6473. Yes; but it is a question upon which we should like to get as much information as we can. Have you any suggestions to make to us as to how things could be more equalised than you appear to think they are at present?—Of course, it is very difficult for a witness who is not a specialist to go into those things. I am quite aware that there is a very great deal of difficulty in localising personal property, and also that there is a very considerable difficulty in doing away with the local control of various matters. Of course the whole subject is an exceedingly difficult one. Still, personally, if I may be allowed to say so—my association may not altogether agree with me—I do not see why a very large portion, at any rate, of personal property cannot be localised.

6474. Could you tell us what personal property you have in your mind?—A manufactory, for instance.

My suggestion is that local taxation should be put upon exactly the same basis as the income tax; that is to say, supposing, for local purposes, a local area and a local body required such and such a sum, that being put on the income tax basis would be put in the form of, for local taxation, so much in the pound. The difficulty as to localising would certainly be met in exactly the same way as it is now by the local authority. The question of localising for that purpose would be, of course, difficult, but in a great many cases it does not appear to me to be so difficult as is generally thought. For instance, taking a manufactory in which certain things are made, I do not see why it should not follow the same law as they have in regard to the Income Tax Acts, and why you should not simply say that the profits should be taken to be those actually made there—not those derived from all parts of the country where they get in and sell goods and so on. Take the ordinary case of a shopkeeper; he gets the benefit of all matters for which local taxation is charged, just as much as a house owner does, and yet for the profits made on his business he does not pay directly one halfpenny towards local taxation. Why his property cannot be localised, I do not see. In regard to those profits which it is absolutely impossible to localise, it is difficult to see why some arrangements could not be made by which an average local taxation rate could be arranged by the Government under which those classes of personal property, which it is found impossible to localise, would pay their proportion of local taxation to a special fund which would be created by the Government from local taxation. I quite agree that it is an exceedingly difficult subject, still there is a feeling that it is exceedingly unfair that this one class of property which, as this Commission is aware, was certainly not intended to bear such a great burden when it was first of all arranged, should bear this very great burden. Personal property, of course, has increased very much more than real property, and what owners of real property say is that it is exceedingly unfair that they, who do not get any more than personal property the advantages of local matters, should be charged these rates, and that the owners of personal property should be entirely let off while real property should bear the whole of the direct taxation for local purposes.

6475. Is there anything else you would like to put before the Commission?—I should like to say, with reference to the poor law administration and the education rate, that we do not see why those should not be made absolutely Government taxes altogether. Whether the Government should take them over absolutely is of course a question which would have to be considered.

6476. Would you propose that Government should administer them also?—I do not know why they should not administer the poor law to a very great extent; there is a difficulty, of course, with regard to education in the case of the voluntary schools which are not under school boards. I can quite see that there would be a great difficulty there. That might, however, be met by a subvention, and subventions would probably get over that difficulty. With reference to the school board, as it is at present, I should like to say that we think it is absolutely unfair; the school board elections—

6477. What is unfair in the school board system—the burden of the rate, or what?—The burden of the rate, the way in which it is got at, and the election.

6478. Keep first to the rate; you say the burden of the rate is unfair now, in what way is it unfair?—The burden of the rate is unfair simply because the burden now falls entirely upon real property generally so called, whether leasehold or not, and that it has been going on increasing very much of recent years.

6479. That has rather something more to do with its amount than with its incidence, has it not?—Yes, it has, but what I want to say is that the ratepayer who has to pay rates has really very little to say in the matter. The reason of it is that, in regard to the matter of election as at present constituted, we do not think it is fair as things are now because the election is really on sectarian principles altogether.

6480. You are referring to the issue that is put before the electors?—Yes. The ratepayers as a body have not a say in the matter, because the voting is cumulative. We say that is unfair. If the ratepayers have got to pay we say that it should not be cumulative. It should be put on the same basis as an ordinary

Mr.  
G. Norton.

1 June '97

Contribution to rates in respect of personal property. Suggested method of carrying this out.

Suggested that expenditure in respect of poor law and education should be paid by Exchequer.

Uniform deductions for the same classes of property desirable.

Contribution in respect of different classes of real and personal property to rates desirable.

Mr. G. Norton.  
1 June '97

municipal election, then the ratepayers who have to find the money would have some chance of checking the expenditure, which at present is under no control whatever, it appears to me, as far as the ratepayers are concerned, the votes being cumulative and the school board officers being elected for three years—

6481. Do you think that is objectionable?—We say that a third should retire annually.

6482. But all that will not affect very much, will it, the point we are rather on, which is the incidence of taxation and whether it is equally borne by the different classes of property?—That is a different subject.

6483. That is the subject we have got to inquire into, and our inquiry is chiefly restricted to that; I do not think we have got to inquire into the question of elections?—I only refer to that to show that the ratepayers have not anything to say really about the expenditure.

6484. You think, under the present system, they have not sufficient control?—That is what I wish to say.

6485. Are there any other points you would like to refer to before the Commissioners ask you any questions?—No, I think not.

6486. (Mr. Elliott.) Are you able to put before the Commission any figures showing what economy could be gained by this amalgamation of the assessment and collection of rates?—No.

6487. Is it a very important question from a financial point of view?—I think it is clearly so.

6488. Are you able to give any figures?—No, I am not.

6489. In a case like Liverpool, would the saving amount to hundreds or to thousands of pounds?—I should certainly think it would amount to thousands.

6490. Is that based upon any study of the question?—No, I cannot say that it is.

6491. With reference to your general position, I understand that you feel that, as owners of property, you are unduly burdened at the present time?—Yes.

6492. You are speaking now as representing owners of property, not necessarily as representing ratepayers?—It comes to the same thing.

6493. Does it?—Yes.

6494. Do you say, then, that the whole burden of the rates falls upon the owner?—It does with reference to the class with which I am concerned—absolutely.

6495. What class is that?—The owners of small property.

6496. That is because those owners directly pay the rates?—Absolutely.

6497. You think, in that case, the occupier is not at all concerned in the amount of the rates?—Certainly. He does not pay one halfpenny directly, and I do not think he pays anything indirectly; if he does, it is so very small that I do not think it could be fairly taken into consideration. A working man is, we will say, paying half-a-crown up to even 5s. a week for a house, and if he had to pay the rates directly, he would neither pay more nor less rent than he does at present.

6498. Then in what you have put before the Commission on this subject of inequality, you are speaking only for those owners of property who directly pay the rates?—That is the strongest view; but I think I might put it generally, that where you get a larger class of house, there it does clearly, if you carry it to its ultimate conclusion, affect the owner as well as the occupier. Of course, I act, besides, for the occupiers of houses. I appear more particularly, I admit, for the owners. Ultimately, the burden on large property comes back to the owner, because there the question of rates is a considerable thing. For the sake of argument, supposing a large owner had to pay any of the rates, his house would certainly command a higher rent than what he is now getting for it without paying the rates.

6499. You are aware of course that under the present system—indeed you yourself have mentioned it—very considerable grants are made out of personal estate to local expenditure?—Yes.

6500. Do you object to that system?—One does not altogether object to it, but of course it only cures the inequality to a certain extent; and then it must be remembered that real property actually pays more than its fair share of Imperial taxation. Whatever is done by way of subventions could not do away with

i 97620.

the difficulty to a very large extent—it would only lessen the evil.

6501. Is your suggestion this: that those subventions should be increased by what could be derived from an income tax subvention—a special grant of the income tax?—I do not want to put it as a subvention at all; it would be direct taxation by the locality.

6502. But it would be a subvention in aid of local expenditure, would it not?—No, I should not put it in the form of a subvention at all. It would be direct taxation, only in the form of an income tax; that is to say, you would get from the inhabitants of any local district a rate which would be put upon the same basis as the income tax is now put, that is to say, on their incomes derived either from real or from personal property.

6503. In other words a local income tax?—Just so.

6504. Would you exclude from rating, property which is not income-yielding—pictures, for instance? No, I would put it on the income tax as it is at present.

6505. Income tax is not at present paid upon such property?—No, and I do not suggest that the income tax should be altered.

6506. (Mr. Murray.) I do not quite gather from your answers what classes of personal property you think could be localised without difficulty?—I can only put it in a general way. I think that a large number can, although I admit that there are some which, perhaps, could not be. Perhaps one might go further than that, and say that, for instance, it might be fairly said that dividends derived from foreign securities, we will say, could hardly be said to derive any benefit from local matters, which are the result of local taxation.

6507. How are you to define the incomes which derive benefit from local taxation?—Of course that would have to be done; it is a matter for thought.

6508. I am asking you how you would do it?—I am afraid I am not a sufficient expert to be able to say that. It is a very hard question.

6509. (Mr. Arthur O'Connor.) Have you with you any prospectus or programme or report of your association?—I am afraid I did not think of that. I could let you have one if you wished it.

6510. How many members have you?—Between 300 and 400.

6511. They would represent—some the owners of land and some the owners of houses?—Yes.

6512. Is the sphere of your operations confined within the municipal limits of Liverpool, or does it also extend somewhat beyond?—Practically it is within Liverpool.

6513. Have you any idea how many owners of land there are within your area?—No, I cannot say. I must explain that a very large number of our members are agents, and have to do with a very large quantity of property.

6514. They are not actual owners themselves?—Some of them may not be actual owners themselves.

6515. Your association includes only 400, some who are not owners at all, but only agents?—Yes, only agents having the care of property.

6516. Have you any idea how many separate owners of houses there are in Liverpool?—No, I could not say off hand.

6517. Are those who are members of your association owners in fee simple or leaseholders only?—A portion of them would be freeholders; a very large proportion of them would be leaseholders in the sense of owning leasehold property under long leases.

6518. They have not the fee simple of the ground?—A very large portion of Liverpool property is leasehold for 99 years or 75 years.

6519. Still, it is not fee simple?—It is not fee simple.

6520. You cannot say what proportion among your members are leaseholders and what proportion are freeholders?—No. A very large proportion of the land in Liverpool is leasehold, held under leases for either 75 or 99 years.

6521. Do the members of your association, as a rule, let their houses at less than they are worth?—Not to my knowledge certainly.

6522. Not if they can help it?—I should think not.

Mr. G. Norton.  
1 June '97

One body for purposes of valuation and collection. Economy effected by this.

