list containing the values of the several parishes in the county; it does not contain the values of the several hereditaments.

13. Is the county basis not formed upon the other one?—The county basis is not necessarily formed upon the other one. Of course the valuation list is in a great many cases used by the county committee as a part of their materials for making the county basis, but they are not necessarily dependent upon it.

14. I understand that with the exception of the Metropolis there is no distinct period at which the valuation list must necessarily be revised?—That is so; there is no distinct period and it is not periodically revised.

15. Do the valuation lists, as a matter of fact, continue and endure for long periods of time?—It would be exceedingly different in different places. In some places the valuation list would be frequently altered and revised; but in some other places I believe we have evidence—which Mr. Dalton, perhaps, would be able to give you—showing that the valuation lists go on for a great many years, almost since the Union Assessment Committees Acts were first passed.

16. Not without any alteration I suppose?—Not without some alterations, but without the making of a new list, without any general revision. Of course, there would have to be alterations, necessitated by the putting together or by the division of properties, and by the building of houses, and so on; but there has been no general revision in some places.

17. Under the Act of last year there has been, I think, as far as agricultural land is concerned, something approaching to a general revision?—The Act involved a division of the value wherever there was agricultural land shown as one item with buildings, but provision was made in the regulations that the value of the totals should not be altered; it was in this respect merely an Act for dividing land and buildings, not for the purpose of revaluing the land and the buildings.

Valuation  
list.  
When  
revised.

18. Who are the officers who are really responsible for the correctness of the list?—The officers who are responsible for the correctness of the list in the first instance are the overseers of each parish. They have, in the first place, the duty, as a general rule, of preparing the valuation list, which is, by them, after its depositing and so on, submitted to the Union Assessment Committee. They are the persons, assisted in many parishes by a paid officer, the assistant overseer.

19. They are the persons, in the eye of the law, responsible, but what I want to get from you is, who is it that does the work, is it a local officer in each union or is there any correlation between the local valuation and the valuation for inland revenue purposes?—There is no correlation between the two. The officer who in many places really performs the duty of making out the list is the assistant overseer, but he is a parochial officer.

20. And a paid officer?—Yes, a paid officer, paid from the funds of the parish. The Assessment Committee

may if they think fit employ a valuer; they may employ another person to make a list; but that is merely by way of exception; the ordinary rule is for the ordinary parochial officers to make out the lists.

21. Would you describe to me the system in the Metropolis?—In the Metropolis the basis of the system is the same thing; it is the overseers or in many cases the vestry who really act as overseers under the Local Acts who are in the first place bound to make out the lists.

22. But it is compulsorily revised, is it not, every five years?—Yes, a fresh list has to be made out every fifth year. There are other provisions which facilitate it in the Metropolis; there are returns to be had from owners and occupiers, for instance, in the Metropolis, which there are not in the country. The machinery for making it is more perfect in the Metropolis, therefore, but still it has, in the same way, to be started by a list formed by the parish officers.

23. The basis upon which the first entry is made is supplied in the Metropolis from the owner or occupier?—He has to make a return every five years.

24. But which, the owner or the occupier?—I think it is both. In paragraph 21 of the memorandum you will see there has to be a return from owners and occupiers: "In every year in which a new valuation list is made, or in the month of March preceding any such year, every person who is liable to be charged with any rate or tax in respect of which the valuation list is made conclusive, is, when required, to make to the overseers of his parish such a statement or return as a person chargeable under the Income Tax Acts is bound to make." Then the memorandum describes how overseers are to send out returns and that the returns are to be made within 21 days.

25. Is there any corresponding provision to that outside the Metropolis?—No.

26. Then what does either the overseer or the paid officer do? Is it purely guesswork or has he any compulsory power to get information from the owner or occupier?—I do not remember that the overseer has any such power. The Assessment Committee may call for information.

27. Do the Assessment Committee come in at all unless there is an appeal?—Yes, the Assessment Committee come in without any appeal; because the list which is made out by the overseer and signed by the overseer and deposited by him is then sent in by him to the Assessment Committee and the Assessment Committee have to consider that list and have power to make alterations in that list independently of any appeal according to their own opinion.

28. But in the light of what information?—They have the power to obtain information. In paragraph 4 of the memorandum you will see: "The Committee may require the overseers, assistant overseers, constables, assessors, collectors, and any other persons having the custody of any books of assessment of any taxes or rates, Parliamentary or parochial, or of the valuations of any parish, or having the collection or management of any such taxes or rates, to make returns in writing."

29. But that apparently applies to public officials, not to the owner or occupier of the property?—No, they have no power to call upon the owner to state the facts.

30. As a matter of fact they do not do so, do they?—No I do not think they do so; of course they would have in the case of the rent the information from the income tax collectors.

31. Perhaps you misunderstood me before: there is communication between the local official, who is entrusted with the making up of the valuation list, and the Inland Revenue Department?—The Assessment Committee are entitled to call on "any other persons having the custody of any books of assessment of any taxes or rates, Parliamentary or parochial" and they could in fact obtain the information from the income tax collector.

32. As a fact does the valuation of the property for local purposes bear any distinct relation to its valuation for income tax under, for example, Schedule "A"?—I believe the income tax is usually more approaching to the gross value but it is not at all necessarily the

Hereditaments which are rateable.

Tithes. Rateability of.

same; the Income Tax Commissioners may put the property at a higher rate and that would not necessarily lead to the Assessment Committee raising the assessment.

33. Would you just describe to me the basis or standard for county rates. You said a moment ago, and I think I understand it but I should like to be quite sure, that the basis or standard of county rates does not affect the individual valuation?—No it does not.

34. But that it simply affects the contribution which the parish has to pay towards the county expenditure?—That is so. The basis of the county rates is simply a list of the parishes in the county, with their gross value and rateable value.

35. As I understand it, the basis for the contribution which a parish pays towards the union rate does not necessarily bear the same proportion to the neighbouring parish for the county rate as it does for the union rate?—That is so; it does not.

36. Who settles it for the county rate?—A committee of the county council settles the county basis.

37. Have they a paid officer to do their work in that way as well as the overseers?—Not necessarily a special officer, but they have a clerk. Of course, the county has power to appoint officers for that purpose as for any other, and therefore they may appoint valuers or assistants to their committee, and in many cases there are officers of the counties, no doubt, who aid in the business.

38. Are you able, as a matter of fact, to say whether, when for union purposes the inter-parochial valuation is settled, it bears the same relation for county purposes inter-parochially; does one bear any fixed relation to the other?—No, it does not necessarily bear any fixed relation to the other. Of course, the difference between the relations of parishes would more frequently occur as between parishes in different unions than as between parishes in one union, because the difference between the county basis and what I may call the union basis, that is, the totals of the parishes as they stand in the union, arises from the fact frequently of the Assessment Committee of one union proceeding upon a different principle from the Assessment Committee of another union, making a greater allowance for repairs and necessary expenses of that sort, or generally in the rate book treating people more leniently.

39. Is the allowance for repairs not statutory?—The allowance for repairs is not statutory except in London. In London there is a scale, but not elsewhere. Of course, if you have one union where people frequently revise their valuation list, and a neighbouring union where the valuation list has not been revised perhaps for 10 years, you would very likely get a great difference between the two, and that would make a difference as compared with the county basis.

40. May I carry it a step further and say that the man who keeps himself up to date, and perpetually revises his valuation, is thereby put at a disadvantage over the man in the parish that does not?—He is at a disadvantage to this extent, that of course he is more likely to be highly charged by the county basis than if he had left the lists alone; but the county basis may put him up, although he has been careless.

41. Please turn to page 26 of your memorandum; would you give me shortly a list of the hereditaments which appear upon your valuation list?—They would be all the hereditaments which are rateable; that is to say, they would be the land and the houses, and the railways of course, which are land in a certain sense, and tithes and shooting rights which are severed from the occupation and let, and which are therefore separately rated, and there would be mines of different sorts. That, I think, about completes the list. There are, of course, woods and underwood, which are rated on a different basis.

42. Take the tithes; in what way do they appear upon the list?—They appear as tithes of the parish of so-and-so.

43. Separately from the value of the land?—Yes, they are separately rateable under the Statute of Elizabeth. Tithes are specially mentioned in the Statute of Elizabeth.

44. Are tithes the subject of sale or gift apart from the lands on which they are produced?—Tithes

are entirely separate from the land. [They are a payment under the Tithe Commutation Act now, by the owner of the land to the tithe-owner; that tithe-owner may be either the vicar or some ecclesiastical person, or the tithes may have been entirely severed; they may be inappropriate and be in the hands of a lay owner, and he will deal with them as with any other part of his property; he may have them collected for him for his own benefit, or he may let them.

45. Do you distinguish between owners and occupiers in your valuation lists?—The name of the owner and the name of the occupier have both to be entered on the list.

46. I understand that shootings in the hands of the owner are not shown separately upon the roll?—Shootings are treated in three different ways. If the shooting or any sporting right as defined by the Act of 1874, is not severed from the occupation of the land, that is to say, if the tenant of the land is entitled to exercise the right, then it does not appear separately in the list at all. It is merely considered as one of the circumstances which increases the value of the occupation of the land. That is a case where it is not severed from the occupation. Supposing the sporting rights are severed from the occupation and not let, that is to say supposing the owner reserves the right of shooting and does not let it, then in that case also it does not appear as a separate value in the valuation list, and not the owner but the tenant of the land, although he does not exercise that right, pays the rate. But the Assessment Committee on the application of the tenant are required to state in the valuation list or elsewhere the value of the sporting right, and the tenant deducts the amount which he has paid in respect of it from his rent. The third case is the case where sporting rights are severed from the occupation and let, and then they are separately entered in the valuation list and separately rated, and the rate is paid by the person who is in the occupation of the sporting rights.

47. And the figure at which they are actually rated is entered in the last case?—That would be valued I should suppose. I do not think that the Act of 1874 prescribes anything else. They are valued just in the same way as any other rateable hereditament.

48. By guess work?—Yes, if you like to call it guess work; it is what the hypothetical tenant would give for them.

49. But when they are actually let, is there any means of finding out what, not the hypothetical tenant, but the actual tenant does give for them?—I suppose they have no difficulty in finding that out. There is income tax paid on his rent and there are deductions made.

50. Would you expect they would get that from the Inland Revenue Authority?—Yes, I suppose that is how they would get it; I should think so.

51. In paragraph 48 you mention that in the Act of 1601 coal mines are specially referred to?—Yes.

52. Let us take the case of a coal mine, how does a coal mine appear upon your valuation list?—A coal mine would usually appear in the valuation list in two divisions, that is to say, there would be the mine and there would be the surface soil and machinery, and they would be separately valued.

53. It is the occupier of the coal mine who pays the rate?—Yes, the occupier pays the rate.

54. But on what basis is he rated, what is he supposed to pay for, is it on his profit or how is it done?—It follows the same rule, on what it is worth. Of course, supposing he is not merely paying a dead rent but is paying a tonnage rent, his rent will afford a very considerable evidence of the gross value of the mine, but in the case of a dead rent it does not afford any such conclusion, because a man may be paying a dead rent for a mine which is not worth anything.

55. What you call the dead rent then would be the amount which would appear in the valuation list?—No.

56. What would appear in the valuation list in that case?—The estimated rent—the rent according to the Parochial Assessments Act, which the memorandum starts with (paragraph 2)—“The rent at which the same might reasonably be expected to let from year to year, free of all usual tenant's rates and taxes, and tithe commutation rent charge, if any, and deducting therefrom the probable average annual cost of the repairs, insurance, and other expenses, if any, necessary

"to maintain them in a state to command such rent." That is in the case you are speaking of, coal mines.

57. Now, passing to the second part of your memorandum you give a list there of the different rates which are levied and the purposes for which they are raised;\* as I understand this statement is not arranged according to any principle, nor according to the object with which the rates are levied, but that it is historical?—It seems to me to start with the poor rate, and with the expenses which are payable out of the poor rate, or with the rates which are connected with the poor rate, and then it goes to the rates which are not connected with the poor rate. I think that is pretty much the principle on which it proceeds.

58. Would there be from this table a possibility of separating these rates which might be said to be distinctly for the benefit of individual properties from those which are not so? Taking a concrete instance, one would of course say that there are some rates without which property could not be enjoyed, such as a sewer or drain rate, perhaps a road rate or a lighting rate, and so on; and that there are others which bear no distinct relation to the enjoyment of the particular property, such as the poor rate. Now, would there be a possibility from this table, by carefully going through it, of dividing the rates into one or other of those categories?—I think that this really does not deal, if I remember rightly, or at all events does not adequately deal with the rates so called, which are distinctly for the benefit of private property. This memorandum, for instance, says nothing about sewers rates under Drainage Acts and such like, although it does refer in paragraph 103 to water rates, which means the rates which are paid for the supply of water to houses; and it refers also to private improvement rates. I think for my own part it perhaps would have been better if those had been omitted, and if it had dealt simply with rates for public purposes. I think all the other rates here are rather for public purposes than for private purposes, even a lighting rate I should not say was for the benefit of a particular property; I should say it was as much for the benefit of the public.

59. But you would probably agree with me that if we are to carry out the terms of the reference to us which are to find out, if we can, "how far all kinds of "real and personal property contribute equitably to "local taxation" it would be necessary to attempt, at any rate, some differentiation of the kind which I have indicated in my last question?—If you thought that that problem included the question as to these rates for private purposes.

60. What do you mean by a rate for private purposes?—I mean just such a rate as you are indicating, a drainage rate for the drainage of a particular level, or a rate for keeping up a sea bank.

61. We need not go perhaps so much into that; but is a drainage rate necessarily a private rate—is there no such thing as a drainage rate over the whole of a local area?—Drainage rates are, in general, distinctly for the benefit, or were supposed to be for the benefit, of particular properties, and drainage rates are very frequently levied upon quite different principles from public rates. Take, for instance, the drainage rate in a place like Romney Marsh, or in Lincolnshire. There the properties are very frequently rated in proportion to their danger. If the land lies very low so that it requires a great deal of pumping to get the water out of it and to keep the water off it, it is charged a higher rate than the land which lies higher.

62. Naturally that would be so, but perhaps it was my ambiguity in taking the drainage rate as a typical example. I will take a lighting rate; you have separate rates over different areas, levied by a public authority for the purposes of lighting, have you not?—There are such cases under the Lighting and Watching Act, and some cases in towns.

63. Would you agree with me that a lighting rate when so levied is a purely local charge for which nobody but the locality gets any direct benefit?—As to the direct benefit, yes, but I think there is a certain advantage to the community in having any district lighted as compared with its being in the dark. I mean for police purposes.

64. Would you admit that a lighting rate in that aspect bears a different relation to the wants and legitimate burdens of a locality than, for example, an education rate?—This is a speculative point which I do not know that I can express an opinion about. I

\* Summarised in tabular form in Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 77 to 83.

think that historically the tendency is not to limit the area of the charge of lighting rates, but to extend it over the ordinary area of local charges. In a great many local Acts in the last century it was the practice to provide that the expense of lighting should only be paid by the houses which were, for instance, within a certain number of feet of a lamp, but the modern practice, and, I think, the more reasonable one, is rather to spread it, and to say it is an advantage to everybody that every part of a town should be lighted, and it is not worth while to make a distinction whether a house is within so many feet or not, but that the whole area should be rated. That is the modern tendency—not to limit the area to those who are most immediately affected.

65. I will put the question in a more general form: When one hears that the rates in one district are 5s. 6d. in the £ and in another district are 2s. 6d. in the £, is it not the case that without finding out what the produce of those different rates is to be, one district being much better served than another, you cannot form any really reliable estimate whether the contributions of the two localities are equitable towards such purposes as might be agreed upon as of general national importance?—That certainly is quite true, and in a great many cases people pay little because they get little, or get little because they pay little.

66. Following upon that, will your second part, which I am now dealing with, afford to this Commission the means of separating the different rates which are levied under the Acts mentioned into one or other of the two categories, as far as it is possible, so to separate them?—I do not quite see how it can. I take the school rate for instance; of course the school rate is not paid everywhere, as in many places the schools are provided by subscriptions and not by rates.

67. Clearly of course we should have to find out from the localities where a school rate is imposed and where it is not; but most of the rates which you mention here are general. The rural rates over the rural districts and the urban rates over the urban districts?—That is so; but of course they do represent enormous differences in the amount of rate, and in the amount of work which is paid for by the rate as between different rural districts and different urban districts. There is no general level of work in rural districts; some have been very careless and some have been very active.

68. Have I made clear to you the object with which I am putting these questions?—Yes, I think so; but I am afraid it is one in which this memorandum affords but little help.

69. Can you give me any suggestion as to how I can get at the separation that I am aiming at?—It would require, would it not, a statistical statement which would distinguish not merely the totals of a given rate, but also would show in what classes of expenditure it had been used.

70. Clearly, but before I proceed to make up that statistical table for questioning the local authorities upon, either by circular or otherwise, we must agree upon the names and get clearly in mind the names of the rates which are to be put upon one side and upon the other?—Yes, of course.

71. Will your table give us clearly, by going through it, the names of the rates which we in our opinion will have to put upon one side or other of the line which I have indicated?—I am afraid, it is probably my fault, that I do not quite understand what that line is because it seems to me that it is rather a line dividing expenditure than a line dividing rates. Take for instance the general district rate in an urban district.

72. I took what I thought was perhaps the extreme upon each side, because there may be a difference of opinion about some rates; I should have said myself, and of course in this matter I am speaking entirely for myself, that the poor rate was not one which ought to be in theory exclusively borne with regard to property but that the drainage or sewer rate, whichever you choose to call it, was one which distinctly benefited the properties which were drained or sewered?—Yes, that would be so.

73. I can conceive many rates which are in the intermediate line between those two and what I want to know is whether this table gives us with sufficient distinctness the names of the purposes for which each rate is applied to enable us by carefully going through it to put the rates on one side or other of the line which I have endeavoured to indicate, those which distinctly

Rates. Classification of Rates of benefit and rates of burden. Difficulty of distinguishing in certain cases.

New rates since 1869.

Valuation list in Metro-polis conclusive for local and imperial purposes.

Valuation lists. Outside Metro-polis. Five in number for various purposes.

Valuation in Metro-polis. Rights of surveyor of taxes.

Assessment Committee in Metro-polis. Position of County Council, with regard to.

benefit property and those which are of more general benefit to the community or necessary for the community to pay without regard to their distinct benefit to individual properties?—I should rather have said that I do not see quite that there is a distinct line which can be drawn. I think that you may place these rates in a series at one end of which there shall be such a rate as the poor rate for instance and at the other end of which there shall be an agricultural drainage rate, but there would be a lot of rates in the middle which it would be very difficult to say to which class they most belong.

74. And there would be a great deal of difference about them, no doubt?—Take for instance, the question of the drainage of a town. The drainage of a town is, of course, an enormous convenience to the occupiers of the individual properties, they get all their filth removed in the quickest way without any expense to themselves, but at the same time it affects questions of general health, and is of wider interest, therefore, to the community.

75. I will not carry it further at the present time. With regard to the third part of your memorandum, I suppose the rates mentioned there are also covered by your general description in the second part?—Yes, certainly.

76. The third part refers purely to rates which are new since the date mentioned, namely, 1869?—That is so.

77. Are they new in fact as well as new in name in every case, or are there those among them which although changed in name are, so to speak, the lineal descendants of charges which have been made before?—I think they are all new rates for new purposes.

78. We know, for instance, that the school rate is entirely new since 1869?—Yes, that is so.

79. Is the same true of the rate for vaccination officers, for example?—That is an instance I was going to mention. The paragraph (no. 118) about vaccination officers is put here because the Vaccination Act, 1871, was the first Act that made that expenditure compulsory. Some expenditure which was to a certain extent analogous to it, was within the power of boards of guardians under earlier Acts. An Act which was merely an empowering Act before 1869 but which has been altered since into a compulsory Act, comes into this third part.

80. Is that the line of distinction you have drawn, the first time the thing becomes compulsory?—Yes.

81. Is there anything as regards the third part that you would like to add?—No.

82. (Mr. Dalton.) In London the valuation list is conclusive, is it not, not only for all local but for all Imperial purposes?—Yes, that is so.

83. On the other hand, outside of London you have a large number of valuations?—Yes.

84. You have the poor rate valuation?—Yes.

85. The county rate basis?—Yes.

86. Besides that, there is a valuation for the borough rate in certain cases?—Yes, possibly there may be.

87. Also an income tax valuation?—Certainly.

88. And another valuation for the land tax?—Yes.

89. You have five valuations entirely independent?—Yes.

90. Is that not an antiquated state of things?—It is an inconvenient state of things, no doubt.

91. When they substituted in London a single valuation for the large number of then existing valuations they allowed the surveyor of taxes to have a right of appeal so as to preserve the rights of the Inland Revenue, did they not?—Yes, and they gave him even more—they were bound to put in his value, I think, if it was not shown to be wrong.

92. Is there any similar representation on the part of the county council in London? Have they any authority to appeal or to be represented on the Assessment Committee?—They are not represented on the Assessment Committee, and their power of appeal by the power of intervening is rendered somewhat doubtful by the case of *Reg. v. The Justices of the County of London and the London County Council*.

93. They are bound by the valuation list, and may not make a separate county rate basis of their own?—Certainly, they are bound by the valuation list.

94. In the provinces there is a provision, is there not, in very exceptional cases for allowing town councils to be represented on Assessment Committees?—There is.

95. Could you kindly give us the circumstances in which it is applicable?—The only case in which it is possible is where the borough is continuous with the union, and where the guardians send a notice of the appointment of the Committee to the town clerk, so that, in fact, just the very case in which it is not likely to be of any use is the only case in which the provision applies.

96. There are comparatively few boroughs which are co-extensive with unions I suppose?—I should suppose there are but few; I do not remember how many.

97. In those cases it is entirely optional with the guardians whether the town council should be represented on the Assessment Committee or not?—It is.

98. If there was a uniform valuation in the provinces in the place of these five separate valuations, do you consider that the different authorities who are interested in the valuation should be represented in any way on the Assessment Committee or have a right of appeal, as the surveyor of taxes has in London?—That appears to be the one natural way; but that is rather a question of remedies, which I perhaps might be excused from giving any opinion about at the present time.

99. At present in the country, where there is no new valuation, the only method of altering a valuation is by the supplemental valuation lists of the overseers, I think?—Of course the Assessment Committee may, on the complaint of an individual, either direct the overseers to make a new list, or they may, if they think fit, appoint somebody else to do it.

100. But the overseer himself, with whom the responsibility rests, would not in any way necessarily be aware of any change in the rent of the premises?—No, he would not.

101. Therefore, the man whose primary duty it is to make these supplemental lists when there is any alteration in the value of property, has no means in a large number of cases of ascertaining whether there has been any change in the value of the property or not?—I do not really know how they manage it. I suppose in the country everybody knows everything about everybody else, but how it is done elsewhere I do not know.

102. Coming to my next point, namely, the properties which are liable to be assessed to local rates; prior to the Poor Rate Exemption Act, 1840, which has since been annually continued, certain classes of personal property were liable to be rated?—So the courts said.

103. Could you tell us for what reason that Act has been continued annually, and has never been made absolutely permanent?—I suppose that it was originally made temporary because it was intended that the whole subject of local taxation should be inquired into and settled on general principles; and I suppose that some such hope perhaps has induced them merely to continue the Act from year to year.

104. If it was not continued in any year, certain classes of personal property in certain circumstances would still be rateable?—That is so, no doubt, in law.

105. Shipping, in certain cases. Could you give us a list of these personal properties?—No, because I do not know that there is any limitation to the personal property which is rateable, except that it must be personal property which has a locality. I do not think a court has ever gone so far as to say that shares or stock could be rateable; it was always confined to property which had a locality. Except so far as that limits it, I do not think that any limit could be stated. It is evidently exceedingly indefinite, because the Statute of Elizabeth says nothing about the rating of stock; it merely says the inhabitants were to be rated. Apparently they thought that they could somehow get at a man's ability, which is also not mentioned in the Act, by rating his stock.

106. With respect to the exempted properties referred to on pages 28 to 30 of the memorandum, there is no very clear principle by which these properties have been selected for exemption from rating, I think?—No, there is no principle at all.

Mr. J. F. Rotton, Q.C.

Poor Rate Exemption Act, 1840. Exemption of personal property.

Exemption of certain persons in respect to certain properties.

Mr. J. F. Houston, Q.C.

11 Mar. '97

107. I see that Sunday, infant, and ragged schools are exempted from rating, but other schools are not?—Yes, that is so.

108. But when land is purchased or acquired under the Burial Acts for the purpose of a burial ground no higher or more improved rent than the value or rent at which the same was assessed at the time of such purchase or acquisition is chargeable?—Quite so.

109. There is no similar provision, I think, for property which is purchased by public authorities for other purposes, such as waterworks or gasworks?—I am not aware of any, and even if it were purchased for the purposes of a burial ground under the Public Health (Interments) Act it would not have the exemption, I think.

110. But there is in the Burial Act to which you refer here, the germ of a principle that the local authority is not to pay rates on the improved value of the public works it carries out; would you suppose that was the intention of it?—I suppose that was the intention. There were other cases. Lunatic asylums, I think, were on the same basis as burial grounds until the Lunacy Act of 1890.

111. The modern tendency has been to do away with the exemption?—That tendency is to do away with the exemption.

112. As regards the statement on pages 54 to 76 showing the purposes for which new or additional local taxation has been authorised by Parliament to be raised in England and Wales since the year 1869, I think the history of the rates up to that date is pretty well given in Mr. Goschen's report, and that that has been the reason this has been selected as the date for commencing. The statement that has been prepared, I see, is chronological?—Yes.

113. And in nearly every year Acts of Parliament have been passed throwing more or less large charges upon the rates?—Yes.

114. Taking the first year, there was the Elementary Education Act, establishing School Boards, the Tramways Act, and the Medical Officers Superannuation Act; in the second year the Vaccination Act, the Pauper Inmates Discharge and Regulation Act; and in the third year the Reformatories and Industrial Schools Acts Amendment Act, and so forth; there has hardly a year passed since then in which new charges have not been thrown upon the rates?—That is so, no doubt.

115. Some of these rates, although they are public rates, clearly do not benefit private property, is that not so? Take the school board rate, can that be said in any way to benefit the private property in the district?—Surely it is scarcely correct to speak of a benefit to property; the only thing you can benefit is the person. I do not know whether the school board rates benefit the person or not; they are supposed to do so.

116. Certain rates would benefit property clearly, would they not; the rates for street widening for example?—Yes, that increases the value of property.

117. Does the school board expenditure increase the value of property in a district?—No, I do not think it does.

118. But such town improvements as are carried out on a very large scale, I suppose, undoubtedly do increase the value of the property in the town?—Of certain properties.

119. Is that not a line of distinction that could be drawn between certain expenditure, although there may be other expenses that are intermediate between the two?—Certainly.

120. (Mr. Elliott.) I think you call attention to the fact that under the Poor Relief Act of 1601 it was the inhabitants who were to be rated or taxed—taxed I think is the word?—Yes.

121. And not particular properties?—I think that is so.

122. Could you give us any indication as to what you conceive the Act of 1601 to have intended?—I think the Act of 1601 as following the Act of, I think it was 1598, of which it was very nearly a copy, must be considered as an attempt to give legal compulsion to what was under the earlier Acts rather in the nature of a charitable contribution. The first collections which were made for the poor by the parish officers were appar-

rently the merely getting in of more or less voluntary subscriptions—weekly subscriptions; but gradually there was an attempt to impose compulsion and the Acts of 1598 and 1601 had that purpose. But it was not sufficiently considered at the time that the indefiniteness which was not unreasonable in the case of a voluntary subscription became impracticable when legal compulsion was added.

123. And that indefiniteness would be still more undesirable as the ability of the persons who contributed assumed a more complex form?—Certainly.

124. I think the Act of Elizabeth requires not only that the inhabitants should be taxed, but that in addition occupiers of lands, houses, tithes, &c. should be taxed?—Yes, these are the words; the overseers "shall take order from time to time, by and with the consent of two or more such justices of peace as is aforesaid, for setting to work the children of all such whose parents shall not, by the said churchwardens and overseers, or the greater part of them, be thought able to keep and maintain their children; and also for setting to work all such persons, married or unmarried, having no means to maintain them, and use no ordinary and daily trade of life to get their living by, and also to raise weekly or otherwise (by taxation of every inhabitant, parson, vicar, and other, and of every occupier of lands, houses, tithes inappropriate, propriations of tithes, coal mines, or saleable underwoods in the said parish, in such competent sum and sums of money as they shall think fit), a convenient stock of flax, hemp, wool," and so on.

125. Would you say that it would be correct to describe the intention of the Act of Elizabeth as imposing a kind of local income tax?—Yes, I think it was so.

126. It would not be correct to say that the Act of Elizabeth contemplated the rating of particular property?—Of course we do not say now that a property is rated; we say that A.B. is rated in respect of certain property.

127. And no such limitation appears in the Act of Elizabeth?—You see it does not say by taxation of lands and houses, but it is by taxation of every occupier of lands, houses, tithes inappropriate, and so on.

128. I understand from the memorandum that, in pursuance of the Parochial Assessments Act, 1836, the value of the several rateable hereditaments was to be ascertained in a particular manner?—According to a certain rule.

129. There was enacted a uniform definition of value?—Yes.

130. And that four years afterwards the Poor Rate Exemption Act prohibited the taxation of any inhabitant in respect of his ability, derived, not only from the profits of stock-in-trade, but from any other property?—Yes, that is to say any other personal property.

131. Is not the exemption of individuals from being rated in respect of personal property, based entirely upon that Poor Rate Exemption Act of 1840?—Legally it is so; but of course one is aware that the practice of rating inhabitants or occupiers only in respect of their land had grown up at a very early period, very soon after the Statute of Elizabeth, as the general rule, although subject to local exceptions.

132. Although the first change on the Statute Book was made in 1840, yet between 1601 and 1840 there had been a gradual change of practice as settled, not only by the overseers, but in the law courts?—Yes; the law courts were for a long time of course opposed, except under particular circumstances, to the rating of anything but hereditaments.

133. Would it be possible for you, without any great inconvenience, to give the Commission a memorandum stating the course of events as they are known to the Local Government Board, and as they appear in the Law Reports, which led to that change as between 1601 and 1840?—I think very nearly everything the Commission would want is set out in the memorandum which was prepared by Mr. Dalton for the purposes of the Commission on Agricultural Depression. That gives a pretty complete history, I think, of the change. I could give you a reference to it; it is published as one of the appendices to one of the reports of that Commission.\* I think you will find that that presents nearly the whole of the history. If anything more is

Mr. J. F. Bolton, Q.C.

11 Mar. '97

New rates since 1869.

Rates. Expenditure which benefits owners of property.

Poor Relief Act, 1601. Taxation of inhabitants.

Poor Relief Act, 1601. Intentions of the Act.

Rates, apportionment of. Power of occupier deduct from rent

Tithe rent-charge deducted from gross rent of occupier.

Extraordinary tithe rent-charge. Rateability of.

necessary, and I can supply it, I shall be glad to do so; but my impression is that it would not be very easy to give much more information unless one had time to search the old rate books, if any of them are still in existence. Probably almost all the cases were got out in that memorandum. There is a very good statement of the case in Mr. Cannan's book on rating.

134. Have you had an opportunity of examining that portion of Mr. Cannan's book which describes the decisions in the law courts and the statutes?—I have not compared it with the memorandum which I am speaking of.

135. One more question with regard to the Act of 1601; I think there was a provision in that Act, was there not, that where the inhabitants of a parish were unable to raise sufficient monies, then the justices might rate other parishes within the same hundred, or the justices in Quarter Sessions might rate any parish within the county?—Yes; by what was called a rate in aid; they might not only rate another parish, but apparently they might rate an individual in another parish.

136. There was really nothing whatever under the Poor Relief Act of 1601 to prevent the poor rate from being made a county rate; it might have been spread over the whole of the county if the justices in Quarter Sessions pleased?—I think only in the case, if I remember rightly, of the parish being unable; I do not think there was a general power of spreading it. Only in case of a parish being unable to support its poor was a rate in aid possible, I think.

137. What meaning do you attach to that word "unable"?—That the charge was a very grievous one—an impossible one in the practical sense. Of course such things as rates in aid were known—it was not merely a speculative trouble. There were plenty of rates in aid at the end of the last century—perhaps I should not say plenty; there were not a few.

138. And those rates might be made by the justices in their discretion?—Yes, I believe so; I do not remember whether it was the justices or the Quarter Sessions.

139. With regard to the law as it stood between 1601 and 1840, can you say what would have been the position of mortgagees, ground landlords, and other persons possessing interests in or charges upon rateable property? Assuming that a ground landlord, or a mortgagee in a parish, were resident in a parish, would they have been rateable in respect of their interests in the property, or would the occupier of the property alone be rateable?—I think the occupier of the property alone would be rateable; that is to say, I do not think there is any evidence of a mortgagee ever having been rated in respect of his charge. Of course the charge for the ground rent is not deducted from the value of the property, therefore the tenant does pay in respect of the ground rent as well as in respect of the rest of the property. I do not remember any case of a ground landlord being rated, whether he was an inhabitant of the parish or not.

140. There was no attempt under the law as it stood between 1601 and 1840 to apportion the rates according to the interests in the property?—I think none at all.

141. But there are some cases, are there not, in which something of that kind is done? You mentioned, I think, the case of sporting rights, where the occupier who is rated when the sporting rights are severed from the land and not let can deduct the rates out of the rent that he pays to his landlord?—Yes, certainly.

142. I think you mentioned that the occupier in such a case was entitled to obtain a certificate from the overseer?—Yes. But if I might say so, I should not quite agree to that being considered as an attempt to apportion the rent in respect of interests in the property, because there it is not an interest in the property, but it is an interest in the occupation. It is not that A. B. has a sporting right which is a separate property from the other interests in the land, but there is a different occupier of the sporting right from the occupier of the land.

143. But in that case the right of deduction is exercised?—Yes.

144. Is the Local Government Board aware of any practical difficulty having arisen with regard to the exercise of that right of deduction?—I do not think we have any information as to any practical difficulty in the matter. The Assessment Committee are bound to

make the entry, and I presume they do so; I am not aware of any difficulty having arisen.

145. Then, in the event of it being suggested that the rates chargeable upon property should be apportioned between the various interests in that property, you do not anticipate that any practical difficulty would arise by the adoption of a system of deduction?—That is a question I could not answer.

146. But there are cases, are there not, in which a system of deduction is operative—the case which you have just mentioned, for instance—and I think there are other cases, are there not?—There used to be another case in the matter of tithes, when tithes were rated in some instances where they were paid by the occupier; but that is cleared away, because the rating of tithes is now altered by the Tithe Act. I am not aware of any other case.

147. Is not the Metropolitan sewers rate a case?—Perhaps it may be, I do not remember.

148. Are there not other cases? Would you not say that the lighting rate in the Metropolis was another case?—It may be so.

149. Is not a deduction made in that case by the occupier from the rent which he pays to the owner?—Of course there may be such cases. In the case of private improvement rates, that is the rates for improvements done to a property by the local authority, for which they are repaid by means of a rate—that will be in the same way deductible from the rent by the person paying it.

150. With regard to the position of the tithe rent-charge, I rather understood, from your memorandum, that the value of property in the hands of the occupier is to be ascertained after deduction of the tithe rent-charge, that is, the value is to be on the assumption that the occupier pays the tithe rent-charge?—Yes, quite so.

151. So that from the gross rent which a tenant contracting to pay the tithe rent-charge would pay, a deduction should be made in respect of that tithe rent-charge?—Yes, that is so.

152. That provision, of course, was made before the Tithe Act of 1891?—Yes.

153. Does it occur to you that the altered position of a tenant under the Act of 1891 makes necessary any change of law in that respect?—No; we do not think it made any difference.

154. Does the tenant now know anything about the tithe rent-charge?—No, he does not know anything about the tithe rent-charge except that he would ascertain what the tithe rent-charge was first, in order to see that it was deducted from his rateable value.

155. Is there not some difficulty, if he does not know anything about the tithe rent-charge, in his exercising the right which the law gives him?—I see no practical difficulty because, of course, it is to the interest of the owner who pays the tithe rent-charge, and therefore knows what it is, to get a deduction made from the rateable value of his property, although he does not pay the rate; therefore he could scarcely refuse the information which is necessary for the purpose.

156. Are you aware whether the Local Government Board have received any complaints that where land is subject to a tithe rent-charge, there is anything like a double assessment of the land and of the tithe rent-charge?—I do not think so; I would not say that there may not have been such cases by way of exception, but I do not think there are many.

157. I am speaking now, of course, of complaints received by the Local Government Board?—I do not remember any.

158. Is extraordinary tithe rent-charge rateable?—I believe so, but I am not sure, so that I cannot answer the question now.

159. I was under the impression it was stated in your memorandum that extraordinary tithe rent-charge is not rateable?—It may be so; I do not remember it.

160. Assuming for a moment that I am right in what I recollect as to the contents of the memorandum, do you see any reason why a tithe rent-charge should be rated and an extraordinary tithe rent-charge should not be rated?—I am afraid I cannot answer that question. I do not remember at the present time what were the provisions of the Act in regard to the extraordinary tithe. There was an Act passed, I should say,

Poor Relief Act, 1601. Rates in aid.

Non-rateability of mortgagees, ground landlords, and other persons in respect of charges on property.

Sporting rights severed from the land. Liability for payment of rates.

\* See Pt. I. of Appendix to Vol. I. of Minutes of Evidence, p. 23, (par. 64)

**Mr. J. F. Rutson, Q.C.**  
 11 Mar. '97  
 in 1886 or 1887 or about that date; but I do not remember what its provisions were. I am not quite sure whether there was not some provision made for its gradual extinction, or something of that kind.

Grading System of Relative liability of owners and occupiers of land and other property under Lighting and Watching Act, 1833.

161. Then in regard to the question of classified or graded rating, I think in paragraph 105 of your memorandum it is stated that under the Lighting and Watching Act of 1833, owners and occupiers of property other than land pay a rate three times greater than that at which owners and occupiers of land were rated?—Yes.

162. Was that the first example of grading?—I do not remember an example in general legislation, but of course it was a very common thing in local Acts that improvement rates should be chargeable in a different proportion on land and houses, and that no doubt was where it was derived from.

163. Then that Act of 1833, and the previous isolated instances which you have mentioned, may be said to be the origin of the system of grading which was embodied in the Act of last Session?—Yes.

164. It was the first example of the kind?—I would rather say of the grading which was in force under the Public Health Acts and the Local Government Acts. Those Acts were, of course, founded on the Improvement Acts which had been passed in the earlier part of the century, and it was from those Improvement Acts really that the principle of the differential charge was derived.

165. To what areas or districts does the Lighting and Watching Act of 1833 extend?—Merely to the parishes or parts of parishes in which it has been voluntarily adopted.

166. Then are the purposes for which that Act was passed carried out in other districts under other Acts?—Yes, certainly.

167. Under those Acts does the same principle of grading apply?—To the other districts where they are carried out, that is to say, in urban districts the expense of lighting would as a general rule be paid out of the general district rate, to which land pays only on one quarter.

168. The main purposes, I suppose, for which the Lighting and Watching Act was passed were indicated in its title?—Yes.

169. Is land rated at this proportion for all expenses analogous to those contemplated by the Lighting and Watching Act?—Watching, of course, now comes to a large extent in police, and practically the Watching Act is obsolete so far as watching is concerned. Of course the police is now borne, in the case of the counties, by the county rate, which is paid out of the poor rate, to which land pays its full share; and it is borne in boroughs for the most part out of the borough rate, or possibly the watch rate, which is levied on the same principle, and to which also land pays on the whole value, not on part. Then as to lighting. The lighting is in general carried out in urban districts under the local government powers, and is paid for out of a rate to which land contributes only on one quarter.

170. Is the position this: that although as far back as the year 1833 these purposes of lighting and watching were considered to be such as to justify the assessment of land at one-third of its value, that principle, even now, notwithstanding the Agricultural Rating Act of last Session, has not been carried out entirely throughout the country?—No, certainly not. It was supposed, evidently, that the Lighting and Watching Act was applicable to the country only by way of exception—where people wanted the luxury of light or the luxury of watching, they were to adopt the Act.

171. Under a different condition of things, we have not hitherto treated land in the same way as the Act of 1833 treated it?—No.

172. Some measure of relief has been given to land, but not the full measure of relief which was given by the Act of 1833?—Only one-half instead of one-third.

173. With regard to the general district rate, I believe that agricultural land is rated to the general district rate at one-fourth, is it not?—Yes, and the tithes, railways, canals, and so on.

174. The provisions as to the rating of agricultural land at one-fourth are contained, are they not, in the Public Health Act, 1875?—Yes, that is the Act.

175. Was that the first occasion on which that provision was made in the case of agricultural land, as regards the expenditure required for the purposes of the Public Health Act, 1875?—No, not the first. It certainly was so under the Local Government Act, 1858, and my impression is that it was so under the Public Health Act, 1848, but I have not got the Act with me. It was a principle introduced by the Public Health Act, 1848, I am almost sure.

176. It would be, I think, useful that we should see the gradual growth of this system of grading. To what areas does the general district rate extend?—The general district rate extends in general to all districts which are under Urban district councils, not being boroughs, and to a very large proportion of the boroughs, I cannot say exactly what proportion, but to boroughs where the expenses payable under the Public Health Act are not payable out of the borough rate. A similar rate of course applies for certain purposes in a rural district, that is to say, for purposes which are defrayed as special expenses, not as general expenses.

177. With regard to that I should like to ask the same question that I asked with regard to the Lighting and Watching Act. Are not rates levied in some areas for the same purposes as those for which the general district rate is levied in other areas, but on a higher scale than one-quarter?—The purposes under the Public Health Act in rural districts are divided between general and special expenses; those only which are special expenses are paid out of a rate to which land contributes only on one-fourth, the others are payable out of a rate to which land contributes on its full value; but as a general rule all those purposes are payable in urban districts out of the general district rate, to which land contributes only one-quarter.

178. (*Mr. Arthur O'Connor.*) Where the valuation list which you told us of early in your examination is not the basis of the county list, how is the county list compiled?—The county list is compiled by a committee of the county council.

179. What materials have they independent of the valuation?—They have a right to call upon all overseers and others to provide them with any information that is available for the purpose.

180. Could you tell us whether they use those powers, and how, as a matter of fact, they do compile their lists?—I can scarcely say how, as a matter of fact, they do; I am not familiar with the fact, but I can give you here the reference; it is the County Rates Act, 1852 (15 & 16 Vict. c. 81. s. 7).

181. Thank you, I will not trouble you to read it, the reference will be enough?—It gives power to inspect documents, and to require overseers and others to produce to them the assessments which are in force.

182. Shortly, do they actually proceed under that section, and get the information in terms?—I think so.

183. The next question I have is with regard to overseers and assistant-overseers; does the definition of the word "overseers" in the Acts which relate to these rates include assistant-overseers?—Which Act are you thinking of?

184. You told us that much of the work was done by assistant-overseers, but I think the word "overseer" is the only one used in the Acts generally?—The overseer is the person who is legally responsible generally for the work being done, the assistant-overseer is merely a paid assistant.

185. Is he an assistant of the overseer appointed by the overseer, and for whom the overseer is responsible, or is he himself directly the officer of the local authority?—The assistant-overseer is nominated by the vestry, and appointed by the justices, and his appointment is subject to revocation by the vestry not by the overseer.

186. He is independent of the overseers?—He is, to that extent, independent of the overseers; I should say that he is now appointed in rural districts by the parish council.

187. The next point I have is with regard to the revision of the valuation; I understand that in the Metropolis the revision is under statutory authority?—Yes.

188. And that it is compulsory every five years?—Yes.

**Mr. J. F. Rutson, Q.C.**

11 Mar. '97

General District Rate. Area to which it extends.

Public Health Act, 1875. General and special expenses in rural districts. Position of owners and occupiers of land.

Valuation list. County list compiled by County Council. Powers of County Council.

Overseers and assistant-overseers. Position and appointment of.

Valuation in Metropolis. Quinquennial

Grading System of Relief obtained under Agricultural Rates Act, 1896.

Public Health Act, 1875. General district rate; railways, &c. rated at one-fourth.

Mr. J. F. Rotton, Q.C.

11 Mar. '97

Valuation outside Metropolis. No compulsory revision.

County rate. Reasons for avoiding a revision of valuation.

Valuations or assessments made for certain purposes not to be made public.

Deductions. System of making deductions in different unions.

Sporting rights. Assessment on copyhold lands.

189. Elsewhere practically there has not been any general revision?—There is no compulsory period for revision, and in many cases revision may only have taken place at long intervals, or not at all.

190. The point upon that which I should wish to put to you is this: is the absence of revision due to the fact that revision involves a considerable amount of pecuniary charge, or would you say that it is due either to the remissness of local authorities, or to the incompetence of overseers, or to the difficulty — to what would you ascribe it?—I think it is not easy to answer that question directly. The absence of a revision may depend upon the remissness of the officers, or because they have no particular interest in getting a revision. For instance, if you take a whole union, it may not so very much matter to that union whether there is a general revision or not. A general revision might raise the whole union, and then, everybody would pay on a larger valuation at a less rate; therefore, for the purposes of the union a general revision might not be necessary, and until they began to feel the pinch in the county rate or in something else, a revision may have no great reason to them.

191. In connexion with the county rate, may there not be an interest in a smaller area in avoiding a revision, inasmuch as a revision would probably involve, with an increasing population, a higher general assessment and a higher charge under the county rate?—Yes, no doubt in many cases that would be an object in avoiding a revision, but then, of course, a revision can be compelled so far as the county rate is concerned, because the county themselves can do it.

192. We have then, two points: first of all the presumable expense attending a revision; secondly, the possible interest of a limited area in not moving in the question at all?—Certainly, both may be present.

193. May I ask you to go to paragraph 4 of your memorandum; I read there these words, "Nothing contained in the foregoing provision is to authorise the production of valuations or assessments which by any provision of law are not suffered to be made public." The explanation of that does not appear upon the face of this memorandum, but I would like to ask you whether that refers among other things to returns or declarations made in connection with income duty?—That was no doubt the purpose for which that exception was put.

194. The reason I asked was this, because in reply to certain questions already put to you, you have appeared to intimate that declarations or assessments in connection with income duty, might be made known to the local authorities, and perhaps, if our proceedings are to be published at all, it is just as well that the public should be assured that with regard to declarations made under the protection of the Income Duty Acts, there is no divulging of that which has received statutory protection?—Certainly; the Income Tax Returns, which would be particularly of interest in matters of assessment would be those under Schedule A., but if I remember right the Income Tax Returns which have a special protection against publication are those in regard to businesses and professional incomes under Schedule D.

195. The next point I have noted is a difference in principle, referred to by you, I think, in one of your answers, adopted by the Assessment Committees of different unions; might it not be the principle of a union to adopt what I may call a very mild principle of assessment?—I was there specially referring to the deductions which should be made from gross rental to find rateable value, that is to say, to deductions in respect of necessary repairs and insurance. Of course, it would be the interest in a union which wished to diminish its assessments to have large deductions.

196. That is, however desirable it may be in the eyes of the local authorities to be absolutely fair as between the different inhabitants of their area, yet when it comes to the total for their own area as compared with the total for neighbouring areas, it may be to their interest to keep theirs as low as possible?—It may be so.

197. The next point I have noted is with regard to the sporting rights, is there any difficulty about shooting or sporting rights over copyhold lands and their assessment?—I am not aware of any difficulty in the matter. The only case, I think, in which any question could arise as between copyhold rights and others would be where there were rights of free warren. I

should suppose that a right of free warren would be treated as a sporting right in the same way as any other sporting right, but I am not sure about that.

198. There would be no complications in connection with the nature of the tenure?—No, I do not think there is any difficulty with regard to copyhold lands.

199. Then with regard to the mines and the valuation of them, the hypothetical tenant might be prepared to pay, besides the dead rent, so much royalty, but is there any deduction made for possible flooding or for the giving out of seams or for strikes?—Those are all matters which would enter into the consideration of the hypothetical tenant. If a mine were specially liable to flooding, I presume it would diminish the rent which a man was prepared to pay for it. But I should say not the giving out of a seam, because the giving out of a seam would mean that the mine was coming to an end, that is, would cease to be rateable; supposing the whole of the seams gave out the mine would cease to be rateable.

200. No doubt the hypothetical tenant would take all those things into consideration, but then the local authority has to act for the hypothetical tenant and my point is this, would they consider all those things in estimating?—Yes, I think so.

201. They would?—I think they are entitled to consider everything which the hypothetical tenant would consider.

202. (Mr. Wharton.) With regard to the county assessment you said that in many of the counties the assessment is continuous in some cases for a number of years?—I do not think I said it in regard to the counties. What I intended to say was that there are some unions in which it is so; it may be the case in regard to some counties, but I could not speak of my own information on that matter.

203. No doubt in some of the counties, in purely agricultural counties, for instance, the circumstances change but very little, and consequently the assessment may have changed but very little; but in the busy counties—say in the mining counties, or in the manufacturing counties, and so on, no doubt circumstances change frequently, and, consequently, there is a re-assessment more frequently in them, especially in the mining counties, than in the other counties?—Yes, re-assessment there is frequently arising.

204. You said that an Assessment Committee have the power of gaining information in various ways, and probably you are aware that in the most busy counties, in the mining counties for instance, they have usually a county valuer?—Yes, I am.

205. To assist the Assessment Committees?—To assist the county basis committee, that is to say.

206. Quite so. You have told us that in rural districts—in counties—there are five separate valuations?—There may be.

207. Whereas in the Metropolis there is only one?—Yes; that is so.

208. Without asking you to suggest any method for the amendment of the law, no doubt you would think it very desirable if the number of assessments could be decreased?—Certainly it would be.

209. I mean from the point of view of economy, because there must be considerable expenditure in each assessment and that would be a saving to those who are mulcted in that way, and it also would simplify the process of valuation?—Yes.

210. (Mr. Elliott.) I think that the questions which I have already addressed to you would be easily answered if you would be so kind as to put in a memorandum showing for what purposes rates may be levied to which land contributes on a lower proportion than one-half in some districts, and on one-half or more in other districts; would you see any objection to putting such a memorandum in?—I think that could be put in with a certain degree of generality, that is to say, as referring to the possible purposes, not the actual purposes.\*

211. The possible purposes would quite meet my purpose. One question with regard to the power of appeal: have the owners of property any powers of appeal?—Owners of property have power to appeal where they pay rates as owners in place of the occupier; but not, I think, as a general rule, where they are merely owners and not paying rates.

212. Although possibly the rent of his property may be affected by the amount of rates charged upon it,

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 77 to 82.

Mr. J. F. Rotton, Q.C.

11 Mar. '97

Mines. Assessment of.

Re-assessment more frequent in mining or manufacturing counties than in agricultural ones.

County Valuers.

Valuation lists. Desirability of reduction in number outside Metropolis.

Proportion of contribution in respect of land to rates for certain purposes in different districts.

Appeals. Owners have no power to appeal unless paying rates.

**Mr. J. F. Rotton, Q.C.** the owner to that extent is dependent upon the energy and ability of the occupier as regards the settlement of the amount to be charged?—That, I think, is so, as a general rule.

11 Mar. '97

Valuation. Basis of, is annual value to tenant.

213. (*Mr. Clare*). Is not the basis of valuation for the purpose of assessment the valuation of the occupation to the tenant?—Not necessarily to that particular individual tenant.

214. No, but to the hypothetical tenant?—Yes.

215. That is to say what rent will the premises let at from year to year to a hypothetical tenant?—Yes.

216. For the purposes to which they can be appropriated?—Yes.

217. As they exist?—As they stand.

218. *Mr. Dalton* asked you some questions, I think, with a view to getting your opinion as to whether property belonging to a local authority should be exempt from rating?—He asked me some questions as to the exemptions from rating.

219. If property belonging to local authorities is exempt from rating, do you not think that the Government might properly refuse to pay rates upon Government property?—That is a hypothetical question, and I do not think I am prepared to answer it. My own opinion is that nobody should be exempt from rating.

220. You rather agree that local authorities' property ought not to be exempt from rating?—That is certainly my personal opinion; I do not express an official opinion on that.

Rating. Exemption of property belonging to local authorities and Government.

Valuation outside Metropolis. No compulsory revision. Supplemental list.

221. I shall not differ from you on that point. Outside the Metropolis I think the valuation list is prepared annually?—Not necessarily. There is no necessary time at which a valuation list is to be made. Immediately after the Union Assessment Committee Act, 1862, a valuation list had to be prepared, and there is nothing to prevent that valuation list, with alterations which the altered circumstances require, going on until the present time. It is the duty of the overseers whenever any alteration takes place in the value or the distribution of property, to send in a supplemental or a substitutional list, and the Assessment Committee either without complaint from outside or upon the complaint of any ratepayer, may require the overseers to send in a partial, that is to say a supplemental or substitutional, list, or to make a new list; or they may appoint a person to make a new list; but if they do not choose to do so, and if nobody moves them to do so, it may go on, and the old list, which was settled in 1863, might be the list at the present time.

222. But if the value of the property does not alter, there is no necessity to alter the list, is there?—None at all. Of course, if the property is divided the list ought to be altered.

Rating areas. Complication of, in certain municipalities. Valuation in municipality. Uniform system desirable.

223. You know that in certain municipalities there is a good deal of complication of local areas, such as unions and parishes, that is to say, that a municipality may contain several parishes and possibly several unions or parts of unions?—Certainly.

224. Do you not think, as a matter of principle, it is desirable that there should be a uniform system of assessing property throughout the whole of the municipality?—Yes, I think there should be, certainly. I think that wherever an equal rate is levied, there ought to be an equal valuation.

225. There ought to be the same basis of valuation throughout the whole area where an equal rate is levied?—Yes.

226. And it is a distinct unfairness or inequality to have different bases for arriving at a valuation in the area over which one rate is levied?—There certainly is an inequality.

227. So that any steps which can be taken in the direction of bringing about a uniform system of rating will, in your mind, be beneficial to the local administration?—Any steps that were successful for that purpose.

Poor rates. Collection of.

228. I think the poor rate is collected by the overseers?—The work of collection may be done either by the overseers themselves or by an assistant overseer, or in some cases by collectors appointed by the guardians.

229. It is either collected by the overseers or by some staff under their control or under the control of the guardians?—Under their control I should say; at all events it goes into their account.

230. So that if you get an area, we will say a municipality with six or seven different parishes in it, it means that there are six or seven different collecting staffs for the poor rate?—Yes, unless there is the same individual; in some cases of course the same individual is employed, but it is legally a different collection.

231. Supposing that in a case of that kind a municipality also has rates of its own, which it collects, does it not follow that the rate collectors of the municipality go over the same ground as the collectors of the poor rate?—That is to say, in the case of a municipality collecting the general district rate which is not collected through the overseers?

232. Yes?—That is so, of course.

233. Do you not think as a matter of local administration it would tend to economy and be more simple; if the same collector collected both the poor rate and the municipal rate in his particular district?—Yes, generally one would suppose that it would. I have no personal information on the point except from the general rule that it is cheaper to pay one man to do a thing than to pay two. I can scarcely give an opinion upon it.

234. I take it that the Local Government Board as a general principle would always advocate anything which tended to economy and simplicity in administration?—I should hope that would be their general rule.

235. The Local Government Act, 1894, I think, gives power to the Local Government Board, by Order, to transfer to the councils of municipal corporations either the powers and duties of overseers or the power of appointing overseers and assistant-overseers?—That is so.

236. May I ask what policy the Local Government Board have adopted with regard to exercising that power?—The Board have in many cases conferred upon urban authorities the power of appointing overseers; they have not, so far as I know, in any case, conferred on any authority the powers of overseers.

237. Have they also conferred the power of appointing assistant-overseers?—Yes, in many cases.

238. Have they done that in spite of the opposition of, we will say, the poor law authorities in the district?—What do you mean by the poor law authorities, do you mean the guardians?

239. I mean either the guardians or the overseers?—I am not sure. I think that they have, but if they have in some cases refused to do it, I think, would be rather the opposition of the vestry that would be considered than the opposition of the overseers.

240. Have the Local Government Board, so to speak, refrained from carrying out an improvement in local administration, which, on general principles, ought to be adopted, simply because opposition has been raised by the poor law authorities in some shape or form to the proposed alteration?—That I cannot answer, as I do not know. I have not all the cases in my mind. Very likely the majority of these cases would never come to me and I could not speak to that.

241. Assuming that under the Local Government Act, 1894, the Local Government Board come to the conclusion that they have not the power, or do not choose to exercise it, of forcibly compelling the overseers to hand over both the duty of assessing property and the duty of collecting the poor rates to the municipalities, do you not think as a matter of principle it would be useful if the law was altered so as to make that compulsory?—That question I could not answer. It is a very large question, it involves a great many different considerations, and I could not express an individual opinion upon it, and I have no authority to express an official one.

242. From your general experience of local government matters may I take it that you do think that as a matter of principle it is advisable to have one assessing authority in any given area and to have one rate-collecting authority in that same area?—Yes, as a general rule that would be so.

243. I do not want you to commit yourself?—Of course I do not want to say it is so in all particulars. I do not wish to express it any more than as a general opinion, that if you can have one authority to do the work it is better than having two.

**Mr. J. F. Rotton, Q.C.**

Valuation.  
Interest of  
parishes  
and  
unions to  
have low  
assess-  
ment.

Rating in  
respect of  
personal  
property.

244. (Mr. Smith.) I gather from your evidence and from the questions that have been put by other members of the Commission that you are distinctly of opinion that it is time that Parliament passed a Valuation Act for England and Wales, making, not necessarily the same, but similar provisions with regard to the assessment and valuation in the country to those that exist at present in London?—I put it rather thus: I would not say "similar" provisions, but some alteration of the law with the same object I think would certainly be desirable.

245. I think you have been a good many years at the Local Government Board; you must therefore recollect a great many valuation bills?—Yes, a great many.

246. Have they all been framed with a view to establishing some general principle of valuation allowances, and with reference to the periodical revision of assessments?—Yes, I believe that is so.

247. Should I be in error if I said that within my recollection, which goes back, now I am sorry to say, nearly 30 years, there have been at least 15 or 20 Bills introduced with that object?—I daresay that is very likely to be right.

248. And Parliament has never found time to pass them. I suppose there can be no doubt from the general tone of your evidence that you think it is time there was some provision made whereby it would be impossible for a district to leave its assessment unaltered for such a time as you have indicated?—I should think the circumstances can scarcely have been so little changed as to warrant a valuation remaining unaltered.

249. The worst of it is there is a particular interest in neglecting the work, is there not?—There may be so. But I think in many cases it has arisen simply from carelessness without any particular interest one way or the other.

250. I do not suggest any motive. It is obvious that as between parishes within unions, a parish has an interest in having a low assessment?—That is so.

251. And as between unions and counties, a union has an interest in having a low assessment?—That certainly is the case.

252. With regard to the parish, there is the control of the Assessment Committee?—It is so.

253. With regard to the union and the county, there is very little control, is that not so?—There is the control of the county basis.

254. But by a low valuation they would, in both instances, escape their proper share of what I call the common charges?—Yes.

255. That is, if they neglected to keep up their valuation?—Yes.

256. To pass to a totally different subject, namely, the question of the rating of personalty, I suppose one great difficulty has been the difficulty of localising personalty for the purposes of rating; that would be the principal reason, I suppose, why it has been exempted by Act of Parliament ever since, I think, 1840?—Yes, I think so. Of course, if you restricted it to personalty which was locally situate in the parish, which I think was almost always the case in which there was an attempted rating, then it would be to some extent got over; but then you are altogether giving the go-by to a system of rating based upon personal ability.

257. It must be personal ability localised?—It is personal ability considered merely with reference to a given place.

258. To take the famous case of Lord Campbell. He, I believe, was rated on his salary as English Lord Chief Justice in a Scotch parish?—Yes.

259. You would not say that was locally earned?—No.

260. That, I suppose, is the real and great difficulty why the principle has never been applied?—Yes, I suppose that was the difficulty. Might I read what Lord Hale said about it; it is quoted in Cannan's book on rates, which I have been mentioning:— "Because those places where there are most poor consist for the most part of tradesmen, whose estates lie principally in their stocks, which they will not endure to be searched into to make them contributory

"to raise any considerable stock for the poor, nor indeed so much as to the ordinary contributions. But they lay all the rates to the poor upon the rents of lands and houses, which alone, without the help of the stocks, are not able to raise a stock for the poor, although it is very plain that stocks are as well by law rateable as lands, both to the relief and raising a stock for the poor."

261. Of course, since that judgment, or dictum rather, was it, of Lord Hale's?—It was not a judgment or even an opinion expressed judicially.

262. Then, since this observation of Lord Hale, personal property has increased to an enormous extent—an extent never contemplated in his time?—Yes.

263. It is probably for that reason that Parliament has of late adopted a principle of making subventions from Imperial taxes to meet that difficulty—that they have probably adopted this principle of Treasury grants, or Exchequer contributions, as we call them now?—That may have been at the bottom of it.

264. That is a method, is it not, of taxing personalty for local purposes?—That may be.

265. And operates to the extent of, I think, 7,000,000 a year?—Something of that sort; but of course that is not by any means all contributed by personalty.

266. It is contributed to some extent by personalty of every description, is it not?—Certainly.

267. By Schedule D, Schedule E (official salaries), out of the general taxes of the country, and out of the indirect taxes?—Yes, and of course out of one class of property, which has no locality and which could scarcely, upon any imaginable principle of local rating, be touched by local rates, such as bonds and foreign securities.

268. Property which I said at first it is impossible to localise?—Practically.

269. (Sir E. Hamilton.) I suppose you would say that practically the valuation is really in the hands of the overseers, is it not?—I think it is very different in different places. In small country parishes, agricultural parishes, the overseers, with the assistance of the assistant-overseer, would practically do the work; they know the different farms, they know just about what their values are, and they know whether a man's rent has been raised or not. When you come to a large town parish, the permanent and paid officers, of course, become of more importance in the work; they are people of higher qualifications, and they would do more of the work; and in the case of manufactories, in the case of mines, and in the case of railways, where railways are concerned, skilled valuers have very frequently to be called in either by the overseers themselves, or by the Assessment Committees.

270. Are overseers, as a rule, people with technic knowledge about valuation?—No. In country parishes they are the farmers: one or two of the farmers take it by turn, you may almost say. In small country towns they would be shopkeepers, and not persons usually, I imagine, with any special technical knowledge; very often they would be people who have interested themselves in parish affairs for a good many years, and have the sort of general common sense knowledge which a man gets from practice.

271. Can you say whether you consider that overseers have primarily in view the interests of the taxing authority or of the ratepayer; I suppose they are presumed to be unprejudiced people, but whose interest do you suppose they primarily look after?—They look after the interests of the ratepayer, no doubt.

272. Not of the taxing authority?—Not of the taxing authority. They are ratepayers themselves, they are persons who are merely overseers for a year or two, and then become ratepayers and not overseers; their personal interests are the interests of the ratepayer.

273. (Viscount Emlin.) You told us that the Assessment Committees and the county basis authority have access practically to the Inland Revenue information and returns?—That is so.

274. But that information is not at the command of the overseers who practically start the valuation for the parish assessment?—I believe that is so.

Mr. J. F.  
Rotton  
Q.C.

11 Mar. '97

275. Can you see any reason why the general information upon the subject of rating, whether from the parochial people or the Inland Revenue people, should not be at the command of those who first get out the assessment lists?—Theoretically I should say that I do not see any reason, but I am not aware that any practical difficulties arise in this matter. I am not aware that the overseers have any real practical difficulty in many cases in finding out what is the proper rent of a property. If a man will not tell his rent, and if a man will not give any information, they stick a good heavy sum on him and let him appeal, that I expect is the way it is done. Perhaps some of the members of the Commission know more about it than I do. But that is what I suppose it would be. It is a very easy remedy.

276. But there seems to be no reason why that information which is at the command of the Inland Revenue should not be given to the first person who makes out the list?—It is an Inland Revenue question, and I should not like to say whether they would be prepared to put their documents at the disposition of the overseers or not.

277. (Mr. Elliott.) With reference to your statement that the Exchequer contributions came out of the general revenues of the country, does that view receive any support from the Acts of Parliament bearing on the matter?—You mean to say that they are paid out of the probate and assessed taxes. I really forget now what they are paid out of?

278. I was asking whether the view you expressed received any support from the provisions of the Acts of Parliament which bear on the matter?—I do not know that they do, I do not remember what the provisions of the Acts of Parliament are.

279. There are specific provisions in Acts of Parliament, are there not, declaring out of what funds these Exchequer contributions shall come?—Yes, that is so, no doubt.

280. There is what is called the probate duty grant, is there not?—Yes, there is a probate duty grant, and assessed taxes and so on.

281. There are what are called the local taxation licences?—Yes.

282. And there are in addition certain contributions from the beer and spirit duties?—Yes.

283. According to the provisions of the Acts of Parliament, would it not be more accurate to say that certain revenues are assigned to local authorities, rather than to say that the Exchequer contributions come out of the general taxation of the country?—Yes, according to the Acts of Parliament it would; I do not think it makes much difference as to the fact.

284. (Mr. Dalton.) But there would be certain grants that are paid, as I understand, out of the consolidated fund; is not the education grant paid out of the consolidated fund? I do not think that is ear-marked in any way?—Certainly not.

285. Are there any other grants similarly paid?—I think Mr. Smith who was asking the question was not referring to the education grant.

286. (Mr. Smith.) My object was to get a general answer; I am quite aware that recent grants have been technically ear-marked to certain taxes, but there are older grants, which come out of the consolidated fund to the best of my memory?—No; the older grants for the most part have had substituted for them grants out of the local taxation Account.

287. (Mr. Dalton.) And there would be certain old grants now paid out of the consolidated fund, for instance I think there is the London fire brigade grant, and a certain number of other miscellaneous grants?—I do not remember.

288. (Mr. Clave.) If seven millions of money are paid out of the Imperial Exchequer towards local taxation, it does not matter very much, does it, whether they choose to call that seven millions of money as the proceeds of certain particular taxes, because if they hand it over to local taxation it has to be raised out of the general taxation of the country in some shape or other?—The question seems to me to be only of importance supposing the particular taxes on which they are charged cease to provide the sum that is required.

289. They must get the seven millions somewhere else, if they do not get it from there?—Yes.

290. (Chairman.) There is one point I passed over rather lightly, I understand the basis of English valuation is what a hypothetical tenant would give for a particular subject?—That is so.

291. How are railways valued?—Theoretically, they are valued in the same way. I should not like, at the present meeting of the Commission, to attempt to go into the question of how, that is to say, what the arithmetical process is, which is, of course, an exceedingly intricate one.

292. I put it broadly to you, is it possible to suppose that an isolated mile of railway which passes through an agricultural parish can be valued upon any intelligible principle at all?—I do not know. I think the principle upon which it is valued, not as an isolated mile, but as a part of a system, is one that is sufficiently reasonable for practical purposes.

293. Now we will take a country parish 20 miles from London, through which there is half a mile of railway, how is the overseer of that parish to obtain any data at all as to what any hypothetical tenant would give for that particular half mile of railway?—It is no doubt exceedingly difficult for the overseer of a particular parish to ascertain what a railway should be charged at, and of course the one mile or half mile of railway is not, for the purposes of ascertaining its value, considered alone, but it is considered as part of a system.

294. Do you know as a fact what the overseer of a country parish would do under those circumstances?—I suppose that the original ratings of railways must almost always have been settled by valuers. The system is an exceedingly elaborate one, and it has to take into consideration the earnings of the railway as a whole, and the proportion of those earnings which is attributable to each of the particular miles which is in the parish. Therefore, I take it that the original valuation of the railways must always have been settled by some valuer called in for the purpose.

295. Does the valuer have regard to the question of whether a particular mile of railway is a single line or a double line, or quadruple?—Yes, he does, and to how much traffic goes over it—whether the whole traffic of the railway goes over it or only a small portion. Take for instance a mile of railway between, we will say, Harrow and Bletchley, the value of that mile would be very different from the value of a mile on some branch where there are only two or three trains a day.

296. But it really amounts to guess work?—I should not like to say that. It is not a matter, of course, with which I am personally familiar. They arrive at a result which I daresay would not satisfy an exact logical inquiry in every particular, but it is a result in which both parties acquiesce.

297. If challenged what is the process that is gone through? Supposing a railway company challenges the valuation put upon its line by the overseer, what process has to be gone through in the appeal court?—It appeals against the rate; it goes to the Quarter Sessions or it may in some cases go to the Railway Commissioners, for the Railway Commissioners have the power of hearing appeals in regard to the rating of railways.

298. What books or evidence has the railway company to produce—what has it to say?—They may have to produce all their books.

299. Then I suppose I need hardly ask you whether the isolated overseer or the railway company is more in command of the facts necessary?—It is obvious. You say an isolated overseer, but there is a provision in the Acts that several local authorities may combine to pay the expenses of a litigation on the subject.

300. Yes, but would the decision as regards the one be binding upon the others?—It would settle a principle which would practically be accepted by the others, I mean to say the railway companies, although disposed to spend a great deal of money, would not fight a case which they were certain to lose.

301. Is there any one mile of railway in the Kingdom as to which some different conditions could not be shown as regards any other mile?—I daresay the system is an imperfect one, but I imagine that probably any system which attempts to rate so great an undertaking as a railway, an undertaking which is in so many parishes, and to divide that rateable value according to any principle whatever, between all those parishes, would find the problem one of such intricacy

*Mr. J. F. Rotton, Q.C.* that it could never be satisfactorily solved in a theoretical sense, although it is, practically, solved.

*11 Mar. '97* 302. As I gather it from the tenor of your evidence, you regard the system of valuation in England as one which was suitable to the country parishes in former days but which has not kept pace with the requirements of modern valuation?—I think I may admit that.

303. I purposely refrain from putting any question to you as to suggestions, in the belief that you come here only to state facts and circumstances, and not to go into questions of theoretical improvement?—That is so; of course I could not make any suggestions without the instructions of the Board on the matter.

*Railway companies. Not represented on Assessment Committees.* 304. (*Viscount Emlyn.*) One question about something Lord Balfour asked you with regard to railway assessments; you are aware, no doubt, that in certain parishes the railways pay a very large portion of the rate?—They do pay a very large portion of it.

305. I should not be putting it too high if I put it at 80 per cent.?—I daresay you would not.

306. Assuming that to be so, can you tell me of any power of representation which the railways have on any Assessment Committee?—No, they are not represented on any Assessment Committee.

307. But other parties who are rated have votes, have they not?—No.

308. Surely the occupiers of other rated property have votes?—The Assessment Committee is not appointed by the occupiers. The Assessment Committee is appointed by the guardians.

309. But at the election of guardians occupiers have votes, have they not?—Yes.

310. Can you tell me of any power of voting or of getting any representation accorded to railways even though they pay 80 per cent. of the rates of the parish?—Yes, they have the power of appointing an officer to vote at the election of guardians.

311. Under what Act, can you tell me?—I believe they have that power, but I really do not remember what the Statute is; I can put it in when reading the proof of my evidence.\*

*Railways. Principle of rating.* 312. (*Sir E. Hamilton.*) With regard to the assessment of railways, do they not take into account what the country is through which the railway goes? Supposing it goes through half a mile of suburban property and that the railroad occupies so much acreage of land surely, having regard to the property on each side of the road, they will take into account what, if that acreage was covered by houses, it would be assessed at?—No.

313. They would not?—No, they would not do that. The subject is rated according to the condition in which it stands, it is not rated higher because it might be used in some other way more profitably. If you were to rate a railway at a higher rate because if it was not a railway it would be building land, you ought to rate an unoccupied field which is not built over at the value which it might be let at for building.

\* The enactment intended to be referred to was 30 & 31 Vict. c. 106, sec. 10; but this section was repealed by the Local Government Act, 1894, and companies cannot now vote in the election of guardians.—*J. F. R.*

314. But when the railway runs through a field you would only rate it at the same rate as the field is rated at on the principle I am putting forward; it seems to me that the parish is certainly deprived of part of its land from which it would derive a rate?—I think it generally gets more from a railroad than it would for the use of the land for any other purpose.

315. (*Mr. Dalton.*) Is it not the case that the railways are rated on their receipts, subject to certain deductions?—That is the way in which their rateable value is ascertained. Of course, there is no legal distinction made between the rating of railways and the rating of anything else. The principles of parochial assessment have to be applied to railways just the same as to any other subject; the mere question is how you can apply them to such an inconvenient sort of thing as a railway.

316. But the decisions of the courts have been, have they not, that you must arrive at the assessment of a railway by taking its receipts, subject to certain deductions?—Yes.

317. And the same principle is not applied to other businesses, for instance it is not applied to a bank; you do not rate a bank in England upon its receipts subject to its outgoings, but a railway is assessed in that fashion, is it not?—It altogether depends on what you include in outgoings.

318. Still in the case of a bank the receipts do not come in any way into the question of what the assessable value of the bank is?—Yes, I think they do.

319. The business done does?—Certainly, those facts, to a certain extent, I should think, do influence the rateable value of the premises. You may give evidence that the bank is doing a very large business, partly because it is situated at a particular place.

320. But it might take other premises in any other part of the town; the profits of a bank do not depend upon the position of the premises necessarily?—Not necessarily, but they do to a certain extent; I mean to say that a bank in Lombard Street naturally pays more on its rates than a bank in some back street would.

321. But speaking of businesses generally as a question of rating, the assessment is not on the profits of the business but on the premises; for example you may have a jeweller's shop containing a very small space and not particularly valuable room, and, on the other hand, you may have a business that is not nearly so profitable that takes an enormous amount of space, a linen-draper's for example; you do not go into the question of the profits of the business there, but you do go into what the hypothetical tenant would pay for the particular premises occupied?—I suppose the distinction would be this—that there is very little connection between the business, and the place where it is carried on in the case of a bank or in the case of a jeweller, as compared with the connection between a railway and the place where it is carried on. The very essence of a railway is that it takes people from A to B and that therefore the company must have some property in A where the people can get on to the trains and some property in B where the people can get off the trains, and they must have some property in all the intermediate parishes between A and B so that they may convey the people. Therefore the business is one of an essentially local character.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

*Mr. J. F. Rotton, Q.C.*

*11 Mar. '97*

*Railways rated on receipts, subject to deductions.*

322. (*Chairman.*) You are senior clerk in the Scottish Office, and have held that position since 1889?—Yes.

323. You have been good enough, at the request of the Commission, to take the leading part in the preparation of this memorandum which I hold in my hand, and which has your signature?—Yes.

324. It commences with a general statement of the valuation and rating systems of Scotland, does it not?—It does.

325. And then discusses the rating system under the three headings of the burgh rates, the county rates, and the parish rates?—Yes.

326. You then tell us what the effect of the Agricultural Rates, &c. (Scotland) Act of last year was, and then you give us a tabular statement of all the rates which are leviable by county councils, town councils, or burgh commissioners, and parish councils in Scotland?—Yes.

327. There are no others—that is exhaustive, is it not?—So far as I have been able to make it.

328. Since it was made up have any been brought to your notice?—No.

329. Perhaps you would, in the first instance, tell the Commission shortly and in your own language how the valuation roll is made up; in the first place it is annual, is it not?—It is an annual roll made up annually in every area by experts. It serves two purposes—as a basis for rating and as a basis for the exercise of the local and parliamentary franchise.

330. When you say the roll is made up in each area, do you mean that it is made up under the authority of the county in the county areas, and of the royal burghs in the burghal areas?—Yes.

331. The whole area of Scotland being divided for rating purposes into counties and burghs, and again into parishes?—Yes, that, of course, being a double division.

332. Taking the division of Scotland into parishes, that is universal, and the parish divisions include, in some cases—in many cases, in fact—burghs within their bounds?—Yes. The burgh boundary very often intersects a parish, so that part of the parish is inside and part of it outside the burgh.

333. For parish purposes the burgh boundaries, as burgh boundaries, are disregarded?—Quite so.

334. Then the other division is into counties and burghs, which in turn disregards parish divisions?—Yes. Perhaps one might put in the remark here that we are more fortunate in Scotland than people are in England, in the fact that there are very few parishes which are intersected by a county area; there are only five such parishes in the whole of Scotland.

335. There are only five now left since the Boundary Commission, in which a parish is situated in two counties?—Yes.

336. The valuation roll, as thus made up, is the basis for the parish, as well as for the county and the burgh rates?—Yes, universally, one may say it is the basis; though not necessarily the sole basis, it is the ultimate basis for every rate.

337. But, in theory, the county authority and the royal burgh authority respectively have the appointment of the experts who make up the roll?—Yes.

338. In how many of the counties are the Inland Revenue assessors employed?—In all the counties except those specified in paragraph 3 of my memorandum, namely, Argyll, Ayr, Bute, Caithness, Edinburgh, Forfar, Orkney, Shetland, and Sutherland; that is to say, in 24 out of 33 counties.

339. What is the case as regards the burghs?—Exactly half of the burghs appoint their own assessors.

340. When we use the word "burgh" in Scotland, we mean two things; we mean either royal or police burghs; but only the royal burghs have the right to appoint their experts?—Yes.

341. What we call the police burghs are, in the main, in the county, for valuation purposes?—Yes.

342. The royal burghs are those which are chartered, are they not?—Yes, they have an old charter from the Crown, and they correspond, roughly, to the English municipal boroughs.

343. If one could make a general parallel, it would be that the royal burghs in Scotland answer to the municipal boroughs of England, while the police burghs would answer to the urban districts of England?—Yes, I think that is the nearest analogy; at the same time a police burgh has more burghal organisation than an urban district in England.

344. (*Mr. Stuart-Wortley.*) What is the chief magistrate of a police burgh?—He is called the provost, and there are commissioners elected each year.

345. (*Chairman.*) The valuation roll then contains, does it not, the annual value of all the heritable subjects within its bounds?—Within the bounds of the valuation area.

346. Would you give me the list of what it includes?—Lands and heritages extend to and include all lands, houses, shootings, and deer forests, fishings, woods, copse and underwood from which revenue is actually derived, ferries, piers, harbours, quays, wharfs, docks, canals, railways, mines, minerals, quarries, coal-works, water-works, lime-works, brick-works, iron-works, gas-works, factories, and all buildings and pertinents thereof, and all machinery fixed or attached to any lands or heritages.

 † *Ibid.*, pp. 100 to 109.

Mr. J. M. Dodds.

13 Mar. '97

Railway assessor, subjects valued by.

Valuation roll. Owners bound to give information as to their rents.

Appeals by owners and occupiers.

Valuation roll the universal basis upon which rates are levied.

County rates put upon gross value with certain exceptions.

Burgh rates put upon gross value with certain exceptions.

347. We may, for our present purpose, disregard railways, as they are specially valued?—Yes.

348. Is there any other subject which, though appearing on the valuation roll, is not a subject of an annual valuation by the local expert?—Certain subjects are valued by the railway assessor all over Scotland, namely, railways, canals, and certain other large public undertakings.

349. Every owner is bound, is he not, to give information to the expert who makes the valuation roll as to the exact value of his property?—Yes, and as to the rental for each portion of it.

350. For example, the owner of a coal mine has to give information as to the rent which he has actually received?—Certainly, and as to the lordship.

351. And that rent appears in the valuation roll?—It does if accepted by the assessor.

352. The same applies, does it not, to every other one of those subjects which you have mentioned, except those which are valued by the railway assessor?—Yes; and those which are valued by the railway assessor also appear in the local roll at the end of it, although done by a different man.

353. Then there are well-understood opportunities given to the owner or occupier of any subject to appeal against the valuation which is put upon them?—Yes.

354. Are you able to say whether the appeals are frequent nowadays?—We have no particulars about the number of appeals that are taken to the local valuation committees, but I understand that there are a large number of them turning simply upon the value at which property is proposed to be entered in the valuation roll.

355. They are locally decided by a committee of the assessing body, and there is very seldom an appeal to the law courts?—That is so. There have been fifty-one appeals to the Court of Session during the five years up to 1895, these being appeals from the local valuation committees.

356. The valuation roll once fixed is the universal basis upon which rates are levied, is it not?—Yes.

357. So far as county and burgh rates are concerned, these are all, practically speaking, put upon the gross value, are they not?—That is the general rule.

358. Can you state the exceptions?—In county rating there is one rate which is rated upon the same basis as the poor rate, namely, the county public health rate; but that system ends in the present year, so long as the Agricultural Rates Act is in force.

359. It only went on up to this time, did it not, because up to the Local Government Act of 1889, the public health administration was parochial, and not county, whereas now it is according to the district of a county?—Yes. Then in the burghs the same rule of taking the value in the valuation roll as the actual basis for assessment is, I think, universal, except as regards certain subjects which are rated at a quarter.

360. Agricultural land, if situated within a burgh, is by statute rated at one-fourth of its value, is it not?—Yes. I can give you an exhaustive list—canals, canal-basins, and towing-paths, railways, and tramways (excluding stations, depots, and buildings), bridges, frontages, and ferries, not being private property; underground pipes, or works of gas or water companies, or corporations; salmon fishings; woodland, arable, meadow, or pasture ground, or other ground used for nurseries, market gardens, or for agricultural purposes. Then, where there is a water supply in terms of the Burgh Police Act, quarries, manufactories, and (unless, in special circumstances, otherwise determined by the Commissioners, with appeal to the sheriff) shops, pay water rate on one-fourth only of their gross valuation. I should, perhaps, say that these exceptions are made in the terms of the Burgh Police Act, which applies to every burgh in Scotland, except the five largest towns; but I understand that in those towns also, under their local Acts, pretty much the same rule exists.

361. The Act under which it is done is the Act of 1892, which was the amending and amplifying Act for what we know as the Lindsay Act of 1862?—Yes, of course, this exception only applies to the rates levied under that Act; these are the principal rates in burghs.

362. It would not apply, for example, to a rate levied under the parochial Acts?—No. The burgh authorities levy other rates under different Acts, to which

these exceptions do not apply; but these are the principal burgh rates.

363. Take the county rates first; speaking generally, all county rates are divided equally between the owner and occupier?—That is the rule since 1889.

364. When we talk of a rate being divided equally between owner and occupier, it does not mean that the rate per £ is necessarily the same, but that if a sum of 1,000*l.* has to be raised from a given area, 500*l.* has to be raised from the owners in block, and 500*l.* from the occupiers in block?—Yes.

365. And it is conceivable that the rate per £ may vary to some extent?—Yes, because some subjects are unoccupied, and no rates, of course, are levied from occupiers in respect of them.

366. And property which is unoccupied is still subject to the owners rate?—Yes, as a general rule.

367. The only exception in the levying of an equal division of county rates between owner and occupier is as to the road debt, is it not, which is paid wholly by the owner, and as to the amount, which varies in each county, of what we know as the stereotyped rate?—Yes, but one must introduce a qualification about the road debt; it is paid wholly by the owner only so far as incurred before 1889, and only so far as it is an old debt still remaining unpaid; but any new road debt incurred since 1889 is payable equally by owner and occupier.

368. Then, in burghs, on the contrary, most of the rates are leviable from the occupier, are they not?—Most of the rates in point of amount; in point of number, I think, more are leviable half and half.

369. Your table\* specifies, as I think, in each case how the rate is levied?—Yes.

370. Now let us turn for a moment to the parochial rates; in that case the valuation roll is not conclusive as to the rule upon which the rates are to be levied, but there is an assessment roll besides, is there not?—There is an assessment roll also.

371. Would you describe to us how that is made up? It takes the valuation roll as a basis, but it is made up, is it not, having regard to the system of deductions and classification?—Yes, having regard to the system of deductions in every parish, at least it ought to be in every parish, although in a considerable number of parishes our returns show that they simply take the valuation roll and levy upon the actual amounts named there; but according to the law there ought to be deductions both from owners' and from occupiers' valuations under this provision. The Act says: "In estimating the annual value of lands and heritages" (for poor rate) "the same shall be taken to be the rent at which, one year with another, such lands and heritages might in their actual state be reasonably expected to let from year to year under deduction of the probable annual average cost of the repairs, insurance, and other expenses, if any, necessary to maintain such lands and heritages in their actual state, and all rates, taxes, and public charges payable in respect of the same"—the English rule.

372. The Act which you have just quoted is the Act of 1845, is it not?—Yes.

373. As you are aware, the Valuation Act was nine years later—in 1854?—Yes.

374. The system of deductions which you have just quoted, while applying to the owner, also regulates the amount upon which the occupier will pay for the poor rates, and all those which are levied on the same basis?—Yes.

375. In addition to the deductions which you have mentioned, there are also certain regulations in some parishes as to a classification of occupiers?—Yes.

376. Would you describe that to the Commission?—The Act of 1845, as now amended, provides that "it shall be lawful for the parish council, with the concurrence of the Local Government Board, to determine and direct that the lands and heritages may be divided into two or more separate classes, according to the purposes for which such lands are used and occupied, and to fix such rate of assessment upon the tenants or occupiers of each class respectively, as to such councils may seem just and equitable." The classification only applies to occupiers, at least, it only should apply to occupiers, but I have an impression that in a few parishes it is applied to owners as well.

377. If that is so, of course it is illegal?—Quite so.

Mr. J. M. Dodds.

13 Mar. '97

County rates. Division between owner and occupier.

County rates. Road debts incurred before 1889 paid by owner

Rates in burghs. Most leviable from occupier in point of amount, but in point of number, more leviable half and half. Parochial rates. Valuation roll. Assessment re Deductions.

Classification. System of, applicable only to occupiers

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 100 to 109.  
B 4

**Mr. J. M. Dodds.** 178. And now that we have a proper system of audit, it will of course be put a stop to?—It ought to be put a stop to.

12 Mar. '97  
379. The classification, if once formed, is operative for every rate which is levied parochially, is it not?—It is operative for the poor rate, and all rates levied as the poor rate by the parish council.

380. And a parish council which is in possession of a classification may not alter it, but may abandon it, without the consent of the Local Government Board?—Yes.

381. Will you turn to Schedule IV., part 3, of your memorandum, there, I think, you have supplied to us some specimens of classifications which are actually at the present time enforced?—Yes, I have taken the classified parishes having more than 20,000 population, where one may presume it is most intelligently applied.

**Classification.**  
**Number of parishes adopting the system.**  
382. Then at the present time do you know how many parishes out of the 877 civil parishes in Scotland possess classifications?—I have stated in paragraph 20 of my memorandum that 162 do, but since that was prepared I have reason to suppose that it is only about 150.

383. They are continually varying, are they not, from year to year—some parishes are asking for new ones, and others are abandoning those which they have got?—Yes, but the abandonments are not made up by the new applications; it is a diminishing number over a series of years.

**Classification.**  
**Agricultural Rates Act, 1896, effect of.**  
384. The effect of the rating Act of last year was, so far as occupiers are concerned in every parish, to introduce a compulsory classification to this extent, that agricultural land could not be rated *quod* the occupier on more than three-eighths of its value?—Yes, that is so in counties and in parishes; the Act did not deal with burgh rates.

385. For all parochial purposes it was so, was it not?—Yes.

386. That was also done so far as the occupier of agricultural land is concerned for county purposes?—Yes.

**Agricultural Rates, Act, 1896.**  
**No separation in Scotland between valuation of agricultural land and buildings.**  
387. Of course the fraction of three-eighths is a less corresponding benefit to the occupier of agricultural land than was given to the English occupier, upon the face of it?—Yes.

388. But in the case of Scotland the agricultural occupier is rated on three-eighths of his whole value, including his buildings?—That is so.

389. There is no separation, in his case, between the valuation of the buildings and the valuation of the agricultural land?—No.

390. That was following what would take place under any classification made under the general law?—Yes; in classifications, a farm building is not separated from the land attached to it.

**Coal mines.**  
**Basis of valuation.**  
391. I touched upon the question of the owner of mines, can you give to the Commission any information as to the basis on which the tenant of a coal mine pays the occupier's rate?—I cannot pose at all as an expert in such matters, but so far as I have ascertained it seems to be simply the same for both; the same valuation is applied to the owners as to the tenants, and the basis of it is the same basis as in every other case, namely, the annual rent which, over an average of years, would be payable for the mine, and that rent can, where the mine is let, be ascertained; where it is not let a comparison can be made with neighbouring collieries, or whatever the mineral is.

392. Would the owner not be obliged to supply the information in the case of even an unlet mine?—I cannot say positively.

393. Assume the case of an unlet mine, and that it was supposed to be appearing in the valuation roll below its annual value, would the remedy not be that the official expert who was valuing would put it in at what he thought right, leaving the owner to appeal, and in the case of appeal the owner would have to show his books?—Certainly.

**Classification.**  
**Rate in £ imposed upon owner and occupier likely to vary.**  
394. Of course this will be understood, that, wherever the system of classification is in force, the apparent rate per £ upon the occupier will be likely to vary from that imposed upon the owner more than in a case of county rates?—Clearly.

395. Because the amount upon the valuation roll upon which the rate is assessed will then not be the same for the occupier as for the owner?—Yes.

396. You have put in some specimens of the demand notes which are in use in Scotland; in two cases, at least, there are some parishes and counties in which the whole county and parish rates are levied upon one demand note by one collector?—I have only seen notes from one county in which that practice prevails, namely the county of Dumfries. By arrangement with some of the parish councils there, the county council appears to levy both the county and the parish rates in certain parishes by one demand note.\*

397. There is nothing in the law to prevent any county or parish agreeing to do that if they chose to do it, is there?—Nothing; in fact, there is a provision specifically entitling them to do so.

398. In what Act?—In the Local Government (Scotland) Act, 1894, section 51.

399. That is so recent, is it not, that it has not yet come into force—probably on account of vested interests and others?—Probably.

400. (*Mr. Arthur O'Connor.*) With regard, first of all, to the question of appeals, which the Chairman put to you, there are comparatively few appeals to the Court of Session, and you cannot tell us the number of appeals to the inferior tribunal?—No, I cannot tell you that.

401. I notice, in your memorandum, that the question of the cost of appeals is referred to. In paragraph 2 you say, "The county and burgh courts cannot deal with expenses except in the case of complaints made against a valuation by third parties;" do you not think that fact may have a good deal to do with the small number of appeals?—Does that not cut both ways, perhaps? The fact that costs cannot be given against the parties may, perhaps, induce appellants to bring up a case year after year.

402. Do you not think that the mere fact that they cannot recover their costs if successful makes them very chary about going to an appeal?—That may be; perhaps I may be allowed to say that you can get full particulars of the number of cases dealt with by the valuation committees from any individual county or burgh assessor.

403. Take the cases before the Court of Session in which the parties have hitherto borne their own costs; do you not think that again would act as a deterrent against appeals—it would probably be scarcely worth the while of a ratepayer to go and establish his right to a deduction before the Court of Session if he had to pay the piper?—I should be sorry to give an opinion about it. I have seen the same reason put forward on the other side.

404. Many of the rating authorities have occasion to borrow?—Yes.

405. They borrow from the Public Works Loans Commissioners among others?—Yes.

406. I notice in paragraph 13 of your memorandum certain instances in which there is a limitation of the rating power with regard to certain classes of property?—Yes.

407. Would that limitation affect the power of the rating authority to raise any sum during the year; would it have a limiting effect upon the total?—Certainly.

408. Under your Acts for borrowing, I think the limitation is two years' valuation, is it not?—There is no general limitation, in fact, in Scotland there is not, as a rule, any limit.

409. I look at it from the point of view of the Public Works Loans Commissioners, as I happen to be a Commissioner myself; as a matter of fact we cannot advance beyond two years' valuation?—I was not aware of that; is that a general rule?

410. I think so, at any rate, it is in this country; but my point is this—if there is a limit to the power of raising the rates independent of the valuation, the valuation would cease to be an index of the amount of security?—Obviously.

411. (*Chairman.*) The limitation does not touch anything but very special rates, such as a special water-supply district, is that not so?—(*Mr. Arthur O'Connor.*) Take Edinburgh, for instance, and Glasgow?—In Edinburgh and Glasgow I do not think there is any limit.

412. Will you refer to paragraph 13, section (3) of your memorandum?—I think that does not provide for a limit of rate, it merely says that under an old Act there was a system of differential rating.

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 110 and 111.

**Mr. J. M. F. Dodds.**

12 Mar. '97

Rates, county and parish, levied upon one demand note by one collector in Dumfries.

Appeals, few to the Court of Session. Cost of.

Rating authorities. Borrowing powers. Limitation of rates.

Mr. J. M. Dodds.  
Mar. '97

Mr. J. M. Dodds.  
12 Mar. '97

Unoccupied property in counties. Liability of owner to pay rates in respect of.

Rates in Scotland vary very considerably.

Local Debts. Amount of.

Division of rates between owner and occupier. Advantages of Scottish system of levying half and half.

Unoccupied property in Burghs. Liability of owners to pay rates in respect of.

Police rate in Burghs. From whom levied.

Rates in Burghs. Upon whom levied.

Poor rate levied half on owner and half on occupier.

413. It "should not exceed 9d. per £, and on subjects at or above 10l., 1s. 3d. per £," that sounds to me very much like a limitation?—That has been repealed.

414. (Chairman.) That is historical?—Yes.

415. It is all repealed, and does not now exist?—That is so.

416. It was discontinued under the Act of 1879?—Yes; but I see the learned Commissioner is quite right—in Glasgow there is a limit as to certain rates. I do not think there is a limit in Edinburgh.

417. (Mr. Arthur O'Connor.) In estimating the value of the security, as connected with the total valuation, it would be necessary, would it not, to have regard to the possible limitation of the power to raise money?—Certainly.

418. You spoke also, in reply to the Chairman, about subjects unoccupied being liable to the owner's rate: what rate would be paid by an owner for unoccupied property?—Where the rates are equally divided between owner and occupier, then half or about half of the total rates levied upon any subject would be payable by the owner, and at least as regards county rates, are by statute required to be paid by him, whether the subject is occupied or not.

419. In other words, the owner may be rendered liable for the payment of rates, even though he is getting nothing out of his property?—Undoubtedly.

420. Is there any very great variation in the rates in different parts of Scotland?—Yes, they vary very largely.

421. What would be the lowest, do you think?—I am afraid I am not provided with figures, but I could furnish them.

422. I suppose something between 1s. and 2s. in the lowest case?—I could give you the averages; would that be of any value?

423. It is rather the highest and the lowest that I want to bring out; that would help us very much indeed if you could get them?—The Local Taxation Returns give them.

424. (Sir E. Hamilton.) Could you prepare and put in a statement for the Commission about the state of the local indebtedness of Scotland, showing the total of the local debt?—Certainly.\*

425. Showing, not only the amount which is outstanding, but the amount of the gross charge for interest and the sinking fund? It is very important for us to know how much out of the total charge for rates goes to meet the charge of the debt?—That is all given in our Local Taxation Returns.

426. And could be furnished to the Commission, could it?—Yes.

427. (Mr. Arthur O'Connor.) You are conversant, not only with the Scottish system, but to a certain extent perhaps, with other systems of rating?—A little.

428. In this country, for instance?—Yes.

429. And in Ireland?—A little.

430. And possibly in some foreign countries; but at any rate with regard to the United Kingdom?—I know a little about it.

431. There is a considerable difference between the system in vogue in Scotland and that in vogue in Ireland?—I believe so.

432. From your official experience—I do not want to go into details—could you indicate to us any salient points in which you think the system in the one country or the other compares favourably with its rival; are there advantages in the Irish system which you think it desirable to introduce here, or vice versa?—I think our Scotch system of levying half and half has been generally eulogised, and I have seen it eulogised in books written by Irishmen.

433. What do you say with regard to the fixity of valuation in Ireland?—That is so entirely different from our system, especially in the rural parts, where it depends upon the prices of produce, that I really am not prepared to give any opinion about it.

434. (Mr. Stuart.) Does the system of charging the owner's part of the rate on the owner in the case of unoccupied property exist in the Scotch burghs invariably?—It is not of so much importance in the burghs, because the bulk of the rates are levied upon the occupier direct, but certainly some rates in burghs are

levied entirely upon owners, and these, I understand; they do pay directly.

435. In the case where the owner does pay a rate, as he does, no doubt, or some proportion of the rate, in Scotch burghs, does he invariably in the burgh, if his property is unlet, still pay his proportion of the rate, or are there cases where unlet property is not charged on the owner; I mean, what is the fact?—It is very difficult to speak generally for Scotland, because we have so many different rating systems under different statutes, but if you will allow me to confine myself to one Act, the principal burgh Police Act, I can tell you what is done under it.

436. Suppose I own property in a burgh in Scotland, and my property is vacant, would I still have, in all cases, to pay a proportion of the rate?—I think so, assuming that any of the rates were levied upon ownership.

437. What is the justification brought forward of levying it upon an owner who is getting no income from his property; or is it never justified in Scotland?—I suppose the idea is that if it is not let it ought to be let.

438. Does a proportion of the police rate fall in all cases on the owner in a burgh?—In all cases the police rate falls upon the occupier.

439. Entirely?—Yes, in every case.

440. (Chairman.) As a matter of practice, is there a right to levy it either way?—In some cases they can levy it so.

441. (Mr. Stuart.) Is it the case in Scotland that the local authority can choose whether it levies it from the owner or the occupier?—In some cases, but not, I think, in most cases; in most cases it is specially laid down that it must be levied from one or from the other, but in burghs —

442. I am speaking of burghs entirely?—In burghs owners are rated in occupiers' rates for lands and premises rented at or under £l. with a power of recovery in full from occupier and with 10 per cent. discount—compounding, in fact.

443. That is a compounding principle, but what I want is this: Supposing the local authority wanted to get its money, has it or has it not the choice as to whom it should rate—the occupier or the owner?—I think not as a general rule; there again one can only speak for individual rates and confining oneself to burghs.

444. This is what I wish to do; is there any rate applicable in Scotch burghs in which the rating authority has the right of choice as to whether it shall levy it from the occupier or from the owner?—I do not remember any at present.

445. (Chairman.) Is it not the case in the Public Health Act that they can levy from one or the other?—I think not. I know that in the case of the poor rate they can levy the whole of that from the occupier, but that is not a burgh rate of course.

446. (Mr. Stuart.) I did not apply it to a burgh rate. I said, "in burghs." I will put my question again, because I want to put a subsequent question founded upon it: Is there any rate, and, if so, what rate, levied in a burgh, I do not say by the burgh, but levied in a burgh, which the rating authority may at its option levy from the owner or the occupier?—The poor rate in a burgh, in fact, universally, may be levied in whole from the occupier, with power of recovery of half from the owner; but in practice that is not done.

447. May it be levied in whole from the owner?—No.

448. It may not?—No.

449. Then there is no rate which may be levied from the owner?—I think only in the case of what you know as compounding under 4l.

450. What is the custom, as a general thing in Scotland, as to levying the poor rate, which, you say, may be half recovered by the occupier; is it usually all levied from the occupier, or is it sometimes levied from both occupier and owner?—Almost universally, if not quite universally, it is levied directly on each—on the owners and on the occupiers.

451. Directly on owner and occupier?—Yes, half and half on each.

452. When you levy it from the occupier, and when the occupier has a right of deduction from the owner,

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, p. 120.  
i 97620.

**Mr. J. M. Dodds.**  
12 Mar. '97

can he come to a private arrangement with the owner not to deduct it?—I think so. You mean, is such an arrangement ruled out by any statutes?

453. Yes?—I do not know of any.

**Poor rate. Power under Poor Law Act of levying in whole from occupier, who has power of recovery from owner.**

454. As a matter of fact, do you know if such leases are made in burghs in Scotland?—That I cannot say.

455. Here is the fact, as I understand now from you, that there is a poor rate in a burgh in Scotland, and that poor rate the authorities have a right to levy, half from the owner and half from the occupier?—They have a power under the Poor Law Act, which I do not think is exercised, of levying it in whole from the occupier, with power of recovery by the occupier from the owner.

456. (*Mr. Smith.*) I want to ask you one question about your general local government organisation in Scotland. Your county corresponds to an English county, in general terms, does it not?—Yes, in general terms.

457. Your royal burgh corresponds to an ordinary municipality in England?—Yes.

458. Your police burghs correspond, I think you said, to our urban district councils, or thereabouts?—Very roughly. I do not think that the police burghs would like the comparison, possibly.

459. Does the term police burghs mean that they have the control of their own police?—Not necessarily; it may be so. I think I have stated in the first paragraph of my memorandum that "police" is a word of very wide meaning in Scotland.

460. Mr. Stuart has asked several of the questions that I wished to ask. You said rates are collected direct from the owner, both in counties and in burghs?—And in parishes.

461. Some are collected in certain cases from the occupier with a power of deduction from his rent?—Yes.

462. Now I want to ask you whether, where owners are rated, either directly or indirectly, they have any power of voting?—Certainly; the ownership vote for local purposes is the same as the parliamentary ownership vote in Scotland.

463. So it differs from the English franchise?—Yes.

464. With regard to vacant property, are there any cases where vacant building land would be rated—where an owner was holding over, we will say, for a better price, or cases of that kind?—It would be rated, I take it, at its agricultural value, or possibly in burghs, at a quarter of its agricultural value.

465. Would it be merely taken at its agricultural value?—Yes.

466. Although it might be worth thousands of pounds an acre?—Ultimately.

467. Are there no means of ascertaining its immediate value for building purposes?—Not in the valuation system.

468. Therefore, if we were sitting in a burgh in Scotland, a piece of vacant land across this street would only be rated at its agricultural value?—That is so, I believe.

469. (*Mr. Clure.*) Just following on that question, is not the system in Scotland the same as in England, namely, that the assessment is made upon the value of the occupation, that is to say, on the rent which it is worth while for a tenant to pay to occupy the property from year to year?—No, if I understand your question rightly, that is not so, except in the case of poor rates. You mean, practically, is it a gross or is it a net rental which is taken?

470. What I mean is this, that the valuation is based upon the value of the property for the purposes of occupation in the condition in which it stands at the moment, and not on the value that it might be put to assuming that something was done with it?—Yes; that is so, I think, in every case except that of woodlands.

471. Take the case, for instance, of unbuilt-upon land in a burgh; it is assessed according to the purposes for which it is being utilised at the moment, and not based upon the theory that if it was utilised for building purposes it would produce a higher rental?—Certainly it is assessed at the momentary or average value of the land.

472. May I ask, just for a moment, about the constitution of the council, as I suppose it is, of a burgh; are the members of the council elected by the votes both of owners and of occupiers?—Yes. The same ownership vote exists for the burgh register as for the parliamentary register; in fact, the burgh register is simply the parliamentary register with certain additions including women.

473. But the owners, who vote as owners at a parliamentary election, would be comparatively few, would they not, as compared with the owners who are liable to pay one-half of the rates?—I have not had occasion to compare the numbers, but it is a very interesting point, which one might, perhaps, work out.

474. With regard to this classification, I understand it lies in the power of the council of the burgh to decide in what proportions different classes of property shall pay the rate?—Perhaps one ought to emphasise the fact that classification only applies to the parish rates; that is to rates leviable by a parish council; it does not apply either to rates levied by a county council or to rates levied by a burgh authority.

475. But it does apply to some rates?—It applies only to poor rates on occupiers leviable by the parish council. The burgh council has no power in that direction; it is only the parish council which has that power.

476. Does not that seem to place a very considerable power in the hands of the council in this way: that it might happen that the majority of the council were composed of people who might have most interest in dwelling-houses?—Yes.

477. Or most interest in shops?—Yes.

478. Or most interest in agriculture?—Yes.

479. Does it not give the council an immense power to give a vote which, so to speak, suits its own purpose?—Undoubtedly; and that is the criticism which has very frequently been made upon the system, that it gives too much initiative to the parish council. Of course, the Local Government Board have some power in the matter; they must approve the classification.

480. Are not some of the rates in Scotland limited in amount?—Yes, to so much in the pound.

481. For instance, under the Parish Councils Act is there not some limitation put upon the amount of the rate which a parish council can raise?—Not to the poor rate proper; there is to the new rates which were authorised by the Parish Council Act.

482. Take the library rate; is the library rate limited to a *1d.* in Scotland?—Yes, to a *1d.* in the pound.

483. Supposing it was decided to levy a *1d.* library rate in a burgh, the amount that the *1d.* would raise would be materially affected by the classification that might be adopted?—Not, as it happens, in a burgh, because the classification does not apply to a rate levied by a town council, as the public libraries rate is in a burgh.

484. Supposing we take the case of a rate which is limited, and to which the classification can apply, then, if the authority decide to levy, say, the maximum rate, and they subsequently make a classification, must it not obviously follow that either the property, which has to pay upon the whole, must pay more than the maximum, or else the maximum will not be raised?—No, because it has been ruled that where, say, a *1d.* limit is imposed, it means that in the whole not more than a *1d.* for each pound may be raised, but that does not preclude, in the case of a classification, a higher nominal amount per pound than a *1d.* being raised from certain individuals.

485. With regard to charging the owner with rates, do you have to serve a separate demand note on the owner and on the occupier?—Yes.

486. How is it arranged then when the owners live away, or when there are trustees?—I suppose there is generally a representative of the owner, a law agent or factor, who would receive his demand note on his account.

487. It occurs to me that the procedure is a little bit complicated for a very simple thing; why not serve the demand note for the whole upon the occupier, simply giving him the power to deduct half the rates from his rent?—I think the theory of Scotch rating has always

**Mr. J. M. Dodds.**

12 Mar. '97

Ownership vote for burgh register same as for parliamentary register, but with certain additions.

Classification system applies only to the parish rates.

Classification system. Position of members of parish council if interested in certain properties.

Rates limited in amount.

Demand notes. Separate ones for owner and occupier.

Mr. J. M. Dods.  
12 Mar. '97

been that it is desirable to let the person rated know directly that he is being rated.

488. But he does know if he sees that he has half the rates deducted from his rent when it is paid to him?—Yes, it may be merely a matter of custom in Scotland, it has been so for the last 200 years in the case of some rates, and the system has continued.

489. Mr. Smith reminds me that it practically obliges every owner to have some local agent on whom the demand note may be served?—I could not say from my own knowledge what the actual practice is.

490. Have you any experience on this question, whether this power which seems to be vested in some of the local authorities of dividing the rate between owner and occupier, and of classifying property, is a matter which is taken into calculation in the value of the property when it has been sold or purchased?—I cannot say from my own experience, but I have every reason to suppose that it is, at least as regards the division of rates.

491. It is an element of speculation which has to be allowed for?—Undoubtedly.

492. I notice that in Scotland the properties which pay rates upon one-fourth instead of the whole include several important matters which are not included in the English law, that is to say, the most important ones being tramways and underground pipes, gas, and water-works?—Yes.

493. Is that paying on the one-fourth in Scotland a matter of right or a matter of concession?—It is a matter of right; I mean it is laid down by statute.

494. Is it provided for by a statute, or is it simply a power which the local authority have of allowing that deduction?—It is compulsorily provided for by statute. You will see in Schedule I. of my memorandum, column 10, where the enumeration comes, that in one case there is a discretion in the local authority—that is the case of shops, which are “unless, in special circumstances, otherwise determined by the Commissioners, with appeal to the sheriff,” to pay water rate on one-fourth only of their gross valuation; but in every other case it is compulsory.

495. The water rate is a special rate?—It is.

496. It would be rather unfair, would it not, to charge a shop on the same basis that you would a house, when, probably, the only water used in the shop is for sanitary purposes in a hand basin?—That is no doubt the reason why there is such treatment.

497. (Mr. Elliott.) With regard to the persons or property to be rated in Scotland, I gather from your memorandum that, both as regards parish rates, and as regards burgh rates, for a long period of years, the idea was to tax according to ability rather than to tax particular rated properties?—You mean that they tried to rate upon an estimate of income?

498. Yes; is that not so?—Yes, I think so, and I think most Scotsmen would maintain that that is the principle which lies at the bottom of all rating in Scotland to this day, although it is got at in a different way.

499. But the object ought to be not so much to obtain the value of particular properties as to estimate the ability of the ratepayers to bear public burdens?—Yes.

500. Was the abandonment of the system due to its inconvenience and difficulty, or to any want of equity?—I think it was entirely on the ground that it was excessively inconvenient and difficult to work.

501. Has the classification system adopted in Scotland grown out of the original endeavour to tax according to means and substance?—It has absolutely grown out of it; it is simply an effort to provide a substitute for an actual estimate of income.

502. Then you would say that, where the classification of properties for the purposes of rating, is adopted, that classification should have some reference to the ability of the person rated?—That is the theory of classification.

503. To take the case of a bank, would you say that the justification of a high rate upon a bank is that the profits of a bank bear a very large proportion to the rateable value of the premises in which the bank is carried on?—That is probably what the parish council might say.

504. As you go down in the scale the profits derived bear a very much smaller proportion to the actual rateable value of the property, would not that account, for the fact that agricultural land is in nearly all these cases of classification at the bottom of the scale?—Yes.

505. The actual rateable value of the property is very high in comparison with the profits derived from that property?—That is the fact.

506. And in comparison with the ability of the occupier of the property to bear the burden?—Yes.

507. With regard to the classification system, is there a tendency for it to become more extensively utilised, or the reverse?—Speaking of it all round, undoubtedly the tendency has been to abandon it. At least, until the last year or two. I think, possibly, since rating questions have come more into prominence, there may be a little tendency to revive it, but speaking over a series of years, the number of classified parishes has certainly diminished and is diminishing.

508. What do you think is the cause of that?—It is difficult to put it down to any single cause. I think one has to remember that it has been in the option of any parochial board or parish council to abandon classification by a simple vote without any further consent, and if at any time the people who are prejudicially affected by classification obtain a majority on the board, naturally they are not unwilling to do what they can to get rid of the system.

509. Would you say that so long as the business of classification rests in the hands of a local authority, it is extremely difficult to bring about any adjustment as between the particular interests affected?—Certainly it is difficult. I think you will find that various Committees and Commissions which have examined the subject have all agreed in recommending that there should be further control.

510. In other words, the interests are so conflicting that it is desirable that Parliament or some central authority should prescribe classification and the details of classification, rather than that the local authorities should be left to deal with them for themselves?—That has been the view, and the same view has often been expressed with regard to deductions in fixing net rental, which, at present, are also left to the discretion of parish councils.

511. You think that this gradual abandonment of classification, to which you refer, is based not so much upon any intrinsic objection to the system on the part of the ratepayers, but rather that there has been no sufficient means for carrying it into effect?—I do not think I could quite say that, because, in some cases which have come before my notice, I know that theoretical objections have been taken by the parish council to the system. I mean it has been argued by one side, which desired to abandon the classification, that the ultimate incidence of all rates was on the owner, and that, therefore, the classification as amongst occupiers was of no consequence; but, as a rule, I think probably what I said before is the chief reason.

512. What has been the practice of the Local Government Board for Scotland on receipt of applications for a classified system; is any local inquiry held?—I cannot speak from my own knowledge; I think, perhaps, it would be better if you had one of the Local Government Board officers here.

513. May I take it, from what you have just now said, that the principal theoretical objection which you have heard expressed to the system of classification has been that, inasmuch as all rates fall upon the owner, it did not very much matter how the occupiers are classified?—I think so. There was a very typical case last year, the Renfrew case, and I can read you, if you care to hear it, some of the reasons which were urged against it.

514. They would be very interesting?—It was a case in which a classification was abandoned by a majority of the parish council, with the result that the rates upon agricultural occupiers were raised threefold; as between one year and the next year their rate was multiplied by three. They petitioned the Secretary for Scotland, and answers were handed in by the parish council which can be produced.\*

515. When once an owner has been rated, and the property is charged with any burden, has he any power to recoup himself, as in the case of the income tax, by deduction? Supposing, for example, that an owner

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, Schedule IV., part G.

Classification system. Number of classified parishes diminished. Reasons for.

Classification system. Control by a central authority desirable.

Classification system. Objections to.

Rating of owners in respect of properties burdened with charges. No statutory deduction.

Classification and division of rates are elements taken into consideration on sale or purchase of property.

Rates in respect of certain properties in Scotland paid upon one-fourth instead of upon the whole as in England.

Ability to pay. Application of principle of.

Classification system is a continuation of rating according to means and substance.

Mr. J. M.  
Dodds.

12 Mar. '97

is rated, and the property in respect of which he is rated is subject to mortgages or other charges, is there any power of deduction on the part of the owner from the interest that he pays on the mortgage, or from any other charges upon the property, ground rent, for example?—I should think that must depend entirely upon the terms of the deed.

516. There is no statutory power of deduction?—Not that I am aware of.

517. So that in the case of the owner of a property which is mortgaged up to the hilt, as it were, the burden of the rates would fall upon the nominal owner, but not upon the real owner?—Yes. On the other hand, of course, the people who lend the money on the estate have to reckon with the fact that certain rates are leviable on the owner; I mean, they will have to calculate that in lending their money.

518. Of course we know that in all these matters there is percession and re-percession, but there is no apportionment of the burden amongst the different interests in the property so far as the statute is concerned?—Not to my knowledge.

Differential system of rating in Glasgow.

519. You have, I think, in Glasgow a differential rating of property as distinguished from what we have called classified rating?—In Glasgow, I think Glasgow is the only case in Scotland now.

520. Under that differential system a smaller proportion of the rate is levied upon small properties than is the case with large properties?—Yes.

Differential system of rating an attempt to rate according to ability.

521. Has that anything to do with convenience of collection, or is it an attempt, again, to adjust the burden of the rates according to ability?—I think it is an attempt to adjust it according to ability.

522. Does it apply to rates levied upon the owner, as well as upon the occupier?—As a matter of fact, it only applies to the police assessment in Glasgow, which is entirely leviable upon the occupier.

523. So that in regard to these rates, the assumption is that the ability of a poor person occupying a small rateable tenement is not so great in proportion to the rateable value of that tenement as in the case of a larger tenement?—Yes, that is the assumption evidently which the Lord Provost made, as you see in the extract from his speech, which I give in paragraph 13.

524. Does not this system depend upon the assumption that the rate is paid by the occupier, and not by the owner?—Undoubtedly.

525. But supposing it to be true, as has been urged by the parish councils to which you have referred, that the burden of all rates is upon the owner, would not the result simply be to relieve the owner of small properties as distinguished from the owner of large properties?—No doubt it would; of course once you get into that theoretical reasoning, you can attack the whole system of levying rates half upon the occupier and half upon the owner. If all rates are paid by the owner ultimately, the mere matter of the half-and-half levy is in theory a matter of indifference.

526. Before you can either attack or defend these systems of classification or differentiation you must make up your mind not only who ought to pay the tax, but who does pay the tax?—I should be sorry to have to make up my mind upon the question, but obviously, according to whether you take the one view or the other, your arguments will be affected.

Rates, division of, between owner and occupier. Purposes for which rate levied considered by the Legislature. Question of convenience in raising rate also an element.

527. With regard to the division of rates between owners and occupiers, I take it that where the legislature has laid down either that the occupier should bear the burden, or that the burden should be divided between the owner and the occupier, each paying one half, or that the owner should wholly bear the burden, some regard has been had to the purposes for which the rate has been levied?—No doubt in each case when the Act was passing through, the question was considered, but my own experience is that, at least in recent years, questions of convenience in raising the rate have come into it as well as the question of principle.

528. Are you aware of any reason why one half should be taken, and not one third or one fourth, or any other proportion?—I am not aware of any reason beyond the historical fact that it has been so taken.

529. Have you ever seen any reason urged why one half should be taken?—No.

530. With regard to the purposes for which rates are levied, is there any variation amongst the different local

authorities as to the proportions in which those rates should be levied for the same purpose upon the owner and upon the occupier?—There may be under private Acts, but so far as the public Acts go, I think it is generally laid down in the statute, or always laid down in the statute. The statute says that the rate is to be levied either half upon the owner or half upon the occupier, or it may say it is to be levied wholly on the occupier, or it may say it is to be levied wholly on the owner, and if it is a public general statute that must be observed, of course, wherever the statute can be put into force.

531. Can you see, running through all this Scotch legislation, any broad general principle as to what rates should be paid and borne by the owner, and what rates should be paid and borne by the occupier?—Looking at the rates as they stand, one finds that in the country the rates are paid almost all round, half and half. In the towns the poor rates are paid half and half; and the police-rate and, in amount, the greater portion of the other burgh rates are paid wholly by the occupier. I think that that distinction may be partly based on the view that the occupier receives the greater benefit of the public expenditure in towns, and also, I think that one must allow something for the fact that the historical origin of the police rate in Scottish burghs goes back beyond 1835, when the Royal Commission on Scottish Municipal Corporations recommended an equal division of rates between owners and occupiers in burghs.

532. But there remain anomalies, that is, for some purposes rates are levied differently in different districts?—Yes, and even in burghs.

533. That brings me to the question of agricultural land; would you say that for the same purposes agricultural land is charged in different districts at different rates?—So far as the rates are fixed by general statutes, of course that cannot be so. I mean, if a statute applies to the whole country, then agricultural land must pay the same rate—not the same rate in the £, of course, but divided in the same proportion as between the owner and the occupier, all over the country.

534. I am referring now rather to the question of the proportion which agricultural land should pay; we know that under the Rating Act agricultural land cannot pay in Scotland more than three-eighths of its value?—Yes, for occupiers' rates only.

535. But for some purposes, agricultural land in some districts is rated at a smaller proportion than three-eighths, is it not?—Only where there is a poor-law classification for parish rates—I am speaking only of agricultural land in counties.

536. Supposing agricultural land happens to be situate within the limits of a burgh, would it not pay a smaller proportion to the district rates?—Yes, under the Burgh Police Acts it would only pay a quarter; but, as a matter of fact, there is very little agricultural land in burghs.

537. How does the owner stand in regard to appeals against the valuation of his property?—During a certain time he has the power of going direct to the assessor, and the assessor at his own hand, as the phrase is, can alter his valuation if the owner persuades him that it has been wrong. After a certain time has expired, the owner can go to the county or burgh valuation committee, and they, if they think fit, may alter the proposed value in the roll. Then there is a further appeal to the Court of Session.

538. Would that apply generally—irrespective of whether the owner was to be rated, or was to bear a portion of the rates?—Certainly.

539. There is a general power of appeal by the owner of any property who objects to the assessment upon that property?—Undoubtedly; I suppose he would not use it unless he expected to be rated.

540. (Mr. Dalton.) The system of rating on means and substance for the poor rate lingered on considerably longer in Scotland than it did in England, did it not?—Yes.

541. What was the year in which it ceased?—The last parish which abandoned it was Greenock, in the year 1880.

542. It was merely for the purposes of the poor rate, was it not?—That was all.

543. And was founded on the assumption that every one should contribute to the relief of the poor, according to his ability?—Yes.

Mr. J. M.  
Dodds.

12 Mar. '97

Rates, Division of, between owner and occupier. Purposes for which rate levied considered by the Legislature.

Rates, Which borne by owner and which by occupier. Reasons for.

Rating of agricultural land. Partial exemptions. Amounts allowed in various districts.

Appeals by owner. Procedure.

Rating on means and substance for purposes of poor rate finally abandoned at Greenock in 1880.

Mr. J. M. Dodds.  
12 Mar. '97

Classification system. The kind of parishes adopted in.

544. If it be the case now, as has been suggested, that the ultimate incidence of the rate is upon the owner, the only people in Scotland who contribute to the relief of the poor are the owners of rateable property; is that not so?—That is so, of course, if the owner ultimately pays all the rates.

545. With regard to this classification system, can you tell us, in reference to those 160 parishes in which it is in force, what kind of parishes they are—are they rural or urban, or are they mixed?—Ninety are partly urban and partly rural; I am afraid that is all I can say now, but I think you may assume that nearly all the rest are rural parishes.

546. In the case where the parish is partly urban and partly rural, the interest of the majority of the inhabitants would be not to have the classification system if the land is to be rated low, I presume?—Assuming the majority were in the burgh, which it probably would be, of course.

547. Even when they are out of the burgh, if they are labourers and do not have land, their rates would be raised in consequence of the low assessment of land?—No doubt.

548. Therefore in these cases it is perfectly clear, although it was contrary to their interest to do so, that they thought it would be fair that land should be rated at a lower value than other properties?—I think that is a perfectly fair assumption.

549. The same would be the case where they have rated railways low; their interest would be to rate the railway high, but in these classifications a railway is generally rated lower than a house?—Yes.

550. Therefore you have it that in a very considerable proportion of the Scotch parishes where the pecuniary interests of the inhabitants are against this system, they have voluntarily adopted it, because they thought it was fair and proper?—I think so.

551. And the fact that it has not been adopted in other parishes may be due to some extent to the fact that the other parishes have not been equally disposed to be generous to the occupiers of land?—That may be.

552. In a purely rural parish it would not much matter whether you had this system or not, I suppose, where all the properties are really of one class?—No.

553. That would be another reason why you have not got a larger proportion of parishes going to the trouble of adopting this classification?—I think so.

554. Can you give us the reason why the poor rate in Scotland is raised on the net value, and the burgh rate on the gross value of the properties?—Of course the primary reason is because the statutes vary; I do not think that one can really say that there is any principle at the bottom of it. I think, probably, the explanation is, that the Poor Law Act of 1845 followed the English practice.

555. The statute of Elizabeth?—The statute of William IV.—the English Parochial Assessment Act of 1836. The definition of the Poor Law Act of 1845 is practically the English definition—subject to correction, I think that is so.

556. (Chairman.) Does it not arise mainly from this: that the Poor Law Act is almost the only important rating Act now in force which is anterior in date to the valuation law?—That is, of course, a fact. I rather thought Mr. Dalton wanted to get at whether there was any principle.

557. (Mr. Dalton.) Which principle do you think is right as a matter of rating—to rate on the gross or on the net?—I prefer not to give an opinion. I think as far as I am entitled to go is to say that whichever plan you choose, I cannot see any reason why it should not be made universal.

558. In Scotland the gross seems to be the more popular, as I gather from your evidence?—I should say so; and chiefly, I think, because it gives far less trouble.

559. I understood you to say where the valuation should be made on the net, in many cases it is not so made?—In a large number of parishes they simply ignore it, and in a further large number they make a uniform deduction all round, which, of course, comes to the same thing.

560. Can you give any explanation why you have such a very large number of separate rates for purposes for which the expenditure is not large in Scotland?—I

think the explanation is simply that in Scotland we have never regarded any area or rate as being the unit, so to speak, like the parish and the poor rate in England; a new expense has often been simply made an additional rate as it came.

561. As a general rule, with one or two exceptions you have in this table\* for nearly every purpose a different rate, although many of these rates would be raised by the same authority?—Yes; of course, in the enumeration there are very few authorities which would raise anything like all these rates; and, on the other hand, there are a large number of rates which are specified in the statutes to be added to, or to be raised upon the same basis as, say, the poor rate, or the public health rate, or the county general assessment, or the county general purposes rate.

562. But they are all set out separately in the demand note: you do not have one comprehensive rate, except in the case, as I observe, of the Burgh Police Act, which is a very comprehensive rate?—That is a very comprehensive one.

563. And that varies from the English borough rate in one important respect, that land and certain other properties are rated to one fourth for the purposes of that rate?—That is so.

564. Whereas they are rated to the full in most parts of England where there is no local Act?—Yes.

565. I think that on the first page of your memorandum you point out that these different local bodies collect their rates independently by separate demand notes, though they have power to make a joint collection, and in some cases do so?—Yes.

566. Has it been a success, having a joint collection, say in a burgh or in a town?—So far as I know, I believe it has been a great success; the only case in which I can speak from personal knowledge is in Aberdeenshire, where the county clerk informed me it had worked very well.

567. It would save, I suppose, a great deal of expense in collection?—Yes, and no doubt vested interests are rather in the way of its being extended.

568. Has the question of vested interests anything to do with the fact that in the valuation a certain number of counties still continue to employ their own assessors instead of having the Government assessor?—So far as I can gather, county councils like to have some patronage, and I think that that has had something to do with it.

569. But you are clearly of opinion that it is less expensive for them to do so?—It is clearly less expensive to take the Government valuer.

570. There is one passage in paragraph 4 of your memorandum that I do not fully understand, and that is with respect to the feu duties. The feu duties, you say, "are not entered in the roll for purposes of assessment, and are not rated as such." What happens with a building in respect of which there is a feu duty? Is the building rated at its full value?—The building is rated at its rateable value, which includes, of course, the feu duty. I mean one may fairly conclude that the rent includes the value of the feu duty. The feu duty is not separately rated.

571. You do not mean that the full value of the house is not entered in the roll?—No, I do not mean that.

572. You are clear upon that point?—Quite clear.

573. You also say, "If occupation brings profit to the occupier in the shape of tolls or rates (such as gas or water rates, or harbour dues, or railway rates and fares), the profit is taken into account in making the valuation, if indeed it is not the sole basis of the valuation." Can you say why that is limited to the cases where it brings profit to the occupier in the shape of tolls or rates; in no other cases, am I to understand, do you rate upon the profits?—In those cases there is really no means of getting at the lettable value otherwise than by proceeding with at least some relation to profits. In most cases you can get at the lettable value, because either the subject itself or some similar subject is actually let. When you cannot otherwise get at the lettable value, you may take profits into account.

574. Take the case of a tramway company; would you rate them on their profits, or on their rates, or charges?—I could not go so far as to say that.

575. Is that done?—The rule in the case of a tramway company is the same as in the case of a railway;

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 100 to 104.

Mr. J. M. Dodds.  
12 Mar. '97

Rates, large number of for separate purposes. Explanation of.

Rates. Joint collection of, by different local bodies in certain localities.

Government assessors. Employment of, is economical.

Feu duties not rated as such.

Tolls or rates. Profit taken into account in making valuation.

Poor rate raised on net value, and burgh rate raised on gross value.

*Mr. J. M. Dodds.*  
12 Mar. '97

they proceed upon the same very abstruse system, which I should prefer you would get from the railway assessor.

576. The bottom of that system is profit in the case of a tramway company; but if you take an omnibus company in the same town, you do not rate that on profit, you rate that merely on the stables and the buildings. Is that not so?—I cannot speak as to that.

577. Then, with regard to your railways; I see you say it is a very important fact that a parish with a single line gets the same rate per mile as a parish with more than one line?—Yes.

578. That has always been so, I suppose?—So far as my knowledge goes, that has been so since 1854.

579. Does it create dissatisfaction in the parishes which have a good many lines?—I think it is fair to say that it does in some districts.

Owners and occupiers, definition of. Feu duties.

580. (*Mr. Stuart.*) About the question of rating the owners, who is the owner? I will make my question more definite. Suppose there is the owner of the feu duty, he is the first person; and another man has built a house upon that piece of land, and pays the feu duty, but has let the house to another on a 50 years' lease; and then the last man lets it to a yearly tenant—there is no doubt which is the occupier, it is the yearly tenant?—Yes.

581. But when you charge a rate upon the owner, which of the other men do you rate?—The person receiving the rent from the occupier.

582. Then the man who owns the feu duty, and the man who owns the house but has let it for a 50 years' lease, would neither of them be brought into it?—Not directly.

583. It is the person who is immediately superior to the occupier?—Yes. I think I quote the terms of the Act in paragraph 5 of my memorandum, "The person in the actual receipt of rents and profits of lands and heritages."

584. (*Chairman.*) The argument being, for what it is worth—I am expressing no opinion—that the feu duty is included, and must be included in the rent?—That is the argument, certainly.

585. Therefore, it pays its rate once through the hands of the final owner?—Yes.

586. (*Mr. Stuart.*) As a matter of fact in Scotland, the two people who pay, one named the occupier and the other named the owner, are the person living in the

house and the person to whom he pays his rent?—Yes.

587. (*Mr. Dalton.*) Mr. Elliott asked you whether there was any general principle underlying this division of rates between owners and occupiers as regards different rates; there is no division on this line is there—that certain rates increase the value of the property, and it is thought right the owner should pay them, while other rates do not increase the value of the property, and there is no particular reason why the owner in those cases should pay them—is there any such line as that drawn?—None occurs to me; certainly there is none specified as such; whether any such principle underlies any particular enactment I could not say.

588. (*Chairman.*) You were asked whether it was desirable to have a separate demand note for the owner and the occupier; it is the fact, is it not, that there is only a separate demand note when the owner and the occupier are different persons?—I think that that varies in different places.

589. Is it not the fact that it is practically universal that in all the demand notes there is a column for owner and a column for occupier;\* if a particular demand note is sent to an owner the owner's column is filled up; if it is sent to an occupier the occupier's column is filled up, and if it is sent to a person who stands for both owner and occupier he gets half of his rate put into each of the columns as owner and as occupier respectively?—That may be so in the counties, but I think in the burghs they have very often different prints, one for the owner and one for the occupier. What happens when the owner is also the occupier I really could not say, but I think it is a matter of discretion.

590. Have you ever seen a demand note yourself which has a column only for owner, or only for occupier, as the case may be?—Yes. I have some here (*producing same*).

591. You have also stated that you thought the system of classification had grown naturally out of the system of rating upon means and substance?—That it was in theory a continuation of the rating on means and substance.

592. That would incidentally get some confirmation, would it not, from the fact that Greenock, which was the last parish to attempt to rate on means and substance, put in force its first classification immediately upon the abolition of the system of rating on means and substance in 1880?—Certainly.

*Mr. J. M. Dodds.*

12 Mar. '97

Rates. Division of, between owner and occupier. No general principle specified as regards expenditure of rates being beneficial to owner or occupier.

Demand notes for owner and occupier, form of.

Classification system is a continuation of rating according to means and substance.

The witness withdrew.

Adjourned to Friday next at 12 o'clock.

### THIRD DAY.

Friday, 19th March 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman*

The Right Hon. J. B. BALFOUR, Q.C., M.P.  
The Right Hon. C. B. STUART-WORTLEY, Q.C., M.P.  
Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.

T. H. ELLIOTT, Esq.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary*.

Mr. HENRY A. ROBINSON called and examined.

*Mr. H. A. Robinson.*

19 Mar. '97

593. (*Chairman.*) I understand you are deputed to come here by the Local Government Board for Ireland in response to the request of the Commission?—Yes.

594. This paper which I hold in my hand is the

memorandum† which you have been good enough in the Local Government Board for Ireland to prepare for

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 110 and 111.  
† *Ibid.*, pp. 127 to 274.

*Mr. H. A. Robinson.*

19 Mar. '97

Mr. H. A. Robinson.

us in answer to the letter which we sent to you some months ago?—Yes. Perhaps I might say with reference to this memorandum that it was prepared on precisely the lines laid down by you; but I think that in itself it will scarcely give you all the information about local taxation that you require. It was intended that it should be read in connexion with a report of Mr. O'Brien upon the working of local government in Ireland.\* Mr. O'Brien's report deals with all the machinery and arrangements of local government in Ireland, and our local taxation returns give the financial result. This memorandum is the connecting link which explains the law.

595. We have not had Mr. O'Brien's report supplied to us, I think?—That is a report which was prepared in 1878, and there is practically very little change, but we have brought it up to 1889, and that read in connection with this memorandum and our local taxation returns will, I think, place the Commission in a position to obtain all the information they require.

596. We understand that your county rates are levied under the authority of the grand jury?—Yes.

597. Upon what valuation is the grand jury cess, as it is called, levied?—Upon the ordinary Poor Law valuation—Griffith's valuation.

598. You have explained to us in the second part of your memorandum the conditions under which certain of the towns are governed and rated; I understand that the county areas and the borough areas are mutually exclusive of each other in all cases?—Yes.

599. But between them they cover for county and borough administration the whole area of Ireland?—Yes.

600. You mentioned a moment ago the Poor Law valuation; what is your unit in Ireland for Poor Law administration?—The electoral division for rating purposes in each union.

601. You do not pay regard to the parochial division?—No, that is unknown for any rating purpose in Ireland.

602. So that your electoral division and your union also cover the whole area of Ireland?—Yes, for Poor Law purposes.

603. Then the rates in Ireland are levied either on counties and boroughs or on the electoral division and union?—On counties, baronies, and boroughs. The barony is the sub-division of the county; the barony is to the county what the electoral division is to the union.

604. Is there any other rating authority than those which you have been mentioning across the table just now?—There are numerous small rating authorities that I have referred to in this memorandum. Paragraphs 80 to 97 give you all the other rating authorities outside those which you have already mentioned. There are the drainage authorities, and there are the Belfast water-rating authority, the Dublin metropolitan police tax.

605. Those are all under private Acts of Parliament, special Acts of Parliament, are they not?—Yes, and they have separate powers of rating. There is, as you see, a police rating authority, and certain bodies with power to levy small taxes for Dublin squares. You will find them all referred to in paragraphs 80 to 97.

606. Is one valuation used for all local rating purposes in Ireland?—Yes.

607. In paragraph 4, I think to the bottom of page 5, you give us a history of what has taken place in the past?—That is quite right.

608. At paragraph 5, where you have printed in large type "Principles of Valuation," you come to the existing state of matters, do you not?—Yes, that is right.

609. If I understand it aright, there is a different system of valuing land and the other rateable hereditaments?—Yes, one is the letting value, and the other is the value according to certain prices fixed by the statute. I should say that, in the Poor Law valuation of land, other matters were taken into consideration, like the cost of production, the fertility of the soil, climate, and conveniences of market.

610. There is one thing I did not quite understand; it is a small detail. You talk in paragraph 2 of the valuation carried out by Sir R. Griffith under the General Valuation Act of 1836, but that, I understand

is not what is currently known as Griffith's valuation?—No, that was a townland valuation.

611. Griffith's valuation is the valuation which you deal with under paragraph 4?—Yes, Griffith's valuation is the first tenement valuation.

612. Would you describe to me in your own language the principles of Griffith's valuation so far as it applies to land?—The valuation in regard to land was made upon the estimate of the net annual value thereof with reference to the average prices of certain articles of agricultural produce, and it was made according to a general rule laid down by Mr. Griffith for the information and guidance of his valuers which was submitted to the Lord Lieutenant for his approval. These circulars and instructions were sent round to each valuer who acted strictly in accordance with them.

613. What I do not quite understand is that you give upon the page we have reached in your memorandum, a list of eight different articles which I repeat—wheat, oats, barley, flax, butter, beef, mutton, and pork—now every acre or every farm or every holding in Ireland does not produce all these articles, and what I want to understand is how this list with the named prices per cwt. which you give was applied to each holding?—It was applied to each holding so far as each holding produced the articles mentioned on the list. I think I can give you an example. Here is, taken from Mr. Griffith's instructions, a table in which he gave an example of say, 100 statute acres under five years' rotation, showing, what the cost of tillage would be, and what the value of the produce would be. That is an example of a holding which I found in Mr. Griffith's instructions. Mr. Barton, the Commissioner of Valuation, will be able to give you better information as to the lines upon which Mr. Griffith acted, but you will find that the general rules which were published for the guidance of valuers give every particular on that subject.

614. This example is clearly a fictitious case?—Yes.

615. There is no doubt about that, because we could never find a holding of 100 statute acres exactly under such a five years' rotation as this giving one-fifth in each year, or 20 acres according to such a working as this?—It evidently was an imaginary case given for their guidance (the witness handed in the following table):—

One HUNDRED STATUTE ACRES under Five Years' Rotation, as follows:—

	Acres Stat.	Cost of Tillage.	Value of Produce.
1st year, $\frac{1}{5}$ or 20 acres	Potatoes - 3	£. s. d. 25 10 0	£. s. d. 42 0 0
	Vetches - 2	6 6 0	12 0 0
	Mangel wurzel. - 3	20 5 0	33 15 0
	Turnips - 12	84 0 0	96 0 0
2nd " "	Winter wheat } 12	41 8 0	108 0 0
	Spring wheat }		
	Barley - 8	24 17 0	52 0 0
3rd " "	Hay - 6	8 17 0	26 5 0
	Clover - 1	2 0 0	4 10 0
	Pasture - 13		
4th " "	" - 20	41 0 0	95 0 0
5th " "	Potato oats - } 20	70 13 0	123 0 0
	Common oats }		
	100	324 16 0	592 10 0
	Allow for wear and tear of implements -	10 0 0	
	" 5 per cent. on 500l. capital -	25 0 0	
	Deduct expenses -		359 16 0
	Nett annual value of produce -		232 14 0

616. That process having been gone through between the years 1848 and 1865, what has been done since 1865?—The value of land has never been altered. Power is given to the Commissioner of Valuation to make a revision of the valuation of the land after 14 years upon an application of the grand jury for revision of the county valuation, but the Act makes no provision for paying the expenses of this re-valuation, and it has never been carried out. The cost of Griffith's valuation was about 325,000l.

Mr. H. A. Robinson.

-respect of.

\* Local Government and Taxation (Ireland) Inquiry. Special Report by W. P. O'Brien, Esq., C.—1865 of 1878.

Mr. H. A.  
Robinson.  
19 Mar. '97

617. Something must surely have been done to meet the changes of every-day life; holdings must have been divided and building must have taken place; what has been done to meet those eventualities?—All changes in buildings are noted and entered in the valuation book, and all additional buildings of every sort and all changes of occupancy have to be noted too; what is not changed is the value of the land.

618. Do you mean that the gross valuation of the electoral division has not changed?—Neither of an electoral division nor of a holding of land. Buildings and the other things such as tolls, railways, and canals are all altered in the yearly revision of valuation.

619. Supposing in 1865 that some gentleman was owner of an estate of 1,000 acres, and, subsequent to 1865 at different times, he sells it in lots of 100 acres to various people until he sells it all, what process is gone through to make the necessary changes upon Griffith's Valuation Roll?—The yearly valuation carries out that; all changes of occupancy or ownership are noted.

Valuation.  
Yearly  
revision of  
ist.  
Procedure.  
Officials.

620. Would you describe to me the yearly valuation?—On the 15th of November in every year the collector of rates has to forward to the board of guardians a list of the tenements and hereditaments requiring revision; this list is forwarded to the Commissioner of Valuation by the clerk of the union and he sends down his revisors to meet the collector of rates and go round and see all these buildings that have been erected since or to which additions have been made; they note the alterations in the occupancy and they make all the necessary changes in the list.

621. The collector of rates, whom you have just mentioned, is of course a paid officer?—Yes, he is paid by the guardians of the union.

622. Is he appointed by the guardians?—Yes, he is appointed by them subject to the Local Government Board's sanction.

623. The revisor of valuations is a central officer in the employment of the Government, I understand?—Yes.

624. In the employment of the Local Government Board?—No, of the Commissioner of Valuation.

625. How is he paid?—The Commissioner of Valuation receives a salary from the Treasury; his office is on the Civil Service Estimates.

626. Do the Inland Revenue, for purposes of Schedule "A," have officers in Ireland as they have in Great Britain?—Yes.

627. Is there any communication between the two departments so that there is a correlative value put upon the subjects for the two purposes, local and Imperial?—I am not quite sure what the course taken by the Commissioners of Income Tax in Ireland is about that.

628. Is there any other point in regard to the valuation of land which, you think, from the questions I put to you, it is necessary to tell me just now?—No. I think that the evidence which you will get from the Commissioner of Valuation will be of more use to you than any evidence that I could give to you on that subject, because it is not under the cognisance of the Local Government Board.

629. Speaking generally, are all rates paid on Griffith's valuation?—Yes.

Valuation,  
Griffith's.  
All rates  
paid on.

630. And, except as you have described to us, no changes of value on account of letting are taken into account?—No changes in the value of land are taken into account.

Valuation  
of land not  
revised.

631. I should have said land; for instance, if the Land Commission have decreased or increased a rent under the process of the Land Act of 1881, and the amending Acts, it does not touch the question of local valuation at all?—No; if they reduce the rent below Griffith's valuation, the rates have still to be assessed upon the valuation.

Valuation.  
Reduction  
of rent of  
land  
below.

632. Upon Griffith's valuation?—Yes.

633. Therefore, no question of tenant right, nor of the value of that, nor any such consideration as that enters into local rating?—No.

634. Do you know whether it enters into Imperial purposes under Schedule "A"?—I am afraid I cannot answer that. The only observation I have to make on the subject of this system of valuation in Ireland is, that the want of uniformity renders it a very undesirable valuation. The valuation of the parts of Ireland which

Valuation,  
Griffith's.  
Objections  
to.

were made immediately after the famine year—that was in 1850, 1851, and 1852—are extremely low; whereas, in other parts of Ireland, such as Ulster, the valuation was made at a later period, after the country had recovered from the period of depression. I could give you, if you like, what Mr. Griffith's own estimate is of the difference in prices of the other districts, which would be necessary to bring them up to the Ulster valuation.

635. If you please?—In the case of Leinster to bring the counties up to the Ulster value, and in Carlow, Dublin, Kildare, Kilkenny, Louth, Meath, and Westmeath, he estimated that 5s. in the £ should be added to the valuation; in Wexford, and Wicklow, 4s.; in Queen's County, King's County, and Longford, 3s. 4d. Then in Munster: the County Limerick he thought was 5s. below the Ulster figure, Clare, Cork, Kerry, Tipperary, and Waterford, 4s. below Ulster. In Connaught, Roscommon was 5s. below the Ulster figure, Galway, 4s. below it, Mayo, 3s. 4d., and Leitrim and Sligo, 2s. 6d.\*

636. Having regard to the table in paragraph 21, do I understand from you that it would now be possible to add on a column giving the figures for 1896?—Yes, and I will do so.

637. Does any question arise as between the proper contribution to be paid by various electoral divisions or unions which may be comprised in a single county for county purposes?—The electoral divisions and unions pay nothing whatever for county purposes.

638. No, but the individuals in those electoral divisions or unions pay of course for county purposes as they do for union purposes?—The occupiers do, the owners do not.

639. Are you familiar with the English system?—To some extent, but to a very slight extent, I am afraid.

640. For your county-raising purposes, the county authority still continues to rate each individual within its jurisdiction, and does not have regard to the divisions into unions or electoral divisions?—It is very hard to draw a parallel from England owing to the fact that in Ireland the incidence of county and union taxation is totally different. The main difference is this, that not only is the county rate upon occupier, and the poor rate upon owner and occupier, but the county rate is a rate levied upon the hereditament, and the poor rate is a personal rate. For instance, if a person owed poor rate in one county his property could be seized to pay for it in another county, or in any part of Ireland, but this is not so in the case of the county cess—the holding is liable for it.

641. I suppose from what is said in your memorandum that it would be correct to say that the system of valuing hereditaments other than land has regard to the annual letting value?—Yes.

642. How is that estimated?—The revisor does it according to the best of his ability. I am not quite sure what general rules he goes upon. That is essentially a question for the Commissioner of Valuation.

643. Does he take the actual rent which the subject produces or ought to produce one year with another, or does he put a valuation upon it of his own without regard to the actual produce of the subject?—I am afraid I cannot answer that question; the Commissioner of Valuation alone could tell you, because their system is kept very much to themselves.

644. What is the list or roll called from which the collector of rates makes up his demand upon each individual whom he has to rate?—The valuation list prepared by the Commissioner of Valuation.

645. That includes Griffith's valuation for land, and the local valuer's statement of what he thinks houses or other hereditaments ought to pay, does it not?—That is so.

646. And also it includes rights of fishing, canals, navigations, railways and tramways, and another head which you describe as rights of way and easements over land?—That is so.

647. How are rights of fishing valued?—I am afraid I cannot give you any information about what principle he values on. That is quite outside the Local Government Board's department.

648. Now would you describe to me the system under which the valuation of the towns is made. As far as I understand it you divide them into three classes, the first of which is mentioned in paragraphs 50 to 52 o

Robinson.

19 Mar. '97

your memorandum?—The valuation for the houses in towns and the valuation generally is exactly the same as the valuation elsewhere. It is valued by the revisor in the same way.

649. I think you would assent to the question that I put to you; that, speaking generally, you divide them into three different classes, according to the three different Acts under which the towns are at present classified?—Yes.

650. The first one, the Lighting of Towns (Ireland) Act, 1828, under which it seems only six towns are placed at present?—Yes. No town can now adopt the provisions of that Act, and many others who were incorporated under it have adopted the Towns Improvement Act, so that it has always been a reducing quantity of late years.

651. The Municipal Corporations (Ireland) Act, 1840, is the second class under which come the eleven towns which are mentioned in paragraph 53?—Yes.

652. Then under the Towns Improvement (Ireland) Act, 1854 come those 90 towns which are given in paragraph 56?—Yes.

653. Who appoints the collector of rates in these towns?—The municipal authority.

654. Do the collectors of rates of these municipal bodies go through the same process with the Commissioner of Valuation for the towns as the rural collector of rates goes through with him for the country districts?—Yes, I believe so.

655. Does Griffith's valuation have any effect in any of these towns?—Yes, the effect of largely increasing the valuation in some towns.

656. How does that operate?—In the case of new houses and new buildings.

657. Griffith's valuation?—Yes, we call all this Griffith's valuation. You make a distinction between the original valuation and Griffith's valuation as amended by the Commissioner of Valuation?

658. Yes?—We have got into the way of calling the whole thing Griffith's valuation.

659. But you cannot apply Griffith's scale of agricultural produce to valuing the main part of the towns surely?—No, but it is all the one valuation, which is annually revised. It is part of the Act that this original valuation of Griffith's should be annually revised by officers appointed by the Treasury, and for that reason it always bears the generic term of "Griffith's Valuation," but the alterations are made upon that valuation from year to year by the revisors.

660. Some of these towns, if not all of them, will have within their bounds agricultural land?—Yes.

661. The process as far as agricultural land is concerned, then, is the same either in town or in the country?—Yes.

662. It is not changed except when sub-divisions and alterations of occupancy make it necessary to change?—That is so. Some of the towns have very large rural areas.

663. Then I turn to the question of the incidence of the payment of rates. Take first the county cess; from whom is that collected?—From the occupier, except in cases where new tenancies have been created since the Land Act of 1870. In such cases the cess is collected in the same way as in the case of poor rates, that is, half being paid by the immediate lessor over 4l. valuation, and under 4l. valuation, the whole being paid by the immediate lessor—the landlord from whom the occupier holds.

664. (Mr. Stuart-Wortley.) That is the case of statutory tenancies under the Act of 1870, I think you said?—Yes, but there are very few of those; the vast majority of the county cess is all paid by the occupier.

665. (Chairman.) Is it, as a matter of fact, commonly the subject of bargain between him and the owner that he has to do so, or is the obligation laid upon him by law that he has to pay?—The obligation is laid upon him by law.

666. Is the owner responsible in the event of the occupier absconding, or not paying?—He is if the holding gets into his own hands. The land is liable, and if the person who was in occupation at the time the rate was made absconds, or goes away, the collector goes and seizes what he finds on the land in satisfaction of the rate due.

667. Irrespective of to whom the article seized belongs?—Yes, if it is on the land.

668. It may belong to the succeeding occupier?—Yes.

669. You drew a distinction between the county cess and the poor rate; you said one was a personal obligation and the other was not?—Yes.

670. Would you make that quite distinct to me?—For the county cess the land is liable; it is the tenements and the hereditaments which are liable. In the case of poor rate the difference is that it is a personal liability upon the individual upon whom the rate is made.

671. Does that distinction run through all rates which are levied for county purposes, and all rates which are levied for electoral division or union purposes respectively?—Yes.

672. Is that under a statutory authority?—Yes.

673. Are electoral divisions and unions in any case the same, or are they always distinct from one another as far as area is concerned?—The electoral division is a sub-division of the union; it was originally intended merely for purposes of election; but as the Poor Law Bill was passing through the House of Lords the electoral district was made the area for rating also in the hope that it would give the owners of land a direct interest in the proper administration of the poor law.

674. How many unions are there in Ireland?—159.

675. Do you know how many electoral divisions there are?—About 3,400.

676. Are the unions of a uniform size, or do they vary very much?—They vary very much indeed, so also do the electoral divisions.

677. Can you give me the sort of range of variation in acreage or square miles of an electoral division?—I can get you that very easily in answer to the question, but I have not got it here.

678. Are they generally smaller in the populous districts and generally larger in the outlying and rural districts?—They are generally larger in the poor districts where a certain valuation is required to enable the union or division to be financed.

679. What is the sort of principle which underlies the division into electoral districts?—I think one of the principles that the assistant commissioners adopted when they were laying out the county into unions and electoral divisions was, as far as possible, to make electoral divisions conterminous with properties.

680. With landed properties?—Yes, so as not to cut too many properties by one electoral division, but to include whole properties or parts of whole properties. That was one idea which I think they endeavoured to carry out.

681. That would prevail at the time, but that object would be liable to be defeated by transfers and changes in ownership?—Yes, it is entirely at an end now. You asked me just to give you an idea of the size of unions; of course I cannot tell you exactly as to the range of them, but there are some unions in which it would be from one end of the union to the other, perhaps we might, say, 35 miles, and there are other unions in which from one end to the other it would be about 12 miles.

682. Do unions in any number of cases extend into more than one county?—Yes.

683. In many cases?—No, not very many.

684. Do electoral divisions ever overlap the boundaries of unions?—No, nor of counties.

685. Nor of counties?—No, we are endeavouring to make the areas conterminous as far as we possibly can. All electoral divisions have now been made conterminous with the counties.

686. (Mr. Arthur O'Connor.) Do they overlap baronies?—Electoral divisions do in some few cases.

687. (Chairman.) Taking the rates for union and electoral division purposes, by whom are they paid?—Half the poor rate is paid by the immediate lessor if the amount is over the 4l. valuation; under 4l., all the rates are paid by the immediate lessor, i.e., the person from whom the occupier holds, the landlord in most cases.

688. Does he as a matter of fact recover in cases under 4l. from his tenant, or is it, to use a colloquialism lumped together in the rent?—He is rated directly for it, and I imagine that all these arrangements about

*Mr. H. A. Robinson.* poor rates and county cess are taken into consideration by the sub-commissioners when they fix the rents.

19 Mar. '97

689. Does the occupier of a holding of under 4*l.* know from year to year whether the rates are rising or falling?—Not unless there was a failure to pay on the part of the immediate lessor, in which case after four months the rate could be levied from himself, and he would then be entitled to deduct the whole of it from his rent when paying it—in such cases he would know whether the rates were rising or falling.

690. Unless there is a valuer, I understand you, on the part of the lessor, in the case of holdings under 4*l.*, the occupier in all probability does not know whether the quantum he pays in rates is rising or falling?—No, he does not feel it.

691. Now take the case of holdings above 4*l.*; is there any difference between the way in which the rates are raised between, say, a holding under 10*l.* and a holding above 10*l.*?—No, it is exactly the same.

692. Once you get above the value of 4*l.*, every holding whatever its size is dealt with on the same basis?—Yes.

693. Now just explain that basis?—I said that above 4*l.* the immediate lessor paid half poor rates; he pays the half poor rates when the rent exceeds the valuation.

Valuation of land. Reduction of rent below. Lessors and lessees shares of rates.

694. You refer to Griffith's valuation?—Yes; but latterly the second term judicial rents have in some cases brought the rents below the valuation, and in that case he would not pay half the poor rate, but he would pay half the poundage rate for each pound of rent he received. It is rather a complicated arrangement. But the law is explained in paragraph 37 under the head of "deductions." "Where the occupier is rated and a rent is payable by him, the person receiving such rent is liable to allow the person paying it one half of the poundage of the rate for every *l.* of rent payable."

695. Do you know what the principle which underlies that somewhat complicated provision is, or upon what basis it is intended to proceed?—No. I cannot find out the history of that; I have looked into it, but I cannot learn why it was put in this way.

696. Does it serve any practical purpose that you know of?—It serves this purpose, that where the rent has been reduced below the valuation, the owner does not have to pay half the poor rate. Take the case where the valuation of a holding is 10*l.*, and the poor rate on that is 1*s.* in the pound we will say. While the rent of that house was 15*l.* the occupier could deduct half the poor rate, that is 6*d.* in the pound for every pound on which he paid, provided it did not exceed one half, so therefore he could have deducted half the poor rate in that case. But assume that on a second term judicial rent the rent was reduced on this 10*l.* valuation to, we will say, 8*l.*, then the occupier could now only deduct half the poor rate, that is 6*d.* for every pound he paid on the 8*l.*

697. That would be he would deduct 4*s.*?—Yes, and the occupier would then pay the remaining 6*s.*

698. (*Mr. Balfour.*) Does it come to this, that the aggregate assessment is not reduced?—No, it is not.

699. (*Chairman.*) Assume what I suppose is still the normal case, that the rent paid is not below Griffith's valuation, the theory of the law is, that the occupier is the hand which pays the money to the public authority, but he is entitled to deduct one half from the owner?—Yes.

700. So there is an attempt in the law of Ireland to make the occupier and the owner respectively feel that they each pay half the rate?—Yes.

701. I am not, obviously, going into the question of whom it ultimately falls upon, but that is the theory of the law?—Yes.

702. Any departure from that is accidental, owing to subsequent legislation?—I would not like to say that the theory of the law was that each should pay half, for I have never been able to find out upon what principle they framed the Act in this way. The practical effect has hitherto been that it has been paid half and half, but of course, any reduction of the rent below Griffith's valuation will alter it.

703. Mr. Stuart Wortley suggests this question; From what year does the division of the rate date?—

From the date of the original Poor Law Act, the 1st and 2nd Victoria, chapter 56.

704. When you use the expression "poor rate," does that include other rates besides the poor rate?—It includes the sanitary rates struck by the rural sanitary authority, the Labourers' Act Rate, and all the other rates which are collected with the poor rate.

705. (*Mr. Arthur O'Connor.*) This very interesting memorandum of yours is drawn up, I suppose, from a great many long-standing notes in your department?—I explained to the Chairman before you came in the purposes for which that memorandum was drawn up; perhaps I might mention them to you so that you will understand. It is not in itself supposed to be a complete statement upon local government and taxation or a sufficient guide to the Commissioners.

706. For what purpose?—For your Commission.

707. What do you mean by the word "guide"?—It is not a complete statement upon the principles and practice of local taxation in Ireland, for the reason I explained to the Chairman already: that there already has been a Parliamentary paper upon that subject.

708. Up to 1878?—Brought up to 1889 by the Local Government Board. The memorandum does not give the figures and the practical result of local taxation, because those returns are published annually by the Local Government Board. It is a general statement upon the lines required by the Commissioners. The only thing outside what was asked us, which I have furnished, are the taxation returns for 20 years past, which are given at the end of the memorandum.

709. The point I was putting to you is this, that this compilation of paragraphs is drawn from notes in your Department?—Yes.

710. Many of them of considerable standing?—Yes.

711. It is a compilation?—Yes.

712. But here and there, there are observations which are original for the purpose of this inquiry?—Perhaps I may explain.

713. As to the fact, there are those observations?—Yes.

714. Who is responsible for those observations?—Some of those observations were not intended to be printed at all. Perhaps you will allow me to explain how they came here?

715. Yes?—When the memorandum on the various points upon which we were asked to give these particulars was being prepared, the time given was so very short that it was done in a very great hurry. In going through all the materials we had before us there were certain little statements put in as to various points suggested and raised by local authorities of which I merely wished to take a note in case the matter might be brought up and discussed. Some of those have been printed I see, here and there in this memorandum, therefore, as I could not alter the type and have it ready in time, I wrote to the Secretary of the Commission, saying I would forward the memorandum if he would allow me to revise it before it was finally published, and to prepare it in such a form that it could be formally approved by the Local Government Board and printed. This therefore was marked "confidential" and sent as a first proof. Some of the observations are misprints.

716. Who is responsible for these observations?—I think probably I am. They are merely notes.

717. Would you turn to paragraph 48—"That each has to pay a portion of the cost of parliamentary registration which should be borne by the Imperial Exchequer"?—That is not what I wrote. I said: "Which local authorities claim should be borne by the Imperial Exchequer." There is a very strong feeling in Ireland on that. I never intended that to be printed in the form it is.

718. You repudiate responsibility for that sentence as it stands?—Certainly. I never intended that should remain in.

719. (*Mr. Smith.*) In my copy the words are "which it is generally claimed"?—Yes.

722. (*Mr. Arthur O'Connor.*) This memorandum is, you say, rather a matter of principles than of details—it deals rather with principles than with details?—And with the law.

*Mr. H. A. Robinson.*

19 Mar. '97

Poor rate. Rates included.

Memorandum prepared by Local Government Board, Ireland. Scope of.

Valuation of land over 4*l.* Payment of rates by occupier subject to deduction of moiety from lessor.

*Mr. H. A. Robinson.* 723. You have I think in your office a very efficient staff, have you not?—Yes.

19 Mar. '97

724. I suppose, as an Irishman, I may take it that it is quite as efficient as anything they have in Scotland or in England?—Yes, as an Irishman I feel bound to say more so.

725. Whatever they can do in Scotland or in England in the way of returns or information, you could do in Ireland?—If we could get a sufficient staff; so far as ability is concerned, I am sure we could do it.

726. Have you ever noticed the returns which are made with regard to England?—Yes.

727. You are conversant with their details and their amplitude?—I will not say that, but I have read them with great interest.

728. I do not mean with the details, but you are conversant with their character for amplitude and details?—Yes, I am.

Local Taxation Returns, England and Ireland.

729. There are a great many different things furnished with regard to the local taxation, and the results to the people who have to bear the burdens?—Yes.

730. Perhaps a little fuller than we have with regard to Ireland?—Are they?

731. In detail, is it not so?—I think for the purposes that we have generally found they are required ours have been generally considered to have been full enough, but we would be very glad to add anything to them that was necessary.

732. But no Commission like this has sat before on Irish local taxation—this is the first time a Commission has sat on that subject?—Yes.

733. For our purposes do you not think it would be desirable that we should have for Ireland details as complete with regard to all existing taxation, not only in the lump, but also in respect of the incidence in the several rateable areas as they have in England?—I should think it would, but it has not been asked for as yet, you know.

734. But there would be no difficulty?—I am not at all sure about that.

735. There would be no difficulty on the score of competence, I think, you said?—It is not a question of competence at all, it is a question of the form in which the accounts are kept by the local authorities.

736. Take the case of the grand jury cess; what amount of information have you in your department about that?—You will find it all in the local taxation returns.

737. By counties?—Yes.

738. But then sometimes there are charges under the grand jury cess unequally distributed within the county area?—Quite so, on the baronies.

739. Have you that?—No.

740. Sometimes even upon smaller areas than baronies there are heavier charges than upon other areas?—Quite so.

741. You have not that information?—No.

742. It makes all the difference to the taxpayer?—Yes. We have no power to get it, I should state, except through the courtesy of the county officials who are not under our control, and may refuse if we ask them for too troublesome returns.

743. Do you think the grand juries would refuse to give you information?—The grand juries may not be sitting at the time. We find it very difficult to get some of these returns out of the local officers if they involve a very great deal of trouble, and if they are not quite clear as to the purpose for which they are required. The Local Government Board in Ireland are called upon to furnish returns from time to time in Parliament which involve a great deal of trouble and labour to these officials, who are not, some of them, too well paid, and they grumble very much if they are called upon to prepare these returns without any extra remuneration for them. That is a difficulty which we always feel in applying for voluminous returns.

744. Whatever you want in the way of returns you have to pay specially for, is that it?—No, we do not pay them, and that is what they complain about.

745. Then it is a question of payment?—No, I do not think it is altogether. I think if we pressed them very

hard, and said these are very urgently required, we should be able to persuade them to do it, and if the Commissioners will give me particulars of any returns which they require, I shall do my best to obtain them.

746. Let us clear up this point first though; as I have said, if they were paid then you would find no difficulty?—I think there would be some difficulty in finding the proportion of the total payments which fall upon the different classes of ratepayers.

747. Not the total; supposing we get them severally we might make totals for ourselves, or your competent staff might do that?—I think our competent staff would have to be very much increased.

748. Still, if we have to do the work, it must be done?—Yes.

749. Is there any reasonable difficulty, or any difficulty which could reasonably be admitted in the way of the county cess officials furnishing details, each for his own county, with regard to the charges which have been imposed, I will say, since the year 1851, for the matter of that? Have they not their county records?—Yes, I should think they could give it.

750. So that for every taxable area within any given county, if they want it, they could supply the facts?—Yes, I think they could supply the facts.

751. Without that information would not our inquiry be somewhat incomplete?—I think you are the best judge of that.

752. Among other charges which exist in Ireland outside the county cess, and outside the poor rate are certain charges upon baronies or half-baronies, or counties for railways?—Yes.

753. Do you know of the charge for a railway in Kerry?—It is very high, but I do not quite know what it amounts to.

754. The Dingle line?—In Corkaguiny Barony it is very high.

755. The Dingle line is in Kerry, though—not in Cork?—The cess in Kerry, I think, is very high.

Railways, rates on.

756. Do you know what it is?—No, I am not quite sure what is the exact amount.

757. Is it 5s. in the £?—I should think it must be.

758. It is a tremendous charge?—It is a tremendous charge, undoubtedly.

759. For a railway which breaks down its own bridges and kills people?—Yes.

760. That is a very poor district?—Yes, it is populous, and has a poor population.

761. Populous in a few spots?—Yes.

762. Mostly rocky and mountainous?—Yes.

763. It is a district which, being poor, is upon that one score alone very heavily charged?—Yes.

764. There are other places in Ireland similarly charged?—Yes, there are Belmullet and Clifden and other Western Unions.

765. There is my own constituency; take East Donegal—is there not a charge there of several sillings in the £ for a railway which takes about an hour and a half to go 10 miles?—Which railway is that?

766. The Letterkenny; it is a very heavy charge?—The cess is very high there; I am not quite sure whether there is a baronial guarantee for that railway or not.

767. That, again, is a local charge?—Yes.

768. Which falls upon the ratepayers?—Yes.

769. Over and above the county cess and the poor rates?—Yes.

770. (*Chairman.*) As a matter of course, the statute under which that charge is made is mentioned within the four corners of this memorandum?—Yes.

771. (*Mr. Arthur O'Connor.*) Would there be any difficulty in furnishing details in regard to those charges?—No, I think not. We have asked for those particulars for other purposes.

772. I do not know what you may think of it, but it seems to me that the real point for us to consider is, what is the actual burden, the actual charge, upon the

*Mr. H. A. Robinson.* People who have to pay the money of all these several rates in the different localities, and the character of its incidence. You see my view?—Yes.

19 Mar. '97

Rates. Amounts and particulars of, from all rateable areas. Possibility of obtaining returns.

773. In order to realise that, I must ask you whether you can give us a return showing, for every rateable area, the actual charge?—I am afraid there are about 4,000 or 5,000 rateable areas.

774. Then it is all the more difficult for us to investigate them—but you can give us assistance?—We will do all we possibly can, but you must remember that there are over 3,000 electoral divisions, 150 unions, and an enormous number of baronies. There are counties; there are municipal areas; there are special areas for special expenses under the Public Health Acts; and that map on the wall, which I prepared for the Commission, of the various areas in Ireland, is like a spider's web if you look at all the little areas. It would take a very considerable time to prepare a statement showing the taxation on all those areas.

775. You have emphasised my point admirably. Now we begin to see what it is we have undertaken, and I am glad to think we have so efficient a department to assist us. You will be able to give us the information if we found it necessary?—If you would give us plenty of time—that is the only thing.

776. In relation to the sittings of this Commission I think you will have abundance of time?—I hope so.

777. How long do you think it would be necessary to take?—I should like to see the headings of the return first.

778. You have seen the English returns?—No, I have not.

779. Would you mind looking at the English returns and seeing how in one form or another every charge for every area is embodied in some form?—Yes, I will look into that.

780. You might then make a calculation as to how long and what extra staff it would be necessary for you to have in order to give it?—Yes.

781. That is what I should ask for—what is the actual incidence of taxation on each taxable area. Now let us go to the question of valuation. Your valuations are made with regard to the price of produce?—Yes, they were made so.

782. And they are still, are they not?—I do not think so—not now.

783. Have we not got a return during the last few days furnished by you of the prices of a number of articles of agricultural produce?—The Land Commission, I should think, furnished that.

784. Yes, that is a Land Commission return; it is the same thing, I suppose?—Yes; that is a Land Commission return.

785. You have quoted these items on the same scale and on the same system of valuation in your memorandum?—Yes, we have quoted the same items as those given in the General Valuation Act of 1852.

786. In paragraph 21?—Yes.

787. In this return furnished indeed by the Irish Land Commission, you still continue the same thing—we have the same list of articles?—Yes.

788. With the same mode of calculation?—Yes.

789. Where are these prices gathered?—Are you referring to my memorandum?

790. Yes?—The first column of the table in paragraph 21 gives the prices which were fixed by the General Valuation Act of 1852; the second one was taken from the Land Commission returns, and the third one.

791. Then it is the same thing as the Land Commission returns?—Yes, it is prepared by them.

792. Do you know how those figures were got together; how were these prices ascertained?—I understand that when the prices for Griffith's valuation were fixed they took the different prices in the different market towns at the time. I have always heard that, but I cannot speak with certainty as to it.

793. And the present ones?—I cannot tell you at all how they get those.

794. Are they obtained from certain Irish ports?—I do not know at all.

795. You cannot say what would be the relation between the prices of these productions and the valuation of land?—Griffith when making his valuation was under the impression that his valuation was about 25 per cent. below the rack rent or the competition rent.

796. That was not quite my question?—I cannot say how far these prices refer to the valuation.

797. Supposing that you take the figures that you have furnished us with; take butter, butter has gone up from 65 to 86 and 87?—Yes.

798. I will not ask you as to what that represents, because I gather that you are not prepared to answer?—No.

799. But have you anything which you can say on the part of your department with regard to that figure as to what relation the price of butter at the point where that is taken has to the value of land at the point where the butter is produced?—No, I am afraid I do not understand that at all.

800. Take beef again. The prices are given for beef and for wheat?—Yes.

801. There is very little wheat grown in Ireland now?—Yes, very little now.

802. You would not see any relation between the price of wheat at the places where those figures are collected, and the value of land in Ireland where wheat can no longer be grown at all?—I presume not.

803. With regard to the fact, you must be aware that there is practically no wheat grown in Ireland now?—Not very much.

804. With regard to the price of beef, I suppose most of the cattle sold in Ireland are store cattle, are they not?—I think the large proportion of them are.

805. There is very little beef?—There is very little fattening land comparatively speaking.

806. So that the price of beef, again, would affect a very small number of farmers in Ireland?—Yes, comparatively.

807. You were telling us that the fixing of rents for the second statutory term had in many cases at any rate increased the disparity between rent and valuation?—I do not know that I used the expression increased the disparity between them; it reduced them below the valuation.

808. Therefore it has increased the disparity?—Yes.

809. Supposing the valuation was 10%, and the original rent 15%, and the first statutory period fixed the rent at 8%, and now the rent has been fixed for the second statutory term at 6%, the disparity would be increased?—Yes.

810. But, although upon this valuation for present and immediately future purposes there is this very great reduction in rent, the valuation remains the same?—Yes, for lands.

811. The valuation in Ireland, on the whole has actually increased during the last few years, has it not?—Yes.

812. Are you aware what has been the experience in England?—No, I have not seen the result in England.

813. Have you seen the assessments for income duty of the two countries?—Yes, I think I did see those.

814. Have you noticed that the total under Schedule B has gone up for Ireland, while it has gone down for Great Britain?—Yes.

815. Does not the mere fact of the figures for the valuation and the rent, getting further and further from each other suggest the idea that it would be desirable to have valuation based upon actual facts locally ascertained?—Yes. I think it would be more satisfactory.

816. Have you noticed at all, any essential or characteristic difference between the returns and statistics prepared for Great Britain, and the statistics prepared for Ireland?—What statistics?

817. All returns under the Local Government Board?—They must necessarily be different, because the law is so different.

818. Have you noticed that all the returns from Ireland are returns drawn up from an administrative point of view?—No.

*Mr. H. A. Robinson.*

19 Mar. '97

Valuation of land. Changes in quantities of commodities grown and in their prices.

Valuation of land. Reduction of rent below. Disparity between valuation and rent.

Local Government Board returns, England and Ireland.

Valuation of land. Principles observed.

Mr. H. A. Robinson.

19 Mar. '97

819. They are all purely official for official purposes?—I do not know; I do not think I have noticed that particularly; I think they are for public purposes generally.

820. Of course you occupy an official position?—Yes.

821. Have you noticed that with regard, at any rate to a very large number of the returns for Great Britain, they are drawn up from the taxpayers' point of view?—No, I have not noticed that.

822. In paragraph 48 you say that county cess is paid practically by the occupier, as the landlords generally contract out of their liability to pay half under the Land Act of 1870?—I have heard that that is the case.

823. Would you mind giving us your authority for it?—In fixing the rents it is generally taken into consideration I have always heard. This is one of those notes which I did not intend to have printed.

824. I do not say it is wrong; I think it is perfectly right?—I believe it is a generally understood thing that the county cess is practically all paid by the occupiers.

825. Would you look at Table II. at the end of your memorandum, please? There is a form there showing the local taxation of Ireland in outline for 1895, column 4 is headed "Poundages: (Average poundages in first three cases and total at foot)"?—Yes.

826. It is a very remarkable return. It gives the averages for the several items, as 2s. 1s. 5½d., 4s. 1½d., 1s. domestic, and 3d. public, and 8d.; and then is a smaller one "usually 2d." and the total is 4s. 2½d.; how is that total arrived at?—I did not check it to tell you the truth, but the total would be the poundage of the total amount on the total valuation.

827. What does the "total" mean there, does it mean that every area in Ireland is taxed to 4s. 2½d. in the £?—No, that fourth column is not a very useful one; but it means that the total amount produced by real property being 3,000,000l. and the valuation upon that being so much, it would produce a rate of that amount. But of course it is not a very useful column, because many of these localities are exempt from some of those taxes.

828. It is not very clear?—No.

829. It may be misleading?—Yes, in revising the return I will go over these statistics very carefully.\*

830. Would you look at Table I. at the end of your memorandum, it appears to me to be the only table in this memorandum which gives clearly a conspectus of the situation viewed historically?—Yes, that table was prepared by Mr. Lough for the Financial Relations Commission.

831. According to that table the local taxation per head in Ireland in 1826 was 2s. 6d.?—Yes. There was no poor rate in those days.

832. In 1843 it was 3s. 5d.?—Yes.

833. In 1851 it was 7s. 1d.?—Yes. The Poor Law was in operation in all parts of Ireland at that date—1851.

834. In 1861 it went down to 6s. 5d.?—Yes. The reason of its being so high in 1851 was that the country was just recovering from the famine period.

835. In 1861, at any rate, it was 6s. 5d.?—Yes.

836. In 1871 it was 10s. 3d.?—Yes.

837. In 1881 it was 13s. 2d.?—Yes.

838. In 1891 it was 14s. 11d.?—Yes, so I observe.

839. Now we have finished with the decennial periods, and we come to intervals of only a single year. In 1892 it went up from 14s. 11d. to 15s. 6d., and in 1893 it went up again to 16s.?—Yes.

840. And there the return stops, I suppose, because Mr. Lough furnished it for the Financial Relations Commission; is that so?—That is so.

841. Before submitting it in this official memorandum, did you check it?—No. I give it entirely upon the authority of Mr. Lough.

842. It is a very striking return?—Yes, it struck me so.

843. You put it in without comment?—Yes.

844. Have you any idea what the charge was for 1894?—No, I have not got that, but I can get that for you.

845. How would you get it?—I will get it in the books of our department; we have got the totals.

846. You could compile it?—Yes.

847. You have the material?—Yes.

848. It was your own material that was used for the compilation of this return, I suppose?—Our own material after 1871; prior to that we had not prepared the local taxation statistics.

849. But you could continue this?—Yes, certainly.

850. Would you kindly let us have that among other things?—Yes.\*

851. The actual amounts are increasing, not only by decennial periods, but by annual steps, while the population is decreasing?—Yes.

852. The incidence of taxation is getting astonishingly high?—Yes, owing to the new charges and other liabilities imposed.

853. So high as naturally to call for examination in detail as to how it is and why it is that these charges do fall on the people?—Yes.

854. And this is with regard to the population taken as a whole?—Yes.

855. Within Ireland the charge falls unequally upon different districts?—Yes.

856. In some it is comparatively low?—Yes.

857. Would you venture to say from memory what would be the lowest rate?—For what purpose?

858. For any purpose?—I should think about 5d. or 6d. for poor rate.

859. What would you say would be the highest rate in any part of the country?—For poor rate this year, do you mean, or for an ordinary year?

860. For the same period the 5d. covers?—I should say about 4s.

861. Even more, perhaps?—On a particular division it might be more.

862. Give the highest existing rate anywhere?—I should say it would be higher than that.

863. What do you think it would go to?—Taking extreme cases, I should say from 5d. up to 6s. or 7s.

864. The disparity is very striking?—Yes, because of electoral division rating.

865. Where the poor rate is so very high you also find other charges very high?—Yes.

866. So that you may say that in respect of local taxation, speaking generally, the charge in Ireland is so distributed that the poorer the district almost the higher the charge?—That is so.

867. Will you kindly look at paragraph 78; there we have a list of what are called "additional rates" which the governing body is enabled to levy in order to defray certain special services?—Yes.

868. These additional rates again vary very much from a minimum of 1s. 6d. in the £ to a maximum of 3s. in the £?—Yes. You should remember that although these towns paid this additional rate they were exempted from the county cess, because this rate was a rate which was struck to enable them to take over the control of the roads which had hitherto been under the jurisdiction of the county authorities.

869. Clearly, and that will illustrate the desirability of having our separate returns for our separate rateable areas?—Yes.

870. Otherwise we shall be completely misled in our inquiries. We should be able to ascertain then what is the actual charge in each of these areas under this particular service?—Yes; this statement gives you the possible charges, and what you want is the actual amount.

871. This is all theory?—This statement gives you the maximum which might be levied.

872. That no doubt is so, but it does not furnish the facts?—Not of actual income and expenditure.

873. Let us look at Schedule C. on page 253. There we have a table of charges transferred from local to Imperial funds. Take one item—the item for the session 1896 for the Irish Constabulary, 1,341,642l.; when was that transferred from local to Imperial funds?—I think you will find that in paragraph 122 of the memorandum—in 1846.

874. What was transferred in 1846?—The cost of the constabulary.

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, p. 209. Witness subsequently revised column 4 of the table.

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, p. 209. Witness subsequently added the figures for 1894 and 1895.

Mr. H. A. Robinson.

Rates. Inequalities in different districts.

Constabulary charges.

County cess. Contracting out of Land Act of 1870 by land owners.

Local Taxation (Ireland) Returns, 1895.

Local Taxation, Mr. Lough's Return, (1826-1893). Local taxation per head increased.

*Mr. H. A. Robinson.* 875. The whole of it?—As a matter of fact it never was transferred as regards 50 per cent. of it, because it never was on it. One half was placed upon the locality in 1836, and one half was defrayed from the Exchequer, and then in 1846 the half was transferred.

875a. Is it correct to say that in the first instance the charge for the constabulary was placed, as regards half, upon the Exchequer?—I do not know that.

876. With regard to the transfer which you speak of, you limit your observation to the half which was transferred in 1846?—Which transfer?

877. Such transfer as you know of?—We simply took this information out and compiled this table from the ordinary parliamentary estimates.

878. Could you let us have a return or a compilation of returns showing us with regard to all local taxation the charge for each rateable or chargeable area the rates which exist, the amount of them for the area, the rate per £ at which they are levied, and the period for which they have been charged, for as many years back as you can with practical convenience go?—Of course, if the Commissioners require it we will do our best, but I cannot promise it for this reason, that we are so entirely dependent upon whether the officers of the local authorities, who are not under our control, will consent to take upon themselves this trouble. Remember that what you ask for is a return involving statistics from 4,000 or 5,000 different areas for a number of years.

879. I am not asking you to make the return. I am asking you whether it is possible, whether it is within the realm of human ingenuity from existing materials to get that information?—Certainly it is within the realm of human ingenuity, but it is just a question for the officers of the local authorities, and of whether we can compel them to provide us with the information we require. We have no statutory power to do so.

880. Who are those authorities?—First of all there are the municipal authorities and the county authorities, the town clerks and county officers who are not under the Local Government Board's control in any way.

881. Have you any reason to suppose that there would be any difficulty in a matter of this kind in getting the municipal authorities to help this Commission as much as possible?—I think if you want to go back to 1851 they would resent it very much. I am inclined to think it would cause very great difficulty and very great trouble. I am merely judging from the manner in which they treat our applications for similar returns sometimes. They complain very much of the labour involved. With regard to the union authorities, I do not think we should have much trouble there, because the union officers are more completely under the control of the Local Government Board, and I think they would probably do it. We should have some difficulty in the case of the officers appointed by the grand juries, who are not under our control in any way. In the case of many officers it would involve their obtaining local assistants who would have to be paid from local funds, and for that reason I believe that some of the local authorities might raise objection to it. But so far as the labour of the Local Government Board is concerned I can assure you we are only too anxious to give you every possible information that we can obtain, and my reluctance to give you a definite answer simply arises from the fact that the statistics would have to be obtained from officers not under our control.

882. You are uncertain as to the attitude of the local extra-official bodies?—Yes.

883. I see the difficulty there might be with regard to going back to 1851; do you think there would be any practical difficulty in going back for one 12 months?—No; I think we should possibly be able to get that without much trouble.

884. There would be no difficulty, you think, in getting complete returns at any rate for one single 12 months?—I think we could get returns for a single 12 months.

885. Returns complete?—Yes, if it is absolutely necessary.

886. From all authorities?—From the whole 4,000 of them.

887. Showing the existing rates upon every taxable area?—Yes. What the expenditure amounted to.

888. Those areas would be counties, baronies, unions, electoral divisions, and half-baronies sometimes, and in some cases townlands?—Yes, and dispensary districts,

special areas, labourers' cottage areas, and sanitary areas. We have named them all, I think, now.

889. Then at any rate you think there would not be any practical difficulty in getting a complete return, at any rate for 12 months?—I think we could manage it for 12 months; I think we could, but I will not be positive.

890. (*Chairman.*) Both the rate per £ and the total quantum raised?—Yes, I think we could get that; I am sure we can so far as the unions are concerned.

891. (*Mr. Arthur O'Connor.*) Where there happens to be anything specially localised you might state it through an asterisk and a footnote?—Yes.

892. (*Mr. Balfour.*) I am afraid I do not quite understand how land was valued with reference to what appears in paragraph 5 of the memorandum; perhaps you will kindly tell me. The memorandum says: "The valuation in regard to 'land' is made upon an estimate of the net annual value thereof with reference to the average prices of the following articles of agricultural produce":—Was this the sort of thing attempted to be done? Did they first ascertain or try to ascertain which of those articles the particular land produced?—Yes.

893. And then did they after that, having ascertained that it was productive of some of those articles, attempt to see what its productivity would be of those articles?—That was the course adopted. The valuator first went down, and he began by digging the soil with a view of ascertaining what the subsoil was, and examining the composition of the subsoil, that being regarded as one of the regulators of the power of the soil.

894. As indicative of its productivity of the particular articles?—Yes. Then the geological arrangement and mineral composition were considered, and a table of analyses was supplied to each valuator, and for each tenement in Ireland those particulars were given. Then the different kinds of land were described, whether stiff or friable, strong, deep, shallow, dry, or wet. The arable land was divided into three classes—prime soil, medium, or poor; and the pasture land was divided into dairy pasture, or store cattle or fattening land.

895. Having ascertained either by actual observation or by such examination as you have described, the quantities of the different kinds of produce which the land was likely to yield, did they then attempt to say what that land would stand in the way of rent, or what would be likely to be its value and rental?—What its value would be.

896. Annual value?—What its annual value would be.

897. How do you distinguish that annual value; is that lettable annual value, or would that comprehend both the tenant's profit and the landlord's share?—I am inclined to think, though I cannot speak positively, from reading over the particulars of the lines upon which the Commissioners proceeded that it would also include the value of the land to the tenant.

898. It would include that, but it would not include the other; then would the result in such a case be what the land might be expected to yield in the hands of its owner?—If it was in the hands of its owner?—Yes.

899. Then it would not give you rent at once, because the rent would be something less than that?—Yes.

900. Then was there no attempt made to ascertain by the process that you have just described letting value?—No, I think not. The valuation for land was not the letting value—only for houses.

901. That seems to come to this, does it not, that what is called here land—whatever falls under "land"—the problem was not attempted to be solved with respect to it, which is with respect to all the other kinds of property, to wit, the term "lettable value"?—That is so.

902. So that the result arrived at on that principle would not be comparable either with the letting value of land in other countries or with the letting value of other real estates in Ireland?—No.

903. I should just like to put a question about the division of rates; did I rightly understand you that what is called the valuation remains constant, and that when the letting value—the actual rental—gets below that, the relief that is given by the gentleman you call

*Mr. H. A. Robinson.*

19 Mar. '97

Valuation of land. Principles observed. Procedure adopted.

Valuation of land. Annual value, what it meant by.

Valuation of land. Reduction of rent below. Occupier pays more than half of actual amount of rates.

Rates. Amounts and particulars of, from all rateable

Possibility of obtaining returns.

Mr. H. A. Robinson.

the immediate lessor is a certain poundage upon what he gets?—Yes.

904. But not upon the total rate?—No.

905. So that apparently in the case where the actual rent has gone below the valuation, the lower the rent goes the greater the proportion which remains to be paid by the actual occupier or tenant?—Yes, that is so.

906. Then you said the immediate lessor—I am putting this purely for information; I do not know, but I fancy it is so—you said the immediate lessor in many cases is not the owner?—Yes, in many cases.

907. Is that what you call middle interest in Ireland?—Yes, it may be so; he may hold under a head rent from somebody else.

908. Where there is a person interposed that you describe as the immediate lessor, where one or more persons interpose between the actual occupier even where there is one person interposed between the actual occupier and the owner of the soil, the owner of the soil apparently pays no proportion of that rate?—The immediate lessor may deduct a certain proportion of the rate from him.

909. That would be by arrangement, though?—No; by the law.

910. I do not think you mentioned that?—I will read you the section, and you will understand it: “Where any person receiving rent in respect of any rateable property also pays a rent in respect of the same, he may deduct a sum bearing such proportion to the amount of rate deducted from the rent received by him as the rent paid by him bears to the rent received by him.” It is in the same Act, 1 & 2 Victoria, chapter 56.

911. I quite understand the operation of that as between the actual occupier and his immediate lessor, but would the same operation be performed upwards, however many persons there were between the actual occupier and the ultimate owner?—There are not generally more than one, but it would go up.

912. On the same principle?—On the same principle.

913. I have no doubt it is familiar to some members of the Commission, but I do not know it; what does the jury cess in Ireland cover—I mean what is done with it?—You will find it all in paragraph 27. It is principally for roads, bridges, footpaths, court-houses, county officers’ salaries, county infirmaries, the cost of maintenance of such lunatics as are maintained in county lunatic asylums, weights and measures, loans, extra police, and a portion of the valuation.

914. My friend, Mr. O’Connor, called your attention to Table I,\* and you mentioned, in reference to the 7s. 1d. per head, the figure which came out in 1851, that the Poor Law was in force by that time?—Yes.

915. What was the date of your Irish Poor Law Act?—1838; but, as a matter of fact, the workhouses were not all built until 1848.

916. So that it was before 1843; but it had not then developed?—Yes.

917. Can you account for the very large increase between 1851, when the Poor Law had come into operation, and, let us say, 1892, or even 1891, when it was fully double?—I think you will find in paragraph 47 all the additional taxation.

918. Is it due to additional taxation?—Yes.

919. And not to an increase of the poor rate?—No, not during those periods to an increase of pauperism.

920. (Chairman.) For instance, the district which is rated at 5s. in the £ for the light railway that broke its bridges would be one of the items which would add to this volume of increased taxation per head?—Yes, up to the present date.

921. (Mr. Balfour.) You gave an answer distinguishing, and rightly distinguishing, if I may say so, between what is assessed as part of the poor rate and the poor rate itself; could you tell us, let us say, between 1851 and 1891—that is during 40 years—how the proper poor rate, that is to say, the part of the rate levied under that name applicable to the support of paupers, or the relief of paupers, compares in those two years—I have taken the two years Mr. O’Connor did, 1851 and 1891?—I can get that for you, but I have not got it here. Table IV.†

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, p. 260.  
† *Ibid.*, p. 274.

shows you that the charges, other than Poor Law charges, have increased very much; the proportion of them to the whole Poor Law expenditure has increased.

922. So then, perhaps, deducting them from the total one would get it; would that be so?—You will see by referring to the last two columns of that table that the per-centage of the expenditure for the relief of the poor was 79 per cent. in 1875, and only 21 per cent. for other purposes in 1875; and that it has been gradually changing, and now it is 35 per cent. for other purposes than Poor Law administration, and the proportion for Poor Law purposes has gone down to 65 per cent.

923. Those figures, of course, were very striking at first, but they must be corrected by deducting the other charges. You could not at the moment, perhaps, tell what part of the 7s. 1d. was for the proper relief of the poor, and what part of the 14s. 10d. was for the proper relief of the poor?—I could not at present.

924. But those per-centages would seem to afford the means of getting at it approximately?—Yes.

925. You gave some figures to my friend, Mr. O’Connor: the lowest poor rate at 5d. and the highest at about 6s. or 7s. In calling those “poor rates” did you mean to distinguish what is properly applicable to the relief of the poor from all that is levied under the name of the poor rate?—No; all the purposes for which guardians levy rates are all levied together.

926. I mean that would be in the 5d. and also in the 6s. or 7s.?—It would. I should like to explain further that those were not the average rates over an entire union, but rates over a particular electoral division. That system of electoral division rating presses very hardly in Ireland, because the towns and very populous places have to bear a very high rate for Poor Law purposes, whereas other districts have a very low rate; where there are very few people in a rich electoral division, they have low rates to pay.

927. I was just going to ask you the kind of districts as regards character, rural or urban, populous or the reverse, where the 5d. is compared with the 7s. rate?—The lowest rates are on rich lands with small populations and few paupers and few villages—large tracts of grazing land.

928. Rural but wealthy?—Yes; and the high rates would either be in towns where there was a large population, or else they would be rates on poor and populous localities in the congested districts.

929. With a relatively large pauperism?—Yes.

930. (Mr. Arthur O’Connor.) There is Behnullet?—Yes.

931. (Mr. Balfour.) Am I right in understanding that you reject altogether the parish as a unit for assessment or valuation?—Yes.

932. Is it not a unit?—No.

933. When you speak of an electoral division, does that consist of more parishes than one, or may it be either way?—No, I should say not.

934. Is it smaller or larger than a parish?—It is smaller than a parish.

935. (Mr. Arthur O’Connor.) Is it?—Yes, it is very much smaller as a rule than a parish.

936. (Mr. Stuart-Wortley.) Could you tell us in what cases the Act of 1870 laid upon the landlord a liability to pay half the county cess?—In what number of cases?

937. No, in what class of cases; how is the class of cases limited? Look at paragraph 48 of your memorandum?—All new tenancies created since the passing of that Act; in all those cases.

938. There is no limit of rateable value?—Nothing of that kind.

939. All agricultural tenancies?—Yes, provided that the occupier went into occupation in the case in which there was a new tenancy. It was not sufficient in the case of the over 4l. rated man that the tenancy should have been a new one, but he should also have gone into occupation; that condition is absent in the under 4l. cases.

940. Before that Act the division was only as regards the 4l. tenancies?—There was no division before that Act at all, it was altogether assessed on the occupier.

941. (Mr. Arthur O’Connor.) Speaking about the difference in principle between the system in vogue in this country and the system in vogue in Ireland, would you not say that a very important feature consists in

Mr. H. A. Robinson.

19 Mar. ’97

Rates. Inequalities in different districts.

Rating areas. Electoral divisions. Size of, compared with parishes.

County cess. Payment of under the Act of 1870.

Valuation. Administrative systems in England and Ireland compared

Mr. H. A.  
Robinson.

19 Mar. '97

this, that the valuation in Ireland is absolutely centralized and official on the part of the executive, whereas the valuation in England proceeds upon a popular basis, and is conducted locally by committees of assessment?—That is so, by the district assessment committees.

942. (Mr. Dalton.) Can you say why the local authorities in Ireland have never had anything to do with the valuation?—That is an historical matter.

943. They have never had anything to do with it?—No, they have never had anything to say to it, except under the first Poor Relief Act before the tenement valuation took place; then the local authorities had to do with it. There was only a townland valuation, but the poor rate was made upon the holdings, or hereditaments, and boards of guardians then had the power to re-adjust the amount assessed on each townland between holding and holding, but they never had any power, so far as I can make out, to absolutely fix the amount of the valuation of their union.

944. The amount of the valuation has always been settled by central authority?—Yes.

945. Without any communication with the local authorities and without taking their advice in any way?—I cannot say whether it was without communication with them or without taking their advice, but, of course, in regard to the present valuation of houses the reviser in going round is accompanied by the poor rate collector; whether he takes his advice or not I cannot tell you; you must ask the Commissioner of Valuation about that.

Cost of  
valuation  
in Ireland.

946. The cost of Griffith's valuation when it was made in 1852 I think was very large?—325,000l.

947. I suppose it is partly the cost which prevents any new valuation?—I fancy that is the reason.

948. You would be more likely to have a valuation up to date if it was done by the local authorities?—Yes.

949. You would not have to be confronted with such a huge sum to pay for a valuation?—Of course, if the local authorities had to bear the expense of the valuation I presume that it could be carried out.

Valuation,  
Griffith's  
Prices of  
commodities  
in  
1852 and  
1896.

950. When Griffith's valuation was originally made the prices with the exception of wheat were considerably lower than they are now?—Was not flax rather higher?

951. Flax was higher and wheat was higher; do you grow much flax in Ireland?—In the north of Ireland they grow a good deal of flax.

952. All the other items that you have in the table in paragraph 21 I think have gone up, some of them very considerably, according to that table?—Yes.

953. It is of great importance to know whether the figures in the table are accurate?—They have been compiled by the Land Commissioners, and I think that they very fairly represent, so far as I am able to judge, what the prices are.

954. Do you think they were equally reliable in 1852 which is the first column in the table, because that column was not supplied by the Land Commission?—No; that is a statutory valuation, and, of course, I cannot say anything about that.

955. The whole valuation rests on those figures; have the figures for 1852 ever been doubted in any way?—I have never heard them doubted; I think they have generally been considered as fairly representing the value of produce at that time; I have always heard so.

956. If anybody was to go down to a district now and make the valuation on the same principle as in 1852 by taking the produce of the land and the prices, the land would be much more valuable than it was in the valuation of 1852, if that valuation was a correct one?—I suppose it would, if they went on recent years' prices.

Valuation,  
Griffith's.  
Difference  
between  
actual  
valuation  
and actual  
letting  
value.

957. In a memorandum to his report to which you refer in paragraph 2, I see Mr. Griffith says: "In regard to the difference between the valuations of land adopted by me under the Act, and the actual letting value. I have to observe that our valuation is about 25 per cent. under the full or rack rent value"—Yes.

958. The old valuation, therefore, was under the then letting value?—Yes.

959. But questions have been asked you which have brought out the fact that the letting value now is considerably less than the letting value was, I think, at the time of his valuation?—Yes.

960. Is there not some discrepancy between those two results; is not some explanation required? If the

valuation in 1852 was 25 per cent. below the rack rent value, and it is now above the letting value, and you also have the fact that the value of the produce has gone up in the interval, what is the explanation?—I should say that the rents were too high in those years that he was referring to.

961. You cannot, I suppose, say, speaking generally, if there were a fresh valuation of land at the present time in Ireland, and it was carried out on a fair system as to annual value of the whole of the land, taking the double interest of the landlord and the tenant, whether it would be higher or lower than the present valuation?—I would not like to express any opinion about that; I am not the Commissioner of Valuation.

962. Can you give us the definition of land for the purposes of Griffith's valuation?—There is no definition of land in the Valuation Acts, but I fancy that the definition would be that it was property other than buildings or fisheries, canals, navigations, railway roads, tramway roads and all the other properties which are distinguished from land.

963. There is no definition in the Act?—There is no definition in the Act at all.

964. But you must get some definition, because the annual value of the land is not to increase in any townland; what do you practically take as the meaning of the expression "land"?—What is not built over.

965. Any land not built on?—I should think so.

966. The last valuation, I think, is conclusive, not merely for local rates, but also for income tax purposes?—I am not sure about that.

967. There is a statement, I think, to that effect in your memorandum, in paragraph 20, beginning with, "On the basis of this valuation"?—Will you read the whole paragraph?

968. "On the basis of this valuation are levied also the assessments under Schedules A. and B. of the Income Tax Act, 1853 (as amended by the Finance Acts of 1894 and 1896), in respect of the ownership and occupation of land and buildings." How is this valuation applied for the purposes of the income tax?—Will you refer to the Acts? I am inclined to think that the amendments are that the owner can decide whether he will pay it upon the rent or upon the valuation.

969. But in many cases, I presume, it will be paid upon the valuation?—Yes.

970. I think you have said that the valuation is not uniform in different parts of the country?—No.

971. If that is so, a serious injustice would be done to the payer of income tax in the parts of the country where the valuation is too high, and where it is too low the payer of income tax will not pay his proper quota?—Yes. I assume that if it is too high in one place and too low in the other, the want of uniformity is unfair.

972. I think it is stated in paragraph 4 of your memorandum that it started with a great lack of uniformity in 1852?—Yes.

973. (Mr. Arthur O'Connor.) I think the lack of uniformity was admitted?—Yes.

974. (Mr. Dalton.) You gave us a good many figures to show that this valuation was not uniform originally?—Yes.

975. It is not likely to have become more uniform since?—No.

976. I see in paragraph 14, section 2, of your memorandum that improvements of farms are not taken into account for the assessment until seven years after they have been carried out?—Within seven years after.

977. What are those improvements precisely?—(1) drainage, (2) reclamation, (3) embankment, (4) erection of farm, (5) out-house or office buildings—

978. Would "erection of farm" include a farmhouse?—I have taken those from the words of the statute; I am not quite sure what they include.

979. In the case of houses, I presume, other than farmhouses, they come into assessment at once?—Yes, in the annual revision the improvements are taken into consideration.

980. Is it entirely a question of the cost of the valuation, or is it a question of the unpopularity of re-opening the valuation which has kept this old valuation of land going so long in Ireland?—There are

Valuation. What is rack rent? How determined.

differences of opinion on the subject. Many persons would like a new valuation and others would not. But then I am inclined to think that the very great cost has a great deal to do with it.

981. You have no school board rates in Ireland, have you?—No.

982. Can you say from what source the Commissioners of National Education derive their revenue; besides Government grants have they any other revenue?—I cannot give particulars of the other funds they have got.

983. What would they do if the Imperial grants fall short?—They are not under the Local Government Board at all; they are under the Board of National Education.

984. We should go to them for information upon it?—Yes.

985. On the question of police I think you say in paragraph 122 that the Royal Constabulary was intended by Sir Robert Peel "as compensation to Ireland for the effects of free trade"; where can we find the authority for that statement—in Hansard?—In the debates in Hansard.

986. In what respect was it considered that Ireland suffered from the effects of free trade more than England?—I presume Ireland lost her market with England to some extent.

987. In paragraph 48 you suggest, I think, that there should be a further contribution towards the cost of pauper-lunatics from the Imperial revenue?—No. The whole of those were various suggestions and claims that have been put forward by persons in districts where the pressure of taxation was very severely felt, and I explained that all these observations were written very hurriedly out, and I did not intend them to be printed. I have not yet revised it.

988. Can you say whether the lunatic grant in Ireland is practically the same as the lunatic grant in England?—The amount, 4s. per week per head. I think, is the same.

989. (Mr. Elliott.) Can you supply us with any further information bearing upon the comparability of the figures you have given as to the valuation in Ireland with the similar figures we have had before us with regard to Scotland and to England? I understood you to say that what is known as Griffith's valuation was 25 per cent. below the rack rent?—He said he considered it was that amount below the rack rent.

990. Can you tell me what he meant by rack rent?—I think he meant the full rent which an occupier would give.

991. The full rent which an occupier in Ireland would give?—Yes, which the occupier in Ireland would give.

992. According to the custom of the country?—According to the competition, I should think.

993. According to the custom I meant, with regard to land tenure in Ireland?—Yes, I should say that that was the meaning of it.

994. Would the expression "rack rent," mean the same thing in Ireland as in England or in Scotland?—I am afraid I should have a difficulty in answering that question, not being aware what the conditions were in England, Scotland, and Ireland at that time.

995. In regard to Ireland, the fact of the existence of the system of what is known as dual ownership would tend to increase the property in the hands of the tenant, would it not, and to diminish the property in the hands of the landlord?—To increase the property in the hands of the tenant?

996. Yes. I ask this question for the purposes of comparison; the tenant would own a portion of the property which in the case of England would be in the hands of the landlord?—I feel a difficulty in answering, not knowing what is the case in England.

997. In the memorandum which has been given to us by the English Local Government Board, we have been informed that the value of assessable hereditaments is to be regarded as the net annual value, that is to say, "of the rent at which the same might reasonably be expected to let from year to year, free of all usual tenant's rates and taxes, and title commutation rent-charge, if any, and deducting therefrom the probable average annual cost of the repairs, insurance, and other expenses, if any, necessary to maintain them in a state to command such rent." Would that definition

that I have just read to you, in your opinion be what was referred to by Mr. Griffith as "rack rent"?—I find a difficulty in answering positively as to what was in Mr. Griffith's mind. My impression is that he used the term in the sense I have defined it.

998. It has been the practice in Ireland, has it not, for the tenants to effect improvements which in this country have been done by the landlord?—Yes.

999. The tenant would not of course pay rent for those improvements?—I am really not conversant with the principles of fixing the fair rent at all; it is altogether done by another Department.

1000. Do not answer this, if you think I am going beyond your province. Would you say that the rent which is paid by a tenant in Ireland is comparable from a statistical point of view with the rent which is paid by a tenant of agricultural land in England?—I am very sorry I cannot answer it.

1001. There were, however, some statements made by you in answer to Mr. Balfour, I think, which bear upon this point; you said that in Griffith's valuation, you thought it probable, that the tenant's profit had been included?—Yes, I gave a statement.

1002. What did you mean by tenants' profit?—What I wish to convey in that answer was that Griffith in making his valuation for assessment purposes took into consideration the valuation of produce and the profit which a tenant would make out of it.

1003. Did he take into account the whole product of a farm irrespective of any question of division between the occupier and the owner?—I think those were the lines he went on.

1004. He took the whole product of the farm?—Yes, upon the principles laid down, and at the prices given by the statute.

1005. Then if it be the case that in England the whole produce of the farm is not taken into account in fixing the rateable value, the valuation in Ireland would compare excessively with the valuation in England?—I suppose so.

1006. Notwithstanding the fact that the assessment was in Mr. Griffith's opinion 25 per cent. below the rack rent?—Yes.

1007. You see no inconsistency between those two replies?—You must remember that the rents were often very high and that the rents were not fixed by any statutory authority at all, but were whatever the persons liked to charge, or what they might obtain.

1008. With regard to the general questions which this Commission has been appointed to consider, have you received many complaints in Ireland with regard to the inequity of the present system of local taxation in Ireland?—Yes numerous complaints.

1009. Could you tell us what those complaints have principally been?—Principally as to the very oppressive system of rating for poor law purposes. At present the charge for indoor pauperism and outdoor pauperism is charged nearly altogether upon the small sub-division of a union, the electoral division, and in some of these cases the electoral divisions are so small, that the cost of one or two paupers will bring a rate up to an extremely high amount. In that way you may very often have a union with an average rate we will say of about 2s. in the £. in which the rate on one electoral division will be 5s. or 6s. in the £. It is also very oppressive in the case of towns, because the towns are generally comprised in one electoral division, and, as the general tendency when people are out of work or sick, is to migrate to the towns to obtain hospital treatment or employment, and as many of these people remain there until they become chargeable on that electoral division it follows that the urban electoral division has to bear a charge for the maintenance of a great many more persons than those who properly belong to it.

1010. That complaint then may be summed up in this way; it is a complaint of area against area?—Yes.

1011. Is there any complaint with regard to the distribution of the burden in all areas—with regard to the ability of the ratepayers to bear the burden?—Between area and area?

1012. No, I am speaking now of complaints between individual and individual in the same area?—A complaint as to what?

1013. I will give you a concrete instance. Is there any complaint that the farmer is more heavily burdened

Mr. H. A. Robinson.

19 Mar. '97

Rating for poor law purposes. Inequalities in amounts in electoral divisions. Complaints against present system.

Rating for poor law purposes. Amounts paid by different classes. Farmers and trades men.

Mr. H. A. Robinson.

19 Mar. '97

than say the doctor or the professional man having a similar income?—Yes, there is that complaint.

1014. From what quarters does that complaint proceed with regard to the poor rate?—In those rural districts where there is a shopkeeper, or perhaps one or two shopkeepers doing the entire trade of a very large extent of country, each of those men having a very small holding, perhaps merely to the value of the shop. The entire money of the district passes through their hands, so that they are extremely wealthy men and better able to contribute towards the relief of pauperism than some of the people themselves; and, further, these men make a great deal more use of the roads in carrying their supplies backwards and forwards than the farmer—I think there is a general feeling that those men are taxed too lightly.

1015. In other words, that the farmer in proportion to his ability is more heavily burdened than the shopkeeper or the private resident?—Yes, or the professional man.

Property not rateable. Complaints.

1016. Is there any complaint of inequality as regards different classes of property; is there any desire that other property than the property now rateable should be brought into contribution?—It is very difficult to see how it could be done.

1017. I am not asking that; I am asking whether there is any feeling of injustice on the part of the owners of the property now rateable with regard to the non-rateability of other property?—Yes, there is a feeling that the land which is poor in paying the entire share of the county cess and poor rates is unduly burdened.

Exemptions. Properties exempted.

1018. Is any complaint made with regard to the existing exemptions from rateability?—No, I think the exemptions are not generally very unpopular—I have not heard any complaints about them. There are very large exemptions. I suppose very nearly on a valuation half a million.

1019. Would you tell me—I think it is in the memorandum—what are the principal exemptions?—Churches and buildings of a public nature, or for charitable purposes, or for the purposes of science, literature, and fine arts. Lighthouses are exempt also.\*

1020. (Mr. Arthur O'Connor.) And schools?—Yes; and bridges—anything that is regarded as a public purpose; that is defined in paragraph 16 in our memorandum.

1021. (Mr. Elliott.) With regard to property held for charitable purposes, what meaning is attached to the term "charitable purposes;" are those purposes necessarily eleemosynary, or are they charitable in the very wide sense of the term as adopted by the courts of law?—I think they must be charitable, and that no profit must be derived by any person from them.

1022. They are not merely eleemosynary purposes?—No; I think the term is wider than that.

Rating of owners in respect of properties burdened with charges. No deductions allowed.

1023. Is there any grievance on the part of the owner of property that he is not entitled to obtain the allowance of any portion of his rates from a mortgagee, for instance?—I have heard complaints of that class occasionally.

1024. I suppose incumbrances upon property are very numerous in Ireland?—Yes.

1025. There is no provision for any deduction of rates by an owner paying interest to a mortgagee?—No.

Ground Rents, deduction from.

1026. Is the system of ground rents operative in Ireland to any large extent?—In the towns it is operative very largely.

1027. Is there any complaint of inability to deduct a proportion of the rates from ground rent?—They can deduct a portion of the rate from the ground rents.

1028. What rates can they deduct a portion of from the ground rent?—Poor rates.

1029. Can they do so in the case of other rates?—The poor rate is all they can deduct. You will find that in paragraph 37 of the memorandum.

1030. That power of deduction extends all along the line?—Yes.

Division of rates between owner and occupier above 4l. valuation, reasons for.

1031. Each interest in the property by a system of deduction apportions the burden of the rates?—Yes.

1032. Then, with regard to the division of the rates: in regard to some rates half is assessed on the tenant and half on the owner, is it not?—Yes.

1033. Are you able to give the Commission any information as to the reason why one-half was adopted?

—No, I am not quite sure of the principles upon which they made that deduction.

1034. You could not tell us why it was not one-third or two-thirds?—No, I think I know the reason for the deduction of the whole of the amount, but I do not know the reason for fixing one-half.

1035. Would you tell us that?—I think the reason for the deduction of the whole with the under 4l. people was that it was at that time felt that there was great poverty among that class of persons, the distinction between them and the destitute was scarcely perceptible, and the landlord would be in a better position to pay in those cases. The line was drawn at 4l.

1036. In the case of these small properties was the object in assessing the owner the convenience of collection rather than the desire to relieve the occupier from a burden which he would otherwise bear?—I think it was to relieve the occupier in those cases—the under 4l. cases.

1037. Was it supposed that the occupier would eventually bear the burden if he paid it?—No.

1038. Was not the idea rather that it would be more convenient in those cases to collect the rates directly from the owner?—No, I think the reason was that which I have given. I have also seen it stated that another reason was to diminish the occurrence of evictions by making the cost of relieving the persons who were evicted a burden upon the property. There were a lot of these very small holdings, and in the discussions which I have read on the subject I gather that it was because of the occupiers' poverty and to prevent a multiplication of small holdings and evictions that the incidence of poor rate was decided on.

1039. Would that not be rather a reason of convenience than a reason of incidence?—No; I think that the objects of placing upon the landlords the entire poor rates for these small holdings were those I have mentioned. If the whole of the electoral division was cleared or an entire property, the landlord would then have to maintain the tenants in the workhouse. It certainly acted as a deterrent very often. It also had the effect of making them provide labourers' cottages and to do more in that way.

1040. You stated that there was a difference between the grand jury cess and the poor rate—that the grand jury cess was a rate struck on the rateable hereditaments themselves, but that the poor rate was a personal tax?—Yes.

1041. Could you give any further explanation of that statement?—I could give no further explanation, I think, than that which I gave the Commissioners in explaining that whereas in the case of the poor rate you can proceed upon the person liable in any part of the country, in the case of the county cess you cannot do so, and you can only proceed upon the land.

1042. Are what are known in England as the local taxation licences paid over in relief of local taxation in Ireland?—The local taxation licences? No, I do not think they are. Ireland gets an equivalent, though it does not get the local taxation licences.

1043. Do you give in your memorandum any account of the mode in which that equivalent is apportioned?—We also get our proportion of the beer and spirits licence.

1044. Those are beer and spirit duties, are they not?—Yes.

1045. I was referring to publicans' licences, for example?—We do not get those in Ireland. We get an equivalent.

1046. Do you know at all what proportion that equivalent bears to the aggregate receipt for licences?—No, I do not.

1047. (Mr. Smith.) Have you received many complaints at the Local Government Board in Ireland on the principle of the valuation of land in Ireland?—They would not be addressed to us; they would be addressed to the Commissioner of Valuation.

1048. I think you said that the towns of Ireland were divided into three classes?—Yes.\*

1049. I think you said we may dispense with the Lighting of Towns Act as being almost obsolete?—Yes, that is so.

1050. You may disregard that for all practical purposes?—Yes.

Mr. H. A. Robinson.

19 Mar. '97

1051. So that the towns in Ireland are divided into those under the Municipal Corporations Act and a number of smaller towns governed by town commissioners?—And a third, which are the towns under local Acts.

1052. They are probably an increasing number?—Yes.

1053. Now, apart from the original valuation of land being dependent upon the estimated prices of certain articles of produce, the principles of valuation of other property—town property especially—are very similar to those in England, are they not?—Yes, very similar.

1054. Such as houses and buildings?—Yes.

1055. Railways, gasworks, waterworks?—I do not know about gasworks and waterworks; the houses and buildings I do know about.

1056. You would not be sure about gasworks and waterworks?—No.

1057. If there is an exception I should like to know what it is?—I think the Commissioner of Valuation could tell you that.

1058. The law of rating is identical to that of England, is it not, as regards the principles for arriving at the value?—I am afraid I do not quite understand.

1059. First of all you said the principles of valuation are the same?—For houses and buildings, yes.

1060. Is there any material difference between the decisions of the Irish courts and of the English courts as regards rating, or does one follow the other?—The rating is so different in the two countries that the decisions of the courts would be different.

1061. The actual rating is different, but the principle of valuation is the same, is it not?—Yes, for buildings.

1062. Perhaps, I should say, the decisions on the principle of valuation?—So far as they are the same, the decisions are equivalent.

1063. You are acquainted with the English returns of the Local Government Board, are you not?—I have read them.

1064. Do you find that they give details of every rated area in England?—No, not of every rated area. I speak, subject to correction: they give them of the unions apparently.

1065. You were asked this morning to go into much smaller divisions than unions?—Yes, because we have them now.

1066. You cannot find, for instance, in the English returns the rates in the £ of every parish in England?—No, I have not found that.

1067. Just one other question arising out of Mr. O'Connor's cross-examination: I think you said that the poorer the district the higher the charge?—Yes.

1068. That is not peculiar to Ireland?—No, I dare say not.

1069. You say that complaints have been made as between area and area; does that not point to something like the union chargeability that we have established in England?—Yes.

1070. Is that a question for the Local Government Board or for the valuer?—The question of an alteration of area, of course, is one which concerns the Local Government Board.

1071. I do not think it is fair to ask you what their opinion is?—The opinions of the boards of guardians?

1072. I am rather anxious to know what view the Local Government Board take of it?—I have no objection to say that we would be in favour of the English system of union rating for Poor Law purposes.

1073. The spreading of the rate over a larger area such as has been done in England?—Yes.

1074. Of course you are aware that in England every parish once maintained its own poor, and a very unsatisfactory state of things it was?—Yes.

1075. I think Mr. Elliott asked you a question about the complaint that the farmer paid more than the professional man. I suppose the farmer in Ireland pays very few other taxes than rates, does he?—Yes, very few beyond the indirect taxes.

1076. Beyond what he pays indirectly on articles of consumption?—Yes.

1077. (Mr. Elliott.) With regard to the assessment of farms, can you tell me whether one assessment is

made for the whole of the farm, inclusive of the farm buildings and the farmhouse?—Whether one assessment is made?

1078. Whether one is made for the land and the buildings thereon?—The valuation lists give the entire tenement as one number.

1079. Inclusive of the farm and the buildings upon it?—Yes, as one number. If the farm was subdivided, the valuer, in coming round, would make out the difference and divide it between man and man, but he would not increase the value of the land. If the farm building was increased in value I suppose he would put an increased value on that.

1080. (Chairman.) I understood you to say, I think in answer to Mr. O'Connor, but I am not quite sure, that you would like to see a system in which the valuation was based on actual facts locally ascertained?—I would like to see a uniform system.

1081. The point that I want to found another question upon is this: that the system was to be upon actual facts locally ascertained?—Yes. That is only a personal opinion; it is not the opinion of the board.

1082. I want to know whether it is your personal opinion?—Yes, it is.

1083. What are the actual facts which you would desire to see locally ascertained?—Value on account of the proximity to a market and various other circumstances, such as the facilities for obtaining manure from a seaside situation, for instance, and the conditions of climate and subsoil, all those various conditions.

1084. But still disregarding in the case of agricultural land, the actual letting value?—Between landlord and tenant?

1085. I will take it in that way. Do you see any difficulty, owing to the conditions of land tenure in Ireland, to taking the actual letting value of a holding for the purposes of assessment?—I do.

1086. Would you state it to me?—I think that the difficulty would be that then you would be valuing for assessment purposes merely the landlords' interest in the holding.

1087. You would agree with me that to value only the landlords' interest—the lessors' interest—is not a sufficient basis for local purposes in Ireland?—No, it is not.

1088. (Mr. Arthur O'Connor.) With regard to the facts actually ascertained, would not that be the system which is now adopted in England? Do not the local assessment committee assess?—I know that the local assessment committee revise the value in England, but I do not know anything about their system.

1089. It is local?—It is local.

1090. (Chairman.) Would you turn to Table I. on page 269; I understand that that table is quoted *simpliciter* from a table which was submitted by Mr. Lough to the Financial Relations Commission?—Yes.

1091. It will be possible, I understand from you, to give us the details from which that summary was compiled?—From 1875 certainly, but there might be some difficulty before that.

1092. There must have been some details for all that table, or else the results could not have been arrived at?—Yes, undoubtedly they got them from somewhere.

1093. Where can we get all the details from which Mr. Lough made that table?—I think we could get them for you; we can endeavour to do so. What I wished to convey was more this—that we could not be responsible for the accuracy of any of them prior to 1875.

1094. But would it not be a useful subject of investigation for this Commission if we are to found anything upon the results which are given in this table, that we should see the basis upon which it is compiled?—Yes, I think it would be important.

1095. To whom should we apply for that?—I shall endeavour to get it for you.

1096. (Mr. Arthur O'Connor.) And to continue it up to date?—Yes.

1097. (Mr. Dalton.) May I ask one question on that table? The rate per head of population of the local taxation according to that table for 1893 is put at 16s. Are you aware that that is very much below the rate per head of local taxation in England?—No, I am not aware of that.

Valuation of farms. Land and buildings assessed together.

Valuation of land. Suggested improvements in present system.

Valuation of land. Actual letting value not a sufficient basis for assessment purposes in Ireland.

Local Taxation, Ireland. Mr. Lough's return. Details on which based.

Local Government Board Returns, England. Details given.

Rating. The union as area for advantages of such a system.

Rates and taxes paid by farmers.

*Mr. H. A. Robinson.*  
19 Mar. '97  
Rating for Poor Law purposes. Electoral divisions, the unit.  
Law of settlement in Ireland.

(1098. *Chairman.*) I want to know a little more about this electoral division system of rating which obtains. I understand, mainly for Poor Law purposes?—Not necessarily altogether for Poor Law purposes.

1099. Mainly?—Mainly, yes.

1100. Have you any law of settlement in Ireland for paupers?—There is a law for fixing the chargeability of paupers within each union.

1101. You used an expression which struck me as being somewhat strange if I heard you rightly: that in periods of depression rates upon certain districts, more especially towns, rose because individuals went to those districts temporarily, and there became chargeable?—What I meant was that they remained there for some years and became chargeable.

1102. Supposing an individual seeks Poor Law relief, what is the test which decides to what area he would be made chargeable?—If he has remained four years out of five, or two and a half years out of three in the division he is chargeable to that division; if he has not, if he has remained less than that period in the division, he is charged to the union at large.

1103. But supposing his residence has not been in the same union, what happens to him?—Do you mean a tramp, moving from union to union?

1104. Yes?—He is then a union charge.

1105. Supposing an individual becomes chargeable in a union and cannot be allocated to any one of the

*Mr. H. A. Robinson.*  
19 Mar. '97

particular electoral divisions which you have indicated to us, has the union as a union any redress against any outside area?—No.

1106. No matter where the person was born?—No. If the man walked across the boundary from one union to another he is chargeable to the union in which he became destitute.

1107. (*Mr. Balfour.*) There is no law of settlement?—No.

1108. (*Mr. Smith.*) And no status of irremovability, as we call it in England?—No.

1109. (*Chairman.*) When did the system of placing rating upon an electoral division within a union first come in?—It was put into the Poor Law Bill when it was passing through the Lords.

1110. At what date?—In 1838.

1111. Were electoral divisions in existence at that time?—No, but they were ordered to be made for electoral purposes.

1112. At the same time?—Yes. When the Bill was passing through the House of Lords it was amended. Instead of using these divisions solely for the purposes of electing representatives of the people on the Poor Law boards, it was thought that it would give property owners an interest in the management of their own union and electoral division by making those divisions also areas of chargeability for indoor and outdoor relief purposes.

*Mr. H. A. Robinson.*  
19 Mar. '97

Electoral divisions for rating purposes, so constituted in 1838.

The witness withdrew.

Adjourned till Thursday next at 12 o'clock.

## FOURTH DAY.

Thursday, 25th March 1897.

At 16, Victoria Street, S.W.

### PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Viscount EMLYN.  
The Right Hon. J. B. BALFOUR, Q.C., M.P.  
The Right Hon. Sir J. T. HIBBERT.  
Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.  
C. A. CRIPPS, Esq., Q.C., M.P.

H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
J. L. WHARTON, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. RICHARD HILL DAWE called and examined.

*Mr. R. H. Dawe.*  
25 Mar. '97

1113. (*Chairman.*) I believe you are town clerk of Kingston-upon-Hull?—That is so.

1114. How long have you held that office?—12 years.

1115. I understand that you are delegated to appear here to-day as representing the Association of Municipal Corporations?—That is so.

1116. As you are the first witness from that body, I will ask you what is the constitution of the association and who are the members of it?—The association is constituted of all the municipal boroughs throughout the kingdom who desire to become members. The members of the association are the municipalities themselves, who appoint representatives always, I think I may say, including the town clerk, but also other members of the council.

1117. How many members are there of the association?—I have not brought those figures with me, but I

think all the municipalities, with the exception of half-a-dozen in England and Wales, are members, and there are also one or two from Ireland that have just been elected.

1118. The first one or two paragraphs of your memorandum\* I need not take you over, because we have had the facts from a witness from the Local Government Board. In the fifth paragraph you say: "There is in every parish a valuation list, which contains the names of the occupier and owner, the gross estimated rental, and the rateable value of all the rateable property in the parish." You go on to say that: "The overseers in each parish prepare annually a fresh valuation list;" do you mean that statement to apply to municipalities—you are not speaking, I presume, of rural districts?—No, I am speaking of municipalities, but I believe that the statement holds good as to all rural districts within unions, because those valuation lists

*Mr. R. H. Dawe.*  
25 Mar. '97

Valuation lists. New lists and revision of old ones.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 1 to 10.

Mr. R. H. Dawson. —  
25 Mar. '97.

are prepared for the assessment committee under the Union Assessment Committee Act, 1862. Therefore it is, I believe, quite accurate with regard to rural parishes.

1119. But how far is the valuation list of each year really a fresh one, and how far is it simply the continuation of previous lists with such alterations as may be made upon it?—I think that in ninety-nine cases out of a hundred it is a continuation of the old list, which is again submitted, and to which, of course, an opportunity of objection is given.

1120. Can you tell us at all with regard to your own experience what per-centage of alterations would be made on the entries of the lists that you have to do with?—No; if I did that I should have to estimate. I have not actual experience of the number on the assessment list.

1121. Could you give me any idea; is it a large percentage?—No, it is very trivial, and usually made at the instance of the ratepayer himself, or when some circumstance occurs, such as the making of new works, or the alteration of property, which leads the assessment committee to suppose that there is an alteration in the value of the property.

1122. Do you consider it a satisfactory state of affairs?—It is most unsatisfactory in every way.

1123. In your memorandum you mention that town councils have the power of making a valuation of their own?—Yes; but that, I think, is very seldom exercised, and there are obvious reasons why it would be undesirable. Of course if they made a separate valuation list it would be because they felt that the valuation list in force was incorrect, and then questions would arise as to which was correct and it would be difficult to support a valuation list in conflict with the valuation list of the overseers as approved by the assessment committee.

1124. Why is that? Is the power not exercised because the town councils feel the desirability of having one list, as far as there can be one list?—It is more, I think, from a feeling of impracticability, and also from the feeling that probably very poor results would follow. It is essential to bear this in mind, that if you have two valuation lists in a district one will be correct and the other wrong, or very likely both will be wrong. It is very desirable in the first place to have only one valuation list for the whole of the rateable area, and I have never advised the making of a separate valuation list though we feel that there might be plenty of room for it in Hull.

1125. To obtain one list would mean a good deal of sacrifice of minor points?—Yes; and then, of course, the valuation list under the Municipal Corporations Act would only apply to the borough rate and it could not correct the valuation list for the other rates.

1126. In the sixth paragraph of your memorandum you indicate that you desire to draw attention to the urban rates; I should like you to put before us what you have to say in your own words?—Of course by "urban rates" I mean the rates other than the poor rate. Those urban rates may be classified under two heads; one the municipal rates, which are collected by the overseers under precepts from the council, and the other the sanitary rates, which are made by the town council and collected by the collectors of the council.

1127. So that, as you point out, there is an unnecessary duplication of collection machinery?—Precisely; to every hereditament there are at least two sets of collectors.

1128. And may be more?—Yes. There are not more in Hull, but I can conceive that there might be more.

1129. Clearly that is a state of matters which causes unnecessary expense and probably unnecessary friction?—That is so.

1130. Is the basis upon which the municipal rate and the sanitary rate are levied the same?—Yes, for practical purposes, though they are levied in two different ways. With regard to the municipal rate the council have to assess the contribution to the borough rate upon the total annual value of the hereditaments in each parish in proportion to the rateable value of those parishes, according to the valuation list or the last poor rate. Then—it is a different phraseology, but it amounts to the same so far as regards the basis of contribution—the general district rate is to be assessed upon the occupiers of all property rated for the relief of the poor as ascertained by the valuation list, or the poor rate where there is no valuation list.

1131. Do certain classes of property such as railways, canals, and agricultural land not enjoy exemptions which are different in the case of the borough rates pure and simple?—Certainly they do. They are to be assessed at a reduced value of 25 per cent.; that is for the general district rate. The value of the property is to be ascertained by reference to the valuation list or the last poor rate, but having ascertained the value then an allowance of 75 per cent. from the assessment is made. The valuation list, therefore, and the poor rate still govern the valuing of the property but the three-fourths deduction is given.

1132. So that the gross valuation of an area for one of these purposes is different from the gross valuation stated in pounds sterling for another purpose?—Certainly. That anomaly also is greatly increased—the inequality is increased—by virtue of compounding.

1133. Following on that you have put in a table\* which shows in a concrete form the differences in the law and practice of compounding under various statutes?—Yes. From that table it is clear that there are four essentials in respect of which compounding under the Poor Rate Assessment and Collection Act 1869, differs from compounding under the Public Health Act, 1875, namely:—

- (1.) The property entitled.
- (2.) The subject of deduction.
- (3.) The incidence.
- (4.) The amount of deduction—
  - (a) on occupied property;
  - (b) on property whether occupied or not.

1134. In addition to these anomalies which are shown in your memorandum, I understand that the Public Health Act of 1875 declares that certain other subjects are only to be assessed at a fourth of their net annual value?—That is so; those are: tithes, tithe rentcharge, agricultural land, woodlands, market gardens, nursery grounds, and land covered with water or used as a canal or as a railway.

1135. Have you or not a further local difficulty of which you complain that the overseers rate the docks as one hereditament in one lump sum, and the corporation have for the purpose of the district rate to apportion this sum between the wharves and the land covered with water though they are entirely without the necessary data?—Yes, we have had the greatest difficulty owing to that, and considerable litigation.

1136. Is that a special local difficulty, or can you say from your own knowledge whether it does or does not exist in other places where there are docks?—It must necessarily exist in other places where there are docks, unless the overseers separate the value of the docks by showing the amount attributable to land covered with water and the amount attributable to land, that is, wharves.

1137. I think the matters dealt with under section III. in your memorandum\* are local to Hull?—They are local to Hull, but I thought it was better to state what actually takes place in Hull, because I think perhaps Hull is typical of all the worst abuses that can possibly obtain under the existing law as to rating. I thought that the facts existing in Hull would probably put the matter before the Commission in the best possible way—better than theorising.

1138. They seem to be fully stated in your memorandum, but I ask you this to give you an opportunity of adding to it: Has any other circumstance which you would like to bring to our notice occurred to you since you wrote it?—No, I think that this paper states everything that I wish to put before the Commission on that question.

1139. I understand you to complain that the existing system results in a considerable want of uniformity in valuation?—Yes, in assessment; it must and does. There is no guarantee that property in the two unions will be valued upon the same basis or standard of rating. Of course it is essential to all fairness in rating that there should be equality in assessment.

1140. You mean that if one area is rated in common, for a common purpose, to be spent by an authority which has jurisdiction over the whole of the area, that authority ought to have the power of seeing that the valuation is uniform?—That is so; it is absolutely essential to the fairness of the rate.

1141. And your idea, as I understand it—you will tell me if I have not gathered it correctly—is that what you call "assessment," which I cannot get out of the

Rating areas.  
Urban and rural.  
Proposed reforms.

habit of calling "valuation," ought to be urban for urban communities, and county or rural for the authorities outside municipalities or urban districts?—That is so. I quite agree with your Lordship that "valuation" is much better than "assessment," and I have only employed the word "assessment" myself because we find it in the Act. The word "assessment" has somewhat a doubtful meaning, because it is used right through the Acts in a dual sense; one is the valuation and the other is the assessment of the rate. Therefore I quite agree with your Lordship that "valuation" is preferable. I think myself, that inasmuch as the local government areas, if I may so call them—municipalities and counties outside—are more important now than the Poor Law areas, those should be the areas for rating.

1142. Would your suggestion not result in this, that while you would improve your system as between town and country, you would introduce the same sort of inequalities as between one part of a Poor Law union and another as existing for borough purposes at the present time?—No, not if my idea is carried out, especially that to which I refer in Section V.\* and which perhaps I may deal with later. I start with this principle—either we are going to have two valuation lists throughout an area or one. Now it seems to me essential that there should only be one, and as your Lordship put it a little time ago, it would be better to sacrifice something than to let the aggrieved ratepayer feel that to one rate he is correctly valued, but to another rate he is incorrectly valued, because we may be sure that the higher valuation will in the opinion of the ratepayer be wrong. Therefore I start with the principle that you must have one valuation for every area. Then the question arises which area should it be—the area of the Poor Law Union or the area of some local government. I say very strongly with regard to all boroughs, and certainly as to county boroughs. I have not a shadow of a doubt that it should be the whole borough. I think that with regard to counties the old Act of 1852, which is still in force, should remain and be acted upon. I have not had experience of a county, but I believe at the present moment they have two Acts which they put into force, namely, the County Rates Act, 1852, and the Union Assessment Act, 1862, and, I suppose, they have to rely on the common sense and good feeling of everyone to make the two things work together. But so far as county boroughs are concerned, there can be no doubt, I think, that they should be the rating area. Now as to unions: in Hull we have a union which is partly in the borough and partly in the county, and, of course, it is essential that the parishes in the county should be able to satisfy themselves that the parishes in the borough are not under-valued; and *vice versa*. That, I think, could be done under my proposal just as easily as it is now. There should be a right in all parishes within a spending area to come before the rating authority and complain if a parish in the other part of the area is under-rated. Now the Union Assessment Act of 1862, was an attempt to cure the blunder of the Act of 1861, but if we had in a borough the rating authority appointed by the council, or if the rating authority were the council themselves, then there would be no object on the part of that rating authority in favouring one parish at the expense of another, and likewise in the county there would be no object on the part of the county council or of any committee appointed by the county council in favouring any parish in the county at the expense of another. So that if you start with the principle which I think is essential, that there shall be only one valuation within every rating area, then, it seems to me that the question is whether you will have the Poor Law union or the local government area as the area of assessment or valuation.

Valuation lists.  
Annual re-valuation or revision at instance of rate-payer.

1143. Of course you would agree with me when I suggest to you that one of the chief elements of securing fairness is that the valuation should be up to date?—Certainly.

1144. At what intervals could a satisfactory revaluation be effected?—I think I should only do it once a year.

1145. Could you do it once a year?—Yes. I should always have the valuation list submitted once a year, so that every ratepayer would have an opportunity of bringing before the rating authority any inequalities in his rating.

1146. Your rates, of course, I need hardly ask, are assessed for the half year are they not?—The poor rates are, but not the general district rate or the borough

rate really. The borough rate is made once a year, and it is levied as the overseers like; I think they levy it half yearly. Upon that point I was going to say that I think the valuation of property is more likely to be correctly adjusted upon the application of the person affected than upon a general valuation over the whole area, so that I should give the ratepayer every opportunity of coming before the rating authority to get his property revalued or get a fresh valuation put in if it is not correct.

1147. I understand your idea to be that the municipality should appoint a skilled person to do the actual work subject to a committee of their number?—I should rather put it the other way; I would let the municipality do it themselves, or appoint a committee or some body for the purpose, and then allow that committee to employ any valuer or to take any steps they like for advising them as to the correctness of the valuations.

1148. Would you arm that body with special powers for getting information from either owner or occupier or both?—I have not given much consideration to that question. I think myself that all those questions of compulsory power are very delicate ones to deal with, and I should not like to make a general statement without considering the exact circumstances under which I would give such power. They necessarily must have certain powers, but I have not considered how far I would limit them or how far I would increase them.

1149. What criterion would you have an officer put before him when he is judging what ought to be the value of a property, if he has no power of ascertaining what it actually produces?—The rent.

1150. How is he to know the rent?—I would certainly give him certain powers to that extent, but I thought your Lordship had in your mind the question of giving further powers than those which they at present exercise.

1151. Would you put it in your own language; I do not want to lead you; what powers would you give to the officer?—I would not give him any further powers than those which he already possesses, at least without that further consideration which I have not yet given to the subject.

1152. What power does he actually possess now?—He can call for statements, I believe, from the owners of property—I believe the overseer can. It is perfectly clear that he has got everything in his power in this way; he has a general knowledge of what property in a locality will fetch; if a landlord will not tell him what the rent is or if the tenant will not, he can say: I will rate it as so much, two or three times its value—he is sure then to put it high enough, and the person is then bound to state what the rent is in order to get the correct figure inserted. He has got it fully in his power.

1153. I suggest to you that a less invidious and more direct way of getting it would be that the owner or occupier or both should have the duty laid upon him or them of telling what is the annual value, under a penalty for giving wrong information?—Yes, I should see no objection to that, but I think the power that they already have is sufficient. That is not based on experience because, as I tell you, we have nothing to do with the actual machinery of valuing property, and therefore I will not express an opinion.

1154. I am not quite aware of the practical difficulties, but I suppose in theory that to carry out what you want to the fullest extent you ought not to have any overlapping area of administration at all, you should make the union and the borough the same if you could do it?—Certainly. I think whatever area is found to be best for the purpose of rating will be found to be the best for the purpose of all local administration. On the other hand, it is essential not to confound the means with the ends. The poor rate is raised for the purpose of the administration of poor relief; and if a union as formed under the Act of 1834 is the best area for Poor Law relief, then I think we must not alter that area merely for the sake of facility in rating, but we must try to devise some means by which we can rate fairly and equally and justly over the area whatever it may be.

1155. Then you would admit, I suppose, that it would be a task of very great difficulty to materially alter the boundaries of Poor Law unions at the present time?—No, I do not think it would be so very great, at all events, as far as regards boroughs. In the case of my own borough I can conceive very little difficulty. It seems to me that in all cases of large boroughs it would

Mr. R. H. Dawe.

Valuation by municipality. Best method to be adopted for obtaining information.

Valuation. Powers of officers to obtain information.

Rating areas. Overlapping to be avoided.

Rating areas. Large boroughs the best areas for municipal as well as Poor Law administration.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 5.

*Mr. R. H. Dauce.*  
25 Mar. '97

be really best to let the boroughs be the area for all purposes—for the purposes of municipal government as well as of the Poor Law.

1156. Then I gather that in your mind it is a question of the balance of the advantages and the disadvantages; if the alteration and simplification of areas could be made with comparative ease, you would like to see it done, but if it would cause a great amount of difficulty it is doubtful in your mind whether it is worth attempting?—I think I can go farther, I think myself that it is worth doing, at all events with regard to large boroughs like Hull with which I am associated. With regard to them it is desirable to do it.

1157. Now will you give me your opinion as to the practice of compounding?—I think that it is as unsatisfactory as it can be at the present time.

1158. What is the limit of compounding in Hull at the present time—we will take the poor rate first?—It is 8*l.* to the poor rate.

1159. And for your borough rate?—For the general district rate it is 10*l.*, and then we include tenements let for short periods, or where the rate is collected at short periods. As a matter of fact I think 10*l.* is the limit.

1160. I understand, from what you have already indicated, that you think the practice ought to be uniform?—Certainly.

1161. How far do you think compounding should be allowed to go, up to what point?—I think that in those boroughs where 8*l.* is the limit it should be extended to 10*l.*, and that 10*l.* should be the amount for all purposes.

1162. Making it a matter of general enactment not depending upon the will of the local authority or the option of the owner?—I think it would be better to do it in that way, subject to this, that where of course property is closed, or not likely to be let at all, you could not ask that that should be assessed on the basis of paying whether it is occupied or not, and, therefore, I would suggest that the simpler way would be for the owner to give notice that he does not wish the law as to compounding to apply, and that he would then be rated upon the usual basis.

1163. Are you a friend of the system of compounding?—Yes, I believe that it is desirable in the interests of the ratepayer and of all persons concerned.

1164. Would you tell me why?—Because when you have these small properties let for short periods it would be very difficult to follow the occupiers and to obtain the rates from them, having regard to the numerous changes that take place in the tenancies. I believe myself that it is found to be generally advantageous to the rating authority as well as to the ratepayer, in fact, one may say at once to the ratepayer because he is the only person to be considered; it is for the advantage of all.

1165. Do you attach any importance at all to an occupier who exercises the franchise having directly brought under his notice the rise and fall of the rate?—No, I do not think so—not in those cases.

1166. Are many of the houses in Hull held upon very short periods of tenure?—There must be a large number; I cannot tell you from my own knowledge, but there must be necessarily a great number, mostly weekly tenancies of those houses up to 8*l.* or 10*l.*

1167. You say a tenancy is a weekly tenancy, but being a weekly tenancy it may endure, and probably does, for half a year or a year at a time?—Or even more; it may endure during a lifetime, or so long as the contracting parties will, but it can be determined at a week's notice, and the rent is, as a rule, payable weekly; in many cases it is payable monthly, but it is mostly payable weekly.

1168. Do the owners in Hull take any steps to let their tenant know the relative amounts which are demanded from them in the name of rent and in the name of rates?—I should say they do not. I cannot say of my own knowledge; in fact, it is a very difficult thing to give evidence on that—as to what is the practice between the landlord and the tenant—but I imagine not.

1169. You apparently would do away with what you describe as the partial exemptions of railways and docks from rating under the Public Health Act?—Yes, certainly. I cannot understand on what basis they are allowed at the present time.

1170. Do you apply that to all exemptions—agricultural land, for instance?—With regard to agricultural lands, you see they would be already saved under the Agricultural Rates Act of last session, and with regard to them I would say, no, certainly not.

1171. We can hardly deal with agricultural lands under an Act which, on the face of it, is a temporary measure. I am asking you rather as to the general principle, because your statement in paragraph 32 is, if I read it rightly, very broad—that all exemptions should be swept away?—I am referring to railways really there, and I had in my mind the fact that agricultural land now was provided for. I make no suggestion that agricultural land should not enjoy the exemption: I think it should; but I am speaking here more especially of railways.

1172. What about such subjects as mines and quarries?—We have not any in municipalities, as a rule, and I have not considered them.

1173. You can hardly draw a distinction between the principles of rating as between a municipality and a country district?—No, but I was directing my observations to my actual experience, and to what comes under my notice with regard to railways and docks, which are very important matters in Hull.

1174. Do you find these exemptions a great annoyance?—Not merely that, but I find this, that they throw upon the other ratepayers a burden which I think the companies themselves ought to bear, because you cannot take a burden off one ratepayer without putting a corresponding burden on the others.

1175. No doubt, so far as it is borne at the present time, but I want to know whether your objection to exemptions is absolutely general?—No, certainly not; it is to those that are included in my memorandum namely, the railways and docks, to which my attention has necessarily been drawn.

1176. What about waterworks?—I should not say waterworks at all.

1177. They should not be exempted?—No.

1178. Would you allow a country parish to rate a waterworks upon its full value?—Yes. I cannot say what the basis would be. We own our own waterworks, and we only extend into a few parishes outside the borough. With regard to waterworks, my view is this, that they should pay a fair rate upon a fair basis without any reduction.

1179. I should like you to point out what you mean by a "fair basis"?—That there should be no special exemption of this kind; that whatever the rateable value is, arrived at upon the same basis as in other hereditaments, that I think they should pay on.

1180. How would you seek to obtain the fair rateable value of a corporation's waterworks which extended into a country district?—What I believe is done is this: the overseers find the total expenditure upon the works, they find also the total revenue, and then they find out the expenditure in each parish, and they divide the rateable value in the proportion which the expenditure in each parish bears to the total expenditure. I think that is what is done. Upon the question of waterworks other members of the association are going to give evidence. The only thing that my evidence is directed to is the question of railways and docks in the borough which has especially come under my notice.

1181. Would you have any regard to the consideration of whether the particular subject in question, such as a railway, derives any benefit from the rate which is levied?—Yes, I should. At the same time I think that whilst it is the one principle which is usually adopted, there is another, namely, the ability to pay; that, I think, is considered the ideal principle of taxation.

1182. Does the system of exemptions now in force not proceed upon some such principle as this, that for certain of the rates those subjects do not get a corresponding benefit at all commensurate with the amount they would have to pay if rated upon their full value?—That is undoubtedly the basis upon which the exemptions are now allowed, and so far as I am aware in old legislation, the principle was the same, namely, to appoint commissioners over a district, and merely to enable them to rate those for whom they performed certain services. I think myself that the advantages of the services performed by the local authority are so great that the railway companies ought not to be exempt.

*Mr. R. H. Dauce.*  
25 Mar. '97

Exemptions partial, under Public Health Act, 1875, in respect of railway and docks not desirable.

Exemptions, partial, principle upon which allowed.

Mr. R. H. Dawe. 1183. Do you condemn the principle of exemption?—No, I do not so much condemn it as say that it is inapplicable to a railway and docks.

25 Mar. '97

Exemptions, partial, under Public Health Act, 1875, in respect of railways and docks not desirable.

Exemption of Government property. No grievance in practice.

Cost of precautions to Hull for preventing introduction of infectious diseases from abroad should be borne by the State.

Poor rate. Scheme for a fixed Government grant in aid of, according to ability of localities to pay.

1184. What is the valuation of the railways or of the docks within the bounds of your borough? If you cannot give it now, perhaps you will state it in revising the proof? I want the total valuation for some purpose which you will name, giving the proportion which is applicable to railways and to docks separately if possible, but if, as I fancy is the case, your docks are mainly owned by railways, perhaps it may have to be in one sum?—They will have to be to a great extent. They are, of course, now divided up according to the rateable values of each parish, and they are very difficult to arrive at, but still we can do it, and I will get it for you.\*

1185. Do you wish to say anything about the exemption of Government property?—I think that the objections that have been felt are largely met now. The objection now is only one of principle, with regard to Government property. I think it would be more satisfactory if Government property came within the general law, but there is no great grievance felt now, I think.

1186. You have, I know, what you regard as a special grievance in Hull, as to the precautions, which cost you something, against the introduction of diseases from abroad?—Yes.

1187. That is a subject with which I am not unfamiliar personally as regards some ports in Scotland, and I do not mean to discuss it with you. I do not suppose that I shall convert you or that the other towns would willingly take their share of the burden, but I take note of your statement here. I wish you to develop, however, the idea which is conveyed in the last six or eight lines of Section V. of your paper, the paragraph beginning with the sentence, "Witness thinks that it would not be difficult to devise a means by which relief might be given in necessitous cases, say, for instance, in aid of the poor rate in any district. He would suggest that a reasonable limit might be placed on the poor rate, and to the expenditure on the relief of the poor in any district, and that the difference between the amount yielded by the rate and the limited expenditure be paid out of the Imperial Exchequer."† I should like you to develop the arguments in favour of that suggestion?—What I had in my mind when I penned that was the formation of Poor Law unions. I think that in consequence of the Royal Commission's report and the Poor Law Act, 1834, unions were constituted with the object of making, as far as possible, the wealthier districts contribute to the poorer ones. It seems to me that if the Poor Law unions were altered and the whole of the parishes of a union in a borough were constituted one union, and there were cases where the district was really unable to support its poor, a scheme might be devised by which relief could be given on fair principles without this combination under the Poor Law Act of 1834. Consequently what I thought was that Parliament could lay down an amount which would be considered a fair contribution from all property in respect of the poor rate, supposing, we will say, it was a shilling in the £, it could then arrive at an amount which would be considered to be a fair payment for the maintenance of the poor per head, and in so far as the poor rate levied in any district, whatever that might be, might fail to meet the expenditure at the

rate of so much in the £ per head that might be met or paid out of Imperial funds.

1188. I do not want to pin you absolutely to your own words, which are necessarily a mere summary touching the fringe of a very large question; but is there not this obvious objection to the suggestion that you make, as here stated, that after the limit fixed for the locality had once been reached there would be no inducement whatever to economy, because the whole balance would be paid out of Imperial funds?—No. The whole object of my suggestion, if I had only properly put it to your Lordship, was this: that the moment that the Poor Law authority exceed the amount laid down as a fair amount for the maintenance of the poor, then they would have to defray all expenditure over that sum, which would be the result of extravagance, out of the local rate. So that the whole object of my proposal is to prevent extravagance, and yet to give assistance—to pay to the local authority the difference between—

1189. I beg your pardon; I do not think, if you will excuse me for saying so, that, as stated, your words quite bear that construction, because they are: "That the difference between the amount yielded by the rate and the limited expenditure be paid out of the Imperial Exchequer"†?—Yes, only the limited expenditure that is what I mean.

1190. I will put it in this way—should it mean this—that supposing the limited expenditure in any area is 1,000£, and 1,000£ is spent, everything above 1,000£, it may be up to 10,000£, is to be paid by the Imperial Exchequer?—No, I see where the misapprehension has arisen.

1191. I wish you would explain to me exactly what you mean?—I think where I have made my mistake is that I ought to have put in "The maximum limited expenditure," where your Lordship has read: "The minimum limited expenditure." What I would suggest is that assuming that the poor rate in the district at 1s. in the £ would yield, say, 700£, and that the proper expenditure on the poor would come to 1,000£, the contribution would be 300£ per annum, but if the authority liked to go and spend 1,500£ per annum on the poor they could do so, but they would have to pay that extra 500£ out of their rates just as they would the 700£.

1192. Then I do not quite see what your suggestion gains for us?—My suggestion is, as to a way of meeting the object endeavoured to be attained by uniting numbers of parishes in one union so as to make rich parishes to some extent contribute to the relief of the poor in poorer parishes.

1193. But, as a matter of fact, and as a matter of practice could you really say, one year with another, what is a proper expenditure upon the poor, because is it not an expenditure which varies according to seasons, according to weather, according to local circumstances of trade, according to a score of circumstances which cannot possibly be foreseen?—I think that it would be quite possible to devise a scale which would be considered what I might call the limit of expenditure upon the poor for certain purposes, and in that way it would be I think also possible to carry out this arrangement whereby you could give effect to the principle of the Act of 1834 and yet group all the parishes into one borough for the purposes of

\* STATEMENT of the VALUE of such RAILWAY and DOCK PROPERTY in the BOROUGH of KINGSTON-UPON-HULL as is entitled to a three-fourths exemption to the General District Rate under the Public Health Act, 1875, as shown by the Valuation which came into force on 1st April 1896.

poor law relief. That is the only object of the sugges- tion, and I make it simply to meet those objectors who might say that we should, by making a poor law union conterminous with the borough, be upsetting the recom- mendations of 1834. I do not think it would necessarily do so.

1194. Most of your rates are levied on the occupier I think in the borough?—Yes, in all cases except where there is compounding.

1195. Have either your municipality or your associa- tion ever discussed the question of a division of the rates between owner and occupier or is that too much of a political question for your association?—We have not done it in our own council, and, so far as I am aware, that has not been done in the association. I know this, that the question was raised in the association, and the council came to the conclusion that the first part of the reference was the only one in which we would take part.

1196. You know that it is a question which has been mooted in and out of Parliament for a good many years past?—Certainly.

1197. I have always a great delicacy in suggesting that anything which is done in Scotland is necessarily better than your system, but I should like to ask you whether you have any remarks to make about it, or any opinion to express?—We thought that that was really somewhat political, and that we would not enter upon it; it had a somewhat political bearing.

1198. Have you any personal remark to make upon it?—No, I do not think I would under the circum- stances make any; I think I ought not.

1199. Have you any suggestion which you would like to make as from yourself, but which you do not feel justified in putting forward either on behalf of your municipality or on behalf of your association?—No, not beyond the suggestions for the improvement of the law which I put in Section V., and which I understand are fully before the Commission. Also I wanted to emphasise the strong objection which I feel to the Act of 1861, which I think was a very great blunder. I think the fact that it was a blunder was recognised in the attempt which was made in 1862 by the Assessment Committee Act of that year to cure the mistake. I do not think the mistake was ever remedied. The object of all rating is and must be to make an equal rate over every area. Take the rate in a poor law union: supposing that the expenditure of the guar- dians is 20,000*l.* and that the rateable area of the union is 400,000*l.* it seems to me that there is nothing simpler in the world than for the guardians to give a direction to the overseers to levy a rate over the whole union of 1*s.* in the *£*, and to pay the proceeds, which would come to that amount, over to them. But instead of that this Act of 1861 directs that the contributions to the common fund shall be levied upon all the parishes within the union according to the value of all the hereditaments in the union whether rated or not, and whether compounded for or not; and then to carry out that law you have a lot of certainly simple sums, but still they are sums that you have to do; you have to divide the expenditure up in proportion to the rateable value of the parishes, disregarding, however, those points which are necessary to be borne in mind in order to make an equitable rate, and then to issue pre- cepts to the overseers to levy a rate in order to meet the precepts. As was shown in the tables that I submit\* the greatest anomalies and inequalities exist, and are the results of that.

1200. One obvious objection to the system being this, is it not, that it puts a premium upon parishes not keeping their assessments, as you call them, up to date, but lower than they ought to be if they were of the fair letting value of the subject?—Precisely; and necessi- tating the Union Assessment Committee Act, 1862, which was to secure a fair basis of contribution from every parish. Unless I had got out the figures myself I should never have believed that the result of this contribution from the various parishes would have worked such a gross inequality and injustice. If you will kindly look at Table I. in my memorandum, you will see, with regard to the rate collected by the overseers, the highest for 1896 was 3*s.* 10*d.* and the lowest was 2*s.* 8*d.*

1201. (Mr. Arthur O'Connor.) Why is that in italics? —That is merely a printer's way of showing the highest and the lowest. You find that over those 9 parishes, under what is supposed to be the same precepts, and

for what should have been the same rates there is a difference of between 40 and 50 per cent. Then, if I may take you on to Table IV. you will see how those inequalities are worked out. You will find that, with regard to the poor rate in 1890, the highest rate was 1*s.* 7*d.* and the lowest rate was 11*d.*; of course the two rates ought to have been exactly the same, and they would be exactly the same if the simple and obvious suggestion which I make were carried out. In 1891 the highest rate was 1*s.* 10*d.* and the lowest 11*d.*; there you see a difference of 100 per cent.; in 1892 the highest rate was 1*s.* 8*d.* and the lowest 11*d.*; in 1893 the highest was 2*s.* and the lowest 1*s.*, and in 1894 the highest was 2*s.* 5*d.* and the lowest 1*s.* These rates are supposed to be equal, and the object of the Union Assessment Act of 1862 was to make them equal over all the parishes, but, as I say, Parliament itself created in 1861 the difficulty, which the Act of 1862 does not cure.

1202. Do these figures show such an inequality as to suggest a burden borne, because I understand it will be this, will it not, that where a parish has a low valuation the rate will be higher per *£*?—The rate ought to be the same over the whole parish.

1203. But supposing everybody in the parish knocks off 25 per cent. of value, and is rated at 1*s.* 4*d.* in the *£* instead of 1*s.* in the *£*, what difference does it make to the individual occupier?—The difference it makes is this, that, as shown in these tables, the occupier of property in one parish and on one side of the street is rated at 40 or 50 per cent. above his neighbour on the opposite side of the street to the same rate and under the same precept; it is a necessary consequence.

1204. State to me shortly, will you kindly, what are the causes which operate to produce this unfairness which you indicate between one property and another in different parishes?—The first thing I would mention is the fact of compounded property. There the allowance is off the rate in the shape of a discount, and conse- quently the whole parish has to be rated at a higher rate to make up for the discount that has to be taken off in respect of compounded property.

1205. You would advocate compounding in the interest of the ratepayer, I understand?—Certainly. What I object to is the inequality which is produced by virtue of this parochial system laid down under the Act of 1861. If the poor law guardians, instead of issuing the precept to the various parishes, gave them a direction to raise a rate of so much in the *£*, as is done in the case of the library rate, no possible inequality could ensue. There is another case which operates very strongly, and that is this: you may have in a parish one very large property—we have it in Hull, for instance—in the shape of a dock company or a large railway siding, that may consist of half the rateable value of the parish; the precept is issued to the parish authorities upon the valuation list in force or the last poor rate at the time the precept is issued, but the rate is subsequently made by the overseers, and an appeal takes place; that appeal may be more or less successful, and the rateable value of the parish reduced; we will say that the rateable value of the hereditament is reduced by 50 per cent.; the parish has still to con- tribute the same amount as if the rate had remained.

1206. (Sir John Hibbert.) I suppose you do not bring forward this case of Hull as a typical case that occurs often in the country?—No, I think that Hull, perhaps, is an illustration of the greatest abuses that exist.

1207. You bring it forward, of course, as representing Hull, but also as being a strong case of great anomalies and great inequalities that exist?—Quite so.

1208. Have the authorities of Hull ever taken any steps to lessen all those difficulties?—Yes, we have.

1209. What have you done?—We promoted a Bill two years ago with regard to rating, and our Bill fell through from objections to other portions dealing with the question of public buildings. Then we made an application to the Local Government Board under section 33 of the Local Government Act, 1894, and owing to the great anomalies existing in Hull no order has yet been made, and we are now promoting a Bill in which we are endeavouring to deal with the whole subject of rating and to put it on a satisfactory basis.

1210. You have, as I understand, 11 parishes in the borough?—Yes.

1211. Nine parishes in the Sculcoates Union and two parishes under the special Act?—There are nine parishes

*Mr. R. H. Dawe.* in the Sculcoates Union—and two united parishes as we call them in the Hull Union.

25 Mar. '97

1212. Have you taken any steps, for instance, to modify that Act, which may be done under a provisional order?—We have not taken any other steps than the promotion of the Bill two years ago, but from time to time this question has been very much discussed. The Local Government Board, I think, are indisposed to take action except with the consent of the guardians, and before the passing of the Local Government Act, 1888, there was a good deal of speculation as to what would take place under that Act and as to what powers would be conferred. Then further legislation was hoped for and came in the shape of the Act of 1894, but we felt that no satisfactory reform could be carried out under the Act of 1894, and consequently we introduced our Bill. Then, as I said, the Bill fell through from the objections to other portions, and then we made an application to the Local Government Board to get as much as we could, but the difficulties in the way were such that no order was made and then we promoted this Bill which will be before Parliament after Easter.

1213. I suppose you are aware that in many other boroughs the unions of parishes have taken place so as to make one parish in the whole area of the borough?—Yes, and we probably could do that but still it would only afford a small measure of relief.

1214. Still it would be so much to the good?—It would be so much to the good; and that is one of the proposals in our Bill now.

Valuation.  
Annual  
supplementary  
list.

1215. Then you say that the separate valuation is brought forward each year; is it not the fact that it is only a supplementary list which is brought forward from year to year?—It is virtually a supplementary list, but you can take exception and objection to the whole list, so to that extent it may be treated as the whole list.

Com-  
pounding,  
advantages

1216. You have compounding in your borough, I believe, have you not?—Yes, for both rates.

1217. Have you any experience of a borough where there is no compounding?—No, none.

1218. Perhaps you are not aware that where no compounding takes place and the borough rate is levied under a valuation of the municipal borough it leads to a very large number of summonses being taken out against the smaller ratepayers?—I can quite conceive that that would be the result, but I have no practical experience of it.

County  
assessment  
desirable,  
but not  
dual valuation.

1219. Then with respect to assessment would you say that you would only have one assessment—would you do away with the county assessment?—No; for the county I would keep the county assessment under the County Rates Act, 1852.

1220. You do not object to that?—I think it is desirable to retain that, but I would not keep the dual valuation.

1221. I was going to ask you if you only had one valuation whether you would bring up the valuation of the whole of the county to one level?—By the appointment of this committee which is made under the County Rates Act, 1852, that power is now vested in the county council under the Act of 1888.

1222. Does your county authority keep the county assessment up to date from time to time?—I believe so.

1223. How often do they have an assessment?—I think every five years. Hull being a county of itself, we have nothing whatever to do with the valuations of the county.

1224. Because you are a county of a town?—Yes, a county of a town and not merely a county borough. We have our own asylums so that there is no contribution even in respect of the asylums.

Exemptions,  
partial. In  
respect of  
railways  
and docks,  
not desirable,  
reasons  
for. In  
respect of  
agricultural  
land  
perfectly  
fair.

1225. You want to do away with the exemption of railways and docks. Is that because in Hull those are the only two species of property which have exemption under the Act?—No, there is a considerable quantity of agricultural land which has the exemption, and which we think it is perfectly fair should be retained. With regard to railways and docks we feel that perhaps there is no kind of property in the borough which benefits more from the local government than that does. We think that the railways and the community, as it were, act and re-act upon each other, and we do not think there is any case grounded upon necessity or anything of that sort which justifies the exemption.

1226. I see that you state in your paper that there is no valuation list for, I suppose, the Hull union?—That is so.\*

1227. How would you manage to obtain a basis of valuation?—Where there is no valuation list the old poor rate is the basis of valuation, both under our local Act and also under the general law.

1228. Have you ever thought of the plan of consolidating all the parishes into one parish?—Yes, we have thought of that, but the Local Government Board object strongly to the consolidation of the parishes in two unions. They are, I think, prepared to consolidate all the parishes in the Sculcoates union, and, of course, then we should have simply two parishes in the borough. That is the most that the Local Government Board think they can do for us.

1229. Perhaps I may tell you of a case in Lancashire where they have allowed a consolidation of the parishes even within three unions?—I may state that the proposals in our Bill to which I referred, were that we should be empowered to treat the whole of the borough as one parish for all rating purposes, but the Local Government Board are very strong in objecting. They say that in consequence of the appointment of this Commission they are not disposed to allow any fundamental change in the general law, and they therefore say that we must be content with what can be done by the application of the general principles to the case of Hull.

1230. Then your application to the Local Government Board has been sent in since this Commission was appointed?—No, our first application to the Local Government Board was made before, and certainly our Bill of 1895 was prepared and promoted before the Commission was thought of—at least I think so, but I am not sure when the Commission was first discussed.

1231. Have you any particular suggestion to make as to the principle upon which compounding should be carried out?—Yes; I think that in boroughs, such as Hull, the limit should be raised from 8l. to 10l., and that the amount which is now 50 per cent. should not exceed 25 per cent. I think also that instead of making it dependent upon the agreement with the ratepayer it would be better to simply say that it shall take place in the case of all property which has once been occupied, or which has not been closed, or in respect of which no notice of objection is received. In Hull I believe a very large proportion of the owners prefer to compound—I am told 99 per cent.; therefore in 99 cases out of 100 an agreement has to be entered into under section 3. I would suggest that the simpler course would be to provide that the compounding should take place except where the notice is given, so that instead of 99 notices we should have merely one notice.

1232. Of course that could not be done under the present law?—No; I am assuming that we are dealing with what might be carried out by an alteration of the law, and not with what can be done under the existing law.

1233. With respect to your allowing a certain amount to be paid, so much in the £, towards the expense of the poor rate by the State, would that not be a kind of limited national rate for the poor?—It would to some extent, and I am only suggesting it as a means of meeting the objections of those who say that under the Act of 1834 rich parishes were combined with poor parishes for the purposes of poor law relief, and that if we are going to alter the poor law unions merely for the purpose of making our rates more easy in collection, or for local government, we must not alter that fundamental principle; I say it is easy enough to devise a scheme by which the very poor parishes can still obtain some measure of relief, whatever it should be.

1234. Has the system of union been a relief to the poorer parishes?—Yes, it has effected that one object undoubtedly; therefore one would be rather careful in saying that you should do something in direct opposition to what has been proved more or less satisfactory by experience; therefore I make this suggestion to meet that point.†

1235. (*Mr. Cripps.*) When you were talking about the 1861 Act and the 1862 Act did you mean that you would take either the union or the corporate boundary as the unit for rating purposes instead of the parish?—Yes.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 4 (pars. 15 and 16).

† The witness has, since giving evidence, drawn up a statement in further explanation of his suggestion. *Ibid.*, p. 7 (par. 28 and footnote).

Mr. R. H. Dawe.

25 Mar. '97

Mr. R. H. Dawe.  
25 Mar. '97

1236. Instead of having the different parishes as a unit you would have a larger unit, either the union or the corporate body?—Precisely. Then may I make a further observation in explanation of my suggestion? Inasmuch as it is scarcely practicable, at all events at present, to make the boundaries of the union coterminous with the boundaries of every borough or area of local government, and inasmuch therefore as the area of the spending authority will not always be coterminous with the area of the rating authority, I suggest that instead of arriving at the contributions which each parish should make to the common fund, the spending authority should ascertain first the amount of their expenditure, then the rateable value of the whole area which contributes to that expenditure, and then should direct the rating authority to levy a rate of so much in the £ to meet the expenditure, and to pay the proceeds of the rate over to the spending authority. That would, I think, do away with the inequalities which I find exist under the present law.

Valuation lists. Annual revision desirable, so as to give rate-payers opportunity to object to list.

1237. I will not go back to the question of how far the bases of your inequalities are just because we have had a criticism upon that, but of your suggestion as regards the future I suppose you have had no experience of the Quinquennial Valuation Act which applies to the metropolis?—No, none whatever.

1238. In your opinion, and in your experience, is it sufficient if you re-open these questions of rating apart from mere supplemental questions once in five years?—No. I am in favour myself of the principle that the valuation lists in force should be submitted to the rating authority or the rating committee, or whatever body they may be, annually, and that therefore any ratepayer can come forward and make an objection if he likes annually. The changes in property in five years, I think, are so great that the quinquennial valuations are hardly sufficient.

1239. I take it that you have had no experience of the working of the quinquennial system?—No, none whatever, but it seems to me that it is desirable that you should allow what obtains in the provinces, namely, that the ratepayer can come, at least once a year, and object to his valuation list.

1240. I take it that your view—I do not want to argue the point—is not in favour of a quinquennial valuation but is in favour of an annual valuation?—I do not say that there should not be a quinquennial valuation, but that it should be open to every ratepayer to object to the valuation list when it comes forward once a year. It may be desirable to have a quinquennial valuation just the same, but the making of the list should take place once a year.

Valuation in Metropolis. Inland Revenue represented.

1241. In order to get what you call "equal rating," do you think the system of the metropolis is a good one, of having a representative of the Inland Revenue Department present?—I do not know anything of the working of that.

1242. I daresay you know that the Imperial officer has a right to be present for rating purposes, in order to get equality?—Yes, I believe he has, but I do not know at all how it works.

Agricultural Rates Act, 1896, has no application where Public Health Act, 1875, applies.

1243. I want to ask you one or two questions about the Public Health Act now. I think you were under an error in regard to one point; the Agricultural Rating Act has no application where the Public Health Act applies, has it?—No, it has not.

1244. Therefore your answer as regards that, I think, would not be applicable to the subject matter you were dealing with—the Public Health Act?—Perhaps I have not made myself quite clear. In drawing my memorandum what I felt was this, that the Legislature had recognised the right of agricultural land to some consideration, and I was not one who at all quarrelled with that.

Agricultural Rates Act, 1896. Principle involved is equitable.

1245. Ever since the Public Health Act, and going back to the old Public Health Act of 1848, agricultural land for this purpose has the benefit of being rated at only a quarter?—That is so, and I would not disturb that.

1246. That, as you recognise is quite outside the Agricultural Rating Act, which does not apply in these cases at all?—That is so, but I am afraid I did not make myself quite clear as to what I meant. I would not alter the principle which is recognised in recent legislation, that agricultural land is entitled to consideration; that is what I meant to say.

Rating of water-works.

1247. Now, only to prevent misapprehension upon this point—I will not ask you about it if you tell me

it is so—you say you do not speak as regards the rating of waterworks from any special experience?—No, none whatever, it is only my general idea.

1248. Take the case of a reservoir, for instance, that is rated in the particular parish in which you find it?—Yes.

1249. I will not go into it further?—I have not considered it, and I did not propose to go into it. Other witnesses from the association are going to deal with it.

1250. Now I want to ask you one question as regards the railway exemption and the dock exemption. Take sanitary matters. I will take that as a step; of course sanitary matters provide drainage for all the houses in a district?—Yes.

1251. Do you say in a case of that kind that a railway should pay the full rate?—I think so. I think myself that the progress in sanitation of a town is so necessary and essential to the development of the town, and the railway benefits so directly from the development of the town that it ought not to object.

1252. I will take the case of Hull, because we are dealing with that for a moment; do you say its development has a great deal to do with the export trade of the docks?—It is an export and import trade of course.

1253. Do you say that export and import trade docks, like the docks at Hull, are very much dependent upon the sanitary conditions of the suburbs of Hull, we will say?—I think they are dependent upon the general wellbeing of the whole community, certainly.

1254. On an export and import trade of that kind?—I think so; the development of the town depends upon it.

1255. I suppose you would say the same about the docks that you have said about the railways?—Yes. My view is that the growth of a railway and docks in localities, and the growth of the locality itself, are so dependent and inter-dependent upon each other that I is one of those kinds of property which largely benefits from the good government of the town itself, and from the growth which depends upon the proper administration of all local laws.

1256. I do not want to go too wide, but take the case of Hull; does not the export and import trade there depend upon the country at large and the amount of competition that you get, for instance, at Goole and Grimsby and competing ports?—Yes.

1257. That is entirely outside the sanitary question?—It is outside, but still I say that the benefits of it are closely connected one with the other.

1258. (Mr. Dalton.) I think you say that the amalgamation of the parishes in the Sculcoates Union would afford a very small measure of relief?—No, if I said "very small," I made a mistake.

1259. I understood you to say a small measure of relief?—I beg your pardon, I should have said "considerable."

1260. The result of it would be that you would absolutely equalise all these inequalities in these nine parishes?—Yes, you would.

1261. That is your main objection to the present state of things, is it not?—No, not the main objection, but it is a very great objection.

1262. It would remove that entirely?—Yes, it would.

1263. And probably when you had only two parishes there would be no great inequality between those two parishes?—No. But there would still be the objection that we should have two valuation lists, and no universal list for the whole borough.

1264. The great inequality is due to the compounding, is it not?—It is largely due to that, but I think in a great measure it is also due to the different way in which the various overseers lay the rates, and also, of course, to the costs of the overseers. Where the parishes are small the establishment expenses are much greater in proportion.

1265. Are you speaking now merely of all the expenses of overseers in the collection of rates, or of their other expenses?—Of their total expenditure; but their expenses are mostly in the laying and collecting of the rates.

1266. Is that so?—Yes.

1267. Do they not incur considerable expenses in supplemental valuations?—No, I do not think so.

Exemptions, partial, for railways and docks abolition of, desirable. Reasons for this view.

Amalgamation of parishes to equalise inequalities.

Inequalities in rating as between parishes in Hull, reasons for.

Mr. R. H.  
Dawe.

25 Mar. '97

1268. Nor in registration?—No, not a considerable amount. I think it is mostly in the laying and collection of their rates and in their establishment charges.

1269. Have you not constantly new properties springing up in Hull?—Yes, and they have to deal with those, of course.

1270. They have to make a supplementary valuation?—Yes.

1271. Surely that will cost money?—It does cost money, but their officers do it, and their officers are appointed for the purpose. They do not employ separate valuers and pay fees, but their ordinary officers who are paid by salaries.

1272. But it would not be fair to say that their expenses were merely expenses of collection?—They are to a large extent confined to the making and collecting of the rates.

1273. To a large extent, no doubt, but the valuation would be taken into account in fixing the salary of the officer?—Certainly.

1274. And also his duties as regards the registration of voters and so on?—Yes, but those are not very great—they are rather very small.

1275. So far as the compounding is concerned, the mischief would be to a great extent remedied, would it not, if, instead of fixing the amount of the contribution on the rateable value, you fixed it on what we may call the assessable value, that is to say, if where you allow 30 per cent. for compounding you based the contribution on 70 per cent. and not on the full 100 per cent. of the rateable value?—Yes, if the compounding were allowed in the poor rate as it is in the general district rate, upon the valuation, instead of a discount off the rate, one source of inequality would be removed.

1276. The main source?—No, I will not say that, because I think, from carefully studying these tables\* that the greatest cause has been these appeals, where a small parish has had to bear the increased burden which follows upon the reduction of the rateable value of a large area.

1277. I do not quite understand one part of your suggestion for the improvement of the law, in which you suggest that assessment committees could be dispensed with?—Yes, certainly they could.

1278. How would you dispense with them, for instance, in a county?—I should dispense with them by adopting the Rating Act of 1852, under which the county councils now appoint committees for settling the standard or basis of contributions for the various parishes to the general expenditure. I think myself that it is undesirable to have two valuations in any given area, but that you should have one; and it seems to me desirable that the county council valuation should be the one and not the poor law union the one.

1279. But you are aware that the county rate basis is not in any way a valuation of particular properties?—No, it is the valuation or basis upon which the whole area contributes to the general expenditure. I should amend the law so as to give each committee appointed the same powers that an assessment committee has at the present time, and I should say that a rating committee, whether in a county or in a borough, would do exactly what an assessment committee does now, that is, it would make a fair rate over the whole area, and it would have no object in favouring one parish at the expense of another, therefore you could do away with the two bodies. One rating body for the whole area chosen from the central body would be sufficient.

1280. That shows what you are aiming at, but there would have to be an enormous valuation; this valuation would give every single property in the county?—No.

1281. Then how would you do it?—With regard to counties I should let the overseers for the various parishes make all the valuations as they do now, but that would be submitted to a committee of the county council, the rating committee, and any person could object to it.

1282. You would maintain the overseers?—Yes, I think in the counties it would be necessary and essential to maintain the overseers or to appoint some other persons in their place. I should think the overseers might be preserved in the counties.

1283. You have mentioned that in many rural districts the overseers are not educated men or men in

any way skilled in valuation, would you have nothing between them and the county council?—Then I would suggest that the county council have the power to appoint men who are skilled in valuation.

1284. Would you think it necessary to appoint a paid official to be overseer in every parish?—No, not necessarily. I think in a rural parish there are plenty of persons who would voluntarily perform the same services as the overseers.

1285. You do not propose that the county council should be the valuing authority in any borough, I understand?—No, I think not. I have not considered the case of the non-county boroughs, because it has not come under my practical experience, and I have confined my observations really to the cases of the county boroughs where I am perfectly clear that the system I advocate would work.

1286. You would not propose that the county council should be bound in a non-county borough by the valuation of the town council?—No. I should give the county authorities the same right to object to a town council valuation as I would give to the town council the right to object to a county council valuation. It seems to me that that will be essential in all cases where there is not an asylum to each district, because the contribution to the asylum, I believe, is based upon the rateable value of the various contributing authorities. It seems to me essential in those cases that the contributing authority in each area should have the right of appeal against the valuations in the whole area.

1287. Take a case where a borough is not conforming with the union, which it would be in the great majority of cases, would it not?—That is so.

1288. You would then have two different valuations in force in the union with contributions for common fund purposes?—Yes.

1289. Would that be desirable?—It would be much more desirable than having two or more valuations over each rating area.

1290. Have you considered the question whether the better solution would not be to have a representative assessment committee on which not only the board of guardians was represented but also the county council, the town council, and the surveyor of taxes?—I thought of that, and I came to the conclusion that it would be too unwieldy and would have too big an area to deal with. For instance, I passed on the line from Yorkshire what is called, I think, the Three Counties Asylum; I believe that the contributions to that asylum are levied over three counties. If the system that is suggested by your proposal were carried out, you would have to have an assessment committee spread over the whole of those three counties in order to satisfy all that the basis of contribution was equal in the whole of the counties.

1291. In the ordinary case, in 99 cases out of 100, the assessment committee would be representative of a very much smaller area than the county council would?—Yes. If you call it an assessment committee well and good, but I prefer to call it a rating authority. You want the area to be the whole of the county over which a county rate can be made, because, as I have endeavoured to explain, it appears to me that the rates for local government are now more important than the rates for poor law relief —

1292. The suggestion was that the county would be represented on the committee?—Yes, but I think that doing it in the parochial way was all right in 1834, but not now.

1293. Do you think that the Association of Municipal Corporations support your view stated in paragraph 28 of your memorandum to the effect that the assessment committee should be dispensed with?—No, I think they have not come to any conclusion on the subject. I imagine that they would reform the assessment committees, but on giving this matter full consideration I have (only recently) come to the conclusion that if you have one rating authority, at all events for a large borough, you do not want an assessment committee, and that the rating authority will do exactly what the assessment committees were appointed to do, namely, see that the contributions from the whole of the area are fair and equal.

1294. You would wish the valuation by whomsoever it was made to be conclusive, not merely for local but for Imperial purposes, would you not?—I think that would be desirable.

Representative rating authority, consisting of representatives of board of guardians, county council, town council, and surveyor of taxes, objections to.

Assessment Committees, abolition of, and creation of one rating authority.

Valuation should be conclusive for local and Imperial purposes.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 8 to 10 (Tables L and IV.).

Mr. H. H.  
Dawe.

25 Mar. '97

Compounding should be allowed upon the valuation instead of a discount off the rate.

Appeals, cost of, to small parishes.

Valuation by one authority for county and also for union purposes desirable. Suggested means of obtaining this result abolition of Assessment Committees. Case of counties and boroughs considered.

Mr. R. H. Dawe.  
25 Mar. '97

Mr. R. H. Dawe.  
25 Mar. '97

Law of rating should be consolidated.

Poor rate. Grants in aid of, distributed on basis of population.

Poor rate. Scheme for a fixed grant from Government in aid of, according to ability of localities to pay.

Inhabited house duty should be handed over to local authorities.

1295. And for that purpose it would be necessary to bring the surveyor of taxes on?—Certainly, there is no objection to that that I know of.

1296. You suggest then a consolidation of the law of rating?—Yes, I think that is very necessary.

1297. You will be aware that that would be attended with a peculiar difficulty owing to the number of people who would oppose any amendment of the law and any consolidation in nearly every direction?—I did not know that there was any general opposition to it.

1298. Do you suppose, for instance, that if your proposal as regards railways was brought in, the Bill would not be very fiercely fought?—The alteration of the law can be carried out with or without consolidation. I am suggesting, that whenever the law is settled, whatever this Commission should recommend, there should be a consolidated law, and that our Acts of Parliament should not necessarily be altered for the purposes of consolidation, but should be consolidated when they are altered.

1299. That is looking a long way ahead. As regards the subventions in aid of the poor rate, should you see any objection to a Government subvention being given on the basis of population, or on any principle of that kind which represented the needs of the locality and did not conduce to extravagance?—The suggestion that I have simply thrown out in my memorandum\* was directed to this one point, that the Government might be able to give relief in necessitous cases; that is, where the parishes are not able to fairly maintain their poor without contributing in the slightest degree to extravagance. I propose that they should only contribute within certain limits.

1300. But your necessitous parishes would mainly be, I suppose, parishes with large populations as compared with their rateable value?—Certainly; that would be so.

1301. Therefore, if the Government grant was given on the basis of population, the necessitous parishes would probably get more than the richer parishes?—Yes, they would probably, but I think that it would not be so certain in its working as the suggestion I have made.

1302. I am not sure that I quite understand the suggestion?—It is perhaps a little difficult to explain it. My proposal is this: that Parliament or the Local Government Board should make up their minds as to what is a fair maximum contribution in every parish to a poor rate. Supposing they take that to be 1s. in the £ they would then make up their minds as to what would be the fair cost of the maintenance of the poor, both indoor and outdoor; they would ascertain what the limited rate of 1s. in the £ would produce in a parish or in a union; they would then ascertain what the limited cost of maintaining the poor in that parish or union would be; they would then deduct the amount realised by the limited rate from the total cost of the limited expenditure, and they would pay over the difference to the union or parish.

1303. That would be a very complicated process to go through for each parish, and I presume no parish would be satisfied with the result; would that not be so?—No, I do not think so. I think the question as to what should be a fair poor rate would be laid down, and then it would apply to every parish; the question as to what should be the fair amount to pay for the relief of the poor would be laid down, and it would simply be applied without any difficulty and universally.

1304. It would be far more difficult than merely taking the population?—It would be, undoubtedly.

1305. You have a precedent for taking the population in the London Equalisation of Rates Bill?—Yes, I believe you have.

1306. (Mr. Elliott.) The view of the Association of Municipal Corporations is, as I gather from paragraph 36 of your memorandum, that the inhabited house duty should be handed over to the local authorities?—Yes.

1307. Do you contemplate that that tax should continue to be collected by the Exchequer?—I think so; but upon this question I may say that I believe the next witness is going to speak. I have not directed my attention so much to this question of a subvention from the Government as to the question of the machinery. It was understood that I should not deal with that question really to any extent. I believe the

view of the association is that the inhabited house duty would be the best to hand over to the local authorities.

1308. There are several questions which I should like to address to the representatives of the association on that subject, but I gather from what you have just said that it would be more convenient I should put them to subsequent witnesses?—Yes, I have not dealt with them in my memorandum. It was understood that the town clerk of Blackburn, or the town clerk of St. Helen's, would deal with them more fully.

1309. With regard to the question of appeals, would you recommend that in any system of valuation which might be enacted by Parliament owners of property should be entitled to appeal?—Yes, certainly.

1310. Apart from whether they also occupied or not?—Yes, I think they must; they ought to have the right.

1311. Do you consider that they have such an interest in the valuation of the property as to render it equitable that they should have that right?—Yes, I do.

1312. You stated with regard to agricultural land that you thought it was perfectly fair that exemption should be maintained; did that observation apply not only to the exemption contained in the Public Health Act, 1875, but also to the exemption conferred by the Act of last session?—Yes. My view is that agricultural land is really taxed as heavily as it can bear. That is really my view, but we are touching somewhat upon political questions into which I do not wish to go.

1313. I am simply referring to an answer which you yourself gave; I may take it that that was the expression of your personal opinion?—Yes, it is my personal opinion on a point which one does not wish to go into in any shape or form, my evidence being directed more especially to the question of railways and docks in towns. What I wish to say with regard to agricultural land is that I do not wish to raise the point in any shape or form, either as coming from Hull or as coming from the association.

1314. (Mr. Clare.) Do I gather generally from your evidence that the experience of municipal corporations, is that the existing system results in an unequal method of arriving at the valuation list, and an unequal method of raising rates and an unnecessary extravagance in collecting them?—Yes.

1315. And that the remedies you suggest, speaking broadly are, that there should be some system devised by which the same basis of valuation should pertain throughout the whole of any given rating area?—Precisely.

1316. And that the collection of rates should be in the hands of one collecting body?—Yes.

1317. Are you entitled to speak on behalf of the association that you represent, as to whether in their opinion, it is desirable that the collection of rates should be handed to the municipality or transferred altogether to the overseers?—I think the general view was that it would be better to leave each municipality to decide that for themselves.

1318. So that, so long as there is only one collecting authority, the association would prefer that the decision as to whether it should be the municipality or the poor law authorities should be left to them?—Yes; I think the general view was that the council should have the option of doing it themselves, or of appointing a body for the purpose. I think that was the general idea; certainly it was my own.

1319. You pointed out a number of injustices which arise under the existing system, one of which is that whenever a precept is issued by the guardians or by the corporation to the overseers at the different parishes in the union or municipality it must invariably work inequitably among the ratepayers?—Yes.

1320. Does that arise from this that the precept is based upon the valuation of each parish as it appears in the valuation list?—To one rate it does.

1321. To the poor rate?—Yes.

1322. Then after the total amount of money to be collected from the rate has been divided among the different parishes according to that valuation, an order is made upon each set of overseers to collect the amount wanted from their individual parishes?—That is so.

1323. Then when they come to lay the rates they find that in the properties included in the valuation list there is a quantity of property which is entitled to three-fourths exemption?—Yes.

\* The witness has, since giving evidence, drawn up a statement in further explanation of his suggestion. See Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 7 (par. 36 and footnote).

Appeals. Owners of property should be entitled to appeal.

Exemptions (partial) with respect to agricultural land under Public Health Act, 1875, and Agricultural Rates Act, 1896, are reasonable.

Valuation, rating, and collection of rates, present system of, disadvantages.

One assessing and one rate collecting authority desirable.

Exemptions, partial, causes injustice to persons rated in respect of other properties under existing system of issuing precepts.

Mr. R. H.  
Dawe.

23 Mar. '97

1324. The result is, is it not, that the property which is not entitled to the exemption has to bear the 75 per cent. exemption which is given to the remainder of the property?—Yes.

1325. So that if the alteration is made with regard to the issuing of the precept that inequality would be abolished?—Certainly.

Compounding, advantages of system.

1326. Then with regard to the amount allowed for compounding the property is not the main object of compounding to make it easy to collect the rate?—Yes, you make it easier and more certain, and you save a infinity of trouble in going to the occupiers who may be in occupation from week to week or month to month, and obtaining a *pro rata* payment of rates from them.

1327. Have not some occupiers a habit in our large towns of removing every three or four weeks when the rent becomes due?—I am afraid to say how often they move.

1328. So there might be a good deal of difficulty in collecting the rates from the individual occupiers?—I look upon the compounding as a great benefit to the general community.

Compounding. Limit of composition should depend upon rent paid by working classes in different localities.

1329. Why do you suggest 10*l.* as the limit for the composition of property?—We have found that 10*l.*, which is the limit in the Public Health Act so far as Hull is concerned, has proved satisfactory. I can quite conceive that the limit of 20*l.* in London is right, and that in Liverpool 13*l.* might well be 15*l.* or 20*l.* That question might be left to the council, I think.

1330. Should it not to a certain extent be dependent upon the amount of rent at which dwellings occupied by the working classes are usually let in particular localities?—Yes, I think that is the basis. I think 10*l.* is about the amount of the rental in Hull. It would vary no doubt in different localities, and that is recognised in the Act of 1869.

Exemptions, partial, in respect of certain portions of railways, canals, and docks, should be abolished.

1331. You say that you think the three-quarters exemption for railways, canals, and docks should be abolished as regards municipal rates?—Yes.

1332. Take a dock, I think the docks only get the three-quarters exemption on the water-space?—Yes, on the water-space.

1333. They pay in full upon the quays, sheds, and warehouses?—That is so.

1334. Suppose we take the railway also, the railway gets its three-quarters exemption only in respect of the part occupied by the rails?—It goes a little further than that, I think, and includes railways and all that is essential to the railway. There is a recent decision on that point.

1335. As regards their stations and sheds, warehouses and hotels, and so on, they pay in full?—Yes.

1336. If the business of the town is increased by the local expenditure, their valuation is increased, is it not?—Yes.

Railways in some parishes derive little or no benefit from local expenditure.

1337. When you get outside a town and get into a country district in the case of a railway, supposing there happens to be a parish in which there is no station or siding, say, and the railway runs through that parish, what particular benefit does that line of railway get from the expenditure, we will say, of a school board or on a public pump, or something of that kind?—It gets no benefit whatever. It does, however, occupy space, and upon that space it is conceivable that other rateable hereditaments might be erected. But I quite recognise, that upon the principle of benefit it gets little or none from the local expenditure.

Overseers and assistant overseers. Power of Local Government Board to transfer to urban authorities on application the powers and duties of, under the Local Government Act, 1894. Policy of Local Government Board.

1338. With regard to the remedies that the Corporations desire to see carried out, does not the Local Government Act, 1894, make provision for those remedies being given?—Yes, to a great extent under section 33 of the Act of 1894, but I fancy there is a delicacy on the part of the Local Government Board in exercising those powers to the extent that the municipalities would wish.

1339. In your opinion, if the Local Government Board would exercise their powers to the fullest extent that the Act of 1894 enables them, it would to a large extent bring about the remedies that are required?—Yes, I certainly think so.

1340. Does your experience of the action of the Local Government Board lead you to the conclusion that the Board have practically prevented those beneficial remedies from being carried out in a simple way?—I would say that I do not think the Board have made the fullest use of the opportunities which the Act of 1894

afforded them. The Board took the view (rightly or wrongly) I think, that the other authorities should be consulted.

1341. Do I understand you to suggest that there should be one area for valuation and rating purposes in a borough?—Yes.

1342. And also one union?—I think myself the best area for rating and all other purposes will prove to be the best area for poor law relief. I quite recognise that a union ought not to be altered merely for the sake of rating.

1343. It is not essential to an amendment of the law that the area and the union should be altered at all?—Certainly not; it is not essential, but I think probably it is advisable. If the principle which I have before referred to, namely, of asking the various rating authorities to raise such and such a rate in the £ and pay over the proceeds to the spending authority or to the union, there could be no necessity for it whatever, at all events *qua* rating.

1344. Do you see any objection to following the principle laid down in the Local Government Act of 1888, where in cases of contributions or payments as between a county and a county borough the valuations on which those payments or receipts are to be based should be settled by a joint committee representing both authorities?—I should see no objection to that beyond this, that in a union the placing upon each area a contribution instead of asking them to levy a rate in the £ sufficient to meet the expenditure is altogether a mistake and gives rise to a lot of trouble without any corresponding advantage, but with positive disadvantage, because if you find, as I say, that a given rate is sufficient, all that you have got to do is to ask that that given rate may be levied over the whole of the area.

1345. (Mr. Smith.) I believe you are anxious to increase the number of compound householders in Hull; how many have you got at present?—I cannot tell you that.

1346. What is the proportion?—I cannot tell you; we have endeavoured to obtain the information from the various assistant overseers, but we have not yet got it, and I am not in a position to put it before the Commission.

1347. Then you would consequently not be prepared to tell me what proportion you would have if compounding were increased up to 10*l.*?—No, I cannot tell you that.

1348. (Mr. Arthur O'Connor.) Do you represent the Irish municipalities in any way?—I am afraid that I cannot say that I do.

1349. Could you tell me if there is any difference in the position of the Irish municipalities and the position of the British municipalities in this respect?—I could not; I am sorry to say that I am absolutely ignorant about Irish law.

1350. (Mr. Wharton.) Will you turn to Section V. of your memorandum, and paragraph 29; towards the end of it you will see these words:—"The result would be that in a borough the Corporation would be or appoint the rating authority for all purposes; and similarly in a county the council would be or appoint the rating authority." I want to ask you to consider the matter of appeal by an aggrieved ratepayer; if the county council were the rating authority to whom would the appeal be then?—I presume the county council would appoint committees for various districts then as they at present appoint their rating committee, and that the rating committee would hold a meeting in various districts which no doubt would be properly accessible from all parts of the county.

1351. You would make them a court of first instance?—Yes; I would make really the rating committee do what the assessment committee does at the present time. I think myself it is not necessary to have the two committees. I believe that the committee which made the rate would feel more at liberty to deal with the representations of the aggrieved ratepayer, than an assessment committee which often feels a delicacy in altering a valuation which has been approved by the overseers.

1352. You had not apparently dealt with the question of appeal, so I thought it would be as well to amplify it to that extent?—I think in all those cases you want to simplify procedure as much as possible.

Mr. R. H.  
Dawe.

25 Mar. '97

Area for valuation and rating purposes should be identical.

Committee of authorities to settle basis of contributions between county and county borough.

Compounding, increase to uniform limit desirable in Hull.

Irish municipalities not represented by witness.

County councils as rating authority suggested.

Mr. R. H. Dawe.  
25 Mar. '97

1353. No doubt you would contemplate that an appeal would be necessary in the case of your new rating authority?—Yes.

1354. I suppose you would give an appeal to quarter sessions from that rating authority as it at present exists from the assessment committee?—Yes.

Estimated rental. The actual rent taken, if possible, though evidence admitted to show what the property is actually worth.

1355. (Mr. Balfour.) I see you say that the method of ascertaining the rateable valuation is, first, by taking an estimate of what you term the "gross rental" and then making certain deductions?—Yes.

1356. You have always, I have no doubt, carefully used the expression "estimated gross rental" in arriving at that estimate; if you can get the actual rental, do you not take it?—Yes, you do; and, in fact, you have to do that under the Act of 1836; you have to take the rental, but inasmuch as you are dealing with the future, it is always called the "estimated rental."

1357. At the time is not the best evidence of the lettable value what is actually paid?—Precisely, and it is, as a rule, the actual rental at the time, but it refers to the future and therefore it says "estimated rental." The estimated rental in the future is probably the same as the rent which the premises command at the time the estimate is made.

1358. In speaking of an estimate do you put on anything if you think it will rise in the period of five years?—No, I should say not.

1359. Do you just accept the actual rent?—You accept, as a rule, the actual; but if you have evidence to prove that the property is worth more you would put it on at once.

1360. Even for such a period as five years?—Yes.

1361. If the rental was taken up annually, of course. I suppose you would then adhere to the actual as the best test?—Certainly.

1362. Unless there was a very long lease or some peculiarity in the case?—It has to be the rack-rent, and it has to be the rent which the premises would command if let from year to year. That is why I think the valuation list should be open to objection from year to year, because it is the basis upon which the valuation is made up.

Estimated rental. Method of obtaining information.

1363. You told us something about the methods of ascertaining the estimated rent, as it is called; is it the practice in taking up the rental or ascertaining the value, to serve schedules to be filled up upon owners or occupiers?—No, I do not think so, except in cases of railway companies or companies incorporated, I think, under the Act of 1862 or 1867.

1364. But the method of serving forms for five years or one year, whatever it was, upon owner and occupier would be a very slow way of getting at the truth?—Yes, it would be, but it is not done now.

1365. You would not think there was anything unduly inquisitorial in that, would you?—No, I do not think there would be in that.

1366. It would not be carried that length?—No.

1367. I think you said some information was asked for; what amount or measure of information is asked for?—I think that when the collectors go round they have no difficulty whatever in ascertaining the rent; and, as I say, if any difficulty were experienced I should put up the valuation; that would at once put it beyond all doubt that it was covering the value. In that way you can always get it.

1368. That is very similar to surcharging for the income tax, is it not?—Well, it might be done in that way.

1369. And putting on something, say, which a man must clear himself out of; is that not a very circuitous method as compared with ascertaining the actual rent paid?—It is, but somehow or other there is a general feeling that if you are asked a question you need not answer you answer it, and if bound to answer it does not follow that you always get the correct answer.

1370. But surely there is no such great secret about what a man's rent is—there may be a lease?—There is no secret now.

1371. Would it not appear to you that an amendment of the law in that direction would be advantageous?—I see no objection to it at all, but, as I say, we have no difficulty whatever in finding out the rental at the present time.

1372. You used an expression that I did not quite understand—I think you said you would have regard to ability to pay?—Yes.

1373. What did you mean exactly by that?—I think myself that the ability to pay is at all events taken into consideration in what is called the ideal principle of taxation. The ability to pay is an element to be considered, and I do feel that in the case of the railway companies to which I go back there is every ability to pay, and they do not appeal to your sympathies at all as being very poor. That is what I had in my mind.

1374. What I should like to know is this: I can quite understand that if you were dealing with a personal tax, ability to pay would be very material, perhaps conclusive; but what has ability to pay got to do with the amount that should be levied on a piece of real property, I mean the ability of the person to pay as distinguished from the ability of the property to pay?—If I had any doubt as to the fairness of the rate, and there was no ability to pay, it would probably decide me on a simple point of expediency in not enforcing it; but if I come to a case where I have not a shadow of doubt as to the equity of the rate, and where I find plenty of ability to pay I can see no reason whatever for a reduction. That is what I mean.

1375. If the rate is what you call equitable, if the rate is fairly struck, why should it not be exacted apart from the personal wealth of the individual?—It should undoubtedly, but I should say supposing you do import into it that consideration of ability to pay, and it is a question which is imported into the Public Health Act with regard to the general district rate, then on that point of ability to pay, there is no doubt that in the case of the railways which I have in my mind, there is abundant ability to pay.

1376. Do you think ability to pay should ever be a criterion?—No.

1377. Unless you come down to cases where exemption on the ground of poverty is proper, there may be people so poor that they are exempted on the ground of poverty, but when you get above that level, has personal ability to pay anything to do with the rating of the property?—No, I think it has nothing whatever to do with the question of whether they should pay or not, because, if it is fair or just, they should pay; supposing that you impose taxes in such a form as to place upon a ratepayer or upon property something which is unfair, then the question of ability to pay does come in, and you encroach upon the ability to pay.

1378. Is not the true remedy then there to make your rate equitable and fair?—Yes.

1379. But is it not mixing up two things that do not quite work together?—I do not think I have suggested in my memorandum that payment on the full assessment should be made because of their ability to pay.

1380. It was an expression you used in an answer that I did not quite understand, and I wished to be sure that I caught what you meant?—There is abundant ability to pay, and therefore no appeal, as it were, to the generosity of Parliament should be made.

1381. (Chairman.) Does that apply to the Hull and Barnsley Railway?—Yes, they are flourishing very much.

1382. (Mr. Balfour.) Is it solvent now?—Yes; we have 100,000*l.* of ordinary share capital ourselves in the undertaking, and its traffic is increasing.

1383. There is one other point I should like you kindly to explain; you mentioned that you thought the principle might be adopted of fixing a limit of what should be a maximum rate, practically, in a particular district, and if there was something beyond that the ratepayers should pay, but as to which there should be a subvention. Now you spoke in dealing with that of what might be a fair rate; what did you adopt as the standard of fairness, what had you in your mind as the standard of a fair rate?—I have nothing in my mind upon the subject, and the suggestion put forward only deals with the poor law, and is not a standard to be arrived at by any local authority, but by the legislature over the whole country. The standard I quite agree with Mr. Dalton, would require considerable care in fixing.

1384. Would it not be as Sir John Hibbert suggests one step towards a national poor rate?—No.

1385. You think not?—I think not. I think it would be done purely on the lines of these government aids

Mr. R. H. Dawe.  
25 Mar. '97

Ability to pay Application of principle of.

Poor rate Scheme for a fixed grant from Government in aid of, according to abilities of localities to pay. Objections to.

Mr. R. H.  
Dawe.  
25 Mar. '97

that we at present receive. We do, at present, receive, as you are aware, government aids in relief of the poor, and I say that the suggestion which I make would enable the contribution from the Government to be in direct proportion to the needs of the locality.

1386. Of course in some places where the poor rate is high at times, there is a want of employment, or depression or the like, and then there is very great prosperity at other times from the industry of those very people who fall into poverty?—Yes.

1387. Is that a matter, do you think, which other parts of the country have much to do with; why should the prosperity and adversity not be borne with by the locality?—They would under my proposal.

1388. You would give them something?—No.

1389. Then I misunderstood you. I thought you said that up to a certain point it was to be regarded as the rate that should naturally be paid by the locality, then that there was a certain part to be met beyond that by subventions from the public Exchequer?—I am afraid I have not put this as clearly as I ought to have done. What I suggest is a maximum poor rate, which should be allowed all over the country.

1390. All over the country?—Yes. There would never be in any district anything beyond a certain maximum poor rate for the purposes of this contribution, and any expenditure beyond what the maximum poor rate would yield, which exceeded a certain amount, should be paid out of the Imperial Exchequer; then anything further and beyond the fixed amount, which should be made up by the Exchequer, would fall upon the rates.

1391. I so understood, and it seems rather a complicated system, a sort of sandwiched-in system?—It is sandwiched in between, as you say, and that is the best way of expressing it.

1392. It is sandwiched in between the public subvention and two local rates?—In between what should be the result of the maximum rate and what should be the result of the maximum expenditure.

1393. Would you throw the rate above what you think should be the maximum of expenditure, above the Government subvention upon the locality?—Certainly.

1394. As a penalty for extravagance?—Certainly, but not as a penalty.

1395. If it was not a penalty for extravagance?—I should not call it a penalty. I simply say this: if you administer your poor relief in such a way that you exceed what Parliament considers is a fair amount for the relief of the poor, you must pay for the luxury. That is all.

1396. Local circumstances and local conditions vary?—Then the locality itself would have to pay for that variation.

1397. Apart from any extravagance at all?—Yes, certainly, they have to do so now.

1398. Why should they not have to pay for other local conditions as well?—They would have to pay for whatever expenditure they incurred above a certain limit, which would be laid down by the Government. The proposal is only put forward to meet the case of the division of the unions, if necessary, by making the unions continuous with the boroughs, that is, if there is any fear that the principle of the Act of 1834 is being upset.\*

1399. (Viscount Emlyn.) I want to understand clearly with regard to the railways and docks exemption. I understand you to take, as a rule, the basis of what benefit they directly derive from such rates?—No, I should say that I find them as ratepayers in a locality, and I should say I find no sufficient ground to give them an exemption and to throw upon their neighbours the burden which they themselves, I think, should bear. That is all I should say.

1400. What has that got to do with their ability to pay?—It was simply this, that there is an ability to pay, and that therefore they have no ground to make any appeal on the score of inability.

1401. Then you do not take their ability to pay and the extent of that ability as anything in the nature of a basis?—No.

\* The witness has, since giving evidence, drawn up a statement in further explanation of his suggestion. Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 7 (par. 36 and footnote).

1402. You would not, for instance, discriminate between a railway which could pay and a railway which could not?—No, certainly not, and I hope my memorandum does not suggest it; I certainly did not intend to suggest it.

1403. I do not think your memorandum does, but I do not understand the answers you have given to other questions. What I may take to be your view is that by the ability to pay you mean that, if a person comes in *in forma pauperis* and says, "I cannot pay this, and you must let me off," you would then consider whether you could let him off?—I would say there is no ground for exempting railway companies on the principle that they are so poor that they cannot pay.

1404. You would not discriminate between one and the other?—What I say is that there is this distinction, that in respect of land there is really not the ability to pay the full taxation, and in the case of railways there is.

1405. But are all railways alike?—Yes.

1406. In their ability to pay?—I think most of them are.

1407. Whether bankrupt or not?—There are few bankrupt ones that I know of.

1408. Take a bankrupt one which cannot pay its way at all?—I should say that they must still pay their rates; I should still say that the rates would have the first claim before the other creditors.

1409. You would still maintain that, though a railway is absolutely bankrupt, there still is ability to pay?—So far as there is ability to pay, they should pay.

1410. Do you discriminate between a bankrupt railway and a bankrupt individual?—I do not.

1411. Do you think there would be ability to pay in both cases?—So far as there is ability to pay, they should pay. The payment of rates in the case of a bankrupt company should be adjusted in accordance with the general law that regulates those matters.

1412. You do not take ability to pay as the basis of the grant of rates at all?—No, I do not suggest it in any shape or form.

1413. In the case of railway companies and other companies—not only railway companies but all companies—do you think they ought to have the power of voting at the election of guardians?—Yes. I think they might if they wished it.

1414. They used to have the power, did they not?—They had some power under the old Act of claiming an owner's vote, but I think myself it would be a retrogressive move—

1415. To give them a vote?—Yes, I think so; I do not think it would find favour.

1416. Are you aware that the power they had of voting has been recently taken away?—I did not know that.

1417. It has been taken away under the Parish Councils Act; assuming that to be so, do you not think that a retrograde motion?—So far as I am aware they have no votes in the municipalities. I take it you are referring to municipalities now. In municipalities the burgess roll is the only register for voting, and I think myself that it is best that that should be maintained. When you speak of a company, it is composed, of course, of individuals, and they have every right of voting for someone or other to represent them. The question as to whether companies should be allowed to vote is a very large one, and I do not know that I have gone into it particularly. I should have no objection to property being represented, because that is what it amounts to. The only thing is that all modern legislation points in the other direction.

1418. Take a case in which a railway company pays 80 or 90 per cent. of the rates in a parish; does it seem to you reasonable that they should have had, by recent legislation, withdrawn from them the right to nominate anyone to appear for them and vote for the election of guardians?—I would not have been the person to withdraw it. I would be one of those who would say: I would be only too delighted for you to have a vote, and not only to vote but to send representatives into the council.

1419. I understood you suggested that there should be an annual valuation, but I am not quite clear whether you meant that there should be a regular valuation of the whole and a fresh list made out, or whether there should only be a right to a ratepayer

*Mr. R. H. Dance.*  
25 Mar. '97  
annually to object to anything in the valuation?—The latter I meant—that there should be the right to the ratepayer to object to the valuation list every year.

1420. In order to get that list right whenever a fresh rate is made?—Yes. He has it now, but the question I was dealing with then was as to whether that right should be taken away in favour of the quinquennial valuation; that is what I understood Mr. Cripps' question to be.

1421. Would not your point be entirely met if the right of the ratepayer to object to the rate whenever a rate is made is still maintained?—Yes, certainly.

*County councils and corporations as rating authorities.*  
1422. (*Sir John Hibbert.*) You stated that in a borough you proposed that the corporation should be the rating authority for all purposes, and that similarly in a county the county council should be the rating authority?—Yes.

1423. I wish to know whether you contemplate in that proposal the setting up of any county or other authority for the purpose of providing for a uniform basis of assessment?—Yes. At present there is what is called the county committee, and they do that work. I should maintain those, but give them power to deal with the individual assessments in each parish.

The witness withdrew.

Mr. ROBERT E. FOX called and examined.

*Mr. R. E. Fox.*  
1429. (*Chairman.*) I understand that you are town clerk and deputy clerk of the peace for the borough of Blackburn?—Yes.

1430. You have been in that office for five years, and previously you had experience as town clerk in the county borough of Burnley and as deputy town clerk in the county borough of Birkenhead?—Yes.

1431. You are a member of the Association of Municipal Corporations, and are one of a committee appointed to give evidence to this Commission on behalf of that body?—Yes.

1432. This printed paper which I hold in my hand is the memorandum with which you have been good enough to furnish the Commission?—Yes.

*Discount of 5 per cent. allowed to ratepayers in Blackburn under a local Act if rates paid within specified time.*  
1433. It deals, I may tell you, as of course is natural, with subjects which we have had before us through other witnesses, and therefore if I do not take you through the whole of the memorandum you will understand it is not because the Commission undervalue the trouble you have taken, but because when statements of fact are unchallenged it is no use to have them repeated upon the notes of evidence over and over again. You refer to some special provisions which are contained in the Blackburn Improvement Act, I observe, as regards the power of recovering rates. Perhaps you will be good enough to tell us shortly in what way they differ from the general law?—The two special powers which I have referred to in my memorandum are first of all the power to allow a discount in respect of the rate due from the ratepayer. Under one of the sections, 265, of the Blackburn Improvement Act, 1882, as amended by section 6 of the Blackburn Corporation, Act, 1892, the corporation may allow a discount of 5 per cent. on the amount due in respect of rates to any person who pays the same within the time limited by the corporation. This time the corporation, as a matter of fact, limit to three months from the laying of the rate.

1434. What is the justification for that?—The borough of Blackburn has possessed this power since 1870. It was an idea which occurred to them in 1870 that it would assist very greatly in getting in the rates promptly without undue expense of collection. The experiment has been thoroughly justified by the success which we have had in the collection of the rates. We find that at least—I am putting it of course roughly—nine-tenths of the ratepayers pay their rates in sufficient time to earn this discount. They value the privilege of having the discount most highly.

1435. Assuming of course, which I am inclined to assume, that the ratepayer ought to pay his gross rate and pay it promptly?—Yes.

1436. Letting that pass for the moment, what is the amount in pounds which the Blackburn town council are out of pocket on account of this discount?—I will take the year 1895-96, if I may. The actual amount

1424. (*Chairman.*) In an answer you gave just now you said that ability to pay was imported into the Public Health Act?—Yes.

1425. What is the basis of that statement. Where do you find it?—I think section 221 enables the local authority to forego a rate when there is not the ability to pay.

1426. Only in case of poverty?—Yes.

1427. It did not apply to public works and companies?—No. I am afraid importance is attached to that term of "ability to pay" which I never attached to it or intended to. All I meant to say was that where you have agricultural land it is recognised on all hands that there is great distress, and has been great distress, and there is an appeal, as it were, to one's sympathy.

1428. If you come down to mere ability to pay as regards any public company it really amounts to the ability to pay of those component individuals who make up the corporation?—Yes, it does, and the expression about ability to pay has merely reference to that. There is a great distinction between agricultural land and railways. I mean they are in two different categories; one is as hardly pressed as it can be, and the other is flourishing. That is all I meant by it.

which the corporation had to pay in discount was 2,576*l.* I have some printed statements showing the amounts for the last five years, and perhaps I may hand copies in.\*

1437. There are two main rates I understand, the general district rate and the poor rate, which are levied within the confines of the borough?—Yes, the poor rate of course includes the borough rate, which is levied with the poor rate.

1438. We will take the general district rate; that will be best for our purposes probably?—Yes, that is the one collected by the corporation.

1439. The rate in the £ was 3*s.* in 1895-96?—Yes.

1440. The amount of rate which you desired to levy was 63,483*l.*?—Yes.

1441. And the amount actually collected was 58,590*l.*?—Yes.

1442. You head the next column "Discounts and compositions"; what is meant by "compositions"?—Compositions applies entirely to the poor rate—the rate you are not dealing with at the moment.

1443. For the general district rate, I may take it then, that the sum which you lost was 2,576*l.*, all under the head of "Discounts"?—Yes.

1444. You collected 92 per cent. of your total rate and had only .05 of arrears?—The actual figure of arrears on the 25th of March 1896, is 32*l.*, and that represents a per-centage of .05 of arrears on the total rate.

1445. The balance to make those figures agree is made up owing to empty tenements, is it not?—Yes.

1446. The amount in respect of which empty tenements you did not recover being 2,285*l.*?—Yes.

1447. You do not have many cases in which you have recourse to the law for recovering your rates I understand?—Very few indeed. In the year we are speaking of, 1896, we had 12 cases in which it was necessary to distrain.†

1448. There is another special power which you were going to tell us of—the special power of distraint which is not part of the general law?—Yes. By section 266 of the Blackburn Improvement Act, 1882, it is provided that it shall be lawful for the corporation "to levy the amount of such rate or any part thereof by distress and sale of the goods and chattels of the person neglecting to pay the same."‡

1449. In what respect does that give you a more summary process than the ordinary method of recovering rates?—The ordinary method of recovering a general district rate would be to apply to the magistrate for a summons against the defaulting ratepayer, and on that summons a distress warrant would be issued by the magistrate, and would then in some cases be levied by the police, and in other cases by the bailiff;

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 11 to 17.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 17 (Table I.).

† *Ibid.*, p. 17 (Table II.).

‡ *Ibid.*, p. 15 (par. 19).

Mr. R. E.  
For.  
25 Mar. '97

I think as a matter of practice as regards the poor rate it is levied by the bailiff; however that is probably a matter of detail. In the case of the special power we possess, whenever the corporation is satisfied that a ratepayer is in arrear as to his rates, all that is necessary is for the corporation to sign a distress warrant and hand it over to the bailiff who distrains without the intermediary of any summary court of justice. The practice in Blackburn is for myself as town clerk to investigate the various cases in which there are arrears, and to sign a distress warrant under a standing authority which I have from the corporation for that purpose.

1450. Are you not rather in that matter acting both as prosecutor and as judge?—In some sense I may be, I quite agree, but after all when you compare the two processes there is not much practical difference, because when you go before the magistrates to ask for an order to distrain, all that you have to prove is that the rate is in arrear; the ratepayer who is summoned to appear before the justices can come, and he has an opportunity of denying that the rate is in arrear if he likes, but I should think a case has never occurred where a ratepayer has been in a position to go before a magistrate and deny that he owes the rate.

1451. I do not want, in any way, to depreciate the value of the system, but I suppose you sit privately, and the whole thing is done without any publicity of any kind?—That is so; it is quite on *ex parte* evidence.

1452. I take it from you that it works well and without friction?—It works exceedingly well, and I submit that the fact that it has been prevailing in Blackburn for 25 years without the slightest objection from anybody, and the fact that the ratepayers pay their rates so well, there being only an average of about 13 of these distresses during the year, show that no one is hurt. No one complains and everyone seems to be quite satisfied.

1453. I put the question in a general way just now that the practice works well, now, I wish to emphasise the question in this way: Are you prepared from your experience of the city to say that it works well, not only from a corporation point of view but from a ratepayer's point of view?—I am quite prepared to say that.

1454. You have not had any complaints or correspondence in the local newspapers, or points raised at elections as to any arbitrary proceedings on the part of the town council?—Never.

1455. Have you had any difficulty in regard to bills of sale, for example?—I have had exactly the same difficulties as regards bills of sale and bankruptcy as a landlord has under the ordinary common law power of distress. We have always considered and believed that this power we have puts us in exactly the same position as a landlord who has the common law power of distress for rents. Of course, as between a landlord and his tenant questions do arise as regards bills of sale and as regards bankruptcy. As regards bills of sale we have a right of distress which takes precedence of the bill of sale creditor just in the same way that the landlord has.

1456. Are you sure that is so?—I think so; I have not looked up this matter.

1457. (Mr. Arthur O'Connor.) If you look at the terms of your own memorandum and the quotation from the end you will see that it is, "By distress and sale of the goods and chattels of the person neglecting to pay the same," so that the subject matter of the bill of sale would have to be proved to belong to the person neglecting to pay the same, or else you would not have power of distress, upon it, whereas the landlord would have power of distress irrespective of the ownership, because the goods were on the premises; is that not so?—I am afraid I do not quite follow that.

1458. (Chairman.) Assume that a landlord has his rent in arrear, he can take possession of any article to satisfy his demands, can he not, such as a clock on the mantelpiece?—Yes.

1459. Can you do so?—Yes.

1460. Irrespective of whether the clock belongs to the head of the family or not?—I may say this section of ours has never had a legal construction put upon it in the courts, but the words of the section have always been so construed.

1461. We will not press it too far, we will take the fact that it has been so up to the present time at any

rate?—I should like to say that my opinion is that we can.

1462. Do you know of any other borough in England which has a similar power?—No, not as regards rates.

1463. Were you town clerk when the Bill was passed?—No. Might I say that similar powers of distress are, I know, possessed by gas companies, but the power is not quite the same in words. The usual power I have seen before in the case of gas companies has been a power saying in express words that the gas company has to have the same powers of distress as a landlord has at common law; and, I may say, we have exactly that power under our local Acts as regards gas and water accounts. The wording, as I say, is different; but in those two cases, we have conferred upon us exactly the same powers as a landlord has at common law. This section as regards the rates does not adopt that form of words, but we have always given it the same construction as the other two sections, we consider, are bound to have.

1464. Do the Commission understand you as putting this forward as a suggestion for general application?—I do not desire to do that. My object is simply to put before the Commission the exceptional powers which the Borough of Blackburn possess, and to put in evidence that those powers we have found in our case to work exceedingly well.

1465. You next deal with what you call the question of ownership rating. Do I understand that by ownership rating you mean the question of compounding?—Speaking generally I do, but it is not compounding as far as I am concerned in my own local rate, because we do not compound in the local rate.

1466. Perhaps you would describe to me what you do exactly mean by ownership rating?—By ownership rating, I mean the rating of the owner of property which is under a certain value per annum. As regards the Poor Law, and as far as provincial towns like my own are concerned, I am referring to ownership rating where the value is under 8*l.*; in the case of the general district rate, I am referring to ownership rating where the value of the tenement is under 10*l.*

1467. I want you to describe to me what is the difference between what you call ownership rating and compounding, because I have looked through all your memorandum, and as far as I can make out, you do use the term "ownership rating" as a term meaning exactly the same as what we call compounding?—Yes, I think I should be right in saying that ownership rating is the same as compounding.

1468. Section 211 of the Public Health Act, 1875, which you say in paragraph 6, "Provides in effect that the allowances which are to be made in ownership rating by the local authority are to be not less than 20 per cent. nor more than 33½ per cent., empties to be allowed in addition, or for a composition to include empties 50 per cent.;" that is compounding, is it not?—That is compounding.

1469. Then your limit, I understand, is 8*l.*?—My limit for poor rate and borough rate only is 8*l.*; for the district rate my limit is 10*l.*

1470. You suggest, I understand, like the previous witness, Mr. Dawe, that for the sake of uniformity, if compounding is to be the practice in future, it had better be made universal at 10*l.*?—Yes.

1471. You approve of the principle of compounding, I understand?—As regards that, I desire to make the suggestion that each local authority should have it within its option either to adopt the principle of compounding or not. May I describe what I mean by referring to my own case? In the case of my own general district rate, the corporation do not desire to compound; they do not consider that is the best system; they levy their general district rate in tenements under 10*l.* directly upon the owner, making no composition allowance, but allowing the discount of 5*l.* per cent. which is allowed to all ratepayers—and they allow him in respect of all empty property he has during the year. That is the system they prefer. On the other hand, as regards the poor rate and the borough rate, there is compounding and no discount.

1472. By statute?—By the Poor Rate Assessment and Collection Act, 1869 section 3. Under that section the owner of a tenement rated under 8*l.* a year may enter into an agreement with the overseers for a term not being less than one year, to pay the rates of

Mr. R. E.  
For.  
25 Mar. '97

Compounding in Blackburn, increase to uniform limit desirable.

Compounding, suggestion that local authorities should have option to adopt.

*Mr. R. E. For.*  
25 Mar. '97

such property, whether occupied or not, and in that event the overseers may, subject to the control of the vestry, agree to make the owner a deduction not exceeding 25 per cent. of the total rates. Then, under section 4 of that Act, the vestry may order that the owners of all rateable hereditaments to which section 3 applies (as regards Blackburn, hereditaments rated at not exceeding 8l.) shall be rated instead of the occupiers, and in the event of the vestry making such order, then the overseers are to rate the owners instead of the occupiers and are to allow them an abatement of 15 per cent., and if the owner is willing to compound—that is to say, to enter into an agreement to pay the rates in respect of his property whether occupied or not, such agreement being for a term not less than one year—the overseers are to allow him a further abatement, which abatement is in their discretion, but not exceeding 15 per cent. The latter section is in force in Blackburn, and, as a matter of fact, the overseers allow the further 15 per cent. The owners who compound thus receiving an abatement or deduction of 30 per cent. from the amount of the rate. The opinion of the Association of Municipal Corporations is that compounding under the Poor Rate Assessment and Collection Act, 1869, should apply to all kinds of rates levied within one borough boundary. I venture to make the suggestion that in order to meet cases of boroughs like my own, for instance, it should be optional upon the corporation whether they should allow compounding or whether they should simply allow for empties and discount.

Compounding under Poor Rate Assessment and Collection Act, 1869. Association of Municipal Corporations consider the Act should apply to all kinds of rates levied within one borough boundary.

1473. You would probably agree with me that whatever system is adopted should be universal for all rates over the area in which it is adopted at all?—Certainly, that is my principal point. Assuming that the Commission thought fit to adopt the suggestion that compounding under the Poor Rate Assessment and Collection Act, 1869, should apply to all local rates in the same area, then I think there is a question as to whether it is desirable that that Act should remain exactly in its present form. I am referring now more particularly to section 4 of that Act. Under that section it is left for the vestry to decide whether there shall be ownership rating or not; if it is decided that there shall be ownership rating, the vestry or the overseers must allow an abatement of 15 per cent. to the owner so rated, and it may allow something more; but if there is ownership rating it is bound to allow this 15 per cent. I venture to submit that that should be discretionary on the part of the local authority. I venture to think there is no reason why the local authority should be compelled to allow even that 15 per cent. In the case of the borough I represent, under my existing powers I cannot have uniformity so long as that provision remains, though still of course that is only by way of illustration.

Exemptions, partial, railways and agricultural land. A revision in the amounts allowed suggested.

1474. The next point with which your memorandum deals is the exemptions from local rating which you quote in paragraph 8. You correctly state, I think, the principle which underlies the enactment that occupiers of the classes of property most benefited by the expenditure of the district rate should be liable to be rated at the highest rate and so on, and the occupiers of classes less benefited at a lower rate. Then you go on to say that, "It is for the Commissioners to consider whether this principle ought to exist to the same degree or not at the present time, and it must be remembered that the occupiers of agricultural property and of railways make considerably increased profits from the land used by them in connection with their trade or business by reason of their being situated among the population of a large town." In the first place I want to get your opinion to help us in forming our own what is your view of that?—My own view I arrive at in this way: It is a long time since that Act of Parliament was passed, and since that Act of Parliament was passed urban districts and municipalities have very greatly increased, and are of very much greater importance than they were. I think the result of that is that the hereditaments (rateable property) which are specially exempted and which enjoy these exemptions ought not to have the same extent of exemption now, because owing to the surrounding circumstances, owing to the increase in population and the increased prosperity of these towns they, so far as they are concerned, get greater profits in consequence of the existence of these towns.

1475. Just let us look at that. I understand in the first place that while you object to the three-fourths deduction you do not take an objection to exemptions altogether?—No, I do not.

1476. You think some exemption is right?—I think some exemption is right, I think it would be too sweeping a change, and I do not think it would be altogether a just change to absolutely do away with exemptions. Of course in saying that I am simply expressing my own opinion.

1477. When you bring into consideration the question of profits, how far do you think that is an element which ought to come into local rating?—Speaking generally, profits I think theoretically ought not to come into local rating, but, as a matter of fact and as a matter of practice, I think profits are largely considered now, under the present law, in local rating.

1478. In what class of cases?—For instance in the case of railways.

1479. It is because, is it not, profits are so largely considered in the amount entered in the assessment roll for railways, that these exemptions are allowed?—No doubt that is so. My point is that the exemption should be reduced as the profits are now greater than they have been in the past, I should say, taking the case of railways for the moment by itself.

1480. Why? Can you point to me any other class of property besides railways and agricultural land which at this moment are rated upon profits?—There are waterworks and gasworks; I think those are the principal ones.

1481. Is that so, as far as gasworks are concerned, they are very largely the property of the corporations themselves. How do you get at the profits of gasworks?—In the case of rating municipal gasworks the professional valuer employed by the overseers goes carefully through the accounts published by the municipal corporation of those gasworks, and from those accounts and from his measurements he arrives at what he considers is the value at which they should be rated, and in arriving at the value of the gasworks he considers the revenue which comes from those gasworks.

1482. Are the owners of the gasworks obliged to show him their books to enable him to make those calculations?—I am not quite sure whether they are absolutely obliged to do it by law, but, as a matter of practice, they do. Further than that, if the gasworks belong to the municipal corporation it does not matter whether you refuse to show your accounts or not, because your accounts are printed and published, and they are always obtainable by the ratepayer.

1483. But there is not a profit made, is there, speaking generally, by a municipality, in the sense that a private owner makes a profit, and in the sense that a railway makes a profit?—Yes. I should say, as a general rule, there is a profit; there is a balance which is carried annually towards the relief of the rate, usually under the provisions of the Act of Parliament which authorises the gasworks.

1484. You make a suggestion I see in paragraph 12 of your memorandum for the transference of the Inhabited House Duty to each local authority in aid of local expenditure?—Yes.

1485. Do you mean that in addition to present subsidies or as the commencement of a principle to be ultimately extended to take the place of those subsidies?—I certainly meant it as being an addition to what is now received from Imperial taxation; I do not consider it is for me at all to make the suggestion what it is to be, I only desire to make a suggestion that there should be some further Imperial relief to our local taxation, and I have mentioned the Inhabited House Duty under the impression that that might be a convenient tax to allocate to local purposes.

1486. Do you know what the Inhabited House Duty collected from Blackburn at the present time is?—I am able to form what I consider to be a fairly correct estimate.

1487. What is it?—I put it down at 2,000l. a year.

1488. How much does *ld.* in the £ on the value of Blackburn raise?—Between 1,800l. and 1,900l. a year.

1489. Roughly speaking, it would come to about *ld.* in the £?—Yes, roughly speaking.

1490. Do you suggest that the Inhabited House Duty should be handed over to the local authority absolutely, or that it should be collected by the Imperial authority and the proceeds handed over; I mean, would you give the local authority the power to raise the Inhabited House Duty, *per se*, or would you keep it as an Imperial tax as to amount, the proceeds only being handed to the local authority?—I would, certainly, keep it as an

*Mr. R. E. For.*  
25 Mar. '97

Exemptions, partial, allowed in respect of certain properties where profits are taken into consideration in rating.

Inhabited House Duty. Suggested transference of proceeds by Imperial authority to local authorities in aid of local expenditure.

*Mr. R. E. For.*  
25 Mar. '97

Imperial tax, the proceeds to be handed to the local authority, following the same principles adopted by the Local Government Act, 1888, in handing the proceeds of what are practically Imperial taxes to the local authority. I do not think the corporation would like to have the responsibility of dealing with that tax as regards levying it; as regards collecting it, that might be another matter.

1491. The local authority could collect it?—Yes; but still, I think, the local authority would, certainly, of the two alternatives, prefer that the tax should be collected by the Government and handed to them.

Valuation, rating, and collection of rates. Systems not uniform where several parishes exist in a municipal borough.

1492. (*Mr. Glare.*) A previous witness pointed out generally the difficulties in the present system of assessing property and collecting rates, and I think, if I might venture to give the effect of his answer, it was this—that where you have several parishes in a municipal borough you do not get either a uniform system of assessment or an equal and fair levying of rates over the whole borough?—Certainly not; it is my opinion that you do not.

1493. May I gather from your experience that the dual collection of rates between the overseers and the municipality is an unnecessary expense which might easily be saved?—Yes, certainly.

1494. You suggest that there should be one assessing authority and one rate collecting authority in each borough?—Yes.

Boroughs should have one assessing and one rate collecting authority, but not necessary to interfere with areas of unions.

1495. I understand from the memorandum you have put in that you do not think it at all necessary, in order to carry out these reforms, that any alteration should be made in the unions?—No, I do not think it is necessary, speaking generally, that any alteration should be made in the unions. I think there may be some exceptional cases where, probably it might be greatly for the benefit of the local authorities interested; but, still, as a general principle, it is not necessary.

1496. It is not necessarily an essential part of a scheme for reforming the principle of rating, and the principle of collecting rates to interfere with the areas of existing unions?—No.

Exemptions, partial, should be extended to certain portions of waterworks and gasworks.

1497. With regard to exemptions, do you see any reason why, if railways and canals are entitled to the exemption of three-fourths from municipal rates, waterworks and gasworks should be excluded from a similar exemption?—No, certainly not; I think gasworks and waterworks are certainly entitled to whatever exemption a railway has. I would not say, and I do not desire to say, that they are entitled to the same exemption, but I think they are entitled to some exemption.

1498. Why should, for instance, a reservoir and pipe line belonging to a corporation be assessed at its full value for any sanitary rates that may be payable, but a railway or a canal have the exemption up to three-fourths?—I do not see any reason for it.

1499. May I take it your opinion is this: That if the existing exemptions to railways and canals is continued it ought to be extended to the reservoirs and pipe lines of waterworks and to the pipe lines of gasworks?—Certainly, on exactly the same principle as any exemption extended to railways.

1500. They ought to be treated alike?—Yes.

1501. And either the exemptions should be removed as regards railways and canals, or should be extended to the other properties?—Certainly.

Arrears of rates in Blackburn, special summary powers of distraint under local Act. Possible objections to.

1502. With regard to this special power which you have of distress, is it not rather a strong order to give an official of the corporation, practically the power to issue those distress warrants just as he thinks fit?—No doubt it is rather a strong order.

1503. I assume, of course, that as we know very well in the case of Blackburn the power is exercised with a great deal of discretion, but cannot you conceive of a case where a power of that kind might be extremely dangerous to place in the hands of any one man?—Compare it with the existing mode of procedure where the power can be exercised by one magistrate; speaking generally, a man who is fit to be a town clerk is usually fit to be a magistrate or ought to be.

1504. As regards the discounts you allow, when do you lay your municipal rate?—It is either in May or June, for the moment I think it is in May.

1505. Do you lay it for the whole 12 months?—Yes, we lay them retrospectively from the last 25th of March to the following 25th of March, we have power to lay them retrospectively.

1506. It is in respect of the whole year?—Yes.

1507. Do your demand notes go out about two or three months after the council has passed the resolution to lay the rates?—As a matter of fact we have extra staff on and we have the demand notes out very soon after the council lay the rate, within a few weeks as a matter of fact.

1508. Up to what time do you allow the ratepayers to pay their rates without the issue of a distress warrant?—We allow them one quarter.

1509. The first quarter only?—I may say that it depends very much upon the circumstances of the ratepayer. We do not issue a distress warrant until the end of the half year, and then we decide on the particular circumstances of that ratepayer as to whether it is necessary. In most of the cases in which a distress warrant is issued it is issued at that particular time because probably the landlord is making demands for rent, or the estate is in bankruptcy, or there is some special circumstance of that kind, then we issue the distress warrant at once in those special circumstances. But as a general rule if a man is a bad payer he is allowed two quarters, and then he is threatened with distress before the actual warrant is served, a written demand is served upon him at the place at which he is liable for the rates and he has about 12 hours after the service of that demand to come and pay the rates; if he does not, then the distress follows.

1510. Do you collect, practically, the whole of the rates in Blackburn within the first six months after the rate is made, or do you allow until, we will say, the last quarter before you take the extreme measures which the law allows to recover it?—We practically collect nine-tenths of the rate in Blackburn within six months after it is made.

1511. At what date is the person entitled to the discount?—If he pays before the 1st of September, I think it is; you may take it that the 1st of September is about the date.

1512. Then it comes to this, that all ratepayers who have a sufficient amount of money to be able to pay the rates for the whole 12 months at some period during the first six months get 5 per cent., but those who are not in that fortunate position have to pay the rates in full?—Yes; that is so.

1513. So really the discount is 5 per cent. reduction of rates given to those who can afford to pay them, which is not extended to those who really are very hardy pressed to find the amount required for the rates; the rich man can get his 5 per cent., but the poor one cannot?—Yes. But I should not like to say that it is by no means within our experience the poor man who is the defaulter. The case no doubt does happen to some extent that the poor man is the defaulter, but in many of the cases where the people do not pay in time to get their discount it is more from habit than anything else, and it is not from poverty. We are surprised to find that there are so many people who plainly tell us that they can get more than 5 per cent. for their money, and that they would rather pay their rate on the very last day on which they would be allowed to do so. Nine-tenths of them do pay and get the discount. I want to emphasise that; the poverty stricken people and the speculative people are only the remainder.

1514. With regard to the property to be included in the list of composition property, I understood you to say that you recommended that no definite rule should be laid down, but that an option should be given to each corporation to allow a composition or not?—Yes.

1515. How will that work in the case of the poor rate in the same town, supposing, for instance, that the corporation decide not to give the composition, and the overseers decide that they will?—I think that will work perfectly well. I am assuming, in saying that, that the town council have obtained, as they can obtain, from the Local Government Board, the powers of the vestry. It is within the power of the vestry to decide whether a composition shall be allowed or not. They have the power to say aye or no as regards that, and if the local authority adopt the principle of not allowing the composition as regards their local rates they can do the same as regards the poor rate, should they have obtained the powers of the vestry.

1516. I just want to ask you a question about the Local Government Board. They have power to give the corporation the powers of the vestry; have you in Blackburn made any application to the Local Govern-

Local Govern-  
ment Board.

ment Board under the Local Government Act of 1894 to get the powers of appointing overseers and assistant overseers?—Yes, we have those powers by provisional order and also the powers of the vestry.

1517. Am I right in assuming that under the Act of 1894 the Local Government Board have the power, if they think fit to exercise it, to give the corporations to a very large extent the power to take over compulsorily the rate-collecting from the guardians and overseers?—They have no power to take over compulsorily; they can only do it by what I may describe as a slightly roundabout arrangement.

1518. But with that exception they can, if they choose, vest in the municipalities a power which will enable the municipalities to carry out a uniform system of rating and to collect the rates in future?—Yes, with that exception, and that exception is this: they have not any power to alter the limit of compounding from 8*l.* to 10*l.* That additional power is required in order to bring about the uniformity which could be obtained under that section.

1519. From your experience of the applications which have been made by town councils to the Local Government Board, do you think the Local Government Board have exercised their powers to the fullest extent, or have they been actuated by the question as to whether any objection or opposition is raised by the parochial authorities?—My experience of the procedure of the Local Government Board has been that the first step they have taken after the application has been made is to say that first of all the opinion of the overseers must be taken upon it, and secondly the opinion of the vestry.

1520. Then, practically, the Local Government Board instead of exercising their discretion as to what is the best thing to do in the interests of local administration consult with all the parochial authorities first of all?—Precisely so.

1521. And if strong opposition is offered they practically give way?—Yes.

1522. So that wherever any opposition is offered by parochial authorities the Act of 1894 is practically a dead letter for all the purposes of improving local administration as regards this subject?—Yes, I believe that is so. I have not had any experience of any opposition myself from the parochial authorities; they have been quite ready to fall in with my suggestions in the matter.

1523. From the table you have put in\* I notice that the percentage of collection of rates by the municipality is considerably better than of the collection by the poor law authorities?—Yes.

1524. There is one figure I do not understand; how is it that under the column headed "Discounts and compositions" (col. 5) for the general district rate a sum of 2,576*l.* is put down, and for the poor rate a sum of 4,564*l.*?—The 2,576*l.* represents a discount of 5 per cent. to those people who pay before the date I have mentioned; the poor rate figure of 4,564*l.* represents, as regards those people who have signed an agreement with the overseers under the third section of the Poor Law Assessment Act, the 25 per cent. which is allowed to them, and it also represents the 30 per cent. deduction which is allowed to them under the fourth section.

1525. It is the composition?—It is their composition.

1526. Do you have no composition at all with regard to the general district rate?—None.

1527. Then what you do is to substitute a 5 per cent. discount to be given to all persons who have the money to pay for the first six months in place of a composition for the poorest class of property, which is allowed by Poor Law?—Yes, that is so. As regards that composition the general experience, I am told, of the people responsible for making the rate in Blackburn is that this class of property—we are speaking about the property under 10*l.* a year—is probably the best paying property from the owner's point of view of any property in the town.

1528. Are not the circumstances of Blackburn somewhat peculiar in this fact that there is regular employment, and that good wages are, as a rule, paid to what are called the working classes, and that is a very different state of circumstances to those which exist in a place like Liverpool where regular employment is very scarce, and the population is constantly shifting?—Quite so. What applies to Blackburn of

course applies to the general run of manufacturing towns in Lancashire and Yorkshire.

1529. As a rule in a manufacturing town the employment is constant, wages are good, and the men do not want to leave their houses?—That is so.

1530. Therefore you can collect the rates directly from the occupiers?—No. We cannot collect the rates directly from the occupiers. Experience shows distinctly the contrary. If you want to get your rates in you must collect them from the owners.

1531. Would the owners pay in full?—They are quite willing to pay in full. In Blackburn the recognised custom when a tenant goes into a cottage house is that he objects strongly to have to pay any rates himself; he wants to have one payment due for the whole thing; so he pays the landlord the rent, and in the rent is included the rates. We have, as I have said, this difference between the general district rate and the poor rate, that the 10*l.* relates to the general district rate and the 8*l.* to the poor rate; as a matter of fact all those people between 8*l.* and 10*l.* do not compound, but pay in full.

1532. (Mr. Elliott.) To what extent have the views you have expressed with regard to partial exemption from rating received the approval of the Association of Municipal Corporations?—I do not think the Association of Municipal Corporations have actually laid down any extent of exemption that they would advocate. I think the opinion is probably not quite unanimous on that point. I know that there is a strong feeling among members of the association that there ought to be no exemptions whatever.

1533. Has your memorandum been in any way submitted to the Association of Municipal Corporations?—No, it has not.

1534. Then the observations you have made with regard to the exemption of agricultural land under the Public Health Act only represent your individual views and not those of the association?—Purely.

1535. I did not gather from what you said in reply to Lord Balfour that you dissent from the principle indicated in Chief Justice Erle's dictum?—By no means.

1536. But only that you considered that in consequence of the change of circumstances the extent of its application was excessive?—Quite so. That is a question of degree merely, and I put it merely as a question of degree.

1537. Would you tell me more particularly what was in your mind with regard to the alterations of circumstances which have taken place since 1875?—Of course I am speaking of the class of towns which I know best. My experience lies principally among the manufacturing towns of Lancashire, some of which have trebled and almost quadrupled their population within that time; the trade of those towns has sprung up and—taking the case of railway companies—the railway companies have many more goods to carry and are getting a very much bigger trade out of those towns. The circumstances in that respect are different from what they were so many years ago. As regards agricultural land, the dairy farmer who has farms all round the town gets a ready sale for his milk, and is able, I think, to make a very good living.

1538. Then the alteration of circumstances to which you refer consists not so much in any alteration of the purposes for which local expenditure is required, but rather in an alteration of the circumstances as regards the particular properties rated?—Quite.

1539. Would not the remark that these properties now yield increased profits apply equally to all the properties situated in the towns?—Yes. I take your question to mean that the same principle must apply proportionately all round.

1540. I wanted to obtain from you this: whether there had been any particular increase in the profitable character of these properties which would render the differential treatment fair in 1875 and not fair now?—I think so.

1541. You think that the profits of these particular properties have increased in greater proportion to the profits of other properties?—As a general principle I do think so. I have just been trying to run through in my mind what the other properties are. The bulk of the other property in a town consists of the ordinary dwelling-houses, and to my mind the value of the railway has increased to a very much greater extent than, we will say, the value of a dwelling-house or of land.

Mr. R. E.  
Fox.  
25 Mar. '97

Exemptions, partial. Agricultural land; benefits received from general district rate, whether substantial ones.

Inhabited House Duty. Suggested transference of proceeds by Imperial authority to local authorities in aid of local expenditure. Difficulties in connexion with carrying out of scheme.

1542. Would that apply to agricultural land which happened to be in the neighbourhood of a borough?—To some extent it would; I think to a considerable extent it would, for this reason—that as the population grows the farmer changes his style of farming, and becomes a grass land farmer; he keeps a larger number of cows, and it does not seem to matter how many cows he keeps, for he has always got a ready market for his milk provided he lives near a town, either within the boundaries of a borough or thereabouts.

1543. What are the principal purposes for which this general district rate is levied?—First of all, general sanitary matters, such as sewage works, highways, and fever hospitals. The general district rate is a sort of guarantee fund, in a way, for some of the municipal undertakings, such as markets and gasworks.

1544. Would you say that those purposes are as beneficial and necessary to the occupation of agricultural land as to the occupation of other rateable property in the borough?—Generally, I should say no. Of course as regards highways, several of the items apply equally; but all the items do not apply equally.

1545. May it not be said of some of the larger items of that expenditure that the benefit to agricultural land in the borough is very small indeed?—Yes, as regards some of the items it may be said so.

1546. With regard to the suggestion that the house duty should be transferred to local authorities, you have told us that in your opinion it would be better that that tax should continue to be levied by the Imperial authorities; do you suggest any changes in the constitution of that tax?—No, I do not.

1547. Would you propose that it should still continue to be levied upon the gross value of property, and not upon the net?—I have not considered that question.

1548. Have you taken into consideration the fact that the house duty is a graduated tax, and that the rate of the tax is higher in the case of more valuable houses than in the case of less valuable houses?—Yes, I have thought of that in this way, that it might probably not be quite an equal distribution, I mean, comparing one class of town with another—a manufacturing town, for instance, with a highly residential town; the residential town would get a great deal more in the way of Inhabited House Duty. I have thought of that, and I consider that is a point of great importance.

1549. Have you also taken into account that the house duty is not only a graduated tax but also a classified tax—that it is charged at a lower rate to farm-houses, public-houses, shops, and property of that description as compared with dwelling-houses?—I may say that I have not carefully considered the incidence of the tax. My evidence is really on the general principle that we ought to have more funds from Imperial sources.

1550. Do I understand that the suggestion as to the transfer of the Inhabited House Duty was made without any full consideration of the incidence of the tax?—No, certainly not; I do not mean to convey that at all. When I put it forward, I considered those various points you have mentioned. I put forward the suggestion of the Inhabited House Duty as being one tax, which even with its various incidence might conveniently be suggested as to be allocated to local authorities; but I do not put it forward in exclusion of any other tax which might be found more convenient.

1551. You do put it forward as a substantial proposal for the reform of local taxation?—Yes, I do.

1552. With regard to the question of equality, not as between borough and borough, but as between property of different classes in the same borough, have you considered what would be the effect of this proposal upon these different classes?—I have considered the effect would practically not be different from what it is now, because, if the proceeds of the tax were handed over to the general relief of taxation, the incidence would remain exactly the same as it does now between the different kinds of property.

1553. You mentioned, I think, that in the case of the Borough of Blackburn if the Inhabited House Duty were transferred it would give a relief all round, according to the rateable value of property in the borough, of about 1d. in the £?—Yes.

1554. Agricultural land in the borough at the present moment pays nothing to Inhabited House Duty?—No.

1555. Consequently agricultural land would be a clear gainer of 1d. in the £, would it not?—Quite so.

1556. Then in the case of manufactories, manufactories are not charged with house duty?—No.

1557. But they are rated, of course?—Yes.

1558. Manufactories, therefore, would be clear gainers?—Yes.

1559. Then in the case of shops where the rate of Inhabited House Duty is comparatively low, would they be gainers, or would they be losers?—I should think they would be gainers.

1560. Not gainers to the same extent as agricultural land and manufactories?—No, certainly not. They would be gainers merely because it is a lower tax.

1561. With regard to the smaller dwelling-houses, they also would be gainers, but not to the same extent as those properties in the borough which do not pay house duty at all at the present moment?—That is so.

1562. Then, again, with regard to dwelling-houses of high value; they would gain least of all, would they not?—Yes, they would.

1563. Because they pay the highest rate of house duty?—Yes, they would gain least of all.

1564. Therefore, in proportion as the charge to the house duty was high or low, there would be a gain?—Yes.

1565. Do you think that result would be an equitable one?—I think that in a comparatively small amount like 2,000l. a year the inequalities that you refer to would be very small—would be so small, indeed, that I do not think they would press unduly on anyone.

1566. Still you do, as I understand, advocate a scheme which would give a greater measure of relief to agricultural land and to manufactories than it would give to shops, and a still greater measure of relief than would be given in the case of dwelling-houses of the higher value?—Yes, I do. I advocate that there should be an Inhabited House Duty added to the resources of the borough, and I advocate it with the idea that those inequalities would not be very material, and would not do much harm. In doing that it does not seem to me that it differs very much from the principle that has already been adopted in transferring to the local authority a portion of the probate duties and licence duties. If you go into the detail of those licence duties you will see that there must be some inequalities: for instance, the beneficiaries under large estates have to contribute more to local taxation than other and poorer people. If you analyse what already exists there must be inequalities, and I submit there will be inequalities, and this use of the Inhabited House Duty would not add materially to the already existing inequalities.

1567. Inasmuch, then, as the application of the Inhabited House Duty to local purposes would be attended with inequalities as regards the extent of relief given, do you see any great want of equity in those inequalities?—No, I do not.

1568. (*Chairman.*) I want to ask a question on behalf of Sir John Hibbert. You have mentioned in paragraph 19, and it has already been the subject of some question that under section 266 of your Improvement Act, it is lawful for your corporation to "levy the amount of such rate or any part thereof by distress and sale of the goods and chattels of the person neglecting to pay the same"?—Yes.

1569. You told us about the procedure to carry out that section, which I understand was something like this: that the town clerk, acting under the authority of the council, simply signed a warrant and it proceeded to be executed?—That is so, after a previous demand, as I have mentioned in evidence, having been served.

1570. How many previous demands in writing do you make to the ratepayer before this process is had recourse to?—A great many; I could not tell you quite how many, but after all the ordinary "duns," if I may use the word, have gone to the ratepayer.

1571. At what date in the year is your rate levied?—In June we lay the rate.

1572. The council resolve upon it, in what month?—In June.

1573. When is the first notice sent to the ratepayer?—Within, I should say, three or four weeks.

1574. Now follow it out; supposing a man is liable to pay a rate of which notice is sent soon after June,

Mr. R. E.  
Fox.

25 Mar. '97

Arrears of rates in Blackburn. Special summary powers of distraint under local Act.

Procedure in carrying out, time allowed, and notices given.

*Mr. R. E. Fox.*  
25 Mar. '97  
at what period of the year do you arrive at the point when the town clerk issues the warrant for distress?—In general cases, without considering those exceptional cases I have mentioned to Mr. Clare, somewhere about December.

1575. Within about six months?—Yes.

1576. And during that time he will have had three or four notices to pay?—Yes, at least.

1577. Has he warning beforehand that this process is to take place at sight of the town clerk?—Yes.

1578. In writing?—A form of demand is served upon the ratepayer about 12 hours before the rate collector will come to me for a distress warrant. That demand states the arrears which are owing, and the rate collector intimates to him at the time personally and verbally if he sees him, of course—there may be times when he does not see him—that a distress will be issued on the following day. I am sorry I have not got the form with me.

1579. From your description of the process it does not seem to me quite certain that the individual will always get definite notice that this process is to be gone through; I understand that he does if the officer finds him, but in the event of his being out at work and the officer not finding him, is it possible that the warrant can be issued without his having an opportunity of appearing?—I do not think it is possible, but it might happen. I can imagine a circumstance where it might

happen as a very exceptional thing, but, speaking generally, it is not possible.

1580. As a matter of fact, do they appear before you?—No; as a matter of fact they do not. I do not think I ever had a case during the five years I have been there. You know the custom has been prevailing in the town for 25 years, and they all understand it.

1581. Please do not assume that because I am putting these questions I am necessarily hostile; I am only anxious to elicit the information on behalf of Sir John Hilbert. Now, take this comparative statement of the collection of general district and poor rates\* into your hand and look at the column headed "Discounts and compositions," (col. 5), which has already been the subject of some questions. You will observe that the discounts under the general district rate remain pretty constant right through the whole of the five years, and that they hardly vary?—Yes, that is so.

1582. It is not so as regards the poor rate; in the first two years of this quinquennial period that item remains pretty much the same, and for the next three years it also remains pretty much the same; but between the second year and the third year it rises by about 1,000l.; how is that accounted for?—I am afraid I cannot account for it.

1583. Perhaps you will look into it, and if you can find it out you will be good enough to add it to your proof?—Yes.†

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## FIFTH DAY.

Friday, 26th March 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Viscount EMLYN.

The Right Hon. J. B. BALFOUR, Q.C., M.P.

The Right Hon. Sir J. T. HIBBERT.

Sir E. W. HAMILTON, K.C.B.

C. N. DALTON, Esq., C.B.

H. E. CLARE, Esq.

T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.

E. O. SMITH, Esq.

JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. WILLIAM JOHN JEEVES called and examined.

1584. (*Chairman.*) You are the town clerk of St. Helens, and are one of the gentlemen who have been delegated to appear here by the Association of Municipal Corporations?—That is so.

1585. This paper which I hold in my hand is the memorandum which you have been good enough to prepare for us\*?—That is so.

1586. How long have you held your present office?—As town clerk since 1st January 1891; I was deputy town clerk three years prior to that; and before that I had some years' experience of the non-county borough of Peterborough.

1587. As you correctly indicate, the assessment for the poor rate is really the basis of all rating?—Quite so—absolutely.

1588. And the poor law union is the area of that assessment?—Yes.

1589. I will ask you in the first instance whether you think that the poor law union is the best unit to take for the assessment, or whether you would suggest any other?—I would say in answer to that that it seems to me the only possible unit, because, generally speaking, the union is the largest unit over which there is a common assessment, and what strikes me is that you must

have an authority for the whole of the largest area over which there is a common rate.

1590. By that answer I understand you to exclude the idea of making the area urban and rural respectively?—For my own part I do not see that that is possible where a borough forms part only of the union.

1591. Assuming that it would be possible to alter the boundaries so that the more important boroughs were not in more unions than one, do you think the reform which I indicated in the question would be a wise object to aim at?—From a practical point of view I should say that I do not see any great advantage in it, if the assessment committee of the larger union had representatives of the corporation upon it.

1592. Your suggestion for alteration, I take it, is that the municipal representatives should have power to see that the union assessment is fairly compiled?—Quite so.

1593. Would you like to elaborate that in any way and give me any further suggestions?—I would like to point out, particularly with regard to the present assessment committee of the union, that there is a considerable variance in practice in the allowances made for deductions from gross to rateable value. I

Assessment. Boroughs in two unions, representation of urban and rural interests secured by representation of corporation in assessment committee.

Mr. W. J. Jeeves. Will hand in a table showing the variations in ten unions from which I have particulars.\*

26 Mar. '97 1594. Ten different unions in the same county, for example?—No. I have taken four unions in Yorkshire, two in Nottinghamshire, and four in Lancashire.

1595. What is the common test which you apply to all these unions from which you deduce the differences that you object to?—The common test, of course, of assessment is letting value, which must be arrived at on the particular facts of each case, but then when you come to deal with the rateable, certain varying deductions are made for such things as repairs, insurance, and that kind of thing, and those deductions vary very considerably in different unions.

1596. You admit the necessity for having some exemptions?—These are not exemptions; these are deductions which are made from the gross rateable value.

1597. Is it your view, that there should be no deductions, using the term in the narrower sense which you have just attributed to it?—No. I think deductions are necessary.

1598. Perhaps you would name the deductions?—I am talking exclusively for the moment of deductions from the gross estimated rental in order to arrive at the rateable value. Taking the letting value as arrived at on the particular facts of each case to be the gross estimated rental in two unions, and suppose it were of cottages, the deduction in one union that I have here is said to be 25 per cent., in order to arrive at the rateable, and in another union it is only 15 per cent. The effect of that would be if one borough were in the two unions, that one lot of property would be having a lower assessment and the other a higher assessment; one part of the borough would, therefore, be paying more in rates than they should, and the other part less.

1599. Do you see your way to making those deductions statutory and universal?—I think from the table I have of them that that would be perfectly possible.

1600. And fixed and stereotyped by Act of Parliament?—I think that would be possible from the actual table that I have of them.

1601. Is that a suggestion which you make to us as a practical proposal for reform?—That was not a point to which I had directed my attention, and I answered your question from the table that I have here. My idea had been that these deductions did not very much matter in different unions so long as two unions did not meet in another area of common rating.

1602. That, I think, everybody will agree with; relatively speaking, it does not matter so long as they are domestic to the union, but the moment that parts of two unions have to be rated for the common purpose your criticism is clearly a good one, that it is not fair as between the two different unions. But I should like to get from you some suggestion as to how that difficulty can be met short of enforcing one scale of deductions by statute?—In a case of that sort, where two unions do join in the middle of a borough, it seems to me that you might get over it apart from the statutory provision you refer to by having a joint assessment committee for the two unions.

1603. The county authorities would, of course, have also to be represented on that committee?—I do not think the county authorities would, because the county assessment is a separate assessment for county purposes.

1604. I suggest to you that some authority outside the borough must also be represented upon the assessment committee, so as to secure uniformity as between two unions which are in the assessable area outside the borough?—That authority, I take it, would be the board of guardians at present.

1605. The district council?—Yes, the district council in other words.

1606. You think that would meet the difficulty?—I think that would meet the difficulty.

1607. (Sir John Hibbert.) I do not think you are right about the district council; they have no assessing powers?—What I understand the Chairman's point to mean is this: that practically he would have for a particular union an assessment committee made up of representatives from the urban district councils, in which I include the boroughs, and also from the rural

district council, instead of having, as now, an assessment committee appointed by the whole board of guardians which represents the whole area, and then giving additional representation to the urban district council, because, as I understand the suggestion, that might give the urban too great a preponderance.

1608. (Chairman.) That suggestion that you have just indicated has been made to us already and has been criticised in this way—that it would make the assessment committees too large in size, and cumbersome in working; what have you to say to that criticism?—I do not think it would be so, because the rural district council is made up of representatives from a whole lot of townships, which are practically the same as wards in a borough. The suggestion does not mean that each township shall be represented, but that a certain number, representative of those rural townships, shall be appointed by the council for the whole rural area.

1609. To sum up that part of your evidence, what I understand you to say is that the main object to be aimed at by one method or another is to secure, as far as possible, uniformity of valuation in each area that is rated in common for any particular purpose?—That is so.

1610. Do you or do you not mean to interfere with the parish as the smallest unit for assessment purposes?—For my own part I see no necessity to interfere with the parish in a borough, except for the purpose of amalgamating the parishes in that borough, and I should have something to say with regard to the way in which the officers of the parish should be appointed in the borough.

1611. Would you not say it now?—Certainly. My view is that if you consolidated all the parishes in a borough, and make one parish for the whole, and then you give to the council of that borough the powers of the vestry together with the power of appointing overseers and assistant overseers, and also give to the council the power to delegate to the overseers, so to be appointed by them, the power of the collection of urban as well as poor rates, you effect all that can be effected, and all that need be effected in the way of economy and efficiency both of collection and of assessment. Instance St. Helens, where in effect this state of things exists, under the provisions of a Local Act, the result being increased efficiency and a saving of 700*l.* per annum in administrative expenses, as set out fully in paragraph 15 of my memorandum.

1612. You wish to have one collecting authority to begin with?—Yes.

1613. What do you desire that that collecting authority in a municipal or urban area should be?—I should say that it should consist of overseers with executive assistant overseers, such overseers and assistant overseers both to be appointed by the council; and in the term assistant overseers I intend to include rate collectors.

1614. To that extent it would be a supersession of the parish?—Then every borough would consist of one parish—it would be the borough and township, or the borough and parish of—the name of the borough.

1615. We know that the actual valuation list upon which the rates are levied is an annual creation, but we have been told that in many cases the same list goes on from year to year with just the minimum of alterations that may be absolutely necessary, as some individual feels aggrieved. Would you explain to me what the system in St. Helens is?—It seems to me that to a large extent the system is described by your question. Many years ago there was a new valuation list, and since then new property, and also alterations in existing property have been dealt with by means of supplemental valuation lists. Upon the consolidation of the townships in 1893, the working effectiveness of this arrangement was found to vary in the different townships.

1616. Do you think that a satisfactory system?—I should say there should certainly be provision for a periodical re-valuation.

1617. At what intervals?—I do not think that periodical re-valuation need be every year; I should say, perhaps, a period of from three to five years for re-valuation, and dealing with any alteration in the meantime by way of a supplemental list would be sufficient.

1618. What is the system in force in St. Helens as to the compounding for the payment of rates?—We now, under a local Act passed in 1893, have power to make the same allowances for our corporation rates as are

Mr. W. J. Jeeves.

26 Mar. '97

Deductions, variation in amounts allowed in different unions.

Deductions could be, of fixed amount by statute.

Deductions. Uniformity in amounts as between two unions forming parts of a borough secured by the creation of a joint assessment committee.

Assessment. Consolidation of parishes in boroughs. Appointment by council of one collecting authority for all rates.

Valuation lists. System of annual revision but not of annual re-valuation.

Valuation lists. Periodical re-valuation desirable.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 53.

W. J. Jeaves.  
26 Mar. '97

made for the poor rates; and having also the powers of the vestry, we regulate the allowances that are made on the poor rates, and we make one uniform allowance for all rates on properties not exceeding 10*l.* in rateable value 15 per cent., and a further five per cent. in respect of empties.\*

Compounding, system of, in St. Helens. Uniform allowances in case of corporation rates as well as poor rates under local Act.

1619. Do you find the different scales of compounding which are prescribed in different Acts of the present time a source of inconvenience to you?—I should say that, taken altogether, the high allowances that have to be made in many cases are prohibitive. At St. Helens up to this Act of 1893, we had provisions under the local Acts to make practically the same allowances as under the Public Health Act; those allowances were considered to be much too high, and therefore, we did not put them into operation; we simply gave a discount under another power to property under 10*l.*

Compounding. Advantages of system.

1620. You approve in principle of compounding, I understand?—Up to a rateable value of 10*l.*, certainly.

1621. What do you consider the arguments in favour of it?—The point is, that the landlord first of all takes the responsibility—he is in the position of a guarantor; and secondly, he has to collect these payments weekly or fortnightly, as the case may be.

Compounding. How far a movement in rates affects rents, and how far are occupiers paying no rates interested in the administration of local affairs, and how far do they take the same view as the owners.

1622. Do the lessors, in any practical number of cases, divide, for the information of their tenants, the sums they collect into the two items of rent and rates?—Not that I ever heard of.

1623. So that the occupier, as a fact, does not know whether the rates are rising or falling?—No, except this, that I believe there was a case where the rates went up when they put the rent up so much a week; but unless the rates go up so much, and there is a sufficient unity among property owners to make a general rise of so much a week to meet that, the occupiers do not know.

1624. You would, of course, agree with me in this, that the power of the owner to make that additional charge would depend entirely on whether the demand for house accommodation was slack, or whether it was the reverse?—Clearly.

1625. So that it really rests rather upon the ordinary supply and demand than on the consideration of whether the rents are actually rising or falling in any particular term of three or four years?—To a very large extent that is so.

1626. You say, to a very large extent; to what extent is it not so?—You constantly meet now with what are called Cottage Property Owners' Associations, and I think where there was a sufficient association among owners of property of that class they might make arrangements among themselves whereby rents were to rise slightly, or to fall slightly, on an increase or decrease in the rate.

1627. Do you feel able to express any opinion as to whether a system, under which so many of the smaller occupiers have practically concealed from them the movement of the rates, tends to economy of administration or the reverse?—I can hardly answer that question directly, but I should say that the people who make the greatest amount of fuss when any rates rise are the cottage property owners.

1628. Are they numerous enough in St. Helens to have any real weight in elections?—I should say certainly they are in St. Helens, because it is a manufacturing town, and in almost all towns, I should say, that would be so, because, whatever may be the actual fact, the cottage property owner, when there is any chance of raising the rate and so on, takes care to operate on his tenants, and his tenants are voters, and therefore, you may take it that in most cases the occupier very foolishly takes the view of the owner.

1629. When you suggest, as I see you do, the abolition of the allowances to railways, may I take it that the word "allowance" means "exemption"?—Yes.

1630. Will you tell me why and upon what principle you make that suggestion?—I make the suggestion because I conceive no logical reason on which the exemption has ever been made.

1631. Are you familiar with the principle which has been more than once alluded to before this Commission, and which is to be found in a judgment, I think of Chief Justice Erle, that there should be some measure,

\* The witness states that power is given under s. 114 of the St. Helens Corporation Act, 1893 (56 & 57 Vict. c. 215) to allow composition up to a rateable value of 15*l.*, but the Corporation need not go and have not gone to the utmost limit.

it may be a rough one, of consideration given to the question whether the particular property is or is not benefited by the rate which is levied upon it?—By that I understand you to mean that the exemption only applies to the lines and not to the fixed buildings such as stations and so on; is that so?

1632. Assuming that to be so, would you follow it out and give me an answer to my question?—I should say that the lines of a railway company are nearly analogous to fixed machinery in a manufactory for instance, and that the owner of the railway gets quite as much benefit from local expenditure as the manufacturer *qua* manufacturer does.

1633. Do you put it forward to me that the manufacturer is rated upon his profits?—He is not rated on his profits; he is rated on the things which he has attached to the land whereby he makes his profit.

1634. But the railway is rated upon its profits, is it not?—I should say that method of assessing railways is adopted, but I should say the net result of it is very much the same as in the case of the manufacturer. It is simply a method. You take the profit and you take certain deductions and so on, and you treat it in the same way as you do a gasworks or a waterworks; it is simply a method of getting at what is the letting value of that railway to a hypothetical tenant. But in the end, whether he be assessed on the profits by way of profits or not, he is assessed at the price at which it is assumed that any other person would be glad to take his property. I do not think it fair to say that railways are assessed on profits, because, among other things, you deduct interest on tenants' capital—on the working capital as distinguished from owners' capital.

1635. You would, I suppose, agree with me that so far as possible the basis upon which every class of property is entered in the valuation list should be the same? I will give you an illustration: it would not be fair to assess the owner of one subject in a way which brings in profits unless you assess others upon the same principle?—The whole principle, I take it, of rating is to secure as far as possible uniformity among the various classes who have to pay.

1636. You agree with that—it is your desire to carry that into effect?—Certainly. Then I would like to further point out with regard to railways that, when you take the gross profits and you make the statutable deductions, and so you work up to the letting value, it has to be remembered that not only the net profits but the gross profits of a railway company are made out of land and out of the people in the country, whereas in the case of a manufacturer only part of that is so, because in the greater number of cases he makes here and he finds his market elsewhere.

1637. Now we are going into rather too abstruse questions, and we may be liable to get into argument, but in the case of a railway, which has a large export trade, is your analogy correct?—It would only have a large export trade, I take it, by having ships and so on, and if they have their ships and steamers that part of their capital would not be assessed to rating.

1638. But if a railway carries a quantity of merchandise, which comes into London from abroad and goes out of Liverpool, is its trade not an export trade in the same sense as the manufacturer's that you gave me?—I should not say in the same sense, because they make it by transferring the goods along their lines of railway from one end of England to the other, and if the lines were not there they could not have had that business.

1639. In the last paragraph of the summary of your memorandum, you make a plea for what I think I must call "additional Imperial aid to local taxation?"—Quite so.

1640. Would you develop that for me a little; what are the reasons on which you ask for it?—The reasons I should sum up in the fact that although of course the power of rating theoretically is unlimited, practically that is not so. The increase in rating has been so heavy and still goes on that you may say as a practical question that the limit of rating has been reached. Take the case of lunatic asylums, which I particularly mention as an instance; the increase in the cost of lunacy to the local authorities has been very great.

1641. Have you ever thought out in your own mind the possibility of making a distinction between those rates which are rates of purely local concern and those in the expenditure of which the community in its larger aspect derives benefit?—I scarcely know how to answer that question in that form. What has struck me about a great deal of the expenditure, such things

Mr. W. J. Jeaves.  
26 Mar. '97

Local taxation requires more aid from Imperial sources.

Rates in respect of national and local matters distinguished.

**Mr. W. J. Jeeves.**  
16 Mar. '97

for instance as lunatics, police, education, the maintenance of the poor, and so on, is that they have seemed to me for a long time to be largely questions of national concern and not merely of local concern, in the same way as such things as baths and free libraries and sanitary administration are things of local concern.

1642. I can quite understand differences of opinion about putting rates upon one side or upon the other of the dividing line: it is obviously a matter requiring great care, and I do not wish to discuss the position with you of whether any individual rate should be on the one side or the other, but rather to draw from you whether you have thought out any principle which could be applied by the Commission in deciding between those which should go into one category and those which should go into the other?—I should say there is no general principle that would apply, unless you can call it a general principle, that as things stand now the Government have recognised that in certain matters they ought to pay a part of the expenditure.

1643. But the idea of the Government aid has proceeded in the past upon two considerations mainly, has it not, one that you suggest, of whether the thing to be aided is of Imperial or local concern, and the other, whether the burden of the thing which is even of local concern should or should not rest upon one class of property in the locality?—I should have been inclined to say that the only instance of that second principle was the Agricultural Rating Act.

1644. Would you not say that the aid to roads proceeded, for example, upon the sort of feeling that those who have large personal property and not much real property should contribute even to local roads in a greater sense than by mere rating?—Only a limited contribution was made to what are known as main roads, and that contribution was confined to main roads. As I understand it, the principle on which they proceeded was that, in the interest of the community as a whole it was desirable to maintain thoroughly good thoroughfares from one end of the country to the other, and because it was for the good of the community as a whole, rather than solely of the localities specially concerned, contributions were made.

1645. I should like, without leading you, which I do not wish to do, and without indicating my own opinion at all, to draw from you your opinion as to whether you think it fair and equitable that real property should bear to so large an extent as it does now directly, the burden for such things as police, education, and other things of a similar kind?—In answering that I think I should have to give you the answer in my personal capacity, and not in my representative capacity, because the Association decided that we should simply, as their witnesses, lay before you the existing state of things, and leave any deductions to be made by others. My own personal opinion is, as I have said, that for purely local purposes the possible limit of rating has been practically reached, and therefore it becomes necessary in certain matters to give additional aid to the locality, and I take it the logical deduction from that view is that land, as represented by land and houses, because that is really the assessment, ought to have relief.

1646. Make, if you can, a little more distinct for me what you mean by the limit of rating?—I mean to say that if the localities generally speaking were to endeavour to raise their rates much, the local works for the good of the community must of necessity suffer. The particular method by which rates are now made seems to me to be such that the people who pay these rates have been taxed to the full extent to which they will allow themselves to be taxed. That is the effect of it, because after all they control it, and they control it through the expenditure.

1647. Do you see, from your experience in dealing with people in your community, an increasing objection to the rates that are imposed, and to any increase of them?—I do not think I would say that specially of my borough, but I would say that certainly of many other boroughs of which I have considerable knowledge from following their proceedings. There are particular reasons why that is not specially true at St. Helens. Through this particular Act of 1893 we were able to knock a penny in the £ off in administration expenses, and one or two special things of that kind. Up to the time we were able to convince them we were having the most economical administration it is possible to have, there was an objection, and a very strong objection, and if that objection had gone on I

should say that a class of people would have come into the council who would have made the work of the community exceedingly difficult to manage.

1648. Can you at all fix an amount per £ above which the feeling against an increase of rates would be liable to increase with greater rapidity?—That of course must depend to a certain extent on the class of properties that have to be assessed; I mean it must to a certain extent depend on the different boroughs. I will explain what I mean by an illustration: Sheffield, I believe, has a rate of nearly 8s. in the £, we in St. Helens have a rate of about 4s. 5d. I do not think St. Helens would have been St. Helens if we had anything like 8s.; and if we were to have anything like 8s. in St. Helens now you would close a good many of the works, and instead of it being an increasing town it would become a decreasing town.

1649. Do you think that the amount of rates per £ and the probable fluctuations of them are seriously considered by those who are going to live in any particular district, or those who wish to carry on any trade in it?—Where it is a question of living, your question would only apply to residential towns; but as to the other points I think it is most clearly considered; certainly in Lancashire the question of getting low rating, cheap water supply, and cheap gas are essential conditions to the carrying on of a manufacture.

1650. You have just given me the incidents which I wanted: cheap water and cheap gas, and the method by which they are provided are clearly rates—if I may use the expression—of benefit rather than of rates of burden?—It works out so in the case of gas works emphatically; it works out so to some small extent in the case of waterworks, but in many cases, in order to get a cheap water supply the ratepayers will bear a burden, *qua* ratepayers, in order to keep manufacturers who particularly depend on their water supply, in their particular area.

1651. You gave me a moment ago—and I take your own figures—a contrast between St. Helens, where the rates were about 4s. 5d. in the £, and Sheffield where they were nearly 8s. in the £; surely before you can estimate which of those two communities is the most heavily burdened you must split up these rates and find out how much the component parts of them in each case are rates which add to the use and the enjoyment of the property, and how much they are rates which do not?—I should have been inclined to answer that by saying that, as a matter of fact, the opinions of a people who live in a town are such, nowadays, that you have got to have very much the same benefits provided by the different authorities in those different localities—I mean to say you must have free libraries, you must have baths, you must have proper sanitary administration, you must have efficient police, you must have good lighting, and so on.

1652. The poor rate may vary very much?—The poor rate may vary, but I was speaking of the borough rates when comparing benefits in different localities.

1653. But you see of course that for the purpose which I have been taking, we must not take only the borough rates. The limit of rating cannot apply to the borough rates to the exclusion of rates which are levied by other authorities; if you talk of such a matter as the limit of rating being reached, you must surely take into account the gross amount of rates which are imposed upon any hereditament regardless, comparatively speaking, of the authority who imposes them?—I have done that up to the point of comparison; then when I came to the point of comparison I said that, so far as urban rates are concerned, you must take it that, except in the exceptional case of a particular borough having to bear a burden of its rates in order to get a cheap water supply—except in such a case as that—the benefits to one community are much the same as the benefits to another. With regard to the poor rate that, I have suggested, is a matter of national concern, and one great reason why I should say that is that there is great variation, and I see no reason why one particular community should have so much more to pay for the maintenance of the poor than another.

1654. But is that not one of the things which, of all others, depends most upon economy and judgment in administration?—It depends very largely upon policy; e.g. you may have the policy of indoor relief or the policy of outdoor relief.

1655. Quite so; I take that, but is that not the thing which is in the control of the community, which would

**Mr. W. J. Jeeves.**

26 Mar. '97

Rates of benefit and rates of burden.

Rating for local purposes, limit reached, therefore land and houses from which rates are derived should have relief.

Increase of rates. How far objected to by the community.

Mr. W. J. Jeaves.

25 Mar. '97

Poor relief expenditure should be contributed to by Government and controlled by it to a considerable extent, but not entirely.

Returns prepared by the Association of Municipal Corporations.

ating in than districts. ow far gh rates and the derprise f manu-cturers ad the eneral prosperity f manu-cturing wns.

have to bear the burden of its recklessness or the reverse?—What I should say is—this, again, is my personal opinion—that the very fact that certain communities are entirely reckless, as you put it, is an additional reason why the State should bear the cost, and in bearing the cost, largely regulate the policy to be followed. I do not suggest that the State should pay more to one particular locality than to another, but I suggest that they should bear the cost, and, as I say, in bearing the cost, they should practically control the policy relating to that particular item.

1656. Do you suggest that the policy to be pursued in a matter of Poor Law administration is to be regulated by the central authority under the control of Parliament?—I think I should say, personally, I should consider that would probably result in an advantage, because there is, as I say, this very great variation in the rating; and it seems to me, in a thing of that sort, it is very hard for the people in a particular union to be rated in one particular manner, and the people in the next in another.

1657. There may be cases of great individual hardship, but they have been, to some extent, neutralised and rectified, as for example, by the equalisation of rating over the Metropolis for Poor Law purposes, with which, no doubt, you are familiar?—Yes.

1658. Do you not think that the feeling that bad administration will tend to raise the rates is a most powerful factor in tending to wise administration in such a matter as the poor rate, and that you would lose that check if Parliament were to accept your theory of a limit of rating, above which assistance was to come from the Imperial Exchequer?—What I should say with regard to that is, that by my suggestion, you would get the benefits of both. I do not suggest that the Poor Law administration should be entirely taken out of the hands of the community. That, I think, would be quite wrong, because you would lose the advantage to which you now refer; but I suggest that the thing should be, if possible, so arranged, that you should have the benefit, as far as possible, of one uniform policy, and also the benefit of the economical administration locally of that policy.

1659. I understand that Mr. Goring Pritchard, the Secretary of the Association of Municipal Corporations, has sent you this buff paper with the request that you would hand it to the Commission\*?—That is so.

1660. It is a series of tables made up from returns received from 140 towns?—Yes.

1661. Application was made to all English and Welsh towns, but only 140 returns were received?—That is so.

1662. Do you wish us to ask you questions in regard to these figures; are you prepared to speak to them; or do you make yourself in any way responsible for the return?—I am prepared to speak to them, if I am desired to speak to them. May I at the same time hand in another paper† on behalf of the Association of Municipal Corporations, namely the returns as to the actual practice with regard to compounding and compounding allowances in local rating. As to these returns again application was made to every borough in England and Wales; 160 answers were received, and for these returns, and the summary of them, I make myself personally responsible, as I got the returns for the Association.

1663. (Sir John Hibbert.) As I understand all your remarks with respect to rating have reference rather to the urban rate than to the poor rate?—With reference to the machinery of townships and so on, that is so, but not otherwise.

1664. I refer more to the burden?—I mean burden of all rates—urban and poor. In the two instances I gave of 4s. 5d. and 8s., I have included all local rating.

1665. You state that you think that a man in seeking a place in which to work would rather go to a town in which the rates are low than to a town in which the rates are high, would that principally apply, do you think, to the various towns in Lancashire?—Not the man who desires to live there, but the manufacturer who desires to establish his works is what I referred to. What I said was that as to the pure living; that related to residential towns purely.

1666. I wish to know whether you consider it to apply to such a town as Preston, where the rates are considerably higher than in any other town in Lancashire?

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 18 to 46.  
† *Ibid.*, pp. 54 to 56.

—There again, if I give you my personal opinion, I should say that Preston would have been a much more flourishing town to-day if the burden of the rates had been less.

1667. Has not Preston increased in population very largely during the last 10, or 20, or 30 years?—It has increased, but I should say not to the extent which, from its geographical situation, it could have increased, considering the increase that has taken place in other communities.

1668. Has St. Helens increased largely?—St. Helens has increased very largely—about 15,000 in each decade for the last two decades.

1669. With respect to the poor rate your suggestion is rather that it should become a national matter than a local matter?—To some extent.

1670. Would that not, as they are both places with very large poor rates, cast a very great burden upon the taxpayer of the country, supposing you were to cast it upon the nation instead of the locality?—Of course it transfers the burden from the locality to the general community.

1671. But is there not an advantage in the present system that where you have bad administration and high poor rates the people themselves of the district have to pay for it?—I have said that there is an advantage in that, and I would endeavour to retain that advantage, but at the same time, even where there is thoroughly good administration on that and on all other rates, the rating has increased so much that relief, it seems to me, is required, and I suggest that the expenditure upon the poor is one of the items which may be said to be quite as much national as local in its character. I take it that, properly coupled with any special grant of that kind, there would be a certain amount of control over local administration, and I was quite prepared for that control.

1672. Would you be prepared to accept imperial interference?—It would depend on the form. I should say that imperial interference is in some cases good. Take education, for instance, imperial interference to the extent of its inspectors and so on is distinctly good, and provides to some extent for a general policy. Then the locality comes in on variations of that general policy, and if they want to vary that general policy, then I should say they should pay.

1673. It is not the fact, is it, that the poor rate has increased in any of the 30 unions in Lancashire?—I do not think I am in a position to answer that question, because things have so changed; I mean things that used to be paid out of the poor rate are now paid out of other rates.

1674. I am speaking of the poor rate as poor rate for the purposes of the relief of the poor?—I took the Local Government Board returns of, I think it was, 1885 and 1896, I think those were the two years, at all events there was a difference of 10 years. What I found was that taking the expenditure on the poor purely it had increased in those 10 years 20 per cent., while the rateable value had increased 10 per cent.

1675. Is not that increase principally caused by the increased expenditure upon lunatics?—I did not go into the details of how they arrive at the relief of the poor as distinguished from payment to other authorities. On the one side there were payments to other authorities, and I concluded that those would include payments for lunatics.

1676. If you take payments to other authorities, of course that is a very different question?—I assumed without looking, and I cannot say whether I was right or wrong, that those payments to other authorities would include lunatics.

1677. How many parishes are there in St. Helens?—We had four.

1678. Have you consolidated them?—We have consolidated those four.

1679. Under the Act of 1834?—Under the Act of 1834.

1680. Have you also under that Act obtained a transfer of the powers of overseers?—I should like to say here that the Local Government Board very much opposed what we asked for, that was that the corporation themselves should be the overseers, but the police and sanitary committee considered that we made out our case, and they gave us the powers. When I came to go into settling the clauses, and

Mr. W. J. Jeaves.

25 Mar. '97

Poor rate. Burden of should be partly borne by the nation, but local control should be retained to some extent.

Poor rate in Lancashire, how far an increase

Consolidation of parishes in St. Helens.

Overseers, transfer of the powers of, at St. Helens. Advantages of.

Mr. W. J. Jeeves.

26 Mar. '97

bearing in mind certain correspondence I had had with the town clerk of Birmingham, who pointed out to me the difficulties which Birmingham had considered there might be in such a case, I came to the conclusion that the best thing would be to take the power of appointment of overseer and assistant overseers, and we took that power; at the same time the power of the vestry was also transferred to us.

1681. You have been working under that power?—We have been working under that power since 25th March 1894.

1682. Would you say from your experience of it that it is a desirable thing to make that general and applicable to every borough in the country?—Unquestionably, and I would go further and say that, so far as the work in relation to the union is concerned, I should be borne out by the clerk to the union. The work is done more efficiently and more economically.

Com-pounding under local Act at St. Helens.