Incidence of local taxation on small property owners.

Liverpool Land and House Owners' Association, particulars of.

Local income tax suggested.

Mr.  
G. Norton.  
1 June '97

6523. Then may we take it that the rent for the land and the houses is a competition rent, as a rule?—Yes it is a competition rent in the sense, that each one gets as much as he can, I suppose.

6524. He asks as much as he dare, and he takes as much as he can get?—Yes.

6525. On the other hand, the occupier offers as little as he dare, and he pays as much as he must. Is that not it?—That is so, no doubt.

6526. In the character of owners of houses, whether as leaseholders or as freeholders, the members of your association get for their property from the occupants what is called rent, and they get as much of it as they can?—Certainly.

6527. Is it not out of that very rent which they get from their tenants that they find the money for the rates which they say are so burdensome?—That must be so, of course, in the very nature of things.

6528. Then, ultimately, the burden is borne by the occupier, because it is furnished out of the render he makes to the owner, is it not?—No, because that is the interest or return the owner gets for his investment.

6529. Yes, but given the owner of a house—that is the situation—he as owner gets from the occupier a certain yearly or quarterly consideration, and it is out of that consideration that the owner pays what he has to pay, is it not?—Clearly, it is bound to be so.

6530. Then it is the occupier who furnishes to the owner the means of meeting these demands for rates?—If you put it in that way, of course it is.

6531. I do put it in that way; do you see any objection to putting it in that way?—Well —

6532. Is it not the bottom fact?—It is, in a sense; the only thing is that it might be put in another way, of course.

6533. Can you fairly put it in any way which is irreconcilable or in conflict with that?—I do not think it is fair to say, for instance, that the occupier pays the whole of the rates. If we carry it to its logical conclusion, I do not think it could be said that the occupier paid the whole of the rates of the town, and the owner paid nothing; that would not be the fact.

6534. *Qua* owner simply, he is dependent upon the occupier for the income which his property brings him, is that not so?—That is quite so.

6535. Then it is out of the render made by the occupier that his liabilities must be met?—Yes, that is so; but of course, if you take the thing from its commencement, and put it as an investment in property instead —

6536. But we are not dealing with an investment in property, we are dealing with the burden of taxation?—Yes, but you must look at it fairly; take it that the owner of property takes the property as an investment for his capital; out of that he has got to pay certain outgoings.

6537. Certainly?—Part of those outgoings are taxes

6537a. I suppose that if a man does not own land of his own, as he must be on solid earth somewhere, he must be in occupation of the land of another?—Yes, that is so.

6538. And he has to pay rent for it. That being so, you divide the community into two classes, one, the class that own the land and the other the class that do not. The class that do not, whether in Liverpool or in the country generally, have to pay to those that do for permission to occupy whatever piece of land they do occupy?—Yes.

6539. And the owners get from their tenants, not only in Liverpool, but everywhere else, the wherewithal to meet the charges that they have to meet?—Yes.

6540. So that ultimately, however the burden may be placed in form, the practical burden rests upon the occupiers, who furnish the owners the means of meeting their liabilities?—But if you will allow me to say so, the purpose for which I come here, that is to say, to advocate the question whether personal property should, as personal property, bear its share as well as real property—that does not interfere with your argument.

6541. I do not want to be in conflict at all, and I quite appreciate your purpose?—I mean to say it is unfair to the occupiers, taking your point. My argument is quite as good on behalf of the occupiers of land,

or of whatever property they occupy, as it is for the owners of that property. I am not specially setting this out with regard to the owners. I say, that neither the owners nor the occupiers of real property should be called upon to pay the whole of local taxation.

6542. I am not finding fault with anything you say. I only want to put certain considerations to you, and to see whether you agree with them or whether you do not. I suppose that your object in coming here is to secure that the members of your association shall get off with as small a payment of rates as possible?—That is so.

6543. Will you kindly look at your memorandum. I see that in one sentence you say: "Under the Poor Rate Assessment Act, when the local authority has made an order that owners of this class of property shall be rated instead of the occupier, the owner receives 15 per cent. for collecting?"—Yes, that is so.

6544. That brings us down from 100 to 85?—Yes.

6545. You go on to say: "The owner has also power to give the overseers notice that he is willing to be rated whether the property be occupied or not, in which case he is entitled to an abatement of (above the first 15 per cent.) not exceeding 15 per cent.?"—Yes, that is so.

6546. Fifteen per cent. from 85 would bring us down to 72½?—It is a second 15 per cent.; it is altogether 30 per cent. off.

6547. It is not 15 per cent. on 100, which brings it down to 85, and then 15 per cent. on the 85?—No, it is 15 and 15.

6548. That makes it rather worse; because it brings it down to 70, does it not?—Yes.

6549. In the next sentence you tell us that: "Under another section of the same Act, the owner of compound property can agree with the authority to pay the rates, whether the property is occupied or not; in which case he is entitled to an allowance not exceeding 25 per cent.?"—Yes.

6550. That is a different per-centage from the 30?—Yes, that is so. They are under different sections; one is where the local authority makes an order and makes it compulsory; the other is where it is done by agreement, without any order at all, and without any compulsion. There are two separate things; one is that a man may enter into an agreement with the local authority without that local authority making an order at all.

6551. Then he only gets 25 per cent.?—He may then get not exceeding 25 per cent.

6552. But, if the compounding is on the initiative of the collecting authority the allowance is 30?—The allowance in the first place is 15—they are bound to allow him that 15; then he can give them notice that he will be rated whether the houses are occupied or not.

6553. That is under the Act, is it not?—Yes, this is all under the Act.

6554. How does it come, then, that in the parish of Liverpool itself only 10 per cent. is allowed?—Pardon me, in the parish of Liverpool, as I have put it in my memorandum, we are bound to compound, and we get 50 per cent.—I am talking of sanitary rates there.

6555. But I am asking you about the poor rate?—The poor rate is, as I have got it, 15 and 15.

6556. Fifteen and 15, or 25?—Yes.

6557. Then will you look at these words in your memorandum: "As regards the poor law assessment, there are seven different districts." When the Chairman was taking you over this paragraph you told us that, whereas in Toxteth Park and the other places the allowance was 15 per cent., in the parish of Liverpool it was only 10 per cent.?—That is so.

6558. My point is, that there is an apparent discrepancy between that 10 per cent. and the 15?—No; one is the assessment and the other is the payment of rates—the collection of rates.

6559. You are quite right; I did not notice that?—They take off from what is called the gross annual value and bring it to the net annual value.

6560. (*Viscount Emlyn*.) The 15 and 15 are abatements on the rate he has to pay, are they not?—Yes, which is a different thing.

Mr.  
G. Norton.  
1 June '97

Compounding. Deductions with regard to poor rate; and also under local Act in Liverpool as regards sanitary rates.

Incidence of local taxation; whether on owners or tenants.

Mr. G. Norton,  
1 June '97

Persons should contribute in respect of personal property to local rates.

Suggested that expenditure in respect of poor law and education should be paid by Exchequer.

Mr. C. Watkins.

United Property Owners and Ratepayers' Association of Great Britain, particulars

6561. (Mr. Arthur O'Connor.) In regard to paragraph 6 of your memorandum it would help this Commission very much indeed if you would kindly tell us what is a "fair and equal proportion of the burden of local taxation" as between real and personal property?—That each should pay the same.

6562. That real property should pay half and that personal property, however it may be defined, should also pay half; is that so?—That they should be put into one lump and pay exactly the same.

6563. You are a solicitor, are you not?—Yes.

6564. Is not the leasehold interest in a house personal property?—Certainly.

6565. Then your members, being mostly leaseholders—?—I will put real property as a general term, but I mean to include in that house property, which is sometimes, of course, leasehold property. I have put it, perhaps, rather too technically.

6566. (Mr. Elliott.) When you say real property, do you mean rateable property?—Yes, I do.

6567. (Mr. Arthur O'Connor.) Are real property and rateable property convertible terms?—Not entirely, because if you put it strictly real property does not include leasehold property, but I intended to put in leasehold property as well.

6568. We should require certain definitions then?—Yes.

6569. (Mr. Stuart.) I see you propose among other things to transfer the relief of the poor entirely to the central authority?—As far as I am concerned, an exchequer contribution would be satisfactory, but I do not know that I make very much point about whether it is taken over entirely. I think myself that the poor law administration can be taken over just the same as the prisons are, and exactly on the same basis.

6570. You say in your memorandum "That the support of the poor and the educational rate should fall on the national Exchequer"?—Yes, that is so.

6571. Do you propose that that should apply to the borough of Liverpool or that it should apply to the whole of England?—To the whole country.

6572. You know that the relief of the poor is a different thing from the poor rate, and that the poor rate includes many things that are not for the relief of the poor?—I am aware of that.

6573. Do you mean the poor rate itself, or do you mean that portion of it that is for the relief of the poor?—I should have put it in that way, I admit.

6574. You understand that that portion of the poor rate which is taken for the relief of the poor has been; since the time of Queen Elizabeth, a burden upon real property?—It has really not been so up to 1840; it was not considered so, although it has always actually been on real or leasehold property.

6575. You do not deny that property in England has for many generations been bought and sold subject to that burden?—I am quite aware of that.

6576. Then why do you suggest that that particular burden should be transferred wholly from the locality?—Because it is one of those that can be. My general proposition is that now the question of local taxation is being gone into, it would be fair to alter the whole incidence of it so as to place all kinds of property in the same position; and as regards education and the relief of the poor, those do seem subjects from my point of view which could be in one form or another taken over by the Exchequer or the Government itself.

The witness withdrew.

Mr. CHARLES WATKINS called and examined.

6593. (Viscount Emlyn.) You represent an association of property owners and ratepayers, do you not?—Yes; the United Property Owners' and Ratepayers' Association of Great Britain.

6594. Would you explain to us what it is?—The united association is representative of all the other house owners' associations throughout England and Scotland. It has, I believe, about 40 different associations affiliated to it.

6595. What area does it cover?—It covers the whole of the country.

6596. England and Scotland, do you mean?—Yes.

6577. If you were to place the whole of the rate for the relief of the poor upon what we may call the general taxes of the country—that is what you would aim at doing?—Quite so.