1683. With reference to the evidence you gave about the composition under your local Act, that is the same as under the Act of 1869, is it not?—Yes.

1684. Before you obtained that Act, had you many defaulters amongst the smaller class of ratepayers?—We had not, because as a matter of fact we had the power of discount which we gave to the people who would have been entitled to composition, if they paid before a certain day, and they generally did pay.

1685. Then you were not obliged to issue any large number of summonses for non-payment of rates?—Not any very large number; it was nothing to occasion remark.

Com-pounding. Advantages of system.

1686. Are you aware that in towns where they have no power of composition in respect to the borough rate, there is a considerable grievance as to the number of summonses which are obliged to be issued yearly?—That is so, and from knowledge of the facts I should say it must be so.

1687. So that, of course, you would agree that this system of composition is a great relief of itself for the poorer class of ratepayers?—I should regard a system of assessing owners in some form or other, either with or without composition, or with or without discount, as really essential in the case of the smaller owners of property.

1688. Would you consider that the assessment of owners in the smaller class of properties is a considerable advantage to the occupiers of those cottages in saving them, from the necessity in the case of non-payment, of being brought up almost yearly before the magistrates?—In that sense, certainly.

Com-pounding. Adoption of principle should be voluntary on part of locality, but there should be a uniform limit of rateable value.

1689. Would you recommend that some compulsory system of composition should be applicable to urban rates as well as to the poor rate in all places?—No, I say that you should have one set of conditions applicable to all rates when you go in for composition and one authority to regulate them, but I think the question of whether there should be composition or not must be left to the locality.

1690. You would leave that to the locality?—I would do so. All that I say is that you should have one general principle, that is to say, one limit of rateable value, and one general set of conditions which the locality adopt, and I suggest, and the Committee of the Association suggested, that the rateable value should be not to exceed 10*l.*, that is to say, practically, the same as the Public Health Act, and not the same as the Union Assessment Act, and that the provisions of the Union Assessment Act as to the allowances are elastic and good; and should be made to apply to all rates. It should be left to the locality first of all to say whether they will put them into force, and secondly to say the extent to which they will put them into force.

Valuation. Boroughs in two unions. Representation of joint interests of unions and uniformity secured by representation of corporation on assessment committee.

1691. With respect to the assessment committee, you have suggested that in boroughs which are in two unions there should be either a joint assessment committee, or that there should be representatives from the borough upon the assessment committee to each union, have you not?—I suggested that there should be representatives and a joint assessment committee as well.

1692. You combine the two?—Yes. I say where there are two unions and one borough the principle of assessment in both those unions should be the same, and in any case, whether a borough be in one or more unions, I suggest that there ought to be representatives

of the corporation upon that assessment committee, largely because the rates which the corporation require are very much heavier than those of the Poor Law, and therefore the corporation have by far the greater interest in the assessment.

Mr. W. J. Jeeves.

26 Mar. '97

1693. Do you approve of the proposal, which is very largely supported, of having one assessment for all purposes?—Would you tell me quite what you mean by that?

1694. At the present time there are various assessments—assessments for poor rate purposes, assessments which can be made by a municipal borough if they think proper to have their own valuation, and also assessments for imperial taxation; would you support the idea of having one assessment for all purposes in which the representative of the State should be allowed to take part?—I would prefer to confine myself to all questions of local rating, and with regard to that I say that one assessment is distinctly desirable for all rating purposes, and that the means by which it is arrived at should be made such as to make that assessment perfectly fair. I might just say here that, from my experience of the assessment to the inhabited house duty, if the imperial authorities were represented, I have very little doubt that assessments would be much higher than they are in many cases. I may say that particularly, because, recently, when we took over these powers under the local Act to which I have referred, we had a new valuation for the whole township, and we found that in public-houses particularly, the assessment to the inhabited house duty was very much higher than the assessment to the poor rate. In that particular item we raised the total assessment 36 per cent. without any appeals to quarter sessions—there were certainly appeals to the assessment committee, but after those appeals to the assessment committee, the result was as stated.

Valuation. One valuation desirable, but county rate committee would still be required.

1695. Are you aware that the system which I have been suggesting is in operation in the metropolis?—I know that it is in operation, but I do not know how it is worked; I do not know anything of its working.

1696. It is quite true that the assessment may be higher, but would it be any injury to the ratepayer if the assessments were higher uniformly in every place?—I do not know about the occupier, but from the point of view of the authority it would be an advantage rather than otherwise.

1697. If the assessments were higher, would it not end in a lower rate per £?—It would end in a lower rate, or in rates not being increased as the case might be.

1698. At the same time would you approve, if your plan was carried out, of retaining the county rates committee of each county, so as to attain a greater uniformity throughout the county?—It seems to me that if you are to have county rating for particular purposes, you must have an assessment which is shown to be arranged on lines common to the whole county, and therefore you must keep the county rate committee alive.

1699. Supposing that you were to retain the county rating committee as an assessment committee for all purposes, could you not have in that committee representatives of the various urban authorities?—Do I understand that to mean that you would make the county rating committee as thus constituted the present union assessment committee, so to speak?

County rating committee might be assessing authority for all purposes.

1700. Yes, for all purposes?—I should see no objection to that. You would then have, of course, to keep your township authorities or your borough authorities alive to do the local work.

1701. Of course?—I should see no objection to that.

1702. You are aware that the county rating committee from time to time revise the county rate, and that they visit all the boroughs in the county for the purpose of obtaining a uniformity of principle throughout the county?—Is not that uniformity practically arrived at in the county assessment by taking the gross annual value to the poor rate and making uniform deductions for woods, and so on?

County rate. Periodical revision of county rating committee. Gross annual value taken. Uniform deduction made.

1703. Is it the case that uniform deductions are made?—I am talking of the theory, and theoretically I should say yes in the county assessment, but how that works practically I do not know.

Mr. W. J. Jeeves.  
26 Mar. '97

1704. I understood you to state that owing to the deductions which were made upon the gross value great want of uniformity resulted; you said that in one union 25 per cent. was deducted on cottage property, and in another only 15 per cent., and that there was a great want of uniformity?—Clearly.

1705. Is it not necessary to have one controlling body of some kind so as to arrive at a uniform system throughout counties?—I said that it is necessary to have one controlling authority for the union, that is the union assessment committee, and if you are going to have county rating and not make the county take the place of the union assessment committee, you must keep the county rating assessment committee alive for the very purpose of the deductions. They take the gross rateable value and then they apply uniform deductions for the same class of property throughout the county.

1706. Supposing you leave the power to your assessment committees, amended as you suggest, would that plan obtain uniformity throughout an area like the county?—No, you would have to keep the county assessment committee alive, in my opinion, unless of course the Chairman's suggestion—though I do not want to call it suggestion—of the possibility of uniform statutory deductions were carried out.

1707. Are you aware that in the Bills that have been introduced for one assessment for all purposes there has been always a schedule of deductions?—I was not aware of that.

1708. And that that is so with respect to the metropolis?—I know that is so in the metropolis.

1709. (Mr. Elliott.) I gather from the concluding paragraphs in your memorandum that you think it desirable that a portion of the burdens which have hitherto been borne by the ratepayers according to their respective localities should in future be borne by the taxpayers as a whole?—Yes, I certainly suggest that.

1710. Do you think that will result in a more equitable distribution of the burden?—I should say it would result in a more equitable distribution of the burden, and looking at it from a local point of view, as to the possibility of administration, it is largely necessary.

1711. Would you give me a little in detail your reasons for thinking it would constitute a more equitable distribution of the burden?—I do not know that I can give any further reasons than those that I gave the Chairman.

1712. I think in answer to the Chairman you said that you considered that many of the objects for which local taxation is levied were rather of a national benefit than of a purely local benefit?—Equally; I said they were quite as much one as the other.

1713. Would it not follow then, if your answer is that it is only just as much benefit to the nation as a whole as to the locality, that there would be no more reason for placing the burden upon the nation as a whole than upon the locality?—I should say no, because my suggestion was that by placing it on the locality you place unequal burdens on different localities at times, and to the extent that they are quasi-national the burdens would be more equally borne if they were borne either wholly or partly—partly, is rather what I suggest—out of national taxation. In that sense it would make the burden more even.

1714. Do you favour the transfer of taxes from the imperial to the local authority rather than further contributions towards the expenditure of the local authority?—The idea, I think, of the committee whom I represent is that it would be a distinct advantage if there was something that was absolutely given to us which we could feel was our own in respect to those particular matters, rather than grants.

1715. Would you suggest that the something should be the Inhabited House Duty?—I suggest that as a something; I do not say *the* something.

1716. Have you taken into consideration the fact that the Inhabited House Duty is a tax graduated according to the value of the properties charged?—Yes, I have said *a* instead of *the*, because I had understood that certain information was to be got by the secretary of our committee as to the amount of those taxes and as to the effect that it would have, and I have not seen that. That information has not been obtained. Without knowing the actual monetary

result, I do not suggest that the Inhabited House Duty of itself, and by itself, would be sufficient.

1717. Is it possible, then, that the result of that further information which is being obtained may be to modify the view which you have expressed on behalf of your association?—If I found the taxes sufficiently large it might turn "*a*" into "*the*"; I mean to say I might say we did not want to ask for anything more. But I do not think that would be likely. My impression of things is that the Inhabited House Duty of itself is not sufficient.

1718. May I at least put it in this way, that the suggestion is not a fully matured suggestion?—If the suggestion be taken as being the only suggestion, then it is not fully matured.

1719. And we may have further suggestions from your association on this subject?—I do not know whether you would have further suggestions from them. What they suggest at present is the general position that there ought to be further aid, and that that aid should be in the shape of the proceeds of specific taxes being paid over to them; and specially among those taxes they mentioned the Inhabited House Duty.

1720. Have you ever considered the possibility of securing greater variation in the way in which local revenues are raised?—From a practical point of view, yes. It has not seemed to me that any variation other than such variations as we already have in the shape of profits from gasworks and profits from waterworks occasionally, and profits from quasi-commercial undertakings are possible. To the extent that that is possible I would suggest that localities have done very much. With regard to that, I just roughly in the train last night took the rateable value of the 140 towns shown in the Association's return,\* and I took the total profits, or rather the profits of commercial undertakings in such of those 140 towns as had them, and I found that allocating those profits over the whole of the 140 towns they represented a rate of 3d. in the £ at the least, because you have to understand that a nominal penny rate does not realise the full amount.

1721. You would hardly, of course, suggest that those profits could be considered in the nature of taxes?—I suggest emphatically that they are in the nature of taxes.

1722. They constitute a tax on the consumers of gas for the benefit of the locality as a whole?—Clearly; and it should be stated that they constitute a tax on the richer portion of the community for the benefit of the community as a whole.

1723. You are aware, of course, that the Imperial revenue is raised in a great variety of ways?—Yes.

1724. And that owing to that fact, it is possible to raise a very large revenue without undue discomfort?—Quite so.

1725. Do you see any possibility of applying that principle of variation to local revenues further than it has already been applied in the way in which you have suggested?—By the local authority?

1726. Either by the local authority or by Parliament?—No, I do not myself, and it is because of that that I suggest that local expenditure and expenditure by local authorities should be aided by the proceeds of Imperial taxation. If it were desired I should see no objection to local authorities collecting any particular tax that might be allocated to them, but on rating pure and simple, I do not see any possibility of elasticity. As I tell you I should say the practical limit is really reached.

1727. You are aware, of course, that the proceeds of certain licence duties are now paid over to the local authorities?—Yes.

1728. Would you favour a proposal that those licences should be collected by local authorities?—There again I must answer you personally. There is a great variety of opinion, and many people seem to think they would like to have it so collected; for my own part I have never seen that there would be any advantage in that.

1729. Do you think it would be feasible to give to local authorities any power to vary those licences?—I should not suggest that it would be desirable

1730. To put before you an example: you are aware, of course, that a small duty is imposed in respect of a dog licence?—Yes.

Mr. W. J. Jeeves.  
26 Mar. '97

Profits from municipal undertakings regarded as taxes.

Rating limit of, has been reached.

Licence duties paid to local authorities. No advantage for local bodies to have the power to collect or to vary in amount.

Local taxation raised for matters of national as well as local concern, should be partly borne by taxpayers.

Inhabited House Duty, proceeds of, should be transferred to local authorities.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 18 to 41.

*Mr. W. J. Jeeves.*  
26 Mar. '97

1731. You are aware, of course, that opinion as to the propriety of keeping dogs in towns differs very considerably?—Yes.

1732. Do you see any objection to a local authority being empowered to raise that particular licence duty?—If by "raising" you mean that they should exercise a discretion as to "Aye" or "No," I should answer the question in the affirmative.

1733. On what ground?—For many reasons. You do not keep your dog in the one locality always; you take your dog about with you, and for that very reason it is rather a thing that should be regulated by the good of the community as a whole than by the particular locality in which you happen to live and have your dogs kennelled.

1734. Take licences to carry on, say, a particular business at a particular place, would you favour a proposal to give local authorities power to vary such a licence duty?—Again, personally, no. I should say that control of that kind should certainly be exercised by the highest ultimate authority, rather than in the particular interest.

1735. Supposing that in any locality a strong opinion is felt in favour of a high duty on licences for the sale of liquors, do you see any objection to the exercise of such a power by the local authority?—Personally again, that seems to me essentially an imperial question, and in questions that are essentially imperial I think myself it is highly undesirable that local authorities should interfere. It seems to me that in the interests of the local administration it would be much better for each—Parliament and local authority—to take their own part.

1736. Then apart from the case in which by carrying on certain industrial undertakings the local authority is enabled to make profits, you see no method of giving variety to the raising of local revenues?—I should say not.

*Rates, inequality of, in urban area comprising several parishes subject to a common rate.*

1737. You have referred in the early portion of your evidence to the desirability of obtaining equality amongst those who have to pay local rates; have any grievances been brought to your knowledge on the part of those who have to pay local rates as against those who have not to pay local rates?—The inequality is not as between payers and non-payers, but as to the amount which payers contribute. I should like, if I may, to hand in a table\* which was sent to me yesterday. It was prepared by the accountant at Sheffield in 1888, and shows how in the different townships in the borough the rate for the same purposes varied. There are in that borough seven townships; the highest rate for borough rate purposes, and of course the borough rate is common to the whole area, was 1s. 0½d., and the lowest was 8d.; the man who paid 1s. 0½d. would consider himself aggrieved. Again on the school board the highest rate was 8½d., and the lowest rate was 6½d.

1738. That was a grievance of locality against locality, was it not?—That was a grievance of part of a locality against part of a locality.

1739. Is it not rather a question of grievance between parish and parish?—Between parish and parish as being part of one area, subject to a common rate.

1740. Of one area for urban purposes?—Yes.

*Rating. Grievances as between different classes of persons in respect of.*

1741. Is there any grievance as between different classes of property in the same parish? Has the manufacturer a grievance against the occupier of a dwelling-house?—That is a question I can hardly answer, except to say that manufacturers always consider in any part that I have observed them to take, in my town at all events, that expenditure in respect of which they have to pay rates is not for their benefit as manufacturers and is, if possible, to be avoided. In that sense I daresay the manufacturer does feel that he is overtaxed; but I do not think I can go further than that.

1742. Have you heard any expression of complaint on the part of shopkeepers that they are overburdened as compared with the residents in private dwelling-houses?—I have heard it in individual cases.

1743. What has been the ground of complaint in that case?—I think their ground of complaint is, as I understand it—and, mark you, it is only individual cases—that practically they take their living accommodation and so on, and the area of their place, and they say it is a hardship we should have so much to pay whilst this private resident who has much better premises does not pay so much.

*Mr. W. J. Jeeves.*  
26 Mar. '97

1744. Do the profits which the shopkeeper realises in the premises in respect of which he is rated constitute as high a proportion to the rateable value of the premises as the income of a private resident does to the rateable value of a private dwelling-house?—I do not think you can answer that as a general rule; that would depend on particular cases. I could find you cases in our own town on both sides.

1745. You referred to the question of railways; have you gone into the question at all of the proportion which the total profit of the railways bears to the amount on which the railways are rated?—Yes, I have gone into the question of the railway assessment in my own particular locality; in that sense I know it.

1746. Could you give the Commission any information on that point?—In what form; in what way would you suggest information?

1747. Is the proportion of the aggregate profits of a railway company to the amount on which the railway company pays rates, a high proportion or a low proportion?—I should not myself consider it a high proportion.

1748. To sum up my questions, you have not gone into the question of the proportion of the values upon which these different classes of people pay rates to their aggregate income?—Only in a general way.

1749. And what is the result of that general examination?—I hardly know how I can answer that question in that form.

1750. (*Mr. Smith.*) I understand the effect of your evidence is that you are decidedly of opinion that large boroughs, at all events, should comprise one union and one parish?—If practicable.

1751. You think that would have the effect of getting rid of the various deductions which are made by assessment committees of different unions?—Variations in the various deductions.

1752. And where practicable, you think one borough, one parish, desirable?—I should say as a general question, that I think one borough, one parish, distinctly desirable, and where practicable, one union also.

1753. Where the borough is large enough to afford a good centre for poor law administration?—Clearly, and where developments have not been such as to make the accumulated property too big for either divided part.

1754. With regard to compounding, you wish to see an equalisation of the compounding for municipal and public health purposes?—Yes, and for poor rates also.

1755. In answer to the Chairman I think you said that in most cases of urban expenditure, the occupier took the view of the owner; but supposing the expenditure is of, what I will call in the best sense of the term, a socialistic character, is the interest of the occupier always the same as that of the owner?—No, the interest is not the same. I said that the occupier, in my opinion very foolishly, took the view of the owner and mainly, as I take it, because the small cottage property owner, when he hears of an expenditure which is for the general benefit—it does not matter to him whether it is for the general benefit or not, the great point for him is that it is expenditure—and when he hears of it he goes and tells his tenants that rents will go up.

1756. Supposing, in the case of a corporate undertaking, it was proposed to largely increase the wages of the workmen, would that be unpopular among the compound householders?—I should not like to express an opinion upon that, because I should only give my opinion, and it would be simply an opinion.

1757. Supposing it were an expenditure in favour of building dwelling-houses for the working classes, would it be unpopular among the compound occupiers?—I think that might possibly be made to be so, in the same way that proposals to introduce free libraries have been made to be through the operation of the paying owner.

1758. In point of fact, the many luxuries or amenities of towns that are now paid for out of the rates are not, as a rule, unpopular to the people who do not directly pay the rates, are they?—The undertakings, emphatically no. The procedure that was necessary to bring those about, in many cases, was made very difficult; therefore my suggestion of the occupier, until he gets into possession, so to speak, taking the view of the interested class who oppose the expenditure.

*Railways, rating of. Relative proportion of profits to amount paid in rates.*

*Large boroughs should comprise one union and one parish where possible to obtain uniformity in rating systems.*

*Compounding. Equalisation of system for municipal, public health, and poor law purposes desirable.*

*Compounding. How far do the occupiers take the same view as the owners with regard to expenditure.*

Mr. W. J.  
Jeeves  
26 Mar. '97

1759. You think he is now more clearly understanding and beginning to see that these so-called burdens or rates are really for his direct benefit?—The tendency is, I should say, distinctly in that direction.

1760. So that you would think that the truth of your observation, that the occupier takes the view of the owner, is probably disappearing?—I should say it is not the force that it was where the object can be fairly easily shown to be for his benefit.

1761. Do you find that expenditure upon parks, workmen's dwellings, and libraries is unpopular with your working classes?—I should say not to the extent, even in the course of my career, that it has been.

1762. You would not go so far as to agree with me, that they are popular?—What I should say is, that the results are distinctly popular, and they are desired and required, but that the expenditure in some cases is unpopular.

1763. Do you not find that the working man is finding out now that he gets more out of the rates than he contributes towards them?—I think he is beginning to find it out.

1764. I do not think I should ask you any further questions as to machinery, because we have had so much evidence on that, but as to these tables you have handed in,\* they purport to give in over 140 boroughs in England and Wales the total amount of rates levied?—Yes, that is so.

1765. And they show them under practically the three heads: poor, borough, improvement; I am not taking the school board, because that is generally included in the poor or borough rate?—Quite so.

1766. You spoke of the limit of rating having been reached; I presume that you mean by that in towns?—In towns, clearly.

1767. We have it, I believe not in evidence, but we have it in Mr. Fowler's memorandum, that the average rates for a country parish at the time that report was written were 2s. 3d. in the £ all told, do you know that?—I believe that is so; I know the report.

1768. Can you tell me, from these tables or any summary prepared from them, what is the average of all rates in. I do not mean to say urban districts but in the borough districts, that you have calculated?—Mr. Fowler, in talking of 2s. 3d., applied the net amount raised to the rateable value, so that the actual rate in the £ levied for that purpose would have been slightly higher.

1769. Would that apply equally to these tables?—I can only tell you the actual rate in the £ here. This actual rate was got out in connexion with the compounding returns,† and in the 160 boroughs it was 6s. on the average, 3s. 6d. of which was corporation and 2s. 6d. poor, including of course borough and school board in the term poor.

1770. The remark about these being net figures applies equally to the 2s. 3d. and the 6s.?—No; I say you would have to increase your 2s. 3d. slightly; the 2s. 3d. is net.

1771. And yours is actual?—Mine is the actual rate in the £, therefore the 2s. 3d. would have to be increased by the difference between the net receipts and the actual rate in the £.

1772. Mr. Fowler in putting it at 2s. 3d. did not take into account the question of collection?—He took the net result; he took the sums actually received, and then he says that represents so much in the £. What he did not take into account were the losses on empties and so on.

1773. Subject to that qualification may I take it that the 2s. 3d. in the country corresponds to the 6s. in the 140 boroughs of which you have collected the recent statistics?—Yes, the 160 boroughs.

1774. They are divided, I see, into 3s. 6d. corporation rates and 2s. 6d. poor rates on the average?—That is so.

1775. Now there is another distinction that I want to draw, which I am afraid is not drawn in the paper. Can you tell me what proportion of the 6s. would be represented by rates that are in the nature of benefits to the property, and what proportion would be in the nature of burdens?—No, I could not give you that.

1776. But in any comparison of urban with country rating, do you not think it very desirable that we

should endeavour to get at those facts?—I think it would be desirable, and I think it would not be difficult.

1777. Could you undertake to supply it to the best of your judgment?—I would like to leave the question of whether I would undertake to do it over. I will go into it and see if I can do it, and if I find I can I shall be glad to do it.

1778. It is obvious that if we have to consider which class of ratepayer is being over-rated, we must eliminate from the town rating those that are direct rates of benefit to property?—You mean property in the town receiving benefit the rural ratepayer does not get?

1779. Yes?—That would be so.

1779a. To afford a just comparison you must eliminate rates of benefit from rates of burden?—I think so. Following on what I have now said, I should say that the general idea that there are certain benefits—very much larger benefits—in boroughs, is much more apparent on the surface than in actual fact; and that again would be an additional reason for getting some figures on which to base general deductions.

1780. We should have probably some difficulty in agreeing exactly on the dividing line?—Take such a thing as sewerage. Some people would say that was a distinct benefit to the property; it seems to me that it is a distinct burden on the community by reason of the necessity of a great number of people having to live together in towns.

1781. It is a necessity of urban life?—It is a necessity of urban life and not a special benefit.

1782. I think it is obvious to us all that there will be things on the border line?—Quite so.

1783. Probably some principle will have to be laid down. Could you give me any instances of very high rating in towns from the paper you have put in—you have given us the average?—I could if I had my returns here.

1784. I want to know at what period the strain is felt so acutely that it is intolerable?—I could give you the instances of high rating if I had the returns here.

1785. Should I be right in putting it that at 7s. in the £, it becomes almost intolerable after that?—I should say 7s. in the £ on an average borough would be distinctly intolerable. I should put it lower than that for the average borough myself.

1786. I think you said that urban rates would be even higher than they are if it were not for the commercial undertakings in which many municipalities have engaged, that bring in a profit in aid of the rates?—That is so. In the 140 boroughs that are represented in the Association's returns,\* the rate would have been something over 3d. in the £ higher—as much more as was necessary to make up for empties, and so on.

1787. As regards commercial undertakings generally, they are a great gain to the municipality?—Undoubtedly.

1788. And cast nothing on the rates?—Nothing.

1789. But rather go in aid of the rates?—Yes; and the fact that they are managed by the community, for the good of the community, tends to the prosperity of the community as such.

1790. The only way in which they affect corporations is by increasing their debt?—Yes.

1791. They pay their own interest, and are worked at a profit; that is so, is it not?—That is so or the general result. There are just odd cases as appear from those returns where a loss is made.

1792. And that loss is exceptional?—Where there is a loss it is exceptional.

1793. They not only pay their interest and give something in aid of the rates, but there is a principle of amortization extending over various periods of years by which the capital expenditure is entirely paid off?—That is so in all cases, and that period in no case exceeds 60 years, and, speaking generally, is about 30 years.

1794. But for these undertakings the rates in town would be 3d. in the £ higher?—At least 3d. in the £.

1795. (Mr. Arthur O'Connor.) I should like to ask you just a few rather general questions, as I am not conversant with the details sufficiently to be able to go

Mr. W. J.  
Jeeves.

Mr. W. J. Jeeves.  
26 Mar. '97

Value of land and buildings in different localities. Reason for differences in.

into them. I suppose that of two houses built stone for stone alike, one in the middle of Salisbury Plain and the other in Lombard Street, one would be very much more highly rated than the other?—Certainly.

1796. Though it might, perhaps, be that it would cost more to build the same house in the middle of Salisbury Plain than it would if you were to build it in Lombard Street?—Leaving out the question of the price of the land, that might be so.

1797. What is it that increases the value of the house in Lombard Street as compared with a similar house in the middle of Salisbury Plain?—The possibilities of the use to which it can be put.

1798. I suppose if there were many people in Salisbury Plain the value of the house would go up?—Undoubtedly.

1799. Would you say then that it is the presence of men and the pressure of men about centres that increases the value?—I should say that is a factor.

1800. The land at the North Pole would be worthless; in the City it is very valuable?—You see we do not quite know what the North Pole is, but subject to that I might assent, I think.

1801. Would you say that with the increase of population, valuation also increases, not only in point of area but also in point of degree?—I should think, generally speaking, that would be true, but I do not think that necessarily follows.

1802. Can you give me any instance in which, with an increasing population there has been a diminution of value?—I would not say a diminution. I hardly suggest a diminution; I suggest that a particular property might not increase in value, because there were a greater number of people round about it.

1803. That is the same particular property under exceptional circumstances?—Yes, I understood you to refer to particular property.

1804. I am speaking only in the general and at large?—It does not of necessity follow that the general value of property in an area goes up in proportion to the increase in population. The general valuation of the area must go up, because there are more places wanted for the people to live in, but it does not follow that the individual items making up the same will become higher; in many cases they do, in other cases they do not.

1805. Now we have agreed that of the two houses the cost of production of the one in Salisbury Plain would possibly be even greater than the cost of production of the one in Lombard Street?—The actual building, possibly yes.

1806. The higher valuation of the house in Lombard Street, therefore, cannot attach to the cost of production?—No, not to the cost of building.

1807. I put it to you that it really attaches to the site?—I should hardly say that. I should, speaking for myself—and, again, it is a personal opinion—be inclined to suggest that the very increased value of houses of that type is not, so to speak, taxation on land, but is rather taxation on personality, because what you tax there is really the use to which the place can be put.

1808. What gives the house its value is, that it is in Lombard Street, and not in Salisbury Plain?—Yes, and can be put to so much greater use.

1809. Because it is in Lombard Street?—Yes.

1810. That is what I mean; it is because of the place in which it is. Do you remember the principle of valuation for the poor rate?—Yes.

1811. It is that amount at which the property may be expected to let to a hypothetical tenant having always regard to certain possible deductions for repairs and insurance?—Yes.

1812. It shows the net annual value?—Yes.

1813. These deductions for insurance and repairs, &c. are deductions of expenses to which the owner would be put, or may be supposed to be put, to preserve the value of the property?—Yes.

1814. The net annual value therefore means the net annual value to the owner?—That is so.

1815. Then the principle of valuation for the poor rate has regard to the net value to the owner?—In effect that is so.

1816. And in terms, is it not so?—Not of necessity, because a man is frequently a tenant having to do inside and outside repairs: in that case no deductions are made.

1817. That is a question of a particular bargain between two individuals, is it not?—Yes.

1818. But I am concerned now with the terms of the law looked at at large?—The rateable value, I should say, is really that which the tenant gives for the pure right of occupation—the net amount which he gives for that purpose.

1819. Those are not the words of the Act?—The words, as far as I remember them, are: “The letting value subject to certain deductions”; in effect, it comes to what you say, that it is the net amount which the owner makes out of the tenant.

1820. Now we will take a place on the banks of the Tyne, which, 40 years ago, was a swamp, and is now covered with large shipbuilding yards belonging to Palmer and Company; I do not know whether you are aware of their existence?—I did not quite hear the early part of your question, I am sorry to say.

1821. I will take any place which, 50 years ago, had few or no inhabitants, but now is covered with a large industrial population; the valuation of that place has gone up very much indeed?—Undoubtedly.

1822. By reason of the industrial community which has come there?—Quite so.

1823. The value to the owner has gone up very much; ground rents naturally increase?—Supposing leaseholds have been the tenure, of course. But there may have been succeeding owners; the land is, of course, of greater value to-day than it was many years ago. The leasehold is not by any means a universal tenure, but on the contrary.

1824. But whoever the owner is, of course, he benefits by the presence of a large population upon his land?—Quite so.

1825. Therefore, the principle of the Poor Law which we have referred to seems to accord with natural justice?—Generally speaking, I should say yes.

1826. When, in a case of that kind, charges are made on the occupier, and also other charges on the owner, the occupier pays from the produce of his industry?—You said, when charges are made on the occupier, and others on the owner?

1827. In the shape of rates?—They are all made on the occupier.

1828. Or through him?—Even when an owner pays, theoretically, it is the occupier—occupation is the test.

1829. Are you distinguishing now between the general district rate, which is, in the terms of the law, leviable upon the occupier, and the poor rate, which, in the terms of the law, is gatherable from a different class?—The gatherability, if I may use the word, seems to me to depend upon the question of whether in the case of the poor rates a condition of things exists, under which the owners are made to pay in the place of the occupiers; but that is only a limited part of the assessment, even so.

1830. Are you aware of the difference in phraseology of the Acts of Parliament with regard to poor rate, in the case of Elizabeth's statutes in the first instance, and the later Acts relating to district rates?—Generally speaking I am; I know them, but I have not considered them just recently.

1831. Are you aware that the poor rate was obtained in the first instance, at any rate, from the owners of property?—From the theoretical owner, yes.

1832. The district rate is obtained from occupiers; it is assessed on the occupiers?—Again I should say the theoretical occupier—and both seem to me to be the same person.

1833. I am speaking of the Act of Parliament?—It is a question of phraseology rather than of meaning, I should have said.

1834. Take the community which we were referring to just now as having arisen within the last century, the portion of money which is paid by the occupiers for rates is obtained by them from the produce of their industry?—Certainly, and of course, in the case of business premises, from the use to which they are able to put those premises.

Mr. W. J. Jeeves.  
26 Mar. '97

Incidence of rates as between owners and occupiers.

Mr. W. J. Jeeves.  
26 Mar. '97

1835. Where does the theoretical owner of this particular land get the means to pay rates?—He gets it, I should say, out of the person occupying, in other words the same source again.

1836. Who in order to pay it to him would again draw from the produce of his own industry?—Quite so.

1837. The creator of the wealth is the industrial occupier?—To a certain extent that is true, but the essential fact that you must remember is that if those burdens that you are mentioning had to be paid directly by the owner, the price which the occupier must pay for that right of occupation would essentially go up on the laws of supply and demand. That again is my personal view.

1838. I quite follow, but whether they go up or whether they go down, whether they are high or whether they are low, the owner of this suggested piece of land now occupied by an industrial community will derive what he does get from it from that industrial body of men?—So long, of course, as his property is occupied by an industrial person.

1839. We are assuming that?—Yes.

1840. We have agreed once and for all that this piece of land is occupied by this industrial community who have to pay rent for the occupation and we need not repeat that. Under those circumstances, is it not the fact that the owner draws from those occupiers the consideration or the rent out of which he himself pays the rates to which he is liable?—I would like to hear that question again.

1841. Does not the owner pay the rates for which he is liable in respect of his real property out of the proceeds of that real property derived from the industrial occupier of it in the shape of rent?—I should say where the owner pays rates he gets it from his tenant.

1842. Then ultimately the source of all payments is the tenants, or the industrial part of the community?—In conjunction with the land he occupies and the tenement which he occupies.

1843. In conjunction with the land?—Yes.

1844. The man must work upon the land. Then the owner, as regards the payment of rates, is nothing more than a sieve through which money called rates paid by him is passed from the industrial producers?—In a sense that is true.

1845. And whatever the rates may be, or however they may nominally fall in the end, they are paid by the industrial community?—I should say they are paid by the occupying community. A man may occupy a house for his own purposes and not be a working man at all. He may pay in that case from private income and so on. I think you must put it as the occupying rather than the industrial classes.

Land, ownership of.

1846. Now you have spoken about some charges being local and other charges being more properly national; you look at England as a whole and you look at it in its several parts; the parts of course are held by individuals, but taking England as a whole who would you say is the owner of that?—I do not quite see how I can answer that. Theoretically, I take it, if you go back you come to the Crown, but there again it is a theory that has been very materially modified and only holds in, so to speak, a lawyer's sense to-day.

1847. Give whatever answer you prefer?—That is what I am endeavouring to do.

1848. Your answer is the Crown?—Using the word in a lawyer's sense, yes.

1849. In your own sense?—No, in a lawyer's sense.

1850. I will ask you to use the words in your own sense?—I do not quite know how to put it. In a general sense the Crown is not the owner, and in a practical sense the Crown is not the owner, but in a theoretical sense the Crown is.

1851. I will take it so, any way you like. Theoretically England belongs to the Crown, as I suppose representing the community, is that so?—I am not prepared to say why that happened.

1852. Practically you say it is actually held separately by individuals?—Yes, practically.

Rating, limit of, has been reached.

1853. You speak about the limit being reached of practical taxation or rating, does that mean that local works cannot be undertaken because people will not submit to charge themselves any more?—The under-

taking of those works, I should say, would be distinctly prejudicially affected.

1854. These people therefore have the power to limit the amount of rates to which they will submit?—In a sense, yes.

1855. Would you be in favour of a body of men in your own corporation or in your own county being able to fix rates which they themselves would not be concerned to limit, not being themselves ratepayers?—Do you mean to say, would I be in favour of an independent body who should say what expenditure a particular locality should go in for?

1856. Would you be in favour of a body of men for, say, the county of Lincoln, meeting and deciding that such and such shall be the rates for that county for the year, themselves not being liable to pay those rates?—I hardly follow your meaning. You see that from a practical point of view you have to deal with Poor Law purposes, urban purposes, and county purposes.

1857. We will take county purposes; who fixes the county purposes?—Of course the county rate, that is the amount in the £ that should be levied, is fixed by the county council.

1858. They are a local representative body?—Yes, they are a representative body.

1859. Would you be in favour of a body non-representative who shall be able to fix, according to their own judgment, and without the intervention of the inhabitants of the county, the rates to be paid in that county—would you, or would you not?—I would not.

1860. Are you aware that that is the system which prevails in Ireland?—I am talking purely of the system as administered in England.

1861. You are not conversant with the grand jury system of taxation in Ireland?—No, practically I am not.

1862. With regard to the real property taken for railways, I understand you to say that if land now held by railways within the limits of your municipality were in other hands it would, like the rest of the area, pay considerably higher rates than are now obtained from a railway?—Do you mean in other hands than as railway or railways.

Exemptions, partial, in case of railways, should be abolished.

1863. Other than as railways?—In many instances the actual line might be so—the actual line might be lower assessed than property.

1864. There is an exemption, is there not?—Yes, there is an exemption. What I say is that there is an occupying value to the railway company which, on the general principles of occupying value as applied to other properties, they ought to pay in full for, and I do not see why, logically, they should not pay. That is the extent of my view.

1865. I think we are at one: the railway is treated on better terms than any other occupier, say a householder would be for the large portion of the rates?—Yes, and I contend that is logically wrong.

1866. (Sir E. Hamilton.) I think you had to do with the compilation of this buff paper?—All that I had to do was in connection with formulating the questions.

1867. You know the contents pretty well?—Yes.

1868. I am going to ask, first, what I suppose is a very ignorant question. It is this: If I take St. Helens and Sheffield—they both happen to be on the same page—I do not understand how you work out the amount in the £; I should have thought that the natural thing to do would have been to take the amount of the proceeds of the rates and to divide it by the rateable value?—The amount in the £ I did not work out from this return. I worked it out from the returns which I got in the other paper—the compounding paper.† What I did was to ask them what their rateable value was, what the rates in the £ for all purposes were, and then each rateable value was multiplied by the amount in the £ for one year. The products of these sums were added up and the total was divided by the sum of the rateable values. On the nominal rates that are levied it is absolutely an average of 6s. in the £, but that was not got from any figures that are here.

Returns prepared by the Association of Municipal Corporations. Method of calculation.

1869. Will you just turn to Table B; the rateable value of St. Helens is put down there at 311,233l., and the total proceeds of the rates at slightly over 60,000l.?—Yes.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 18 to 46.  
† *Ibid.*, pp. 53 to 56.

**Mr. W. J. Jeeves.**  
26 Mar. '97

1870. That I have made out roughly to be just under 4s. in the £ on the total?—Yes, and then if you take the next column you will find the nominal rate, in order to get that result, was 4s. 6d.; that is exactly what I said to Mr. Smith.

1871. The difference in the two calculations comes out strikingly in Sheffield, for instance; if you add up in the column the amount in the £, 4s. 2d., and 3s. 6½d. that makes 7s. 8½d. P—Yes.

1872. But if you divide the proceeds of the rates, which come to 225,023l., by the rateable value, which is 1,178,464l., that comes out to a little under 4s. P—Yes, but then you notice that in Sheffield they have not given you the amount received in respect of the poor rate.

1873. But St. Helens does not come out the same under one calculation as under the other?—It will not come out the same, as I explained in answer to Mr. Smith. The actual rate has to be greater than the net rate received, because when you lay a rate of a penny in the £ there are certain leakages for empties, allowances, and so on, and therefore when you work it out as you have it worked out on that column, if you are going to compare it with the nominal rate, you must add a similar proportion. Take that case of 4s. and 4s. 6d. That shows, roughly speaking, a difference of an eighth, and if you are going to compare nominal with actual, you may take it roughly that there is a difference of an eighth.

1874. I see that in St. Helens, with which you are most familiar, the amount received from the local taxation account comes to 7,368l. P—Yes.

1875. That consists of your share of the excise licences and of the probate duty P—Yes.

1876. Can you tell me now to what purposes that 7,368l. is applied, I mean roughly speaking?—Yes. First of all we pay, as you see here, 2,871l. to union officers, that is in the next column; then we allocate one half of the cost of the pay and clothing of the police to the police account—we charge it to that 7,368l.; that comes again, I think, to about 3,500l. We charge what are known as the "discontinued grants," that is the grants that were made prior to the passing of the Act, to this fund, and we (so to speak) put ourselves in the same position that we were in before the passing of the Local Government Act of 1888. Then the balance goes to the general account in aid generally of local taxation, but the balance is not a large one.

1877. That sum, of course, represented on this page by 7,368l. is a variable sum, dependent really upon the proceeds of the Probate Duty, which is now the Estate Duty?—Yes, that is so.

1878. Has any inconvenience been felt by the fact of its being a variable sum?—I should say no practical inconvenience. The variation has not produced practical inconvenience.

1879. Do you think that the relief represented by 7,368l. has been sensibly felt. Has it tended merely to arrest the growth of rates, or has it tended towards the actual reduction of rates?—In so far as it was an increase on the old state of things prior to 1888—it was only a small increase you know—it certainly tended to arrest the increase of rates, I should say. I am perfectly clear that expenditure was not gone in for merely because there happened to be a little money. On the contrary it was applied to pure economical purposes.

1880. You do not, then, think that the fact that it has been received from an outside source has tended to un-economical administration?—Absolutely no.

1881. At St. Helens itself, is there a strong feeling, do you consider, among the ratepayers generally that the rates are excessive?—I should say not specially so in St. Helens. Any increase would be very much resented, and would work a material injury to the town, being a manufacturing town; but, as a matter of fact, when we do hear any complaint we say we are lower than most people, we are lower than the average, therefore, why are you complaining? It is because we have that answer that we have been able to meet their complaints.

1882. Now I turn to Table F,\* where St. Helens again appears. This Table, as I understand, purports to show how the proceeds of the rates have been applied?—Yes, that is so.

1883. One of the most important items of expenditure which must practically form a first charge on all

rates must be the debt charge, so to speak, and I do not see any mention of that at all in this Table?—The answer to that is that the charge in respect of debt, both interest and sinking fund, is apportioned to the particular item, and the amount here under each of these heads includes the sinking fund and interest on that part of the debt which is represented by this particular head.

1884. Surely that is misleading. The proceeds of the rates represent your revenue; the first charge upon that revenue must be the interest and sinking fund in respect of your debt, which I was looking at this morning in a book; it comes to a very considerable amount; I think I am right in saying that the total of your debt, for what I understand to be remunerative expenditure—I take it from Mr. Burdett's book, which I happen to have on my table, and which I believe is fairly correct—amounts to 420,000l. P—You are now talking of St. Helens.

1885. Yes. That is the amount for remunerative expenditure, and it is about 182,000l. for unremunerative expenditure. I make out that the charge in respect of both those debts is about 4 per cent., roughly speaking. The charge in respect of the debt raised for remunerative expenditure comes to about 17,000l., and for unremunerative expenditure 7,000l. P—Yes.

1886. Would not that naturally form a charge upon the rates which you show in your income account?—You see, with regard to remunerative expenditure, you may take that to mean in our case the gas and water undertakings. The loans with respect thereto were incurred by reason of the gas and water undertakings belonging to the Corporation and charged wholly to gas revenue as payments for gas purposes, and to water as payments for water purposes, and there is no charge on the rates; but, on the contrary, in the case of gas, there is a profit going in aid of the rates.

1887. Quite so; but I should have thought you would have brought to account as part of your revenue all you received from your gas and water undertakings?—We keep accounts which show all that. Table F.\* shows the net result, that is the profits.

1888. As regards the unremunerative expenditure?—That is —.

1889. I made it out to be, according to this book, 182,000l. The whole of that is not outstanding, I admit; but still I understand there is an annual charge in respect of it amounting to about 7,000l. a year?—Quite so, and that is divided among these various heads, establishment, police, and so forth, according to the purpose for which the debt was incurred, and each of these items in Table E.† includes the proportion of the sinking fund and interest in respect of the debt.

1890. But surely one ought to show first of all in an account what one's debt charge is?—You have got to remember this is a summary simply. We show all these things in our abstract of accounts. I would be very glad, if you like, to send you a copy. That will show you the returns from which this was worked out.

1891. Therefore, you do separate expenditure which is incurred on capital account from expenditure which is charged to revenue account?—Yes, that is clearly shown; every item is shown. Take the gas account; you show so much for production, so much for distribution, so much for capital charges, so much for interest charges, and so on. Would you like to have an abstract of the account?

1892. I should like to see it very much P—I will send you one; it is an example of all abstracts of account.

1893. Mr. Elliott asked you some questions this morning with respect to whether there was any feeling among localities about having some power of raising by other means than rates, and I understood you to say that you were averse to any such power being conferred on local authorities?—As I understand it the feeling is, and my personal feeling certainly was, that what we want is the proceeds of a particular tax, not the power to impose that tax.

1894. But one would have thought that local authorities would desire not only to have the actual money but to have the control of that money, and to be able to put up or put down, so to speak, the rate. I do not mean rate in the sense in which we are generally using the word, but the rate of the tax, so as to accord with the requirements of the particular year?—I personally suggest—I think it is essential in the matters that

Local Taxation Account. Sums received from, how applied at St. Helens.

Local Taxation Account. Sums received from, not conducted to extravagance at St. Helens.

Debt charge at St. Helens for remunerative and unremunerative expenditure. How treated in accounts.

**Mr. W. J. Jeeves.**  
26 Mar. '97

Local Taxation assisted from Imperial sources. Proceeds of taxes required, not power to impose taxes.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 46 to 46.

† *Ibid.*, pp. 33 to 39.

Mr. W. J. Jeeves. were mentioned to me—that as it is an Imperial question it is better to be uniform throughout the whole country.

26 Mar. '97 1895. Now take such a tax, for instance—please do not think I am advocating it—as a tax on amusements, which has been suggested, I believe, very often—a tax upon people who are going to the theatres, music-halls, and so on: I cannot conceive why that should be uniform throughout the country; if St. Helens likes to put on a tax for that purpose there is no reason why Sheffield should put it on?—My own point of view would be that I should resent such a tax very much, even if it were imposed by Parliament, and I should resent it still more if it were imposed by any lesser authority.

1896. Why should you object very much to its being imposed by a local authority?—I should say that is a distinct interference with the liberty of the subject which is not within the function of a local authority, who exist essentially for the government of the locality for purely local purposes, and who, I think, it is desirable should exist for those purposes alone.

1897. But you raise your own rates now for purposes which you, rightly or wrongly, consider in part national purposes?—Yes, we do.

1898. Therefore I do not see quite where the great objection comes in to your raising some other form of taxation?—As I say, I should see great objection to local authorities having the right, so to speak, to interfere with individual liberty, but as they raise their rates now they do not interfere with individual liberty.

1899. But surely rates are that, are they not?—No, I do not think so.

1900. You draw a distinction?—I should draw a distinction.

1901. (Mr. Arthur O'Connor.) One question with regard to what was put to you by Sir Edward Hamilton as to gas and water; you make a profit out of them?—We make a profit out of the gas, but water we neither make profit nor loss on; we are not allowed to.

1902. Out of gas you make a profit?—Yes, out of gas.

1903. Is it confined to your own area?—We have a power of supply outside, and do to some extent supply it outside.

1904. Do you pay income-duty on the profit which you make outside your own area?—We certainly pay income-tax, and there is a general impression that corporations pay income-tax twice over, and to a certain extent they do.

1905. That is a matter of opinion; you are great sticklers for personal liberty in St. Helens, but do you consider it would be a greater interference with personal liberty to have a charge upon an institution like a music-hall or a theatre, than it is to prevent a man selling the contents of his own dust-hole?—I am afraid I do not follow that.

1906. I suppose that under the special laws you do not allow a man to remove his own dust—do you, to empty his own dust-hole?—We empty it for him; I do not think we should object to his emptying himself.

1907. As a matter of fact it is an offence against the sanitary law, is it not?—No, I do not think so.

1908. It is in London, I think?—I do not know about London; it is not with us. We undertake it, and it is a privilege to the ratepayer.

1909. (Sir John Hibbert.) I want to ask you upon a question put this morning. I wish to know what is included in the term "poor rate," because it seems to me to vary very much in different places?—You may take the term "poor rate," generally speaking, to include the precept of the corporation for borough rate purposes, that is, the purposes of the municipal corporation, including the police and also school board purposes. Roughly speaking, more than three-fifths, I should say, of an ordinary poor rate is for pure urban expenditure, and something more than one-fifth for pure Poor Law expenditure.

1910. According to Table E.\* I find that at Manchester the whole of the expenditure by the county borough is taken out of the poor rate?—They have special provisions for that purpose.

1911. I have just added it up; 350,000*l.* are taken for various purposes connected with the corporation, and

only 106,000*l.* for the relief of the poor. Is that not very misleading, and must that not be very misleading, when you consider the amount of the poor rate?—As I say, in considering the question of the poor rate, on the average, you may, I think, consider that more than three-fifths are for urban purposes, and something over one-fifth only for poor purposes. Manchester is a very special case, and you must there take, roughly speaking, about 1*s.* in the £ for poor rate purposes, and the rest for urban purposes.

1912. Have you considered about retaining this question of levying all this money under the term "poor rate," and whether it would not be desirable to have some other term for it?—As I said I should give to the corporation the power to appoint overseers, and I should levy one general rate which would be to meet precepts.

1913. You agree, I presume, that it is misleading to have all these large expenditures taken out of the poor rate?—Yes, to an ordinary person that may be so.

1914. It would be desirable to have some change with respect to the title of the rate from which this expenditure is taken?—Yes, I should advocate one rate for one area.

1915. (Mr. Dalton.) With regard to these tables, Sir Edward Hamilton has asked you some questions upon Table B.\* he pointed out that the amount received in respect of each of these rates was not apparently what it would work out, according to the rateable value in the second column; that rateable value in the second column is the rateable value for the purposes of the poor rate, I think?—Yes.

1916. Of course, for the purposes of a general district rate or any rate to which properties are exempted to the extent of three-fourths or otherwise, it would not at all work out?—No, that would be so.

1917. Take these three rates that you have at St. Helens, the highway rate, the borough rate, and the poor rate; under the local Acts, are any properties exempted to those rates in any way?—For the borough rate they are exempted.

1918. Your borough rate is practically a general district rate?—Yes, practically.

1919. Therefore, that would account for very much of the difference between the rates in the £ appearing in the table, and what would apparently be the result of a calculation?—Yes, that would be one reason.

1920. I suppose that would be the case with a great number of boroughs?—That would be so, and the other reasons would be compounding and empty property.

1921. That reason might in some cases account for a very much larger amount than you would get from compounding or empty properties?—Yes, in the case of St. Helens it would account for the difference in the results between the highway and the poor rates, as compared with the borough rate.

1922. Table E.,\* as I understand it, merely gives the net results of the net charge upon the rates of these different undertakings?—That is so.

1923. It is not the gross charge at all, but merely the net charge falling on the rates?—That is so, after deducting the receipts from any other sources than rates.

1924. Table F.\* is the net profits and losses, on possibly remunerative undertakings?—Yes.

1925. They are not accounts at all, but merely give the net results?—That is so.

1926. Do you feel any doubt that, when rates become high in a town, that has a very detrimental effect upon the industry of the town?—I am very clear that is so in manufacturing centres.

1927. Could you give me any experience of your own on that in St. Helens?—Yes; I have in my mind particularly the loss of large works in St. Helens, because they found they could get practically the same rates, and cheaper gas and water in a neighbouring town.

1928. It is not, therefore, merely a question of whatever the incidence of the rates is as between the owner and the occupier, but it is a matter of importance to the community in the town, that the rate should be low?—Clearly.

Mr. W. J. Jeeves.

26 Mar. '97

High rates detrimental to industry.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 33 to 39.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 20 to 46.

**Mr. W. J. Jeeves.** 1929. Do you think that, without the Government subventions you have had at St. Helens, you could possibly have maintained your present position as an industrial community?—If we had maintained our position as an industrial community, we should not have maintained our position as a municipal and sanitary authority; that I am clear about. What I mean to say is, that if our rates had gone up to that extent, we should have lost our position as a manufacturing centre, or if we had not done that, the sanitary institutions, and our other municipal institutions would have had to suffer.

1930. You consider that Government subventions are a matter of as much importance to towns as to rural districts?—Undoubtedly.

1931. And you would not agree at all with the view that is occasionally put forward that it is merely the rural districts who desire them?—No, I should not.

1932. The Inhabited House Duty, you recommend, should go over to the local authorities because it is a local rate levied for imperial purposes?—Exactly—as stated in paragraph 21 of my memorandum.

1933. Does it in any way vary from a local rate?—In its incidence I should say not at all.

1934. Is there any justification in your mind for levying a local rate for imperial purposes in addition to the local rates that are levied for local purposes?—I should say no, and I should think it also impracticable as well as unjustifiable.

1935. (*Chairman.*) In the course of your examination by Mr. Elliott, I think you handed in a table\* prepared by the borough accountant, showing the

The witness withdrew

**Mr. JOHN HENRY ELLIS** called and examined.

1940. (*Chairman.*) You are, I understand, town clerk of Plymouth?—Yes.

1941. This paper which I have in my hand is the memorandum which you have been good enough to send to us in answer to our request?—Yes.

1942. How long have you been town clerk?—Six years, of Plymouth.

1943. I do not want to take you over the various points which are matters of fact, which we have had from other gentlemen. I see that a good deal of your memorandum is taken up, as is perhaps not unnatural, with special circumstances of Plymouth?—Yes, I understood the general evidence was going to be given by other witnesses, and I confined myself to the Plymouth case to a great extent.

1944. You illustrate, as regards Plymouth, some of the difficulties of the present system?—Yes; they are less in Plymouth than in most other places by reason of the fact that the Plymouth Poor Law area and the Plymouth borough are co-extensive.

1945. You agree, so far as the facts are concerned, with what has been stated by Mr. Jeeves in regard to the present system for making up the valuation list not being a very convenient one?—Not being a very convenient one generally, but there is no inconvenience in Plymouth.

1946. That arises on account of the Poor Law area and the municipal area being the same in that district?—Yes, and the corporation of Plymouth having the power of the allowance of the poor rate.

1947. Then I understand that Plymouth is exceptionally favourably situated in the two respects which have been mentioned?—We think so.

1948. Is there any special matter which you wish to bring before us as to the method of making up the valuation list?—No.

1949. Have you anything special to say as regards the practice of compounding?—No, we have no compounding in Plymouth.

1950. No compounding at all?—No.

1951. Is the occupier in every case the hand which conveys the produce of the rate to the rate collector?—No, the owner in the case of small properties.

1952. How do you manage that?—We govern, as stated in my memorandum, under certain old private Acts. The Act of 53 George III. cap. 73 provides in section 11 that where any houses, tenements, or here-

amounts assessed by various bodies in regard to Sheffield?—Yes.

1936. Are you prepared to speak to the details of that table?—I am prepared to speak to them as they appear there; I cannot make myself responsible for them, but I believe them to be correct.

1937. Why, for example, does the school board rate vary in different districts of Sheffield?—Simply because, as I have pointed out, there may be differences in the practice as to composition in the different areas; that through there not being one area, one parish may have more empty property than another parish, and therefore, in order to prevent that variation, I suggest that there ought to be one area, because that rate ought to have been common over the whole area. That is a table which shows better than any table that I have seen the bad results of divided areas of taxation in an area over which there is a common rate.

1938. Why is there no burial board rate in five of the districts which are mentioned here?—The answer would be that a burial board, generally speaking, was made in the old days for an ecclesiastical parish, and probably that ecclesiastical parish would only extend over the one parish and not over the others.

1939. (*Mr. Arthur O'Connor.*) Surely, when you have a somewhat large area, a subdivision of that area may have a higher charge in respect of the debt incurred in respect of it, and not in respect of the whole area?—That might be possible in some cases, but not in respect of either the school board rate or the borough rate, which are referred to there, and which are for purposes common to the whole area.

1953. You have no special difficulty to bring under our notice as regards Plymouth?—No, we very nearly attain this—one rate-assessing, and one rate-collecting authority for the whole borough, and we do not wish to be disturbed. We have now decided to make an Order under section 57 of the Local Government Act of 1888 for amalgamating the two parishes into which the borough is divided, and when that is done it will be somewhat simpler than it now is, although there being the same rate in the £ for each of the parishes, it is only in the clerks' work really now that there is anything extra.

1954. I do not take you on the particular point of the special public health administration which you have to pay for, because that is not peculiar to yourself; we have had that from other seaport towns?—Yes, you will have that from Hull, and so on.

1955. You make a statement in paragraph 9 of your memorandum, to this effect: "So long as the present system of subsidising local funds from the Imperial Exchequer obtains, Plymouth will suffer a serious injustice unless the grants are substantially increased." What do you mean to imply by that?—That we have extra expense owing to our geographical position, and we are put to extra expense because we are a service town and have naval and military establishments in Plymouth. We have extra expenses which are not common to most other towns, and in that respect we differ from them.

1956. There is nothing beyond that meant in the statement?—No.

1957. What do you suggest?—That in so far as our expenditure is incurred by reason of our being a service town, by reason of our geographical position for national purposes, we should have some allowance. It is partly adjusted now by what the Treasury has done with regard to the assessment of Government property in aid of local rates, but we do think it is somewhat inequitable that the Government properties should contribute one penny less than other ratepayers in the £ to the local rates, as they now do.

† *Ibid.*, pp. 58 to 60.

Mr. J. H. Ellis.  
26 Mar. '97

1958. That does not depend upon the present system of subsidising local funds so much as on the present system of rating Government property?—To be sure.

1959. You would not put it to me that Plymouth gains no benefit from its position as a service town, I suppose?—I think if you take the benefits and the disadvantages, and if you were to strike a balance, you would find that we should be at a disadvantage.

1960. You would?—Yes.

1961. You would not like the Government operations in Plymouth taken away, I suppose?—That is a very difficult question to answer.

1962. I thought it would be?—But there are very great disadvantages. For instance, the number of apprehensions of naval and military offenders is 20 per cent. of the total number apprehended by the police, but of the population in Plymouth it is only about 2½ per cent. Then again our poor rate is most substantially affected, whether it is through the imperial legislature or what, by this fact, that in our workhouse infirmary we have to-day 41 cases of venereal disease. No doubt our poor rate is substantially increased by reason of the forces being located in Plymouth.

1963. (Mr. Smith.) I want rather an explanation of your exordium here: "So long as the present system of subsidising local funds from the Imperial Exchequer obtains, Plymouth will suffer a serious injustice unless the grants are substantially increased"—"so long as the present system of subsidising local funds"; I do not quite see how that governs the sentence. Does it depend at all upon that, or is your grievance totally apart from that?—It is in connection with it; you see we say we have special expenses.

1964. How does the present system of subsidising funds from the Imperial Exchequer affect the question of your grievances?—It may be very remote, but I think our pauperism and our lunacy are probably increased owing to the services being located in Plymouth.

1965. That is not the question?—Yes; we have grants for lunatics, and so on.

Rateable value in Plymouth low compared with population.

1966. It does not seem to me quite clear; I think you seem to have got an ideal community. As a matter of fact, is not your rateable value—I think I remember this—very low as compared with the population?—Yes, I think it is low as compared with our population, but you see we have a great deal of what we call in Plymouth tenement property.

1967. You have also a great deal of Government property?—Yes, we have. That has been improved somewhat recently; it jumped from about 3,000*l.* rateable value, to 5,500*l.*

1968. Your rateable value is low for a considerable town?—Yes, although I believe it to be as fairly assessed as it is possible to be—for Messrs. Ryde & Sons, as you know, are well-known surveyors, and are constantly re-assessing property and keeping it upon a uniform basis.

Special expenses incurred by seaport towns. Special contributions should be received in respect of.

1969. (Mr. Clara.) I take it that all important seaports are subject to expenditure from which inland towns are exempt?—Yes, and I think the inland towns recognise to a certain extent that seaports have a claim for some contributions in respect to safeguards that the seaport towns afford them. For instance, the Chamber of Commerce of Sheffield, I believe, supported the view of Plymouth that we should have some contribution towards the expenditure to which we are put in keeping out cholera and small-pox.

1970. That is to say your expenditure as a port sanitary authority?—Yes.

1971. Does not a seaport town also suffer, if it happens to be a county borough, by the fact that a number of lunatics which are ordinarily known as vagrant lunatics, are brought by ship and landed inside the county borough, and then immediately have to be kept at the expense of the county borough?—That is so.

1972. (Mr. Elliott.) Does not a seaport town to some extent obtain a corresponding advantage by reason of the facilities it has for draining and sewerage?—That may be, but we do not find that we have much facility in Plymouth, because the services, who are able to advise the Local Government Board, and perhaps Parliament, in ways that we cannot trace, are able to prevent our sewerage either by sanction of the Local Government

Board or Parliament, and do not appear upon the inquiries. They themselves deliver a vast amount of crude sewage into our Sound, and yet they scotch us when we propose to do the same thing.

1973. Speaking generally, would you say that the fact that a town is on the coast does enable it to sewer and drain at a much lower rate of cost than in the case of an inland town?—Yes, speaking generally.

1974. So that it obtains considerable advantage from its maritime position?—It may do, but Plymouth may not. Probably you know Plymouth Sound; it has two horns, and we may have to take our sewage right outside the Sound at some future time, and in that way may be put to an expense which an inland town will not have.

1975. You suggest in paragraph 11 of your memorandum that taxation earmarked for local purposes should be collected by the local authority; I assume that you do not refer either to the probate duty or the customs or excise duties?—Not to the probate duty; I think it is impossible to do that. But in regard to dog licences and gun licences, and all those things, I do not see why we should not have some such system of collecting as I understand the French system to be—where the local authority contributes so much to the Imperial Exchequer and takes so much for itself; instead of having this collection locally, transmission to London, accountkeeping there, allocation in London, and re-transmission back; it seems to me rather wasteful, that is all.

Local Taxation Account. Certain sums now received from, should be collected by local body.

1976. Would not some difficulty arise by reason of the difficulty of distributing the proceeds of those licence duties as between the counties and the boroughs?—No.

1977. Do you not think the county would object if you simply took your own licences?—No, I do not think so. The Local Government Act, if I recollect aright, provides that by Order in Council such licences may be transferred, provided the county council makes convenient centres for collection in the county.

1978. If such a change were made, there would have to be some revision of the equitable adjustment that was effected under the authority of the Commission?—Yes.

1979. Did you hear the evidence Mr. Jeeves was good enough to give us, with regard to the possibility of varying the sources from which local expenditure is defrayed?—Yes.

Finding new sources of.

1980. Do you associate yourself generally with what he said to us on that subject?—I do not carry it altogether in my mind, but my notion would be that the direct taxation of real property is the simplest and the best form, and we do not want to go further afield for new sources of rating for local purposes.

1981. You see no advantage in following the analogy of the Imperial Exchequer?—No.

1982. In paragraph 12 of your memorandum, you suggest that there should be no differential assessment of railways or other properties; to what other properties do you refer?—The properties exempted by the Public Health Act—the tithes on land, and so on. That is merely so that we may get one consolidated rate. Let it be by discount on the whole rate, instead of the general district rate being at a fourth, so as to avoid the necessity of making two or three rates instead of one rate.

Exemptions, partial, under Public Health Act. Discount on whole rate preferable.

1983. You do not regard the present allowances as inequitable in themselves?—I have not considered that matter very fully, but for myself, I do not understand why a railway has this three-fourths exemption.

1984. On what grounds do you understand that that exemption was granted?—I understand because it is not sewered, and is not supposed to have the advantages of sewerage, road making, recreation grounds, and matters of that kind. But I think it does derive an advantage from that expenditure. By the expenditure of boroughs, land in the neighbourhood is gradually improved in value; it first becomes accommodation land, and then building land, and is appreciated in value by the borough expenditure.

1985. Would not a corresponding appreciation take place as regards other properties in the parish?—Yes.

1986. Then the relative position of the two properties would be the same?—Yes.

Mr. J. H. Ellis.

26 Mar. '97

Rateable value in Plymouth includes the rateable value of Government property.

Government expenditure in Plymouth is an advantage.

Special expenses incurred by seaport towns. Special contributions should be received in respect of.

Tunbridge Wells a non-county borough in two unions.

Tunbridge Wells borough has no direct representation in making up valuation list.

Allowances different in the two unions in Tunbridge Wells.

1987. (Mr. Dalton.) Mr. Smith drew attention to the fact that your rateable value in Plymouth was very low; I presume that does not include the value of the Government property?—I think it does.

1988. (Sir John Hibbert.) It is not rated?—No, it is not rated.

1989. (Mr. Dalton.) The 395,000l. includes Government property?—Yes, because although it is not rated we receive an allowance by way of Treasury contribution. I am pretty well certain it is included, because I have just had to negotiate with Devonport upon the basis of the rateable value; and we have both taken the Government assessment into account.

1990. (Sir John Hibbert.) You said because Plymouth is a service town, it ought to have some advantages given to it in extra grants in aid; have you not the advantages of a very large Government expenditure in Plymouth, that would counterbalance any disadvantages you have?—We have the advantage of an expenditure, but whether it compensates for the disadvantages or not, I am not prepared to say; I am disposed to think it does not.

1991. You must admit that the larger the expenditure in a place is, the place must be benefited by it whether it is expenditure by private persons or by Government?—If it remains in the place.

1992. You think that you ought to have an additional grant on account of your peculiar position, being a port; do you consider that Plymouth has any other claims for consideration than those in a place like Liverpool?—No.

1993. Would you allow the same claims to operate for all large ports?—For all large ports under the same conditions.

1994. Has any expense been thrown upon you by the giving up of the Government establishment for dealing

with cases of yellow fever. Last year the Government quarantine establishments were given up, I believe?—Expenditure has not yet been thrown upon us, that is to say no case of yellow fever has yet been imported, but we have to pay the interest and sinking fund on our infectious disease hospitals whether floating, or whether on land, and on our disinfecting apparatus. We have to be ready for such cases, if imported, and that is where the expense comes in—it is the expense of keeping yourself prepared to deal with it. It may be a dozen years before we have a case to deal with.

1995. Have you increased your hospital accommodation on that account?—We are increasing it.

1996. On that account?—I will not say on account of yellow fever—no, but to guard generally against the importation of infectious disease.

1997. In paragraph 9 of your memorandum you make use of this question of dealing with yellow fever cases as a reason for getting an additional subsidy?—I deal with the importation of all kinds of disease, "the importation of plague, cholera, yellow fever, and other diseases."

1998. With respect to the cases of the "Nubia" and the "Harlech Castle," does that put you in any different position from places like Liverpool?—No.

1999. You would think that they would have just as good a claim as you would?—Yes.

2000. Have you applied to the Local Government Board for the transfer of the powers of appointing overseers?—No, because it has not been necessary. We work together. We allow the guardians to rate, and the overseers do not make the assessment in Plymouth; the guardians make the assessment; we have the same surveyor, and there has not been any necessity.

2001. You, as has been stated, appear to be in a happy position?—Yes, and we hope we shall not be disturbed.

The witness withdrew.

Mr. WILLIAM CHARLES CRIPPS called and examined.

Mr. W. C. Cripps.

2002. (Chairman.) You are town clerk of Tunbridge Wells, and have also been in practice as a solicitor at that place for about 20 years?—Yes.

2003. This paper which I hold in my hand is the memorandum which you have been good enough to supply to us in consequence of our request?—It is.

2004. And you are one of the witnesses delegated to appear on behalf of the Association of Municipal Corporations?—Yes, especially as regards the non-county boroughs.

2005. I think from a reading of your memorandum you deal almost entirely with the special circumstances of Tunbridge Wells as illustrating that class of borough?—As a fairly typical case of a non-county borough in two unions.

2006. You are not only in two unions, but you are in two counties, I see?—Yes, but that is not so serious, because although we are in two parliamentary counties we are only in one administrative county.

2007. Your main difficulty that you wish to represent to us is because you are in two unions?—Yes.

2008. And that arises, does it, from the fact that the Poor Law union is the area for assessment, and as regards the making up of the valuation list you have no direct representation?—No, none whatever.

2009. That is your point of difficulty?—That is our first point of difficulty. We also have a difficulty arising from the fact that being in two unions different allowances are made in the two unions, and it has been impossible to arrange for the collection of the whole of the rates together.

2010. Do those difficulties arise in the respect that you are not a county borough, or if a county borough were in the same position as regards unions, would the same difficulties arise?—I am scarcely sufficiently conversant with the results to a county borough, but I believe it would be the same thing.

2011. Your idea, I understand, is this: that the rating authority for any area should be the authority under

whose cognisance the valuation list is made up?—Certainly.

2012. Do you desire to arrive at that by giving representation to your borough council upon the assessment committees of the unions, or by assimilating the boundary of the union with the boundary of the borough?—In small boroughs such as Tunbridge Wells, or other like non-county boroughs, it would be impossible to make the union and the borough conterminous. You must have, in any case such as that I am referring to, several rural areas and probably several urban areas all in the same union. The borough itself would not be a sufficiently large unit; therefore you must have either direct representation of each borough or urban sanitary district upon the assessment committee, or you must have a system such as I have suggested here, whereby the representatives on the assessment committee should be divided between the urban districts and the rural districts in proportion to the rateable value.

2013. Which system do you prefer?—I think that the latter system would be more likely to work satisfactorily throughout the country, although I am not prepared to differ from Mr. Jeeves, whose view, as I understand it, is that each urban district should have direct representation.

2014. Why do you take representation according to rateable value? Is that a safe basis to take?—I think so for rating and valuation purposes.

2015. Would you have no regard to population at all?—I do not think so for those purposes.

2016. Do you not think it would be fairer to combine the two?—No, because it is purely a question of assessing and expenditure of rates—I should correct myself; it is hardly expenditure of rates, because the assessment committee has nothing to do with expenditure.

2017. Then I gather from paragraphs 4 to 8 of your memorandum that the existing provisions for making alterations are not sufficient to effect the purpose which you have in view?—That is so. I have applied to the Local Government Board on the very point, and made every possible endeavour.

Mr. J. H. Ellis.

26 Mar. 297

One assessing and one collecting authority in Plymouth.

Mr. W. C. Cripps.

Urban and rural districts should be represented in proportion to rateable value on assessment committee.

Mr. W. C.  
Cripps.

26 Mar. '97

Local  
Govern-  
ment  
Board  
inquiries  
as to  
boundaries  
and areas.  
Objections  
likely to be  
raised by  
local bodies  
to altera-  
tions of  
boundaries.

2018. Did the difficulty arise from insufficiency in the law or from unwillingness on the part of the Local Government Board to comply with your request?—I understood the Local Government Board were personally of opinion that the law might be sufficient, but they were unprepared in the present condition of the number of their staff to undertake the enormous labour that would be entailed upon them by holding such a vast number of inquiries as would be necessary throughout the country were it desired to make boundaries in any sense conterminous.

2019. Taking that objection which you surmise in the first instance, you would probably agree that there would be an enormous number of inquiries?—I think there would be a large number of inquiries necessary.

2020. Did any difficulty arise also on account of any of the difficulties made by local bodies at the transference?—That difficulty would arise, and I have no doubt that was present to the mind of the Local Government Board. Taking my own case, the Ticehurst Union, which is a very small union within the borough, would strongly object to the area within the borough being taken from it and passed over to Tonbridge, the objection being purely a selfish one.

2021. When you say "a selfish one," you mean this: that if the transference of the area is to benefit one body of persons, it will *qua* rating do injury to another; the rates of one area will be lowered; the rates of another area will be raised?—Possibly so, and they would not have regard to the convenience of the persons who would propose to be transferred. The objection of the Ticehurst Union would be solely on the part of those persons resident outside the borough; all those inside the borough are exceedingly anxious that the transfer should be made, and they presented, I believe, a unanimous petition to the corporation to carry the matter into effect. The Boundary Commissioners who were appointed, I think, under the Act of 1888, held a public inquiry on the matter, and recommended that the transfer should be made.

Com-  
pounding,  
recom-  
mendations

2022. I do not think your recommendations as to compounding differ materially from those which have been made by Mr. Jeeves, whose evidence you heard?—I entirely agree with his evidence on those points.

Rates,  
collection  
of, simpli-  
fication of,  
and  
economy.

2023. And you agree, I gather from paragraph 35 of your memorandum, with him also that the collection of rates might be greatly simplified, and that each occupier might have only one demand note presented to him?—That is so. I have with me, if I might be allowed to put them in, the forms which are adopted in Tunbridge Wells in regard to the rates under the provisions of section 189 of the Tunbridge Wells Improvement Act.\*

2024. These consist of pages from your rate books and specimen copies of your demand notes and receipts?—Yes.

2025. Each figure which appears upon the demand note would have a corresponding figure in the rate book?—Yes.

2026. This would not, I suppose, include any rates except the borough rates; it would not include the poor rate, would it?—No. I suggest that there is no reason at all why the poor rate should not be added to this—all kept in the same book, all collected together with the corporation rates. That could be done if the whole of the borough were in the same union, and the whole of the collection were undertaken by the corporation, and of course the corporation authorised to levy the poor rate.

2027. To levy, do you mean, or to collect it upon the instance of the union authority?—It might be done either at the instance of the union authority as a rate, or the overseers might issue their precept to the corporation, and then the corporation might themselves make the rate in the same way that they make the general district rate or the borough rate. That system has reduced already the number of collections in Tunbridge Wells; there are only two collections now of corporation rates and there were formerly eight.

2028. How do you mean eight collections of corporation rates?—There were two collections formerly of the general district rate, four collections of the water rate—

2029. Not from each person, each payer?—Yes.

2030. Two, and four districts in which they were collected, do you mean?—No.

Mr. W. C.  
Cripps.

26 Mar. '97

Allowance  
and de-  
ductions,  
inequalities  
in the  
Tonbridge  
and  
Ticehurst  
Unions.

2031. (Sir John Hibbert.) You mean quarterly collections?—Yes. The general district rate was collected twice a year from each person, the water rate was collected four times a year, making six, and the overseers then collected the borong's rate twice, that is eight times. We have now two collections only. The only collection outside our own collection is the collection of the poor rate; if that could be collected at the same time there would be only the two collections then.

2032. You see no practical difficulty in effecting that reform, if you had the statutory power to do it?—None whatever, and there would be enormous economy. The cost to the corporation of collecting 42,000*l.* a year is 315*l.*, the cost to the guardians of collecting their 16,000*l.* a year for the poor rate is 410*l.* We should save at least 300*l.* a year, practically a  $\frac{1}{2}$ d. rate, if we could do what I suggest.

2033. Is there any point which I have omitted in taking you generally through this memorandum, which I have already read, on which you would like to speak?—I think not, except, perhaps, the point as to the inequalities which result from the allowances in the two unions. I have taken properties which are situated within the borough in the Tonbridge Union, the gross rent of which is 240*l.*—I take this simply as an instance—and in Tonbridge the rateable value would be 192*l.* Taking a property in the Ticehurst Union, of which the gross rent is 240*l.*, the rateable value would be 204*l.* Therefore, a ratepayer who lives in the borough and occupies a house, the rent of which is 240*l.* a year, if he lives in the Tonbridge Union part, he pays rates on 192*l.* a year, but if he happens to live a few yards distant in the Ticehurst Union part, he pays rates on 204*l.* a year.

2034. Are both cases instances of house property?—Shop property.

2035. There is no difference in the class of property which would account for that difference?—In the Tonbridge Union on private houses 15 per cent. is allowed, and in the Ticehurst Union on all property 15 per cent., but in the Tonbridge Union 20 per cent. is allowed on business premises; there is a larger allowance made in the Tonbridge Union on business premises than on private houses.

2036. Would you see any difficulty in doing away with this class of exemption or allowances, as you call them, having the rates on the gross, if it were done universally?—If it were done universally it would come to exactly the same thing.

2037. (Mr. Dalton.) I think you referred to the recommendations made by the Boundary Commissioners in 1887?—Yes.

2038. It is the case, is it not, that the Boundary Commission investigated all overlapping areas in England and Wales prior to the passing of the Local Government Act, 1888?—They did.

2039. And the original intention apparently was to carry out those alterations before the passing of the Act of 1888?—It was so.

2040. But the local objections then were so very strong that it was impossible to carry out that arrangement in the Act of 1888, was that not the case?—I cannot say the reason they were not carried out; I suppose that was the reason.

2041. The main difficulty, I suppose, is the one to which you have alluded, that the rates in two neighbouring unions may be very different, and the result of making a symmetrical boundary would be to put a very much higher rate upon certain people, who would therefore very strongly object to it?—No, I do not think so.

2042. Is that not the case in your district?—In our district it is simply the outside ratopayers who are outside the borough who object to having this particular portion taken away from them.

2043. Because their rates will go up if it is taken?—Not to any extent—nothing like the expense and difficulty which arise by reason of the existing state of things.

2044. But still, although the loss there in that case is very small, yet the opposition is very great?—I generally find that all these local things are the subject of contest; and that they are not nearly so bad afterwards.

Boundary  
Commis-  
sion in  
1887.  
Local  
objections  
to altera-  
tions of  
boundaries?

Mr. W. C. Cripps.

26 Mar. '97

Collection, cost of.

Area containing several parishes cannot get an equal rate equitably levied. Uniform system for arriving at valuation list necessary.

ONE RATE collecting authority results in economy.

OVERSEERS and assistant overseers.

Power of Local Government Board to transfer to urban authorities,

on application, the powers and duties of, under Local Government Act, 1894.

Policy of Local Government Board.

ONE RATING and one collecting authority, advantages of.

2045. Then as to the cost of collection, you put the cost of collection by the guardians as 430*l.*, I think?—Yes.

2046. How do you get at that; is that the total cost of the salaries of the overseers?—The salaries of the collectors.

2047. It is not collected by the overseers?—No, it is collected by collectors appointed by the guardians under the orders of the Local Government Board.

2048. That is the net salary and covers nothing but collection?—It is the total expense of collection.

2049. But it is purely collection?—It is purely collection.

2050. (*Mr. Clare.*) I take it that the general tendency of your evidence is that under the existing law it is impossible to get an equal rate equitably levied over any area which contains two or three or more parishes?—That is so.

2051. And that if you want to have equality of rating there must be the same system of arriving at the valuation list pertaining through the whole of the rating area?—Yes, whatever that area may be.

2052. I understand also that your experience is, that doing away with the collection of rates partly by the guardians and partly by the corporation has resulted in substantial economy?—Yes.

2053. As representing the non-county boroughs, do you know what their experience has been with reference to their endeavour to get powers under the Local Government Act, 1894, to do away with many of these evils, as far as possible?—Not satisfactory.

2054. Under that Act I think the Local Government Board have power to go a long way, if they choose, in rectifying the evils which exist?—Yes, they have power to give non-county boroughs the power to appoint assistant overseers. In some cases they exercise it, and in some cases they have refused. They have refused it, I believe, in our instance.

2055. There has not been a systematic policy adopted by the Board in endeavouring to improve the administration in the municipalities by exercising powers which the Act of 1894 gives them?—I think the Local Government Board have had very great difficulties to contend with in bringing the Act into operation, but I cannot say there has been a systematic policy.

2056. (*Mr. Smith.*) We know that you are in favour of one rating and collecting authority; why are you in favour of that authority being the municipality rather than the guardians?—Because my experience has been mainly with rating and collection by the municipality and not by the guardians. I think a very large number of the municipalities of the country would strongly object to hand over the whole of their duties as a rating and collecting authority to the boards of guardians.

2057. Or to the overseers of distinct parishes?—Or possibly to the overseers of distinct parishes.

2058. Do you know that we do that in Birmingham?—Yes, I know.

2059. And probably you know with very considerable success as regards saving?—I think I have heard

that is so; Birmingham is, though, if I may say so, an exceptional district and has exceptional local powers, I believe.

2060. That is so; but your strong point is one rating and collecting authority?—Quite so. I would rather have the transfer to the overseers or to the guardians than that things should remain as they are. My preference between the two is that the municipality should be the one.

2061. That is merely based, I think, upon your experience as a municipal officer?—Yes, and I think I am speaking for my brother town clerks of non-county boroughs on the whole.

2062. You do not know that the town clerk of St. Helens was converted, if I may say so, by my experience?—No, I do not know that.

2063. (*Sir John Hibbert.*) Would you say what were the reasons the Local Government Board gave for not agreeing to your application for the transfer of powers to appoint assistant overseers?—I think it was because they had already, immediately the Act passed and after our application, given the collectorship to the board of guardians.

2064. They considered that to be an impediment?—Yes.

2065. Did they give you the power of appointing overseers?—They gave us the power of appointing overseers.

2066. Any other powers—parish council powers?—Two or three others, but nothing of any great importance.

2067. Yours is really a special case—it was not governed by any principle except that particular one of having appointed collectors?—I think it has been a pretty universal experience.

2068. Do you know that it is said that it is of general application?—I do not know that of my own knowledge.

2069. Perhaps you do not know that they have granted transfers of these powers to a great number of municipalities?—I know they have in some places.

2070. And to urban districts also?—Yes, I think you will find in our return a considerable number mentioned.\*

2071. What did you say with respect to the assessment? Do you wish to do away with the assessment by the assessment committees of the unions, or do you wish to have one of your own?—I think the assessment committees of the unions should be retained.

2072. You wish them to be retained?—Certainly.

2073. Do you approve of retaining the outside committee of the county for the purposes of keeping all the assessments as far as possible upon one uniform basis?—I do not think as long as you have county rates levied in the way in which they are levied now that you can do away with the general county committee.

2074. Is the assessment of the county rate revised from time to time?—I believe that is so.

2075. Every five years?—I believe that is so, but I could not speak from my own knowledge.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 20 to 30.

Mr. W. C. Cripps.

26 Mar. '97

Local Government Board, application to, for transfer of powers to appoint assistant overseers refused in case of Tunbridge Wells.

Assessment committee of union and general county committee, retention of, desirable.

County rate, assessment of, Periodical revision.

The witness withdrew.

Adjourned till Thursday next at 12 o'clock.

## SIXTH DAY.

Thursday, 1st April 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Viscount EMLYN.

The Right Hon. J. B. BALFOUR, Q.C., M.P.

C. N. DALTON, Esq., C.B.

C. A. CRIPPS, Esq., Q.C., M.P.

H. E. CLARE, Esq.

T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.

E. O. SMITH, Esq.

JAMES STUART, Esq., M.P.

J. L. WHARTON, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Sir HARRY BODKIN POLAND, Q.C., called and examined.

Sir H. B.  
Poland,  
Q.C.

1 April '97

2076. (*Chairman.*) You are a Queen's Counsel, and I believe, have had in the course of your professional experience a good deal to do with the law of rating, and with the system under which real property is rated in this country?—That is so. I do not profess to be a specialist. I practised generally, but I had a great many of the rating cases which have been tried at the County of London Sessions, and I might add that since I retired from practice in the middle of 1895, as a justice of the peace I have endeavoured to do my duty by sitting and assisting the Chairman of the County of London Sessions in trying appeals as well.

2077. I think you are also at the present time an alderman of the London County Council, and as I think you have told me a director both of a gas company and of a water company?—Yes. I wish that to be stated because a witness may be unconsciously biased, and I wish my exact position to be known.

2078. In response to the request of the Commission you have put together some notes, which I hold in my hand, as to the points on which you think you could usefully give us some information?—Yes, I have done that. Since I received the request on the part of the Commission to attend and give evidence upon the law of rating, I have endeavoured in the short time which has elapsed, to qualify myself to give as much useful information as I can.

2079. (*Mr. Cripps.*) I propose to ask you first to go through the history and the present state of the law, and then to ask you as regards any suggestions afterwards, so as to keep the two things distinct. The law of rating, I think, so far as England is concerned, commences, does it not, from the statute of the 43rd Elizabeth, chapter II. ?—Certainly.

2080. But at the present time, to understand the law, you must read that statute, must you not, with the later statute of 37 & 38 Victoria, chapter 54 ?—Yes, that is the Act of 1874. Those are the two chief Acts.

2081. Would you, in reference to those two Acts, make any statement that you think would explain to us the foundation of the law of rating so far as England is concerned?—The material words of the 43rd Elizabeth I think should be quoted. The statute requires the overseers of every parish to raise by taxation of every inhabitant, parson, vicar, and other and of every occupier of lands, houses, tithes impropriate, appropriations of tithes, coal mines or saleable underwood in such competent sum and sums of money as they shall think fit, a convenient stock of flax, hemp, wood, thread, iron, and necessary ware, and stuff to set the poor on work, and also competent sums of money for and towards the necessary relief of the lame, impotent, old, blind, and such other among them, being poor and not able to work, and also for the putting out of such children to be apprenticed, to be gathered out of the same parish according to the ability of the same parish. That really is the foundation

of the law of rating in England, which you will notice is divided into three, the parson or vicar, the occupiers of lands and of buildings, and other inhabitants.

2082. I think I may notice, may I not, from what you say that the obligation to pay the rate is not directly imposed on the land as a species of property, but on the occupier of the land?—It has been expressly held that it is on the occupier in respect of the value of his occupation, on the inhabitant in respect of his personal property, and on the parson or vicar in respect of the tithes, the ability to pay being of course measured by the value of the occupation, and in the case of the inhabitant by the value of the profits on the stock in trade.

2083. The Crown, of course, is not mentioned in the Rating Act of Elizabeth ?—In the statute of Elizabeth the Crown is not mentioned, and as it follows, is not liable in any way to pay rates in respect of property occupied by the Crown for public purposes. Perhaps it is just as well to have on the notes the case of *Jones v. The Mersey Docks*, which was decided by the House of Lords in June 1865, which puts the matter beyond all question. The judges were called in to advise the House of Lords, and there is a most elaborate statement of the law by Mr. Justice Blackburn on behalf of the judges. That case goes a little beyond the mere decision that the Crown is not liable because not mentioned in the statute; the decision goes further and extends to the case of occupations by public bodies for Government purposes. For instance, the county justices had to provide the assize courts, the judges' lodgings, and police stations, and all property of that kind when used for public purposes comes within the exemption.

2084. If I understand you that decision not only says that the Crown property is not rateable because the Crown is not mentioned in the statute, but also that where property is used exclusively for public purposes such as police purposes, it is not rateable?—Certainly. It in no way applies to municipal buildings or anything of that kind. The exception dealt with in that decision, as explained by subsequent decisions, applies to all property occupied for the public purposes of the Crown.

2085. I will not ask you at present your views upon that; we will come to that in a moment, but that is the law as it stands?—I think that is the law as it stands. There have been express decisions about the assize courts, police stations, and property of that class.

2086. I think you can also tell us, can you not, what has been held to be a rateable hereditament in regard to the English law?—Everything is a rateable hereditament which is occupied profitably; I do not mean by that where a profit is made, but where the occupation is of value, the distinction being between property which is of value and property which is of no value. In the judgment in the House of Lords they refer as an illustration of that to the fact that a man is not liable to be rated for a barren rock or for a worked-out coal mine, but anything

Poor rates imposed on the occupiers of land, not on the land.

Property occupied by the Crown and property occupied by public bodies for Government purposes not liable to be assessed to local rates.

Rateable hereditament. Definition of.

else capable of yielding a rent, and which is of value, the occupier is liable to be rated for.

2087. You have used the words "profit" and "value." Suppose the occupation is what is called a beneficial occupation apart from profit, would that make it rateable?—Clearly.

2088. One other point; separate occupation makes the occupier liable, does it not, for the part of a house or premises which he occupies separately?—Yes, the present state of the law is that any part of a house which is separately occupied is a separate rateable hereditament although there is no structural severance. The leading case upon that subject is the case of *Allchurch v. the Hendon Union*, which was decided in 1891, and is in the Second Queen's Bench, 436. Lord Esher, in giving judgment in that case, said that the overseers "must not only look at the outside of a house, but they must go into the house or inquire into the state of the house, and they must rate people according to their true and legal rights in respect of that which they occupy." In that case there was a house divided into two, the first floor and the ground floor were occupied separately. There was no structural severance, but there being a separate contract to occupy one part, and a separate contract to occupy the other, they were decided to be separate rateable hereditaments. I ought to qualify that to this extent; that if there are a number of rooms in a house which are let out, and the landlord lives on the premises and has the control of the outer door, then it would be held that the landlord is the occupier of the whole, and in that case the others would be lodgers, but if the landlord does not live at the house at all, and lets out the whole of it, each occupier of a room is the occupier of a separate tenement, notwithstanding that the occupiers have the common use of the staircase and of certain other parts of the house, the conveniences and so on.

2089. Now you have spoken as regards the premises or hereditaments capable of being rated. I think that when the premises are rated they are rated on what is called the net annual value, are they not?—Yes.

2090. Is the expression "Net Annual Value" found in the Parochial Assessment Act, 1836?—Up to the time of the passing of the Parochial Assessment Act, 1836, occupiers were rated in respect of the value of their occupation, that is to say, the rent that the tenement would let for. That was expressly decided in the case of the *Queen v. Adams*. The passing of the Parochial Assessment Act, 1836, did not alter the law in any material respect; it only gave a guide to the parish officers, and further, it compelled them to rate at the full net annual value; before that many of the parishes used to take off 10 or 20, or even 30 per cent. I should like to support what I say with regard to that by referring to the case of the *Overseers of Sunderland v. the Sunderland Poor Law Union*, which is quoted in 34, *Law Journal*, *Magistrates Cases*, 135. This is what Mr. Justice Byles said in that case. "The Statute of Elizabeth imposes the rate, not on the land, but on the person of the occupying tenant, in respect of his ability, as tested by the annual value of the land; for, originally, an inhabitant and occupier was rated for personal as well as real property; and it has been repeatedly held that the poor rate is no charge upon the land. *Heed v. Starkey*, 8 Mod. 314. Nor is there much danger of abuse; for, in ordinary cases, that method of letting which will produce most rent will be preferred by the landlord. It is true that pecuniary charges on the land created by contract, as ground rent, rentcharges, annuities, interest of mortgages, and the like, are not to be deducted from the rateable value of a tenement; but that is because the legal criterion of rateable value is, by the provision of the statute, the rent which a tenant from year to year would give for the land in its actual condition,—subject to certain deductions, among which are tithes, rates, taxes, insurance, repairs, &c., but among which deductions pecuniary charges created by contract are not to found. But in truth"—this is important—"the statute of 6 & 7 Will IV., though not in form declaratory, made very little alteration in the principles of rating before accepted by courts of law." So I think that supports what I say. It is the express opinion of the judge that the Parochial Assessment Act, 1836, made no material change in the law; it was merely declaratory.

2091. In order to get it before us on our proceedings could you give us the definition of net annual value from the statute itself?—The net annual value is defined by the statute itself in the first section in these words:—"No rate for the relief of the poor in England and Wales shall be allowed by any justice, or be of any force, which shall not be made upon an estimate of the net annual value of the several hereditaments rated thereunto; that

is to say, of the rent at which the same might reasonably be expected to let from year to year, free of all usual tenant rates and taxes, and tithe commutation rent-charge, if any, and deducting therefrom the probable average annual cost of the repairs, insurance and other expenses, if any, necessary to maintain them in a state to command such rent. Provided always, that nothing herein contained shall be construed to alter or affect the principles or different relative liabilities (if any) according to which different kinds of hereditaments are now by law rateable." Now that is the clear and distinct definition of what is net annual value, which of course is equivalent to rateable value outside London.

2092. I will come to that in a moment. In your view, and you have given us the authority, the definition of "net annual value" contained in the Parochial Assessment Act was really in the nature of a declaration of the law?—Yes.

2093. Carrying on the old law?—Carrying on the old law in substance, and, as I have said, making it compulsory that the parish officers should rate up to the full net annual value.

2094. I want to put on one side any exceptional case; outside London, so far as net annual value is concerned, does the definition from that statute still decide in rating cases?—Outside London that is the sole definition of "net annual value," and you will notice that in that statute it does not mention what gross estimated rental is.

2095. I will come to that in a moment; at present I want to get it clear for our purposes that the definition so put forward in the Parochial Assessment Act, 1836, has never been altered, has it?—It has never been altered.

2096. Now, of course, the other matter that we have to consider in rating cases is called the "gross estimated rental"?—Yes.

2097. In what statute do you first find the gross estimated rental?—It is mentioned in the Parochial Assessment Act, and in the schedule giving the form of rate there is a column there headed "gross estimated rental" which is put down as 60*l.*, and another column headed "rateable value," which is put down at 55*l.*, so that shows that the "gross estimated rental" is the full value and then the rateable value or net annual value is arrived at by making the deductions which are referred to in the section which I have read; but in order to make the matter clearer, in the Union Assessment Act of 1862 (25 & 26 Vict. c. 103), the Legislature thought it desirable to define "gross estimated rental." That Act in section 15 says:—"The gross estimated rental for the purpose of the schedule to this Act shall be the rent at which the hereditament might reasonably be expected to let from year to year, free of all usual tenant's rates and taxes, and tithe commutation rentcharge, if any; provided that nothing herein contained shall repeal or interfere with the provisions contained in the first section of the said Act (6 and 7 William IV., c. 96), defining the net annual value of the hereditaments to be rated."

2098. You told us that there was some little distinction, as between London and the rest of England, as regards the definitions of the gross value and the rateable value; to what statute do you refer?—The Valuation (Metropolis) Act, 1869, (32 & 33 Vict. c. 67). In section 4 of that Act there is a series of definitions. It defines "hereditament" as meaning "lands, tenements, hereditaments and property which are liable to any rate or tax" and so on; and then they change the term, and do not call it "gross estimated rental," but "gross value," and that is defined in these words—"the term 'gross value' means the annual rent which a tenant might reasonably be expected, taking one year with another, to pay for an hereditament, if the tenant undertook to pay all usual tenant's rates and taxes, and tithe commutation rentcharge, if any, and if the landlord undertook to bear the cost of the repairs and insurance, and the other expenses, if any, necessary to maintain the hereditament in a state to command that rent; the term 'rateable value' means the gross value after deducting therefrom the probable annual average cost of the repairs, insurance, and other expenses, as aforesaid." You will notice the principal change of expression is, instead of saying "from year to year," this statute uses the more accurate term, "taking one year with another." Some persons have expressed an opinion that something different to the old definitions was meant by the new definitions; but I find in the Valuation of Lands (Scotland) Act of 1854 (17 & 18 Victoria, chapter 91 section 6), the expression used, "one year with another." I think the beginning of that section is:—"In estimating the yearly

" value of lands and heritages under this Act, the same shall be taken to be the rent at which, one year with another, such lands and heritages might in their actual state be reasonably expected to let from year to year." &c. As I am particularly anxious to be accurate in a matter of this importance, I should like to refer at once to a judgment of the House of Lords in what we generally speak of as the "Erith" case. It is the case of the rating of the London County Council's outfall sewage works at North Woolwich and Erith, and their pumping station at Pimlico, in St. George's, Hanover Square, and their sewers. It was decided in 1892, and Lord Herschell, who was the Lord Chancellor, in giving judgment, specially referred to these definitions. The case will be found in the ordinary law reports, but I am quoting a book that your secretary has got for your use, "Ryde's Appeals, 1891-93."

Value. Annual value, net annual value; gross value; rateable value. 32 & 33 Vict. c. 67, intended to make language of 6 & 7 Will. IV. c. 35 clearer.

2099. I may say that it is a book generally referred to in these matters?—Yes, it is generally referred to. At page 422 you will see Lord Herschell says:—"The rule which is to govern the assessment of premises to the poor rate was laid down by the Legislature in 6 & 7 Will. IV. c. 96, s. 1, which provides that. 'No rate for the relief of the poor should be allowed or be of any force which should not be made upon an estimate of the net annual value of the hereditaments rated thereunto; that is to say, of the rent at which the same might reasonably be expected to let from year to year, free of all usual tenants' rates and taxes, and tithe commutation rentcharge, if any, and deducting therefrom the probable average annual cost of the repairs, insurance and other expenses, if any, necessary to maintain them in a state to command such rent.' In the Act to provide for uniformity in the assessment of rateable property in the Metropolis (32 & 33 Vict. c. 67), the term 'gross-value' is defined as 'the annual rent which a tenant might reasonably be expected to take one year with another, to pay for an hereditament if the tenant undertook to pay all usual tenants' rates and taxes, and tithe commutation rentcharge, if any, and if the landlord undertook to bear the cost of the repairs and insurance and the other expenses, if any, necessary to maintain the hereditament in a state to command that rent.' The term 'rateable value' is defined as meaning 'the gross value after deducting therefrom the probable annual average cost of the repairs, insurance, and other expenses as aforesaid.' So far as the question to be determined in this case is concerned, I do not think the terms of the latter Act are important. 'The annual rent which a tenant might reasonably be expected, taking one year with another to pay for an hereditament' is the same thing as 'the rent at which the same might reasonably be expected to let from year to year;' and so on, I need not trouble you further. That is a direct statement by that learned person that the change of language is merely to make clearer, what the Legislature meant in the Act of 1836.

2100. In other words, there is no substantial difference between the two?—No, none whatever. I think it was to get rid of the notion that some people had that "let from year to year" meant that it was the rent that a person would pay for a hereditament, only to use it for a year and then to be turned out. Of course in the case of large country houses it would not be worth a man's while to move in the furniture if he is going to be turned out at the end of the year. The valuation is upon the assumption that the tenancy will continue year after year.

2101. Assuming that the Commission wish to find a definition which would apply in all parts of the country equally could you give us your views which of those definitions you would prefer?—I think the latter definitions are more clear, I should certainly prefer those.

2102. I do not think there is anything further you wish to add upon the definition of gross estimated rental or net annual value?—No.

2103. Perhaps I might ask you one question in reference to what was asked here the other day. When you use the expression "gross estimated rental," even although there is an actual tenant in the particular case you might still have to consider whether the actual rental was a fair one or not?—If the property is actually let it is immaterial what the rent is. The parish officers are bound to get at the true annual value, and if a father let his son have a house at a cheap rate, he is not to be rated at that sum, he is to be rated at the true sum. That is quite clear. Of course, if there has been a recent bargaining between the landlord and the tenant, and the rent has been agreed upon, there is strong *prima facie* evidence that that is the rent which a tenant might reasonably be expected to pay.

valuation, principle of. The annual value of property to be assessed, to be paid for necessarily be test.

2104. I suppose, in most cases, the actual rent would be the best evidence, but it is not the test?—If recently agreed upon it would be, but it would be a very bad test; in a neighbourhood, for instance, where the lease was 10 or 20 years old, and the property had been going up in value ever since, and recent lettings of similar property that came into the market showed that the rent paid was much below the true value.

2105. Applying the test of which you have given us the definition as regards the net annual value, or rateable value, the actual amount is always a question of fact, is it not?—It is always a question of fact.

2106. In reference to property which is from time to time in the market, such as an ordinary house, we will say, in a London street, no difficulty has been found in that case, has there, for getting at the rateable value?—No. The house agents in a particular neighbourhood know what the value of the property is. Then there are dealings from time to time, and those have to be examined. Some times a man pays a high rent and no premium, sometimes he pays a high premium and a low rent. All those things have to be carefully considered in arriving at the rent a tenant might reasonably be expected to pay. Of course, premium is nothing more than rent paid in advance, or, as it is sometimes called, capitalised rent. But the people accustomed to deal with the letting of property know how to apportion the premium so as to arrive at the annual value.

2107. Where you are dealing with a property which is practically never let or sold in a market, then the difficulty does arise, does it not?—The difficulty is very great indeed with regard to all properties which are not actually let, and properties which are exceptional and never intended to be let.

2108. Would you just explain a little further from your experience; take such cases as hospitals, or board schools, railways, gas undertakings, and matters of that kind?—Let us take the simpler cases first, board schools. They have been specially built with the playground for the purposes for which they were wanted; they are never let, as school boards have always provided their own buildings. Just to illustrate that—how would you arrive at the value of that except by taking the value of the land and the value of the buildings put upon the land; and if you combine the two you have got the capital value, and then the question is when you have got the capital value, whether it is not a reasonable way of arriving at the annual value by taking a percentage upon the value of the land, and the value of the buildings. The question of the school board is an important one, because the case has been before the courts, and there is no doubt the House of Lords have approved of the decisions in the school board cases; may I just refer to the school board case in 1885, which is reported in 55 Law Journal, magistrates' cases, page 33. It was in the Divisional Court, and the judgments of Mr. Justice Cave, and Mr. Justice Wills are very instructive. Their decision was confirmed by the Court of Appeal in the following year, and is reported in the same volume at page 169. If you will allow me I will read the head note:—"The school board are rateable to the poor according to the annual value of the buildings occupied by them, whether they rent or own the buildings. The cost of the land, and the cost of the buildings are rough tests of the value of the occupation. Fair and reasonable interest, calculated upon the necessary outlay in purchase money and building, may be taken as a method by which to arrive at the rateable value, as representing the value to the existing occupier. So also may the rent which the board might be supposed to be willing to give if the board were desirous of hiring premises for schools." They put before the court a number of facts. Now the court adopted as one view that there might be what is called a contractor's rent; that is to say, supposing a contractor had known that a school board would want a building exactly of this class and character, and had bought the land and built it, what would be a fair rent for them to pay to him for the outlay which he had expended in providing that which the school board wanted? The courts say it is entirely a question of fact, and if it is to be a per-centage it must be upon value, not upon cost. Cost might not represent value. He might have come upon a quicksand, and that might have cost an enormous sum of money in making foundations, but when the building is up, it is of no more value than one which is built upon firm ground. You must take the value, not the cost. Or, again, the cost might have been very extravagant or foolish. But when you have got the value, what per-centage are you to put on the land and on the buildings? That must be

Sir H. B. Poland, Q.C.

entirely a question of fact, and in this particular case the court put 4 per cent. on the land, and 5 per cent. on the buildings. The paragraph is: "That the assessment 'appealed against—namely, 1,150*l.* rateable value—was 'proved to have been arrived at by calculating the 'annual value of the land at 4 per cent. on its original 'cost, and the annual value of the buildings at 5 per 'cent. on their then estimated cost." If the sessions—which was the sole judge of the facts—chose to put 6 per cent. and 5 per cent., or 4 per cent. and 3 per cent., the Superior Court could not overrule them, as the question was one of fact. The school boards say that 4 per cent. and 5 per cent. is a great deal too much, because they can borrow money at a very low rate, and having borrowed the money at a low rate, they could, instead of renting, buy the land and build the school for themselves. But still, that is pure fact.

2109. Of course, one is familiar with the fact that these per-centages have been argued sometimes lower and sometimes higher, but would the 4 per cent. and 5 per cent. on the land and buildings respectively be about the figure which is now pretty generally adopted?—It used to be 4 per cent. and 5 per cent. generally upon railway stations, school boards, and property of that class; but since the judgment of the House of Lords in the Erith case there is a contention always made that 4 per cent. and 5 per cent. for property which is not occupied for the purpose of making a profit is too much, and that argument is founded on a dictum of the Lord Chancellor, Lord Herschell, in the Erith case. I will just read it:—"In the case of gasworks, 'waterworks, and other industrial undertakings where a 'hereditament is enhanced in value by its connexion with 'a profit-bearing undertaking the profits earned and the 'share of those profits attributable to any particular 'hereditament have to be taken into account, and in such 'cases as these any restrictions which the law has imposed upon the profit-earning capacity of the undertaking 'must, of course, be considered. But I do not think this 'class of cases affords any guide to the assessment of 'such hereditaments as those with regard to which your 'Lordships have now to lay down the proper principle of 'rating. Owing to a statement made in the course of the 'argument at the bar, I wish, in order to avoid possible 'misconception, to add a few words as to the method 'which ought to be followed when it is manifest that an 'owner would be willing to pay a higher rent than could 'be obtained from any other tenant. It was said that a 'practice prevails of taking 5 per cent. on the cost in the 'case of buildings as a basis for arriving at the rental. 'Such a rule of thumb may be all very well where the 'premises would be likely to find competing tenants, but 'is not by any means necessarily applicable where it is 'thought that the owner would be likely to give a higher 'rental than anyone else. It would often be obvious that 'he would never be willing to pay the rent arrived at 'in such a fashion inasmuch as it would be more 'advantageous for him to become the owner. There 'are many other circumstances, too, which may affect 'the answer to the question what the owner of the premises would have been willing to give, if instead of becoming the owner he had become the tenant of them. In 'all cases of the description of which I am speaking the 'whole of the circumstances and conditions under which the 'owner has become the occupier must be taken into consideration, and no higher rent must be fixed as the basis 'of assessment than that which it is believed the owner 'would really be willing to pay for the occupation of the 'premises." I must say with regard to that, no doubt that is a very valuable guide to the sessions, but it is not law. It is an intimation how the tribunal which has to decide the question of fact should go to work. I may add that in that particular case—I was in it at the sessions—the county of London sessions having regard to the peculiar nature of the property took there, 3 per cent. on the land and 4 per cent. on the works—I think that is so, speaking from memory.

2110. Apart from the particular per-centage which, as you state, may, of course, be a question of fact, do I understand that the principle you put forward is this—that where a property is such that you would not have any ordinary market test, either as regards selling or letting, you would take this test, that a man probably would expend at about the same amount at which he could obtain similar premises if he took them from some other person or contractor?—Yes.

2111. Therefore this is merely a machinery or method of arriving at the net annual value which it is supposed the tenant would be willing to pay?—Yes; it is, as Mr. Justice Blackburn said, as to property which is let from time to time—(to use Sir Robert Peel's expression, of which

he was rather fond)—the higgling of the market between the landlord and the tenant fixed the value. When there is no higgling of the market then you must get at it in some other way. I always thought myself that the fair question is this: if the landlord was in possession of the property and was anxious to let it, and there was a tenant who was anxious to take it, and they could not agree between themselves as to what the rent should be, what would persons of skill and judgment, and experience say was the fair rent between the parties?

2112. And, if I understand you, just to follow that up, suppose there were no abnormal circumstances as regards cost, such as quicksand or anything of that kind; if you take an ordinary case you would probably arrive at that by finding out the cost of the land and of the structure whatever it might be?—Yes, but I would prefer saying instead of "cost," the "value," because circumstances change, and it may cost more from various reasons.

2113. Does this principle which you have explained as regards board schools, apply to all other classes of property where you cannot get a tenant in the ordinary way, and where there is no market for an ordinary tenant; I mean to say, take railway stations, waterworks, reservoirs, cemeteries, sewage farms, and matters of that kind?—Yes, including infirmaries, hospitals, lunatic asylums, industrial schools, and all that class of property which has to be valued as buildings. Of course, I exclude the actual railway which earns money; that is a different thing; I am speaking now of railway stations, hospitals, lunatic asylums, and all property of that description.

2114. Outside railway lines, and one or two special matters of that kind, which I will ask you about, does the principle which you have now laid down apply to all buildings and structures other than those in respect of which you could get at an ordinary market value as regards letting or selling?—Yes, I think so; take the city halls, for instance.

2115. In your experience are you aware of any other test having been applied except the one you are now explaining to the Commission?—No, that is the practice generally adopted in London. Some surveyors, however, absolutely reject the value of the land and the value of the buildings. They go into the witness box and say, "I have 'had enormous experience in valuing property, and I tell 'you that the value of this, in my judgment, is so much." When they say that the Sessions have to consider it with the other evidence.

2116. When you come to a basis of principle apart from the *ipse dixit* of a particular witness, you are not aware of any other principle being applied, are you?—No, I think not.

2117. I do not know whether it would be convenient for you at this stage or not—you will tell me whether it is—to carry this matter forward, and taking the case of a railway line, to show how that is dealt with in England for rating purposes. You have told us that with regard to structures you either have the case of tenancy or you have the case of what we have called structural value, and you arrive at the rateable value from one of those two points of view; could you tell us, as regards such an undertaking as a dock or a railway which, perhaps, extends into different parishes how, in those instances, the rateable value is arrived at?—There you have a most complex question to deal with, because you have got the railway stations which are valued in a different way; then you have got the line of railway, and to value that I do not see how you could possibly get at what a tenant would be likely to pay for it unless you go into the takings of the railway; no tenant possibly could say what rent he would pay unless he inquired into the whole circumstances of the company. Therefore, in rating a railway first of all you take the gross receipts; then, having taken the gross receipts, you will take all the expenditure and you will get at the net receipts. Then having got at the net receipts you have got to say how much is attributable to the landlord and how much is attributable to the tenant. What is generally done then is to ascertain—assuming that the property was vacant—what capital a tenant would have to put into the concern to take to the rolling stock; to take to all the goods and chattels necessary for making the occupation valuable when he gets possession. Then having got at what they call tenants capital, the next point is, what would he expect to get as a return for that capital? There we come again to questions of fact. The sum usually claimed and usually allowed is 10 per cent. for tenants' profit and 5 per cent. interest on the capital—supposing he will have to borrow the money upon the security of the chattels that he buys. They generally allow 5 per cent. for that; and then he has got to take care

that at the end of the year he should not be on the wrong side of the account, and therefore he has to allow for risks and casualties.

2118. (Mr. Balfour.) You have told us the per-centage upon the tenants' capital, but how do you arrive at a conclusion as to how much capital the tenant would want for such an undertaking?—That must be done by skilled valuers. Of course, there is the whole of the rolling stock; there is all the stock of coal, and all the goods and chattels which are necessary for the man to commence his year of tenancy with, to make his profit out of the occupation. I mentioned the 5 per cent. interest on the capital, and then I was going to speak of the risks and casualties. He must take care he is not on the wrong side of the account at the end of the season. Supposing it is a summer line—supposing it is a pleasure line, and there is a very wet summer, that is a serious matter for him; supposing there is a strike, supposing there is a terrible accident, for which he would have to pay; that also would be a serious matter for him. He is therefore generally allowed 2½ per cent. for risks and casualties. That makes altogether 17½ per cent. But I may say that, although usually with regard to railways these percentages are claimed and allowed, it is a question of fact, and it is only a question of fact. If the sessions choose to say that 17½ per cent. is too much, nobody can interfere with them. In the Grand Junction Railway case in 1844 they allowed 25 per cent.; in the Southampton Dock case in 1851 they allowed 25 per cent.; in the Sheffield gas case in 1863 they allowed 20 per cent. The lowest and the ordinary rate is the 10, the 5, and the 2½ per cent. Then, having got the tenant's share you have got to make the statutable deductions from the gross to get at the rateable; that is to say, you have got a fund for the renewal, to keep the hereditament in a state to command the rent; you have got the repairs and you have got the insurance. Then when you have deducted what they call the "statutables" you get at the net annual or rateable value. The stations, I ought to have said, are taken out of this valuation. The stations are rateable in the particular parish in which they stand, and the parish where the station is, is entitled to the whole value of that station. When you have got the net rateable value, if the railway were all in one parish it would not be such a difficult job, but when you have got a railway running through a number of parishes then you have got to find out what the particular piece of line in the particular parish is worth; you have got to find out from the actual earnings, because the accounts are kept so as to show what number of passengers travel over that particular part of the line; the quantity of goods carried over that particular part of the line; and then valuers have to find out the value of that particular part of the line.

2119. (Mr. Arthur O'Connor.) The value to whom?—The value to a tenant who is supposed to occupy that particular part of the line.

2120. (Mr. Cripps.) The process you have been telling us about is exceedingly costly and exceedingly cumbersome, is it not?—I was going to say it is terrible.

2121. I mean not only to the company but also to the parishes and the public authorities?—Yes. Of course the overseers cannot deal with the railways, the water, the gas, the electric lighting, the hydraulic power companies, and the telephones. The parish officers cannot deal with those very well. They are obliged, generally, if they cannot come to terms with the company, to call in a skilled valuer or valuator, as he is spoken of in Scotland, and he then gets hold of the accounts of the company, and he goes to work to make out his valuation. If the parties cannot agree then the parish valuer meets the valuer on the part of the company, and one says: "Your tenant's capital is too high," and they discuss it between themselves. If they cannot agree to a compromise it goes into court, and then when it goes into court there is a battle royal.

2122. Not only is it costly and cumbersome, but as you have told us as regards different per-centages in these complex questions the result must be very uncertain?—The result is very uncertain. There is always a great dispute as to the tenant's capital, because the parish valuer says, the moment you are in possession you begin to earn money, and you will not want so much tenant's capital. Then there is a dispute as to whether the stock which the tenant will have to take to have been properly valued. Accounts of enormous magnitude are put in on both sides, and the unfortunate tribunal that has to decide it has to try to do justice between the parish authorities and the company.

2123. I think everyone who has known what goes on in these cases would admit that they are costly, cumbersome, and uncertain?—Yes.

2124. I do not know whether you have considered it, but could you apply any other method of arriving at the rateable value, take, for instance, a railway line, by which you could get rid of the uncertainty and the costliness of this cumbersome process?—I really do not know.

2125. You have not considered that?—I have considered it, but I have got no plan which I should suggest. If the valuers can invent a satisfactory plan I should be very glad. Then you must recollect also that you have got this great difficulty, that a particular appeal which is decided does not in any way affect other parishes. A railway goes through a number of parishes, and you may get one quarter sessions deciding one appeal upon one principle, and another quarter sessions deciding another appeal upon another principle. Of course, the quarter sessions would try and agree, if they could, with a previous decision of another quarter sessions, but if they honestly could not agree they would say: We are very sorry, but we do not agree that the sum put as tenant's capital is right. You may, therefore, have different decisions upon the same rateable hereditament that is split up in pieces in different places.

2126. I put it to you in this way: Of course the case is much more complex, but according to the English system you might have a railway, we will say, going through 20 parishes, and as regards the tribunal you might have, perfectly *bona fide*, a different basis adopted, really, in each of those parishes in order to get at the hypothetical tenant?—You certainly might. There have been suggestions made as to whether the Railway Commissioners, if they have got time, should not take all these railway rating cases.

2127. There is one suggestion I should like to mention—perhaps you may not have considered it. You have told us of the difficulty of the hypothetical tenant, everyone must admit that, and the increasing difficulty there is in trying to have a hypothetical tenant in each different parish?—Yes.

2128. But do you think any system could be adopted to rate the railway line, as a whole, and then to divide it according to mileage or on some principle of that kind between the different parishes?—The only way I can suggest as regards that would be to have a tribunal like the Railway Commissioners. Then would come the question about the mileage principle. In England that has always been repudiated; they say the parochial earnings principle is the proper one, and mileage is not the right principle. The parish has a right to rate upon the value of the property, and the value of the property in that particular parish, which is called the parochial earnings principle, is clearly the law. There is also the case of docks. When docks run into three or four different parishes they sometimes find it is absolutely impossible to say what the value of each part of the docks in each parish is, and then they distribute the value according to the area. But you may take it, as being beyond all question, the law, that if there are any means of getting at the value in the parish, you must adopt the parochial earnings principle. If you cannot adopt it then of course you must take the rough and ready way of area.

2129. I think there is no difference, and can be no difference of opinion as regards English law, because we have always adopted the parochial principle?—Yes.

2130. But I think you agree—at least I understood you to express the opinion—that the parochial principle as applied to railway rating was costly, cumbersome, and uncertain?—Yes.

2131. Never mind about the particular tribunal for a moment, but suppose that before a satisfactory tribunal you could rate a railway company as a whole, do you not think that would be a more satisfactory system than trying to rate it by parishes?—Clearly, because the railways naturally make the best terms they can with each parish, they may make a very good bargain indeed, and be under the true amount, and of course they fight their best cases.

2132. Then having got the rating of a railway line as a whole, it would not be impossible or impracticable, would it, to divide that fairly between the different units of rating, whatever they might be?—I think not, at any rate it would be much better than the present principle.

2133. I imagine it is inconceivable to suggest anything more illogical or more impossible than to rate a railway on the parochial principle?—It would be most absurd upon the parochial system of treating the line as a separate unit in each parish; of course upon the parochial earnings principle the value in each parish would be the correct value in each parish, not the mileage.

Sir H. B. Poland, Q.C.

1 April '97

Rating of railways. Disadvantages of present system.

Rating of railways. Parochial earnings principle, and mileage principle.

Rating of railways. Parochial rating system, disadvantages of.

*Sir H. B. Poland, Q.C.* 2134. If you were to apply the parochial principle, of course you would have to go through something of the nature of the process we now go through—this absurd and cumbrous process?—Yes.

1 April '97

2135. But you may rate the railway as a whole—I do not want to suggest any particular method; and then have some method by mileage or otherwise of distributing the amount so arrived at between the different rating units?—Yes, certainly. That must be fair to the railway and must be fair to the different parishes as the same independent tribunal deals with them all upon the same footing.

Rating of certain classes of trading companies, Difficulties in connexion with.

2136. Now you have explained to us the principles of rating where you have an ordinary tenancy, and you have explained it where you have got to take the structural value or cost, and you have explained it in the case of such a property as a railway; is there any other form of property that you care to mention as showing any special principle of rating in England?—No, I think not. Of course the difficulty with regard to railways applies to water companies, gas companies, electric light companies, hydraulic power companies, telephone companies, and all companies where they have part of their works which indirectly conduce to profit, and part of their works, which are profitable, where you have to separate the two, and where the hereditament is in several parishes. Dealing with the same subject we sometimes get hereditaments that are ordinary hereditaments in two parishes. For instance, I was in the rating of the Imperial Institute, and that is in two parishes, but luckily the two parishes were in the same county, and so the same Quarter Sessions could deal with it. But sometimes you get one that is in two jurisdictions, sometimes part in a county and part in a borough, sometimes part in two counties.

2137. Apart from these somewhat special cases like the Imperial Institute, I think as regards principle we have dealt with the three series of cases which practically arise, have we not?—Yes, I think so. Of course there are racecourses where there is gate money taken; nobody can tell what is the value of such racecourses without looking at the receipts.

2138. But as regards a racecourse, or a railway company, or any of these properties, where you have got to look at the receipts, it is one thing to rate it as a whole, and then to distribute it between the two parishes, and quite another to take the parochial system, which you say is so absurd?—Yes. In the case of these companies where the takings have to be gone into, there are the means of rating them at their full value. Mr. Justice Blackburn made some very useful observations in regard to that, in the case I have before me, which is the London and North-Western Railway Company's case, in 1874. He says: "The rateable value of the occupation of property shall be estimated at the rent, which the property might reasonably be expected to produce if it were let from year to year, making certain deductions and certain allowances. It happens, unfortunately, in many of the cases, that have arisen, especially in the case of railway and similar companies, that there is great difficulty in applying that principle; because, from the nature of the thing, the property in a particular parish could not be let by itself alone, and there is not the possibility of getting a tenant from year to year who would give an annual rent for it. Cases often happen of a link in a railway which lies in a parish between two stations; there is one station in parish A, the next station in parish B, and between the two a bit of the line in parish C, and no one could say, and it is not in the nature of things possible, that the link in parish C could be let by itself. No one would take it. Nevertheless, in assessing it to the poor rate, you have to consider the complex matter, and ascertain, as well as you can, what it would let for; and to do this you have to ascertain what are the proper elements to take into consideration. Now there is one principle which is quite clear; in letting a thing from year to year, the rent would be regulated by two matters: on the one hand by the benefit the tenant would be likely to derive from the occupation; because he would not give more than that; on the other hand, by the nature of the property, such as its local situation, or how many persons there are who could supply him with an equally eligible thing, and be willing to let it to him; for while he would not be willing to give more than he expected to make by it, he would not even give that if he could get a similar thing at a lower rent." Then he illustrates the case of chambers in the Inns of Court, where he says it does not matter whether the tenant is the Attorney-General who is making thousands a year, or whether it is a briefless barrister, who is on the wrong side of the account; the chambers must be

of the same annual value for both tenants for the purpose of rating, because there they have a market value.

2139. In the same way, I suppose, if you are rating a shop in Bond Street you would not take a note of the particular business which was being done there, because it would have a value quite irrespective of that?—You must assume the shop to be vacant. What would take a tenant entering in for the year of the rate pay for the occupation, having regard to the various advantages? Upon that matter I should like—I hope I am not going too much into detail—to refer to the case of the Mersey Docks v. Liverpool, which is reported in the same volume as the London and North Western Railway case (Law Reports, Queen's Bench, Volume IX.). The Mersey Docks case deals with the very point which you have put, and I would like to read what Mr. Justice Blackburn said:—"Where the hereditaments, or hereditaments of a similar kind, are in practice actually let at a rent, the amount of which is ascertained by what has been called 'the higgling of the market,' the application of this definition is easy and simple. Where the hereditaments are not in practice let the problem becomes more difficult. The facts and circumstances, which would be taken into consideration by those who in the case of a real tenancy do in the higgling of the market fix the rent, are to be taken into consideration, and on a view of all those the net annual value of the occupation is to be determined; and in many cases the amount that is made by the trade carried on by the occupier's occupation, less an allowance for the profits which the tenant might elsewhere make by his trade is an important element in the evidence of the annual value." "If the hereditaments are such as to afford peculiar facilities for carrying on any kind of business, that facility does, beyond all question, enhance the value of the occupation; but though the profits which may be reasonably expected to arise from such a business, no doubt form an element in estimating the enhanced value of the occupation of the premises, the actual profits made do not form any element, except in so far as they afford evidence of what might be reasonably expected to be made from the occupation of premises affording facility for carrying on such a business. For instance, to explain our meaning, there can be no doubt that the annual rent of a shop in Cheapside is higher than the annual rent of a similar shop in a back street; and that the reason why tenants give a higher rent is because of the superior facility for carrying on business there. But the rent and the rateable value of the shop are quite independent of the amount of the shopkeeper's actual gains. The rateable value is the same, whether the tenant is a flourishing trader or is carrying on business at a loss." That exactly deals with the point which you put to me. I may say that that case has been mentioned recently in the Court of Appeal, and has been held to be the foundation of the law with regard to the rating of such properties.

2140. Now I want to take you to what I may call more special points, and to get your opinion upon them. You have already referred, in your general evidence, to the exemptions from rating under the Statute of Elizabeth, which are still maintained; I mean the exemption from rating of Government property, and also of property such as police courts. Would you state your view as to the exemption of Government property from rating, and property such as police courts?—I object entirely, if I may be allowed to say so, to Government property being exempted from the payment of rates. I cannot conceive why, when property which is rateable is taken for general purposes of the State, that should turn rateable property into non-rateable property. Property is occupied in a parish for the general purposes of the State, and why should that parish be deprived of the advantage of rating the Government in respect of that property in the same way as other occupiers of property in the parish are rated?

2141. Of course, you know that at the present time there is adopted the principle of voluntary contribution by the Government?—Yes, it is a voluntary contribution; but the contribution is made upon the valuation of the Government's own valuer. I have before me the Treasury Minute of the 25th June 1874; it is as follows:—"Memo- randum drawn up at the Treasury, read by the Chancellor of the Exchequer in Committee of Supply, House of Commons, June 25th, 1874. We have had under our consideration the subject of the rules which ought to govern the distribution of the proposed increased grant of Parliament for contributions in lieu of rates in respect of property occupied for the public service. We adopt the principle that property occupied

Poland,  
Q. C.  
1 April '97

" for the public service should contribute to the local rates equally with the other property in the parishes in which it is situated, having due regard to its character in each case. The contribution will be made to the poor and all other local rates levied in the parish in which the property is situate, and no parish will be excluded from such contributions on the ground that the Government property is less than a certain minimum. We feel it necessary, considering how widely different are the various kinds of Government property, and how impossible it is to apply to all of those the rules of assessment applicable to private property, to retain in our own hands the valuation of all Government property with the intention of adopting in each case, as far as possible, the same principles as are applicable to the valuation of private property. Thus, property occupied as *ex officio* residences or quarters for officers of the Government will be assessed on the estimated rateable value which would attach to such premises if they were in private occupation and liable to assessment to the local rates. The same rule will, as far as practicable, be applied in determining the rateable value of all Government hereditaments occupied as post offices, coastguard stations, county courts, probate registries, Inland Revenue buildings, Custom House, &c. The rateable value of the whole of the naval establishments and of the principal military establishments was agreed upon between the Government and the parishes in which they are situated in the year 1860. The valuations then agreed upon will be revised with reference to the improvements and additions which have taken place at such establishments since that date. The valuations in these cases will be taken as a guide in fixing the rateable value of the barracks and other buildings at such of the military stations as were not brought within the arrangement of 1860, and also in fixing the rateable value of the military, naval, and convict prisons. If in any particular case the principles of valuation applicable to private property cannot reasonably be adopted we shall inquire into and decide upon each such case upon its merits; but in no case will we contribute less than was payable on the assessment of the property at the time the Government acquired it. Hereditaments under the control of the Commissioners of Woods, &c., not being in the occupation of any other occupier will be the subject of contributions determined on principles similar to those herein-before made applicable to Government property. These regulations will apply to Government property in Scotland and Ireland as well as to that in England."

2142. Is there any special point in that Memorandum that you wish to call our attention to?—The special point is that the Government adopt the principle that property occupied for the public service should contribute to the local rates equally with other property in the parish in which it is situated; but then they go on to say:—"We feel it necessary, considering how widely different are the various kinds of Government property, and how impossible it is to apply to all of those the rules of assessment applicable to private property, to retain in our own hands the valuation of all Government property with the intention of adopting in each case, as far as possible, the same principles as are applicable to the valuation of private property." That means, in plain terms, that although they admit that they ought to be rated, that is to say, be put upon the same footing as the occupiers of other property in the parish, they claim to appoint their own valuer to fix the value instead of doing as they do in all other cases. When they want money for income tax, or succession duty, or death duty, they go into court if there is a dispute, and it is settled by the legal tribunals of the country. If they have a dispute with their contractor as to the building of an ironclad they go into court and the matter is settled in court. If they have a dispute as to a patent for cordite, or whatever it may be, they go into court. There is proper machinery provided by Mr. Bovill's Act that the Crown should have all their disputes of this class and character settled in court, and they should pay costs if they are beaten, and receive costs if they succeed. When they actually admit the principle that they ought to pay rates in the same way as the occupiers of private property pay rates, why they should claim to appoint their own valuer to make the valuation, and not have it checked in any way by an independent tribunal, seems to shock me, as a lawyer, because there is the maxim that we are first taught when we put our foot into the Temple, that no man is a good judge in his own case. Really, it shocks me. The Government state that they retain this valuation in their own hands because the various classes of property, the dockyards,

the naval establishments, the barracks, the police stations, and so on, make it so complicated. What is the complication? The buildings in Downing Street are private houses, and in Whitehall great public buildings, offices and so on—large offices. What is the difficulty with regard to them any more than with regard to any other property which is not let? What is the difference between their dockyards and Armstrong's, and the great ship building yards? Where is there a greater difficulty than in the sewage works? Of course there is difficulty, and I quite admit that the most difficult of all would be the cases where the land is occupied with fortifications. There is no doubt that is a very much more difficult question. But with regard to all the ordinary dwellings, the public offices, the dockyards, shipbuilding yards, manufactories of ammunition, and all those cases, there is no more difficulty than the rating authorities have with private occupiers. The fortifications is a much more difficult question, but then when you have got fortifications, you have got barracks, and there is no more difficulty with barracks than with the other cases. I do not know whether I am right, but I should be very glad to be told about this. In Ireland I find, from reading the memorandum as to the statutory provisions in force in Ireland relating to the general principles and machinery of valuation for rating purposes, prepared for the Royal Commission on Local Taxation, by the Commissioner of Valuation, Ireland, dated February 1897; that two valuers are appointed, and if they cannot agree, a third valuer is appointed, and, after making a valuation, that settles the valuation.\*

2143. (Mr. Arthur O'Connor.) Appointed by whom—by the Local Government Board, is it not?—It is stated in this memorandum that there are two valuers and then a third valuer. In paragraph 23 there are these words:—"Valuation of Government property. Government property in Ireland is valued in precisely the same manner as other property of a similar nature liable to be rated. A return of all Government property is furnished by the Valuation Department every year to the Treasury, on which a contribution in lieu of rates is paid to the various rating bodies in whose area of jurisdiction the property is situate."

2144. There is no exception, the valuation all over Ireland is conducted by the central authority?—Thank you. What I am upon is, whoever is the person to make a valuation for private property makes the valuation for Government property, and the Government in Ireland do not claim to do as they do in England, namely, to appoint their own valuer for Government property. It is assumed, of course, that they appoint skilful persons who are likely to arrive at the true value of the property, but having appointed those persons to fix the true value of the property occupied by private persons, those same persons fix what they consider to be the true value of Government property. That seems to me, if I am correct in that, a valuable support to the argument, if I may so call it, that the Government should go into court with regard to the valuation of their property when there is a dispute between themselves and the parish, as all other subjects of the Queen are obliged to do. While I am upon this matter, before I forget it, might I refer to the Union Assessment Act of 1862 which now recognises the contribution of the Government as a common ordinary thing which must be added to the valuation list. Government property is not put into the valuation list, and is not put into the rate, and, therefore, as between parishes when the contribution has to be made to the common fund of the union by the parishes the Government property does not appear, and, therefore, the parish might get a contribution from the Government and yet not pay upon that contribution to the common fund of the union. That has been dealt with by the Act of 1862 (25 and 26 Victoria, Chapter 103). Section 30 of that Act is in these words—and it applies outside London and inside London:—"When the assessment committee for any union shall have approved valuation lists for all the parishes comprised within the union, the guardians in such union, in computing the amount of contribution to the common fund for the several parishes, shall thenceforward take the annual rateable value of the property in such parishes respectively from the valuation lists for the time being lastly approved of for such parishes respectively, any statute to the contrary notwithstanding." This is the important part of the section:—"Provided that in case any parish comprised in any union shall receive any sum of money as a contribution in aid of the poor rate of such parish, for or in respect of Government property within such parish, and used for public purposes, the annual value of such

" property, according to the estimate (if any) of such value  
" or which the amount of the sum of money so received is  
" computed, or, if there be no such estimate, then the  
" annual value of such property estimated in the mode  
" provided by the Act 6 and 7, William the Fourth,  
" chapter 96, for making an estimate of the annual rate-  
" able value of property liable to be rated to rates for the  
" relief of the poor, shall be included by the overseer or  
" overseers in the valuation list of such parish, and shall  
" be added to the annual rateable value of the property in  
" such parish in computing the amount of contribution to  
" the common fund for the several parishes in such  
" union." In the county of London—I do not know how  
it is outside the county of London—we have all the rate-  
able property in the list; it is added up, and it comes to,  
say, 600,000*l.*; then an estimate is made of the Govern-  
ment property, which we will say is 1,000*l.*, and that is  
added, and there is a second total including the Govern-  
ment property; and then, when a contribution is to be  
made to the union, of course, the gross total of both is  
taken as the sum upon which the contribution to the  
union fund is made.

No  
practical  
reasons for  
exemption  
of Govern-  
ment  
property.

2145. (Mr. Cripps.) I just want to put one or two  
questions upon this point; I think the Commission will  
understand your general view. Municipal buildings, for  
instance are rated at the present time, are they not?—Yes.

2146. Do you see any greater difficulty in rating, we  
will say a Government building than in rating a municipal  
building?—None whatever. A municipal building is for  
public purposes, although it is not for State purposes, but it  
also may be partly for State purposes, because the assize  
courts which are provided by the municipality are in the  
same building that is used for municipal purposes. With  
regard to the sessions house, the real building close to the  
Westminster Hospital, which is used by the Middlesex  
County Council, and is also used for holding the Middlesex  
Quarter Sessions, and, therefore, is used for both purposes  
—for municipal purposes and for Government purposes—  
the court expressly held recently, that it is rateable to the  
extent to which it is used for municipal purposes. That is  
a much more difficult problem to solve, because you have to  
get the value of the whole and then attribute a certain  
portion of the annual value to State purposes.

2147. Therefore, so far as the difficulty of assessment is  
concerned or is put forward as a reason for not rating  
Government property, you do not think it is sound reason?  
—No, that is not a sound reason at all.

Rating of  
Govern-  
ment  
property.  
Fortifica-  
tions.

2148. I should just like to ask you one or two questions  
about what you said was the most difficult case, namely the  
case of fortifications. Even there you might take the test,  
might you not, of value or cost as you have to do as regards  
other undertakings?—Yes. But then this difficulty  
arises. Take the place with which I am very familiar as  
being an official, Dover. Take those great cuts that are  
made there, I do not know the proper military expression for  
them, but there are enormous cuts in the cliffs so that  
troops could not get round. Whatever those cuts are it  
would cost an enormous sum of money to dig out all the  
earth; and therefore to apply any principle of percentage  
on structural value in that sense would not be right; you  
would have to go upon some other principle.

2149. I was not suggesting the taking into consideration  
of any cost of that kind, but in regard to outside structures,  
which, as you say, are an entirely different matter, I was  
suggesting—I do not know whether you have considered it  
—whether you should not deal with the value of the site  
merely as a site value?—Certainly as compared with other  
agricultural or farming land in the neighbourhood.

2150. Or whatever it might be—it might be land for  
building?—Yes.

2151. But it would be on the site value?—Yes, the land  
value. I see no difficulty whatever in doing it, but there  
is a greater difficulty undoubtedly with regard to fortifica-  
tions.

Rating of  
Govern-  
ment  
property.  
System of  
valuation  
in England  
and Scot-  
land  
identical.

2152. I want to ask you this question, particularly as  
Mr. Balfour is present. You have told us that there is  
a difference apparently between Ireland and England in  
dealing with Government property. Do you know at all  
whether there is any difference in Scotland?—Yes. I  
came here a little earlier this morning because I had for-  
gotten to look up that point, and your Secretary was good  
enough to find for me what I wanted. I find this in the  
"valuation of property for rating in Scotland," by Mr.  
Arnaud. He says, "the Treasury, however, retain in their  
own hands the right to value all Government property  
for the purpose of making contributions to the rates in  
respect thereof."

2153. Therefore, as I understand that, the Scotch system  
is the same as the system in England?—Yes. I am  
obliged to the Secretary for showing me that.

2154. And the Scotch would be in your view, of course,  
subject to the same criticism?—Yes. Now take the City  
of London. The City of London manage their own police  
and they have all the police stations. Those stations have  
been expressly held not to be rateable, because they are  
used for Government purposes. I do not know whether  
they contribute, or whether they do not: the City is so  
liberal in most things that they may do so. But why  
should the police stations in a particular parish in  
the City where land and buildings are so valuable—they  
have got, for instance, their very large chief office in the  
Old Jewry—why should they not be rated? Why  
should not that particular parish have the right to the  
rates in respect of the value of the occupation?

2155. I understand your view to be that no parish ought  
to suffer, because within that parish you have Government  
buildings or buildings merely used for public purposes?—  
That is so. The non-liability arises from our old friend  
the 43rd of Elizabeth not mentioning the Crown by name,  
and, of course, in those days the Crown—

2156. Was more difficult to deal with, you think?—  
That sentence shall be incomplete.

2157. I want to put a very general question to you now  
upon this point. I am dealing now only with total exemp-  
tion, and I am not now dealing with any question of the  
partial exemptions of property; do you think that any  
total exemption should be allowed, or not?—I am glad you  
have drawn my attention to that, as I was going to men-  
tion another, total exemption, which seems to me with very  
great respect to be most unreasonable. By the Act of 1843  
(6 & 7 Vict. c. 36) all institutions and societies established  
for the purposes of literature, science, and the fine arts  
exclusively, and which are not entitled to make a bonus  
amongst the members, and are wholly or in part supported  
by voluntary contributions are to be exempt from rates.  
Just apply it to the actual facts—the Birmingham Library,  
the London Library in St. James's Square—I do not  
belong to it, but I am told that you can get 10 volumes at  
a time away from that valuable institution—are exempt  
from rating; and a dispensary in the same parish or a  
hospital in the same parish is not exempt.

2158. (Mr. Arthur O'Connor.) Would the College of  
Surgeons be exempt?—I will think over that. There is  
the Liverpool Library, there is the Manchester Institution,  
the Bradford Library, and there is the Linnean Society—a  
number of prosperous gentlemen belong to a scientific  
society like the Linnean Society, and that is exempt; the  
Oxford Botanic Gardens for scientific purposes is exempt,  
but the residence of the professor is rateable; a part of the  
Taylor Institution for teaching European languages is  
exempt, the Geological Society is exempt, the Royal Man-  
chester Institution is exempt. Then, on the other side,  
there are these places that are held not to be exempt, the  
Religious Tract Society, the Baptist Missionary Society, the  
Civil Engineers in Great George Street, the Zoological  
Gardens, the Russell Institution, the Royal Agricultural  
Society, and the Art Union of London. I am happy to say  
that one of the last cases I was in before I gave up practice  
at the bar was the case of the Art Union of London. I  
succeeded in the Divisional Court and persuaded the two  
judges, that when you have got an engraving for your  
guinea and a chance in a lottery of a 500*l.* picture that  
was not within the Act; but the Master of the Rolls, and  
Lord Justice Kay, and Lord Justice A. L. Smith differed—  
they were two to one and I was defeated there; I lament-  
ably failed. But after I left the bar I had the pleasure of  
reading that in the House of Lords they had overruled the  
Court of Appeal, and that the Art Union of London is not  
now exempt. Compare the cases all over the country  
which come under that statute. There are hospitals where  
wards are actually shut up because the rates are so heavy—  
rates are very heavy on those charitable institutions, and  
wards are shut up for want of means. Yet societies like  
those I have mentioned are exempt from rates and hospitals  
are not.

2159. Would you go the length in your view of repealing  
the exemptions which we find in 6 & 7 Vict. c. 36?—  
Absolutely. I would make this distinction—I think you  
have it in your mind already—in favour of those societies  
which are for the peculiar benefit of the parish. We know  
that all churches and chapels—for it is not limited to the  
Church of England, but applies to all chapels which are  
registered as places of worship—are exempt from rating.  
There is something in that, because they are for the  
parishioners; and if the parishioners among themselves  
have the benefit of an unrated building of that kind that is

1 April '97

all fair enough; it may be so too with regard to the schools, but with regard to places like the Linnean Society and the London Library and those other places, they are not for the benefit of the parish.

2160. (Mr. Balfour.) Do you say the Zoological Gardens pay?—They are held not to be exempt. Then there is in Whitehall, the United Service Institution, that is not exempt because the court said the art of war certainly was not a fine art. I think there is this broad distinction between a place which is solely for the benefit of the parish, and a place which is in the parish and is not for the benefit of the parish. That is the line that I would draw as a very marked distinction between the two.

Rating. Exemption undesirable except in cases of churches, chapels and schools.

2161. (Mr. Cripps.) You have given your view against Government exemptions and also against the exemptions contained in 6 & 7 Vict. c. 36; are there any existing exemptions which you would continue, or are there any cases where there are not exemptions now in which you think exemptions might be allowed?—I am against all exemptions, but I think you cannot go back from the churches and chapels. I do not think you could rate those at all. The present law is perfectly fair for all denominations so long as they are registered, and I do not think you could rate those. With regard to schools if they are peculiarly for the benefit of the parish, I do not see much harm in those being exempt from rating. There is, of course, the distinction between parishes with schools and parishes without, and then when you come to the total rateable value of the parishes for union purposes there may be a slight inequality between the two parishes, but it is so small that it is not worth taking into account. I think the total rateable value of the schools which are supposed to be exempted by the Bill that has not passed, but has nearly passed, is something over 8,000l.

2162. That is in London?—Yes, but it may be smaller than the true amount, because some of the parishes, notwithstanding the Act of Parliament, rate some of the schools at nominal sums or very small sums.

2163. (Viscount Emlyn.) Is that 8,000l. the rateable value?—No, the total amount of the rates from which the voluntary schools will be relieved. I find the amount is calculated to be 8,666l. 6s. 6d. for 1895-96, which the voluntary schools in London had to pay.

2164. (Mr. Cripps.) Of course, we know that in London that is the figure, but I think in a large number of districts they are either not rated at all, or are rated merely at nominal amounts?—In London I think it is more looked after; I think most of them are rated at reasonable sums.

2165. I put this to you in order to summarise it. Outside churches and chapels, and what you have said as regards schools, do you think there should be any total exemption at all?—No.

2166. You are opposed to all of them?—Yes, I am opposed to all of them.

Rating. Extra-parochial places.

2167. Before we leave the total exemptions which we are dealing with, there is just one other point I want to ask you about, in order to get an exhaustive account of them, that is as regards extra-parochial places, what have you to say upon those?—That, also, again depends upon the Statute of Elizabeth, and the Statute of Elizabeth only applies to parishes, parishes being places with overseers who make the rate for the purposes of the poor. Extra-parochial places were not rated in any way to the poor. Take the case of the Temple and the Inns of Court, they were extra-parochial until a few years ago. It was thought so unfair that they should escape rating that an Act was passed to compel them to be, for the purposes of the common fund of the union, attached to the adjoining parishes, and therefore extra-parochial places all over England were so dealt with. Complaints were made that it was rather hard on a man who had bought an extra-parochial place without any rates attached to it, and who afterwards found himself annexed to the adjoining union, and had to contribute to the common fund. It was thought right and proper that that should be done, and I really do not think anybody ought to complain of it. The statute relating to the extra-parochial places is the 20th Victoria, chapter 19. There is this very curious thing about that which I ought to mention now, perhaps, because it is obviously a matter that ought to be corrected. The Blackpool pier extended out into the sea. Between high and low water-mark the land, when the sea is out, may be part of a parish or may not, that is a question of evidence, but when you get below low-water mark you are out of the realm of England. The case is reported in 46 Law Journal Reports, Magistrates' Cases 189. The tolls were paid for the use of the whole of the pier, and it was held by the court that the part of the pier beyond the low-water

non-rateability of property below low-water mark.

mark, being beyond the realm, was not rateable. An attempt was made to bring the pier within section 27 of 31 & 32 Vict. c. 122, which failed. The substance of that case is—and so is the law, it has not been altered since—that the part of the pier beyond the low-water mark is out of the realm of England and is therefore not rateable. I ought to add to this that it is not out of the jurisdiction of the licensing justices, because under the licensing Act of 1872, section 61, a pier is to be deemed to be within the jurisdiction of the licensing justices.

2168. (Mr. Arthur O'Connor.) Has not the Lord High Admiral some jurisdiction in those quarters?—Not for rating purposes. Of course there is the great case of the "Franconia." The pier is within the territorial waters, but part is without the realm of England; we exercise jurisdiction for the three miles.

2169. (Mr. Cripps.) To go to another point. In certain cases there has been a provision, has there not, that land which is used for one purpose and then applied to another shall only be rated in reference to its value for the original purposes?—Yes, there are a series of Acts of Parliament on that subject.

2170. Will you just state what they are, and what your view is on that point?—The Commission will find most of them, if not all—I am not sure that they are all there—in the very able memorandum prepared by the Local Government Board for this Commission.\* Pages 28 to 30, give the exempted properties, and also Crown properties, which are rated on an exceptional principle of valuation. Shortly, I may state with regard to the series of enactments that the property is only to be rated at the sum at which it was rated at the time when it was acquired. There are burial grounds, lands vested in the Secretary for War for the purposes of defence under the Defence Act, land taken for the purposes of the Postmaster-General, the telegraphs, the Military Forces Localisation Act, &c. One of them, namely, the Telegraph Act, is one that I ought specially to refer to as an example of the curious state of the law upon this subject. It is 31 and 32 Victoria, cap. 110. Section 22 of that Act I ought to read:—"All land, property, and undertakings purchased or acquired by the Postmaster-General under this Act shall be assessable and rateable in respect of local, municipal, and parochial rates, assessments, and charges, at sums not exceeding the rateable value at which such land, property, and undertakings were properly assessed or assessable at the time of such purchase or acquisition." This case occurred under that; the parish of Marylebone rated the Postmaster-General at a sum of 500l. annual value. He appealed, and then, of course, he was advised by the Law Officers that he need not appeal at all, because being the Postmaster-General, a servant of the Crown, he could not be put into the rate, and so the appeal was abandoned; but he tendered to the parish a sum of 4l. 3s. 4d. The parish objected to that, because that was upon a rateable value of 20l. only, and upon that—deadlock. I ought to say that the property had not been rated at all before the Postmaster-General acquired it; the company was not a flourishing company, and the parish had not had their attention called to it, and they had not rated it. But they claimed at the time it was acquired that it was worth 500l., and he tendered 4l. 3s. 4d., the rate on 20l. What was to be done? They said it was not assessed; but it was assessable at the time of purchase at 500l., and they claimed to be paid upon that. The only way of trying it was by Mandamus, and the case came before the court in May, 1873 (28, Law Times, New Series 337). Mr. Justice Blackburn in the course of the argument said, "What remedy has the parish? Section 22 of the first Act clearly entitles the parish to the payment of the rate, but you contend that the Treasury Commissioners are themselves to be sole judges as to the amount of the assessment upon which the rates are to be paid." The Attorney-General said "Yes." Then they said, "What is to be done?" The parish could not rate the Postmaster-General and distrain because you cannot distrain on the goods of the Crown. Nothing could be done. Mr. Justice Blackburn in giving the judgment of the court said, "I have no doubt whatever but it was intended by the 22nd section that the parish should not be losers by the transfer of the telegraphs, and that they should have the same rates they had or ought to have had previously; but the Act provides no means of enforcing payment, and in that respect it is defective. All we can do is to refuse the writ." I do not know what has been done since, but there is the deadlock.

Partial exemptions. Certain properties rated at the sums at which rated when acquired.

2171. (Mr. Arthur O'Connor.) Is not that rather on the question whether the court will allow a Mandamus to

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp 1 to 83.

Sir H. B.  
Poland,  
Q.C.  
1 April '97

issue? Does it decide a point of law upon rating?—No, it does not decide a point of law upon rating, but I say it leaves the parish without any remedy. It is exactly in point because there is the dispute whether it is 500*l.* a year or whether it is 20*l.* a year, and the Government, through the Postmaster-General, refuses to have the matter submitted to an independent person to say what is the true rateable value. There was even a stronger case than that.

2172. (*Mr. Cripps.*) Might I put one question first of all upon that case; of course, as you pointed out, under the Telegraph Act—and that is the Act you were dealing with, was it not?—Yes.

2173. Under that Act where the Postmaster-General takes land, if he is liable to be rated at all, which is another point, he is only liable at the old value of the land when he takes it over?—Certainly.

Partial ex-  
emptions.  
Objections  
to.

2174. Then I want to ask you this quite apart from any question of procedure or difficulty of that kind; supposing the Postmaster-General or anyone else takes over land, and the land is applied to more valuable purposes, do you think that the rating should be taken on its real net annual value as in other cases?—Certainly. If this property had remained in the hands of the company it would have gone up in value or down in value, and would have been rated at the true sum.

2175. What we are dealing with at the present moment is, that you are opposed to what we may call these partial exemptions, namely, leaving land or hereditaments to be assessed for rateable purposes on what I may call their original value, not on either their enhanced or decreased value according to the purposes for which they are applied?—Yes, just exactly the same as if they were in the hands of private owners. The parish win, or they lose; it may go up, or it may go down, but it ought to be just the same as all other property.

2176. In fact, you apply to what I may call this system of partial exemptions the same criticism as you did to the system of total exemption?—Yes. It has been held under that section that there is this curious and remarkable state of things—that even in a case where the Postmaster-General did not want all the property and let off part of it, that that part which was let off and in the hands of a private occupier, having been acquired under the Post Office, was still only rateable to the old sum. The case for that is the *St. Gabriel (Fenchurch) Overseers v. Williams*, 16 Queen's Bench Division, 649, 55, Law Journal, Magistrates' Cases, 14.

2177. Then we may take it as regards these illustrations of what you may call rating property, particularly as regards burial grounds, land taken by the Secretary of State for War, and land taken by the Postmaster-General, the principle of rating them at their old value instead of at their real value is, in your opinion, not desirable at all?—It is not desirable. I want to give, if you will allow me, a very strong instance indeed, which is that of the lunatic asylums, as we lawyers proverbially like precedents. When the lunatic asylums were under the magistrates of the county, they were rated by the 16th and 17th Victoria, chapter 97, section 35, and they were not to be rated at a higher sum than the value of the land at the time of the acquisition. That went on until 1890. In 1890 the Lunacy Act (53 and 54 Victoria, chapter 5) repealed the old Act, and expressly declared, by section 263, that for the future, lunatic asylums should be rated on the same basis and to the same extent as other lands in the parish. Therefore, what I am contending ought to be done in regard to the Government, has been already done as against the county councils. It is such a serious matter to the London County Council, with their enormous lunatic asylums, that I believe the removing of the partial exemption and making them liable to be rated in the ordinary way makes a difference of about 7*d.* a week in the maintenance of their lunatics. You could not have a stranger instance than that.

2178. (*Mr. Elliott.*) Is that 7*d.* per week per lunatic?—It is 7*d.* per week per patient.

2179. (*Mr. Arthur O'Connor.*) You would not object to that with regard to private lunatic asylums, would you?—Private lunatic asylums were never rated at the old sum, they were always rated at the full value.

2180. There are still lunatic asylums where there are many private patients and also pauper patients?—Yes.

2181. Combined institutions?—Yes.

2182. How would you deal with those?—It seems to me with great respect that is not this point at all. The point here is that until 1890 lunatic asylums were rated on an exceptional principle of valuation. The tendency of modern

time is to remove all those exemptions, and when they consolidated the law they took care to alter it so as to put the lunatic asylums on the same footing as all other private property.

2183. (*Viscount Emlyn.*) The asylums you were referring to were asylums maintained out of the rates?—Certainly.

2184. (*Mr. Arthur O'Connor.*) Exclusively?—Certainly; the exemption only applied to those.

2185. (*Mr. Cripps.*) There is one other point that I think possibly might have been overlooked. You are giving this illustration not for the purpose of criticism, but as carrying out your view that all these special exemptions ought to be swept away, and that we should have rateable value on the ordinary basis on the full amount?—Certainly. The wisdom of Parliament must do what is right for the general body of the community, and they will not recognise vested interests in these extra-parochial places or in these exceptional principles of valuation. When they have to deal with the subject, they will do what is right.

2186. That is your view throughout, and I do not want you to repeat it, that really these exemptions ought to be swept away?—Yes.

2187. Of course, as we know, in many private Acts of Parliament, like some of the old canal Acts, you find this in principle that the canal is not to be rated as its enhanced or decreased value, but at the same value as the old agricultural land was; what have you to say upon that?—

With regard to those, they are on an entirely different footing, owing to the desire to encourage canal companies to make canals for the transit of merchandise to different parts of the country. The canal companies said: If we make these canals we shall be rated at a very high sum, and that is a very serious business. So they made a bargain—it was in the nature of a bargain with the Legislature, "we will make the canals, but we think we ought not to be rated except upon the old sum." With regard to those cases, and there are a number of them, they only pay on the land occupied by the canal, the same as for land lying near, not upon the increased value by reason of the making of the canal, and the building of the buildings necessary for carrying on the trade of the canal. I should say that in all those private and special cases the bargain should remain. When they go to Parliament for fresh powers, and prove that they are very prosperous, and are making a considerable profit, they may make a fresh bargain, but at present I should not, by a general Act sweep away those exemptions; they must be dealt with each one upon the facts of the particular case.

2188. I do not know whether you are aware, as a matter of fact, that a good many of these special exemptions have been taken away when the particular companies have come to Parliament for fresh powers?—I did not know that to be so—I have heard it. I can understand that it is a perfectly sound principle; just in the same way when railway companies and water companies, and gas companies go for fresh powers Parliament says, you shall have the extra powers you want, but you shall only charge so much; they make a fresh bargain—"you want something of us; we want something of you."

2189. Now, I will go to another part of your evidence; I want to take you to the Public Health Act, 1875; of course we know under section 211, and in reference to the general district rate we get the quarter rating as regards certain properties?—Yes.

2190. What is your view as regards the quarter rating under the Public Health Act and Acts of a similar kind?—

With regard to that it seems only reasonable that a less sum should be paid for particular rates if the property does not benefit to the full extent, and the Public Health Act deals with that particular subject. It seems to me to be reasonable that under the Public Health Act, 1875, section 211, the owners of titles or the occupier of land used as arable land, meadow land, pastures, woodlands, market gardens, nursery grounds, canals, land covered with water, railways constructed under Acts of Parliament—orchards and allotments have been added by another Act—it seems to me that it is not unreasonable that the owners of all these should only pay a fourth. It seems to me that that is quite reasonable. The only thing is whether that should not be extended because the water pipes and the gas pipes under a road do not get much benefit, and the question is whether there are not other properties which should be added to the list which is contained in that Act of Parliament. I think it is rather for the particular people who feel the pinch to come and speak for themselves; but I think it is quite reasonable that there should be a change of the law in that respect. There is the same provision in the Metropolis Management Act of 1855, sections

161 and 163. There is also a very remarkable case under the Lighting and Watching Act. Under the Lighting and Watching Act there is the same kind of provision that the owner or occupier of houses, buildings, and property other than land, is to pay a rate in the £ three times greater than that at which the owners and occupiers of land shall be rated and pay. A most extraordinary case occurred where there was a man rated for a coal mine in a parish, and there was no access to that mine from that parish, the access being from the adjoining parish, so that he could not by any possibility derive any benefit from the lighting. The court held that it was property other than land, and that he did not come within the lower scale provided by the Lighting and Watching Act of 1833. In the Libraries Act 1892, section 18, I think there is a similar provision.

2191. (*Mr. Arthur O'Connor.*) What is the Watching Act?—The Lighting and Watching Act is an Act which is adopted by the parishes in the country. It is the 3 & 4 Will. IV., c. 90. s. 33. The case to which I referred about the coal mine is *Thursby v. Briercliffe*—with *Entwistle*. It was in 1894, and is reported in 2 Queen's Bench 11. It went to the Court of Appeal. Therefore I would say generally that there are undoubtedly cases not included in these Acts which, if that principle is right, ought to be included.

2192. (*Mr. Cripps.*) I do not know, I am sure, whether you can answer this, but have you at all considered the classification as adopted in Scotland for rating purposes upon this point?—Not at all, I have read of the three divisions, but I have not considered it, and I could give no opinion whatever about it.

Empty houses and vacant land. Reasons for not rating.

2193. The next point, I see you wish to say something about is the question of empty houses and property not occupied; do you think there is any special point as regards unoccupied premises or houses?—I would like to say just a few words upon that, and I will try and say only a few. There are some people who think—and the persons to whom I refer gave evidence before the Town Holdings Committee in 1890—that empty houses and vacant land ought to be rated. Some of the witnesses before that committee contended that the vacant land was liable to be rated. I think I can state in a very few words what the law is upon the subject. Unoccupied houses or houses merely under a caretaker waiting for a tenant are clearly not liable to be rated; if any of the produce of the garden is sold or any substantial benefit is derived from the occupation then they are liable to be rated. The more difficult question is with regard to the land. The general principle of law undoubtedly is that property is only to be rated in the state in which it is, and if it is left vacant no rate can be made upon it. The chief authority for that is Lord Mansfield in *R. v. St. Luke's Hospital* (2 Burrows' Reports, 1053). He says there, "As to the argument that a proprietor of lands or houses cannot by his own private voluntary act discharge his property from payments legally due to other persons upon and out of it, it does not hold true in fact. This rate payable to the parish, as well as several other payments arising from property and chargeable upon it, do and must depend upon the will of the proprietor. The owner of a house may if he pleases pull it quite down and convert it into a loft. The owner of lands may, if he pleases, suffer them to lie barren and unoccupied." There are people who contend that building land which is left vacant—if, for instance, the owner is waiting for a builder to come and take a lease and put buildings upon it—ought to be rated at a substantial sum. The law is, I think, clear, that such land is not rateable if it is a space of ground that is not fit for cultivation, but is simply left there until it has become so ripe that it can be let for building. As I know the matter has been disputed, I will refer to a case which decides the point. It is the case of *Crowther-Smith v. The New Forest Union*, and it is reported in the second volume of *Mr. Rydes' appeals*, page 311. The headnote is in these words: "The appellant purchased a plot of building land and affixed a bill to a tree standing thereon, stating that the land was to let, but he was unable to find a tenant. The tenant of adjoining land allowed his cattle to graze on the grass growing on the appellant's land without the knowledge or consent of the appellant. Held by the Court of Appeal affirming the decision of the Queen's Bench Division that the appellant had no beneficial occupation and was not rateable." I think you will find if any witness comes before you to contend that that property ought to be rated, that he will not be able to define what building land is. Nobody has been able to say what is building land. It is land of course that may at some time—probably will—be built upon, but what

is building land and what is not? The owner is waiting for a price, he does not think the price offered is a sufficient price or he is waiting and will not sell because it is gradually going up in value, it is near a town, and he is waiting his time. There is no definition of what building land is, and no satisfactory definition can be given. The rule of law is that the property must be rated *rebus sic stantibus*. An owner has the right to do what he likes with his own property, and it must be rated at the value it has at the time at which the rate is made. I ought to make one exception to that, and that is that if a man has got a quantity of valuable land fit for growing wheat and he chooses not to let it and refuses to grow anything in it himself and there is a tenant willing to take it at a fair and reasonable rent, I am inclined to think that the property would be rateable. I say that because *Lord Blackburn in Regina v. The London and North-Western Railway Company said*,—"No doubt if a man chooses to leave a farm unproductive he must still pay the value as if productive." That same principle of law was also laid down in *Regina v. Foyle*, which was reported in 27 *Law Times*, Old Series 64, where Lord Campbell said, "This case is also perfectly different from the case which was before us last term, where it was argued that an occupier of land on which grass was growing was not rateable because he did not choose to reap the profits of the land but allowed it to go to waste. It is quite clear that if a man who is in possession of the surface of the land, which in the ordinary use of it might be made productive, chooses only to grow thistles upon it for the use of the donkeys in the parish he is nevertheless rateable in respect of the profit which it might reasonably be supposed might be made of it."

2194. (*Mr. Arthur O'Connor.*) How does that principle not apply to the other land which might be utilised though it is called building land?—I should be very pleased to answer you now or hereafter. The principle is this: It is not land which is fit to be made a profit of by being let for the ordinary purposes of simple land; it is land of which at present no profitable use can be made, and which is waiting for the time to come when profitable use can be made of it by letting it out on a building contract.

2195. (*Mr. Wharton.*) Supposing it to be proved to the rating authority that a man had some land close to a town, and we will say 800*l.* an acre had been offered to him for it, but that man persisted in standing out for 1,000*l.* an acre; would you still say that that was unrateable land, with the knowledge that it was land which the man had been offered 800*l.* an acre for?—I think it must be a question of degree. If he really believed it was worth 1,000*l.* an acre, he had a perfect right to stand out for it.

2196. (*Mr. Cripps.*) You have stated your view as regards the building land and its being vacant; I just want to finish this up—are there not some Metropolitan Local Acts which provide that even for empty houses the owner is to pay a part of the rate?—Their name is legion. In the metropolis almost all the parishes have got local Acts, and they have got provisions made that the owner is to be rated when vacant on half the annual value. They have also put in some of those local Acts that where an ambassador's house is occupied by the embassy, the owner shall pay half the rates. Those are all provisions you see which were made by private Acts, and when they went to Parliament it was assumed that the parishioners agreed to those provisions.

2197. (*Mr. Arthur O'Connor.*) It was not by private Act, was it?—Yes; all these Acts to which I refer are private Acts—I can give you them by the dozen.

2198. (*Mr. Cripps.*) The Acts to which you are referring at the present time are private Acts?—Yes, they are local, and personal, and special.

2199. There is a very large number of them of course in the metropolis?—Yes; I have got a paper here that gives them by the dozen; they are in almost every parish.

2200. Would you leave those local and personal Acts, or would you have a general rule applicable throughout?—I think that is peculiarly a matter of local self-government. If the parishioners find that the Local Act works well, very good; it must depend, you see, so much upon the parish. In the London parishes the property is generally occupied, but the occupation changes; sometimes one house is vacant, and sometimes another house is vacant. In other places where the town is going down, there are large districts vacant. Therefore it must depend entirely upon the facts of the particular case.

2201. I think it has been brought to your notice that one of the matters which has been referred to this Commission is the possibility or the practicability of making

personal property contribute to the rates; that is a matter, I think, to which you have given your attention, is it not?—I have considered most carefully the law upon the subject and the general question.

2202. I see the reference says that we are to enquire "how far all kinds of real and personal property contribute equitably to such taxation," what is your view as regards the possibility or practicability of dealing with personal property for rating purposes?—It is absolutely impracticable. The history of the matter can be stated very shortly. The statute of Elizabeth does not mention personal property at all, but it does mention that the inhabitants are to contribute according to the ability of the parish. The words I read were that every inhabitant is to be taxed for the relief of the poor, and so on, "to be gathered out of the same parish according to the ability of the same parish." The ability of the occupier depended upon the value of his occupation, the ability of the inhabitant depended upon the profits which he made from personal property, to wit, stock-in-trade. Now the history of the matter is this—after the passing of the statute of Elizabeth, for years it was found impossible to satisfactorily rate personal property, and the judges, Lord Mansfield and others, over and over again doubted whether personal property could be rated at all. The statute of Elizabeth is dated 1601. From the year 1792 it was laid down in express terms by Lord Kenyon, and the other judges, that the profit made by stock-in-trade was liable to pay poor rates. Ships particularly seem to have been the favourite personal property that was fixed upon. Money lent on securities was not rateable, household furniture was not rateable; it must be something which produced profit. Now there are various decisions down to shortly before the Parochial Assessment Act of 1836, and, although it was perfectly clear that property was rateable, it was generally found throughout the country that it could not be rated, and that there was no satisfactory mode of rating it.

2203. When you use the word "property," do you mean personal property?—Yes; it could not be rated. Then there came the Parochial Assessment Act of 1836. It appears from Mr. Cannan's book that when that Act was being passed through Parliament nothing was said about personal property. If you look at the Act itself it is obvious that the whole thing was forgotten, or at any rate the rating of personal property had so fallen into disuse that it was not within the range of practical politics, because the form of the rate is "name of occupier, name of owner, description of property rated, name or situation of property, estimated extent, gross estimated rental, rateable value, rate at 6d. in the £." That obviously does not apply to personal property. After that Act was passed a landowner appealed against a rate in Wimborne, in Dorsetshire, on the ground that personal property had been omitted, and that therefore the rate was invalid. That came before the Court of Queen's Bench in the case of the Queen v. Lumsdaine, in 1839, and it is reported in 10 Queen's Bench 157. The court, consisting of Lord Denman, Mr. Justice Littledale, and Mr. Justice Patteson, in express terms, said that notwithstanding the form of the rate in the Parochial Assessment Act, still personal property was liable, and the law had not been altered, and therefore the rate was bad and the rate was quashed. They point out also that the practice had been to rate stock-in-trade, principally shipping, and that the property must be visible in the parish; the inhabitant must be an inhabitant of the parish in which the property was, and profit must arise from it. Now upon that decision being given, and it becoming known all over the country that every occupier of land or of a house could quash any rate which did not include personal property, the Poor Law Commissioners were obliged to deal with the question, and on the 6th of March 1840 they sent a circular letter round to the parish officers of every parish in the kingdom, pointing out that personal property must be rated. They further pointed out that it was a most difficult thing to do, but they gave suggestions. It was known that if the parishes had attempted to rate personal property it would have made tremendous confusion, and various letters were sent to the Poor Law Commissioners protesting against the necessity of rating personal property. The next thing which occurred was that on the 14th of May 1840, Lord Normanby being the Home Secretary, and there being no Local Government Board at that time, the Poor Law Commissioners (Mr. Shaw Lefevre, Mr. George Nicholls, and Sir George Cornwall Lewis) made a statement to him of the law. In that very able State Paper they point out what the law is, and what the difficulties are. Upon that being done, Sir Robert Peel in the House of Commons, the Home Secretary being in the House of Lords, called the attention of the Attorney-General, Sir John Campbell, to this matter,

and he said that he admitted that it was almost impossible to rate stock-in-trade. The Attorney-General said that to rate personal property "forced a most inquisitorial research into the private affairs of individuals," and that something would have to be done. A Bill was then introduced for the purpose of totally exempting personal property from rating. It was supposed upon being examined to go rather too far, and the committee stage was postponed to that day three months, which practically destroyed the Bill. Then a new Bill, the Bill which is now in force, which is the 3rd and 4th Victoria, chapter 89, was passed at the end of the same session, the understanding being that it must be passed only as a temporary Act. It existed only to the 31st December 1841. The discussion in the House of Commons and in the House of Lords upon that Bill is exceedingly interesting; the substance of it is that it was absolutely impracticable to rate personal property. In that memorandum, to which I have referred, of the three Poor Law Commissioners, they say that the practice of not rating personal property was in abeyance after the Statute of Elizabeth for a century and a half; they say that "for a century and a half after the passing of the Statute the liability of inhabitants to be rated for personal property was not agitated." I am able to confirm that. In a book that I have not seen referred to in any of these reports, but which is a work of very great authority (I refer to Nolan's Poor Law, the fourth edition of which is dated 1825), I find it stated that—"As it was unusual to assess personal property for near two centuries subsequent to the statute, the court felt considerable reluctance to decide upon its rateability, notwithstanding Sir Anthony Earby's case. Such a universal agreement to omit was considered as strong evidence to show the impossibility of rating it. But it was at length held to be clearly rateable for its profits where they can be ascertained, and a Mandamus was granted to compel the justices to assess it." Then further on the author refers to the inquisitorial nature of any inquiry in the parish which is necessary to rate a man for profits in trade. He points out that the property must be in the parish, and the man must live in the parish, and therefore he can escape rateability by living somewhere else. He says this:—"Personal property is not usually rated. It is difficult to ascertain its actual amount, unless by using those arbitrary means which are neither provided by the poor laws nor permitted by the spirit of our constitution. Sometimes a fair disclosure of his effects is supposed to injure a commercial man, and he would rather choose to submit to the imposition of an exorbitant assessment than seek redress at the hazard of his credit. These and other reasons have induced most parishes to refrain, as it were by common impulse, from assessing personal property since the 43rd Elizabeth. Its liability is no longer questionable; but the apprehension of mischievous consequences has usually prevented its being rated even in manufacturing countries, where the omission presses upon the landed proprietor with considerable hardship."

2204. What is the date of that?—It is the fourth edition of Nolan's book on the Poor Laws, and it is dated 1825. The Act speaks for itself, because it refers to its having been held that inhabitants are liable in respect of their "ability from the profits on stock-in-trade," &c., and it then enacts that such profits are no longer to be rated. That having passed, year by year it was renewed, and in 1850 there was a Committee of the House of Lords, Lord Portman in the chair, to inquire into the question of rating generally, and personal property was dealt with. Sir George Cornwall Lewis gave evidence before that Committee, and Sir John McNeil, who was the Chairman of the Board of Supervision for the Relief of the Poor in Scotland, also gave evidence as to the Scotch mode of rating a man for his means and substance. No one can read the evidence of Sir George Cornwall Lewis and of Sir John McNeil, without feeling that the case against the rating of personal property is absolutely crushing. The Lords made this recommendation in their report of the 18th July 1850; "That the relief of the poor is a national object to which every description of property ought justly to be called upon to contribute, and that the Act of 43 Eliz., c. 2, contemplated such contribution according to 'the ability' of every inhabitant." Now, this is what they say about stock-in-trade in paragraph 11, "that until some mode is found in which the value of such descriptions of property as are commonly called stock-in-trade can be defined with sufficient accuracy to enable the overseer to maintain a rate in cases of appeal, it will be necessary to continue to exempt such property from its legal liability to assessment." Now from 1850, when that report was made, year by year, this Act has been renewed, and it now stands renewed until 31st December in the year of our Lord 1897. I venture to say, having

Rating in  
respect of  
personal  
property.  
Abolition  
of rating  
on means  
and sub-  
stance in  
Scotland.

Sir H. B.  
Poland,  
Q.C.

1 April '97

most carefully studied the subject that anybody acquainted with the law of rating will find it is absolutely impossible to devise a system of rating of personal property. Sir George Cornwall Lewis accurately described it as a parochial income-tax. I believe I am right in saying that an Act has been passed to exempt persons in Scotland from being rated upon means and substance. The Commissioners will find the whole matter—I only saw it yesterday—most carefully stated in the Appendix to the Royal Commission on Agriculture, which bears the signature of Mr. C. N. Dalton, and is dated the 20th February 1895, in which all the circulars of the Poor Law Board are set out, and also the material part of the evidence of Sir George Cornwall Lewis. I find there that the Scotch Act referred to, whereby the rating of personal property in Scotland was finally abolished, is dated 1861.

2205. (Chairman.) That is what we know as Baxter's Act?—Yes.

Rating in  
respect of  
personal  
property  
still objec-  
tionable if  
larger area  
than parish  
taken for  
rating.

2206. (Mr. Cripps.) One question on that, not to get into controversial matter, but merely to get your view, do you think that the same objections would apply if you had a larger unit for rating purposes than a parish, supposing you had a county unit?—Do you mean as to personal property?

2207. Yes?—I think it makes no difference. If it is to be a rate on profits of stock-in-trade, which it clearly is, how are you going to deal with it without this inquisitorial inquiry in a small locality. I do not think it makes any difference if in a county; I will add this, that of course there is a difference in the case of a subsidy. What I understand by a subsidy is so much in the £ on the value of a man's property, his pictures and plate, and other property like what they have in America, and what they call in America "intangible property," I think it is.

2208. Yes, that is so?—Anybody who reads the second volume of Bryce's American Commonwealth (if that gives an accurate account of the rating of intangible property), will be of opinion that it is not a desirable thing to introduce that kind of taxation or rating into this country.

Rating in  
respect of  
machinery.  
Principle  
laid down  
in the Tyne  
Boiler  
case.

2209. Going away from the particular point but going to a kindred point, that is as regards the present position of the rating of machinery, would you just state how that stands in your opinion?—I think the law upon that subject is perfectly clear. The leading case upon the subject is generally known as the Tyne Boiler case. It went to the Court of Appeal, and the Master of the Rolls gave a judgment which is now always acted upon.

2210. You could probably give us the effect of it?—It will not take a minute; it is very short, and I should like to read it because it is an important subject, and he lays down the true rule. It is reported in the second volume of Mr. Ryde's book. At page 241 the head note says this:—"In estimating the rateable value of premises on which machinery is used, machinery which is on the premises for the purpose of making, and which does make those premises fit as premises for the particular purpose for which they are used, ought to be taken into account in estimating the rateable value of such premises." Lord Esher in his judgment says this:—"I believe the true rule to be that things which are on the premises to be rated, which are there for the purpose of making, and which do make those premises fit, as premises, for the particular purpose for which they are used, ought to be taken into account in ascertaining the rateable value of such premises. It is not all things which are on the premises, but only such things as are within the description I have given, that are to be taken into account. And it seems to me that when once things are brought within this category, they would, as a matter of law, pass by a demise of the premises as between landlord and tenant, unless they were in express terms excluded." That is the rule which he lays down, and it makes no difference that these things which are attached to the premises are personal property. It applies equally to things which go to the executor and not to the heir, to things which belong to the tenant and not to the landlord; it does not make any difference. Lord Esher after that case in the Chard Union case, said he had reconsidered the matter, and he could find no better rule than what he laid down in the Tyne boiler case.

Rating in  
respect of  
machinery.  
Personal  
property  
to some  
extent  
rated.

2211. Taking the rule as laid down, would that, in your opinion, have the effect of to a certain extent rating personal property?—Undoubtedly the building is enhanced in value by that personal property, which is attached to it, and, therefore, in that sense no doubt it is a rating of personal property. In the previous case you will remember—the Chidley case—it was decided that this property was

not rateable because they rated the personal property *per se*; but these other cases say that if the premises were vacant, and if the things described were attached to the premises, and if a man could claim on a demise to him of the premises to have the use of those things in connection with the building without paying for them as chattels, they would have to be taken into account as enhancing the value of the occupation.

2212. As this is important I just want to be certain that I understand your view. Do you adopt as the right principle, the principle which the Master of the Rolls laid down in the Tyne boiler case and in the Chard case?—That is a very difficult question. I know it is a burning question in the manufacturing districts, but I have hardly considered it. I do not think it is very unreasonable, taking care always to exclude things which remain moveable chattels as compared with fixed things. I protect myself under my gown by saying I am a lawyer, here to give evidence on points of law. I have got the Bill for exempting machinery, and it seems to be a very well-drawn Bill to carry out the views of the persons who drew it. I have not considered the matter sufficiently to give an opinion.

2213. There are one or two other points, I think, before we come to questions of procedure, that I see you deal with. Take the question of compounding in rating: have you anything to say upon that?—No. Of course, the law is perfectly clear upon the subject of compounding.

Com-  
pounding  
Law per-  
fectly  
clear.

2214. Have you anything you wish to say about the rating of the tithe commutation rentcharge?—No; it is clear, of course, that the tithe commutation rentcharge is rateable. There, again, there was a debate in the House of Commons the other day, which most fully dealt with that question. It is reported in the "Times" of the 24th March. The question was very fairly and very fully discussed.

Rating of  
tithe com-  
mutation  
rent-  
charge.

2215. You have nothing to say about it?—No, the law upon the subject is clear. I find that many of the text-books say the law is very hard upon rectors, vicars, and so on, but I know nothing about that.

2216. Before I come to procedure there are just one or two other questions that I want to ask you, which are rather matters, I think, of principle than procedure, although they run very close to one another. Do you think that the Quinquennial Valuation Act is right in its principle of re-opening these questions every five years, or do you think that they should be capable of being re-opened every year?—The quinquennial principle of course only applies to London, and I doubt whether it is a good thing. It operates very hardly indeed in some cases where ratepayers let slip the time for appealing. They are fixed absolutely for five years because the 47th section says in terms that the valuation list for the time being in force "shall be deemed to have been duly made in accordance with this Act and the Acts incorporated herewith, and shall for all and any of the purposes in this section mentioned be conclusive evidence of the gross value and of the rateable value of the several hereditaments included therein, and of the fact that all hereditaments required to be inserted therein have been inserted." So that if a thing is left out it might perhaps be left out for five years.

Valuation.  
Quin-  
quennial  
valuation  
in Metro-  
polis.  
Some  
objections  
to.

2217. Of course, we know how large your experience has been in London; have you ever known a case of substantial hardship arise in London owing to the operation of the quinquennial system?—I cannot give an individual case, but I think I have known of such cases, and I have known of complaints. The rateable value of London is about 35,000,000*l.* coming under this system. The revision which takes place every year is only for the purpose of adding to or taking from the sum in the quinquennial list. I think there might be an alteration to this extent that rating authorities should be bound to make a new list every five years, but they should be allowed to alter the valuation of property every year. I do not see why, if in the large towns in England they make a fresh valuation whenever they like, the same thing should not be done in London.

2218. The only thing I wanted your opinion upon, particularly as you have so much knowledge of London, is whether the quinquennial system which some people, at any rate, approve of, has in your view ever acted to produce substantial hardness?—My impression is so, but I cannot give you individual cases. Of course, one would not hear of them very often. A man would be told at once by his solicitor, or by the parish officers, there is the list, and you are bound for five years, and it is no use

*Sir H. B. Poland, Q.C.*  
your saying anything more about it and wasting money in law.

1 April '97  
2219. Under the Quinquennial (Metropolis) Valuation Act the surveyor of taxes has certain rights; you have the same basis for local and Imperial purposes?—Yes.

Valuation in Metro-  
polis.  
Same basis for local and Imperial taxation.  
2220. Do you think that is an advantage?—I think so. That is a very important question. Of course that again only applies to the county of London. Section 45 makes the valuation list conclusive for house-tax and income tax under schedules A. and B.

2221. Of course we know it only applies to London, but I am really asking you whether in your opinion that is a system which might be applied more generally?—I know that the surveyors of taxes do act in friendly co-operation with the assessment committees, and try to get the assessment committees, in the case of properties which come under their notice, to increase the gross and, as a consequence, to increase the rateable.

Rating areas.  
Parish the unit for purposes of valuation.  
2222. You dealt, I think, before the Chairman was present with the great difficulty as regards railways, in dealing with the parochial unit, do you think you might have a larger unit than a parish for rating purposes?—That matter has been very fully discussed in Pashley on Pauperism and the Poor Laws, whether there should be a union or whether there should be a national rating, and he has got a scheme of his own.

2223. I was asking you whether you had formed any view upon it?—No, I have not had time to do much in political or social questions.

Valuation in Metro-  
polis.  
Statutory maximum scale of deduction exists.  
2224. The only other matter I think you want to call our attention to here is some question of procedure?—There is one other matter I should just like to mention about the London Act, and that is that there is a scale of deductions. When you get the gross value in each case you find out what deductions ought to be made to get at the rateable value, and in the schedule to the Metropolis (Valuation) Act there is a scale given dividing all the property into classes; these are the classes, houses and buildings, with land and without land, and so on, and then coming down to class 8, mills and manufactories, and classes 9, 10, and 11, tithes, railways, and rateable hereditaments other than those mentioned. The maximum scale of deduction is given; you must not deduct more than that. But I may say that in London my experience is that with the enormous number of valuations which have to be made, that they generally allow the ratepayers the full deduction mentioned—not always. I ought, upon this subject of machinery, to remind you that although the machinery enhances the value of the buildings yet under this scale, you may deduct as much as a third from the gross to get at the rateable value of mills or manufactories.

Valuation outside Metro-  
polis.  
No statutory scale of deductions.  
2225. Could you answer this: outside London, no Act of Parliament has established the same system of fixed deductions as between gross and rateable?—No, none have. They simply have to apply the Parochial Assessment Act plus the Union Act of 1862.

Valuation in Metro-  
polis.  
Statutory maximum scale of deductions not always allowed.  
2226. I should like to ask you upon this point, first of all, whether you think a statutory deduction as in the case of London, is valuable, in order to arrive at rateable value and if you do, whether you approve of the scale in the London Act?—I have hardly sufficient experience to answer that. The scale is not universally followed. I remember a case of a jewellery manufactory, in which the court said there was very little wear and tear there of machinery, and that therefore they could not allow the full third. It is rather a rough way of doing it, but when you come to consider that some of the large London parishes where there is a rateable value of a million—and some of them are over that—you will see that to go into the condition of each house is absolutely impossible.

2227. There may possibly be some little incidental unfairness, but is it not much better, as far as possible, to have a fixed rule of deduction?—I think so, and when there

is an appeal the court may say: this is a case in which the full deduction ought not to be allowed; therefore we have not allowed it.

2228. Still adopting a fixed rule saves a lot of trouble in some cases?—Yes.

2229. And acts very fairly and properly?—Yes. We must in these rating cases, do what we are so very fond of talking about—substantial justice—rough justice.

2230. There is only one other point which I see you have called attention to in your memorandum, and that is the procedure as regards making out the valuation lists, and questions of that kind; do you wish to say anything yourself upon that point?—No, I think not. The overseers make the list according to their local knowledge, and the assessment committees, as far as my experience goes, are very often very able men; they know the locality thoroughly well, and very often you get retired house agents and gentlemen who are supposed to have a knowledge of the subject put on to the assessment committee. Speaking for myself, when I have been sitting as a justice of the peace at the County of London quarter sessions, I have found two or three of the magistrates who are members of assessment committees, most valuable members of the court for assisting in arriving at a decision of the true value of the property.

2231. So far as procedure is concerned, you have found it satisfactory beginning with overseers through the assessment committee, and then appeal is necessary to the quarter sessions?—Yes. They have tied down the quarter sessions rather too strictly to the time; the valuation list is made up on the 1st of June by the overseers; it has to be settled by the 1st of November by the assessment committee, notice of appeal has to be given by the 15th January, and the appeals have to be heard during February and March, and by the end of March the appeals ought to be all finished, so as to be ready for the financial year beginning the 5th of April. Fortunately it has been held by the court that that is only directory, and the time is over and over again exceeded.

2232. Of course, that would be impossible in the case of London?—It would be impossible. You never can tell. I have got some of these lists with 500 rating appeals on them, but a great many get settled; that does not matter, because there is a clause in the Valuation Act enabling parties to adjust the differences afterwards when the value is lowered.

2233. I do not know whether there is any other point on which you wish to give evidence; I think I have been through all the points you have suggested?—The only other matter was in connexion with the Lands Clauses Act.

2234. Perhaps you might explain that?—When property is taken for a public improvement, or by a railway company, where a large quantity of property is likely to be destroyed, the Lands Clauses Act, which is the 8 Vict. c. 18. s. 133 provides that while the works are going on, and until they are completed the public body taking possession of the land shall make up the deficiency in the rates caused by their being taken while the works are going on; they are not liable to be rated, but they must make good the deficiency, that is to say, if the occupiers of the property taken paid to the rates 500l. a year, the persons taking the property must continue to pay 500l. a year, and when the work is finally finished the parish must take their chance whether it is of greater value or less value.

2235. To carry out really the view you told us of before, that after public works are carried out by whatever body, they ought to be assessed at their then value whether higher or lower than the old value?—Yes, I think that the Act is defective, because it is limited to the poor rate and the land tax, but in a great many of the recent Acts a clause is inserted making the promoters liable for the deficiency in all rates.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

SEVENTH DAY.

Friday, 2nd April 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. J. B. BALFOUR, Q.C., M.P.  
The Right Hon. C. B. STUART-WORTLEY, Q.C., M.P.  
C. N. DALTON, Esq., C.B.

H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq.  
E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*

Sir HARRY BODKIN POLAND, Q.C., recalled and further examined.

Sir H. B.  
Poland,  
Q.C.

2 April '97

Valuation  
of rail-  
ways.  
English  
and  
Scottish  
methods.

Valuation  
of rail-  
ways.  
Parochial  
earnings  
system and  
mileage  
system  
compared.

2236. (*Mr. Balfour.*) Your system in England is different in many respects from that in Scotland. One point I should like very much to know your own view upon is the method of valuing railways. Up to a certain point, I think, there is no substantial difference between your practice and ours except as to rates, I mean in the method of treating it as one trading concern, and making all the proper deductions to ascertain the rent that the hypothetical tenant would pay, and treating the stations locally. So far the method is common to both countries?—Yes.

2237. I rather gathered that you did not approve of the method of separate local valuations applicable to the portions in the different parishes?—There does seem to me to be very great difficulty about it, because not only are the different localities rated by several local authorities, but, in case of an appeal, the quarter sessions of a particular county may decide one way, and the quarter sessions of an adjoining county may decide another way; they are bound to exercise their own independent judgment.

2238. Would you prefer a system under which, proceeding as far as you have stated it, on a system common to both, when it came to dividing the running line between the different rating areas that should be done simply by mileage?—Of course the question is whether the mileage principle would give to the locality the value of that part of the property which is in the locality. According to our rules the parochial earnings principle must always be applied if it can be.

2239. I know it is, and I understand that, but I was wishing to know whether you would not prefer another system, or what the objections to it were. When you take the whole enterprise as one undertaking, which is done both in England and in Scotland down to the point of division, that seems rather to disregard the particular structural cost except of the stations in each locality, because each mile is just as essential to earning the receipts as another?—Yes.

2240. Do you not think that, on the whole, considering the matter as an aggregate rent-producing subject, it would be a sounder principle to divide it by length when you come to deal with the different rating areas?—It would be, no doubt, very much more simple, but I have hardly considered that question very much.

2241. Of course, unless in the case of traffic so local that it was both taken up and set down within one rating area, all the rest would traverse different areas, and, therefore, go into the general account?—Yes.

2242. And so even that local traffic would go into the general account?—Yes.

2243. According to your method, is what is recorded in dealing locally with the running line in the separate rating areas, the structural cost itself on the number of purely local passengers?—The cost, except of the

railway stations, which are separately valued in the locality, is not taken into account at all.

2244. It is the earning power?—Yes; that is to say, the number of passengers over that particular part of the line in the parish, the tons of goods carried, and so on.

2245. But when you reject, as I understand you do, the test of the cost of construction of local works other than stations, do you not think it would be much simpler to treat the whole running line as a *unum quid*, and divide it by mileage?—I am so wedded to the parochial earnings principle. I have known the rating system since I was a student in the Temple in 1848, and I was brought up always to deal with rating matters on the parochial earnings principle, so that I have really never thought out the question at all whether a change should be made so as to put it on the same footing as the Scotch valuation.

2246. You have stated the objections which seemed very reasonable to local valuations, and to local appeals to separate appellate authorities; that, of course, runs the risk of a great want of uniformity of decision?—Most certainly.

2247. Would you prefer a system under which a public functionary, as it happens, called an assessor of railways and canals, was appointed to make the valuations in the first instance by communication with the railway companies, and then in so far as he and they fail to agree upon any question of principle, to have an appeal to a judge or judges of the Supreme Court?—One difficulty with that would be that in England, with the enormous number of railways there are, you would require a large number of official valuers.