6578. Would you consider that if that were done personal and real property would then contribute fairly as between the two to that particular purpose?—Yes.

6579. Why do you select the money for the relief of the poor to be dealt with in that way; why not also take all other local taxes?—Simply because I do not think it is wise to take the local responsibilities away from the localities.

6580. Do you say, then, that the local responsibility for the relief of the poor may safely be taken away?—I think it might be put into the charge of a Government department altogether.

6581. And then there would be no local responsibility for the relief of the poor?—Quite so.

6582. As to the education rate, what is the rate levied in Liverpool just now for educational purposes?—11d. in the pound.

6583. What total sum does that raise for the school board?—I am afraid I cannot tell you right off.

6584. Perhaps you can tell me what proportion of the total expense of the education of the children in the school boards of Liverpool is met by that rate which you have just named?—I am afraid I cannot do that; there are a good many voluntary schools, and so I could not tell you.

6585. I am speaking of what you refer to as the education rate?—I am afraid I could not tell you that.

6586. You propose that the education rate should fall upon the national Exchequer, without any reference to what proportion of the educational expenditure by the school board at present falls on the national Exchequer?—I do not think it would be wise to take over the actual education rate absolutely, as I said you might do with reference to the poor law, because of course voluntary schools would come in and it would be exceedingly awkward to do away with local control in that sense. My point was rather that that might be met by subventions, as practically it is going to be done now.

6587. I understand that your point about the incidence of rating upon the owner and occupier would be that, where the owner pays the rates under the particular arrangements in Liverpool, he is unable to throw the burden upon the occupier?—He is, absolutely.

6588. Then when the occupier pays the rates, which he does in the case of a large amount of property, is he equally unable to throw it upon the owner?—Except by agreement.

6589. Then you mean that where rates are charged upon the owner in Liverpool they remain on him?—Yes, certainly.

6590. And where they are charged upon the occupier they remain on him?—That is so.

6591. (Viscount Emlyn.) Is there anything you would like to add?—I do not think so. The only point I should like to make is that these suggestions of mine have been given simply at your request, and I do not mean to say that in the slightest degree they are given as representing the association—they are simply personal suggestions.

6592. I understand you to say that they are personal, and that you do not want to bind your association to them?—That is so.

6597. And Ireland?—No, not Ireland.

6598. Do you appear to give evidence on their behalf?—Yes; I was deputed at their annual conference to give evidence on their behalf.

6599. What are the particular points which you wish to bring under the notice of the Commission?—The principal point is that the association which I represent consider that real property—and in the term "real property" I include chattels real—bears a most unfair proportion of the burden of taxation.

6600. Can you explain to us in any way how you come to that conclusion?—Yes, because certain rates which are of a rational character are thrown upon

Mr. G. Norton,  
1 June '97

Suggested that the Poor Law should be administered by a Government Department.

Suggested that education rates should be paid by subventions.

Incidence of local taxation in respect of the burden borne by owners and tenants.

Mr. C. Watkins.

Suggested that expenditure on poor law, education, and police should be paid by the Exchequer. Question of local control.

house property and land to a great extent, to the exclusion of other sources of income. The opinion of the association which I represent is, that as regards such matters as the poor rate and the education rate, they are of a national character and ought not in any way to be thrown upon house property and land to the exclusion of other sources of income.

6601. Take education to begin with; the Government grant is not levied in that way, is it?—With regard to the Government grants and subventions, my opinion is that those subventions are not sufficiently elastic to be fair; the guarding of the poor should be on the same principle as our prisons are managed.

6602. That is going away a bit from the question I was asking as to education; will you follow education first, and tell us what the unfairness is there with regard to the Government grants?—I do not say anything with regard to the Government grants; what I wish to say is, that house property and land bear an unfair proportion of the education rate. The Government grants minimise it to a great extent, but education is of a national character, and should not be borne by house property to the exclusion of other sources of income, in other words, the whole of the education rate should come out of the national revenue, and the national revenue should be augmented for that purpose.

6603. Have you thought out at all how you would conduct your education and the management of your schools?—If there were a Commission of Education appointed to deal with the whole of the schools throughout the kingdom, the management could be either local or otherwise as the Commission might decide. That is a matter of detail.

6604. Do you suggest that you could raise Imperial funds and leave the control of those funds entirely to local administration?—No, decidedly not; the funds would be under the supreme control of the Commissioners of Education, in the same way as the prisons are centrally controlled. With regard to the appointment, or the election, of certain local authorities to manage the schools, that is matter of detail.

6605. It is rather an important detail, is it not?—It is an important detail certainly. At the present moment the local authorities have no direct control over the school board rate.

6606. I do not quite understand what you mean by saying that the local authorities have no control over the school board rate?—The local authorities, that is the vestries, have no control over the rate; they simply collect the money to pay the precept of the school board.

6607. But then the school boards are elected by the ratepayers, are they not?—Exactly; and I would suggest that if the education rate were wholly taken over by the Government, the same system could prevail, and that the question of the management could be dealt with on the same principle as it is at present.

6608. Does it not come very much to what I put to you just now—that you would be raising Imperial funds to pay for the cost of education, and that the local authority, which does not raise the funds, should have the control of it?—I think not. The local authority does not control the school board rate. The school board is quite a different authority to what is known as a local authority. The school board might have the same control as now; they could be appointed on the same system as now.

6609. But the funds to maintain the education would not be raised locally as I understand?—No, the money would not be raised locally; it would come out of the national Exchequer; that is my suggestion, education being a national matter. It is one of those things that could be treated, I think, on the same principle as prisons are now treated. Of course, I do not wish to put the school board in the same category as prisons; but in the case of prisons the cost is spread over the whole of the country and it is managed as a whole, and I say that education can be managed on the same principle.

6610. But you must do away with local control?—There is practically no local control, as regards school boards now.

6611. Is there not?—Only to a very limited extent.

6612. Why so?—With regard to the parish—which is practically the local authority—it has no control over the school board. Take London for instance; the areas of the school board are in no way identical with the areas of the local authorities.

6613. The amount of money that you want and that you spend is surely regulated by the school board, is it not?—It is regulated by the school board authorities, undoubtedly, as they now exist.

6614. Does that not give what you call local control—it strikes me they are representatives of the locality?—I think not; the local authorities have no control over the spending by the school board; the vestries simply pay the precept of the school board.

6615. I take that as your evidence. With regard to the maintenance of the poor, I understand you to think that should be done in the same way?—I should put that on the same footing. The maintenance of the poor is a national matter, and should be placed on the same principle of management as the prisons are now—taken over as a national matter.

6616. Would you do away with all local control?—Decidedly, in that case.

6617. And all local management?—All local management except as before stated.

6618. Do you think that would be an improvement?—As regards the maintenance of the poor, yes.

6619. I am only asking you as to the maintenance of the poor?—As regards the maintenance of the poor, yes.

6620. Then other matters, I think you say, are also of a national character; what other matters do you refer to besides education and the maintenance of the poor?—There is the police; I do not think the maintenance of the police ought to be in any way a matter for local taxation and placed upon house property to the exclusion of other sources of income.

6621. Would you put that entirely as an Imperial charge?—Yes, entirely. I think that the practice of subventions is a wrong one.

6622. What harm is there in a subvention from your point of view, do you think?—Subventions are not sufficiently elastic. They are grants out of certain sources, which do not in any way represent the expenditure on particular matters to which they are allocated.

6623. Have you any other points you want to raise; I see you mention in your memorandum the question of the taxation of house property?—Yes. I take it that the house tax is an anomaly in itself; it is an extra special tax placed upon house property, and it is one of those taxes, having regard to the present burden which house property bears, that should be abolished altogether. I see no reason why house property should bear that extra burden.

6624. What do you propose to put into its place?—If the incidence of local taxation is altered, that would be abolished in the scheme.

6625. You would do away with it altogether?—Yes; I see no valid reason or object in placing that extra special tax upon house property.

6626. (Mr. Murray.) What tax are you speaking of?—The house tax.

6627. Do you mean the inhabited house duty?—Yes, that is the extra special tax for Imperial purposes placed upon house property, as though the idea was that house property bore a very small proportion of the taxation of the country, and this was put on as a make-up; whereas the reverse is the case, and house property at the present moment bears a very unfair proportion of taxation, even without this house tax. Under the circumstances the house tax, I say, is an anomaly, and ought not to exist.

6628. (Viscount Enlyn.) Can you tell us in what way you think house property now bears too great a share of these burdens?—In having to bear an unfair burden in regard to the poor and education. In my opinion, those are the two rates which ought to be national taxes. I would not propose to limit local control with regard to many subjects, all of which, so far as the metropolis is concerned, are comprised under the heading of the poor rate—I refer to lighting, baths, wash-houses, libraries, drainage, and similar local matters. Those I would leave wholly to local control, and those, in my humble opinion, should be subjects of expenditure which house property should bear.

6629. Have you considered, at all, the present manner in which house property is rated. I see you suggest that the taxation of house property for Imperial purposes should be based on the same rateable value as that fixed for local taxation. I presume you mean the

Inhabited House Duty should be abolished.

Suggested that expenditure on poor law and education should be paid by the Exchequer. Assessment in the Metropolis. Different assessing authorities, assessments. Uniformity desirable.

Mr. C.  
Watkins.

1 June '97

assessment of it?—Yes. You are probably aware that in the numerous parishes comprised within the metropolis there is for each separate local authority a different assessment. There are, I think, 39 distinct assessing authorities in London alone, and the assessments vary throughout; in many respects some are alike, but in other respects they vary very much indeed. I think that the basis of assessment should be under one authority.

6630. What would that authority be?—I should suggest that the London County Council's basis of assessment should be taken. They have already made a suggestion as to having one uniform assessment, but that has not been adopted by the various assessment committees. I think there should be one uniform assessment. I do not take the question of expense into consideration, because the expenses of assessment committees are very small indeed in the metropolis. At all events the assessments should be uniform throughout the metropolis.

6631. Would that observation apply to country districts and the country at large as well as it would to the large boroughs?—I think it would, according to the evidence which has been given by Mr. Norton.

6632. Do you agree in the view that he has put forward?—I think, probably, as far as the metropolis is concerned, we are not so badly off as some country towns are, yet there is unnecessary confusion incurred in having different modes of assessments and different collections. At the present moment we have the Imperial collection under Schedule A., and the house duty, both of which I may mention are calculated on an entirely different basis. That causes complexity. Then the assessment for Imperial purposes is different from what it is for local purposes. I think there should be one uniform assessment both for local and Imperial purposes.

6633. You would have representation of the local authorities of different kinds, I suppose, upon the authority that has to make the assessment?—I do not quite follow.

6634. You wish to have one authority for assessment purposes?—Yes.

6635. And for collecting purposes?—Yes, and I would suggest that it should be left in the hands of the local authorities to have the collection of it.

6636. You would leave the collection in the hands of the local authority?—Yes, they to account to the Imperial Revenue in respect of the Imperial taxes collected.

6637. Take a county, for instance; whom would you set up as the authority for assessment purposes?—Take the county of London; I should set up the London County Council for settling the basis of assessment.

6638. Take an ordinary county, not a county like London?—Probably the particular council representing the county.

6639. The county council in fact?—Yes.

6640. Are there any other points you would like to mention to the Commission?—No, I think not.

6641. (Mr. Elliott.) Supposing for a moment that the whole burden of maintaining the police, the public elementary schools, and the relief of the poor were transferred to the Imperial Exchequer, what do you think the additional amount required to be raised in taxation would be?—I am not prepared to go into figures of that kind. I am not prepared with figures.

6642. You have not made any inquiries as to what all those services cost?—I have endeavoured to find out, but it is a question I have not yet satisfied myself upon.

6643. It would amount to many millions, would it not?—Undoubtedly.

6644. How would you propose that those millions should be raised?—By increasing the income tax under Schedule D. Of course you might have a local Imperial tax instead.

6645. Let us, first of all, deal with the question of the income tax. Supposing, for assumption, you wanted 10,000,000*l.* that would involve, if you had the income tax as it is now, the addition of 5*d.* to the income tax, would it not?—Yes, probably.

6646. Would you propose to charge, say, a clerk who receives, say, 150*l.* a year, another 5*d.* in the pound?—I think that the existing exemption clause and sliding-scale would meet that objection. I certainly should not throw any extra burden on the poorer classes.

6647. Would you impose that extra burden of 5*d.* in the pound on the man who, having no property of any description, derives his sole remuneration, which might be, say, 4*l.* a week, from his own labour and industry?—Decidedly. It would not work unfairly, because the burden, as regards his house, would be taken from him.

6648. Do you think a man would gain in that way. Do you think a man with 200*l.* a year, who had to pay 5*d.* extra income tax in the pound, would gain?—He would gain in that particular instance, because the house in which he resided would be relieved of a greater burden.

6649. Do you think such a man would have to pay more or less?—In the case you mention he would pay less.

6650. But you have not worked it out?—No, I have not worked it out precisely.

6651. It is a mere general proposition which you put before the Commission?—Quite so.

6652. (Mr. Murray.) If you increase the income tax in the way you suggest, say, by 5*d.* in the pound, that would fall on house property too, would it not?—Of course it would.

6653. And it would be additional?—Yes, instead of the precept being 8*d.* in the pound, as it is at present, it would be that with the addition.

6654. Have you thought at all what kind of machinery would be necessary if your plan was carried out and the whole of the poor law administration was managed by the central government?—Yes. I apprehend that a poor law commission would be formed, and poor-houses looked after and governed on the same principle of management as prisons are now.

6655. It would be rather a larger business than the prisons?—It would, indeed, be a larger business.

6656. Do you think the central government is capable of that kind of work?—I think so; far better than the ratepayers themselves are. One of the reasons I make the suggestion that a great rate, such as the poor rate is, and the education rate is, should be placed under Government is that I think it could be worked more economically than at present. My experience is that the parochial ratepayer has no knowledge of the way in which his particular parish is governed, and that he takes little or no interest in it. In the great majority of cases he does not know how the rates are made out or how the money is spent.

6657. He would take still less interest in it under the other plan, would he not?—I think not. It is a well-known thing that when a Government tax is raised or lowered, it gets the attention of all classes. When the income tax is raised or lowered either 1*d.* or 2*d.*, it gains the attention of the country at large, it affects all people alike and they understand it, whereas when a ratepayer's rates are raised 1*d.* or 2*d.*, or lowered that much, it affects only his particular parish, and is consequently not a matter of universal interest, it affects only the rateable value of his house, and the subject being complex he does not trouble.

6658. He has to pay, I suppose?—Probably.—The Chairman smiles, but I have had some experience on local boards and vestries, and I find that if you ask many of those who pay rates—unless in the case of large ratepayers—what the rates for the maintenance of the poor have been for the last year, or 18 months, they would not be able to tell you, and neither do they make any representations on the subject.

6659. What branches of local government would you leave to the local authority?—Only those matters which affect the locality, such as lighting, baths, wash-houses, libraries, drainage, and, as far as the initial expense went, all paving and road making.

6660. Do you think that would be a popular measure?—I think so. I think the making of the poor rate and the education rate a Government measure would be extremely popular.

6661. Would it be popular to remove the control and the administration from the local authority to the central government?—I think so. There is only the question to be considered of the guardians of the poor. It might be so arranged that, if it were taken over as a national matter, certain persons could be selected from the parish to maintain and govern the particular poor-houses in that particular locality. I think it is a great evil that each particular locality should have

Mr. C.  
Watkins.

1 June '97

One authority for valuation and collection purposes desirable.

County Councils should be the valuation authorities in counties, and also in Metropolis.

Suggested that expenditure on poor law, police, and education should be borne by Exchequer. Discussion as to what classes should bear this expenditure, and what administrative changes should take place. Question of control discussed.

Mr. C.  
Watkins.

1 June '97

to maintain the poor, who may come from an entirely different neighbourhood. If it were taken over as a national matter that would get rid of the difficulty in that respect. There are poor-houses in which their inmates are treated differently according to the parish, or the guardians who may be in office at the particular time. If it were a national question the poor would be treated alike, on the same principles as the inmates of our prisons are. It is rather awkward to suggest a comparison between poor-houses and prisons, I only do so because of the principle of management involved.

6662. (*Sir Edward Hamilton.*) Such a policy as you advocate is a considerable reversal of all recent policies, which have been intended rather to extend the control of local authorities and, practically, to devolve some of the duties of the Imperial Government upon the local authorities; do you see any difficulty about the reversing of that policy?—I should not like to say that it is reversing that policy. I say that each local authority should have as large powers as possible, but I do not think, as regards the poor and as regards education, they are matters of a local character at all. One particular locality may have a very large proportion of poor compared with another; one locality may require a larger number of board schools than another. I do not think that poor-houses and school boards should be allocated to any particular area any more than prisons are.

6663. I understand that you have not at all thought out the grave difficulties that would attach to raising the revenue by the State, which would be necessary if the State undertook those services, such as the administration of the poor law and the police?—No doubt it would be a large revenue to raise, but then house property would bear its share. My contention is, that all sources of income should bear their fair share of taxation for education and maintenance of the poor.

6664. I understand that, roughly speaking, you have in your mind a large increase of the income tax?—Yes.

6665. But without, if possible, letting the increased income tax fall upon the people with small incomes; do you intend that this enormously increased income tax should extend to all the other people—landlords, for instance?—Undoubtedly.

6666. To all the other schedules of income tax—no not only Schedule D., which I think you mentioned a moment ago, but to all the schedules?—Yes. I mentioned Schedule D. because there you tap a very large source of income. House property would bear its share, but every income should be taxed. As regards matters of national character, every source of income should contribute its fair share.

6667. You do not think it would be transferring the charge from one pocket to another?—No, certainly not. It would simply relieve house property from its present unfair burden. The owners of house property would bear their proper proportion with the owners of other sources of income. The same with the education rate. At present the owners of house property bear an exceptional proportion of it notwithstanding the subventions.

6668. (*Mr. Arthur O'Connor.*) You said that you thought the majority of ratepayers were indifferent to local affairs, and, for the most part, ignorant of them?—Yes, ordinary small ratepayers.

6669. I suppose that the members of the ratepayers' associations take an intelligent interest in local affairs?—Yes, I presume so.

6670. They are, in most parishes where they exist, rather potent agents for the manning of boards of guardians and vestries, are they not?—Not so much house property associations, such as I represent.

6671. No, but we are speaking of them at large?—Ratepayers' associations, as such, go into the questions of elections to the vestries and boards of guardians, and parochial officers. House owners associations are of rather different constitution.

6672. And where they exist they are rather important?—No doubt ratepayers' associations are.

6673. And they are able to have a good deal to say as to the constitution of the local authorities?—Yes, and they do at times.

6674. Not only with regard to the local authorities, but also with regard to municipal purposes, and also with regard to school board elections, sometimes, do they not?—I do not know that there is very much combination with regard to school board elections.

6675. They are mostly composed of tradespeople in the neighbourhood, are they not?—I think, there is very little combination with regard to elections for the school board.

6676. I know, but we are passing from that; these ratepayers' associations are generally composed of tradespeople, are they not?—Of tradespeople and ratepayers generally—not necessarily tradespeople.

6677. In a given parish, say, in London, you would have two boards, would you not—the board of guardians and the vestry?—Yes, there would be the vestry and the board of guardians.

6678. The members of the board of guardians are not allowed to take contracts from their own board, are they?—I think not.

6679. Neither are the members of the vestry allowed to take contracts from their own vestry?—That is so.

6680. But a guardian may take a contract from the vestry, and a vestryman may take a contract from the board of guardians, may he not?—That is a question which I should not like to answer off-hand.

6681. It is a fact, is it not?—I should not like to answer that question off-hand.

6682. The ratepayers' association influences the return to both boards?—Yes, that is their object.

6683. Have you ever heard that boards of guardians give their contracts to members of the vestry and that members of the vestry give their contracts to members of the boards of guardians?—I should not like to answer that question.

6684. You have never heard it suggested?—No.

6685. You do not think it is possible?—I should not like to answer that question.

6686. How many ratepayers' associations do you represent?—The United House Owners' and Ratepayers' Association is constituted by about 40 affiliated associations.