2248. That may be?—If you consider not only the metropolitan lines, but what the railway system is throughout the whole of England, you will see that you must have a number of separate valuers. Then they would very likely go upon different principles. Except when some question of law arises the valuation is solely a question of fact with which a court of law will not deal, and if I may, I will give an illustration of that from a case which came before the House of Lords. I have got a reference to it, and I think it is worth referring to. It was a case of the rating of a railway, and the question was referred to a barrister, Mr. William Graham, to fix the value. He went into it very carefully indeed, and he prepared a most elaborate special case, setting out the mode in which he had arrived at the value. There were two, if not more, modes which he submitted to the Divisional Court, and two of the judges in the Divisional Court gave a judgment upon it. There was an appeal then to the Court of Appeal, and the Court of Appeal also gave judgment upon that case, and overruled the decision of the Divisional Court. It then came before the House of Lords, and there were present amongst other

Sir H. B. Poland, Q.C.  
2 April '97

of the noble lords the Lord Chancellor and Lord Watson. The name of the case is the North and South Junction Railway v. The Brentford Union. When it came before the noble lords they said: "We cannot, as a legal tribunal, decide this case at all, it really is a question of fact." I will just read what the Lord Chancellor said, as it is very short—"The problem propounded by the Statute is plain enough in its form; it is simply to ascertain what rent a tenant from year to year would give for the occupation of the tenements subject to certain deductions. . . . The thing is to be valued as it is, for the purpose for which it is used, and its value is to be ascertained upon the principle which is enacted by the Statute." Then what Lord Watson said is, I think, also material. He said: "My Lords, there are principles of valuation which depend on purely legal considerations, and any misapplication of these is open to correction by the Courts. But there are also certain so-called principles of valuation, which are simply formulæ for arriving at the solution of questions of fact, which have commended themselves to valuers of experience. There may be several alternative formulæ of that kind, all of them capable of leading to a just and reasonable conclusion. It is for the arbitrator, who is constituted the judge of the facts, to determine for himself which rule of that kind he will accept for his guidance." The case, therefore, was sent back to the arbitrator, and he had to do what he thought was right as a question of fact, and so the case ended in that way by throwing upon him the responsibility. Therefore the difficulty which you have put to me is that, so far as any question of law is concerned, you can do that before the Court, but the moment the Courts say it is a question of fact, then you have got the difficulty.

2249. I quite understand what you say, but is it not the case that, apart from pure questions of fact, that is to say, the questions applicable to the particular case on the one hand, and questions of law on the other, there are certain general rules? I will give an instance which I have seen brought up: the percentage, for instance, that should be deducted in ascertaining the value to the hypothetical tenant. If a general rule was laid down say, by one Court or by a couple of judges, would it not be accepted without appeal—because numerous appeals on facts are not good things; and do you not think that that might become a uniform rule of practice even if there were more assessors than one?—I am afraid the judges would say—that is not law, it is a question of fact. When you have got the amount of the tenant's capital, then what percentage should be allowed the tenant as a tenant's share, is a question of fact.

2250. It is, no doubt, but have you not seen that done, or anything like that brought up, under a case stated?—No. In the case of the School Board which goes into that question very fully, the judges simply say that all those matters which the Court did take into consideration, namely, the question of four per cent. on the value of the land, and five per cent. on the value of the buildings, were only elements for them to consider in solving the problem which the Statute put to them.

2251. You made a suggestion, I think, that the Railway Commissioners might be employed to do this; they of course are judges both of fact and of law?—Yes.

2252. If they were to lay down certain rules of practice, do you not think that they being the sole tribunal would be followed without further appeal?—I do not know whether it is under some statute or whether it has been by consent, but I know they have dealt with some of these rating cases. If you had a tribunal of that kind, where one of the Judges of the Superior Court was present to deal with the law, and the other members of the Commission were experienced men, that would be a very good tribunal as far as I am able to judge.

2253. You are aware that, under recent legislation, they are made statutory arbitrators in various matters?—Yes.

2254. So that the function you propose to cast upon them would be very much akin to what they perform now?—Yes; of course there would be a great advantage in their taking up these railway matters, because they have such a large knowledge of the working of railways from the number of cases they have had before them.

2255. And they are not very fully employed, are they?—I believe they are not overworked.

2256. Do you not think, if there was no appeal from them and they were the sole appellate body, they

would very soon establish efficient rules of practice for the guidance of any number of assessors?—I think so. If there were to arise any very important questions of law, they might have power in the form of a special case to refer them to a legal tribunal. There is only one judge, one legal member of the Commission, you see.

2257. They have that power now under certain conditions?—If that were so, I think that would be a very good tribunal.

2258. That would meet any difficulties you see in the way of bringing it under the cognisance of one or more judges?—Yes, I think so.

2259. I think you said that, as regards docks running into one or more parishes, it must become a very arbitrary and difficult problem?—It is a most difficult thing to apply the parochial earnings principle to docks, and in some cases it has been found to be absolutely impossible, and that the only way was to divide according to the area. Of course, with the warehouses it would be different: the warehouses earn their money by people paying for the goods being deposited there in the particular parish, but when you deal with docks and the dock charges generally, which apply to the docks proper, it is almost impossible to do it in any other way than by dividing according to area.

2260. Is not dividing the docks by area very similar to dividing the railway by mileage?—Most certainly.

2261. So that there is an analogy in the docks?—Certainly.

2262. It may be *ex necessitate*, but still the analogy is there?—Yes.

2263. I suppose your great objection to the non-rating of public property consists in this, does it not, that that property is serving the whole country and all the subjects of the Queen?—Certainly.

2264. Not merely those in a particular place?—That is so.

2265. Therefore they should all bear it?—Certainly.

2266. And the only way they could be made all to bear it, is by making that property pay like all other property?—Yes; and also you have to consider that, in some cases, they turn rateable property into non-rateable property.

2267. They withdraw it from the rateable market, certainly?—If they want to extend old premises which have existed for hundreds of years that might be somewhat different; but when they take fresh land and pull down houses so that they may build a great Government office upon it, then they are turning rateable property into non-rateable property.

2268. In some places, such as our great naval or military station like Portsmouth, a very large portion of the property must be Government property?—I should think so. In Portsmouth it must be enormous; I do not know whether it extends out of the parish of Portsmouth, but in some of the parishes of course there is an enormous quantity. I have seen a return of Woolwich; a very large proportion of the rateable value of Woolwich is in the Government Arsenal and the Government Dockyard.

With regard to the rating of railways, I have got a list before me of the cases in which the judges have made pathetic appeals to the legislature to do something to relieve them of the difficulty of dealing with the rating of railways and similar properties.

2269. (Chairman) Will you be good enough to hand that list in?—Certainly. [*Handing in list.*]\* The first case was dealt with by Lord Campbell in 1851. He actually felt so much difficulty that he adjourned the case, and said the Court could not decide it, in the hope that the legislature would interfere; it did not interfere, and he was obliged to decide it. The observations of the judges go down to the present time when Lord Herschell dealt with the Erith case (which is reported in Mr. Ryde's last book, on page 435). He speaks of the law of rating being in an unsatisfactory condition, especially with regard to the rateability of public bodies, and he mentions the difficulty of applying the principles of the Parochial Assessment Act.

2270. (Mr. Smith.) I think you said you were both a gas and water director?—Yes, I have the good fortune to be both.

2271. Do you consider the principle upon which those undertakings are now rated a good one?—I think there is no question about this, that the parishes

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 88.

Sir H. B. Poland, Q.C.  
2 April '97

Valuation of docks. Parochial earnings system. Difficulties of applying.

Government property, non-rating of, objections to.

Rating of railways, and certain public bodies. Difficulty of applying the principles of Parochial Assessment Act.

Rating of gas and water companies. Results of application of parochial earnings system.

Valuation of railways. Railway Commissioners a court of appeal. Advantages of.

Sur H. B.  
Poland,  
Q.C.  
April '97

under the present system of rating get the advantage, that is to say, they get a knowledge of the whole of the facts, and are thus able to make the rating at the full rental value under the statute. In some cases no doubt, the rating is rather hard upon the companies.

2272. I want to take you to the case of a company, or a corporation having large reservoirs and works, in a Welsh village; should you think the principle of valuation for rating was just under those circumstances?—They get at the value of the whole undertaking, and then take the source of the supply which, as we term it, indirectly conduces to the value, and put a percentage upon the value of the land and the outlay—

2273. And the structural value of the reservoir?—Yes, certainly.

2274. So that a corporation might pay practically the whole rates of a Welsh village in which it was situated?—No doubt the Welsh villages would benefit most materially by having such valuable rating property brought there—created there, I should say.

2275. I want you to apply your mind to another case. Take the case of an aqueduct, which would be rated, I presume, like a railway—an underground aqueduct in a deep tunnel, the surface over the tunnel being untouched; does it not seem rather curious that a rural parish should get the benefit of such an undertaking as that?—I should say that would not be rated like a railway; that would be rated like the trunk mains which bring the water to the place where it is sold.

2276. They would pay a very large proportion of the rates of the parish under which they tunnelled?—Certainly; but they would be rated on exactly the same principle as the trunk mains of the water companies, and the trunk mains of the gas companies—that is, only upon the percentage of the value of the pipes which are put into the land. The courts have held that what is directly conducive to value is the pipes where the delivery takes place.

2277. Under the Act of Elizabeth I think you made it quite clear that the hereditaments are not actually rated, but only the occupier's interest?—That is quite clear.

2278. And that the inhabitants were to be rated in respect of personal stock yielding income and within the same parish?—Yes; what they used to term the stock-in-trade which is productive.

2279. So that personalty not localised was never really rateable by law?—No, there is a case on that, *Rex v. Shepherd*, where the man owned a lot of ships in the parish where he lived, and he was rated for those; but he also owned a lot of ships in another port, and he was not rated for those.

2280. I think you told us that the exemption of Crown property takes its rise from the Act of Elizabeth, simply because it is not therein specifically mentioned?—Certainly; that is the express decision.

2281. You also said that the value of the rateable hereditaments must be taken to be their value for ordinary purposes, until they are occupied for some special purpose such as building upon the land?—Yes, land is rated as land, and when buildings are put upon it then it is land plus the buildings.

2282. You thought "building land" could not be defined?—I have read some of the evidence given before the Town Holdings Committee, and I think it was generally considered that there was no good definition given of "building land."

2283. Let me put a case to you: Suppose you find in a town, land fronting a street left a mere waste, while on either side of it and opposite to it you find land sold or let by the foot or the yard, would there be any difficulty in saying that that was building land?—I think in that particular case you could say it was building land.

2284. It must be a question of degree?—Certainly; of course there may be difficulties in dealing with the property, and there may be some reason why it has not been let; for instance, the owner of it might say, "I think in all probability if I hold out longer I shall get a very much better price than that which has now been offered to me."

2285. That is a case, no doubt; the question in my mind is whether it should not be rateable. Of course the saleable value of adjoining land in such a case as that, or the ground rent at which the land was let, would be a good guide to the value?—Yes, a very good guide.

2286. Although it might not be fair to rate a man at the full amount, he might be fairly rated for a considerable amount, having some regard to the value of the land—not by law now, but I mean it would be a possible alteration of the law?—He might possibly, in that case, but then you must not extend that principle too far. Take Holland Park, Kensington, that would be of enormous value, of course, if it were to be built upon.

2287. There might be an exemption for land of that character?—Take the Temple Gardens and Gray's Inn, and Lincoln's Inn Gardens; of course they would be valuable for building upon.

2288. They were extra-parochial at one time?—Yes.

2289. But the law has altered that?—Certainly, and the Templars think they were not unfairly treated in having to pay their share of the common charges of the union.

2290. You mentioned the Valuation (Metropolis) Act, and, I think, you said you preferred the definition of value given in that Act to the definition of the general law?—Yes, I do prefer that.

2291. That Act enables you, does it not, to get from the occupier of premises information as to his holding?—Yes, it is, I think, one of the good things in that Act, though it applies only to the metropolis; that the parish officials send out a printed form, and that printed form contains certain questions; the occupier is bound to fill it up, and return it signed, as being useful to the parish officials. I have a form here.

2292. Is there a form in the Act?—No, there is not a form in the Act.

2293. But there is a form drawn up?—There is a form in Mr. Boyle's book on rating of the return which is required to be made.

2294. I only want the fact that you think such a return desirable?—I think so; no honest man should make an objection.

2295. That leads to my next question. Do you not think a general Valuation Act—at all events for England and Wales—on somewhat similar lines to the Metropolis Act, would be a good thing?—I do not see why, if there is a good law existing in London, it should not be extended to all the rest of England.

2296. I might almost say it is the one question upon which London is in advance of the provinces in local matters, might I not?—Yes, I think that is so.

2297. You must remember a great many valuation Bills being introduced into Parliament?—They are introduced from time to time; I have got one dated 1850, I think.

2298. There have been in my time, I think, I should not be wrong in saying, a dozen at least?—I will not say how many; I know they have been numerous.

2299. They all prescribed, I think, a general system of application, and a scale of deductions in a schedule?—I will not say that as I do not study Bills very much; I wait until they are Acts of Parliament before I study them.

2300. You probably cannot tell us the reason why Parliament never passed them?—I cannot tell the reason.

2301. Probably there was no great public opinion—political opinion—behind them?—Public opinion is a very great motive power. I always like to see anything with the name of George Cornwall Lewis upon it, and I have got here a Bill on the subject dated 1850.

2302. Since then they have been repeatedly introduced, have they not?—You say so, and I do not doubt it for a moment.

2303. In rating a railway or similar undertaking, the great difficulty you have is in arriving at the tenants capital, is it not?—That is one of the great difficulties.

2304. That is a great question of dispute?—Yes. Another difficulty always is the determination of the life of a particular thing so as to settle the renewal fund.

2305. Do you think a special tribunal might deal with all those questions?—I think so.

2306. I will not ask you about the differences between England and Scotland, because Mr. Balfour has already asked you about that point. You said you had no opinion as to which was the preferable plan of dividing up the parishes according to the share of profit or by mileage?—That is so.

Sur H. B.  
Poland,  
Q.C.  
2 April '97

Valuation (Metropolis) Act. Advantages of. Definition of value. Questions to be answered by occupier.

Rating in respect of personal property not localised has never been legal.

Rating in respect of Crown property not mentioned in the Act of Elizabeth.

Valuation of rateable hereditaments is based upon the value of their use for present purposes in present condition. Difficulty of determining what is "building land."

Rating of railways and certain undertakings. A special tribunal to ascertain certain particulars.

Sir H. B. Poland, Q.C.  
2 April '97

2307. I think, personally, you told us you were against all exemptions from rating, except, I think, in cases of places of worship?—Or I would say a school—in fact anything which could be shown to be purely for the advantage of the parish in which it is situate.

Exemptions undesirable except in cases of places of worship, schools, &c.

2308. Is not the principle underlying your objection to total exemptions something of this kind, that *prima facie* all hereditaments in a parish are of some value, and land and buildings should not, by reason of their particular occupation, be allowed to reduce the rateable value or ability of the parish?—Yes. I may say that the judges have several times expressed an opinion that these exemptions are unsatisfactory, because it is not a matter of benefit to the particular person who is exempted, but it is also the throwing of another charge on other people.

Rating of public parks.

2309. I gather from what you have just said that your objection to exemptions would hardly extend to public parks provided for the general use of the inhabitants?—The case of a public park is now before the House of Lords; it is the question of whether Brockwell Park is rateable or not. The subject wants consideration.

2310. Pending that decision, I think the overseers have relieved us from rating, at all events, in Birmingham?—The decision of the Court of Appeal is that it is not rateable on the ground that the London County Council, who are the owners in possession, and therefore the occupiers, have no benefit, the public having all the benefit. Therefore it is like the case Mr. Justice Blackburn mentioned of the lord of the manor with a common where the commoners have all the advantage; it may strictly be rateable, but then it is rateable at nothing.

Rating of museums, art galleries, free libraries.

2311. That would apply to all our municipal parks in Birmingham, and we have seven or eight?—Yes. An ordinary highway is owned by persons, and if you shoot game over it you are a trespasser; but the public have all the advantage in the use of it.

2312. Your objections to exemptions could not apply on the same principle to public museums, art galleries, and reference and free libraries, where no charge is made, and where they are paid for out of the rates for the common use of the inhabitants?—I would rather see them rated, because they are in a parish, and people come from the outside, from all parts, to that parish.

Exemptions (partial). Reduction or increase in number.

2313. They are not for the benefit of the parish, but for the benefit of the municipality, which may consist of more than one parish; but you would prefer that they should not be exempted?—I think they had better be rated in the place where they are.

2314. I think you would materially reduce the number of partial exemptions also?—Yes.

2315. You would in some cases disregard vested interests, would you not?—Yes.

2316. Always, provided that they were not the subject of special parliamentary contract?—Yes.

2317. And you would reconsider those on any fresh application to Parliament?—Yes. I mentioned a list of them yesterday; I would sweep all those away.

2318. With regard to the three-fourths exemption on the general district rate, do you think the gas and water pipes ought to be benefited in the same way?—I think so, and I would not limit it to them; it should be applied to all property which could be put upon the footing of the things which are already in that Act—railways, arable land, woodlands, and so on.

Unoccupied houses, non-rateability of.

2319. Unoccupied houses are not rateable at law, are they?—I think clearly not. That is shown to be so beyond all question by the Rate Collection Act which says that, during the period a house is unoccupied, the old tenant is not to be rated, but when the new tenant comes in then he is to be rated.

Unoccupied land, rating of, undesirable.

2320. But unoccupied land ought, you think, to be rated at something?—No, I think not, unless it is the case that I put of a man actually refusing a tenant who offers him the full value for it, and it is capable of producing crops.

2321. Would you limit it to crops?—Yes.

2322. Of course I know it is not the law; but you would not yourself apply it to unoccupied building land in towns?—No, I would not—on the principle that a man has the right to deal with his property as he thinks fit; until it is beneficially occupied he should not be rated for it.

2323. I just want you to make quite clear your view about the rating of personal property; personal property is, but for the annual act of exemption, still rateable?—Certainly.

2324. But it must be visible locally, profitable, and belonging to an inhabitant of the parish?—Yes; certainly.

2325. Apart from the annual act of exemption, you believe that any direct assessment of personalty for local rates is impossible?—It is absolutely impossible. Nobody, I think, can read the memorandum that I referred to yesterday of the Poor Law Commissioners, dated May 1840, presented to the Marquis of Normanby, and Sir George Cornwall Lewis's evidence before the Committee in 1850, and hesitate for a moment upon that subject.

2326. Just one word as to the rating of machinery; you say the law is clear as laid down in the Tyne boiler case?—Yes; I take it to be.

2327. You are aware that, in practice, it has given a great deal of trouble?—In a great number of cases it gives a great deal of trouble.

2328. And is very differently interpreted by different overseers?—Yes; and perhaps, also, I think I might say, by legal tribunals, very often. I know a chairman of quarter sessions sometimes says: "I really should like to see the thing myself and judge."

2329. Have you ever heard of a rough-and-ready way that we have in Birmingham of rating manufactories according to the number of horse-power employed?—Yes: I know there is that system.

2330. We do not say it is legal?—No, and I do not say it is.

2331. But it is generally acquiesced in for want of a better principle?—Yes; as a short way of doing it, I believe it is very often done.

2332. There is no reason, is there, why a general valuation Act should not simplify that also?—There would be very great difficulty I should say.

2333. It might lay down some rules, do you not think?—I do not know; I do not think so. I should think it would be very difficult.

2334. There would still be room for the tribunals?—I should think it would be very difficult indeed.

2335. (*Mr. Clave.*) Following on one or two questions that were asked you by Mr. Smith, may I ask you if you have heard anyone suggest a practical method of assessing the man who has occupations in four or five different parishes in respect of the income he derives, say, from the London and North-Western Railway shares?—No.

2336. You never hear of any practical method being suggested of doing that?—No.

2337. Then, again, with regard to public buildings belonging to municipalities, if in a small parish a large area of land is cleared for the purpose of public buildings, does it not bear rather hardly on the ratepayers who are left in that small parish, if those buildings are not assessed for the contributions to be made by that parish towards the union rates?—Most certainly.

2338. Although, in a municipality which contains several parishes, the expenditure on the public buildings may be an additional advantage to the corporation as a whole; it may work unfairly as between individual parishes?—Certainly.

2339. I take it that if the public building is rated, the rates are paid by the corporation themselves out of rates leviable equally over the whole of the parishes?—Yes.

2340. So in that way there is a fair adjustment of the loss, so to speak; I mean a fair adjustment of the rates thus takes place as between the different parishes—there is a certain amount of compensation given back to the parish which has a large quantity of rateable value pulled down, by having the public buildings erected and assessed in the place of those pulled down?—Yes.

2341. I understood you to say that the Parochial Assessment Act, 1836 laid down the general basis that the valuation of property for the purpose of assessment is to be based on the value to the occupier?—Yes. The supposition of a tenancy is only a mode of ascertaining the existing value of the occupation to the existing occupier. That is what Lord Denman said in the Grand Junction Railway case.

Sir H. B. Poland, Q.C.

2 April '97

Rating in respect of personal property an impossibility.

Rating in respect of machinery. Difficulties of valuation.

Rating in respect of personal property, difficulties of.

Rateability or non-rateability of buildings belonging to municipality. Position of parishes in which situate.

Valuation of rateable hereditaments is based upon the value of their use for present purposes in present condition.

Sir H. B. Poland, Q.C.

2 April '97

2342. The condition of the property as it stands at the time the assessment is made for the purpose of occupation is the basis?—Yes.

2343. And not the uses to which it might be put if the landlord developed it?—Certainly. Take the case of a man who chooses to have his stable next to his house; it is only rated, of course, on its value as a stable, although it might be much better that he should have another house built there and should put his stable further off; but you must take it as it is.

2344. The sole question is: what is it worth for a man to take as tenant from year to year subject to the conditions which at present exist?—Certainly; as a tenant from year to year, meaning the value for the year, taking one year with another—not that he may be turned out at the end of the year, but on the assumption that the tenancy will continue.

2345. The amount of capital that the owner may have spent on the hereditaments to be assessed is not a consideration which arises, is it?—Not at all in regard to property which is in the market and which has a market value for sale or letting.

2346. So that the overseers, in arriving at the valuation of property, do not consider as to whether the rent they assume it to be worth gives an adequate return as an investment to the owner or not?—No, a common illustration is this: two houses are built side by side; one has a very bad foundation, one a good foundation, one may cost hundreds of pounds more than the other; but when they are both up they are of the same value.

2347. So that the return of income to the owner is not a point that has to be considered?—No.

2348. It might pay him 1 per cent., or it might pay him 10 per cent., but that does not alter the valuation for the purposes of the occupier?—No.

2349. I take it that it does not make any difference to the valuation whether the owner has built the houses out of money that he had lying at the bank, or whether he has borrowed the money on mortgage?—No.

2350. Nor whether he borrows the money at 3 per cent. or at 5 per cent.?—No it does not make the smallest difference. It is worth what it is worth.

2351. I think yesterday you referred to a case, I think it was one of the sewer cases, where the courts laid down that in arriving at the rateable value regard should be had to the contractor's rent?—Yes, that is with regard to property which has no market value, which is not usually in the market, which is never bought in the state in which it is, and never let in the state in which it is. Those are school boards, sewage works, and cases like those.

2352. I take it the expression, "contractor's rent" means a reasonable return to an investor for spending his money in those particular works?—Yes. The way it has always been put is this: supposing a man had the foresight to put up a building or to create works suitable for the person who wants them, what would be a fair rent to him? You would measure the fair rent by the outlay to which he had been put.

2353. I think you said also the court applied that principle to the case of school boards?—Yes, as a question of fact they did at the sessions take that into consideration, and the court said it was quite right to consider that as an element.

2354. They arrived at the total value by putting 4 per cent. on the cost of the land and 5 per cent. on the cost of the building?—Yes.

2355. That being based on what they consider to be a fair return to the landlord for his investment?—Yes; I do not know that they actually worked out the rateable value from those percentages, but they certainly did consider those two percentages as important things for them to consider.

2356. The London School Board could borrow money, I presume, at about 2½ per cent?—They borrowed it very cheap.

2357. Is it a fair question to ask you whether you think the decision of a court, based upon a return to the owner giving him 5 per cent. on the building, and 4 per cent on the land, is reasonably consistent with the principle laid down in the Act of 1836, when the occupier could himself have provided what he wanted at a cost of 2½ per cent. interest, plus a sinking fund to repay back his capital?—That again, is always an element. The courts which have to deal with these rating matters, always consider whether the tenant would give

that rent for it, and they always consider, as an element also, that if he could borrow money at some cheap rate, as you mention, he would prefer to buy and build for himself. That again is an element to be considered. I may say that since Lord Herschell made the observation in the judgment to which I referred yesterday, it is often now contended that 3 per cent. only should be taken as the percentage on the value of the land and building together. But then again that must always be a question for the court as a question of fact, because if you have got two buildings side by side and exactly alike, it would be a curious state of the law that one should be rated at one sum and the other at another, according to the borrowing power of the owner in possession.

2358. Assuming for a moment that a public body can get what they want at a cost representing 3½ per cent. upon the capital, why do you think it reasonable for the court to assume that they would be willing to pay about 1½ per cent. more for getting the same thing?—Of course it is a matter which the tribunal must consider.

2359. If the tribunal have the opportunity of considering the assessment for the purposes of occupation, why should they go out of their way to consider it from the point of view of an investment to the owner?—They do it. You cannot get away from this, that it is a fact, and not law at any rate.

2360. In this particular case it is evident that the London School Board were assessed at far beyond what they ought to be?—I do not know about that.

2361. Follow this case on a little bit further, please: I think you told us before that if the owner spent money extravagantly that did not affect the rateable value?—Certainly not. The common illustration which is used in court is that tremendous, expensive arch at the Euston Square Station. When you value the station upon the percentage of the cost they say: "That is really ornamental, and it is thrown away " practically as a railway station; the railway station " has just the same value without that wasteful expenditure and that splendid arch."

2362. May it not be accepted as a general fact that any property purchased by a local authority invariably costs more than the real market value of that property?—That I do not know.

2363. Assuming it is bought compulsorily?—They hope they do not pay more than it is worth; they may or may not.

2364. From your experiences of arbitrations, do you not think that, as a rule, if you buy property compulsorily it involves a little bit more expense than the ordinary market value?—I think the arbitrators are very just; they think a man should have the full value of his property if it is taken compulsorily.

2365. If a public body acquires an area of land for some public purpose and they have to clear out tenants as well as to buy up owners, they have I presume to pay trade compensation as well?—Yes.

2366. So that when they get their land cleared of buildings, it has cost the price they have had to pay to the owner for the value of the land, as well as the trade compensation, all of which is included in the actual cost of the land?—I think they take the land as vacant land; when putting a percentage on the cost they do not take into consideration the trade compensations.

2367. Then, in arriving at the assessment on the 4 per cent. and the 5 per cent. basis, the value of the land has been taken at its market value, and not at what the school board paid for it?—That is so; for instance the compensation costs, the law costs, and the payment for goodwill, are not taken into consideration at all; it is valued as vacant land.

2368. You referred to the Erith case, the sewer case; can you explain on what logical ground it is that the courts have held that the main sewers and outfall sewers are a rateable hereditament, but that the ordinary street sewers are not rateable?—The Queen's Bench held originally, years ago, that the ordinary sewers running through the streets were not rateable. In the judgment of the House of Lords the particular sewers in question there happened to be sewers which were built up on an embankment for the sewage to flow by gravitation. Lord Herschell, in giving judgment, draws the distinction as judges will do, you know, and says, "This " particular case is not the ordinary case of a sewer " running through the streets—this is a built-up

Annual value of properties never let. What is cost.

Rating of sewers. Main sewers; outfall sewers ordinary sewers.

Sir H. B. Poland, Q.C.

2 April '97

Annual value. Tenant from year to year. Meaning of.

Annual value of saleable or lettable hereditaments not determined by cost.

Annual value of properties never let. Contractor's rent.

Rate of interest on cost.

Annual value of properties never let. How far annual value can be determined by power to borrow money for their purchase or erection.

Sir H. B.  
Poland,  
Q.C.

2 April '97

"sewer." But I think he does not decide that the other sewers are not rateable; he says that the courts will be very unwilling, as they have been exempt for so many years, to rate them; but, he says, that question is not before the court. If you ask me as a lawyer to say what is the difference between a thing which is built up so that the sewage may flow by gravitation, and a sewer which is built on land which is suitable for the sewage to flow by gravitation, I should say there cannot be any real distinction there. All that Lord Herschell says about the sewers is to be found on page 433 of Mr. Ryde's book.

Rating of  
municipal  
water-  
works;  
prohibited  
by statute  
from  
making a  
profit.

2369. I want to ask you a few questions about the rating of waterworks belonging to a corporation. As you are aware, when a corporation owns waterworks, it is almost invariably prohibited from what is called making a profit?—Yes.

2370. That is to say, the amount of the water rents it is entitled to charge is based upon the amount of money it requires to meet its expenditure for the year?—Yes.

2371. How are those kind of waterworks now rated?—I rather think they are exempt; there is the Droitwich case upon this—I think that is the name of the case, speaking off-hand.

2372. Do they not take the gross receipts to start with?—I think they come within the picturesque term used by Lord Justice Bowen—they are "struck with sterility," that is to say, the Act of Parliament prevents the occupier using them.

2373. For profit?—In a beneficial way.

2374. We will take the Liverpool Corporation waterworks; how is it they are assessed at something over 100,000*l.* a year, although the corporation are absolutely prohibited from making any profit?—That, I do not know; I should like to look into that question.

2375. You are aware, are you not, that the ordinary method of assessing waterworks is to take the gross receipts, and from those, to make certain deductions to arrive at the rateable value?—Certainly; the indirect portion that conduces to value—the reservoirs and the main trunk lines—being rated in the place in which they are as suitable for delivering the water at the place where it has to be sold to the consumer.

2376. Do you think it is fair to take the gross receipts as the basis of arriving at the rateable value, when you are absolutely prohibited from earning any profit at all?—I would rather have time to consider that question if you would allow me. I know that the water company of which I am a director, is rated at its full amount, that is to say, they get the accounts, and the parish authorities take care to get the uttermost farthing.

2377. But that company, I think, is not prohibited from earning a profit?—No; it pays over 10 per cent.

Rating of  
railways.

deductions  
from gross  
receipts  
compared  
with  
power of  
borrowing  
money.

2378. Touching the assessment of railways; in making the deductions from the gross receipts, you told us that altogether 17½ per cent. was allowed as representing the interest on tenants' capital, profits, and casualties?—Yes; 10 per cent. on tenants' profits, 5 per cent. interest on capital, and 2½ per cent. for risks and casualties; that is almost universally allowed now.

2379. Does not that give a great advantage to the railway company, in arriving at the assessment, if the money that they have employed in working the undertaking and invested in rolling stock is borrowed by them at about 3½ per cent?—That may be so.

2380. So that to the extent of the amount arrived at as representing the tenants' capital the railway companies get a benefit about three or four times in excess of what they ought to do under the present methods of assessing?—I would rather not give any opinion upon that; I am a lawyer and nothing but a lawyer, and that is a question for a valuer. Reserve that for some of those eminent men that you will have before you at a later stage.

Valuation.  
Qualifica-  
tion of  
overseers  
in urban  
and rural  
districts.

2381. May I ask you about your experience with regard to the valuation made by overseers; do you consider the overseers in an ordinary parish are duly qualified men to assess all kinds of property?—The answer to that is that there are overseers and overseers, and also, you know, now they have permanent officials to advise them. With regard to London, I may say that the London County Council called a meeting of all the rating authorities in London in order to induce them to try and agree upon certain principles upon which valuation should be made, and they passed a series of resolutions, which I

have here, and upon those resolutions they act as far as they can for the purpose of uniformity; but I must say that I do not agree with many of them.

2382. The overseers acting for a large urban parish are in a very different position to overseers acting for a rural parish, are they not?—Yes, but then if farmers are overseers in a rural parish they know pretty well the value of the farming land in that parish.

2383. When it comes to the question of assessing railway stations and railway works, there is a distinct disadvantage, is there not, to the parish in having inexperienced men to deal with the very experienced men who represent the railway companies?—Yes, if they cannot come to a reasonable arrangement, they must have a skilled valuer to advise them.

2384. In your opinion, for the purpose of arriving at a fair valuation of property throughout the country, some means should be taken to see that a proper assessment of property is made in those parishes which, possibly, now do not quite understand how to manage their own affairs?—Yes, but then under the Parochial Assessment Act there is power to have a valuation made.

2385. You know by experience, do you not, that the threat of a large company to take a case to the House of Lords often prevents anything in the shape of an appeal?—I need not say anything upon that subject, I think.

2386. In the case of a union containing several parishes, have you not found that there is a great variation in the method of arriving at the assessable value in each parish?—I think not so much now, because the list of each parish is settled by the assessment committee, and the assessment committee is made up of representatives from each of the parishes; therefore that beneficial Act which was passed in 1862 has done a great deal to create uniformity.

2387. Still that does not cause uniformity as between different unions comprised in the same borough?—No.

2388. (Mr. Elliott.) I think that you mentioned, in the evidence you were good enough to give us yesterday, that the Poor Relief Act of 1601 may be said to have been the basis and origin of our present rating system?—Certainly. It has remained in force till the present day, and is acted upon every day.

2389. That law continued in force without any substantial alteration till 1840 when the Poor Rate Exemption Act was passed?—Yes.

2390. I think that you also mentioned to us that you had read a little treatise by Mr. Cannan, entitled "The History of the Poor Rates in England"?—Yes. I have read part of it.

2391. He says, referring to the Act of Elizabeth, that the poor rate was intended to be a local income tax upon the inhabitants of the parish, would you associate yourself with that view?—I do not see how it could be a local income tax in regard to property which is occupied. Of course it has been said that the term "Local income tax" is used as applicable to the property which is occupied, because the value of the occupation is the measure of what the man can afford to pay.

2392. But the ability of the inhabitant was to be taken into account, was it not?—It is impossible to say. The statute of Elizabeth does not in any way mention personal property, it says the inhabitant is to pay; and, therefore, there must be some means of finding out what he is to pay, and the courts have decided that the payment is to be upon the profit made on the stock-in-trade, taking care not to charge it twice over. They held, for instance, that the farmer was not to be rated upon his stock-in-trade, because he was rated upon the value of his farm, and the stock-in-trade was necessary to produce the value of the farm.

2393. I think the Poor Rate Exemption Act, 1840, prohibited the rating of an inhabitant, not only in respect of his stock-in-trade, but also in respect of any other property?—Well, *ejusdem generis*—it must be stock-in-trade; it clearly does not apply to property which has been held not to be rateable, such as money at the bank, furniture, and plate.

2394. You think that under the Act of Elizabeth which was in force, unaltered, till 1840, an inhabitant of a parish would not have been rateable in respect of any income derived, say, from consols?—Clearly not, that is expressly held, and I could give you authority for that if you wanted it. It is clear beyond all question.

Sir H. B. Poland, Q.C.  
2 April '97

Rateability of trading profits under Act of Elizabeth. A parochial income tax.

Relief of poor was the object of the Act of Elizabeth. Ability to pay and not benefits derived to be considered.

Rating in respect of personal property impossible.

Public Health Act, 1848, partial exemptions.

2395. Would he have been rateable in respect of income derived from personal exertion?—No, I think not.

2396. In regard to the income derived from stock-in-trade, was an inhabitant rateable in respect of the whole of his trading income?—Only that which arose from the visible property in the parish; for instance, there was the case I have mentioned to-day of a man who had ships in the parish where he lived, and ships in another parish where he did not live; they have to separate them, as he was only rateable in respect of the ships in the parish where he lived.

2397. You are aware, of course, that trading profits differ very materially according to the trade carried on?—Yes.

2398. Would that have been taken into account?—I think it would be a regular parochial income tax; they held that a man's debts were to be deducted, and the interest on capital borrowed was to be deducted, so it would be a regular parochial income tax.

2399. Take, for instance, a butcher and a draper, the profits of a butcher are very much greater in proportion to the value of his stock-in-trade, than the profits of a draper?—I think they have said that the butcher has no stock-in-trade. I know a butcher is especially mentioned in this memorandum, and he is also mentioned in Nolan.

2400. May I, at any rate, take it from you that there was no attempt in the period between 1601 and 1840, to divide a man's profits for the purposes of rating into the profits derived from his capital and the profits derived from the industry and skill brought to bear upon that capital?—I can only answer that by saying that they found out the income derived from the stock-in-trade. There was a balance sheet made up, and they found it out. You cannot have a better expression than Sir George Cornewall Lewis's—that it was a parochial income tax with all the disadvantages, because all the local people knew the whole of the man's affairs, and his affairs were disclosed—it was not done secretly as the income tax is now.

2401. It would be a parochial income tax in a different sense of the term, to that in which we use the term "income tax" now?—Of course, the income tax now, includes everything—it includes salaries, for example.

2402. Under the Act of Elizabeth the only object was to raise a fund for the relief of the poor, was it not?—Yes.

2403. And the expenditure therefore was not in any sense a benefit to the locality, but a burden upon the locality?—Yes, it was to relieve the locality—to set the poor to work, and apprentice them and to do everything that was desirable to be done so that they should not have a number of paupers existing in the parish.

2404. It was not at all necessary to take into account the value of the expenditure to the different classes of the inhabitants?—No; whatever money was wanted they had to raise by taxation.

2405. It was simply an endeavour to distribute the burden upon the inhabitants of the parish?—Yes, upon occupiers who did not reside, upon inhabitants who were there, and upon the parson, vicar, &c.

2406. In the evidence you gave us yesterday, you expressed the opinion that the case against the rating of personalty was absolutely crushing?—That is my own personal view.

2407. Is that view based upon the impracticability and impossibility of rating personalty or upon any want of equity in the rating of personalty?—I should like to put it on the broad ground of the impracticability; it is absolutely impracticable.

2408. Your observation that the case against the rating of personalty was absolutely crushing did not mean to imply that the burden should be levied upon one particular class of rateable property as it is at the present time?—It is absolutely impracticable—I prefer to put it on that ground.

2409. If it were not impracticable it would not, in your opinion, be inequitable?—I should say that is not a matter of law.

2410. You are aware, of course, that under the law as it stands an endeavour is made to secure at all events a substantial contribution from personalty?—Not as the law now stands.

2411. Has your attention been called to the case of the South Wales Railway v. the Swansea Local Board?—I have not that case in my mind.

2412. It is a case in which Chief Justice Erle delivered a very important dictum as to the intention of the Public Health Act, 1848?—Will you just remind me of it? Is it a question under the Public Health Act as to whether the particular property in that case should pay upon the full annual value or only the fourth?

2413. That is the case?—These cases are all collected together in the text books, but I cannot say that I remember the facts of that particular case, although I think I know most of those cases.

2414. Do you associate yourself with the view which Chief Justice Erle expressed in that case, that the object of these classified ratings was to take into account and to give some weight to the amount of the benefit derived by the particular property charged?—Certainly.

2415. Do you think that that principle is an equitable principle?—I think so.

2416. Has your attention been called to any systems of differential rating?—No, I know nothing about that.

2417. You are aware, of course, of the provisions of the law as to compounding?—Yes, the compounding statute, of course, I am very familiar with.

2418. You are aware, that under those provisions, it is possible for an owner himself, to pay rates by agreement with the rating authority?—Yes. You are referring to sections 3 and 4 of the Poor Rate Collection Act, 1869?

2419. Yes; have you in that connection at all studied the question of the incidence of rating?—No.

2420. Have you given any attention to the schemes for the raising of local revenue by a variety of ways?—No.

2421. Have you given any attention to the question of the division of rates between owner and occupier?—No.

2422. (Mr. Dalton.) Do you consider, as a matter of principle, that it is right that the occupier should be rated on the gross value, as in Scotland, or on the net value, as in England?—I have not considered the question at all, but I have always been brought up in the idea that the net value is the proper thing.

2423. From the very earliest cases the occupier has been rated in England, has he not, on what it is assumed he can afford to pay for the hereditament?—The words of the Act are, what a tenant might reasonably be expected to pay.

2424. Going back earlier than that statute—going back to the earliest case, I think under the statute of Elizabeth—Sir Anthony Earby's case—I think it was held that the occupiers within the town were to be taxed in regard to their possessions, and not the lessor in regard to the rent which he received?—Yes. Would you mention the date of that case—1600 and what?

2425. 1633?—Thank you. When we come down to the Parochial Assessment Act, 1836, we find the principle adopted had always been substantially the same as that which was provided for in that Act.

2426. I am not suggesting as a matter of law that it is not perfectly clear that the occupier must be assessed on his net rateable value, but if the occupier is to be rated on his interest it seems rather curious that he should be rated not on what he pays for the premises, but for the net amount that the owner receives; is that not an anomaly?—I do not think I am competent to give an opinion upon that, off-hand.

2427. It would be much simpler, as a matter of fact, to rate on the gross estimated rental, than on the rateable value, because then you would get away from all those difficult questions of deductions and scales, and so on?—I give no opinion upon that; of course, the inhabited house duty is made upon the gross value.

2428. You do not think there is any reason, do you, for departing from the principle of annual value? It has been sometimes suggested that you should rate upon capital value; have you any opinion upon that?—It should be annual value, because the rate is made for the year and the property should contribute according to its value for that year.

2429. I quite agree. You would be strongly against attempting to rate upon capital value?—Yes.

2430. Then with respect to rating railways, water-works, and gasworks, apart from the present condition of the law, is it essential that they should be rated on their profits?—They are not rated on their profits.

Compounding principle of.

Rating upon gross or net value.

Annual value not capital value, basis of rating.

Rating certain properties in respect of receipts.

Sir H. B.  
Poland,  
Q.C.

2 April '97

Value of  
land en-  
hanced by  
a profitable  
trade.

Rating of  
railways,  
principles  
of.

Rating of  
mines and  
collieries,  
brickfields  
and gravel  
pits.

Rateability  
of municip-  
al prop-  
erty, but  
not of  
Govern-  
ment  
property.  
Police  
courts.

2431. On their receipts, then?—The observation I make upon that is very short; the profits of lands cannot as such be brought into the rate, but if the ability of carrying on a gainful trade upon the land adds to the value of the land, that value cannot be excluded, because it is referable to trade. That is what Lord Denman said in the Grand Junction case. You only go into the profits to see what rent the hypothetical tenant could pay.

2432. But in other properties you do not merely go into the question of what the receipts are; you take into consideration the question whether the lessee could not get a similar thing at a lower rent?—Yes.

2433. In the case of a railway, as far as the line is concerned, he could get a similar thing, at a lower rent, in many a country parish if he himself built alongside that line a line for himself, could he not?—Is that not rather far-fetched? He would have to get his Act of Parliament. You only go into the receipts and the expenditure, because there is no other mode of dealing with it. The Act says it is what a tenant might reasonably be expected to pay; so you must get all the facts, and the tribunal must see what a tenant might reasonably be expected to pay. Nobody has ever yet been able to make any better proposal as to the rating of real property than that which is in the Parochial Assessment Act. You must recollect that it refers to all real property.

2434. Take the case of a school board, who may have have to go for a special Act to get their land compulsorily for the purposes of the school—there you take cost into consideration in the rating?—Yes, as an element, but only as an element.

2435. It is the main element in that case, is it not?—If the tribunal saw there was a very similar building to the school close by, and that it let for a particular sum, they would take that into consideration.

2436. With regard to the railway, practically, you do not take the cost of making the line into account at all?—No. Just fancy the cost of making a tunnel or a viaduct; that of course can have no bearing whatever upon it.

2437. Do you think the railways would be rated more highly, or at a lower assessment than they are at present, if they were rated on their cost?—I cannot tell; that is quite beyond me.

2438. There are one or two classes of property of which I think you have not explained to us the method of assessment—one is mines and collieries; can you give us any information on that?—The whole law upon that subject is practically in the case of "Regina v. Westbrook" (16, Law Journal, Magistrates cases, page 87). It is a very important case. The subject there was a brickfield, and they applied the same rule to a gravel pit, coal mines, &c. The tenant can afford to pay on what he can make out of it for the year, and that would depend upon the likelihood of the demand for coal or the demand for bricks. He must agree to pay his rent before he goes in, and take care that he is not on the wrong side of the account at the end of the year. The Act of 1874 contains provisions as to the rating of mines.

2439. As regards police stations—which I think you told us were exempt from rating?—Certainly.

2440. What is the line of demarcation between police stations and other municipal buildings?—Police stations are used for what they call Government purposes—the suppression of crime; municipal buildings are for the use of the municipality.

2441. But the police are now under the control of the municipality?—Yes, the police are under their control, no doubt. The Metropolitan Police are not, you know—they are under the Home Secretary; the City Police are under the Lord Mayor and the Corporation; and the other police are under the counties. It is only by Act of Parliament that the police have been put under their control, but the police are nevertheless for the maintenance of order in the kingdom, and therefore it is a public concern.

2442. Police stations are still treated as Crown property, as I understand, for the purpose of rating?—Yes, exactly upon the same footing; and in the judgment of the House of Lords in "Jones v. The Mersey Docks" they expressly say that, although they are not strictly in the occupation of the Crown, the occupation

is for the purposes of the Crown, and so it is on the same footing.

2443. (Chairman.) Do you think the parish as an area is a good area to make the unit of assessment?—That is a matter that I have not considered. No doubt it is most convenient.

2444. Do you not think it would get you out of a good many of your difficulties, for example, in regard to docks and other matters which have been the subject of question and answer, if the area of assessment was a larger one?—Yes, I think it would; but I must qualify it to some extent—of course there is this enormous difficulty, that all the property has been dealt with upon the footing that the rates in a particular parish are so much in the pound, and that the rates in an adjoining parish are also so much in the pound.

2445. No doubt there would be a dislocation for the time?—No doubt.

2446. In some cases large and in other cases smaller?—Yes.

2447. Let us for a moment pass over the practical difficulties. What do you think should be the authority under whose supervision the assessment is made up from year to year; at present it is the overseers of the parish as we know?—The overseers and the Assessment Committee.

2448. Supposing it was thought desirable to enlarge it, should we take each union by itself, or should we attempt a division into burghal and rural districts?—The difficulty about that is, of course, the enormous number of hereditaments, and the amount of the work. Some of the London parishes are unions in themselves.

2449. Do not let us regulate the whole country by London, think first of all of the great rural areas which are still in this country. Which is the best area in your opinion in the country districts?—I have not considered the question, but I should say the larger the area the better.

2450. You would, I suppose, say that it would tend to diminish friction if every conceivable authority that had to raise rates should have a say in the making up of the valuation list?—Yes.

2451. As regards Government property, I understand you to express the opinion that it ought to contribute to local burdens on something the same scale as other classes of property?—Certainly.

2452. Do you think there is anything in the objection sometimes made that a large corporation like the Government might not always get fair play from local assessors?—I do not fear that, because there is the appeal to the quarter sessions.

2453. Do you think that the appeal would be sufficient protection?—I think so.

2454. Would you or would you not favour the proposal that if Government property were to be regularly rated like other property, by an authority, that authority should be a general authority rather than one for each district?—I think so; but you know it is impossible not to feel that the valuer appointed by the Government to value their own property upon which they are to contribute rates would naturally wish to make the best bargain he could.

2455. I do not say necessarily appointed by the Government solely for the purpose: I would give him, by whatever authority appointed, fixity of tenure, so that he should be in an independent position?—You see it is an enormous amount of property to entrust to one man, who may have a peculiar way of valuing everything.

2456. I did not commit myself to one man, I said "an authority"?—Whatever the number—even two, I cannot help thinking that the rule which applies to valuing nine tenths of the parish should be applied to valuing the other one tenth, whoever is the occupier.

2457. Do you not think that in the same way corporation property might receive less fair treatment than an individual's property from a parochial assessor?—I think not; he would always be trounced if he did wrong.

2458. Any such apprehensions as Mr. Clare suggested in his questions you would dismiss altogether?—Yes There is the appeal, and they would have to pay the costs if they are beaten, in consequence of having improperly increased the rating.

Sir H. B.  
Poland,

the rating  
of, by  
local  
assessors.  
Whether  
advisable.

Sir H. B. Poland, Q.C.

2 April '97

Valuation of Government or corporation property. Profit not a test.

Rating of municipal water-works.

Prohibited by statute from making a profit.

Community gets benefit.

Valuation of property.

Question of cost with regard to power of borrowing money.

Value of hereditament is what it will fetch, not what it costs.

Mortgage on property not an element in letting value.

2459. The gentleman who puts up the value does not pay it out of his own pocket, but the municipality that contests the value does pay it out of the municipal pocket, is that not so?—Yes, still they look after him. In some instances valuers are paid a percentage upon the amount of extra value they put on to the value of the parish, which is a very bad system.

2460. I understand you not to commit yourself to profit as a test in the case of Government or corporation property?—No, there is no such thing as profit there.

2461. In such a case as waterworks, even if the municipal owners are forbidden to make a profit, if they do not make a profit in money, would you agree with me that there is a profit, which is diffused over the community, which though not reducible in pounds, shillings, and pence, is of substantial value to the community?—Certainly.

2462. And ought to be as fairly taken into account as a money profit, which an individual puts into his pocket?—I think so.

2463. Do I understand you to commit yourself to the opinion that buildings put up with borrowed money should be valued more lightly than those which the man pays for himself out of his own pocket?—No.

2464. I misunderstood you in that?—Yes.

2465. I want to see that we are quite at one upon that subject?—One of the elements to consider is the percentage on the value of the land, and the percentage on the value of the building, that is, assuming the property is not in the market, and has not a market value.

2465A. Does it matter to the hypothetical tenant whether a building is put up by money borrowed from a bank, or by money taken out of the funds?—No.

2466. Therefore, you would not go behind the means by which the owner had put up his building, in ascertaining the annual value?—No, except that if he could get his money, like a public body, very cheap indeed, he would not rent at all, he would buy the land, and create for himself.

2467. Do I understand you to suggest that, because a public body can build at a less annual cost to itself, owing to its facility for getting money at a low rate of interest, property so built should be rated at a less annual amount?—I am rather inclined to think it should, to some extent.

2468. But why?—Because it is a question of what a tenant would reasonably be expected to give, and he would not give the rent, measured by 4 per cent. and 5 per cent., if he could buy out of money which he gets at 2½ per cent.

2469. An individual owner puts up a house on one side of the street, and the corporation puts up a similar house on the other side of the street; or a man who is not very financially solvent puts up a house on one side of the street, and a financially sound individual puts up one on the other side of the street; provided the houses are equally well built, what does it matter to the hypothetical tenant what are the circumstances of his landlord?—I quite agree. The absurdity of making a distinction, where you have got identically the same building at one corner of the street as at the other corner of the street, because one man can get his money at it at 2½ per cent., and the other has to pay 5 per cent. for it, has often been mentioned. It is quite clear that the buildings are of equal value.

2470. Can you conceive anybody extending such a principle as I have indicated to the case of land? Suppose a corporation buys a farm, borrowing the money at a low rate of interest—lower than an individual can do it; do you think that the tenant who was going to farm it would care—would he give any less rent to the corporation than he would to the private owner?—No, if you have got your tenant; but we are now dealing with cases where there is no landlord, and where there is no tenant, where you have got a hypothetical landlord, and a hypothetical tenant; you have got to apply the Parochial Assessment Act to that problem.

2471. I take the hypothetical tenant; the value of the thing is what it will fetch, not what it has cost to produce, is it not?—Yes, certainly, as in "Hudibras"—

"For what is worth in anything  
But so much money as 'twill bring?"

2472. I need hardly, I suppose, ask this other question, that whether the owner has a mortgage on

the property which he wants to let or not, does not matter to the hypothetical tenant, and should not be taken into account?—Certainly not.

2473. I admit the point which you made in answer to one question, that a property such as Holland Park should not be rated as building land, but do you not think that, where land in the immediate vicinity of a growing population is obviously kept practically derelict, waiting for a rise in price, the owner of that land should not in some way be rated?—I think not.

2474. Why?—According to the law, a man has a right to deal with his property in the way that he may think fit. In London, where land is very valuable, he has a right, if he chooses, to have a large garden.

2475. But your test is what a hypothetical tenant would give, is it not?—What a hypothetical tenant would give to occupy it in the state in which it is—it is *rebus sic stantibus*. I will refer you to a passage I quoted from Lord Mansfield yesterday. A man has a right to do what he likes. He may pull down a very valuable house, and build a stable in its place. He has a right to deal with his own property in the way he may think fit, and you must rate it in the state in which it is. You cannot dictate to a man.

2476. Has there not been a decision that if a man lets his land go out of cultivation, and grows thistles upon it, he is still to be rated upon what it would produce in good cultivation?—I read yesterday the two passages with regard to that view—one from Mr. Justice Blackburn and one from Lord Campbell. The thistle case is on the Notes; it is the case of "Regina v. Foyle."

2477. Did I not state it correctly, that, supposing an owner of a large tract of land in a country parish let it go out of cultivation, he being also the occupier, and it went derelict, he would be rated upon what it ought to bring provided it was kept in a good state of cultivation?—The *dictum* of Lord Campbell is to that effect, but it is a *dictum*.

2478. Will you distinguish the principle which underlies that *dictum* from the case you put to me just now, where a man has a valuable house, and pulls it down, and leaves the land a waste; why is the same principle not good for him?—With regard to the thistle case, the decision applies to the particular year, but after a few years, if thistles are grown continuously on this farm land, so as to make it valueless, or almost valueless, then the tenant, in the condition in which it then is, it having been left out of cultivation for a certain number of years, would not give the price for it. I think Lord Campbell's *dictum* is upon the assumption that it is in the condition in which a tenant would be willing to pay for the land in its then state.

2479. Assuming that to be the effect of the *dictum*, do you think it fair?—I think you must leave a man to deal with his property as he may think fit.

2480. Is that fair to the other occupiers in his parish, as compared with the occupiers of parishes in a union which possesses no such derelict land, and in which case the burden the parishes have to bear, as parts of the union, is spread equitably over the whole?—I do not think it is unfair. It is a question of degree. Supposing you told a man that he has got a gold mine, or a coal mine, under his land, and he says, "No, I prefer having this land as part of my garden, I am not going to dig it up."

2481. So far as the other inhabitants of the parish are concerned, the effect of the course of procedure adopted by the man who leaves his land derelict, is the same as if he had transferred it to Government under the old law, and they got nothing out of it at all?—Yes.

2482. You condemned that as unfair to them, in the case of the Government taking the property and abstracting it from the total rateable value; do you not see a parallel on that ground between the action of the one man and the action of the Government?—No; in the one case it has a value to the people who occupy it, in the other case it has not a value.

2483. I am looking, not to the conduct of the owner of the property, but to the effect of his conduct upon the people who are round about him?—I think you must assume that a man will always use his property in the best way for his own advantage. You must deal with things as they are. He does not leave it derelict out of malice; he has left it derelict because he is waiting for the market to turn, when he will get the best advantage out of it.

Sir H. B. Poland, Q.C.

2 April '97

Rating of vacant land, objections to.

Property must be rated on basis of value of its use for present purpose in present condition.

Sir H. B.  
Poland,  
Q.C.

2 April '97

Rating of  
tithes.  
Principle  
of valuation.  
Deductions.

2484. As it is for his own advantage, does that not rather make it worse that he should put his neighbours to disadvantage for his own account?—I do not see that.

2485. Tithes are one of the classes of property specially mentioned in the Act of Elizabeth to which you have referred more than once, are they not?—Yes.

2486. And they are rated upon their gross value, are they not?—They are rated upon what they will let for.

2487. Is that not another way of saying they are rated on their gross value?—There is the deduction.

2488. Supposing a clergyman has tithes of the value of 500*l.* year, he is rated on the 500*l.* a year, is he not?—Subject to the deduction for ecclesiastical dues.

2489. I want you to put it right for me, because, when I have got it right, I am going to ask a question or two upon it?—I would refer you to the case of "*Regina v. Capel*," which is reported in 12 *Adolphus and Ellis*, 382. This is a boiling down of the decision: Under 6 & 7 *Wm. IV. c. 96. s. 1*, the vicar of a parish receiving composition for small tithes is to be rated on such receipt in the same way as the occupier of land; that is, on the sum for which the same would let free from the tenants rates and taxes and ecclesiastical dues.

2490. What are included in ecclesiastical dues?—I forget for the moment what they are; they were mentioned by Mr. Round in the debate in the House of Commons the other day.

2491. I have got Mr. Round's words before me; you will tell me if these are what you refer to: "They were allowed to deduct the actual amount of rates paid, any necessary ecclesiastical fees, the amount of repairs to the chancel, and 5 per cent. for the cost of collecting the tithe rentcharge; but they were obliged to pay rates upon the remainder of the tithe rentcharge"; is that the passage to which you refer?—Yes.

2492. Do you agree with that as a statement of fact?—I think so.

2493. Then it is suggested, in some representations which have been made to us, that the amount which a clergyman has to pay to Queen Anne's Bounty, for such a thing as money borrowed to provide the parish with a parson's residence, should be deducted; could you give me any expression of opinion on that?—No, I have not considered it. It is not allowed now.

2494. Would you rather express no opinion as to whether it should be allowed as a matter of fairness?—It is a very debatable question.

2495. It is because it is debatable that I am asking Sir Harry Poland his opinion, if I may venture to say so?—I hesitate to give an opinion upon a matter which I have not considered.

2496. (*Mr. Dalton.*) With regard to the cost of collection, it is not. I suppose, a fixed rule that merely 5 per cent. can be allowed for cost of collection?—No, I suppose not.

2497. Whatever the cost of collection might be would be allowed?—I suppose so.

2498. (*Chairman.*) To the clergy, or, indeed, to the tithe owner, this amounts, does it not, to a rate upon income?—Yes, if you treat it as income; but it is treated as coming from the land—it is part of the value of the land. I do not know whether you have seen two letters, published yesterday and the day before, in the "*St. James's Gazette*." In one of them a rector writes and says it is perfectly just as it is now, and he gives his reason for it.

2499. I can easily understand the difference of opinion, but I was endeavouring to extract yours, if I could have it, because I want to learn from all sources?—I have learnt a good deal lately which I did not know before, but I have had very little experience in rating tithes, and I may say I have not considered the question at all except the bare law; what the state of the law is at present I think I know.

2500. (*Mr. Elliott.*) Does the law enable any deduction to be made in respect of stipends to curates?—Clearly not. Some of the decisions at one time allowed it, but the law is settled now, and there are no deduc-

tions allowed for a curate; so that if a man has got three churches to attend to, and he necessarily must employ perhaps two curates, he is not allowed to deduct a farthing.

2501. Are you aware of any dictum by the judges to the effect that the intentions of the Legislature in that respect have not been fully carried out in the later Acts of Parliament?—No, I am not.

2502. (*Mr. Dalton.*) If a clergyman were allowed to be rated on a different system in respect of tithe rentcharge because his income was derived from it, I presume that same principle would apply to his glebe land, because his annual income from his glebe, is his income just as much as his income from the tithe rentcharge, is it not?—Yes, it may be so.

2503. Therefore it would be necessary to rate him on his glebe on a different system from that adopted in the case of any other rateable property?—Yes, that may be so.

2504. (*Chairman.*) Do you wish to add anything to the evidence you have already given?—The only thing that occurs to me is that in two cases, in the one Lord Campbell, and in the other Lord Chief Justice Erle, expressed themselves very strongly that exemptions ought not to be allowed as a matter of benefit to particular persons, because it throws the charge upon the other ratepayers of the parish. There were two strong *dicta* to that effect; I do not know that they are worth reading because it is so obvious, but the judges have dealt with the point.

2505. There is one other matter, I admit at once it is not a legal point, and you may probably answer me that you have not considered it—have you ever thought over the possible differences, which may be justified, in the treatment and classification of rates, which are, so to speak, rates of burden and rates of benefit?—By rates of benefit do you mean school rates.

2506. I will put it in another form if you like—put on one side of the line a rate which adds to the utility and enjoyment of the particular property which is rated, and on the other side of the line a rate which does not?—Of course that matter has been discussed on the question whether the rate falls ultimately upon the owner or upon the occupier. Everybody admits that the school board rate cannot in any way be for the benefit of the owner; that must be for the benefit of the occupier who has children there in the parish.

2507. But not even necessarily exclusively for the benefit of the occupier, is it?—No.

2508. The education rate is of course one which it is very difficult to apportion?—Yes.

2509. I think perhaps the best example of a rate of burden is the poor rate pure and simple?—Yes.

2510. And one of the easiest examples to take of a rate of benefit is such a rate as a lighting or local road rate?—Yes.

2511. Do you not think that when you speak of the rates of any district being so much in the £, you must, before you found any inference upon that bare statement, separate as far as it is possible so to do, the rates which are rates of burden from the rates which are rates of benefit?—Yes.

2512. Can you suggest to me any test which in your opinion would be a satisfactory one to apply, or any definition which you could give me of a rate of burden and of a rate of benefit?—I cannot suggest a definition. I say you must deal with each rate by itself.

2513. I will suggest to you in a question a possible definition, and ask you to be good enough, if you will, to consider it and send me your answer, if you will take that trouble?—I will take any amount of trouble if I am equal to the occasion, but most likely I shall not be.

2514. Would you think a rate of benefit satisfactorily defined in this way—as a rate which is expended in the purchase of some thing, or some right for the use of the ratepayer; and a rate of burden as a rate expended on paying for an obligation contracted by a community, without regard to any benefit which might accrue to the ratepayer?—I will give my best attention to it.

## EIGHTH DAY.

Thursday, 8th April, 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

C. N. DALTON, Esq., C.B.

T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.

E. O. SMITH, Esq.

JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. THOMAS RATCLIFFE ELLIS called and examined.

2515. (*Chairman.*) I understand that you are a solicitor practising at Wigan, in the County of Lancaster, and also in London, and that you are Law Clerk and Secretary to the Mining Association of Great Britain, and also to the South Lancashire and Cheshire Coal Association?—I am.

2516. You represent professionally in Lancashire, particularly in the Wigan district, a considerable number of coal owners, and have conducted on their behalf many applications to assessment committees in connexion with the rating of mines, and also at the quarter sessions?—I have.

2517. The rating of mines is a subject to which you have given considerable attention?—It is.

2518. I think you are delegated to appear here to-day on behalf of the Mining Association of Great Britain?—I am.

2519. And this paper which I hold in my hand is the memorandum which you have been good enough to supply us with?—Yes, the Association appointed a small Committee from each district to assist me in the preparation of this memorandum. There was Mr. Cooper, from the north of England, who is the solicitor to the Association there; Mr. Fletcher of Cumberland, who is a large coalowner and President of the Association; Mr. Parker Rhodes of Yorkshire, who is solicitor to the Yorkshire Association; Mr. Alfred Hewlett, who is a very large coalowner in Lancashire and Cheshire; Mr. Salmond, of the Midland counties, who is also largely interested; Mr. Gardner, of Cannock Chase, who is a solicitor acting for coalowners there and for the Association; Mr. Cloughton of South Staffordshire and Worcestershire, who is a large coalowner; and Mr. Deakin from the Forest of Dean, who is also a considerable coalowner. Then Scotland appointed Mr. John Wilson, M.P. (Falkirk Burghs); and my memorandum was sent down to South Wales, and considered at a meeting of the Association, and approved of. So that I think we may take it that the memorandum which I have supplied has the approval of all the coal districts in England, Scotland and Wales.

2520. I think your Association is a federation of a considerable number of local associations, is it not?—It is.

2521. And represents, I suppose, a very considerable amount of invested capital?—I estimate that the coal alone, outside the iron mining, certainly represents over 100 millions of invested capital.

2522. We know that coal mines are one of the class of hereditaments which are mentioned in the Act of Queen Elizabeth, which is the foundation of our system of rating?—That is so.

2523. What was the effect of the Act of 1874 upon the subjects which you represent?—The Act of 1874 was the Act which made other mines rateable, I think, was it not?

2524. Yes that is the Act I am referring to?—The construction put upon the Act of Elizabeth was that it

only extended to occupiers of coal mines, and that other mines were not rateable, because they were not included in the description of coal mines; and the effect of the amending Act was to make all mines rateable. It prescribed the method of rating one class of mines, tin, copper and lead; it left the other mines unprovided for by any method of assessment, but in respect of those three classes of mines, it provided that the assessment should be made in a particular way.

2525. The Act had no direct effect upon coal mines, I believe?—It had no direct effect upon coal mines.

2526. Would you describe to me exactly the process by which an entry affecting the valuation of coal mines appears in the assessment list?—Is is a very difficult thing to do that. It depends which union you take. If you take the Wigan Union, the entry for the colliery there would be this:—a gross column value is fixed, how, I scarcely know, and then there is some deduction made from that, to get at the rateable. The rateable value is fixed in the Wigan district by an arrangement of this kind; there is a list which was made many years ago of all the mines that are worked in the Union, and then there is what is called a field price attached to every mine. I have got a list of them here, which I would hand in.\* In Lancashire generally we estimate the area by what is called the Cheshire acre, which is about double the statute acre, and each mine has attached to it, a price per foot thick, for each Cheshire acre that is worked—a royalty, that is. Now that royalty is not in all cases the royalty which is actually paid by the worker of the mine, but it is what the assessment committee fixed some years ago, as what would be the ordinary letting royalty value of that particular mine under ordinary circumstances. Then each coalowner in the Union is required to send in at the beginning of each year, a statement showing the quantity of each mine which he has worked during the preceding year.

2527. You say each coal owner is required to send in such a statement, by whom is he required?—By the Assessment Committee, it is an arrangement which has been made.

2528. That is under an arrangement and not acting under any compulsory power on the part of the Assessment Committee?—No, it was under an arrangement that that was agreed to be the method of ascertaining the annual value. Each account is sent in but not in tons; it is sent in according to the area of a foot thick which has been gotten of the particular seams.

2529. Are any steps taken to verify that statement or is the coalowner's statement accepted as accurate?—As a rule it is accepted as accurate. If any question arises about it it generally arises upon appeal when the assessment is increased; then the coalowner, when he appeals, produces evidence, probably the evidence would be the "get book" to show what he has paid his lessor in respect to that quantity of coal. He has to

Mr. T.  
Ratcliffe  
Ellis.

8 April '97

satisfy them, if there is any doubt about it, but as a general rule his statement is accepted.

2530. The lessor's financial interest of course being contrary to the lessee's in this respect, the assessment committee are satisfied if the lessor is satisfied?—Yes. That is the evidence which is given in the few cases in which there is any necessity to corroborate the statement. Then the area which he has "got" is taken at a foot thick. Take the first on the list, the Ince Yard Mine, the price there is 60*l.* per foot thick per Cheshire acre. If he had worked one acre of a foot thick it would be 60*l.*, supposing the seam was 3 feet thick it would be 180*l.* It is not taken out in tons, it is taken out in area, that is the principle adopted in Wigan; and that includes the plant. If there should be anything about a colliery which is exceptional, for instance, supposing that at one colliery there should be a very large workshop, which serves a great many collieries, there would probably be some additional assessment put on in respect of that; but the plant which is necessary for the getting of the coal and dealing with it on the surface is all included in that 60*l.*, or whatever the price per foot per acre might be. That system has been in existence in Wigan for 20 years to my knowledge. At the present time the assessment committee have decided that they will have a re-valuation made of the whole of the collieries in the Union, and that is now being undertaken by Mr. John Cross of Manchester, who is an expert in rating.

2531. But the system at Wigan being a purely voluntary arrangement either side might break away from it?—Either side might, and, as a matter of fact, the cause which has led up to this re-valuation is that a coalowner did break away from it, and under these circumstances: The "get" of last year—I think, as a matter of fact, it was the preceding year, when the dispute arose—was sent in by him in the ordinary way in accordance with the arrangement, but during the year of the assessment he had very serious accidents at his pit—the shaft fell in and there was not any prospect of his getting any coal at all. The Assessment Committee assessed him on the get of the preceding year. He said that that was very unfair to him, because the assessment should be upon the value of that year, and whilst under normal circumstances one way—perhaps the best way—of getting at the quantity which you would get this year would be to see what you got last year, in this exceptional case it was unfair. He appealed against the assessment at the Liverpool Quarter Sessions, and the Quarter Sessions decided that the assessment was bad and that it would not stand. Then the assessment committee upon that decided to have a re-valuation of the whole of the collieries in the Union, and I suppose some other principle will be adopted, not by agreement as this is but more in accordance with what they may be advised will be the legal position.

2532. You will agree with me, I suppose, that a system which depends only on the continuance of mutual agreement is not sound or safe for either party?—It is very undesirable indeed.

2533. Would your Association like to see the matter settled once for all upon statutory authority?—We should, in order that there might be some uniform method prescribed of ascertaining what annual value is.

2534. Mr. O'Connor suggests to me a question which I will interpolate here: Your system which has endured for the last 20 years, depends, does it not, upon the assumption that all the coal is of a comparatively uniform quality?—It does depend upon that, subject to this, that, supposing there was any particular case in which a man was subject to some special disadvantage, the assessment committee have, in cases that I have known myself, made a reduction in the assessment to compensate him for that disadvantage, over and above what would be the normal condition of the mine.

2535. By disadvantage, do you include an inferior quality of coal?—I have known an allowance made for an inferior quality of coal, but it is more frequently considered in cases where there is water which has to be dealt with—where the mine is worked under less favourable conditions than the seam would be worked in the ordinary way.

2536. Do they make any allowance for distance from a railway as an unfavourable condition?—That is not allowed for in this arrangement between the assessment committee and the coalowners, but I think it ought to be. I ought to say this, that as the collieries in the

Wigan Union are pretty well all in a group, I do not think there would be any great disadvantage under that head.

2537. Are they tolerably uniform in that respect?—Yes.

2538. The coal, which is lying in a thick seam, four or five feet thick, would be relatively more valuable per foot would it not, than coal which was lying in a thin seam of only one or two feet thick?—It would depend, to a great extent, on the quality. The price per foot thick in the Wigan Union varies from 60*l.* to 150*l.*, for instance, the Cannel is 150*l.* per foot thick, per acre, and the mine called the Ince Yard Mine, which is one of the commoner mines, is as low as 60*l.* per foot thick, per acre. That would be taken into consideration in considering the royalty.

2539. It is quite clear, is it not, that your system of taking a basis of value per foot thick, while it might do for a limited area where the mines were all of a closely approximate quality, could not be expected to form a basis over the whole country where there is every infinite diversity of circumstances prevailing over widely distributed areas?—That is so. If you take, for instance, some of the mines known by the same name in the Wigan Union, you will find it of a very different character even in the adjoining Union. When I speak about a "mine" I ought to say "seam" properly, to be accurate; it is the layer—the particular seam—I am chiefly referring to here.

2540. You point out in paragraph 3 of your memorandum that different assessment committees have different systems?—That is so.

2541. And you give us, as an example, another system, the Leigh Union?—Yes. The Leigh Union adjoins the Wigan Union. The system in the Leigh Union is described in paragraph 4 of my memorandum. There it is not an acreage rent which is taken—that is, not so much per foot thick, per acre—but it is a tonnage rent, and you have to return there the number of tons that you have "got." Then a royalty is fixed upon that, not by agreement, but by the expert who values. He fixes in his own mind, I suppose, what he thinks to be a fair royalty for a particular seam per ton. Then he adds to that the interest upon some capital value of the plant; I do not know exactly how he gets at it, but he puts a certain amount as representing the annual value of the plant, in addition to the royalty, that is, of the plant which is necessary for the getting of the coal to the surface, which would include the shaft, the winding engines, and the other plant necessary to bring the coal from the seam to the surface. Then he adds to that a further assessment with respect to railways and other appliances which take the coal from the surface to the canal, or to the railway by which it goes to market.

2542. This system, I take it, is subject to the same comment which we made a moment ago; that after all this sanction is a voluntary one, and could not really be enforced by law if anybody broke away from it, except as a matter of bargain?—It is very difficult to say whether it could or could not. What is to be ascertained is: what this would let for per annum, and that must be ascertained in an artificial way. If the quarter sessions considered that that was the best means of ascertaining this annual value, I suppose it would be quite competent to uphold it.

2543. I suppose your Association will agree in this: that if you are to be assessed, as the law says you are, upon the letting value, the best thing for everybody is that that letting value should be ascertained as certainly and as cheaply as possible?—Quite so.

2544. Why cannot you take the actual value for which a mine is let, when it is let?—That might or might not be the lettable value of the royalty at the time that the assessment is made. When a man takes a coalfield, he has to take it to some extent on trust, and it is not until he has sunk his pits that he knows exactly what the character of the coal is and what are the difficulties which he has to meet with in getting at the coal. So really to get, if it were possible, at perfect fairness, you should only fix the value of the royalty, when you know what the coal is, in respect of which you have to pay the royalty; of course that is impossible in letting and taking a coal mine—you could not wait until that; you make your bargain with your landlord, and it may be a good bargain or it may be an indifferent one.

Mr. T.  
Ratcliffe  
Ellis.

before  
mines have  
been  
worked.

Mr. T. Ratcliffe Ellis.  
April '97  
rents and practical systems of payment.

2545. Is not your royalty so much per ton?—The royalty generally throughout the country is based, I think, on the acreage rent; I should think there are more places where it is based on the acreage rent, that is so much per foot per acre, than there are places where that method is not adopted.

2546. I will take it in that way, and we will follow out that case. A royalty is based on the acreage rent, and after the mine is in working order, according to the terms of the agreement, a certain lump sum is paid to the owner, calculated according to the acreage rent bargained for and the amount that has been worked during the year?—The leases are in this form—there is a certain or fixed or minimum rent reserved in the leases; that is a rent which you undertake to pay, whether you get coal or whether you do not; in addition to that there is a royalty rent of so much per acre or per ton on the quantity that you get, during the period over which the rent runs—a half year or a year.

2547. If the minimum rent is 500*l.*—I take a fictitious sum—and the rent calculated on the other system only comes to 450*l.* the owner chooses the minimum rent of 500*l.* does he not?—He does.

2548. If the acreage rent comes to 750*l.* he chooses the acreage rent and gets that?—Yes, but the first 500*l.* is only on account as it were. Supposing the certain rent was as you say 500*l.* and this year we worked 450*l.* worth of coal we should have to pay the 500*l.*, but if next year we worked 550*l.* worth we should only pay 500*l.*, so that we should recoup the first 50*l.*

Valuation of mines. Systems in Scotland.

2549. That is exactly what happens in my own country. You mentioned that Mr. Wilson, Member of Parliament for the Falkirk Burghs, had been made a member of the Committee which helped you to draw up this paper?—I sent it to Mr. Wilson after I had drawn it up and I have got a letter from him in reply with reference more particularly to Scotland I think; he says that in Scotland: "The local assessments are the county council and parish council and are paid on the amount of rent paid to landlord. The landlord pays fully two-thirds of the county council assessments, and half of the parish council assessments. There is an abatement of 12½ to 25 per cent. on all the items of parish council, but only on the items of public health and water on county council. Every parish differs from another as to the allowance in Scotland. Dwelling-houses in connection with collieries are assessed separately on the amount of rent produced or value when rent-free, both for local and Imperial purposes in every respect the same as other houses. Ground rent, that is ground occupied by collieries, workshops, and railway sidings,—is assessed on the rent paid to landlord for same, but when paid to farm tenant as compensation for surface damages it is covered by the rent paid for assessment purposes. I quite agree with you that it is unfair to value the royalties paid for mineral as rent and to assess on the full amount. There should be an allowance for return of capital. I do not know of a case in general business where a merchant is assessed on the purchase price of his goods, it is only the mineral estate owner who is. He pays a big price for an estate with minerals in it and when he comes to realise it after long delay he has to pay both local and Imperial taxes on the stock. I have as above, I think, given you an idea of how things are with us in Scotland."

2550. That letter, of course, obviously divides itself into two parts, the first is a statement of fact, the second is his argument which would lead us into a wide field of controversy. I do not at this moment take up the second part, but if I may venture to say so from hearing it read I think the first part of the letter is a fair abstract, in short form, of the Scottish system. How would such a system suit your Association?—That, I gather, is a system, by which part of the rates are paid by the landlord, that is, by the lessor.

2551. Certainly, but for the purpose which we are on at the moment for getting at the value of the mine, we may leave out of consideration who pays it; it is an important subject, without doubt, but the question at the present time is what is the value of the mine as a rateable subject; I limit my question to that point, as a method of ascertaining the annual value of a mine as a rateable subject, what would your Association say of the Scottish system?—According to the Scottish system, he says: "The local assessments are the county council and the parish council, and are

"paid on the amount of rent paid to landlord. The landlord pays fully two-thirds of the county council assessments, and half of the parish council assessments. There is an abatement of 12½ to 25 per cent. on all the items of parish council, but only on the items of public health and water on county council. Every parish differs from another as to the allowance in Scotland. Dwelling-houses in connection with collieries are assessed separately on the amount of rent produced or value when rent-free both for local and Imperial purposes." If I understand him aright the royalty is assessed on the land on the surface used for the purposes of the mine, and there is nothing added to either one or the other in respect of plant; then it is pretty much what I should say would be an acceptable arrangement.

2552. Cannot you leave out for our purpose the question of the value of the land on the top because that is the agricultural value?—There is a good deal of land used about a colliery for various purposes, not agricultural, but for spoil banks, and various purposes of that description; that, I should say, ought to be included in the royalty value. Supposing we have any land for agricultural purposes, that, of course, would be a separate matter of assessment altogether.

2553. Take land which you spoil for agricultural purposes, but which you use for banks, and sidings, and so forth, how do you propose to have that valued for your purposes?—I should say that there should be a reasonable quantity of land available to the tenant for the purpose of working the mine, and that the rent which he paid for the royalty should include that reasonable quantity of land; it is necessary for the purpose of getting the coal out, and it should be included. Then at the end of his lease of course he may be under obligations which are of quite a different character to clear that land off or to purchase it.

2554. Subject to that reservation and subject to the question of possible deductions, on which I may ask you a question or two hereafter, have you any further comment to make in regard to the system which Mr. Wilson described?—If it be as I have described it, I have no further comment to make upon it because it is that the payment in respect of royalty does represent the plant and other necessary machinery for the purpose of getting the coal. I have other instances showing the effect of this inequality.

2555. Have you anything to urge on behalf of your association on the question of deductions—which I think you call exemptions?—Yes. Having ascertained in some uniform method what the annual value is, a colliery should only be rated upon one-fourth of that annual value.

2556. Why do you fix the one-fourth?—Because that is what the Public Health Act fixed for the rating of land, railways, tithes, market gardens, nursery grounds, reservoirs, and of the other things which are described in the Public Health Act as being entitled to an exemption from the full amount of the rate.

2557. Have you no other reason?—Yes, I have another reason. A coal mine cannot possibly benefit by a very large proportion of the expenditure, the money for which is produced by the district rate. What is rated really is an ungotten seam of coal. Even in the cases where valuers add something to the royalty in respect of plant; a very large proportion is in respect of an ungotten seam of coal that is lying yards below the surface, it is ungotten, but as soon as it becomes coal on the surface. It is not rateable at all. It then becomes a chattel, and then it is stock in trade. Therefore the assessment upon the occupier of a coal mine is upon an ungotten mine. You cannot sewer it, you cannot get at it to light it; in fact you can do nothing for it, and in that way it differs from other classes of property.

2558. Our reference would cover the question of coal becoming a chattel because it says we are to inquire: "How far all kinds of real and personal property contribute equitably to such taxation," so that we could not confine ourselves to the question of whether coal is at this moment, when on the surface, rateable. The question for us would be, whether it is or is not fair, that it should escape rating by coming to the surface as a chattel?—I should put it that, whether it is underneath and unsevered, or whether it is brought to bank and put into waggons within a few hours after it gets on to the ground and passes by railway or by canal entirely away from the place, it has no benefit what-

ever, either from the lighting of the district, or from the sewerage of the district, or from the cleaning of the highways, or from a great amount of the expenditure which the district rate provides for.

2559. Do you think that the person who owns it and deals with it gets no benefit?—I do not see what possible benefit the person who owns it can get in respect of this particular property. If he has got a house in the district he pays his rates for the house. The people who are employed at the colliery live in houses which pay rates, and which get all the benefit from these things, and therefore, they properly pay for them. I might mention cases in the north of England where not infrequently—I should think generally—the colliery proprietor owns the houses in which the workmen live, and for which he is separately assessed.

2560. Does not the opening up of a coal mine and the working of it bring a large population into a district, whose children have to be educated, and unless something more than the rates upon the houses in which they live are paid, would not their presence cause a large additional burden upon other classes of property which are in the union?—It would; but I think as against that should be considered, that when a colliery comes into a district it improves the rateable value of pretty nearly the whole of the property in the district. Land which was purely agricultural, becomes building land, and instead of being let at probably a pound or two per acre, it becomes worth a penny a yard, which is more like 20*l.* an acre. Large wages are paid to the people; they spend them with the shopkeepers, and they have, in point of fact, a wage given to them sufficient to educate their children and to pay all the rates.

2561. Would you, or would you not, agree with me that for general purposes, if coal mines were exempted, as you suggest, the opening of a coal mine would cause a large additional burden upon other property in the area?—The rate has to be found, but there might be other property which is not at present rated that might possibly be brought in to make up that deficiency.

2562. I should be glad to have a suggestion?—I prefer not to make a suggestion about increasing anybody else's rates.

2563. I beg your pardon, I thought you were leading up to it?—I simply wish to point out, that as far as collieries are concerned, they are paying a great deal too much. I should not like to take the responsibility of saying what other property is not paying enough or not paying at all.

Valuation  
of coal  
mines.  
System  
adopted in  
the Orms-  
kirk union.

2564. You were indicating, a moment ago, that apart from the differences of system between the two unions of which you have spoken—the Wigan Union and the Leigh Union—you had some other instances which you desired to put before us, showing the disadvantage of the present uncertainty and inequality; was that not so?—That was so. Adjoining the Wigan Union is another Union known as the Ormskirk Union, which is in the neighbourhood of Liverpool. In the Ormskirk Union there is a township which is known as the Skelmersdale Township, and which is largely a mining township. Out of a total assessable annual value of 25,000*l.*, coal represents about 16,500*l.* The method of rating coal mines adopted in that Union is to assess a royalty value on the coal gotten, and to add to that a sum of 2*d.* per ton upon that quantity for shafts and plant. Then from this gross sum there is a deduction of 10 per cent. to get at the rateable value. This applies where both mines and shaft are within the Union. Where the mine, however, is in the Wigan Union, and the coal is brought to bank by means of the shaft in the Ormskirk Union, the 2*d.* per ton, less 10 per cent., is charged in the Ormskirk Union, the coal being assessed in the Wigan Union. In the Wigan Union, however, the method of assessing coal which is brought to bank in another union is by deducting from the royalty assessment one-seventh of the amount. The effect of this is as follows: I will instance it in connection with one mine, known as the Arley mine, and in connection with the largest colliery in the Skelmersdale District, namely, the White Moss Colliery Company, Limited. Where that mine lies within the Skelmersdale Township in the Ormskirk Union, and is brought to bank in the same Union, the total assessment per ton is 6*d.* rateable. Where, however, the same mine is brought from under the adjoining area which is situated in the Wigan Union, but raised in Skelmersdale, it is assessed as

between the Wigan Union and the Ormskirk Union at practically 8*d.* per ton, as follows: The royalty value put upon this mine in Wigan is 90*l.* per foot thick per acre, that is to say—taking 3,000 tons to the acre of one foot thick—7*2d.* per ton. From that amount the Wigan Union allow one-seventh in respect of the plant which is in the Ormskirk Union, leaving 6*18d.* to be paid in Wigan. Then in the Ormskirk Union they are charged at 2*d.* for the plant rent, less 10 per cent.; that means 1*8* of a penny, which, added to the assessment in the Wigan Union, makes a total assessment at the rate of 7*98d.* per ton. So that the difference in the method between these two unions in point of fact means this: that this very same mine which is worked at the same colliery and brought, so to speak, from the other side of the hedge which divides the two Unions, if the plant and the mine are in the Ormskirk Union, it is rated at 6*d.* per ton, and if the plant is in the Ormskirk Union and the mine in the Wigan Union, the want of uniformity makes it 7*98*, practically 8*d.* per ton.

2565. You mean that the rateable value is that?—Yes.

2566. To some extent, although, of course, I do not for a moment say it is compensated altogether, a higher valuation means, relatively speaking, a lower rate than would otherwise be collected?—Yes.

2567. So that I would be right in this, that the whole difference between the two is not between the figures that are mentioned but between some other not quite easily ascertainable difference?—The difference in money to each colliery would, of course, depend upon the amount of the rate in the *£* which was levied in each union.

2568. No doubt, but apart from that, the higher the valuation the lower the rate which will produce the same result—that is obvious?—It would be so.

2569. Supposing a uniform deduction were made from every subject in an assessment area, the rate per *£* would apparently appear somewhat higher, but the burden would not be increased?—It would not be different. Of course, I am aware there must be difficulties in two unions where you have got the plant in one union and the mine in the other, because it requires some adjustment between the two unions, but I should say that the sum should be fixed for the royalty value of the quantity got, and then the two unions should agree between themselves as to how much should be allowed to the one in which the plant was. I have other instances, and I will put it generally thus, that there are scarcely two unions where you find the same method adopted, and that the result of that is, in my view, to bring about a great inequality.

2570. I understand also, from what you said in answer to a previous question put by me, that your Association would like to see the obtainable royalty taken as the basis for ascertaining the annual value?—We should. In 1877 there was a Valuation Bill before Parliament, and this matter was then considered by the Mining Association of that day. An attempt was made to obtain a clause which I have given in paragraph 12 of my memorandum, which would carry out the principle I am suggesting, namely, that the royalty value should include the plant.

2571. That is the royalty actually obtained?—No, I should not say the royalty actually obtained. I should say that it would work out in this way; I am working a colliery with a number of seams; the only question to be ascertained would be, if you had to undertake a lease this year of the ordinary character of a mining lease, what would be a fair royalty to be paid in respect of each of those seams?

2572. Why not take the sum which was actually paid as between lessor and lessee?—I will give you two or three reasons. The first is that it might be taken at a time when royalties were very low. I know one lease which has just expired, which was for 100 years, and which was entered into when the royalty was a very low royalty indeed; it would be very unjust to the other ratepayers and to the other colliery proprietors if that were the royalty taken. Again, I have known cases in which, from the coal being peculiarly situated, it commanded a fancy price, and a much higher royalty was paid, under exceptional circumstances, than anybody would otherwise give for it.

Mr. T.  
Ratcliffe  
Ellis.

8 April '97

Valuation of coal mines. Mines placed in favourable and unfavourable circumstances. Value to lessor. Royalty and rent.

2573. You have taken an extreme case of a lease for 100 years, but would you say that on a lease of more moderate duration the actual sum paid under the terms of the lease would not be a good basis to take?—I should hardly like to go as far as that. Supposing you have a lease of a mine which is open, that is to say, supposing you have got your pits sunk and you have got into the seam, and you know pretty much what it is and then you take an adjoining seam; I think the first would very fairly give the lettable value of the second seam. But in a case where you are going to a new coal-field, for instance, and you undertake to pay a certain amount as the value of the royalty of the seam, then when you come to sink your pits to it it may be a great deal deeper than you contemplated, it may be that you have come across a great amount of water, which makes it more costly to work; it may be, when you get to the face, you are disappointed in its quality. Therefore, whilst I should not exclude the actual royalty paid, I should not take that as the invariable standard which should fix the royalty value for assessment purposes.

2574. Would you give the assessment committee power to obtain the information they require from the lessor or lessee of the mine?—I think it would be perfectly fair to give them the right to obtain the information from the lessee. I do not know that I could suggest any reason why they should be excluded from getting information from the lessor—by production of the lease, for instance.

2575. It might be more information than that, might it not; it might be the sum he actually received?—I should not at all object to the lessor being required to show the amount which the lessee paid to him, which would show the quantity which he had got, and how it was ascertained.

2576. As a matter of fact, it would be a guarantee in favour of honest people?—I think it would, and I think it would be an advantage to have such an arrangement, because those who send in correct returns would desire that everybody else should do the same. In support of the view, that the plant should not be included, there is a precedent for it in the Act of 1874, which made other mines rateable, and which, so far as I know, is the only Act which provides as to the method by which mines should be rateable with respect to tin, lead, and copper. It provides that the royalty should be taken as the actual value, and that that should include the plant. Then, again, if you adopt any other principle than that, if you say that it is not legal unless there is an addition made to the royalty for the plant, I do not quite see how anything like uniformity or equality can be obtained, because there might be a colliery which has the very great disadvantage of having to incur a much larger expenditure on plant than another colliery. In a colliery where there is a great amount of water to be dealt with for instance, that means the setting up of a large amount of machinery especially to deal with water; but another colliery getting the same seam of coal may be free from water. I think it would be a very unjust thing to rate the colliery which has the disadvantage of the water upon the plant which is necessitated by that disadvantage; that colliery would be less eligible, to a tenant, and yet if you rated it upon the plant, it would be rated on a higher sum of money. The only other principle, so far as I know, which is adopted is that in some cases the assessment is based upon a certain proportion of the selling price of the coal. I think, in the Cannock Chase District, that is done. There is a good deal, I think, to be said for that, but I think there is something to be said against it. I think it might operate unfairly to the rating authorities, and also unfairly to neighbouring coal-owners, and for this reason: A colliery which is very favourably placed as to the coal and the means of getting it, can get it for less per ton than a colliery which has disadvantages, although they both sell in the same market, and both sell the same coal, because the man who has the favourable colliery can obtain the same margin between the cost of getting the coal and the sum he gets for it by selling at a less price, and if a proportion of the selling price was taken he would be assessed at less money. Then the man who has the unfavourable colliery has the disadvantage of having to get a bigger price in order that he may secure the same margin between the cost and the selling price. I think it is open to that objection.

2577. But then on the other hand the man with the less natural advantages would pay less royalty rent?—I am not sure of that.

2578. I will put it this way: The owner of the mine which has the less natural advantages—the ultimate owner—would one year with another get a less return from his mine?—No, I do not think that would necessarily follow.

2579. Surely he would?—I think it ought to follow for rating purposes; I think that that ought to be so in order to meet the difference in royalty.

2580. Just tell me why one year with another the man with a coal mine with the least natural advantages does not get the least return acre for acre worked?—The man with a coal mine, or the lessor?

2581. I mean the lessor of course, because after all, we are practically agreed that it is the ultimate value to the lessor that has to be taken as the basis of the rating?—The ultimate value to the lessor, I suppose it is; it is what a tenant would give.

2582. That is the value to the lessor, is it not?—Yes. The reason is this; that the lessor gets his rent entirely irrespective of whether the lessee makes any profit or does not make any profit. I can understand that there may be coal-fields in the same district—and I could tell you in a moment where it could happen—where a royalty is paid exactly of the same amount to the lessor, but where one colliery is worked at a profit and the other cannot work except at a loss. In one case there would be the question of water and in the other case the coal might be nearer to the surface.

2583. You are not going to put it to us, are you, that except for a limited time the coal goes on being worked at a loss, and the lessor is getting his rent and the lessee is losing his money?—Of course, if that went on for ever there would cease to be any collieries.

2584. Would that need to go on for ever for that? Surely the lessee would cry off before very long as soon as the lease was up, or at the first available opportunity?—The lessor gets his royalty, it is the worker of the coal who suffers. The lessor's royalty is paid to him irrespective of what the coalowner does until the time comes when he cannot get coal any longer, and then he goes to his landlord and asks for some remission in his rents.

2585. Then really it is the value of the thing one year with the other to the lessor, which is the same as the letting value, is it not?—It is. But I should like, if you would allow me, to qualify that in this way. I would put what appears to me to be the strongest case against the view that I am suggesting. If the lessor is in possession, not merely of a coal seam, but is in possession of a colliery with all the appliances for working the coal, and he had to let that to a tenant, assuming, of course, the coal was worth getting, he would ask and he would get a larger amount per ton than if he simply had to let the seam without the means of getting it. That it is true, would be the rent, but that would not be the rateable value, because from the rent which the tenant would give there have to be deductions made for repairs, insurance, and other expenses necessary to maintain the hereditament in a condition to command that rent.

2586. That is, taking a parallel case, the difference between letting a furnished and unfurnished house, is it not?—Scarcely, for this reason; I am assuming that the plant belongs to the lessor; he has got it somehow or other—

2587. Is that a common state of affairs?—It is very seldom indeed the case, unless the lessor has had to take it because it did not pay. I am assuming a case in which, for some reason or other, a lessor is in possession not only of the coal but of a colliery which would include the coal and appliances for getting it. If the lessor deducts from the excess which a tenant would pay him over and above the royalty value, the repairs, insurance, and depreciation, that is, if he sets aside a sum of money which, when the undertaking was finished, would put him back his money that was spent on that plant, he would have nothing left but the royalty; if on the other hand the tenant has to do it, he could afford to give nothing more than the royalty. The plant is put down at a colliery for a specific purpose, that is for the purpose of getting the coal; as soon as the coal is got the plant is useless altogether.

2588. I do not want to split hairs with you, but it is not altogether absolutely useless, is it?—I tell you

Mr. T. Hacliff Ellis.

8 April '97

Assessment Committee should have power to obtain information from lessor and lessee of coal mine.

Valuation of mines, royalty the actual value including plant.

Valuation of coal mines. System adopted in Cannock Chase district.

Mr. T.  
Ratcliffe  
Ellis.

8 April '97

what you could do with it; assuming the colliery runs its life out you could sell the plant for old machinery, and it would probably take the whole of that to make your surface good and to get rid of your obligations under the lease, so that, practically, it is put there for the purpose, and for the sole purpose, of getting that coal; that is a part of the expenditure. You must get the money back to replace that, and depreciation in order to restore that money to you and the cost of repairs, would in my judgment—and I have asked a great many people whether I am correct in that and they say they think I am—would absorb anything in the shape of rent. So that whilst it is perfectly true that the landlord would want a larger rent, yet if he set aside what he ought to set aside, he would have nothing left but his royalty.

2589. That case you have just been putting applies only to circumstances where the lessor is letting something more than the mine, and is letting part of the plant with which it is to be worked?—That is so.

2590. In the other case where he is letting merely the mine and the plant is the property of the lessee, no corresponding deduction would have to be made from the rent to get at what you call the letting value?—Precisely the same deductions would have to be made.

2591. Why?—Because there the colliery owner is the landlord of the plant, and he has to make precisely the same deductions in order to get at the rateable value. He wants back his money.

2592. I do not quite see that, because in the one case the very proper charge for restoring the capital invested in plant would be included in the working expenses of the lessee and excluded from the rent—from the royalty?—That is exactly what I say, that the difference between the royalty and the selling price should be hypothecated; first of all to pay the cost of getting the coal, secondly for the depreciation of the plant and to set aside a fund to get back the money which the plant represented to the owner; and, lastly, as to the balance, the profits, they should belong to the owner.

2593. I do not follow that argument in the case in which the plant is the property of the lessee, because surely the royalty which he then pays goes directly into the pocket of the lessor, and, except for one circumstance, which I will allude to in a moment, is as purely profit to the lessor as the rent of agricultural land?—The royalty is not the rent of agricultural land.

2594. No, there is one difference which you fairly allude to in your paper, namely, that the royalty upon coal includes the consumption of the *corpus*—of itself; it is done after it is all taken out of the mine. Therefore, in that sense, it is not analogous to the rent of agricultural land, but, with that one exception, surely the royalty which goes into the pocket of the lessor is comparable with the rent of agricultural land in the case in which all the plant is the property of the lessee; if not, I will be glad to hear what you have to say upon it?—I should not say that. I should say it is not rent, and it is not profit. In the Acts of Parliament which provide for a tenant for life, for instance, in leasing coal mines, he is only allowed to have a certain proportion of it, and the balance is put aside as capital. I think that the cases are precisely the same, if I may be allowed to say so, whether the plant belongs to the hypothetical landlord, who for some reason has got possession of it, because he has to set aside a sinking fund to find him the money back again, and, therefore, he has nothing left to him but the royalty; or whether the plant belongs to the tenant, because he has to do the same thing.

2595. Yes, but he pays the royalty in addition, and, therefore, he pays a less sum as royalty?—I say he pays exactly the same royalty, because, although he pays the lessor, who has got the plant-right royalty *plus* something else, the latter is taken away altogether by the depreciation which has to be put aside either by one or by the other. Supposing, for instance, the tenant took it, and he said: "I will undertake to cover all this depreciation; I will undertake to give you back, at the end of 20 years, 20,000*l.*, which is the value of that plant;" then the amount which he would have to put aside would leave nothing but the royalty, that is, the rental value of the undertaking.

2596. (Mr. Dalton.) I think, in the clause which you have printed at the end of your memorandum, you propose that the gross and rateable annual value of the mine, on the basis there fixed, should be the same?—Yes, for this purpose.

2597. There is a very great difference, I think, in practice with regard to the deductions which are made to arrive at the rateable value in different unions in the matter of coal mines?—Very great indeed.

2598. In some unions no deduction is made at all, and in others all kinds of deductions are made?—Quite so. In some unions they seem to add the royalty and the plant rent together and make a deduction from the whole sum, but I do not know upon what ground they make the deduction from the royalty. In other cases they make a deduction from the plant-rent only and leave the royalty a fixed sum. It varies almost in every case, and there is no uniform practice.

2599. Does that lead to litigation in any way?—It leads to appeals very frequently.

2600. There is no statutory provision as to how you are to make any deduction to get at the rateable, is there?—There is a statutory provision, and that is in the Parochial Assessment Act. It says that you must deduct—I forget the words exactly,—but certain taxes are mentioned, and then "repairs, insurance, and other expenses," necessary to maintain the property in the condition to command the rent.

2601. But that is not applicable to this system of valuing coal mines, if you value them on a royalty rent?—It would not be applicable, if you adopt the principle of valuing on the royalty, because that would be the net value. The suggestion in the clause is that it should be the net value, and therefore you would not want to make any deduction from the gross assessable value.

2602. The only case in which you can properly make any deduction in the case of mines to get at the rateable value would be, if you include the value of the plant in the gross estimated rental?—Quite so.

2603. Do you know of any other union, in which the system of valuing coal mines, which is in force in the Wigan Union, prevails?—I do not know of any other. That was an arrangement made as I say, 20 years ago, certainly, I have known it for that length of time, and it was come to by an agreement, after a great deal of trouble between the coalowners of the district, and the assessment committee; and it has prevailed ever since.

2604. The fact that it is not in force in any other union, although it has been in force so long in the Wigan Union, seems to be an indication that it is not generally approved of by assessment committees?—I should think that must be so, if it is exceptional although it has been going on for so long. It has not commended itself probably to other assessment committees.

2605. The result of that system of assessment is that coal mines are assessed considerably lower than in the other unions where a different system prevails; is not that the case?—I think the difference is probably the plant. I have given an instance between the Leigh Union and the Wigan Union where the difference is three-farthings per ton.

2606. The Leigh Union system, with modifications, is the one which far more generally prevails, is it not?—I think that wherever you have an expert valuing, that is a gentleman who considers that he is an expert in rating, you would have the system of the Leigh Union in some way or other; you would have the plant separately assessed, and added to the royalty.

2607. And that would practically make the difference between the assessment in the two unions?—It would go a long way towards doing it. I should think, probably, that it might arise further from this. There might be something said, and no doubt there is something to be said from an expert's point of view, as to rating the machinery in addition to the mine; but I think it is additionally unjust when you rate in addition to that what I call adjuncts, that is, what may be positive disadvantages to a colliery. If a colliery is situated a mile and a half from the main line, and the lessee has to spend money in making a railway to get his coals to the main line, and he has a competitor who is on the main line, then to rate the man who is a mile and a half away from it for the railway he has to make

Mr. T.  
Ratcliffe  
Ellis.

8 April '97

Valuation of coal mines. Deductions, systems of making greatly vary.

Valuation of coal mines. Deductions, statutory provision.

Valuation of coal mines in Wigan union. An exceptional system.

Valuation of coal mines. System adopted by experts.

Valuation of coal mines. Plant usually rated. How far equitable.

Mr. T. Ratcliffe Ellis. April '97

to get to precisely the same position as the other man, is hard upon him; it seems to me that something ought to be taken off rather than added in his case.

2608. Would you agree that, according to the existing law, the plant ought to be rated?—It is a very difficult matter to give an opinion as to what the existing law is on the subject. I think that one would have to say that the cases show that it must be what is called the improved value that has to be rated. About a fortnight ago there was a case decided which was reported in the "Times," as to the rating of a brickfield. It was the case of the Overseers and Parish Council of Clayford v. Rutter. Certainly if that is good law, I should think there is a good deal to be said for the position, that it is not absolutely necessary to make a rate legal for a coal mine that the machinery should be included.

2609. You admit that in the Wigan Union, where the plant is not rated, the custom is illegal, and that it is a custom which does not prevail in any other union?—I should not like to say that it is illegal. You see there is no law which says what is legal and what is illegal as to getting at the annual value of a property. A person is rated for a coal mine, because he is the occupier of a certain right, that is a right to take this coal out in a particular way. Now, if the assessment committee or the quarter sessions came to the conclusion that the value of the occupancy was fully covered by the rate per foot thick per acre, which was charged upon the mine, it seems to me that nobody can say that is illegal.

2610. But in all these other unions, with the exception of Wigan, the plant is taken into account?—I say wherever you have got a man who says: "I am an expert in rating"—not a lawyer, but a valuer—and who has formed his own opinion upon these cases which have been decided, in my opinion he rates the plant in addition, because he thinks the law requires him to do it.

2611. Is not the average royalty rent the interest of the lessor in the property; is it not arrived at on that presumption?—The royalty rent is, of course, the interest of the lessor, that is, what is paid to the lessor for the right to get the coal.

Valuation of coal mines. Rating of plant. Depreciation, how far should be allowed for.

2612. Then after that is paid, the lessee improves the property by putting down a plant for carrying it out. Therefore, to get at the true letting value of the property for the time being, surely you must add the two interests together?—I should say that he does not pay his rent until he gets at his coal, that is to say, although a man may undertake to pay rent from a certain day, yet the royalty becomes only payable when the coal is being got. As I have already said, if in addition to the mine itself, a lessor is in a position to say, I have got the plant established and I will give you the means of getting it, it would command a greater rent; but I say when you have taken off what should be taken off for the depreciation of that plant, you have got back again to the royalty.

2613. But do you in other properties make any deduction from the annual value for the matter of depreciation?—The Act of Parliament says that you must deduct from the gross rental, repairs, insurance, and other expenses necessary to maintain the rent. Now, "insurance" is a very wide expression; there is no limitation upon it, and I understand it and the "other expenses" to mean depreciation; that you are justified in taking off the gross assessment such a sum as will enable you to maintain the assessable property in a condition to produce the rent.

2614. It does not say you must maintain it in a condition to maintain that rent when the property is wearing out?—It does not say you must not do so.

2615. It says, expenses in keeping it in a state of repair, and so forth; that does not mean that when you have got a wasting property, for instance, a burial ground, or anything of that kind which in course of time wears itself out, you are allowed to deduct depreciation in getting at the annual value?—With very great respect, I do not think it says that you should not. It does not say that you may insure it for a certain length of time, or for a certain number of years, and it does not say it must maintain that rent for 20 years, or for a limited period. It says, to maintain that rent. Therefore I should say that under that we ought to be entitled, as the law stands now, to take off

depreciation in order to replace the capital value at the expiration of the undertaking.

2616. (Chairman.) Ought not that last condition, which you have just mentioned, to be held as being taken into calculation before the royalty was fixed?—I do not see how it could be, for this reason, that what is usually taken from a lessor is simply the mine—I only take the mine—that is what I pay him for.

2617. The royalty after expenses have been calculated?—Of course, I do not undertake to pay the royalty unless I think I am going to get my money back again. What I want to get back is this: I want to get back not only an annual sum, but I want to get back what I spend in getting the coal, to enable me to pay the royalty, and that I can only get back by putting aside a sinking fund.

2618. And you fix the royalty at an amount which enables you to get that back from other sources and put it into your pocket?—I fix the royalty as the amount which I will pay to the lessor, and if you take that as the total amount on which I am going to be rated, I am quite content. The other things, I say, are not rent at all, they are simply investments which I want to get back again, and if I could not get them back I could not pay that royalty.

2619. (Mr. Dalton.) Can you tell us how long it takes to work out a coal mine in the Wigan Union?—In some places you get 700 or 800 tons a day, in some places you do not get as much as that. It depends entirely on what your capacity is for getting the coal.

2620. What is the average life, for instance, is it a very long life or a very short life?—I should think the average leases in the Wigan Union are 40 years—some probably more.

2621. Do you think that if, for the plant, you put by a sinking fund for depreciation for 40 years, the plant would practically be worth nothing?—I say, if I put by my depreciation I have got the money at the end, but if I do that I have no available money to pay rent for the plant with.

2622. Not if the plant is available for 40 years?—The plant itself, unrenewed, would not be available for 40 years.

2623. But if it were kept in a state of repair?—If it were kept in a state of repair, then I say, if I do that, if I spend the money to keep that in a state of repair, I put by a depreciation fund to give me the value of the plant back, which may be a 100,000.—not an unusual sum for the plant about a colliery—then there is nothing left to pay interest upon.

2624. In a district where the population increases very largely because of the colliery, at the end of the time I suppose the population very frequently goes away again?—Of course, if there is nothing for them to do they are obliged to go away.

2625. In the meanwhile they have required a large expenditure for school board purposes, sanitary purposes, and so forth, and if a colliery proprietor did not pay on his full to those expenses, the result would be that at the end of the time the population would go away, and the other occupiers of property in the district would be saddled with the whole of the cost of the population which had been brought there for the colliery?—I venture to say, with very great respect, that if that were the principle on which they were assessed it would be an entirely illegal principle.

2626. Were you not suggesting that?—I say that would be very unfair, and has never been the law. If you take a building and say this is only going to be put up for a few years, you do not go and double the rent because you think you are going to do away with it at the end of a few years. With reference to these people you must remember that a colliery brings other industries into the place. You have cotton mills brought into the place, you have ironworks brought into the place; in fact, the result of establishing a colliery is to bring other industries there which would find occupation for these people. I scarcely know a case, of course there must be cases, but I scarcely know of one in which a district has had to change altogether because some colliery is stopped up. I know that where collieries have closed there has been a great amount of suffering and trouble until the people have found other sources of labour, but I think it is a very unusual thing to find that a district has to migrate somewhere else because some colliery has worked out.

Mr. T. Ratcliffe Ellis.

8 April '97

Collieries, influence of, on population, industries, expenses of local government, and value of property.

Mr. F.  
Ratcliffe  
Ellis.

8 April '97

2627. I did not suggest that you should charge the colliery proprietors more than any other occupiers of property, but you were claiming that they should be charged at the rate of one-fourth?—That is another point. It is not the case of a man who says I do not want your sewerage because I can sewer my own farm, and I do not want your light because we could not use the light—they would be no benefit whatever to us.

2628. But they would be a benefit to the men you employ?—Their houses pay for that. There is a high wage given in collieries and the workmen live in houses, and those houses should pay, and the shopkeepers they support should pay.

2629. The rates do not fall exclusively upon the workers in the colliery; they fall, for example, upon the farmers in the district also?—If it is an agricultural district, I suppose the farmers would have to pay their share, but then if it is an agricultural district and a few collieries come into it, the farmers can a great deal better afford to pay the money, because they have a market for their produce. If a farmer gets a few fields taken by a colliery the trespass rent that he gets from the colliery very often pays his full rent; so there is a corresponding advantage. We do take into a district certain disadvantages, but we take far more compensating advantages.

Average annual assessable value of mines not altered if proposed change in law adopted. Contribution per ton in certain counties.

2630. (Mr. Elliott.) I think you anticipate that if the alteration in the law which you propose were adopted, there would be no material alteration in the average annual assessable value of mines?—So far as I can see, for the reason that I have given, I do not think that there would be. I have taken this return of Mr. Burt's,\* that was made in 1890, and I have taken the assessable value from that of the different counties, and I have also taken from the mineral statistics return, the quantity of tons got in each county in the year 1883, that was the year previous to 1890, on which no doubt Mr. Burt's return would be based. I find that it averages out something like 5d. per ton. This is only a very rough and ready way of getting at it, because in Cumberland for instance, and I suppose in Durham, North Wales, and there may be other places that are not just at this moment within my mind, the coal which is under the sea is not rated at all. There is a continual quantity of it got from under the sea which pays no rate at all; that is I believe on the ground that it is not in any parish, and therefore it does not pay any rates. When you take that, I should think the rate would probably be over 5d. rather than under it.

2631. That conclusion is as it were an average conclusion?—Yes.

2632. Have you examined at all the details on which that average is made up?—I have taken each county and I have calculated out the average rateable value per ton in each county; I could scarcely do it in a smaller division than a county, because it would then be necessary to get the output in each union, and that would be almost an impossibility.

2633. I take it, that in some counties, if the basis you have proposed were adopted, coal mines would bear an additional burden and other properties would be relieved, whereas in other counties coal mines would be relieved and other properties would be additionally charged?—Yes, if there are no other properties brought in; then if you take it off one, you must necessarily put it on to another.

2634. Could you tell me the counties in which the maximum additional burden imposed upon collieries, would be the greatest?—I propose that the burden should be taken off the collieries—that wherever there is any plant included in the royalty, the royalty should be reduced there.

2635. Do you mean to say that under the scheme which you put before the Commission, in every county, taking the county as the area, coal mines would claim a substantial relief from the burden of the rates?—If you of course take one-fourth.

2636. Leaving the one-fourth out of the question?—If you take the county of Lancaster and the three unions I have mentioned, in the Wigan Union there would be no change, and in the Leigh Union the annual value would be reduced, and in the Ormskirk Union there would be a reduction in the annual value. I should think that it would come to this, that if the principle I suggest were adopted, and the royalty only

were charged, there would be a general reduction in the assessable value, but not very much.

2637. You are not now taking into account the further proposal with regard to the one-fourth?—Not at all. You notice in this return of Mr. Burt's\* in some places they give no opinion at all about it, and in some the Assessment Committee do not seem to know how it is done—that is done by some valuer; but I should think it would follow that wherever in addition to the royalty there has been anything imposed for the plant, in those cases the annual value would be less necessarily.

2638. But then I do not understand how, if the adoption of your system would give relief to coal-mines everywhere the average contribution of rates by coal-mines throughout the country would remain unaltered?—I will read you this—in Cheshire the average per ton works out in pence to 6.15, in Cumberland to 4.82, in Durham to 4.77, in Gloucestershire to 3.73, in Lancashire to 4.78, in Leicestershire to 3.98, in Monmouthshire to 5.48, in Northumberland to 4.03, in Nottinghamshire to 6.01, in Salop to 4.93, in Somersetshire to 3.60, in Staffordshire to 3.34.

2639. (Mr. Arthur O'Connor.) Does that mean the whole of the county of Stafford?—Yes.

2640. Could you give me the difference between South Stafford and North Stafford?—I could not, I have got them both together there.

2641. There is a good deal of difference is there not?—No doubt there is a good deal of difference, but I could not get the figure for divisions of the county, I could only get it for the entire county. Westmorland should really be outside the calculation because there are only 1246 tons got and it comes to 13.48d., that of course is not a fair calculation. In Worcestershire it works out to 5.56, and in Yorkshire to 5.24. In Wales, in Carmarthenshire it is 6.18, in Denbighshire 3.02, in Flintshire 1.42, in Glamorganshire, 6.94, and in Pembrokeshire 4.65.†

2642. (Mr. Elliott.) But still I do not gather from those figures in what counties there would be an additional burden upon coal mines in consequence of the adoption of the principle you recommend?—There would be no additional burden upon coal mines at all, that is to say not in the assessment.

2643. I am speaking absolutely of rateable value?—There would be no additional burden upon coal-mines anywhere, because there is no place where the royalty is not running and if my principle was adopted there would be a uniform method and wherever in any union something more than the royalty was rated the coal mine would be relieved to that extent, but in no case would it be relieved from the payment on the value of the royalty.

2644. Assuming this universal relief in every county, I still do not understand how you can say that the change in the law which you propose would not materially alter the average annual assessable value of mines?—Neither would it, that is to say if the calculation I have made for proving that is at all reliable, it runs out, you see, to 5d. per ton.

2645. Then to that degree would you qualify the statement in paragraphs 7 and 8 of the memorandum which you have been good enough to give the Commission?—I do not say that quite. I do not think that that statement is of any very great value. I do not think if you take the average that it would be more than 5d. per ton, but that would not mean that it would be imposing any additional obligation on coal-mines. Of course in the places where the plant is now assessed in addition to the royalty that would be reduced.

2646. May I take it that your evidence on this point comes to this, that, assuming the adoption of this principle indicated in your memorandum, the result would be to give a substantial measure of relief to coal mines as regards rateable value generally?—I think I may say generally for this reason—because I believe in most of the districts the plant is assessed in addition to the royalty.

2647. Have you made any investigation as to the proportion of the rateable value of mines to their aggregate profits?—No, I have not done that. I do not think that that would be a fair way or would afford any basis of rating at all, because if you get a colliery

Profits of coal mines in relation to rateable value.

\* Parliamentary Paper, No. 405 of 1890.

† Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 75 (Table II.).

Mr. T.  
Ratcliffe  
Ellis.

which has made no profit you must pay a rate of some sort.

2648. I was not suggesting that that was a fair basis of rating, I was simply asking what were the facts—what was the proportion—if it is within your knowledge—of the rateable value of these mines to their aggregate profits?—I could not possibly tell you that, because I do not think you can average the profits of the mines for the country. I can tell you this, I know a number of very large collieries, and I have also heard the experience of a number of men who have large experience, and they tell me that taking an average, during the last 30 years there has not been more than 5 per cent. made upon the capital invested in collieries.

2649. I think you mention in paragraph 9 of your memorandum that taking rates as a whole, they also come to 5 per cent. on the capital value?—On the total capital value estimated in the way I have said.

2650. So that you would say the rateable value is on that basis of calculation equivalent to the profits?—To the profits generally made I should.

2651. I think in paragraph 10 of your memorandum you compare the position of mines with certain other properties, especially spinning mills?—I do.

2652. Is your case based upon the larger proportion of profits earned in proportion to the rateable value in the case of spinning mills to what it is in the case of mines?—No, I have not gone into the question of profit at all, except that I have gone into it to show the position of the Howbridge Cotton Spinning Company, which has a total capital value employed worth £21,000. I suggest that that is the value by showing the present saleable value of the shares, and by stating the fact that the company has paid a good profit for a considerable number of years past.

2653. In considering as between properties of different classes whether the rating system is equitable or the reverse, do you think that to take the actual value of the capital engaged is a fair criterion?—The only reason that I have taken that is for the purpose of getting some contrast between what a colliery pays, and what a cotton mill will pay. I do not think for the purpose of rating that it really is a fair criterion; I do not think it makes very much difference in considering the question what would it let to a tenant for.

2654. But in considering the equities of a system you think that it is a fair criterion?—Yes, it is fair in the comparison that I have made. You see a cotton mill can make use of everything which the district council can supply to it. It has got the light, and it has got the sewerage. We cannot put anything into a sewer from a colliery—they would very soon stop us doing that, they would not allow us to put it in. Water coming out of a mine generally, they expressly exclude us from putting into the sewers, the mill, as I say, can make use of everything, it is watched, and the policemen look after it. If we have a policeman at a colliery we have to pay for him.

2655. I think, in paragraph 11 of your memorandum, that you not only contrast the position of mines in regard to rating with cotton spinning mills, but also with every other commercial undertaking?—I say that as far as I know, I do not know of any commercial undertaking which is assessed at 5 per cent. upon the capital value employed.

2656. Have you at all compared from the point of the equity of the system, the position of mines with that of private residences?—I should think if you take private residences, they would compare very favourably indeed. The only thing which I think would compare at all with it would be cottage property. I should think that probably there you would find it was getting nearer 5 per cent. on the actual value; but then they get everything there, and there is nothing that is not rateable upon a cottage, whereas upon a mine there is a great deal that is not rateable, but I am including everything—the whole capital of the undertaking. I should think, if you take breweries for instance, you would find a very different state of things there.

2657. You think that in the case of breweries both the capital invested and the profit earned would be greater in proportion to the value on which rates were paid than it is in the case of mines?—I think so enormously. I think if you take the capital value of a brewery, and take what is rated, you would find that it does not come to anything like 1 per cent. probably.

2658. Do you think the capital value is the best possible criterion in a matter of this kind?—It occurred to me to make that comparison, and I did not quite see what I could take to make a comparison of this sort. The Act of Elizabeth rated personal property, it rated every inhabitant according to ability, and, therefore, everything that he had got, the whole capital employed in his undertaking would be rateable. When the Act of 1840 was passed, it relieved personal property from rating, but it has not relieved us at all; everything that we have got is rated, and I adopted this capital method as a means of comparison. I could not think of anything better to show that if you took these two industries, cotton mills and collieries, and if you took the capital employed in each, that you would find that one paid a very much larger proportion of the rates than the other.

2659. But you are not able to make any proposal to the Commission as to the means by which that inequality can be remedied except by the reduction of the rating on mines?—I should prefer not to make any suggestion as to what class of property should be brought in, but if the result of the Commission's inquiry should be that they find a good deal of property which does not pay any rate at all, then I think that probably it might be remedied by making those people who do not pay now, relieve those people who pay a great deal too much.

2660. With regard to the replies which you gave to the Chairman and Mr. Dalton about the exclusion of what may be called generally the plant of the collieries; in calculating the rateable value, I take it that where the lessee provides the engines, machinery, buildings, and so forth, he would, in addition to being in a position to replace his capital at the end of the term, expect to derive a profit from that capital during the term?—He would.

2661. You have suggested that that profit should be excluded from rating?—Certainly. You should not rate a man on his profit, because the profit might be a question of management. It is not directly in connexion with his occupancy, but it depends upon how he manages his business.

2662. You suggest, in other words, that the capital which a lessee puts into an undertaking in that form should be excluded?—I should say in a colliery it ought to be, but there are special circumstances about a colliery because in a colliery your capital is gone at the end of your undertaking—you have finished with it.

2663. Is not that view somewhat inconsistent with the view that you have just expressed as to the adoption of capital as the best criterion of equity in connexion with rating?—I do not put it that I should adopt it; I say I only take it for the purpose of showing the difference between what we pay as coal-owners, and what a cotton-mill pays. It is the only way I could suggest of bringing out the difference. I should not advocate that you should take capital as the basis of rating; this is only taken for the purpose of comparison.

2664. I gather that you would not take into account, in any shape or form, the lessee's profits?—I should not quite say that. Supposing that there was a mine which did not make any profit at all, then I should say that on that mine no royalty would be paid, but I could not, therefore, exclude the consideration of profit in any shape or form. The profits should only be taken into consideration in considering how much a person would give, and I should not assess him on his profits at all. If it was an entirely unprofitable mine, then no one would give any royalty for it, and it would not be rateable. I do not think, however, that one good year or one bad year ought to affect the rating of a colliery; but supposing that you had a succession of bad years, and people are not encouraged to come into that class of property, then I think that would affect it; I think then, whatever the tenant is paying to his lessor by way of royalty, the royalty really ought to be put at less than that, because he has presumably taken it at the royalty which applied when more people would take it, in fact when the industry had had a succession of good times. Then I think if there is an improvement in trade for one year that would not bring a rush of tenants for the purpose of going into this industry; but if it has been going on for some time, and there is a reasonable chance of making something out of it, then I think that would reach the royalty, and would improve the letting value. The profits *qua* profits I should not assess or go upon at all. Of course, if the place was unprofitable altogether, that would affect what a tenant

would give for it. I may say with reference to the estimate I put of 10s. per ton on the capital value, that in the North of England, which is a very large coalfield, I suppose they would be producing there from 30,000,000 to 40,000,000 tons out of the 180,000,000 tons produced in the Kingdom, I am told that there it is over the mark, and that 6s. 8d. is more like the figure; but the 10s. per ton Mr. Hewlett (whose name I have mentioned, and who has had perhaps as long an experience and as large an experience in the coal trade as any man in the Kingdom) tells me he thinks amply covers it. Where I know the output of large collieries, and where I know their capital value, and what the shares are selling at, I have made calculations in that way, and it all comes to the same thing that 10s. per ton is an outside price. In the same township where the Howbridge Cotton Spinning Company is situated, the instance that I have given in paragraph 10, there is a large colliery, and they are assessed at 6½ per cent. upon their paid up capital.

Ungotten seams of coal should be partially exempted under Public Health Act, 1875.

2665. (Mr. Smith.) You have alluded to the Valuation Bill of 1877. Do you remember whether that contained any special provision as to rating collieries?—I do not. It was before I became connected with the Association, but I know the Association at that time suggested that clause.

2666. With regard to the ungotton seams of coal for which you claim the three-quarters exemption under the Public Health Act, your case is not one of greater hardship than exists in the case of gas and water pipes, is it?—I cannot suggest that it is any worse than that.

"Insurance," meaning of, in Parochial Assessment Act, 1836.

2667. Probably we should find other properties similarly situated. You put rather a liberal definition or explanation upon the term "insurance" in the Parochial Assessment Act of 1836; do you not think that meant insurance against fire?—I cannot tell what that meant. It does not say so, it says simply "insurance."

2668. Take this case: Would a lessee occupying a leasehold house be entitled in arriving at a rateable value to deduct a sinking fund that he might establish to recoup him against the falling in of the lease?—There is also "repairs," taking "repairs" and "insurance" there would be very little depreciation.

2669. You have got repairs already, but you give such a liberal interpretation to "insurance" that it covers depreciation?—Yes.

2670. You have no authority for that, have you?—I have no authority for it; the Act says "insurance and other expenses."

2671. If you have "repairs" and "insurance" against fire, do you think you ought to have depreciation as well?—I think you ought.

2672. To enable you to reinstate?—Yes, for this reason, because there are the "other expenses," and it is for this purpose "to maintain it in a condition to command the rent."

2673. On the same principle, do you think a lessee should be entitled to a sinking fund or a return on account of premiums for insurance?—I do. Suppose the case of a lessor who has to let; if it is right in his case it is equally right in the case of a lessee, because for rating purposes he is the landlord.

2674. But you cease to be rateable when you lose your property?—So I should. If my property is not there I could not be rated; you can only rate me for property of which I am the occupier, and I do not think you will rate me more because I am not going to be there for ever.

Ungotten seams of coal. Legal owner of.

2675. (Mr. Arthur O'Connor.) You have told us that what is rated is the ungotton seam of coal?—Yes.

2676. To whom does that ungotton coal belong?—It belongs to two people; it belongs in this sense to the occupier; that he has the right to get it subject to paying to the lessor a certain amount for getting it.

2677. But until it is gotten, in whom is the legal ownership?—I should rather put it that the right to get it is in the occupier.

2678. That is an existing interest?—Yes, he could exclude anybody else.

2679. In whom is the legal estate?—The legal estate, I think, during the lease, must be in the lessee; he can exclude anybody else from interfering.

2680. He may never get the coal?—That is quite true, but he would not pay for it if he did not; he only

pays for it as he gets it, except so far as the certain rent obliges him to get something.

2681. He enters into a contract to pay a certain dead rent or a certain royalty, which I suppose is really a rent, to be ascertained subsequently?—That is so.

2682. And that gives him the right to get, if he will, and if he can, a certain amount of mineral which is now latent or lying ungotton, but becomes his when he gets it, is that not so?—Certainly; it is stock-in-trade then.

2683. Until he gets it, whose is it?—It is rather difficult to say; I think that it must be his, because nobody else has a right to get it as long as he performs the conditions of his lease.

2684. Would you say that the owner of the land has no interest in it, but that the owner of the land has an interest to receive the rent for it when it is got?—When it is got.

2685. And until it is got?—All that he gets until it is got is anticipatory rent so to speak, that is to say, he receives a certain amount per annum in respect of the coal. Leases invariably provide, that when the whole of the coal has been paid for by the fixed rent, then they are entitled to get the coal out during the residue of the lease without paying any more rent for it. Of course, if a man took a coal-field and never worked it at all, if the lessor allowed him to do it, he would go on paying the fixed rent until the end of the term if all the coal was not paid for before that.

2686. You are a solicitor?—I am.

2687. In the first instance, the coal belongs to the landowner, does it not?—Yes.

2688. The legal estate is in him?—Yes. There may be some cases in which it is in the lord of the manor, but I am assuming that you mean the ordinary course of things, where the man owns the surface of the mine. There are of course places where the coal belongs to the lord of the manor, and where he has certain rights upon the surface for the purpose of getting it according to the custom of the manor.

2689. Those are exceptional cases?—Yes.

2690. I am only dealing with a common law case, where the owner of the land is the owner of the minerals?—As a rule *cujus est solum, ejus est usque ad cælum et ad inferos*.

2691. The coal-worker contracts to pay a certain royalty for such coal as he may get?—He does.

2692. Until he gets it, whose is it, does it not remain the landowner's?—I do not think it does.

2693. Subject to the rights of the lessee if he proceeds to get it?—I do not think it does remain the landowner's. I should test it in this way—

2694. The legal estate must be in one or the other?—If I have taken a lease of the coals, I could exclude my landowner from coming anywhere near the place, except so far as it is provided in the lease that he can come and measure the coal. He could not deprive me of the right to get it.

2695. The same would apply to a house?—But it is the occupier who is rated.

2696. I am not dealing now with the question of rating, but with the question of ownership?—I should say myself that the lessee is the limited owner to the extent that as long as he performs the conditions of his lease, he would be entitled to exclude the lessor from any interference with his holding.

2697. I am asking you these questions because I see that you are an experienced solicitor; your opinion is that the legal estate in the coal is in the lessee?—During the lease. I think if you test it in any way in which a legal right is tested you would find that. He would be able to bring an action for trespass, and he would have all the rights of a person who has the legal estate, so long as he perform the conditions of his covenant.

2698. Yes he has rights, but I am only dealing now with the legal estate; at whose risk and peril is the industrial venture entered upon?—That of the man who puts his money into it.

2699. The lessee?—The lessee.

2700. The industrial producer?—The industrial producer.

Mr. T.  
Ratcliffe  
Ellis.

8 April '97

Mr. T. Ratcliffe Ellis.  
8 April '97

2701. Without his intervention what would be the value of the coal?—Nothing at all except if you wanted to get support for the surface. If there is something on the surface, a railway for instance, which wanted the support of the coal they might give money to leave it ungotten.

2702. That would not be *qua* coal?—No.

2703. That would be as dead material?—As support. Without capital the coal is worthless.

2704. The coal deriving its value from the intervention of the industrial producer, who is it that is rated in respect of it?—The industrial producer; he is the occupier, he is the only person.

2705. The man who gives it its value is the man who is rated—the man who gives it actual and immediate utility is rated?—Yes he is rated, the lessor of course is not.

2706. The lessor presumably does nothing but let?—That is all.

2707. And he gets his royalty?—Yes. He would not, I apprehend, if the Act of Elizabeth was acted upon now in its integrity, he would be rated upon it.

2708. We will deal with things as they are, we will not go into speculations or we shall never finish. He gets his royalty without any deduction in the matter of rates?—He does.

2709. And included in the property rated is not only the coal gotten, but the plant which is necessary to get the coal?—That is so in the great majority of cases.

2710. Would you rate a tailor in respect of his goose, or a cobbler in respect of his last?—No, I should not rate him certainly for that.

2711. And he is not rated?—I do not think he is rated now.

2712. Would you tell me, in point of principle, what is the difference between the tailor's goose or the cobbler's last, on the one hand, and those instruments of production which are necessary to a coal-getter on the other?—I do not think there is any difference between the two; it is his stock-in-trade with which he has to make the coal valuable.

2713. They are instruments of his industry?—Yes

2714. Necessary for the prosecution of it?—Absolutely.

2715. When a colliery is open in a district, whatever may be said for the amenities of the place, I presume that the natural result is an increase of value to the landowners of the district?—It is.

2716. The increase of value due to the presence of the colliery industry, and the increase of population consequent thereupon, goes to the landowner?—The increase in the value of the land goes to the landowner.

2717. The rating falls upon the industrial collier?—The rating falls upon the occupier of any property except as to land, which, as you know, is rated at one-fourth.

2718. Does it strike you that that is equitable?—If you asked me my opinion I do not think it is equitable, and that is one of the things we complain about.

2719. Are you acquainted with the circumstances of South Staffordshire?—No, I am not.

2720. Are you aware that they have had a great deal of trouble with water there?—Yes, I know they have drainage areas.

2721. Are you aware that they have incurred jointly very heavy liabilities for money advanced for common pumping purposes?—I know there is a rate of that sort in South Staffordshire.

2722. Those charges are charges necessary for carrying on the industry?—Absolutely; it could not work without it.

2723. Without it it would be impossible?—Yes.

2724. Would it strike you as reasonable that there should be a deduction in respect of those necessary outgoings?—Undoubtedly. I say that the reduction should be made from the royalty; you could not pay as much as you would if you had not those outgoings.

2725. Do you consider that in all fixings of royalties all these things are taken into account?—I should not say that they are taken into account in each fixing of a royalty, but there is a sort of recognised price in each district, and one follows the other. I should think it

is very likely that when the price first became fixed many of these things were taken into consideration. But that is only a general thing. There are a number of exceptional circumstances which would affect the value of the royalty, which cannot be ascertained until after the lease is completed, and after you have commenced to work the coal.

2726. Shortly, I suppose, I may take your evidence to amount to this, that in respect of the rating of collieries there are at present four different modes of assessment, the first in which royalty is payable in respect of the mines chargeable?—Yes, the assessment is on the royalty paid.

2727. The next is where the assessment is on the royalty *plus* the annual value of the plant?—That is so.

2728. The third is where the assessment is based upon a certain proportion of the selling prices of the coal at the pit's mouth?—Yes.

2729. And the fourth is the one which prevails in the Wigan Union, and perhaps elsewhere, under which royalty is fixed upon each seam of coal, calculated at a rate per acre per foot thick?—Yes.

2730. You suggest that it is desirable that there should be statutory provision for the establishment of a uniform method of rating?—Yes; and I venture to suggest also that the provision should be in the way that that clause suggests.

2731. Now, with regard to that clause, you tell us that it assimilates, or proposes to assimilate, the method of rating coal and other mines to that which the Act of 1874 enacted as to the method of assessing tin, lead, and copper mines?—That is so; and you see I have excluded tin, lead, and copper.

2732. Why have you excluded these, if in reality you are putting coal and other mines upon the same footing?—Because the Act of Parliament provides that they shall be on the same footing. The Act of 1874, in the 7th section, says: "Where a tin, lead, or copper mine is occupied under a lease or leases granted without fine on a reservation wholly or partly of dues or rent, the gross value of the mine shall be taken to be the annual amount of the whole of the dues payable in respect thereof during the year ending on the thirty-first day of December preceding the date at which the valuation list is made, in addition to the annual amount of any fixed rent reserved for the same which may not be paid or satisfied by such dues. The rateable annual value of such mine shall be the same as the gross value thereof, except that where the person receiving the dues or rent is liable for repairs, insurance, or other expenses necessary to maintain the mine in a state to command the annual amount of dues or rent, the average annual cost of the repairs, insurance, and other expenses for which he is so liable, shall be deducted from the gross value for the purpose of calculating the rateable value." Then there is a provision later—

2733. Is there not some further deduction?—Yes: "In the following cases, namely,—(1.) Where any such mine is occupied under a lease granted wholly or partly on a fine"; that of course is very proper, because the rent does not represent the royalty there; it is partly paid in advance in the shape of a fine,—(2.) Where any such mine is occupied and worked by the owner; and (3.) In the case of any other such mine which is not excepted from the provisions of this Act and to which the foregoing provisions of this section do not apply; the gross and rateable annual value of the mine shall be taken to be the annual amount of the dues or dues and rent at which the mine might be reasonably expected to let without fine on a lease of the ordinary duration, according to the usage of the country, if the tenant undertook to pay all tenants' rates and taxes and tithe rent charge, and also the repairs, insurance, and other expenses necessary to maintain the mine in a state to command such annual amount of dues or dues and rent."

2734. You have not got that in your clause?—Yes, I have got all that.

2735. You have got nothing about the tenant undertaking?—No, I have not got that, for this reason. I say if you take the assessable value as the royalty I do not ask you to deduct anything from that because there

Mr. T. Ratcliffe Ellis.

Valuation of coal mines. Different systems of.

Valuation of coal mines. Statutory provision to obtain uniformity desirable. Proposal of Mine Owners' Association.

Plant, rating of, not equitable.

Collieries, increase in value of property a locality.

Valuation of coal mines. Deductions for charges necessary to carrying on working desirable.

Mr. T.  
Ratcliffe  
Ellis.

8 April '97

wants no expenditure upon that to maintain it in a condition to command the rent. The reason that tin, lead, and copper mines, were excepted from that clause is because there is a provision in the Act of 1874 that the royalty shall be the assessable value and that it shall include all the plant. I think you are right in this: that we should not quite be in as good a position as they would because we have not asked to have deducted anything from the net royalty.

2736. (*Chairman.*) On that clause I notice that you propose to make the basis of settlement "the average" royalty rent in the Union."?—That is so.

2737. Do you not run yourself into the same difficulty which you have been condemning in other systems of taking an average: will the average that you take not necessarily be too favourable to the well situated mine and too unfavourable to the badly situated one?—I think there might of course be a danger of that: there might be cases in which within the Union, even within a limited area of the Union, there might be a very great difference in the letting value of the mine, but I do not quite see how, except we took the actual rent paid, we could have anything better than that, and I

have mentioned the reasons why I think it might not always be right to take that.

2738. When a lessee goes to take a coal-mine and to offer a royalty for it, in entering on that transaction I presume he takes into account on whom the incidence of the rates will fall?—I suppose he does, or ought to do; but as a matter of practice there is a certain fixed price for a mine if it is in a district where coal-mines have been worked, and he gets as much less than that as he possibly can. I should doubt very much whether a person taking a coal mine would enter into very elaborate calculations as to how much would be left to pay the royalty with.

2739. That only takes it a step further back; if the general practice were that the rates should be paid by someone else than the lessee would it not necessarily involve that the rents which he takes into calculation would be higher than they are?—I think so, and I think this—no doubt when first this field price, as I have termed it, was being fixed in a district, he would consider how much,—after he had paid everything that he would have to pay—there would be left to pay the landlord for rent; I suppose that would be the way in which it was originally got at.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## NINTH DAY.

Friday, 9th April 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

THE VISCOUNT EMLYN.  
SIR E. W. HAMILTON.  
C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.  
G. H. MURRAY, Esq., C.B.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. JOHN SANCROFT HOLMES, called and examined.

Mr. J. S.  
Holmes.

9 April '97

2740. (*Chairman.*) You are a landowner in the county of Norfolk, and a member of the Norfolk Chamber of Agriculture, and you have been delegated by that body, along with others, to appear before the Commission and give us such information as you can?—Yes.

2741. These two prints which I hold in my hand are the papers which you have lodged with us, to form the basis of your examination?—Yes, also this supplemental paper (*handing in copies*).\*

2742. I think, to take a small point first, that, in the last line but one of the first paragraph of your memorandum,† the word "excess" should be "increase"?—It is an excess assessment by the county authority.

2743. But increase is what you mean really?—Yes, it is an increase.

Expenditure in  
county of  
Norfolk.  
Statistics  
with refer-  
ence to.

2744. Now, with regard to the tables which appear immediately below that. I think, having had these figures looked through from the Government returns, they are substantially correct; the differences are so small that it is not necessary for me to make them the subject of question and answer. But in the expenditure table, and with regard to the line which you call "various charges," I should be obliged if you will tell me how those are made up, because, from any return in our possession, we have not been able to trace them?—They are taken from a return made by the Norfolk County Accountant, and they comprise every charge other than those under the head of establishment, police, and roads. They comprise the cost of assizes,

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 83 and 84. (Section III.)

† *Ibid.*, pp. 81 to 85.

quarter sessions, petty sessions, conveyance of prisoners, reformatories, annuitants, coroners, together with various items under the heading of asylum maintenance, buildings, loans, interest on capital, cattle diseases, registration, elections, analyst, bridges, allotments, and weights and measures.

2745. They are the ordinary items of county expenditure?—Yes.

2746. And they have increased, I understand, according to your paper, from 19,214*l.* in 1875 to 24,656*l.* in 1895, an increase of 5,442*l.*?—Yes.

2747. Can you tell me under which of the heads which you have mentioned the actual increase has taken place?—The pension fund will account for very nearly 3,000*l.* of the increase.

2748. Pensions to whom?—To the late county officials. On doing away with the county prisons there were several officers pensioned off; I think the chaplain heads the list. On his office being done away with he was paid a pension, I think, of 200*l.* a year.

2749. If this increase of 3,000*l.* is in pensions, that is of course, a thing which is purely temporary, and will work off in the course of a few years?—Yes, I take it it will. I am not quite sure whether more pensions are allowed now than were previously. The heaviest pension we pay in the county is for the late superintendent of the lunatic asylum, which is, I think, 600*l.* a year. He took a pension on retiring some few years ago. In this account which I have received from the county, I see there is nothing under the head of "Pensions" in the year 1875; it may have been classed under another head.

Mr. T.  
Ratcliffe  
Ellis.

8 April '97

Incidence  
of rates,  
how far  
taken into  
account  
by lessee  
of coal  
mine.

Mr. J. S.  
Holmes.

9 April '97

Mr. J. S. Holmes.  
9 April '97

2750. Perhaps as I have put the question to you and indicated the point of difference, in correcting your proof you will give me the exact information I have asked for from your county accounts?—Yes. You wish details given with regard to the items of various expenditure.\*

2751. We do, particularly on this point, whether it arises from any new rates which have been imposed under a recent Act of Parliament?—Undoubtedly that is the case with certain expenditure, especially with regard to weights and measures.

Valuation. Uniformity in, desirable.

2752. I understand your Chamber to be of opinion that it would be of great importance to you to have your assessment made up in a more uniform manner than is done at the present time?—I think the Chamber is undoubtedly of the opinion that it is desirable that there should be one assessment for all purposes based upon one common principle.

2753. Under the guidance of what authority would you like to see that assessment made up?—That is a point we have not gone so far as to consider. We are dissatisfied with the present existing state of affairs, but I do not think we have got so far as to consider what form we should like it to take. I do not know whether the members of the Chamber are aware of the system prevailing in Scotland at the present time.

Valuation roll. System of making in Scotland a desirable one.

2754. Would you be in favour, for example, of an annual making up of the roll for assessment, or between what periods would you have it made up?—Upon that point I could only express my own private opinion, and that private opinion I have expressed in paragraph 7 of my memorandum, saying that I thought the system adopted in Scotland was the one to be copied.

2755. If you will excuse me for saying so, I do not think you have stated the system in Scotland with perfect accuracy; you use these words: "Without venturing to speak on behalf of anyone but myself, I believe that the placing of all assessment business in the hands of an assessor to be appointed, as in Scotland, either by the Government or the county council, and of the two I much prefer the former, as better guaranteeing uniformity and impartiality, to be the best and safest way of dealing with the present anomalous position of affairs." Perhaps you will take it from me that the assessor is not appointed by the Government in any case in Scotland. What is done is this: Where the county or burgh authority wishes to do it they have the right, under an arrangement with the Inland Revenue to take the Inland Revenue Assessor and appoint him and let him act for them as well as for the Inland Revenue; but he is appointed by and paid by the local body. Does that in any way modify your view?—No, I do not think so.

Inland Revenue, information obtained by, should be available for purposes of local assessment.

2756. Would you like to see in England, as far as it can be done, a uniform arrangement made so that the Inland Revenue knowledge should be made available for local purposes as well as for its own?—Certainly.

2757. And you would be willing to help an Inland Revenue official with your local knowledge where it was asked for?—Yes.

VALUATION. No objection to assessment committees having increased power to obtain information as to rents actually paid.

2758. Would you see any objection to further powers being given to whoever does make up the assessment roll to get information from the landlord or the tenant, or both, as to rents actually paid?—No.

2759. That is, you would agree with that?—Yes.

2760. Do you wish to express any opinion as to whether the union is the best area over which the assessment should be uniform?—I do not think the union is the right area. I think, for county purposes, it should certainly be the whole county. I think the Union is the best area for getting the local facts, which any assessor who sits to make the assessment must be in possession of.

AREA FOR the purposes of valuation. County preferable to union. Representation of union and borough authorities.

2761. I want clearly to get your view, because, as I understand it, the difficulty is this: That union areas are not in all cases conterminous with counties, and in some cases rural and borough boundaries conflict with union boundaries?—That is so.

2762. I want to get your view without leading you; what would be the best reform to make?—My idea was that the assessment should be made by an authority who should deal with the whole county.

2763. What authority do you suggest?—I thought it should be placed in the hands of an assessor who should

\* The amended table is given on p. 81 of Pt. II. of Appendix to Vol. I. of Minutes of Evidence. The original table is given in a footnote on p. 82 of the same volume.

obtain his local knowledge and facts through the local union committee—that it should virtually be made, as it were, in the Union, but being ultimately made by one person, the assessor having a seat upon all the union committees, that would result in there being an absolutely uniform system throughout the whole county and country.

Mr. J. S. Holmes.  
9 April '97

2764. Then the borough authorities would have to be consulted in that case, would they not?—The independent boroughs would, certainly.

2765. But all borough authorities would have to be consulted, would they not, if they were part of a union?—I am thinking that in Norfolk we have only two or three independent assessing authorities other than the agricultural unions—Norwich, Yarmouth, and I think, Lynn.

2766. Then the difficulty which has been brought to our knowledge from some other parts of the country where the union boundaries include parts of boroughs which are not county boroughs, I think, could not arise in your district?—No, not within my particular knowledge. I think the union area is a very good one for getting local facts which must be in the possession of anybody who is making the assessment, but I do not think there should be, as at the present time, different systems of assessment prevailing in different unions in the same county.

Rates, increase of, in Norfolk. Extent and explanation of.

2767. I do not ask any question upon paragraph 10, which begins: "Some check should be placed upon the extravagance of spending authorities," because that goes rather beyond our reference. I do not notice in your memorandum—you will tell me whether you wish to speak about it—any reference to the increase of rates or to the increasing burden of the rates at the present time or within recent time?—In the report of the Committee on Local Taxation to the Norfolk Chamber of Agriculture, which is one of the papers I have handed in, you will see that that is fully dealt with. In 18 parishes taken entirely by chance—as the returns happened to be sent in—there is an increase of 50 per cent.\*

2768. An increase of 50 per cent. on what?—In the rate.

2769. In the rate per £, or in the gross amount raised?—In the gross amount raised there is an increase of 11 per cent., but in the actual incidence of the rate in the £ there is an increase of 50 per cent.

2770. Where are the returns given by the Committee taken from?—I must say that to get these returns was a matter of very great difficulty indeed, and the only way in which it appeared possible to make anything like a complete return of the various rates levied in the parishes was by sending round a circular letter to members of the Chamber. I think there are something between 300 and 400 members of the Chamber; these circulars were sent out to all, and they were asked to make their own return of the rates paid in their respective parishes. These returns have been got together from various sources. There has been a very great difficulty in getting them because some of the figures were not easily obtainable; the figures of the highways, for instance, were extremely difficult to get, because the books in so many cases had been destroyed; and in the case of schools, many of the parishes have voluntary schools, so that it was very difficult to get authentic returns there, too.

2771. In fact, you cannot compare fairly a parish which has a school board and a parish which has not, as to the burden upon the ratepayer can you?—No, it would be very difficult to do so.

2772. Would you kindly explain the last table in the Committee's report because it does not very well tell its own story to me. The first column "Rateable Value," I understand; under the next column you have "Union," and the figure "412"—412 what?—Pounds; these are all pounds,—shillings and pence being left out for the sake of simplification. That 412<sup>l</sup> was the levy on that particular parish of South Creake for the common charges of the Union.

2773. The next column is "Highway, 75"—is that 75<sup>l</sup> also?—Yes.

2774. And the next column is "School, 44"—is that 44<sup>l</sup>?—Yes.

2775. In that column, when there is no figure opposite the parish, does that mean there is no school board there?—No. These returns do not distinguish between school boards and voluntary schools. Wherever the amount of the school rate was obtained it was put in,

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 76 to 80.

Mr. J. S.  
Holmes.

9 April '97

even where it was a voluntary rate to support a voluntary school. There is no discrimination between school boards and voluntary schools in this table.

2776. Where there is a figure under the heading "School," it may mean a rate levied by voluntary arrangement then?—Yes. There is a note at the foot of the page to say that the levies include all local payments.

2777. The last column is headed "Rate in £"; you have a figure and a fraction after it, what does that mean?—Those are farthings, the first figure is 20½d.

2778. Then the figures in the last column are pence?—Yes.

2779. Then taking the last columns under each of the three years 1875, 1885, and 1895, the differences between the figures in those columns show the differences between the rate in the £ raised in each of these parishes?—Yes.

2780. That is the total rate in the £ for all of the purposes mentioned in the previous column?—Yes.

2781. And the figure in the column headed "Total" is the gross number of pounds raised by the rate, which is on the right-hand side of it?—Yes.

2782. Running one's eye down those figures, and taking the total at the bottom, I do not quite see how you make out the increase of 50 per cent. which you mentioned a moment ago?—If you look at the right-hand column under the year 1875, you will see that there was a sum raised in these 18 parishes of 7,436l., being a rate of 23½d. in the £; if you carry your eye to the right hand column of the year 1895, you will see that those same parishes had to raise 8,253l., an increase of 817l. in the amount, and that the rate levied, the rateable value having in the meantime fallen from 75,172l. to 56,951l., had increased from 23½d. to a rate of 35½d.

2783. I follow that now; but in paragraph 9 of your own memorandum you say that "the increase in the value of house property has compensated, to a large extent, for the fall in the value of land; figures, therefore, which include both classes of property, are no true guide as to the rise or fall in the value of one separate class." Is house property not included in these columns which we have been discussing?—Yes, it is all included, because we had, up to last year, no means of distinguishing between the amount rated on land and the amount rated on houses.

2784. I am quite sure there is an explanation of it, and that you will give it me at once; but that being so, I do not quite at once find myself able to reconcile the statement in these columns that your rateable value has fallen from 75,172l. to 56,951l., with the statement in your own memorandum that the increase in the value of house property has compensated to a large extent for the fall in the value of land?—In regard to these individual parishes that are here named, I cannot say whether each individual parish is one in which the property is chiefly land, or in which there is much property other than land. The reference was made more particularly to the county figures in which I point out there is only a comparatively small decrease in value. If these figures could have been divided as between land, and property other than land, the increase of the rate would appear much greater but this is a figure which gives a return of both land and houses, and it is the average of the two combined, on which this 50 per cent. increase is shown.

2785. Under this heading, what I understand to be the point of your complaint is, shortly, this, is it not, that as is unfortunately too well known, the value of agricultural land in your county has greatly depreciated during the last 20 years, while the burden of the rates has increased and, therefore, if you take the two years 1875 and 1895, or any corresponding period, you find that the percentage of amount taken from the occupier in the name of rates is very much larger than it was formerly. Is that a correct statement of your complaint?—Yes.

2786. Would you, over any area or areas fairly selected, or by any number of individual cases which would bring it home to us accurately, give us a statement in actual figures of one or more holdings, showing how that result actually works out?—On an individual estate?

2787. If you could give it us on an estate that would help us; the name need not be published, but it would have to be given to us as a guarantee?—I had the promise of a statement which I hoped to have been able to produce to-day, with regard to a large estate in

Norfolk, as to the actual sums paid in rates and taxes in those two periods 1875 and 1895; but I am sorry to say it has not been furnished me. I do not know whether it is owing to the extreme difficulty of getting out any statement of that kind, because in 1875 a very large proportion, probably the whole of the estate, would be let, and the rates would be paid by the tenants, and now, probably, a very large proportion of that estate is in hand, and the rates are paid by the owner who is occupying the land. The extreme difficulty is to get at the amount of the rates that that estate paid when it was let.

2788. Surely we could get some cases of land which has been continuously in the owner's hand, and therefore he would be occupier during the whole period?—Yes, you could.

2789. And if he has kept his books, he could of course give us the information I have suggested to you?—Yes. Such a statement could no doubt be got, but I have not such a statement with me.\*

2790. Which of your rates show the most increase? I will tell you exactly what I want to get at. I want, if you can tell me, what are the old rates leviable before 1870, say, which have increased, and what are the new rates which have been put on by Parliament for the first time since 1870?—I do not think there is any rate imposed recently which is of any serious importance to us; not that I am aware of, at all.

2791. Not the lunacy rate?—That is a very old one.

2792. In other parts of the country, it has been complained of to us as one of the rates which has been most increasing in burden?—Yes, but it is an old rate. It has very largely increased in Norfolk. I have not the county figures for lunacy, but I can give you the figures of the Union in which I myself reside. The increase in regard to the extra charge has been enormous; it has gone up 50 per cent.

2793. You will not think I am wishing to break down your case in any way so as to be unfair, when I say that, of course, if you take only a small area for these purposes, it is not so safe to generalise from it; if we can have the increases over a larger area, the better it is for our purpose?—The charge for lunatics is one of the common charges of the Union, and being mixed up with all the other union charges, it is very difficult without getting all the details to say exactly what has been the increase under that head, for, whereas, we have had a large increase in the cost of lunatics, we have had Government subventions which have gone a very long way to reduce charges in other directions. I have not got any details here with regard to the cost of the lunatics in Norfolk, but under that head, I know, there is a very large increase over the whole county; the most important increase in Norfolk, though, is on account of the highways.

2794. In the report of the Norfolk Chamber of Agriculture on which you are speaking, you come to two conclusions. First: "That real property pays an undue share of local taxation as compared with personal property;" would you like to develop that, and to give me the grounds upon which you arrive at that judgment?—I would rather rest that on the evidence given by the Local Taxation Committee; we are quoting the report of the Local Taxation Committee in connection with that.

2795. You would rather leave that for them to speak to, would you?—I think so.

2796. The second conclusion is "That agricultural land pays an undue share of local taxation as compared with other real property;" do you give me the same answer with regard to that?—I could give you my own private reasons, but I did not think it was worth while to bring them forward in face of the very explicit statement which is made in the report of our Local Taxation Committee.

2797. Do your private reasons differ from those that are given by the Local Taxation Committee?—Not at all.

2798. You agree with them?—Entirely; the case is so well stated there that I should not like to detract from it by anything I said here.

2799. (Mr. Murray.) What is the main cause of the increased expenditure on roads. Is it entirely new expenditure, or is it transferred expenditure from some other authority to the county?—I will explain it. When the turnpikes were disturnpiked, we had, I

\* The witness subsequently forwarded a table giving these particulars. See Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 85 (Table I.).

Mr. J. S.  
Holmes.

9 April '97

Rates old and new, increase in.

Local taxation, share borne by real property and by agricultural land.

Roads, increased expenditure on. Reasons for.

Rates paid on some estate in Norfolk for 20 years, possibility of getting such a return.

Mr. J. S. Holmes.  
9 April '97

think, some 300 or 350 miles of roads in Norfolk, which became by Act of Parliament main roads. The county took over those main roads, but it added very largely to the mileage of the main roads, so much so that at the present time we have now over 1,300 miles of main roads in Norfolk. It is the expenditure upon these roads which were previously under parish management which accounts to a very large extent for the extent of our county expenditure. Of course the county, having taken over these 1,300 miles of roads, has relieved the parishes to that extent, and you would naturally expect that the parishes having been relieved of what amounts to about one-third of the whole of the mileage of the roads in Norfolk, the sum expended upon the remaining two-thirds in the hands of the parishes would be correspondingly decreased. The figures reported in these 18 parishes show that although they have not got these main roads now to maintain, still the expenditure on the roads which they do maintain amounts to almost if not quite as much as the whole did before they were taken from them. That is to be accounted for by two reasons—one is the very considerable extra charge for materials which is now made for the mending of the roads, and also for the increase in the cost of labour which is expended upon them.

2800. Then the increase which you show of 48,000l. in the expenditure on roads, is not new expenditure but merely a transfer from the parochial rates to the county rates?—It is that; only the transfer has had the effect of very largely increasing the expenditure on the roads. Those roads did not cost that amount to the parishes that they now cost the county. The county adopts a more elaborate and better system of road management than the parishes ever did; having taken over the roads they perhaps spend double or treble what the parishes did upon them.

2801. When you urge that all land should be assessed on one uniform basis what exactly do you mean by that?—In Norfolk at the present, we have some 20 odd unions. I only know that exact system of assessment in the Union in which I myself sit, and in which I am the Chairman of the Assessment Committee; but from what I know of the system prevailing in other unions, I believe other unions adopt a system which is not altogether on the same lines as that adopted in the particular union in which I reside. The union assessment committees interpret the law of assessment differently in the different unions, and there is not a really uniform basis on which all property is valued in the unions.

2802. Could you suggest any means by which all the assessing authorities could be compelled to interpret the law in the same sense?—I think they could if the actual determination of it was placed in the hands of an assessor.

2803. He could not control his authority after all?—I thought he would be the authority, and that the Union Assessment Committee would be the advisers as to the local facts and the knowledge—that they should not, as it were, be the arbiters of the law with regard to the case as they are at the present time.

2804. Do you purpose to place the absolute power then in the hands of the assessor?—Subject to appeal, as I understand it is in Scotland, to a Committee of the county.

2805. Even so you would have no means of compelling all the assessors to act on the same principle?—If they were Government appointed officers, I take it that they would do so.

2806. Is it your suggestion that the Government should appoint assessors all over the country to fix the basis of assessment?—That is my view.

2807. That of course would be a very serious change in the existing law and practice?—It would. I take it that it is necessary, because in the olden days the basis upon which we levied our rates was a matter which only concerned the union, because the union raised the money and the union spent the money; now a very large proportion of the money we raise in the union is spent by the county, and it is therefore, very important that all the unions should be upon a similar basis; and inasmuch as the Government now, by the Rating Act of last year gives us very large help towards the burdens upon land, I think from an Imperial point of view, it is very necessary that the Imperial taxpayer should be protected, and that his money should be allocated to the various counties on a basis which is absolutely fair to the whole of England,

Mr. J. S. Holmes.  
9 April '97

and I think you cannot get a basis of assessment fair to the whole of England unless it is under one central control, and I take it that that must be Government control.

2808. In fact, you say that it is not desirable that neighbours should be called upon to fix each other's assessment?—Yes.

2809. You adhere to that?—I do very strongly indeed.

2810. And that it would be better to have a Government representative to do it for them?—Yes, I say that because it has been my fate during these last six months to act as chairman of a union assessment committee. We have thought it right to change the basis of our assessment from what was called the comparative system of valuation, and to adopt that of the actual annual value as determined by rent. This has been a matter of extreme dissatisfaction and disappointment to a considerable number of the people living in the Union. It has necessitated assessments in a great many cases being put up, and naturally the ratepayers have resented the assessments being dealt with in such a way. As our assessment committee is in every case drawn from people living in the immediate locality, it follows, as a matter of necessity, that we have each of us had to sit and adjudicate upon each other's assessment.

2811. Do you think that as a matter of practice the basis of assessment does vary very much, for instance, in the county of Norfolk?—I think I may say that I am quite certain it does.

Valuation in Norfolk want of uniformity.

2812. How many different bases of assessment are there, I do not mean different assessing authorities?—The basis of assessment adopted by the county is that of Schedule A. As a Member of the County Rate Basis Committee, I can say that we do not take the figures returned, and have not taken the figures as returned by the Union for any time I can remember. It was found throughout Norfolk, that whereas one union would possibly assess itself at a sum even above Schedule A., there were several unions in the county which would very probably assess themselves at 20 per cent., and even more under Schedule A. The county decided that in justice to the county ratepayer they could not accept the figures as returned by the Union Assessment Committees, and therefore they have made it a practice for a number of years of basing their assessment upon the returns of the Surveyor of Taxes in regard to Schedule A., and disregarding the Union figures altogether. That is one basis.

Valuation in Norfolk, different bases of assessment.

2813. Then they practically make a new valuation for themselves?—Yes, entirely based upon Schedule A. If you go into one union you may find there that they base their assessment upon what is Schedule A. annual value, they take it pure and simple; you may go into the adjoining Union, and you may find that the assessment committee there do not regard annual value at all, but that they go by what they think is the real comparative value of the land. They argue that land on one side of the fence is of the same value as land on the other side of the fence, and that it is not material whether the land on the one side of the fence is let for more than the other, they will assess it according to what they think it is worth, and not according to what it is let for.

2814. That makes two different bases, are there any more?—Variations between those two, I think are the only other ones that are possible. There is a further large class of property, that of public-houses, which is a very important thing. I am not very well aware of what the custom in the county is with regard to them, but I know there is a very varying custom with regard to the assessment of public house property.

Public-house property. Valuation of.

2815. Do you consider that Tables II. and III. of the report to the Norfolk Chamber are fairly representative of the whole county?—I believe them to be as representative as any taken completely by chance can be. They are absolutely independent of any selection. Every member of the Chamber was invited to send in a return; I forget how many were sent in, but there were altogether about 50. Several of these were of comparatively little value because they were so incomplete, but every single schedule which could be got into correct form has been returned in these tables.

Rates, increase of in Norfolk. Statistics. Figures given refer to agricultural land only. Explanation of figures.

2816. You observe that Table II. only gives the particulars of 14 unions out of 19?—Yes

Assessment. Uniform basis of, desirable.

Government assessor, appointment of, desirable, who should be advised by Union Assessment Committee. Reasons for this view.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 81 (par. 2).

Mr. J. S.  
Holmes.  
9 April '97

2817. Is 19 the whole number in the county?—The 19 are the agricultural unions; the other unions are borough ones, namely, Norwich, Yarmouth, and King's Lynn; those three unions were not returned, because it was not thought their figures were necessary for the purposes of this report.

2818. But if you are taking the county expenditure, ought you not to include the whole of the rateable value of the county?—No, because they are not in the administrative county. Norwich is a county by itself, Yarmouth is a borough by itself, Lynn is in the county, but only for certain purposes.

2819. There are only two county boroughs in Norfolk, then?—There are two county boroughs—Yarmouth and Norwich.

2820. In Table II. does Freebridge include the borough of Lynn?—No. There is another place I may say—Thetford—which is put down here, but the return from that was not available.

2821. Then may we take it that these 14 Unions represent purely agricultural land?—Yes, and the other ones were not given, only for the reason that we could not get the returns. These returns, of course, had to be of an entirely voluntary and unpaid character, and it was not every clerk or every authority who saw fit to assist us in the inquiry which we were making.

2822. But you could get that information practically from the official returns, could you not?—That I am not certain. I do not know myself where we could have got all the figures, certainly not for the year 1895.

2823. No, probably not for 1895, but you could have got it for 1894, though, I should think; however, practically that does not show the compensation that you have mentioned due to the rise in the value of houses as compared with the fall in the value of land; in other words, you are putting it at its worst, are you not; you show a falling off in rateable value from 1,520,188*l.* in 1875 to 1,221,727*l.* in 1895?—I do not quite understand how you say we make the worst of it.

2824. I mean that the fall has been greatest, of course, in the value of agricultural land?—Yes.

2825. That has been compensated, you say, to a great extent by an increase in the value of houses?—I meant in these particular unions for which we have got the returns here.

2826. But probably if you were to include Thetford, Lynn, and so on, the result would be materially different, would it not?—Thetford would not materially affect the figures; Lynn might to a slight extent, but not to any very large extent. They were not excluded for that purpose. What I wanted the Commission to understand was this: that although these figures work out that there is an increase of 50 per cent. in the rate, that increase is on the average, including land and houses. If we could produce you a figure, which we cannot do, to show you what has been the increase of the rate upon the land, it would be very much larger than 50 per cent. on land alone; the 50 per cent. is an average increase, land and houses together.

2827. In those 18 parishes?—Yes.

2828. But you will see that the increase in the rate in the £ on the unions is very different; it has risen from 19*d.* to 23½*d.*?—Yes.

2829. That is a very much smaller increase?—Yes.

2830. While the actual levy has diminished from 123,268*l.* to 119,673*l.*, the rate in the £ has risen from 19½*d.* to 23½*d.*?—Yes. I will not attempt to bring these figures together. I cannot; and one of the reasons why it is impossible to bring these figures together, or to make them support one another in the way that you would expect them to support one another, is, I think, in a great measure to be attributed to the fact of the different bases on which assessments are made.

2831. Do the levies in Table II. include voluntary rates in the same way as the levies in the table at the bottom of the page?—There are no voluntary union rates. The only case in which I know there is a voluntary rate, is for a school, and that is a parish rate.

2832. (Chairman.) Is there no other parish rate except that for the parish council?—There is the lighting and watching, and there is the parish council precept, but the whole total of those is small, and there are so many parishes in which there are none at all that it was not thought desirable to put it in. Another reason

is that the parish council precept did not arise until 1896.

2833. (Sir Edward Hamilton.) In paragraph 3 of your memorandum you refer to the Government grants; do you consider that the basis upon which the Government grant is distributed among local authorities is a fair one or do you take exception to the basis of distribution; you refer in this paragraph to the "residue," but you do not refer to the rest of the grants?—You see the rest of the grants are all upon lines which have been long laid down and it would have been, I thought, opening too wide a subject to go into the question of the wisdom upon which Government gives us assistance.

2834. As I understand they are distributed now in proportion to the old grants-in-aid?—Yes.

2835. Exactly?—Yes.

2836. Perhaps you may recollect that when the Local Government Bill was introduced in 1888, the idea was not to distribute the Probate Duty Grant according to the existing grants, but either according to population, rateable value, or indoor pauperism; that I think was discarded and it was decided to ask Parliament to pass the measure in such a way that the money should be distributed on the basis of the old existing grants-in-aid?—Yes.

2837. Would it have made much difference, do you think, if one of those other bases had been adopted instead of the old proportions of grants-in-aid?—It is very difficult to say how we should, in Norfolk, come out under that.

2838. You do not know that any exception was taken to the change that was made in the Bill by the Government itself at the time?—No, I think a great many of us were very thankful the distribution of the grant was not made dependent upon any question connected with the poor law administration.

2839. I see that in paragraph 9 of your memorandum you say: "what is most wanted is not only a general remission affecting all lands, but a special remission"; therefore I presume that you really take exception to the principle of the Agricultural Rating Act of last year?—I cannot say that, I think, the principle upon which the Agricultural Rating Act was passed last year was altogether wise. I think that it gives the minimum of help where most is wanted.

2840. Have you in your Chamber at all considered whether you could devise any method by which it could be done with greater discrimination?—No, we have not gone into that.

2841. In paragraph 12 of the report that is put in by the Norfolk Chamber of Agriculture, I see a reference is made to Imperial charges; could you say what you would classify under that head of Imperial charges?—I am afraid I must answer, that it was a question we did not like to go into because we felt it would require a great deal of consideration. I should prefer not to express any individual opinion, because I know that it is a point which is going to be particularly brought forward by the Local Taxation Committee.

2842. The Norfolk Chamber of Agriculture do not propose to bring it forward themselves specifically?—No. We think generally that there are a great many charges, the main burden of which now falls upon the land, which have just as much right to fall upon personal property as upon realty.

2843. What charges have you specially in your mind?—First of all with regard to education, then with regard to police, with regard to the administration of the poor law and with regard especially to providing for the maintenance of lunatics.

2844. I see in paragraph 10 of your own memorandum you suggest that the responsibility should be brought more home to the spending authorities; does this not imply that a system of grants-in-aid over which the local authorities have no control tends rather to extravagant administration?—I am afraid I think it does undoubtedly.

2845. You refer also in paragraph 8 to the burden of rates having enormously increased. Though you think there has been some tendency to extravagant administration due to Government grants, I suppose you would admit that the rates and taxes have been kept down to a certain extent by the increased Government grants?—Certainly.

Mr. J. S.  
Holmes.  
9 April '97  
Government grants.  
Basis of distribution.

Agricultural Rates Act, 1896.  
System by which relief given open to some objection.

Local taxation, how far contributing to subjects of national concern.

Government grants, how far conducive to extravagant administration.

Parish rates, comparatively small.

Mr. J. S. Holmes.

9 April '97

Government Assessor. Appointment of, desirable. Should be advised by union assessment committee.

Government Assessor. Appointment of, would tend to economy.

Valuations, inequalities different unions. Reasons for.

2846. (Mr. Arthur O'Connor.) In your memorandum may I take it that where you use the word "assessment" you might also have used "valuation"—does it mean valuation?—Yes, it does.

2847. You speak in paragraph 7 of the system in Scotland, which, so far as you apprehend it, you approve of, under which a district can if it likes bring in the assistance of a Government officer?—Yes.

2848. Are you aware of the system that prevails in Ireland, under which all the valuation of the country is done by a Government Valuation Department?—No, I was not aware of it.

2849. Would you be disposed to approve of that system, as compared with that which exists in your own locality?—Without knowing the details, I should not, of course, like to express an opinion, but subject to the local authority having a voice in the determination, I should like to see the whole of the valuation business put into the hands of the Government.

2850. What would be the extent of the authority or the voice which you would entrust to the local authority assuming that the system adopted in Ireland was adopted here?—I should like to see the union assessment committee sit as it does now to advise and to assist the assessor or Government officer. I take it that he would require the local knowledge which only the local persons resident in the neighbourhood could supply.

2851. In other words you would associate with the Imperial officer two local assessors or something of that kind, or a committee of assessors?—A committee.

2852. Having a consultative but not a definite voice?—Exactly.

2853. Have you any idea what the cost of the valuation is in your county?—I am sorry that I cannot say.

2854. Do you think that the cost of valuation by a central authority would be less or would be more than the present cost?—I should think that it would be decidedly less, for this reason, that you have the Government expenses now for the formation of Schedule A under the Commissioners of Income Tax, you have the expenses incurred in getting at the Land Tax, you have the expenses of the County Rate Basis Committee—

2855. And also the parish?—I do not think the County Rate Basis is a large item because we take our figures from the Surveyor of Taxes; the chief expenditure, of course, is under the union authority.

2856. So there are four?—The union assessment authority entails an annual expenditure which is not a considerable sum, but when the unions make, as they, I think, generally do, a fresh valuation every three, four, or five years, then there is a very considerable expenditure entailed.

2857. You were asked just now, with regard to the various systems or principles upon which assessments are made; might I suggest this to you as a possible source of difference—do you think it is at all possible that in one union the guardians might be disposed to raise the assessment in order to get credit for having a low rate, whereas in another union they might favour the idea of having a very low valuation in order that their contribution to the common funds might be as low as possible?—Yes, I think that is quite possible.

2858. All these things are apt to work inequitably as between different areas?—Yes. I may say that I know as a matter of fact that a great many union assessment authorities thought at one time, with a view to meet a lesser share of the county burdens, that it was desirable to have a low union assessment.

2859. You spoke of some alteration of system in the district where you are chairman of the committee; is there in that district, or has there been in past time, a ratepayers' association or a ratepayers' protection society?—No, nothing of the sort.

2860. In past times has there been ever any reason to suppose that people who manipulated the constitution of the board of guardians themselves were on committees of assessment?—No, I should not say that, and I do not think that.

2861. You have heard that such things have been in some unions in this country?—I have never heard that.

2862. You are not acquainted with the circumstances of any London parish?—No. I think the chief difficulty

that the union assessment committee has to deal with is that we are all so intimately connected with one another, that it is an extremely difficult matter sometimes for the body to be entirely judicial in its actions.

2863. It is an invidious position sometimes?—Very invidious indeed.

2864. You have been asked whether the change which you suggest would not be a very serious alteration of the existing system; I suppose if the existing system is proved to be bad, inequitable, and expensive, you would not be afraid of an alteration of the law?—No, I should not be at all afraid myself.

2865. With regard to the increase in the expense on your roads, I suppose that when the county took over the roads they not only expended more money upon them but they materially improved their condition?—Certainly.

2866. And the general standard for roads in Norfolk has been materially improved?—Certainly.

2867. There was plenty of room for it?—I would not admit that.

2868. Then there has been extravagant expenditure? I am rather at issue, I am afraid, with the large majority of the Norfolk County Council upon that point. I admit with all, that the condition of our roads is excellent, but I say that they are more expensively maintained than we, the ratepayers, can afford to bear; that is my contention: that they are too good for the condition of the county.

2869. Would you kindly look at paragraph 10 of your memorandum: "The rate and taxpayers' money is now lavishly expended"—I do not dwell upon that—"a considerable proportion of the representatives on county, district, and parish councils contributing little, possibly nothing at all, towards the rates they "vote away"; you think that is a bad system?—I think it is a very bad system, that people should have the power of spending money to which they in no way contribute themselves.

2870. Are you aware that you are describing the system which obtains under the Grand Juries in Ireland?—No.

2871. But if that is the system you condemn it?—I think it is a bad system all the same.

2872. It would be against the judgment and sense of the majority of the people in your district that there should be a body, not themselves paying the rates, but assessing them and allocating them over an area?—I do not say that is the opinion of the people: that is my own opinion.

2873. You have no reason to suppose that those about you would differ from you on that point?—No, I think not; I think that is very generally accepted. I may say with regard to that particular answer what is in my mind is this: that now the franchise is so reduced for county council and for union representation it may happen that there are parishes in which the rates are compounded and in which many of those who return the representatives do not directly pay any rates or taxes at all. I think it is in the direction of doing away with the Small Tenements Act that the remedy is to be found.

2874. But, generally, you desire to impress upon us the principle that, if representation is limited to those who pay rates and taxes, greater economy would be exercised?—I think so, certainly.

2875. (Mr. Smith.) I think I may take it that the county for which you speak is one of the purely agricultural counties of England?—I should say more purely agricultural than any county in England.

2876. I am very anxious to know what are the average burdens in the shape of rates upon an occupier in a typical county like yours; I do not see any table here that gives me the entire burden. If you turn to Table II. of the Report of the Norfolk Chamber of Agriculture, it appears that in 1875 the burden for county and union rates was 19½d., and in 1895, 23½d.—Yes, that is so.

2877. Is there anything to add to that?—Yes, I should like to explain that. It is the parish return in Table III. from which you get the full measure of the burden upon the ratepayer. Table II. merely divides the union expenditure into union and county.

2878. What else is there?—There is the parish expenditure.

Mr. J. S. Holmes.

9 April '97

Roads, increase of expenditure on.

Valuation and spending authorities, members upon, who contribute little or nothing to rates. Objection to this system.

Rates in Norfolk. Amounts of burdens borne by ratepayers.

Mr. J. S.  
Holmes.  
9 April '97

2879. That is what I expected; I want to know at what we could fairly put the parish expenditure?—The whole expenditure is returned in Table III.

2880. But those are only typical parishes, and possibly not quite fair instances?—The ability to answer that question, is, I think, one that should be, but never has been, in the power of any person that I am aware of.

2881. I live in the country myself; would the parish rates, under the Parish Councils Act, amount to a *ld.* in the £ all round? Take 1895; what ought I to add to that final figure of 23*d.* to make a fair allowance for the parochial charges—the lighting, watching, and parish charges—those are the only things I can see that you have to add?—You will please see that Table III. includes the schools and the highways.

2882. The highways are now a district charge, are they not?—Yes, but in 1895, the time of this Report, they were parish charges.

2883. I see the total amount of your highway rates and school rates is not large; what would they amount to in the £ if they were added to that 23*d.*, and covered the whole county?—There, again, I must refer you to Table III., which gives the full measure and the complete answer to your question.

2884. Only as to certain parishes which may or may not be typical?—Then I am afraid I could not give you any other answer.\*

2885. You cannot tell me, as Chairman of a Committee, and as a Member of the Chamber of Agriculture, what is the average burden of rates upon an occupier in the county of Norfolk?—No, I wish I could. I should like to see it in the power of any person to answer that question by the production of a return which should be made compulsory in every county of every rate expenditure. Until we get such a return, and it is made quickly and easily available, I do not think it will be ever possible to base a really sound argument upon what is the total burden of rates.

2886. Surely the Local Government Board returns can give you that?—The Local Government Board returns may give you a portion of that, but they will give you only portions at a time, two or three years old, so far as I have been able to get at them.

2887. I represent the City of Birmingham, where our rates are from 6*s.* to 6*s.* 10*d.* in the £ according to the parishes into which they are divided; would it be impossible for you to tell me, or get for me the total amount of rates that you pay in the county of Norfolk?—I do not know any authority who can provide you with it, because we have so many different spending authorities. If you were living in a parish in Norfolk, you would have found that, at the date of this return, 1895, the overseer would have asked you for a rate in the £ to meet the union expenditure—the union expenditure covering all the common charges of the union and the county expenditure.

2888. You need not explain to me the English system because I may tell you, although I am Town Clerk of Birmingham, I live in the country, and I am perfectly well acquainted with the country system?—I only wish to say I do not know how that return can be given.

2889. I think I could get it for Warwickshire?—Could you get a return including the education rate?

2890. I could give a very shrewd guess at it, because I know how many school boards there are?—The school boards are not the difficulty, the difficulty is getting at the cost of the voluntary schools.

2891. I do not consider my subscription to the voluntary schools a rate?—In Norfolk you would find a considerable number of voluntary schools are maintained out of a voluntary rate, which is very largely paid.

2892. I am afraid I cannot take a voluntary rate into consideration any more than I should my school subscription?—Can you give also the highway expenditure in the same county?

2893. Certainly?—The highway expenditure is confined to the individual parish, or was then.

\* The witness subsequently forwarded the following information:—*Highway Rates.*—In 1893 the total number of highway parishes in Norfolk that were not included in any Highway District was 691. These parishes had a rateable value of 1,567,440, and 5,221 miles of parish highways. The receipts for highway rates amounted to 30,582*l.*, equivalent to a rate of 1*6s.* 4*d.* in the £ (see Local Taxation Returns, Vol. 1, 1893-4, Part VI., p. 4, House of Commons Paper, No. 466-111, Sess. 2, 1895). *School Rates.*—The large majority of the elementary schools in Norfolk are voluntary, but it has not been possible to obtain any precise information as to the total amounts raised by voluntary subscriptions and voluntary rates.

2894. Can you not get it now, at all events, since the district councils have taken over the roads?—Now, from the district councils we can, but it is the first time that we could.

2895. Those parish accounts that previously dealt with highways were all audited by a Local Government Board auditor, were they not?—They were.

2896. And they must be available. Let me suggest that your Chamber should try and supply that information to us.\* I think you admitted, that although the value of land had decreased, houses had to a great extent kept up the valuation. That is given in paragraph 8 and 9 of your memorandum, but they only show the division broadly between buildings and land including farmhouses?—Yes.

2897. Now, farmhouses are not, as a rule, rated highly, are they?—No.

2898. A very low rate is put upon them for obvious purposes?—I may say that the figure you have there is the figure which we were compelled to get in consequence of the Agricultural Rating Act, 1896.

2899. I quite see your reason; you would not have got it out but for that Act?—We were tied by that Act to put a certain valuation on the premises.

2900. I see that buildings, including agricultural buildings, are 55 per cent. of the rateable value of the County of Norfolk?—Yes.

2901. The land being only 45 per cent.?—Yes.

2902. Have you any idea of what the value of buildings, not agricultural, would be?—No.

2903. You only got the return for the purposes of the Act?—Yes.

2904. But I am certain in some of the watering places on your coast the value of the buildings has materially assisted the land?—Very materially.

2905. That is an increasing assistance?—Yes.

2906. I think you said that you thought that the system of Government grants tended to extravagant administration; have you found that in the County of Norfolk?—I think our county expenditure is, to a certain extent, an answer to that question.

2907. The figure is quoted in your report?—Yes.

2908. Are you quite satisfied with your poor law administration?—In what direction may I ask?

2909. I see an indication in paragraph 7 of your report that too much out-door relief is given?—There has been a very decided increase of the amount given in out-door relief since the passing of the Act of 1894.

2910. And that is probably why you would not have preferred to have had the Exchequer contribution, as regards the Probate Duty, based upon indoor pauperism?—I would not say yes or no to that.

2911. I saw you did not relish the suggestion?—I did not, and for the best of all reasons, that anybody who lives in the country knows how vexed a question is the question of indoor and outdoor relief, with those who have the administration of the poor law.

2912. There can be no doubt about the principle, I suppose?—There is a very great doubt about the principle, I think, in Norfolk.

2913. It has some direct relation to wages, has it not?—I think that the present constitution of the boards of guardians inclines the guardians to take perhaps a less wise view with regard to the administration of the Poor Law than that which was adopted by those who preceded them.

2914. Those of us who read the reports of the Poor Law Commissioners know that there is such a thing as relief in aid of wages?—There is undoubtedly.

2915. (Mr. Clere.) In this return, which is annexed to the Report of the Norfolk Chamber of Agriculture, I notice three periods are taken, 1875, 1885, and 1895; I presume that was merely done because it happens to cover the 20 years?—Exactly, and 1895 is the last year for which we could get returns of public expenditure; it was taken for no other cause.

2916. As the Highways and Locomotives Act was passed in 1878, the figures for 1875 are hardly a fair comparison with the figures of 1895, are they?—No, because they cover completely different states of circumstances and conditions.

\* The witness states he is unable to obtain this information.

Mr. J. S.  
Holmes.  
9 April '97

2917. Under that Act, if a turnpike road became disturnpiked, then the cost of maintenance fell upon the county rates?—Yes.

2918. Whereas previously it was paid out of the tolls paid by those who used the roads?—Yes.

2919. In this return, does the highway rate simply mean the highway rate levied in the parishes or unions, or does it include the cost of the main roads?—It is purely parish expenditure, exclusive of main roads, if you are referring to Table III.

2920. So that, probably, the increase in the county expenditure is, to a certain extent, accounted for by the new burden, so to speak, thrown upon it since 1875, in respect of main roads which were previously maintained by some other means?—Yes, undoubtedly, to the extent, in Norfolk, of 350 miles of roads which were turnpikes, and which were maintained by the tolls, of course.

2921. Is the general purport of this return of the Chamber of Agriculture, and of your evidence, to convey the impression that a considerably increased burden is now borne by the agricultural ratepayer, as compared with either the year 1875 or the year 1885?—Yes.

2922. I notice it is put down here that there is an average increase in the rates of about 50 per cent. in these specified parishes?—Yes.

2923. That would almost lead to the conclusion that an man paid 2s. 6d. in the £ before, he would now be paying 1s. 3d. more?—Yes.

2924. May I point out that in 1885, according to the table, a rate of 27d. in the £ yielded 7,782l., and in 1895 a rate of 35½d. yielded 8,253l., showing a total increase of expenditure of 471l.?—Yes, that is so.

2925. I see that by working out what the rate produced in 1895 it comes to 232l. each penny?—Yes.

2926. So that, practically, the increase of rating between 1885 and 1895 is just about 2d. in the £, that is to say, there is a total increase of expenditure of 471l., which requires, roughly speaking, a 2d. rate to produce?—I do not quite follow you there, because I see that the 7,782l. levied in 1885 was produced by a rate of 27d. in the £.

2927. Twenty-seven pence in the £ means that each 1d. produces 288l.?—On that rateable value of 69,757l.

2928. Yes?—You will see that in the next period the rateable value has dropped very largely—down to 56,951l. so that 1d. rate produced a great deal less.

2929. What it comes to is, that the total amount required to be levied in 1895 was 470l. in excess of the total amount required to be levied in 1885?—Yes.

2930. But owing to a drop in the assessable values, it required a rate of 35½d. in 1895 to levy the same as that in 1885 plus that 470l.?—Yes.

2931. So that the individual occupier of a farm, who in 1885 paid rates on his then assessment of 27d. in the £, was only paying actually in 1895 2d. in the £ more than he paid in 1885, although the nominal rate is 8½d. more?—I should, with submission, say that you are not right in saying only 2d. in the £.

2932. A rate equivalent to 2d. in the £ at the rate he was paying in 1885?—Yes, at the rate he was paying in 1885, but you see the fact that the rateable value has fallen so much in the meantime makes it completely different. I quite see that the amount that he pays actually in cash, is only, comparatively speaking, a small amount more, proportionately to the value of what he is paying on, which is represented by the 470l.

2933. As a matter of fact the actual cash which the occupier of a farm in Norfolk is paying in 1895 is a very small increase on the amount he was paying in 1885?—Quite true.

2934. And the impression that might be gathered from this table, that there had been an increase in rates of 50 per cent., is in that way rather misleading?—You will see that it is very carefully stated here, that the levies have only increased by 817l.; it is the incidence of the rate which shows the very large increase.

2935. I admit the accuracy of the figures. With regard to the increase of lunacy in the county, I suppose the main increase in the expenditure is in connexion with the lunatic asylums, is it not?—Yes, I think it is. I do not think there is a very great difference in the actual cost of weekly maintenance. There is not an important difference.

2936. Is it not that the asylums have had to be increased owing to the fact that the Lunacy Commissioners are driving the imbeciles or the epileptic patients from the workhouse into the county asylums?—To a great extent, and because there is less disinclination on the part of the poor to send their lunatics into the asylums.

2937. So far as the poor rate is concerned, for the maintenance of the poor, it makes very little difference, does it not, whether the lunatic is maintained in the workhouse or in the asylum, because if he is maintained in the workhouse the whole charge falls on the poor rate, but if he is maintained in the county asylum, 4s. a week is given in relief of the poor rate?—That 4s. would not anything like compensate for the additional cost. The cost of the lunatic in the poor-house would, I should think, speaking without figures, not exceed 3s. 6d. a week; the present cost of maintenance in the asylum at Thorpe is 9s. 4d.

2938. Is that maintenance pure and simple, without interest on capital, expenditure, and sinking fund?—Yes. Off that 9s. 4d. the Government gives us 4s. so that the charge to the Union is 5s. 4d. in place, I should say, of about 3s. 6d., so that there is an additional cost and rather an important one.

2939. You made a suggestion that there should be one assessing authority for the whole of the county, and that that authority should take the form of either a government or a county department, I think?—Yes, one assessing officer.

2940. Do you not think there would be a difficulty in carrying it out in detail, owing to the fact that every separate occupation in every parish has to be entered in a list?—I do not think the difficulty of doing that would be any greater than what the Government Surveyor of Taxes now has to contend with; he has to enter every separate hereditament in his list.

2941. The Government Surveyor of Taxes has the poor rate books always to copy and look at?—True.

2942. And he generally takes the gross assessment, unless for some reason or other he thinks that he ought to alter it?—Yes.

2943. Practically he has the foundation of all his list ready made for him by the overseers?—Quite so. There is not much alteration in real property assessment when once you have got it on the valuation lists.

2944. Supposing in a parish you have had your annual valuation made by this county department, building goes on in the parishes from month to month, and a month after the valuation is completed in different parishes the new houses become capable of occupation, then who is going to make that supplemental list to include those houses in the valuation list?—The overseer would do it at the present time; I do not know why he should not do it in the future.

2945. What I want to point out to you without arguing against your principle, is that, as a matter of detail, some provision must be made for some one or other who is going to advise or to make the valuation list to be almost always present in every parish, so as to know what is going on?—I quite see there is a difficulty there.

2946. Otherwise a great deal of property which ought to pay rates would escape them for the best part of two years?—Not for the best part of two years.

2947. For the best part of one year, at any rate?—Yes.

2948. Why do you think that the principle of Government grants has conduced to increased expenditure by the county, except, I will admit, in the case possibly of technical instruction; let us take it in detail for a moment: take your police to begin with?—May I first of all say this, that I am not so anxious to wish it to be thought that I think the county authorities have been so extravagant on account of the Government grants? It is not the county authority; I think it is the union authority.

2949. I take the case of a union, do you mean to say that the fact of the union having all their officers now paid for out of Government grants has a tendency to increased cost of administration?—Yes I think so. I think that the unions are less careful in securing the services of their officers at as reasonable a sum as they might do knowing that it is a Government charge.

2950. It is in respect of the union officers mainly?—Yes.

Mr. J. S.  
Holmes.  
9 April '97

Government assessor desirable. Difficulties in connection with scheme.

Government grants conducive to extravagance by unions. Reasons for this view.

*Mr. J. S. Holmes.* 2951. In that case I think the Government grant goes to the extent of covering the whole cost?—I think so.

2952. Have you noticed that there has been any tendency to increased extravagance where the Government grant has only equalled a given proportion of the expenditure, and not covered the whole—take the case of the police?—No, unless it might be in the case of the police pensions.

2953. (*Mr. Elliott.*) I gather that the foundation of the case you have presented to the Commission is that simultaneously with a substantial increase of the expenditure there has been a considerable fall in the property and profits derived from the agricultural industry in your county?—Yes.

2954. In Table III. of the report of the Norfolk Chamber it would appear that the valuation of these typical parishes has fallen from 75,172*l.* in 1875 to 56,951*l.* in 1895?—Yes.

2955. That represents, according to a calculation I have made, a fall of 24 per cent.; would you say that 24 per cent. represents the fall in the value of agricultural property in your county?—Not the fall of agricultural land.

2956. Nor the fall of agricultural profits?—No, certainly not.

2957. The discrepancy may be attributed, I suppose, in part to the fact that buildings and not merely agricultural land are included in these figures?—Yes.

2958. Are you able to give the Commission any idea as to what the real percentage of the fall in the value of agricultural property has been in Norfolk?—I am afraid it is impossible to say because no answer that one could give would be correct except for a very limited area.

2959. Would you put it at a figure substantially higher than 24 per cent.?—Certainly.

2960. Very considerably higher?—Very considerably.

2961. Would you say as much as 50 per cent.?—I should say at the very least 50 per cent. on my own judgment.

2962. Do you think that that very considerable reduction has been at all adequately represented in the valuation of agricultural property as it appears in the valuation lists?—No.

2963. I notice that in paragraph 14 of the report of the Norfolk Chamber it is stated that in many cases the whole profit of an agricultural property is absorbed by rates and taxes?—Yes.

2964. Are you able to give us any information as to what the figure in the valuation list would be in a case like that?—I can only say that the principle adopted in the Union in which I reside is this: There we have adopted the principle that we will not in any case recognise a property as having no value at all, and we have adopted a minimum rate per acre below which we refuse to assess any property whether it has any annual value, or whether it has none.

2965. For reasons which seem good to the assessment committee you have not in fact given full effect to the consequences of agricultural depression in making your valuation list?—By no means.

2966. In regard to the practice which you have just referred to as having been adopted by your assessment committee, what is the minimum figure that has been taken?—I should rather hesitate to answer that question because I am not sure that in adopting a line of this sort, the assessment committee has adopted a line which is in accordance with the law. I should ask you to excuse me giving an answer.

2967. At any rate, what you have just told us suggests that any comparisons based upon the figures as they now appear in the valuation lists in a county like Norfolk are extremely delusive?—Are entirely fallacious.

2968. And considerably understate the case which you yourself wish to present to us?—I say the case is very much worse than as appears in these returns.

2969. It is very much worse?—Yes, very much. You asked me the question and I said that in my particular Union we adopted a minimum below which we declined to go, I may say that I know that other unions have adopted a similar line. We have done it in self-defence.

2970. Some questions have been addressed to you with reference to Table III. of your report; would you say from your local knowledge of those parishes whether

there is any reason to suppose that they are not fairly typical parishes?—As far as I know they may be taken as absolutely typical of the whole county. Those returns were made entirely voluntarily, and every single return which could be made use of has been put in. There has been absolutely no idea of selection to prove our case.

2971. I notice, for example, that the parish in which the rate in the *£* is the highest is Starston—do you know of anything exceptional in the case of Starston, which causes such a high rate in the *£*?—No, I do not. It so happens that Starston is a parish in which I myself have property, and with which I am intimately connected. I know of no circumstances which should have brought such a result about with regard to Starston.

2972. The lowest rate in the *£* is apparently the rate at Honing which is 2*s.* 3*d.*?—Yes.

2973. Do you know of anything which would make that parish exceptionally lowly-rated?—No.

2974. Then to conclude these questions I will put it to you that you have had an increased expenditure to meet, and a very considerable reduction of ability to meet that expenditure?—Yes.

2975. Would you say that that proposition could be held to apply to any other industry with which you are acquainted in anything like the same manner?—Not that I am aware of.

2976. Have you any other industries in your county which you can compare with the agricultural industry?—I think Norfolk is unique in its position of having almost a lesser amount of alternative industries than any other county in England. Its chief alternative industry is its fishing industry, and that, of course, is confined to its seaboard.

2977. Has there been any considerable depression in that particular industry?—I am not aware of the circumstances connected with the fishing trade at all.

2978. With regard to the purposes for which this local expenditure has been levied, I think you mentioned to us that the purely parochial expenditure is very small indeed?—Yes, the vast majority of the parishes in Norfolk incur no expenditure under that head at all.

2979. For what purpose is the bulk of the expenditure levied?—The union rate (including the county) includes the relief of the poor, and the main roads—which are about one-third of the whole mileage, the expenditure for dealing with the remaining two-thirds rests in the hands of the parish; and there is the school expenditure.

2980. And lunacy?—That is included in the union charge.

2981. Then the union charge comprises charges other than the maintenance of the poor?—It includes all the county charges generally.

2982. Would you say generally that the purposes for which this expenditure is required, are purposes which add to the personal convenience and comfort of the person who bears the expenditure?—Only to a certain extent.

2983. Would you say generally that they are burdens rather than benefits?—Certainly with regard to the relief of the poor it is a burden; with regard to education it is only very partially, I think, a benefit to the immediate locality.

2984. And with regard to the particular agricultural property rated?—No, I think a great deal of the property rated derives no direct benefit from the charges at all.

2985. I gather from some observations which are contained in paragraph 11 of this report, that the owners and occupiers of agricultural property in the county consider they have a grievance as against owners of other property who derive an income therefrom?—Yes.

2986. Would you give us some further reasons as to why you think you have a grievance against other owners and occupiers?—I cannot do it better than in the words that are put into the report of the Local Taxation Committee, contrasting the position of the professional man and of the farmer, both employing the same amount of capital; the professional man pays his rates and taxes upon the assessment of his house, and the farmer pays his upon the assessment of the whole farm.

*Mr. J. S. Holmes.*

9 April '97

of Norfolk Chamber of Agriculture.

Expenditure increased while value of agricultural property and profits derived from agriculture decreased.

Fall in value of agricultural property not represented by value as appearing in valuation lists. Rent not always taken as the basis for valuation in Norfolk.

Expenditure increased in Norfolk, ability to pay decreased.

Expenditure purposes for which rates levied.

Rates of benefit and rates of burden.

Rates, burden of borne by different classes of the community contrasted.

Rates in Norfolk. Statistics

**Mr. J. S. Holmes.** 2987. Is that a grievance of the owners and occupiers of a particular class of rateable property as compared with the owners and occupiers of other classes of rateable property?—Yes, I think it is.

9 April '97

2988. And in addition would you say not only that there is a grievance as between different classes of rateable property, but that there is a grievance on the part of the owners of rateable property as against the owners of other property?—Yes.

2989. Has your Chamber given any consideration to the question whether any grievance exists as between the owners of interests in identical properties?—I do not quite follow you there.

2990. May I put to you the case of the owner of agricultural property which is heavily mortgaged, and which may be subject to charges in favour of different persons; does the owner of that property make any complaint that he is unable to apportion these burdens as between himself and the mortgagee and the person entitled to the charge?—No, I do not think so. I think the nominal owner is the man who invariably bears the whole.

2991. Does he feel it any burden to do so?—I have no doubt that he feels the burden very severely, but I do not think he thinks there is any possibility of being relieved; I have not heard that he does.

2992. In the case of the Income Tax, Schedule A, he is entitled, is he not, to deduct a portion of the tax on payment of the mortgage interest?—I cannot answer that question.

2993. Has your Chamber at all considered the propriety of making any division of rates between the owners and the occupiers of agricultural property?—Not that I am aware of; I do not think the question has been raised in Norfolk.

2994. Have you at all considered in your Chamber the possibility of giving greater variety to the system of raising local revenues?—No, I do not think so.

2995. I gather that you think that some re-adjustment of local burdens is necessary?—Yes.

2996. Have you at all considered, or are you able to make any specific proposals to us as to what the scheme of readjustment should be?—No, we have not liked to do that. We thought it was more our province to show you how severely the burdens press upon us rather than to suggest the remedies.

2997. You are aware, of course, that during what is now a considerable period of years there has been a gradual development of what may be called the graded or classified system of local taxation?—Yes.

2998. And that that system received its latest development in the Agricultural Rating Act of 1896?—Yes.

2999. Have you considered whether any further development of that graded or classified system is possible?—No, we have not considered it as a Chamber.

3000. Have you considered it personally?—Personally, myself, I think it is very much to be desired. I think there is a certain class of property in land which, at the present time, is unable to bear any burden of rates and taxes at all.

3001. And I gather from what you previously said not deriving any such benefit from the local expenditure as would justify the payment?—Quite so. I would further say, if I may, that I think if the present system of rating is maintained, it can only result in a very large abandonment of the cultivation of certain lands in England.

3002. You are aware, of course that in addition to the gradual development of the system of grading or of classification, there has also been a gradual development of the subventions to local expenditure out of Imperial funds?—Yes.

3003. Notwithstanding the opinion which you have expressed with regard to the possible tendency to extravagance of that system, do you propose that any further development of it should take place?—I should certainly favour an extension of the system, although I may not altogether approve it, as the best system on which help can be given.

3004. You would prefer a development of the graded or classified system to a development of the system of grants from the Imperial exchequer?—I should,

certainly, because I think that is the one which would benefit us most in Norfolk.

3005. Are the observations which you have made with reference to the possible extravagance of the system of Imperial subventions your own individual opinions, or are they the opinions which you express after consultation with your colleagues?—I think it is the very generally received opinion that the principle of grants-in-aid is one which has a tendency to create extravagance in local expenditure.

3006. Even when these grants-in-aid are limited in the manner which has been put to you by Mr. Clare?—Yes.

3007. Has the increased expenditure in your district been an increased expenditure on old objects or a new expenditure on new objects?—I think, so far as the county is concerned, we have had several new obligations thrown upon us which of necessity have entailed a heavier expenditure on the county. The Local Government Act of 1888 very much extended the duties and responsibilities of county authorities, and that of necessity has entailed a considerable increase in county expenditure.

3008. But the Imperial subventions have enabled that new expenditure to be more easily met?—Yes.

3009. Has your Chamber considered the special grievance of the owners of tithe rentcharge?—No.

3010. (*Mr. Dalton.*) I think you base your opinion that Government grants tend to extravagance mainly on the expenditure of boards of guardians?—Yes.

3011. You do not think it applies so much to county councils?—No.

3012. And in the case of boards of guardians, you attribute it rather to the union officers' grant, I think?—Yes, I think so mainly.

3013. You told us that the union officers' grant provides for the whole cost of the union officers; that is not quite the case, is it? Is it not a fixed sum?—Yes.

3014. It is a fixed grant based on what the cost of union officers was in the year 1888?—Yes, I think so.

3015. If that is the case, so long as you do not increase the salary of the union officer, the whole of the cost is paid out of the Government grant; but if you increase it, any increased expenditure falls at once upon the union?—Yes.

3016. How does that conduce to extravagance? Would it not conduce to caution in expenditure?—It should do, but the guardians are inclined to regard this as a sum that is defrayed by the Government, and on that account lose sight of the fact that in reality they have to pay the excess and not the Government.

3017. You think that is the case in your county?—Yes, I think it is so.

3018. Have you remarked any increase in the salaries of the officers of the boards of guardians in your county?—No, I could not say I could point out that to you.

3019. The other item, I think, in which it was suggested that there was some extravagance on the part of boards of guardians was out-relief?—Yes.

3020. You thought that had increased since 1894?—Yes.

3021. But there has been no additional grant-in-aid of the poor rate expenditure since the year 1888?—That is so.

3022. Therefore, if there has been any increased extravagance on out-door relief it is not due to the giving of Government grants?—No, certainly not.

3023. You attribute it to the passing of the Act of 1894?—Yes.

3024. By which no Government grant was given?—That is so.

3025. Having regard to these facts, do you think there is a strong case to show that the Government grants have induced boards of guardians to be extravagant?—No, I do not know that there is. Generally, I am of opinion that the principle of Government grants tends to extravagance rather in local expenditure.

3026. It is rather a general impression than anything else?—Yes.

3027. I think the Norfolk Chamber of Agriculture, in paragraph 7 of their report, give other reasons why the cost of the relief of the poor has increased in your

**Mr. J. S. Holmes.**

9 April '97

Expenditure, increase of in Norfolk partly due to new obligations.

Government grants conducive to extravagance by board of guardians with regard to the union officers grant.

Government grants not led to extravagance on out-door relief, but Local Government Act of 1894 has tended to produce such a result.

Relief of poor. Increased cost of, due to migration of best labourers.

Rates, possible re-adjustment of burden.

Grading or classification system of local taxation.

Government grants in aid of local taxation. Extension of system desirable.

Mr. J. S. Holmes.

9 April '97

county; they state it is partly due to "the migration of the young and able-bodied to other parts of England where wages are higher, the older and less able-bodied being left behind and becoming, in course of time, a charge upon the rates"; do you agree with that?—Yes.

3028. Have you any figures that you can put in to substantiate that?—There is Mr. Shaw-Lefevre's Local Government Board Return of 1895, which amongst other things gives the population of the various counties and in paragraph 13 of the supplementary memorandum that I have handed in I have shown that in Norfolk, as a whole, there has been an increase as between 1891 and 1871, of close upon 30,000 in the population; but if you take out the increase in the boroughs it leaves a net decrease in the agricultural districts of 4,500.

3029. There is no doubt whatever that the agricultural population of Norfolk has decreased very considerably?—There is no doubt whatever that there is a very large decrease in the population that are getting their living by agriculture. It is, of course, a little difficult to say what is the agricultural population, because they drift from the villages into the small towns, and they are still classed as agricultural population, but the decrease in some villages is very remarkable indeed. In the particular union with which I am connected there has been a decrease of a thousand in each of the last two decades.

3030. The third cause of increase is the cost of lunacy?—Yes.

3031. I suppose the lunatics live considerably longer now than used to be the case?—Yes.

3032. And are better treated?—They are much better treated.

3033. You would not consider that an extravagance on the part of the guardians, would you?—It has nothing to do with the guardians at all, the guardians have no controlling voice in the matter.

3034. But it increases their cost?—Yes, but the guardians have nothing to do with regard to the administration.

3035. The fact that the increase of the guardians' expenditure, so far as lunatics are concerned, is altogether out of their control, makes the case stronger, does it not?—It is entirely out of their control.

3036. Therefore that cannot be attributed to the Government grant?—No.

3037. I think you stated, as regards the Agricultural Rating Act, that it gave the minimum help where most was required; but your Chamber of Agriculture say it is a substantial relief?—Yes, it is a substantial relief to agriculture as a whole.

3038. But not to your county?—Yes, I meant to say to the whole agriculture of Norfolk. But it chiefly goes to help the rates where the help is least needed; on the most valuable land they get the greatest measure of relief; on the land which is assessed at the least they get the least measure of relief.

3039. As I understand from your figures 45 per cent. of your whole valuation is agricultural land?—Yes.

3040. That means that you get an enormous grant under the Agricultural Rating Act for Norfolk?—Yes, a very considerable one.\*

3041. And also in Norfolk, as I understand, the poor agricultural land is put at a considerably higher value on the valuation list than is really its intrinsic value?—Yes, no doubt.

3042. That will conduce to giving the poor land a considerable grant, will it not, as the grant is given according to the latest valuation?—I am not clear about this point, but I think it is not given to the individual farm; I think it is given to the union, and whatever that particular union gets will go to the common fund of the union, and whatever charges are to be levied on the union half the rate will be levied on the land; but on that I am not quite clear.

3043. It is not half on the land and half on the other hereditaments, the land will be rated at half?—Yes, that will be so, but I thought the tenor of your question was that if the poor land had been assessed at more than it was worth now, it would get a greater reduction than that which it was entitled to in consequence of the Act of last year.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 85 (Table II.).

3044. All this agricultural land will be rated at one-half in future. I presume the valuations have not been altered and it would get half of whatever rates are raised upon the land?—Yes, whatever the assessment was in July last.

3045. I want to ask you one or two questions on Tables II. and III. of the report of the Norfolk Chamber of Agriculture. What does the "union levy" in Table II. precisely include; it includes, I understand, not only the charges of the guardians but certain other charges?—Yes.

3046. Does it include the rural sanitary authority's charges?—Yes.

3047. The school boards'?—The school attendance committees.

3048. But not school boards'?—No.

3049. Those are left out of both tables, are they?—No, School boards will be included under the head of "Schools" in the parish returns.

3050. In the parish returns are there school boards or are there not, in those 18 parishes?—I cannot say that, because we have got the returns for "Schools," not discriminating between school boards and voluntary schools.

3051. It is rather striking in the parish return that there has been no great rise in the school rate since 1875; the total is 709*l.* in 1875 and 752*l.* in 1895, after an interval of 20 years; that looks as if there were no school boards there?—There are some school boards I know returned in this, but I do not think there are many. I think the bulk of these returns are from voluntary schools.

3052. At any rate there is no high school board rate there?—Not that I am aware of.

3053. In Table III., when you come to the "union levy," that means something totally different to the "union levy" in Table II., does it not?—Yes, Table II. you will notice gives the Norfolk Union Returns and then the returns are divided into "Union" and "County." Do you wish to know what is comprised in the "Union"?

3054. In the parish return the county is included under the heading of "Union"?—Certainly; it includes all the union charges.

3055. I am not sure whether I should gather from your evidence that you thought that the Government contributions in any way went to the different counties in proportion to their rateable value; I rather thought you said something which pointed in that direction?—If so, I did not mean to convey that impression.

3056. As a matter of fact you get the local taxation licences collected in your county?—Yes.

3057. And the probate duty grant you get in proportion to your discontinued grants?—Yes.

3058. Rateable value has nothing to do with the proportion that you get in your county, except as between you and the county borough?—That is it exactly; that is where the rateable value comes in, and nowhere else.

3059. (Mr. Stuart.) You have brought forward here the returns that have just been referred to for 1875, 1885, and 1895; these do not, I suppose, include any relief from the Act of 1896?—No, none.\*

3060. Are you founding the various arguments that you have brought before us to-day upon an inclusion of the results of the Act of 1896, or are your arguments based upon figures that do not include those?—They are entirely exclusive of the 1896 Act.

3061. Then your arguments are somewhat out of date?—They are very much modified by the relief which the Government gave by the Agricultural Rating Act of last year.

3062. Let us look for a moment at what you mean by "very much modified," can you state how much they are modified?—I cannot say, of course, with regard to the county generally, but with regard to my own particular union we have already ascertained that the Government grant will relieve our local burdens to the extent of just over 2,000*l.*

3063. I will put to you your own table\* of the Norfolk Union returns; if you will look at that table

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 77 to 80 (Table I. to III.) and p. 85 (Table II.).

Mr. J. S. Holmes.

Rates in Norfolk Statistics of Norfolk Chamber of Agriculture. Effect of operation of Agricultural Rates Act, 1896.

Lunatics, increased cost in maintenance of.

Agricultural Rates Act, 1896. System by which relief given open to some objection.

Agricultural Rates Act, 1896. Norfolk gets a large grant under.

Mr. J. S.  
Holmes.  
9 April '97

you will see that the total levies for 1895 amount to 119,673*l.* which is equal or equivalent to a rate in the £ of 23½*d.* Now let me put this to you and you can tell me if I am right; it is the quickest way I can do it. I am right, am I not, that Norfolk is roughly half agricultural land and half other things?—The non-agricultural is 1,053,382*l.*, the agricultural is 866,582*l.*

3064. Roughly, for my purposes it is half, and as, I think, you have already admitted, these unions are a fair sample of Norfolk—I do not want exact figures just now?—Yes, they certainly are.

3065. As your agricultural rates are relieved by half and as they are, roughly speaking, half of the whole—I do not want exact figures, but, roughly speaking, you are getting a relief of one quarter of that 119,673*l.* in the unions that you have given us?—That is, roughly, right.

3066. That is all I want, but if you wish to make any explanation of that, by all means do so?—In reference to that I would say this, that in my own particular union we had a levy last year of 12,000*l.*, the Government contribution in consequence of the passing of the Agricultural Rating Act of last year is now 2,000*l.*, that is not a quarter, you see, it is a sixth. Therefore, I must say that your remark that the Act of 1896 will relieve us to the extent of one-quarter is only approximately correct.

3067. It is only very roughly true?—Yes.

3068. It might be a fifth, over the county, call it a fifth, roughly, over the county; that would be for these particular areas that we are looking at, the fifth of 119,673*l.*, which, roughly speaking, would be 25,000*l.*?—Yes.

3069. Roughly speaking, am I right in saying that in these Norfolk Unions these parishes would get a relief from the Act of 1896 amounting to 25,000*l.*?—It is a little difficult to answer that question because I have no data to go upon, other than the data which I happen to have with regard to my own particular union. We have not got any return yet in Norfolk to show what will be the amount although we assume it will be somewhat near what you say.

3070. That is quite enough—it is near what I say?—Yes.

3071. If you take that 25,000*l.* off that 119,673*l.*, and make the calculation, I will ask you whether it does not reduce that 23½*d.*, roughly speaking, by a sum of 5*d.*?—I dare say it does.

3072. I have done the calculation and I think that is right; when you have reduced that 23½*d.* by 5*d.* you get 1*s.* 6½*d.*?—Yes.

3073. If you will look back to the rate raised in 1875 you will see it was greater than that?—Yes, it was.

3074. Then your position is that you complain to us of the rise in what you have to raise by rate; why do you complain of that after what I have said? May I ease your reply by asking you is it because of the relative difference—is it a relative complaint or an absolute complaint? I will put that more easily, if I can—have you considered the rates of the town?—No.

3075. Have you any reason to think that the rates in the boroughs of England generally compare favourably or unfavourably with what you have now stated to be the case in Norfolk, that is to say, if I were to take the rates of the boroughs of England in 1875, or of any borough, and compare them with the rates of the boroughs or of any borough in 1895; do you know whether there would be an increase or a diminution in the rates?—I have no accurate knowledge, but of course I believe that there has been a considerable increase in the borough rates.

3076. Do you know the rates of Norwich, for instance?—Yes, I have heard them spoken of as being the highest in England.

3077. They are nearly; you know they are not diminishing anyhow?—I believe not.

3078. If you complain of the condition which we have just got at by your answers to my questions in these Norfolk Unions, how do you meet the position of the boroughs, do you say that they have all that greater claim than you, or that their claim should be neglected?—We have not attempted in this report to draw any inference as to the relative burden of rates between the town and country, and we have no desire to raise that question at all.

3079. Now if you come to your rates, and the rates of the town, you have made no inquiry, I suppose. I gather from what you have said that you have made no inquiry as to where the rates of the town differ in character from your rates?—No, we have not.

3080. Now I want to ask you a question which is somewhat of a different kind; do you know any district of Norfolk well enough to be able to tell me whether the rateable value put down in 1895 represents, or does not represent, the rent?—I am only acquainted with the circumstances of the union in which I reside.

3081. Let us take that one?—I would say that the figure returned in 1895 does not in my belief represent the rent. I mean to say that it is in excess.

3082. What is the Union you refer to?—Depwade.

3083. What is the amount of the rateable value of land in that Union?—According to the return I have, it is, you may say, 57,000*l.*, and other than land is 70,000*l.*\*

3084. Then could you give me any idea of what you believe yourself to be the rental of land in Depwade, which is rated at 57,000*l.*?—I could not possibly give you a figure for the aggregate.

3085. Can you take any one farm in the Depwade Union, and tell me what that farm is rated at, and what it is rented at?—I could very easily procure that evidence.

3086. Do you not think it would be a valuable and important point as bearing upon this inquiry, that if you could easily do so, you should for the union that you know, get us what is the present rateable value, and what is the actual rent, either of the majority of the farms, or of some of the farms?—I daresay I might be able to get the information you require. It is a little difficult to go back to two years ago. I can get what appeared in the rate book then, but it would be a little difficult to be certain of getting the rent for that particular year.

3087. I should be quite satisfied if we got a few facts of that sort for any year, say the present year?—I will make a note of that.†

3088. Can you state for any other part of Norfolk what you know, if you do know anything, as to the actual rent paid for, and the rateable value in the rate-book of agricultural land?—No, I could not tell you of any other.

3089. (Chairman.) Following out that sort of line I will ask you a question or two. I will first ask you one or two questions, which I do not think you will have any difficulty in assenting to. You state in Table III. of the report that the average decrease in rateable value is about 24·2 per cent. over your 18 parishes?—Yes.

3090. I think I understood you in the course of your evidence, to say that the entries affecting agricultural land in your rate books would show a drop as between 1875 and 1895 of about 25 per cent.?—Yes.

3091. You also stated that in 1875 your average loss of rates was nearly 24*l.* in the £?—Yes.

3092. That in 1885 it had risen to 27*d.* in the £?—Yes.

3093. And that in 1895 it had risen to 35½*d.*?—Yes.

3094. I asked you for, and you were good enough to say you would endeavour to get them for me, the actual figures of rates paid in respect of a farm which had been continuously in the owner's hand during that time?—Yes.‡

3095. Let me take a hypothetical case; assume that in 1875 a holding of land had paid a rent of 100*l.* which appeared at its value in the rate-book, then the rates upon that farm at 24*d.* would amount to 10*l.*?—Yes.

3096. In 1885, at 27*d.* in the £, the total rate levied on that farm would arrive at 11*l.* 5*s.*?—Yes.

3097. But if in 1895 the value of the farm had fallen to 75*l.* a year—and I understand a loss of a quarter to be your hypothesis?—I said, if you remember, that that was the average loss including lands and houses, but if you ask me what my opinion is of the loss upon land alone, 24 per cent. does not represent it.

\* Pl. II. of Appendix to Vol. I. of Minutes of Evidence, p. 85 (Table II.).

† The witness subsequently stated that to get the actual rental and rateable value of the union would be impossible.

‡ Pl. II. of Appendix to Vol. I. of Minutes of Evidence, p. 85 (Table I.).

Mr. J. S.  
Holmes.  
9 April '97

Rateable value of land in Depwade Union of Norfolk is in excess of actual rent.

Rates paid on agricultural land in Norfolk in 1875, 1885, and 1895.

Rates in rural districts and in boroughs in Norfolk compared.

*Mr. J. S. Holmes.* 3098. Will you give me a figure; will you take 50 per cent.?—I should say 50 per cent. would be much nearer.

9 April '97

3099. Then assuming it was dropped to 50l. the rates at 35½d., which is your hypothesis, would come to 7l. 7s. 11d. in 1895?—Yes.\*

3100. That is in 1875 the occupier would be paying 10l. on a rental of 100l. a year; in 1885 he would be paying 11l. 5s. upon his rental, if it remained the same, and in 1895 he would be paying 7l. 7s. 11d. in regard to a rental of 50l.?—Yes.

Value of land and buildings, proportion.

3101. Can you tell me what the probable proportion of the value of the buildings to the agricultural land is upon such a holding?—If you were to ask me that question with regard to the value of land before the depression, I could have given you an answer. I should have said that with regard to heavy land the buildings would cost not less than 10l. per acre; if the property was worth 50l. per acre, I think you might put 40l. for land and 10l. for buildings.

3102. One-fifth?—Yes.

Agricultural Rates Act, 1896. Permanency of Act desirable.

3103. If the full rate was still paid upon one-fifth of the value as appearing in the rate-book under the Act of last year, there would then, as Mr. Stuart put it to you, be a considerable advantage in favour of the amount which will be exigible from the agricultural tenant after the Agricultural Rates Act of last year comes into force?—Yes, four-fifths.

3104. I suppose it would make you materially more comfortable than you are at the present time, if you had any assurance that that relief was going to be permanent?—Yes, it would.

3105. That is your point, is it not?—Yes.

Roads, improvement of and expenditure on.

3106. In the course of your examination a reference was made to your roads, and you said, I think, that they were not capable of improvement—that, I think, was your expression?—I do not think I used that expression; I said that the roads had been greatly improved under county administration; the expense had been very greatly increased, but the improvement had been very considerable too.

How far cost of improvements should be borne by localities and how far is expenditure borne in proportion to benefits received.

3107. Would you agree with me that the improvement in the roads was of much greater relative benefit to the lady who drives in a carriage on springs than to the farmer who takes his produce to market?—Unquestionably so; it is of very little advantage, or of comparatively little advantage to us who farm the land.

3108. But you have to pay for it?—We have to pay for it; but prior to this improved condition of the roads, the roads were in a sufficiently good condition to carry our farm traffic.

3109. Do you, or do you not, think that the real property in a county should pay for a good road for the sake of a bicyclist, for example?—No, I do not.

Government grants, now far salary of union officers paid out of.

3110. Were you correct in what you say as regards the payment of the salary of union officers out of the Government grant? I understood you to put it to us that one reason for the increase of extravagance was that now the boards of guardians could get the whole of the salaries of their officers out of the Government grant?—Yes, I said so, but I think I attached rather undue importance to that fact; I do not think, in reviewing what I said about that, that I attach quite so much importance to it now as perhaps I did.

3111. I am only on the point of accuracy just now; is this or is this not the state of matters—that the Government grant is paid to the county and the union reclaims its salaries from the county authority?—Yes, it is so.

3112. Do you, or do you not, get anything more out of the Government for your district: is it or is it not the county fund that suffers rather than that an increased claim is made upon the Government?—I take it that the county is merely the conduit, the old plan was that the Government handed it to us direct, now it all goes to the county and the county hands it to the union authority, but I do not think the amount is varied.

\* The witness states that "it must not be taken for granted that because the rental value of a farm fell from 100l. to 50l. that the assessment necessarily followed suit. It is only during the current year that the Depwade Assessment Committee decided to make rent the basis of assessment."

3113. There is this, is there not, that the union can increase the salaries of its officers and make the county poorer, the county authority not having any control over your salaries?—No.

3114. Do you mean that is not so?—Yes.

3115. Would you state to me exactly how it is?—You are asking me a question I am not prepared to answer fully.

3116. If you say you do not know I will take that from you?—I do know, generally, but I could not give you the exact details.

3117. If you would rather not express an opinion, I have got the Act of Parliament, and it is not necessary to get it from you as it is in the Act?—I could not give you the exact details.

3118. (*Mr. Dalton.*) I think you said that under the Agricultural Rating Act your union would only get 2,000l. out of the 12,000l. expenditure; did not the expenditure that you are speaking of include the county rate?—Yes.\*

3119. Are you aware that the 2,000l. that you receive as guardians, does not include anything for the county rate, but that the county council themselves will receive a grant in respect of that?—In the 2,000l. I have already included the 500l. which will be handed to us by the county; we get 1,500l. direct from the Government and 500l. from the county, the two sums together making up the 2,000l.

3120. Do not the county hand you any part of the grant on the Agricultural Rating Act?—We are relieved to the extent of 500l. because the county receives that on behalf of what the union would otherwise pay the county so it comes to the same thing.

3121. Another fact which would account for your only receiving a sixth and not a fourth, is that land in your union does not represent half the rateable value of the union?—Not quite.

3122. (*Mr. Arthur O'Connor.*) With regard to the returns we have about the valuation, they are partly lands and partly buildings and the point I put to you now is whether "land" does not really cover land which is not truly agricultural land?—May I ask you what particular figure you are referring to.

3123. You gave us, some little time ago, figures with regard to land, and figures with regard to buildings?—They related to the net annual value of agricultural land in 22 unions.

3124. The figures appear to me to coincide very much with the figures for Norfolk in the Parliamentary return and I assume that you take the word "lands" in the same sense, but it occurs to me, I do not know whether I am right or not and I want to ascertain whether I am, that this word "lands" includes as distinguished from buildings, lands which are not agricultural lands but which may become building lands in a short time—I mean land in the neighbourhood of centres of population?—Under the Act of 1896 union assessment committees were required to discriminate as between what is agricultural land only and all other hereditaments and that figure which is returned here is the figure which is returned for agricultural lands only.

3125. (*Mr. Stuart.*) That figure, however, includes, as I understand, the buildings that are intimately connected with and utilized for agricultural land?—No, because that is the very thing we had to separate under the Act. We had to decide what was the value of the buildings and the houses on the land independently of the bare land.

3126. Under the Act of 1896?—Yes.

3127. What you have given us in these things that you have previously spoken about includes when you speak in the past, the farm buildings?—Certainly, because then we had no separate assessment. May I add that the supplement that I have handed in is extracted from Mr. Shaw Lefevre's report, and goes to show that the burden of rates and taxes in Norfolk is heavier than in any other county.

Government grants. Basis of distribution of residue between counties and county boroughs. Objections to.

3128. (Chairman.) I understand you are also a landowner in the County of Norfolk, and are President of the Norfolk Chamber of Agriculture?—Yes.

3129. Of course, we obviously shall not take you over the whole ground that Mr. Holmes has covered, but I understand from your memorandum that you are in general agreement with the views which are put forward in the prints which he has handed in?—Yes, there may be some matters of difference—mere matters of personal opinion—in which I am not in general agreement with him, but as to the facts and the main points we are in agreement.

3130. You have heard the questions put to Mr. Holmes; before I take you to the one or two points in your memorandum is there anything you would like to say in qualification of what he has said?—There is one thing in answer to a question which you put to him which I should very much like to mention. It struck me when you were asking him to get the figures of land continuously in the occupation of a landowner for 20 years, that that would probably, as a rule, be a home farm, and I am afraid home farms are not really typical altogether, that would rather vitiate that condition.

3131. We will take it from you in the best way that you can give it in order to illustrate your own contention; but it is necessary, is it not, to have, if possible, the same subject treated continuously for as long a period of time as possible?—Yes, certainly.

3132. Is there any other point?—No, I think not.

3133. You enter upon some criticisms upon the Government subventions and into the policy of them, particularly objecting to their proportion to the rateable value of the county?—Yes.

3134. And you give two reasons for that; you say first that it makes the County Rate Basis Committee unduly reluctant to recognise facts as to a fall in values; would you kindly develop that a little?—The more the county basis is put down the less the administrative county gets in the readjustment between the administrative county and the county boroughs. It is therefore obviously the interest of the County Basis Committee to strengthen its hands in its dealings with the county boroughs, of which, however, we have only two in Norfolk, to have as high a county valuation as possible.

3135. Therefore, assuming that to be so it would tend to this result, would it not, that the rate books are not a complete guide as to the amount in which the value of land has really fallen?—I think the rate book is not a complete guide; I should say it may not be very serious; but I should say it is not a complete guide, and that incompleteness is accentuated by a point which the Chamber's report\* has drawn attention to, namely, the extreme slowness of the recognition of any fall owing to the fact of the readjustment of the county rate basis being only at intervals of several years; I think it is every seven years, if I remember aright, but we have put that in our Report.

3136. Do you wish to suggest any scheme which would be fairer?—I am in this difficulty there, that I have had no official experience, and I imagine that any scheme which anyone without official experience is likely to suggest is so extremely likely to be inapplicable in some details that have not come under one's observation, that I do not think I could usefully do so. The principle is what I wanted to bring forward, that under the claim as existing by the Rating Act a poor county with a low rateable value which presumably wants most help gets least.

3137. You, I understand, in addition complain of the incidence of local expenditure falling so much upon real property?—Yes.

3138. Have you any suggestion to make upon that point?—I do not think that I could usefully suggest anything.

3139. You see, unless I can get some suggestion from those like yourself, who are making complaints, you will only carry the matter half-way for me. Our object would be, not only to localise the grievance, but to see whether anybody can suggest a scheme to which others could not equally take exception; therefore, I wish to know whether you can give me any assistance?—I should say that in principle, undoubtedly, personal

property ought to contribute to rates, and that the present scheme of subventions, I presume, aims at that but carries it out in a necessarily rough and ready and imperfect manner, and as regards the Rating Act of 1896 for five years only, at the end of which time, unless this Commission recommends legislation with the same object, we shall be plunged into our old grievance again.

3140. Have you any suggestion to make as to the method by which property, other than real property, could be got to contribute for local purposes?—I should imagine you could get at it through Schedule D; I do not mean necessarily to make Schedule D the basis of local assessment to rates, but to make it a basis for ascertaining the contributing ability of each contributor and each species of property. If the Schedule already exists for tax purposes I should imagine that we could use it for other purposes.

3141. Obviously there are large sums under that Schedule which are collected, not in the locality, but in central places?—Yes.

3142. How would you localise them?—I imagine if that were adopted it must be by the central authority collecting on that scale and devising an equitable scheme of redistribution among the localities.

3143. In what way does that differ from the system of this subvention?—It should differ from it, I think, in this way, that you would be dealing with actual figures.

3144. This is just the point. How is the Imperial authority to ascertain where all the holders of the London and North-Western Railway Stock, for example, are resident?—I am aware that that is an extreme difficulty, but at the same time the holders of the London and North-Western Railway Stock would be surely contributing much more in proportion to their holding than by any existing scheme.

3145. (Mr. Dalton.) I think you have suggested that under the existing system of Government subventions, a poor county gets less of the Government grant than a rich one?—Yes.

3146. But the grants are not distributed in any way as between counties on rateable value. Take Norfolk and Suffolk, for instance, there is no distribution in proportion to rateable value between those two counties, is there?—No. I meant with reference to the Agricultural Rating Act of last year, that a county with a high rateable value then got half the rates on its agricultural land paid; that is to say, assuming, as I suppose one may, that the grazing counties are generally more highly rented than the arable counties under present conditions, a county consisting largely of grazing land will get a very much larger subvention through having half its agricultural rates paid than a county of whose agricultural land is mainly arable.

3147. But under the Agricultural Rating Act, the grant is not distributed in any way in proportion to rateable value; you simply find what the rate was that the land paid and for half the rate on the agricultural land there is an allowance?—Yes, but does not that work out the same way.

3148. I should have said not. Supposing you have two counties in which there is exactly the same amount of rate raised on agricultural land, they will get the same grant whatever their rateable value may be, although one may have a high assessment and the other a low assessment, yet if the total amount of rates in the two counties is the same on agricultural land, they will each get precisely the same amount?—I see.

3149. I do not quite follow how you think that the system of distribution induces one county to have a high assessment and another a low one?—It was not as between county and county that I said there was an inducement to the County Rate Basis Committee to keep it up; that was as between a county and county boroughs.

3150. As between a county and the county boroughs in the county it is merely the residue of the grant that is divided in that proportion?—Yes, that is so.

3151. A comparatively small residue?—That is so.

3152. And that was done in consequence of the provision in the Act of 1888 that the county borough should get no advantage and suffer no disadvantage from going out of the county?—Yes.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 76 (par. 5).

Mr.  
H. C. H.  
Calthrop.

9 April '97

3153. That merely refers to a very small proportion of the Government grants?—It does; I have not got the figures before me, but I think it means on the last readjustment a loss of 1,200*l.* to the Administrative County of Norfolk, if I remember aright.

3154. A loss?—A loss of 1,200*l.* a year to the administrative county of Norfolk.

3155. In what way would there be a loss?—In the readjustment between the Administrative County of Norfolk and the County Boroughs of Norwich and Yarmouth.

3156. Could you say that the County Boroughs of Norwich and Yarmouth gained 1,200*l.*, the amount which the county lost?—I believe that is so; I think I am correct as to the figures.\*

3157. (Mr. Stewart.) You have suggested a possible remedy handy, collecting Schedule D. and distributing it?—Yes.

3158. In order to make personalty contribute a fair share to local expenditure as I understand?—Yes.

3159. Can you carry it a step further, and say whether you have any proposal as to the form of distribution?—No, I do not think that I have.

3160. Are you aware on what basis the distribution of the central grant is at present?—I think so.

3161. What is it?—The basis of distribution of the residue?

3162. The basis of the distribution of the large amount that is now distributed from the probate duty and other sources I am referring to; the basis of that distribution between one district and another?—Between the county and the county boroughs?

3163. Or between any places. I will put it to you, that it is distributed practically upon a basis of what the sum given to them was in 1888?—Not the residue, I think the old grants.

3164. I meant the main sum?—Yes, exclusive of the residue.

3165. Is that the basis that you would continue to distribute on, or would you like to alter the basis?—I am not prepared with any objection to it. I have not gone into it.

3166. You have no idea whether it would be distributed according to rateable value, or rates, or amount of rate, or population, or any view of that kind?—I should think that the proportion of rateable value to population which is given in Mr. Shaw Lefevre's Report might have been taken.

3167. Would you apply that to counties as well as boroughs?—I do not say that I would; I should have imagined that that might *prima facie* give an equitable basis.

The witness withdrew.

Mr. T. H.  
Hubbard.

3177. (Chairman.) You are, I think, a tenant-farmer and Vice-President, at the present time, of the Norfolk Chamber of Agriculture?—I am.

3178. And one of those appointed by the Chamber along with the other two gentlemen whom we have heard, to appear before us to-day?—Yes.

3179. You concur generally, I understand, in the printed statements which have been put before us?—Yes, I do.

3180. You state to me that your farm is a farm of 357 acres in the village of North Elmham, and that the rates of this farm for the agricultural year ending October 11, 1886, amounted to 3*l.*, leaving out shillings and pence, and for the year ending October 11, 1896, to 45*l.* 12*s.*, an increase, as you properly put it, of 24 per cent.?—Yes.

3181. In the first instance, can you tell us, in consequence of what expenditure these rates have increased?—It was due to an increase on the relief of the poor, and the increase in the cost of the highways.

3182. Anything else?—No, I think that about meets it.

3183. Have you any objection, you will tell me at once if you have, to telling us what the rent of the farm in 1886 was as compared with the rent in 1896?—

\* The witness subsequently stated that the exact amount was 1,040*l.*

3168. But you have not gone into it?—No, I have not gone into it.

3169. Only one other question, and it is a different one—taking the table of the Norfolk Union Returns\* that has been presented to us by the previous witness, which you practically accept also?—Yes, entirely.

3170. You see there is a total sum levied in 1875 from the various unions amounting to 123,268*l.*, and there is a total sum levied in 1895 amounting to 119,673*l.*, which we have seen has been considerably diminished by the particular Act of 1896, do you know what was the actual total expenditure in those unions in those two years?—No, I am afraid I do not further than what is shown in those tables.

3171. All that is given in these is the residue that falls upon the rates, but there is a large quantity that has been borne by other means, by the Government grant in various ways?—That, I think, is set out in the first pages of Mr. Sanicroft Holmes' memorandum.

3172. I was wanting to fix our minds upon these separate unions; we have not got the figures here for those unions of what was the total expenditure, although we have got what is the total sum that comes on the rates. Do you think you could give us the total expenditure if we wanted it?—I am afraid I could not; I could get it for my own union if the Commission thought it was useful.

3173. You complain, rightly or wrongly, of the present condition of things. When you make that complaint does that mean that your arguments apply, the Act of 1896 being supposed to exist, or that it is only the fear of the removal of that Act which causes your arguments to have force?—I think that the complaint is very greatly modified by the Act of 1896. Supposing the Act of 1896 were made permanent, it would go a very long way towards the removal of the hardship.

3174. If the Act of 1896 were permanent would you be appearing before this Commission?—I should still think that the relief given might go upon principles rather different from those of the Act of 1896.

3175. That would be the question really, then that you would raise, only some alteration in the method of distribution, not in the total amount of distribution?—That would be the question on which I should be more inclined to insist.

3176. (Chairman.) Is there anything occurs to you that you would like to add?—I should like to emphasise the point you have already put so pointedly about the classes which benefit from the increased expenditure, not being those on whom the cost is put. What you said about the carriage on springs, in the case of the highways, exactly illustrates the point on which I should have liked to have insisted a little further, but I do not think it necessary as you have already done it.

Mr.  
H. C. H.  
Calthrop.

Mr. T. H.  
Hubbard.

The rent of the farm at present is 1*l.* an acre, and I get 10 per cent. off after having deducted the tithe. I really cannot say what it was 10 years ago, but it has decreased.

3184. To enable us to judge of these figures and the relative burden, one wants to know in respect of what it was paid; it is not so much per acre as the gross rent that one wants?—I am afraid I cannot tell you what it was 10 years ago.

3185. I suppose you would be paying 45*l.* last year in respect of a much reduced rent?—Yes.

3186. Do you know what the rate per £ upon your farm was in the two years respectively?—I do not think the rate per £ has much to do with it, I think it is the actual money I pay.

3187. But we want the facts for our own information, if we can get them; you cannot tell me that?—I do not think I can tell you the difference in the assessment between 10 years ago and now, but I might urnish it.

3188. You will not, of course, know as yet, what out of your rental will be allowed you for land and buildings respectively?—I think the advantage I shall get will be about 18*l.* a year.

Mr. T. H. Hubbard.  
9 April '97

Rates, increase of, in Norfolk. Increase in respect of outdoor relief. Reasons for.

Valuation. Actual rent the best test. Advisable to take Schedule A. as basis.

Rates in respect of land. Land unduly burdened.

Valuation. Basis for county rate and union.

Rates, increase of, in Norfolk. Increase in expenditure on outdoor relief.

Agricultural Rates Act, 1896, relief obtained under.

3189. Out of what?—Out of the 45l. 12s.  
 3190. You will get a relief under the Act of last year of 18l. out of 45l.?—Yes, about that.  
 3191. So that to put it in another way you will now be paying for the five years which are immediately before us, 27l. a year instead of 36l., as in 1886?—Yes, but I am afraid that the expenses will increase considerably before the five years are over.  
 3192. Do not think for a moment that I want to enter into a controversy with you; I only want in the first instance, to get the facts. For the year 1897 the pounds, shillings, and pence which you will have to hand over to the rate collector will be about 27l., as compared with 36l. in 1886?—Yes.  
 3193. I suppose it would go some distance towards relieving your grievance if that condition of affairs were permanent?—To a certain extent—to the extent of the redress it would, but it would be inadequate I am afraid.  
 3194. You say that poor relief is one of the items on which the increased charge has occurred?—Yes, I do.  
 3195. Can you give me any reason for that, why is it so?—It is so, because the guardians, as at present elected, having very little interest in the expenditure, are more liberal, or extravagant, I might say, in granting out-door relief particularly, than was the case under the old system.  
 3196. Is that causing any discontent among those who put the guardians in their places?—No, those who put the guardians in their places are those who pay nothing; they are not ratepayers, and are only too anxious to appoint those people who will give them great relief.  
 3197. Is it made a question at the election whether a man is to give more or less indoor or outdoor relief?—No, it is an assumed thing that in many cases the electorate who pay nothing, elect those men, some of them almost of their own class, or rather above, who they know will, in fact must, do it to secure their seats.  
 3198. You are in favour, as I understand it, of taking the actual facts of what property actually lets for, as far as you can, as the basis for making up the assessment roll?—It is the system we adopt in the Union of which I am Chairman and it works very well. I think I said in my memorandum that the union assessment was nearly in accordance with the income tax assessment. The income tax assessment is rather more and that arises from the fact that I think people appeal continuously against their union assessment and do not against Schedule A. Some years ago, before there were so many appeals, it was nearly the same owing to the principle of taking Schedule A. as the basis.  
 3199. Would you like to see the assessment roll made up at regularly stated intervals of every year, or every three years, or every five years?—I think if the system were universally adopted of taking Schedule A. as the basis, it would work well; I do not know that it wants to be made up every year.  
 3200. Is there any other point which you would like to bring specially before the Commission?—I wish to draw attention to the last paragraph of my memorandum, where I say that I must protest against the unfair way in which land bears its burden in proportion to other property. I draw attention to a farm in my district of under 400 acres which pays 50l. in rates, and a large house and grounds occupied by the owner, with coachman, footman, gardener, and every indication of a large income pays only 8l. 10s. towards the local rates. I think it is a thing in which the rates bear very hard on the tenant farmer.  
 3201. Is that not remediable to some extent by the assessment committee?—I do not think it is. The farm is assessed on its rent and the house in which the owner lives is assessed on its rent. A farmer who farms under 400 acres and practically gets no income from his farm—I know the place very well, and he practically gets no income for it—pays 50l. in rates and the private owner of the house who, as I assume, must have a large income, pays 8l. 10s. I think that is most unjust and very hard on the tenant-farmer.  
 3202. You bring in there the question of rating upon income, is that the question you mean to raise?—I think in very olden times people contributed to the rates according to their means  
 3203. Granted; I do not want to argue, and I certainly do not want to lead you; I want to try and get

you to suggest to me some scheme, if you feel inclined to, by which it can be redressed?—That is hardly my position; I draw your attention to the plain fact.  
 3204. You feel the grievance?—I do.  
 3205. But you are not prepared at present with a remedy?—I do not think it is my duty.  
 3206. Apart from duty, you would help us if you could, I am sure?—Yes, I would if I could.  
 3207. Having thought over it—and you are Chairman, I understand, of the Union?—Yes.  
 3208. You do not see your way out of the difficulty?—No, I do not; only by some very great change in the law, which I am not able to specify.  
 3209. (Viscount Emlyn.) You said, in your evidence, the union assessment and the County Rate Basis are very much alike in your Union?—Yes. Some few years ago I compared figures, they were very much alike, but now there is some difference which arises in this way. I think we are continually having appeals from farmers on their assessment, but they do not take the trouble to get their income-tax Schedule A. reduced in the same proportion. That is the reason why at the present moment we are not so equal as we might be, perhaps.  
 3210. Is it a custom of the County Rate Basis Committee to accept pretty well the union assessment?—By no means; it is made on Schedule A., and we adopt Schedule A. in our union, too.  
 3211. You do adopt Schedule A.?—Yes, we do as a basis; in fact, almost invariably we have adopted it.  
 3212. (Mr. Stuart.) I think you complained of one of the causes of the rise in rates as being the increase of out-door relief in Norfolk?—No doubt it is a very great cause of the increase in the rates.  
 3213. Since when has that increase been taking place?—I should say since the Act, some three or four years ago, allowing the non-property qualification for guardians.  
 3214. Since the Act of 1894?—Yes.  
 3215. Do you mean to say that the increase since 1875, roughly, which is the date we have been comparing with, of out-door relief in Norfolk has taken place, as a matter of fact, really since 1895?—In my own Union, I think, to a great extent it has done so; of course, there has been a tendency to increase all the way through, but it is shown more fully now.  
 3216. Your position practically is that since 1895, or rather since the operation of the Act of 1894, the increase in the out-door relief of Norfolk has taken place?—Yes.  
 3217. You said your rates, on your farm of 357 acres, were, in 1886, 36l.?—Yes.  
 3218. But under the Agricultural Rating Act of last year they are reduced to 27l.?—Yes.  
 3219. And you would wish them still further reduced?—I should very much.  
 3220. Suppose they were swept away altogether, that would add to your present income available for other purposes 27l.?—It would.  
 3221. Would that place you in the position you were in in 1875?—Oh, dear no, not nearly.  
 3222. Is there no other means of getting back to your old position except that margin of 27l., which seems such a small margin to deal with?—I quite agree.  
 3223. What other method has ever occurred to you?—A certain amount of protection I should say, or some other means of increasing the value of English farm produce.  
 3224. The point we have to deal with is the relief that can be got through rates, and on a farm of 357 acres, paying 1l. an acre, and therefore with natural profits arising from it, 27l. seems such a small margin to deal with?—I quite agree with you that it is.  
 3225. I wanted to know if you felt that, and I think you do?—If you swept away the whole thing it would not be much.  
 3226. You have not much to go on to do any good with, out of the rates?—No, but if you take the agricultural land of the county you see it amounts to a large sum, it is 24 per cent.  
 3227. Still when I bring it back to your own farm, which is the proper way of looking at it, you find that

Mr. T. H. Hubbard.

9 April '97

Rates paid in respect of land. Land unduly burdened.

Profits from farming greatly decreased in Norfolk.

Wages in agriculture have remained stationary in Mitford and Launditch Union of Norfolk.

Rates paid in respect of land. Relief in respect of.

Government grants, how far conducive to extravagance. Lunatics grant, and Union officers' grant.

all the relief you can get in rates, supposing they were paid altogether by other people, is a very small matter?—Yes; in a small farm it would necessarily be a small matter.

3228. I took your farm entirely, because I took the 27*l.*, and that brings it to bear on your farm?—I consider mine a small farm.

3229. (Mr. Smith.) I just want to ask you one question about the contrast which you drew between the farm of under 400 acres, which paid 50*l.* a year, and the occupier of a house who paid 8*l.* 10*s.*, can you tell me what the owner in question was rated at?—I cannot tell you the actual sum; it would be about 3*s.* 2*d.* in the *£*.

3230. What is the valuation of his house?—About 60*l.*, I think.

3231. How much land has he?—An acre.

3232. You have got this gentleman with a 60*l.* house on one acre of land; would it be better or worse for your parish if you had a dozen of them?—I am sure it would be better if the present burden of local taxation is to continue on land; otherwise, not so.

3233. (Mr. Elliott.) You stated in reply to the Chairman that your rates had fallen from 36*l.* in 1886 to 27*l.* in 1896, after the Agricultural Rating Act came into force; that represents, as you will see, a reduction of 25 per cent.; can you say whether the reduced value of the produce of your farm has amounted to so much as 25 per cent.?—When you use the word "produce," what does that mean?

3234. I mean to say all that you sell off the farm?—Of course, on a farm in Norfolk, half the produce of the farm is consumed in grazing cattle and sheep, and the profit or loss is on those as well as on corn.

3235. Eventually the produce is sold off in one shape or another?—Yes, it is. The decrease in the value of the produce of the farm is far more than 24 per cent.

3236. Take, for instance, the case of wheat, the decrease would be very much more than 25 per cent.?—Yes, it would; in fact, the whole thing through, the whole subject of farming has become very depressed indeed.

3237. Twenty-five per cent. does not represent the measure of that depression?—I am sure it does not. I may say that I keep very accurate accounts, and it does not represent the depression in my own farm, where I have lived all my life.

3238. One question with regard to the extension of out-door relief, has that extension had any effect upon the rate of wages in your union?—No, it more applies to older people. We do not have very much able-bodied relief.

3239. Have wages in your Union increased or decreased simultaneously with this increase in the expenditure on out-door relief?—They remain practically the same; they have increased a small amount with the decreasing of wheat, but they have remained practically the same all the time.

3240. The farmers have not gained by a reduction in wages what they have lost in the way of rates?—No.

3241. With regard to the comparison you have drawn between a farmer and the occupier of a private house, the 50*l.* to which you referred as being paid in rates by the farmer would be substantially reduced would it not, by the Agricultural Rating Act?—It would be reduced down to about 30*l.*

3242. Therefore, by the operation of that Act that inequality has been reduced?—As between 30*l.* and 8*l.* 10*s.*

3243. Supposing additional taxes are put on the private occupier, which are eventually paid in relief of local rates that would also, would it not, tend to diminish the inequality?—Yes.

3244. Therefore, you would prefer, would you not, any variation under those two heads which would reduce the inequality?—I would.

3245. (Mr. Dalton.) I think you said that the money given in Government subventions is not always so carefully expended as it might be?—No, I think it is not.

3246. The two main subventions given to boards of guardians are the lunatic grant and the union officers' grant, I believe?—Yes.

3247. The lunatic grant is 4*s.* per week for each lunatic in the asylum?—Yes.

3248. You have no alternative but to spend that money on lunatics in asylums?—That is so.

3249. In what way is that grant not so carefully expended as it might be?—Certain cases arise from time to time of people who are able to contribute more than the 5*s.* 2*d.*, which, I think it is, we have to pay; but the guardians say: "If you pay 5*s.* 2*d.* the other "comes out of the Government, and we will not "trouble you about that at all."

3250. Are there a great number of such cases in your Union?—Not a great many, but it is a thing that comes before me on occasion. It is an impression in my mind that there is that distinction made. You discuss a subject and there is a general feeling in the Board that the money is not to be expended, but the clerk suggests that it is to be paid by the Government and then they are all in favour of spending it at once.

3251. That would not account for much of the grant; you would not find the greater part of it goes in that direction, I suppose?—No, not the great majority.

3252. Then, coming to the other grant, the union officers' grant, that I think is a fixed sum?—Yes, it is a fixed sum.

3253. It does not increase when the salaries increase?—No.

3254. It goes practically in the salaries of the officers as they stood in 1888?—Yes, it does.

3255. How is that not so carefully expended as it might be?—It is altogether rather a small matter, but there is a general tendency to spend the money. I, from time to time, hear the suggestion made: "It "comes from the Government; we will not oppose it "for a moment"; but they would oppose it if it came out of the ratepayers' pocket directly.

3256. If you pay anything now in salaries higher than was paid in 1888 that falls not upon the Government but upon the rates?—Quite right, it does.

3257. Do you think, therefore, that that grant tends in any way to encourage extravagance?—Only in the way in which I have said it does, that there is that general feeling that money given by Government is not so carefully spent as that which is given from the rates.

3258. Supposing a clerk comes for an increase of his salary you cannot say that the increase is paid by the Government?—No, it is not.

3259. It would not materially affect the expenditure on union officers?—Not materially.

3260. On the other hand, the Government grant gives very material relief both on that and on the lunacy expenditure?—Yes.

3261. (Chairman.) Is your Union mentioned in Table II. of the Report of the Local Taxation Committee of the Norfolk Chamber?—Yes, my Union is Mitford and Launditch, the 12th on the list.\*

3262. That is the Union in which you say the out-relief has increased 1,533*l.* on what it was 10 years ago?—Yes.

3263. I see that the total expenditure of the union is lower than it was in 1875; why is that, do you know?—It is higher than it was in 1875.

3264. I think not, but I am quite willing to take a correction if I am wrong; according to this table, it is higher than it was in 1885, but not higher than it was in 1875; I rather want to get from you, if you can explain it to me, what the great fluctuations are in that case?—I really am not in a position to answer it.

3265. You know about this table, of course?—Yes.

3266. One of the columns is headed "Union"; that, I think Mr. Holmes told us, was the expenditure in pounds from the Union?—Yes.

3267. What does that column include besides poor relief?—I am not aware that it includes anything, but I am not quite able to answer that.

3268. I observe that in nine out of the 14 unions the expenditure is lower just now than it was in 1875. I will read the names of the unions, and then if you like to make any explanation, I should be glad that you should do so. Perhaps you would be kind enough to explain to me why the figures under the head "Union" are in the following cases lower in 1895 than in 1875. I should like to have the reason for it; the unions to which I refer are Aylsham, Depwade, Downham, Erpingham, Forehoe, Freebridge,

Guilford, Mitford, and Swaffham. It is quite possible that the suggestion may be, as is made to me by Mr. Stuart, that in the one case the Government grants are not taken into account, but they are in the other?—I will endeavour to give you the information.\*

3269. (*Mr. Stuart.*) I would like very much, at the same time, to know what was the expenditure on out-door relief in the years 1875, 1885, 1895, and 1897.† I should like to verify your statement that the increase

\* The witness states that he is unable to supply the information.  
† The witness has forwarded the following figures:—In 1885 the expenditure on out-door relief in the Mitford and Launditch Union of Norfolk was 5,265*l.*, in 1895 it was 5,955*l.*, and in 1897 it was 7,841*l.* He states that he is unable to supply the figure for 1875.

The witness withdrew.

Adjourned till Thursday, May 6.

## TENTH DAY.

Thursday, 6th May 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

THE VISCOUNT EMLYN.  
THE RIGHT HON. J. B. BALFOUR, Q.C., M.P.  
SIR E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. A. CRIPPS, Esq., Q.C., M.P.

T. H. ELLIOTT, Esq.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
J. L. WHARTON, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

MR. JOHN GEORGE BARTON called and examined.

3273. (*Chairman.*) You are, I understand, Commissioner of Valuation and Boundary Surveyor for Ireland?—Yes.

3274. You have been good enough, at the request of the Commission, to prepare this memorandum as to the statutory provisions in force in Ireland, relating to the general principles and machinery of valuation for rating purposes and the carrying out of the same\*?—That is so.

3275. The statement embodies your views as to the statutory provisions in force in Ireland relating to the general principles and the machinery of valuation for rating purposes, and it describes in your own words the method in which those provisions are carried out?—That is so.

3276. You open, I think, with the list of the statutes which provide for the valuation of hereditaments in Ireland?—Yes. The second paragraph gives a list of the statutes under which the first Government valuation was made. There were practically three Government valuations in Ireland. The first Government valuation, which began in 1830, was a valuation of townlands—the townland being made the unit of value. It was solely used and intended to be used for the collection of county cess. Before it was completed in 1846, Lord Clarendon who was then the Lord Lieutenant of Ireland considered that it would be necessary to have a valuation in tenements owing to the fact that in 1840 the Poor Law Act had been passed. Previous to this the valuation for Poor Law purposes was made by local applotters engaged by each of the boards of guardians for that purpose. This was found so very unsatisfactory, that in 1846 a second valuation was begun under the Act of 9 & 10 Vict. c. 110.

3277. You need not go into all those details, because they are given in your memorandum which will appear in our Appendix. You tell us that houses are valued, that mills and factories are valued, but that water-power is valued only so far as it is actually used. Are no other hereditaments subject to valuation?—The

is due to the Act of 1894?—I have the figures for 1885 and 1895 for my own union with me.

3270. Could you tell me what was the expenditure on out-door relief in your Union in the years 1885 and 1895 respectively?—In the half-year ending March 1895 the out-door relief was 3,188*l.*, and in the half-year ending March 1885 it was 2,517*l.*

3271. What was it in March 1894?—In the half-year ending March 1894 it was 3,034*l.* 12*s.*, and in the half-year ending March 1896 it was 3,554*l.*

3272. (*Chairman.*) Is there any other point you would like to add?—No, I do not think there is.

hereditaments subject to valuation are set out in paragraph 8. They are: "All lands, buildings, and open mines; all commons and rights of common, and all other profits to be had or received or taken out of any land." Land or buildings used exclusively for public, scientific, or charitable purposes, are exempted, but tramways, railways, and fisheries are rated.

3278. The next valuation, I think I understood you to say, was in 1840, but we may for our purposes disregard that, may we not, because it is not now in force?—No, it is not in force now.

3279. The valuation which succeeded the first one which you mentioned to us, and which is now the basis of valuation in Ireland is what we know as Griffith's Valuation, is it not?—Yes.

3280. I wish, as to Griffith's valuation, that you would describe to us as fully as you can the principles of that valuation so far as they apply to land, and tell us how they were carried out, and by what machinery, because while I know you have stated it to us in paragraph 7 of your Memorandum in general terms it is not very easy for us to understand how it was really applied?—I should just mention before stating it, that the first valuation is also Griffith's valuation, and that it was used in making the third valuation beginning in 1852.

3281. Perhaps you would now answer the question which I put to you as to how the principles of valuation which you state in your paper were really applied, because they seem to me complicated and very difficult to understand?—The work was carried out by Sir Richard Griffith, who was a very well-known valuer and geologist in Ireland, and under him there was a very large staff of surveyors and valuers appointed; the general instructions given to them were that the value of the land, separately from that of the buildings was to be ascertained, but that it was to be borne in mind that the total valuation of the land and buildings, exclusive of taxes, would not exceed the fair letting value to a solvent tenant. The nature of the soil, subsoil, and underlying rock were considered.

*Mr. T. H. Hubbard.*

Valuation, Griffith's. Principles upon which the valuation was made and how applied.

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 277 to 281.

Mr. J. G.  
Barton.

6 May '97

Fair letting value is the value to the tenant, excluding profits, but including interest on value of tenant right.

3282. I want to get a distinct definition of that term "fair letting value," because I think Mr. Robinson told us, at least I understood him so, that the valuation in Ireland included tenant's profits?—The fair letting value to a tenant is the definition of Griffith's valuation.

3283. Then the tenant's profit would be excluded altogether?—Yes, certainly; possibly what is now called tenant right would be included, but that is quite a different thing from tenant's profits.

3284. Where do you draw the distinction between tenant right and the tenants' profit?—The tenant right is very difficult to explain, but I take it that it really is the fine that a man pays on going into a holding to the man who is leaving that holding. It includes interest, or is supposed to include interest, on what money that man who is leaving the holding or his predecessors has or have spent in improvements on the holding. You must remember that generally in Ireland all improvements are done by the tenant, not by the landlord, and the occupier on leaving has a right to sell his interest in the holding to the tenant coming in, and be over and above the interest on this expects to make profits on the farm sufficient to live on. These profits are quite a different thing from the fine that he pays on going in, which represents the value of the tenant right.

3285. I will put it in another way; ultimately when we come to consider the relative burdens borne by those who are working under one system and under another we shall have to compare the burdens which are borne by those who pay local rates in Ireland with the burdens which are borne by those who pay them on this side of the channel. Roughly speaking, here we have only to consider what a solvent tenant will pay—the lettable value—and the tenant's profit. I think from what you have just said, and from our knowledge, that in Ireland there is a third matter to be taken into consideration, which we have just now described as tenant right; would you or would you not assent to what I am now suggesting, that the tenant right is something over and above, and an interest different from those which I have described as existing on this side of the channel?—I think not. I consider the tenant right as part of the letting value of the holding, but that part of it does not pass into what is called the landlord's hands.

3286. I can follow it up from that at once; does it appear in the valuation?—It does.

3287. How?—May I give you the illustration of house property, which will perhaps explain it? There are two houses alongside each other, both will let for 100*l.* a year; one man pays a fine and reduces his rent to 50*l.* a year; but these two houses would still be valued by me at 100*l.*, although the rent paid in the one case is only 50*l.*, and in the other case is 100*l.*, because I should take the interest of the fine that he paid and add it to the rent to arrive at the fair letting value.

3288. That brings it to this, that the rent which is paid in Ireland is not comparable with the rent payable in England, we will say, so far as valuation for local rating purposes is concerned?—That is so. The rent that is actually paid in Ireland to the landlord—I would like you to add those words, to the landlord—is not, but the rent that is paid in Ireland by the tenant, is.

3289. How do you arrive at what you describe as the rent which is paid by the tenant?—I take it that the interest on the money which the tenant has paid going into that holding, added to the sum that he pays his landlord is the rent that he has paid.

3290. Is that now, as a matter of fact, included in the valuation for local purposes?—I take it that it is.

3291. By what machinery?—You must remember that land has not been revalued since Griffith's time, and therefore, I am only comparing it now with the rent. But if I was to value in Ireland again, as I very likely will do within the next few years, I propose to put it before the Government that I should take the interest on what the tenant has paid in addition to the sum he pays the landlord, in arriving at the valuation.

3292. Would you agree with me that unless that is done no fair comparison could be made between the facts in Ireland and the facts in this country?—That is so.

3293. Perhaps you would explain to me how the principles set out in paragraph 7 of your memorandum

were applied?—The valuers in making Griffith's valuation had not to deal with this question of tenant right except so far as Ulster was concerned. In Ulster tenant right has existed by custom for a great number of years, but the tenant right in the rest of Ireland did not exist till after the passing of the Act of 1870. The principle the valuers went on was that they calculated the value of the produce that each farm would produce and the cost of that production. That was divided into two shares, the landlord's and the tenant's. The landlord's share would be the rent, and on that the valuation would be based.

3294. In paragraph 7 of your memorandum you give a list of eight articles which were the units, so to speak, which Sir Richard Griffith took?—Yes.

3295. In the case of a farm which, perhaps, only produced two, three, or four of those articles, what was done?—Those two, three, or four were taken as a basis. It was considered necessary to have that list because prices are constantly changing, and if you were to take merely the prices which were in a particular market at the time the valuation was made, you would perhaps have one farm valued this year at prices 20 per cent. higher than a farm that was valued in the same rating area the year following; so that in order to have uniformity, a certain scale of prices was arranged on which the calculations as to the value of the holding were made as to the amount of the produce, and the value of that produce in each holding.

3296. But then to arrive at a fair result, would it not be necessary to consider not only what articles were produced upon the farm but the proportion of each of those articles which the farm would produce?—Yes.

3297. How was that done?—That was left to the skill of the valuers. They were men of large experience, and were trained by Sir Richard Griffith; I think they were for nearly a year being trained on different kinds of land. He put them on different farms and made them value those farms, and he did not allow a valuer to start working in the country till his valuation corresponded within, I think it was, a shilling per acre with the valuations that the more experienced men had made. He trained them in that way till these men thoroughly understood how a farm would best be worked taking into account different local circumstances, such as, for instance, proximity to market, altitude, aspect, the facilities for getting seaweed was also taken into account, and formed a very important element in the valuation in Ireland.

3298. The individual circumstances of every individual holding as it existed at the day were taken into account by those gentlemen?—Presumably, yes.

3299. As a matter of practice, was the valuation made by one gentleman checked by others acting independently?—Yes. What was done was, that two valuers went over each farm, and in addition there were a certain number of senior valuers, men of great experience, who were employed solely in checking. Across a certain area of a county a belt of three miles wide was taken; the senior valuer valued that belt, and if the valuation of each of the lots in that belt did not correspond with what the valuers had made it, the whole district was valued again. I have got all the particulars of the old valuation, and it is wonderful with what care it was worked out. The description of the soil and subsoil, the altitudes, and the amount of allowances for each of those different matters was worked out in each particular case.

3300. Since that time it is of course obvious that the relative value of these various products has changed very much amongst themselves owing to the changes which lapse of time and other circumstances have brought about?—Yes.

3301. And therefore, taking a farm which in those days produced a larger proportion of one article or another, if the article which it produced in a large proportion has gone up or down in price, that would of course vitiate the valuation which was then made?—That is so. I should, however, mention this, that comparing the present prices with the prices given in the Act, it will be seen that the present prices are slightly, but not very much above, those given in the Act. Between the time when the valuation was made and the present day there has been an enormous increase in value, and there has been a fall in the last few years. I will just mention one or two of the articles. Wheat, you will see, was 7*s.* 6*d.* in the Act, in 1894 it was 6*s.* 5*d.*

Mr. J. G.  
Barton.

6 May '97

Valuation in Ireland. Principles adopted by the valuers in respect of Ulster tenant right.

Valuation in Ireland based on prices of certain articles of agricultural produce. Method of applying this principle.

Valuation in Ireland. Procedure adopted in valuation by valuers generally.

Valuation of land in Ireland based on rent paid by tenant and the sum paid for tenant right, is comparable with valuation based on rent paid to landlord in England.

Prices of agricultural produce in 1894 slightly higher than at time of Griffith's valuation.

Mr. J. G. Barton.

Mr. J. G. Barton.  
—  
6 May '97

oats, which is very largely grown in Ireland, was 4s. 10d. in that Act, and in 1894 it was 5s. 10d.; barley was 5s. 6d. in the Act, and in 1894 it was 7s. 3d. The prices therefore are slightly higher. Flax has fallen very largely. Flax was only 50s. in 1894, but that was a particularly bad year; and in 1893 it was 95s. It is a very variable crop.

3302. But it has risen above what it was in the Act?—In 1893 it was raised, but in 1894 it had again fallen. In 1893 it was 95s. and in 1894 only 50s. as compared with the price given in the Act, namely 49s.

3303. Do you care to go through the other articles?—If you would like me to go through them I could give the figures. Butter was 65s. 4d. and in 1894 it was 84s.; beef was 35s. 6d. and in 1894 it was 43s.; mutton was 41s. and in 1894 it was 57s.; and pork, which was 32s. in the Act, in 1894 was 35s.

3304. Taking mutton, you would not, I suppose, depend upon the price of mutton alone in a farm which carried many sheep, because you would have to take the price of wool into account too, would you not?—I do not think mutton, except in some one or two counties, in Ireland is a very important factor.

3305. Supposing you were to have to re-value Ireland for local purposes again, would you propose to go through it on the same principles?—No, on quite different principles. I should value it now in the same way that land is valued in England.

3306. Perhaps you would describe to me how you would suggest that should be done?—Since Griffith's valuation was made the Land Commission has been created, and under the Land Acts 1881 and 1895, they have fixed the rents of two-thirds of the holdings in Ireland. I take it that what they have done must form an element in any future valuation. You cannot have one Government Department acting adversely to what has been done by another. To that rent fixed by the Land Commission I would add interest on the tenant's interest.

3307. "Interest on the tenant's interest"; kindly make that clear to me?—The tenant's interest in Ireland now sells at from 10 to 20 and up to 40 years' purchase of the rent. I am able to get what the average sale is in most districts. Of course there are some cases where they sell up to 40 and 50 years, but they are exceptional cases; there are generally some exceptional circumstances, such as a small field or two lying alongside another man's farm, and he is prepared to pay twice the value for it. But those are exceptional circumstances which one would eliminate. When you get the general tenant right value in each district I would add interest on that to the rent that the Government have fixed the tenant shall pay to his landlord, and I would arrive then at what I call the letting value to a tenant.

3308. Could you work it out on any one supposed case of figures; what interest would you add?—I would propose to add 4 or 5 per cent.

3309. You would simply take the amount paid for tenant right and add interest at the rate of 5 per cent.?—Something like 4 to 5 per cent. As the security is not particularly good, and it varies a good deal, I think 4 to 5 per cent. would be about the right thing to add.

3310. You think that those two things taken together would represent something corresponding to the fair letting value upon this side of the channel?—Yes.

3311. I think it was the fact, was it not, that after this valuation of Sir Richard Griffith he expressed the opinion that it was to some extent below what would be described as the existing rack rent of the day?—Certainly, it was very much below it.

3312. Was it 25 per cent. below it?—I think I said in my evidence before the Financial Relations Commission that it was from 15 to 20 per cent. below it, as far as I could judge. I got a great number of cases of the old rents and compared them with the valuation, and I should say it was about from 15 to 20 per cent. below.

3313. Would it vary, do you think, between one district and another owing to the unfortunate circumstances of the time in some cases?—Yes; when the valuation commenced in 1852 Ireland was in a very distressed condition. It was just after the famine years, and the result was that the valuations made in the first few years were very low indeed; in some cases they were fully 50 per cent. below the rents. The valuers commenced in the south and they worked up north; as they got further north prices were improving, the

country was getting more prosperous, and when [they finished in Armagh in 1865 prices had nearly reached their highest point, I think they reached their summit early in the "seventies," and during this period taxes had fallen very considerably. Of course, when the valuers saw rents rising and saw tenants' interests sold for such large sums naturally the valuation rose with it. The result has been that whilst in the south the valuation is very much below the judicial rents, in the north it is rather above it. I could give you the exact amounts if you like from a table that I made out some time ago. In Ulster the judicial rents were 8'96 below the valuation; in Leinster they were 4'35 above, in Connaught they were 2'66 above; and in Munster they were 12'25 above.

3314. (Mr. Elliott.) What was it for the whole of the country?—That is for the whole of the country.

3315. Can you give one figure for the whole of the country?—The average is 1'53 above.

3316. (Mr. Cripps.) But according to the basis you have told us of, the conditions would not be comparable would they?—No, I do not think the last figure is of very much value.

3317. (Chairman.) You would agree with me, I suppose, that want of uniformity in valuation over different districts would probably be the cause of injustice when you are comparing the amount that one man pays with what another man pays as regards local rates or Imperial taxes?—Yes; as far as the local rates go, of course, it does not matter as long as inside the rateable area the valuations are uniform.

3318. Except it would matter in this, would it not— if you are comparing the rate per £ that one occupant has to pay with what another man has to pay in another part of the country?—Yes, of course it does matter then.

3319. Does the value of the tenant's interest enter into consideration just now for Imperial purposes—take the Income Tax under Schedule A.?—The taxation under Schedule A. in Ireland is made on the valuation, or the rent, whichever is lowest. A landlord in Ireland pays his taxes on the valuation if it is lowest, or on the rent, whichever is lowest. He has the option of doing it.

3320. But I presume there is such a thing as a tenant in Ireland who pays under Schedule B. as well?—The amount paid under Schedule B. in 1893 or 1894, was only 29,000l. for the whole of Ireland. Most of that was paid by the landlords on their demesnes. In Ireland no tenant pays under Schedule B. if he has no other property but land, unless his valuation is over 460l. a year, because his profits are assumed to be a third of his valuation under the Income Tax Act.

3321. Is it within your province to explain to us how rates are paid as between owner and occupier when the rent is below Griffith's valuation?—That was one of the questions, I think, which Mr. Robinson wished reserved; if it is not within your province, would you say so?—I think I can most likely answer the question, but I do not at the moment quite understand it. Do you mean if the rent is below Griffith's valuation?

3322. In answer to Question 694 Mr. Robinson said this to me:—"The second term judicial rents have in some cases brought the rents below the valuation"—that is Griffith's valuation—"and in that case he"—that is the immediate lessor—"would not pay half the poor rate, but he would pay half the poundage rate for each £ of rent he received. It is rather a complicated arrangement. But the law is explained in paragraph 37, under the head of 'Deductions'"—and then comes a quotation in inverted commas—"Where the occupier is rated and a rent is payable by him the person receiving such rent is liable to allow the person paying it one half of the poundage of the rate for every £ of rent payable." Is that a correct statement?—I believe that is correct.

3323. Do you agree with that?—Yes, I believe it is quite correct.

3324. Do you know the principle which underlies that somewhat complicated arrangement?—No, I do not think I can answer that question; it is not exactly in my province. I have nothing to do with the collection of rates.

3325. Are any complaints addressed to you as Commissioner of Valuation as to the system of the valuation of land?—Yes, there are a few every year made and

Schedule A., basis of payment under.

Schedule B., taxation under, when paid by tenants.

Rent below Griffith's valuation. Rates, how divided between the immediate lessor and the lessee.

Complaints made to the Commissioner of Valuation.

Valuation of land if new made should be based upon the rents fixed by Land Commission and the interest on the sum paid for tenant right.

Valuation by Griffith was 15 to 20 per cent. below the rack rent, but it varied in different parts of Ireland, according to the circumstances which existed in the different localities at the time of making the valuation.

Mr. J. G.  
Barton.  
6 May '97

some are addressed to ministers in the House by persons complaining that their valuation is much above their rent.

3326. I am talking of land rather than of houses at the present moment?—I am talking of land altogether. These persons who complain say a re-valuation ought to be made, and that their valuation ought to be reduced to their rent. I think the general idea of a tenant whose rent has been brought below the valuation is that the valuation should be brought down to the rent.

3327. What do you say in answer to that?—Of course there is only one answer to be made now. That is that under the existing Acts of Parliament no change can be made.

3328. You do not go into merits in answering it at all?—No.

3329. Are there any other complaints?—There are very few.

Houses,  
how  
valued.

3330. Would you describe to us how hereditaments other than land are valued?—I think they are valued entirely on their letting value. Shall I go through some of them and describe them to you?

3331. If you please?—We will take houses where there is a rent paid, that rent is the basis of the valuation if it is what we consider a fair rent. My valuers in each case measure up the house and arrive at its gross value; taking a percentage on that they arrive at what they consider would be a fair rent. In a great many cases where there is no rent paid, where the owner occupies the house, of course this latter is the way we arrive at the rent; but in other cases we use this method as a check on the rent that is paid. Of course sometimes a man may have paid some consideration for a house that we do not know anything about, and the rent paid is really not the fair letting rent.

3332. Do you ascertain from either owner or tenant what the rent actually paid is?—Yes, as far as we can get it.

New  
houses  
System of  
making  
deductions  
in order to  
arrive at  
the basis  
upon  
which  
houses  
were  
valued by  
Sir R.  
Griffith.

3333. You have no compulsory power to arrive at it?—No, we have no compulsory power, but we have no difficulty, as a rule, in getting it. The occupiers are generally very obliging, though they do not always give the information very accurately, and in order to prevent any mistake we check it in the way I have described. In Ireland I should say in regard to all this property that we have to make a deduction in each district in order to make the new valuations relative to the old ones.

3334. What does that mean exactly?—This valuation of Sir Richard Griffith was completed in 1866, so that it is practically from 30 to 40 years old; only those cases that are brought before us by the local rating authorities, or by a ratepayer are dealt with; we have no power to go into a district and make a re-valuation; and at present only cases where structural changes have been made, or where reductions of rent are made are really brought before us.

3335. Or a case of a newly built house?—A newly built house is, of course, brought before us, and all cases where a man puts a front in his shop would be brought before us. In paragraph 20 of my memorandum I give the number of cases that we have dealt with each year; you will see that 8,900 new houses were valued.

3336. The point in your answer which I did not quite understand was, what relation the new valuation is to have to Griffith's valuation?—We have to tone it down, as it were in order to make it relative to Griffith's valuation.

3337. What do you mean exactly by that—must you never exceed Griffith's valuation?—If we did not do this we would have the new houses with a relatively much higher valuation than the old ones, and that would be a case of great injustice to the owners of property now being valued.

3338. You have to go through some sort of process in your mind like this—if this house had been in existence when Griffith made his valuation, what would Griffith have put upon it?—Yes. The way in which we do it is this: in each district we have arrived by experience at a certain deduction.

3339. That must be rather a difficulty?—I think it is very simple applying it in this way. In making the statutory valuation of a house, in the first instance, in our note books, each valuer works it out exactly as if it

was in England. Then he deducts a certain amount in each district to make it relative to the other houses. In each rating area we have arrived at a certain deduction per £ which he has to make in each district, and at the beginning of his note book he has got that set out for him. It varies in different districts from 5 per cent. to 30 per cent., but in no one district does it vary more than 5 per cent. This he deducts from the total statutory valuation.

3340. Take other subjects besides houses?—Of course we have mines; there are a few of those, but very few. Then there are railways which are valued, I think, very much the same as in England except that in dividing up the valuations between the different townlands I go by train mileage.

3341. Do you value all railways?—Yes.

3342. (Mr. Balfour.) Did you say that you went by train mileage?—Yes.

3343. (Chairman.) Of course that is not quite the same as in England, but it is more nearly analogous to the system in Scotland?—The system in Scotland is according to the mileage of the line, not according to the train mileage. In Ireland one central authority arrives at all valuations, and we issue lists showing how much the valuation of a railway in a district is.

3344. Do you separate the value of the stations from the value of the line?—Yes, we arrive at a detailed valuation of the line in very much the same way, as is done in England giving the statutory deductions for tenant and landlord; having arrived at this we make a valuation of every station and those are all added together and taken from the total. The balance is divided over the line according to the train miles in each district. We divide the line up into districts between junctions or between centres of traffic. Having done this we arrive at a rate per mile for each mile of the line in that district according to the train mileage.

3345. And in the district every mile of the line is of the same value to the local authority through whose district it passes?—Yes, then we have to divide that up between every townland it goes through according to the number of yards in each.

3346. Is the per-centage of value which is attributable to stations maintaining the same ratio to the whole valuation, or is it increasing or diminishing?—I am afraid I could not answer that straight off, as I have not got the figures before me.

3347. Perhaps you will kindly add that to your evidence?—Yes, I will add that. What you want is the per-centage of the value of the stations to the total valuation.

3348. If you divide the thing into two parts, the actual value of the buildings to the district in which the station stands, and the train mileage value which is distributed over the areas through which the railway runs, then what I want to know is whether, those two making up the gross, the per-centage attributable to stations is or is not gaining upon the per-centage attributable to train mileage?—I think I can give you that.\*

3349. Are there any other subjects to be valued which you would like to speak to?—We deal with fisheries, as there are a great number of those in Ireland. I take into account what the cost of maintaining the fishery is; and make certain allowances for repairs of weirs and of nets, &c. Then canals and navigations are valued in the same manner as railways. Then we have gasworks; they are valued as they are in England—in fact, I may say with reference to all the properties quoted in paragraph 8, we value them almost exactly as they are valued in England.

3350. Would you describe to me the system under which the annual revision of valuation takes place?—Each year the rate collectors have to furnish to the clerk of the union in which they are working, a list of the cases which require a revision of valuation. That has to be sent in before the 15th of November. At the same time any ratepayer may furnish a list of any cases that he considers require revision; I may say

\* The witness subsequently wrote "In the case of the two dividend paying railways in Ireland which I have valued for rating purposes, namely, the Great Northern and the Northern Counties Railways, the station valuations are from 19 per cent. to 19.5 per cent. of the total valuation of the lines. I have no information which would enable me to say how far this per-centage is increasing or diminishing, as it is only within the last few years that details of railway valuations have been kept."

Mr. J. G. Barton.  
6 May '97

that these are nearly always applications for reductions. These lists are forwarded to my office in Dublin by the clerks to the unions, on the 30th of November, and immediately they are received I send down revisors to each of the different districts, to deal with all of those cases. The revisor goes to the clerk of the union; he gets any supplemental cases he may have, and he goes through the cases that have been received, and he then drives out to the different farms or houses and makes his revision. He then forwards to the office the results of this revision, and they are carried out into the valuation roll. They are then transferred by us into the valuation rolls of the unions. The secretaries of grand juries, and also town clerks where we furnish them to towns, have a copy forwarded to them every year of all the revised valuations. From these they make up their rate books.

Valuation, annual revision, right of appeal against.

3351. Is there any right of appeal against those valuations?—Yes, the first appeal is to me; it is really to correct any mistakes. The work in the first place is done by my revisors in the field, and there are sometimes mistakes; very often they are mere clerical errors. But those are always made right. The second appeal is to the quarter sessions; from that an appellant can go to the Court of Exchequer or the Queen's Bench. I have got made out a list of appeals. Taking the last four years, the number of appeals to quarter sessions, out of the 34,000 cases per annum dealt with was, on an average, eight, and the number of appeals to higher tribunals two in each year.

3352. Are there any circumstances under which changes of value or buildings are brought under the notice of the Commissioner of Valuation, other than those that you have mentioned to us?—The only cases are new buildings, alterations in buildings, or reductions in rent.

3353. Or objections by a ratepayer or a rate collecting authority?—I do not think there is anything except those. The case of an increase in rent is not dealt with.

Commissioner of Valuation works in harmony with the local authorities.

3354. To what extent do you in your office, work in harmony with and get the advice of local authorities?—Of course we work in harmony with them so far, that we furnish them with these particulars every year and have their views in particular cases. We generally work very pleasantly together, but we have very little to do together; that is to say, they hardly ever interfere in the case of a valuation. They sometimes appeal against my decisions; they have done so on one or two occasions, but it is very rare.

Inland Revenue officers and Commissioner of Valuation communicate with each other with reference to valuation of certain property.

3355. Do the Inland Revenue officers have any communication with your office so as to see that a correlative value is put upon subjects for local and Imperial purposes?—Yes. They furnish us with lists of cases each year where they think alterations should be made in the valuations of public-houses or property of that class, and we furnish them with all changes in the valuations of public-houses. I should mention in connexion with that that the valuation of all that class of property in Ireland is particularly low. In England the value of the licenses is taken into account in arriving at the valuation; in Ireland it has not been done, and the result is that in one of the Acts the Inland Revenue have power in Ireland to add, and do add, one-fifth to Griffith's valuation in arriving at the sum at which the duties are calculated.

Valuation of land in Ireland includes the value of rent paid to the landlord, and in addition the interest on the sum paid by tenant for tenant right.

3356. (Mr. Balfour.) I understand you said that where a tenant right exists along with a landlord's right, in the case of any land that you value, the rental paid to the landlord would not exhaust the full value of the land?—No.

3357. You would require to take into consideration also the interest upon the tenant's share in the estate?—Yes.

3358. And the true value would be the sum of these two?—Yes.

3359. I suppose you would agree that the aim of the valuation of real estate should be to make each part of it pay a fair share with every other part?—Yes.

3360. Irrespective of the manner in which the rights in it might be carved out and divided?—Yes.

3361. So that whatever may be the result of two or three estates being carved out of one piece of property, you would not allow that if you could prevent it to affect the result for rating purposes?—No.

3362. How do you, in fact, ascertain what the amount of the value pertaining to the tenant's share of the estate should be? Is it a money interest?—Of course in Griffith's valuation the tenant right did not actually exist in money value in the way it does now. I stated that if a valuation was being made now, I would have to take that into account. The way in which I would arrive at it is by taking the tenant right value in the particular district which I was dealing with. There are a great number of sales of tenant right going on constantly all over Ireland, and, as far as possible, I am keeping a record of those. Perhaps in one union, there might be 200 or 300 sales; I would eliminate from those 200 or 300 the cases which I thought were exceptional, as I think I have explained before, and I would strike an average of the others; then I would say that is the tenant right value in that particular district.

3363. Was the tenant right material according to Griffith's method of valuing, as you have described it? If you value under Griffith's system, or ascertain by going to the ground and forming an opinion as to its productivity it would be immaterial whether it was carved out into several estates or not, would it not?—It would be immaterial of course, but he included that because he got the full value.

3364. Exactly; but you would approach the problem in the two cases from different sides, would you not?—Yes, but the result would be the same.

3365. Should be the same?—Yes, should be.

3366. Should certainly be the same?—Yes.

3367. I think his Lordship put a question to you in regard to the way you would deal with land for the purpose of Imperial taxes?—Yes.

3368. Supposing that you had land with divided interests partly belonging to the landlord, and a tenant right upon it, of course the landlord would pay the Imperial taxes upon his rent in respect of the share that belonged to him?—Yes.

3369. But suppose the tenant's money interest upon his tenant right was of such an amount that it would not be to assessable income tax, would that part escape Imperial taxation?—Certainly.

3370. That would be the result of the present method of the division of the estates?—Yes. You see the tenant only pays income tax on one-third of his valuation. That is the rule laid down in the Income Tax Act; this amount being assumed to be the tenant's profits. Of course it is well known that it is very different; it would sometimes be three times the rental.

3371. I should think there are very few Irish small tenants who are not below the income tax paying line?—Very few.

3372. So that apparently a large amount of the rent of Ireland escapes income tax?—Yes. The income tax paid under schedule "B" is very little in Ireland; about 29,000*l.* altogether.

3373. Do you think that according to your system for local purposes you in one way or another really get at the full annual value of the land and make it taxable either in the hands of the tenant or in the hands of the landlord?—In such a system as I have proposed?

3374. Yes?—I think you would get at the full value in that way.

3375. Under the system in operation, do you think you could get at that?—The system in operation has been in operation so long that I cannot defend it. A valuation of land, in my opinion, ought to be made certainly every 15 or 20 years at least.

3376. With reference to present conditions?—Yes; therefore you cannot defend a valuation made so long ago. Practically, the present valuation has been made over 40 years, because it began in 1830, as the valuation made in 1830 was used in the after valuation, therefore the latter is more or less influenced by it, the greater part of the present valuation is, therefore, some 50 or 60 years old.

3377. You mentioned a thing about the valuation of houses which at first seemed a little curious, if I may say so; you stated that if a house is built now, the aim is to ascertain what the value of that house would be if it had been put up in Griffith's time. Is that so?—Yes, that is it practically.

3378. Although material, labour, and values have all changed in the meantime?—Yes. Of course, we do not

Mr. J. G. Barton.

Gasworks generally easy to value. Waterworks, how valued.

Valuation of land in Ireland based on letting value to the tenant, inclusive of value of tenant right.

Valuation as made by Griffith included interest on the value of tenant right in Ulster.

Revaluation in Ireland would raise the present valuation.

go as far as that, quite, that is to say, our reductions do not bring the houses down to as low a level as Griffith's valuation, but I think you will agree with me that all rateable hereditaments inside a rateable area should be comparatively valued.

3379. Certainly?—Therefore, where you have inside a rating area a large amount of property rated on a certain basis, which though bearing a relative proportion to its true value, is considerably below that true value, it would not be fair to value the remaining rateable property at a higher rate, otherwise those people whose property is now rateable would be paying more than their fair share of taxes.

3380. Do not all these considerations which you have so clearly put rather point to this: that the aim should be to ascertain the present lettable value of all subjects?—Yes.

3381. Disregarding the past history?—Yes.

3382. But taking things as you find them?—Yes.

3383. I suppose you would agree that for the purposes of taxation what the land should return, in other words, its lettable value, should be the criterion?—Yes.

3384. So that you are not quite satisfied with your present system, but suggest reforms which would tend in that direction?—I am not at all satisfied with it, but I think it is the best thing we can do under existing circumstances.

3385. Still, what you have suggested would bring it more into harmony with what I was putting to you interrogatively, I think?—Yes.

3386. You were good enough to tell us about the valuation of railways; you say that to some extent it is the same as the English system; would you kindly tell us how you begin the problem of valuing a railway, what do you take first?—The first thing I take is the profits of the railway for three years.

3387. Do you take the gross returns and make a number of deductions so as to see what its value would be to a hypothetical tenant?—Exactly.

3388. Then having arrived at that, you proceed to divide it locally between the different rating areas?—Yes.

3389. You used the expression, I think, that you divided it by train mileage?—Yes.

3390. Do you mean according to the number of train miles run in each area, or do you mean according to the measurement of the line?—I meant the number of train miles run in each area; that I take to be train mileage.

3391. You are quite right; I thought you meant that, according to that you bring in, as an element in the basis of division, the amount of traffic in each area?—Yes. That is my object in doing it.

3392. My only reason for putting the question is that in Scotland, when the hypothetical tenant's profit is ascertained, it is divided by measurement mileage?—I know it is.

3393. So that you have two methods to choose from?—When I took up my present office I considered the Scotch method, and I considered the English method, and I came to the conclusion that we could not carry out the English method in Ireland; the railway companies have not got and could not therefore have given us the materials which would enable it to be done as it is in England. There is a large staff I understand kept by each of the railway companies in England solely for assessment purposes; that is not done in Ireland. After a conference with the secretaries of some of the leading railway companies in Ireland, I came to the conclusion that the train mileage, modified to a certain extent, was the fairest for both parties—both for the ratepayers and for the rating authorities, and so I adopted that with slight modifications.

3394. Your aim, I gather, was to see what was the share of the hypothetical rent pertaining to each particular place,—if there were more traffic it would stand more rent—was that the idea?—Exactly, that was my idea.

3395. Do you not find it difficult to work that principle out in allocating the aggregate of the gross hypothetical rent?—It is difficult. It takes a considerable amount of time and trouble, but it can be

done, and it is simpler, I think, than the plan adopted in England where you have to take the amount of traffic in each district.

3396. Have you considered at all as entering into that question how far (a railway being a *unum quid*, if I may use the expression) each part of it is equally essential to earning the aggregate as every other part—it may be a poor part in some ways, but it is quite essential to gaining the aggregate receipts?—It is a very big question, and I have read a great many judgments of the judges upon it.

3397. The Scotch method might be pointed to as a simpler one, though I quite see that yours is theoretically very defensible?—It is not very hard to work out. This year I valued the largest railway in Ireland, and I think I had a staff of three or four officers working for about six months at it.

3398. Then with regard to gasworks you probably have not much trouble in valuing them from the fact that they are generally within one rating area?—Yes, as a rule they are.

3399. Have you had trouble in regard to waterworks the pipes of which run through different rating areas?—Yes.

3400. How have you solved that?—The plan adopted was that we took the capital sum spent in each rating area, that is to say, the area where the reservoirs got the greatest benefit. The principle of division was decided, I think, by the English judges. I have got the case showing that that was the way it was to be divided in England, and have followed it.

3401. Did they not, in England, sometimes adopt the system of dividing the annual value between the distributing area and the area through which the water was carried?—Yes, but the distributing area gets really the least value. The area where the reservoirs are, and where the expensive works are, is the area that really benefits most. That, I think, has been decided as the way in which it has to be done.

3402. In dealing with the areas in which the water is carried by pipes or stored in reservoirs, do you proceed on the basis of the structural cost of these and give a per-centage on it?—Certainly, that is the way we have done it.

3403. You have never treated waterworks like a railway or a canal?—In dividing it—no.

3404. (Mr. Murray.) Am I right in understanding that the valuation now in force in Ireland is a valuation not of land or property, but of the interest of a particular person in land or property, namely, the landlord?—No, I take it that it is not the landlord as he exists now. The value of land is the sum that it would fetch one year with another if let to a solvent tenant. That is the basis on which the valuation was made.

3405. But surely that will include the value of the tenant right?—Yes.

3406. But that is not, I understand, the basis of valuation?—I think I have said all through that the tenant right is included in the valuation; I intended to say so, and I think I did.

3407. Then you do value the gross value of the land or property, whatever it is?—Yes.

3408. I thought you said that owing to the peculiar circumstances of Ulster, there was a difference between the valuation of Ulster and the valuation of the rest of Ireland?—I said that at the time that Griffith's valuation was made tenant right only existed in Ulster; there was no tenant right in the south of Ireland at that time; it was not till the Act of 1870 that tenant right became universal in Ireland, it was then legalized.

3409. Then in Sir Richard Griffith's time he included interest on the tenant right in Ulster?—Yes.

3410. And valued the gross value for the rest of the country?—Yes, but by including the interest on the tenant right in Ulster he arrived at the gross value there, too.

3411. Therefore it is on the same basis all over the country?—Practically, I take it that it is.

3412. (Sir Edward Hamilton.) I understand that the total valuation of lands in a given area can neither be increased nor lessened?—That is so, we can only adjust.

Mr. J. G. Barton.

6 May '97

upon which houses were valued by Sir E. Griffith, not a satisfactory one, but the only course to adopt under present circumstances.

Valuation of railways in Ireland. Description of system. English and Scotch systems compared.

Mr. J. G. Barton.

6 May '97.

Relative position of town and country with regard to rating under present valuation.

Valuation of land in Ireland is made without regard to the distribution of the different interests in it or to the relative value.

3413. Do you consider that owing to that restriction the aggregate valuation of Ireland is below or above Sir Richard Griffith's valuation?—I consider it is below; re-valuation would tend to raise it considerably.

3414. Does that restriction act very unfairly in certain districts, do you think?—It acts unfairly in districts where there are large towns. In the country districts I do not think it does act unfairly, because there are few houses and they are a comparatively small proportion of the valuation of the whole district, so that they do not affect it much one way or the other. Where there is a town which is being raised in value, there, presumably, the houses and the land pay higher taxes per £ than those in the country.

3415. (Mr. Arthur O'Connor.) I suppose that your department is concerned with each particular parcel of land, for the purpose of valuation, just as it stands without any regard to the distribution of the interest in it?—Quite so.

3416. Suppose then that a particular parcel is to be valued in its entirety at  $x$  and the interest in it is distributed as between rent A and tenants' profits B and tenants' rights C, or any other number of things that you can think of, it does not matter to you one bit; you are only concerned with the  $x$  total?—That is so.

3417. The  $x$  may be divided and cross-divided in a great variety of ways?—Yes.

3418. Among other interests carved out of it may be what is called the tenant right?—Yes.

3419. But you are not concerned with that as such?—No.

3420. Supposing that I have a piece of land or ground valued at 5*l.* a year, and that I build a very large house upon it which you value as a new structure at 100*l.* a year—not an uncommon case in Ireland or in England?—No.

3421. You would not be concerned with the question whether I was the simple owner or whether I was a tenant?—No.

3422. You would only be concerned with the valuation?—Yes.

3423. And it might be that if I were a tenant I should be paying 5*l.* a year for rent, the sum of the original valuation, and that as owner of the house I should be getting 100*l.* a year rent from my sub-tenant in respect of which your valuation would be 100*l.*?—Yes.

3424. There are many such cases in London, for instance, and in towns?—Yes.

3425. I suppose that you would recognise that my interest in that property, it being a house worth 100*l.* a year, was very considerably above the interest of the landlord to whom I paid 5*l.* a year?—Yes.

3426. That, again, is a very common thing in this country, I suppose, as well as in Ireland?—Yes.

3427. Therefore it is by no means an astonishing thing that, now and then, there should be a tenant with an interest in a particular holding a great deal larger than the interest of his landlord?—Yes.

3428. In the case of ground with a house on it?—I take it in that case the 5*l.* would be the ground rent.

3429. Yes, that would be the term applied to it no doubt. I think you told us that the improvements throughout Ireland, speaking generally, are made by the tenants?—Yes, they nearly always are.

3430. And that the addition to the valuation is by reason of the tenants' improvements?—I do not think I said that; there has been no addition.

3431. I am putting that as a corollary?—Yes, there would be an addition if there was a re-valuation.

3432. The tenant right represents in part at least the interest which the tenant has in the improvements which he has made?—Yes.

3433. And as we have seen it may be that in any given case the improvements made by the tenant are themselves worth more than the land in connection with which they are made?—Yes, it may be so.

3434. Therefore, it is not unreasonable that in certain cases at any rate the tenant right should exceed the original landlord's interest?—It is possible that it should do.

3435. I think you said that if there was a new valuation made in Ireland on the British lines there would be an alteration in the total valuation?—Yes.

3436. I understood you to suggest that the valuation would be raised?—Yes.

3437. Would you mind telling us why you think so, and how that would come about?—The reason I think so is that property has increased in value very much.

3438. Whereabouts—should you say that was agricultural property or urban property?—Both, I think have increased; certainly in some parts of Ireland both have increased.

3439. I was going to take the case of County Meath, where there used to be, at the time when this valuation was started, a very large amount of land—the best land in the country—under crops?—Yes.

3440. Which is now only pasture?—Yes, it is all pasture.

3441. Would you say that the valuation of the land about Old Castle should be higher now than it was then?—I could not answer that question. I could not answer for any particular district and say it should be higher without going into the valuation of that district. I think that the land value of Ireland as a whole would be raised, the chief increase being in the south. I think in Kerry and other parts of the south it would be raised very much, partly due to the fact that there have been enormous sums of money spent on reclamation, drainage, and improvements to the lands within the last 20 years, while there has been no increase at all in the valuation. There is land valued in Kerry at 1*s.* an acre which is worth, I suppose, 12*s.* or 15*s.* at least; there is land in Kerry that is not valued at all, because it cannot under the existing Acts be brought into the valuation list.

3442. There is also, I suppose in places, some land which has gone out of cultivation?—There is some, no doubt. Therefore you must take it as a general proposition, not that any particular district would be increased.

3443. Now with regard to your railways, how would you value at present the Lismore, Dungarvan, and Waterford Railway?—I do not remember whether there is a profit on that line or not. If there is a profit I would value it on the profits.

3444. The Board of Works is foreclosing upon it as mortgagees in possession?—But there might be a profit.

3445. That would not affect the valuation?—No, the fact of the mortgagees foreclosing would not; the mortgage is a capital sum.

3446. Would you kindly explain in what respect Ulster differs from the rest of Ireland for valuation purposes on account of tenant right, I did not quite follow what you told us?—I said that it did differ from the rest of Ireland at the time that Griffith's valuation was made. I do not think it differs now at all since the Act of 1870.

3447. In the early stages of valuation work you had certain prices scheduled to the Act, I think?—Yes.

3448. Among the articles included in the schedule was wheat?—Yes.

3449. There was a good deal of wheat grown in Ireland then?—A large quantity.

3450. There is none now?—Practically none.

3451. So that your standard for comparison between then and now so far is worthless?—As far as the wheat is concerned, certainly.

3452. You told us also that you thought the rent in a very large number of cases was some 15 or 20 per cent. over the valuation?—Yes.

3453. The valuation includes all interests, the tenants as well as the landlords?—Yes. Of course it does not include the tenant's profits, that is to say, what the tenant makes out of it.

3454. The thing as a going concern is valued by you at  $x$ ?—Certainly.

3455. You told us that in many cases the rent may be 15 or 20 per cent. above  $x$ ?—Yes.

3456. And yet the thing as a going concern includes, besides the landlord's interest, the tenant's interest?—Yes.

Mr. J. G. Barton.

6 May '97

Revaluation in Ireland would raise the present valuation. Reasons for this.

Valuation of railways.

Griffith's valuation. Case of Ulster not now different from the rest of Ireland.

Valuation based upon value of certain articles of agricultural produce. Since making the valuation, growing of wheat practically ceased.

Valuation of land in Ireland. Landlords' and tenants' interests in, considered.

Mr. J. G.  
Barton.

6 May '97

3457. The landlord's interest is  $x$  minus the tenant's interest?—Yes.

3458. The rent is  $x$  plus the 15 or 20 per cent.?—Yes.

3459. So that for an interest represented by something less than  $x$ , a tenant is paying a rent of 15 or 20 per cent. over  $x$ ?—In some cases in the north it would have that effect, but those are exceptional cases.

3460. In what part of Ireland would you say that generally prevails more than in any other?—I think that there are very few cases in Ulster where that prevails. That, of course, assumes that the valuation is correct. Griffith's valuation did not include those two interests as they now are.

3461. I think you would maintain that probably the valuation is nearer the standard of justice than the rent?—That I would not give an opinion on.

3462. Would you tell us, if you can, what has been the expense of this valuation of Ireland?—Do you mean the original valuation which was made by Sir Richard Griffith?

3463. Yes. The reason I ask is this: we are concerned with two or three different systems of valuation, one prevails here, another prevails in Scotland, and the third prevails in Ireland. It may occur to some that to have a central system of valuation, one for the whole country, as you have in Ireland, is better than the system which prevails here. I want to ask you what do you think has been the expense of establishing your valuation in Ireland?—I can tell you what the expense of the original valuation was. It must be remembered that this valuation was done in a very expensive and unsatisfactory way.

3464. I know; with all its blunders what did it cost?—I can give you exactly what it cost. The first valuation, that is the Townland valuation cost 159,900*l.* The second two valuations, that is the 1846 and the 1852 (Griffith's) valuations cost 325,133*l.* 11*s.* 11*d.*

3465. It was something under half a million altogether?—Yes.

3466. What is the annual expense of the maintenance of the valuation?—It is given in paragraph 32 as about 21,000*l.*

3467. How much do you receive from the local authorities towards the annual expenditure?—We receive 8,000*l.* from the counties.

3468. About one-third?—Yes; and then fees are paid to us from the public amounting to from 1,000*l.* to 1,200*l.*

3469. So that the cost stands the Exchequer in, for the whole country, something under 20,000*l.*?—The Exchequer has to find about 12,500*l.* or something like that.

3470. The valuation business is run for about 12,000*l.* a year at the central expense?—Yes, that is it.

3471. I suppose you consider that the system of one central valuing authority for the country, is better than a sub-division over different areas with different authorities?—I think it is, because there is more confidence, the people, I think, have more confidence in it.

3472. There is something more of a standard about it?—Yes. You see, if the local authorities in Ireland have to do their own valuation they would have to employ valuers, and outside my office there are no men who could do such valuations as railways, canals, and hereditaments of a similar nature.

3473. I understood you to say that the valuation of land which now exists is practically obsolete as a fair standard?—Yes.

3474. And that the valuation ought to be repeated, say every 20 years?—I think so; that is my opinion.

3475. What do you think would be the cost of a fresh valuation if you took it in hand at once?—I estimated it the other day for Mr. Gerald Balfour at from 200,000*l.* to 250,000*l.* I would re-value the country in five years for that sum.

3476. So much as that?—I think it would cost that amount. I should like to explain in regard to that, that one of the most important things that a re-valuation would insure would be a correct tenement map of the whole of Ireland. Our maps show all the tenements in Ireland. But the boundaries of these tenements are only revised when the necessity for revision is brought

before us by the local authorities, therefore there are a great number of cases that have escaped revision. I think it would be of the greatest benefit to Ireland and to the Government to have one set of correct maps of the whole of Ireland. To do that it would be necessary for us to perambulate, practically, all the boundaries.

3477. Did you include the cost of that in your quarter of a million?—Exactly.

3478. How much did you put that down at?—I could not say offhand how much I would charge to that.

3479. Would it be half the expense?—No, I do not think it would be half, but it would be a considerable portion. You see, the men doing that would also do the other work to a certain extent at the same time. It is rather hard to divide it.

3480. Can you tell us anything about the rates in Ireland?—It is not exactly in my department.

3481. Do you know whether local taxation in Ireland has increased or diminished?—I know it has increased.

3482. It has increased?—Yes, I know it has.

3483. Since Griffith's valuation began?—It is increasing every year, I think, but I could not give you the exact figures.

3484. Would you say it has doubled?—I am afraid I do not remember what it was when Griffith's valuation was made.

3485. (Mr. Wharton.) As I understand it, you have one assessment for the whole of Ireland, not as in England, where we have perhaps four or five different assessments of the same area?—Yes, we have one valuation for the whole of Ireland on which poor rate, county cess and municipal rates are levied.

3486. Then with regard to railways, you have told us that the system of rating your railways is upon train mileage, and not upon the running mileage?—The dividing of the valuation is done in that way.

3487. Not by the lineal mileage as in Scotland?—No.

3488. That would, no doubt, be particularly good in the cases where you have part of a railway on which there are a great number of trains running, say, between two main towns, as compared with a long piece of railway where there are only a few trains in the day?—Yes.

3489. By using the train mileage system you equalise that and make it more equitable than you would if you were to take the lineal method?—That was my idea to get nearer the English system.

3490. The English system is, that it is left to each local authority to value that particular portion of the railway?—That is what the English system is intended to be, if I may put it in that way.

3491. I hope it is what the English system may be. With regard to another matter, with regard to public-house licences proper, has there been a large increase of late in the assessed value of public-houses?—Yes, there has been a considerable increase. Of course few of the towns in Ireland are growing very considerably; but Belfast is growing very rapidly, and there are a very large number of new public-houses.

3492. Has there been a very large increase in the value of the public-houses?—Not very large.

3493. In England we hear it has nearly doubled in the last 10 years, but I did not know what it might have been in Ireland?—It has not done that.

3494. (Mr. Smith.) I want to ask you to make quite clear what you meant by tenant's profits. When Mr. Robinson was here, at Question 1092, he is asked by Mr. Elliott: "What did you mean by tenant's profit?" and the answer is "What I wish to convey in that answer was that Griffith, in making his valuation for assessment purposes, took into consideration the valuation of produce and the profit which a tenant would make out of it." Do you agree with that answer?—No, I do not.

3495. What I understand you to mean is this, that in valuing property you take the rent paid to the landlord and a certain interest on the tenant right?—Yes.

3496. And that those two together amount to what you call the letting value to a solvent tenant?—Yes, I would practically put it in this way, that if the land was in the landlord's hands and he wanted to let it, it would be the sum that he would get from a solvent tenant.

Mr. J. G.  
Barton.

Mr. J. G. Barton.  
6 May '97.

3497. Exactly, but you do not take into account at all the profit that the solvent tenant has to make for his maintenance?—No.

3498. I think we have cleared up that point. Mr. Robinson's answer was evidently given under a misapprehension. Your system, in fact, is very similar to that which obtains in England in valuing property?—It is intended to be the same I fancy.

3499. Where there are divided interests?—Yes.

3500. If you take a house in London the ground rent of which is 50l.; 4,000l. having been spent by the lessee, and 1,000l. premium; adding these up together at 5 per cent. they would come to 300l. a year?—Yes, exactly.

3501. But you take no regard to the individual interests?—No.

3502. Except that for certain purposes you water it down to an assumed Griffith's valuation?—Yes.

3503. Because your valuation of land in Ireland is a fixed amount?—Yes, the valuation of land and houses that have not been re-valued.

3504. I suppose there are no common charges between the three divisions of the kingdom based upon the valuation, are there?—Not except the Income Tax.

3505. If there were any common charges based upon such a valuation, it would be unfair to the other countries?—It would.

3506. (Mr. Elliott.) I understood from what you said with regard to the method adopted by Sir Richard Griffith that the first thing that was done was to ascertain the aggregate value of the produce according to a certain fixed scale of prices?—Yes.

3507. And then from that aggregate value a deduction was made in respect of the cost of production?—Yes.

3508. What items went to make up that cost of production?—I should say the cost of the seed, the labour, the interest on whatever tools the tenant might require for the production—of course it would vary in different farms.

3509. Would a deduction be made for repairs?—Do you mean the repairs of his house?

3510. Repairs to farm buildings for instance—I am speaking now of agricultural land?—Yes, certainly.

3511. And for insurance?—Yes.

3512. And for tenant's profits?—Yes.

3513. And for tenant's rates and taxes?—The principle of valuation is the rent a tenant would give, he paying all taxes.

3514. In the case of Ulster, having obtained that valuation, would anything be added for interest on tenant right?—I do not quite understand you. The tenant right is included in it.

3515. I wanted to see precisely what was the difference in procedure between the course taken by Sir Richard Griffith in Ulster, and the course taken by him in the other provinces?—I do not think there was any difference really because he arrived at the valuation in exactly the same way for each, and in exactly the same way as one would arrive at it now if one valued on the produce, and the cost of producing it; but if you value on the rent, you then bring in the question of tenant right.

3516. Do you think that the difference between Ulster and the other provinces is due to the measurement of the tenant's profits?—When you say the difference between Ulster and the other provinces, what do you mean?

3517. I mean to say the difference of system adopted in Ulster by Sir Richard Griffith, as compared with the system adopted by him in the other provinces?—I do not think there was any difference—I did not mean to convey that there was any difference.

3518. I understood you to suggest with respect to tenant right that there was some difference, but I may have misunderstood you?—I am afraid I did not put it very clearly. What I intended to say was that the tenant right did not exist in any part of Ireland except in Ulster when he made the valuation.

3519. So that in making his valuation he took no notice of tenant right?—He took no notice of it because he valued it in a way in which the tenant right would not form an element in arriving at the fair letting value.

3520. Are you impressed at all by the fact that Ulster is the only province in which the judicial rents are below the valuation?—Except in exceptional cases.

3521. I am speaking generally, of course?—Yes, generally it is so.

3522. Are you impressed by that fact, does it suggest to your mind that there was any difference of system in Ulster?—No, I think it was the general rise in prices all over the country more than anything else. Of course that is only supposition. I find no mention of tenant right in any of the valuer's books in Ulster, and therefore I assume that they did not directly take it into account.

3523. What is your explanation of the fact that in Ulster the judicial rents fixed are on an average something like 9 per cent. below Griffith's valuation, whereas in all the other provinces they are above Griffith's valuation?—One reason is the one I have just stated, that I think prices had gone up very much.

3524. Had prices gone up in Ulster as compared with the other provinces?—They had gone up when the valuation was made in Ulster. That is one reason. I think another reason that very strongly influenced it, was that the prices in this schedule for grass lands are very much lower than the prices for tillage lands, and Ulster being all tillage was naturally more highly valued than the South.

3525. I gathered from what you said that taking the country as a whole the judicial rents have proved to be something like 1½ per cent. above the valuation?—Yes, I think that is it as a whole, but of course that figure has not very much value.

3526. Is it based on a very great number of cases?—Yes, I can give you the number. It is based on 288,000 cases.

3527. Do you think that that percentage may fairly be applied to agricultural land as a whole in Ireland?—You see that is an average. I think you ought to take the averages that I gave you for each of the different provinces in order to arrive at it more fairly.

3528. But at any rate in three of the provinces the judicial rents have been fixed at a sum substantially above the valuation?—Yes, the judicial rents are above the valuation in three of the provinces.

3529. Would the judicial rents take into account any interest on the cost of the tenant's improvements?—No.

3530. Would you say the judicial rents in Ireland would be lower or higher than rents in England?—I would not like to give an opinion on that subject.

3531. We have before us statements in which the rateable values of the three countries are put in juxtaposition, and I want to get from you how far we are entitled to regard those figures as comparable. I understand that the valuations are in some provinces as much as 12 per cent. below the judicial rents, but I put it to you that the judicial rents in Ireland would be much less than the rateable value of the land if it were in England?—You see the rents in England have been enormously reduced in the last few years.

3532. The rents in England would include the profit that would be derived from the whole of the improvements, would they not?—Yes, I suppose they would.

3533. The rent would include a rent for the buildings and for the improvements which are the property of the landlord?—Yes.

3534. But a judicial rent in Ireland would not include that?—No.

3535. Therefore, judicial rent in Ireland can hardly be compared with the rateable value of agricultural land in this country?—It would be very hard to make a comparison between them.

3536. You think any comparison would be dangerous?—I think so. I should not like to lay down any particular figure.

3537. With regard to houses, you mentioned that a certain deduction is made in order to bring the assessment into line with Griffith's valuation; could you put any figure to that statement?—Certainly, I can give you a figure for every district in Ireland.

3538. Would you do so?—I have no objection at all to give that figure. Each union has a separate

Mr. J. G. Barton.  
6 May '97

Valuation in Ulster now above the judicial rents, and in other parts of Ireland below them. Reasons for this.

Judicial rents in Ireland not comparable with rental value of land in England.

Valuation of new houses. Percentage of reductions made to arrive at the basis upon which houses were valued by Sir R. Griffith.

Present valuation in England, Scotland, and Ireland, would be an unfair basis for charges common to the three countries. Valuation of land in Ireland. Steps taken to arrive at the valuation explained.

Method of valuing land by Griffith included interest on tenant right in Ulster, where it at that time alone existed.

Mr. J. G.  
Barton.  
6 May '97

an engine that runs along with a couple of empty trucks and a van should count the same in train miles as an engine that goes with 40 trucks loaded with merchandise?—No. When the railway company supply us with the train mileage, they supply us with it in this form—so many train miles of goods and so many train miles of passengers. We do not take into account any

such trains as you spoke of; I do not think they would appear in either one or the other.

Mr. J. G.  
Barton.  
6 May '97

3610. I put it rather too high perhaps, but can you distinguish between a train mile of two loaded trucks and one of 40?—We do not at present, although, to go into it accurately, I think you are quite right, and that the distinction ought to be made.

The witness withdrew.

Mr. W.  
Munro.

Mr. WILLIAM MUNRO called and examined.

Memorandum prepared by Assessor of Railways and Canals.

3611. (Chairman.) We know that you are the Assessor of Railways and Canals for Scotland, and I understand that for the years from 1858 until 1877 you were Government Assessor of lands and heritages for the First District of the County of Lanark, and that after being a short time in the office of Inspector of Stamps and Taxes you succeeded in 1879 to the office which you now hold, and you have held that office continuously from that time to the present?—Yes.

3612. You have been good enough to prepare for us this memorandum which I hold in my hand in response to a request from the Commission?—Yes.

Valuation of railways in Scotland. System of. Amount of deduction made for working expenses and tenants' allowances.

3613. As you have heard Mr. Barton describe his Irish system of valuing railways, perhaps you would just shortly describe to us the system which you go through to get at the value of a railway in Scotland?—First I take the gross revenue of the company from the half-yearly accounts, and deduct from it the working expenses and tenants' allowances, which include 25 per cent. on working stock and plant, 25 per cent. on locomotive machinery, station furniture, &c., 10 per cent. on stores, 5 per cent. on floating capital and 18 per cent. on the plant employed in working small lines.

3614. As you are aware, there have been some complaints about the amount of these deductions, and I shall put them to you in a few moments. I want to get first the more general results of your system. Having gone through this process you then have to divide the value which has to be put upon stations, and the value which has to be put upon the running line?—Yes.

Valuation of stations and the running line. How allocated to the different rating areas. If running line is a quadruple one, a double allowance is given, but a double line treated as a single one. Objection to this system. Suggested reform.

3615. The value which is allocated to the stations goes to the rating area in which the station is situated?—Yes.

3616. And the value of the running line is divided equally according to the mileage through all the different rating areas which the railway traverses?—It is so.

3617. And no difference is made, as I understand it, in respect of there being more traffic upon one part of the line than upon another?—None.

3618. For example, if the North British Railway runs through the City of Glasgow at one end and the parish of Fort William at the other, the mileage is the same for a parish in Glasgow as for a parish in Inverness-shire?—It is so wherever the North British Railway is situated.

3619. Do you make any difference as between single, double, and quadruple lines?—Latterly where there have been quadruple lines, and there are only very few miles of quadruple lines in Scotland, we have given a double allowance. I have taken it upon my own responsibility to give double allowance when the line is quadruple. There is no difference whatever made between a single line and a double line.

3620. The practice of making no difference between thinly populated and populous districts has led to some complaints and some anomalies, has it not?—It certainly has. It is one of the faults of our system, I consider.

3621. You do not think that is a part of the system which is in the abstract fair or defensible?—I do not think that part of our system is.

3622. What would you suggest?—I have suggested frequently on different occasions that the lines should be reduced to single lines, and that where there is a double line it should be treated as twice its length; that the rate be ascertained in the usual way, and then be applied twice as much where there is a double line as where there is a single line.

3623. That would not make the same effort to distinguish between lines full of traffic and lines which

are not so as is made in what you have heard of the Irish system?—No, it would not. That is, I believe, the English system also. Of course that is an entirely different system, but in the abstract it would appear to be the more perfect system. It would, however, be very expensive to carry out, and very troublesome, and upon the whole, the system we have, if we could reduce the lines to single lines, would appear to be nearly as perfect as anything of the kind could be.

Mr. W.  
Munro.

3624. I have been very much interested in Table II. of your memorandum. They are all, I think, compiled upon the same basis, so if I put questions as to the first one, which deals with the Caledonian Railway, the questions I put will apply to all the other tables, will they not?—Yes, I have no doubt they would.

Decrease in value of lines on Caledonian Railway attributable, to a great extent, to increase in number of and addition to railway stations.

3625. The first thing that must strike one is the curious alterations in the value per mile of the Caledonian Railway which have taken place during the last 20 years?—Yes, no doubt that would be so.

3626. Take one question first. Does it not strike you as requiring explanation that the percentage of value which is attributed to stations should have grown so greatly as compared with the percentage of total value?—Stations, of course, have enormously increased in value. The amount of money spent by the Caledonian Railway Company in building stations has been very large, and by statute the allowance or the proportion we must give to the stations is fixed, that is to say, it is 5 per cent. on the cost.

3627. That is a fixed charge, do you say?—Yes.

3628. By statute, or as interpreted, judicially?—Originally by the Act of 1854 the percentage was 3 per cent., but that was changed by the Act of 1867 (this is all narrated in paragraphs 5 and 6 of my memorandum) to 5 per cent. Since that time the sum spent upon railway stations has been very large, and it has made this 5 per cent. bring out a result that shows what many think is an excessive allowance for stations as compared with what remains for lines.

3629. If the process were to go on in the future as it has done in the past, the stations would by-and-by swallow up the whole valuation, would they not?—They might, and there have been cases even of that.

3630. Is that defensible?—It does not appear to me to be so.

3631. Have you any suggestion to make to us?—I have given it at length in paragraph 11 of my memorandum. I have already mentioned that the Act of 1854 directed that the valuation of stations should be ascertained by taking 3 per cent., and that the Act of 1867 raised that to 5 per cent.; for a period of years after 1867, railway traffics were large and increasing, and the proportion of the *cumulo* value allocated to the stations did not appear to be excessive. From about that time, and for many years subsequently, many new stations were built, and others re-constructed at great cost, all of which tended to diminish very materially the proportion of the *cumulo* value to be allocated to the lines of railway, and to increase the proportion for the stations. It has all along seemed to me that 5 per cent. was excessive as a percentage on cost, for the value of stations. More especially did it appear to be excessive as regards the *solum*, or sites of stations for which at any period the original 3 per cent. was in my opinion sufficient. The value of land in such a town as Glasgow where the stations are built upon is very large, in fact, the value of the erections alone is nothing compared with the value of the *solum* when you take ground at 25l. a yard as some portions of it are.

3632. I understand you to suggest that it was an error to raise that percentage from 3 to 5?—It has always appeared to me to have been an error.

3633. Do you think 3 per cent. is the proper percentage to take?—Yes, I think it is sufficient.

Railway stations, statutory allowance of 5 per cent. given to stations is too high.

Mr. W. Munro.  
6 May '97

Decrease in value of lines per mile attributable to a certain extent to increase in value of plant.

Caledonian Railway. Value per mile fluctuated very much during last 20 years. Reasons for this.

Deduction of 25 per cent. for working stock and plant, how made up.

Deduction of 5 per cent. for interest is too much.

Deductions not likely to increase so as to greatly reduce the valuation.

3634. It is not the only cause I think which has contributed to reduce so largely the value per mile of the Scottish railways as shown in Table II. ?—The value has been reduced chiefly by more than one cause, one being the enormous increase of plant added almost every year by the railway companies. That, of course, was necessary to earn the enormously increased traffics; the traffics have been always increasing, but to earn that increased traffic the companies have had to build an immense number of new carriages, and not only a greater number, but very much more expensive carriages. Altogether that made up a very large sum for each company, and as the allowances were 25 per cent. upon this enormously increased sum, that brought out a very large reduction.

3635. Apart from the percentages contributed to stations, and the percentages contributed to lines, I observe that in the two last columns of the table namely, those which give the extent and value per mile, the value per mile of the Caledonian Railway fluctuated very much apart from the fact that it has been reduced in the last 20 years?—It fluctuates yearly with the traffics. If the traffic receipts are large the valuation will be large. That to me seems to justify our system so far. As the valuation is made up yearly, if the traffics are good and large, and paying, the railway is worth that much more.

3636. In other words, the hypothetical tenant would give more for it in that particular year?—Yes. The last year 1896-7 was a very low year indeed, but this current year, 1897-8 it has quite recovered. I have prepared an additional memorandum in connexion with the returns of revenue,\* from which it appears that, taking the cases of the three largest railways, while the percentages of the total traffics to total receipts, and to net receipts respectively are considerably lower now than they were in the exceptionally good years of 1876 and 1877 these percentages have all along been subject to great fluctuations owing to dull trade or the reverse. Over the whole period of 22 years covered by these tables the average percentages of total value to total receipts as compared with the percentages for 1897-98 were as follows:—the Caledonian Company average for 22 years, 22.4, and for 1897-98, 22.0; so with that Company it is pretty much the same, taking the percentages over a period of 22 years. There is no great falling off, only a very trifling falling off; but while that is the case, on the other hand, they should really have been greater, one would fancy, because the traffics are so much greater. I do not know that I need just now give the averages for the other companies.\*

3637. You have referred once or twice already to the deductions which you set out in paragraph 4 of your memorandum, the first of them being the 25 per cent. for working-stock and plant?—Yes.

3638. That is made up in the first place of 12 per cent. for tenants' profits?—Yes.

3639. You next go on to 5 per cent. for depreciation, then 5 per cent. for interest, and then 3 per cent. for accidents and incidents, making up a total of 25 per cent. ?—Yes.

3640. Do you think there is any foundation for the complaint which is not infrequently made, that these deductions are excessive?—May I give you the same answer I gave to the Royal Commission on Agriculture, or at least begin with that, which was that if 5 per cent. was the proper deduction for depreciation or for interest 40 years ago, now with the enormously changed value in money when companies can borrow money so much more readily, that consideration alone appears to me to make it somewhat excessive now.

3641. And that, I gather, is your own opinion—it is too high?—It is.

3642. Again, these deductions are open to this argument, are they not, that if they go on growing in the future as they have in the past, they will swallow up the valuation altogether?—I am aware that that statement is made, but I do not quite agree with that. I think the fact that the valuations of the current year are returning to quite the average, shows that there is not much risk of that. The year before last when we had the great coal strike and a frost for 13 weeks, which practically bound up the whole country and injured trade exceedingly, that was quite enough to account for the exceptionally low valuation.

3643. Do you think it was under the influence of that exceptional year that many of the recent complaints have been made?—I think that brought the complaints to a point. There had been a good deal of grumbling before, but those low valuations which were caused by that exceptional year brought it to a point.

3644. Can a deduction of 12 per cent. for tenants' profits be defended in these days?—That seems a very large deduction.

3645. Has that ever been the subject of judicial decision?—It has.

3646. Are you bound by that decision?—I consider I am. I am bound in more ways than one. One way being that the judges on two successive occasions have declared that they did not see their way to alter the decision of a judge, as one of them termed it, of co-ordinate jurisdiction.

3647. Was the case upon which that was first decided the case of a large and important company?—I think it was a case where the result was to be agreed to by all the companies jointly. It was argued by several judges and counsel, but there is no direct decision upon it; it was just agreed to. The question was raised in 1875-76 before Lord Ormidale, and in 1884-85 before Lord Kinnear.

3648. Does not the system amount to this, that whereas the tenants' profits, or in other words I think we may say in the case of a railway, the rent, is by your system fixed first of all at the very large amount of 12 per cent., the railway gets the benefit whether it earns it or not?—Yes, it does.

3649. Is that a just criticism?—The same argument would apply to any fixed percentage, I presume.

3650. Ought it to be fixed at so high a sum as 12 per cent. under those circumstances?—I have no very fixed opinion upon it, because a railway is a very hazardous undertaking, and subject to enormous losses, accidents, and so on. It certainly does appear to me to be a very large percentage for tenants' profits.

3651. I understand you never do make any alteration?—I never do; I never attempt it; I always avoid raising questions unless there is some ground for believing that I might succeed.

3652. I need hardly ask this, for I suppose your answer is sure to be in the negative; in making these deductions you make no calculations as to the net railway receipts?—The net railway receipts are really the dividend; the amount paid for dividend shows that.

3653. Whether they pay a dividend or not, they get the 12 per cent. as far as the rating is concerned?—They do if there is enough to allow it.

3654. With regard to the 5 per cent. for depreciation, is that a reasonable percentage?—In addition to that the railway companies get the whole of their repairs and renewals.

3655. The repairs and renewals are done out of revenue, are they not?—Yes.

3656. If you allow them, first of all, deductions for repairs and renewals out of revenue, and then give them 5 per cent. for depreciation, you are practically taking the same thing twice over, are you not?—That has been very strongly argued, but in the last case that was tried no alteration was made by the judge. The parish of Govan raised that question.

3657. Did the judge say he was bound by previous decisions?—He either said it, or implied it.

3658. The 5 per cent. for interest would seem to be a high charge according to the rate of interest to be got in these days with good security?—To me it certainly does appear to be so. Of course it is not quite the case of the railway company as owners borrowing the money, because it is the hypothetical tenant who is borrowing, and it is quite possible that he may have to pay a higher rate than a man borrowing money with the credit of a great railway at his back.

3659. On the other hand the tenant is a very hypothetical person, and the railway company is in existence and actually working the line?—It is so. But I think the objection to that is not quite so strong as it is to the 5 per cent. for depreciation. Here are Lord Kinnear's remarks upon this point in the Govan case, the county

Mr. W. Munro.  
6 May '97

Deduction of 12 per cent. for tenants' profits is a large one, but the assessor is bound by a legal decision.

Deduction of 5 per cent. for depreciation given in addition to allowance for repairs and renewals which are done out of revenue.

Deduction of 5 per cent. for interest is a high one.

Deduction of 5 per cent. for depreciation. Lord Kinnear's observations.

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 229 to 203.

Mr. W.  
Munro.  
6 May '97

of Lanark were parties to it; I must say that it was not pushed as well as I thought they were going to do it:—"The assessor has included in the deduction of 25 per cent. on the assumed value of plant an allowance of 5 per cent. for deterioration of plant, and has also allowed the sums entered for repair and renewal in the company's account. But this does not necessarily involve a double allowance, since it is assumed that the expenditure upon repairs and renewals will only bring up the plant to 75 per cent. of its original value, and the percentage of 5 per cent. is in like manner calculated upon 75 per cent. of the prime cost. The assessor therefore, following the established practice, has held that one or other of these allowances alone would not be sufficient. I express no opinion on the question whether the method which has long been followed of estimating the allowance which should be made for depreciation is correct in principle, or whether the amount allowed is reasonable. The principle upon which the calculation proceeds has not been challenged except in so far as it is supposed to involve a double allowance, and no grounds have been stated to justify my interfering with the assessor's judgement in the question of amount."

3660. Were you a party in that case?—I was a consenting party to it.

Legal proceedings.  
Locus standi of assessor of railways in courts of law.

3661. Have you any power yourself in your capacity as assessor to state your own case, or to employ counsel, or otherwise to contest except when a local authority chooses to do it?—On that very occasion I think I read a paper which Lord Kinnear listened to, but against me I had many of the first gentlemen at the bar.

3662. Then you were present on that occasion?—I was present.

3663. In what capacity?—As assessor.

3664. Have you the right to address the court as assessor?—I think I have; the judge allowed that.

3665. Do you cross-examine witnesses on such an occasion as that?—I have done so to a very slight extent, but I really feel I am unequal for the combat.

3666. If the assessor does not cross-examine, and the railway companies do, it is not altogether improbable, or in any way casting a slur upon the assessor, if I say that he is put at a disadvantage in defending?—It is a very great disadvantage—the greatest possible.

3667. I suppose there would be a difficulty, having regard to the source from which your office is remunerated, in suggesting that you should be supplied with funds from the same source, to contest the railway companies?—There is a great difficulty there, I quite see, but I believe that the railway companies would really not object—I have heard several of them say so.

Deduction of 3 per cent. for accidents, &c., is a high one.

3668. Then to take another item, out of this 25 per cent., which is an allowance of 3 per cent. for accidents, incidents, and tenants' proportion of law charges and parliamentary expenses; do you know whether that was ever settled upon any intelligible statement, or whether it was simply added on to the other 22 per cent. for the sake of making 25 per cent.?—I think it was added on to meet the risks of accidents and the losses by accidents. I think my predecessor once said that he would include any case of snow-blocks as an incident. Snow-blocks are quite common on some of our railways. But taking the whole of these risks together, including the highest year any Scotch railway had for accidents, which, I think, was the Caledonian in the year of the Pennylee accident, it would never amount to anything approaching the 3 per cent.

3669. It is stated in Mr. W. Alston Dyke's pamphlet, that if you take 3 per cent. in the case of the North British it would come to something over 140,000*l.* a year?—I have no doubt it would.

3670. Do you think the payment for accidents, incidents, Parliamentary expenses, and law charges, and giving you the benefit of the snow-blocks, would come to anything like 140,000*l.* a year?—No, it would never come to that.

3671. Therefore the 3 per cent. is too high?—It appears to be too high unless you include anything for the risk of the undertaking and managing such a difficult and hazardous concern as a railway; but that is said to be covered by the 12 per cent. for tenants'

profits. Every percentage that might be taken from that 25 per cent. would mean a difference of about 50,000*l.* a year either to the Caledonian or to the North British, so while the gross valuation of the Caledonian this year is 800,000*l.*, if 5 per cent. were taken off, it would mean an addition of 250,000*l.* to the 800,000*l.*; it mounts up very rapidly.

3672. Taking it broadly, you think there is a case for re-examining the basis upon which these deductions, as a whole, have been estimated in the past?—Yes, I cannot help believing that there is. I state it very much upon the fact that the change of value in money is so notorious and apparently is so fixed now.

3673. Are you in favour of further provisions for appeals in valuation cases?—Very much so. I think the present court is insufficient for the magnitude of the interests involved.

3674. The present court, I understand, is the Junior Lord Ordinary for the time being?—Yes, and hitherto the time allotted for these cases has always been during the vacation time.

3675. Then is it the Junior Lord Ordinary or the Lord Ordinary on the Bills?—The Lord Ordinary on the Bills I should say, one of the juniors, not the junior.

3676. Is there any appeal from his decision?—None whatever.

3677. Is that by statute?—Yes, it is by statute. It has to be done within a very short time. Formerly he had to decide the cases by the 30th September, and very often he only commenced within two or three days of the 30th, and the proceedings were necessarily hurried.

3678. Then would you say there is absolutely no continuity in the tribunal, and yet there is no appeal?—There is no appeal, and in fact the cases are not reported in the ordinary way. They are reported now in the "Poor Law Magazine," because at my office we take care to have them reported in that and send them to the editor of this paper, or they never would be reported at all. As your Lordship may be aware, the Committee of 1888 recommended that there should be a certain change in the tribunal.

3679. A calculation has been made for me, I do not know whether you will be able to check it, but if not I will give you the calculation, and you shall state in your proof when revising your evidence, if you will be good enough to do so, whether I am accurate. I rather think a copy of it has been supplied to you. I find that the net receipts of English railways in 1894 are stated in the Statistical Abstract, page 195, to be 31,271,507*l.* The proportion of net receipts to gross rental in England in the same year was about 31 to 17, and of rateable value 31 to 13; are you able to say whether you have had an opportunity of checking those figures?—I have had no opportunity of checking them, in fact, I only got them this morning.

3680. I will put another question, and I will ask you to be kind enough to check it when you get your proof, it is only fair that you should have time to do it. The Scottish net receipts for the same year are 4,279,957*l.*, and the railway valuation 1,800,000*l.* The proportion in the calculation for Scotland being 42 to 18 as compared with 31 to 13 in England?—That is nearly the same.\*

3681. What I want to ask you is whether you think this is an accidental coincidence in which the totally different English and Scottish systems have brought about very similar results, or whether you think that although arrived at by different methods, the results in the two countries are practically the same?—I cannot think that. These calculations, I think, apply, not perhaps to our worst year, but to several years back, and I presume the coincidence must be just accidental.

3682. I suppose that you are aware that when one is comparing English with Scottish railways it is necessary to bear in mind that the mileage of some of the Scottish railways is actually in England?—Yes.

3683. Therefore, when you are comparing rates paid between England and Scotland you must add something

\* The witness subsequently stated that he had checked the figures referred to and found them to be correct. He also forwarded a table showing, for the railways in Scotland, the total valuations, net receipts, and total rates paid. (See Pt. I. of Appendix to Vol. I. of Minutes of Evidence, p. 309.)

Mr. W.  
Munro.  
6 May '97

Deductions.  
Revision of amounts desirable.  
Appeals in valuation cases.  
A change in the present tribunal advisable.

Proportion of net receipts to rateable value on English and Scotch railways.

Valuation of Scottish railways partly situated in England. Method adopted.

Mr. W. Muir.

6 May '97

to the payments that are made by Scottish railways in order to get a fair comparison with the payments that are made by the English railways?—Yes, certainly.

3684. *Per contra* when you are calculating the amount paid as compared with the capital expenditure of the railways you must take off something from the Scottish capital expenditure, because the capital expenditure for the mileage of the Scotch railways in England is shown in the accounts of the Scottish companies?—It is, including in one case one half of the cost of the very large and expensive station at Carlisle.

3685. Is it still impossible to get at the proper abatement which should be allowed in respect of traders' wagons?—Circumstances are still exactly the same as then. I do not think it would make a very large difference even if it were got at. The railway companies almost declined to do it. They said it would involve an immense amount of work and labour on their staff, and they would require to engage new clerks and so on.

3686. I have great sympathy with that view, but I felt bound to put the question to you. I take your answer to be that you do not think the difference that would result is worth the labour that would be involved in getting it?—Quite so; that is my opinion.

3687. There are, I think, only four canals in Scotland?—Yes, two of them, the Caledonian and the Crinan being Government property.

3688. Have any complaints reached you as to the method of the valuation of canals?—We have had several appeals from the Crinan Canal. The County Council of Argyll have appealed several times. It being all in one county they think they should have the privilege of the case being tried before the Sheriff of Argyll; but now the Supreme Court—and this curiously enough is the only case we ever were able to get to the Supreme Court in Scotland—have decided that the Caledonian and Crinan were one and the same property and must be valued continuously.

3689. As a matter of fact, excepting that case there have been no difficulties about canals?—None.

3690. And it is not a question upon which we need expend much time considering here, I think, is it?—Probably not. Of course, there is this point, that the Forth and Clyde Canal get the same mileage rate as the railway does. They are just part of the system, just the same as a non-paying line of railway.

3691. Have you anything to say as to the system of valuation of tramways in Scotland?—No.

3692. What is the method which you adopt?—It is practically the same as with the railways.

3693. Surely the circumstances of a tramway are different from a railway?—Of course they are.

3694. What process do you go through to get the valuation of a tramway?—We take the receipts from the published accounts, and follow the same system as regards deductions.

3695. What deductions do you allow?—The same as for railways.

3696. Do you allow 3 per cent. for accidents?—We do. At one time there was a great risk of tramways escaping the valuation altogether, but the judge held that tramways are practically the same as railways, and that brought them under my office.

3697. You value all systems of tramways in Scotland, wherever situated, do you not?—Yes, I do. There might be a short one within one county or within one parish even, but I would still value it.

3698. You also value the waterworks?—Yes; that we have had a great deal of discussion over.

3699. You have gone so fully into that question, and it takes up so much of your memorandum, that I do not think I have any questions to ask upon it; is there anything you would like to add? Perhaps your experience may indicate some weak spot in the practice?—The practice was completely changed by a decision of one of our judges. Previously we valued them in a different way, according to a system which is followed in England.

3700. Which decision do you refer to?—It is mentioned in paragraph 32 of my memorandum. It is the *Queen v. the Churchwardens and Overseers of Mile End Old Town*.

3701. That is an English decision?—Yes. We had valued the Scotch waterworks according to the findings of the English judges, which I still think is the best system, but the Judge of the Court of Session who tried the case, said that it did not apply to Scotland.

3702. Which case was it that was tried in Scotland?—The Dundee case.

3703. Was that tried in 1883?—There was a joint appeal by Glasgow, Edinburgh, Dundee, Aberdeen, and Dunfermline to the Lord Ordinary—

3704. I think, before you go to the appeal, it was decided, was it not, in 1883?—Yes, and again in 1884.

3705. Was that decision appealed from?—No, there was no appeal from that.

3706. I want you to explain it to me—I am sure you know; that decision was surely a decision of two judges, was it not?—That was the Dundee case, and it is a curious fact that cases brought up on appeal against one of the local assessors are tried before two judges, but that a case from the Railway Assessor, where the interests are ten times larger, is tried before one judge; that is statutory.

3707. How are those two judges selected?—They are selected by the court.

3708. That, I suppose, you would agree with me, is a better system than the system of railway appeals?—It is better, but the system of having two judges is not always satisfactory, because not infrequently they differ, and then there is no result at all.

3709. What happens then?—The assessor's valuation holds.

3710. I understand from what you say that you would have liked to have had upon that and upon other questions the decision of the Supreme Court of Appeal in the respect that although the individual interests involved in the one case might be relatively small, the effect that flows from the decision to the country at large is of supreme importance?—Yes.

3711. That is your view, is it?—It is my very strong view that there should be an appeal from these judges. If there were three judges, as was recommended by the Committee of 1888, it would be a much stronger court.

3712. Put it in this way: a decision in the case of waterworks of a small burgh of 5,000 or 10,000 inhabitants might change the whole system of large undertakings like those of Glasgow, Edinburgh, or Dundee?—Yes, it certainly might.

3713. Do you value gasworks and electric lighting works?—Yes.

3714. Even although they are purely local?—If required to do so, only. In the case of railways and canals it is necessary, but in regard to the others they must make application according to section 23 of the Act of 1854.

3715. I understand that the total value of the property valued by you in the present year was 2,625,000?—Yes.

3716. That is the whole, is it?—That is the whole.

3717. Is it the case that you did that at a cost of under 2,200 a year?—Yes.

3718. That is the whole cost?—Yes.

3719. Do the railways pay the whole cost of your office, or is it paid also in proportion by waterworks and gasworks?—By waterworks and gasworks also, by any subject valued by me.

3720. They pay their share?—Yes.

3721. There is no charge upon the Imperial funds for your office at all I understand?—None whatever.

3722. And there is no recoupment on the part of the local authorities, is there?—No.

3723. I suppose some recent Acts of Parliament subdividing districts for special purposes, such as water districts and drainage districts and special areas of that kind which are more or less fictitiously made have not diminished the work of your office?—They have considerably increased it.

3724. I think you sometimes think that Parliament takes a pride in putting conundrums of that kind to you?—I think if it were possible to make those districts into one district for all purposes, it would be a great

Mr. W. Muir.

6 May '97

Appeal from local assessor and appeal from railway assessor. Difference in tribunals. A change desirable.

Gas and electric light works. Valuation of.

Value of property valued by the Assessor of Railways and Canals. Cost of valuation and by whom paid.

The Assessor's work has increased owing to recent Acts of Parliament subdividing districts for special purposes.

Mr. W.  
Munro.  
6 May '97

advantage. At present we have one district for drainage, another for water, another for lighting, and another for something else; that complicates the work very much, and makes it very difficult.

3725. And those districts are often varying very slightly?—Yes. I do not know whether your Lordship would take the trouble to look at these plans of districts which I have brought with me (*producing plans*).

3726. I have seen those plans in your office. I need not look at them again, but the other members of the Commission might like to see them. Is there any point, not included in your memorandum, which is really very full and exhaustive, and which must have given you a great deal of trouble, which has not been covered in my questions, but on which you would like to say anything?—There are one or two points. One thing that I should strongly urge is that the word "undertaking" as used in the Act of 1854 should be defined. That was mentioned by me before the Committee of 1888, and it was recommended in their Report,\* but nothing has ever been done. This is my proposed definition:—"The word 'undertaking' used in the Act 17 & 18 Vict. c. 91, and Acts amending the same, in relation to the valuation of railways and canals in Scotland, shall mean all lands and heritages belonging to, or leased by, each railway or canal company, including the permanent way as defined by section 2 of the Valuation Act, 30 & 31 Vict. c. 80, canals, ferries and all erections used as stations, offices, waiting rooms, hotels, platforms, loading banks, sheds, stores, stables, workshops, gasworks, wharves, docks, basins, depôts, railway sidings, and all other houses, erections, works and places of business used for the traffic purposes of such company, or in connection with the management, working, or maintenance of the railway or canal, or any part thereof, and all lands, buildings, privileges, and others within, or adjoining to, or abutting upon any of the works herein-before mentioned, let to or used by or for the convenience of persons using the railway or canal, including such erections as may be placed thereon by occupiers; the following subjects amongst others being held to come under this interpretation, namely, hotels sanctioned by statute as station hotels, refreshment rooms, bookstalls, cabstands, advertising spaces, depot ground, warehouses, stores, sheds, offices, stables, and the slopes or banks of canals or railways; but declaring that the said word 'undertaking' shall not include any dwelling-house or garden, or other accommodation occupied in connection therewith; nor shall it include offices or places of business leased and occupied by railway or canal companies, as separate subjects, and used as booking or goods or parcel receiving offices, or as stables, or for any like purpose, where such are not situated within or adjoining to the undertaking as herein-before defined." I have also prepared a statement giving a comparison between English and Scotch valuation, and rating; it is long and rather complicated (*handing in statement*).†

3727. (*Viscount Emlay*.) In the deductions you quoted you seemed to think that the change in the value of money and other reasons, showed you that some of the deductions were unreasonable; would those be variations that would periodically occur according to the value of money?—I suppose you are liable to that, but of late, and for a great many years back, the experience has been that money has been getting cheaper and cheaper, and at present apparently there is no reason why that should change.

3728. If you fix the deductions by statute, will you not always be liable to get into that position that there may be changes in the value of money and so forth, which it would require statutory enactments to put right?—I presume so, if they are fixed by statute. Of course these deductions of 12 per cent., five per cent., five per cent., and three per cent. are not statutory, they are only practice.

3729. There would be an objection, would there not, to making fixed statutory deductions to certain percentages?—Of course if it had been statutory it might involve hardship at a future period.

3730. Would you prefer that they should be settled by a court of appeal from time to time, or that they should be left to decision on each case?—Left to decision by whom?

3731. By the authority which has to decide each case—by the Court of Appeal if you establish a Court of Appeal?—I think that would be sufficient.

3732. To take each case on its merits?—Do you mean each railway by itself?

3733. Yes?—I think that would be for the court to say; I would not propose that.

3734. How would you fix the deductions?—By a percentage upon the value of the rolling stock—the tenant's stock.

3735. Fixed by whom?—Just as it was done before now—fixed by the assessor; and if he fixed too much or too little, let there be an appeal, and let it be settled by the court.

3736. Does the assessor fix it generally for all railways?—There has been no change for 40 years.

3737. How was that originally settled 40 years ago? Did the deductions fixed by the assessor apply to all railways?—There was a conference of railways and it was debated before the court. As I understand it was an arrangement, but there is really no correct report, or no sufficient report of what took place. That, however, was the result.

3738. Would it not be better to have some authority who could fix, at all events for a time, until they changed their decision, exactly what the deductions should be?—Do you mean a court?

3739. A court like the Court of Appeal, or the Railway Commission in England?—I do not know really what the Railway Commissioners are; they are not railway men, are they?

3740. At all events, you would want some authority that could fix the deduction, and could vary the deduction from time to time?—Yes, I should think so. I think the first division of the Court of Session would be enough for that.

3741. I understand with regard to the lines that the division, the apportionment rather to parishes, is now done according to the line of railway running through the parish whether it is a single line, whether it is a double line, or whether it is a quadruple line—it is just the same?—We have only a very few miles of quadruple lines, and of late years I have doubled the valuation of those quadruple lines with the consent of the railway companies, and of the assessing bodies too.

3742. How have you treated the double lines?—I have treated them in the same way as single lines.

3743. Do you think that is the right way to treat them?—No, I do not.

3744. How would you treat them?—I should reduce the whole to a single line.

3745. And then?—And then apportion, that is to say, if there were a hundred miles of double line, I would call it 200, and then if there is another hundred miles of single line, it would get just one half of what the hundred miles of double line got.

3746. What you are speaking of now are running lines?—Yes.

3747. Turn again to sidings; I understand your view as to sidings is that they should also be treated much in the same way as running lines, is that so?—Yes, I think so. I think that would be a very good solution of a great difficulty. At present they are treated as stations, and that throws an immense deal more valuation into the large towns. If they were treated as running lines, it would certainly tend to lessen the valuation in large towns.

3748. Would that be so in a large goods yard?—I think it would.

3749. Would treating a very large area of sidings in a goods yard as running lines tend to diminish the amount that a large town would get?—I think it would, because the value of the *solum* in the large towns is so enormous. If you value ground rents, worth about 5*l.* a yard cost price, and take 5 per cent. upon that, it makes an enormous sum. In Glasgow, where our largest stations are, the great bulk of the valuations of stations is for the *solum*, not for the buildings.

3750. In the case of your treating sidings in a large goods yard as running lines, would you eliminate the question of the cost of land?—I should entirely eliminate that, as we do at present on the running lines.

Mr. W.  
Munro.  
6 May '97

Deductions should be fixed and varied by a legal tribunal.

Method of valuation of quadruple lines.

Valuation of single and double lines. Method is identical, but double lines should be treated as if twice the length of single ones.

Sidings should be treated as running lines instead of being treated as stations. This would diminish the valuation in the large towns, as the question of the value of the land would be eliminated.

"Undertaking" used in 17 & 18 Vict. c. 91, should be defined. Definition suggested by the assessor.

Deductions, change in the value of money has made it desirable to have some alteration.

\* House of Commons Paper, No. 335 of 1890.

† Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 296 to 298.

Mr. W. Munro.  
6 May '97

3751. Would the value of that land not be taken into account at all?—It would be represented just the same as the land upon which the lines are.

3752. But it would not be valued according to its actual value?—In regard to its actual value, of course, the part of the line which runs into the large towns is just in the same position.

3753. Then if you still hold on to the value of the *solum*, as far as the sidings are concerned, and you are treating them as running lines, would you not be increasing the value of the large goods station?—No, I would not hold on to the value of the *solum*; I should strike it out entirely. I should treat those lines simply as at so much a yard, or so much a mile, leaving out of account entirely the question of the value of the *solum*.

3754. Then a portion of a large goods yard in a town would not be dealt with at all so far as the value of the *solum* was concerned?—In what respect?

3755. Assuming you have got a very large proportion of sidings in a large town which you are going to treat as running lines, and in respect of which you are not going to consider the value of the *solum*, then I say a large proportion of the value of the land in the goods yard would be dropped out of all assessment?—They would get their share of the mileage rate undoubtedly.

3756. That is so, but that is not an equivalent, as I understand, in your view to the value of the soil?—No, the value of the soil in many cases—in most cases—would be much greater.

3757. Do you think that the value of a siding in an ordinary goods yard can be treated just in the same way as far as its value is concerned as the value of a part of a running line on a system of railway?—It would appear certainly that the running line is more valuable—one would imagine so; but in formulating a system I suppose we must just give and take, so to speak, as we do in the case of valuing these running lines in distant parts at the same rate as those entering large towns.

3758. Do you think that that is the fairest way of valuing the running lines—valuing them just the same in the country parishes as in the large towns without any reference to what passes over them?—I may be prejudiced in favour of it because we have had no other in Scotland for the last 40 years, and therefore of course during the 20 years I have had to do with it.

3759. Eliminating your experience of Scotland, as a matter of principle should you think it a fair thing?—I do not know much except by report, and by reading about the system in England, but I venture to say that if anyone chooses to look closely into it he will find the Scotch system the better of the two in one respect particularly—that is very like what a north countryman would say I daresay. In England, I understand, that the large towns grab at all they can get, and have a great deal more than they should get, and the country gets a great deal too little.

3760. That is in England?—In England.

3761. Do they not complain in Scotland that the Scotch system has had very much the same effect, and that while you secure to the large towns and large stations a fixed amount, in times of bad trade, and bad traffic the country parishes get next to nothing and your large towns still hold on to what they have got?—They are getting too much I consider; I have all along considered that the large towns are getting an undue proportion. If our railways were worth double or treble or four times what they are worth the towns might not be getting too much. I have prepared a scale giving to the towns certain per-centages according to the value of the running line.

3762. Without reference to the stations?—If the value of the railway generally were a thousand pounds per mile I should give them five per cent. as well; if the value of the railway is not above 100*l.* per mile, I think it is one per cent. that I would propose counting. I would value the whole system and give it—country and town—something which would be as near as possible a fair proportion. Of course it is in the towns that an immense deal of the traffic is collected which is spread out; but for the railways, the towns would be very different to what they are.

3763. And the country districts too, would they not, some of them?—I think the railways have destroyed the country districts to a very large extent. What

would be the price of grain but for railways and steam-boats?

3764. It has been stated, has it not, that the result of the present practice in Scotland is that you are really assuring to the towns the full amount they can get without much variation according to what the traffic may be?—Yes.

3765. And that the whole brunt of the fluctuations of the traffic falls upon country parishes?—Yes, certainly that is the case.

3766. Is that not rather hard upon the country parishes?—I think so; that is mainly why I wish to reduce the amount given to the large towns.

3767. (Mr. Balfour.) Of course, according to the present system when 5 per cent. or as it used to be 3 per cent. is taken upon the stations, that is quite a fixed quantity not dependent in any degree upon the success of the trading enterprise?—Quite so.

3768. Whereas, on the other hand, the valuation of the running line depends exclusively and entirely upon the success of the mercantile enterprise?—Entirely.

3769. So that two quite different methods are applied in the two cases?—Yes.

3770. I understand that you are now making a suggestion that the stations should so far be put into the position of following the trading fortunes of the undertaking, that is your idea, is it not?—Yes.

3771. If a scheme could be devised by which the stations could so far follow the trading fortunes of the undertaking, the objections which you have mentioned would be met, would they not?—I think so.

3772. While it is quite true that in unprosperous times 5 per cent. is all that the stations get, they never can be more?—They never can be more.

3773. The running line, on the contrary, in times of great prosperity may get a great deal more?—It might.

3774. Still, all the risks of loss and the possibilities of profit go to the running line at present?—They do.

3775. But you think you see your way to making all follow the fortunes so far of the enterprise?—I think that would be desirable and fair.

3776. In 1868 you told us, as you have told us now, that there should, in your view, be a reduction to 5 per cent. What you have referred to as the continuous fall in the interest of money appears to sustain that view?—Yes.

3777. That it should be reduced to 3 per cent.?—I think so.

3778. Is it the case that the railway companies have not provided station accommodation in excess of what they feel to be necessary for the success of their undertakings?—I think they never build a station but what it turns out to be too small.

3779. You do not suggest that the railway companies are spending more upon their stations than is necessary for the prosperity of their undertakings?—Apparently not. They have built a very large and costly station at Glasgow, and it certainly has turned out to be too small, and they are adding to it now.

3780. So that I understand you would be quite prepared in one form or another to give the stations a full and fair share of the enterprise?—Certainly.

3781. Although you object to their getting a stereotyped amount irrespective of the trade, that is your real objection?—That is. May I add that at the time the Act was passed in 1854, the railway stations were mere wooden sheds or little better, most of them, but not all of them, and people never contemplated that costly stations would be necessary.

3782. No doubt it was thought that they would be relatively a smaller part of the property of the undertaking?—No doubt.

3783. And you think the point might be met in somewhat the same way as you have mentioned?—I think it might in some way be desirable.

3784. I think the next thing you dealt with was the reduction of the prime cost of the plant to 75 per cent.?—Yes.

Mr. W. Munro.

6 May '97

Valuation of stations is fixed, whereas valuation of running line depends upon the success of the enterprise. Scheme suggested to make stations share the trading fortunes of the enterprise.

Deductions, change in the value of money and rate of interest.

Railway stations are not too large for the necessities of the traffic.

Valuation of railway stations should depend on the success of the enterprise.

Standing stock of railway company.

Mr. W.  
Munro.

6 May '97

Reduction  
of 25 per  
cent. from  
prime  
stock.

3785. Was that not done upon the idea, that taking the plant of a railway company as a standing plant all over, making allowance for what was new out of the shop, and what was old enough to be thrown out, the standing stock was not in excess of 75 per cent. of prime cost?—I imagine that was the idea.

3786. Is it not the fact that it was upon that idea that the 75 per cent. was struck?—Of course, that 75 per cent. was struck about the year 1855 or so, so I could not speak positively to that.

3787. Do you not think that is quite just; apart from division altogether, do you not think it is in accordance with the fact that the standing stock of a railway company is of about a fourth less value than if it was all new out of the shop?—It is a very difficult question to answer.

3788. I am not now on the per-centage?—I think it fluctuates.

3789. It would, no doubt; but what I am putting to you is this: taking the whole stock as a standing stock—some new, some old—do you not think that 75 per cent. is a moderate overhead value as against new stock?—I really could not offer an opinion.

3790. Is that not the way it was fixed—right or wrong?—That is fixed, right or wrong; but it always seemed to me very arbitrary.

3791. It may be arbitrary, but would you ever say that the stock of any railway company overhead is worth anything like cent. per cent. of its new price?—That would be whether it would bring that in the market?

3792. Yes, or whether it is worth it to the person owning it?—A great deal of it is not, but a great deal of it is better.

3793. It will not grow better by running, surely?—No. I engine on the Caledonian railway may be worth three times what it was.

3794. You will observe that the consideration I am putting to you now is a consideration quite apart from a reduction of 12 per cent. for tenants' profits, you see that?—Yes.

3795. Are you quite sure that you are correct in saying in your memorandum that this 12 per cent. deduction for tenants' profits enters into that calculation—that is into the reduction of the standing stock of a railway to 75 per cent.; is it not something rather different?—Of course, if they get these deductions upon the full value they would be much larger.

3796. The view I was putting to you had nothing to do with the question of deduction for tenants' profits; it was that a standing stock of hundreds of carriages and waggons was overhead not worth more than about 75 per cent. of what it was when it was all new?—I think the value of the stock will fluctuate according to different authorities to the extent of 25 per cent.

3797. That is hardly an answer to my question, but that is your answer?—I think it is.

3798. If it was to be dealt with as a tenants' profit of course the profit of a hypothetical tenant of a railway is a trading profit?—It is.

3799. Entirely; is that not so?—It is.

3800. Do you think that any hypothetical tenant could be expected to take a line equipped with stations and supply it with plant and run all the hazards of the undertaking for less than a good commercial profit?—No. I think any company or any prudent man would require the prospect of a good profit.

3801. The profit of that would be very different from the rent of agricultural land?—Very; there are such risks in the case of railways.

3802. Do you think that, looking to the risks incident to a railway business, and assuming that the hypothetical tenant would equip it with plant, he would be content with less than a tenants' profit of 12 per cent.?—I really do not feel justified in offering a very strong opinion upon it.

3803. I thought you said that 12 per cent. looked a big rent?—Yes, so it does.

3804. Viewing it as rent, I quite agree with you, but I am suggesting to you that although it is called rent, it is really the expectation of the profits of a trade, and

of a very hazardous trade?—Yes, but we see hazardous trades every day turned into limited companies, and greedily swallowed at less than 12 per cent.

3805. I know you are as frank and fair as possible, and I will put it once more; do you not think that the 12 per cent. for what you call tenants' profits when the subject of the tenancy is a railway line which on the hypothesis has to be equipped with plant, and a trade carried on upon it, is moderate?—I think it is high.

3806. What would you make it?—It would depend upon other things.

3807. No man would do it for the mere interest of the money invested?—No, but they have got interest over and above that; they have 17 per cent.

3808. That is another matter; your next item is depreciation?—Yes; that has always seemed to me the most difficult item of the whole.

3809. I want to know your view upon that. Even when you have reduced what I call the standing stock to 75 per cent. of original cost, is there not always a kind of depreciation going on which is not quite met by renewals?—As a matter of fact I should doubt whether there is much of that in the railway companies because every engine and every carriage renewed is a better engine and carriage than it was originally.

3810. Then it is an addition to the plant, if it is a better carriage?—It is done out of the revenue. The Caledonian have got No. 1 and No. 10 engines which are supposed to be the same engines as when they started.

3811. The next item is 5 per cent. for interest; do you think that a higher rate should be allowed upon money embarked in a trade, or borrowed to be embarked in a trade, than say upon a heritable security?—Certainly, you would require a higher rate.

3812. Even supposing the ordinary rate of Consols had gone down when you are dealing with a trading concern, would not the supposition as to interest be that you would require to borrow it—I presume it would be so.

3813. Do you think that for that kind of interest five per cent. is excessive?—I believe as a matter of fact at the present moment and for years past the railway companies have been borrowing at much less.

3814. If a trader had to borrow for current purposes, for floating capital, do you think he would get the money for much less one year with another than 5 per cent.?—It would depend entirely upon the trader's credit.

3815. Then, turning to your 3 per cent. for accidents and incidents, I do not think you said much against that, did you?—No, but I believe it is much more than the sum actually ever expended for these purposes.

3815a. Still there might be a big accident, you know?—There might be, but we have never had any accident cost anything like so much as 150,000.

3816. What would you suggest about that?—One suggestion would be to give the actual sums expended every year.

3817. To make that a matter of ascertainment?—Yes, for all these different things, including snow blocks which are very heavy on the Highland railways.

3818. Why? Would not clearing away the snow blocks enter into working expenses?—Yes, but then there is loss of traffic.

3819. However, I understand your view is that you would rather take that upon the actual figures?—Of course, it would make an immense difference to the railway companies supposing any of these deductions were shortened by that much. It would make an immense difference to the valuation of the Scotch railways if even that one 5 per cent. were knocked off.

3820. Do you propose to knock it off altogether and leave them without floating capital?—That is what many of those who are writing on the subject do.

3821. You would not propose to knock off all allowance for interest for traders' capital, would you?—No, certainly not, but I spoke of the 5 per cent. for depreciation.

3822. I will not recur to that. The next thing I think you dealt with was the question of the effect of

Mr. W.  
Munro.

6 May '97

Depreciation, how far met by renewals.

Deduction of 5 per cent. for interest. How far fair.

Deduction of 3 per cent. for accidents and incidents. How far a fair deduction.

Deduction of 12 per cent. for tenants' profits. How far a fair deduction.

Towns get too large a share of valuation owing to increase in value of stations.

Mr. W. Munro.  
6 May '97  
Lines and stations should both be treated on basis of profits earned. Value of plant of railway companies has increased and character improved.

Valuation of a railway line should be based on lettable value to a hypothetical tenant.

Mr. W. Munro.  
6 May '97.  
Value of stations and lines should both be treated on basis of profits earned. Canals. System of valuation. Waterworks. System of valuation.

Traders' wagons. Allowances to traders in respect of their supplying their own wagons.

Valuation of stations. A proportion should be attributed to the lines.

Valuation of waterworks. Country districts obtain a larger share of the valuation than the towns which pay for the works.

raising the valuations in towns by so much being put upon the stations and, therefore, leaving very little value to attribute to the running line?—Yes.

3823. That would be met, would it not, by some such scheme as you have suggested of treating both kinds of real estate, with some relation to the profits earned?—Yes.

3824. That would be a remedy anyhow, would it not?—Yes, it would.

3825. Before passing from the stock, you said that there has been a very great increase in the value and character of the plant with which railway companies equip their lines?—The accounts show that.

3826. And it is true?—Yes.

3827. You do not suggest, do you, that they have been too luxurious or too lavish in equipping their lines? Was it not necessary to keep up their custom and compete with others?—Yes, and I think some of their expenses were forced upon them, such as the block signalling, which was a very heavy expense.

3828. That is quite fair, that was by legislation, was it not?—Yes.

3829. Has not the stress of competition compelled the great railway companies to run more trains and to provide better carriages?—Undoubtedly, and undoubtedly also it has induced greater travelling.

3830. You do not suggest that they should not get fair credit for that which was necessary to their business under modern conditions?—No, certainly not.

3831. I think it has been put, as almost an absurdity, that the running line should get very little value. Do you think that it is likely, even under the present law, that the running line should be left with no value?—It has happened.

3832. That was through bad trade, was it not?—It was a bad line, I suppose; there was the Girvan and Portpatrick, and others also.

3833. Is it at all an unprecedented thing that people carrying on a trading and speculative enterprise are sometimes left without profit?—It is quite common, I fancy.

3834. Cannot you conceive that there might be a line for which, owing to its local situation or condition, the hypothetical tenant would hardly give any rent for to be allowed to equip it with plant, and that any profit that was made in the working of the line might be made out of the plant put upon it by him?—I suppose any profit must be made by the working of the plant.

3835. Therefore, is there any reason for insuring a certain payment in respect of the running line irrespective of a similar provision for the expenditure upon stations and plant; are they not all equally necessary?—The one is as necessary as the other— even more so.

3836. Accordingly, cannot you conceive that if you had a line to let it might, merely viewed as a line, hardly bring any rent in some cases?—A line to let?

3837. A line to let to a tenant invited to take it and equip it with plant, and with stations, is it not quite conceivable that a subject so circumstanced would have very little rental value?—It is quite conceivable a line might be made which would not pay working expenses. There are plenty of them.

3838. Do you not think that after all it comes to this, that if part of the line, that is a hereditament, is allowed to follow the fortunes of the trading undertaking, that is all that it can expect?—It is the fate of all property in other cases.

3839. Would you not assent to the view that it might be quite conceivable that a line to let, if the tenant had to equip it would bring very little?—Certain lines I have already said.

3840. Some lines would; some lines might bring more?—Yes, some lines, such as the Girvan and Portpatrick, even when equipped, would have brought little or no rent, while worked as an independent undertaking, as was the case with this line a few years ago.

3841. Can you conceive any fairer way of ascertaining the lettable value of a line than the one, subject to the criticisms you have made as to the deductions, of seeing, after you have provided for equipping and working it, what is left as a rent—is there any fairer way than that?—That is taking the receipts as a basis.

3842. Yes?—Certainly; there is no other sound view, I think.

3843. If the same principle could be applied to stations, on the one hand not insuring them 5 per cent., and on the other hand letting them get more if there was more to attribute to them; that would meet your difficulty, would it not?—That is really what I have always desired.

3844. And that would meet the objections that have been taken to the present system?—I do not say it would meet them altogether, but it would meet them to a certain extent.

3845. I think you said that canals are just like railways?—Yes.

3846. There was a great waterworks question that at one time arose; would you tell us whether since 1888 the question of valuing waterworks has been advanced in any way?—No, they are really waiting for legislation. Glasgow and Dundee, who always stir up these questions in Scotland, are always expecting and hoping for some further enlightenment and assistance based upon that report.

3847. But it remains very much where it was, I think?—Yes.

3848. I did not observe that you said anything about floating capital?—I have said something.

3849. But you have no particular criticism on that?—No.

3850. I think you were asked a question about traders' wagons; are you aware that under recent legislation there is provision for the allowances that are to be made to traders in respect of their supplying their own wagons, being ascertained by statutory arbitration?—It has not come up before me in reference to the valuation.

3851. You do not object, do you, in this instance to an allowance being made to a trader because he supplies the wagons?—A payment?

3852. An abatement of his rates?—Certainly not, he otherwise would have no object in supplying the wagons.

3853. Perhaps you know that some traders think they do not get enough?—I am sure they do not.

3854. (Mr. Smith.) You think that the stations and sidings in towns, of railways, should be thrown as it were into hotchpot with the railway and valued accordingly, is that so?—I do not quite understand.

3855. I was using a term of English law "hotchpot." I mean mixing them with the earnings of the line and then rating them proportionately—that is your idea, is it?—My idea is that they should get a certain share of the valuation.

3856. Do you not rather leave out of calculation the fact that these stations and sidings occupy often the most valuable land in the towns—in the very centre of the town very often?—I do not leave it out of account because I have often considered it, but I think that much of the value of the surrounding ground in the towns arises from the fact that there is a railway station there.

3857. You think that, do you?—I do.

3858. Might it not in some cases be a detriment?—To residential property it might.

3859. It depends very much upon the situation of the railway station, I think?—The value of the land does as far as my experience has gone.

3860. Still you admit that they do occupy land that would otherwise be of high rateable value?—It might be so.

3861. Whatever be the case with regard to the railways, the towns get a good deal the worst of it as regards waterworks, do they not?—Yes.

3862. The boot is quite on the other leg there?—Quite.

3863. The decision in Scotland which appears to be still law has made a most material alteration. I understand, in the advantage which a town gets from the rating of its own waterworks?—Yes. I always thought that the locality in which the rates were collected should get a greater advantage.

3864. It happens also to be the district generally that has found the money to construct the waterworks, does it not?—Yes.

Mr. W.  
Munro.  
6 May '97

3865. I think paragraph 41 of your memorandum shows that the result of that decision was to give, in the case of the Glasgow Waterworks, to the counties 73·9 per cent. of the total value, and to Glasgow itself only 26·1 per cent. ?—Yes.

3866. Whereas the proportion used to be 41·6 to 58·4 per cent. ?—Yes.

3867. And there was a somewhat similar result in Edinburgh ?—I resisted that as long as I could.

3868. It is some set off to the railways that the corporations owning waterworks are really paying the rates of many country parishes ?—They really are.

3869. In paragraph 64 of your memorandum there is a suggestion which gives me a grain of comfort. You suggest that "owners of property built on ground " let on perpetual or long leases, or 'feued,' might have " authority to deduct a proportion of local rates the " same way as is now done with the property tax ; " have you considered the question of ground landlords in England ?—I am not sufficiently acquainted with it to be able to give a definite opinion.

3870. They are in a somewhat similar position, are they not ?—I think they are.

3871. How would you deal with the cases of existing contracts ?—That would apply to all.

3872. You would apply it to all, would you ?—There is no other way of doing it.

3873. Supposing, as is the case in England, land is let upon a certain rent which is to be paid free of all deduction except the property tax, would it be fair, do you think, to impose upon the landlord the deduction of local taxes ?—I do not think it would be any harder upon the landlord than to impose new rates upon other classes of property.

3874. You would deal with them by new legislation to which all people might be subject ?—Yes. That is the only way, and it certainly does appear that the owners of such very valuable property should in justice pay at least a share.

3875. In the shape of a new Parliamentary charge, you think it might be fairly applied, even to existing contracts ?—There is no other way of levying it.

3876. (Mr. Elliott.) I observe in Table I. of your memorandum that the net revenue of the Caledonian Railway Company in 1876-7 was 1,710,000*l.*, and that in the year 1897-8 the net revenue was 2,100,000*l.* ?—Yes.

3877. That is an increase in the net revenue of about 25 per cent., is it not ?—I have no doubt it is.

3878. Taking the same years the rateable value has fallen from 889,000*l.* in 1876-77, to 800,000*l.* in 1897-98 that is a diminution in the rateable value of about 10 per cent., is it not ?—Yes, or 9 per cent.

3879. So that while the net revenue of the Caledonian Railway Company has increased by nearly 25 per cent., the rateable value has diminished by between 9 and 10 per cent. ?—Yes, that is the result.

3880. Are you aware of any other class of undertaking in which a large increase of profit has taken place accompanied by a diminution in rateable value ?—A large increase of profit do you say—it is not exactly profit, it is receipts.

3881. I am speaking of net revenue, a large increase of net revenue has taken place accompanied by a substantial diminution in the rateable value ?—An increased revenue may be derived at an immense additional expense.

3882. I am speaking now of net revenue which, of course, is arrived at by deducting the working expenses from the total receipts ?—Of course, large additional tenants' plant was necessary to earn that revenue.

3883. Do you think that the hypothetical tenant would be unwilling now to pay so large a rent for this particular undertaking as he would have been in 1876-77 ?—That he would be as willing to pay as large a rent ?

3884. Would he not be willing to pay a larger rent to-day as compared with 20 years ago ?—I should think he would, it is a larger undertaking altogether.

3885. Therefore, does it not follow that the system adopted in order to arrive at the rent which the hypothetical tenant would give, is proved by those figures to be unsatisfactory ?—It tends in that direction, or

else! the profits are to be smaller, and people are not content with smaller profits, which is the fact in many cases, is it not ?

3886. Does it not seem inequitable that simultaneously with a steady increase in the profits there should be what is almost a steady diminution in the proportion of rateable value to profits ?—It does seem remarkable, certainly it is very striking. But of course we have against that the fact that in the present year, 1897-98, it is much higher than it was in the previous year.

3887. Yes, but taking the previous years you have very much the same result ; you have not so large an increase of net revenue, but you have a very much larger diminution in the rateable value ?—Have we ? That was one of the exceptional causes which I have explained.

3888. Then, adopting the criterion Mr. Balfour has submitted to you, that the value of the hereditament should follow the fortunes of the undertaking, would you say that under the present system that has been secured ?—I would say not.

3889. And for the reason given in your memorandum ?—Yes, that the one is a fixed charge.

3890. With regard to these deductions, is it quite fair to look upon a railway as in any sense a hazardous undertaking ?—I think it is to a certain extent. It is a more hazardous undertaking than the average hazardous undertakings, I should think.

3891. Having regard to the position which a railway company occupies in regard to Parliament, and the fact that it enjoys a certain measure of freedom from competition, would you not say that the hypothetical tenant would be quite content with a smaller profit than this 25 per cent. ?—It is 12 per cent.

3892. But in addition to that 12 per cent. there is 5 per cent. for interest, is there not ?—There is, and that makes it 17.

3893. I understood from paragraph 4 of your memorandum that in addition to the 12 per cent. which it is assumed that the tenant would require to have for profit a deduction of 5 per cent. is also allowed in respect of the interest on tenants' capital ?—Yes.

3894. So that the aggregate profit is 17 per cent., is it not ?—Yes.

3895. Does that not strike you as being an excessive profit to assume, having regard to the risks involved in the particular case of a railway company ?—It seems a very liberal profit, there is no doubt of that. I think that in arriving at the valuation in this way you could not cut down the supposed profits under the ordinary limit. Trade profits are often much larger than that, and very much oftener still less.

3896. What I wanted to elicit from you is this : it is suggested by you, is it not, that, seeing that the rateable value of the Caledonian Railway Company and of the Highland Railway Company have fallen simultaneously with the increase of their net revenue, this system is therefore deficient ?—I do not know that I suggest that, but I admit it.

3897. And the principal direction in which the present arrangement is unsatisfactory is in respect of these allowances ?—And the division.

3898. I am not speaking of the division now, I am speaking of the rateable value *in cumulo* ?—That is, of course, the only thing that could be suggested for altering ; you cannot increase the traffics beyond their proper sum, and you cannot lessen the working expenses ; the only other deduction then must be in regard to these per-centages.

3899. Then I may take it that it is your opinion that the revision of these per-centages might be so effected as to bring about a closer relationship between the rateable value of these undertakings and their net revenue ?—In other words to lessen the deductions.

3900. Yes ?—Yes, I have already said that. I think 25 per cent. is scarcely the right figure.

3901. Would it be possible for you to give us somewhat similar information to that which you have given in the case of railway companies with regard to the other companies falling within your jurisdiction ? These figures as to the proportion of rateable value to net profit are, of course, of great interest ; could you give us similar particulars with regard to canals, tramways, waterworks, and gasworks ?—The canals

Mr. W.  
Munro.  
6 May '97

Deduction of 12 per cent. for profit and 5 per cent. for interest. How far fair deductions.

Ground landlords. Suggestion that they should pay part of local rates.

Caledonian Railway. Net revenue increased and the rateable value has decreased, comparing 1876-77 with 1897-98. Value of hereditament has not followed the fortunes of the undertaking.

Mr. W. Munro.  
6 May '97

belong to the railway companies and are mixed up with the railway companies; I do not think they could be separated.

3902. Could you get similar information with regard to tramways, waterworks, and gasworks?—The waterworks we value belong to corporations, therefore they get no tenants' profits.

3903. With regard to the tramways and gasworks, perhaps you could give us the figures?—Gasworks are also the property of corporations.\*

Deduction of 5 per cent. for interest on floating capital not excessive.

3904. (Mr. Balfour.) Does the question of the allowance for interest on capital, relate to anything more than what is termed floating capital?—Is that part of the 25 per cent.?

3905. Are you aware that the question of floating capital was brought into the Scotch valuation as the result of an English decision?—Yes, and I think that is stated in paragraph 4 of my memorandum.

3906. It is not upon the capital of the company?—No; it is floating capital, loose money in hand for carrying on the business.

3907. Does not floating capital mean such an amount of the capital of the company as may not at the moment be profit-yielding; what is necessary to keep the

business going, but upon which an actual return is not being got at the moment?—Yes, I should say so.

3908. Is it not quite right that an allowance should be made for that, whatever its amount may be?—That is in addition to the 5 per cent. included in 25 per cent. on value of plant.

3909. I give you the instance of outstanding accounts and the like, as things in respect of which an allowance must be made, must it not, as part of the cost of the business?—Yes.

3910. And is it not the assumption that a railway company has to borrow, or, in the case of any trader in stating his accounts, is it not the assumption that he has to borrow the money, or find it somehow?—He must find it, unless he has the capital.

3911. Do you think 5 per cent. is excessive for that?—No; I never said that I thought on this 100,000l. that 5 per cent. was excessive.

3912. (Mr. Elliott.) I distinctly understand from your memorandum that, in addition to that deduction of 5 per cent. on floating capital, there is an allowance of 5 per cent. on 75 per cent. of the value of the working stock?—Yes; but they are two different things.

3913. They are two different 5 per cents.?—Yes.

3914. (Viscount Emlyn.) Is there anything else that you want to add?—No, I do not think so.

Mr. W. Munro.  
6 May '97

Deduction of 5 per cent. for interest on working stock and plant, and also of 5 per cent. for interest on floating capital.

The witness withdrew.

Adjourned till to-morrow at 2 o'clock.

ELEVENTH DAY.

Friday, 7th May 1897.

At 16, Victoria Street, S.W.

PRESENT :

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The VISCOUNT EMLYN.  
The Right Hon. J. B. BALFOUR, Q.C., M.P.  
Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. A. CRIPPS, Esq., Q.C., M.P.,

T. H. ELLIOTT, Esq.  
E. O. SMITH, Esq.  
J. L. WHARTON, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. HARRIS P. CLEAVER called and examined.

Mr. H. P. Cleaver.  
7 May '97

3915. (*Chairman.*) I think you are the clerk to the West Derby Union of the city of Liverpool?—I am.

3916. How long have you held that office?—For 18 years.

3917. You have received from us a printed schedule† of questions which briefly indicated the points upon which this Commission thought you might be able to help us?—I have.

3918. As regards the first of those questions which had to do with the system adopted in making up the valuation list for each parish in the union, the Commission would be glad to give you an opportunity of making any observations that you would wish to put before us?—The overseers of the separate parishes, with the assistance of a paid valuer, provide the assessment committee with a valuation list; that valuation list forms the basis for the new rate, and it is deposited with the assessment committee for one month. In the West Derby Union we have a new valuation list for every township in the union every year. We do not adopt the system of having a supplemental list. The alterations were so numerous that the assessment committee came to the resolution to call upon the overseers to provide new lists every year, and this they do. The

overseers were provided by the assessment committee with rules for their guidance in the year 1872.

3919. Was it in 1872 that your union came to this decision to have an annual valuation?—No; it came to that decision in 1882, three years after my appointment. Previous to that they had supplemental valuation lists continually pouring in upon them, and they thought that it would be to the advantage of the union to have fresh valuation lists every year—that was in 1882 or 1883.

3920. I think I understand what you mean by a fresh valuation list; you mean a fresh list altogether, but not necessarily a complete re-valuation?—That is so; not necessarily a complete re-valuation.

3921. But every entry, I presume, is gone over to see whether, in the opinion of those who are making up the roll, there is any case for alteration?—Yes. By that means it brought the assessments more clearly under their notice than by only having supplemental lists.

3922. Are you of opinion that that has been a wise course of procedure on the part of your union?—I think it has been a very wise course of procedure.

3923. Has it been carried out with much difficulty?—I think at first the overseers hardly liked the idea of making the new lists out, but I have not heard of any grumbling for very many years.

Mr. H. P. Cleaver.  
7 May '97

New valuation list has been made annually in West Derby Union since 1882. Advantages of system.

\* Pt. I. of Appendix to Vol. I. of Minutes of Evidence, pp. 310 to 325.  
† Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 382.

Mr. H. P.  
Cleave.  
7 May '97

3924. Has it been an expensive process?—It has in this way, that the overseers have had at different times to employ paid valuers, and they have employed them oftener than they did when there were only supplemental valuations made.

3925. May I take it that your assessment committee would not under any circumstances willingly go back to the old system?—I am certain they would not do so.

3926. Your practice is universal throughout the union, is it not?—It is.

Rules provided for guidance of overseers in West Derby Union in 1872 and 1892, to secure uniformity. Application of definite principles in valuing.

3927. Is there any other matter in regard to that particular branch of the questions that we put to you on which you would like to add anything?—I would wish your permission add this, that previous to the assessment committee calling upon the overseers to make lists, they did in the year 1872 provide them with rules for their guidance as to how they would wish that list to be made out. Those rules are contained in the following letter:—"14, Clayton Square, Liverpool, 13th March, 1872.—Gentlemen, "I am directed by the Assessment Committee of the "West Derby Union to forward to you, for your "guidance in making out the valuation lists for your "township, a table showing the deductions which they "have resolved shall be made from the gross rental "of the several descriptions of property to produce "rateable value, viz. :—

	£	
" Land - - - - -	5	per cent.
" House and buildings - - - - -	15	"
" Cottages not exceeding 10l. } annual rent - - - - -	20	"
" Corn mills - - - - -	20	"

" In cases where the parochial and local rates (for "which the tenants are liable) are, under express "agreement, paid by the owners, a further deduction "must be made from the gross rental to cover the "amount of such rates; and in the townships of "Everton and Kirkdale, and in that portion of West "Derby which is comprised within the borough of "Liverpool, the Assessment Committee have, as a "general principle, sanctioned a reduction of 15l. per "cent. on account thereof, and with respect to houses, "the gross rental of which is 19l. 10s. and the rates "paid by the owners, the Committee direct that the "rateable value be reduced to 13l. As regards the "value of clay for making bricks the Committee have "subject to variation in special cases) adopted the "charge of 66l. gross and 56l. rateable value per stool "of 500,000 bricks. The Assessment Committee "request that no fractional parts of a pound be "entered in the valuation list. I am further directed "to remind you that in all cases wherein the com- "mittee are required to sanction original or supple- "mentary valuation lists, or to hear and determine "objections made to such lists, they rely upon the "attendance of at least one honorary overseer in "addition to the assistant overseer.—I am, gentlemen, "your obedient servant, W. Cleave, Clerk to the "Assessment Committee. To the overseers of the "poor of [

3928. That letter is dated 1872?—Yes, and then in 1892 certain rules were adopted for the guidance of the overseers, and also as an assistance to the assessment committee, a print of which I put in (*handing in print of rules*).\* Then in the year 1893 I wrote a small book upon parochial assessments, which was published for the guidance of the overseers, a copy of which I also put in (*handing in book*).†

3929. Then, I suppose, those rules contain practically the principles which have been adopted by your assessment committee in dealing with the valuation lists?—That is so, to ensure uniformity.

3930. I suppose your effort has been to put out a sort of schedule of fixed calculations for determining the gross estimated rental and the rateable value of the different classes of property?—That is so.

3931. So as to secure as much uniformity between owner and owner and occupier and occupier as possible?—That is so.

3932. I suppose I need hardly say that as a matter of justice you attach very great importance to this process being done upon definite and well-ascertained principles?—Yes, I would wish to supplement what I have said by saying that the Assessment Committee, while putting those rules as the basis upon which they

wish the valuation list to be formed, do not preclude individual objectors from having their case gone into separately upon possibly other lines if they wish.