6687. How many ratepayers' associations do you represent?—The secretary is here and he will be able to answer that question.

6688. (*Viscount Emlyn.*) Perhaps he can answer it better than you?—Yes.

6689. I meant to have asked you what your official position is in connection with the association?—I am one of the vice-presidents, and I have taken a great interest in its formation. I also represent some local house-owners' associations.

6690. (*Mr. Arthur O'Connor.*) What are you professionally?—I am a solicitor.

6691. Practising in London?—Yes.

6692. (*Mr. Stuart.*) You, I understand, feel that a rise in taxation is much more keenly felt and resented by the taxpayers than a rise in rates is felt and resented by the ratepayers?—Exactly. A rise in a national tax is much more considered than a rise in the local rates.

6693. There has been a great rise in taxation during your lifetime, has there not?—I have no doubt of that.

6694. And you have seen local contests for the vestry and the guardians, and you have seen parliamentary contests for Parliament?—Yes.

6695. Is it your experience that questions of taxation occupy a larger scale in the one than questions of the amount of the rates do in the other?—I notice this, that, locally, a candidate for local honours often makes retrenchment one of his watchwords, but that does not prevail to so great an extent in parliamentary elections.

6696. You mean that the question of the rise of a rate, say the county council rate, at the last county council election?—?—Is made more of an election cry than it is in parliamentary contests.

6697. You say that the raising of the rate is made more of a cry, locally?—Yes.

6698. Then how do you reconcile that with the fact that you think that the ratepayers pay less attention to a rise in the rate than taxpayers pay to a rise in the taxes?—I say this, that, as regards ratepayers generally, a very small proportion ever take the trouble to inquire into the management of local affairs. We have had instances in the recent elections how few ever vote in proportion to those who vote in parliamentary elections.

6699. I may have misunderstood you, but, as I understood you, your point was as to the amount of the expenditure?—Yes.

Mr. C.  
Watkins.

1 June '97

United House Owners' and Ratepayers' Association, constitution, con-

Greater objection taken to a rise in taxes than to a rise in rates.

Indifference of ratepayers to local affairs.

Mr. C.  
Watkins.

1 June '97

700. Do you mean that when many candidates appeal to be returned for a vestry on the ground that the old vestry raised the rates they are making a mistake, and are appealing to people who really do not care?—I say yes, most emphatically. The general run of ratepayers do not know what powers the vestry have over the rates; we ourselves know that over the greater proportion of the rates the vestry as a local body have little or no authority, and that they simply collect the money to pay the precepts for expenditure, over which they have absolutely no control.

6701. That of course is a fact, but it is not the point that I asked you upon. The point put to you was whether, in your opinion, if there was a rise in the rates, it interested the ratepayers less than a rise in the taxes interested the taxpayers, and I take it that your answer to that is "Yes"?—I perhaps do not quite follow that question.

6702. I will put it once again: it is that there takes place a rise in the rates, and there takes place a rise in the taxes, the first affects the ratepayers, the second affects the taxpayers—I ask you which resents the rise most?—I say that a rise in the taxes obtains more attention and probably resentment, but I say, with regard to a rise in the rates, the average ratepayer does not understand what power the vestry has over the expenditure of the rates. It is too local a question to ensure general public attention.

6703. That may be an explanation of what you think; what you are decidedly of opinion is that there is a greater responsiveness of complaint, so to speak, against increased taxation than against increased rating?—Yes, decidedly.

6704. There is another point I want to go on to, and only one other point; that is with regard to the question of the transference of the maintenance of the poor, of education, and of police, or of such of those as are not dealt with by the central funds, to the central funds; you are not able, I understand, to say how much that would be?—No.

6705. Just for the purposes of argument, taking what a Commissioner who has already questioned you about the matter put it at, say, taking that it amounted to a 5*l.* income tax, which you would wish to transfer, and taking the same gentleman that he took, one with 200*l.* a year, then that 5*l.* income tax placed upon him would mean 4*l.*, but do you say that he would be relieved because his house would not be taxed?—He would be relieved, if not wholly, to a very great extent.

6706. We will not go into the amount, I want to take the principle first. He lives in a house on which the landlord pays the rates—for probably a man of that kind would?—I should hardly think so in London.

6707. We will assume that he does for a moment; would the landlord charge him less rent?—The tenant in all cases pays the rates, either directly or indirectly, there is no question about that.

6708. Then you differ absolutely from the witness who immediately preceded you?—On that point, with regard to such a tenant as you mentioned, yes, decidedly. But he referred to a very much smaller class of property, he mentioned a rent so low as 2*s.* 6*d.* a week.

6709. It will be on the notes, but I think I got a very different statement from the last witness as to who he felt ultimately paid the rates; without going into what he said, your definite statement is that the occupier ultimately pays all the rates?—Yes, unquestionably, that is my statement.

6710. And you rely upon that for the justice of your proposal?—Exactly. I think there is no question that an occupier, whether he has a small house or a large house, ultimately pays his proportion of all the rates. As a landlord myself, if the tenant desires me to relieve him of the trouble of paying the rates and taxes, I simply add them to his rent. I have done that on

The witness withdrew.

Mr. ROBERT ALFRED BELLWOOD called and examined.

6724. (*Viscount Emlyn.*) You are the general secretary to the United Property Owners' and Ratepayers' Association of Great Britain, are you not?—I am.

6725. That is the same association which Mr. Watkins has been speaking of to the Commission, is it not?—Yes.

6726. You have heard the evidence he has given before us?—Yes.

several occasions. I think that is done in the majority of cases.

6711. Your experience as a landlord would be that if the rates fall or rise that would make no difference to the rent that you would have to charge if the occupier paid the rates?—If the rates rose very largely, the rents would probably be raised accordingly.

6712. You do not mean to say that if the occupier paid the rates, and then the rates rose, the rent would also be raised?—No, decidedly not.

6713. You only mean in the case where the landlord pays the rates?—Certainly.

6714. In a case where the landlord pays the rates, and the rates rise and he raises the rent, that is directly in proof of what you say that the rates fall upon the occupier?—Yes.

6715. Is that your experience in London?—Yes, decidedly.

6716. What extent of experience are you quoting when you say what you are now saying?—My experience is certainly not very large as regards the collection of rents of that kind, but I have had some experience. I have a number of estates now under my control. Take a row of houses where some pay the rates and others do not. It simply comes to this that those who pay the rates have their rents very much lower, according to the amount of the rates. Some tenants say "We have so many of these demands we do not wish to be troubled; will you pay all the rates, and we will pay a lump sum," and that has been agreed to. I have taken into consideration what the rates are from the past, and added on so much to the rent, a little more, perhaps, to pay for the trouble. The tenants are very agreeable to pay that in order to be relieved of the trouble. There is no question about it that the actual paying of these rates falls upon the tenant. With regard to small houses, such as Mr. Norton has mentioned, a tenant of one of those would not pay the house duty. Then there is a certain amount of compounding which brings the rates in that case to so small and infinitesimal an amount that the tenant practically pays no rates and taxes at all. Take the case of the occupier of a house let at 2*s.* 6*d.* a week gross, the abatements and remissions are such that, so far as the rates are concerned, they are infinitesimal, and I agree in that point that such a tenant practically pays no rates at all.

6717. What limitation of tenant then do you say pays no rates?—I should not, in principle, put any limitation; but Mr. Norton has said about 2*s.* 6*d.* a week.

6718. Never let us mind what Mr. Norton said, let me know what you say, which I am equally interested in ascertaining. Mr. Norton's views can explain themselves. You say—I am not combatting the statement at all—that if you have a tenant and you pay the rates, if the rates rise the rent will rise—that is it, roughly, is it not?—Yes.

6719. Do you say there is any inferior limitation to the point at which that will take place. Is there a tenant who pays so low a rent that you will not raise it, or that it will not be raised even if the rate be doubled?—I mean to say this, that in the case of a tenant paying, for instance, 2*s.* 6*d.* per week, a rise in the rates would seldom warrant a rise of rent of even 6*d.* a week. The rates would have to be raised to a very great extent to equalise 6*d.* a week.

6720. Is it the case that he is charged in that 2*s.* 6*d.* a rough estimate of what the rates are?—Exactly.

6721. And that small rise or fall would not reach him?—It could not really affect him.

6722. But I presume if all rates were doubled in the course of years it would mean that his rent would have to be raised?—Undoubtedly.

6723. (*Viscount Emlyn.*) Is there anything you want to add?—Nothing, I think.

Suggested that expenditure on poor law purposes, police, and education should be borne by Exchequer. Effect of this on particular classes.

Incidence of local taxation in respect of the burden borne by owners and tenants. The case of tenants belonging to different classes.

Mr. R. A.  
Bellwood.

6727. May we take it, generally, that you concur in the evidence he has given on behalf of the association?—Generally, I do.

6728. Are there any other points you would like to raise, because, I presume, you would not wish to travel over the ground he has travelled over?—No, I should not. I should like to say that we would wish to emphasise the statement that all classes of pro-

Mr. R. A.  
Bellwood.

Mr. R. A. Bellwood.

1 June '97

Rates should be paid in respect of real and personal property. Probable effect of this in Liverpool.

erty, real and personal, should bear an equal share of local taxation. Take Liverpool, the place to which I belong, local taxation there is levied now on the owners and occupiers of premises, and up to a 13l. assessment the owners are bound to pay compulsorily.

6729. All rates?—Always. The consequence is that whatever money is required to carry on the administration of the town for local purposes, the burden is bound to fall upon the compounding property owners and upon the remaining occupiers. The empty places escape, so the more empty houses there are the higher the rate is. We, as an association, contend that there is no reason at all why the burden of local taxation, which is increasing in most towns, should be borne by the owners and occupiers of real estate. We represent, I may say, about 50 associations, and we represent a very large number of both ratepayers and owners in different towns. We contend that an alteration should be made. It has been suggested that this local taxation should be put on the basis of the income tax. I have written to the Government authorities for particulars of the income tax assessment, and of the poor rate assessment, but they have not been sent to me. If we take Liverpool we find that the poor rate assessment of Liverpool is something over three millions, and, I believe there are about 60 millions invested in real estate in Liverpool.

6730. Are you speaking of the three unions in Liverpool?—Yes, of the three unions—of the city of Liverpool as at present constituted.

6731. Is not one of those unions partly within and partly without the city?—West Derby is, but I only include Liverpool proper.

6732. You are not speaking of the part outside the city at all?—No. I think the poor rate assessment is 3,500,000l., and that, if you levied the local taxation on the income tax basis, it would be about 13 millions; that is, you would get nearly four times the amount on the income tax assessment that you get on the poor rate assessment, and therefore everyone would pay their share on the income tax basis. Take, for instance, the case of a shopkeeper in Liverpool. I know of a case in one of the principal streets, where the shopkeeper is paying 600l. a year, and his rates are 150l.—one fourth of that, but he is only making a bare living. Take another man who speculates in stocks and shares, and has no office at all perhaps; he is a member of the Stock Exchange or of the Merchants' Exchange—perhaps he is a bachelor and lives in apartments, but makes his thousands, and does not pay a penny towards local taxation. The shopkeeper and the owners of small property are bound to pay these increased rates. In many cases we cannot get increased rents because the people would never stay in the district—they would move over the water or into other places; therefore we would like to urge upon you the necessity of taking this into serious consideration.

6733. Then, taking the stockbroker whom you have just spoken of, would you localise the whole of his income from stocks of all kinds and from speculations of any kind to Liverpool?—That is a matter, I think more, perhaps, for the Commission to deal with—you are gentlemen with more experience than I have.

6734. I only want to know whether you have any solution of it to suggest to us, because of course it is one of the difficulties of the problem?—Yes, localisation is a difficult matter.

6735. Are there any other points you would like to raise. I understand that, generally, you agree with what Mr. Watkins has said?—Yes, generally.

6736. As to the point of raising the money required for the poor rate and for education, do you agree that it should all be raised on the income tax?—Yes; on the income tax basis.

6737. Do you also agree with his view that you should do away with the local control of education and the local control of maintenance of the poor?—Yes; we say those should be national rates.

6738. Are there any other points outside his statement that you would like to mention?—I agree entirely with Mr. Norton as to the multiplication of rate collections. I can speak from some experience of that, because I happen to be in a large way of business as an estate agent. I am called upon by eight different collectors throughout the year; we are never done paying the rates. What I would suggest is that one collection should be made, say, half yearly or quarterly; that would be a great saving.

6739. A saving of expense, do you mean?—Yes; and it would be much better for ratepayers than to be called upon, as I am, by eight different collectors.

6740. Have you thought out what would be the body to whom you would hand over the making of the assessments?—No. Owners and ratepayers only want to be fairly dealt with, and if they are fairly dealt with, I do not see that the other would matter very much.

6741. Are there any other points you would like to mention. Of course I do not want to take you over the points on which you agree with Mr. Watkins?—No; I think all the ground has been gone over so thoroughly that there is nothing left for me to say.

6742. (Mr. Murray.) I do not quite understand the meaning of the paragraph in your memorandum in which you speak of "substituting as a basis income tax assessments, instead of the present poor rate system?"—I would take a town like Liverpool, where the poor rate assessment for local purposes is a little over three millions, but where, if we take as a basis the income tax, it would be 13,487,000l.

6743. What do you mean by the "income tax assessment?"—That is the assessment for income tax purposes.

6744. Under all schedules?—Yes, under all the schedules.

6745. Would you propose to levy a tax on the income derived by a person in Liverpool?—Yes.

6746. From all sources?—Yes.

6747. Wherever he derived it from?—Yes.

6748. How are you to arrive at that?—At present everyone makes a return of his income.

6749. Not from all sources?—As I say, in Liverpool the assessment is 13 millions, and if you base it on that, you get a much better return.

6750. But this 13 millions which you speak of is only the assessment which is returned by people in Liverpool; it is not their income from all sources?—I take it as the amount they have returned of course.

6751. Many of them may not be living in Liverpool at all?—No.

6752. For instance, if you were to take the income tax assessment in the city of London, you would arrive at rather a curious result, would you not?—Yes.

6753. Your plan would be very inequitable would it not?—What we suggest is that everyone should pay their share towards the taxation in that particular district.

6754. In the district in which they live?—In which they live.

6755. Or in which they do their business?—I do not know that that is very important.

6756. Is it not?—In which they do their business I should say.

6757. Not in which they live?—Not in which they live.

6758. Would that not be rather hard on the residential districts in Liverpool?—No, I do not think so.

6759. Suppose a man does his business in the city of Liverpool and lives outside it, then the place in which he lives would get no contribution from him at all, and the city of Liverpool would get the whole according to your plan?—Of course, the apportionment would have to be dealt with in a proper way; I have not gone into the question how to deal with the funds derived in that way.

6760. That is vital to your scheme, is it not?—Of course there might be a special fund provided for these cases. We have all along contended for many years that the burden of taxation should not be laid upon the owners and occupiers of property.

6761. Take the city of London, for instance; how would you deal with that, where nobody resides at all practically, but where they all earn their incomes and are all taxed?—Those engaged in business would have to pay their share based on the income of their business.

6762. Yes, but the places where they live would get no taxes at all out of them?—That would be dealt with, I suppose, in a fair way. It could be apportioned.

6763. (Mr. Arthur O'Connor.) Are you satisfied that all people pay income tax who ought to?—No, I do not think they do.

Mr. R. A. Bellwood.

1 June '97

Personal property, rating in respect of, on income tax basis suggested. Difficulty of localisation.

Personal property. Difficulty of rating in respect of.

Incidence of local taxation.

Personal property. Difficulty of rating in respect of.

Suggested that expenditure on poor law purposes and education should be borne by Exchequer.

One collecting authority desirable.

Mr. R. A.  
Bellwood.  
1 June '97

6764. Then your income tax is not a tax which covers all that ought to be reached?—No, but it is the best thing that we can do.

6765. To that extent it is defective?—Yes, but it is the fairest thing.

6766. It is not exhaustive of mankind?—No, it does not take in everybody.

6767. Do you not think that owners and occupiers of premises do exhaust mankind?—No.

6768. What members of the human family are not either owners or occupiers of premises?—I mean people that do not occupy premises and live in apartments.

6769. Do you not think that when they occupy apartments they occupy premises?—Yes, they occupy a portion.

6770. Let us go to your interesting merchant who is a bachelor, and who lives in apartments. Do you not think he pays a rent for those apartments?—He pays rent certainly.

6771. Do you not think that that rent indirectly is rent for the house?—Yes.

6772. Then he does pay rent, and he does occupy?—Yes, but he does not pay his share towards local taxation which we want him to.

6773. Not directly, but do you not think the lodging-house keeper, who takes his money, pays her rates out of what he pays her?—We think it is the whole basis of assessment that is wrong.

6774. I know, but will you for a moment follow that point. Suppose I am a lodging-house keeper, and I let to a millionaire bachelor who lives in the top attic, if you like, he pays me something; do I not pay my rates partly out of what he gives me?—Yes.

6775. Then whether it is direct or whether it is indirect, the occupiers of premises must furnish forth the wherewithal to meet all these charges?—Yes.

6776. Then as regards the universality of the charge, the owners and occupiers meet the requirements of the case better than the income tax assessment?—No, it is not equally assessed, people are not equally assessed.

6777. I am speaking now merely with regard to the comprehensiveness of the burden?—Yes, as regards that the basis is wrong to start with.

6778. I suppose, if you had your income tax basis, you would have a higher total figure, and you would have a lower rate, would you not?—Yes.

6779. Now about your eight collectors. Are all the eight collectors, who call upon you, collectors for one and the same area?—No. There are in Liverpool proper the sanitary rate collector and a poor rate collector.

6780. For the same area?—Yes.

6781. Do all the eight collectors collect for the same area?—They are in the same area now, because they have within the last two or three years extended the boundaries of Liverpool considerably.

6782. Does each and everyone of those eight collectors collect for the same conterminous area?—Yes.

6783. They are not different collectors for different areas?—No. Take West Derby, Toxteth, Everton, Kirkdale, Wavertree, and Walton, they are all parts of the city of Liverpool.

6784. Does each of those eight different collectors collect for one and the same area, and one and the same area only and exclusively?—Yes, he collects for the same district or area. Take West Derby, Toxteth, Everton —

6785. West Derby and Toxteth do not appear to me to be the same area, and I should have thought they were two separate areas?—Of course Toxteth and West Derby are separate areas; I misunderstood you. Each, that is, West Derby, Toxteth, Everton, Kirkdale, Wavertree, and Walton, is a separate area as regards the poor rate.

6786. Let me assume that this is a chess board, and that your area is the king's rook's square, do you mean to say there are eight separate collectors for that one square of the chess board, and for that one square of the chess board only?—No.

6787. You are an extensive agent, I believe?—Yes.

6788. You are concerned with property in different areas, are you not?—Yes.

6789. Does that not account for it?—I think I can explain it. There are six poor rate areas within the district of Liverpool, and each different poor rate area has a separate collector.

6790. You have extensive dealings all over Liverpool?—Yes.

6791. And so you are called upon by eight different collectors?—Yes.

6792. If you had dealings also in London, you would be called upon by a collector in London, would you not?—Yes, but we suggest that one collector might collect the whole of the rates in Liverpool, both local and Imperial.

6793. What would then be your suggested area for collection—would it be a municipality or a county?—A municipality.

6794. You speak from a Liverpool point of view?—Yes, I should take towns as a rule, of course.

6795. (*Viscount Emlyn.*) Is there anything you want to add?—No.

The witness withdrew.

Mr. WILLIAM KING called and examined.

6796. (*Viscount Emlyn.*) I believe you are the secretary of the Southport and District Property Owners' and Ratepayers Association?—Yes.

6797. And you have come here to speak on their behalf?—Yes.

6798. Will you tell us what that association is?—It is an association of ratepayers and owners of property.

6799. Limited to Southport?—Limited to Southport and the district as far as Waterloo, I may tell you that it is a new one, and that it is one of the associations affiliated with the united association, of which the last two witnesses have just been speaking. Its objects are exactly similar, namely the protection of ratepayers and owners of property.

6800. I think you wish us to confine your evidence to one or two special points?—Yes, the poor rate is the principal one.