3933. Of course, that is a matter of elementary justice?—Quite so.

3934. But at the same time while there may be a variation in the application of principles, you regard it as of extreme importance that the principles should be known beforehand, and applied equitably over the whole?—That is so.

3935. Has the result been that in your different parishes you have secured a fair amount of uniformity?—Not as thorough as I think is to be wished, but to a very great extent better than it ever was before the issue of the rules. We have tried to carry them out as nearly as possible, but in some cases, we find it difficult to do so.

3936. What have you found to be the chief obstacles in your way?—Principally with regard to the agricultural land and farms. We find a difficulty in ascertaining the rentals of the farms, in this way, if I might explain. Possibly I must take an individual case to prove what I mean; we are surrounded in West Derby by farms owned by Lord Sefton and Lord Derby; for every farm that is to be let there are a great number of applicants, but it has been the rule there to hand down a farm from one generation to another, very often not at the highest rental that might be obtained. According to my rules, rental is looked upon as a basis, and it is not so in every case; I would like to put that.

3937. But human nature being what it is, rental is about the best you can get if you can ascertain it accurately, taking the country all over, is it not?—That is so, unless relationship comes into the matter.

3938. Have you been confronted with any difficulty of getting definite information from either owner or occupier of lands or houses, as to the rent actually paid?—As you are aware, there is no compulsory power, and, in my opinion, it would be a very good thing if there were. If there were some power by which owners could be compelled to make a return of the real rentals received by them, it would be an invaluable assistance. We have in our valuation list, I think, what you will not find in many valuation lists in the country, a column for the weekly rental. It is the duty of the collector to go round and find out what the weekly rentals of these different hereditaments are, but I may say I have found two rent books in existence upon more than one occasion.

3939. Do you think that if everybody was put under the same obligation there is any hardship in requiring for public purposes of this kind accurate information to be supplied?—Not the slightest.

3940. Do you think it would be resisted?—I think it would be objected to for the simple reason that I have already spoken to two or three owners requesting them to give what information they could, and they did not seem very willing to do so; I do not know for what reason.

3941. Do you think it amounts to more than this, that nobody likes to give information which is not exacted from other people, but if information were exacted under statutory powers from everybody, do you think there would be the same opposition?—I think there would not; I think there would be no opposition.

3942. Have you anything to say as to the method of levying and collecting the rates in a union?—They are levied by the overseers and collected by the collectors, in some cases by the assistant overseers, and in a great many cases they are paid at the overseers' offices situated in the different parishes, in fact, a great amount of the rates is paid in there.

3943. What I wanted to draw from you, without leading you, was as to any system of compounding or of deductions and other things which make a difference in the valuation upon which the rates are actually calculated and the valuation as it would seem to appear to anybody who simply summed up the columns of your book?—I am afraid I cannot quite follow.

3944. Do you give in Liverpool any deductions, for example, for prompt payment, or do you give deductions to an owner who pays the rates of his tenants?—We do.

3945. I want you to kindly explain that to me?—In several townships the Poor Rate Assessment and Collection Act, 1869, has been adopted. By that the owners receive a reduction of 15 per cent.; the 15 per cent. is

Mr. H. P.  
Cleave.  
7 May '97

Agricultural land. Rent not necessarily the lettable value.

Rent. Owners should be compelled by statute to make return of actual rent received.

Levying and collection of rates. Method of.

Compounding and deductions in West Derby Union.

Compounding. Amounts allowed to owners.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 86 to 88.  
† "Parochial Assessment Rules" (Haddon, Best, & Co., West Harding Street, E.C.1).

Mr. H. P. Cleaver. May '97

allowed to the owners provided they, and not the tenants, pay the rates. Then, in the event of the owners willingly agreeing to pay the rates whether the property is full or empty they have another 15 per cent. allowed them. They could have a greater amount granted them for composition under section 3 of the Poor Rate Assessment and Collection Act, 1869, but in the West Derby Union that has been considered to be a fair reduction.

3946. You used the expression "township" just now; I think I understand about unions and about parishes, but I am not quite certain whether I understand what the exact meaning of "township" is?—I would like to amend that by calling them parishes instead of townships. At the time I was speaking I was thinking of the Toxteth Park township.

3947. Are you in favour of these—shall I call them allowances or deductions?—I am certainly in favour of compounding in certain parishes. I cannot say that I am in favour of granting the second allowance to owners for paying whether empty or full. I would like to separate the two cases altogether, meaning the system allowed by section 3, as distinguished from that allowed by section 4 of the Act of 1869. I think, in the first place, that it is distinctly to the advantage of some of the parishes to allow a compound for the property, but as far as the extra allowance that is made upon an application by the landlord to pay whether the property is empty or full under section 4, sub-section 2, of the Act of 1869, I cannot say that I am in favour of that.

3948. Why should not the rates be paid on the gross valuation as it appears in the roll?—I am not prepared to answer.

3949. Do you see any objection?—I am afraid I have not considered that point in a manner to allow me to answer.

3950. Is there any other point in connection with the method of levying or collecting the rates that you would like to speak upon?—I think not.

3951. How many demand notes go round in your union to each individual ratepayer?—Including the water rates?

3952. I would rather confine myself to rates levied by public authorities—you will have, of course, the borough and union rates?—There would be the poor rate demand note.

3953. What else is there?—There is the city rate demand note, there is the inhabited house duty—

3954. That is an imperial tax, of course?—Then we have the water rate.

3955. Of course you are not so unfavourably situated as they are in some places, but I suppose you would agree that if it could be managed that each ratepayer should have only one demand note from the union and city authorities alike, and one collector, it would be an advantage to everybody concerned?—I am strongly in favour of having one rate levied, one demand note, one collector to collect it, and one basis for all valuations, if possible, imperial as well as local.

3956. You say "if possible"; do you think it a counsel of perfection, or do you think it can be carried out?—I think it can be carried out. At the present time, instead of having only one basis, we have four. We have first the poor rate basis, then we have the corporation basis, fixed upon the year before's poor rate; then we have the inhabited house duty, fixed to a certain extent upon the poor rate when it suits them, when it does not, their own valuation; and then we have the county basis, which is fixed upon five years before in many cases.

3957. What would you make the authority for settling the basis?—At present there is the basis settled by the city authority, and one by the union authority so far as local bodies are concerned?—I am strongly in favour of retaining the local knowledge of overseers. I think that overseers, as a rule, know far more about the requirements and the letting value of the union than any paid valuer can do. Of course, that does not mean to say for one moment that paid valuers would not be required.

3958. Those overseers and valuers act, of course, under the directions of the assessment committee, do they not?—Subject to certain rules.

3959. On that assessment committee the city authorities are not represented?—They are not. There is, as you are aware, a means by which if the guardians of a

union, wholly situated within one borough, apply to the corporation, stating the number of members upon their committee and asking the corporation to place members upon it, they can do so.

3960. But that is of limited application?—It is.

3961. Would you or would you not concur in this—that if, taking the country as a whole, there is to be one basis for the assessment and levying of local rates, that would have to be a body on which all the authorities which are interested in the levying of rates would have to have a representation of some kind or another would it not?—I quite agree with that. I should like to see the surveyor of taxes upon the assessment committee.

3962. You would go further then and give the imperial authorities a *locus standi* as well?—I would.

3963. Are there any disadvantages in having a union in two or more administrative counties?—I know of none. I have carefully thought the matter over but I cannot point to any.

3964. But it would complicate the making up of this basis for the assessment, would it not?—I cannot see any way in which it would.

3965. Would it not? It would require the representation of a larger number of authorities upon the assessment committee?—But those parishes within a particular county would be represented upon that body whatever it might be.

3966. Is there not an interest diverse from the parishes namely that of the union or the administrative county, as the case may be, as a union and as a county?—I see no difficulty.

3967. I understand from the answer you have sent in to the sixth question that you are in favour of assessing by means of a paid professional valuer?—As far as possible—together with the local assistance of the overseers.

3968. How far would you have it in the hands of the overseers, and how far in the hands of the paid professional valuer?—The paid professional valuer would be under the direction of the overseers and he would to all intents and purposes go over the whole of the property assisted in many cases by ascertaining from the overseers the real letting value of the smaller property—houses between 20*l.* and 50*l.* a year.

3969. Is there any other point that we have omitted in our questions on which you would like to speak?—I would like to make a strong point of this; it would be a very great thing for unions if some power could be brought to bear upon owners to provide the assessment committee with a list of the rents they receive.

3970. (Mr. Elliott.) In the instructions which you have issued to valuers have you laid down a scale of deductions in order to arrive at the net value?—I would like to point out that these are not instructions to valuers; they are only instructions to overseers and assistant overseers. Perhaps the valuers would not act upon them possibly as fully as overseers except where it suited them.

3971. But you have laid down a scale of deductions, have you not?—We have.

3972. Can you tell me what the principal items of that scale are?—Repairs.

3973. And for other charges?—Upon household property, 15 per cent.

3974. And upon factories and industrial property of that description?—In some cases; it varies; we rate machinery.

3975. What is the class of property upon which the highest deduction is made in order to arrive at the rateable value?—I consider that is the compound property, certainly.

3976. Leaving out the question of composition, what description of property?—Can I answer it in this way—which property do I think suffers the most from taxation?

3977. No, I want to get from you the fact as to what class of property it is in respect of which you allow the greatest rate of deduction in order to arrive at the rateable value?—I would say common house property.

3978. Not manufactories?—No.

3979. Nor mills?—No.

Mr. H. P. Cleaver. May '97

Assessment committee. Representation of all authorities desirable.

Union in more than one administrative county. No disadvantages.

Overseers. Local knowledge very valuable. They should assist paid valuers.

Rent. Owners should be compelled to make return of rents actually received.

Deductions. Scale laid down in instructions to overseers.

Compounding. Objection to owners getting additional 15 per cent. if they run the risk of paying for empties.

Demand notes, number of in the West Derby Union.

Desirable to have one basis of valuation instead of four for local and imperial purposes; one rate levied, one demand note, and one collector.

Overseers. Their local knowledge very valuable. They should assist paid valuers. Power of guardians to invite a corporation to place members upon assessment committee.

*Mr. H. P. Cleaver.* 3980. Nor any industrial property?—No, leaving machinery entirely out of the question.

*7 May '97*  
Rating on gross valuation, effect of.  
3981. You found some difficulty in replying to a question of the Chairman's as to the reason why the rate should not be levied on the gross valuation. Having regard to these different rates of deduction would not the effect of the adoption of the gross valuation as the basis of assessment be to charge more highly the properties from which a high rate of deduction is allowed at the expense of the properties from which a low rate of deduction is allowed?—That would be so.

3982. Do you not see in that a reason for not taking the gross assessment?—I would rather not answer that question.

*Parishes in the West Derby Union.*  
3983. (*Mr. Smith.*) I understand that the West Derby Union contains only one parish, is that so?—No. Litherland is a parish.

3984. It contains how many parishes?—I think three—I think Waterloo is also a parish, but I am not very certain of that at the moment.

3985. The townships you have described, are they parishes under the last Local Government Act, or are they merely district areas for rating?—They are district areas for rating.

3986. But not parishes in the sense of having a separate poor rate or a separate overseer?—They have a separate poor rate.

3987. Is that not the definition of a civil parish?—It is.

3988. Then are they not parishes?—Yes. West Derby, Waterloo, and Litherland.

3989. There are only those three?—Only those three.

3990. I beg your pardon. I thought there was a small outlying township. However, when you use the term "township" it means the same thing as parish?—Yes. There are in all 25 parishes or townships forming the union, each having a separate poor rate.

*Deductions. Uniformity desirable.*  
3991. You are strongly in favour, I understand, of uniformity of allowances?—I am.

3992. As you have laid that down in your instructions?—Yes.

3993. You must remember several valuation bills being introduced into Parliament having that object, do you not?—I do.

3994. You think it would be an extremely good thing if Parliament could find time to pass one?—I have long thought so.

*Compounding in Liverpool. A 15l. limit.*  
3995. I think with regard to compounding in Liverpool you have some special limit, have you not, higher than the rest of the country?—The same as Birmingham—15l.

3996. No, it is not the same as Birmingham; you are superior people to Birmingham; ours is only 10l.?—Yes, in Liverpool and Manchester it is 15l.; Birmingham I think is 10l.; and London 20l.

3997. I thought one of them was 12l.; however, it is immaterial. You can go up as high as 15l.?—Yes.\*

*Compounding, to what extent desirable and undesirable in West Derby Union.*  
3998. I gather from your observations that you think it is desirable in the interests of the parish that compounding should continue, but you hesitate about the amount of the allowance?—I do.

3999. What would be the use of compounding if the owner did not pay whether the property was occupied or not; would there be any advantage in compounding unless you had that provision?—There is an absolute impossibility in a great number of cases of obtaining payment of the rates from the tenants.

4000. You do not quite understand my point; you say that you disapprove of the second allowance of 15 per cent. which is allowed to a landlord who pays, whether the property is occupied or not?—Yes.

4001. But there is a previous 15 per cent. allowed him, which I presume is the 15 per cent. allowed on houses and buildings?—Yes.

4002. So that the first 15 per cent. he enjoys in common with the other owners of house property, is that so?—No; he gets another 15 per cent.

\* The witness subsequently wrote, "That is to say, 15l. 'gross estimated rental,' 10l. 'rateable value' within the city of Liverpool, and 5l. 'gross estimated rental,' 5l. 'rateable value' elsewhere throughout the Union. I find Manchester as well as Birmingham is 10l. 'rateable value.'"

*Mr. H. P. Cleaver.*  
7 May '97  
4003. I want to get at that; I want to know exactly what he gets that for. He gets 15 per cent., of course, which is your ordinary allowance on houses and buildings?—Yes.

4004. Then he gets another 15 per cent. because he is within the compound?—Yes.

4005. And if he undertakes to pay whether the property is let or not, he gets another 15 per cent.?—Yes.

4006. So that he gets 45 per cent.?—He does.\*

4007. What is the use of compounding unless you do secure the rate whether the property is occupied or not? Would there be any advantage in making the extra second allowance of 15 per cent. if you do not have the guarantee that you would get the rate in any case whether the place was void or full?—I think not. The second 15 per cent., if I may call it so, that is allowed by the overseers to the owner paying instead of the tenant is what I was speaking about just now. There may be 20 tenants in one year, as there are in many cases.

4008. He really gets it because he gives you a better security for the rate?—That is so.

4009. He gets 15 per cent. as an ordinary owner of house property?—That is so.

4010. Fifteen per cent. for his credit?—That is so.

4011. Fifteen per cent. for compounding whether occupied or not?—Yes.

4012. Have you any cases where the rate is collected from the man where he is only allowed the two fifteens; that is to say, the 30 per cent. and not the 45 per cent.—where he does not give the guarantee?—A great number.

4013. What proportion would there be of those who guarantee the whole amount of the rate—would there be a large proportion who get the 45 per cent.?—I should say the larger proportion.

4014. The larger?—I should say so, but I must say that with reserve, because I really do not recollect.

4015. For convenience of collection that is no doubt an advantage?—It is.

4016. Although it is a very heavy loss on the rate?—Yes.

4017. You do not know, I suppose, what the effect of that has been upon the compound voter with regard to his views as to expenditure?—I find—at least I have heard, and it is only hearsay evidence—that the people in compound property turn up more than any other class of person at the vestry meetings.

4018. You do not, probably, speak with municipal experience?—No.

4019. Do you know whether as a rule they are in favour or opposed to expenditure, useful or otherwise—perhaps you have not considered the question?—I cannot say.

4020. It is quite clear that they do not, at all events, directly pay any rates?—They do in their rent.

4021. In their rent, yes, but I said "directly"?—No.

4022. If the rates were materially raised would the rent be raised, do you think?—If the rates go up the property is in compound; if the rates go down in many cases we find that the property comes out of compound.

4023. How are the city rates collected in Liverpool? Do you collect any portion of the rates for the Corporation?—The watch rate and the library and museum rates.

4024. Are they the only ones?—I am not quite certain about the school board rate.

4025. That is collected primarily with the borough rate, and it would probably follow the borough rate,

\* The witness subsequently wrote, "I should like to explain that the first 15 per cent. is not an abatement of rates; it is the deduction from the gross estimated rental to find the 'rateable value,' which is allowed on all houses and buildings whether the owner pays the rates or not, to cover the cost of repairs, insurance, &c.

"The second 15 per cent. is in a sense 'hard cash' returned to the owner, because he is compelled to pay the rates, and is, in fact, a payment for collection (section 4, sub-section 1, of the Act of 1869).

"The third 15 per cent. is also hard cash, and is the maximum allowance returned to the owner when he agrees to pay rates, whether the houses are occupied or not, and is, in fact, a payment to secure the community against loss, owing to the well-known difficulties connected with the collection of rates from the occupiers of this class of property."

*Mr. H. P. Cleaver.*  
7 May '97

*Compounding. Effect of system with regard to voters' attitude in local affairs.*

*Compounding, how far influenced by rise or fall in rates.*

*Collection of rates by West Derby Union, and by the Corporation of Liverpool.*

**Mr. H. P. Cleaver.** whether collected with the poor rate or not. You do not collect what we call the borough rate, and what you call the city rate?—No.

**7 May '97** 4026. The Corporation collect that, and they have their own staff?—They have.

4027. And their own assessment?—They take the poor rate assessment for the year before.

4028. But they have a separate roll and a separate assessment committee, have they not?—No.

4029. They collect it by virtue of a private statute?—Yes.

4030. It is not strictly in your vocation, but can you tell me whether the city rate in Liverpool includes what is done under the improvement and general district rate; is it one consolidated rate as it is in Manchester?—I think it is one rate, but on the demand note the purposes for which that rate is levied are shown.

4031. And to the extent that it is a general district rate under the Public Health Act, there are separate allowances?—I think so; in fact there are.

4032. What is the water rate; do you collect that, or do the city authorities do so?—The city authorities do so.

4033. That is a general rate for public watering, I suppose?—That is so.

4034. Independently of that, there are water rents, I presume, which are charges for water?—Yes, and form a separate rate; we call them rents.

4035. I eliminate them from the category of rates, because they are nothing more than goods sold and delivered, are they not?—Yes, the price of the water.

4036. But there is independently a rate for water for public purposes?—That is so.

**Deductions. Uniformity desirable.** 4037. You have told me that you are strongly in favour of a Valuation Act, which shall prescribe, as far as possible, uniformity of allowances?—That is so.

**Desirable to have one rate and one demand note, showing purposes for which raised.** 4038. You think that it would be not impossible to devise one rate?—I think it would be quite possible. I should like to add that it would be most desirable to have upon the demand note a statement setting forth how that rate was made up, showing each individual item, so much for the poor rate, so much for the city rate, and so on.

4039. That could, obviously, be done, if the rate was inclusive of everything?—That is so.

4040. But it is not very important when the rates are separately collected?—No.

**Assessment committee. Representation of all authorities desirable.** 4041. You think that there might be one assessment committee or one assessing body?—I will not exactly use the term "assessment committee"?—For the whole union?

4042. Yes; you have pledged yourself to a consolidated rate for all purposes?—Yes.

4043. Now, are you prepared to say there shall be one assessing body for all purposes?—I think the assessment committee should remain as they are.

4044. Not quite as they are, do you, because there must be representatives?—In the townships comprised within the union, the appeals would be made from the rating authority to the assessment committee.

4045. As the Chairman pointed out to you, if you are to take one rate for all purposes, including city rates, county rates, and poor rates, it is obvious that the county and the city would require representation?—There would be no difficulty in that, as far as I can see.

4046. That is what I put to you?—I thought you meant taking, for instance, the three unions in Liverpool, and saying that one assessment committee would meet to decide.—

4047. I want to get you out of Poor Law for the moment and to treat the thing as a whole—to look at the whole question of local taxation. You said you would retain the assessment committees just as they are—I mean with further representation?—Yes.

**Union in more than one administrative county. No disadvantages.** 4048. And you do not think that there would be any great difficulty?—I do not.

4049. As a matter of fact, are you in more than one administrative county?—I am in three.

4050. And from your point of view you have not found that a disadvantage?—I know of no disadvantage.

I have thought it carefully over, and I do not know of any disadvantage.

4051. You are probably aware that the object of the Local Government Board of late years has been, as far as possible, to make the union areas conterminous with other local government areas, so as to have one governing body?—The Local Government Board have varied their rules very much, so I would answer—in some places, yes; in some places, no.

4052. They are endeavouring, surely, to make the union and county conterminous?—In some cases.

4053. There are very much fewer unions that cut the boundaries of counties now than there used to be, are there not?—I think so.

4054. And that is the object of modern legislation?—It may be.

4055. It may be possible that there may be disadvantages which have not occurred to you, but which the county or the county borough may have felt from having a union extending into more than one area?—I have spoken to the clerk of one of the large counties, and I think he agrees with me, that there is no difficulty.

4056. He does not say there is no difficulty?—He does not know of any difficulty; I asked him just before coming up.

4057. Just one question about machinery. How do you rate machinery in Liverpool?—It is rated by the surveyor; we have a surveyor for no other purpose; he is appointed by the Assessment Committee, and kept by the Assessment Committee for the duty of assessment.

**Mr. H. P. Cleaver.**

**7 May '97**

4058. Of course, you are governed by the law as to the rating of machinery, and you only rate such machinery as is fixed to the freehold?—That is so.

4059. Do you in any case rate movable machines?—In mills?

4060. What about the shafting?—I think it is rated in some cases where it is attached—sometimes, you know, a shaft must be attached.

4061. But not isolated machines?—No.

4062. You are governed by the decisions on that which I have, no doubt, you have incorporated in your book?—That is so.

4063. (Sir E. W. Hamilton.) What is about the average burden of rates in your district?—Taking the whole of the rates?

4064. Yes; do you know what they come to?—They vary; I put them at 8s. in the £; I have the amounts here—collected by the overseers, 3s.; by the corporation, 5s.

4065. 8s. in all?—Yes; of course, it varies in the other counties; I am now speaking of the county of Liverpool. In the county of Lancaster the highest amount paid is 6s., and then in the rural districts the highest amount paid is 5s. 4d.

4066. In the locality with which you are specially connected is the burden of rates felt very heavily, do you think?—Since the extension of Liverpool I think it has been felt. Why I say so is this: that so many people are leaving Liverpool to go to the other side of the water where the rates are less.

4067. Has the increase been very material of recent years?—There has been a considerable increase. I cannot say what it is, but it is a very considerable increase for improvements.

4068. I think you said that a part of the union is agricultural?—It is.

4069. I suppose all the town property is held on ordinary building leases?—Yes, that is so.

4070. Do you know whether the question has been mooted at all in your part of the world—it has very often been mooted in other parts of the world—about the division of rates between owner and occupier?—It has been.

4071. Are you yourself in favour of such division?—I have not considered the matter, and I would rather not give an opinion.

4072. (Mr. Murray.) Has that increase of the rate in the £ produced any other effect besides driving the people across the water; has it lowered rents at all?—In some districts it certainly has.

**Machinery fixed to freehold. Rating of in West Derby Union.**

**Rates in the £ in Lancashire and Liverpool.**

**Rates in West Derby Union. Burden of rates felt owing to the extension of Liverpool.**

**Increase of rates in the West Derby Union has caused people to leave the district, and has also lowered rents.**

**Mr. H. P. Cleaver.** 4073. Speaking generally?—I may say that undoubtedly rents have decreased in value and have gone down.

4074. That, of course, will increase the rate in the £ because the valuation will fall off?—That is so; the less the assessment, of course the higher the rate.

4075. You really have noticed an appreciable effect of that kind?—Yes.

**Compounding in the West Derby Union is more beneficial to the owner who compounds than to the local authority.** 4076. As regards your compounding arrangement, who do you think has the best of it now—the compounder or the local authority?—I think the compounder, undoubtedly.

4077. You would get more if there was no composition, in fact?—I think the amount allowed is too great. I am in favour of compounding to a certain extent, but I am not in favour of such a very large reduction being made. I think it would be perfectly impossible in some cases to obtain the rates from the people. I would like to say, if I might in answer to you, something about a sliding scale. It has been mooted several times that there should be a sliding scale for property—that old property should have a greater deduction made than new property. I wish to say that, as far as the West Derby Union is concerned, it would not be advisable at all, because there are thousands of people who make it a sort of point of duty to themselves to go into every new house they see and dirty it and leave it, and the cost of maintaining and keeping it up, papering and repairing, is quite as great in the new property as in the old; in fact, old established property in the union I represent lets better than the new property. They will flock to the new property to-day, but they will be gone next week or the week after it, having soiled the house.

**Local taxation presses the most heavily upon small shop-keepers whose rentals are up to 40% a year.** 4078. Would you like to see compounding extended any further—to a higher class of houses, for instance?—Perhaps I might answer that question in this way—that the persons who are hit the hardest in taxation at the present time are those people just out of compound, the small shop-keepers up to 40% a year. I think if something could be done to assist them it would be an advantage. I could not suggest compounding, but I think that is where the shoe pinches at the present time with regard to taxation.

**Professional valuer is the officer of the assessment committee.** 4079. What would be the functions of the paid professional valuer that you propose; would he merely advise the assessment committee?—He does. He sits with the assessment committee to hear all objections having previously gone round. When the objections are received the professional valuer goes round, views the property, makes his own valuation upon it, then comes before the assessment committee. When the appellant is there he states his case, and the professional valuer states his. I can say that the opinion of the professional valuer is not always taken by the assessment committee. The professional valuer leaves the room when the appellants leave the room, and the cases are treated, I think, as fairly as it is possible.

4080. But he is the officer of the assessment committee?—He is.

4081. How is he paid—by salary?—By a fixed salary per annum.

**System of employing professional valuers for valuing docks, railways, tramways, &c., should be extended.** 4082. You suggest that the system should be extended, I think?—Yes, I think it should be universal. I do not see how it is possible for overseers or for any other men not professional men to value the large works that we have—docks, railways, overhead railways, tramways, and all those exceptional properties if they are men who have not made rating a study; indeed, I think it is practically impossible for them to render a proper account of it in their valuation lists.

4083. He does not devote his whole time to the Assessment Committee and their business, of course?—He does, the whole of his time.

4084. Does he?—I would have him do so. In the case of the West Derby Union he is also the architect to the Union, but if we are not building he devotes the whole of his time to the West Derby Union, and as the West Derby Union is practically built, I may say that now he has absolutely nothing else to do but his rating.

4085. He has no private practice of any kind?—No, he is not allowed to practice. Of course he has given evidence for the Corporation and for the other unions, and he meets the valuers of the other unions in consultation. The docks, for instance, go through Toxteth,

Liverpool, and West Derby, and to arrive at one uniform assessment upon the docks it is necessary for him to place himself in communication with the rating surveyors of those townships, the same with the tramways, the same with the railways; so that really they do meet together and arrive at a proper basis upon which to fix their valuations.

4086. (Viscount Emlyn.) Can you tell us what proportion of the houses in Liverpool are compounded for; is it a large proportion?—I am afraid I cannot say. I will add that afterwards.\*

4087. Is it largely carried out?—It is.

4088. There is a large amount of compounding and you are anxious that that should be maintained?—Yes, to a certain extent.

4089. But not to the extent it is at present?—Not to the extent it is at present.

4090. Why, might I ask?—I think 8s. weekly rent, the owner paying rates, will barely bring them into compound, but the assessment committee have rather strained a point to allow them into compound; that is not my wish if I might put it that way. I think there was a penny difference in it, and a penny took them out of compound and a penny brought them in. I think the Assessment Committee gave them the benefit. Of course that might mean that 1,000 houses might be brought into compound which in my opinion should not be.

4091. That is your reason, is it, for thinking that the reductions allowed should be diminished?—That is so.

4092. (Chairman.) You said and Mr. Murray subsequently put a question or two upon it, that the rise in rates in Liverpool had driven some of your occupants over to the other side of the water?—Yes.

4093. That is Birkenhead, I suppose?—Hoylake, West Kirby, and New Brighton.

4094. Hoylake, you say?—Yes.

4095. I have heard that there are other attractions there besides low rates?—Golf; I live at Hoylake myself.

4096. Do you think golf has had anything to do with taking people there?—I think it is the oldest golf ground in England with the exception of one I believe, and within five years—or I will say within two years—Hoylake has trebled or quadrupled its size, so it cannot have been for golf.

4097. Are you quite sure, because I think golf has been increasing very much in the last four or five years?—To a great extent it has, but still at the same time I do not think that that has been the means of sending people there.

4098. Could you put into figures for me what a man of the class that you say is hardest hit, and as we all know is hardest hit by rates, saves by going from Liverpool to either Birkenhead or Hoylake?—I will take my own case if I might.

4099. If you please, but I should be sorry to think you are one of those who are hardest hit?—I do not wish to suggest that.

4100. However I will take your case?—I lived in Liverpool, and in the district in which I lived the rates were 8s. in the £, but in the district in which I now live they are 3s.

4101. Of course I do not want to pry into your private affairs, but I want to know what it means in money, say upon a house of 50l. or 100l.?—I should say it roughly means 5s. in the £.

4102. Is that in the case of a man who has to come every day from Hoylake to Liverpool to business?—Of course it all depends upon the class he travels.

4103. I want, if I can, to go through the arithmetical calculation which the gentleman, who goes from Liverpool to Hoylake, would have to go through before he made the change; I want to see how much he saves upon it?—He will save, roughly speaking, 5s. in the £ in his rates, minus the extra cost incurred by reason of the distance that he has to travel.

\* The witness subsequently wrote: "In the large parishes of the union which are within the city, the greater proportion of the rateable hereditaments are dwelling-houses, and they are all or nearly all compounded for."

"In the other parishes of the union including Bootle, which is a county borough, the proportion of dwelling-houses suitable for compounding is not so great, and the number is further limited because composition is limited by the Act of 1889 to houses of a rateable value of 5s. and under."

**Mr. H. P. Cleaver.**

7 May '97

System of compounding in West Derby Union exists large extent. Not desirable that it should exist to this extent.

Increase of rates in the West Derby Union has caused people to leave the district. Amount saved in rates by those who leave the district and live further from Liverpool.

Mr. H. P. Cleaver.  
7 May '97

4104. You have exactly got the point that I want to make out, but I want to have it put, if I can, into figures, to see whether the inducement is enough presumably to make him go?—That is taking for granted that he spends nothing in cabs or omnibuses when living in Liverpool, because you must remember that the distances are great in Liverpool as well. I would roughly say that he would save at any rate upon a 60l. house 5l. a year. That is saying that he never spends a penny in any other means of conveyance on the Liverpool side.

4105. You think the saving of 5l. a year is enough to make him transfer his residence from one side to the other?—I cannot say that is so; he may, of course, take into account other advantages, but I adhere to my former statement, that by reason of the rates being so high, it has put it into the heads of a great number of people to go to the other side of the water, and that they have done so.

4106. The rents will be cheaper on the other side of the water too, will they not?—I am sorry to say that in some of the districts the demand is so great, that the supply has not been able to meet it, and consequently they are getting rather high rents at the present time.

4107. It is a common feature of the conditions of modern life that people are now, from every town, going further afield to live than they used to do before, are they not?—It may be so.

4108. Is there any point which those of us who have questioned you have missed that you would like to say anything about?—I think not.

The witness withdrew.

Adjourned till Thursday next at 12 o'clock.

**TWELFTH DAY.**

Thursday, 13th May 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. SIR J. T. HIBBERT, *in the Chair.*

Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq.  
E. O. SMITH, Esq.  
J. L. WHARTON, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. GEORGE HUMPHREYS-DAVIES called and examined.

Mr. G. Humphreys-Davies.  
13 May '97

4116. (*Sir John Hibbert.*) I believe you have been, for upwards of 30 years, a surveyor and valuer in London and Manchester?—Yes; in all parts of England.

4117. And also you have held several public appointments, such as arbitrator under the Board of Trade?—Yes.

4118. I suppose you appear here to-day to represent the Machinery Users' Association, do you not?—Yes, only I am anxious to avoid appearing as a partisan. I am rather anxious that I should give the Commission any assistance that I can, and, as far as possible, in an impartial way.

4119. At the head of your memorandum are placed the words, "The Machinery Users' Association," and I thought you were deputed by them to give evidence?—That is so.

4120. You have had great experience with regard to the law of assessment, I presume?—Yes, I have.

4121. In all parts of the country?—In all parts of England and Wales.

4122. Have you had any experience with respect to the working of the Valuation (Metropolis) Act in London?—Yes, I have had considerable experience of that.

4123. I believe you wish to make some statements with respect to the amendment of the law of assessment, do you not?—In regard to the metropolis?

4109. (*Mr. Smith.*) You are one of those who have taken advantage of the amenities of Hoylake and left Liverpool?—Yes.

4110. There must be many small tradesmen who you have told us are hard hit, who could not adopt that process because of their business?—I have in my mind at the present time a small grocer who lives in Hoylake, and who goes into Liverpool every day to his business.

4111. Then he does not live over his shop?—He does not.

4112. But in the case of the man who lives at his shop, of course he cannot avail himself of that advantage?—No.

4113. (*Mr. Elliott.*) What would be the average income of a man who would live in a 60l. house in Liverpool?—I think if you put a cipher at the end of the rent, that, as a rule, is a very good guide to the income of a man.

4114. Is the man who lives in a 60l. house in Liverpool one of the small occupiers you referred to as being hit hardest?—40l. a year I should wish to go to; it is really out of compound up to 40l. a year. The smaller shopkeepers by reason of their tenements being shops are, of course, rated higher; at least, the rents are higher than for private houses.

4115. Do you think a shopkeeper, whose shop is rated at 60l. would make 600l. a year out of it?—No, I cannot go into what the profits of a trade are, but what I mean to say is, that if a man in business lives in a 60l. house, I should roughly put it that his income was 600l. a year.

Mr. H. P. Cleaver.  
7 May '97

Rental of 60l. a year usually paid by a man with an income of 600l. a year.

Mr. G. Humphreys-Davies.  
13 May '97

4124. Generally, throughout the country?—So far as the general basis of assessment is concerned, as I understand the law at present, I am satisfied with it.

4125. You are satisfied with it, according to your memorandum, so far as the owners or occupiers of real property are concerned?—Yes.

4126. You think no injustice is done to them?—That is so. I understand that the law has always been that the incidence should fall upon the occupiers of real property, and I think it should be continued in that way.

4127. Have you had any experience of the rating of machinery?—I have had a great deal to do with that question in various parts of the country.

4128. Would you state your objections, if you have any, with respect to the working of the present Assessment Acts?—Speaking outside the metropolis, I think the great cause of complaint, so far as machinery users are concerned, is that in some places, principally in consequence of the judgement in what is known as the Tyne Boiler Case,\* attempts have been made to impose

\* Tyne Boiler Works Co. v. Longbenton (Overseers) (or Tynemouth Union), 53 L.J.

Law with reference to assessment is satisfactory as regards owners and occupiers of real property. MACHINERY rating in respect of. Attempts have been made in some unions to rate persons in respect of a class of machinery which is personal property.

Mr. G.  
Humphreys  
-Davies.

13 May '97

a rate upon machinery which is really personal property.

4129. Is that in reference to any particular union, or is it in reference to attempts generally all over the country?—We know, as a rule, what the unions are in which that attempt is made, or would be made, and I am sorry to say that now and then there are accessions to their number. They are not general all over the country, they are various unions in different parts of the country.

Machinery,  
rating in  
respect of.  
Not rated  
in many  
unions.

4130. You cannot say that attempts have been made to rate machinery in many unions?—No. Of course, it must be remembered that a large number of the unions are not affected to any extent, because they are, perhaps, purely agricultural unions; and then other unions are agricultural and residential.

Tyne  
Boiler  
Case.  
Principle  
laid down  
in this  
case has  
been  
extended  
to other  
sorts of  
machinery  
whether  
fixed or  
movable  
in certain  
unions.

4131. You mentioned the Tyne Boiler Case; what union was that in?—That was in the Tynemouth Union.

4132. Has the principle of that case been extended to other machinery?—Yes.

4133. In that particular union?—Yes, in the Tyne-mouth Union we always find that they claim to rate the whole of the machinery in a works.

4134. Whether fixed or movable?—Yes.

4135. Do they attempt to rate going machinery which is not fixed?—Yes.

4136. Have they succeeded in that?—Yes. I may say that substantially in almost all these cases they have not always rated it to the fullest extent that they wished to rate it; it has very often ended in some sort of a compromise, in which we thought it was better to give up something rather than to go for everything we thought we were entitled to contend for. Substantially, in taking a case like the Tynemouth Union, it may be said that they have rated machinery.

4137. Is that the union in which they have rated shipping?—That is a very old case.

4138. But they continue to do it still, do they not?—I have no knowledge of that, and I do not think that is so.

4139. In the adjoining unions in the north, have they adopted the same principle?—They have on the north-east coast in the South Shields Union, the Gateshead Union, and the Sunderland Union—I am not quite sure for the moment whether that is the correct name, but I am referring to the union in which Sunderland is situated.

4140. Is the amount of rating considerable with respect to that particular kind of property?—Yes; wherever it is carried out it is a very heavy tax upon the manufacturer. In effect, what they claim to do is to put 5 per cent. or 6 per cent. as a rateable value upon the cost of the machinery.

4141. Upon the cost of all the machinery in a mill?—Yes. Putting that into figures, taking the highest rated parish in the kingdom, which I believe is West Ham, it in effect comes to this: There the rates are, I think, nearly 10s. in the £; they are increasing, and, I believe, they have reached almost to that point, but taking them at 10s. in the £, it means a tax of 2½ per cent. upon the machinery in a works.

4142. Have any appeals been made in any of these unions against the principle of the rating of machinery?—Yes. I have been concerned in a great number of appeals. When I speak of appeals, perhaps I ought to point out that there is technically a distinction between what is called an appeal to an assessment committee and an appeal to quarter sessions. We call the proceedings before the assessment committee an objection.

4143. I meant an appeal to the quarter sessions or to a higher court?—There have been a great many appeals to the quarter sessions also.

4144. And to any of the higher courts?—The last case that went to the higher courts was the Chard case.\* I do not think there has been anything since that.

4145. That is in Somersetshire, is it not?—Yes. The manufacturers are most anxious to get a case stated, to get the opinion of the House of Lords upon the question, in order, if possible, to get a clearly defined judgment which all persons could easily understand; but the difficulty is that we cannot get in these cases the other side to agree to a statement of the case which we think raises the question clearly. They shelter themselves behind the words of Lord Escher's judgment

and say: "We have only taken the machinery into consideration," when they are pushed; but they have taken it into consideration by putting a tax of 5 per cent. upon its value. We say that that is not at all the meaning of the judgment, and that that is in effect rating the machinery. But that is not the form of the case which would bring out a clear statement of the law.

4146. What are the words or principles of the Act of Elizabeth upon which they base their right to rate machinery?—The Act of Elizabeth is, of course, I should point out, modified by the Act of 1840; but the Act of Elizabeth speaks of "taxation of every inhabitant, parson, vicar, and other, and of every occupier of lands, houses, tithes impropriate, appropriations of tithes, coal mines or saleable underwoods in the said parish," and so on. Under that Act and those words, it was for many years considered and held to be the law that persons having stocks-in-trade, and even, I believe, in one case, ships, were rateable upon those things; but, of course, I am not able to speak to it from the legal point of view.

4147. There is an Act of Parliament which exempts stock-in-trade from being rated, is there not?—Yes.

4148. Which is renewed from year to year?—That is so. It was found so impossible to carry out the rating of stocks in trade and trade profits, and I believe it will be now even more impossible, that in 1840 an Act was passed, 3 & 4 Vict. c. 89, which enacted that "From and after the passing of this Act it shall not be lawful for the overseers of any parish, township, or village to tax any inhabitant thereof, as such inhabitant, in respect of his ability derived from the profits of stock-in-trade, or any other property, for or towards the relief of the poor." Until 1878, when the Bishopwearmouth case\* was brought forward—that was a case arising in the Sunderland Union—that was absolutely carried out without any question.

4149. It appears that the attempt to rate machinery has been carried out principally in some of the northern counties; has it also been attempted in other parts of the country?—Yes. For instance, in Cardiff, Swansea, and some of the parishes in London.

4150. What kind of machinery beyond collieries would there be at Cardiff and Swansea on which they would attempt to rate?—In Cardiff, for instance, there are a large number of dry docks where they have ship-repairing works and engineering works, and in those shops they have tools, lathes, drills, and things of that sort. Of course there is no such machinery as you find in Lancashire, such as spinning machinery. Then in Swansea, there are also docks and a good many small works. There are a great many industries in Swansea of various kinds.

4151. Have any attempts been made in Lancashire to rate machinery?—In Lancashire there is a case I am concerned in now for the United Alkali Company in the union of Prescott. With the exception, perhaps, of Barrow, which is a parish in which the Union Assessment Committee Acts have never been applied, and Chorlton-upon-Medlock—which is rather a curious instance in connection with another point—generally speaking in Lancashire, I think I may say throughout that county, they adhere now to the principle, that they have always adopted of rating the building and the fixed machinery in the shape of engines and boilers.

4152. That is adhered to in all the Lancashire unions, is it?—I have got here the scale of one of the chief unions, that is Bolton, showing how they do it. The only difference of opinion which arises there between us is as to the value of buildings, and it is always capable of settlement. We scarcely have any difficulty except in the union of Chorlton-upon-Medlock; it is rather curious that there are there two parishes, I think it is, which are under separate Acts of Parliament.

4153. Under local Acts?—Yes. The curious result is that in those parishes they do not attempt to rate machinery, but in the other parishes in the union they do, and you have in consequence (which shows the objection to local Acts affecting the law of assessment) two systems of assessment in force in the same union, creating, of course, inequality in the rates.

4154. Are these two parishes which are under local Acts, to which you have referred, not under the assessment committee of the Chorlton Union?—Yes, they are under the assessment committee. There is the parish of Manchester by itself, which is a small parish.

Mr. G.  
Humphreys  
-Davies

13 May

of getting  
a case with  
the real  
issue stated.

Mr. G. Humphreys  
Davies.

Mr. G. Humphreys  
Davies.

13 May '97

Fixed machinery which is part of the hereditament should be rated.

Bills introduced to amend the law relating to hereditaments containing machinery. Strongest opponents are the small property owners.

Taxation and representation. The people who raise the rates and expend them are not always the people who pay them.

4155. But that has a separate board?—No.

4156. They have a board of overseers?—Yes, but they are in the union of Chorlton-upon-Medlock, and Messrs. Whitworth & Co. have had considerable trouble there. Only two years ago I was concerned in an appeal in which Messrs. Whitworth & Co., feeling the injustice of it, seeing that there were machinery users in other parishes who had not been treated in the same way, objected to the assessment and appealed against it. It ended in a compromise, I think.

4157. Can you state in that particular case of Whitworths' what kind of machinery had been rated?—Yes; the whole of the machinery in their fitting shops and erecting shops.

4158. Both fixed and movable?—Without regard to being fixed.

4159. They came to a compromise, I think you said, with the assessment committee?—Yes, so far as they themselves were concerned. But they never got any relief from that as far as I can recollect.

4160. Did they carry it to any court of quarter sessions?—They did, but the case was not fought out, and the result was that everybody stood as they did before.

4161. Do they pay rates upon the assessment of their machinery?—They do.

4162. Did those attempts to rate machinery in various parts of the country give rise to the introduction of the Bill now before the House of Commons called the Rating of Machinery Bill?—Yes.

4163. That Bill has been before the House for some years, has it not?—I think the first Bill was introduced in 1887. You asked me as to the other unions in which it had been done; one occurs to me—the union in Somersetshire in which the Chard case arose, which was a purely agricultural district.

4164. Is this system more generally carried out in agricultural unions than in unions where there are industries as well as agricultural occupations?—Yes. The attempts were made in what may be termed mixed unions, where, as in Chard, there are a few manufacturers and a large number either of agricultural ratepayers or of small property owners. Both, I suppose, seek and do get large representations upon the assessment committees, and, in order to relieve themselves of the burden as far as possible, or as one means of relieving themselves, they claim to rate machinery. In purely manufacturing unions, such as those in Lancashire, as a rule, the difficulty does not arise.

4165. I suppose there is considerable opposition to this Bill?—Yes. The opposition arises from the causes I have just mentioned. The Bill has always been passed by large majorities of the House, and I think in the session before last it reached its third reading stage, but through an unfortunate accident it was put down for the wrong Wednesday. It was passed without amendment in that session through Committee. It is supported, I may say, by a large number of assessment committees, who, I may almost say, are more qualified to deal with the subject than any others, because they represent manufacturing unions.

4166. What is the exact title of the Bill; because, as I understand, the object of the Bill is not the rating of machinery, but to prevent the rating of machinery?—Yes, that is so. We say, as I said before, that machinery is not now rateable, and I think from the Acts I have referred to, as it is personal property, it is a chattel, and it is not rateable. What is wanted is a clear definition of the law, and really this Bill is a defining Bill. It is called "A Bill to amend the law relating to hereditaments containing machinery." It is really a Bill of one clause, the effective clause providing that in estimating the gross annual rental of any premises used for any trade, business, or manufacturing purposes "any increased value arising from machines, tools, or appliances which are not fixed, or are only so fixed that they can be removed from their place without necessitating the removal of any part of the said hereditament, shall be excluded." But there is a most important proviso in the later Bills which says "that the gross annual value of any such hereditament shall be estimated at not less than the sum at which it might reasonably be expected to let for the purpose for which it is used on a tenancy from year to year void of the machines, tools, and appliances which it might reasonably be expected

"would be supplied by the tenant if the tenant paid all the usual tenants' rates and taxes and tithe rent-charge (if any), and if the landlord undertook to bear the cost of the repairs and insurance, and the other expenses (if any) necessary to maintain the said hereditament in a state to command such rent." That, we think, is an amplification merely of the Act of 1836, but an amplification which makes the object of that Act a little more clear and prevents any confusion.

4167. But the proviso attached to it is in addition to the principle laid down by the Act of 1836, is it not?—We think it only explains that Act more fully, because it is not claimed that machines—if there be such, and of course there are—which are of such a character that they are really a part of the hereditament, should be exempted from rating. If they are of such a character that they have become part of the freehold, like the kitchen range of a house, or a water tank, then they should be rated. Of course there is an enormous variety of machinery, and we have always felt—I, myself, have felt it strongly—that it is impossible to put any schedule of machinery forward which would be useful, or which would not lead to a dispute; for instance, you may have a gas engine which is easily moved, and that would be obviously a tenant's piece of machinery, but you might also have a steam engine, which no tenant would provide. There are many things of that class.

4168. The opponents of this Bill are principally, I presume, from the northern counties and from the agricultural unions?—Yes. I think it may be said that perhaps the strongest opponents are the small property owners' associations. There has been an association formed in the last year or two, improperly formed we think, of rating and assessing authorities, for the purpose of opposing this Bill, and also of opposing manufacturers generally. They have used actually in some cases public funds, raised by the rates, for the purposes of deputations to London and generally of opposing this Bill. In two or three representative cases we know that that expenditure has been objected to before the Government auditor and disallowed—surcharged. But that association was really started, as far as we could tell, by the small property owners, but it was thought a convenient way of getting up an association and an effective opposition by using the name of the rating and assessing authorities.

4169. I suppose they were representatives of the various unions?—In a sense they were.

4170. You do not object to this association; you object to their spending public money, I presume?—Yes. It also points to this: that there are large conflicting interests, and that it is necessary that assessing authorities, whether assessment committees, or overseers, should be merely the authority to initiate the proceedings, the assessment, and so on, and that there should be a full right of appeal to a competent and impartial court against all assessments.

4171. I presume there is, probably, an association on the other side, that is, to promote the Bill, is there not?—Yes.

4172. You cannot object to one association if you approve of the other?—No, except in so far as it is making use of public money. The Machinery Users' Association, of course, have had charge of the Bill.

4173. They spend their own moneys?—They do.

4174. Have you any suggestions to make for the amendment of the law with respect to assessment committees, so as to place them on a more satisfactory footing?—I do not know that, as far as that is concerned, any great amendment is required. I would like to point this out—that the people who raise the rates and have the expenditure of them are not the people who pay them. One case I can give as an instance where there is no representation at all. The South-Eastern Railway in the parish of Merstham pays 73 per cent. of the rates, and they have no voice whatever in the expenditure of the money. That is only a typical case. In most unions the manufacturers, as far as they are concerned, get little or no representation. The rateable value of one of our metropolitan unions, for instance, is three-quarters of a million, and the assessment committee is composed of 12 gentlemen whose total rateable value is 500*l.* The composition of the Committee shows the necessity of some safeguard for large ratepayers.

Mr. G.  
Humphreys  
- Davies.

13 May '97

4175. Your argument rather tends to go against the principle of representation, because these men are elected as representatives?—That is so. I only want to lay before the Commission the practical effect of the law at present, so as to show how necessary it is—perhaps that is the only thing one can hope for—to have protection by way of appeal against an improper application of the law, and how great is the necessity for requiring by statute that the valuation lists and rates should be carefully and correctly made, and that the money should be spent in accordance with the law, and not improperly applied as we showed it was in the case of the association which is opposing the Bill.

4176. Have you any grievance against that particular union with respect to their mode of assessment?—Yes, they rate machinery.

Appeal successfully maintained by dock company against rating of portable cranes.

4177. Has any appeal been made on the rating of machinery in that union to the London Court of Quarter Sessions?—Yes. There was a dock case which has just been decided, and in which I was engaged. The appeal was forced upon the dock company. The assessment committee claimed there, to rate the whole of the portable cranes, among other things, running on lines round the dock, just the same as a locomotive; the court held that those cranes were tenant's chattels and were not rateable.

4178. So they got relief?—They got to that extent relief, but at a great cost; I believe that appeal will cost something like 10,000.

Companies should have some representation upon assessment committee.

4179. Have you any further proposal to make with respect to the amendment of the assessment committees, or the mode of assessing properties in the country; do you suggest any new plan of doing that?—I am afraid that is a task which is beyond my powers. In view of the legislation of recent years, I think it is desirable to keep to local areas. I think that, on the whole, economy is promoted by that. I think it is more economical to make the incidence of the rate, as far as possible, in a limited local area, because then there is some check upon the expenditure which you could not get if you raised the money by a general rate throughout the country. I think it is desirable that there should be some representation. It used to be the case that an owner of property had a vote which slightly increased, according to the value of the property, up to a certain extent. That is all done away with, and practically now the representation is in the hands of men, some of whom do not pay rates at all in many districts. I think that being so, it would be desirable to give public companies, such as gas companies and railway companies and others, representation in some way upon these bodies—something more than they have got now.

4180. If they had representation for their particular firm or company, would that not make a very unwieldy body?—I do not suggest that the whole of the shareholders should be there.

4181. Even supposing that each company should send only one representative, would that not rather tend to make an unwieldy body?—In effect I think that would hardly be so. The secretary of a railway company at the present time could not possibly attend, but railway companies all have agents to look after these matters, and if the agent in the case of a railway company, or a similar company, had some sort of right to get upon these bodies, it would promote publicity rather more than is now the case, and be some protection, I think.

Sunderland. Rating in respect of machinery is being adopted.

4182. Have you any other point you wish to raise?—Speaking of the attempts to rate machinery, I mentioned Sunderland, and I have got here a copy of a recent letter, dated 18th March 1897, from the clerk of the union, which shows that they are rating machinery at the present time, and increasing the gross estimated rental in consequence of it.\*

\* The following is a copy of the letter referred to:—  
Union Offices, 17, John Street, Sunderland,  
18th March 1897.

DEAR SIR,  
I am desired by the Assessment Committee to forward you the following copy of a resolution which was adopted by them at their meeting held on the 5th instant, viz.:

"That the several assistant overseers be requested in their next supplemental valuation lists to increase the gross estimated rental of all hereditaments containing machinery, by adding one-fourth to the present assessment, so as to make an allowance of 33 per cent., in order to arrive at their respective rateable values as appearing in the valuation lists."

The result sought by the Committee may be arrived at by simply adding one-fourth or 25 per cent. to the amount of the gross estimated rental as at present appearing in the valuation lists.

Any further information you may require I shall be glad to furnish.

Yours truly,  
(Signed) S. S. HOBSON,  
Clerk.

4183. I presume that the resolution contained in this letter includes machinery of all kinds, both fixed and movable?—Yes.

4184. It is intended to do so?—Yes; perhaps I may call your attention to Lord Esher's judgement in the Tyne Boiler Case and to the words of Lord Blackburn in the Lee Gas Case.\* In the first case Lord Esher points out that as far as the taking into consideration of any enhanced value, due to the presence of machinery, is concerned, the word "fixed" is not conclusive. Lord Blackburn in the Lee Gas Case gives some illustrations. Speaking of the difficulty of applying the word "fixed" as a test, he—I am now speaking of Lord Blackburn in the Lee case, which, I think, you will see, Lord Esher said in the Tyne Boiler Case was not over-ruled, so far as any question of law as to the rating of machinery was concerned—pointed out that stones forming dry stone walls, such as they have in Devonshire, for instance, would be rateable as part of the hereditament, but larger stones, even in a builder's yard, would not be rateable, they would be stock-in-trade, although afterwards going to be incorporated in a building. It is the intention which is one of the main things to consider. Then he points to the anchor of a ship, which has to be very firmly fixed in the soil to hold a ship in a gale, but it is not rateable, and nobody would contend that it is; on the other hand the anchor which holds the chain of a suspension bridge, is of course a part of the hereditament, and is rateable. He also illustrates a carpet nailed to the floor, and things like that.

4185. Do you know with respect to this resolution of Sunderland whether any action has been taken against it by the machinery owners?—At the present time none has been taken. We have only got, so far as the machinery users there are concerned, to await the course of events.

4186. It has not yet been brought into operation?—They have rated machinery before.

4187. Yes, but have they under this resolution?—At present I am not aware of anything being done. I am expecting that I shall be called to Sunderland shortly. There is a resolution passed by Poor Law Conferences in the year 1892 which, perhaps, I ought to call attention to.

4188. Which Poor Law Conferences; you see there are a great many throughout the country?—The North-western District comprising 42 unions, the North-Midland District comprising 45 unions, and the Yorkshire District, comprising 61 unions.

4189. Will you just read that resolution?—"That in the opinion of this Conference it is necessary that the law with regard to the rating of hereditaments containing machinery, which is at present in a most conflicting, unsatisfactory, and unsettled state, be amended without delay; that the Government be urged to take the matter up by introducing a Bill next session to clearly define the law on the subject; and that the members of this conference, in their respective unions, be requested to press upon their parliamentary representatives the desirability of immediate legislation on the subject."

4190. I suppose you are aware that it is the fact that at some of these conferences they do represent both agricultural and industrial unions?—Yes, I understand they are, as far as possible, representative bodies. I take it that the object of this resolution was the same as that of the Machinery Users' Association, namely, to get a clear definition of the law which rating authorities could understand, and ratepayers too.

4191. (Mr. Murray.) Do I understand that a company paying rates has no voting power at all?—Practically in the case of a railway company such as I have mentioned, that is so.

4192. Cannot it vote at the election of guardians?—The secretary might have one vote. I am not quite sure.

4193. Is not the company in exactly the same position as any other ratepayer?—Yes, I suppose they would be, but the difficulty is that they cannot get one of their officers elected; he would not be qualified for election.

4194. Election as a guardian, do you mean?—Yes.

4195. He could vote for the election of other guardians?—No, he could not; only the secretary, I take it, would have a vote, even if he did. I do not know where the vote would be.

Mr. G.  
Humphreys  
- Davies.

13 May '97

Fixed and movable machinery Rating in respect of Judgment in the Tyne Boiler Case (55 L.J.) and Lee Gas Case, (L.R., 1 Q.B.D. 241).

Sunderland. Rating in respect of machinery. No action yet taken by the machinery users there.

Poor Law Conferences. Their opposition to rating in respect of machinery.

Companies have no voting qualification.

Mr. G. Humphreys - Davies.

13 May '97

Rating in respect of, personality not possible.

Real property subject to hereditary burdens, or which has been bought and sold subject to burdens, should not be relieved of them.

Injustice has been caused to owners of real property by the increase of taxation imposed upon them and not upon other people.

Poor rate is raised for purposes both connected and unconnected with the relief of the poor.

4196. When you say that the South-Eastern Railway Company have no vote in the parish. I want to get exactly what you mean by that?—The South-Eastern Railway Company in that case are of course ratepayers. How they could vote I do not know; I know they do not vote, and I understand they cannot vote. The secretary would not be a ratepayer; his name might be on the rate book, even as secretary of the company, but that would not make him a ratepayer; it would be the company that would be the ratepayer.

4197. What is the nature of the injustice which you think would be done to other forms of property if they were rated as well as real property?—They are not rateable now, and it would be transferring the incidence of the rating from something, that has for now 400 years been liable to the rate, on to other shoulders. I think, apart from that question, it would be absolutely impossible to carry out any law which said that personal property was to be rated. It would be impossible in practice. I never heard any suggestion which would be practicable for that purpose, and it was so bad, even in 1840, that it caused the passing of that Act.

4198. It may not be practicable, but why do you think it is unjust?—I think as far as the injustice goes to the extent I pointed out just now, that real property has for 300 or 400 years been bought and sold subject to these charges, and, of course, if in the case of a railway company, for instance, half the rate were removed from this property, that would be increasing its value, for it would be putting that half of the rate into their pockets, and taking it out of somebody else's pocket.

4199. That would apply to almost any new tax that you can think of, would it not?—Yes, but not in quite the same way, because if I have bought my land subject to paying one-fourth or one-fifth, or whatever the proportion may be, to somebody else, and that tax is removed, as I say I am benefited. I get that fifth or fourth in my pocket as an increased value. If a new tax is put upon me for a new purpose altogether, if it is put upon my personal property, as the money has got to be raised somehow, then as long as everybody contributes on a fair basis there is no injustice; but when I have bought property subject to a charge, as an abstract question I do not see why that charge should be removed.

4200. Do you think that any injustice has been caused to the owners of real property in the last 50 years by the gradual increase of taxation which is imposed on them and not on other people?—Yes, to some extent perhaps there is. Whether there is redress to be obtained for that I do not know. Take, as an instance, the school board rate. In West Ham—I think Mr. Howard, who is here, will be able to give you some information about that—there are a large number of dwellings of the labouring class, the occupants of which are employed in London; the land is utilised for their dwellings. They come down and on an acre of land bring a large number of children. I have not got the figures, but I believe they have been got out, showing that the cost of educating those children alone is more than the total rates received out of those houses. The consequence is that those children are educated at the expense of the owners of the other property, such as manufacturers in the borough.

4201. Would you not say, then, that an injustice much of the same sort was created when the school board rate was first imposed?—That is a political question; I am afraid I cannot say that it is against public policy to educate the children. I would not like to go so far as that.

4202. I am not speaking of that, but mainly of the incidence of the tax. If it is an injustice to transfer from real property owners to other property owners, is it not an injustice of the same sort to impose fresh taxation on the owners of real property and not on other people?—Yes; of course it is a matter of argument whether the whole cost of education should not be paid out of the income tax perhaps, but there again I think it is to be remembered that much as is said against the school boards, you get more economy by having a local school board under some sort of local control than if the whole charge were thrown upon the tax-payers at large; at any rate I think that is so.

4203. What are the many purposes unconnected with the relief of the poor, the expenditure on which improves the letting value of real property?—Lighting the streets, scavenging, and so on.

4204. Is that part of the poor rate?—One gets in one's demand note for the poor rate a large number of

things, all of which go to make up a total rate of 4s. in the £, or whatever it may be.

4205. You did not mean poor rate literally, then, of course?—One terms it poor rate. I think it is legally called the poor rate, if I am not mistaken.

4206. (Sir John Hibbert.) There is a poor rate for poor law purposes, and a poor rate for other purposes, which are given in the Local Government Returns always separately?—It is always raised upon one rate and collected under one demand note; only the particulars are given on the demand note as to how the amount is made up—so much for poor, and so on. I have got the Government Return in my hand.

4207. (Mr. Murray.) Are you satisfied with the existing areas for union and assessment purposes?—Yes.

4208. You would not extend them?—No. The Local Government Board, where it is necessary; alter the arrangement of unions, and sometimes take parishes out of a union.

4209. You would not take the county, for instance, as the unit for area?—No, I do not think I should. Of course that is one step towards enlarging the area and perhaps transferring the incidence of local taxation. The agriculturist would then, perhaps, object to being brought in to share the burdens of the urban district.

4210. Why do you draw a distinction between the interest for rating purposes of agricultural property and manufacturing property?—It is merely the interest of transferring the burden from one shoulder to the other. In Chard, for instance, there is no doubt that the litigation in connection with the rating of machinery there arose, because the farmers, who are able to attend and do attend very excellently to their work on the boards of guardians, sought (as they thought, properly, no doubt) to rate machinery so as to increase the rateable value, and so spread the rate over a larger sum by putting a large part of the total rateable value on somebody else, namely, on the manufacturers.

4211. You do not object to the rating of manufacturing property, apart from the question of machinery, do you?—No. I think all real property should be rated upon the basis of the Act of William IV. as far as possible. I think the rating should be simplified. I think that exemptions should be done away with as far as possible. There are a good many exemptions of one sort and another, no doubt, that have arisen in the course of time, and I think they should be done away with.

4212. What class of exemption are you thinking of that should be abolished?—I do not mean churches and chapels, of course, and possibly not ragged schools; but canals are most of them rated at the agricultural value of the adjoining land, while a hospital is rateable as an ordinary house. That seems to me rather a striking illustration of unfairness. It is desirable to assist inter-communication between various parts of the country by canals, but it is equally, of course, desirable to have a hospital. I do not see why there should be a partial exemption in favour of the canal at the expense possibly of a hospital. There are other exemptions which have grown up, and I do not think it is desirable to extend those exemptions; indeed, I think it would be as well to do away with them.

4213. What do you mean in your memorandum by the "insecurity" of the decisions of the Superior Court, particularly that of the Court of Appeal?—It is a mistake, the word should be "uncertainty."

4214. Is the decision in the Tyne Boiler Case uncertain?—Yes; there is the greatest difficulty about it. I can only speak from my experience of contesting it and giving evidence before courts of quarter sessions. It is most difficult to clearly explain it. Very often one has to go before a court of quarter sessions, who, perhaps, have not had a rating appeal involving the assessment of a factory for years. It is a very technical subject, and it has to be threshed out, and it always seems to me that magistrates must find a great difficulty in grasping what the arguments on both sides mean; and where the words are as they are in the judgement of Lord Esher in the Tyne Boiler Case, that being a judgment of the Court of Appeal—it is without long study most difficult to appreciate that "taking into consideration" in the way that Lord Esher pointed out does not mean rating. As a matter of fact, I feel very strongly myself that he could not have meant the rating of machinery, because there are other words in the judgment which show that. Then there is the Act of 1840. It is very difficult for a lay court to understand the underlying principles where

Mr. G. Humphreys - Davies.

13 May '97

Areas for union and assessment purposes satisfactory as at present constituted. Objection to enlarging area.

Exemptions and partial exemptions in rating should be abolished.

Tyne Boiler Case. Decision uncertain and difficult to appreciate.

Mr. G.  
Humphreys  
-Davies.  
13 May '97

there have been so many judgments, and where the words of many of these judgments upon differing facts have been so uncertain. This Bill, we think, has that effect. It does not alter the law; it does not remove any obligation which is now upon the manufacturers, but it defines what that obligation is. If a machine which is a piece of personal property is to be rated in the factory, of course it is reasonable for the manufacturer who is rated for it to say, "Well, then, rate everything else of the same nature." As a matter of fact that is not done, and has never been attempted in recent years. To be consistent it must be one way or the other—either the machine which is a chattel in a factory must be treated in the same way as the machine which is a chattel in a dairy or a shop; or the other thing must be treated in the same way as the machine in a factory. As this judgement stands now, it is a judgement of the Court of Appeal, which is the highest court that any case on the subject has ever been to, and it is most difficult for, as I say, a court which perhaps never had a case of this sort before to deal with, to understand.

Valuation  
(Metropo-  
lis) Act.  
Schedule  
limiting  
deductions  
from gross  
value is  
unfair.

4215. What is your experience of the working of the Valuation (Metropolis) Act?—Under the Valuation (Metropolis) Act I have had a great many cases to deal with. The object of the Valuation (Metropolis) Act was not to alter the incidence of the rate; it was simply to alter the procedure. The objection that I have to that is that incidentally they did alter the incidence of the rate, and, as in the case of Oldham, by a local Act, unfairly. I object to the schedule in the Valuation (Metropolis) Act which limits the deductions from gross value, and which has a very unfair effect in many cases.

4216. By the fixing of a maximum deduction?—Yes. I have constantly cases before me in which the cost of repairs and renewals in a factory, or even a warehouse, is much more than is permitted under this Act. I see no object in the schedule. It, no doubt, crept in because it is the custom in many unions to allow a scale of deductions in respect of house property. It is a very good rule of thumb to take off from the ordinary (dwelling-house a fifth or a sixth; but when you get to factories you get such a great divergence; you may have a blast furnace where the cost of maintenance is, one may say, probably 200 per cent. of the rateable value, and you may have another works in which the cost of maintenance is very fairly what is put in this Act, 30 per cent.; and there are many classes of works and factories in between. Therefore it is impossible to lay down any scale. There is Class II in the schedule which includes "rateable hereditaments not included in any of the foregoing classes;" that is very vague, and it has been held not to include any sort of factory. In fact we have had very great difficulty sometimes in getting some kind of factories included in Class 8. There have been many disputes, for instance, as to printing works, whether they are factories or not. I think that schedule could be done away with without any harm resulting; it would not affect the deduction in the case of dwelling-houses, but it would assist justice in the case of properties such as I have mentioned.

4217. (Sir John Hibbert.) Are you aware, upon that question, that in every Assessment Bill which has been brought forward in the last 10 or 20 years there has been a similar schedule?—There has been none passed that I am aware of.

Oldham  
Improvement  
Act,  
1880, is  
unjust to  
mill-  
owners.

4218. I did not say passed, but brought in?—Yes. There are men who go for that. I know men who say that there should be no deduction at all. There is the case of Oldham. They have actually in an improvement Act, which no one had the least idea referred to rating at all—an Act of 260 sections—introduced one section of eight lines which says that after the passing of the Act "section 292 of the Act of 1865 shall be read and have effect as if the word 'gross' were inserted before the words 'annual rent' or 'value' wherever the last-mentioned words occur in the said section." That section was slipped in there, and the Act is called an Act "to alter and extend the Borough of Oldham." There is not a word to suggest that it affects rating. It was slipped in because of the decision in the case of *Dobbs v. Grand Junction Water Company*,\* I think it was, which said that "rateable value" meant something different to what the water companies contended. The effect is that a mill owner is assessed upon the gross value of his mill, which certainly would be, taking the Valuation (Metropolis) Act, two-thirds of its gross value, whereas the occupier of a cottage or a small villa, of course, is assessed on the gross value,

but then the net value would be far larger. The consequence is that all the millowners are suffering in Oldham very considerable injustice.

4219. Is it not the case in Oldham that the assessment committee allows a deduction of 33 per cent. to obtain the rateable value of the mills?—I have just referred to the Act which is in force there.

4220. Not for poor law purposes?—I am speaking of the borough rate now, the general district purposes rate.

4221. The Act does not affect the poor law purposes at all, nor the assessment committee?—As to the poor rate, I have had an appeal there, but I forget for the moment how it is.

4222. I know it is for certain what I have stated?—Thank you. Of course this is an Act promoted by the corporation. The same sort of thing affects the rateable value for the poor rate in the metropolis. The other objection to it is this: that if there is an error in the valuation made at the quinquennial period, nothing can be done to put it right—and that has been decided by the Court of Appeal—until the next quinquennial. It is true that supplemental lists and provisional lists, as they are called under sections 46 and 47, can be made, but all they can do, according to the judgment, is to add to or deduct from the value on that previous 5th of April, according to any increase or diminution in the value of the property in that period. So, as I say, it comes to this, that supposing a house is under-assessed to the extent of 50 per cent., or if it is over-assessed, it goes for five years. I do not think that was the intention of the Act, but that is the effect of it, as it has been decided. I would suggest that an alteration is required, so that what I take to have been the object of the Act may be carried out, namely, that there should be a re-assessment of the whole union, at least every five years, but that—as it is outside the metropolis—it should be open to a ratepayer to object to the assessment of himself or anybody else at any time, if it be wrong, and to show that it be wrong.

4223. (Mr. Murray.) Subject to those two criticisms, do you think that the Valuation (Metropolis) Act could be extended to the country at large?—Yes; so far as the main object of the Act goes, which provides for obtaining an entire re-valuation of the union every five years, I think it would be desirable.

4224. And also it includes a uniform valuation for all purposes within the area, does it not?—Yes, the gross and the rateable values in the metropolis are the same for Imperial taxation and for local taxation.

4225. For all local taxation?—Yes, I think so.

4226. Would that not be a good method, do you think, to introduce for the country at large?—Yes. I find these local Acts, such as the Oldham one, inconvenient when I go into a place to value property for assessment purposes. Of course in an important case a company or a manufacturer has to employ outside assistance as a rule; if I am employed, I have first of all to find out what are all the local Acts, and that is a terrible job sometimes. They may be out of print, and very often cannot be obtained; and only recently in Widnes we found at the last moment that there was a local Act which had a very serious effect upon our right of appeal, but we did just manage to get our notice of appeal in within the right time. I think it is most important to have one uniform system of assessment throughout the country, both as to the basis of assessment, the making of the valuation, the making of the rate, and the levying of the rate; so that there shall be no doubt as to what the meaning of the law is, and what one has got to do to get relief. In the present session I was asked to give evidence in respect of the Bolton Corporation Bill,\* which sought to alter the mode of assessment; the clauses have been withdrawn now, but if they had been retained it would have added to the difficulty. There are other Bills in the present session of Parliament, and they are increasing in frequency, in which some attempt or another is made to alter either the basis of the rate, as in the case of Oldham, or the mode of levying it, and the making of the valuation list.

4227. (Sir Edward Hamilton.) Are we to understand you as claiming that all machinery should be exempted from rating?—No, that has never been claimed as far as I know. All that is asked is that machinery which, as the Bill says, it is reasonable to suppose would be provided by the tenant—in other words, machinery which remains a chattel—and like other personal property should not be rated; but as to things which are really part of the hereditament, it is not

often  
inconve-  
nient.

Uniformity  
throughout  
the coun-  
try in basis  
and mode  
of valua-  
tion and  
the making  
and levying  
of the  
rate  
desirable.

Tenant  
should not  
be rated in  
respect of  
machinery  
which is a  
chattel.

\* L.R., 9 App. Cas. 49.

\* The Bolton Tramways and Improvement Bill received the Royal Assent on 15th July 1897 (60 & 61 Vict. c. 134.).

Mr. G. Humphreys Davies.

13 May '97

asked that they should be exempted; they are admitted to have been always rateable and there is no question about them.

4228. What rather misled me was that this case which is so often quoted, the judgement of Lord Esher, had reference to a boiler; it is called the Tyne Boiler Case, is it not?—Yes.

4229. But I understand that boilers, as a rule, have been included?—Yes; I think it is merely a short way of referring to the case to call it the Tyne Boiler Case. There was even a grindstone in that case. There is no claim to have a thing like a boiler exempted, and even I myself have never claimed exemption for a steam-hammer such as Armstrong's; there I had to deal with a 30-ton steam-hammer; I am never so unreasonable as to suggest that that is a tenant's chattel.

Bill to amend the law relating to hereditaments containing machinery. Object is to get a definition of what machinery should be rated.

4230. What you want then is a clear definition of what machinery should be rated, and what machinery should not be rated?—Yes.

4231. And that was the object, I suppose, of the Bill which has been more than once introduced into the House of Commons?—Yes, that is the sole object of it. It has been stated that the object of that Bill was to get a factory valued as if it were some other sort of property; there is no desire of that sort, and that proviso which has been inserted in all recent Bills was put in to show that. We are quite ready to have a factory valued at its full letting value for the purposes for which it is best suited. Of course, some factories like Cammell's, at Dronfield near Sheffield, become valueless as factories when all the machinery is pulled out of them, and the building remains, not worth while pulling down—the buildings are remaining there at Dronfield. Of course, in that case the buildings have no rateable value; but as long as the machinery was in them and the works were carried on, they had some rateable value, and there would be no question among manufacturers, as far as I know, of their being rated at that value. That is, as I understand Lord Esher's judgement, what he means by "taking into consideration" the machinery.

4232. As a matter of fact, so far as your personal knowledge goes, have the assessment committees of recent years, since that judgement, brought more machinery into the valuation than they did previously?—Yes.

4233. To any great extent?—Yes, they have done it to a very large extent, in the unions where they have carried it out.

4234. Would that mean in many places, or only in a certain number of cases?—I should think that, possibly, it may be said to be so in 10 per cent. of the unions, but that hardly gives you a fair idea. It is very difficult to put into figures what the extent has been, because of the number of unions which have no concern in the question, and do not trouble about it. For instance, unions which are agricultural will only have a railway, and there is no question about it there, for they have not got to the extent of saying that the steam-engine and coaches are rateable—they are always allowed. They have got practically to that extent in one union where they have attempted to rate cranes which run about on the same class of rails round the docks. But there are many places—and, of course, a very large proportion of the unions—whose only concern with machinery is the locomotive on the railway. As I said earlier, it is the mixed unions that have done it, and I should say, you may take it that there are 10 per cent. out of the whole, which up to the present time, in one form or another, rate machinery under this judgment by putting a percentage upon the cost.

4235. (Sir John Hibbert.) That would be 60 out of 600 unions?—Yes; I do not think it would be more than that at the present time. You see all Lancashire may practically be taken out of it, a great deal of the midlands may be taken out of it; and so, I think, I have given you a very liberal estimate when I say 10 per cent.

4236. (Sir Edward Hamilton.) I see that you say in your memorandum that, in your opinion, the contributions from the Imperial Exchequer tend to extravagant administration; do you make that statement from any personal knowledge, or is it merely from a theoretical point of view?—I have never had any personal experience of practical local government. That is only a pious opinion, formed from my own observation, that where people get a large sum of money out of somebody else's pocket, they are not very careful in spending it. Perhaps I ought not to say that, having regard to the interests of manufacturers, because, no doubt, if there

Rating in respect of machinery since the Tyne Boiler Case. How far the practice has been extended.

Imperial contributions tend to extravagant administration.

Mr. G. Humphreys Davies.

13 May '97

Uniform system of valuation desirable.

were a large subvention of the rates in all the unions in the country, the rates would be reduced and transferred to some other shoulders. But I am only giving you an impartial opinion, as far as I can, upon the subject.

4237. I think you said that you were in favour of one system of valuation all over the country?—Yes.

4238. Have you in your mind a system of valuation to be undertaken by the Government, such as exists in Ireland?—No. I am inclined to think that with a diversified country like England you want a combination of local and special knowledge. There is often much local information I find, when I go down as a valuer into a place, that I have got to learn on the subject; and I doubt whether the employment of a Government valuer therefore would tend to be advantageous. As long as there is a revaluation frequently—every five years or so—and it is fairly carried out, I am not sure that the present system is not the best. You see in many of the unions the overseers make the valuations, and there is no difficulty about it. They make them very economically and very fairly. They have got nothing but house property, and, if I own a house, they can find out what my next-door neighbour is paying as rent, and what the people down the street are paying; and so they can fairly assess me, and they do. As far as that is concerned, I do not think that there need be, as long as it is, as I say, honestly done, and carefully done, much question. The difficulty arises when you get to special classes of property like factories, railways, and docks; and I am afraid that the Government valuer would hardly do there, with all his skill and intelligence.

4239. It is in respect of those special kinds of property that the want of uniformity comes in then mostly?—I am afraid you cannot have any more uniformity than a general direction that property shall be assessed upon the annual letting value, and that the property to be assessed is real property and not personal property. I say that because with the great diversity of factories that there are—and it is extraordinary how varied is the class of things one has to deal with—I do not think it is possible to lay down any more hard-and-fast line than that. I think—and this is what one of the judges has said, I remember—that you must leave it to the common sense of the parties interested and of their advisers.

4240. (Mr. Wharton.) With regard to the rating of machinery, as I take it, your opinion is that machinery which one might call, and which one probably would call a landlord's fixture should continue to be rated?—Yes.

Tenants' machinery should not be subject to rating.

4241. But that other machinery, which should be mere movable machinery which the tenant would bring in, should be exempt from rating?—Yes.

4242. That I think sums up pretty well what your suggestion is as regards the rating of machinery?—Yes, and I think it is the law as it really stands now.

4243. A question or two with regard to the rating of railways; you probably are aware of the different systems in the three countries, England, Scotland, and Ireland?—Yes.

Railways Rating of English, Scottish, and Irish systems. Which is the best system?

4244. In England the railways are assessed by the local rating authority according to the best of their ability in each individual rateable area, without regard to the total value of the line; in Scotland the whole line is rated, and then divided according to the lineal mileage; and in Ireland the whole line is rated and divided according to train mileage?—Yes, I am aware of that.

4245. Which of the three systems do you think is the best?—I have had no personal experience in Ireland or in Scotland, but as far as I am able to judge in theory, I think the English system is best. I have had a great deal of experience of it, and I think it leads to the fairest result. Next to that, I think the train mileage system would come in.

4246. Do you think the train mileage system is better than the lineal mileage system?—Yes. In a case that has just been concluded, a very important case affecting the rating of a parish in London, it was a question whether it should be 19,000*l.* rateable value for about a mile of line or 9,000*l.*; the arbitrator has decided that it is somewhere between. If on that railway the whole line were apportioned according to the mileage—

4247. Lineal mileage do you mean?—Yes; you would first have to apportion between single and double line, I take it; then the parishes on some lines which are hardly worth keeping up—I know a piece of line on that very railway which is in that state and which

Mr. G.  
Humphreys  
-Davies.  
13 May '97

certainly is not worth more than 100*l.* a mile rateable value at the outside—would get a share of the mile of line that I am now speaking of in London which is worth 20,000*l.* a mile. Therefore, you would have this result, that where the money was wanted, presumably, that is, in the densely populated urban district, it would not be paid, but it would be transferred to a local district where it is not wanted and where, as far as I can see, there is no reason it should be paid.

4248. That is the objection to the lineal mileage?—That is one of the objections.

4249. That objection would not obtain in the case of the train mileage system?—Not to the same extent, because although the train mileage system is not a gauge of the true receipts in the parish, it is a better test.

4250. It is a fairer division?—Yes.

Machinery.  
Rating in  
respect of  
in Scot-  
land.

4251. Do you know whether there are many appeals in Scotland against the rating of railways on the Scotch system?—I should not like to say, as I have had no experience in Scotland at all. I might say this, if I may, that there has been a judgement of the Court of Session in Scotland on the question of the rating of machinery, which is entirely in favour of the exemption of machinery from rating.\*

4252. (Mr. Smith.) I rather gather that although the employers of machinery may have suffered occasionally in rural districts and others, they have not suffered materially from the judgement of Lord Esher in urban districts; is that so?—They have suffered more in mixed districts, I think.

4253. Where the manufacturer was the exception, and the small property owner, or the agriculturist, the rule?—Yes. I think that is so. I should like to say this: I think it was the report of the Select Committee of 1887 which directed or suggested that it was desirable that until the Bill was passed or some fresh Act passed there should be no alteration in the basis of assessment; under that I know many unions are simply holding their hands.

4254. That comes to my point, that up to the present time you have not suffered very extensively from Lord Esher's judgement?—No; in some districts, as I say, Lancashire practically not at all, except in Chorlton Union.

4255. Where manufacturing interests are almost supreme, as they are in our large towns, you have not suffered materially?—In some cases in London we have suffered a great deal.

4256. I am coming to London in a moment; take the Midlands, you have not suffered there?—In many places around Birmingham we have, but not in Nottingham.

4257. Has not what is known as the Midland system, to rate upon the horse-power, been in existence for years?—That is a rule in the Birmingham parish alone, but the Birmingham parish is only a small parish as far as area is concerned.

4258. You have not suffered in Birmingham?—Not in Birmingham parish, but then the bulk of the factories which are in what we term Birmingham are really outside the Birmingham parish.

4259. They would be in Aston?—Yes.

4260. Have you suffered in Aston? There was a re-valuation of Aston, as I happen to know, three years ago; have you suffered materially there?—They treated us with great courtesy. We have had a lot of appeals there, and a great many cases were settled without appeal.

4261. I do not want the details; I want to know generally whether you find you are much heavier assessed in Aston than you are in Birmingham in consequence of Lord Esher's judgement?—We are assessed there more than we should have been had it not been for Lord Esher's judgment.

4262. How much more?—I should say that the result of the Chard case is that instead of paying an increase of, I think it was, 250 per cent. in some cases at Chard, we are not paying, perhaps, 25 per cent. more than we think we ought to pay.

4263. To a great extent your fears are for the future?—There are many places now in which we have great trouble, such as those I have mentioned, Gateshead, Sunderland, and so on.

4264. I am afraid your clients, as a rule, do not take much part in local government, do they?—That is so,

\* North British Railway Company v. the Assessor of Railways and Canals. 26th September 1887. 25 S.L.R. 4.

no doubt; manufacturers are very much occupied with their own business, and they cannot give their own time to going on boards of guardians; some of them do, but they are rare cases.

4265. Have you much complaint to make, with the exception of Oldham, against corporations with regard to their rating of machinery?—The rating for the district rate follows the poor law valuation.

4266. Not always?—I think so, under the Public Health Act.

4267. There are a great number of corporations with improvement Acts where the valuation may be distinct and separate?—Yes. I cannot give you any instance here, but although they have got that power, they do not use it.

4268. Some of them do not use it?—I do not remember having any case at the moment.

4269. It was used in Birmingham until I got an Act introduced to stop it. There was a separate valuation?—I beg your pardon; it occurs to me that there is the same thing at Oldham and at some other place I was trying to think of. Two or three years ago I had a question down there, and I was greatly puzzled by finding that I had got two valuations to deal with—two rateable valuations and two gross valuations, both inconsistent.

4270. Of course that was absurd. Your objection to a General Valuation Act is mainly, I think, that you think there should be no maximum allowance placed on manufacturers?—Yes, I think it should be according to the circumstances of each case.

4271. That is a detail, is it not; it is not a sufficient reason for objecting to a General Valuation Act?—No, and I did not intend to say that.

4272. It obviously would be a good thing, would it not, to have a General Valuation Act for the whole country?—Yes; I thought I conveyed that rather.

4273. You do not object to uniformity?—No; I think it is a good thing.

4274. One basis?—Yes.

4275. What you do object to is in the case of the particular interest which you represent, that the maximum allowance is too low?—Yes, in the case of the metropolis; there is no maximum allowance outside.

4276. There is no General Valuation Act unfortunately. Have you any experience yourself of local government?—No.

4277. Then I want to know why you lay such stress in your memorandum upon the point that you think the present system of Government audit of union accounts should be maintained and, if possible, made more strict and extended to municipal accounts; is that based on experience, or is it a pious opinion?—It is based on experience. For instance, the experience of the cases I have mentioned where the rates were used to oppose this Bill.

4278. Yes, I understand that; but what I want to point out to you is that the case where the rates were used to oppose your Bill were the cases of parochial or union authorities who were subject to Government audit?—Yes.

4279. How do you propose to remedy that, by subjecting the municipal accounts to Government audit? You see my point?—Yes.

4280. The people who opposed you, as you think improperly out of the public funds, were people who were subject to the Government audit?—Yes.

4281. You build upon that a theory that the Government audit should be extended to municipal accounts and municipal authorities; but I do not see how you propose to remedy it?—I think it would be much more desirable to have a Government auditor to come down to audit the accounts of a municipality.

4282. You are not answering my question. You have told me that you had no experience, but you base your opinion upon the illustration that you give of a union which you think improperly opposed your Bill out of public funds; but they, as I have pointed out, were subject to Government audit; upon that experience you say that the Government audit should be extended to municipal accounts; I cannot follow the reasoning, and I want you to apply yourself to that point?—It only seems to me that there is an equal necessity for having the same sort of audit.

4283. It did not prevent the misappropriation in the one case, how should it in the other?—It did, because they were surcharged.

Mr. G.  
Humphreys  
-Davies.

Mr. G.  
Humphreys  
Davies.  
13 May '97

4284. Were they surcharged?—Yes; in another case with respect to a railway company, objection was taken to the payment of 800*l.*; they paid it in spite of the objection, and the only remedy was an objection before the Government auditor, and he disallowed it and surcharged.

4285. I suppose it was remitted afterwards?—In that case it was.

4286. You form your opinion, then, with regard to the municipal audit, from that solitary experience?—Yes, but it is hardly solitary.

4287. Have you any complaint to make of improper conduct on the part of municipal authorities?—No.

4288. You must know that the extension of a Government audit to municipal accounts is opening a very large question, an enormous question, is it not?—I do not know that it is.

4289. Every local Act would have to be known by the auditor, and there are often 20 or 30 affecting a single borough?—That is what I have been suggesting.

4290. This is a question which I must ask you: It is not merely that the auditor would have to be a judge of arithmetical accuracy, but he would have almost to be a judge of the High Court to decide the various legal questions connected with boroughs; have you thought of that?—I take it that the auditor who is now employed has that, or ought to have, that knowledge.

4291. Only acting under general statutes?—I mean the existing auditors of the municipal authorities.

4292. You evidently do not know anything about it, because they are elected by the burgesses and they have no power of surcharge; do you know that?—Yes, and that is what I think objectionable. I know of cases in which a most improper man has been the auditor of very large funds in one parish.

4293. Are you speaking of a parish or a borough?—I am speaking of a parish.

4294. Then that does not appeal to me at all?—He is the auditor in that case. He is elected, or was elected—I do not know what it is now—in the usual way by the ratepayers, and I should say that the audit in that case was a mere farce.

4295. Very likely; but I suppose there was a Government audit as well?—In that case I think not.

4296. What were the circumstances?—I know nothing about the circumstances. It struck me that there was practically no check. It seems to me that as a general question it is much more satisfactory to have a trained auditor like a Government auditor, and an absolutely impartial man, than to take the chances of an election in a borough of some one who may or may not be a good man, and who in all probability will not have the special knowledge.

4297. Do you not know that in large boroughs almost every department has its auditor, who is a public accountant?—Yes, I know that that is the case.

4298. You do not think there is any objection to that, do you?—On the question of symmetry I think it would be much better to extend the audit which is now a Government audit, so far as the poor law is concerned, to the municipal accounts.

4299. You think a poor law auditor would be quite competent to deal with all the questions that might arise in a borough?—I think he would be equally competent with those who now do the work, and more competent than some of them. I cannot put it higher than that.

4300. Would you give him power of surcharge?—If he found any improper payment I think I would.

4301. You know the present people have no power of surcharge?—Yes; it seems to me desirable in the interests of the ratepayers that if an improper payment is found, or one that is thought to be improper, there should be some means of surcharging.

4302. Are you not aware that there is a means?—I do not pretend to know.

4303. Is it not the fact that any ratepayer can take any payment by a municipality into the Queen's Bench and have it challenged?—Yes, but that is a very expensive process.

4304. Have you any experience of that?—No.

4305. Then I really take it you have very little experience on this particular point which I am examining you upon?—Very little.

4306. I was obliged to ask you the question because it is in your memorandum. I suppose the case of the metropolitan union you have referred to is very exceptional, is it not?—It is an extreme case, but to a less extent it exists in many other unions.

4307. Perhaps it has a little shaken your faith in representative government?—They have a rateable value of something like three-quarters of a million and an expenditure of over a quarter of a million annually. I should prefer myself to have a body with a different constitution to spend my money if I was concerned in the spending of so large a sum as that.

4308. A good deal of the difficulty arises, does it not, from the neglect of the large ratepayers to take an interest in local affairs?—I hardly think it is so there. Large ratepayers are in the hands entirely of the voters. They may have votes themselves, but the people who have the power to elect are the people who occupy the artisans' dwellings as a rule, and they are under the control, to a very great extent, of the owners of small property.

4309. In some places?—Yes, in some places; in country districts that does not apply.

4310. It does not apply to many of our large towns, where we find some of our best people taking part in local government?—That is so; I do not wish to be thought to be putting an extreme or unfair case from improper motives. I am bound to say that on many assessment committees that I have to meet, I find most excellent men of high standing who do take great care in the transaction of their business and evidently desire to do what is right.

4311. (Mr. Clave.) May I ask whether the occupiers of premises which are fitted with machinery had any cause to complain of the method of assessment prior to the decision in the Tyne boiler case in 1886?—I do not think they had. But I would go a little further back than that. I think you may take it that the trouble began with the Bishopwearmouth case.

4312. I mean that you yourself would be satisfied with the position which existed prior to the decision in that case?—Yes.

4313. The effect of that case is, that in the case of the occupiers of certain classes of premises, their assessment has been increased, because there has been included in the estimate of valuation certain personal chattels which were excluded before?—Yes.

4314. And the effect of that has been, has it not, that as a larger rateable value has been placed upon the owners of mills, and such like, it has relieved to a certain extent the owners of other property in the same rating district?—No doubt.

4315. And probably that has accounted for the opposition of the Association of Small Property Owners to the Bill promoted to place the manufacturer back into the position in which he was prior to 1886?—Yes. I should like, if I may, to add one thing that I think I have omitted; that is that manufacturers as a class feel that they have not only got to contend with the burden which has been transferred to their shoulders improperly, but that the men who to a great extent have done that, escape their fair share of taxation. It is felt very strongly that to give—as in West Ham, I think it is, to take one case, out of many other places—a reduction in the rate itself of sometimes one-third to the owner of compounding property, is a most excessive allowance for any risk that he undertakes and any trouble that he has.

4316. Do I understand that you wish to point out, then, that the practical result of the present system of local government in certain exceptional areas is that those persons who have the power of fixing the assessment of the large ratepayers are the people who would be most interested in increasing their assessable value?—Yes, I do not want to put it offensively, but the men who own the small properties have a very large interest in the question, because they in effect as owners pay the rates. Therefore, if they can transfer a part of the burden, it goes directly into their pockets. Owning small property is as much a business as any other business, and many men do nothing else, and it is a part of their business to get on the assessment committee for the purpose in the first place of looking after their own assessments with one object, and in the second place of looking after the assessments of other people with another object. That being so, they further get the great advantage, that whereas in the case of West Ham

a manufacturer pays the full rate in the £—10s. or 9s. or whatever it may be—if it is 9s. in the £, the owner of small property contracts to pay the rates, and only pays 6s. in the £; he does not contract if he knows his property is going to be empty. It is a voluntary contract so far as he is concerned, and if he has got a house that is always empty he does not undertake to pay the rates.

4317. Quite so; he does not compound in any case unless he thinks it may pay him?—That is so.

4318. That is somewhat following the principles of human nature, is it not?—Yes. Of course it is quite right that if a man relieves the rating authorities of some of the trouble and expense of collecting the rates and some of the risk of losing the money, he should be compensated for it; but what is said is that where he has got 30 per cent. as in many places—and the law now permits 30 per cent. to be the maximum, I think—he is getting far too large an allowance.

4319. The owner of small property, who is what we would call a compound property owner, has no representation or vote for representation on the local authority as an owner of property?—Yes; in the first place he would be an occupier himself—he would be a ratepayer himself.

4320. I will assume that he is not an occupier. He has no representation or vote as an owner, has he?—No, but he has —

4321. You may take it from me that he has not?—He has a right of appeal in London under the Valuation (Metropolis) Act.

4322. As a matter of fact no one who is not an occupier has a vote for a municipal or local governing body; then if he wants to be elected on the local authority he must appeal to the suffrages of the ratepayers?—Yes.

4323. Who elect him?—Yes.

4324. And if he is successful in inducing the majority of the ratepayers in any particular ward to vote for him he gets returned?—Yes.

4325. In that way he gets this power which you say he sometimes exercises in his own interest?—Yes.

4326. Supposing that a railway company—we will take the case of the South Eastern Railway Company in the parish of Merstham, where I think you said they pay about 70 or 80 per cent. of the rates —?—Yes.

4327. Why should not the officials of that railway company also come forward as candidates to sit on that parish council?—In the first place, of course, all the time of the railway employé's is fully occupied in looking after the business of the company.

4328. Are not many of the people inhabiting the parish of Merstham employed by the railway company?—No; there is only a small station there, employing perhaps altogether not more than five men, if so many, and there would be a signalman on the line in the parish.

4329. How would you propose that the railway company should have a representation, we will say, on that particular parish council? Should they elect themselves?—That is a difficult question which I have not come prepared to suggest an answer to, I am sorry to say. Of course, as compared with a small property owner, it is not their business as it is in the same sense the small property owner's business to be on the council. What they do in the way of looking after rating matters is that all of them employ an agent, and it seems to me that if that agent could in certain cases be given something more than the ordinary right of a ratepayer, it would be desirable where they pay such a large proportion of the rates.

4330. We will just follow that out for a moment. Take the case of Liverpool; by how many would you propose to increase the Liverpool City Council to represent the different interests of railway companies, manufacturers, and so on, who have no vote in their corporate capacity?—Of course, I have not thought out the details of this question, and I had not a case like Liverpool in my mind. I was thinking rather of parishes such as Merstham. I do not think that the railways pay anything like the proportion in Liverpool that they do there.

4331. Supposing that you conceded to a railway company the right of nominating somebody to represent them on the governing body of the district, why, in principle, should you not concede that to every

individual who employs labour and owns assessable property, and yet has not a vote in that district?—I think that there is no difference between a railway company and a gas or water company, or an electric light company. It very often happens that valuable property in a parish is occupied by a railway company.

4332. Why should not a manufacturer who employs 5,000 men and pays 2,000l. or 3,000l. a year in rates have equally a right to nominate someone on the local authority, if a railway has?—I am afraid theoretically at any rate the manufacturer is not in the same position, except it be the case of a limited company, because in an ordinary case he is the ratepayer and occupier, and has a right to go and be elected if he can get elected.

4333. Take the case you quoted of Cammell, Wilson, & Co., at Dronfield; the partners of that firm possibly might have had a vote each for the local authority for Dronfield?—Yes.

4334. The whole place practically depended upon their business?—Yes, it did.

4335. But then they did not nominate the governing authority for the district?—No.

4336. Why should they not have practically nominated the whole governing authority for that district if you are going to concede the right to a railway company to nominate representatives on each of the local authorities through which the railway passes?—Only because there is this difference, that in Cammell's case, whether it is Sheffield or Dronfield, they are ratepayers and on the rate-book, and they have a right to be elected as guardians if they can get the suffrages, whereas in the case of the railway company or a similar company there is no one who can get elected, as I understand.

4337. The stationmaster is on the rate-book?—Yes, as an ordinary ratepayer if he has got a house, but he would not be in respect to the station. He is not rated in respect to the station; the company is rated in respect to the station, and he very likely occupies two rooms there.

4338. But he is entitled to vote?—No, not unless he is rated. If he lives outside the station he would be entitled to a vote, but then he would have to attend to his duties, and he would not have the time to give to these matters, whereas it is the business of the rating agent of the South Eastern Company, for instance, to look into these matters. I did not desire to lay any great stress on it, I only wished to point out what was clear, the somewhat anomalous fact that there is a large contribution to the rates practically without representation.

4339. You said, I think, that the decision of Lord Esher in the Tyne Boiler Case had not been universally followed by unions where premises containing machinery existed?—What I want to convey is that the same view of that decision has not been taken all round.

4340. The effect of that is that a manufacturer in a union where they have followed out very strictly that case may be seriously prejudiced in competition with the manufacturer in another parish where they do not do it?—Yes.

4341. So whether it is right to assess machinery or not, it is clearly desirable in the interests of trade that there should be a consistent system for assessing premises containing machinery?—Yes, and not that you should go across the road and find a man contributing, perhaps, one third less or 50 per cent. less to the rates than, say, another man occupying precisely similar property on this side of the road.

4342. Am I to take this to be your opinion, that the law, as it at present exists, has a tendency to induce the assessing authority in a local area which largely depends upon manufacturing business not to include machinery in the assessment in order to give their manufacturers the advantage over those areas where it is not included?—No, I do not think they do it with that object. In Lancashire, for instance, their view is, I believe, that the other view is not correct, that the meaning of Lord Esher's judgement is not what the people, for instance, in the Tynemouth Union say, and they think that they are carrying out the law. On the other hand, the other people say no, we are carrying out the law; and that Lord Esher's judgement meant that we were to put 5 per cent. on the value of the machinery in the place, and that is "taking it into consideration."

Rate levied  
on gross  
value  
instead of  
net prejudi-  
cial to manufac-  
turers.  
The case  
of Oldham.

Assess-  
ment com-  
mittee  
should  
represent  
all classes  
of rate-  
payers.  
Borough  
council of  
corporation  
might  
nominate  
overseers  
and a  
certain  
portion of  
assessment  
committee.  
How far  
practicable.  
The Bill of  
Borough of  
Bolton.\*

4343. In the Oldham case that you complain of, I think you said that they obtained an Act that all rates should be levied on the gross instead of on the net?—The Act I was then alluding to is an Act of the Corporation, and has reference to the district rate, the borough rate, but not to the poor rate.

4344. As regards a rate which has to be levied by the Corporation, they levy it on the gross instead of on the net?—Yes.

4345. How does that prejudice the manufacturer?—In this way—if his gross value is 100 per cent., as it may be said to be in some cases, more than the rateable value, that is to say, if his premises are worth 100*l.* a year and cost 50*l.* a year to repair and renew; and there is somebody else contributing to the same rate who has premises which, in proportion have a higher net rateable value, because the expense of repairing and renewing them will only be 25 per cent., then to that extent he is prejudiced.

4346. I see; the effect is that the amount you allow as a deduction from the gross, to arrive at the net annual value in the case of the well-built dwelling-house, would be less per cent. than the amount which you would allow for the maintenance of a manufactory?—Yes.

4347. And in that way, I suppose, you would conclude that the manufacturer is prejudiced by paying on the gross instead of on the net?—Yes, he is considerably.

4348. On the other hand the town as a whole benefits by the larger share it gets in the local taxation account by the increased rateable value?—I am not qualified to express any decided opinion on that; I do not quite know.

4349. It is possible that views in that direction might have had something to do with the passing of the Act?—I take it that the value for contributions would be the rateable value under the poor law valuation.

4350. If the amounts to be paid you are largely in excess of the amounts you have to pay, and both are based upon rateable value, it is obviously in the interest of the locality to have the rateable value put as high as possible instead of as low as possible?—Yes, of course.

4351. I understand you to say as regards the overseers that you do not approve of the present system of appointing overseers?—I do not think I said that.

4352. You say in your memorandum that the assessment committees "should be made more representative of all classes of ratepayers, and not be given, in any sense, the powers of a court of justice" P.—Yes.

4353. Would it not be carrying out the principles you advocate if the power to nominate the overseers, and also the power, we will say, to nominate a certain portion of the assessment committee, were given in the case of a corporation to the borough council?—That is rather a big question and one that would depend upon the circumstances a good deal. Take, for instance, the Bolton Bill,\* which is now before the House; they have withdrawn the clauses there, but, I think, we would have been able to show that the application of the principle in that case would create inequality—the very inequality that I pointed to just now of one factory on the opposite side of the road paying a rate different to that paid by a similar factory on this side of the road. It is rather a complicated question, but there the municipality of Bolton sought in effect to get control of the assessing of the union. It was felt by those outside the borough for reasons which I can hardly go into shortly, that that would create injustice.

4354. If anyone has to nominate a body to make the assessment, would it not be better that it should be nominated by the only really representative body there is in the town, namely, the city council, rather than by the justices?—That is to say, as to the overseers alone?

4355. Yes?—For the parish, as long as they are proper people, I do not think it makes very much difference who they are or who nominates the overseers, as long as the ratepayer has got first of all the assessment committee to go to by way of objection (which is as good a body as can be found), and then a free right of appeal to an impartial court.

4356. To go to another matter, supposing you have a building at the corner of two streets which is called a

\* The Bolton Tramways and Improvement Bill received the Royal Assent on 15th July 1897 (60 & 61 Vict. c. 134).

public-house, how would you assess it?—As a means of arriving at its value?

4357. Yes?—That is a property that has aroused very considerable attention lately, particularly in view of the high values that are given for public-houses. I look upon a public-house as in a sense a monopoly, because it has got a licence to use a piece of land in a way that the man next door cannot use his piece of land, and I fail to see, that being the case, why it should not be treated in the same way as a railway company is treated for the monopoly it has got of using the soil.

4358. Is a public-house of more value than a shop occupying exactly the same area?—I think so.

4359. Why?—For the reason I put just now; because a monopoly is granted to the owner and occupier of that particular piece of soil to do something that the man next door cannot do.

4360. Then as a matter of fact the valuation is increased because of the particular trade that can be carried on in that particular building?—In that particular case, yes; but it is a monopoly.

4361. The licence belongs to the occupier of the house?—It belongs, I think, to the owner of the freehold.

4362. Is not the licence renewed every year by the justices to the occupier of the house?—Yes.

4363. Then the licence is a personal matter attaching to the occupier?—So far as that is concerned, yes.

4364. If that occupier misbehaves himself as the licensee he loses the licence?—Personally, yes.

4365. And if he loses that licence that house then ceases to be a public-house?—No, I think not; in fact in practice it is very seldom the case because the brewers, and most of the brewers now have got the houses—

4366. Pardon me, I will not take the case of a brewer where they transfer before they get a conviction; I will take the case of Brown who is the owner, if you like, and occupier?—I happen to be the owner of a public-house at the present time; indeed, I have bought for the South Eastern Railway Company several for the purpose of widening their line, so I have been through it.

4367. I will take the case where the licensee is the *bona fide* occupier of the house, and not merely the manager of a brewery company; he does something which is an offence against the licensing laws, and he loses his licence; if he loses his licence that house is shut up as a public-house, is it not?—He is convicted, and then when the time comes round for renewing the licence the police object.

4368. We will just assume for the moment that the objection is strong enough to induce the licensing body to refuse to renew the licence; the licence having gone, what is the value of the public-house except for the purposes of ordinary trade?—But the licence has not gone in that case. I do not know whether this is material to it; I do not quite know what point you are going to put to me; but as a freeholder I should go to the magistrates and ask to have that licence given to myself if I were going into it, or if I were not to somebody else, as a rule the magistrates would grant it to a suitable person.

4369. Perhaps your experience differs from mine, but as a rule in Liverpool in no such case would the licence ever be granted again. What I want to point out to you is that as an expert valuer you do attach an additional value to a hereditament by reason of the personal qualification of the occupier, but I want to know why you should do that in the case of a public-house and refuse to do it in the case of machinery in a manufactory?—That is not my position. What I say is that you must not rate the trade profits of the public-house; it is a very difficult thing to divide it, I admit, but to put it into abstract theory you must not rate a public-house at its own value, plus the value of the man's own intelligence and skill, because one man would do well, and another man would do badly in the same house.

4370. I do not ask you to take into consideration his intelligence or skill, but, I think, you admit that you do take into consideration that adjunct which he has, namely, the licence?—Yes.

4371. That is a personal matter to the occupier?—For the time being, yes, and it enables him, a man of ordinary intelligence—I am taking, in both cases, an

element  
in the  
valuation.

Mr. G.  
Humphreys  
-Davies.

13 May '97.

ordinary business man, an ordinary tradesman—to do something in the house at one corner of the street, where there is a licence, which the other man at the opposite corner cannot do. He is under the Act of William the Fourth for rating purposes, and it is reasonable to suppose that he would pay a higher rent for that piece of ground than for the piece of ground opposite, where there is no licence, because the licence enables him to make a bigger profit.

4372. The reason he pays a higher rent is, is it not, that if he can get his licence it is worth his while to pay a higher rent for that building than it would be if he could obtain no licence?—Yes.

4373. Suppose, then, a man has a mill with machinery specially fitted for a particular purpose, and he wants to let it, would he not let it at a higher value because it is fitted with that machinery than he would do if the machinery were not there?—No; that is a different question altogether. In the one case I am free to go and put a factory where I like; in the other case I am not free to put a public-house where I like. If a man asks me 10,000*l.* a year for a factory, I say, "Well, I will not give you 10,000*l.*, I will give you 5,000*l.*, and if "you will not take 5,000*l.*, I can go and buy a piece of "land across the road and put up a factory which will, "when I have reckoned interest on the outlay, not cost "me more than 5,000*l.* plus the ground rent, therefore, "there is no reason why I should give you 10,000*l.* for "this place," and he has got either to keep his place idle or else to take my 5,000*l.*; but that is not the case with a public-house at all, and in no case; are the publicans' trade fittings and fixtures rated.

4374. Take the case of a mill which is supplied with water-power; is not an enhanced value given to that mill because it has water-power attached to it?—Yes.

4375. Would you not, as a likely occupier, be willing to pay a higher rent because it has water-power attached to it, than you would if it had not?—Water-power, of course, is not worth so much now-a-days as it used to be.

4376. Assume water-power is of value?—On the abstract question, certainly a piece of land with water power on it, whether it is wanted for one purpose or another, is worth more than a piece that has not water power?

4377. If you had a mill exactly the same as the one supplied with water-power, but without water-power, you would pay so much less rent for it?—Assuming that I wanted water-power?

4378. Assuming that you want power to work machinery, if you had a mill supplied with water-power, you would pay a higher rent for it than you would for a mill that had no water-power attached to it?—You must not put the two things on the same basis—you must assume that I want water-power, and that no other power will do.

4379. Assume that you want power—assume that you want 100 horse-power, for instance—it does not matter whether you get it from water or whether you get it from coal, except as regards the question of cost; if you wanted machinery of 100 horse-power inside a mill, would you not pay a higher rent for a mill which had water-power capable of giving 100 horse-power, than you would do for a mill which had not that water-power attached to it?—I do not think I should. I am obliged to say that, not because I want to evade the question, but because it depends on so many other things. For instance, take the River Exe: within the last 15 years, I think there used to be something like 15 paper mills, and other places upon it, but they are all done away with now; there is only the Hansard Mill, I think.

4380. We will take the case of another mill; Arkwright's Mill at Matlock. Do you mean to say that Arkwright's Mill at Matlock is not greater in value by reason of the water-power which it has attached to it, than it would be if it were situated at the bottom of a valley by the side of a dry river?—As long as there is a continual head of water, and it is cheaper to use water than coal, then that will be so, but it is very seldom that that is the case now.

4381. That is not the point: supposing you had not water you would have to use coal, and then clearly it is an advantage to have water?—Certainly.

4382. Then when you put your increased assessment and pay your increased rent for a mill with water-power, the difference between the value of that mill with water-power and its value without it is practically

represented by the value of the power you get?—The power which nature has supplied in the shape of water.

4383. So that you are paying in the shape of rent what in the other case you would pay in the shape of cost of coal to give you the same amount of power?—Yes.

4384. Why, if you pay on an increased assessment for a mill with water power, should you object to pay on an increased assessment for a mill with other mechanical power to give you the same result?—We do not.

4385. In the one case you pay upon the machinery which is capable of producing certain power, in the other case you pay upon the natural product which gives the power itself; that is, in the case of the water-mill, you are paying on the building, the machinery, and what in the case of the other mill represents the cost of coal?—There is no objection raised to that principle; in fact, we should be paying upon more than in the case of the water-mill according to our Bill, because we should be paying and are ready to pay on the value of the boiler and the engine.

4386. (Sir John Hibbert.) Are you aware that under the Act of 1894 power is given to the parish councils to appoint overseers?—Yes.

4387. Are you also at the same time aware that under the same Act town councils and urban authorities generally may apply to the Local Government Board for the same powers?—I was not aware of that power. The only object with which I mentioned the subject in my proof was not to object to the appointment of overseers particularly by anybody, but what we want is to secure that all the forms in connection with the making of valuation lists and rates should be carried out strictly. Of course under the Union Assessment Committee Acts and the other Acts they are required to do that, and we only want that maintained.

4388. (Mr. Elliott.) I gather from your memorandum that, apart from this question of the rating of machinery, you consider that the basis of assessment adopted for the purposes of local taxation is at present satisfactory?—Yes, I do not think it is possible to get any basis which will not only not be better, but will be anything like equal to the basis of annual value.

4389. In arriving at that opinion did you take into account the change made by the Agricultural Rates Act of last session?—No, I do not know that I did.

4390. Do you consider that the present system of rating as settled by the most recent legislation is satisfactory, or that it was satisfactory before the change of 1896 was made?—You are now speaking of the Agricultural Rates Act?

4391. Yes?—I spoke rather before 1896; I would rather not express an opinion about the Agricultural Rating Act.

4392. I was not asking you to express an opinion about the Agricultural Rating Act; what I wanted to get from you was, what was the system that you thought satisfactory?—The system that was in operation certainly up to that time, and laid down by the Acts I have referred to.

4393. What do you regard as the attributes of a satisfactory system?—A clear statement of the law as to the basis upon which the assessment should be made and the manner in which it should be carried into effect and the rate collected.

4394. Would you regard the equitable distribution of the burden as a necessary constituent of any compulsory system?—Yes.

4395. Would you say that some regard ought to be had to the benefits received by the ratepayer?—Yes. Of course at the present time there is some relief given to certain occupiers under the Public Health Act, but it is a very difficult question. Taking the case of West Ham. Manufacturers there get very little themselves for their 9*s.* or 10*s.* in the £; what they are really doing is supporting people who come from somewhere else to live there.

4396. Would you say generally that some account of the benefits received ought to be taken in estimating whether a system of local taxation was equitable or not?—Yes.

4397. Have you made any comparison between the incomes of the various classes of ratepayers?—No. I

Mr. G.  
Humphreys  
-Davies.

13 May '97

Local Government Act, 1894. 57 & 58 Viet. c. 73. Power given to parish councils to appoint overseers, and to town councils and urban authorities to apply for same power to the Local Government Board.

Law and basis of assessment satisfactory except in respect of machinery.

Local taxation, system of. Benefits received by ratepayers should be taken into consideration.

Mill fitted with machinery or supplied with water power. How far taken into consideration in valuation.

Mr. G. A. Humphreys - Davies.  
do not know that it is possible to do that with any degree of accuracy.

13 May '97  
Local taxation, system of. Ability of ratepayers to pay, doctrine of.  
4398. You have not studied the existing system from that point of view?—The point of view of the income tax?

4399. The point of view of the comparative burden of the rates according to the ability of the individual ratepayer?—I have only looked at it from the point of view of the benefits which can be derived from the occupation of the property to be rated.

4400. Not from the point of view of the ability of the ratepayer to bear the burden?—The ability as shown by the value of his occupation only.

4401. Yes, but not as shown by his aggregate income or his aggregate profits?—No, not his trade profits.

4402. Are the views that you express with regard to the system of local taxation generally the views of the Machinery Users' Association, or are they your personal views?—They are my personal views, but I have done this: I have had a synopsis of my memorandum sent to all the leading manufacturers in the country, and the whole of the replies that I have received, which are very numerous, concur in what I have stated there.

4403. But you have made no serious study of the system of local taxation from the point of view of the ability of the ratepayer to bear the burden?—Not as based upon his trade profits nor his income from other sources.

4404. You have never compared, for instance, the respective burdens of a banker and a farmer?—No, nor a barrister in the Temple, perhaps paying 50*l.* a year for his chambers and making 10,000*l.* or 15,000*l.*

Real property subject to hereditary burdens, or which has been bought and sold subject to burdens should not be relieved of them. To what extent can this view be supported.  
4405. You express an opinion with regard to the transfer of local taxation from one class of property to another, and you say that "real property has been bought and sold subject to the liabilities imposed upon it by legislation, and great injustice would be done if real property were now relieved of the burden so imposed, and that burden transferred to other forms of property"?—Yes, I think so.

4406. Supposing that the liabilities imposed upon property were shown to be clearly unjust, would you say that the fact that that property had been bought and sold after those liabilities had been imposed would preclude the removal of the burden?—No. If somebody sold me a piece of land under which there was valuable coal, and did not know it, if I bought it I took my chance and I should take and have the coal. If I bought a piece of property supposed to be liable to some burden, such as ground rent or something of that sort, and I found after I had got it that it was not liable for it, I should certainly refuse to pay it, and I do not know that I should hand over the benefit.

4407. I do not think you quite appreciate the point. That, of course, is a question of adjustment as between purchaser and vendor?—Yes.

4408. But this is a question of the adjustment by the legislature of an injustice, and I gather that you would say that the legislature should feel itself precluded from remedying that injustice, because the property had been purchased burdened with that injustice?—It is open to question if there be an injustice, but my view is there is no injustice.

4409. I am assuming that an injustice is proved?—If it is an unjust thing then, of course, there is no reason why a man should submit to it. But what I put before you was that you have got to remove the charge on to somebody else's shoulders; it is not doing away with the charge altogether; somebody has to pay the money, and I do not see why, if I have got a property which has never been subject to rating, I am to pay for somebody else whose property has always been subject to rating.

4410. But supposing it be shown that you contribute too little to the public burdens of the country, and that the person in possession of rateable property contributes too much, do you see any injustice in the transfer of burden from the one shoulder to the other?—No, if that were shown; but then my view is strongly that that is not shown.

4411. You referred to the question of protective tariffs in foreign countries; you are aware, of course, that there have been, in times past, protective tariffs in this country?—Yes.

4412. Had not land been bought and sold previous to the removal of those protective tariffs in this country?—Yes.

4413. And the removal of those protective tariffs had a serious effect, had it not, upon the value of particular classes of property in this country?—Yes.

4414. Did you see any injustice in the removal of those tariffs?—I was not old enough to form an opinion then.

4415. I know that, but I am asking for an opinion, not for your recollection?—My view is that the nation at large has benefited by free trade.

4416. You are aware, of course, that the owners of agricultural property have felt themselves injured by the removal of those tariffs?—Yes.

4417. Do you think that a tariff should not be removed because of the effect upon agricultural property if it were found on the whole desirable that it should be?—No, but of course many manufacturers suffered equally, the paper trade, the silk trade, and others suffered equally with agriculturists. There is this to be remembered, that if the land suffered in value by that, its rateable value was reduced, and it has also been reduced *pro rata* with the agricultural depression which has arisen from other causes.

4418. You express an opinion that a system of rating personal property would be a failure; you are aware, of course, that under the law as it stands, a considerable contribution to local taxation is made by personal property?—Nothing but the contributions from the consolidated fund.

4419. But these contributions are very substantial, are they not?—Yes, they are. I am not, of course, referring to that. It is one thing to raise money by way of income tax or taxes on tobacco, and so on, but the impossibility that I am referring to is what I conceive to be the entire impossibility of rating the houses in this parish of Westminster according to the personal property and income and profits of the various occupiers.

4420. It is a question of feasibility and not a question of justice or desirability?—I think it would be wrong for three reasons; I think it would be against public policy; I think it would be a burden upon trade, because it would handicap us in competing with foreign countries and stop enterprise; and I think it would be also unfair because it would be imposing a burden upon profits which was never meant; as I said before, it was on real property that the burden was to be put, I think it would be impossible to carry it out in practice.

4421. You are aware, are you not, that very considerable sums are now contributed by means of the probate and estate duties to the relief of local taxation out of personal property?—Yes, and real property.

4422. It is quite clear there is nothing impracticable about that, inasmuch as it is done?—No, but that is an altogether different thing—

4423. May we stop there: it is done, and therefore, it is quite clear that it is not impracticable?—I should not like my answer to stop there, because I do not want to be misunderstood. It is a very different thing to raise money by local rating in local areas to raising money for Imperial taxation by way of property tax and Excise duties.

4424. Yes, but I am not talking about the property tax or the Excise duties; I am putting to you the simple fact that very substantial sums are paid out of the probate duty and estate duties, which are duties on personalty in relief of local taxation?—Yes, that is so.

4425. Do you take any exception to that system?—As I said before, I think the more you increase that system the greater the tendency is to extravagance, because people are spending money which they have not themselves directly contributed to.

4426. Apart from the question of administration and extravagance, do you see any injustice in the contribution which is made by the owners of personal property by means of these contributions out of the estate and probate duties?—I do not know if a large sum were raised from me on my private income from abroad, why I should contribute to relieve the local taxation here that is all.

4427. I leave out the question of the foreign resident; I refer to the ordinary British subject resident in the United Kingdom, who, leaving a personal estate on his death, contributes by means of the estate and probate duties to the local taxation of the country?—I do not like the system. There is this to be remembered

Mr. G. A. Humphreys - Davies.

13 May '97

Personal property, rating directly in respect of not feasible or desirable. Contributions from the Exchequer to local taxation, how far equitable and desirable.

Mr. G.  
Humphreys  
-Davies.  
13 May '97

that a great many of the services which are paid for by local rates are services such as the supply of light for the streets, the scavenging of the streets, and the removal of the snow, which used to be an obligation upon the householder, but is now done by the parish—all those are personal services just as much as the domestic service in the house, and I do not see why I should contribute to them. Many of these charges are in that way.

4428. You are aware, of course, that for those purposes there is no Exchequer grant?—No, I have not gone into that.

4429. You have not studied the question?—(Generally speaking, I have not studied the question in regard to the contributions to the local exchequer.

Machinery,  
rating in  
respect of,  
which  
trades most  
affected by.

4430. With regard to this question of the rating of machinery, can you tell us what are the industries which are mainly affected? I presume that some industries are more affected by the decision in the Tyne Boiler case than others?—Yes, by these attempts to put a peculiar construction upon it. Those that are most affected are the engineering trades and trades like the cloth, the cotton, and other trades employing principally light machinery—not such trades as some of the chemical works, which have a great deal of plant that one could not say was not properly rateable.

4431. Are you able to form any opinion as to whether the profits in the light machine trades, if I may use that expression, are greater or less in proportion to the rateable value than in the heavier machine trades?—There is a very large capital invested, of course. I should say the largest amount of capital is invested in the trades that are most affected, because the whole of Lancashire, if the view of the judgment that we oppose is held to be correct, would be affected.

4432. Might I put a specific case to you; take the case of a chemical manufacturer deriving an income from his factory, exactly equal in amount to that which a woollen manufacturer derived in the same parish;

The witness withdrew.

Mr. C. H.  
Fox.

Mr. CHARLES H. FOX called and examined.

4438. (Sir John Hibbert.) Are you a manufacturer living in Somersetshire, or in what capacity do you attend here?—I am one of the directors of a Limited Liability Woollen Company.

4439. I understand that you have taken great interest in this question of the rating of machinery?—Naturally.

4440. Are you a guardian in your own district?—I am, and I am a member of the assessment committee.

4441. Would you, as concisely as you can, bring forward the important points which have affected your district of Chard, in Somersetshire, since Lord Esher's judgment?—Before Lord Esher's judgment we always understood that the practice which was common in the west was fixed, namely, that by such judgment as providence has gifted our overseers with, they estimated the lettable value of property, and that, with regard to the factories, included all motive power—which covers water as well as steam—the conveying apparatus, that is to say, the shafting, and any gasworks and other things which were absolutely connected with the hereditament, and which, if the factory had been erected by an independent person with the view of being let, in order to so let it, he would have had to place as they now stand. Up to the time of that judgment, the manufacturers in the west had got on fairly well with their overseers. We had had one or two questions which had been easily settled by the professional advisers, but directly that judgment was given, a well-known firm of factory raters appeared at Chard and advised the assessment committee to act on this judgment. The valuation taken in the usual way of a particular firm in which my brother was interested, and which was the case which first brought me to a sense of the danger we were in, was 297l., but Messrs. Castle & Co. added the "enhanced value," bringing it up to 1,097l.; therefore the enhanced value was 800l. on account of the machinery, and that was based on Lord Esher's judgment that machinery might be "taken into consideration in the assessment." Of course, that was a tremendous blow. The assessment was at once tripled, and the manufacturers, after

would the chemical manufacturer contribute more or less in the shape of rates than the woollen manufacturer?—I cannot answer that question, because you see I should have to consider the size, and many other things.

4433. You have referred to unions where the guardians and the assessment committees represent a small proportion of the rateable value; what was your object in that?—I wanted to show how easily a manufacturer could be attacked. There would be nobody on such assessment committees who would be concerned to defend him.

4434. Do you suggest that a large manufacturer or a large ratepayer would be more likely to take a broad view of questions of expediency than gentlemen occupying premises of comparatively small rateable value?—I think he would.

4435. Would not the personal interest be greater in his case than in theirs?—Yes, but he would not, if he were a man of standing, sit on the committee to deal with his own case; in fact, I have known it constantly happen that a man has got up and said: "I am interested in this, and I cannot stop here."

4436. Do you suggest that the larger the rateable interest the more likely a man is to be a judicial member of an assessment committee?—No, that does not necessarily follow, of course.

4437. In the Metropolis, of course, you have the twofold outside check of the surveyor of taxes and the London County Council; and therefore, if any body of guardians were inclined to take a view of assessments which was not judicial, they would be subject to a close scrutiny and check?—The surveyor of taxes in the Metropolis has the right to sit with the assessment committee and a right of appeal, but I have never known the latter exercised. Of course he constantly sits with the assessment committee, but I do not think in practice that makes very much difference.

Mr. G.  
Humphreys  
-Davies.  
13 May '97

Assessment committees. Constitution of in certain places not equitable with regard to interests of larger ratepayers. In Metropolis surveyor of taxes has right of sitting with assessment committee, and has a right of appeal.

Mr. C. H.  
Fox.

vainly trying to appeal satisfactorily to their own assessment committee, called upon others to know whether they would assist them in carrying it as a test case further.

4442. Did they carry it to the quarter sessions?—Yes, and then they carried it to the Court of Appeal.

4443. What was the result in the two cases?—The quarter sessions offered a compromise. In the quarter sessions it was reduced from 1,097l. to 895l. net.

4444. Were any reasons given for the reduction?—The Chairman said: "Plainly at first sight it appeared to be rather a stretch of language in a case where the real property might be said to amount to about 300l. a year, and the value of the machinery to about 800l. a year in round figures, to say that they were simply enhancing the value of the real property by adding this 800l. a year. As has been said in ordinary language, it was something like the tail wagging the dog." I think it was considered that Messrs. Castle's figure was somewhat exaggerated, and so it was reduced.

4445. Then a test case was sent to the Court of Appeal?—Yes.

4446. What was the result of that?—The Court of Appeal confirmed the action from a legal point of view of both the assessment committee and the quarter sessions.

4447. And nothing further, I presume, has been done?—Yes. The Chard Assessment Committee, because of the Bill which was brought before Parliament, accepted a compromise which was to last until the Bill was passed. An exactly similar compromise has been accepted in the case of my firm with another assessment committee. The figure at which my brother's case stands is now 695l., which is 400l. above the ordinary value of such property. Therefore the ordinary valuation may be said to be 300l., and the present sum on which they are paying to be 700l.—leaving out the units. This is what my brother says in a letter: "This was a compromise pending a settlement of the question." I had this from his own hand in order to have the figures correct.

4448. I presume the manufacturers of your district have all promoted and supported the Bill now before

Manufacturers desire a clear definition of the class of machinery rateable.

\* Gifford, Fox, & Co. v. The Chard Guardians (63 L.T. 240).

Mr. C. H. Fox.  
13 May '97

the House of Commons, which has been brought in for the settlement of this question?—That is true. All we ask for is a clear definition, and we venture to say that the old practice which has existed any number of years—I cannot tell you how many—is the proper basis. It has formed the basis of the present Bill, and it had been the practice, I might almost say, throughout all England, until these questions were raised by assessment committees.

Rating in respect of machinery in Tiverton union, Devonshire. A compromise effected with assessment committee pending the fate of the Bill before the House of Commons dealing with the subject generally.

4449. Have you any other local matter to refer to?—I have. While the Bill was before Parliament—and it had been agreed generally with the assessment committees in the west that nothing should be done until we saw whether the Bill was approved of by the country—while the Bill was still before Parliament the firm with which I am connected received a summons on behalf of a small factory in Devonshire (our principal place is in Somersetshire, but we have a branch factory in Devonshire, in the Tiverton Union). Here the same rating surveyors, Messrs. Castle & Co., were employed to re-assess the factory property of that union. They dealt with our factory with a curious simplicity of figure. As they had at Chard made use of the figure 3, so our previous assessment, multiplied by three, seemed to furnish them with a sufficient basis for a professional valuation. Having been previously rated at 300*l.* gross and 255*l.* rateable, we received a summons to pay on 1,296*l.* gross and 864*l.* rateable; rather more than three times the previous figure.

4450. Did you appeal?—We appealed in the first place to the assessment committee, and received from them an offer of a compromise, that is, they offered instead of 864*l.* rateable to make it 760*l.* We declined, and said we would take it to quarter sessions. We went to the Exeter court of quarter sessions, but the defendants did not appear; I believe that was wholly a mistake. Shortly afterwards we received another charge of 760*l.* rateable, and we again appealed or said we should carry the case again to quarter sessions; on which we received an invitation to attend the assessment committee and discuss a compromise. A compromise was arrived at, fixing 380*l.* as the rateable value, which was to be reduced to the old figure if the Bill passed. On that we have stood ever since, as the Bill has not passed.

Gifford Fox & Co. v. the Guardians of the Chard Union. Since Lord Esher's judgement manufacturers are afraid of further extension of assessing machinery.

4451. You still stand on that?—Yes. Of course it is only a very small addition of 125*l.* on the previous assessment. With regard to our very much larger factories, where we pay on a rateable value of over 3,000*l.* there are several things we think unjust, but we hesitate, and manufacturers all through the west, and possibly all through the country—but I am not acquainted with more than a limited number—hesitate to raise almost any question of justice or injustice for fear of the operation of this last judgment being extended towards us. We live in fear. Our firm are afraid to raise the smallest question with regard to rating, because we know that what we consider would be a great injustice might be forced upon us, and we might be exposed to immense expense in taking the case to a higher court of justice, and probably it would end, because at present I believe it would be perfectly legal to let it so end, in a very large increase of our assessment, having regard to Lord Esher's judgement.

Number of woollen manufacturers greatly decreased in the west of England.

4452. Has every assessment committee in your district where there are manufactories of the same kind acted upon the same principle?—No. There are few manufactories left in the west. Forty-five mills have been closed in the west of England since my grandfather's time. Competition with the north, with Germany, and with other countries is so severe that it is very difficult for any man to keep his standing at all. We have persevered and stand, but 45 have been closed, and there are only two or three places in the west of England where there are any woollen manufactories, and the paper mills are getting fewer and fewer; there used to be a large number of them.

Woollen industry in the west of England would be crippled if the assessment committees had not come to a compromise pending the fate of the Bill before the House of Commons.

4453. Have you anything to say with respect to other parts of the country apart from your own district?—No. I prefer to confine any observations I have to what I perfectly know.

4454. Have you found that this increased rating which has occurred has had any effect in depressing your business?—Of course an increased rating of 125*l.* could not have depressed our business, but had they carried their point, which was only waived by reason of the Bill being before Parliament, and if it had been extended to the whole of our manufacturing interest—because the assessment committee of the Wellington (Somerset) Union, I have no doubt, were only waiting

to see how far the Tiverton Committee had succeeded, and naturally would act in accordance—it would have crippled our industry altogether. We are now paying a very enormous rate; we are paying on over 3,000*l.*, and if that was raised to double the amount it would be a very crippling figure. We now pay more than 800*l.* a year in local rates.

4455. There are woollen manufacturers, are there not, in Scotland and in Ireland?—Yes.

4456. Do you know what is the principle of assessment in those two countries?—I am unacquainted with Ireland; I was interested in hearing about it here, but I must say that previous to coming into this room I was in ignorance as to Ireland. As to Scotland, I can inform you that it is perfectly clear in the sense that we want to make it clear for England. On the 26th of September 1887 a case between the North British Railway Company and the Assessor of Railways\* was brought before Lord Fraser, who gave a perfectly clear judgement upon the matter. He pointed out that the English rating statutes did not contain any express reference to machinery such as occurs in section 42 of the Valuation Act of 1854, and he went on to say, "The enactment is not that all machinery that can be found to be adapted to the particular mill or gas-works or shipbuilding yard shall be deemed heritage to be valued; it must be machinery fixed or attached—fixed, that is to say, in such a manner that it cannot be detached from the building without destruction to the building. It is, moreover, clearly an abuse of language to say that an article, because it is very heavy, is to be held to be fixed or attached to the heritage when it rests there without bolt or screw or attachment of any kind."

Mr. C. H. Fox.  
13 May '97

Rating respect of machinery in Scotland, North British Railway Company v. the Assessor of Railways. Lord Fraser's judgement. The principle laid down in this judgement is satisfactory to manufacturers.

4457. You would be satisfied, would you, with a law carrying out that decision?—I believe it would be quite satisfactory. I do not like to pledge the whole association to it, but it appears to me to embody, with somewhat less clearness, the principle of the Bill which was very carefully drawn up for 1894. I think you probably have a copy of that Bill, if not I should be very happy to hand a copy to you.† The Standing Committee on Trade went through the Bill and agreed "to report the same without amendment."

4458. I see that in your memorandum you refer to the law in Germany, Italy, America, France, and Austria: from these references, I presume you would say that if this principle of rating machinery is carried out to its fullest extent it would seriously injure you in competition with other countries?—It would; it is a tremendous struggle now; what with longer hours and lower wages, and the great advantages their commercial travellers have in speaking other languages, while our men confine themselves to one simple language, we find it very difficult to compete with those countries; and, of course, every advantage that is given to them is just so much handicap to us. The greatest advantage is given by Austria-Hungary, and there, I may say, we can do very little indeed. In America there are very considerable facilities, in seven States especially; the great manufacturing States give special exemption from taxation to manufactories. I have no doubt you have got a copy of the Consular Reports, but if not our secretary has got abundance.‡

Competition with foreign countries, advantages given to manufacturers there.

4459. Have you anything to say with respect to the formation of assessment committees, or any objection to make to the present system upon which they are elected?—I have nothing definite enough to give you. I have no great objection to the present system. I think Englishmen generally try to be somewhat fair, but our opinions are somewhat, naturally, coloured by our private interests. I have been a member of an assessment committee the chairman of which is a landowner, nine members being farmers, and three members being townsmen. I can only say that I believe they wish to be fair, on the whole, and to deal fairly. Of course, if such a judgement as this of Lord Esher's gives them legal power to raise large assessments, that is a very strong instrument placed in their hands to do so.

Assessment committees. Town and country interests representation of.

4460. Is there any other point that you wish to refer to?—The only points I argue are two. In the first place we should wish your Commission very carefully to consider a definition which would save us from the danger that is hanging over our heads, that is to say,

\* 25 S.L.R. 4.  
† Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 88.  
‡ Reports from Her Majesty's Consular Officers on Exemptions in Foreign Countries from Rating and Taxation of Manufactories and Machinery used in Manufactories, C. 7030 of 1893.

Mr. C. H. Fox.

13 May '97

Manufacturers desire a clear definition of the class of machinery rateable. They complain of the possibility of their being rated in respect of movable machinery, particularly in semi-rural districts.

of Lord Escher's judgement being put in action against isolated mills like ours. The danger is especially, as Mr. Humphreys-Davies has said, in these semi-agricultural districts. I want permission to read a letter from a man who has a great knowledge of the condition of affairs. He is a manufacturer in the West of England. This gentleman is the son-in-law of a man who was very highly honoured in the House of Commons, one of the great economists of his time; he is the son-in-law of John Bright. He says, "Dear Mr. Fox,—We have had a note sent us of the evidence you propose to give as to rating of machinery next Thursday, and the points you dwell on seem all very important. "If you have an opportunity to do so under your paragraph (f) you might impress on the Commission what a special injustice the rating of machinery would be to isolated rural industries. Where there are a large number of mills crowded in a city, if all are rated unjustly they to some extent help one another to bear the injustice, but where, as in your case and ours, the rest of the rating is all, or nearly all, on other classes of property, any unfairness has all to be borne by the one business. In the face of the great difficulties and disadvantages attending the carrying on of isolated works, and the woful results of the crowding of industries into our large cities, I think this point should have weight." Only one other point I press upon you, and that is that all industries, having regard to foreign competition, deserve to be somewhat relieved. I fully approve of agriculture being relieved. My point is that all industries should be relieved and more should be placed upon personality as far as possible. I do not hesitate to say that dwelling-houses are the nearest approach to putting it on personality at which you can arrive. Another point is that manufacturers living in their own place are rated at five or six times as much as persons with the same income. That is laid down very excellently by Sir Henry Fowler, and I need not amplify that. I can only say that in my own case I am paying seven times in proportion to my income compared with the amount paid by a private resident having the same local advantages. Whether your Commission think that is an unfairness I leave you to judge. It seems to me something requiring adjustment. Therefore we ask, in the first place, that industry may be relieved to some extent, and the extent we propose is that more shall be taken into consideration of the great cost of maintenance. The ordinary reduction from gross to rateable is 25 per cent.; that has hardly any reference to the cost of maintenance, and we ask that it may be made 33 per cent.; not that it would remedy what we feel to be the full amount of the injustice, but it would go to some extent towards meeting it. Above all, we ask that you should so define the question of chattels and movable machinery that we shall be relieved from the great danger in which we are living.

4461. (Mr. Smith.) Is it part of your compromise that you are always to have a Bill before Parliament?—That is a very amusing way of putting it. We should very much prefer having it embodied in your recommendation.

4462. (Mr. Elliott.) Have you any intimate knowledge of the agricultural conditions in your district?—I hardly know what you mean by intimate; I know something about it.

4463. You have a general knowledge of agricultural conditions. I understand?—Yes.

4464. Do you think that many agriculturists make, including the rent they pay, twice as much as the rateable value of their farms?—That is to say, do they make two rents?

4465. Yes, that is it?—I should not like to express an opinion.

4466. Do you think that a tenant farmer very often makes for himself more than his rent?—Not very often now. I think that on the whole capital a farmer brings into his farm—

4467. May we leave the capital alone?—As you please.

4468. Now proceeding from the case of the agriculturist, who, as you agree, does not very often make twice as much as the rateable value, do you think that can very often be said of the manufacturer?—I gave my answer guardedly, because for the last two or three

years we have had times of great depression. If you had taken it, as manufacturers do, on a period of 10 years, I should have given a different opinion as to agriculture, that is, if you had included the 70's, when very large profits were made. You asked me a question and I gave you an answer not extending back for more than three or four years past—the period of depression. I do not think during that time they have been making more than double rent.

4469. I want to put my question as generally as possible?—Does it mean on an average of how many years?

4470. I will put it in this way, as you have some difficulty in answering. Do you not think that manufacturers' profits usually bear a much larger proportion to the rateable value upon which they pay rates than agriculturists' profits?—Yes; therefore I fully agree with the principle of reduction to half.

4471. You think that prior to the Agricultural Rates Act there was a feeling, which was legitimately founded, of injustice on the part of the agriculturists?—Yes, I do.

4472. With regard to what you said as to the rates on manufactories in rural districts, I take it that the amount of the rates on those manufactories, leaving out of question the rateable value, would be much less than if those manufactories were in towns?—I do not think so. I compared the rateable value that we have accepted on our own factories, with the Lancashire scale taken at its very highest point, and I found that we are paying on—I could give you the figures—many hundreds, in fact nearly 1,000% more.

4473. Do you pay as much in the £?—No; we do not pay as much in the £, but you asked me about the rateable value.

4474. I was asking about the rates?—The rates probably are heavier.

4475. In towns?—Yes.

4476. Therefore the inequality is remedied?—There are so many advantages through being in towns—the mere being near a centre of purchasers, and a centre of information, for instance—that the balance, even with the lower rates, is against the man holding an isolated manufactory in the country.

4477. Do you consider, even assuming that Lord Escher's judgement were to stand, that it could be said that manufacturers in rural districts were, by reason of that fact, handicapped as regards their urban competitors?—I do. They are already handicapped; they are already working at a great disadvantage, and as a general rule, they are submerged by the disadvantages under which they at present suffer.

4478. One question with regard to what you say about your foreign competitors. Do you seriously think that the burden, for public purposes, upon English manufacturers, is greater than the burden upon foreign manufacturers?—It is impossible for me to answer, as I do not know. I have no basis to give an opinion upon. I only know there are special exceptions.

4479. Are you not, in your memorandum, rather drawing a comparison?—Yes, I was doing so.

4480. Are you not suggesting that the British manufacturer is heavily handicapped, and is working in an inferior position as regards public burdens to his foreign competitor?—I am. Until you raised the point, whether we are more or less heavily handicapped, I really had not considered it, because I see that I must take the amount of taxes in each case, which I have not been able to get at. I simply took this from the consular report, and it struck me, certainly, that certain exceptions were given to foreigners, which we had not the privilege of. I think I may say, there is no question, if you look at Austria-Hungary, where they are relieved of almost any form of taxation, and where the railway companies only charge half price for the carriage of their produce, that they have exceptional facilities.

4481. Do you think you could carry on your own particular manufacture in Austria-Hungary better than in this country?—Yes, I do; I have no doubt of it.

4482. I did not expect you to say that?—I could. A great many are taking their manufactories abroad, more perhaps for the sake of protection than anything else; many men are starting in America.

Mr. C. H. Fox.

13 May '97

Rates paid by manufacturers in the country less than in the towns, but in the towns there are greater facilities for carrying on their business.

Foreign competition. Taxation of manufacturers in foreign countries. A woollen manufactory could be carried on better in Austria-Hungary than in England.

Mr. D.  
Howard.

Mr. DAVID HOWARD called and examined.

Mr. D.  
Howard.

13 May '97

13 May '97

4483. (Sir John Hibbert.) I believe you are vice-president of the London Chamber of Commerce, vice-chairman of the West Ham Chamber of Commerce, and a chemical manufacturer in Stratford, London?—Yes.

4484. Therefore you are able to speak with some experience on the question of local taxation?—Yes, and I may say that I do so after consultation with a committee of the London Chamber of Commerce, who have considered the matter very carefully, with all the leading members of the West Ham Chamber of Commerce, and with a number of other individuals.

Rating in respect of machinery. Present system and method is uncertain and undefined and imposes a great burden on the manufacturers.

4485. I believe you consider that it would be a great injustice to extend this system of the rating of machinery in mills?—It is not only a question of the rating of machinery, but the special application of it which is often so difficult. The mode of rating, as far as I can understand it in our areas, is exceedingly difficult, because like wise men the rating authorities never give an exact statement of how they arrive at their conclusions for fear of its being a matter of law which we can appeal against. It is admitted that the practice in the neighbourhood of London, namely, to rate on the principle of Lord Esher's judgement, is carried to an extreme extent. It is difficult to see how the figures can be arrived at on that judgement. That amounts to a very serious tax on manufacturers, many of whom are exposed to extreme competition by foreign houses, and from what I know of my foreign competitors the utter uncertainty of the taxation is a thing unknown abroad, and as far as I can judge the taxation is actually less under similar circumstances.

4486. That can only refer to the present state of things; there has not been that great uncertainty in the past years; it is only since Lord Esher's judgment, I presume, of which you have spoken?—It is only since that judgment. In the old days we were rated on an exceedingly low assessment. I am speaking here of our own particular case. As far as I can discover it was on the mere value of the premises, without any question of anything in them. We were afterwards, after a very careful survey by, I think, Fuller and Horsey, but I am not quite certain of it—at any rate by one of the leading firms—rated fully on the value of anything that could be considered to attach to the freehold; indeed they carried the idea of anything that was attached to the freehold, anything that could be considered to belong to the hereditament, to rather the extreme. Lately we were threatened with the doubling of our rating, and I can only say that if anyone will give us the 3,000*l.* a year which was proposed for the term of our lease under the City, we should delightedly surrender all the plant which could possibly be rated under that and go elsewhere.

Chemical works. Method of valuation very unsatisfactory. The plant is usually tenants' fixtures and deteriorates very rapidly.

4487. You consider that the rating of chemical works is not satisfactory, do you not?—It is most unsatisfactory.

4488. Has there been any great change in the law with respect to the rating of chemical works?—There has been no change.

4489. That is, since Lord Esher's decision?—I do not know of any special decision which applies to chemical works in particular.

4490. Then I will go further; have not chemical works generally been assessed as being more or less landlord's fixtures?—Yes, though not to the extent which is now proposed. As a matter of actual fact, in the case of ordinary chemical works, such as ours, at the termination of a lease every particle of plant is taken away by the tenant, or sold.

4491. I suppose that all chemical works deteriorate very rapidly?—With the most extraordinary rapidity.

4492. What is the life of different chemical works?—In the case of certain furnaces it is not six months; certain plant, especially lead plant, which is put to very severe work, may last a great deal less than six months, and, of course, certain apparatus which is used is destroyed every operation.

4493. I suppose that is all taken into account in the assessment of your premises?—We are unable to find out how it is taken into account. As far as I can discover, the idea is to take the value of the plant and make some calculation founded upon it, but, as I say, they carefully avoid telling us how it is done, but they charge us with that.

4494. With a large deduction, I presume?—I cannot see where the deduction can possibly come in.

4495. Then what is your proposal with respect to the chemical works, do you say that they should be exempt from rating?—No, of course, that would be claiming too much. I say, putting them on the same basis as house property, it would require to exempt everything except the mere building. I only put it that that would be the accurate mode of arriving at the same conclusion; but I do not claim that, because I have no doubt that would be claiming too much.

4496. How is the case with respect to other unions than yours; are chemical works assessed in the same manner in other unions at a high rate?—It is very difficult to answer. The complaint of a very great increase of assessment is universal all over London, but it is so difficult to arrive at the method, as they carefully avoid telling us how it is done.

4497. I suppose it takes an expert to do it?—Yes, it does, and then the expert does not explain how he does it, for fear of appeal, I suppose.

4498. Is it a general complaint throughout the country?—It is general as far as I know, except in certain cases where the particular sort of plant may be well known, so that there are some recognised rules for rating it.

4499. There are very large chemical manufactories in Lancashire, for instance; do you know anything of those?—Those are heavy chemicals as we express it, and those I do not know much about. The United Alkali Company's Works would cover those, but I really do not know the details of them, and I had better not say anything about them, as what I could say would be mere hearsay.

4500. Do you object to the present system of the election of assessment committees and overseers?—We do, and I think all those members of the Chamber of Commerce who have considered it object extremely to the system on which they work. To begin with the assessment committee represents almost entirely the small householder. It may be said why is that so? I will say in this way. An owner of small house property has the power of putting the pressure on his tenants which of course it is not right or legal to do, but as a matter of fact it is done and it is notorious that they can get elected if they choose. A manufacturer does not always do his duty as much as he ought, but it is much more difficult for him to get elected. It would be far more likely to be noticed if he put pressure on his workmen, and in many unions a manufacturer is afraid of calling attention to his position and of making enemies among the local authorities.

Assessment committee, constitution of, not equitable with regard to interests of larger ratepayers. Reasons why this is so.

4501. Would you be in favour of the election of a body representing a larger area than the present union so as to avoid the action of local feeling?—It would be an advantage as far as it could go; the difficulty is that it is a representation of one class and only one class of persons.

4502. At present?—At present. The great evil that we see in the system of rating is that these assessment committees are not all quite like the one we have heard of; it certainly is invidious to mention any, but there is a good deal of the same sort of difficulty. They call in some man who is celebrated for putting up rates, or surveyors will come and offer their services, being paid by results. Under those circumstances the manufacturer must either accept an increase of rating or must fight it and fight it at his own expense against the public money, which is spent very freely by vestry clerks and others in defending these ratings, and with the utter uncertainty of what the basis really is. What we would urge is that this system of paying by results should be done away with entirely, and that whoever is employed, whether by the Government as in the income tax assessment, or by the authorities, payment by results should be entirely done away with and that there should be some not expensive appeal allowed in all cases on fact as well as law to an independent and judicial authority. We should prefer that the rating was taken altogether out of the hands of the local authorities.

Payment of valuers and surveyors by assessment committee according to results an undesirable system. Appeals, alteration in system of, desirable.

4503. Then you would be in favour of its being placed in a body representing a much larger area, would you not?—Yes, or a Government rating like the income tax rating. But this point of appeal is a matter which

Valuation by a body representing a large area or by a government official desirable. Appeals, alteration in system of, desirable.

*Mr. D. Howard.*  
13 May '97

is felt very strongly. The appeal is from the overseers, who are, I think, increasingly appointed by the local authority, either the urban district council or the borough council. It is an appeal from them to the assessment committee of the guardians who are an exactly similar body. The appeal from them in the case of a borough is to a special sessions, I think I am right in saying so, in which case the borough magistrates are probably not the best authorities as they are not independent, for they are again the same people.

4504. Then you have the quarter sessions?—Yes, and the quarter sessions in a borough means the recorder, and I think that is not an absolutely impartial tribunal even in the case of a recorder.

4505. (*Mr. Smith.*) You employ a large number of men, I suppose?—I think about 350 men and boys.

4506. Where do they live?—All of them in the borough of West Ham, I should say, but I think, taking the average cost, as far as one can guess, our rating would pay for a great deal more than that, because in the borough of West Ham there is an enormous population belonging to London, and the popular belief is—I think it is a true one—that every acre of ground which is built over with small houses costs hundreds a year beyond the rates it pays.

Many working men employed in London live in West Ham, and the manufacturers there pay rates in respect of their requirements.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## THIRTEENTH DAY.

Friday, 14th May 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. JORN NORTH called and examined.

4513. (*Chairman.*) You are Clerk to the Guardians of the Aston Union, and to the Assessment Committee of the Union?—I am.

4514. You have been good enough to prepare this memorandum which I hold in my hand, for us at our request?—I have.

4515. As you are aware, the main outlines of the information which naturally would occur to a clerk to a board of guardians to give us must be the same in the different parts of the country; and, therefore, I do not intend to take you over the whole of your memorandum in so far as it deals with points which we have already had before us. I think I may ask you this question—generally you see the value of having a uniform system throughout the different parishes in your union?—That is recognised in our union.

4516. Do you have anything of the nature of a re-valuation at stated periods, or what is your system?—There is no stated period. The last one was some three years ago, and the one before that was many years ago.

4517. Would you see any difficulty in having a yearly valuation of all the properties in the union?—I should not think that a yearly one would be necessary; a periodical revision I should think would be very good, but not a yearly one.

*Mr. J. North.*  
14 May '97

Uniformity of system in a union desirable.

Revaluation every five or seven years desirable.

4507. Beyond the rates received from those houses?—Yes. If it was a question of the manufacturers paying for their own men it might be fair or it might not, but that manufacturers should pay for men employed in London seems to me to be quite inequitable.

4508. You have described your works, I think, as light chemical works as compared with heavy chemical works; they are probably not so offensive as the heavy chemical works, are they?—I do not think anyone can say they are offensive.

4509. They do not necessarily pollute the air or occasion special sanitary precautions?—No, we have never had any trouble and we are under careful inspection.

4510. You would agree that where works of an objectionable character are carried on it would perhaps be necessary to have sanitary provisions on a somewhat extensive scale?—Yes, in certain cases.

4511. Providing open spaces and so on for the people?—There is Epping Forest within a very short distance. The beginning of it is within three miles of us.

4512. And you have not injured its vegetation?—It shows no signs of it.

*Mr. D. Howard.*  
13 May '97

Chemical works in West Ham not offensive or destructive to vegetation.

*Mr. J. North.*  
14 May '97

Compulsory powers to ascertain rent paid desirable. Gross estimated rental. Deductions from, in Aston Union.

4518. What period—triennial or quinquennial?—I should think every five or seven years would be frequent enough.

4519. Would you be in favour of giving compulsory powers to the officer who makes up the list to ascertain from the owner or the tenant the rent actually paid?—I think that would be an advantage.

4520. Have you anything to say to us as regards what really is a very important element in the question, namely, the rateable value and the method of arriving at it?—To arrive at the rateable value the following deductions from the gross estimated rental are made in my union:—

Land without buildings	-	5 per cent.
Farms { Houses and buildings	-	10 per cent.
{ Land	-	5 per cent.
Best class of retail shops and offices	-	10 per cent.
Ordinary retail shops, houses, offices, public-houses, and manufactories, without heavy machinery	-	15 per cent.
Theatres, mills, and manufactories, with heavy machinery	-	20-25 per cent.
Weekly tenements where landlords pay rates, according to class and situation of property	-	15-25 per cent.

Mr. J. North.  
14 May '97

4521. Have you any remarks to make upon that system?—I should think that is a very good system, and that it would be well if it were adopted throughout the country. There would be a much greater probability of equality of assessment than if each assessment committee or each parish proceeded on its own lines.

4522. What do you mean by the "best class of retail shops and offices"—who decides which are the best class and which are not?—To a great extent the valuer to the committee; the best are those which require least repairs from being well built, or which are comparatively new.

Collection of rates in the Aston Union. Method of.

4523. Have you anything to say to us as to the method of levying and collecting rates in the union in which you think your system is peculiar, in comparison with any others?—I do not think there is anything peculiar in our union. We have no local Acts relative to the matter, and I should think the system followed is the general one.

4524. How many demand notes are presented to each individual ratepayer in the course of a year in your union?—The number varies in different parishes. There are three in each urban parish, and three or four in each rural one.

4525. Are all your rates collected half-yearly?—No. In three parishes of the union they are collected yearly; in the other six half-yearly.

One demand note presented on behalf of the different authorities in the Union desirable.

4526. In the six that are collected half-yearly from what authorities do the demand notes come?—In urban districts from the overseers and from the urban district council; in the borough of Birmingham all the collections are by the overseers, and in the rural parishes all the collections are by the overseers also.

4527. Would it in your opinion be convenient, and if convenient, would it be possible that all the demands for rates should be made upon one demand note by one collector acting on behalf of all the different authorities?—I think it would be both possible and convenient.

The witness withdrew.

Mr. F. C. Hett.  
Glanford Brigg Union. Description of.

Mr. FRANK CROWDER HETT called and examined.

4540. (Chairman.) You are clerk, I understand, to the Guardians and Assessment Committee of the Glanford Brigg Union, in Lincolnshire?—Yes.

4541. Your population is 42,000, your area 165,000 acres, and you are nearly equally divided between an urban and rural population?—Nearly, not quite; the rural population is about 24,000, and the urban population about 18,000.

4542. You have a large railway system in the union, and some steel works and blast furnaces?—Yes, we have 17 blast furnaces.

4543. And part of the union is agricultural?—Yes.

4544. As far as I understand, from a letter which you have sent to us, the number of acres of arable and pasture land in the union is about 132,000 or 133,000?—Yes; that letter of mine will convey the correct figures.

Agricultural land, fall in value. Rateable value decreased in proportion to letting value.

4545. The average value per acre being about 18s.?—On the 20th July 1896; that was when it was taken off for the purposes of the Agricultural Rates Act.

4546. Is that much of a diminution, can you say, from what it was 10 or 20 years ago?—Yes, very great.

4547. To what extent?—I hardly like to say to what extent; I think I could find it out, but it would take an enormous amount of labour. From my personal knowledge the assessments of the farms and the rents have decreased enormously in the last 20 years—I should say from 30 to 40 per cent.

4548. Have they moved downwards in successive years, or how has the downward movement been brought to your notice?—Do you mean to my notice as clerk to the assessment committee, or as a solicitor in large practice?

4549. As clerk?—It has been brought to my notice under the objections under the Union Assessment Committee Act of 1862. When a tenant gets his rent lowered, he immediately comes to the assessment committee and asks them to lower his assessment in the valuation list, and they do it.

4528. Is there anything which has occurred to you since drawing up your memorandum in respect to the questions which we asked you\* on which you would like to make a representation to the Commission?—I do not think I have any statement to make beyond what is expressed in the memorandum.

4529. (Mr. Smith.) You made a new valuation, I think, three years ago?—That is so.

4530. You have not been in office many years, I think, have you?—About six years.

4531. Could you tell me when the previous re-valuation was made before that?—Not exactly, but I have the impression that it would be well on towards 20 years ago.

4532. Of course you would agree that that was too long an interval to allow to elapse?—I should agree to that.

4533. (Mr. Elliott.) Have you any agricultural land in your union?—Yes, we have five rural parishes in which there is a good proportion of agricultural land.

4534. In valuing agricultural land have you followed generally the principles which you have indicated in your paper with regard to hereditaments?—Yes.

4535. Do you think you have given full effect to the reduction in agricultural values in recent years?—Yes, I should think we have.

4536. How have you dealt with cases in which rent has been reduced?—We have lowered the assessments.

4537. And in cases in which rent has been temporarily remitted what have you done?—I should hardly think those have been taken into consideration.

4538. Do you think that on the whole the valuations are in excess of or about equal to the amount of rent actually received by the landlord?—I should think they are about equal to the rent actually received.

4539. (Chairman.) There is nothing more you want to add—you are quite sure?—I think not.

Mr. J. North.  
14 May '97

Revaluation in Aston Union. Periods at which made.

Agricultural land in Aston Union, how valued. Valuations about equal to the amount of rent actually received by the landlord.

Mr. F. C. Hett.

4550. Do you think that in the case of your union, the rateable value has decreased in accordance with what I might call the value for renting purposes?—Yes, I do.

4551. Is there much land in your union in the owners' own hands?—Not now. A few years ago there was a considerable quantity, but nearly all the land is now re-let.

4552. When the land was in the owner's own hands, had you applications from the owner for a decrease of the rateable value?—No, I think we had not. It is the most difficult part of the work of the assessment committee when land is in an owner's hand to arrive at the value; and unless the owner felt that he was being very much aggrieved he would not come.

4553. What test do you apply?—The average value of the land in the parish, and also the local knowledge which I regard as one of the most essential features in the matter.

4554. Do you think the present system of making up the assessment lists is satisfactory, or would you prefer to have them renewed at stated periods?—I do not see the necessity for renewals at stated periods.

4555. Do you see any objection to it?—There is the objection of expense; I do not know that there is any other.

4556. Would it be a serious expense?—It is a very considerable expense. We have 52 parishes, and so a new assessment does create a very considerable expense. The overseer in every parish has to be paid, and the clerk has to be paid, because it gives him an immense amount of extra work.

4557. I do not know that I quite understand the answer to the question we put as to the principles adopted by the assessment committee in dealing with the valuation list, and in determining the gross estimated rental, and rateable value of different classes of property; perhaps you would just explain to me what you say in reply to that question?—Perhaps I had better hand in our printed instructions to the overseers which set out the system adopted (*handing in prints*).†

Agricultural land in the owner's hands, method of arriving at valuation.

Revaluation entails a great expense.

Gross estimated rental, deductions in the Glanford Brigg Union.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 382.  
† *Ibid.*, pp. 89 to 91.

Mr. F. C.  
Hett.  
14 May '97

4558. Are these, practically, rules of your own making, made by your assessment committee?—Yes.

4559. Are they universally in force throughout your union?—Yes.

4560. Is there any special point in them to which you would like to draw our attention?—They are not absolutely correct at the present time, because, as to the deductions on mills, foundries, gasworks, and other properties of 4s. to 5s. in the £, those are matters for special valuation, and I do not think that the rule of thumb is correct there.

4561. Do you think it would be possible to make the deductions and allowances statutory?—I do not see why it should not be so.

4562. But it would be, would it not, taking a somewhat invidious duty off the shoulders of the local committee?—Yes, it would. The only thing is that, in assessment, hard and fast rules always work hardships in particular cases.

4563. Is there anything special in your method of levying and collecting rates in your union?—No.

4564. I see you make some suggestions as to changing the number of days within which the valuation lists should be deposited, but I do not propose to take you through those. Do you see any difficulty in having a collector who shall collect all the rates of the various local authorities in one demand note from the ratepayer?—Except the expense, which is a matter that the villages resent very much.

4565. I do not think any of us would like to unnecessarily add to the expense, but in what way do you think it would have that effect?—The overseers in the villages collect all the rates now, and if they have a paid collector, of course that adds to the expense. In the towns I think it would be a distinct advantage, and, I may say, that with us the rates are, at present, generally collected by different persons in the towns. Of course in the towns there are two sets of rates; there is the poor rate, and then there is the urban rate as well, which is entirely distinct, although both are based on the same valuation; the rates themselves are levied by entirely different authorities.

4566. I do not know whether you would care to express an opinion upon it, but I will give you the opportunity by asking whether you think it is necessary that the basis on which the urban rate is levied should be different from that on which the union rate is levied, and whether it should be collected by a different authority?—In ordinary cases I do not see why it should be, but there are certain rates where there is land in urban districts, the land pays only a fourth what the houses pay, and, practically, a separate rate is made out for that; there is no reason why the same person should not do it—not the slightest.

4567. I understand from an answer you gave a moment ago, that in some of your rural parishes the rates are still collected by unpaid collectors?—Yes, by the overseers themselves.

4568. Does the same overseer remain in office in successive years?—Not necessarily. Latterly there have been a good many changes since the parish councils appoint them.

4569. Do you find gentlemen in an independent position who will take the trouble of collecting the rates, and giving receipts, and doing all the book-keeping that that entails without remuneration?—They take the responsibility; as a matter of fact they get someone else to do the book-keeping, and the actual collection very often.

4570. Is that individual not paid?—He is paid in some way. I am speaking of what I have not entire knowledge now, but he does get something in some way; I believe one way is in reference to the voters' lists, and things of that sort; there is very frequently a man in the parish who does all these little things; he takes the whole of them, and gets paid for some; but in many villages the overseers do a considerable amount of work without any payment, and a paid collector would mean increased expense.

4571. Who pays him—what authority?—It comes out of the poor rate.

4572. Who pays in reality for the collection of rates—out of what fund does it come?—It comes out of the rates themselves.

4573. Then I do not quite understand why a paid collector, acting over a large area, would add to the expense?—Acting over a large area, it should not be so.

4574. Do you see any objection to obliging the owner or occupant to give information for valuation purposes, as to the actual rent which passes between them?—We do oblige it now; if anyone comes before the committee, we compel him to produce his agreement.

4575. I meant at an anterior stage, why, instead of only getting the information after you have made the guess, and gone to the Committee should not a schedule be sent to each owner, and he fill it up so as to guide you in making up the first list?—I think it would be very inquisitorial, and I do not see the necessity for it. We have the lists as they are, and those lists represent the rent, or something very nearly approaching the rent at the present time.

4576. I suppose you would say this, would you not, that in a rural district, such as in the main you are speaking for in this matter, everybody really knows each other's affairs?—Exactly.

4577. Enough to give them a pretty good guide?—Exactly.

4578. You would not apply your answer necessarily to a district in which that was not the case?—No, I would not.

4579. In the answer to the question we put to you as to suggestions for improving the present system of valuing properties, and otherwise offering suggestions on subjects included in the terms of reference, I understand you to express a strong opinion that taking Schedule A is not a good plan, and produces illusory results?—Yes.

4580. I wish you would explain that to me, for I do not quite understand it?—In many instances where land is mortgaged, the interest is inserted in Schedule A, because it is the owner of the mortgage who has to pay the property tax; the owner of the land is very frequently exempt, and so he returns to the assessor the interest he pays. That is most frequent with us and instead of the value of the land being put in Schedule A, the interest that is paid to the mortgagee is put into Schedule A.

4581. (Mr. Arthur O'Connor.) That is simply wrong?—I should say that that is only information that I have received, but it is correct. I can say that I have known cases where very small properties have not been assessed in Schedule A. It has been ascertained that there has been a small mortgage on them, and they have been assessed at the amount of the interest on that mortgage—I can say that. Supposing I lend a poor man a couple of hundred pounds, and I take the deeds of property, worth 15*l.* or 20*l.* a year, as security, my interest, say, at 4 per cent.—the 8*l.* he pays to me—is liable to property tax, but the rest of the rent is not liable to property tax; he is exempt because he is a poor man.

4582. (Chairman.) Why is he exempt?—Because, under a certain amount, he does not pay Income Tax; he is not liable to it.

4583. You are mixing up the case of a man who has so small an income that he would not be under the schedule of Income Tax?—That is what I meant all the time; there are many cases like that.

4584. But for local rating purposes surely the rent should be inserted in your valuation list?—So it is. I am speaking of Schedule A, at the present time, and why I object to Schedule A, as a basis for the poor rate.

4585. Have you anything to say to us about the rating of personal property?—I can tell you, if it is any interest to the Commission, exactly what the grants-in-aid in our union were last year, and what the poor rate was, to show you what an extremely small contribution there is from personal estate.

4586. That is one of the things which is submitted to us in the reference; we are to consider it for the whole country, and you may give us the facts if you wish?—I have here the statement of our union for the year ending Lady Day, 1896. The total amount of poor rates raised by the overseers was 30,532*l.*, and the total amount of the payments from the exchequer contribution account was 2,324*l.*; that is the poor rate proper. In addition to that there would be the urban district rates levied in the urban districts, the grants-in-aid to urban districts being very small.

4587. (Mr. Smith.) Can you produce the figures?—No, I cannot produce the figures now. I am clerk to

Mr. F. C.  
Hett.

14 May '97

Compulsory powers to ascertain rent paid not desirable. Local knowledge in a rural district is sufficient guide.

Schedule A. Land mortgaged. Interest inserted in Schedule A.

Treasury subventions in Glaugford Brigg Union. Amounts.

Agricultural Rates Act, 1896. Amount received in Glaugford Brigg Union.

Deductions might be made statutory.

Collection of rates in a Union by one collector on one demand note would entail paying a collector instead of collection by unpaid overseers.

Mr. F. C.  
Hett.  
14 May '97

one of the urban district councils, and I can say that, as a matter of fact, we get, if I recollect aright, half the medical officer's salary and half the inspector's salary: it is a trifling amount. Then, of course, the Exchequer grants are now further augmented by the Agricultural Rates Act to the extent of half the rates on the agricultural land. Under the Agricultural Rates Act this year we shall receive, for poor law purposes, 1,427*l.* 4*s.* 8*d.*; for the rural district council, which includes highways, 3,844*l.* 8*s.* 6*d.*; and for school boards, 119*l.* 4*s.* 1*d.*, making a total of 5,390*l.* 17*s.* 3*d.* If you add to that the 2,324*l.*, because that is a fixed sum, you arrive at what I believe we shall receive in aid during the present year.

Agricultural Rates Act, 1896. Extension of principle advocated.

4588. (*Mr. Arthur O'Connor.*) 7,714*l.*?—Yes. There is another matter I want to mention. At the end of the paragraph in my memorandum where I suggest that the Agricultural Rates Act should be extended to houses, I say: "I have heard it remarked sometimes the county 'pays half so-and-so; but there is always the immediate answer given, 'But the money comes out of our 'pockets all 'the same,' and I believe the same feeling 'prevails with reference to grants from the Imperial 'Exchequer.'" I should like to add these words: "at 'any rate, among the larger spending authorities." I should not like to say that amongst some of the very small spending authorities the fact of the money coming through the Government would have no effect.

4589. (*Chairman.*) I understand you to condemn the principle of the central authority contributing to local expenditure?—On the contrary, that is what I am advocating strongly. I say in my memorandum that I do not believe it would make the expenditure by local bodies lavish; on further consideration, I wish to confine that remark to the larger spending authorities, which are, of course, the important ones, parish councils being limited in what they can spend.

4590. I do not gather what your opinion is as to whether these grants should be continued or whether they should not, or whether any change of circumstances should be made?—I think, certainly, they should be continued, but I think they should be extended to the other real property—buildings and other hereditaments.

4591. Would you impose any conditions at all?—If any conditions could be devised I think it would be desirable.

Tithes, rating of. Tithes deducted from gross estimated rental.

4592. I understand there is an anomaly in the rating of tithes, to which you wish to draw our attention?—Yes. There is an anomaly in the rating of tithes to which I would draw the attention of the Commission—tithes are rent. When the Union Assessment Committee Act was passed in 1862 tithes were payable and leviable upon the tenant, and were treated by that Act as a tenant's tax, yet they are deducted before arriving at the gross estimated rental, because of the tithe owner being separately assessed on the tithe; the effect being that in the case of tithe rent the rates are paid by the owner, and in the case of other rent by the tenant. This is, on the face of it, an inconsistency. The effect is peculiar, and operates very favourably on some tenants and hardly on others. The tenant of Blackacre pays 500*l.* a year rent, and the tenant of Whiteacre pays 500*l.* a year rent. The farms are of exactly equal value. Blackacre is subject to 100*l.* a year tithe rent, which (now) the owner has to pay over to the tithe owner. The gross estimated rental of Blackacre is, therefore, 400*l.* per annum; the gross estimated rental of Whiteacre, 500*l.* per annum. The tenant of Blackacre, therefore, pays rates on whatever the rateable value of 400*l.* gross estimated rental may be, and the tenant of Whiteacre pays on the rateable value of 500*l.* gross estimated rental for a farm of exactly similar value. This works an injustice on the tenant of Whiteacre, because now, that the owner pays the tithe by law, a tenant is not put to any inquiry on the subject, and as a matter of fact, is not, as a rule, aware of the great advantage of taking a farm with a heavy tithe on it. As to whether the owner or occupier should pay rates is a question into which it is unnecessary to enter for the purpose of my argument; but at present the anomaly against the tithe owner and in favour of his tenant, as compared with the owner of the rest of the rent and his tenant, is glaring.

4593. I do not now gather where the injustice to the tenant of Whiteacre comes in?—It is not so much an injustice to the tenant of Whiteacre as an unfair advantage to the tenant of Blackacre. I have a valuation list before me. On one farm in the parish the present tithe is 94*l.* 14*s.*; the rent is 600*l.* a year, and if there was

no tithe on it the gross estimated rental upon which we arrive at the rateable value, would be the 600*l.* a year; but in this actual list which I have before me it is 506*l.* Therefore, the man pays on 94*l.* less than the rent, whereas his neighbour in the same parish, who has no tithe, pays on his full rent.

4594. Of course, each of them, in taking the farm, made the calculation accordingly, and gave a rent in accordance with the altered circumstances of rating?—The landlord now pays the tithe.

4595. Would not the case be as I put it to you?—I think not.

4596. Why not?—Because the landlord now pays the tithe, and the tenant is not put on inquiry about the tithe.

4597. Do you mean to tell me that a tenant in Lincolnshire goes into a bargain with his landlord for the amount of his rent without finding out what his rates are to be?—He finds out that the rates in the parish are so much in the £, but he does not necessarily know that he is going to be rated on a less rateable value than his neighbour, because there is tithe on the farm.

4598. He can find that out, cannot he; that is a matter which he can ask about before he makes his bargain?—He can, but it is only occasionally that it occurs; it is not all over the union; as a matter of fact, I do not believe he does.

4599. (*Mr. Arthur O'Connor.*) Would you tell me what was the date of the valuation before the valuation of 1894?—I think it was in 1888.

4600. Six years before?—Yes.

4601. Will you kindly look at these words in your memorandum—"In consequence of a considerable amount of new property having been added in some of the urban districts by supplemental lists, and the discovery of what were believed to be serious discrepancies in the rating of buildings and other hereditaments in different towns and villages, and a general feeling by the committee that the whole of the lists required revision, it was decided by the committee to have a new list for every parish in the union." How is it that as between 1888 and 1894 such serious discrepancies had arisen and so strong a feeling with regard to the injustice existed?—There had been a considerable amount of building in one or two towns and villages, and it was believed that these new buildings were not properly rated; then also the values in the agricultural land had gone down very materially in those six years.

4602. In reply to the Chairman I noticed that you rather deprecated a periodical revision; what I want to point out is, that within six years, in your own area, there had arisen "serious discrepancies" and a general feeling that a new revision was required?—I ought to, perhaps, modify that answer in this way: I understood that by a periodical revision it was intended to convey that the lists could not be altered between times. I think that it is so in the metropolis, is it not?

4603. But is there anything to prevent a re-assessment where there are new buildings in respect of the new buildings?—No, not in respect of new buildings; but I think it is essential in an agricultural district that there should be power to alter the list at any moment.

4604. But so there is, is there not?—Yes; and I do not see except on the ground of expense that there is any great objection to a periodical re-valuation as long as none of those powers are curtailed.

4605. Would you not think it a reasonable construction of the memorandum which you put before us that the case of your own area is an illustration of the possible need, and the urgent need apparently, of a revision within six or seven years?—On that particular occasion, but I also take it as an indication that my committee was quite capable of deciding that it was necessary.

4606. And they did decide to have it?—They did decide that.

4607. I see that you have 45 miles of railway lines within your area; in calculating that mileage do you take merely the miles of metal of single lines, or do you treat the miles as of equal value no matter how many lines there may be?—They will be all double lines.

4608. Forty-five miles of double lines?—Yes.

4609. Suppose that there are four lines in one case, two lines in another, and a single line in a third,

Mr. F. C.  
Hett.

Periodical revaluation, advantages of.

Railways, mileage of, in Glanford Brigg Union.

Mr. F. C.  
Hett.

14 May '97

Farm  
buildings  
valued  
separately  
from the  
land.

would you treat them all as of equal mileage for valuation purposes?—I am not competent to answer the questions as to railways.

4610. I will not press it then. In your paper giving the instructions to overseers I notice that under the head of "dwelling-houses and their appurtenances," "every dwelling-house with its out-buildings, yards, gardens, and other appurtenances must be separately valued and form a separate item in your list;" would there not be, especially in an agricultural district, many buildings, which, apart from their use in connection with the land would be of very little value?—That is so, and they are valued accordingly; I may say that it has been the practice with our committee always to keep the farmhouse, the farm-buildings, and the cottages separately assessed from the land, which saved an immense amount of trouble under the Agricultural Rates Act.

4611. The outbuildings of a farm surely would have value only in respect of the land which they were connected with?—And they would be valued accordingly. The house is valued, the buildings are valued, and the cottages are valued and put into the list separately; then the total amount of the valuation of the farmhouse, cottages, and buildings is deducted from the rent, and the rest of the rent put on the land.

4612. With reference to schools you say, "This assessment will include the playgrounds, but not 'masters' houses or gardens,'"—are they separately assessed?—Yes.

Valuation  
on structural  
value of  
certain  
hereditaments.

4613. Then in the case of windmills, foundries, workshops, and other buildings, I notice that your committee consider that there should be an assessment of from 6 to 7½ per cent. on the structural value of the buildings. You adopt there 6 or 7½ per cent., but in the case of warehouses and other buildings you adopt a rate of 3½ to 5 per cent., and in the case of gas and water works you adopt 6 per cent. What is the principle which enables you to differentiate with regard to these rates on buildings?—Those are really all to some extent rule of thumb. A warehouse, I take it, is not worth as much as a building used as a foundry or a workshop. A warehouse is merely used for storing goods, and with us is of very little value compared with—I will not say windmills now because they have almost lost their value but—foundries, workshops, and other buildings where machinery is employed. Of course I do not say that that is right. It is all to a certain extent rule of thumb, as valuations must be. The committee considered that those were fair percentages in considering what those buildings would let for—what a man would be likely to ask for them.

Sporting  
rights,  
valuation:  
of.

4614. In your memorandum you say: "The first step taken by the Committee was to revise the average value of arable, meadow, and pasture land, woodlands and sporting rights in each parish"; there you estimated the sporting rights separately, did you not?—We are obliged to do so under the Act; where there is anything for sporting rights that must be put separately.

4615. In your instructions under the heading of "Land used for woods, plantations, or for growth of saleable underwood," you say, "The sum per acre estimated by the committee as the minimum average gross rental includes the right of sporting over the land so used"—Yes. The committee practically settled what the average in every parish of the woods and plantations, including the sporting rights, was to be, and the sporting rights over the rest of the parish had also to be settled. The printed instructions as to the sporting rights are in strict accordance with the law.

Hereditaments  
should be  
rated on  
full value.

4616. I am afraid it is my fault, but I am utterly unable to see any system or principle in any portion of these instructions or explanations. With regard to the tithe, tithe is an interest carved out of a particular piece of property, is it not?—Yes.

4617. Just as a mortgage is carved out of a piece of property; do you see any reason why there should not be got in from the tenant the rates payable upon the full value of the property, altogether regardless of the interests which may be carved out of it?—That is exactly what I contend for.

4618. For assessment purposes and for the collection of poor rates you are really not concerned with the sub-division of the taxable entity?—Exactly; that is what I have tried to explain.

4619. If that system were adopted then you would have no difficulty with regard to the interest on the

mortgage or the existence of tithe or the non-existence of tithe?—No.

4620. (Mr. Smith.) I see the area of your union is 165,000 acres roughly?—Yes.

4621. And its rateable value is 285,000l.?—Yes.

4622. Of which land alone represents 120,000l.?—Yes.

4623. So that curiously enough the buildings in your Union exactly add 1l. an acre to the value of the land, is that not so?—Yes.

4624. You have 165,000 acres and you have roughly 165,000l. in rateable hereditaments other than land?—Yes.

4625. So that your land is worth something less than 1l. an acre—15s. I reckon it—and the buildings make it worth 35s.?—Yes.

4626. I need hardly ask you this after that—your area is almost purely agricultural, I suppose?—Yes; but this 165,000l. for buildings and other hereditaments includes blast furnaces, steel works, and railways not having their termini in the union.

4627. I am endeavouring to ascertain what is the proportion paid by land, and what is the proportion paid by buildings. Your district is mainly agricultural; have you a town of any size in it?—Yes; Scunthorpe and the surrounding ironstone villages, with a population of 10,000.

4628. It cannot be described at all as a residential district?—No.

4629. If it were you would expect the benefit from buildings to be much greater—buildings would bear a much larger proportion to the land?—I hardly follow you in what you mean by a residential district.

4630. I mean the overflow from towns—villa residences, and so on?—No, we have nothing of that.

4631. Therefore you are almost a purely agricultural district, with a rateable value as far as land is concerned, of only 15s. an acre?—Yes, except the ironstone villages, which have a rateable value (exclusive of agricultural land) of 50,000l.

4632. I think I understood you to say that you approved of the principle of Government grants but you thought they ought to be extended to houses?—I did.

4633. You have given us some figures showing how very small a sum your union receives out of the exchequer contribution account, but you have not told us the amount received by the urban districts or the amount expended by them?—No, but you may take the proportion as no greater.

4634. You do not think the proportion in an urban district would be greater than in a rural district?—I think it would be less.\*

4635. Does it not bear some relation to the expenditure?—No.

4636. Surely it bears relation to previous grants, does it not?—Yes, but the expenditure goes up.

4637. I do not think we need discuss that, because it is a matter of fact?—Yes, it is.

4638. What I want to point out is that you have left out all account of the county rates, which also receive an exchequer contribution grant?—The figures I have given you of the poor rate of 30,532l. that we raise include the county rates.

4639. Including the lunatic asylums?—Yes, and police. We raise the county rate; we get an order from the county.

4640. Then it is an inclusive poor rate?—Yes.

4641. Does not the county get anything direct outside that rate, or is it all included in the precept served upon you?—All we as the spending authority and the raising authority get, is that 2,324l.; the county may get other money—that I cannot say, as I do not know.

4642. Will you kindly tell me what, putting all your rates together, is the average total rate in your district on agricultural land—what does it amount to in the £?—If we take the 30,532l. it is a matter of calculation.

4643. That is only the poor rate and I want to know what all the rates are?—In the towns I cannot tell you.

\* I have now ascertained that in the Urban District of Scunthorpe, where I am clerk, the council raised last year 1,400l. 18s. 3d. by rates, and only received 35l. from the Exchequer, and 13s. per annum as all that will be received under the Agricultural Rates Act.

tural land.

Mr. F. C.  
Hett.  
14 May '97

4644. I mean in the country districts?—The poor rate represents everything in the country districts that is levied on the basis of the valuation list, except certain expenses under the Public Health Acts.

4645. It represents everything?—Yes, with that exception, and also certain local drainage rates and sewers rates; it does not include those, and they are not levied on the lines of the valuation list.

4646. Are they substantial in amount?—They are 2s. 6d. an acre in some parishes, but those have nothing to do with this matter.

4647. Those are on reclaimed land, I suppose?—Yes.

4648. Apart from those special rates of benefit as I may call them on reclaimed land, what is the amount in the £ of the rating in your agricultural districts?—I can only take these figures and calculate it out.

4649. Is it 2s. 6d. or more, do you think?—I should think it is not more than 2s. 6d.

4650. Not being, as you say, more than 2s. 6d. so far as agricultural land is concerned that would practically be reduced to 1s. 3d., would it not?—Yes.

4651. And those will be all the rates you pay?—On the agricultural land.

4652. (Mr. Elliott.) What was the effect of this re-valuation of property in your union upon the agricultural land in the union?—It was not so great as was expected.

The witness withdrew.

Mr. JOSEPH PEACE called and examined.

4661. (Chairman.) I understand that you are clerk to the Dewsbury Union?—Yes.

4662. How long have you held that office?—Since 1873.

4663. That is a union which is wholly urban, I understand?—Entirely.

4664. In your case the valuation lists are prepared by the overseers from valuations made by professional valuers, are they not?—Yes.

4665. How often are they revised?—There was an entire re-valuation in 1880 of the whole of the property.

4666. Has there been any re-valuation since that time?—Yes; there was a re-valuation of railways and collieries in 1891 by Messrs. Castle & Son of Chancery Lane.

4667. The list, of course, being kept up to date by making allowance for changes since that time?—Yes, by a supplemental list each year. The hotels and licensed premises were valued throughout the union only last year.

4668. You have heard some of the questions which have been put to previous witnesses about the advisability of making either an annual or triennial list; what do you say about that?—Do you mean an entirely new list?

4669. Yes?—I should quite concur in that; I think it is the proper thing to do.\*

4670. Would you have it done under the authority of a body which is representative of the whole district, with such professional assistance as might be necessary?—Yes.

4671. Do you think that any expense which would be incurred in that system would be more than recouped by convenience and by bringing up the valuation to date?—I think it would be a benefit in making the assessments uniform and bringing them up to date.

4672. And you would like to take, I understand from the answer to the printed questions† which we sent to you, the surveyor of taxes along with you in the valuations?—Yes; I may say that the reason for that is that he was found of some assistance last year in settling the overseer's statements under the Agricultural Rates Act of 1896.

4673. Do you see any objection to obliging the owner or occupier, or both, to furnish the assessment committee with a return of the actual sums paid by those who occupied the property?—That is one of the things I am prepared to recommend.

\* Witness subsequently wrote that he considers periodical re-valuations every five or seven years would be sufficient.

† Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 382.

Mr. F. C.  
Hett.  
14 May '97

4653. Can you give any figure indicating it—it was a reduction, I suppose?—Yes, it was a reduction but not as much as was anticipated.

4654. Can you give, roughly, any idea of the percentage reduction?—I cannot.

4655. Do I understand the suggestion made in your memorandum to mean that houses and land should again be put on an equality in regard to local rates and that at the same time the exchequer grant should be increased?—That is my suggestion.

4656. Have you considered whether the value of a house bears the same proportion to the ability of the occupier to pay as the value of agricultural land?—I do not think I have thoroughly considered it. The view I take is that if land is worth 50l. a year, and a house is worth 50l. a year, they ought equally to pay.

4657. One question with regard to what you suggest as to tithe. I rather understood you to say in reply to Mr. O'Connor that you would not rate the tithe owner, but that you would rate the occupier of the farm?—Certainly.

4658. Do you think that that would be acceptable to the ratepayers in your district?—I cannot say that; no man likes having his rates increased.

4659. Would it be considered that although it was unpleasant, it was still just?—I think it would be agreed that it was just.

4660. (Chairman.) Is there anything you would like to add?—No.

Rating of houses and land. There should be equality with respect to and increase of Imperial contributions. Occupier should be rated in respect of tithe.

Mr. J.  
Peace.

4674. Those are all the points which you have furnished me with in the memorandum which I have got; is there anything you would like to add?—There are several matters which I would like to mention if it would be convenient to do so now. I would say that the valuer who makes the valuation on behalf of the committee is assisted by the assistant overseer, who renders him all the assistance he can from the local knowledge he possesses. After the list has been deposited we fix a day for hearing the objections. In the meantime the list is examined and checked also by the committee, but very rarely we have any objections then. The objections chiefly are dealt with under Section 1 of the Union Assessment Committee Act, 1864, and all the objections, or nearly all, are received after the rate has been demanded. When the committee hear the objections the valuer is always present, and between the time of the objector giving notice and the day fixed for hearing the valuer goes and makes a re-survey of the property. He looks at it and inspects it so as to be able to report to the committee and advise them upon it, and the committee, in a great measure, act upon his advice. Although I should favour periodical re-valuations, as I have said, yet we have so many alterations and changes in each year that it seems to me it would be still necessary to have a supplemental list each year under Section 25, I think it is—there are so many structural alterations of property and new buildings. As to the method of levying and collecting rates in each district, there is a general district rate and a poor rate, and in one or two instances a water rate as well. Those are the only rates levied. With regard to the appointment of valuer I would submit that the law is sufficiently flexible at present to enable the assessment committees to appoint a professional valuer, and it seems desirable in all cases to employ one, especially with regard to special property such as railways, canals, collieries, and property of that special description. I would suggest that the union area is the most convenient area for assessment purposes, and for valuation purposes.

Valuation in Dewsbury Union, and levying and collection of rates. Procedure and system adopted.

4675. (Mr. Arthur O'Connor.) You have had considerable experience in your present office, I think?—Yes.

4676. How long have you been connected with this kind of work?—Since 1873.

4677. For 24 years?—Yes.

4678. You are quite conversant with the working of it in every detail?—I know a good deal about it.

4679. Is there anything which your experience suggests to you with regard to the existing law or practice which you think might be with advantage and with justice altered? Is there any prominent thing which you have specially before your mind when you look at

Desirable to have only one assessor and one rating and one collecting authority in each union.

Mr. J.  
Peace.

Valuation in Dewsbury Union. System adopted.

Revaluation annual or triennial desirable.

Assistance of surveyor of taxes desirable in making valuation.

Owners and occupiers should furnish returns of rent paid.

Mr. J.  
Peace.

14 May '97

the existing system?—I think it would be more convenient if there were only one assessing and one rating authority in each district.

4680. What do you mean by "district"?—In each union.

4681. Do you mean a city?—Or in each parish.

4682. Which is it; is it a parish or is it a union; or is it a borough, or is it a county?—I mean in each union.

4683. Would you make the union the assessment area?—Yes, as at present.

4684. And the collecting area?—The rating area would be the same as at present.

4685. Would you make the assessment area the same as the rating and the collecting area?—What I mean to suggest is this—that there should be one assessing authority in each union, and that there should be one rating authority in each union, and that each spending authority in the union or in the parish should levy a precept upon the rating authority at the commencement of the year, say, in January or February, which ever might be fixed, and that that rating authority should levy one general rate in each parish calculated to meet all the requirements of the spending authorities for the coming year.

4686. May I put it in this way: you would have a kind of local exchequer under the control of what you call the rating and collecting authority?—Yes.

4687. And that to this rating and collecting authority you would have demands addressed by the different services that are charged with certain particular departments of business, such as the poor law guardians and others?—And the school board, the urban district council, or corporation; these authorities should all levy a precept upon this authority for the money they require.

4688. With regard to the valuation, I suppose valuation is necessarily a current business, by reason of new buildings, by reason of fires, by reason of vacation of premises—there must be constant fluctuations requiring record and notice?—That is the case in my union.

4689. And it must needs be so everywhere, must it not?—I should think so.

4690. Valuation is, therefore, a current business?—Yes.

4691. And whether you have, or have not, periodically complete re-valuations, you must always have a current check of some kind going on?—Yes.

4692. Are you satisfied that the existing machinery for recording that which has to be recorded from day to day, or from week to week, is effective and sufficient?—I think the present system of having a supplemental valuation list each year is sufficient.

4693. Do you think it is a good thing to have separate rating authorities, with, possibly, separate standards in different areas; or do you think it would be better to have, as elsewhere they have, one central rating authority for a very much larger area, as for a county, or the whole country?—I think the present method for certain purposes has worked well; it is well defused.