6801. Will you tell us what you wish to say as regards the poor rate?—We wish it to be a national rate.

6802. I think you heard the evidence given by the previous witnesses to-day?—Yes, and I have spoken at several conferences on the subject.

6803. Do you agree generally in their view with regard to the way in which the poor rate should be dealt with?—In every sense.

6804. Have you anything to add to what they have said with regard to it? May we take it that you concur in the views of Mr. Watkins?—I concur in everything the previous witnesses have said. They have cleared all the ground and I have nothing now to say upon it.

6805. Of course we do not want to take you over the ground again, but anything you wish to add we shall be very glad to hear?—As I said, I have spoken several times at public meetings on the matter, especially as regards the poor rate and the education rate, and on the way it is levied. It is levied upon one portion of the property of the country, instead of upon all the property of the country, and I think that we, as property owners and ratepayers, pay an unfair share of the burden of supporting the poor.

6806. Do you think, the better plan would be to put the whole of the burden upon an income tax basis?—I do. I have been a guardian for 12 years, and I have been chairman of the largest union in England, that is the West Derby Union, and I have therefore had a great

Mr. R. A.  
Bellwood.

Collection.  
One collecting authority desirable for local and Imperial rates and taxes in a municipality.

Mr.  
W. King.

Suggested that expenditure on poor law purposes and education should be borne by Exchequer. Question of control of expenditure, and of administration discussed.

Mr.  
W. King.  
1 June '97

deal of experience. I have also been for 10 years an overseer. I do not see any difficulty in the way. The guardians could serve their precepts upon the Chancellor of the Exchequer, and after the Local Government Board had checked their accounts to see there was nothing wrong, let him pay the bill.

6807. You would not give him any authority then, would you?—I would give him all the authority. The spending authority could be carried on as usual by the guardians, and there need be no change in that respect.

6808. Do you mean the guardians would spend the money, and ask the Chancellor of the Exchequer to pay the bill?—That would be done easily enough when put under the control of the Government.

6809. What control would you give the Government with regard to the poor rate?—There is not a pound spent but what the Local Government auditor comes down systematically and checks everything, and if there is any error or inaccuracy, immediately the poor unfortunate guardian who signs the cheques is surcharged. There is always the authority of the Local Government Board held over their heads.

6810. But in spite of that, I think you will admit there is a goodish deal of diversity of practice amongst different boards of guardians?—Yes, there is.

6811. And some guardians are thought to be extravagant and some the reverse?—Yes, some are.

6812. Therefore there is a good deal of liberty given to guardians in the amount they spend on poor relief?—At present.

6813. Would that not continue just the same?—I do not think so. I think they would fear the Government.

6814. Do you mean that they do not at present?—I am not so sure of it.

6815. But why so, unless they have some special control over the expenditure?—I mean under the control of the Government, but they could appoint certain members—at any rate a certain proportion of them—as a spending authority on account of their experience, and to get the benefit, so to speak, of their experience.

6816. Then with regard to the education rate, you wish to say a word as to that, do you not?—I think that should be a national rate. I think all property should contribute towards the support of the poor in every sense of the word.

6817. You would apply that observation to all board schools, I suppose?—I would.

6818. How would you deal with national schools?—Of course, I know there is a little difficulty there, but I think our Government are able enough to meet that difficulty.

6819. You have not any very definite suggestion to make on that point—how they should be dealt with?—I have not.

6820. Are there any other points you would like to mention which have not been touched by other witnesses?—No, I think it has been pretty well threshed out.

6821. May we take it you agree very much in the views they have put before us?—I have exactly the same views in every sense of the word.

6822. (Mr. Murray.) Your scheme of poor law administration is a little different I think from theirs; I gather from them that they would make the Government administer it entirely?—Yes.

6823. But your scheme would allow boards of guardians to administer and for the Government to pay?—For the Government to have the benefit of certain men who are guardians to control it to a certain extent—I do not mean to have complete control of the workhouses.

6824. Suppose for instance that a board of guardians thought it would be desirable to give 5s. a week in outdoor relief to everybody in their union, would you suggest that the Chancellor of the Exchequer should pay the bill when it was sent in to him?—No, I think that if the Government took the control over the workhouses that outdoor relief would be abolished, which I think it ought to be. I know from years of experience that I have had of outdoor relief that it is money which is very much wasted.

6825. I only take that as an illustration?—My opinion is that the Government should have complete control over the workhouses, the same as they have over the prisons.

6826. And over all the operations of boards of guardians?—Let them employ a certain number of them who have had experience, that is what I mean.

6827. And pay them, I suppose?—Yes, pay them.

6828. Pay boards of guardians?—Yes, they ought to be paid. I have spent seven years for nothing as guardian, and I know the labour that is bestowed upon it by many of the guardians, and really, I think, that it ought to be paid for. It is really terrific; it is a very heavy business of itself, I assure you.

6829. Do you think that would be an economical measure?—I do.

6830. To pay the boards of guardians?—Yes.

6831. And let them run up the bill, and then the Chancellor of the Exchequer to pay?—I mean the Chancellor of the Exchequer to pay whatever is to be paid of course.

6832. He would have to pay what they thought was right, would he not?—The Government would, it would be the same.

6833. (Mr. Arthur O'Connor.) Would not the functions of boards of guardians be at an end if your scheme were carried out?—They would.

6834. Then they would not require to be paid much?—Whatever the Government thought proper—whatever they liked.

6835. I suppose you would hand over the duty of finding funds to the Government?—I would.

6836. And you would leave them to settle any little difficulties that might arise in adjusting the matter?—Yes.

6837. I suppose if you assimilated the workhouses to the prisons you would, at any rate, allow local authorities powers similar to those of the visiting committees which now go to the prisons?—Yes.

6838. (Viscount Emlyn.) Is there anything you wish to add?—No.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

Mr.  
W. King.  
1 June '97

NINETEENTH DAY.

Wednesday, 2nd June 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE VISCOUNT EMLYN, *in the Chair.*

G. H. MURRAY, Esq., C.B.  
T. H. ELLIOTT, Esq.

E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. JOSEPH STEPHENSON HORN, called and examined.

Mr. J. S. Horn.  
June '97

burnley union. regulars areas, rateable lue, &c.

valuation lists in burnley. overseers re required to send in supplemental list at least twice a year, and four times per year if they like.

6839. (*Viscount Emlyn.*) You are the clerk to the guardians of Burnley Union, are you not?—Yes.

6840. Have you been their clerk for some years?—Yes, for 15 years.

6841. Have you had any experience besides that in poor law work?—Previous to that I was an overseer of the poor for several years.

6842. Would you describe to us what the Union of Burnley is comprised of?—The Burnley Union consists of 30 townships. The rateable value at the present time is a little over 700,000*l.*, and the union consists in part of urban townships and of rural townships. The urban portion consists of 7 townships, the remaining 23 being rural, or partly rural and partly urban. The great industries of the union are cotton weaving, cotton spinning, loom making, ironworks, and coal mining. The largest municipality in the union is the county borough of Burnley—a borough that has increased very much—and next to that would be the borough of Nelson, which has also had a very remarkable increase. I may state that the county rate committee have just completed their assessment, and I believe that out of the Lancashire unions the one which shows the largest absolute increase is the Fylde Union, the Burnley union coming third; but that as regards per-centage of increase the Burnley Union stands second.

6843. With regard to the system adopted in making the valuation lists for the parishes in your union, we have had, of course, evidence as to the general practice under the ordinary law; I do not know whether there is anything special in your case in Burnley that you would wish to bring under our notice, or whether your practice is practically that of other unions of the same character?—The practice, I think, will be the same as that in other unions of a like character, except this, that the assessment committee in their rules and regulations require the overseers to send in supplemental lists at least twice a year, but four times a year if they like.

6844. Is that at fixed times?—We have fixed times, four times per year, but it is expected that at least twice a year they will send in lists. The larger townships, such as the county borough of Burnley, Nelson, and Colne send in three times, or four times, according as changes take place.

6845. But it is compulsory that they should send lists in twice?—Yes, and we find that of the greatest possible advantage.

6846. Would there be no intermediate lists sent in between those periods? Assuming the practice in a parish was to send in twice a year, would any changes that took place between those not be noticed at once?—They would come in in the four times per year. We send out a circular, for instance—that circular has just now gone out—at the commencement of the financial year stating that the assessment committee would sit upon such and such a day during each quarter in the year, that the list must be deposited for

inspection on such and such a day, and returned to the assessment committee on another day; so that they cannot forget the dates. If, however, the overseers of any township happen to overlook the matter we should sit between times to take it.

6847. Are there any other differences in practice, do you think, between your union and others that you would like to bring to our notice?—I do not know that there is, taking unions similar to the Burnley Union.

6848. Then on the next point, with regard to the principles adopted by your assessment committee in dealing with the valuation lists and in determining the gross estimated rental and rateable value on different classes of property, will you tell us how you proceed with regard to them?—The gross estimated rental in the great majority of cases would be the actual rent paid in the case of shop-property and house-property, because there you can very readily ascertain the rent that the occupier pays to the owner. But when you come to works of a special character, of which there are many in the Burnley union, such as railways, canals, collieries, mill property, works with power, public-houses, and so on, the assessment committee are of opinion that neither their skill nor that of the overseer is equal to ascertaining the gross estimated rental. In cases like that the assessment committee, with the consent of the guardians, appoint the very best man that they are able to get for money to make the valuation for them. Shop property and house-property, in my opinion, is, perhaps, the hardest rated of any class of hereditament, owing to the simple fact that you can get so readily at the value. In order to arrive at the rateable value, different per-centages are taken: for instance, in the case of land, 5 per cent. is deducted from the gross estimated rental; to arrive at the rateable value; in the case of land and buildings it is 7½ per cent.; in the case of shop property and houses above 15*l.* value it is 15 per cent.; in the case of cottages below 15*l.* value it is 20 per cent.; and in the case of works with power it is 25 per cent.

6849. By works with power you mean works with machinery, do you not?—Yes; either steam-power or water-power, but generally it is steam-power.

6850. Is it a uniform fact that with works with any power or machinery they always get a deduction of 25 per cent.?—Yes. But supposing any occupier came before the assessment committee and showed to the committee that the cost of the repairs, insurance, and everything else was greater than 25 per cent., then the committee would take that into consideration. But such a case has never in my experience arisen.