4694. You do not think it would be better to have a department of valuation for the whole country?—You would not get the local knowledge that you have now. I am afraid.

4695. Not even by means of advisory councils—local consultative bodies?—Of course they would be able to render some assistance.

4696. (Mr. Smith.) Is there anything in your district that makes it differ from any other urban union in the country?—Not that I am aware of.

4697. (Mr. Elliott.) Have you any agricultural land in your union?—I can give you the relative proportions. The total rateable value of agricultural land is 27,000l., and the total rateable value of buildings and other hereditaments is 587,263l.

4698. I think you said there had been no complete re-valuation of property in your union since 1880?—That is so, except with regard to certain classes of property.

4699. Has any effect been given to the great fall in agricultural values which has occurred since 1880?—Yes.

4700. Do you think, roughly speaking, that your gross estimated rental in the valuation list represents the actual rental value of land at the present moment?—It is fully up to the rental.

4701. Do you think it is beyond it?—I should say it is almost in some cases.

4702. Is it much beyond it?—No.

4703. Have any complaints been made by the owners or occupiers of agricultural land in your union?—Yes, there are frequently appeals from occupiers of land—small farmers.

4704. Do you think that the discrepancy to which you refer is so great as to call urgently for a re-valuation of the property?—I believe the committee are quite satisfied with the valuation; they take them all on one uniform basis. They always go by the rent.

4705. Do you take into account remissions of rent which agricultural landlords are compelled to give now?—Yes.

4706. Do you think full account has been taken of those remissions?—I think so.

4707. You would not say, generally, that the value on which rates are paid is in excess of what it would be if the provisions of the law were strictly complied with at the present moment?—I am not prepared to say that.

4708. You have not considered the point?—No.

4709. (Chairman.) Is there any other point which we have missed which you would like to speak about?—I may say that an additional reason for keeping the union as the assessment area is, I think, that in our union it is the area for the petty sessional divisions and for county police purposes. I should like to be understood about the surveyor of taxes; I suggest that he should be present at the meetings of the committee, but not with a vote. Then I think the scale of deductions from the gross to the rateable should be made uniform throughout the country.

4710. Statutorily so?—Yes, and that there should be periodical re-valuations. My committee wished me to mention the subject of the tied-house system, and the difficulty of arriving at the gross rental, if you take the actual rent paid, because in these cases the actual rent paid does not nearly represent the actual value of the premises—in some cases it is merely nominal, as the rent is paid through the beer account.

4711. Have you any suggestions to make about it?—The only suggestion that the committee would make, if this is the proper place to make it, is that the system should be abolished altogether.

4712. How would that benefit them?—It would do away with the present conditions upon which this class of property is taken, and the committee would then be better able to get at the real value of the premises to let, as is the case with other houses.

4713. (Mr. Arthur O'Connor.) They are generally under a mortgage now, are they not?—A good many of them are under mortgage and under a lease.

The witness withdrew.

Adjourned till Tuesday next, at 12 o'clock.

Mr. J.  
Peace.

FOURTEENTH DAY.

Tuesday, 18th May 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.  
T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. SYDNEY MORSE called and examined.

Mr. S.  
Morse.

Mr. S.  
Morse.

18 May '97

18 May '97

4714. (*Chairman.*) You are, I understand, a solicitor, chairman of the electrical trade section of the London Chamber of Commerce, an *ex-officio* member of the Council of that Chamber, chairman of the Rating Committee of the London Chamber of Commerce, and a member of the Council of the Institution of Electrical Engineers?—Yes.

4715. You are one of the gentlemen who are deputed by the London Chamber of Commerce to come here to-day to explain their views in regard to the subjects of our reference?—That is so.

Companies and manufacturers do not get the same benefit from expenditure of certain rates as householders do.

4716. I am not going to take you over the history of the poor rate, because we have got all that information already, nor of the Union Assessment Committee Act; we know also that the poor rate covers a great deal more than it means in its own words?—That is so. My point on that is that companies and manufacturers do not get the benefits from the other matters which householders naturally get from them—such as police, sewers, education, and so on.

4717. I should have come to that in time, but as you have just mentioned it, you might now make a little more distinct what you mean?—Of course almost all rates now are based upon the assessment for the poor rate, and when that basis was fixed upon, the factories were not so numerous or so large, nor were the other rates so numerous, such as, for instance, the school, the lighting, and the police rates. Companies such as electric lighting companies, which I particularly represent—

4718. The London Chamber of Commerce is not going to begin with electric lighting companies first, is it? There are some larger questions before we come to the bearing of this subject on an electric lighting company, are there not?—I was putting forward the one I know best; that was the reason I was going to give that example.

4719. Very well, as you please?—The point I make shortly on that is that a company, such as an electric lighting company, uses the under-surface of the roads, and yet contributes as largely to all these rates as a banker or other person who uses the road himself to just as large an extent probably, and for whose benefit these rates are largely made.

4720. The valuation of an electric lighting company is fixed locally by the overseers and the assessment committee, is it not?—That is so.

Appeals of electric lighting companies from assessments.

4721. Are you interested in an electric lighting company which has ever made any appeal from its assessment?—Yes.

4722. Perhaps you would give me the reference to that?—As your Lordship is aware, assessments are made in London quinquennially with the right to make a supplemental or provisional list. From a provisional list there is no appeal; and the first case I had, was

where the company was suddenly increased in a provisional list from a rating of a few hundred pounds payable in rates per year, to a sum which put on the company 2,500*l.* additional to be paid by them in rates. That was done by a provisional list from which there was no appeal. In a case in which I have had to appeal, we have got so far as the quarter sessions, but I have never been able to induce the quarter sessions to grant a case for the opinion of the superior Court.

4723. Can you give me an idea of the points on which you feel yourselves aggrieved?—The point on which I think not only electric lighting companies but all the companies we represent feel aggrieved is that the rates are assessed on profits; they are not assessed on the rateable value, we say, of the land and hereditaments.

Companies assessed on profits, a grievance.

4724. How do you make out that the assessment of an electric lighting company is based on profits?—In this way, that there being no landlord and tenant in the ordinary way, in the case at any rate of a station or a large manufactory, it is the practice for the assessment to be based upon the actual receipts of the company for previous years, the figures being taken from the balance-sheet and worked out on that basis.

4725. What was the point on which you took the appeal?—The point on which we took the appeal was that the amount on which the figures worked out gave too high an assessment. I put it shortly in this way. In taking the accounts of one of these companies they first of all take the receipts, and from those they deduct the expenses, excluding repairs and maintenance. That brings you down to a certain figure; if we take, say, 20,000*l.* of receipts, and 10,000*l.* of expenses apart from repairs and maintenance, we get 10,000*l.* left, which has to be divided between the hypothetical tenant and the hypothetical landlord. They then try to find out by assumption what working capital the tenant would require to earn the income which has been shown. They allow him upon that 17½ per cent as his profit, and they deduct that from the 10,000*l.* which has been left, if you say that is 2,000*l.* it brings the balance to 8,000*l.*, and that is really the gross value of the premises in the way they work it out. Then they have to ascertain what the landlord would have to spend to keep the premises in a state of repair to earn the rent, and that deducted from the 8,000*l.* gives the rateable value. But as these are all hypothetical figures, there is always an enormous difference between the views taken by the various parties of the question what is the fair amount the landlord would have to spend in order to keep the premises in a condition to earn the rent. That is where the difficulty arises. The great difficulty is that it is largely a question of fact rather than of law upon which there are naturally grave differences of opinion, and so we have to appeal really on the figures as to what the rateable value is and how it ought to be ascertained in this hypothetical manner.

Method adopted of assessing companies.

Mr. S.  
Morse.

18 May '97

Suggested  
method for  
valuing  
companies.

4726. You have described and explained your objections to the present system, would you now tell me what, in your view, would be a fair system on which to value an electric lighting undertaking?—We think, if I may say so, that a system which is uniform and well ascertained is essential, based on a fair percentage of the excess of receipts over expenditure, having regard to the repairs and renewals, all being brought in as part of the expenditure; that might be a fair basis for dealing with the matter. At the present time there is no system at all, and there is no actual rental of the premises taken; it is always a question of hypothesis—of what a tenant would give. The cases vary so much that frequently the rateable value is brought out as equal to the net profits that the company has earned in the past year, which cannot be right. It is very difficult to suggest what would be fair, because at the present time if you make no profits because of bad management you do not have to pay rates, but if you make large profits because you have a careful management you are immediately penalised by having heavier rates put upon you. That which is a reasonable percentage, having regard to what other properties bear, upon the result to the companies would probably be a fair basis, at any rate it would be uniform, and that would be a very great advantage to the companies.

Constitu-  
tion of and  
appoint-  
ment of  
assessment  
commit-  
tees.  
suggested  
alterations.

4727. I do not propose to pursue the electric lighting matter farther at present, others may perhaps ask you questions upon it. You wish, I think, to say something to us as to the constitution of the bodies by which assessments are made and reviewed?—That is so.

4728. Perhaps you will do so now?—The Chamber of Commerce thinks that the body by which the assessments are made and reviewed should be an independent body; their report terms it "a non-elected independent body."\*

4729. What do you mean by that?—Perhaps I should mention it in reference to what the body is now.

4730. We know that; we have that already in evidence?—At the present time the members of the body by whom the rates are assessed, and to whom appeals are made, are not necessarily independent of the results of the rates.

4731. We know what they are at the present time; I should be glad to have your suggestion as to what you think they ought to be?—Our suggestion is that they should be independent.

4732. Yes, but how appointed—we must have a practical suggestion?—If the Local Government Board would appoint them it would be perfectly satisfactory to manufacturers.

4733. Do I understand that you want to represent that the Government department should appoint a valuer for every local authority all through the kingdom?—Not necessarily directly appointed by the Government department; there should be we think a central authority to which appeals should be made.

4734. I think I must ask you to describe your system so that we can see it as a whole and understand it; I want you to put it before me?—Then I would suggest that in each county or division of a county there should be a body appointed as the assessment committee which should not be interested in the rating which its decisions involve.

4735. How would you proceed to appoint it?—It might be appointed by the county council, or by some body of that sort, providing that the persons constituting the committee by whom the rates are fixed should not be interested in their decisions.

4736. Would you have an appeal?—I would have an appeal from that body.

4737. What sort of appeal would you have?—I should like to see the appeal to such a body as the Railway Commission in railway matters.

4738. Do you think that would be a possible arrangement, having regard to the probable expense that would be involved in it?—I think I may answer that in this way—that if there were such a body the appeals would be reduced to a very small number, because we should have a system, and we should know upon what system the assessments are made. The appeals at the present time are enormously expensive. We cannot get an appeal without going to enormous expense. I had a case in Dorsetshire last month in which the magistrates at quarter sessions suggested that if they had to fix

the costs of the appellants they should put them at 500 guineas—and that was simply for going to quarter sessions. I do not think the costs would be so important as getting an independent body whose decisions would be known and reported, and who would no doubt set up a uniform system of rating.

4739. Has that suggestion, which you have indicated, been the subject of discussion in the Chamber of Commerce, or is it your own personal view?—It has been discussed amongst the members; the actual form which the tribunal should take has not been definitely settled by the Chamber of Commerce.

4740. How far has any decision on that point been come to by the Chamber of Commerce?—This is from paragraph 19 of the report: "That rating assessments should be made by a non-elected independent body, with the right of appeal to a judicial authority." I might perhaps mention that the Chamber of Commerce has a letter from the manager of the National Telephone Company, in which he asks us to put forward, not before you to-day, but in the course of the proceedings of the Rating Committee of the Chamber this point: "The least that, in my opinion, the companies affected are entitled to, is an appeal to an independent and judicial tribunal."

4741. Have you not got that at the present time?—No, the assessment committee hears cases of objections before it.

4742. Do you not admit the quarter sessions to be an independent tribunal?—I have not the slightest suggestion to make, that the magistrates at quarter sessions do not work absolutely independently. The objection rather to the quarter sessions as an appeal is, that they are not judicially constituted, that the members of that body are not judicially trained persons, that they have to deal with very important questions of law, with which they are not conversant, and that there is no appeal from them.

4743. Do I understand you to suggest that the appeal should be to a purely judicial body without any element in it of what I think I may describe as men of affairs?—Not quite. I suggested the Railway Commission which, I think, is based on joining the two together.

4744. We all know the constitution of the Railway Commission, that it consists of a judge of the High Court of the country, in which it happens to be sitting for the time being, a member who is more or less a representative of the railways, and a member chosen by the Board of Trade?—Yes.

4745. Surely the railway representative and the member chosen by the Board of Trade, being primarily chosen for railway purposes would not be likely to have that knowledge of affairs which you must often get at quarter sessions?—I should have said that they have more knowledge of affairs than you get at quarter sessions, and that you do have the advantage there of having a judicial representative in the shape of the judge of the High Court, which is a most important element.

4746. I understand from what you have said, that one of your objections to the system of ascertaining rateable value, more or less by reference to profits, is that there is no uniformity in dealing with it?—That is one strong objection.

4747. You then have indicated to us, I think, that when the capital expenditure has been large and the profits small, or when the management has been bad and the profits consequently small, the result is not fair, and puts a premium on bad management?—From the rating point of view.

4748. I see from your memorandum that you offer to give an example of this which will illustrate it; will you do so now?—I have in mind this case in Dorsetshire, which I had to deal with. The facts were, that the generating station of the electric lighting company, which was appealing, is in one district, and Bournemouth, from which it gets practically the whole of its custom, is in another district for rating purposes. There was no income in the district where the station was situated. We said that the rateable value of the station must be dependent on what it could earn, and that, therefore, the right way to take the rating was to find out the earnings of the whole, and from that the rateable value of the whole, and to apportion it fairly between the two districts. The assessment committee said that as there were no returns in their district, but only a

18 May '97

station, they were entitled to take a percentage on the capital expenditure. They took it at  $7\frac{1}{2}$  per cent., and they brought out a rateable value for that station itself considerably over the profits earned by the company in both districts. That was appealed against twice, and at the final appeal at quarter sessions the magistrates upheld—they did not say so in terms, but by the result they upheld—the percentage on the capital value.

4749. What percentage?—It worked out at between 5 and  $7\frac{1}{2}$  per cent.; it was suggested to be  $7\frac{1}{2}$  per cent. by the assessment committee, and the decision was rather over 5 per cent., but not equal to  $7\frac{1}{2}$  per cent.

4750. Was the case reported?—It is only reported in the local papers.

4751. What was the date of it?—It was on the 23rd February of this year. May I say that in that case Mr. Balfour Browne on the one side and Mr. Freeman on the other side, argued the matter as a point of law, as a principle of assessment. Then, when the magistrates had given their decision they were asked for a case for the superior courts; but they said the matter was simply one of fact, and of no great difficulty, and they refused a case. There was no power to take the matter further.

4752. I want rather, as you are the first witness for the London Chamber of Commerce, to get you out of the special application to electric lighting companies. I will take you to the paragraph in your memorandum, in which you say: "But the suggestion is that there is no reason why a man who carries on a manufacturing business in his own premises or on premises let on a building lease where he has built and erected machinery, or a man working a wasting article should be bound to contribute so much more heavily to the rates than a man who, very likely using the same amount of capital, is able to rent premises suitable for his business at an annual rental which simply shows the value of the land and buildings he employs, and forms the basis of the 'rateable value.'" In that paragraph you indicate some of the main controversies which have surrounded the question, and indicate the view which you are likely to take; I should like you to elaborate that a little, and to suggest to the Commission, if you can, some principle of rating this class of property which you think would meet with more general acceptance?—It is suggested that the intention of the Act was to take the rent of the land and buildings for one year—"from year to year" the words of the statute are. The system which is adopted now works very hardly upon manufacturers, because where there is fixed plant that fixed plant is brought into the valuation of the property before you get the rateable value. Where plant is used in a business which is not fixed, show cases or anything of that sort, those articles, are not brought in in any way to add to the valuation. Take the instance that I have given in my memorandum of a gravel pit or a coal mine where the assessment is really based on the profits, but the profits are not strictly speaking revenue, because so far as the article is concerned they are exhausting the capital by every ounce that is taken out of the gravel pit or out of the coal mine. If you take the gravel pit as a whole and pay a rent for it, that rent should be I think apportioned as to the part for the right to carry on the work and as to another part in respect of that portion of the capital which you take up and sell. I do not know whether I have made myself clear?

4753. I follow; everything, of course, depends upon the line of division which you take. I wish to get some suggestion from you as to a practical means of carrying out your proposal?—I have considerable difficulty in suggesting a practical means of carrying it out by making a strict line of division. I think it must be worked out on some other basis, because you cannot very well say that a factory to day having a certain plant a certain portion only of that plant shall be treated as landlord's plant, without raising a difficulty as to what will happen in a future case. I think we must come to some other method of getting at the fair rateable value.

4754. Very well; what I am asking is for you to give me your suggestion of a method?—I think the right suggestion of method to put forward is to limit the rateable value so as not to exceed the percentage of receipts over expenditure when you come to those cases where you cannot draw a line between what is the landlord's and what is the tenant's, strictly.

4755. I do not know whether I quite understand what you mean by a system in which you fix a percentage of, did you say, receipts over expenditure?—Yes.

4756. Is that not profits in another form?—Certainly it is profits in another form, and I do not see how you can get apart from that altogether because of the difficulty of fixing the rental value of the premises.

4757. I am anxious to get from you your suggestion in a form in which I can understand it and deal with it and discuss it afterwards. Supposing you were a valuer and had a manufactory of some kind—I will take the instance from yourself—what would be the process which you would go through?—If I were told that I was to find the rateable value of a manufactory which was in the position that there was no rental as between the landlord and the tenant, and I was at the same time told that I was to find the excess of receipts over expenditure and to put upon it a limited percentage as the fair rental value, I think that would be a great improvement on the present system.

4758. The question is, why you should limit the percentage, what the limit should be and whether it should be uniform for all power manufactories or whether there should be a statutory scale laid down so as to give the valuer some indication. I only suggest to you these questions which occur to me at the moment. I want to get your scheme worked out if I can in some form in which I can grasp it and deal with it?—I do not think it would be possible to make a uniform scale applicable to all companies, I think they would have to be classed into various groups and a scale should be made for each of those groups. I think that there would be no great difficulty in laying down a scale by those who were conversant with the various businesses so as to say what, having regard to all the circumstances of such a business, is the proportion which the landlord's rent of those premises should bear to the tenant's capital, in carrying on his business in those premises; in electric-lighting especially we have to provide plant and machinery far in excess of the demand at the moment.

4759. (Mr. Arthur O'Connor.) I suppose you are not so great an admirer of the existing law as to imagine that it is not susceptible of improvement?—No; I think it is susceptible of improvement, though I think if we could get at the fair rental value of any premises, it is a fair basis to take for these purposes.

4760. But you are not unprepared to consider an amendment of the statute law?—No.

4761. Even if it extends to the statute of Elizabeth?—No, I think not, because the circumstances are changed so greatly.

4762. Can you give me any reason why a tenant of any kind or description should be rated at all?—I suppose someone must contribute towards the cost of the benefits which as an occupant of a district he enjoys. Do you mean a tenant as against a landlord?

4763. Yes?—I think the tenant enjoys it as well as the landlord, if I understand you rightly.

4764. He pays for it, does he not?—He always pays rates and taxes in addition to his rent.

4765. He pays for the enjoyment he gets from the landlord's property?—In the rent.

4766. Yes?—But it is always a condition that he pays rates as well; the basis of the rent is that it is in addition to the rates, as a rule, I think.

4767. Would you rate a cobbler for his last, or a tailor for his bench?—No, I would not.

4768. Supposing the bench was fixed to the ground, would that make any difference?—I do not think it ought to; that is the point of my objection.

4769. Is the machinery of a manufacturer, in principle, different, or is it in essence different, from a cobbler's bench?—Certainly not, I think, in principle.

4770. They are all articles for the purposes of industry?—Certainly.

4771. And the tenant, whether a cobbler or a manufacturer, is benefiting the neighbourhood by his industry?—Certainly.

4772. And as industry is developed and population increases, the value of the land as land goes up?—Certainly.

4773. The landlords, therefore, as a class benefit by the presence of the industrial community?—Undoubtedly.

4774. And without the presence of the industrial community they would have no benefit?—Undoubtedly.

Mr. S.  
Morse.

18 May '97

Ascertaining rateable value, having reference to profits. Classification of Companies suggested and a uniform scale laid down for each.

A fair basis for assessment is the fair rental value.

Landlords or tenants, who should be rated?

Rating in respect of machinery or plant not desirable.

Whether land-owners should bear the burden of rates.

Ascertaining rateable value, having reference to profits. Suggested method.

Mr. S.  
Morse.

18 May '97

4775. Do you think, therefore, there would be anything objectionable in point of principle in throwing all rates upon the landowners and upon the land?—I do not think in point of principle there would be any objection.

4776. Do you say it would be a sound principle that those who owned the land should bear the burdens?—I should not like to definitely commit myself to saying that; I have not considered that from this point of view.

4777. I suppose as far back as you recollect you have been accustomed to the existing law and to the accepted view that rates of all kinds should be distributed among different members of the community apart from the question whether they owned the land of the country or not?—Yes.

Appeal-  
Objecti as  
to Quarter  
Sessions as  
a tribunal.

4778. With regard to the question of appeal, as a matter of fact, the point under appeal is, as a rule, rather a point of fact or of estimate than of law, is it not? It is rather a question for the jury than for the judge?—To a large extent, because it is a question of the amount at which the rate should be fixed; but that question must depend to a large extent upon the principles upon which that rateable value is made up, and we have no settled principles as regards manufactories upon which the basis is fixed.

4779. But then, if you have no settled principles, it is a question of the length of the Chancellor's fool if you go to a lawyer, is it not?—Frequently.

4780. How far would it be satisfactory, then, to go to a judicial tribunal which has no fixed principle to guide it rather than to business men who may be assumed to take a practical, every-day view of affairs?—If the business men were absolutely independent of the results that would be a very great advance towards satisfaction on the part of the manufacturers; but you see the assessment committee before whom objections have to be made in the first instance, and who make the rate, are always interested in the result; they are chosen from the guardians of the district.

4781. But the manufacturer is interested in the result too, is he not?—Certainly.

4782. He is an interested party?—Undoubtedly.

4783. The surveyor of the vestry would be personally disinterested, would he not?—The surveyor of the vestry does not make the rate; he only reports his views to the assessment committee, if called upon.

4784. You tell us in your memorandum that they are guided to a large extent by the opinions of the surveyor?—I said that the quarter sessions would be.

4785. The chairman of quarter sessions is generally a lawyer, is he not?—Not in my experience in the country; he may be a non-practising barrister.

4786. He practises at quarter sessions as chairman, anyhow?—If you like to put it in that way. May I say this on that point. When you go before an assessment committee it is the invariable practice that they should hear the evidence of the assessment witnesses in the absence of the company which is appealing to them.

4787. That is what I was just going to ask you about. In the particular case that you referred to I see the appellants were heard by their solicitor, and gave evidence. Were the respondents present at that time?—Yes.

4788. The respondents then had the opportunity of hearing both sides?—Yes.

4789. Is that the ordinary proceeding?—Yes. As far as my experience goes it is invariable before the assessment committee.

4790. But I suppose observation upon that would be directed rather to the conduct of those who had the enquiry in hand than to any fault in the system of valuation: it refers to the form of procedure?—That might be so. I only wish to call attention to the fact that it is the case, and even in the case where additional rates to the extent of 2,500*l.* which we had to pay in that year—I mean not rateable value, but rates which we had to pay—were put upon us, and that was done without our hearing what the other side said, or having an opportunity of asking them questions or commenting upon their evidence.

4791. Still, your criticism goes to a point of procedure rather than the system of valuation?—Possibly.

4792. Now in the case of the generating station that you were mentioning, would that be a question of law or of fact?—It was argued as a question of law.

4793. Of course, because you had lawyers employed for the purpose, but I mean looking at the thing from a practical point of view?—One side put forward the principle that capital expenditure was the basis upon which the rate ought to be fixed, and the other side said it was a question of the results. I think that it is to a large extent a question of law rather than of fact: it is a question of the principle of assessment rather than of the fact as to what the assessment was to be.

4794. After all the only question of law you can argue in a matter of that kind would be by way of quoting precedents?—Certainly.

4795. There is no general principle involved?—There is no general principle laid down, but I think there is a principle involved as to how the rate is to be fixed.

4796. Then that is a principle which would be binding upon the committee; if you could show, as a matter of fact, that they had departed from the law there you would have had an assured ground for an appeal?—Unfortunately you cannot appeal from quarter sessions except in the form of a case stated by the magistrates.

4797. Do you not think in a matter of clear departure from the existing law quarter sessions would afford you sufficient protection?—It is entirely a matter within their discretion.

4798. I mean if you prove a clear departure from the law surely you can trust the quarter sessions to do you justice?—Quarter sessions naturally assume that they have taken the right view of the case.

4799. That who have?—That they, the quarter sessions have.

4800. I mean when you are appealing to the quarter sessions from a subordinate tribunal, and there is a case well established of departure from the law, you can trust to the quarter sessions to give you redress, can you not?—My experience is that you cannot. They naturally take a view of the law which, I have been advised, has been wrong, and I am answering in that way, therefore, that I cannot trust them to take the right view of the principle.

4801. You would have liked to have had a further appeal?—I should have liked it to have gone to a judicial authority.

4802. Would you say that from your position as an official or from your instinct as a solicitor?—I am here simply representing the London Chamber of Commerce, and I am giving you the gist of their report. They wish it in that way. I hope you will allow me to say that my interest as a solicitor is to look after the interests of my clients, and I find that is best done by keeping them out of law. I think those who know me will confirm that I have taken that view rather than the reverse.

4803. Where would you limit the right of appeal?—I should be quite satisfied with one central authority, such as the Railway Commission, without any further appeal from them. If we had an independent authority in each county to which matters could be taken cheaply without the employment of counsel, but by the parties themselves going so that we could get quickly a definite decision—that would be what those I represent would desire.

4804. Do you think that if you went to the Railway Commission, and you had a strong sense that they were wrong you would not desiderate some further appeal?—I should consider that my case had been considered by those who were by their experience able to deal with it on a thorough basis. Our difficulty at the present moment is that we do not seem to get to those who have experience in those matters and who can deal with those matters in a way that will give confidence to those who come before them.

4805. Take the case of the gravel pit; you say that really it is capital that is being rated?—Yes.

4806. But does not the owner of the gravel pit turn his gravel into income by taking it?—I do not think that that is so entirely.

4807. It is a consumable property?—He may spend that which he receives, but if he kept his books rightly he would only spend a portion of what he receives and would put the rest to capital account.

4808. Gravel is a thing that does not bear a crop?—Quite so.

4809. Or increase by natural process?—I think the result of any business should be that the capital expended should be intact at the end of the operation.

Mr. S.  
Morse.

Mr. S. Morse.  
18 May '97

Mr. S. Morse.  
18 May '97

4810. Surely the business of a gravel-getter is industry directed to raw material, and that raw material being of a limited quantity becomes ultimately exhausted?—Yes, but I do not think that the result of selling the raw material when got is all income: that is where I differ I think with the view you are suggesting.

4811. Say that again?—I do not think that the result obtained by selling the raw material when got is all income or ought to be treated as income.

4812. If he brings it into consumption in a year does he make it income?—I think not. I think he only makes that income which really is the excess of his receipts over that which he has paid for the raw material and the labour expended upon it.

4813. (Mr. Smith.) You commenced by saying that you thought companies and manufacturers were not so much interested as householders in police, sewers, and education?—Yes.

4814. Manufacturers and companies employ a large number of men, do they not?—Certainly.

4815. And therefore they are interested in the aggregation of people near their works?—Yes; but I take it that those men live in houses which contribute according to their rateable value to those various items. I am only putting it in this way that the manufacturer, so far as he has house and land ought to contribute undoubtedly to the rates, but I do not think that because he has machinery by which he carries on his business that that machinery should be made to contribute in the same way as if there were a great number of houses.

4816. Your first statement was much broader than that. You put it broadly that manufacturers and companies were not much interested in police, sewers, and education; now you admit that the aggregation of a number of people in the neighbourhood of a manufactory is almost a necessity, is it not?—Yes, certainly.

4817. And that aggregation of people demands certain urban expenditure?—I hope I understand you, but I do not think I meant to put it quite in that way. I meant that the manufactory where the business is carried on does not require the police and education for itself.

4818. You have left out sewers?—I did not mean to leave any out, I am taking them as a group; I do not think the manufactory itself does.

4819. Your manufactory must have some sanitary accommodation?—Some undoubtedly.

4820. And will require sewers to take away the results?—Undoubtedly some.

4821. Then with regard to police, a manufactory contains valuable stock and requires watching?—Yes, so far as the house and buildings and land are concerned, I think they ought to contribute just as much as another house equally large contributes, but not more than that.

4822. With regard to education I presume as representing the electric light interests you are peculiarly interested in getting intelligent workmen?—Yes, but I do not think we are different in that from a banker who requires an intelligent clerk.

4823. Then you do not put that point which at first you put rather broadly, any higher than that you do not wish to be rated on your machinery?—I say that it comes to that. In respect to those matters we are not more largely interested than a householder occupying a house of the same size as our manufactory.

4824. I think Mr. O'Connor has got from you that these cases which you have litigated really were questions of fact; the amount of profit seems to have been the question at issue?—No, in this one particular case the question was the principle upon which the rateable value should be arrived at—whether it should be as percentage on the capital expenditure, or whether it should be based upon the results of the trading.

4825. Was that the Bournemouth case?—Yes.

4826. That Bournemouth case did not seem to me, when I heard you relate it, to differ materially from the method in which, say, a corporation would be rated for its waterworks' reservoirs in one parish?—No, I took electric lighting because I was more conversant with it.

4827. I mean that we stand on the same footing?—Certainly.

4828. The principle is exactly the same—the reservoir is in one parish, the water supply in another, the reservoir is rated at its structural value, and the profit is made elsewhere—that is so, is it not?—Yes, the profit is made elsewhere.

4829. You are no worse off than all the water companies and all the corporations owning waterworks throughout the kingdom?—No, we are in the same boat entirely. I merely took the electric light, as I say, because I was more conversant with the details of it.

4830. You suggested that each county should appoint the assessment committee; may I ask you, before putting any further questions, whether you have had much experience in local government matters yourself, apart from these questions of rating appeals?—I have had a large amount of work in connection with local authorities, but I have not acted on the side of the local government, if that is what you mean.

4831. Have you been a member of any local authority?—Yes.

4832. In London?—In the neighbourhood of London.

4833. Do you know that counties and unions, which are the present rating authorities, are not by any means conterminous?—I meant to indicate that some authority of standing should appoint an independent rating authority; I took the county council as a body which we all respect in all the districts as the authority who could select good men for the purpose.

4834. I think your first suggestion was that the Local Government Board should do it?—I suggested that some independent authority should appoint, and I said to the Chairman that if it were under the Local Government Board we would be perfectly satisfied; he asked me whether I meant that the Local Government Board should appoint every valuer, and I suggested that the local county council might appoint in the various counties.

4835. That, of course, would not deal with the unions. Would not the association of the Government Surveyor of Taxes with the assessment committee meet your case?—No; we should like to get the assessment committee disposed of altogether.

4836. Then you are not, apparently, a great admirer of local self-government in matters of assessment?—No; we find it is not to the advantage of manufacturers in any way. The present local authorities are appointed by the small householders, and the result seems to be that a company or a manufactory is deemed fair game, and they increase the rates upon it.

4837. Is that not a little the fault of the manufacturers in not taking more part in the local government of their district?—A manufacturer has no power to take any part in the local government of his district. He has only one vote, there is no property voting, and so with his one vote he is always outvoted by the small householders.

4838. Who are very often his own employes?—It may be, and they may be very unwise in the course they take; but it is the result that is found.

4839. Your observation strikes at the whole root of what we are accustomed to think a rather good principle—local self-government—does it not?—We find that in rating matters, at any rate, the interests of the companies are generally put aside, and the sole question seems to be, what is the highest rate we can put upon them. It may be, as you say, that it is striking at the whole root of the matter; but those are the results that we find.

4840. How can you distinguish at all between the case of the gravel pit and the coal mine, that you mention in your memorandum, and that of a leasehold house? What difference is there in principle? They are both wasting to a certain extent?—To a certain extent they are both wasting, undoubtedly.

4841. Supposing you have a short lease, you pay on it as long as your lease lasts, and you pay on the gravel pit as long as there is any gravel to get?—The gravel goes as well; but in the house it is only your interest under the lease which goes, and the landlord still has the house, unless he lets it to somebody else.

4842. The landlord has the house, no doubt?—In the gravel case the landlord has not the gravel; it is gone.

4843. Take a house in very bad repair, a decaying house held under a lease?—Then you see the landlord

Manufacturers should not contribute more largely to rates than householders occupying premises of a similar size. Their machinery should not be taken into consideration.

Rating on structural value in respect of premises or reservoirs owned by undertakings which earn profits in other districts.

Assessment committees, construction of. An independent rating authority should be appointed by county council.

Assessment committees, constitution of, not satisfactory to manufacturers.

Consumable property, assessment in respect of.

Mr. S.  
Morse.

18 May '97

only gets the rental value of the decayed property, and he still has the decayed property at the end of the time.

4814. And he has the site of his gravel pit?—Which is useless.

4815. What is the difference in principle?—I think there is a great difference in principle.

Rating with reference to profits is objectionable.

4846. Do you think it would be possible to devise a scale of companies' profits, which should be settled by this superior authority that you desire?—I think there ought to be no great difficulty in settling it; and the very fact that it was settled, and that companies knew what they ought to look forward to, would be a very great boon.

Companies should be classified for the purpose of valuation.

4847. What sort of guide would you take in arriving at what the profits of a particular company ought to be?—It should be as regards the rateable value, and not as regards the profits.

4848. I understand you to object to being rated on the profits at all?—I say that as at present taken, it is profits, irrespective of the rental value of the land and buildings.

4849. But you object rather to be taken on profits; you want to be rated for the mere land and buildings you occupy?—Yes.

4850. That is not the law?—It is not the law as it has been decided, undoubtedly.

4851. We must bow to the judges if you will not bow to the assessment committees?—I thought we were discussing the whole question here generally.

4852. Quite so?—If you take the rateable value as fixed and bow to the law, I have nothing more to say.

4853. I have got your answer here that you thought some scale of companies' profits ought to be taken, and what I want to know is what your guide is going to be. You were asked whether you would apply it to all companies, and you said at once, "No, there ought to be a scale"?—As to the same scale I was asked —

4854. Do you mean to state that there ought to be a different scale?—I think the companies should be grouped.

4855. What guide would you have as to their profits; would you take prospectuses?—No. I think if you take it in that way you should take the receipts.

4856. Then you leave it very much in the power of the company, do you not, to frame their balance sheets so as to reduce their apparent profits?—I do not think they would do that. Of course, they might do so, if they wished to do so; they might reduce the dividends to the shareholders, in order to save the rate if it was worth doing.

A common basis for valuation desirable where a rack rent is not paid.

4857. (Mr. Elliott.) I gather from your evidence that you are very anxious to see some common basis of value taken?—That is so.

4858. I am afraid—perhaps it is my fault—that I did not quite understand from you what that common basis should be?—The Act was passed, as it states in the preamble, to bring about a uniform assessment, and the uniform assessment was to be the fair rental value. At the present time where there is no actual rent upon which the rateable value can be based, it is taken on capital value in one case, on net profits in another case, and in a third case it may be taken on some other entirely different principle. The committees have no definite uniform basis before them on which they act.

4859. Then in a case in which a rack rent is paid for a property, you would still propose that rental value should be taken?—Certainly.

4860. In cases in which no rack rent is paid for the premises, do you propose that some definite system, such as you outlined in reply to the Chairman, should be adopted?—That it should be brought as near to the rental value as it can be.

4861. Your proposal was, as I understood, that the rack rental value should be arrived at by taking a maximum percentage of the profits?—Yes.

4862. Would that maximum percentage be taken in every case? Do you propose that a particular percentage should be adopted as the rental value in the case where no rent was paid?—I do not know that I quite follow.

4863. Your suggestion, as I understand it, was that in the case where no rent is paid for the premises a percentage of the profits should be taken?—That it

should be put down that the rateable value is not to exceed a percentage of the profits.

4864. But that of course only limits the rateable value?—Yes.

4865. What is the principle that you propose should be adopted in arriving at that rateable value? It is obviously not sufficient to say it should not exceed it, but you have got to say what it should be?—I think it is impossible to say at once what it should be. I think that it is a matter for further investigation, what it should be in each group of cases. I only suggest that as a way of dealing with it.

4866. Then you propose that there should be a classification as it were?—Yes.

4867. And that in cases where no rent is paid a certain percentage of the profits should be taken, according to the class of property rated?—That is so.

4868. On what principle would you propose that that percentage should be taken?—On the principle of endeavouring to ascertain, as far as possible, what the rental value of the premises should be.

4869. Would you, for instance, propose that a smaller percentage should be taken in the case of a bank than in the case of a manufactory?—I do not see why it should be so. There would be a rack rental probably in the case of the bank premises, but if there was not, I do not see why a bank should pay less than a manufactory pays.

4870. Is it a fact that a rack rent would usually be paid in the case of a bank; would not the bank usually own its premises?—I suppose frequently they do.

4871. I understood you to favour a system of classification?—Yes, certainly.

4872. Would your classification extend to a differentiation, say, between a bank and a manufactory?—Yes, I quite agree.

4873. Then in the case of a bank would you take a smaller percentage of the profits, because the rateable value is usually much smaller in relation to profits than in the case of a manufactory?—I do not know any principle why it should be smaller.

4874. Then do you propose that the percentage of profits should be uniform?—What I had in my mind was this: take the electrical industry which I am more conversant with; as you are aware, it is dependent upon machinery for the supply of light; you must have spare plant, duplicate plant; I do not think it would be fair if you are going on the capital expenditure to treat the duplicate plant as additional plant.

4875. Now you are introducing, are you not, a new element, that is, capital expenditure. I understood just now that your proposal was to take a certain percentage of the profits?—I was referring to the answer I gave to his Lordship.

4876. I am only trying to make clear your views on the subject. Would you take capital value into account?—Not on the suggestion that I made.

4877. Then I want to get from you generally the principles on which you would classify, and I put to you the two cases of a bank and a manufactory; you are doubtful whether you would take a different rate of profit in the case of a bank than in the case of a manufactory, are you not?—I think it is a very important matter, and one not to be answered rather on the spur of the moment. I would suggest to the Commission, if I may, that what we desire to see is, first of all, an independent rating authority; and we realise that if that were secured, and if the Act were left as it is, namely, that "rateable value" should mean "fair rateable value," then we should in time, we think, get all these principles worked out. I think it is very difficult to suggest how they should be worked out.

4878. I rather want you to follow the line that was presented to you by our Chairman, and to obtain from you suggestions as to the mode in which the principle you have suggested could be carried out; as yet I have not got them. I want to ascertain quite clearly what the effect of your suggestion would be in the two extreme cases, as I conceive them to be, of a bank and of a manufactory?—I am afraid I cannot answer that question properly. If a valuer is told to value on the basis of getting at the rental value, having regard, as we suggest, to a maximum percentage of the profits made, and not bringing into account the machinery on the manufacturer's side, or the show cases or whatever

Mr. S.  
Morse.

18 May '97

In cases where rent is not paid the valuation should be based as far as possible on what the rent would be.

A percentage of the profits should be taken according to the class of property rated.

Classification of manufactories or businesses desirable for rating purposes.

Mr. S. Morse.

18 May '97

Valuation. Manufacturers desire that tenants' machinery should not be taken into consideration, and that there should be an independent rating authority.

Rating in respect of machinery of electric lighting companies.

Rating in respect of machinery. Case of manufacturer moving abroad in consequence.

Case of electric light company rated at a sum almost identical with net profits.

Appeals from assessment committees independent tribunal suggested.

it is that the merchant uses, I think we should very quickly get to a basis which would work out. I cannot suggest to you the percentages that should be put.

4879. Supposing we could effectually deal with this grievance as regards machinery, would you have any substantial grievance against the present system of local taxation?—Yes; there would still be the question of the independent rating authority.

4880. Leave out of the question the authority; I am now dealing with the question of valuation?—I do not think you could get a better basis than the fair rental value.

4881. Do you think that if, in arriving at that fair rental value, valuers were to exclude from consideration the machinery, which now they take into account, your grievance as manufacturers would disappear?—Certainly.

4882. Would you propose to exclude all machinery?—I think the intention of the Act was that the rating should be on the hereditament. If we leave the principle of the Act alone, and the rating should continue to be on the hereditament, I think it would be right to exclude from that practically all machinery.

4883. Is not the whole difficulty of the present position this—that it is extremely difficult to say where the hereditament leaves off and the chattels begin?—Of course it is very difficult, and the courts have held that everything is hereditament and nothing chattel.

4884. Is that really so?—In the case of a gas company they have held that the only things which were not hereditaments were the meters in the customers' houses, and the tools and loose things lying about, and small matters of that sort.

4885. You would not suggest, of course, to the Commission that all machinery is at the present time rated?—In the case of an electric lighting company everything is rated, even batteries, dynamos, engines, and everything but the meters on the consumers' premises and the testing instruments, which are actually carried about by the workmen employed.

4886. Taking the large bulk of the manufacturing undertakings of the country, you would not suggest to the Commission that the whole of the machinery is rated, would you?—I must give you an answer from my experience; as far as my experience goes, it is.

4887. Have you made any inquiries as to what the real facts are in the matter?—It is difficult to tell you what the inquiries are that I have made. Those who come to the committee all tell me that the whole of the machinery is rated, and the result is that they are thinking of taking their factories elsewhere. Mr. Boulton, the Vice-President of the Chamber, hoped to have been able to give evidence here; he was going to tell you that he has established a factory out of this country because of the heavy rating of his machinery.

4888. What factory is that?—He is a coal-tar distiller.

4889. You would not, I suppose, suggest that that is other than a very exceptional case?—May I put a case of rating to you? An electric lighting company in London was rated by a provisional committee at between 9,000*l.* and 10,000*l.*, its net receipts for the previous year not being 10,500*l.* Now that is a case that I know of my own knowledge, and that I can speak to. You will see there that the rating was put just under the net profits made in the previous year, and they say that is the rental value which anybody would take and pay for those premises for the year.

4890. Is that the case of the Electric Supply Company?—Yes.

4891. You do not suggest, of course, that their works could be moved out of the country?—No, they are unfortunate in that respect.

4892. Do you suggest that in that case the company has not the full power to recoup itself by charges to consumers?—They are limited in price; there is a maximum price; there is a limited period for which they hold their tenure, and the Board of Trade is entitled every seven years to reduce the maximum price they are entitled to charge. I do not see how, under those circumstances, they can take it out of the consumers by increasing prices.

4893. With regard to the question of the tribunal would it meet your view sufficiently if there were an appeal to a judicial tribunal on questions of law as distinguished from questions of fact?—I think there ought to be an absolute right of appeal.

4894. On questions of fact?—On all questions.

4895. Would you give the power to any ratepayer, however small, to carry the rating of his premises up to the highest judicial court?—I do not think an impecunious ratepayer ought to be allowed to put an authority to an expense which he cannot recoup. There should be a reasonable arrangement for the security of the costs, whatever it might be. I think in principle there ought to be an appeal to an independent authority, having regard to the fact that the authority by whom the assessment is made is not independent. I hope I am not suggesting that members of the committee do not act fairly, but it is human nature that they should not.

4896. Do you think that human nature being what it is, you are certain to get a more disinterested opinion from a large ratepayer than from a small ratepayer?—No, I suppose not; but I think that if there were a small authority, an authority composed of few members, whose proceedings were open not only to both sides, but to the public, and from whom there was an appeal to a judicial authority, we should, in time, get what we want.

4897. Would you suggest that the very existence of the right of appeal would tend to steady down the decisions of the assessment committee?—I think so.

4898. You rather surprised me by assenting to a suggestion made by Mr. O'Connor that you saw no objection in principle to the whole of the rates being borne by the landlord?—My reason for that answer was this, that, so far as my experience goes, land is let at its value on the basis that the tenant pays the rates. If the landlord pays the rates, he adds it to the rent in future, that is why I see no objection in principle.

4899. Do you think that the adoption of that principle would have no practical effect other than the increase of the rent in proportion to the burden transferred from tenant to landlord?—I think it would have this further effect, that the tenant's fixtures and the tenant's property would not then be taxed.

4900. So that you see in that direction some mode in which the manufacturers might be relieved?—Certainly.

4901. But, supposing again, that that question of the machinery were dealt with, would you then approve in principle of the suggestion made to you?—You see lately we have had tithes put on to the landlord; I do not see that in principle there is any great objection which part owner in the property has to pay these rates and taxes.

4902. Supposing that that stupendous change were made, would you think it expedient that the present system of administration should remain on foot?—I object to the present system of administration as it is.

4903. Do you think that the spending authority should be elected?—I will not say by the ratepayers, because there would be no ratepayers other than the owners—but would you propose that the spending authority should be elected by the occupiers?—It is a very large question, which I have not considered.

4904. I rather wanted to give you an opportunity of amplifying the broad proposition to which you committed yourself?—I said I saw no objection in principle. Take a case which we have in London—at Poplar. In Poplar there is a rateable value exceeding 700,000*l.*; the 24 elected guardians appointing the assessment committee occupy hereditaments in the district of a total rateable value of 993*l.*, and the chairman of the 12 members forming the Assessment Committee occupies premises rated at 11*l.*, the rates upon which are paid by the landlord. Those people pay no rates at all, and yet they settle the rates for the whole district.

4905. You say they do not pay rates at all, but they do pay rates?—Take this man of 11*l.*, what does he pay? His rates are commuted; his landlord pays them for him.

4906. That man who is rated at 11*l.* is a member of the London County Council, is he not?—I am afraid I do not know who he is.

4907. I do?—I only know the facts are as I have stated.

4908. You said, in reply to Mr. O'Connor, that you saw no serious objection in principle to the transfer of the payment of the rates from the occupier to the owner of the land; do you say that without hesitation, or do you wish to qualify that answer in any way?—I think I said to Mr. O'Connor that that was not a question which had been considered in connexion with this

Mr. S. Morse.

18 May '97

Payment of rates by landlord. Probable effect of, as regards incidence; the rating of tenants fixtures; and election of authorities.

Mr. S.  
Morse.

18 May '97

matter, but that I saw no objection in principle to that being done, having regard to the fact that the rates are based by the Act upon the fair rental value. I had not considered the matter before coming here, because I did not expect it would be gone into. The question here was, I understood, what was a fair rating value, and who was to fix that fair rating value.

4909. You would not wish us to regard that as a serious expression of opinion, would you?—No, certainly not; nor as a considered question.

4910. Nor as the expression of opinion of the London Chamber of Commerce?—No, it has not been before them.

4911. (Mr. Dalton.) Do you consider that the companies which you represent should contribute to the poor rate in proportion to their ability?—That is the old statute of Elizabeth, which has been brought down by the statute of William IV. to a uniform basis, and I think it ought to be a uniform basis.

4912. But you do not object to the principle of taxing your undertakings in proportion to their ability, do you?—I do; I think it ought to be on a uniform basis.

4913. A uniform basis?—Yes; of course it carries with it "in proportion to their ability," in so far as a man who pays a higher rent than another pays more taxes, because he is able to pay a higher rent. If you mean that a man who makes 10,000*l.* a year in business because he is a good business man, should pay ten times what a man who does his best and has not such ability pays, I do not think that would be reasonable.

4914. I am speaking now merely of the expense of the relief of the poor. Do you dissent altogether from the principle that a company should be rated for the relief of the poor in proportion to its ability?—I have not considered that matter. I am considering it from the point of view of the Rating Act, I am afraid.

4915. But that is the principle?—The principle is the rental value.

4916. There is the statute of Elizabeth?—The statute of Elizabeth is gone.

4917. Gone?—It has gone, in so far as it is amended by the statute which makes a uniform basis for all rent.

4918. But the statute of Elizabeth is not repealed?—No, but it is amended by the fact that instead of paying according to ability, it is according to the rental value of the premises.

4919. I think you explained that in assessing your companies, after taking gross receipts and expenditure, you make a further reduction of 17½ per cent. on the working capital; or is it on the capital employed in the undertaking?—It is on the capital which it is supposed the tenant would require to carry on his business from day to day. It has nothing to do with the actual capital; it is a hypothetical figure.

4920. Is that not a very large deduction?—If you get an enormous tenant's capital it might be; but there again there is no system upon which the tenant's capital is based—it may be nothing.

4921. Do I understand you to consider that 17½ per cent. deduction is not large enough?—I say this, that it is entirely in the hands of those who are dealing with the matter to say what the tenant's capital shall be, and as the 17½ per cent. is taken on what they say the tenant's capital ought to be, if they reduce the tenant's capital to a very small figure it is not worth talking about—neither 17½ per cent. nor even, it might be, a larger percentage. In practice we find that the tenant's capital is brought very low indeed.

4922. But, I suppose, that deduction of 17½ per cent. is made upon the assumption that it does make a very large allowance of profits?—I never heard it put in that way.

4923. Why is it made then?—It is 5 per cent. for interest on capital, 10 per cent. for profits, and 2½ per cent. for contingencies; that is how the 17½ per cent. is made up. They say that a tenant who takes a big factory should be content with 10 per cent. on his tenant's capital; I do not think any manufacturer would be content with 10 per cent. on his capital after the 5 per cent.

4924. Still 10 per cent. is deducted for profits in those cases?—Yes, it is supposed to be so deducted.

4925. That being the case, I do not understand how it comes about that the rateable value in some of these cases equals the net profits?—Nor do we.

4926. You have already deducted, as I understand, 10 per cent. on account of profits?—That, I should say, is the basis upon which surveyors who give evidence put forward the figures, but notwithstanding that, in cases the rateable value has been brought up practically to the net profits of the previous year.

4927. In a London case?—Yes.

4928. Do you find in London that the assessments are more uniform than in the provinces?—In so far that the same surveyors generally appear as witnesses, I think it would be so.

4929. That has a tendency to make the assessments uniform in London?—It has that tendency. Then when we go to the quarter sessions in London of course we have a very able judge; and that also tends to make them uniform in London.

4930. Do you not think that if the surveyors of taxes were put on the assessment committees in the country that would have a tendency to make the assessments more uniform?—It might have that tendency, but I do not think it would go far enough. The surveyor of taxes would only have, I suppose, one voice, or he might have no voice at all, in the decision of the assessment committee.

4931. I understand that your objection to the present assessment committees, or one of your main objections, is that they are themselves interested in the result of their decisions?—Yes.

4932. But the case that you quoted from Poplar shows that in some instances their interest is exceedingly small?—Certainly; but they represent those of the same class as themselves generally. A small householder on an assessment committee will look to the interest of his class, not only to the interest of himself.

4933. That is the main ground on which you put forward the statement that they are interested in the result—not that they are pecuniarily interested themselves to any large extent, but that those whom they represent are interested?—Yes, both ways.

4934. Do you find that heavy rates handicap the undertakings that you represent?—In the London case, to which I have referred, we were suddenly put up by a sum which was over 1 per cent. on our total capital expenditure; therefore the dividend was reduced by 1 per cent. in consequence of the increase of rates in that particular case.

4935. Do you know any cases in which high rates have had a prohibitive effect upon these undertakings?—It is rather difficult to speak of it in that way, because, until the undertakings are started, the cases of rating do not come forward. These electric companies in which I am particularly interested have a great many restrictions, and Mr. Crompton, who is coming next, will, I think, give you a better answer to the question; he is more familiar with the circumstances of the case.

4936. Taking the point that you raised as to the capital wasted during the tenure of the lease of electric lighting companies and tramway companies, is that fact not taken into account in fixing the hypothetical rent?—No.

4937. Do you mean to say that it is assumed that a company on taking a lease for 21 years will give the same rent, when it has to provide a wasting machinery, that it would if it had to provide a non-wasting machinery?—Absolutely; they are rated on the same basis and assumed to pay the same rent, because the Act says it is to be the fair rental value from year to year, and, therefore, whether you are a freeholder, a leaseholder, or holding on any tenure whatsoever, you are put upon the same basis.

4938. But does that not mean the rental that a man would pay, subject to the conditions on which he is bound to take the lease?—He only takes it for one year under the Act; under the Act he is assumed to be a yearly tenant, or less than a yearly tenant—a tenant who would only take it for one year. Therefore none of those conditions come to his relief.

4939. Are you sure that that is the state of the law?—The point has been raised, and though I cannot say there has been a decision of the High Court taken upon it—for we cannot get to the High Court, although that is our desire—I think you will find, on asking other witnesses, that I am absolutely correct in stating that.

Mr. S.  
Morse.

18 May '97

4940. I think we have heard evidence to the contrary of that from Sir Harry Poland. I am not speaking with regard to your case, but with regard to the mere question of what a tenant from year to year means?—The only case which has been tried in which the point was definitely raised was a case before the Recorder of Birmingham. We were advised in that case by our counsel, and the case was compromised, so we did not get a decision upon it; but so far as the Recorder's views were ascertainable, he intimated that this consideration which we are now dealing with could not be brought into the case. It has always been put to us that it makes no difference whatever. We have tried it as far as possible, as I say.

4941. But assuming for a moment, now, that you are wrong in your opinion of the law in that respect, and that this condition that you have to provide wasting machinery when you take the lease, is taken into account in fixing the hypothetical rental, would not your grievance then disappear?—No, it would not disappear.

4942. Why not?—It would help us, undoubtedly. If the wasting nature of the business was brought into account that, undoubtedly, would help. I am almost inclined to say that I have got the written opinion of Sir Harry Poland to the contrary effect; but I do not like to speak from memory. We went to him upon that very point, and I can produce his opinion.

4943. You do not think that the words "from year to year" mean taking one year with another?—They may be taken to mean taking one year with another; but that does not bring into effect the fact that at the end of, say, 20 years, your business is bound to be brought to an end by the Act under which it is constituted; I understood you were dealing with a wasting property.

4944. Yes, if it was made clear that an allowance should be made for the waste—?—If it was made clear that we ought to have an allowance for the fact that we have not got a freehold, that would help the matter considerably.

4945. Why would that not remove it entirely? If you had a deduction why would it not remove your grievance altogether?—I represent on the Chamber of Commerce companies which have more than a limited tenure, and which are coming before you with evidence, such as gas companies, and so on. I think you will hear that their view is, that it does not remove the grievance. We are told that it will not remove the grievance.

4946. You speak of a scale which should be drawn up of deductions to be allowed in respect of profits on different classes of business; could you give us the views of your Chamber of Commerce upon such a scale, and could you give us a scale in which the companies are grouped?—I could not give you a scale at the present moment.

4947. But I think you say there would be very little difficulty in doing it?—I think it would work out in practice; I do not think it would be very easy to be given straight off by one side or the other. I think if the principle were laid down that in some such way the rental value was to be found out it would quickly adjust itself.

4948. Could you give us an illustrative scale so that we may see the sort of deductions that you think should be made?—I am afraid I could not do so on behalf of the Chamber. We have not gone into it in detail, and I prefer not to commit them to it. I do not know whether Mr. Crompton will be able to do so when he comes before you.

4949. Could you say how far your valuation for local purposes differs from your valuation for Income Tax purposes?—It differs, I think, only in respect of that 17½ per cent., which is taken off for the tenants' profits. I think I am right in saying that.

4950. Do you find fault with the system under which you are assessed to the Income Tax?—The Income Tax you see is paid by the shareholders in the company.

4951. But the shareholders practically pay the rates, do they not?—I do not think anybody would object to getting rid of the Income Tax.

4952. I am speaking of the valuation. You object very strongly to the local valuation, because you say it is made by persons interested, and it is not uniform. What I want to know is, do you object or not to the Income Tax valuation—that is not made by persons who are interested in it, and it presumably is uniform?

—The Income Tax is taken on the net profits, and the Act says it shall be taken on the net gains and profits. The rating is taken also, as we say, frequently on the net profits of the company, whereas the Act says it shall be taken on the rental value of the premises wherein the business is carried on. Our objection is that it is not taken on the rental value, but is taken on something else; that is the case I am trying to make. If the Act had always said the rates should also be on net profits, we should not have a case to come to you with at all.

4953. Would you object to the Inland Revenue Department fixing your rateable value?—As I have tried to show, so long as there is a uniform basis of ascertaining the rental value, and it is made by an independent body with a right of appeal to some judicial authority or quasi-judicial authority, we should be perfectly satisfied. We do not suggest in any way that any Government department, or any authority such as you suggest, would do otherwise than act fairly between the parties. As regards our companies, we have to go to the Board of Trade a great deal. We are perfectly satisfied with the fair way in which matters are dealt with there, and I do not think in principle there would be any objection to any such authority.

4954. The Inland Revenue Department have to go into the question of your profits for the purposes of the Income Tax valuation?—Yes; but the profits, forgive me, are not the basis which the Act gives as the basis of rateable value—it is the rental value, which is quite another matter.

4955. I understood that you considered that it would be fair if you got a proper deduction for your profits, and that that would meet your views; at present you have that deduction of 10 per cent.?—No. You asked me if there was really any difference, and I say it often works out that the only difference is what is allowed for the tenants' profit.

4956. That is 10 per cent.?—That is the 17½ per cent.; but I do not think that would be a reasonable result if I follow your question properly now. You see on the rating they divide it between the hypothetical landlord and the hypothetical tenant; the total is the dividend or profit which goes for Income Tax, and it is divided between the two for the purposes of these ratings.

4957. Still, the Inland Revenue Department will have a great many figures before them bearing upon the question?—I do not think so as regards rental value; they have no figures of rentals.

4958. The assessment committee have no figures of rentals, but they get at the hypothetical rent?—Only in these particular cases. I do not think they ought to get at the hypothetical rent by going into the profits so largely as they do.

4959. Have not the Inland Revenue Department all the materials for coming to a conclusion as to what the hypothetical rent would be?—I do not think they have.

4960. What additional materials, may I ask, have the local authorities?—Will you put it in this way? The rating is said to be the rent which a tenant may fairly be expected to give taking one year with another, the landlord doing the repairs and doing whatever is necessary to keeping the tenement in a condition to earn the rent; therefore, all those questions of repairs and maintenance have to come into the question, and the Inland Revenue Department would not have any of those figures.

4961. You would have to furnish them with those figures instead of furnishing the assessment committee with them?—Yes, that is so.

4962. The assessment committee do not have those figures until you furnish them?—No, and they are a question of opinion very frequently; there is a fair amount to be taken.

4963. (Chairman.) Do you want to add anything?—No.

4964. (Mr. Smith.) In point of fact you are contending, are you not, for the mere structural valuation of the hereditaments?—I say that that was the intention of the Act of 1869.

4965. (Chairman.) I think I must ask you one question on that. Do you also contend that that is the limit of burden which should be put upon you as a company? My point is this—that we have not only to

deal with what is within the structure of the Act, but with what is in itself fair?—Taking it in that way I think we may go further, certainly. Those I represent

have no objection to paying a fair amount towards the rates if it is based upon a uniform system, and if it is administered by an independent body.

Mr. S. Morse.

18 May '97

The witness withdrew.

Mr. ROOKES EVELYN BELL CROMPTON called and examined.

Mr. R. E. B. Crompton.

Assessment committees, constitution of. Objections to. Independent body desirable. Appointed by county councils, and power of appeal from.

4966. (Chairman.) You are Past President of the Institution of Electrical Engineers, Chief Engineer to the Kensington and Knightsbridge Electric Lighting Company, and Managing Director of Crompton and Company, Electrical Engineers, who carry on business in London and Chelmsford?—Yes.

4967. You are also one of the Committee of the London Chamber of Commerce appointed to appear before us to-day in respect of this report,\* which has been the subject of discussion between us and Mr. Morse?—Yes.

4968. I understand you to agree with what Mr. Morse has said about the present assessment committees?—I do.

4969. I do not propose to take you over that a second time, unless there is anything you would like specially to add from your own experience on that point?—No; I perhaps might save your time if I just make this short statement: I gathered from your questions to Mr. Morse that you were rather surprised at the London Chamber of Commerce putting so much weight on to this electric lighting assessment question. I think the reason is that it is a burning question, as an enormous amount of capital has been expended upon electric supply here.

4970. I have no objection to hear you on that; I will take you through that, and give you a chance of saying what you wish to say, but that is really not the point of my question, which was, is there anything you would like specially to add to what Mr. Morse has said about the present assessment committees?—I have nothing to add on that point.

4971. Then you adhere to the view expressed by the Committee of the Chamber that there should be an independent body, as suggested by Mr. Morse?—Yes.

4972. I should like to know on that whether you have any suggestion to make to us as to how that body should be formed, and the machinery under which it should work?—I think that the assessment of electric lighting undertakings is somewhat difficult and technical, and cannot be well carried out by a body who are elected from time to time. The officials should be appointed for longer periods probably, as is usual with Government officials. I think that they should be appointed locally by the county councils, and that there should be a court of appeal to which disputed questions of assessment could be referred.

4973. What I want to get from you is, why you fix upon the county council? I have no hostility to the county councils, but I want to know why, for this particular purpose, you fix upon them?—The county councils, we presume, are possessed of local knowledge, and they are also suggested in order to avoid too much centralisation.

4974. Have you any objection to the area of the boards of guardians as the unit?—I think it is rather a small area; the county area is a very much larger one.

4975. Do you think it is a disadvantage that the area should be small?—I think that with the boards of guardians there is a greater chance of the wrong man being elected on the assessment committee than there is with the county council, which is drawn from a much larger area, and has much greater interest taken in its election.

4976. The main point of your objection to the present system, apart from the question of those by whom it is administered, is, as I understand it, the uncertainty under which you labour about the want of principle which so far as you know, is not laid down?—Yes, that is it mainly.

4977. Can you give me any suggestion how far it would be possible to lay down general principles supposing a new statute were to be passed, or how far you adopt Mr. Morse's suggestion, which, as I understand it, was that it should be built up by decision after decision, each on its individual case?—I have not had the same course of training as Mr. Morse has, and consequently, I no doubt look upon it in a somewhat

different manner. I have been engaged in investigating the extreme unevenness of the incidence of local taxation on electric light supply companies, and I think that there is a case where there are very plain grounds which we could ascertain.

4978. I will take you to the electric lighting immediately; we cannot make a whole law to suit electric lighting companies only?—Quite so.

4979. I expected and I think we had a right to expect, that the London Chamber of Commerce would come here to suggest some principles which will guide this Commission and the Legislature, in dealing with the general manufacturing industry of the country and not only upon electric lighting?—I am the managing director of a large manufacturing company, and I feel the difficulty of the incidence of local taxation very much in that case; but I can see that our case is extremely difficult to deal with.

4980. I have no objection to taking you on that case; but am I to understand from you, that although one of the three witnesses put forward by the London Chamber of Commerce, you have no suggestions on their behalf to make to us of any general principles under which rental value can be ascertained for manufactories all over the country?—No, I prefer not to give evidence on that; my views are personal on that point.

4981. Very well, I will take that; and you shall now state what you choose about your electric lighting company?—I think it is quite possible to make suggestions as regards all statutory companies whose gross income is well ascertained and the accounts of which have to be published yearly, in which case, consequently, the data necessary for local taxation can be very easily ascertained from the accounts. I think that as the Lighting Act imposed on the companies that their accounts should be so published, it gives the assessment committee a very fair chance of arriving at the proper basis of taxation. But what do we find? At the present moment we have the advantage of having the accounts of every undertaking, both those owned by local authorities and those owned by companies throughout the kingdom, and we are able to analyse those accounts, and we find that the local taxation varies to the extent of 15 times in one case what it is in another.

4982. When you say the taxation you mean the valuation, I suppose?—Yes.

4983. The taxation varies, do you not see, in another way?—Yes.

4984. The taxation varies not only on account of valuation, but on account of the amount per £; therefore, I interrupted you entirely in your own interest, because I saw you were using a word which when we came to read the evidence, would not convey a distinct idea to us. What I understand you to say is this, is it not, that although the accounts of all the electric lighting companies are published, both those owned by municipalities and public bodies, and those in private hands, you find that the valuation of these undertakings varies very much?—It varies very greatly; it varies between the extreme limits of 15 to 1, that is to say, in Cardiff they pay one-fifteenth of what they pay in some undertakings in London.

4985. Perhaps you will just give me an instance or two showing the difference of the principles applied to the electric lighting undertakings by different authorities, or a concrete instance or two showing how these are worked out?—What we are complaining of is that the principle is so difficult to apply that really it results in there being no principle. The assessment committees make, to use a slang word, a shot at it, and the results make it evident that this is the case. Take the vestry of St. Pancras. The rates in the £ in St. Pancras are approximately the same as those at Kensington or rather a very little lower, and the price of electricity to the public is the same at St. Pancras as it is in Kensington, yet one-fourty-sixth of the price is paid as rates in St. Pancras and one-fourteenth is paid

Mr. R. E. B. Crompton.

Electric lighting companies. Variation in valuation in different parts of the country notwithstanding publication of accounts.

County as a rating area preferable to the union.

Electric lighting companies. Uncertainty in present principles of rating.

Mr.  
R. E. B.  
Crompton.

18 May '97

in Kensington. There is an instance of two parishes a few miles apart in which it is as three to one.

4986. I am afraid a statement put like that, does not help us very much unless you tell us the different methods taken in those two parishes at which those results are arrived at?—It is very easy to arrive at figures from that. In Kensington in the case that I am speaking of the works are assessed at about 6,500*l.* a year.

4987. (Mr. Elliott.) Is that the rateable value?—The rateable value is 6,500*l.* a year; those are approximately the figures; and in St. Pancras the works for turning out a similar output of electricity are assessed at 1,200*l.* There are still wider discrepancies in country undertakings. As a matter of fact, I believe the reason, in fact I know the reason is this, that during the earlier periods of these undertakings, especially when they are owned by the local authorities themselves, they do not commence to rate them at all. They assess the works at a merely nominal sum, an even sum of a few hundreds a year, until they really begin to pay, and after they begin to pay then they fix another large round sum. This has been in my experience, the method of fixing the assessment; it is only when a case has been fought that the thing has been assessed, as it is supposed to be assessed under the Act.

Valuation of electric lighting companies. Should be valued upon gross income of the company.

4988. (Chairman.) Supposing we were going to draw up a new statute to regulate the valuation of electric lighting companies, what would be your suggestion as to how it should be framed?—My view, one held by a considerable number of us, is that it is fair to assess on the selling price; that is, the gross income per annum.

4989. In other words, you would abandon rental value, and take as a test that which you call the gross selling price?—The figure put in the Board of Trade returns every year, as the gross income of the company should be a definite multiple of the assessment value.

4990. Would you take any deductions off the gross income?—No, I think that the incidence of taxation ought to bear a proportion to the gross income of the company.

4991. Supposing the gross income of the company to be ascertained by the individual who makes up the roll for valuation—of course, I need hardly ask you the question—he would not enter as his figure the gross income?—Of course not.

4992. You do not propose that?—No.

4993. What proportion of it do you propose?—I think the companies would have to be grouped. Supposing, as no doubt is correct, that the total sum paid for local taxation by the London companies as a whole, is a correct sum, and it is only the application, the local incidence, that is unfair. I think we can ascertain what proportion that sum now bears to the total gross income of the whole of the companies, and I think if the assessment was made at this figure all round, as far as London is concerned, it would be fair, and we should have no more grumbling. It would give a basis for London at all events.

4994. I do not know that I quite follow. It is no doubt very familiar to you, and you have thought it out, but your answer does not quite convey an idea to me?—Suppose a company that I have in my mind, where the gross income is 30,000*l.* a year, and where they are now assessed at 6,000*l.* a year, I believe that assessment to be excessive, and that 5,000*l.* a year perhaps might be right.

4995. Just let me take that step by step. You take the gross income of a company at 30,000*l.* a year?—I took one particular company whose figures are before my mind at the present time. If we take the whole of the London companies it would be about 480,000*l.* I took one company, and I said in the case of that company, whose gross income is 30,000*l.* a year, and which is now assessed at 5,000*l.* a year; one-sixth of their gross income is the amount they are assessed on.

4996. When you say you think that might be a fair amount, what is the test you apply to convince your mind that it is fair?—I propose to apply an averaging test.

4997. But if it is the case of only one company, could you say it is an averaging test?—Yes, because I

have added together the figures of several of the London companies, and I find that that proportion of one-sixth would about work out with existing figures. I am only supposing that existing figures based on the average are fair. A certain amount of money has, of course, to be raised by local taxation in London, and the Electric Lighting Companies have to pay their share of it.

4998. I do not now understand how you got at your figures; did you take the whole income of all the London Electric Lighting Companies?—I took the Board of Trade returns of several West End companies.

4999. And then the whole sum that they pay in local taxation at this moment?—No; I calculated the assessment in each case from the sum they pay as rates.

5000. Do you find that that is a sum comparable, or is the same with what would be one-sixth of their gross income?—That is what it is at present apparently on the average. My complaint is that the principle is so ill understood, and so difficult to apply, that the different assessment authorities arrive at extraordinary results, varying so widely among one another as three to one in London, and sixteen to one if we take the whole of the assessment all over the country.

5001. (Mr. Dalton.) Referring to the two cases that you quoted—St. Pancras and Kensington—there is a company, I think, at Kensington, is there not?—It is a company in one case, and it is a local authority in the other.

5002. Does that not make a difference?—It ought not to do so, and it does not always, because some of the local authorities are themselves exceedingly highly assessed on their works.

5003. You say the charges of electricity are the same in both cases?—Approximately.

5004. Do the vestry of St. Pancras make a profit?—Yes, I think they are just making a little profit.

5005. Can you say what the profit of the Kensington Company is—what per-centage of profit does it give to its shareholders?—I think, taking the average of capital all round, it is about 6 per cent.—it is 5½ or 6. It is divided into several classes of shares, so I could not calculate it for you straight off the reel.

5006. That would be a considerably higher profit than the local authority would probably consider themselves justified in making, would it not?—The local authority have to pay the interest on their loan, and they put aside—which should be counted as profit—a sum for the amortisation of their loan.

5007. Does that come to 5 or 6 per cent.?—I think it comes altogether to 5½; I should therefore say they are about the same.

5008. They are able to put 4 or 5 per cent. apart for that purpose, but they have no profits in aid of the rates, have they?—They ought to have; other bodies have profits.

5009. When a local authority takes an undertaking of this kind it is not generally considered that it is bound to make the largest profit it can necessarily; it must have regard to the interests of the consumer too?—I think the Corporation of Manchester is attempting to make a very considerable profit now on that undertaking, and is doing so.

5010. On their waterworks?—On their electric lighting works. I am speaking of the subject that I am closely connected with; I believe they do it on their electric lighting—in fact, I know they do.

5011. (Mr. Elliott.) You suggest that the first thing to be done in rating an electric lighting company should be to take the gross receipts, I think?—Yes.

5012. And then you would take a certain fixed proportion of the gross receipts in order to arrive at the rateable value?—Yes.

5013. Would you adopt that principle in the case of any other classes of industry?—I would prefer not to speak for other people, but I cannot see why it cannot be applied to all similar undertakings—water companies, gas companies, and all of those whose gross income is so well known.

5014. Supposing in the case of electric lighting companies a sixth of the gross receipts were taken, how would that compare with the selling price of electricity? I want to see whether I may properly compare that one-sixth with the one-fourteenth for instance, that you

18 May '97

mention in your memorandum in the case of Kensington?—At Kensington last year the rates, at 5s. 7d. in the £ on the one-sixth assessment, amounted to one-fourteenth of the selling price.

5015. What would be the effect now upon the Kensington Company of the adoption of that principle which you have just proposed?—It would keep it about the same or would reduce it very slightly. Kensington, I think, is over-assessed; just as St. Pancras is under-assessed.

5016. Has your Chamber considered generally this question of taking gross receipts as the basis of rating?—Not the Chamber as a whole, but one of the sections of the Chamber connected with electric lighting has discussed the rating question generally.

5017. Has this come before any other sections of the London Chamber of Commerce?—I do not think so.

5018. Are we to consider this evidence as only emanating from the members of the electric lighting section?—The evidence in my memorandum represents the views of the members generally.

5019. I want to know from you whether this proposal to take gross receipts as the basis of the rating has been considered by the London Chamber of Commerce generally?—No, it has not.

5020. Only by the representatives of the electric lighting companies?—Yes, it is only applicable, I think, to those classes of undertakings.\*

5021. Is it suggested that the principle is applicable to other classes?—I think not, I think that electric lighting is peculiar, on account of the Act having imposed upon us the publishing of our accounts, and consequently all our undertaking is open to the world.

5022. (Mr. Smith.) As to the publication of accounts, that is common to gas companies, is it not?—Yes.

5023. And to water companies?—Yes. Personally I do not see why it should not apply to gas and water companies; but I am not entitled to speak for them.

5024. You admit that the gas companies certainly are under statutory obligation to publish?—Yes.

5025. And railway companies?—Yes.

5026. And insurance companies?—Yes.

5027. So that electric lighting companies are not so exceptional after all in the publication of accounts. Now you have mentioned the Birmingham case; you were not rated I think by the much-abused assessment committee, were you?—I do not know who the original authority was.

5028. You were rated by the overseers of the parish?—Yes, I suppose so.

5029. What would you suggest as an alternative for the overseers of a large parish like Birmingham—would you say the County Council of Warwickshire?—No. I think it is very difficult to lay down one principle.

5030. I rather gather that you did pledge yourself to the county council, did you not?—I am not familiar with the working of the County Council of Warwickshire, and I do not know in what way it would be inferior.

5031. I am not suggesting any inferiority; I do not see that there would be any improvement—that is my difficulty?—Then I think Birmingham is somewhat exceptional. I think that it has always been considered a model municipality.

5032. You put it to the test; you appealed against the Birmingham overseers' valuation to the Recorder of Birmingham?—Yes.

5033. Do you know that he is the Chairman of the County Council of Warwickshire?—I did not know that.

5034. There is one point I want to clear up; I think you sometimes confuse the term "rating" with "assessment"; you make the statement in your memorandum that Birmingham is, as a town, "lightly rated," you must mean lightly assessed?—Yes.

5035. I should be delighted to know that it was lightly rated, but unfortunately I know that the rates

are 6s. 10d. in the £, and I do not call that lightly rated; you mean lightly assessed of course there?—Yes.

5036. Where an undertaking is in the hands of a local authority, are there not cases where it is exempt from an improvement rate under an improvement Act?—There may be cases, but I know a great many of the chairmen of electric committees and their engineers, and they all complain of it just as much as we do in the case of companies. I do not think that in any case I have come across they have been exempt.

5037. I think you will find that in some corporations they are exempt from paying their own rates on their own property?—It is not the case in one or two very important instances; in Brighton, for instance, it is not.

5038. (Mr. Arthur O'Connor.) I see that you make it a ground of complaint that your company has no voice or control in the election of the rating authorities either of Kensington or of St. Margaret's, Westminster?—That is so.

5039. Has your company any voice or control in the election of Parliament which imposes taxes?—No.

5040. Do you object to that?—We cannot help ourselves.

5041. You also point out that the charge for electricity, which goes to local taxation, in one place is very much larger than the charge which goes in another place to local taxation. Now let us get rid of electricity for a moment if we can, and think of public-houses; I suppose, if there are two public-houses with premises very much alike, and one does ten times the business of the other, the charge for local taxation would be ten times as much in the pint of beer in the one case as it would be in the other, would it not?—Do you mean that one sold ten times as many pints of beer as the other?

5042. Yes?—I should say it would be one-tenth instead of ten times the money; of course, the sum would be divided over a greater number of pints of beer.

5043. One-tenth is one to ten, and ten times is ten to one; whichever way you take it, between the two there would be the same disparity in the proportionate charge for local taxation in every pint of beer, surely?—I do not think it follows.

5044. Why should you treat electricity as different from any other fluid or liquid, whatever you choose to call it? You supply electricity, other people supply beer, and it may be in one place that the charge for local taxation is more per measure than in the other?—I was dealing with the whole question, as I explained to the Chairman, quite apart from the rating for the time being. Suppose it is 5s. in the £ in every case, I say the assessment varies very greatly in different places owing to the ignorance of any principle on which the assessment can fairly be made.

5045. I see you say assessment committees are neither independent nor disinterested, nor in many cases competent?—I think competence is the principal need.

5046. You propose that you should have independent valuers who should be permanent officers?—Yes.

5047. Preferentially under the Local Government Board or some other central Government board?—Yes.

5048. Supposing a public body is furnishing for the use of the public any article such as electricity or gas, or water, and furnishing it at such a price as will pay for production, making no profit beyond what is absolutely necessary to avoid a loss, would you say that they ought to be assessed on the same terms as a prosperous Kensington company which is making a profit?—Why not? The local authority borrow the money; someone is making a profit—the people who are receiving the interest.

5049. Do electricity companies never borrow money?—Certainly, they do; and that is all considered in the capital of the company. There is no division of the profit there. The local authority's case differs very little from that of the company; but the local authority can borrow at a much lower rate.

5050. Cannot you understand the difference between a certain amount of money which is necessary to pay for interest on borrowed capital, and the profit over and above that which goes into the shareholders' pocket?—I know there is a distinction made, but I do not see

Mr.  
R. E. B.  
Crompton.

18 May '97

Exemption of undertakings of local authorities under improvement Acts.

Companies have no right of voting in elections.

Valuation of electric lighting companies varies greatly in different parts of the country owing to want of a defined principle.

Independent body for valuation purposes desirable.

Electric lighting. Valuation of public companies and undertakings of local bodies.

\* Mr. Compton subsequently wrote, "I wish to correct my answer to question 5020. The answer should be: 'I did not come prepared with a proposal authorised by the Chamber, but have put forward the only proposal which has been discussed by those interested in the question.'"

Mr.  
R. E. B.  
Crompton.  
18 May '97

why any distinction should be made. The capital has to be raised, and all that that capital earns goes into the hands of the people who lend that capital, whether it is in the form of interest, or whether it is in the form of dividends, those are only different names for the same thing.

5051. You know something about the circumstances of Birmingham, do you?—The Birmingham Corporation?

5052. Yes; are you conversant with any of the circumstances connected with the Birmingham administration?—I cannot say that I am conversant with them sufficiently to give evidence upon them.

5053. Do you know that with regard to certain things they make a profit by supplying outside their own area?—I know that is said to be the case, but I could not give it as evidence myself.

5054. Assuming that it is so, do you see any difference in the position of the corporation within and without its area in that respect?—I think certainly that outside their area they ought to be rated much higher than inside their area; I quite agree with that.

5055. Then I think we need not carry you any further; you admit that there is a difference between a local service by a corporation and a service by an independent company for profit?—I do not think the Birmingham business is right, and I do not think it ought to be allowed; the fact that it exists, I do not think affects the argument.

5056. (Chairman.) Is there any matter we have omitted on which you would like to speak?—As a manufacturer, I have very strong views on the great

difficulties arising from the uncertainty owing to the gradual increase in the assessment, due to a desire in every case to copy that north country decision, and include movable machinery. Every year smaller and smaller machinery is being rated, and consequently instead of being rated on the hereditaments as we used to be, which included the fixed engines and the heavy fixed tools, now an increasingly large amount of smaller tools is brought in every year. I know, speaking as a manufacturer, we all feel that it is time that some definite arrangement should be arrived at, so that we should know where we are, and what we are to be rated upon. I think I speak for the general body of manufacturers when I say that it is the uncertainty we object to very much. We know the local taxes have to be paid, but we do not know what we are to do; and it is very hampering to industry to buy a certain number of tools and know that you cannot bolt them down, simply because if you bolt them down they become hereditaments, whereas when they are loose tools they are not. Surely that is a way of juggling with matters which we ought not to be called upon to submit to.

5057. (Mr. Smith.) Just one question in reference to something asked by Mr. O'Connor which, I think, might be misleading; you know something of the Birmingham circumstances, I presume?—I was a witness before them for the company.

5058. Do you know that the price charged for gas and water in Birmingham is exactly the same outside as inside the city?—I did not know that, but I have been told differently; I could not give evidence upon it, however.

5059. You may take it that it is the same?—Yes, I will do so, of course.

The witness withdrew.

MR. HORATIO JOHN ADAMSON called and examined.

5060. (Chairman.) I think you are a director of John Howell and Company, Limited, whose place of business as wholesale warehousemen is in St. Paul's Churchyard?—That is so.

5061. You are one of the three gentlemen whom the London Chamber of Commerce has asked to come here to-day?—Yes.

5062. Generally speaking, you support this report\* of the Committee of the London Chamber of Commerce which I hold in my hand?—Yes, I do.

5063. Is there any point in that report on which you would like to lay special emphasis?—My point chiefly to-day is with respect to the mode of rating, and the appeal. I refer, of course, to the definition that rateable value means the gross value after deducting the average cost of repairs and insurance.

5064. We will take you on that point, that the rateable value means the gross value after deductions; what have you to say on that?—In the first place, I may say that the premises, freehold and leasehold, which our company occupy, now pay towards the rates and taxes over 1,000*l.* a year more than they did five years ago.

5065. Do you mean that in the quinquennial revision that amount has been added to the value?—It has been added, but not so much in the quinquennial; it happened four years ago after the reconstruction of a portion of the buildings which had been pulled down for the widening of Ludgate Hill.

5066. A part of your premises is freehold, and a part leasehold, I think?—Yes.

5067. Did the alteration take place, so far as you know upon the value of the freehold, or upon the value of the leasehold?—On the leasehold part.

5068. Was that the part which was pulled down?—A portion of it about 70 feet by 17 feet deep was taken away which necessitated the destruction of a third of the whole property, and its reconstruction.

5069. I would like you to state in your own way, first, what happened, and then what your objection to it is?—My objection is that we, as a limited company, have no vote at all, either political or municipal. Our rental is now 6,500*l.*

5070. Is that your rental for the leasehold premises?—No; I have estimated 4 per cent. upon the value of the freehold, and included it in that amount. We are

\* Part II. of Appendix to Vol. I. of Minutes of Evidence pp. 22 to 24.

rated by our neighbours, occupants of the parish, whose rents vary from 200*l.* to 300*l.* or less; and our appeal against their decision is to their own body.

5071. So far as leasehold premises are concerned, is it not a sufficient answer if you are being over-assessed, that your lease rent is so and so?—We are assessed beyond the rental considerably.

5072. On the leasehold premises?—Yes; they are taken as a whole.

5073. Do not let us mix up the two. I quite understand the difficulty in finding the true value which a hypothetical tenant would give one year with another for freehold premises which are in the occupation of the owner; but let me take leasehold premises. Supposing your premises were, as a whole, leasehold, and you put in evidence at the appeal that your rack rent was so much, that rack rent would be accepted as the rental on which you would be rated, would it not?—I presume so, but the assessment is on the premises as a whole; the leasehold and the freehold are not assessed separately.

5074. Do you think you are rated at too high an amount?—That was admitted to a certain extent, inasmuch as in 1889 our rental was 6,000*l.*, and we were assessed at 7,000*l.* gross; a portion of the buildings were pulled down and reconstructed, and immediately after reconstruction we were assessed at 8,000*l.*; I went and appealed, and they took off 600*l.*

5075. Can you state from your own knowledge how the first value was arrived at—what was in the minds of the committee?—They were old premises, and from time to time old houses have fallen in, and have been added to the original warehouse, so that I have no data actually to go upon.

5076. Would you go this length with me, that the problem which your premises put to an authority which is charged with finding the true rateable value is a somewhat complex one?—It is not now, but it was.

5077. It was?—Yes, 10 years ago.

5078. Why is it not now?—Because it comprises simply two leases and a freehold. Everything is quite clear; there are new leases which are granted presumably at their present value, and the freehold which we purchased five years ago.

5079. Taking them together, how would you propose to arrive at the proper rateable value of your leasehold and freehold premises?—I should take it at the

Mr.  
R. E. B.  
Crompton.  
18 May '97

Rating in respect of movable machinery is increasing. A definite principle is wanted.

Birmingham Corporation charges the same for gas and water inside and outside the city.

Mr. H. J.  
Adamson.

Mr. H. J.  
Adamson.

Rateable value. Definition of.

Increase of rates paid by Howell & Co. on leasehold premises.

Objection to Companies having no right of voting. Increase of rates paid by Howell & Co. on leasehold premises.

Valuation of leasehold and freehold premises. Tests to be applied.

Mr. H. J.  
Adamson.  
18 May '97

estimate which I have made, that allowing 4 per cent. on the purchase of the freehold, together with the leasehold rental, the total would come to 6,570*l.*, and we are assessed at 7,400*l.* I may tell you that in constructing a portion of the new buildings we put some shops—

5080. I do not want, of course, to go too far into the details of your own particular case. As far as the leasehold is concerned, would you be satisfied if the rateable value was fixed at the amount of the rent actually paid, with some check to make sure that the rent was the actual value?—Yes, subject to the deduction for repairs, alterations, and insurance.

5081. Now as far as freehold property is concerned, what test as a matter of theory would you like to see applied?—I can hardly tell you, except inasmuch as this, that the actual cost which would be the present value was incurred three years ago.

5082. Would actual cost and present value be always convertible terms?—I should say 4 per cent. upon the original cost.

5083. In all time coming?—Yes; it has been the case for many years.

5084. Supposing for some reason or another a neighbourhood improves very much or deteriorates, then would the cost of a bygone time be really a test?—No, probably not.

5085. Then what test in the case of a freehold in the hands of the occupant would you like to see applied?—I can hardly make any proposal, inasmuch as the rental of the leasehold extends over 50 or 60 years, and that would remain at the same amount.

5086. It turns upon this, does it not, that it must in some cases be very much a matter of estimate?—Yes.

5087. I understand you would like to see that estimate made by a really independent and responsible authority?—Undoubtedly, and an appeal.

5088. Then I will take you one step further and ask, what machinery or what authority would you like to set to perform that duty?—I would like to see it referred to a committee; I can hardly suggest how the committee should be composed, but the members should be persons entirely uninterested in the welfare of the particular locality.

5089. It would not be desirable, would it, to commit it to people who are altogether without local knowledge?—That they could always ascertain, I should think from the Income Tax and such like, from time to time.

5090. Taking this report of the Chamber of Commerce, is there any other point you want to emphasize before I go to your own paper?—I think I am only before you to emphasize those two points—the mode of assessment and the form of appeal.

5091. What do you say about the form of appeal?—That we should be content to be assessed by an outside and independent body, and to appeal to any body who are not locally interested. I believe I represent the feelings of the whole Chamber of Commerce in that respect, who have considered the matter for the last two years.

5092. I think, really, that in leading you on from one question to another, I have, without intending it, really covered both your memorandum and the points in the report of the Chamber of Commerce on which you specially want to speak?—I think so too.

5093. (Mr. Arthur O'Connor.) Are you a director of your company?—Yes.

5094. Have you a copy of the report which you issued to your shareholders?—I have not with me, but I can let you have one.

5095. Do you remember what was in the balance sheet?—Yes, fairly well.

5096. Do you remember the figures at which you valued your premises?—I cannot tell you the figures for the new leases; the freehold was valued at about 22,000*l.* and the leases, I think, at 20,000*l.*

5097. Now, having regard to your own figures in your balance sheet, do you think that you are too highly assessed?—I think so.

5098. To what extent?—Inasmuch as we are assessed beyond the rental value.

5099. Take the estimate of your own premises that you laid before your shareholders, and show us how, according to those figures, you are too highly assessed?—I base my calculation upon the rent and the interest on the cost of the freehold and the cost of the new erection.

5100. You may be paying a certain rent, but does that represent the value to your shareholders of the property you hold? It is a beneficial lease, is it not?—It is a lease of 99 years.

5101. A beneficial lease?—Yes, under covenant to build.

5102. Supposing that you were the freeholder of the entire premises and you wanted to let them, would you let them for less than you yourself or your company is paying for them?—No, we should consider the present rental the actual value, inasmuch as it is all new as from two years ago.

5103. And having regard to the good condition of it it is almost the minimum value?—No, because within the next three years we shall have to pull down and rebuild that portion which is freehold.

5104. But that is a matter which is not of present pressure?—It has to be done between now and the year 1900.

5105. As the premises stand—?—As they stand the freehold will almost tumble down.

5106. Quite so, but then the site is very good?—The site is good.

5107. Do you remember the story of the sale of St. Paul's schools—that is not far from your place, is it?—The new St. Paul's schools are immediately in the rear of our freehold. The old schools were at the eastern end of St. Paul's.

5108. I know, but in the same immediate neighbourhood?—Yes.

5109. Do you remember what amount the old St. Paul's schools fetched?—Yes.

5110. I suppose that site is not less valuable now than at the time of the sale?—No.

5111. Is it not of greater value?—It is not less valuable now.

5112. Not greater?—I do not suppose it is; it has not increased in value during that period as far as I know.

5113. You say with regard to the assessment committee, that it is a body chiefly drawn from local people; suppose you had to assess the value of your neighbours' property of all kinds over some considerable area, would you trust to your individual opinion or would you prefer to lean upon some expert opinion?—I should prefer to lean upon some expert.

5114. Such as a surveyor?—In this instance, if I may be allowed to say so, the surveyor to the committee is also a householder in the immediate neighbourhood.

5115. When you say that tradespeople who are on the committee of valuation and assessment are chiefly guided by the opinions of their surveyors, I am induced to ask you, if you had the same work to do where would you find better advisers?—I ask that the surveyor should be an expert from outside the district.

5116. That he should not have any local knowledge?—Not that he should not have any local knowledge, but that he should have no local interest.

5117. It is not that you object to surveyors *qua* surveyors, but that with regard to these particular individuals they happen to be surveyors with a personal interest?—Yes. I should prefer that anybody possibly having a personal interest in the neighbourhood should not assess.

5118. Do you consider that as an essential, reasonable qualification for a surveyor?—I have no desire to make any imputation, but still there is all this temptation.

5119. I only want to get the attitude of your mind; you consider that a man to be an impartial valuator should be not only a surveyor or one qualified, but that he should have no possible interest in the district?—That is it.

5120. Where then would you find anybody who would prove a satisfactory valuator, according to your standard?—I should leave that to the authorities to find; it would not be for me to seek.

Mr. H. J.  
Adamson.  
18 May '97

Independent body for valuation purposes desirable, and also power to appeal.

Independent body for valuation purposes desirable.

Valuation of leasehold and freehold premises of Howell & Co. is too high.

Mr. H. J. Adamson.  
18 May '97

5121. Is that not much like propounding a conundrum to the authorities? You do not help us very much towards a conclusion in our own mind?—In this instance the surveyor who contested this claim with me and assessed us at 8,000*l.* eventually consented to the reduction to 7,400*l.*

5122. Were you there personally?—Yes, I attended alone.

5123. It may have been due to your own powers of advocacy?—I had to retire.

5124. Was any premium paid with regard to your leasehold premises?—No, there was no premium. A new lease was taken, but we covenanted to spend 10,000*l.*

5125. There was some consideration over and above the mere nominal rent?—Yes, over and above the mere renewal of the lease, there was this 10,000*l.*

5126. I think you told us that in regard to your freehold you thought 4 per cent. was a reasonable amount?—That is how we take it in our balance-sheet.

5127. I suppose we may take 4 per cent. on the 10,000*l.*?—Yes.

5128. (Mr. Smith.) Is it a serious objection that as a public company you have no votes in the elections?—We have never taken it into consideration at all. I only know that we have no municipal vote; there is no personality in the company.

5129. Do you think you would be any better off if you had a vote?—Not in this respect in regard to municipal matters.

5130. You do not think they would be likely to elect the representatives of one of these large companies?—No, our vote would be swamped by those who surround us.

5131. You find that is so in London, do you?—It would be so, undoubtedly.

5132. Have you any acquaintance with municipalities in the country where the vote is similar?—No.

5133. They do not always return a small ratepayer there, do they?—I do not know. I have no experience at all of the municipalities in the country.

5134. You find that in London they always return one of their own class?—I know they are all tradespeople round about our neighbourhood.

5135. You do not complain of their incompetence or of their injustice, do you?—They are not competent other than their knowing the interest of the parish or of the district.

5136. But they are guided by professional opinion?—Yes, they are, and their professional assistant is also a resident, and is a ratepayer in the parish.

5137. But he would be a small ratepayer as compared with your firm, for instance?—Yes.

5138. The members of the assessment committee, or the overseers as they are in your case, would be small ratepayers as compared with your company?—Small as compared with us, but not necessarily small.

5139. So that if you put your objection on the score of interest you have a greater interest in a low assessment on your premises than they have in a high one?—We have only the desire to be fairly and properly assessed.

5140. We must assume that they have the same desire?—But we are assessed beyond the meaning of the Act.

5141. Would you kindly give me those figures that you gave to Mr. O'Connor; you put the value of your freehold at how much in your books?—21,600*l.*

5142. That is for the old buildings on the freehold land?—Yes.

5143. What is the value of your leasehold?—We shall have to rebuild the remainder within the next four years.

5144. I am dealing with things as they are; what is the value of your leasehold— I think you said 20,000*l.*?—I think it was 21,000*l.* or 22,000*l.* It all passes away by effluxion of time, and that is really money expended on it.

5145. Does that include buildings?—Yes.

5146. Then you have spent 42,000*l.*—at least they stand in your books at 42,000*l.*—and you are rated at about 7,000*l.*?—At 7,400*l.*

5147. (Mr. Elliott.) You mention in the early part of your memorandum that you concur in the recommendation made by the London Chamber of Commerce, that all property should be assessed on the same basis; what basis have you in your mind?—From what has transpired to-day, I am rather at a loss to answer you, because I am not acquainted with the machinery of such matters as have been before you, but the basis I intended is that specified in the Act—the rental value.

5148. Have you studied the Valuation (Metropolis) Act at all?—Not beyond what is put before me.

5149. Are you acquainted with the various checks contained in that Act which are devised to secure that the same rating assessment shall be adopted?—I have not enquired into the subject at all.

5150. Then you do not ask us to consider that recommendation as a very serious recommendation of yours?—No, excepting that I am representing the feeling of the whole Chamber of Commerce who have had meetings.

5151. Does that feeling amount to very much more than this, that you would like to see your rates reduced?—We do not ask for the rates to be reduced so much as that we should be properly assessed.

5152. I want to get at the basis on which you should be assessed?—On the basis of our rental less the expenses of repairs and maintenance; we should be satisfied with that.

5153. Where there is no rental, as in the case of freehold property, how would you get at the rental?—That question the Chairman asked me, and I could not satisfy him. At present we take 4 per cent. upon the cost, and it would be a matter for adjustment at a future time, as it increased or decreased in value.

5154. Do you suggest that a fixed rule of taking 4 per cent. upon the cost of the buildings would give you an equitable rateable value?—Not in view of the property being worth more or less.

5155. It comes to this then, that some method of valuation apart from that rule of thumb, must be adopted?—It must be an estimate.

5156. You cannot suggest any authority which would be better able to get at the real value of the property than the present one?—No, I do not come before you with any suggestion in that respect at all. The Chamber of Commerce have considered the grievances up to now, and that is as far as it has gone. We do not come prepared to offer any suggestions.

5157. What are the rents actually reserved in your leases?—The rents we pay are 3,080*l.* and 2,180*l.*, I think; one is paid to the ground landlord and the other to the Ecclesiastical Commissioners.

5158. That gives you a total of 5,260*l.*, does it not?—Yes, and then there is the interest on the cost of the freehold which would be 800*l.*; that brings it nearly to what we value it at.

5159. You express this opinion in your memorandum: "That a definite principle should be laid down in respect of premises which, when rebuilt, are at present invariably assessed at a higher amount"; it follows, does it not, that when premises are rebuilt, they are usually of a higher value than they were before?—The lessee expends a large amount of money over them as a rule, and it seems to me rather hard that he should have to pay more in consequence. He loses the interest on his money and he has to pay more in rates and taxes because he has spent the money.

5160. Presumably he would not spend that money, unless he saw his way to recoup himself, would he?—In our case, possibly, a large portion of it was spent in respect of the embellishment of Ludgate Hill, in order to make a fine building. Our business could be conducted quite as well in a back street, if we had premises as large, although they were more insignificant.

5161. Can you suggest to the Commission what that "definite principle" should be?—No, I am not prepared to make any suggestion.

5162. Have you any suggestions to make with reference to the constitution of the assessment committees, over and above what you have said in reply to the Chairman?—No, I have not.

Mr. H. J. Adamson.  
18 May '97

Valuation, basis of, should be rental value.

Valuation (Metropolis) Act.

Valuation, basis of, should be rental less cost of repairs, &c.

Valuation of freehold property. Basis of valuation must depend on an estimate.

Rents paid by Howell & Co.

Premises rebuilt. Increase in valuation of.

Independent body for valuation purposes desirable.

Valuation of leasehold premises. Payment of premium.

Companies have no votes. Effect of this.

Assessment committees, constitution of, not always satisfactory.

Value of leasehold of Howell & Co.

Mr. H. J.  
Adamson.  
18 May '97

Leasehold  
property of  
Howell &  
Co. is  
alleged to  
be over  
assessed.

5163. (Mr. Dalton.) What is the date of your lease?—The smaller amount which I gave you was for 60 years from 1889.

5164. And the other?—The other is for 99 years from, I think, 1893.

5165. You covenanted to expend money?—We covenanted to spend in all on the two leases 16,000*l.*

5166. How much more than that did you spend?—We spent 21,000*l.* or 22,000*l.* which is the amount at which the lease is valued on the balance sheet; that was the outlay.

5167. Do you consider that you are over-assessed at the present time?—We consider so.

5168. You pay a rent of 5,260*l.* a year?—6,500*l.*

5169. I was taking the rent you actually pay, and I understood that that was 5,260*l.*?—It is about that, as nearly as I can recollect it.

5170. You reckon the value of your leasehold and freehold together as 43,000*l.*, I think?—That would be the cost of the freehold, and the money that was expended in building.

5171. You enter that value in your books; taking a fair percentage on that 43,000*l.* and adding the result to the rent you pay, it comes out very much to what you pay according to the present assessment; there is no great discrepancy?—There is no allowance made for repairs, nor is there for the fire insurance premium.

5172. You do not consider that the property has gone up at all in value since you took the lease in 1889?—No; it may be valued at more, inasmuch as a portion of it is new building which has been erected at our expense.

5173. You do not think the site is worth more than it was in 1889?—No.

5174. What class of ratepayers in the City do you think do not contribute their fair share to the rates?—I do not make any assertion of that kind.

5175. If you are over-assessed some other property in the City gets the benefit?—I do not know where all the money goes to which is derived from the rates; it is not all spent in the parish. Of course, money has to be provided for the county council, the school boards, and such like.

System of  
valuation  
is not satis-  
factory.

5176. Your grievance is not as to the amount of the rate raised, but as to the system of assessment?—That is it.

5177. What properties in the City at the present time do you think benefit by the present system of assessment? The warehouse properties in the City, you say, lose; what class of property within your assessment area gains?—I fancy that if a heavier amount is obtained in a house similar to ours some of those surrounding us contribute a smaller amount.

5178. What class of property would contribute that smaller amount—shops, business premises?—Yes; probably the assessment may remain at the same amount in the *£*, but less would be required.

5179. You think then that the grievance is not so much that the rates are divided unevenly as between the different classes of property in the City, but that you have a higher rate in the *£* than you should pay; is that what your grievance is?—We pay the same rate in the *£*, but we are assessed at a larger amount than we should be.

5180. What property escapes, and is too lowly rated in the City?—Supposing the rate to have been last year 7*d.* in the *£*, and this year it is 6*d.* in the *£*, all those who have to pay the smaller percentage will save.

5181. But you all pay the same rate in the *£*?—But then we pay it on the higher assessment.

5182. What class of property gets the lower assessment in the City?—That I cannot tell you.

5183. All the property in the City, practically speaking, consists of business premises, I presume?—There are very few residential properties.

5184. Therefore it is a question of one business property compared with another, and your grievance would be being assessed at a higher value than another?—If five years ago in a certain district, the assessment was a certain amount, or the charge in the *£* was a certain amount, now after this quinquennial assessment, if we are assessed 1,500*l.* or 1,600*l.* higher, the same amount being required, so much in the *£* would not be required from the surrounding householders.

5185. As a matter of fact the rates in the City are very much lower are they not, than the rates, we will say in the East End?—We pay over 7*s.* in the *£*.

5186. 7*s.* in the *£* in the City?—Yes. It is rather exceptional in our parish because there is the tithe commutation paid by our parish which goes to the support of the minor canons.

5187. Leaving out for a moment the tithe which is not reckoned—certainly amongst the rates for London?—It is a tax.

5188. A tax is a different matter from a rate, I do not think the tithe is part of local taxation. Leaving out the tithe, what is your rate in the *£* in your parish?—I expect that the tithe commutation is about 1*s.* 4*d.*, so that the rate in the *£* will be about 5*s.* 8*d.* or 5*s.* 9*d.*

5189. I think the general impression is that the City is not so highly rated as a number of other parts of London?—We pay the equalization rate too—that is 6*d.*

5190. You say you have no political or municipal representation in the City?—I believe that a limited liability company has not any.

5191. What class of ratepayers in the City practically elect the guardians who appoint the assessment committee? Who have votes in the City?—All the ordinary householders.

5192. But they are not householders, nearly all of them are business men, are they not?—Yes, but they have their votes for their interest in a City business. The Common Council, for instance, are all in business in the City.

5193. Are not their interests to a great extent identical with yours? Are they not all men of business?—Yes, most of them are—all of them in fact.

5194. They are not residents; they are not working men or anything of that kind; they are all business men?—They are all business men and some live on their premises and some live away.

5195. Very few, I should think, live on their premises?—There are a great many.

5196. In the City?—Yes.

5197. But they have not antagonistic interests so far as you know to those of your firm?—As far as I know, not.

5198. Although they may not be limited companies they are carrying on business and they are all commercial?—As far as I know they have not any antagonistic interest.

5199. (Mr. Elliott.) What is the rateable value of those shops that you spoke of; you have given us the gross value, but not, I think, the rateable?—They are rated as nearly as possible at the rental. We found that they were rated so high that we had to take 7½ per cent. off the rental, off every one of the shops, and now the present rental is about the rateable.

5200. (Chairman.) Is there any other point you want to speak to?—No.

Mr. H. J.  
Adamson.  
18 May '97

Rates in  
the *£* paid  
in certain  
parishes in  
the City.

Class of  
ratepayers  
in the city  
who elect  
the guar-  
dians are  
chiefly  
business  
men.

Rateable  
value of  
shops of  
Howell &  
Co. almost  
equal to  
the rental.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## FIFTEENTH DAY.

Wednesday, 19th May 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. C. B. STUART-WORTLEY, Q.C., M.P.  
 Sir E. W. HAMILTON, K.C.B.  
 G. H. MURRAY, Esq., C.B.  
 C. N. DALTON, Esq., C.B.

H. E. CLARE, Esq.  
 T. H. ELLIOTT, Esq.  
 ARTHUR O'CONNOR, Esq., M.P.  
 E. C. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. ALFRED TOWNSHEND COBBOLD called and examined.

Mr. A. T. Cobbold.

19 May '97

5201. (*Chairman.*) I think you have been for 15 years clerk to the Samford Union Assessment Committee, and that you have held other offices in the county of Suffolk?—Yes.

5202. You have been good enough to send us in a memorandum\* which I hold in my hand, in answer to the questions which we have submitted to you, which forms the basis of the statements you wish to make to us to-day?—Yes.

5203. As we are hearing evidence from clerks to unions, from a great many districts in the country, you will not be surprised to hear that a great deal of what is in your memorandum has naturally been already stated to us and that therefore, I need not take you over it in detail; but perhaps you will allow me to say that we think your memorandum has been very carefully prepared and will be of great service to us?—I am much obliged to you for those remarks. I imagined that my remarks were rather elementary in character, that is to say, as to the preliminary workings to arrive at certain assessments of rates and so forth.

5204. One thing that has struck me as regards your own union and the figures which you give, is that while the rateable value is 67,611*l.* a year, only 20,324*l.* of that represents agricultural land and yet you class your union as an agricultural union?—There is a railway running through it, and I think that a very fair proportion of the rateable value is in the railway.

5205. What is the rateable value of the railway system in your union?—I have nothing here to tell me that. I will, in revising the proof of my evidence, put in figures showing how much represents the railway and how much represents the houses.†

5206. I see, in paragraph 13, you express a strong and confident opinion that it would greatly lessen the labours of the overseers and assessment committees if either the column "gross estimated rental" or "rateable value" could be eliminated from the valuation list with the view of, amongst other things, making the values inserted in the list as uniform as possible over as large a district as possible?—Yes.

5207. Do you think there would be any opposition to carrying out that reform?—I have not heard the suggestion elsewhere, except quite incidentally and I do not think it has been broached publicly in any way, so I can hardly say whether there would be opposition or not.

5208. From your experience would you anticipate any opposition?—I should not.

5209. Your union, as I understand it, is one of those which is in more than one administrative county?—Samford is entirely in one county; in paragraph 16 of my memorandum I refer to Sudbury which is in two administrative counties.

5210. Have you any experience yourself of Sudbury?—I have a very small experience of it in connection with county work.

5211. Do you find it in connexion with county work a great disadvantage to have a union in two administrative counties?—Not so much in regard to one county by itself, but I think the union clerk and the board of guardians would find it so. Of course, one county has its work to do with regard to that portion of the union only which is in its administrative county.

5212. If a change is to be made, either the county boundary or the union boundary would have to prevail; which should it be?—I imagine the county boundary.

5213. Would that cause much confusion and difficulty in the first making of the change?—Not a great deal, I think. Of course, it is rather a large thing to suggest; but the alteration of the county boundary would be a great deal larger matter.

5214. Do you suggest that the change is worth making in spite of the dislocation that it would cause?—I believe in the simplification of areas, and I think it would be a simplification.

5215. On a balance of advantages and disadvantages, would it, in your opinion, be a greater convenience to make the change than it would be inconvenience during the time that it is being made?—I think ultimately it would be a greater convenience; no doubt, inconvenience would be felt at first before things got into working order again.

5216. From whom would you expect most opposition to the making of the change?—Possibly, from the guardians.

5217. What would they say?—They would rather be inclined, I think, to stick to the area which they had been accustomed to, but it would be more sentiment, perhaps, than anything else.

5218. Is the list of deductions which you have given us in paragraph 23 of your memorandum, the schedule which you refer to in paragraph 21 as having been compiled by you in December last?—No; the list of deductions given in paragraph 23 of my memorandum is a scale in connexion with the county rate basis. It was the scale upon which I was directed by the County Rate Basis Committee to act; the County Rate Basis Committee set the scale.

5219. Do you put it forward as a scale which would do for unions as well as being the county rate basis?—No. For instance, take the second item: "Land, with or without houses and buildings, 12½ per cent.;" I am strongly of opinion that the land and the houses should be separated, and that the scale of deductions from the one and the other should differ, looking at the purpose for which the deduction is allowed.

5220. Do you suggest that it is possible to make a scale of deductions which might be enacted by statute as applicable for both the union assessment list and the county rate basis?—I think powers could be given by statute to an authority to make a scale which should go entirely through a county, but I doubt whether one scale would apply equally to the facts in one county as to the facts in another county.

5221. To which authority would you remit that duty?—I think the county councils. I have rather suggested in paragraph 13 of my memorandum that it should be done through a committee of the county council—

Change of county boundary, whether possible and whether desirable.

Deductions. Uniform scale throughout a county desirable for union valuation list, and county rate basis made by county rate basis committee with assistance from the union desirable.

Mr. A. T. Cobbold.

19 May '97

Value of agricultural land in the Samford Union.

Valuation list. Elimination of either the column "gross estimated rental" or "rateable value" desirable.

Union in more than one administrative county, disadvantages of.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 25 to 100.  
 † Mr. Cobbold subsequently stated that, in the Samford Union, the rateable value of railways was 11,500*l.*; works, 843*l.*; houses and buildings, 28,634*l.*; tithe, 6,304*l.*; and land, 20,324*l.*, making a total rateable value of 67,611*l.*

*Mr. A. T. Cobbold.* probably the County Rate Basis Committee, they having some knowledge of that kind of work.

19 May '97 5222. Without any representation from the unions?—With representation from the unions, I think.

5223. Do you think it would be a possible and a desirable reform that over an area like a county the scale of deductions should be uniform?—I do most strongly.

5224. Do you think that those, so far as you know, who are engaged in work similar to yours in your district, would agree with you in that expression of opinion?—I have not the slightest doubt about it.

5225. Has it ever been made the subject of public discussion in your district?—Yes, my memorandum goes to that. We have had meetings in Suffolk in regard to that. We tried to get a uniform scale previously to the coming into operation of the Agricultural Rates Act, or rather with a view to that being passed, we had meetings in which a scale of deductions was prepared and agreed to. There were representatives present appointed by each county council in Suffolk—there are two county councils in Suffolk, by-the-bye—and representatives were appointed by each board of guardians, and they were practically unanimous in the scale of deductions which they recommended.

Valuation of agricultural land in certain unions not made below a certain fixed sum. Practice not warranted.

5226. Is there any point in your memorandum which I have omitted on which you would like to lay emphasis?—I think I have pointed out in paragraph 5 of my memorandum that in the Samford Union various classes of property have been dealt with by comparing one with another. We find that in some unions various practices have prevailed, perhaps not following the exact line laid down by statute; land, for instance, is not to be assessed at less than a fixed amount. I have not, perhaps, touched on that point in the memorandum, but I think that wants more clearly showing.

5227. How would that principle work of land not being assessed at more than a fixed amount?—I do not think it is a true test of value to make a hard-and-fast rule that land, or any property, shall not be assessed at less than a certain amount. I am, perhaps, rather going outside my own memorandum now, because I have not mentioned this there.

5228. I do not quite follow, because I do not see how you can lay down a fixed amount for land, either as a maximum or as a minimum, because the annual value of land, surely, ranges from prairie value to 5*l.* or more an acre?—I quite agree that that is so; but I know that, not in my own union, but in other unions, such has been the case; unions have fixed it and have said no land is to be assessed at less than a certain amount.

5229. There is no warrant for that in the statute, is there?—I do not think there is.

One scale for rating for county and union purposes desirable.

5230. Is there any other point you wish to refer to?—The particular point, I think, is, that there shall be one scale of rating for all purposes. We point that out strongly. We have a union scale, and we have a county scale, the union scale differing in all the unions, the county scale made as nearly as possible to apply equally all over the county; and then, for Imperial purposes, there is the income tax scale, that, I suppose, being based really upon the union figures.

Alteration of county or union boundaries, practical difficulties of.

5231. (*Mr. Dalton.*) On the question of making the unions and the counties conterminous, has anything been done by the county councils in your county and the neighbouring counties in that direction?—No, but there have been inquiries, and at the time of the passing of the Local Government Act, 1894, for instance, there were inquiries as to certain areas; but nothing has been actually done.

5232. They have full power to deal with those cases, have they not?—Yes.

5233. By a sub-committee?—By a joint committee, and also to alter county boundaries, of course.

5234. It is taken in hand first in the locality?—Yes.

5235. Do you not think that the reason you have not had your unions and counties conterminous is that in the inquiries you have mentioned practical difficulties were found to arise?—I did not see anything in the shape of practical difficulties. We had rather a large inquiry in West Suffolk with Cambridge as to the Newmarket area. There were six parishes in the administrative county of West Suffolk, and they are so still; there was an attempt on the part of Cambridgeshire to alter the boundary in that respect, and that would have had

the effect of throwing the whole of the Newmarket union into Cambridgeshire. That, of course, affected a very large piece of territory, and a very valuable piece, so far as Suffolk is concerned, that was really the objection to it.

5236. That would often be the objection, would it not, that one county or one union would lose a valuable piece of territory, and would object to lose it?—It would be so no doubt.

5237. Can you say when the last valuation was made in your union?—The last one was in 1895-96. Instructions were given in 1895, and the lists were actually returned in 1896; there have been supplemental lists since.

5238. Do you find that the overseers comply with the instructions of the assessment committee?—Very well indeed, in the majority of cases.

5239. You have given them somewhat more elaborate instructions than many unions have done, have you not?—I have seen a few instructions from some other unions which certainly have not been so elaborate.

5240. But you find that they regularly comply with them, and that the overseers do not give you much trouble?—Of course there is a lot of work in one's own office to be done, and a lot of care has to be taken to see that they do it. They are constantly coming in, and asking questions, &c. There is a certain amount of trouble in the work, but there is no real opposition to doing the work.

5241. I suppose the value of agricultural land has fallen enormously in Suffolk?—Yes.

5242. How did that come out at your last valuation in 1895-96; was there a great reduction?—Yes; I think the total is something like 10,000*l.*, but then we have been reducing the land during the last 10 years perhaps; I think the committee on three occasions made reductions in the land values prior to that.

5243. I see you say it would be an advantage if some degree of permanency in the assessment could be secured, but is that not impossible when a particular property like agricultural land is falling very rapidly? You must take into account the fall in value, I presume?—I quite agree that that is so. What I rather want to point out there is that the mere fact that a farm lets for a certain amount one year, and lets again the next year, perhaps on a re-hiring for a less sum, should not have too much importance attached to it. The conditions under which it is let are practically the same. It seems to me that to upset the assessment, because it happens to be let the second year at a little less figure, when there has been no practical alteration in the farms immediately surrounding, nor perhaps in the union, is not quite reasonable. It would be an advantage if that farm or property could have had some kind of settled basis, settled assessment, for a period of three or five years; there should be no appeal or anything of that kind.

5244. In your last assessment did your gross valuation come out the same as the income tax valuation, Schedule A.?—We did not compare them, and I could not tell you.

5245. You do not know which was the higher?—No, I do not know.

5246. I ask the question, because you suggest that the surveyor of taxes should prepare the list in the first instance, I think?—Yes.

5247. In valuing tithe throughout your union, I see you make certain uniform deductions for expenses of collection, &c.?—Yes.

5248. Is that quite right? I suppose where the parish belongs entirely to one owner, the tithe is paid in one cheque, but if the land belongs to a large number of small owners there must be a very great expense in collection, would that not be the case?—As a rule tithes are collected by persons appointed to collect on behalf of the owner, and commission is paid on the collection, whether he collects it from a large number of persons paying or a small number.

5249. But the charge for collecting it from a small number would be very much less than the charge for collecting it from a large number?—I have had to collect tithe myself. I used to collect it from the occupiers which was perhaps worse still, but I did not find that I got paid any better when there were more. That was my experience. There is not so much work, as a rule, in the case of the large owners.

*Mr. A. T. Cobbold.*

19 May '97

Valuation in Samford Union. Instructions carried out satisfactorily by overseers.

Agricultural land in Suffolk, fall in value. Permanent basis of valuation for 3 or 5 years desirable.

Tithe, valuation of. Uniform deduction throughout Samford Union for expense of collect

Mr. A. T. Cobbold.  
19 May '97

5250. I think you rather throw some doubt whether the rate should not be on the gross instead of on the net, do you not?—It has been in my mind but I think I have not expressed it in my memorandum.

5251. Have you any opinion on that point?—No; I do not feel that I know quite enough about it to express an opinion. I can see some objections.

5252. Is the gross valuation for your union the same as the gross valuation of the union for the county rate basis?—No, there is no gross for the county.

5253. Not?—No.

5254. They make certain deductions, you say?—Yes; but the county rate basis is on totals of parishes and on classes of property, whereas in the union it is on the properties themselves.

5255. Could you say whether in the county rate basis your union has a higher net value than it has in your own valuation?—I have the figures here. The net annual value according to the county rate basis is 71,300*l.*, and according to the union it is 67,611*l.*

5256. Is it somewhat in the same proportion in the rest of the county?—It varies very much. I have here a statement showing in 1895 the then county rate basis, the proposed new basis which was practically adopted, and the union rateable values at that time. This statement shows that the then basis was—leaving out the odd hundreds—1,613,000*l.*; the proposed new basis was 1,473,000*l.*; and the union basis was 1,464,000*l.* There you do get the proposed new and the rateable very much alike, but since then the union rateable values have gone down enormously, and the county rate basis has stood still. The county rate basis is never made more than once in five years, or something like that.

5257. (Mr. Elliott.) Do you think that as regards agricultural land full effect was given in your new valuation of 1895, to the reduction in agricultural values?—I think not entirely; because we have had some big reductions since.

5258. You would say then that the gross estimated rental, even in the valuation of 1895, was in excess of the actual rental value of agricultural property?—I should say it was.

5259. Would you say considerably in excess?—I do not know what you might mean by "considerably," I should not say considerably. Since 1895 there has been a further decrease in value I believe.

5260. And the effect of that further decrease has not been shown in your valuation?—No; that is to say there has been no new valuation over the whole area, but where the parties have objected some of them have succeeded in getting a reduction.

5261. I was not referring so much to the further decrease in value which has taken place since 1895; I was anxious to know whether you considered that the figure in the valuation list in 1895 represented the true rental value of the property in that year?—Yes, I think it does fairly so.

5262. You are aware of course that there is a general impression, especially in the east of England, that the gross estimated rental, as it is stated in the valuation lists, is in excess of the actual rental value of the property?—Yes, I believe that is so. But then I have found this with regard to the assessments, that very often in the gross estimated rental, there has been no deduction from it in the first instance, for the purposes of tithe. In the Samford Union we take practically the rent, but I have always most strongly advised my guardians that rent is not the basis—that it may be *prima facie* evidence of it, but that it is not the basis. Then from that a deduction is made to represent the tithe, the tithe being already assessed as tithe; and then you get the gross. In some instances—and I think very likely that was the case in 1895—I have known that the tithe has not been so deducted before arriving at the gross; therefore if the tithe was in as well as the rental value of the land to an occupier, and the tithe was separately assessed, you have got the tithe in twice over.

5263. Does your knowledge of the valuations of other unions in East Anglia suggest that that has happened in other unions than your own?—No, I do not think it does go quite so far as that.

5264. You are aware of course that it has very frequently been alleged by agriculturists in East

Anglia that the tithe is doubly assessed, once of itself and once in the value of the land?—It has been stated so where it has not been deducted.

5265. And you think there is some foundation for that allegation?—I think so, certainly. I have known it as a fact in regard to some of my own parishes in the past, but I think we have got them all right now.

5266. How have you been dealing with remissions of rent to which effect has not been given by a new lease or by some formal instrument of the kind?—We have fortunately had, I think, but one or two instances altogether.

5267. Usually they are permanent reductions of rent?—Yes.

5268. You mentioned in an answer that you gave just now that you saw no reason why there should be a reduction of the valuation if it happened that a farm was let at a reduced rent at the end of the year?—Yes.

5269. Why should there not be any amendment of the valuation in that case?—I have one particular instance in my mind now. The circumstances are these. That when the person hired it it happened to be a bad dry season and things were about as bad for letting as they could be; if that person hired, we will say this year after plenty of rain and suitable climatic conditions in the spring for letting, the farm would let better, I think.

5270. Is there any complaint amongst agriculturists in your district as to the valuation of their property?—There is some little bit of feeling about the place that the rent is not, I may say, blindly followed. There is a strong desire amongst agriculturists that the rent, whatever it may be, should be followed.

5271. Are the occupiers pretty keen in securing an adjustment of the valuation?—Some few I think are.

5272. Do you think that the owner suffers at all in consequence of the occasional apathy of the occupier?—I should think very likely he would, and that where the occupier has not brought his particular assessment to the notice of the committee, he is perhaps over-assessed; or where he has been living on a farm for years and has not taken any trouble with the assessment, but has been content to go on as he is and does not care to be disturbed—there may be something in it then.

5273. Would you see any objection to giving to the owner a right of appeal, seeing that his property may be affected?—I should see no objection to that; I should think it would be fair.

5274. He has no right of appeal at present?—Not as owner.

5275. And you see no objection to his being given that right?—None whatever.

5276. (Mr. Clare.) On this question of taking the rent as the gross estimated value, does not the rent depend a great deal upon the question whether the lessee or tenant undertakes to do the repairs or whether the landlord does?—Of course it all depends upon which undertakes that liability what the rental would be. A person will not give so much rent if he has got to keep the premises in repair as he would if the landlord kept them in repair.

5277. The gross estimated value as required by law has to be the rent that a tenant would pay before deducting anything for the expenses of repairs, insurance, &c.?—Yes.

5278. So that if the tenant undertakes to bear the expense of repairs, insurance, &c., the rent he pays cannot possibly be the gross estimated value as required by law?—The tenant paying for the repairs, do you say?

5279. If the tenant undertakes to bear the expense of repairing, keeping the property insured, and other expenses necessary to keep the property in a state to command the rent, then the rent he pays cannot possibly be the gross estimated value in accordance with the Act of Parliament?—Of course if the landlord did those repairs the tenant would pay more rent.

5280. I see you suggest that there should be a uniform system of deductions for similar classes of property throughout the county?—Yes.

5281. And I see you divide the different properties into five classes, and put houses altogether in one class

Mr. A. T. Cobbold.  
19 May '97

Agricultural land. Permanent basis of valuation for a certain period. desirable.

Agriculturists think that actual rent should be basis of valuation.

Appeal against valuation by owners. No objection to such a course.

Gross estimated value. Deductions. Uniformity of, with respect to similar classes of property desirable.

Valuation on county rate basis and on union basis.

Value of agricultural land in Samford Union is now below the valuation appearing in the valuation list of 1895.

Tithe sometimes assessed twice over.

Mr. A. T.  
Cobbold.  
19 May '97

and suggest that if you followed the county basis there should be a 20 per cent. deduction from the gross, to arrive at the rateable value?—That is in the county basis.

5282. Do you suggest that that system, or one somewhat similar, should be applied to the assessment of each individual property, for the purpose of the valuation list?—No, I think not, because in the county rate basis you get property in bulk, houses classed in bulk all together; but where you are dealing in a union with various kinds of property, you get different classes of houses, and I think you would have to take a different per-centage for cottages from what you would for mansions.

5283. I rather wanted to give you an opportunity of explaining this, because it is not quite clear, I think, in your memorandum. You do not mean, do you, that when you have arrived at the gross estimated rental of houses the same deduction should be made in respect of each class of house?—No, I certainly do not mean that. If you refer to the document which accompanied my memorandum, you will see that it shows various deductions for different classes of property.\*

5284. It would obviously be impossible, would it not, to apply a scale uniformly over the county?—I think you could apply a scale.

5285. Does not your experience of valuing property teach you that you will have to consider the state and condition of each individual property before you can arrive at the rateable value?—Undoubtedly that is so, but you may have a scale within certain limits, say from 15 to 20 per cent.

5286. If you allow a limit then you get the variations, and you want uniformity?—I think you would get practical uniformity, because you would get a duty to be done—a rule to be followed—of course it is all the better if you can get a hard-and-fast one. I quite see your point; there is a difficulty there, and I think it could be met by a limit within which it could be done.

5287. You have suggested the abolition of the column of gross estimated rental. Do you not think that the keeping of the column of gross estimated rental in the valuation list is a great protection to the occupier who is going to be assessed?—It is as things are now.

5288. If he had only one thing put in, namely, that in the opinion of the overseers he ought to be rated on the basis of so much a year, he would not know how that has been arrived at, would he?—There is, of course, that difficulty, and I have seen it all along. I do not quite know how it is to be done, but if it can be done I think it would be an advantage.

5289. Do I understand that you, as representing an assessment committee, are of opinion that the existing method of valuing a property for the purposes of rating, by overseers in each parish is unsatisfactory, and as between different parishes works out inequitably?—You say as representing a union—of course I am here in my individual capacity: I have not consulted the assessment committee.

5290. I meant rather as a gentleman with large experience in assessing property?—Would you mind putting the question again?

5291. I understood from your memorandum that you say that your experience leads you to the conclusion that the present method of having the valuation list prepared by overseers for each parish is unsatisfactory, and as between different parishes works out inequitably for the purposes of rating?—I think it does in some instances. I do not think that is intentional on the part of the overseers, but I think as a matter of fact it does work out so. Different overseers have different views, and they go on their own lines.

5292. (Mr. Smith.) You have a double experience—as clerk to the county rate basis committee and as clerk to a rural union?—Yes. As to the county rate basis my experience is somewhat limited. I have only carried through one basis, with some supplementary work as well.

5293. Would you kindly tell me what difference there is between the county rate basis for the union of which you are clerk and the rateable value according to the union assessment committee?—3,689l.

5294. In favour of the county rate basis?—The county rate basis is larger by that than the union.

5295. When was your last general valuation of the union?—In 1895-96.

5296. Then it was made in the same year?—Yes, practically at the same time.

5297. And you are clerk to both; but they cannot both be right?—No, they are not, and they cannot be, both right. In the parish of Brantham the county rate basis is 6,451l., and the union rateable value is 6,892l. That is in favour of the union rateable value, but when you come to the totals the thing is quite the other way.

5298. I gather that when you came to compare the total of the whole county with that of all the unions of the county, the proportion was not very different, I think you said?—That is so.

5299. I suppose I may put it to you, may I not, that you are a little more careful about keeping the county rate basis correctly now in consequence of the Commissioners' decision under the Act of 1888. Do not some of your Exchequer grants depend upon it. You know the decision of the Commissioners as to the balance of certain exchequer contributions depending upon rateable value, there being a division every five years according to the rateable value?—As between two counties, for instance?

5300. As between two counties or as between counties and county boroughs?—Yes.

5301. Therefore it is to the advantage of the county council to take care that their basis is kept up to the full amount?—I have no doubt it would be.

5302. Is it within your experience that they have been a little more careful recently, about their valuation as a consequence?—No, not as a consequence. I have never heard it suggested for a moment that the county rate basis should be kept up for that purpose, and I am quite sure that that has not entered into the minds of the committee in any way.

5303. Still, the Exchequer contribution depends upon its being kept up to its accurate amount—I am not putting it any higher than that—as between the county and county boroughs?—Yes.

5304. You have no county borough, I suppose?—There is Ipswich.

5305. I mean in your own union?—No, we have not.

5306. Have you any boroughs in the union?—No.

5307. It is a purely rural union, then?—Purely rural.

5308. I think I am right in the figures; your land in that union appears to work out to something under 10s. an acre—it is about 9s. 6d., I think?—I have not worked it out, but I should think very likely it did.

5309. You suggest that the county rate basis committee, or whatever they are called, should be the future assessing body for the county; have you considered the case of county boroughs at all?—No.

5310. Would you give any opinion as to who should be the rating authority there?—No. I have not thought about it in connection with the county boroughs.

5311. You would not suggest that they should be the rating authority if they have at present no rating functions?—By "they" do you mean the county council?

5312. Yes?—I have not given it a thought, so I could not express an opinion.

5313. (Mr. Arthur O'Connor.) The parish which you mentioned just now as showing the difference between the union assessment and the county assessment has gas works, has it not?—No; there are some works there known as Xylonite Works.

5314. I see that in your allowance of deductions you have 30 per cent. for gas houses in the parish, and that is not mentioned in any other parish?—I do not quite follow you. The parish I mentioned was Brantham.

5315. I beg your pardon; I thought you said Wangford?—No; I am sorry I did not speak sufficiently clearly.

5316. What is tithe?—A rent or a rentcharge.

5317. A rentcharge?—A charge on land.

5318. It is an interest carved out of property; it is a portion; it is not the whole?—It is a property in itself.

5319. But it issues out of the land, does it not?—It issues out of the land.

Mr. A. T.  
Cobbold.

County rate basis and distribution of Exchequer grants.

County rate basis committee as valuation body of county. Position of county boroughs under such a scheme.

Tithe rentcharge. Rates in respect of, whether payment by the occupier desirable.

Valuation of property by overseers in each parish produces inequalities.

County rate basis and union basis. Inequalities in results of valuation.

Mr. A. T.  
Cobbold.

19 May '97

5320. That is only a part of a larger interest; the land is the full interest in its entirety?—If you take the land in its entirety, yes.

5321. Absolutely fee simple?—Yes, the fee simple.

5322. And the tithe rentcharge is something taken out of it—it issues out of it?—It issues out of it.

5323. Then it must be smaller, because the whole is greater than a part?—Yes.

5324. So under a settlement any other charge is a part issuing out of a larger interest, is it not?—Yes, I imagine so.

5325. Similarly with a mortgage, is it not so?—Yes, with a mortgage on land, but then there is probably some collateral security in the shape of a man's covenant.

5326. Quite so, but the mortgage interest cannot be larger in respect of the principal security than the land itself in value?—Probably not.

5327. In the case of mortgages or life charges under settlements you do not have any separate rating or valuation, do you?—You mean of the charge?

5328. Of the particular charge?—No.

5329. For any partial interest except in the case of tithes you do not have any separate assessment and charge in rating?—No, I do not think you do.

5330. Why should there be in point of principle any distinction made in respect of tithes; do you see any reason for that in principle?—That is perhaps going rather further than I have thought out. Tithe of itself is in the nature of a freehold, but in the case of an ordinary mortgage the debt is secured upon the freehold.

5331. It is a charge upon the land, is it not?—Yes.

5332. There are many other charges upon the land?—Yes.

5333. With regard to the others, there is no separation for the purposes of valuation or rating?—A mortgage is an encumbrance on the land; tithe is not.

5334. You say tithe is not; it is probably a question of terms, and I do not want to have any dispute about terms; let us try to think of the thing. I want to get at this basis of yours. Tithe is a charge or something issuing out of property?—Yes.

5335. Which is larger than itself?—Yes.

5336. And there are other interests, whether life interests or any other interests, also issuing out of similar property, are there not, such as settlements?—Yes, there are such.

5337. Tithe itself is a thing which does not extend all over the country—which affects only certain properties and not others?—Yes.

5338. The same is true of mortgages and settlements. I want to know whether you know, as a witness here before us, any reason why there should be a distinction made in respect of tithes?—I have not, perhaps, put the thing together in the same shape that you have, or thought it out. One wants to consider before giving you an answer. I do not see anything at the present moment.

5339. Let me suggest this to you. Would it not be more convenient to recover all that has to be recovered on account of rates from the occupier, and allow him to deduct from what he pays the landlord what he has paid on account of tithe rent, so as to leave the rating authorities undisturbed and untroubled by those little divisions and sub-divisions of interests?—I do not quite follow you.

5340. Suppose that instead of having tithe separated and separately assessed and rated, you had one rate for the whole property, whatever it might be, regarded as a whole, recoverable from the occupier, and then wish regard to any sub-divisions of the interests, that deductions were made by the occupier from the landlord or from the tithe rentcharger, as the case might be?—I do not quite like the idea of it.

5341. You would not see any advantage in the simplification of procedure?—There might be simplification of procedure with regard to the rating authority, but I am afraid that when you have got interests as between individuals, the tenant and the landlord, you might find difficulties. I think the landlord would fare very badly, probably.

5342. (Chairman.) Would there be any injustice to him in it?—I think very likely the tenants would give less and less in the shape of rent, if they had to meet these charges, although they were allowed for them afterwards.

5343. (Mr. Arthur O'Connor.) I am concerned with the point of view of the rating authority; would it not be better, more convenient, and probably cheaper, to have only one undivided interest to look to, and one final collection as far as the rating authority went, irrespective of the sub-division of interest within the property?—Yes, I agree with you there.

5344. That is my point; you do agree. Now with regard to tithe, from the rating authority point of view it would be more convenient if they had no distinction such as at present exists between the tithe and the rest of the property, would it not?—We cannot get away from the fact that tithe is a distinct property in itself, although, as you put it, it is mixed up with land. It seems to be so distinct a property that it would have to be assessed.

5345. I see that in connection with tithe you say that certain deductions are made, first, 5 per cent. for expenses of collection and loss by non-payment; secondly, 5*l.* for insurance of chancel; but that is not legal, is it?—Which, the insurance?

5346. The 5*l.* for insurance of chancel?—I think a hard and fast 5*l.* is not strictly legal.

5347. Is anything legal in the way of deduction?—I think so.

5348. Was there not a case of Regina v. Goodchild on this point?—I know the case, but I do not think it decided that point, did it?

5349. It decided that you could not make any deduction in respect of the chancel?—In respect of the curate.

5350. No; in respect of repairs to the chancel, is that not so?—My attention has not been called to that point; I think it was with regard to a curate, if I recollect aright.

5351. Perhaps, if you can find out and wish to correct your evidence on that point, you will do so?—I will do so, certainly.\*

5352. The next deduction, is, you say, the full amount of the first-fruits, synodals, &c., paid by the owner of the tithe—is that a deduction which is admissible?—It is treated as such, in my union.

5353. There you are concerned not only with the separation of the tithe interest from the full amount of the property, but you actually have to go into the sub-divisions of the interests of the tithe itself?—Because you treat tithe as a separate property.

5354. Do you find no inconvenience in that? Would it not be better, from a rating point of view, to get rid of all that?—I quite believe that if you could simplify it in that way it would be an advantage.

5355. Go to the next section, number 3, of your memorandum, dealing with the method of levying and collecting rates in the union; I see that your poor rate is collected half-yearly, and that your highway rate is collected only yearly?—Yes.

5356. Do you think it would be better to have some kind of similarity in system with regard to all your rates?—The poor rate is made half-yearly, and collected in two instalments, practically quarterly; you get two rates in the year, each of which is collected in moieties. The highway rate is collected as a whole; the highway rate is so very small that you could not bring it down to two.

5357. Small or large, do you think it is a good thing to have one rate collection over one period and another rate collection over another period?—It would be an advantage if you could have them collected in the same way, I think.

5358. Simplicity, at any rate, would be better upon that point?—Yes.

5359. Now, as to the authority who should discharge the duty of preparing the valuation list; you suggest that the collector of taxes should prepare the list; what

Mr. A. T.  
Cobbold.

19 May '97

Tithe rent-charge. Deductions.

Collection of poor and highway rate. Advantages if collected for similar period.

Valuation list, preparation of.

\* Mr. Cobbold subsequently wrote: "I have looked up the case referred to by Mr. Arthur O'Connor, it is that of the Dean and Chapter of St. Asaph v. the Overseers of the Parish of Llanshaedry-n-Mochant, in which it was held that no deduction is permissible in respect of the liability of the owners of the tithe rentcharge to repair the chancel of the parish church."

Mr. A. T. Cobbold.

19 May '97

Income tax officer instead of overseers should prepare and union assessment committee should revise.

is the basis upon which he now makes his valuation?—He is only an officer, I take it, of the surveyor. The surveyor, if I understand rightly, prepares the list, and he gets his information, I believe, in the first instance, through the union assessment committees.

5360. Precisely. If the income duty authorities base their estimate upon materials supplied to them by the local people, what would become of the surveyor if you did away with the local people's valuation?—I think you rather emphasise the fact that you must have some local knowledge.

5361. You tell me that he gets his materials from the assessment committee; if you do away with the valuation by the assessment committee how is he to get on?—I do not think you can do away with the assessment committee; I think that the surveyor of taxes, or rather the tax collector, would simply act in the place of the overseers.

5362. At present it is the overseer who prepares the list, is it not?—Yes.

5363. If the overseer prepares the list where is the income tax officer to get his basis?—He has a basis now to begin with through the income tax returns and schedules.

5364. Where do you suppose those income tax returns are framed, and how?—They are framed, I believe, in the first instance from returns supplied by the assessment committee, probably through their clerk—I have sent some in myself—and also from returns of owners and occupiers.

5365. If I understand your suggestion it is that those who now prepare the lists upon which really the income tax officers proceed, are not any longer to do that work; if those men are not any longer to do that work, the income tax officer will have nothing to stand upon?—He has got the groundwork of the existing lists to stand upon to begin with, and then he has local knowledge. He is constantly about, and he knows from time to time what the properties are, and will have every opportunity of knowing what the properties were, and he can prepare the list; but then, of course, it would have to be subject to revision by either the union assessment committee or some other body.

5366. I understand your suggestion to be this, that he should take as his base line the existing lists?—I think you must begin on that.

5367. The overseers being got rid of, as far as the preparation of the list goes, this income tax officer is to take over the duty and do the groundwork of amending and supplementing?—Yes. I think he might. I will give you an illustration, if I may, where that practically is done. There are, I think, four parishes if not five in my union, and in those four parishes the same officer is assistant overseer, and also happens to be the tax collector in those parishes as well. He does the whole work for those four parishes. There is no difficulty found with regard to the work that he has sent in. I could give you other illustrations.

5368. In what character does he do the work; does he do it as overseer?—He does it as assistant overseer.

5369. And not as income tax officer?—No; but there is the same man doing double work and doing it for four parishes. You get equality as between those four parishes. I think, by that one head going over the whole of those particular parishes.

5370. Would you kindly tell me what you mean by paragraph 19—I am sure it is my fault that I do not understand it, and I only want you to explain it—"In estimating the union expenditure each half-year a different rate in the £ has to be raised according to whether a parish is in one county or the other," I do not quite understand that?—Take the Sudbury Union which I have illustrated; it is partly in Essex and partly in West Suffolk; West Suffolk may levy a rate for general purposes, which includes police, of 6d. in the £ we will say, Essex may levy a rate for their general purposes of 9d. in the £, and perhaps the parishes in Essex may also be in the same police district for which they may want a penny in the £—altogether Essex will be levying 10d. in the £ as against West Suffolk's 6d. in the £.

5371. Is the police rate a union rate or a county rate?—It is a county rate.

5372. Then this paragraph does not refer to it, because the paragraph says, "In estimating the union expenditure" P.—Yes, but the county rate is collected by the union authority.

5373. It is collected by it, yes; but it is not a union rate, and it is not a union expenditure?—No, not in the first instance, but the county council levies a precept upon the union and the union pays in bulk, but levies in the parishes on the union rateable values.

5374. Please turn to paragraph 23: "Exceptional cases received exceptional treatment, and additions were made in respect of property situated in each parish and assessed in some other parish, and deductions were made in respect of property assessed in each parish and situated in some other parish." I fail to comprehend the force of that; would you kindly explain it. How can a property situated in one parish be assessed in another parish?—For income tax purposes I think that arises in consequence of property belonging to one owner—

5375. Excuse me for a moment, this does not deal with income tax?—Yes, that is in reference to the income tax returns.

5376. It is under the sub-head: "To make any suggestion for improving the present system of valuing properties"?—What I have stated there is what was carried out in making the county rate basis.

5377. You say in paragraph 22, "In preparing the new county rate basis for Suffolk the system adopted was" so and so; and then in paragraph 23, "additions were made in respect of property situated in one parish and assessed in another"; how can property situated in parish A be assessed in parish B?—Because probably in parish B the owner owns a considerable amount of property, and a little of it in parish A. He is assessed in that parish for income tax purposes, and so we have to carry it backwards and forwards from those parishes to get them into their right parishes.

5378. For income tax purposes; but is the county rate an income tax matter?—No. Will you allow me to draw your attention to paragraph 22: "The system adopted was to obtain a return of the totals of the property tax assessments for each parish." We got those totals. The parish of A would show some property which was situated in one and assessed in another; I believe that is only a matter for facilitating collection.

5379. "Then we have the property tax assessments upon which income tax and inhabited house duty are assessed, and we find we have a third annual or rateable value which does not agree with either the union or county rateable value." Now I suppose a halfpenny circulates in a parish, or in a union, or in a county, just to the same value, does it not?—Yes.

5380. And rates raised—no matter whether they are union, or county, or parish rates—are upon the same property—the property does not change?—Yes, it is all on the same property.

5381. Whether you look at a thing from a parish point of view, or a union point of view, or a county point of view, the property is not affected; why then should there be a separate rating or valuation for the same property, according as you look at it from different points of view?—I think it should be one and the same myself.

5382. There again you are in favour of simplicity?—I am certainly.

5383. You would have one rating authority, I presume, for as large an area as possible?—I should not go outside the county, except perhaps where we have—as is the case in Suffolk—two counties which have a joint committee for certain purposes. There I think it is advisable that, as they exist now, there should be power to act jointly.

5384. For the whole of Suffolk?—So that the whole of Suffolk might be under one authority; in the particular incidence of the two counties I think you require that as we are now.

5385. Have you any copyhold in Suffolk?—Yes, we have a good deal of copyhold.

5386. Do you have any difficulty in regard to rating it?—No, I have never heard of any difficulty on that score.

5387. How do you assess the lord of the manor?—I do not think he is assessed at all—not as such.

5388. Do you assess manorial rights?—There are none assessed in the Samford union.

5389. (Mr. Stuart Wortley.) Probably there are none of any value?—We have no manorial rights assessed

Mr. A. T. Cobbold.

19 May '97

One valuation for all purposes desirable.

Union in two counties. Dissimilarity of rate in the £ for various purposes, in different parishes.

Mr. A. T. Cobbold.  
19 May '97

in the Samford union as such, or in any other way I think, but I say in regard to the property tax assessments they would be found there.

5390. (Mr. Arthur O'Connor.) Can you account for that discrepancy?—I suppose they are treated as personal property—I do not know whether it is accounted for in that way or not. When I first had to do with county assessments, and these property tax assessments came before me, I observed that total, and I could not understand why they should not perhaps come in for assessment purposes in unions as well as for tax purposes.

5391. Your "Instructions to Overseers,"\* gives a scale of deductions, and at the end of the scale I notice, "Other hereditaments according to general principles of law"—what does that mean? How far would that act as an instruction to an overseer?—It practically means what is stated in the first six paragraphs of the circular.

The witness withdrew.

Mr. WILLIAM WARD DUFFIELD called and examined.

5396. (Chairman.) You are, I think, clerk to the Chelmsford Union in Essex?—I am.

5397. How long have you held that office?—For 34 years.

5398. Do you hold any other local offices besides that?—A good many. I am clerk to the Magistrates, registrar of the County Court and of the Bankruptcy Court, clerk to the District Council, and all the other bodies connected with the union, and of some school boards.

5399. I have looked through your memorandum, and I see there are a few points in it which have not been touched upon by other witnesses. I will just take you over them. In answer to our first question,† you describe the course adopted by the overseers in making out their valuation lists which they do upon the prescribed forms supplied to them?—Yes.

5400. You then go on to say, "For this purpose the overseers meet and sometimes call before them residents in the parish on whose fair judgment as to the value they think they could rely?"—Yes, that is what I understand to be their practice in some parishes.

5401. You say you understand—do you know that of your own knowledge?—Yes. I know it of my own knowledge that they have done so.

5402. Is that a sort of local parliament for the purpose?—I suppose they look upon it in that light.

5403. Do you think it is a good practice?—I do not think there is much objection to it. I do not like to say much against it. Some of them are not the most intelligent people we meet with.

5404. Where would the meeting be held?—In their own parish.

5405. They do not meet on the road; what building have they the control of?—The overseer's house sometimes, sometimes in the vestry hall; there is never any difficulty. I do not think that that practice prevails in more than about a third of the parishes in the district.

5406. Do you think it a good plan that the valuation list should go on practically from year to year without any definite revision and renewal?—We have a rule that no original valuation list shall last more than five years; in practice we have always had a fresh valuation list every five years.

5407. You find in practice that unless you do revise it at such an interval as five years, and possibly some unions change more frequently still, the system would not work?—We have done it at a shorter period when the committee have thought it necessary to do so. Then, of course, the supplementary valuation lists are prepared from time to time in consequence of any alterations in rateable value or other circumstances rendering them necessary.

5408. How do you proceed to arrive at the gross estimated rental and rateable value of different classes of property?—You see our assessment committee is always elected from the various districts of the union so that every portion of the union is represented on it. From those gentlemen we are generally able to get accurate information with regard to the value of the property, and we have remarkably few appeals.

5392. Do those paragraphs set out the general principles of law?—I think they do.

5393. (Mr. Dalton.) As to the rating of tithe, is it not the case that in taking the tithe in each parish at present you have one entry in the valuation lists for the whole of it?—Yes, in each parish.

5394. And one payment is made by the tithe-owner for the whole of the rates in respect of tithe in the parish?—Yes, where there does not happen to be a number of small payments by various persons.

5395. But if each occupier had to deduct what he paid for the tithe, and to recover it from the tithe-owner, you would have a great number of claims on the tithe-owner in each parish, and he would have to make a great number of payments in respect of his rates instead of making one payment in respect of his rates as he does at present to the rating authority, because he would have to pay every occupier of property which was subject to tithe?—I do not think so, but I have not thought that out.

Mr. A. T. Cobbold.

19 May '97

Rating of tithe. Advantages of payment by tithe owner.

Mr. W. W. Duffield.

5396. (Chairman.) You are, I think, clerk to the Chelmsford Union in Essex?—I am.

5397. How long have you held that office?—For 34 years.

5398. Do you hold any other local offices besides that?—A good many. I am clerk to the Magistrates, registrar of the County Court and of the Bankruptcy Court, clerk to the District Council, and all the other bodies connected with the union, and of some school boards.

5399. I have looked through your memorandum, and I see there are a few points in it which have not been touched upon by other witnesses. I will just take you over them. In answer to our first question,† you describe the course adopted by the overseers in making out their valuation lists which they do upon the prescribed forms supplied to them?—Yes.

5400. You then go on to say, "For this purpose the overseers meet and sometimes call before them residents in the parish on whose fair judgment as to the value they think they could rely?"—Yes, that is what I understand to be their practice in some parishes.

5401. You say you understand—do you know that of your own knowledge?—Yes. I know it of my own knowledge that they have done so.

5402. Is that a sort of local parliament for the purpose?—I suppose they look upon it in that light.

5403. Do you think it is a good practice?—I do not think there is much objection to it. I do not like to say much against it. Some of them are not the most intelligent people we meet with.

5404. Where would the meeting be held?—In their own parish.

5405. They do not meet on the road; what building have they the control of?—The overseer's house sometimes, sometimes in the vestry hall; there is never any difficulty. I do not think that that practice prevails in more than about a third of the parishes in the district.

5406. Do you think it a good plan that the valuation list should go on practically from year to year without any definite revision and renewal?—We have a rule that no original valuation list shall last more than five years; in practice we have always had a fresh valuation list every five years.

5407. You find in practice that unless you do revise it at such an interval as five years, and possibly some unions change more frequently still, the system would not work?—We have done it at a shorter period when the committee have thought it necessary to do so. Then, of course, the supplementary valuation lists are prepared from time to time in consequence of any alterations in rateable value or other circumstances rendering them necessary.

5408. How do you proceed to arrive at the gross estimated rental and rateable value of different classes of property?—You see our assessment committee is always elected from the various districts of the union so that every portion of the union is represented on it. From those gentlemen we are generally able to get accurate information with regard to the value of the property, and we have remarkably few appeals.

5409. Do you take any steps to ascertain the actual rent which is paid?—I will tell you the steps which we took a year ago. We got permission from the Inland Revenue Department to have a copy of the assessment to the property tax, and upon taking that we found great discrepancies between the gross estimated rental of many of the properties and the returns made by the tenants. We acted to some extent upon the returns for the property tax and raised considerably the rateable value of the union.

5410. Would you agree with me that access to a copy of the property tax assessment list would be a very useful thing for a local body?—Very; I think I ought to say in reference to that that it certainly did not make much difference in the rateable value of the land, it principally affected buildings and residences; there are a considerable number of large residences in our union and those, we found, were assessed very much below their rent.

5411. If you have a railway or a large manufacturing premises in your district, you employ an expert, I understand?—Yes, occasionally; for railway purposes we do. The Great Eastern Railway runs through the whole of our union from one end to the other, and we raised its assessment 10,000l. a year about three or four years ago; they gave notice of appeal but they never proceeded with it.

5412. Is this gentleman's appointment a permanent one or do you employ him as you want him?—We employ him as we want him.

5413. For a fee of course?—Yes.

5414. Do you think the system works satisfactorily?—Upon the whole I am bound to say that in our union it does work very satisfactorily, but so much depends upon the trouble that the assessment committee will take. We have a considerable town population around us. The population of the Borough of Chelmsford, of which I am a member, is about 12,000 now, but immediately surrounding it we have four parishes containing over 2,000 inhabitants running right down into the borough.

5415. Still, under the existing system a great deal depends upon the zeal and energy of the individuals in the different parishes who prepare the valuation lists?—Yes.

5416. More perhaps depends on that than ought to depend upon it?—I do not think so because the assessment committee, if they will take the trouble can set anything right which is wrong, and they do, so far as my experience goes. I think I have mentioned in my memorandum that in this union we have not had an appeal to any other authority for 20 years against any assessment in the union.

5417. Would you agree with me if I were to suggest that that is perhaps a conspicuous proof that you do not assess people very highly?—I should not say that. I think they are assessed very fairly and as high as they ought to be—much higher than in a good many unions; we found that out in the county rate assessment.

5418. I do not want to argue with you, but if you have aggrieved nobody in 20 years is it not a fair

Mr. W. W. Duffield.

Access to assessment to property tax desirable.

Expert valuer employed for valuing certain hereditaments.

No appeals against any assessment for 20 years in Chelmsford Union.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 98 and 99.

† *Ibid.*, p. 382.

Mr.  
W. W.  
Duffield.  
19 May '97

inference that a good many people must have got off very easily?—No; I think, if I might say so without egotism, they have found that they have substantial justice done to them when they come to appeal against their assessments.

5419. I gather from your memorandum that you agree with what has been said by a great many different witnesses, and I need not take you at length over it, to the effect that the valuation of property in different unions may vary quite unduly for county purposes?—It does no doubt.

5420. And that the present system is a distinct premium upon the union keeping their lists rather too low?—Certainly.

5421. You agree with that?—Certainly.

5422. You think that might be remedied if the area over which the committee for making up the assessments ruled was a larger one?—I think so. I am rather inclined to think that for the purpose of adjusting any inequalities between the rating of districts and the rating of the county, it would be a very good plan if there were a committee composed, say, of the chairman of every assessment committee in the county and gentlemen representing the county council. I think that would probably be the least expensive method, and would lead to an adjustment of the differences which now arise.

5423. You say in your memorandum, "There does not appear to be in the present day any just reason for exempting personal estate from contributing towards the maintenance of the poor, bearing in mind altered circumstance since the original poor law was enacted," that is your opinion?—It is, certainly.

5424. I have no doubt you will find a great many people to agree with you?—Yes, I do.

5425. Would you like to suggest to the Commission any means whereby the object you there have in view can be attained?—I have thought the matter over considerably, but it struck me that it could only be done through the property tax assessment; I do not see any other mode of doing it. That is the only way by which you can get on anything like correct data with regard to property which persons possess of a personal character. If it is to contribute I do not see any other means of doing it.

5426. (Mr. Arthur O'Connor.) You have in your union a share of the probate duty grant, have you not?—Yes.

5427. On what kind of property is the probate duty levied?—The probate duty is levied upon all property now, real and personal.

5428. Probate duty?—Yes; but it does not go under the name of probate duty.

5429. You mean estate duty?—Probate duty and estate duty.

5430. What is probate duty levied upon, is it levied upon personal or real property?—The probate duty?

5431. Yes; let us use the word accurately—on what is probate duty levied?—Personal property.

5432. Then you get a share of that, do you?—Yes, we get some share of it.

5433. Does not personal property therefore by that means come in for a share of the burden?—Not during the man's lifetime.

5434. We are speaking not of a man's life, but of property?—Yes, but it does not go solely to ease ratepayers, it goes for other purposes.

5435. Are those purposes purposes which otherwise the ratepayers would have to meet?—I think I ought to say that that remark of mine applies solely to the poor rate, and not to any other rates. It does seem to me to be just that those who possess a considerable amount of realised personal property, and who in some way or other help to make paupers just as much as those who are possessed of land and houses, should contribute something to the maintenance of those paupers.

5436. "Help to make paupers?"—What I mean is, persons who are their tenants or employees, or in whatever capacity they may be; they have just as many persons who are liable to become paupers in their service as other people have.

5437. Do I understand you to say that landlords make paupers of their tenants?—No, I do not say

that; I did not mean to suggest that for a single instant.

5438. Do you mean publicans then?—Persons become paupers owing to a variety of circumstances.

5439. Do not a good many make themselves paupers as often as not?—I am sorry to say a good many do; that is the result of my experience.

5440. In respect of them there would not be any charge on personal or real property, would there?—Even in those cases it seems hard that real estate alone, land and houses and tithe, should maintain them, and that others whose income is derived from other sources should not contribute.

5441. I suppose you have tithes in your neighbourhood?—Yes.

5442. Tithes issue exclusively from land?—Yes.

5443. Not from houses?—There are some houses in London which pay tithes—a good many.

5444. I am speaking of your district?—In my district it is all from land.

5445. In making the deduction of the amount of the tithe you make the deduction from the total value, including the houses, do you not?—In our valuation—yes; the Act of Parliament directs that you are to exclude tenants' rates and taxes, tithe commutation rentcharge, and repairs and insurance, in arriving at the net rateable value.

5446. And you comply with the Act, of course?—Yes, but if you would wish to know what we do with regard to the tithes I can tell you in a few words. We have a system by which we take from the rectorial tithes 5 per cent. for collection, losses, and everything else, and from vicarial tithes 7½ per cent. because it is much more difficult to collect the small tithe than the greater tithe; then we have been in the habit of deducting something for the repair of chancel, in the case of a rector, but that we have ceased to do now because of the decision which has been referred to.

5447. (Mr. Smith.) Would you suggest that the property tax payer or the income tax payer, which probably would be the more accurate expression, should contribute to the relief of the poor rate?—Yes.

5448. And the poor rate alone?—Yes.

5449. Does not the amount of the poor rate depend very much upon administration?—Of course it must do. Different people take different views. There is no doubt that in some unions they are much more liberal in the treatment of the poor than they are in others.

5450. Therefore, how would you propose to give the income tax payer any control over that local administration?—I admit there is that difficulty, which has impressed itself upon my mind, as to the mode in which he can be represented.

5451. Do you not sometimes find in agricultural districts a very low rate of wages, and a very high rate of out-relief?—Not in our district, nor in any of the districts that I am acquainted with.

5452. But you have heard of it?—There is no doubt that the wages of all working people in my districts have gone up within the last 20 or 25 years at least 33 per cent.

5453. That is not peculiar to your district, is it?—I believe not, but still it has gone up more there than it has in some others.

5454. You have no doubt studied poor law literature and the report of the Commissioners?—I endeavour to do so.

5455. You are familiar with the expression of "relief in aid of wages"?—Yes, I am.

5456. Does it not occur to you that the income tax payer might in those circumstances be in an awkward position if he had to pay, and local authorities interested in the payment of wages had to administer?—He might be so, but I think it would be possible to devise some means by which he might be protected.

5457. You admit the difficulty?—Yes, I admit there is a difficulty. What you mean is that the ordinary doctrine of taxation and representation, in that case would not go together?

5458. Yes?—There is that difficulty about it, no doubt.

 5459. (Mr. Clara.) Do I understand you to suggest that there should be a local assessment of personal property for the purposes of local rates?—No, I do not think you could adopt such a system.

5460. I do not quite understand what your suggestion is; would you kindly explain it?—My suggestion was this, that every person at the present time, and I think few escape, is presumed to pay upon his income derived from realised personal estate so much in the £.

5461. Do you propose then to locally assess a man according to his income?—No, I should not do that. I should make it one common fund, if that were assessed at all.

5462. Well, I do not quite understand it; do you mean to take the individual incomes of people living in the parish and assess them according to their income tax, or do you propose that the Government grants in aid of local taxation should be increased?—That is it; that is the only way of doing it.

5463. I quite agree with you, but you put it in rather a different way?—I did not intend to do so.

5464. (Mr. Elliott.) Do you think that the owner of property in your union is interested in this question of rates?—He is to some extent interested, and whenever a tenant comes to appeal he always brings in aid his landlord in some way or other—he perhaps gets a letter stating any reduction which is made in his rent, either temporary or permanent. There are a variety of things of that kind, with which the assessment committee deal fairly, being satisfied that it is a genuine statement of fact.

5465. Do you not think that the amount which the owner receives is to some extent affected by the amount of rates levied on his property?—It must be to some extent, of course.

5466. Has the owner any voice in the expenditure of the rates as owner?—He has votes.

5467. As owner?—Yes, if he likes to exercise them. He can get registered, only he has to take the trouble to register, and that very few of them do.

5468. Does he get a vote as owner or as occupier?—As owner.

5469. Whether he occupies or not?—Yes, as regards some properties, and for many rating purposes; but they very seldom take the trouble to register. Of course my experience is limited, as every man's must be, to his locality pretty nearly, but I do not think upon the whole that the owners of property have any great reason to complain of the mode by which the property is assessed. There is no doubt there is some land in our union assessed higher than the rent, for this reason, that it is well known that there have been so few persons applying for the land that the man gets it at really less than it is worth. There are other cases in which we have raised assessments of that kind, namely, where a man takes a farm which is in very bad order, and after three or four or five years of, I will not say expensive, but proper, cultivation, the rental value of the land is increased; in those cases the assessment committee think it right that the rating should be assessed even above the rent.

5470. Are you an owner or occupier of agricultural land yourself?—I am both. I am sorry to say that I have lost a great deal of money by land.

5471. (Mr. Stuart Wortley.) Have you any suggestions to make as to alterations in the method of rating tithe?—No, I do not think so. I see no difficulty whatever about rating tithe.

The witness withdrew.

Mr. JOHN WILLIAM BOOTMAN ANDERSON called and examined.

**Mr. J. W. B. Anderson.**  
 5476. (Chairman.) You are chairman of the Morpeth Union in the county of Northumberland, I believe?—I am.

5477. You come before us chiefly to speak upon one special point—there may be others, but I take this to be the one which is given most prominence in your memorandum, and on which your union evidently feels most strongly, which is the justice of some measure for rating coal mines which are worked below low-water mark and under the sea?—That is the case.

5472. Did you hear the suggestion put to the last witness that it should be collected from the occupier and not rated as a separate property?—I think it would lead to a great deal of difficulty to adopt that course. There is really no difficulty in rating tithe. We rate it afresh every year under a supplementary valuation list. We get the average and then we make the ordinary deductions from that. It did not strike our committee that our deductions were excessive—7½ per cent. upon vicarial and 5 per cent. upon rectorial tithes, and it has satisfied every tithe owner, for there has never been any appeal against us.

5473. (Chairman.) Have you anything to add?—I think, with regard to the county rate, that a joint committee would meet the difficulty which now exists in regard to the difference in the rateable value of different unions. So far as the union itself is concerned, it is not of much importance, as nearly everything now is a common charge, and therefore if the union is rated low the rate is 2d. in the £ more, and everybody pays in the same proportion. But when you come to the county rate, in the union with which I am connected the county rate call—I can give you the figures from memory pretty nearly—is 8,000l. a year, and the poor rate is nearly 9,000l.; and if other unions are not rated in the same proportion as we are, we pay more to the county rate than they do. One of the Commissioners asked some questions about the deductions from the gross annual value. I do not think there is much difficulty about that; I sent in a printed paper containing the instructions to the overseers from our union.

5474. I am aware of that, but we have so many of them supplied to us that I did not take you through it; is there any point that you would like to call our attention to in it?—No, I think not. We have acted upon those instructions now for four or five years, and we have not had much complaint. We find that the deductions generally come out to the right average. Of course, deductions in respect of repairs vary very much; in some cases the property is in a very good state of repair, even timber property is in a very good state of repair, and it requires a very little foresight in that length of time. Then a brick, a slate, or a tile yard does not require half the repairs that timber does, and we make a distinction in those cases before arriving at the rateable value. I may say, speaking generally, that I do not see any advantage in altering the present area of rating from the union, and making it larger. I think if you had a large area you would have the greatest difficulties imaginable. Of course, we know very well that you cannot get the same calibre of mind in every union. In some cases you get a very excellent board of guardians and district council, and a very good committee; in some others you cannot get them quite so good, and some will be swayed more by private and personal interests than others. But upon the whole I cannot say that you could find any area which would be a better rateable area than the present one. In my union, in the borough of Chelmsford—and, of course, the borough rates are entirely separate from the other rates—they make rates of their own for borough purposes, and I think, so far as that borough is concerned, it now pays one-fourth of the whole rates of the union of 30 parishes, whereas 20 years ago it only paid one-seventh. That has arisen very much from the great drop in the value of agricultural land, and also from the extension of the borough itself.

5475. We have had evidence from other gentlemen in your county pointing out that that is so. Is there any other point you would like to speak to?—I think it would be right that the borough should be rated upon the assessment committee's valuation; I think that would be a very good plan.

**Mr. W. W. Duffield.**  
 19 May '97

County rate. County committee suggested to obtain uniformity in rateable value of unions.

The union a desirable area for rating purposes.

Borough should be rated on valuation of union assessment committee.

**Mr. J. W. B. Anderson.**

5478. That with you, I understand, from the figures which you have put in, is a somewhat pressing question?—It is so. The figures in my memorandum are the actual amounts for the different years of coal worked out under the sea from one colliery; but it is not all in our union, although the larger portion of it is in our union. Since this memorandum was sent to the secretary I have drawn our clerk's attention to a slight deviation from the figures, which I will let you see. The total amount in 1893 was rateable value of 3,687l., of which 3,565l. was in our union—

Mr.  
J. W. B.  
Anderson.  
19 May '97

5479. I did not mean to take it up so much as between different unions. You are bringing the point before us, as I understand, that at the present time there is no right to assess this coal?—It appears there is no right to assess it.

5480. I need hardly ask you about the distance from the shore at which coal can be worked to a profit, that is a necessarily limited distance, I suppose?—It is said to be three miles at the present time.

5481. I would like you to state to me the grounds upon which you claim that the produce of the rating of coal should go to the union which is *ex adverso* of the place where it is worked; I think I can understand it; but I would like you to state it in your own words?—So far as our union is concerned, the miners are living in the township adjoining, where the coal is worked out under the sea—

5482. Do you use the word "township" advisedly?—Township or parish—you can use either.

5483. Are they convertible terms with you?—We speak of the "parish" of Bedlington, but small parishes generally go under the name of townships; but they are one and the same. In Cambois the total of the rateable value of the land would be only between 500l. and 600l., if there were no coal mines, and unfortunately there are from 300 to 400 cottages built there, all occupied by miners who are working in these pits under the sea; and should an accident take place and these poor men be all lost then we should have their widows and families to support. Before the Union Chargeability Act became law it would not have been possible to have kept them; but now the charge is spread, you see, over the whole union. The agricultural portion of the union, no doubt, feels a hardship, and even the colliery owners who are working coal under the land feel a hardship as well, because their rates are more than twice as much upon each ton of coal as those that are cut out under the sea.

5484. What is your suggestion—that there should be an alteration of the law to distribute the rate upon the coal which is brought to the surface within the parish, or what do you propose?—We ask that the assessable value of the coal worked under the sea below low-water mark shall be rated the same as that which is worked above low-water mark. The coal above low-water mark in Cambois is 143,000 tons in round numbers, and below low-water mark it is 205,000 tons. Therefore our loss is very great.

5485. You apparently do get something for the coal which is worked below low-water mark?—We do.

5486. How do you follow it and obtain that?—Under what is called "Shaft rent."

5487. Is there any other point you want to bring before us?—Not specially. I should only say that in the parish of Bedlington, for poor law purposes there is a loss at the present time, through this coal not being rated, of 154l. a year, and for urban district council purposes, 437l.; and they have all the benefits without the charge.

5488. While the figures as given by you do not seem very large, they are an important thing to the small area which you represent?—No doubt.

5489. (Mr. Stuart Wortley.) Has this proposal ever been put in the form of a Bill, and so brought before Parliament?—I do not think so; it is 18 years since I brought it before our assessment committee, but our clerk at the time—the father of the present clerk—always said that, according to law, it could not be done, and I suppose the law has not been altered; but we think it is an injustice, more particularly as we have a very large seaboard likely to be worked.

5490. (Mr. Dalton.) Your proposal is by statute to extend the boundary of the parish seawards for rating purposes, so as to take in the whole of the mine?—That is so.

5491. You are aware, perhaps, that some difficulty has arisen in respect of other properties below low-water mark, such as piers, wharves, docks, jetties, and so on?—I am not aware of it from personal knowledge, but it may be so.

5492. You do not know that by means of local Acts the same system of legislation that you have proposed has been adopted?—I am only speaking for unions.

5493. (Mr. Arthur O'Connor.) The coal gotten under the sea is not really in your parish?—That is the difficulty; I suppose it is in no parish.

5494. Would you propose to assess it, however far the borings and the workings might go under the sea?—So long as it was brought into our union; that is, into our parish, certainly.

5495. Supposing the coal was gotten in the adjoining parish under the land and was brought to bank in yours, would you have it assessed for your parish?—In a different union do you allude to?

5496. Yes?—No, we then only get a shaft rent.

5497. And that you get now?—We get a shaft rent for this only, which is very different from a colliery which is worked in one union and brings the coal to bank in another union, as in this case it is fully assessed in the union where the coal is worked, less shaft rent due when it is brought to bank.

5498. You say that if an accident happened below low-water mark, the parish would be charged with the maintenance of the widows and orphans?—That is so.

5499. Would the same happen with regard to a fishing population?—It does.

5500. Would you propose to assess the fish in the sea?—No, there is no analogy. Coal worked under an inland river or lake is assessable, but not the fish.

5501. It seems to me there is a certain amount of analogy; certain men work from your parish, some under the ground, and some over the water; they come to grief; the survivors if injured, or the widows and orphans of those whose lives are lost are maintained by the parish; do you propose to assess property under ground, which is not in your parish any more than the fish of the sea are in your parish?—That is the fact, but we do not even get any assessment from what is worked under the sea.

5502. But you benefit by what is worked under the sea, do you not, to the extent of the shaft rent rating?—Yes, but it comes to a very small amount.

5503. Still you get it?—We do, but except for this small amount the coal escapes.

5504. So that the coal that is worked under the sea, even if it is outside your parish, below low-water mark, you get the benefit of?—Yes, a small amount.

5505. (Mr. Elliott.) Would any practical difficulty arise in determining in what union the coal got under the sea should be rated?—Not the least.

5506. You say it should be the place where it was brought to bank?—Yes.

5507. I take it that owners of these collieries enjoy all the benefits of local government in your union?—I suppose they do.

5508. And their men enjoy all the benefits of local government in your union, do they not?—They do.

5509. And you would say they are very well able to make a contribution in respect of this particular coal that they work?—That is what I do say.

5510. (Mr. Clare.) Your object would be effected I suppose at once, would it not, if you merely got the parish boundaries extended to what is ordinarily known as the "Three mile limit"?—That would be so.

5511. (Mr. Smith.) I think you spoke of your parish being liable to pay for the widows and orphans; that is not so, is it—it would be your union?—It would come upon the common fund of the union no doubt.

5512. Since the Union Chargeability Act it is a union charge, not a parish charge, is it not?—Yes, that is so, and that is where we think it is a hardship.

5513. To whom does this land which you want to rate belong?—I suppose it belongs to the Crown.

5514. Who receives the royalties?—As far as I understand in this particular parish the Crown receives the royalties.

5515. Then you would want something more; you would want to make Crown property rateable?—We would wish to have the coal that is brought into our union rated.

5516. I quite understand your object; but Crown property is not at present rateable, so you have a double difficulty in your case?—We have collieries in the adjoining parish, where there has been coal wrought under the same circumstances, and the royalty owners are the owners of the foreshore, and they pay no more than those in this parish, where the Crown owns the royalties.

Mr.  
J. W. B.  
Anderson.  
19 May '97

Liability  
of parish  
for share  
of main-  
tenance of  
widows and  
orphans  
in case of  
accident  
below low-

parish  
where it is  
brought  
to bank

Mr. J. W. B. Anderson. 19 May '97

5517. The owner of the foreshore might be the lord of the manor of course?—Yes.

5518. (Mr. Dalton.) Have you made any application to the Government for a contribution in respect of this property?—No, we have not.

5519. (Chairman.) Is there any other point which you would like to speak to?—One of our principal collieries, turning out between 4,000 and 5,000 tons a day, will in time, we consider, be close to the foreshore, which I understand belongs to one of the owners of the colliery.

Mr. J. W. B. Anderson. 19 May '97

The witness withdrew.

Rev. CHARLES THEOBALD called and examined.

Rev. C. Theobald.

5520. (Chairman.) I understand that you are rector of Lasham?—Yes.

5521. And that you are here to-day as representing the parliamentary committee of the diocese of Winchester?—Yes.

Diocese of Winchester Parliamentary Committee.

5522. Perhaps you would, in the first instance, tell us how that parliamentary committee is constituted?—The parliamentary committee is constituted in this way: it is elected from the members of the Diocesan Conference, and that Diocesan Conference consists of laymen and clergy elected in equal numbers.

5523. The parliamentary committee, I suppose, is a committee of that body which attends to all matters which ought to come under the cognisance of Parliament?—Yes.

5524. You are appointed by the committee to give us information upon subjects which come within our terms of reference?—Yes.

Tithe owners should have same relief as agriculturists. Position of tithe owners and agriculturists.

5525. I understand from previous communications with you that the first of those is to the effect that tithe owners should be given similar relief in the matter of rates to that given last year to the owners and occupiers of agricultural land?—That is so.

5526. Perhaps you would kindly develop that in your own way, and then I will ask you some questions on it?—I feel very much that the ground has been cut from under one's feet by the debate which took place in the House of Commons on the 24th March, when a resolution was adopted by nearly two to one in the House in favour of the motion brought forward by Mr. Round.

5527. The end of it was really that those who put forward the plea, of which Mr. Round was the Parliamentary spokesman, were practically referred to this Commission?—That was it, practically.

5528. We would like you to support the proposal on its merits?—I can best do that by saying that all rates and taxes that are put upon land are also put upon tithe rentcharge, and it does seem to a certain extent difficult to argue why, if land is excluded from this burden of rates, tithe rentcharge should not also be freed from the burden. As it is, tithe rentcharge having gone down to a very low percentage there is a diminished income from which to pay an increasing rate annually. Those seem grounds for asking that tithe rentcharge should share the remission of taxation which agricultural land enjoys. One has nothing more to urge in favour of that than what seems to be common sense to us who appeal on the matter.

5529. Clearly understand that if I put questions to you upon it, the questions I put do not necessarily indicate my own opinion so much as a desire to clear away some difficulties. The tithe rentcharge, so far as concerns the interests of those to whom it is paid is income, is it not?—Yes.

5530. And as income is part of the produce of the land—what I mean is that you can hardly differentiate between the interest of the owner of tithe rentcharge and the interest that the owner of the rent have in their respective positions?—I do not think it was ever intended, was it, that rent and tithe rentcharge should have any proportion one towards the other?

5531. Possibly not, but the relief to the occupier was given to him to a large extent upon the argument that he was being assessed upon a basis different from other occupiers of hereditaments throughout the country?—Do you mean by that to establish a reason why farmers should have remission of rates and tithe rentcharge owners should not have remission of rates?

5532. I wish you to comment upon it to show me that there is no difference, if you can?—I put it upon these grounds: that if farmers, through agricultural depression, needed a remission of rates, so do owners of rentcharge, because they pay all the same taxes and rates as land; especially as besides having the same

rates that land has to pay, owners of rentcharge also suffer from the rentcharge being depressed every year according to the price of corn, which is the produce of the land.

5533. But there is this difference, is there not, between the relation of the farmer to the rent, which is a thing which he pays on the one hand, and the relation of the owner of the tithe rentcharge to the tithe rentcharge, which is a thing which he receives, on the other?—There is that difference, of course.

5534. Does it follow, that because a burden upon the rent which a man pays is excessive, the burden upon the sum which he receives is excessive?—But the rent can be altered, and a man gets his remedy in that way: the rent is altered and his rates are governed by his rent.

5535. No doubt the tithe rentcharge has not been altered, because it was commuted upon an arrangement made some years ago?—Yes.

5536. Does that argument not amount to this, that because the bargain which was made in 1836, I think it was, has turned out to be a bad bargain it should be altered? If it had not turned out to be a bad bargain the argument that it should be altered would not have been so pressing?—I see. If we go into the merits of the bargain it might be said that the tithe owner gave up advantages.

5537. Of course, I cannot go behind the bargain; in this case it is a matter of bargain which is more or less immutable; the rent as distinguished from the tithe rentcharge is not, and it rises and falls with the state of the matter and with the times?—Yes, the rent does no doubt.

5538. The difficulty that I see is in regarding tithe rentcharge as rent?—I do not mean to say it is rent. All I say is that tithe rentcharge is treated as land in the matter of rates and taxes, for all the rates and taxes that are put upon land are put upon tithe rentcharge.

5539. Upon the rent—the rent is the test of value?—I may have something to say about the value of the rent by-and-by, in connection with rating. I think those are the only grounds upon which one can urge it, that as land is eased of its burden in respect of rates, so rentcharge should be eased of its burden in respect of rates, to the same extent.

5540. I have some difficulty in accustoming myself to your English practice in the matter. I do not know whether you know what our Scotch practice is in the matter of what we call "teinds," which are really your English tithes?—I do not know the Scotch practice.

5541. The Scotch practice is this: the landlord pays the whole of the "teind" out of his rent, but the rates are divided practically between owner and occupier; the landlord pays his rates upon the rent, including the "teind," the owner of the "teind"—in almost every case the parish clergyman—therefore does not pay a second time. It is difficult for me to understand why your tithe rentcharge should not be rated once; I want you to explain it to me?—I do not argue that it should be free from rates; I think it ought to be rated. What I urge is that if land is to be eased of its burdens, then tithe rentcharge should be eased of its burdens in the shape of rates, because it is rated for all the same purposes that land is, and, therefore, it seems only fair that it should partake of the benefits of that Act; in fact that the titheowner should be given similar relief in the matter of rates to that given in 1896 to the owners and occupiers of agricultural land.

5542. There is another plea which those who take your view have, is there not, that so much of the tithe rentcharge does not remain in the pocket of the clergyman, but is expended on purposes which he must meet, and over which he has no real control?—In the shape of what do you mean?

Rev. C. Theobald.

Land and tithe rentcharge should be placed on the same footing in respect of relief in rating.

Rating in respect of tithe rentcharge. Deductions for payment of curates.

Rev. C.  
Theobald.  
19 May '97

5543. In some cases the payment of curates has been suggested to us?—Yes, that is one of the points I wish to urge. In the case of *Regina v. Goodchild* a deduction was allowed by the High Court where a curate was employed, but that was overruled by a decision of the House of Lords in the case of the Mersey Docks, where it was decided that a property capable of beneficial occupation is to be assessed to the poor rate, irrespective of the amount of the remunerative value to the particular occupier.

5544. Are there any other matters outside the payment to curates, which you would suggest as matters which should be deducted from the tithe rentcharge before it is rated?—No, individually I do not think there is any unfairness in the way in which tithe rentcharge generally is rated—I cannot say that I think there is.

Relief of owners of tithe or tithe rentcharge under Public Health Act, 1875 (38 & 39 Vict. c. 55, s. 211), but not under Agricultural Rates Act, 1896 (59 & 60 Vict. c. 16).

5545. The second of the points which you were to speak to was that the method of assessment of properties should be so altered as to secure uniformity in the different unions?—Yes. I do think that there is great inequality in the way of rating in various unions in counties. I might give an account of the way in which rating is adopted in the Alton Union with which I am connected. As regards the Agricultural Rating Act it is impossible to understand under what principle an allowance has not been made on the rating of the tithe. Tithe rentcharge for the purposes of land tax, poor rates, &c., &c., bears all the burdens of land, and is considered as land for the purposes of land tax, Schedule A, assessment, and also for poor rate purposes. The principle of giving relief under the Agricultural Rates Act was, it is believed, to a great extent, founded on the relief which has been given to land under and by virtue of the Public Health Act. By Section CCXI (general district rate) (1) sub-section (b), "The owner of any tithe or any tithe commutation rent charge, or the occupier of any land used as arable, meadow, or pasture ground only, or as woodlands, market gardens or nursery grounds, &c., shall be assessed in respect of the same in the proportion of one-fourth part only of such net annual value thereof." It will be noticed that tithes or commuted tithe rentcharges are by this Act coupled with land, and get the relief that is given to land, and consequently it is hard to understand why, when tithes are included in this Act, they do not come within the Parliamentary exemption conferred on agricultural land by the Agricultural Rates Act, 1896.

5546. Again, I do not want to argue, but it seems to me that there is a distinction between the position of the owner of the tithe rentcharge and the position of the occupier of the land?—May I ask who gets the benefit ultimately of the remission of rates upon land?

Rating in respect of tithe in the Alton Union and in certain other Unions in Haunts. System adopted.

5547. You ask a very large question on which there is a great deal of controversy; I do not suppose any one individual gets it; the individual who first gets it may not, under all circumstances, retain it if the rise or fall of the market tends to prevent his doing so?—With regard to the rating in the Alton Union, the principle of the rating of tithe has been of late years as follows: The average sum per year has been taken, and from that has been deducted the rates for the last year, 5 per cent. for collection, and in the cases of the rectors, some small annual sum, about 5*l.*, for chancel repairs. In this way, the gross estimated rental of the tithe has been arrived at, but in the Alton Union no difference is made between the gross estimated rental and the rateable value, and the gross estimated rental and the rateable value have been left the same. In other unions the average for the year of the commuted sum has been made the gross estimated rental, and the deductions above mentioned have been made, whereby the rateable value has been arrived at. Now, look at land. In Alton Union the rent paid has been made an actual basis for assessment. From the rent so paid there has been deducted the amount of tithe on the farms by the average for the year, and from the amount so arrived at there has been deducted so much for the house and so much for the cottages, and the balance so arrived at has been treated as the gross estimated rental of the land with the per-centage allowance for the rateable value. In some instances by this means land has worked out at about 9*d.* an acre rateable. It will be seen, from what I have just mentioned, what allowances are made on land before the gross value is arrived at, and that there is, as there ought to be, a difference made between the gross estimated rental and the rateable value, whereas in the case of tithe in the Alton Union, the

gross and the rateable are the same. In other unions in the county, the value of the tithe by the averages is made the gross and the allowances I have just referred to are deducted, and by this means the rateable is arrived at. In no case, however, is there any allowance made between the gross and the rateable values except the authorised allowances, and nothing whatever is, as far as is known, allowed for tenant's profit or otherwise. In taking rent as an actual basis, the position of the owner or the circumstances, if any, which have induced him to let at a low rent are not taken into consideration. By this is meant that no allowance is made for the fact that the owner may be a tenant for life and unable or unwilling to farm the land and to face a valuation. The rent that is actually paid is accepted as a basis for the gross rental, from which, as I have just said, the commuted tithe, and not the proportion of the tithes according to the gross estimated rental are deducted. The gross estimated rental for the purposes of the schedule to the Union Assessment Committee Act, 1862 (see section 15), shall be "the rent at which the hereditaments might reasonably be expected to let from year to year free from all usual tenant's rates and taxes and tithe commutation rentcharge, if any." Previous to 1891 some farms in the Alton Union were let on the basis of the tenant paying the tithe, and, of course, in these cases it was (and rightly so) always the custom to deduct the tithe so paid and to assess the tenant to the poor rate after this deduction. Since 1891, the tithe is payable by the landlord and no new letting can include the tithe; it appears, therefore, on the face of it that the rent is the amount which the tenant pays for the land, free from commutation rentcharge, and that if the rent is taken, not as an element, but as a basis, the tithe rentcharge ought not to be deducted. It is contended that, although the tenant no longer pays the tithe, but the landlord is under an obligation to do this, the rent paid by the tenant represents in part tithe, and that if this tithe was not deducted the tithe rentcharge would be rated to the poor twice over—once to the tithe owners and again, as part of the rent, to the tenant. If this contention is right, at any rate, in deducting the tithe from the rent, the proportion of the allowances made to the tithe owner before the gross is arrived at ought to be deducted before the average tithe is deducted from the rent. Another point is, that if the mode of assessment in Alton Union is correct; as the tithe goes down the rating of the farm should go up, as, of course, if the tithe average is lower the proportion paid by the tenant, as representing rent, is larger.

5548. Of course, I follow the argument to a certain extent, but I point out to you, and I shall ask you to account for it if you can, that Mr. Round, in making his case to the House of Commons, did not, as I read his speech, draw a parallel between the position of the tithe owner and of the tenant, so much as make a plea to the effect that a great deal of the money which went into the pocket of the tithe owner did not really stay there but had to be paid out under the name of obligations which he was obliged to meet?—Therefore, do you mean that it is not a parallel case; is that what you are aiming at?

5549. I am open to instruction, and I am trying to elicit from you how you can make out a parallel between the position of the tenant farmer and that of the owner of the tithe. I think I can understand arguments why a tithe owner should not be rated, except under deductions for certain outgoings, but I cannot see myself—it is possibly my own fault, due to my ignorance of English practice—the parallel between the position of the agricultural tenant and the position of the owner of the tithe?—I cannot say more on that point.

5550. Is there any other thing which you would like to speak of?—I think there is a great inequality in the matter of rating, which is one of the three points I have to speak about. I should like to urge that, owing to the manner in which land is now assessed, as I just mentioned, for the purposes of poor rate, the tithe owners have to bear a very large and heavy burden; and in some instances, which could be quoted, farms with good houses are not assessed now at anything like the proportionate amount at which the tithe owner is assessed for a tithe of about 300*l.* a year. Of course, too, with the small amounts at which land is assessed, the tithe owner has, in many instances, to pay on an unfair assessment twice as much in the £ as he would have to pay if the land was fairly assessed. To take an example of the mode in which land has been lowered by an assessment

Rev. C.  
Theobald.

Relative position of tithe owner and of agriculturist in respect of rating.

Inequality in the assessment of tithe rentcharge and of agricultural land. A uniform basis of assessment and a specially constituted board for all rating and taxing purposes on which surveyor of taxes should sit desirable.

Rev. C.  
Theobald.

19 May '97

committee: I believe in the Alton Union there are 70,000 acres of land—I am unable to say what proportion of it is built on, at any rate, a very small proportion—but if you take the whole 70,000 acres as agricultural land, it would work out at about 2½*d.* per acre for the purposes of the county rate. In this county not only are the poor rates in different and adjacent unions calculated on a different basis, but poor rate, land tax, Income Tax, inhabited house duty, &c., &c., are all rated on a different footing. The manner in which the Assessment Committee Acts are construed depends, to some extent, in each union on the constitution of the assessment committee. The relief that I suggest is that there should be a uniform basis of assessment, one valuation for all taxation; and that it should be administered by a board specially constituted, partly *ex officio* and partly elected, with a surveyor of taxes to attend each meeting in the division, and with a voice on the board, his special province being to secure uniformity of taxation. I think there is a great deal of inequality, and I do not see how it is to be remedied unless there is some such arrangement as that.

Reduction  
of clerical  
incomes  
and in-  
crease of  
burden of  
rates.

5551. You would like to bring in the representative of the imperial authority, so as to get as far as possible a uniform basis for local and Imperial taxation?—Quite so. I might mention the case of Bentworth parish in the Alton Union.\* The commuted value of the tithe rent charge is 937*l.*; it is a large living. From March 1887 to September 1887, the rateable value was 745*l.*, and the rate paid in that year was 2*s.* 9*d.* in the *£*. From March 1896 to September 1896, and from September 1896 to March 1897, the rates were 3*s.* 8*d.* in the *£*, and that was raised upon an income which was 745*l.* at the previous date, but had been reduced to 544*l.* and 517*l.* in those two last respective half years; that is to say, the income was reduced from 745*l.* to 517*l.*, and the rate upon that diminished income was increased to 3*s.* 8*d.*, whereas upon the original income it was only 2*s.* 9*d.* in the *£*. I am only showing you how hardly the rates bear upon the tithe owner.

5552. I suppose the rates upon other property went up in the same ratio per *£*?—No doubt that was so.

5553. It was an addition of new rates for new expenditure in this period?—I have no doubt that is so.

5554. (*Mr. Stuart Wortley.*) Coupled, I suppose, with diminished valuations upon other kinds of property?—Less rent paid, of course, on farms and so on.

5555. (*Chairman.*) Is what you suggest that the assessment committees consisted mainly of farmers?—I should be sorry to bring any accusation like that against our assessment committees. Let me take another parish, the parish of Hartley Mauditt. In 1886 the tithe rentcharge was 241*l.* rateable value, and the rateable value of the rectory—house, garden and glebe of 12 acres was 54*l.*, the rector of that parish paying 23*l.* as rates. In 1896, 45*l.* in the way of rates were paid by the same rector.

5556. And of course his tithe rentcharge had gone down in the proportion which we know in the 10 years?—Yes, the rateable value of his tithe rent charge was 158*l.* in 1896. There was a diminished income upon which to pay that increased rate. Let me take another farm or two in connection with that parish. I will take the Hartley Park Farm, which consists of 488 acres. In 1886 the gross value of the farm was 440*l.*, and the rateable value 405*l.*; in 1897 that same farm, instead of being 440*l.* gross was 233*l.* gross, and instead of being 405*l.* rateable was 209*l.* rateable. Compare those figures with the rector's rentcharge and see what an enormous loss one has suffered. Here is another farm in the same parish, Barleywood Farm, which consists of 199 acres. In 1886 the gross value was 196*l.* and the rateable value 180*l.*; in 1897 that same farm instead of being 196*l.* gross was only 45*l.*, and instead of being 180*l.* rateable was only 40*l.*

5557. I am afraid we cannot take in those figures unless we had had time to look into them and compare them beforehand?—They only bear upon the hardship which the incumbent of a parish seems to suffer.

5558. (*Mr. Stuart Wortley.*) Does the parliamentary committee of the diocese of Winchester make this claim for remission of rates upon the tithe rentcharge in respect of the tithe rentcharge received on behalf of all kinds of owners, or only on behalf of tithe rentcharge received by clerical owners?—The wording of the proposition given to me was this:—"That tithe owners should be given similar relief in the matter of

" rates to that given by the Act of 1896 to the owners " and occupiers of agricultural land."

5559. Then it makes no distinction?—It makes no distinction.

5560. The case would be, I suppose, that the tithe rentcharge is so adjusted as to rise and fall owing to the operation of the same set of causes that are generally described as agricultural prosperity or depression, and that that state of causes has been admitted as the claim of agricultural land to receive remission of rates in the Act of last year, but that the case of the clergy in the case of the clerical tithe owners is not made less strong from the fact that their tithe rentcharge happens also to be their professional income—that is shortly the case?—Yes.

5561. Of course your claim is not for any revision of your relations with the tithe payer?—No.

5562. It is only really in respect of your relations with the tithe payer that there can be said to have been any fixed parliamentary bargain?—Yes.

5563. The ratepayers or the rating authority were in no sense parties to that Parliamentary bargain?—No.

5564. And Parliament has the same freedom to revise their position towards you as it had to revise their position towards the occupiers of agricultural land?—Yes.

5565. (*Mr. Dalton.*) Can you say which has fallen the most in value owing to the depression in the Alton Union—the interest of the tithe owner or the interest of the landlord in the land? Can you say what rents were before the depression began and what proportion tithe then bore to the rent and what proportion tithe now bears to the rent in your union?—I can give an instance of some farms now. I have not meant to argue that the land has not gone down, and that the landlord has not suffered; of course he has.

Rev. C.  
Theobald.

19 May '97

Fall in  
value of  
land and  
of tithe  
compared.

5566. I should rather have inferred from some of the figures you have given us that practically tithe absorbs the greater part of the rent in the Alton Union; is that so?—The rent has come down to a very small amount. In assessing a farm the tenant comes to the assessment committee to appeal against the rating; he is asked what he wants and he says "I have come to appeal against my rating." "What do you propose?" He says "My rent is so and so"—under 100*l.* say. "Well, what is your tithe?" "20*l.*"

5567. Is that the usual proportion?—No, I am only mentioning that as a figure. His rating is immediately put at 80*l.*, we will say.

5568. I think you gave us some cases where the land is valued now for the purpose of rating at 9*d.* an acre?—Yes.

5569. What is the rating of that land including the tithe?—I cannot tell you what the rating of it is; it works out at about 2*s.* 6*d.* an acre; for instance, I can tell you that 1,170 acres of land are rated at 147*l.* rateable value.

5570. After paying the tithe?—These are the figures: 1,170*ac.* 1*r.* 10*p.*, the gross estimated rental is 185*l.* 15*s.*, and the rateable value is 147*l.* 5*s.*

5571. What is the tithe on that land?—I should think about 2*s.* 6*d.* in 1896.

5572. The tithe, then, is larger than the rent, is that not so? Of course there are parts of the country where the tithe we know has practically eaten up the rent?—Yes.

5573. Is the Alton Union one of those districts, or has it only nearly eaten up the rent there?—We have some very bad land in our union, very poor land, but I have not picked out the worst land.

5574. But the value of the agricultural land there, I presume, has fallen far more in proportion than the value of the tithe—I should judge so from the figures you gave us?—I could specify farms; in 1881 the gross rateable value of four farms was 587*l.*, and now it has come down to 185*l.* 15*s.* There has been a great fall there.

5575. It is now less than a third what it was before?—Yes.

5576. Whereas the tithe rentcharge has fallen about 30 per cent?—Yes, that is so.

5577. You would agree, then, that in that district the value of the land has fallen far more than the value of

\* Part. II. of Appendix to Vol. I. of Minutes of Evidence, p 101.

Rev. C.  
Theobald.  
19 May '97

the tithe—I am speaking of that district, mind. I am quite aware that in some parts of England the opposite would be the case?—Yes. I take one farm in the union of 299 acres; the gross is 260*l.* and the rateable value 236*l.* I take another farm of 488 acres, the gross is 233*l.*, the rateable value 233*l.*; in the one case there has been no large reduction, in the other the owner, being tenant for life only and unable to take up a valuation, has accepted a very low rent rather than have the land thrown on his own hands. That is where there comes in inequality of rating. As regards the character of the land, the farms are about the same.

5578. Still, I suppose it would be the fact that part of the clerical income in the district would come from glebes?—No, principally from rentcharge.

5579. Would that be the case nowhere?—It is the case in some instances.

5580. Has there not been greater depression in the glebes than there is in the tithe?—In the case of my own glebe I am rated at 10*s.* an acre, and I have a tithe myself to pay of 10*l.* besides. What I pay myself in tithe is not deducted.

5581. You are aware that the Agricultural Rates Act gave relief only to the occupiers of agricultural land, and not to the occupiers of all land?—That is so.

5582. But the tithe is not payable merely in respect of agricultural land; it is paid in respect also of houses, railways, and other property?—Yes, land upon which houses have been built; but in very many such cases the tithe rent charge has been redeemed.

5583. If the relief had been given merely to the tithe that was payable in respect of agricultural land, it would have been necessary to apportion the tithe in every parish falling on agricultural land, and the tithe falling on other houses and other properties?—Yes.

5584. That would have been a very expensive operation, would it not?—I should think so.

5585. Assuming that the tithe payable in respect of agricultural land should have been relieved to the same extent as agricultural land, why should the tithe payable out of a house receive relief when the house itself does not receive relief?—I suppose really it is a very small proportion of the tithe which is payable upon land that has been built upon.

5586. Should you say so? Take a farmhouse and farm buildings on the land; the tithe is payable in one sum for the whole of them, but the proportion which the value of the farmhouse and buildings bears to the value of the entire holding has increased enormously of late years—that has come out through the Agricultural Rates Act. At any rate, if your claim was admitted, you would agree that it would be necessary to have this apportionment in every parish, and that would be a very expensive operation, the cost of which would fall, probably, upon the tithe owner. I suppose?—I know it is only on agricultural land, of course, and I cannot go behind what you have said in the matter.

5587. Would you argue, for instance, that the tithe in London, which now is on houses that have been built since the Commutation Act, should get the relief given to agricultural land by the Agricultural Rates Act?—It is not agricultural land here, is it?

5588. No. What I mean is that you would have to differentiate, if your claim is allowed, between tithe charged on agricultural land and tithe charged on other properties?—Of course.

5589. And that would be a very troublesome operation?—Yes. When the Tithe Commutation Act was passed, the tithe owner forewent any increased value that might accrue through the improvement in cultivation or through buildings.

5590. But I think it was the case, was it not, in regard to buildings, that before the commutation, if land was built upon, it ceased to pay tithes, and therefore, by the Commutation Act the tithe owner gained in those cases, because his tithes then stuck to the land, although if the commutation had not taken place they would have left the land. Is that not the case?—I do not know.

5591. I do not know whether you have seen the allegation, but it has been alleged that when the tithe was commuted in many cases, an addition was made to it in respect to the rates which have to be paid by the owner?—Yes, I know that very well, but that is a fallacy.

5592. I agree with you, but I ask the question in order that you may deal with it. Will you explain to

us how it comes to be a fallacy?—I have got the evidence here which was given by Mr. Elliott before the Agricultural Commission. I will put that in as substantiating the view which I take upon it.

5593. You would concur with that evidence?—I do. I have an instance in connexion with the parish of which I am the rector, which proves the truth of Mr. Elliott's statement.

5594. You recommend that strict uniformity should be required in all unions, in assessing the rateable value of tithe rentcharge, especially with regard to the deductions allowed; but, is it not the case that the deductions should depend upon the local circumstances in each parish? Do not the cost of collection, the amount of rates, and the other deductions that you have to make, vary in every parish?—In the majority of rural parishes I do not think they vary very much.

5595. In one parish I take it the tithe is all paid by one landowner, and in another parish it is payable from a great number of small people?—Yes.

5596. The cost of collection in the one case must be nothing, and in the other it may be very great indeed; would you not have the actual cost of collection deducted?—I was not speaking of the cost of collection, and I do not think I have mentioned that.

5597. It is one of the deductions that are allowed?—Yes; it is, generally speaking, 5 per cent. is allowed for that, I think in some cases 3 or 4 per cent. only, but in most cases it is 5 per cent.

5598. Would you allow the actual costs of collection, whatever they were?—Yes, if it is fair.

5599. And the actual rates?—Yes.

5600. (Mr. Elliott.) Are you acquainted with the position of the tithe rentcharge with reference to the rates levied under the Lighting and Watching Act of 1833?—No.

5601. You are not aware that under that Act the tithe rentcharge is rated on the same principle as land?—No.

5604. What would you suggest to the Commission as being the reasons for the exemption of tithe rentcharge under the Public Health Act?—I can only suppose that it was thought that tithe rentcharge deserved the exemption or the relief, being treated as land.

5605. Do you think that Parliament at that time considered that to rate tithe rentcharge on its full value would constitute an excessive measure of the ability of the owner of the tithe rentcharge to pay the rates?—I cannot tell what was in the mind of the Parliament of that day.

5606. Might that not have been the reason which was in the mind of Parliament?—Yes, it might have been so.

5607. Do you think that the relief given to tithe rentcharge under that Act had any reference to the amount of benefits received by the owner of tithe rentcharge?—I suppose so.

5608. Then you would say, I gather, that the fact that tithe rentcharge was to be rated at one-fourth, was due to the fact that if it had been rated at its full value it would have borne an excessive burden, having regard to the ability of the owner to pay and the benefits received by the owner?—Yes, I think so.

5609. And your contention would be that that principle should be still farther applied?—Yes.

5610. Have you formed any idea as to the manner in which the relief that you ask for should be given?—I thought a portion of the rates might be remitted.

5611. But that proportion, of course, would have to be made good by someone else?—Yes, in the same way that it is made good in the case of agricultural land.

5612. Then would you suggest that it should be made good out of the same source, that is the estate duty?—I am not prepared to offer a suggestion on that.

5613. I suppose that since the Tithe Commutation Act the local public expenditure has very much altered in character?—Yes.

5614. And many new rates have been imposed?—Yes.

Rev. C.  
Theobald.  
19 May '97

Uniform basis of assessment in respect of tithe rentcharge. How far practicable.

Tithe rentcharge. Rating in respect of, under Lighting and Watching Act, 1833, and Public Health Act, 1875. Extension of the principle of these Acts desirable.

Tithe Commutation Act, 1836. Should not preclude a revision in respect to the rating of tithe rentcharge.

If relief had been given to tithe owners under Agricultural Rates Act, 1896, it should not have been given in respect of tithe charged on property other than agricultural land.

No addition of rates to commuted tithe under Tithe Commutation Act.

Rev. C.  
Theobald.  
19 May '97

5615. Would you say, then, that you consider the settlement of 1836 precluded a review of the position generally in regard to the rating of tithe rentcharge?—No, I should not say it precluded a review of it; I should say that many rates are imposed now which were not contemplated then.

5616. You would not say there was any such bargain in 1836 as would make it inequitable to look at the present position of tithe rentcharge in regard to rating?—No; land has had burdens put upon it in the way of rates which it had not in 1836, and rentcharge has the same rates put upon it; and therefore as the one is relieved, I think that the other is entitled to relief too.

5617. Would you say that if Parliament thought proper to review the position in the one case it was equally competent to do so in the other?—Yes.

Position of  
tithe rent-  
charge  
owner and  
an occu-  
prier of  
agricul-  
tural land  
compared.

5618. (Mr. Smith.) I suppose you think that tithe owners ought to have been included in the Act of 1896?—It is thought so.

5619. But do you not know that in Parliament it was stated that that was relief to the occupier?—I do not see that that alters the point at all; the tithe owner is the occupier of the tithe.

5620. That is what I am coming to; suppose rightly or wrongly it was stated in Parliament that that Act was intended as a relief to the occupier, and the idea was deprecated that it was a relief to the owner, would not the admission of the owners of tithe rentcharge have completely altered the position—would it not be admitting that it was a relief to the owner?—No, I think that the owner of the tithe rentcharge occupies the same position as the owner of a farm who occupies it himself and farms it himself.

5621. Is it so?—Why not? If a man farms his own estate of 1,000 acres he is the occupier, and he gets the relief from the rates.

5622. He may lose the whole of his property in farming, but you get your rentcharge in any case?—He may do it, but he does not farm with the idea of losing it.

5623. No, but I am afraid he very often does. Shortly, what I want to put to you is this—that you are not an occupier, but that you are an owner?—I am an owner and an occupier.

5624. But an occupier without risk?—I might let my rentcharge.

5625. But an occupier without the risk of an occupier, because you get your rentcharge?—I do, unless the farms are so unremunerative that no rentcharge can be paid upon them.

5626. Unless you have exhausted the whole value of the land?—I could not say that about exhausting the whole value of the land, because some men may farm very badly.

5627. I mean unless you exhaust the whole value of a farm or of its produce?—Then what am I to do in the case of my glebe? I farm my own glebe—

We will deal with the tithe, please, here; I am particularly confining it to the tithe question.

5628. (Chairman.) On the glebe you get the occupiers' remission, do you not?—Yes, I do.

5629. (Mr. Smith.) I asked you these questions not because I have not a good deal of sympathy with you but because I felt that you did not quite appreciate the point—you are an owner and not an occupier?—Yes. I am an occupier as well as an owner.

5630. If it was right that the contention in Parliament was that the Act of 1896 was intended as a relief to the occupier, and not to the owner, that was a reason for not putting you into the Act, was it not?—No, I

think the reason was that the Chancellor of the Exchequer had not funds to help us with, I think that was given as the reason.

5631. Would it not have admitted that the relief given by the Act was relief to the owner if they put the tithe owner in—would it not have given the case away as it were?—I do not follow that.

5632. You see you are an owner?—Yes, and so is the owner of a farm, and, as I said just now, the owner of an estate if he farms that estate, he is an owner getting the remission.

5633. He is running the risk of an occupier which the tithe owner does not?—Quite so, I admit that; there is not the same risk.

5634. (Chairman.)\* In regard to the table referring to Bentworth parish. I have had time to examine it since you put it in. If you will allow me to say so respectfully, I think that mixes up two things, because the increased amount which is taken from the owner is increased on account of the natural increase of rates; this table points out that now there are 96*l.* and some odd shillings taken from a rental of about 550*l.*, whereas formerly in the first year of the table there was 96*l.* some odd shillings taken from a rental of 745*l.*; that really arises from an increase of rates which is common to all classes of property and is not peculiar to the rentcharge?—Yes, I see your point.

5635. In other words, if the rates had remained the same, the amount payable in rates would have been not 96*l.* but 66*l.*?—Yes, but then there would have been a diminished fund from which to pay them.

5636. Of course it would have been 66*l.* from 544*l.*, instead of 96*l.* from 745*l.*?—Yes, but what accounts for the increase of the rate paid is the lowering of the rates upon the land in the parish, so that the rates upon the rentcharge go up in a corresponding proportion to that in which the rates upon the land go down.

5637. When you compare gross sum with gross sum taken from you in the name of rates you must not omit the consideration that the rates have increased owing to increase of expenditure?—Not in the same proportion. I do not think the rates throughout the country in villages would be so high as they are; tithe rentcharge would not be rated so high as it is, unless the rating on land had gone down very much.

5638. This table does not go so far as to show me that, because it does not tell me anything about the expenditure of the parish?—No.

5639. May we keep this table?—Yes, and you can keep this other table too (*handing in table*).

5640. What is this other table exactly intended to show me, because I do not understand it?—This was supplied to me by the rector of Hartley Mauditt, which shows that in 1886, with an income of 295*l.* paid to him, he paid 23*l.* in rates, and in 1896, with an income of 203*l.*, that is 87*l.* a year less, there is demanded of him 45*l.* in the shape of rates.

5641. Clearly, but so far as this table shows, while it may arise from the source which you suggest, it also may arise from extravagant administration?—That table shows more than that. Take the Hartley Park farm of 488 acres, which in 1886 had a rateable value of about 405*l.*, and in 1897 had a rateable value of 209*l.*; that very largely accounts for the rector having to pay 45*l.* in 1896, instead of the 23*l.* which he had to pay 10 years before.

5642. I am afraid I cannot carry it further; what I suggest to you is that that table is not complete enough to show us the causes from which the thing arises. Is there any point which you would like to add which I have omitted?—No, I think not. There are other points, but I am not called upon to argue them.

The witness withdrew.

Rev. DAVID JONES DAVIES called and examined.

Rev. D. J.  
Davies.

5643. (Chairman.) You are chairman, I believe, of the Billericay Union of Essex?—Yes.

5644. How long have you held that position?—I have been chairman of the district council since the beginning, and of the board of guardians since a year or two before.

5645. You have been good enough to supply us with this memorandum which I hold in my hand?—Yes.

5646. You will easily understand that many of the points which are included in that memorandum are points upon which we have had substantially the same evidence from a number of other parts of the country?—I have no doubt that is so.

5647. Therefore, I do not take you over the whole of the memorandum. Is there any point which you

\* Part II. of Appendix of Vol. I. of Minutes of Evidence, p. 101.

Rev. C.  
Theobald.

yourself would like to emphasize particularly before I ask you any questions upon the paper?—Perhaps, on the whole, I should prefer to answer questions.

5648. Is there nothing in it which you desire specially to emphasize?—No doubt the paragraph which deals with clerical tithe owners being inequitably rated, is the most difficult one I should have to deal with.

5649. I hardly expect you to speak to that in your capacity as Chairman of the union?—I do not come here in that capacity at all.

5650. Perhaps you will kindly tell me exactly in what capacity you do come?—I was urged by some of my neighbours to offer evidence.

Clergymen rated upon professional income.

5651. The point in that paragraph, as I read it, is this: that the rating upon the clergyman is a rating upon his professional income which does not happen necessarily in the case of those who pay rates on other hereditaments?—Yes, that is it.

5652. You do not, I understand, make any difference between the clergyman as owner of the tithe rentcharge and the owner of other property?—No, I make no difference.

5653. Supposing a man happens to invest all his worldly goods in houses, he would be rated upon the whole of his income?—Yes.

Position of clerical tithe owner and owner of land with reference to rating compared.

5654. Which, the man who puts his income into other classes of property would not be. The point which you desire to make is that the clergyman returns a service for his tithe rentcharge which the other owner of property does not return?—That is one of my points. If I may be allowed to say so, the way I look at it is this: if you regard tithe as rateable property as it is generally regarded, then you must compare what it pays to the community with what other property pays to the community. Every unit of rateable property in a parish should pay the same towards local purposes, but the contributions to local purposes pass through the owner of the property, and that is the way we get it. I compare what the owner of the land, as owner of land pays to local contributions; he pays rates at so much per £. The owner of clerical tithe pays precisely the same proportion of rates to the same purposes and in addition to that he renders and is compelled to render services by law to the parish in which he is; therefore, comparing the rateable unit of property in the case of the clerical tithe owner with the rateable unit of property in the case of any other owner, I find that the clerical owner pays more by the amount of his services than any other owner.

5655. I do not think that parallel will quite do?—I compare the man who owns land and occupies it with the man who owns tithe and occupies it. I do not introduce the tenant at all, because it only complicates matters. Of course, I am expressing my view of it.

5656. I do not want to get into an argument with you, but I point out that the owner of land may presumably have paid capital value at so many years' purchase for it, whereas the clergyman receives it as a condition of his service?—The conditions are different; only they are now so many and so stringent that really the clerical tithe owner has been reduced to the position of a man who works for a salary. As I point out in my memorandum, there is compulsory residence, which by-the-by is a comparatively recent condition, and therefore to that extent there is a reason why the burden upon the clerical tithe owner should be reduced. Recently, another Act of Parliament has been passed, rendering the holding of a benefice really tenable during good behaviour. I quite agree that these conditions are proper, but the property that the clergyman has is held on a very much more fragile tenure than any other property in the parish.

5657. Do you wish to develop that any more?—No, I do not wish to do so.

Decrease in rateable value of tithe rentcharge and increase in land tax.

5658. I observe one statement near the end of your memorandum in which, in referring to the land tax, you say that it is an increasing burden upon the tithe owner, and that in your parish in 1883 the rateable value of the tithe rentcharge was 590*l.*, and the land tax on it was 18*l.* 11*s.* 3*d.*, but in 1896 the rateable value of the tithe was 398*l.*, and the land tax on it was 19*l.* 6*s.* 3*d.*; how has the land tax varied?—Because of the reduction in the rateable values of other properties.

5659. In Scotland the land tax is a fixed sum which never varies; is it not so with you?—No, it is not; it varies from year to year.

Rev. D. J. Davies. —  
19 May '97

5660. Is there any other point in your memorandum which you would like to emphasize?—I would call your attention to the operation of the Agricultural Rates Act, to which I have referred. It is also quite possible that your attention has not been directed to what I say in my memorandum referring to the unequal assessment of land.

Effect of Agricultural Rates Act on clerical tithe owners.

5661. Take one thing at a time. As I understand, the first point is contained in these words: "If the clerical tithe owner be rated at 300*l.* he will have to pay 5*l.* a year more than he would have had to before, in addition to his share, by way of the additional income tax required to produce the farmers' relief grant." Would you develop that for me, for I do not quite understand it?—The Rates Act of 1896 compensates the union for the amount required to relieve the farmer of half his rates.

5662. That is to say, half the rates on his agricultural land?—Yes.

5663. I do not quite see how the clerical tithe owner can have to pay more. I can understand the argument that he ought not to have to pay as much as he will have to pay; but I do not see how you can make out that the effect of the Act is that as a tithe owner he will have to pay more?—I shall have pleasure in showing you how that is. There are parochial charges, and there are union or general charges, and the Rates Act takes cognizance only of the general charges of the union—

5664. Is that so?—It is so.

5665. You say so very definitely, and, therefore, I do not like to contradict you, but it is a surprise to me if it is so. Will you specify the particular rate or charge under which the clerical tithe owner has to pay more?—In this way; there are several purely parochial expenses to be met out of the rates.

5666. Such as—?—The payment of the assistant overseer.

5667. What rate does that come out of?—It comes out of the rate of the parish; that is, the parish must put a penny or twopence, as the case may be, more on the union call than the call is in order to meet the expenses of the assistant overseer. The parish alone pay him. We are not compensated by the Act for the loss that we sustain in consequence.

5668. How much does that amount to according to your way of calculating it?—In my parish it is about 10*l.*

5669. What will your share of that be?—10*l.* would be about a twopenny rate.

5670. (*Mr. Dalton.*) What is the rateable value of the parish?—The rateable value of the parish is 1,300*l.*, and something, but the assessable value of the parish is a great deal less.

5671. (*Chairman.*) Is there any other point on which you think it puts an increase?—Yes; the special sanitary rate, when it comes under 10*l.* is divisible according to the Rates Act among the ratepayers of the parish; but the Rates Act does not provide any compensation for that; the relief grant does not reckon that at all; nor parish council expenses.

5672. Is there any other point?—Yes; the school board rates in parishes which have formed boards since 1895, or will hereafter form them; a school board is a very expensive item.

5673. Anything else?—I mention in my memorandum the voluntary school rate; in many parishes in England we form a voluntary rate.

5674. I do not think we can take that into calculation?—It is not legal I know, except in one way.

5675. Not compulsory is what you mean, it is legal?—It is purely voluntary. It is compulsory in one sense; the parish is bound to keep a school, and the parishioners in some cases prefer to do it their own way rather than by forming a school board.

Rates on land subject to tithe and free of tithe.

5676. Is there any other point that you want to call our special attention to?—We will return to the second point I mentioned. An acre on a tithe free farm pays less than an acre of land upon which there is tithe.

5677. That is not unnatural, is it, if a capital sum has been paid to redeem the tithe?—We will compare two equal acres—

5678. But I mean if the other process of getting rid of tithe has been gone through, it would be unjust to

*Rev. D. J. Davies.*  
 5675. make them pay the same, would it not?—I do not hold that; we have to deal with property, say it is an acre of land; each acre of land, supposing it is worth the same, should pay the same, whether it is tithe free or not.

5679. That, of course, is a matter of bargain in by-gone times, is it not?—I do not think so.

*Agri-  
 cult-  
 Rates  
 Act, 1896.  
 Criticisms.*  
 5680. Is there any other point?—I point out in my memorandum how any excess over the estimated amount, or the ascertained amount of the Government grant, will have to be paid; it will have to be paid unequally by the owners of land and the owners of other property; and in certain unions the inequality would be very considerable; I mention some. In my own union, it is printed in my memorandum 8 per cent., but I have ascertained since that it will be 9 or 10 per cent.

5681. I do not quite understand that; it may possibly be my fault; but is that not a repetition of the complaint that formed the subject of question and answer a moment ago, when I quoted certain words from your memorandum?—No, I think not; it is not the same thing.

5682. Perhaps you will explain that statement to me?—The Government grant was ascertained by reference to the amount of rates on agricultural land in the year 1895. If our rates remain the same as they were in 1895 there would be no inequality; but if our rates go up as they have done and will do, there would be inequality.

5683. Then I follow that this paragraph is a complaint of the contents of the Rates Act of last year?—Yes.

5684. Except incidentally that is hardly within our terms of reference?—I thought, perhaps, it would come in, because, possibly, in consequence of what you recommend something may be done. We have felt in the country, both farmers and tithe owners, that this Act is not based upon justice.

5685. Are you authorised by the farmers to say that?—Farmers who meet me every fortnight have told me that, but they do not authorise me to say anything.

5686. You have no resolution of farmers' societies, or anything of that sort?—No, not at all.

5687. (*Mr. Dalton.*) If it be true that if the rates go up, the grant will not be sufficient to pay the whole of the deficiency on agricultural land, then I suppose it would be true that if they go down the grant will be larger than is required for the purpose, and will give relief to tithe owners and others?—That is perfectly true, but it is a most improbable thing.

5688. You know that the rates in rural districts are, as a matter of fact, in many places lower now than they were a good many years ago. I am not saying that they are lower than they were a year or two ago, because that would differ in each district, but taking the country as a whole you would admit that they have not greatly risen at any rate?—I have a return here from all the parishes in my union for the years 1884 down to 1896, and this shows in many cases an increase of 50 per cent.

5689. What does that mainly arise from? Which rate has gone up?—If we want better buildings for the union that would influence the poor rate. Then the expenses of the county council gradually creep up and more money has been spent upon the roads and education.

5690. What parish is that you are speaking of; could you give us the name of it?—The parish that I have now before me is the parish of Basildon, but I have the figures for over 20 in my hand.

5691. I think you say that the land tax payable on the tithe in your parish is larger now than it was in 1883?—Yes.

5692. Is it correct to assume from that that the tithe, although it has fallen in value, and fallen considerably, has not fallen in value so much as the other property in the parish subject to the land tax?—I do not think there is much difference.

5693. How else do you account for the fact that you are now paying more land tax than you did in 1883; there must have been a re-assessment of some sort which has thrown more upon the tithe in the parish?—Yes, there has been.

5694. Was that re-assessment properly made?—It is difficult to say when the land tax assessment is properly made.

5695. Does it follow the poor law valuation in your parish?—No.

5696. The income tax?—No.

5697. What is your land tax valuation based on?—I cannot say; it is the judgment or perhaps the incompetency of the assessor sometimes.

5698. (*Mr. Elliott.*) Did the owners of the tithe rent charge feel any sense of grievance as regards local taxation before the passing of the Agricultural Rates Act?—We certainly did always in my district; ever since I have been there we have thought that we were very heavily taxed.

5699. You do not object to the Agricultural Rates Act as in itself unjust do you?—I do personally; I think it is very unjust.

5700. Because it did not extend so as to include a particular class of property in which you are interested?—No, it is not that at all; that may be an element but it is a very inappreciable element.

5701. What is your objection then to the Agricultural Rates Act?—I will give you one instance. There is accommodation land that I know of which lets at about 4l. an acre, and no one can say that such accommodation land deserved to be let off paying any of its rates.

5702. Of course you are aware that some people do say that?—I do not think they would really mean it.

5703. (*Mr. Clare.*) Before the Agricultural Rates Act, 1896, was passed, I presume you had an assistant overseer in the parish who collected the poor rate?—Yes.

5704. And you paid him?—Yes.

5705. You now employ him?—Yes.

5706. And pay him?—Yes.

5707. There is not much difference, is there, in the position?—Yes, there is. Now the occupiers of land pay on half their rateable value which means that the other half has to be provided by the other ratepayers.

5708. But the other half which is given back to the occupier is paid out of the Government funds?—Not in the case of the assistant overseer, that is one of my complaints.

5709. Before the Government grants were made the parish paid the assistant overseer?—Yes, by an equal rate.

5710. And they pay him now?—By an unequal rate.

5711. They do not pay more than they did before?—The total sum is not more but it is divided unequally between the owners of the land and the owners of other property.

5712. May I suggest to you that there is not very much difference in character between a tithe rent-charge and a ground rent. Do you see any difference between a ground rentcharge upon, we will say, large leasehold property in London representing one-fourth of the actual rent of the whole premises and a tithe rentcharge charged upon agricultural land if you like, representing possibly half of the rental value?—I think there is this difference—the owner of the ground rent is not compelled by law to render any services to his country or his parish as the owner of a tithe rent-charge is.

5713. But the owner of a ground rent is not now liable to be rated for other rates, you are aware of that?—Of course I do not know anything about it; we have not got such things in our district.

5714. I am only suggesting to you that if the owner of ground rent is not now rated for local rates, is that not rather a reason that tithe rentcharge should be put upon the same basis, or else that owners of ground rents should be made liable to pay the rates?—It makes my view of the matter very much stronger, supposing the present system of not rating owners of ground rent were to continue.

5715. (*Mr. Smith.*) Your principal grievance as a clerical owner of tithe really arises out of the accident of the method of payment, does it not? You are treated as a landowner, whereas your claim is to be treated as a salaried officer?—I think it resolves itself into that.

5716. You must stand on one ground or the other. By law you are a landowner, but in reality you say

19 May '97

5717. It comes to this that the accident of the method of payment imposes upon you, so far as services are concerned, a heavier burden?—It does.

5718. Could you offer us any suggestion as to the assessable value of tithe in future?—My suggestion is

that the assessable value of the tithe should be the excess of its rateable value, over 150*l.*

5719. Making that as an allowance for the value of the service?—Yes, that is it.

5720. (*Chairman.*) Is there any point you want to add?—No, thank you; I have put in everything in my memorandum that I thought of.

The witness withdrew.

Adjourned till Thursday, 27th May, at 12 o'clock.

## SIXTEENTH DAY.

Thursday, 27th May 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. Sir J. T. HIBBERT.  
Sir F. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.

H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq.  
ARTHUR O'CONNOR, Esq., M.P.  
J. L. WHARTON, Esq., M.P.  
ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. FREDERIC CAMPBELL HULTON called and examined.

*Mr. F. C. Hulton.*

27 May '97

5721. (*Sir John Hibbert.*) You are Clerk of the Peace and Clerk of the Council for the county of Lancaster?—Yes.

5722. You have held one of those offices, clerk of the peace, for a considerable number of years; for how many would it be?—Over 20 years.

5723. And the other office you have held since the formation of the county council?—Yes.

5724. You are also a member of the County Councils Association?—Yes.

5725. As one of the clerks representing the clerks of county councils?—Yes.

5726. You appear to-day to give evidence for the County Councils Association, and you put in, I presume, this memorandum?—Yes, I put in that memorandum on behalf of the Association.

5727. Do you also put in these Tables?—Yes.

5728. You also, I think, propose afterwards to give evidence in your own personal capacity?—I do.

5729. We will take the evidence for the County Councils Association first. You state in this memorandum how the financial business of the county council is regulated by the Local Government Act, 1888; do you wish to make any short and concise statement about that—perhaps it would be as well if you took your own mode of doing it?—The financial arrangements of the business of the county council are regulated, as stated in the memorandum, by the Local Government Act, 1888, section 80. The Act requires that all payments to be made to or out of the county fund shall be made to and by the county treasurer, and that all payments out of the county fund shall be made in pursuance of an order of the council signed by three members of the finance committee.

5730. You propose to deal in the first place with the county accounts and to make some suggestions upon them; will you take that course?—The County Councils Association have stated in this memorandum the way in which the county accounts are prepared, and the various items of which they consist. I do not know beyond that that I have anything further to say.

5731. I think you should state the general mode in which the county funds are kept; it is so different from the mode in which the municipal funds are kept, that I

think it is desirable you should state that—not only as respects Lancashire, but as respects the general class of counties?—Then I think I may state that the county fund is divided into three separate accounts—the general county account, the special county account, and the Exchequer contribution account. All the three accounts are regulated by the Act of 1888. The process is that the accounts of the various committees are referred in the first instance to those committees, and by them passed on to the finance committee; the finance committee then consider the accounts, and recommend the county council to pay them. The orders for the payment of those accounts are signed by three members of the finance committee, and countersigned by the clerk of the council, and are laid before the meeting of the county council, when an order is made that the county treasurer shall pay them.

5732. Will you make any statement with respect to the most important duties which come within the general county account?—I think the most important is the expenditure under the head of main roads, which in Lancashire amounts to nearly 130,000*l.*, to which has to be added a contribution under section 11 of the Local Government Act of 1888 on behalf of the class of roads which are not main roads but which are called secondary roads, and that is limited to a sum of 23,000*l.*, which makes a total of nearly 160,000*l.* under that head alone.

5733. Is that the largest item of expenditure which occurs in the general county account?—That is the largest amount. In other counties there may be a very heavy charge on the account for lunatic asylums, but that, as you are aware, is dealt with specially in Lancashire, and I would rather not complicate the matter by any reference to it.

5734. In most counties, I suppose in the majority of counties, the lunatic asylums are managed by the county council?—By a committee of the county council.

5735. And in respect to Lancashire they are managed by a board under an Act of Parliament?—Under a special Act of Parliament.

5736. There are other important payments with respect to the salaries of the clerks to justices of petty sessional divisions, the salaries of inspectors of weights and measures and expenses, the salaries and expenses of coroners, and also the salaries of county analysts?—With regard to the salaries of clerks to justices, the amount received from the clerks for fees practically

balances the sum paid as salaries. The salaries of inspectors of weights and measures is a growing and a heavy expenditure, and exceeds the receipts in Lancashire by over 1,000*l.* The salaries of coroners again is a heavy item; they amount to practically a little over 4,000*l.* I think I ought to mention the cost of prosecutions at assizes and sessions: that is also a heavy item, amounting to between 8,000*l.* and 9,000*l.*, an item which, prior to the passing of the Act of 1888, was paid by the Treasury.

5737. Is there no payment now by the Treasury?—There is no payment now by the Treasury.

5738. It is paid out of the local funds?—Yes, it comes out of the county rate.

5739. Have you anything further you wish to say about general county purposes?—No, I think the other items are small in amount, although they total up to a large sum.

5740. Will you take the next branch, the special county purposes?—In the special county purposes account, the most important item is the expenditure on the police. That is supplemented by one-half of the pay and clothing being charged upon the Exchequer contribution account. The net expenditure for police last year in the county was 85,000*l.*

5741. That is for your own county?—Yes, only for Lancashire.

5742. (Mr. Wharton.) Do you mean that is the total amount?—It is the net amount.

5743. Is that minus the Exchequer contribution?—After giving credit for the Exchequer contribution.

5744. (Sir John Hibbert.) It is the balance?—The balance.

5745. (Mr. Wharton.) Then the police cost you double that?—Yes.

5746. (Sir John Hibbert.) Why is it called a special county purpose?—It is a special county purpose. Under the Police Act the county is divided first into the head-quarters division, which is the administrative county, exclusive of the boroughs having separate police establishments or having agreements for policing with the county; then the county is also divided under the same Act into police divisions.

5747. Is that the case in all counties?—No, I think you will find from Table II. B that there are a number of counties which are not divided into police districts—all the counties against which in the second column you find the figure (4).

5748. Those counties with the figure (4) are counties in which there is no divisional police?—Yes.

5749. But the rate goes over the whole county?—The rate goes over the whole county.

5750. Of course, when I say county, I mean administrative county?—Yes, I understand.

5751. Where the division has been carried out to any considerable extent, of course, it does impose the levying of a very considerable number of different rates?—That is so.

5752. What is another special purpose?—Another special rate, but I think this is only applicable to Lancashire, is the rate for hundred bridges; those are the bridges repairable by separate hundreds from immemorial custom.

5753. That is not common to other counties, then?—I believe that in a Turnpike Continuance Act some eight or ten years ago, the local rating was abolished, and now all the bridges are charged to the county—with the exception of course that in counties there are some bridges chargeable only to very small districts, not equal to the hundreds in Lancashire.

5754. What are the other special county purposes?—They are really special matters, such as salaries of chairmen of quarter sessions, the stipendiary justices, and the Manchester Assize Courts, and, I believe, the charge for intermediate education in Wales is also a special county purpose in Wales.

5755. I suppose in both general and special purposes in the county, the deficit that occurs upon any of these purposes is made good out of the county rate thrown over the whole county or thrown over the separate division?—That is so. The general purposes expenses are raised out of a general rate and the special purposes are raised out of special rates.

Mr. F. C. Hulton.  
27 May '97

5756. Have you anything to say with respect to the mode of raising money under those two plans—general rates or special rates?—No. I think it is a very convenient way of raising the money. The order is made by the county council, and a rate either for general or for special purposes is ordered to be levied; that rate is included in a precept to the guardians of the poor,\* and they apply to the overseers of the different parishes for payment of the contribution. We deal entirely with the clerks to the guardians, and are not brought into contact with the overseers, except in case of default.

5757. I suppose in the county the county rate committee is a very important element in the administration of the county?—It is.

5758. And you have had considerable experience in carrying out the law with respect to the division of county rates during past years?—I have. I have had to attend as clerk to the county rate committee on five different occasions.

5759. How does that act with respect to a county like Lancashire, where there are a considerable number of county boroughs?—In Lancashire advantage was taken of the Local Government Act of 1888 to appoint a joint committee, and that joint committee consists of 15 members appointed by the county council, and one member from each of the 15 county boroughs within the county.

5760. How many does that make?—It makes 30. The average attendance is, I think I might say, about 12. There are three or four members who attend every meeting, and then the representatives of the particular district, whose case has to be revised, attend and look after the interests of that area.

5761. In working this Act jointly with the county boroughs, do you travel about various parts of the county for the purpose of revision?—We do. We sit at the various centres of population: for instance, at Preston, at Manchester, at Liverpool, and in the north at Lancaster, and at Ulverston.

5762. Is it your experience that that mode of revising the county rate is a satisfactory one?—In my opinion it is most satisfactory.

5763. Is that the opinion of the county boroughs as well?—I think so. There has never been the slightest friction between either the county members or the county borough members—quite the contrary.

5764. In the revision which takes place, I suppose every five years, do you find much necessity for having this controlling power?—There is a great necessity. At first, if I may go back to 1872, the work was not well done in the unions, but by the pressure of the county rate committee, the assessment committees in the various unions in the county have not only been more alive to the necessity of keeping up the rateable value of the various kinds of property, but they have also been obliged, if I may use the expression, to get re-valuations of the railways, and the mines, and the mills in the district, which are most important elements.

5765. Do you find that the local assessments vary very much from the county rate assessments?—Considerably.

5766. I suppose differently in different unions?—In some unions, between the poor rate assessment and the property tax assessment (which is one of the bases upon which the county rate committee act) there is very little difference indeed; in other parts of the county, particularly in the rural districts, there is a great difference.

5767. In the revision of the county rate, does the representative of the Inland Revenue Department sit with you?—Both the clerk to the Commissioners of Income Tax and the surveyor of taxes attend.

5768. Have you found advantage from that?—Great advantage, because we have returns made both by the overseers of the various classes of property and also by the Income Tax Commissioners, the two assessments are compared, and I may say invariably the property tax is taken as the basis for property liable to be assessed to the county rate.

5769. Does your total of gross value come to pretty much the same amount as the gross value of the Imperial assessment?—Very much the same.

5770. That is with respect to the county rate?—Yes.

County rate joint committee in Lancashire created under Local Government Act, 1888. Section 33. Their procedure. System has proved a satisfactory one to county and borough members.

County rate committee has made the union assessment committees keep up the rateable value and obliged them to get revaluations of railways mines, and mills in Lancashire.

In some rural unions, local assessments vary very much from county rate assessments.

\* Pt. II. of Appendix to Vol. I. Minutes of Evidence, pp. 106 and 107.

**Mr. F. C. Hulton.** 5771. How do you do with respect to the deductions for rateable value, have you one scale for the whole county?—Yes, the committee before they proceed with the re-valuation, lay down a special scale, and that scale, if I may be allowed to hand it in, is this: "For the purpose of estimating the net annual value of the property in each parish, township, or place, the joint committee first ascertained the gross estimated value thereof, and from such gross value made the following deductions: From the value of agricultural land as defined by the 'Agricultural Rates Act, 1896,' one twentieth part. From the value of all lands (other than agricultural land), woods, plantations, tithes, canals, navigations, docks, watercourses, reservoirs, sporting rights, quarries, delphs, and brickyards, one-twelfth part, and from the value of all buildings, mines, railways, and gasworks one-sixth part."

27 May '97  
County rate committee in Lancashire. Scale of deductions adopted in revision of valuation.

Appeals. Only one appeal against decision of county rate committee in Lancashire since 1872.

Valuation for county rate in Lancashire and of the several unions, difference in.

Valuation for Imperial and poor rate purposes outside Metro- polis, difference in.

5772. Is that schedule taken from any Act of Parliament?—No. In respect to the first item, the valuation of agricultural land, I ascertained that generally throughout the county in the best managed unions they deducted a twentieth, and the committee adopted that, that being a new item under the Act. With regard to the other deductions those have been in force since 1872 to my knowledge, and I believe prior to that time, and they have always been acquiesced in by the various rating authorities.

5773. Have you had any or many appeals against your decisions?—Since 1872 there has been one appeal.

5774. Only one?—Only one.

5775. And that is during a course of how many revisions?—Five; and I believe that there had not been any appeal prior to that time since the Act of 1852 came into operation.

5776. Now this principle which you have been explaining which is adopted in Lancashire, is it adopted in other counties?—I believe it is to a greater or less extent, or rather, I should say, probably to a less extent.

5777. We will take a district near to Lancashire, that is the West Riding; what is the plan adopted there?—I believe very much the same plan; also I think in Cheshire.

5778. Do you know whether the result in the other counties is equally satisfactory with the Lancashire result?—I cannot answer that question.

5779. Have you anything further to say upon this particular branch of the subject?—No, I think not.

5780. Before we go to a new branch, could you state what the difference is between your valuation for the county rate and the valuation of the several unions; it is very important to know that?—The valuation for the poor rate is shown in Table H. C. column 5a and 5b. For Lancashire in 1895 it was 8,899,405*l.*, and in 1896 8,653,041*l.* I think I may explain that the reduction there is not on account of the county going back, but on account of a large proportion of the county being absorbed into the city of Liverpool.

5781. A million of rateable value, I think, has been absorbed by Liverpool and Manchester together?—Yes. At one time, between 1895 and 1896, about half a million went to Liverpool.

5782. That accounts for this particular difference?—Yes. Then the county rate basis which is given in column 6 was, in December 1895, 8,504,894*l.*, that being the basis fixed in the year 1891; but the basis which has been fixed within the last fortnight will increase that figure from 8,504,894*l.* to 9,287,621*l.*\*

5783. What I wanted to know was, what is the total of the assessments under the different assessment committees, for poor law purposes throughout the county, to compare with this. I believe there is a considerable difference, is there not, between the totals of the rateable value?—There is a difference of 600,000*l.*

5784. (Mr. Wharton.) That is for exactly the same area?—Yes.

5785. (Sir John Hibbert.) To go beyond Lancashire, I believe the difference in the whole of England outside the metropolis, between the Imperial assessment and the poor rate assessment, is something like 5,000,000*l.*?—It is a little over 5,000,000*l.*

5786. (Mr. Wharton.) Which way is that?—The poor rate is so much lower; I think the exact figure is 5,889,000*l.*†

5787. (Sir John Hibbert.) Is that gross?—No, rateable value.

5789. (Mr. Dalton.) Where do you get that difference of 600,000*l.*? The figure in the table for the county rate basis of 1896, column 6 b, is 8,504,238*l.*; that only makes a difference of 150,000*l.*?—That makes a net difference; it makes the poor rate 150,000*l.* above the county rate, but, as I pointed out to the Chairman, the county rate assessment was fixed in 1891.

5790. All I meant was that the 600,000*l.* does not appear on that table?—No, it does not. The last county rate basis which has been fixed is not in this return; it is 9,287,621*l.*\*

5791. (Sir John Hibbert.) We will take the next branch, Exchequer contribution account. Of course this account was created by the Local Government Act of 1888, and consists for every county of the proceeds of certain licences, a share of the probate duty, and a share of the Customs and Excise duty?—That is so.

5792. That is the same in every county, and it is distributed in a certain way by Act of Parliament?—That is so.

5793. What have you to say—I do not mean to say representing your own opinion about this, but as representing the County Councils Association—upon the mode of carrying out this part of the duties of the county council?—These accounts are sent in to the county council, and they are audited, and, as far as possible, it is ascertained whether they are correct. A number of them are payments made by direct order of the Local Government Board.

5794. (Mr. Wharton.) You say sent in. Would you say by whom?—By the different authorities to whom payments have to be made.

5795. Who are those authorities?—The first three items—the salaries of teachers in poor-law schools, the school fees for pauper children, and the salaries of public vaccinators—are paid upon the order of the Local Government Board. In regard to the fourth item, the salaries of medical officers of health, the local authority where there are medical officers of health send in the accounts to the county council, and then they are checked and paid. The same applies to the salaries of inspectors of nuisances. The salaries of registrars of births and deaths are paid by order from the Local Government Board. The charge for pauper lunatics, 4*s.* a week, is claimed by the unions in each county.

5796. (Sir John Hibbert.) Is that not under the Local Government Board also? Do they not certify the amount that has to be paid?—I think not. Each union sends in a claim for the number of pauper lunatics chargeable to that union at the rate of 4*s.* per head.

5797. How is that checked?—It is checked by the audit department of the county council.

5798. But there are very few counties which have audit departments?—I cannot answer for other counties. In the same way the salaries of poor law officers are sent in by the various authorities. The county police is dealt with by the county council, and the boroughs with borough police send in a claim every year, after the police have been inspected by the Government inspector, and a certificate has been issued that the police are in a state of efficiency.

5799. (Mr. Wharton.) Perhaps it would be more correct if you were to say that the police are dealt with by the standing joint committee?—No.

5800. The standing joint committee recommend what the amount should be; they requisition the county council, and the county council pay?—Yes.

5801. (Sir John Hibbert.) Then there is the item for technical instruction, what have you to say upon that?—I believe generally throughout England, the amount received from the Customs and Excise duties is charged with technical instruction.

5802. Then supposing a balance remains after the payment of all these charges which you have referred to, what becomes of that balance?—That balance is appropriated under section 23 of the Local Government Act, 1888; and really the first charge is, that any balance is to go to repay to the general county account of the county fund the costs on account of general county purposes for which the whole of the area of the county is liable. There are other subsequent appropriations, but I am sorry to say, speaking for Lancashire alone, that for the last two years there has been no surplus of any kind whatever.

5803. Is that owing to less money having been received under the Exchequer contribution, or is it

Mr. F. C. Hulton.

Exchequer contribution account. County councils, accounts of, and procedure in connection with. No difficulties as between county and county boroughs.

\* Reduced on appeals in August to 9,275,883*l.*  
† The exact figure in 1895-6, according to the 40th Report of the Inland Revenue Commissioners, was 6,157,816*l.*

\* Reduced on appeals in August to 9,275,883*l.*

Mr. F. C. Hulton.  
27 May '97

owing to the payments becoming larger?—Partly from the payments becoming larger and partly because the Exchequer contribution account, certainly the year before last, decreased to a very considerable extent.

5804. Have you found any difficulty in carrying out the law in respect to these purposes?—No.

5805. No difficulty owing to there being county boroughs?—No, I think speaking in the presence of one of the Commissioners who represents a county borough, we have worked very fairly and amicably since the adjustment took place before Lord Derby's Commission.

5806. Have you anything further to say on this branch?—No.

Police Pension Fund and superannuation fund in Lancashire.

5807. With respect to the Police Pension Fund, do you wish to say anything upon that?—Only that it has had a good effect upon the superannuation fund inasmuch as it has prevented its being dissolved by the charges being too great upon it; at the present moment it is just about paying its way.

5808. You are speaking now of Lancashire; what is it generally?—I am afraid in other parts of the country the pension fund is in rather a disastrous state.

One uniform valuation for all rates and taxes throughout the country desirable.

5809. What do you wish to say with respect to uniformity in rating?—Resolutions have been passed by various county councils, I believe upwards of 40, suggesting that, "In any comprehensive scheme for consolidating and amending the laws of rating, provision should be made for one uniform assessment, upon a basis applicable to the whole country, on which all taxes and rates of every description should be charged and levied."

5810. Have the County Councils Association passed a resolution of that kind?—They have.\*

5811. And your own county?—The county of Lancaster has also passed a resolution which I believe has been forwarded to Mr. Wilson Fox.

5812. I understand that the resolutions of the county councils on this point have been forwarded to the Commission in most cases?—I believe upwards of 40 counties have passed the resolution.

Exchequer contribution account in Lancashire not sufficient if half the expense of main roads can be charged.

5813. What have you to say with respect to the Exchequer contribution account?—Simply that at present the account in Lancashire is not sufficient to pay the charges on that account, assuming that we have a right to charge one-half the expense of the main roads.

5814. Does that state of things apply to many counties?—That, again, I am not prepared to answer.

5815. Do you know whether any other counties pay one half the cost of the main roads out of the Exchequer contribution?—That I cannot answer.

5816. Do you wish to say anything further upon the general question as representing the County Councils Association?—No.

5817. (Mr. Murray.) If a uniform system of assessment and valuation were adopted all over the country, would you make it over-ride all the local Acts that are now in force?—Certainly.

5818. Would you repeal them all?—Yes.

5819. Without any regard to the local necessities and so on?—Yes.

5820. You would have one uniform basis of valuation for all kinds of property?—There, of course, a difficulty arises as to the different kinds of property; take railways, for instance, it would be difficult to lay down a principle applicable to the whole country for them.

5821. How do you propose to meet that difficulty?—I propose to meet that by appointing special valuers or assessors. Taking the railways as the first item, the committee should appoint a special valuer to value the whole of the railways in the county and other classes of property in addition to railways—mines, mills, ironworks, and manufactories generally; but in regard to rented property, such as houses, then the property tax, being, undoubtedly based on the return of the rent, would be *prima facie* at any rate, the basis.

5822. You would not value agricultural land, for instance, on any other basis than you would houses?—You would take what the rent is.

5823. Where does your county assessment committee meet?—The present committee meets at Preston, which is the most central town in Lancashire, and then it adjourns to Manchester, taking all the unions within

A uniform system of valuation should override all local Acts. VALUATION of special classes of property such as railways, mines, mills, &c. should be valued by a special county valuer. Houses and land should be valued on basis of rent. County rate committee in Lancashire. System and procedure adopted.

8 or 10 miles of Manchester, at Manchester; then it sits at Liverpool and takes a number of the unions surrounding Liverpool; going north, it sits at Lancaster for the agricultural unions north of the Ribble, and also at Ulverston, which is quite detached from the rest of the county.

5824. Then it is practically a movable body?—Yes. At one time we used to sit at half a dozen more places, but railway communication is so good in Lancashire now, that it is not necessary to sit at more than these four or five places.

5825. That is enough to supply you with all the local knowledge you want?—Quite.

5826. What happens when they meet—who attends?—The overseers, or rather the assistant overseers, are summoned, the clerk to the assessment committee, the clerk to the Commissioners of Taxes, and the surveyor of taxes.

5827. Do any of the interested parties, the ratepayers, come?—Sometimes.

5828. Do they make representations?—No.

5829. They do not attend as interested parties, then?—No.

5830. They merely attend?—They are merely there to listen.

5831. They have no *locus standi*?—That question has never been raised.

5832. Do you find that the 5 per cent. allowance for land is generally sufficient?—Yes: it was the percentage put on by the overseers in November, when the Act first came into operation.

5833. I do not quite understand paragraph 30 of the County Councils Associations memorandum. Apparently you think that the county councils are worse off than they expected to be?—I have no hesitation in saying that that is so.

5834. That is, that the charges on the Exchequer contribution account are larger than the amount of the contribution?—Yes.

5835. But I cannot gather that from your Table II. B; you see under column 4 of your receipts, you get three millions and a quarter out of the contribution account. Is that not so?—Yes.

5836. Then look at column 10 on the other side of the account, that would come to 1,157,455*l.*?—I think I must guard myself in my answer in this way, that I am only speaking as respects Lancashire; I believe in other counties the receipts from the Exchequer contribution account do go considerably in reduction of the rates.

5837. (Sir John Hibbert.) Is it not the case that you take one-half of the expenses of the main roads out of the Exchequer contribution?—Yes.

5838. Is that so in other counties?—That I cannot answer. In Lancashire the main road expenditure is made a special charge upon each hundred; in the rest of England the main road expenditure is paid out of the general county fund.

5839. (Mr. Murray.) Take the case of Lancashire under column 4; you get about 275,000*l.* there?—That is so.

5840. What do you pay on the other side—something under 100,000*l.*?—First of all the 10,433*l.* (column 4, *b*), that receipt is appropriated to the Police Pension Fund; then 39,428*l.* (column 4, *c*) is appropriated to technical instruction; so that the total amount is the 225,383*l.* column 4, *a*.

5841. But what are the charges in Lancashire against the 225,383*l.*?—First, under the head of payments, column 10, you will find to boards of guardians 78,840*l.*, to sanitary authorities 6,562*l.*, to boroughs maintaining their own police 13,140*l.*, to public vaccinators 354*l.*, and then other payments 253*l.* Then you have half the expense of the main roads, which, in the year ending the 31st of March 1895, came to over 53,800*l.*

5842. That would be 160,000*l.*?—Yes.

5843. (Mr. Dalton.) Then there is half the pay and clothing of the police?—Yes; the 13,140*l.* was the amount of half pay and clothing of the police, payable to the councils of boroughs having separate police establishments.

5844. (Mr. Murray.) You have got that down in column 10, *c*?—Yes.

5845. (Mr. Dalton.) Then there is your own county police?—Yes, that is 64,000*l.* The transfer, if I may put it in a word, to other accounts of the county fund

Mr. F. C. Hulton.  
27 May '97

Exchequer contribution account, effect of in Lancashire. No balance remains. Amount of rates to be raised has not been reduced since this was instituted.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 105 (par. 29).

*Mr. F. C. Hulton.* amounted to 122,000*l.*, in addition to what appears here in column 10, a, b, c, d, and e.

5846. (*Mr. Murray.*) In fact that comes out of the 472,776*l.* in column 8?—Yes, it is included in that sum.

5847. Speaking generally, the other counties would not seem to be as badly off as Lancashire in that respect?—No, I think that is so.

5848. Column 8 on the payments side appears to include repayments of loans and interest?—Yes, it includes those.

5849. Have you any idea what they come to in Lancashire?—Yes. There again it is hardly fair to take Lancashire, because the asylum loan is not included in that amount. The only loans that we have are for the court house at Liverpool, I think about 4,000*l.*, and then police loans amounting to about 100,000*l.*

5850. Do you mean the annual charge is 100,000*l.*?—No, that is the total.

5851. How much of that 472,776*l.* represents principal and interest on loans?—For the repayment of loans the sum was 8,569*l.* for the year ending 31st of March 1896, and the interest on loans was 3,614*l.*, making a total of 12,183*l.*

5852. Is the amount of rates raised under columns 1 and 2 larger now than it was 10 years ago?—No, I should think not. I think if you will refer to Table II. C you will find that the rates in the £ for general county purposes in 1894-95 were 4·28*d.*; in 1895-96, 5·18*d.*; and in 1896-97, 5·07*d.* I believe this year there will probably be a slight decrease. Then for special county purposes the rate in the £ was for 1894-95, 3·03*d.*; for 1895-96, 2·69*d.*; and for 1896-97, 2·64*d.* Taking it for the last nine years, I do not think there has been any appreciable difference in the rates.

5853. That is practically you have not suffered much by the arrangement of 1888?—No. I have not said we have. It is only to a small amount that our charges are not met.

5854. In fact the rate in the £ is not higher than it was?—No, practically not.

5855. Then all you have lost in fact is an expectation of reducing the rates?—Yes, certainly.

5856. (*Sir Edward Hamilton.*) With reference to paragraph 30, on which Mr. Murray has been asking you some questions, are we to understand that what you regard as the "elaborate provisions for the appropriation of any balance remaining over after those payments have been made" have never been put into force because there has been no balance to appropriate?—That is so. Take the first head—that the balance shall go to the payment of the costs of the general county purposes; that would mean that if that balance were sufficient to meet the costs of the general county purposes, there would be no necessity to lay a county rate.

5857. Have you ever made out a calculation, or would it be troublesome to make out a calculation, showing how, supposing the Local Government Act had not been passed in 1888, or these financial provisions had not been included in the Bill, you would have stood now as compared with how you stand under the present arrangements?—Assuming that the Government take over what?

5858. Going on as heretofore?—I should think we should be very much the same as we were in 1888.

5859. Do you mean to say that you consider you have gained nothing by it?—I do not think we have gained anything. Further charges have been thrown upon the county by the appointment of various officers, and as the effect of Acts of Parliament which have thrown further expenditure upon the county.

5860. Of course I would exclude a new charge like that of technical education?—I am referring to the medical officer of health for instance, and the extra work thrown upon the inspectors of weights and measures.

5861. (*Sir John Hibbert.*) Then there is the pollution of rivers?—Yes, that is a heavy item.

5862. (*Sir Edward Hamilton.*) Still, under the arrangements made in 1888, there was a very considerable additional sum handed over, and I do not see why it is you cannot show that you have got some benefit by it?—Of course the question of main roads comes in, and no doubt the main roads have been increased very considerably since 1888.

5863. Still, if I recollect aright, the main roads was not a very serious item, was it?—At the present moment it is nearly 130,000*l.* a year.

5864. Still the Government, if I recollect rightly, took half, before?—The last year they took half, previously to that they paid a fourth.

5865. (*Mr. Wharton.*) You mean that in 1887 they took half?—In 1887 they took half, and prior to 1887 they paid a quarter.

5866. (*Sir Edward Hamilton.*) Then in paragraph 33 you refer to the distribution of the probate duty grant; it is done, as you state in the memorandum, on the principle that, "it shall be divided in proportion to the share which the Local Government Board certify to have been received by each county during the financial year next before the passing of the Act of 1888"; has that worked unfairly, and is it out of date, so to speak, now?—I am not speaking now on behalf of the County Councils Association; all I have ventured to state in the memorandum is just this matter of fact, that the distribution in 1889 was based upon the discontinued grants for the year ending 31st March 1888.

5867. Were these two tables prepared from information that you received from all the various county councils?—Yes. They are compiled by Mr. Fitzgerald, the secretary to the County Councils Association.

5868. In sending them up to you, I suppose there are no explanations given as to how the rates varied in the three years, because I notice there are considerable variations, some going up and some going down. Was any explanation of that sent in at the time?—I am hardly able to answer that question.

5869. Take Lincolnshire and Rutland. Lincolnshire is a very remarkable case indeed; in the Kesteven division of Lincolnshire it was 8*d.* in the first year and 1½*d.* in 1896-97?—Yes.

5870. That seems to require explanation?—I am hardly in a position to answer those questions, because those tables have been prepared by the secretary to the association, and I have only a general knowledge of them; I cannot answer any special questions.

5871. You did not actually prepare the tables?—No. I did not actually prepare them.

5872. The secretary to the County Councils Association prepared them?—Yes. I believe Mr. Merrifield, who is to give evidence next, will be able to explain the variation in the rates with regard to West Sussex.

5873. (*Mr. Arthur O'Connor.*) In paragraph 30 of the memorandum you say: "The county councils were assured that the sums received on the Exchequer contribution account would be amply sufficient to pay, not only"—so-and-so, but also other sums; "and the Act, section 23, contains elaborate provisions for the appropriation of any balance remaining over after those payments have been made." I suppose Lancashire is not in the same case as all other counties in the country; some counties actually do find a balance to be provided for, do they not?—Yes, I believe so.

5874. Therefore provisions were necessary in the Act that arrangements might be made for the disposal of the surplus?—Yes.

5875. Therefore there is not necessarily any implication in the Act, by reason of the presence of those provisions, that there should be any surplus such as you regret you have not?—I hope the Commission do not understand that I have imputed anything; I am merely stating the fact.

5876. Those provisions were in no sense or shape a guarantee, direct or indirect, that there would be any surplus; they only made provision in case there should happen to be a surplus?—I think if you refer to the Act you will find that when it was passing, at any rate, there was provision made; it was dealt with in the transitory provisions for the tax to relieve the main road expenditure, the wheel and van tax, which was afterwards withdrawn, and certainly hopes were held out that a very large sum of money would accrue to the county councils from that source.

5877. In some cases counties have benefited where Lancashire, in fact, has not?—Yes.

5878. May I draw your attention to Table II. C for a moment? Your rates in the pound in Lancashire have fallen during the last three years, have they not?—For

*Mr. F. C. Hulton.*

27 May '97

Statistical tables prepared by County Councils Association.

Exchequer contribution account not sufficient in Lancashire, and no balance remains.

Rates for special and general purposes in Lancashire. Rise or fall in recent years.

*Mr. F. C. Hulton.* general county purposes the rates have rather increased, but for special county purposes they have decreased.

*May '97* 5879. For general county purposes they were, in 1894-95, 4.28d., and then in 1895-96 they were 5.18d., and they came down again?—They came down slightly next year.

5880. And for special county purposes they have come down year after year?—That is so.

5881. Have you a greater expenditure than you used to have?—Yes, the expenditure is going up.

5882. I want you to explain this: your expenditure being greater, and your rates in the pound on the whole having decreased rather than increased, I look to column 5, and I see that your rateable value has come down in 1896, as compared with 1895, from 8,899,405*l.* to 8,653,041*l.* If you have a greater expenditure, and if you have a lower rateable value, how is it that your rates have come down rather than gone up?—I think I explained to Sir John Hibbert that the decrease in the rateable value from 1895 to 1896 was caused by a large extension of the city of Liverpool, which took away nearly half a million of the rateable value of the county.

5883. But did it not at the same time take away the corresponding amount of charge?—That is a matter which has not yet been decided; there is an adjustment proceeding at the present time. I might explain that; if you add the general county purposes to the special county purposes, you will find that there is a small general increase during the three years.

5884. (*Mr. Wharton.*) Can you tell me at all what has been the increase in the total amount of local taxation in Lancashire during the time you have been clerk of the peace there?—The increase has been considerable.

5885. Could you, in round numbers, state what it has been?—I should not like to pledge myself, but I think that within the last 10 years there must have been an increase generally of at least *1d.* in the pound.

5886. With regard to the rating of railways which you have mentioned, you are aware, I daresay, of the three different systems—the English, the Scotch, and the Irish systems of rating railways?—I have not gone into them.

5887. Perhaps I might broadly state them to you; the English system you are aware of, it is rating the railway in each area; in the Scotch the whole railway is rated, and then each area takes its lineal mileage as its basis of rating; and in the Irish system there again the whole railway is rated, but each area takes the train mileage of that particular area. Now I observe that you have stated that you would propose that the assessable value of the railway should be taken for each county?—Yes.

5888. Would you not think it a preferable plan that the total value of the railway should be taken first, and then that either the union area or the county area of that railway should be taken?—That is to say, taking a great railway like the London and North-Western, running from London to Carlisle, that the value of that railway should be taken as a whole.

5889. As a whole first, and then that you should take the proportional value of that railway in each area according to either the Scotch or the Irish system; do you think that would be more satisfactory than taking the assessment in each area according to the present English system?—I think it would be a fairer thing for the railway.

5890. Would it not be fairer for all concerned?—I think so. I believe, if I might state it, that in the very early days—in 1846 and 1847, the London and North-Western Railway, or rather the Lancaster and Carlisle Railway, was assessed on that basis, but the courts in London would not allow it to stand.

5891. You mentioned Lord Derby's Commission; I want to know whether, up to the present time, the settlement which was arrived at by that Commission has been satisfactory to the county and to the county boroughs?—I think so. I can answer for the county of Lancaster; the five years have expired, but we do not propose to do anything.

5892. (*Mr. Arthur O'Connor.*) Will you kindly look at Table II. C again, under column 5 c, and observe the amount of the value in connection with the Agricultural Rates Act, 1896; it is 8,116,891*l.* How is that figure arrived at, or what does it mean, having regard

to the fact that Lancashire is so covered with industries other than agriculture?—North of the Ribble, Lancashire is a purely agricultural county, and the rating of agricultural land—again I am only speaking from memory—is nearly 2,000,000*l.*

5893. But you have 8,000,000*l.*?—I mean pure agricultural land. That is the total after deducting the difference between the rateable and the assessable value.

5894. But it is put in here in connection with the Agricultural Rates Act, 1896?—That is so. The Act provided that the county rate basis should be altered by revaluing the agricultural land, and then finding the assessable value, that being one-half of the value of the agricultural land.

5895. What does this 8,116,891*l.* represent, then?—That represents the assessable value.

5896. Of the agricultural land?—No, of the administrative county.

5897. Not the agricultural land only?—No, it represents the assessable value of the whole county, that being a reduction of one-half the value of the agricultural land.

5898. (*Sir John Hibbert.*) Dropping out one-half of the value of agricultural land?—Yes.

5899. (*Mr. Dalton.*) It is the value of all the properties?—It is the value of all properties less one-half of the agricultural land.

5900. (*Sir John Hibbert.*) Will you try to explain that and make it a little clearer?—May I take the union of Lunesdale? The basis fixed for the county rate in 1891 was 89,462*l.*; then we had to find out what the value of the agricultural land in that union was, and having found the value of the agricultural land, we had to deduct one-half of that value from the 89,462*l.*; that would bring down the assessable value under the Act to 63,764*l.*

5901. (*Mr. Wharton.*) You did not state what was the value of the agricultural land alone?—I could not answer that question, practically it is double the deduction.

5902. (*Mr. Arthur O'Connor.*) With what, then, should this 8,116,891*l.* in Table II. C be compared?—There is no comparison given in Table II. C.

5903. It is the difference between the county rate?—It is the difference between column 5 b, which is 8,653,041*l.*—that is the rateable—

5904. (*Sir Edward Hamilton.*) Excuse me interrupting for one moment; you gave a figure a moment ago of 63,764*l.*?—Yes.

5905. Is not the figure 8,116,891*l.* the corresponding figure to the 63,764*l.*?—Yes, that is so.

5906. (*Mr. Arthur O'Connor.*) What is the figure that corresponds to the 89,462*l.*? (*Mr. Dalton.*) Would that not be the figure in the preceding column?—The 8,653,041*l.* is the total rateable value for poor rate purposes, and the next figure is the assessable value for the poor rate.

5907. (*Mr. Wharton.*) It is the same thing, minus the reduction of the agricultural land?—Yes.

5908. (*Mr. Clare.*) What is the meaning of rateable value as compared with assessable value?—The rateable value is the value as fixed by the County Rate Act, 1852, and the assessable value is the value as fixed by the Agricultural Rates Act, 1896.

5909. Then rateable value and assessable value are not convertible terms?—No, the Agricultural Rates Act makes all the difference.

5910. In the memorandum you put in on behalf of the County Councils Association, you give the principle on which the commissioners' award in 1890 was made?—Yes, we do.

5911. After describing what we generally recognise as the priority payments, it shows that the balance is to be distributed according to rateable value?—Yes. You are referring to paragraph 35?

5912. Yes. It then does follow, does it not, that if the distribution of the local taxation account is to be equitably made as between county boroughs and the county, a uniform system of assessment should obtain over the whole geographical county?—Yes, that is so.

5913. Under the existing law, you find in Lancashire that you have got that uniformity of assessment for county purposes?—Yes.

*Mr. F. C. Hulton.*

27 May '97

Assessable value of administrative county of Lancashire since the Agricultural Rates Act, 1896.

Rateable value and assessable value, meaning of.

Local Government Act Commission. Principle on which the award was made. Distribution of local taxation account as between county boroughs and the county.

Mr. F. C.  
Hulton.

27 May '97

County rate committee in Lancashire deal, if necessary, with individual properties in a parish.

Valuation of all properties in a geographical county could be finally settled by one authority.

Imperial contributions have not made county councils extravagant.

LOCAL Government Act Commission gives satisfaction in Lancashire to county boroughs and to the county.

Main roads in Lancashire a charge upon the hundred. Effects of this.

5914. But the county rate committee only deal with the rateable value of parishes as a whole, do they not—they do not deal with the rateable value of individual properties in a parish?—If it is found necessary they do, and they have done.

5915. I understand you to say that in Lancashire the county rate committee have a uniform deduction from the gross in respect of different classes of property?—Yes.

5916. They apply that uniform deduction to the gross value of the parish as a whole, do they not?—No.

5917. To each class of property in the parish as a whole, and not to individual properties?—At first they deal with it as a whole, and then if it is found that any particular kind of property—I will take a large mansion for instance—is rated at a very low sum, they raise the assessment; but that is not a usual thing.

5918. You do not think, then, that there are any such practical difficulties as would prevent a system of having one superior authority to finally settle the assessable value of all properties in each geographical county?—I do not think so.

5919. May I ask whether, in your experience, you have found that county councils have gone into unnecessary extravagance, because a portion of their money has been paid out of the Government grant?—No, I do not think so.

5920. Your experience does not lead you to believe that Government grants, where they are made in proportion to the total expenditure, have in any way induced extravagance?—I do not think so, speaking from my experience.

5921. I think you said that in Lancashire generally the award of the Commissioners is considered to be satisfactory?—Yes.

5922. And that no one, as far as you know, wishes to upset it?—I have not heard of any county borough wishing to upset the present arrangement.

5923. Do you not think there would be a practical objection to upsetting financial arrangements on which different authorities have acted for a number of years?—We had a long contest before Lord Derby's Commission, and, I think, the result was that it gave fair satisfaction generally throughout the county; and I am quite sure I do not wish on behalf of the county, to raise the question again.

5924. With regard to main roads, I think main roads in Lancashire are, as you said, a charge on the hundred?—Yes.

5925. And not on the county as a whole?—Not on the county.

5926. I take it, also, that the amount spent by the county on main roads varies in different hundreds?—Yes.

5927. That is to say one hundred gets a relief in the pound much larger in proportion than the other hundreds get?—Possibly that may be so.

5928. But is it not so?—Each hundred gets half the cost.

5929. If you have your main roads charged to hundreds, and it remains with the county council to say whether a road shall be declared a main road or not, they can, by declaring a large number of main roads in one hundred, give an advantage to that particular hundred out of their Exchequer contribution account which is not shared in the same proportion by the other hundreds?—Of course if the number of main roads is increased in any particular hundred, that hundred gets the benefit of an increased sum from the Exchequer contribution account.

5930. Under the Act, and the section which, I think, you quoted—section 23, sub-section (3)—the surplus, after the payments enumerated in that section, which do not include main roads, ought to be applied in paying the general accounts of the county, ought it not?—Yes.

5931. And if it is applied in paying the general accounts of the county, the whole county receives the benefit rateably?—Yes.

5932. But if it is applied in paying charges which are a hundred charge, one hundred receives a benefit disproportionate to the others?—But will you allow

me to point out that the main road expenditure is a general county expenditure, and is made so by section 11.

5933. That has been held to be so, I agree, and I am not disputing the law; I am only referring to the fact that the county council, by appropriating their surplus for main road expenditure, is not appropriating it so as to give an equal benefit over the whole county, but is appropriating it in a way which gives a benefit to one portion of the county in excess of or less than the benefit given to another portion?—Yes, but the practical result is that each hundred gets practically the same amount of relief granted to it in proportion to its rateable value and the number of main roads.

5934. Do you mean to say that the main road expenditure is exactly in proportion to the rateable value?—No, I do not say so.

5935. Then if it is not, how can they get the relief equally?—I do not quite say equally, but they do get a relief fairly in proportion, one hundred with another.

5936. The county council of Lancashire, I think, have very materially increased their grants to main roads in the last few years—since 1890?—Since 1890 they have granted the contribution which I described as to secondary roads, and which is over 23,000*l.*

5937. (Sir John Hibbert.) I think what Mr. Clare means is that there has been an increased cost?—The cost has increased.

5938. (Mr. Clare.) I mean to say that there has been a tendency on behalf of the representatives in the county council to increase the number of main roads which they have adopted?—There has been no great increase during the last three years, but there was a considerable increase about the year 1891.

5939. The contribution towards secondary roads made by the county council out of the Exchequer contribution account is purely a voluntary contribution by the county council, is it not?—In a sense it is a voluntary contribution, as a matter of fact it is not, because when once a contribution has been made it is continued.

5940. But still at the same time it is within the power of the county council either to diminish or increase it if they like?—There is only a fixed sum, and they cannot exceed the sum of 23,000*l.* over the whole county.

5941. Why not?—Because that is the resolution of the county council.

5942. But the county council can alter their resolution?—Yes, they can, but that was a compromise come to in 1891, which I do not think it is likely will be altered.

5943. (Mr. Elliott.) The County Councils Association, as I understand, recommend to the Commission, that "provision should be made for one uniform assessment upon a basis applicable to the whole country"?—Yes.

5944. You are aware, of course, that at present there is very great divergence in the matter of valuation, taking the best standard that we have—the income tax assessments?—Yes.

5945. Do you think that uniformity of assessment, as between county and county, could be secured?—By the introduction of the surveyor of taxes I think it could be.

5946. Do you think the introduction of the surveyor of taxes would be sufficient to override the tendency to variations in the practice of Assessment Committees?—Yes, subject to what I have said in a further memorandum.

5947. You are aware, of course, that some assessment committees value high, and others low?—I am.

5948. And you think that the introduction of a single Government officer would be sufficient to prevent variations of that kind?—I think it would have a very strong tendency to prevent any attempt at reducing the value.

5949. Do you think that the introduction of the surveyor of taxes would secure such an uniformity of assessment as would enable the Government to distribute grants according to rateable value?—I think it would.

Mr. F. C.  
Hulton.

27 May '97

Uniform basis of assessment for the whole country could be secured by getting assistance of the surveyor of taxes.

Mr. F. C. Hulton. 5950. You mentioned, I think, that at your county rate committee the surveyor of taxes and the clerk to the Commissioners of Taxes attended?—They do.

27 May '97 5951. Is that a voluntary arrangement on their part?—When the committee was appointed I wrote up to the secretary at Somerset House asking for leave for the clerks to the Commissioners and the surveyors to attend, and that leave has always been granted.

Imperial contributions. Effect of Agricultural Rates Act, 1896. 5952. With regard to paragraphs 30-36 of the memorandum of the County Councils Association, I do not gather that the association make any recommendation to us with regard to the Exchequer contributions?—No.

5953. They have simply stated to us what the law is?—What are the facts.

5954. And you are not instructed to make any recommendation either as to the sufficiency or the insufficiency of the Government grants?—Simply this statement.

5955. Simply the statement of the law as it stands?—Yes.

5956. You make no reference to the Agricultural Rates Act?—No.

5957. Was that omission accidental or designed?—I do not think the Agricultural Rates Act was mentioned.

5958. It of course affects the amount of the Exchequer contributions?—In this way—that the Local Government Board have issued an order stating that under the Agricultural Rates Act a certain sum is payable to each county in respect of the difference between the rateable value and the assessable value, that that sum will be taken into account whenever the rates are levied, and that that has to remain in force for five years.

5959. Those sums, of course, constitute an increase of the Exchequer contributions towards local expenditure?—Yes, I suppose it would be so.

5960. I wondered why it was that no reference was made to that subject in your memorandum?—I do not think the matter was mentioned—it is the law under the Agricultural Rates Act.

5961. (Sir John Hibbert.) You thought it was rather political, perhaps?—Yes.

Statistics supplied by County Councils Association. Rateable and assessable value of certain counties. 5962. (Mr. Elliott.) With regard to Table II. C I should be much obliged if you could give me some further explanation. Take, for instance, the case of Herefordshire; you will observe that the rateable value of the county of Hereford is stated at 885,959*l.* and the assessable value is stated at 876,601*l.*, a difference of 9,000*l.* only?—Yes.

5963. Would you suggest that that represents half the value of agricultural land in Herefordshire?—No, I should not like to make any suggestion. Those figures have been supplied by the clerk to the Herefordshire County Council and have been inserted as sent up.

5964. Take the case of Berkshire; the rateable value of Berkshire is given at 1,123,860*l.* and the assessable value at practically a million; does the difference there, of about 123,000*l.*, in your opinion, represent half the value of the agricultural land in Berkshire?—That would represent probably half the value of the agricultural land in Berkshire.

5965. You see, of course, the great divergence between those two figures and the figures as they exist in the case of Lancashire?—Yes.

5966. Could you put in to the Commission a copy of the circular issued by the County Councils Association upon which this return was prepared?—Certainly.\*

5967. I will ask you, generally—do you think that the officers who have supplied these figures have really in all cases adopted the same interpretation of what was required?—I think so, but you shall have a copy of the circular with pleasure.

5968. You will notice, for instance, in the case of Kent, that the assessable value is actually in excess of the county rate basis?—Yes. That may be explained—but I do not know that it can be explained—in the same way that it has been explained in Lancashire, namely, that the county rate basis is one of long standing, and does not represent the present value.

5969. (Mr. Dalton.) While you are on Table II. C, may I ask how these figures of the rate in the pound for special

\*Pt. II of Appendix to Vol. I. of Minutes of Evidence, pp. 103 and 109.

county purposes have been arrived at? I see that in Lancashire you have 35 different areas; are these figures, 3·03*d.*, 2·69*d.*, and 2·64*d.* the average?—I think they represent the average.

5970. For the 35 divisions?—Yes.

5971. Then, on the question of assessments, you have found in Lancashire, as a rule, that the local assessment is considerably lower than the income tax assessment?—Yes.

5972. And you have found it necessary to raise it?—Yes.

5973. In Lancashire have you ever found a local assessment as high as the income tax assessment?—Yes, and within the last three weeks there have been two cases in which the poor rate was higher than the income tax—but they were very small places.

5974. That, I suppose, would be owing to the fact that there had been no recent valuation, and that the value of the property had fallen?—There had been no re-valuation of the property tax for three years.

5975. Is not one great reason why the local assessments are low, that they are the assessments of individual properties, and that it is exceedingly unpopular to raise the assessment of a particular individual property—you get an appeal against it then?—Yes.

5976. And when you take, as you do in the county, merely in the lump the rateable value of the whole union together or of the whole parish together, there is not the same interest on the part of individuals to appeal against it?—Quite so. That case arose again in the last month, where, in a union—I have mentioned it already, the Luncsdaie Union,—the assessment committee met and came to the conclusion that it would be undesirable to allow the farm rates to remain as they were, and they appointed a small sub-committee of farmers to value the farms, with express instructions that they were not to consider what the rent was. That came out quite accidentally at the first or second township we took, and the result was we had to put up all these farm rates again.

5977. I think that will be the main difficulty in getting a uniform assessment throughout the whole country, that it will have to be an assessment of individual properties?—To begin with it must.

5978. It must be that?—Yes.

5979. And there will be unpopularity in raising it in certain districts?—I am hardly prepared to say that, because I have ascertained that with regard to Schedule A, practically there are no appeals at all under the schedule. Of course the appeals before the Income Tax Commissioners have reference particularly to Schedule D.

5980. You find, I suppose, that when an assessment committee raises its assessments there are appeals?—Yes.

5981. Pretty frequently?—Yes.

5982. You would want a very strong body to carry out uniform assessment of individual properties?—Certainly.

5983. You would have more work to do in it a great deal, and more troublesome work than you have now in getting a uniform county basis?—Possibly.

5984. Were the contributions from the Exchequer enough to leave a balance for general county purposes, when the Act first passed?—Yes.

5985. The effect, then, is this, is it not, that the revenues which were handed over to you in 1888 have not grown so rapidly as these expenses which are payable out of them?—Yes.

5986. These expenses, before the Act of 1888, covered by the discontinued grants were increasing annually, was that not so?—Yes, very likely.

5987. The pauper lunatic grant, for instance, and the main roads?—Yes, and the police.

5988. And you think there was a revenue which was not very expansive, handed over to you to meet certain charges which were expanding rapidly?—Yes.

5989. The result has been that now the increased expenditure on these items has practically caught up and taken away the gain which you had in 1888?—Yes, that is so.

Mr. F. C. Hulton.

27 May '97

Local assessments in Lancashire as a rule have been lower than income tax assessments. Reasons for this. Would be necessary to have a strong body to effect a uniform valuation of individual properties.

Imperial contributions at first in 1888 left a balance for general county purposes, but do not do so now owing to increased expenses.

Mr. F. C.  
Hulton.  
27 May '97

5990. That would not be the case in Lancashire only, but it would be the case in other counties to some extent?—Where the counties are increasing in population.

5990. The increase of population must greatly increase your pauper lunatic grant, for instance?—No doubt.

5991. You do not allege, I believe, that it was assured when the Local Government Act was passed, that the revenues then handed over, would, for an indefinite period of time, be sufficient to leave a balance?—I do not say so.

5992. It was only that they would leave a balance at that date?—At that date.

5994. And they did at that date leave a balance even in Lancashire?—Yes.

5995. In your memorandum you set out certain purposes that are general county purposes, and certain purposes that are special county purposes, but I suppose that what is a special county purpose in one county is a general county purpose in another county?—It may be so.

5996. For instance, the police. If you have no police borough, that is a general county purpose?—Where there is no police division.

5997. And no police borough?—Yes.

5998. (Chairman.) I understand that your examination upon your memorandum, so far as it concerns the evidence actually on behalf of the County Councils Association, is now at an end?—Yes.

5999. But that you desire to put in, speaking as clerk of the peace for the county of Lancaster, an additional memorandum\* which deals with one or two matters that you specially desire, on behalf of that county, to bring before the Commission?—Yes, that is so.

Uniform valuation for all rates and taxes desirable. Could be secured by a joint assessment committee in each geographical county, with assistance of Inland Revenue and surveyor of taxes.

6000. Perhaps you would just explain the first of the points in such a way that it can be put on the notes?—My object in presenting this memorandum is with a view of trying to suggest some means of carrying out a resolution which has been passed by most of the county councils, and referred to in paragraph 29 of the memorandum of the County Councils Association; that is, "In any comprehensive scheme for consolidating and amending the laws of rating, provision should be made for one uniform assessment, upon a basis applicable to the whole country, on which all taxes and rates of every description should be charged and levied." I have already stated to the Commission the constitution of the joint county rate committee in Lancashire; now I venture to suggest, as a way of giving effect to that recommendation, that there should be appointed in each geographical county a county assessment committee, that that committee should have all the powers now vested in a union assessment committee, and that the assessments fixed by that committee should be the basis for all taxes and rates to be charged.

6001. In order that there may be no difference of opinion about it hereafter, I ask you what you mean by "geographical county"?—The whole county, including all county boroughs.

6002. Including all county boroughs within the county?—Yes.

6003. Have you done that in Lancashire?—We have now got a joint county rate committee, composed of representatives of the county council and one from each county borough. There are 15 county boroughs in the county.

6004. How long has that been in operation?—Since the passing of the Act of 1888.

6005. In your opinion, and from your experience, has it worked satisfactorily?—It has worked exceedingly well. We have had two valuations, one in 1891 and one just concluded.

6006. And you know of no probability of the arrangement being broken up?—Not at all.

6007. Do you propose that it should be made compulsory to re-value every year?—No. I think that if a county assessment committee is appointed the assessment should be in force for, say, five years, with power to add [as there is now in the union assessment committees] valuation lists for new property, or for changes in the existing property.

6008. Do you, as a matter of fact, in Lancashire now arrive first at a gross rental of all properties in the

Quinquennial revaluation sufficient with power of revision and addition.

county, and from that, make, according to the class of property a uniform deduction?—That is so.

6009. Do you, as a matter of fact, have representatives of the Inland Revenue Department present?—Yes, the clerk to the Commissioners and the surveyor of taxes for the district attend every meeting.

6010. Do you think that if your scheme were followed it would tend to secure uniformity, not only within the area of the geographical county but as between different geographical counties?—I think so, but I should propose to go further.

6011. Would you kindly do it in your own words, please?—What I suggest is that the county assessment committee should have all the powers of the present union assessment committees, and then with a view of obtaining uniformity, as between county and county, that there should be created a Special Commission meeting whenever and wherever required, whose duty it would be to see that the county assessment committee's work was properly carried out, and powers should be given to such commission to prescribe regulations and to enforce its orders. That, I venture to submit, should be a special commission sitting primarily in London, but to go about visiting the various counties to see that the proper assessments are made, and that the principles of the Act are carried out.

6012. Do you desire to add anything to that suggestion, or have we got it now from you completely?—I think that is the main suggestion I have to make.

6013. I think you have also another suggestion to make to us as from yourself, that the distribution of the probate duty grant should be amended and should be made in proportion to the rateable value of each county?—That is so.

6014. And you put in a table showing, according to your view of it, what the effect of that alteration would be?—Yes.\*

6015. I should like you to justify the proposal, and give me your reasons for it?—Yes. I think I ought to state that this proposal is contingent really upon a uniform assessment being made throughout the geographical counties throughout England, otherwise it would not work fairly.

6016. On that assumption, why do you select the rateable value?—Because that is at present the only existing figure that I could give.

6017. Do you put it to me that the rateable value, apart from every other consideration, is a fair test upon which to distribute the probate grant?—Yes.

6018. You take no account of population at all?—Rateable value and population I find generally go together; where there is an increase of rateable value, it is followed or preceded by an increase of population.

6019. I cannot controvert that, although I am surprised it should be so; I know it is not so, as far as Scotland is concerned?—I was not aware of that.

6020. (Mr. Dalton.) The effect of distributing the probate duty grant on rateable value would, I suppose, be to give most to the richest places, would it not—wherever the rateable value was high they would get a large share and wherever it was low they would get a small share?—Would you kindly take the small county of Westmorland? According to the present distribution Westmorland gets 3,999*l.*, and if it is distributed according to rateable value it would get 5,959*l.*

6021. But Westmorland is not a county in which there has been a great fall in the value of agricultural land. May I take the two counties of Essex and Norfolk?—Yes.

6022. Essex at present gets 51,800*l.*?—Yes.

6023. But if you gave it according to the rateable value it would get 42,516*l.*?—That is upon the rateable value of March 1895 not upon the present rateable value.

6024. It would get less, I presume, on the present rateable value, for the value of land has been falling so in Essex. Norfolk would get somewhat less too; but the general effect would be, would it not, that a rich residential district, for example, with a high rateable property would get a great deal more than a poor district—take the West End and the East End of London, for example?—Take Lancashire—you will find it makes no difference.

Mr. F. C.  
Hulton.  
27 May '97

Uniform valuation throughout the country secured by County Assessment Committee and a Special Commission to supervise these committees and prescribe regulations.

Probate Duty Grant. Distribution of should be on basis of rateable value if assessment in geographical counties uniform.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 114.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 115.

Mr. F. C. Hulton.  
27 May '97

6025. Lancashire is a big county and it may make no difference there, and it might make no difference in other large counties where you have rich and poor joined together—where you have a large population and also a high rateable value; but you would get some districts where you have a large population and a small rateable value, I suppose?—That might be so.

6026. You say population and rateable value go together; do you see objection to taking the population as a basis instead of rateable value?—I have not considered that.

6027. You think that a county assessment committee, formed as you propose, could carry out the whole of the work of the assessment in Lancashire?—Yes.

6028. And of course if that could be done in such a huge county with such an enormous number of different properties, you would consider it could be still more readily done in the smaller counties?—I think the assistance of the surveyor of taxes will get rid of an enormous number of objections.

6029. You do not think the job is too big to be done by one body?—No, and I may add that I am supported in that opinion by a large number of the members of the county rate committee who have discussed this question.

6030. (Mr. Elliott.) With regard to your proposal that rateable value should be taken as the basis for these Exchequer grants, would you explain a little more fully the reason for that proposal?—I think it is a fairer test than the discontinued grants which were made in 1888.

6031. What standard of fairness do you think should be taken in a matter of this kind?—In 1888 it was known that many of the counties were, if I may use the expression, extravagant in a number of their appointments, and they got the benefit of those appointments: now 10 years having expired it appears to me that the basis might be altered, and there is no question, I think, that rateable value is the fairest basis to adopt.

6032. I rather understood from the first part of your answer that you simply thought that that was a fairer method than the one adopted?—Yes.

6033. Do you put it forward to the Commission as being the fairest method?—No, I say if my first suggestion is carried out and you get a uniform rate throughout the country, then the distribution of the probate duty grant should be based upon that; I do not go further than that.

6034. Do you think that the character of the local expenditure should be taken into account in determining the amount of Imperial contributions towards that expenditure?—No, I should say that the sum to be distributed should be distributed as I suggest, and not upon an accidental state of circumstances in March 1888.

6035. I will give you a concrete instance, which may possibly show what I mean. Under your scheme the county of Glamorgan, instead of getting 26,000*l.* would get 41,000*l.*; what would be the effect of that increased grant of 15,000*l.* in Glamorgan—what rates would it relieve?—I cannot tell you.

6036. You have not gone into that question of expenditure?—No, I have not.

6037. Take the case of London; under your scheme, London, instead of getting 398,267*l.* would get 383,904*l.*; have you considered at all the case put forward by London, not for a decrease of grant, but for an increase of grant?—No, I have simply given you the figures, that is all.

6038. (Mr. Clare.) You suggested that there should be a re-valuation every five years; suppose that during the five years there happens to be a substantial alteration, we will say a substantial diminution in the rateable value of a county borough, to take that as an illustration, the effect of that diminution will not be appreciated by the ratepayers until the new valuation comes in at the end of the five years?—I think I supplemented my answer by saying that the basis should be fixed for five years, with power to issue valuation lists when necessary.

6039. I understood you to mean this, that you should have a valuation list made every five years, with power for the county assessment committee to add new property as a supplemental list?—Yes.

6040. I want you to take the reverse case; I will take as an illustration the case of Liverpool, with an assessable value of three millions and a half to start with on

a given date when the valuation is made; during the period of five years that assessment drops half a million, but the loss of assessable value is not appreciated in the rates until the end of five years, when the new valuation comes into force?—Yes.

6041. The effect of that would be that at the commencement of the new valuation list the ratepayers would suddenly find that, without having to provide for any increased expenditure, they have to provide an extra rate of 6*d.* to make up for the loss of rateable value?—But that is rather a matter of detail. Under the county rate committee any diminution of property is the subject of appeal to the county rate committee and to this joint county committee, and they alter the assessment.

6042. Then, it practically comes to this, that it is an annual assessment and not a quinquennial assessment?—I think in the metropolis the valuation list is in force for five years.

6043. Do you not see my point, that it is objectionable from the ratepayers' point of view that they should suddenly feel that loss of 6*d.* in the pound, instead of having it come upon them gradually during the five years?—Still, if there is a very large diminution, say 40,000*l.* or 50,000*l.* in Liverpool, that would be the subject of appeal to the joint committee.

6044. I may say that as a matter of fact the county rate assessment of Liverpool was certainly 400,000*l.* above its poor rate assessment for at least three or four years, and the effect of it was that when the alteration was made it increased the amount of rates you had to levy to provide for the same amount of expenditure?—But any alteration in property would be the subject of appeal.

6045. Then I understand you would have a valuation once in five years with a supervision of it every year?—In case of a serious diminution of property it would have to be. As a matter of fact, I believe we have only had about half a dozen appeals to the joint committee, principally in the Ulverston Union, where mines have gone out of working.

6046. I think you told me a short time ago, that the settlement of 1888 as between counties and county boroughs was generally satisfactory, and that it was undesirable to disturb it?—Yes.

6047. Why should you disturb the settlement as between counties and counties?—In what way?

6048. Instead of distributing the probate duty grant according to the needs of the counties by distributing it according to the rateable value whether they wanted it or not?—I lay the suggestion before this Commission and leave it with them.

6049. (Mr. Wharton.) You have suggested that there should be a special commission created who should take over the existing work of quarter sessions as an appeal court?—Yes.

6050. No doubt, therefore, that special commission would be a judicial commission?—Yes.

6051. For the whole of England?—Yes, I should like it to be both an administrative and a judicial body.

6052. You would have it composed of a body of men whose decisions would be looked upon with respect?—Certainly.

6053. No doubt there would be some little addition to the expense, because those men would have to be a paid body?—Yes, certainly.

6054. There would be that additional expenditure—probably not a large one?—Yes.

6055. You would contemplate somebody in the position and with the standing of a judge at the head of that commission, assisted by other men of legal experience?—That is so—in order to gain uniformity in the decisions.

6056. And you think that the gain of uniformity would more than compensate for the expense?—I am sure it would be the greatest advantage.

6057. (Sir Edward Hamilton.) You advocate a different distribution of the probate and estate duty grant; you would substitute rateable value for the basis of the discontinued grants?—Yes.

6058. Have you ever considered another proposal which I think was originally made when the Bill was brought forward in 1888—that of indoor pauperism?—I have not considered that; I believe it was raised in 1888.

6059. I rather think it was in the original Bill?—I believe it was.

Probate Duty Grant, suggested distribution on basis of rateable value.

Special Commission as an appeal court from County Assessment Committee with administrative and judicial functions.

Probate Duty Grant, suggested distribution on basis of rateable value.

A County Assessment Committee with assistance of surveyor of taxes can undertake the valuation of a county.

Probate Duty Grant. Proposed distribution on basis of rateable value and not upon the basis of certain circumstances existing in 1888.

Quinquennial revaluation sufficient, with powers of revision and addition.

Mr. FREDERIC MERRIFIELD called and examined.

Mr. F. Merrifield.  
27 May '97

6060. (Chairman.) You are, I understand, Clerk of the Peace for the counties of East Sussex and West Sussex?—Yes.

6061. And have been along with Mr. Hulton, appointed to come here to-day on behalf of the County Councils Association?—That is so.

6062. I have looked carefully over your memorandum,\* and I think I am right in saying that over a very great part of the recommendations contained in it, you entirely concur in what Mr. Hulton has put before us?—Yes; I especially concur in his proposal for the appointment of the special commission.

6063. It has obviously so much to recommend it that I am not surprised at that, but I do not gather from your paper whether you have actually tried it?—I do not quite see how it could be tried.

6064. I understand in Lancashire it has been tried, and that they have actually, since the passing of the Local Government Act, obtained a considerable amount of uniformity?—That is the county committee; I was speaking of the central commission.

6065. I beg your pardon; I went at first to the county committee?—I am afraid my experience does not agree with Mr. Hulton's about the suitability of the joint committee for the purpose proposed.

6066. Perhaps you would give me your experience?—My experience, generally, with regard to joint committees is, that the members of the joint committees come frequently, I think I may say generally, to consider themselves as representatives of the interests of the county or county borough by which they are appointed, instead of as members of a tribunal for the purpose of deciding a thing on judicial grounds; and that where interests are conflicting, you do not get harmony of action.

6067. I think I was right in saying what I put to you, because I observe in paragraph 11 of your memorandum of evidence that you agree: "That in general this county committee should be a committee for the geographical county, and think it might well be constituted much in the way suggested by the Clerk of the Peace for Lancashire"—that is the joint committee, practically?—Yes; but you will see, by turning to paragraphs 17 and 18, that I provide for an appeal against what may be a wrong decision of the majority of that committee; I think that is essential.

6068. Still, you do not differ from the chain of local authorities which Mr. Hulton recommends?—No, except that I am in favour of continuing the union assessment committees.

6069. (Mr. Murray.) May I ask whether you have a joint committee in Sussex?—We have no joint committee for the purpose of rating, as between the county and the county boroughs, for the purpose of the division of the Exchequer contribution grant according to the rateable values.

6070. (Chairman.) That is what I asked you, whether there had been any attempt to experiment in the same way in Sussex as they experimented in Lancashire?—There has been no experiment, because we have only two county boroughs. We arranged it satisfactorily with one county borough; with regard to the other, I was satisfied that we should find great difficulty in the solution of the difficulty, and we came to a compromise.

6071. Have you any objections to stating what the nature of the compromise was?—No. I knew what Lancashire had done, and I was desirous of having the relative rateable values of the county borough and of the county settled upon similar principles all through, taking the property tax qualification as a basis; but I found extreme difficulty. I found an indisposition to acquiesce in what I thought to be a fair settlement, and we came to a compromise. I felt sure that if we had gone before a joint committee, there would have been a dispute first of all as to how many there should be on the joint committee, on each side, and if it had been settled that there was to be an equal number on the joint committee, we should probably have had a dispute as to who was to be the chairman with the casting vote.

6072. Do you think it possible, over so large an area as a geographical county, to establish the compulsory system of uniform deductions which Mr. Hulton

suggested?—I think generally speaking that is the condition of the geographical county is such that it is a large area with a great many different kinds of property, the uniform scale of deduction would work well, and would be agreed upon.

6073. You have no doubt of the desirability of trying it if it is at all feasible?—I have no doubt at all about that. I think there would be no difficulty in coming to an agreement for the satisfactory conduct of the work of the joint committee, such as is proposed, provided that the parties had the power of appeal to some central outside and independent authority. I think there would be very few appeals, but the knowledge that the power existed I think would be enough to ensure the work being done fairly.

6074. I am not quite sure whether I apprehend accurately the lesson which you want the Commission to draw from the table which is at the bottom of paragraph 4 of your memorandum?—The lesson I want you to draw from it is that in the first five unions that are mentioned there, there is strong evidence in the last column of that table that they are rated upon uniform principles, because there is only a difference of something like  $\frac{1}{2}$  per cent. when you compare the rateable value of each of those five places according to the poor-rate assessment with the county rate basis, which is made upon uniform principles; but when you come to some others you find great diversity, and a diversity which can only be accounted for on the ground that the assessment committees in those cases do not do their work properly.

6075. You agree, I may gather, that the present system gives a premium upon those who desire to keep their union assessment as low as possible?—Yes, there must be some reason for it, but I cannot see any great advantage in it, because, as paragraph 3 of my memorandum explains, in the county rate basis we practically disregard assessments made by the union assessment committees.

6076. However, any approach to such a uniform arrangement as both you and Mr. Hulton suggest, would cure these obvious defects which you bring to our notice in this table?—I think so; the establishment of a county committee, with proper controlling powers and revising powers, would do so.

6077. At what intervals do you desire that this machinery should be gone through?—Lately, I should say, properties have been changing so much in value owing to the fall in agricultural land, that we find it necessary to have a revision of the county rate basis every three years, and the last suggestion was, and it was a suggestion accepted, that it should be every two years. But I do not think that state of things will continue, and I am very much disposed to think that the revision, at periods of from three to five years, with the same power that the union assessment committees have, of preparing a supplementary valuation list, wherever property is either decreased or diminished in value, or wherever new property is added to the rate, would be all that is necessary.

6078. Do you agree to the surveyor of taxes having a power of expressing his views and of consulting with the committee?—Yes. I think he should be present, and have a power of making representations both to the union assessment committee and to the county committee.

6079. You heard Mr. Hulton's evidence and the questions which were put to him; is there any point on which you would like to speak which he has not covered?—Just one or two points upon the memorandum of the County Councils Association occurred to me while Mr. Hulton's evidence was being given. First he was asked with regard to the salaries of clerks to justices of petty sessional divisions, charged to the general county account, and Mr. Hulton said that in Lancashire he thought the fees were about equivalent to the expenditure. That is not the case in either East Sussex or West Sussex. One reason is that there are a great many fees remitted, on general grounds, which do not take the shape of cash, and do not come into the receipts of the county, but are, under the Act of Parliament, taken into account in estimating the salaries of the clerks, because they are included, of course, in the work done by the clerk, but not in the work for which fees are paid. As regards the hundred bridges, it was mentioned. I think, that it was believed that only in Lancashire were the bridges charged upon the separate

Mr. F. Merrifield.  
27 May '97

A County Assessment Committee desirable, but there should be an appeal to an independent authority.

County Rate Committee in Sussex disregards assessments of Union Assessment Committees.

Quinquennial or triennial revaluation sufficient, with power of revision and addition.

Surveyor of taxes should assist the County Committee and the Union Assessment Committee.

County bridges charged upon separate rates in West Sussex and upon hundreds in East Sussex.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 116 to 119.

County Assessment Committee desirable, but there should be an appeal from, and Union Assessment Committee should be retained.

No joint committee in Sussex as in Lancashire as between county and county boroughs. Difficulty of carrying out such a scheme. A compromise effected.

Mr. F. Merrifield.  
27 May '97

hundreds. Curiously enough, in West Sussex the county bridges are not a charge upon the rates at large, but the county is divided by a very ancient division into three rapes, and each of those rapes maintains the county bridges of that rape. Therefore, we have special assessments for the purpose. Then we also have hundred bridges in East Sussex which are very troublesome indeed. They are bridges which are repaired out of the rates levied over small areas, which are very difficult to raise.

6080. I am doubtful whether we need perhaps go into all these minute details; is there any other point?—Yes, there is one point which should be mentioned with regard to the relief that the ratepayers of the counties have received from the Exchequer contribution account. I am not aware of any county in which there is a surplus available out of the Exchequer contribution account; but it has not been pointed out to the Commission yet, that I have heard, that the relief which the ratepayers of the county get, is not so much in the county rate as in the poor rate from the payment of the union officers' salaries. Then it was mentioned that I could explain in reference to Table II. C.\* one case where there has been a great fluctuation of rates. If your Lordship will turn to West Sussex, you will find that in West Sussex the rate was only one halfpenny in the pound in 1894-95, and that it afterwards rose to 3d., and has been since about 2½d. That is entirely owing to the fact that there was a very large expenditure on a lunatic asylum incurred at that time, and that we now have to pay on the repayment of loans and interest upon that. The county rates in East Sussex, I think, are about the same as they were before the Act of 1888. The ratepayers of Sussex get a great relief, owing to the poor rates having been reduced in consequence of the county handing over a portion of the Exchequer contribution grant to the payment of union officers' salaries. West Sussex distinctly benefits in the way of county rates, besides the ratepayers benefiting in the poor rate in the way I have mentioned.

6081. (Mr. Murray.) I gather that there is this difference between your proposals and Mr. Hulton's, is there not, that you would retain the existing machinery of the union assessment committee but superimpose on it a revising body, the county assessment committee?—Yes.

6082. Mr. Hulton proposed that the county assessment committee should do the whole work, as I understood him?—Yes.

6083. Then above those two bodies you would have a central commission to control the two?—Yes, there I agree with Mr. Hulton.

6084. That would be three bodies, then, practically?—Yes, but then the central commission would take the place to a great extent of the quarter sessions as the court of appeal in rates.

6085. Would that not involve two appeals?—No, I think not. It might in some cases, but you would very rarely get appeals to this central body from the counties; you would only get an appeal, I think, where there was a prospect of injustice being done between county and county or between county and county borough.

6086. You prefer the existing machinery of the union assessment committee to Mr. Hulton's county assessment committee?—I think you would find it exceedingly difficult to get a sufficient number of gentlemen to do the work that would be necessary. I mention in paragraphs 8 and 9 of my memorandum that in four unions, as to which I have made inquiries, I found that the assessment committees met about 12 times a year in each of those unions—eight to ten gentlemen being present.

6087. They appear to have got over that difficulty in Lancashire?—Well, I do not know. Mr. Hulton's opinion—and Mr. Hulton's is a very valuable opinion of course—is that in Lancashire it could be done, but in Lancashire it is evident there is a uniformity about the rating which clearly does not exist in Sussex. I think, probably they have brought their assessment into a better condition there than is the case in many counties.

6088. Would not the main step to take be to prescribe a statutory scale of deductions?—I think that would help.

6089. Would that not remove nearly all the difficulties that you have got in your mind?—No. I think the

greater portion of the questions that arise with an assessment committee, are questions not of deduction, but questions of gross estimated rental in putting down the rent, especially where it is property not of the usual character—not like one of a row of houses—or where it is property occupied by the owner.

6090. You do not see any prospect of prescribing a uniform system for that purpose by statute?—I think you would help very much by making the surveyor of taxes attend. He would confront any objector of course with the property tax assessment wherever there is an actual rent paid.

6091. Yes; but you would have the same difficulty of arriving at the Schedule A. assessment, I suppose?—Not where there is an actual rent paid, because there you get the rent as the basis of the assessment.

6092. But where you have not that—which is, of course, the case in which all the difficulty arises?—There the surveyor of taxes would help very much, because he could assist the committee, he could refer to properties of the same class.

6093. But he does not know much more about it than the adviser of the assessment committee, I suppose?—No, but then his cue is to keep up the assessment—to assess all the property at its full value upon uniform principles.

6094. No doubt. Is the poor-rate assessment that you give in paragraph 4 the gross assessment?—No.

6095. Is it the rateable?—It is the rateable value.

6096. How can you compare that with the county rate basis, which is based on gross value?—That is just the same. The County Rates Act defines full and fair annual value for the county rate purposes as meaning the net annual value, as the same is or may be required by law to be estimated for the purpose of assessing the rates for the relief of the poor. If both were done rightly, both ought to agree exactly.

6097. Because they ought to be on the same basis exactly?—Yes.

6098. (Mr. Elliott.) With regard to these differences between the county rate basis and the poor-rate assessment, is the difference in such unions as k, l, m, and n uniform as regards the various classes of property rated?—I do not know that I quite follow.

6099. Do you find the same difference between the two assessments in the case of land and in the case of houses?—I could not tell you that. The business of the county rate basis committee is to value equally as between parish and parish, and it is only incidentally that the question of the rating of individual properties comes in.

6100. Then the endeavour of the county rate basis committee is to find out whether the actual property in a particular parish has been fully and fairly assessed?—Yes.

6101. It does not go to the question of the different properties in that parish?—Only so far as may be necessary to find out whether the whole property of the parish is properly assessed or not.

6102. With regard to the information given in Table II. C., which was put in by Mr. Hulton, showing the assessable value and the rateable value of counties, I notice that in the case of East Sussex the rateable value is put at 1,695,814l., and the assessable value at 1,530,739l.; does that difference represent half the value of agricultural land in the county?—I would rather you took it upon the figures in columns 6 b and 6 c, because they are the county rate basis, and that is assessed, I know, upon more uniform principles than the poor rate is. You may take it that the difference between 1,621,960l. in column 6 c, and 1,758,700l. in column 6 b, represents half the value of agricultural land in East Sussex.

6103. And the same reply applies to West Sussex?—Yes.

6104. (Mr. Dalton.) Referring to paragraph 4 in your memorandum of evidence, I see that in every union the county rate basis shows an increase on the poor rate assessment?—Yes.

6105. Does the county rate basis at all correspond with the income tax valuation?—Yes, that is the basis of it.

6106. It absolutely corresponds with it, so far as gross estimated rental is concerned?—Not always, but generally it does, unless reason is shown.

Mr. F. Merrifield.  
27 May '97

Surveyor of taxes should attend meetings of Union Assessment Committee.

County Rate Committee endeavours to ascertain whether individual properties are fairly assessed.

Rateable and assessable value in East Sussex.

County rate basis in Sussex is on basis of income tax valuation, and is higher than poor rate valuation.

Imperial contributions. Relief obtained by ratepayers.

Uniformity of valuation. Mr. Hulton's and Mr. Merrifield's proposals compared

Deductions. A statutory scale desirable.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 112 and 113.

Mr. F.  
Merrifield.  
27 May '97

6107. It very nearly corresponds?—Yes, very nearly.

6108. Do you agree that the poor-rate assessment is always lower than the county rate basis?—I am disposed to think that it is always lower than the true value. Everybody is interested in lowering the rating of his own property, but he does not see that he is interested in seeing that his neighbours are rated up to their full value.

6109. That difficulty will apply when your county committee, if it is constituted, take up the valuation of individual properties?—Yes.

6110. That is a difficulty they would have to face?—I do not think it would much matter when the great object is equal rating.

6111. You think they would get over that?—Yes, I think they would.

6112. What would be the size of the county assessment committee for your county if these different authorities were fairly represented upon it?—There are 14 unions; I think each of those should be represented—there should be one representative for each; and then there is the administrative county and the county boroughs.

6113. What representation would you give them?—I was wrong in saying 14, because there is a large parish under a local Act—the parish of Brighton; there are 15 unions or areas equivalent to unions, and there would be three representatives of the county boroughs and the county.

6114. Three for each of them?—One for each, that is three in the whole.

6115. How many for the county?—I am not sure that you need have more than one for each.

6116. One for the county?—One for the county, and one for each of the county boroughs.

6117. Then the result would be that the union representatives would have an enormous preponderance on this committee?—I think so.

6118. They would have 15 to 4?—15 to 3.

6119. Do you think that that being the case, the present system of assessment would be very much altered?—I think it would be altered.

6120. Would they not each be still in favour of keeping the assessment low?—No, because you would have a number of the committees—five of the principal unions appearing on my table—I believe it would be six out of 15—who would wish to assess the property properly, and I have no doubt that when they were brought together face to face with the others, one principle would prevail, or the other, and I have very little doubt that the principle prevailing would be that of fair and proper assessment according to actual values.

6121. Still, is one representative sufficient to give to the county when the county consists of 15 unions?—I am not prepared to say that one is sufficient. That is a matter for consideration. I think it might very likely be that the number ought to be increased, but that is a point I have not considered.

6122. I understand that the difference between your opinion and Mr. Hulton's is, that he is of opinion that this body could do the work in Lancashire?—Yes.

6123. But that you doubt whether such a body as this could do the work in your county?—I very much doubt whether it would.

6124. Would it make it easier for it to do the work if it was a larger body appointing committees to act in the different districts?—I think still there would be very great difficulties attending upon it. You must consider that these assessment committees meet generally, I think, as many as 12 times a year; and then the objection is not only that, but there is the difficulty of the work, and you must remember that you are losing the advantages of the services of persons experienced in assessing, and also possessing local knowledge.

6125. But you would get, as I understand, this knowledge from the representative of each union, and I suppose they would send their best representative?—Is that not rather a large supposition?

6126. On an average they would send a good representative, at any rate, would they not?—I would rather not answer that question.

6127. Then you propose to keep the assessment committees as they are?—To keep them as they are, but,

perhaps, to strengthen them it might be desirable to strengthen them as suggested.

6128. How would you bring about the uniformity, then?—I would have the uniformity brought about in this way, that every valuation list would have to be approved by the county committee.

6129. And if they did not approve of it, if they had one of these lists sent up to them where the whole of it is, say, 21 per cent. too low, and they altered it from top to bottom, what would happen?—Then there is this central commission, the special commission proposed by Mr. Hulton, to which an appeal could be made. I would give any one of the bodies represented on that committee the power of appealing to the special commission. I think you would have very few appeals, because the knowledge that that power existed and would be exercised in case there was a want of agreement and of uniformity would, I think, certainly result in the committee agreeing to uniformity of rating.

6130. But this appeal would be for an enormous number of individual properties, it would not be merely on the principle on which the whole valuation list was prepared?—That would be so. Certainly, I think I would limit the appeal from the county committee to the special commission to general questions.

6131. How would that work practically? Take any one of these valuation lists, consisting of an immense number of different properties, you might find, on the whole, that it is 21 per cent. lower than the county put it at?—Yes, you might.

6132. To put it right they would have to alter nearly every property in it, I suppose?—They would send it back to the assessment committee to alter; they would say "This is a bad list, you must correct it."

6133. But suppose the assessment committee stick to it, and say it is a good list?—Then what I propose is that there should be power to appoint some person to do the work, and charge the union with the expenses. There is a somewhat similar power now. Both the county rates committee and the assessment committee have the power of having a valuation made and charging the expense, under certain circumstances, upon the district by default of whose authority it has been rendered necessary.

6134. Have you had any experience of the working of that arrangement?—No, I cannot say that I have.

6135. Do you know any case in which it has been resorted to?—I know certainly of none in county rate matters, but then we have never had an appeal against the county rate, people have been satisfied that we meant to be uniform and just, and I think they have never carried it to the extent of appealing.

6136. You would admit, would you not, that it is a very different thing having a uniform basis in which you take the whole of the valuations for each parish and give a sum total, from what it would be when you come and alter the assessment of every individual property?—Yes, but I think when the list came up to them as approved by the assessment committee, they would have these cases to deal with—they would have the case, for instance, of people who were individually dissatisfied with the amount at which they are assessed, and who had failed to obtain redress, and they would be dealt with in the way I suggested; but, perhaps, before it came to this stage, they would look at the list and they would find that the whole list was made upon a bad principle, as, for example, in the case of the union which is at the bottom of my list which, I may say, was a union where an assistant overseer complained that the assessment committee had instructed him to put as the gross estimated rental 20 per cent. less than the actual rents paid.

6137. Less than the actual rents paid?—Yes. When they found cases of that sort—and they would infer it whenever they found that the union assessment valuation list was considerably below what the property tax assessment showed—they would send it back to the assessment committee and say, "You have not rated the property as the Act requires you should, and you must be good enough to correct this list."

6138. Do you agree with Mr. Hulton that the probate duty grant should be divided between the different counties upon their rateable value?—That is a point on which I am not prepared to express any opinion. I may say that my experience rather agrees with him to the effect that, at all events, in the area with which I am

Mr. F.  
Merrifield.  
27 May '97

Special Commission could hear appeals of bodies represented on County Assessment Committee from decision of County Assessment Committees.

Proposed County Assessment Committee. Suggested constitution of.

Union Assessment Committees, advantages of retaining them. But they should be strengthened, and the valuation lists approved by the County Committee.

Probate Duty Grant. Basis of distribution.

*Mr. F. Merrifield.*  
27 May '97  
best acquainted, the population and the rateable value taken over a large area come very closely together. We found that to be so in the question very much litigated between the county borough of Brighton and the county of East Sussex of the lunatic asylum there; we found, practically, that whether we took rateable values, or population it made no difference.

6139. If you took Brighton and Hove, for instance, would the result be the same?—That is a small area, and I think that there you would find a great difference.

6140. If Hove was a county borough, and if Brighton was a county borough, and each took its probate duty grant in proportion to its rateable value, the result might be very unfair?—I think it is extremely probable you would find a great difference. I limited my remark to large areas.

6141. You mean a very large area?—Yes.

*Imperial contributions. No surplus in any county at present time.*  
6142. I think you said you did not think there is any county in which there is a surplus at the present time out of this Exchequer contribution account?—I am not aware of any.

6143. But I suppose in the majority of counties after the passing of the Act of 1888 there was a surplus on that account?—I think not.

6144. Was there not in your county?—There was not in either of my counties—neither in East Sussex nor in West Sussex.

6145. Not immediately after the passing of the Act?—No, because there were heavy charges thrown upon the county. The Exchequer contribution account had to pay not only the fixed charges, but it had to pay the main roads; and it also had to pay the expenses of the union officers.

6146. Are you calculating the whole of the cost of the main roads, or only half?—The additional half; you see we paid half before.

6147. You paid half, and you got back a quarter; before the passing of the Act of 1888, the county paid one-half of that expenditure?—Yes, the county paid one-half, and, practically, it came to only one quarter.

6148. What additional charges are you charging against the Exchequer contribution account when you say there was no balance?—There was the very large expense in connection with the salaries of union officers.

6149. I mean on the main-road question—are you charging the whole of the expenses of the main roads?—I should think, probably, they would come into it, but I cannot tell you, as I did not prepare these accounts myself.

6150. Do you think Government grants tend to extravagance when they are not given in proportion to expenditure?—No; I think if they are given in proportion to expenditure they tend greatly to extravagance.

6151. They have not been given in that proportion for a great number of years past?—No.

6152. Do you consider that an improvement?—Yes.

6153. (*Chairman.*) Have you any point which has been passed over which you would like to speak upon?—That point which has just been mentioned reminds me of a point I wanted to mention, and that is a case in which hardship is done to counties, and an extravagant and unnecessary expenditure encouraged in the boroughs, I think, by the law in a way which it strikes me ought to be altered. That is in the case of the police. If the county wants to increase the number of its police force by one person, or to increase the scale of pay, it has to obtain the sanction of the Home Secretary; but the boroughs are under no such restriction; and they are able to increase their police force to any amount, and to increase their pay, with the certainty that half the extra cost of that will fall upon the county rates. The county has to pay half the pay and clothing of the borough police.

*Mr. F. Merrifield.*  
27 May '97

*Imperial contributions, if based on expenditure, tend to extravagance.*

*Police. Boroughs can increase number and pay of their police and half cost falls on county rates. Counties cannot do so without leave of Home Office.*

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## SEVENTEENTH DAY.

Friday, 28th May 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. SIR J. T. HIBBERT, *in the Chair.*

Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.

H. E. CLARE, Esq.  
T. H. ELLIOTT, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. EDWARD WOLLASTON NADIR KNOCKER called and examined.

*Mr. E. W. N. Knocker.*  
28 May '97  
6154. (*Sir John Hibbert.*) I understand you are town clerk of Dover, and have been so for a number of years?—Yes.

6155. Since 1868, in fact?—Yes.

6156. That is a long time; you are also borough accountant of Dover?—Yes.

6157. You wish to give evidence, I presume, principally as to the representation on the board of guardians and the assessment committee?—Yes.

6158. Dover is not a county borough, is it?—It is not.

6159. What is the population of Dover?—I heard yesterday from the Registrar-General; he puts it at 35,500 now; it was, in 1891, 33,300.

6160. Of course it is one of the old corporations?—Yes.

6161. Has the Local Government Act of 1888 made any change in regard to Dover?—Decidedly, it made

a great change; under it we paid a county rate for the first time.

6162. You send representatives to the county council?—Yes, we do.

6163. Do you possess, as a corporation, public works in the way of waterworks?—Yes, waterworks, baths, markets, and a school of science and art, and we are now establishing tramways.

6164. Electric tramways, I believe?—Yes.

6165. You have had extensive public street improvements, I see, within the last five years?—Yes.

6166. May I ask whether, as you are within the county council, you have any friction of any kind as to any matters?—We have settled down now, but at first we had considerable friction upon many matters.

6167. I suppose you did not like your autonomy to be interfered with?—That is so. It was a very sore subject with us. There are many points which arose under the Local Government Act of 1888 under which

we went and took the opinion of the court. We put to them about a hundred conundrums in order to settle the questions between us and the county council.

6168. You did not get a hundred conundrums settled by the court, did you?—We did, indeed.

6169. That would be for the benefit of other places?—For the benefit of other authorities.

6170. Would you say you are now in a more comfortable position?—Yes, now we get on pretty well.

6171. What number of representatives have you on the county council?—We have three wards, each sending one councillor to the county council.

6172. What is the size of the council?—I cannot tell you, I am afraid, speaking from memory. It is very large; but I may say that the rural representatives greatly outnumber the urban representatives. That, however, is a matter I am not prepared to go into.

6173. Are there many non-county boroughs in Kent?—There are a good many; in fact, we have only one county borough in Kent, I think.

6174. Which is that?—Canterbury; which was made so, as being the metropolitical city, for some inscrutable reason. It has a very much lower population than ours.

6175. How did it become a county borough?—I cannot tell you how it was done. Mr. Henniker-Heaton did it, I think.

6176. I thought no place was made a county borough unless it had 50,000 inhabitants?—There were a few exceptions, and this was one.

6177. (Mr. Elliott.) A few historical places were made exceptions were they not?—I am not sure.

6178. (Sir John Hibbert.) In paragraph 4 of your memorandum\* you state the populations and rateable values of the borough and of the union, the borough, of course, having the larger population and also the larger rateable value?—About five-sixths of both.

6179. The total number of guardians of the union is 25?—Yes.

6180. Divided into how many for the borough?—The borough sends 9 guardians and the rural parishes 16.

6181. Are you dissatisfied with that arrangement?—We think it is not a proper representation.

6182. I suppose you are not aware that that is the mode of representation in most unions where there is a borough and a rural district combined in the same union?—I am not aware whether it is so or not.

6183. I can say that it is so to a very large extent, of course it is a cause of friction?—Yes.

6184. In what way have you suffered from want of representation?—I had not gone into that question, and I am not prepared to answer any detailed questions on that head; I did not imagine I should be asked them.

6185. Perhaps it is more sentimental than real?—There may be a certain amount of sentiment in it, but I know there is dissatisfaction in the borough; they think it hard that they should be governed in these matters by such a large proportion of rural representatives.

6186. Would that not end if you had power to form the borough itself into one union or rather one poor law district?—That is, in my opinion, what should be done, and I have said so.

6187. Is that not contrary to the spirit of the principles carried out by the Local Government Board in respect to unions?—It may be, but I do not think the Local Government Board is perfect.

6188. I suppose their argument is with reference to the assessment committee rather than with reference to the board of guardians?—Yes, no doubt, but that is where friction more frequently arises.

6189. Supposing that you had an objection owing to not having sufficient representation on the board of guardians, does any injury accrue to your borough through not having that proper representation of the people of Dover in the way of relief?—Of course it is more than relief which is involved. There is, of course, the chance of persons requiring relief in the borough not being considered so much as those having it in the rural parishes, and there is the question of the cost of administration. At the present moment the guardians are spending a considerable sum of

money in making alterations in the union; five-sixths of the cost will have to be paid by the borough, which has only one-sixth of the representation in the union, or, rather, I should say the matter is really determined by an authority which is representative so largely of the rural districts.

6190. It breaks into the principle that representation and taxation should go together?—Yes.

6191. Have you any grievance with respect to the formation of the assessment committee?—The assessment committee consists of eleven members—five borough and six rural members; whereas the representation, according to both population and rateable value, should be—borough nine, rural parishes two.

6192. Have you considered the similar cases in other parts of the country; have you considered whether your grievance is a special one?—I have not. I have been asked by the Association of Municipal Corporations to give this evidence.

6193. Taking up the borough question as a general question?—Yes. I have not looked into the question of other authorities.

6194. Are you one of the witnesses of the Association of Municipal Corporations?—Yes, I am.

6195. (Mr. Clare.) I think you represent the non-county boroughs especially?—I do, and I was asked to give evidence on this special point.

6196. (Sir John Hibbert.) But you have not gone into the other cases?—No, I have not.

6197. Now, with respect to your rates; what are the rates in the borough?—The rates last year in the borough were: The general district rate, 1s. 10d., and the poor rate, including the county rate, and the borough and watch rates, 2s. 5d.; being a total of 4s. 3d.

6198. The general district rate you say is 1s. 10d.?—It was last year.

6199. Do you consider that to be low?—That has been low for some years; but in consequence of the large improvements we have been carrying out, the cost of which is now beginning to fall upon the rates, the general district rate for this year has gone up to 2s. 4d. in the £.

6200. Has the poor rate gone up?—The poor rate has gone up a penny for the first half of this year. I take it that the rates will be about 5s. in the £ this year. I may say that these are very low as compared with most of the boroughs near us—especially sea-side resorts. They are very much lower than many other places near us; in Folkestone, Margate, and Ramsgate they are very much larger.

6201. Do you say that prior to 1896 the borough was composed of six parishes?—Yes.

6202. Have you, under the Local Government Act, 1894, made the whole of those six parishes into one parish?—We have.

6203. Do you find that a great economy?—It will be an economy when the assistant overseers are absorbed, as we hope they will be.

6204. And a great convenience, I presume?—A great convenience in every way—and I think especially to the public—that there should be a uniform poor rate throughout the borough made by one authority, instead of having six authorities to make these different rates over different periods.

6205.\* You have got the power of appointing overseers conferred upon you through the Local Government Board?—Yes, but they refused to give us the appointment of assistant overseers.

6206.\* They leave that with the guardians?—Yes.

6207. I suppose you applied to have both powers?—We did.

6208. Did they hold an inquiry, or was it all done by letter?—I think there was no inquiry.

6209.\* But you have a distinct advantage in the new system—that you have only now two authorities instead of seven?—That is so; but we hope that the Board may give us the appointment of assistant overseers.

6210.\* Are you still pressing that upon them?—We have not applied again, but I think we shall very

28 May '97  
Cost of collection of poor rate and district rate.  
Difference in cost.  
Reasons for this.

Boundary of Union and Dover Borough should be contentious.

Suggested that corporation should be the rating and collecting authority for borough.

Corporation should be the valuation authority, or else corporation should be represented on Union Assessment Committee in proportion to rateable value of borough. Representation of urban and rural interests.

shortly. We are very anxious to have the control and appointment of the collectors, for this reason: that by so doing we should be able to have one collector collecting all the rates together in one part of the borough.

6211. Do you find a difference in the cost of collecting rates between the district rate and the poor rate?—We do.

6212. As to your own district rate?—That costs us 2 per cent., and the poor rate costs us 4 per cent.

6213. Can you account for that?—It is in consequence of our having four assistant overseers to collect the poor rate and one collector to collect the district rate.

6214. Have you compounding in both rates?—Yes.

6215. What are your suggestions for producing a more efficient administration of the affairs of the borough?—They are, in the first place, that the boundaries of the borough and union should be contentious.

6216. Would that not leave a very small district outside?—They could be readily apportioned among the two adjoining unions.

6217. You think it could be done in that way by attaching them to other unions?—Yes.

6218. Would the other unions be rural?—Yes, they would.

6219. What are they?—They would be Eastry on the one side and Elham on the other.

6220. Has such a proposal ever been made to the Local Government Board?—I think not.

6221. What is your next suggestion?—It is that there should be one rating and collecting authority for the borough, and that all rates should be collected together. Supposing the corporation were not made the poor law authority for the borough that it should be the rating and collecting authority.

6222. I suppose that if you had the borough made into a union of itself, you would not propose that the poor law work should be done by means of a committee of the corporation, would you?—Yes, I should. I think it would be a great advantage to get rid of as many elections as possible; there might be power to the committee to bring in outside members if thought desirable.

6223. That is a reform of a general character rather than a reform for your own borough?—Yes, certainly.

6224. Such a proposal, of course, has often been made?—Yes.

6225. What do you propose as to the assessing authority?—I think the corporation or a committee appointed by it should be the assessing authority; or, if that should not be done, that the corporation should be represented on the assessment committee of the union in proportion to the rateable value of the borough.

6226. I suppose you are aware that there is a very strong representation going on at the present time for the formation of one assessment for all purposes throughout the country—Imperial and local?—No, I was not aware of that.

6227. Many authorities, both county and borough, have suggested such a plan. At the present time, of course, you merely have your representation on the assessment committee, and you have no power beyond your five representatives?—Of course we have no power at all in the matter.

6228. I suppose you are only one short of the rural representation?—We are only one short of the rural representation, but we should be nine to two in my view.

6229. Have you anything to complain of; have they ground you down in any way?—No; but I think that the majority of the assessment committee, being rural representatives, have no knowledge whatever of the value of the property in the borough.

6230. You have your five men on it?—Quite so.

6231. They have a knowledge of the borough?—Yes.

6232. Perhaps you would suggest that their power is not sufficient to make their knowledge felt?—At all events they are a minority. We do not know what goes on inside the assessment committee you see; we only know the results.

6233. I am afraid most of your objections are rather of a sentimental than of a real kind, are they not?—I

am quite willing that anyone should take that view of the matter. I think that there is good ground for an alteration.

6234. Have you any other point to suggest?—I have not.

6235. (Mr. Dalton.) Have you made any application to the Local Government Board to alter the representation of the urban parishes on the board of guardians?—No, I have not.

6236. When was the number of the guardians representing the urban parishes fixed?—I cannot tell you, but I think it was a good many years ago. I think there was an order of the Board fixing the same number for the six parishes when they were made into one.

6237. But there was no application made at that time to increase the number?—No, not that I am aware of.

6238. If the borough were made into a union, and these rural parishes were added to the unions of Eastry on the one side and Elham on the other, would they be much further distant from the workhouses of those unions than they are from the workhouse of the Dover Union?—They would.

6239. That would be an inconvenience?—To some of them it would be.

6240. Do you know what distance it would be?—I take it that from some of the parishes in Dover Union, now, they have to go five miles.

6241. What distance would they go if they were amalgamated in these neighbouring unions?—Some of them would be about the same distance, others would be further off perhaps.

6242. Do the guardians who represent those parishes come for other purposes more frequently into Dover than they would into the centres of the Eastry and Elham Unions?—I think it is very likely they might, but at the same time a good many of them, if they were put into the Eastry Union, would go to Sandwich, which has a cattle market, which we have not at Dover.

6243. I think you said there has been no application made by anyone to the Local Government Board to add these parishes to the other unions?—I believe not.

6244. Therefore the question has not been gone into from the point of view of the poor law administration at all?—No.

6245. I am not quite sure that I understood you rightly, whether you think that, if the borough was made into a union, it should take over the whole of the duties of the board of guardians, or only those for collecting rates and for assessments?—I am merely giving you my own opinion, and I am not expressing an opinion on behalf of the Association of Municipal Corporations when I suggest that I think the corporation should take up all the powers.

6246. All the powers for the relief of the poor in every way?—Yes.

6247. Is that the view of the association?—No, I do not think it is; I do not think they have passed such a resolution. I am only giving it as my own opinion.

6248. Does the present poor rate assessment of the union correspond pretty closely to the assessment of the county rate basis, or is there any wide discrepancy between the two?—I am afraid I cannot tell you.

6249. I see that on the assessment committee the urban parishes have a larger representation than they have in the whole board of guardians?—That is so.

6250. That, I suppose, has been voluntarily conceded to them by the guardians?—Yes, I suppose so.

6251. You do not know whether they have asked to have a larger representation?—I do not know.

6252.\* Could you say on what ground the Local Government Board refused to give the corporation power to appoint assistant overseers?—I understood it had something to do with their being collectors of rates, or some of them being collectors of poor rates.

6253.\* Collectors of poor rates, I suppose, under the guardians had already been appointed?—Yes, they had in some of the parishes.

6254.\* Then the result would be that if the corporation had the power of appointing assistant overseers

\* Mr. Knocker subsequently wrote: "I find the answers to these questions are incorrect. The Local Government Board gave the power to appoint assistant overseers, except as to existing holders of the office."

Mr. E. W. N. Knocker.

28 May '97

Representation of urban parishes on Board of Guardians No complaint made to Local Government Board.

Alteration of boundaries of unions. Administrative difficulties.

Suggested that if borough was created a union it should take over duties of boards of guardians and of valuation and collection.

Appointment of Assistant Overseers by Corporation of Dover. Action of Local Government Board.

they could hardly exercise it until the determination of the office of the present collectors under the guardians?—We have taken them both on the understanding that they should not be disturbed. That was a special resolution passed by the corporation and sent to the Local Government Board before the matter was considered.

6255. I see the expenses of collecting the poor rate in the borough are considerably higher than the cost of the collection of the general district rate; is the 648l. the expenses of the collection of the poor rate, the total expenses of the overseers for all their work, or merely their expenses of collection; overseers, as you know, have other duties besides the collection of the poor rate?—This only includes the salaries of the assistant overseers and the incidental costs of collection.

6256. Do not the assistant overseers have other duties than those of collection, as, for instance, in connection with the registration?—Yes, but that is not included here.

6257. This is simply the cost of collection?—Simply that.

6258. (Mr. Elliott.) Do you suggest that under the present arrangement any serious evil as regards over or under valuation has occurred?—No, I am not prepared to give you any detail of that.

6259. Do you think generally that the effect has been to bring about an under-valuation of properties or an over-valuation of properties?—That I am not prepared to say; I have not gone into the question really.

6260. Is the feeling much more than that which Sir John Hibbert indicated—a matter of sentiment?—It may be, but it produces an unsatisfactory result.

The witness withdrew.

Mr. GEORGE SWAINSON, F.L.S., called and examined.

6268. (Sir John Hibbert.) I believe you are the Borough Treasurer of Bolton-le-Moors, in Lancashire?—Yes.

6269. How long have you held that position?—For 21 years.

6270. You are also a member of the Institute of Corporate Treasurers and Accountants of England?—Yes.

6271. Have you taken an active part in the work of that institute?—I have.

6272. You have been their president, I believe?—I was their first president, and I have been on the executive ever since.

6273. You have taken a great interest in the question of the accounts of public authorities, have you not?—Yes.

6274. You, I suppose, are prepared to say how you consider these accounts fail to be clear and satisfactory?—Yes, I am prepared to go into that, though that is not in the memorandum\* that I forwarded to the Commission. My memorandum specially deals with the question of local taxation.

6275. Would you take that question first?—In 1887 I retired from the presidency of the Treasurers' Institute, and during the whole of the two years that I held office, I had been going into this question very fully—or for a year and a half perhaps—I felt that the time had then arrived when something should be done towards trying to arrange for the consolidation and collection of the rates, which I was then fully convinced was needful, and which would lead to a very great saving. I particularly obtained information from Barrow-in-Furness, where the borough treasurer was singularly appointed assistant overseer, the overseers themselves being members of the finance committee of the town council. The whole thing worked with so little friction, that it was felt that Barrow-in-Furness was the kind of object-lesson which we should strive to attain.

6276. Why was that; because it was a new place?—No, because the two offices were merged in one, and the administration was practically one when Barrow was made a separate union. A circular was sent round to every member of our institute drawing their full attention to this, and advising them—in fact there was a resolution to come before our finance committee suggesting that they should—when the assistant

6261. It does?—Yes; it creates an impression among the appellants to the assessment committee that their matters are being discussed by persons without any special knowledge of the circumstances.

6262. Does not that arise rather because their view of the matter has not been taken than because any actual injustice has occurred?—I should not say that. I believe the committee do their duty to the best of their ability, and fairly, and so on; I have no reason to say anything to the contrary.

6263. (Mr. Clave.) You represent the Association of Municipal Corporations, and the non-county boroughs in particular?—Yes.

6264. May I ask, from your knowledge of their experience and opinion, whether the present method of assessing property is unsatisfactory, and whether the present system of the dual collection of rates by the poor law authorities and by the municipalities is extravagant and complicated?—Certainly it is so.

6265. That is the universal opinion of the corporations, that there ought to be one rate-collecting authority and one assessing authority in each area over which a rate is laid?—That is so. They passed a resolution I believe to that effect.

6266. So, without going into details as to the exact method of carrying it out, the unanimous opinion of the municipalities is that an alteration of the present system is required so as to bring the assessment under the control of one representative body for each municipality and the collection of rates either entirely in the hands of the municipality or entirely in the hands of the guardians?—Certainly.

6267. (Sir John Hibbert.) Have you anything else to say?—No.

6277. You say that was the case at Barrow-in-Furness?—Yes; in Huddersfield, where I was appointed borough accountant in 1868, I was there met with great difficulties in connection with the precepts of the corporation served upon the overseers. The old Act of 1835 was then in existence, but the present Municipal Corporations Act has the same provisions. We found that the money did not come in at all satisfactorily, and we were constantly having to press for payment. Therefore in 1871 the corporation resolved, in their application to Parliament, to apply for power to take out of the hands of the overseers this collection. I refer you to sections 334 to 360 of the Improvement Act of Huddersfield,\* which I think you will find to contain a very satisfactory settlement of this question.

6278. Was that Act passed before you left Huddersfield?—Some years.

6279. Then you saw the working of it?—For five years. I left in the beginning of 1876 and went to Bolton, and there I found the same unsatisfactory condition of affairs.

6280. Would you just state very shortly what the improvement was that took place under this Improvement Act, and these special clauses?—There was a saving in collection. The same thing applied in Bolton, and I was going to take the two things together so as to save your time. In Bolton we found a similar unsatisfactory state of affairs. The overseers at that time considered that they owned the balance of the rate, and that the bank interest that they made was their own private property, and the auditors at that time declined to consider it; now, I believe, the Government auditors have instructions to deal with it.

6281. Do you mean the borough auditors?—No; the Local Government Board auditors.

6282. But they do not audit the accounts of municipal corporations?—They audit the accounts of the overseers, and I am speaking of the money that the overseers collect for the borough. All that money they retained in their own hands, and would not part with it when they had money in hand to pay the corporation; and they have always been in the habit of getting out of the

ratepayers' pockets an undue amount of rate, and keeping it. At the present moment, they say they must have 8,000*l.* in hand to meet the calls, because, they say, overseers are held strictly responsible for the calls of the guardians, and therefore they must have these large sums in hand, in order to be ready at any moment to meet calls. At that time their sole object, in my opinion, was to get a large bank balance which they could use the interest of, because I know, at one time, they went on several rather considerable trips out of this fund.

6283. I am quite aware that those abuses did occur. I want to know whether such abuses can occur now under the new system?—Certainly not in Bolton, because every day's receipts are paid into the corporation's banking account. They are audited both by a professional auditor and by the Burgess auditors; and there is no friction in connection with the collection of the borough rate—not the slightest. The arrangements in Huddersfield did away with the district rate and called it a borough rate, and included the district rate purposes with the quarter for land on certain purposes, as you know, all in one rate, and called it the borough rate. In Bolton, our town clerk felt a difficulty in connection with the various Acts of Parliament that Bolton had obtained and, instead of that, he worded it that the district rate should go on being collected, but that the borough rate, for borough purposes, should be collected by our own staff along with it.

6284. Is that done under your special Act?—Yes.

6285. When was that obtained—are you referring to the Bolton Improvement Act of 1877?—Yes, section 114, the words are, for the corporation “to make, assess, levy, collect, and recover the borough rate in the same manner as, and with and under the same provisions (except as to exemptions from, and reductions in, the assessment), with which they make, levy, assess, collect, and recover any district rate, and they may so make, assess, levy, collect, and recover the same either as a separate rate or with the district rates.” The demand notes are made showing the district rate and borough rate payable together. The school board rate, which we feel rather sorely in Bolton, has been rather a heavy rate, and is shown separately. At the back of the demand note we give details of all expenditure.

6286. Is this done entirely under your local Act?—Yes.

6287. And in that it differs from the general law?—Yes; that is why I thought it was important to come before this Commission and give this information. But now we have had to withdraw the clauses by which we intended trying to get further powers. Lord Morley would not move our Improvement Bill this year in the House of Lords unless we withdrew these clauses, and he said we must come here and make our case known to this Commission.

6288. How many clauses are you referring to?—I will tell you in a moment. I will give them to you. I have a copy of the Bill here. By our withdrawing these clauses the Local Government Board have conceded a point to us. Perhaps I had better put these two Bills in (*handing in prints*)\*. This is the Bolton Tramways and Improvement Bill, as deposited in Parliament, and I am referring to sections 65, 66, and 67 as to the levying of poor rates in the parish of Bolton. We practically wanted to do what we do for the school board—for the guardians to make their demand for our portion of the union upon Bolton, and for the corporation to pay the money over to them, exactly as we do for the school board, and include it in our borough rate. Then, with respect to the assessment in the next clause—clause 68—we ask for one of two things—

6289. Is that a withdrawn clause?—Yes; clauses 65, 66, 67, and 68 are withdrawn. Clauses 66 and 67 were really what are called the Oxford clauses. They were given to Reading in 1881 and to Oxford in 1890, and I have here the proof of the city accountant of Oxford, who was formerly high sheriff of Oxford and chairman of the finance committee—he is an accountant, and he is now borough accountant—he was to give evidence for us, and I have his proof here showing how

extremely satisfactorily that system has worked in Oxford.

6290. For how many years?—Since 1890. At first the guardians did not like it. The corporation make their own assessment for all the property within their borough for their district rate only.

6291. Do they do this under the special Act?—Yes, for the district rate only they make their own assessment. The guardians had the making of their poor rate, which they made under their assessment, but the assessment of the city of Oxford by the corporation has proved so satisfactory that the guardians have given up bringing Oxford matters before their assessment committee.

6292. They adopt the Oxford assessment?—They take *en bloc* the assessment of the Oxford Corporation, and that is what we want in Bolton. As a kind of alternative clause, our town clerk put in clause 68, which meant that, as we were half the union, we should have half of the assessment committee. The assessment committee consist of 12 members, eight of whom are outside the borough and four inside; we are something like Dover, the evidence of whose town clerk I have just heard.

6293. Am I not right in saying that the number of an assessment committee cannot exceed 12?—That is so, and they have 12, and eight of them are for the outside districts, although the population of those outside districts is not one third of the total, and their rateable value is the same as Bolton; perhaps is 20,000*l.* more, but I can give you the exact figures, if you wish them. We asked for that, but I am not pressing for it. We prefer the Oxford clauses, because we think that if we had half the union given to us there would still be friction, and there would still be the causes for it which there are now. I will go into the matter of cost, if you like, because I can answer many of the questions which you have asked of the town clerk of Dover, and which he was not prepared to reply to.

6294. With respect to those Oxford clauses, the Local Government Board at that time, I presume, assented to the inclusion of these clauses in the Oxford Bill?—They were fought, I believe. Mr. Boyce appeared against them, but the Committee were so impressed with the evidence they brought of the unsatisfactory character of the assessments that they gave this decision in favour of the clauses, and as they had already given them for Reading they gave them for Oxford. We have simply asked this year if we could get similar powers.

6295. Do you know of any other places with similar clauses?—I am not sure whether Norwich has them, and I would not say.

6296. Do not say if you do not know for certain?—I am not certain at the moment. I now submit the Bill which has just received the assent of the Commons, and has practically passed Lord Morley. With the consent of the Local Government Board the following clause has been added since I sent my memorandum to you.

6297. And since you withdrew these other clauses?—No, it was done at the same time; it was agreed with Mr. Lowther.

6298. I thought it was a kind of compromise between you?—It was a compromise that if we would withdraw these clauses they would give us the clause that you will find here. This is the new Bill,\* and perhaps I had better read the clause: “(1.) From and after the passing of a resolution in that behalf by the council, the powers and duties of any collector of poor rates appointed by the guardians of the Bolton Union shall cease in respect of the parish of Bolton.” I will give you the reasons of that in a moment. “The Local Government Board may prescribe the form of rate to include the poor rate, borough rate, district rates, water rate or rent, or any other rate or rent, and they may in respect of such rates and rents prescribe a form of demand note, receipt, and other necessary documents in respect of such rates and rents, and any forms so prescribed shall be sufficient in law. Compensation shall be paid by the corporation to every collector of poor rates, and every assistant overseer appointed prior to the thirty-first day of May one thousand eight hundred and ninety-five, who, by reason of this exercise by the corporation of the powers of this

"section, or of any thing done in pursuance or in consequence thereof, suffers any loss by abolition of office, or by diminution or loss of fees, emoluments, or salary. Any such compensation may (at the option of the corporation) be by way of annuity or by payment of a sum in gross, and in case of difference between the corporation and any collector or assistant overseer, as aforesaid, as to the amount of compensation payable to him, the difference shall be finally and conclusively settled by an arbitrator to be appointed by the Local Government Board."

6299. What is the number of that clause?—It is clause 77. In my memorandum I gave a history of Bolton matters in connection with the Local Government Board. We have been more successful than any other corporation.

Appointment of Assistant Overseers in Bolton by Corporation; but the Guardians appoint the collector for poor rate.

6300. In what way?—In getting what we wanted from the Local Government Board. We were early in the field. In March 1895 we had an assistant overseer and collector who died, and we brought pressure to bear upon the Board, because we should have had the same scandal that occurred in Salford, where there was a three days' open competition in connection with the vestry; and the result of it was that, rather than face that, the Local Government Board gave us the order.

6301. In what year was that?—1895.

6302. Since the passing of the Act of 1894?—Yes, in March 1895. I think I have the order here.

6303. I do not think you need read the order if you will just state the facts?—The order gives power to appoint assistant overseers. They would not take away the power of the guardians to appoint a collector, but the Bill now does take it away.

6304. It overrides that?—Yes; they would not give us that power then, but they gave us the power to appoint the assistant overseer. On this death, therefore, the corporation at once appointed, in March 1895, the overseers, and the overseers appointed as their chief collector, the gentleman whose name is on the demand note—Mr. Brookbank. He is a chartered accountant as well as chief collector. They appointed him assistant overseer for Bolton, and they saved in salary and fees 135*l.* a year for one portion of the borough only. We applied to the guardians at once that they would not appoint a collector, or, rather, that they should appoint our man; we had already appointed him before they had had their fortnight's notice, &c. I have here the minute of the overseers' committee of the corporation. "The town clerk reported death of Mr. Thomas Platt, assistant overseer for Great Bolton, and the urgent need of steps being taken for appointment of his successor. Mayor, deputy-mayor, chairman, and Alderman Miles appointed a deputation to the Local Government Board, urging the expediency of an order being made vesting in the council the appointment of assistant overseer." That, of course, they got; and then the mayor and a deputation were deputed to confer with the guardians of the Bolton Union as to the appointment of a collector of poor rates for the township of Great Bolton.

6305. What was the result of that?—The result is shown in this newspaper report.

6306. You need not read the newspaper report; just tell us the result?—They had a long discussion, and they were altogether in a contrary mood.

6307. Then the corporation did not get what they wanted?—The guardians declined entirely. They would not give up their own patronage. The resolution was that they should appoint their own collector. As the corporation was thwarted they tried then to make an arrangement that this collector should come to the town hall, where some of the other collectors were already placed. After some little objection, the overseers told him they should not pay for his offices if he took his own house or any other offices, and, therefore, he came. The next step we made was to have the whole of the five townships in Bolton made into one.

Consolidation of Parishes in Bolton.

6308. You can do that under the Act, can you not?—Yes, and the Local Government Board confirmed it. In consequence of this order the collector and assistant overseer for the township of Little Bolton fell in with the wishes of the corporation, and removed his office to the town hall. Negotiations were then entered into with the remaining collectors, but we have not been able to get them to consent until now, when we shall be legally empowered to pay them compensation.

or to deal with them in some other way. In consequence of the difficulties of dividing the collection—that was their reason—no final settlement has yet been come to.

6309. Have you obtained every object that you sought in your Bill?—Except our present wish that we should be able to do away with the separate poor rate collection and deal with our assessments.

6310. You have not obtained that?—We have not obtained that. Even now we have to give separate receipts, as you can quite understand, in those districts where we have got the power of collecting the poor rate. We have to give the receipts separately, but we do not think that is necessary, as the matter of audit, and all that sort of thing, can be perfectly well arranged, and there is no necessity why they should be separate.

6311. Of course, with respect to the poor rate, the Government auditor would have to audit the accounts?—Certainly, and that we are quite agreeable to.

6312. But not anything connected with your borough?—Quite so.

6313. I do not know how you would get over that?—We should be quite agreeable to that. The expenditure, you see, can be met by a precept. The Local Government Board auditor would have to do with the overseers what he does now. He audits the school board rate in identically the same way, and that is why it is so simple when a precept is served upon the corporation for the expenditure.

6314. Would you put it in exactly the same way as the school board?—I recommend this Commission strongly to do so. It clears all the troubles and bothers and difficulties away, and makes the thing as easy sailing as possible. The amount collected by our corporation is 67,150*l.*, 51,822*l.* of which is the borough rate, and 35,328*l.* the district rate; the amount collected by the guardians being 26,862*l.*—really between a third and a fourth. The corporation are desirous that they may pay to the overseers such sums of money as may be required to pay the calls of the guardians and their own legitimate expenses without levying a separate rate. They are desirous to include the demand for poor rate with their demand for borough and district rates, and to give one receipt, and that powers may be given them to make arrangements with the four poor rate collectors that they may pay to the overseers such sums of money as may be required. I come now to the population: the borough of Bolton has a population of 120,000, and the number of cottages assessed at 8*l.* and under is 17,000; the limit for compounding for the poor rate being 8*l.* For our district rate and borough rate the compounding limit is 10*l.* and between 8*l.* and 10*l.* we have 5,000 cottages; therefore, in Bolton, 22,000 assessments are collected direct from the owners. By special Act we have that 10*l.* limit, and we wish that to be retained. The number of the other assessments is 8,000. The rateable value is 471,000*l.*

6315. You have told us very clearly of the great advantages which you have got in Bolton: I presume they work satisfactorily?—Yes.

6316. Do you suggest that this system should be applied generally to all boroughs?—I do, with an improvement upon it on the lines of the school board precept.

6317. Then even that system which you say is so good can be improved?—Yes.

6318. Do you consider that the clauses that you have had to withdraw from the Bill would have improved the system?—Decidedly; the Oxford clauses would settle the question of assessment.\*

6319. Now will you go to the next branch of the subject?—I have for several years past prepared a table of rates levied by corporations, and sent it round—it has been in the newspapers—showing the rating of towns and the price of gas. That table I put in for last year. I do not know that there is any question upon it, but I was at a meeting of the Association of Municipal Corporations when I heard it was understood there was a request from this Royal Commission that

\* The Clauses referred to are sections 115 and 116 of the Oxford Corporation Act, 1890 (53 & 54 Vict. c. 225).

Mr. G.  
Swainson,  
F.L.S.

Auditing of accounts. Poor rate. Government auditor.

School board account, auditing of.

Inclusion of poor rate in Corporation demand for borough and district rates, and one receipt given desirable.

Compounding in Bolton. A 10*l.* limit under special Act.

System of collection of rates, &c. satisfactory in Bolton. Suggested improvements.

Rates of burden or necessity, and rates of benefit or luxury. Return with reference to.

Mr. G.  
Swainson,  
F.L.S.

28 May '97

the information should be tabulated in a little different shape. As a financier and practical accountant, at Bolton, I considered that was my business—that it was really a financial and actuarial matter, and not a town clerk's matter, so I have prepared it. Therefore I have presumed to hand this table to you simply on my own action (*handing in table*).\*

6320. Not as representing any association?—Not as representing anyone but myself. I do not even, in this matter, represent my own corporation; the information contained in this table has been forwarded to me from all the towns named. There are some few towns which I did not ask. I do not think I asked Liverpool, and I did not ask Birmingham, and I did not ask St. Helens.

6321. Why did you leave them out in the cold?—Simply because gentlemen representing Liverpool and Birmingham are on this Commission, and I thought they could add their items to it without my presuming to ask them.

6322. (*Mr. Clave.*) But Liverpool is in the list?—It is not in the second list. There are a few towns in the first list who have not made replies; you will find Manchester, for instance, and Manchester did not reply. They distinctly declined to be included in the list for 1897.

6323. (*Sir John Hibbert.*) It would have been more perfect if you could have included all?—Yes, much more perfect; I have done my best to get it for you, but I believe there is a little feeling in this matter.

6324. Then I have nothing further to say on that?—I have a little feeling myself that we ought to have been asked, as treasurers and accountants, to supply this information by the Association of Municipal Corporations, but, as treasurers, we have really nothing to do with the association, which ignores us entirely, and so I have determined to prepare this return myself. I think there is one item in the table that this Commission would like to see and understand, that is the rates of burden or necessity; in the first column I have the rates of benefit or luxury, and in the second column the rates of burden or necessity. The Commission must notice that I have particularly, in this table, separated the poor rate and the school board rate, over which corporations have no control, and have merely put in the table and arranged it in order according to the amounts of rates for which the corporation is responsible, and then divided that into two items, one the rates of burden or necessity and the other the rates of luxury or benefit.

6325. Is every town treated on the same principle in this division?—Yes; as far as I understand it. I have been able to tell them the lines I wanted them to go upon.

6326. (*Mr. Elliott.*) Did you issue a circular letter to those towns?—I did.

6327. Will you let us have a copy of that circular letter?—I have here the letter which I wrote, it is marked "Private and confidential."

6328. (*Sir John Hibbert.*) I do not think you had better put that letter in, I have seen that letter, and I think there are one or two observations in it that had better not appear?—That is what I felt.

6329. (*Mr. Elliott.*) I only want to get exactly what was presented to the officers in asking them to prepare this return; could you state what were the questions put?—I say this in the letter: "The Commission, we were informed, were specially desirous of differentiating "between the expenditure of the various boroughs for "matters of luxury or local benefit, such as baths, parks, "libraries, museums, &c., which rural England knows "nothing of, and classifying particularly rates of burden "or necessity occasioned by the aggregation of houses "in urban districts." That is all you want, I think.

6330. I think that is all I want unless you said anything more?—No.

6331. (*Mr. Dalton.*) Did you tell them what rates they were to put under each head?—This distinctly tells them.

6332. What rates did they put under the first head; did they put the borough rate and the district rate?—The fourth column is the total; that total is the rate for which the town council is responsible, including both the borough rate and the district rate. That total is divided into two parts; first, we deducted

those of luxury or benefit for the purposes as follows—baths, parks, libraries, museums, &c.

6333. What does the "etcetera" include?—I think I left it to the gentlemen each to form his own conclusion. I put in my technical school a  $\frac{1}{4}$ d. rate. I have here the estimates for the borough of Bolton for this year, and you will see that it includes so much for the parks.

6334. (*Sir Edward Hamilton.*) Did you send round a circular to all the people, and did you exactly specify in your circular what was the information you wanted?—Yes, I sent this circular round, and that explained it better than anything else.

6335. Have you reason to think that all these figures are compiled on the same basis?—I have. Some few that were very heavy I made inquiries about, and I have had to alter one of them because he had included the town hall.

6336. But this does not include in the column of rates of benefit or luxury what is often called a rate, but what is practically a charge for a service performed; I mean to say that it does not include what a householder will have to pay for a supply of water?—Certainly not; our rates do not include anything for water.

6337. Or gas?—Or gas.

6338. This is merely what the town authority itself raises?—As a rate of burden or necessity for the aggregation of houses together in a town.

6339. Is this a complete list of all the boroughs?—It is complete as far as I could obtain the information; it is complete to the extent of the 64 boroughs mentioned.

6340. I think you gave a list of what came under the head of benefit or luxury; what did you put under the other column of burden or necessity?—All the rest.

6341. But you distinguish the poor rate from it?—Because we have nothing to do with the poor rate in the corporation.

6342. Therefore, in order to get at the full amount of what I may call onerous rates, you would have to add to the first column the poor rate?—Yes.

6343. Would you kindly say, then, what are the component parts of the first column—the rates of burden or necessity?—Everything else.

6344. Have you got a list of the details?—Police, fire brigade (I consider that an essential), burial board (it is necessary to bury our dead), town hall (even counties are now getting county offices), the various payments to the county which, as a county borough, we have to make, such as lunatic asylums, county officers, prisons, loans, sea fisheries, rivers pollution, quarter sessions, expenses of the officials in the town hall, main roads—

6345. But in sending out your circular, you did not mention those, did you?—I did not put those in, and I have not finished with the list—I had better finish—expenditure on highways, streets, scavenging the town, night-soil as well as day sweepings, the medical officer of health, and his department, including fever hospitals (because even counties are having now to provide fever hospitals), street lighting. From some of that in Bolton we have rather heavy deductions for our profits on gas and water, but I have taken those profits entirely from my rates of burden, and have put in the rates of luxury at their full extent.

6346. (*Mr. Elliott.*) In order to arrive at your rates of burden, have you deducted the profits of your undertakings?—Yes.

6347. Did you give any instruction to that effect in your circular?—No, but it naturally follows because I have only asked them to give me the total rate laid. You will quite see that that is the answer to it—the total rate laid is bound to have the profits deducted before they can lay the total rate.

6348. (*Sir Edward Hamilton.*) What I want to know is whether, in sending round your circular, you actually specified the information which you wanted?—Yes.

6349. Therefore you have every reason to believe that the compilation is made on the same basis?—Yes. Would you, in your tables, alter the figures opposite Bootle? The borough accountant writes me: "I have included  $\frac{1}{4}$ d. for the town hall; on second thoughts, perhaps I was wrong to include the last item, "as a luxury; if others have not included it, please alter "Bootle accordingly." It has not been included. I

Mr. G.  
Swainson,  
F.L.S.

28 May '97

have checked them over with their accounts as far as I am able, and no other has included the town hall. Town halls have been included as a necessity, as there are town halls now in counties. Therefore you must alter Bootle and increase the rate of burden by 2½d. and decrease the item for luxury by the same amount.

6350. The Bootle item is 2s. 10½d. under the head of "Rates of burden or necessity," and 7½d. for the rates of benefit or luxury?—The 7½d. should be 5½d.

6351. I do not think we need go into those details?—That is the only one that is wrong.

6352. You wish to put in this table as an appendix to the paper you have already submitted to the Commission?—Yes.

6353. (Mr. Elliott.) Did you, in asking for this information, give any instructions to the local officers other than those you read to the Commission just now?—None; but they are local officers who know their business, and they are bound to put the rest in under the other head. I gave sufficient instructions, in my opinion, for an intelligent man to be able to answer it. I am sure of it, from the questions I have asked of those who returned the heaviest rate. I found that the reasons for the heaviness were special reasons. Keighley, for instance, has put in 4½d. for a special grant this year to the mayor for Jubilee purposes.

6354. (Mr. Dalton.) The result of this table is to show an average of 3s. 7d. for the rates of burden or necessity, and 3½d. for the rates of benefit or luxury?—Yes; that is so.

6355. You would not say that none of the rates of burden or necessity are rates of benefit, would you?—Yes, I would.

6356. Would you say that the town gets no benefit from the fire brigade, the police, the burial board, the town hall, the highway expenditure, and the street improvements?—It is just exactly in the same way that the country people receive benefits from the various things of a similar kind.

6357. Do you not consider that a great deal of this expenditure is of benefit to the property in the town, and raises the value of the property very much?—It is absolutely a necessity from the aggregation of houses in a town.

6358. I can understand it if you had kept your column to "Rates of luxury" simply, but you head it "Rates of benefit or luxury"; do not a great number of the rates of burden or necessity include rates of benefit?—You see the word "benefit" there is qualified by luxury; it is those items of benefit that are really luxuries that I put in the second column, and those items of benefit that are in the first column are those of necessity or burden.

6359. But you agree that many of these, although they may be a necessity, do add to the value of the properties in the town?—No doubt the fire brigade, for instance, does.

6360. I do not quite understand now how they are separated; do you not think public baths are a necessity in a crowded population?—No, not absolutely. We have not any in Bolton paid for by the corporation; we have several private baths and the corporation have made bathing places in the parks.

6361. Do you not think a park is a necessity for a crowded population?—No, I think it is a luxury.

6362. How do you draw the distinction between making a wide street, we will say, in a town, opening up an area for giving them fresher air, and having an open space or a park?—I would leave that to the individual judgment of the Commission. I do not think you can divide it satisfactorily. Many men, many minds, on a point like that. What I might think was so, you might say was not—of course I speak respectfully.

6363. It is very difficult, as a matter of fact, to divide a rate of benefit from a rate of necessity, is that not so?—That is what I mean.

6364. We will leave this table and come to the question of the powers of the Local Government Board; as I understand the Local Government Board have done what they can under the existing law to simplify the collection of rates in Bolton, is that not so?—The Local Government Board, after great pressure and constantly urging, have done nearly all that I consider the Act of 1894 ordered them to do.

6365. What have they omitted to do in Bolton that they have power to do in this matter?—To transfer the whole of the powers of the vestry and the whole of the powers of the overseers; they have power to transfer the powers of the overseers to the corporation, and they have failed to do so.

6366. In your Bill\* you proposed, I think, that the corporation should collect the poor rate for the guardians as well as the borough rate?—Yes.

6367. Do you know any town in which that is done at present?—No.

6368. No town?—No town.

6369. Therefore that was an unprecedented proposal?—It was.

6370. No such power was given at Reading or Oxford by the clauses of which you have been speaking?—No, and that is why I come to this Commission to urge that upon them.

6371. You have referred to the irregularities years ago in connexion with the interest on the bank surplus in the hands of overseers?—Yes.

6372. That is not anywhere allowed at the present time, I believe?—I believe that, universally now, the auditors of the Local Government Board pursue those items to their sources. They ought to have done so long before they did.

6373. When you were speaking of that, the time you spoke of was about 1871, was it not?—No.

6374. It was a great many years ago when this took place?—Within the last 15 years.

6375. Fifteen years ago?—Perhaps ten years ago; I cannot be quite certain at this moment, but I believe it is not more than ten years ago since the Local Government Board were pressed and urged into doing their duty. They ought to have done it long before.

6376. It is the auditors you should speak of, I think?—They are the servants of the Local Government Board.

6377. But the auditors have the first jurisdiction in the matter, and the Local Government Board has no power to disallow any payment in the accounts in the first instance; it rests exclusively with the district auditors?—The Local Government Board instructs the auditors what they shall audit and what they shall not audit. Just now I have a very strong contention with the Government auditors on the false method of their audit at present, and of the accounts that they will have. I am very strong on that, and Sir John Hibbert thought I was going into that, because he has known of the papers I have written on that subject; but I did not wish to go into it. Still if you ask me questions about the Local Government Board, of course, I am bound to be honest and to tell you.

6378. All I am asking you is this: had the Local Government Board any power whatever to disallow any of these payments; was it not merely a question whether the district auditor could do it?—The Local Government Board ought to have insisted that the district auditors should do their duty.

6379. Do you mean to say that when these irregularities were discovered, the district auditors did not at once go into these accounts?—Certainly; for years they did not go into them after they had been discovered.

6380. They had been kept from them by the overseers?—Yes; they ought never to have allowed that.

6381. They were not aware of their existence?—What is the worth of a Government audit if they cannot follow these things to their sources?

6382. In the Bill,\* this year, that you introduced, no provision, I think, was made for the audit of these accounts of the overseers; was that not one of the points to which attention was drawn in the report of the Local Government Board on the Bill?—You have the report, I have no doubt. Would you mind reading it to me?

6383. On clause 65 this passage occurs: "No provision is made with regard to the audit of the rate, "The Board look upon this as a most important matter" and one that should be provided for specially in the "clause if the proposed change is accepted"?—If the Board had met us and agreed to our clauses we should

\* The Bill received the Royal Assent on July 15th, 1897 (60 & 61 Vict. c. 134).

Bolton Improvement Bill, 1897,\* proposed that Corporation should collect poor rate for guardians, which is an unprecedented proposal.

Audit of accounts by auditors of Local Government Board. Present and past systems.

Bolton Improvement Bill, 1897.\* No provision made with regard to the audit of the rate.

Rates of burden or necessity, and rates of benefit or luxury. Classification in table discussed.

Collection, &c. of rates in Bolton. Action of Local Government Board under Local Government Act, 1894.

Mr. G.  
Swainson.  
F.L.S.

certainly have accepted any reasonable audit it could request.

6384. You have no objection to that?—Not the slightest, because, as I tell you, I would arrange it exactly as a school board audit is done—there is no need of anything beyond that. We simply pay the precept of the school board and the Government auditor audits it—that mere one item, that one payment, he audits the expenditure, and he could still audit the overseers' expenditure. It makes not the slightest difference whether the overseers collect it, or whether the corporation hand over 20,000*l.*, say.

6385. All I was drawing attention to was that no provision was made for that in the Bill, and that that was one of the main objections that was taken to the

clause?—It did not need any, in my opinion; however, if they had allowed the clauses to pass, we would have agreed to put something in.

6386. (Mr. Clare.) Your experience in Bolton has been that the consolidation of rate collection leads to economy?—Distinctly so, and very largely so.

6387. In your opinion, would it be an advantage if you had one assessing authority for the whole borough, and one rate-collecting authority for the whole borough?—Decidedly. The Bolton Corporation's Overseers' Committee, last Monday night, passed a resolution endorsing those resolutions that have, no doubt, come to you from Suffolk, Appleby, Westmorland, and other authorities, that there should be one basis of assessment for Imperial, local, and municipal purposes.

The witness withdrew.

Mr. ARTHUR JOHN HARRIS called and examined.

6388. (Sir Edward Hamilton.) I think you are clerk to the Cardiff Union Assessment Committee?—Yes.

6389. You have sent us in two memoranda, the later one\* being practically an amplification of the heads of your original memorandum?—That is so.

6390. What are the main points which you desire to bring out, and have brought out, in this further paper of yours?—I wish to bring out more fully the points as to the provisions of the Act of 1862; the inequalities of the present mode of apportionment of contributions amongst parishes contributing to a common fund; the inconveniences of the dual control, and the lack of interest in the duties of overseers, and then the changes suggested, and also the point as to the precepts being for a specified rate in the £, the proceeds of such rate being paid to the spending authority.

6391. You seem to have gone tolerably fully into most of those points in your second memorandum?—I have.

6392. Are there any points which you would desire to supplement *vis à vis*?—No, I think I have endeavoured to place everything there as fully as possible. Of course there are one or two questions on which I should have spoken a little more in detail.

6393. Of course these are mostly points upon which we have had a great deal of evidence already, and therefore, if I were to put a great many questions to you on them it would be going over the same ground again to a great extent; but are there, from your own personal experience, any particular points which you would like to bring out which you think may not have been already brought before the Commission?—May I shortly refer to those questions I spoke of a moment ago?

6394. If you can do so briefly, yes?—First of all we have found that the provisions of the Act of 1862 for deposits of lists before approval and means of objection beforehand are most obstructive to the bringing into force of lists as speedily as is desirable. We have had, during 10 years, only 40 objections to lists before approval, and we have had to observe all the provisions of the Act of 1862 simply for the sake of those 40 cases, whereas after lists have been approved we have had some 1,279 objections, showing that ratepayers feel that the Act of 1864 affords them all the facilities that they can possibly want for objecting to their assessment. We have recently found that these same provisions in the Act of 1862 are most mischievous; they afford facilities for technical objections by which it has been sought to upset our rates, without alleging that any grievance was sustained by those who have put them forward. I think the fact that on an average four persons a year have availed themselves of the Act of 1862, as against 1,279 who availed themselves of the Act of 1864, shows that there would be no hardship in entirely abolishing all these deposits and opportunities for objecting before lists are approved. Then, with regard to the inequalities of the present mode of apportionment of contributions amongst parishes contributing to a common fund, I find that the method by which expenditure is apportioned amongst parishes in an area does not result in an equality of rates. The various parishes have their own parochial expenses, and their own local circumstances, which cause differences. To take a somewhat striking instance in our union: the larger portion of the Bute Docks is in the parish of St. Mary, and they would collect there, say, 6,000*l.* in one sum, whereas in

another smaller parish they would have to collect that from a very great number of people, and not only would they have to spend more in collecting it, but they would lose a large portion of it in irrecoverables. The result is shown in the actual rates. The parish which is least rated pays an average poor rate over 10 years of 2*s.* 1*d.*; the other parish in the town that I refer to would pay an average of 2*s.* 2½*d.*, making a difference of 1½*d.* in the £ per annum for rates in one town alone. Similar differences may occur in the country. I also wish to point out that the present method of specifying the amount of the rates in the £ does not result in those rates being stated accurately. The overseers very often have to make their rates before they know what burdens will be cast upon them. There are, of course, different local circumstances which cause the rates to vary. They have balances in hand, they have fractions which are difficult to estimate. The result is that you may have a rate set down for a different sum in different parishes, but which is supposed to be actually equal in all. The most striking illustration I ever had of that was when, in one of the rural parishes of the union, the poor rate was taken to be 10½*d.*, whereas in the town it was taken to be 4*d.*; as a matter of fact, they ought to have stated it in the country at 5½*d.* I dare say the inconveniences resulting from the dual control of the board of guardians and overseers have been stated before.

6395. Yes, we have had evidence before us upon that?—And also upon the lack of interest in the duties of overseers; those are two points that I specially desire to emphasise. As a remedy I am suggesting that the union assessment committee should be the sole local authority for making all assessments and collecting all rates; that the committee should be enlarged, and that representatives of all the chief spending authorities, urban councils, rural councils, school boards, county councils, should be added thereto; that the overseers should be abolished and their duties transferred to the assessment committee; that the various spending authorities should send precepts to the assessment committee, and those precepts should not be for fixed sums, which should have to be raised in the best manner possible, but for fixed rates in the £; the result of that would be that over the whole area of the spending authority the rate would be absolutely equal.

6396. (Mr. Dalton.) I understand that you propose, therefore, that the assessment committee should not only assess the properties, but should also collect the rates?—That is so.

6397. Should it collect all the rates?—It should collect one rate in which should be included all rates.

6398. You have heard what Mr. Swainson has said as to the collection of rates in the boroughs?—Yes.

6399. If your proposal was adopted, the union assessment committee, I understand, would collect the rates?—They would.

6400. Not the corporation?—Not the corporation.

6401. So that your proposal is absolutely at variance with his?—Yes, certainly.

6402. In Cardiff is your union coterminous with the borough?—No, it includes urban and rural areas outside.

6403. At the same time your union assessment committee is representative of the chief spending authorities in the district?—That is so.

Mr. G.  
Swainson  
F.L.S.

28 May '97

One valuation and one rate collecting authority for whole borough desirable.

Mr. A. J.  
Harris.

Union Assessment Committee representing the chief spending authorities should be the sole local authority for making all assessments and collecting all rates. Assessment Committee should take the duties of overseers. They should raise fixed rates in the £.

Mr. A. J.  
Harris.  
28 May '97

6404. In your own union, what kind of body would it be, and what would be the representation on it—have you thought out what would be a fair representation?—I think that the guardians should retain their 12 representatives and that the other authorities should have another 12.

6405. That is to say, they are going to collect the rural rates as well as the urban?—Yes, everything.

6406. Therefore you would have represented upon it the rural district councils and the school boards as well as the corporation of the borough?—That is so.

6407. The guardians would take, undoubtedly, a larger number of representatives than any of these other bodies?—I think they should retain their half, their present position is that they have the sole control of the assessments.

6408. You would also have to have the county council represented on it?—Yes.

6409. You are giving rather a preponderance to the guardians in the matter, are you not?—I certainly am.

6410. Although the rates raised by the guardians would be very much less than the aggregate of the rates raised by these other bodies?—Yes; considering that the guardians at the present moment have the making of these assessments without any representatives of other spending authorities, I do not think that they should be simply reduced to the level of one of these authorities.

6411. I am not suggesting that; I only want to bring out the difference between the two proposals we have had put before us to-day. Then you suggest that the precepts should be not for a specified amount, but for a specified rate in the pound?—Yes.

6412. I rather understood you to say that the present inequality of rates in the different parishes is owing to irrecoverable rates and matters of that kind to a great extent?—Yes.

6415. Would it not be very dangerous if you gave a uniform rate in the pound? Would not every parish then be disposed to collect it more laxly, and to have more and more irrecoverables?—No doubt that would

be so under the present system. I do not think the proposal is applicable, unless you combine them all under one authority, but I believe with one authority—on which all the spending authorities would be represented—the representatives would all take care that the rates in which they shared were properly collected.

6414. That is the safeguard you would provide for it—you would have a strong collecting body as well as a strong assessing body?—That is so.

6415. Do you think that your proposal that the overseers should be abolished will be generally acceptable to boards of guardians?—I think so. I was at a conference the other day in South Wales, and, I think, probably, in South Wales the feeling in favour of overseers might be expected to be stronger than in England. But I was surprised, on a paper having been read proposing that they be abolished, that they had, practically, no supporters, and that the meeting was almost unanimous in favour of it.

6416. Have any complaints been made of the assessments in your union?—Do you mean complaints as between various authorities?

6417. Yes?—No, I think not; of course, I am not speaking of individual ratepayers.

6418. Does your assessment differ much from the county rate basis, or does it correspond with the county rate basis?—They are very nearly the same; the county rate committee follow our assessment, I think, pretty closely.

6419. Is it pretty much the same as the income tax valuation, Schedule A.?—I cannot say, as I do not know what that is.

6420. (Mr. Elliott.) I have no questions to put to you, but I should like to say that we do very much appreciate this careful and detailed memorandum you have put before us, which really enables us to know your exact position?—I was asked to give this evidence, and I have endeavoured to put what I think is the most useful information before the Commission.

6421. I think you have done so most successfully, if I may be allowed to say so?—Thank you.

The witness withdrew.

Adjourned till Tuesday next at 12 o'clock.

## EIGHTEENTH DAY.

Tuesday, 1st June 1897.

At 16, Victoria Street, S.W.

PRESENT :

THE VISCOUNT EMLYN, *in the Chair.*

Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
T. H. ELLIOTT, Esq.

ARTHUR O'CONNOR, Esq., M.P.  
JAMES STUART, Esq., M.P.  
ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. GEORGE NORTON called and examined.

Mr.  
G. Norton.  
1 June '97

6422. (Viscount Emlyn.) You are the president of the Liverpool Land and House Owners' Association, are you not?—Yes, I am.

6423. You propose to give evidence before the Commission on their behalf?—Yes, I do.

6424. What does your association represent?—It represents a society of owners and agents for owners of house property; a large proportion of that is small property.

6425. Could you give us at all the proportion which is small property and the proportion which is large?—

No, I do not think I could do that. I should say that, probably, rather more than one half would be small property.

6426. You have in Liverpool, have you not, a local Act dealing with rating?—Yes, we have a local Act with reference to the rating of small property.

6427. Would you explain to the Commission what that local Act is?—We come, in Liverpool, under the 13*l.* limit. You will see by the Poor Rate Assessment and Collection Act, 1869, that 13*l.* applies to Liverpool as the limit under which, in regard to the poor

Compounding, Local Act in Liverpool with reference to municipal rates. Owner obliged to pay whether property occupied or not, and gets 50 per cent. for collection.

Owner pays half sewer and water rate in Liverpool.

Compounding in Liverpool. System is satisfactory.

Three classes of assessments in Liverpool with regard to property.

Assessments with regard to poor rate in Liverpool. Seven sets of assessors and seven areas.

rate, they allow a deduction—that is what is called “compounding.” In Liverpool, under a local Act, where compounding property is dealt with for the purposes of municipal rates, the municipal authorities return to the owner for collecting, one half, that is 50 per cent.; but he has to pay, and he is obliged to pay, whether the property is occupied or not; that is peculiar to Liverpool.

6428. Can you tell us how that compounding has answered?—It has answered very well. The municipal authorities found before that they could not collect from the occupiers direct. The compounding of small property in regard to collection from small property is not peculiar to Liverpool, because it is done under the Poor Rate Assessment and Collection Act as well; but, as I dare say you know, where they make the order that an owner shall be rated for property, they allow him 15 per cent., and if he agrees with them to pay whether the property is occupied or not, they allow him another 15 per cent. There are arrangements made by that Act also, by which, outside the question of an order by the authority, an owner can agree by private agreement with the authority, in which case he is allowed an amount not exceeding 25 per cent. In Liverpool also the owner pays one half of the sewer rate and water rate; he is obliged to do that.

6429. He does not compound for that then in any way?—No.

6430. That he pays absolutely?—That he has to pay, and he really cannot get out of that in any way whatever.

6431. Have you formed an opinion as to whether the arrangements made in Liverpool as to compounding are really satisfactory?—Yes. It falls rather hard upon the owner where, for instance, a whole lot of property—a whole street we will say, of property—falls vacant, because of course he has to pay there whether it is occupied or not. That comes hard, but taking it as a rule I do not think it has worked badly—presuming of course that the system altogether of ratepaying is correct.

6432. What do you mean by “presuming that the system of ratepaying is correct”?—What we really wish to put before the Commission is that we are of opinion that the rates should not fall upon what is ordinarily called real property.

6433. But you are going to deal with that a little further on in your evidence, are you not?—Yes.

6434. Therefore, perhaps you had better not mix that up with this compounding question?—Very good. Taking the system as we have got it now it works all right and fairly, I think.

6435. Will you tell the Commission about the different classes of assessments in Liverpool?—Yes. There are three classes of assessments in Liverpool with regard to property. There is the poor law assessment and the assessment for Imperial purposes—income tax purposes—and there is the assessment for the general municipal rates.

6436. How are those assessments made?—They are all supposed to be on the poor rate assessment. They are not altogether so, because, under some circumstances the corporation are allowed to assess themselves; for instance, in regard to the municipal assessments—

6437. By that you mean the assessments for the general municipal rates?—Yes; they follow the poor rate for the last year. In some cases the property alters a bit, in which case the corporation assess themselves; they have powers, I think, if they are not satisfied, to make their own assessments.

6438. You mean that they need not follow the poor rate assessment?—They do generally, but I do not think they are absolutely obliged to do so, and I do not believe that the Imperial authorities are absolutely obliged to do so; but I believe that, as a matter of fact, it is really all based on the poor law assessment.

6439. But more, as I understand from you, as a matter of convenience than as a matter of law?—I believe that is so.

6440. Have you anything more to say with regard to those three classes of assessments that you have now dealt with?—Yes. As regards the poor law assessment, there are seven different districts and sets of assessing authorities in Liverpool. There is the parish of Liverpool, and then there are the districts of Toxteth Park, Everton, Kirkdale, West Derby, Wavertree, and

Walton. The principles on which these assessments are made vary in this way—they do not, as a matter of fact, vary from one another, with the exception that the parish of Liverpool varies from the other divisions.

6441. Are you speaking now of the poor law assessments?—Yes, I am talking of the poor law assessments. With reference to the parish of Liverpool, 10 per cent. from the gross annual value is given—

6442. As a deduction?—Yes, as a deduction from the gross annual value. The rest of the divisions allow 15 per cent., and, as a matter of fact, I think they have agreed amongst themselves as to that. They are not obliged to do so; they are absolutely free to allow what they think fair, but I believe that they have come to an agreement that 15 per cent. is about fair, and that is what they do.

6443. Those variations in the deductions allowed would be upon the same class of property, would they?—Yes.

6444. In one district you would have one deduction, and in an adjoining district, you would have another deduction?—Yes, that is so.

6445. Is that, to your mind, a satisfactory arrangement?—No; that is not satisfactory of course.

6446. Have you any suggestion to make to the Commission with regard to its alteration?—I think that it should be known that there is some deduction which is either compulsory, or which is considered fair, and which should be stuck to right through.

6447. You mean that you prefer a uniform deduction on property of the same class all through?—Yes. It is certainly exceedingly unfair that one side of the street should have such-and-such a deduction, and the other side of the street, for no reason whatever, should have a separate one.

6448. Have you formed any idea yourself as to what that deduction ought to be in the different classes of property?—No, except that I do not think 15 per cent. is unfair.

6449. Whatever it is, in your opinion, it ought to be uniform right through?—Yes, I think that they might allow some things that they do not allow—but that is a long subject. I think perhaps 15 per cent. is not an unfair deduction. Then the collections are multiplied also. With reference to the poor rate, they collect, with the poor rate, the city rate and the school board rate, and they also collect the city library rate.

6450. You say “they,” but who are the collecting body?—The poor law authority. They charge commission for that to the municipal authorities; I do not know why they do that I am sure.

6451. Is that done as a matter of convenience?—I think so.

6452. On that question of collection; have you finished what you have to say?—No. I should like to say, with reference to the question of collection and assessment, that, dealing generally with the different classes of rates, we think there is great waste of both time and money by having so many classes of assessments or different assessments and collections; even if the present system went on the multiplicity of dealings as to collections, assessments, and so on, should be given to one body so as to save the various collections. There are at present three collectors going over the same ground.

6453. Where would that be?—That would be with reference to the collections for the poor rate, for Imperial purposes, and for the general municipal rates. The same ground is gone over absolutely three times for those; that, at any rate, could be saved.

6454. You think you ought to have one body then for assessment purposes?—One body might do the assessment, and one body—the same body—might do the collecting, so that you should not certainly go over the same ground several times.

6455. And as you have already told us, you would also make the deductions uniform?—Yes, I would.

6456. What area are you speaking of, because you have got in Liverpool three unions, have you not?—Yes, we have three unions in Liverpool.

6457. Will you tell us what those unions are, and how they are divided?—The select vestry governs the

Deductions in Liverpool. Poor rate valuation. Uniformity.

Deductions. Uniformity desirable.

Collection. Poor law authorities in Liverpool collect poor rate, city rate, school board rate, and library rate, and charge municipality commission.

One body for purposes of valuation and collection desirable in Liverpool. This could be accomplished notwithstanding the city is in three unions.

Mr.  
G. Norton.

1 June '97

parish; then the union of West Derby, which is partly within and partly without Liverpool, and then there is the union of Toxteth Park.

6458. Is that within or without Liverpool?—That, I think, is wholly within Liverpool.

6459. The select vestry which you speak of as governing the parish, is that wholly within Liverpool?—Yes, it is.

6460. Would there be any difficulty in applying one assessing body and one collecting body to all those parts of the unions which you have spoken of as being within the city?—No, I cannot see that there would be the slightest difficulty.

6461. How would you deal with the union of West Derby, which I understand is partly within and partly without the city?—Of course, one would take what was within the city as a part of the city and the other must be left outside, I take it.

6462. Is there a large proportion of that West Derby Union which is outside that city?—Yes, there is a very considerable portion.

6463. How would you propose to deal with that?—I suppose that would have to be taken from the outside altogether, as if the portion which is now Liverpool had been taken off the union.

6464. Does not West Derby Union, even that part of it which is without the city, bear some of the city burdens that are common to the part of the union which is within the city?—No, not city burdens.

6465. None?—No.

6466. There would be no difficulty then, you think, in apportioning the burdens if you separated that union into two parts?—No, I think not.

6467. Your point practically is, that you want to get everything that is within the city of Liverpool under one assessing body?—Yes.

6468. And under one collecting authority?—Yes.

6469. And having done all that, you would, of course, go further and have your deductions uniform under that one body for the same classes of property?—Yes; although we have not the slightest objection to the municipal authorities taking that upon themselves, I am not quite sure that my association would be prepared for the actual municipal authorities taking up that, and I am not quite sure whether there should be a special body—

6470. Apart from the municipal body?—Yes; I am not quite sure about that. Certainly they ought to be one body. Whether they should be absolutely the municipal body or not I am not quite prepared to say, because, of course, the political question comes in there. There are all sorts of difficulties about that.

6471. Does your association hold any strong views with regard to the contributions of different classes of property and the equalisation of the burdens of taxation?—Yes; that is really why I am asked to attend here.

6472. Will you tell us what your views are upon that?—My association think that all classes of property, whether real or personal, should contribute their fair share to local taxation. We think that the support of the poor and the education rate should fall in some form or other on the national Exchequer. Whether that would be by the Government absolutely taking over those departments, or by Exchequer contributions, as is now done to some extent, is a question, of course, for Government arrangement.