6851. (*Mr. Murray.*) I did not catch what class of property it was that got the 7½ per cent. deduction?—Land and buildings.

6852. Land with buildings?—Yes, a farm.

6853. (*Viscount Emlyn.*) As against 5 per cent. for land alone?—For land, pure and simple.

Mr. J. S. Horn.  
2 June '97

Valuation of different kinds of property. Deductions.

Deduction in case of land and buildings.

Mr. J. S.  
Horn.

2 June '97

6854. (Mr. Smith.) Do you not divide the land from the buildings?—We are obliged to do so now under the Agricultural Rates Act.

6855. Ought you not to have done it before?—No.

6856. Was there not a suggestion before that they should be divided?—There was no Act requiring it.

6857. I thought the Local Government Board had issued some orders about that?—Not within my remembrance, but even then they would only be suggestions to the assessment committee.

6858. Possibly I am wrong?—I may state this, that in the urban districts they were bound in the case of farms to divide the value.

6859. For the purpose of the general district rate?—Yes. That was a matter which they could determine for themselves.

6860. The reason I interposed was to ascertain whether, now that you have to divide them, you continue to give 7½ per cent. over the whole, or whether you deal with them separately?—They are 7½ per cent., but I think that is a question that will still engage the attention of the committee.

6861. Do you take 7½ per cent. off the land as well as off the buildings?—We take 5 per cent. off the land and 7½ per cent. off the buildings.

6862. You told us just now that off land and buildings you take 7½ per cent., and the question I put to you is, now that you have to divide them, what do you take off each?—Off the land 5 per cent., and off the buildings anything between 7½ and 15 per cent.

6863. Then the illustration you gave us just now of farms no longer exists?—That is so; I had in my mind the old practice.

6864. (Viscount Emlyn.) How would you settle the difference as between 7½ per cent. and 15 per cent.?—That would depend upon local circumstances as to the class of buildings, as to whether it was a house or whether it was only a farm building not occupied.

6865. Is there anything more you would like to say with regard to that part of the subject?—I do not think there is in that respect. I would like to add that during the past 15 years the result of all the special valuations has been that we have had no appeal to quarter sessions against them. We have been threatened from time to time, but there has been no actual appeal.

6866. Is that during the whole time you have been clerk to the union?—Yes; with one exception, which took place a month ago; that was the case of a cotton mill, and it was decided against the appellant. That is the only case that I know of.

6867. Would you tell us your practice with regard to levying and collecting the poor rate?—That is a question that I am not practically acquainted with as a clerk to an assessment committee or as clerk to the guardians, although I think I know the general practice. The guardians send out to the overseers a precept for so much money; the overseers then take into consideration how they are to raise that money, together with their own office expenses, and the cost of the preparation of jury lists and register of voters, and so on. In the large townships, I think in five of them, they lay a rate once a year, and in the remaining 25 townships the rate is laid half yearly and is collected by the assistant overseers, and I believe with very great success indeed, that is to say, the amount uncollected is a very small per-centage of the rate laid.

6868. Does that apply to house property as well as to land and houses?—To all classes.

6869. Generally?—To all classes of property. Take, for instance, the township of Burnley which has the same boundary as the county borough of Burnley, the overseers demand amount, for the poor rate only, for the year to 14,166*l.*, and they collected the entire amount with the exception of 673*l.*, that 673*l.* being chiefly on account of empties.

6870. Unoccupied premises, you mean?—Yes, and on account of reductions in valuations; a person may have objected to his valuation, and perhaps got it reduced, or there may have been excuses on account of poverty. The 673*l.* would be made up very largely of unoccupied property.

6871. Are the houses that are unoccupied not rated at all, then; are no rates paid upon them?—No rates are paid upon them.

6872. Not in any case?—Not in any case in the borough of Burnley. In another borough in the union, the borough of Nelson, the district rate is included in the poor rate. In the county borough of Burnley, the county borough collect their own rates, but in the borough of Nelson the poor rate comprises also the general district rate, and there they collect 12,979*l.*, their total loss being 817*l.*; they have compounding there.

6873. Is that the only township where you have compounding in force?—There is another smaller one where there is compounding, Nelson being the chief. As far as I can observe in the borough of Burnley where there is no compounding they do quite as well if not better than in the borough of Nelson where there is compounding.

6874. Can you tell us the terms on which compounding is carried out in the borough of Nelson?—In the borough of Nelson 15 per cent. is allowed, and if the owner pays for the hereditament whether occupied or not they give 25 per cent.

6875. If he pays rates whether the premises are occupied or not then he compounds at 25 per cent.?—Yes. From my own observation in these districts 25 per cent. is a very big per-centage, because that class of property, which is the worst class of property, is, as a rule, generally pretty well occupied. A person lives in a 3*s.* house. Why? Because he cannot get one at 2*s.* 6*d.*; or he lives in one at 2*s.* 6*d.*, because he cannot get one at 2*s.*, or he lives in one at 2*s.* because he cannot get one at a shilling. He wants a shelter, and even if times are bad that class of property you will find to be the best occupied.

6876. Then we may take it that, from your point of view, there is no advantage at all in compounding?—I think there is a positive disadvantage comparing Burnley with Nelson. I would not apply that to every part of the country bear in mind; that is why, I think, it is wise that it is optional with the vestry to put the compounding in force—I am speaking for my own union only when I say that compounding is not an advantage to the union, but rather a disadvantage.

6877. Would you tell us what class of union you think it might be advantageous in—I understand that you think in some unions it might be advantageous?—I can quite understand that there may be an advantage in the slums of London, in the slums of Liverpool, and in the slums of Manchester where a tenant, perhaps, does not even pay his rent, but may go off with the doors or use a good many of the fixtures for firewood.

6878. But it would not be an advantage, you think, with regard to any class of property that you have in Burnley?—Not in the Burnley Union. Further than that I am also of opinion that it tends to greater economy on the part of the governing body, where the occupier pays his own rates and knows the cost of government.

6879. Is there anything else you would like to say with regard to that point as to collection?—No, except that I think in Burnley the overseers do remarkably well in the collection of rates; I mean to say that until just lately, perhaps, the Burnley Union was the best wage-earning district, not only in England, but in the world. Trade has been bad lately, but we hope it will be better.

6880. Do you suggest any alteration that you think desirable with regard to the collection of rates?—Except that, I think, there ought only to be one rate, and that the overseers are the best persons to collect it.

6881. Have you any suggestions to make as to the change in preparing the valuation list or the authority who should discharge the duty?—No, I am of opinion that the assessment committees as at present appointed, are about as good an authority as you can possibly have. They are fairly representative of a large area, and not of one particular part of the union.

6882. Do you think that the assessment committees as at present established get at first hand all the information they ought to have to enable them to come to a conclusion as to the value of property?—At first hand?

6883. Yes, in making their first valuation?—Where they appoint a paid valuer they do get it at first hand, that is to say, in the case of special properties, not properties of the ordinary nature of house property and shop property. The information about that, of course,

Mr. J. S.  
Horn.

Surveyor  
of taxes  
should  
have a seat  
upon the  
assessment  
committee.

Barnley is  
in two  
admini-  
strative  
counties.  
No incon-  
venience.

One valuation  
for  
local and  
Imperial  
purposes  
desirable.  
County  
authorities  
might  
follow the  
valuation  
of assess-  
ment com-  
mittees if  
surveyor of  
taxes had  
a seat on  
them with  
power of  
appeal.  
But county  
authorities  
should have  
right of  
appeal to  
Quarter  
Sessions.

Triennial  
re-valuation  
desirable.

is not at first hand; it is got through the overseers. I think that is a great advantage, because the overseers being scattered over the various parts of the union are enabled by their local knowledge to get information that no central authority could very well get unless they had returns of rents in the same way that the surveyor of taxes gets a return under Schedule A.

6884. I see you have suggestions further on in your memorandum of alterations which you propose shall be made; but do I gather that you do not think it desirable that the assessment committee should have any one sitting with them to advise them or to assist them outside their own body?—I think it would be a very great advantage if the surveyor of taxes had a seat upon the board; I say nothing as to whether he should have a vote or not, although I should have no objection to that because one vote out of 13 is not a very strong voting power, but I think it would be a very great advantage indeed for the surveyor of taxes to have a seat upon the assessment committee. I have seen the benefit of that under the Agricultural Rates Act, where he has been of very considerable assistance to the assessment committee.

6885. There is one other question I want to ask you about the union of Barnley; it is in two or more administrative counties, is it not?—At the present time it is in two administrative counties, it was in three.

6886. Does any practical inconvenience arise from that?—Not the slightest.

6887. None whatever?—Not the slightest.

6888. Then I understand that with regard to assessment you think there should be only one assessment of any sort or kind?—Yes.

6889. For all purposes?—For both Imperial and local purposes.

6890. Do you propose then to do away with the county valuation?—I think the county people might follow the local valuation, if the surveyor of taxes had a seat on the assessment committee, and if the county authorities were given the same rights of appeal to quarter sessions as are now possessed by the overseers, I think they would be protected in that way.

6891. What do you mean by the county authorities having a right of appeal?—At present the county authorities have their own assessment, but if they are to adopt the assessment of the assessment committee, then I think if they were not satisfied with it they ought to have the right of appeal against it, and it would help, I think, to keep the assessment committee up to the mark if they knew there was another court behind them.

6892. Have you thought at all of the possibility of representation for county authorities upon the assessment committee?—I have, but my difficulty is this, that I am afraid representation like that is not practicable. Take, for instance, the county of Lancaster; there is the county council, then there are a number of county boroughs—there is a considerable number in Lancashire—then in the county there will be probably 30 assessment committees at least, so that it would be a difficult matter to arrange meetings.

6893. You think it is not practicable to carry that out?—I think not.

6894. You prefer to rely upon the right of appeal by the county authority in case of their not being satisfied that the assessment is a correct one?—Yes, together with the fact that the Imperial authorities are represented by the surveyor of taxes.

6895. With whatever powers you give him on the committee?—Yes.

6896. It would be practicable, I suppose, would it not, to give him some power of veto if he did not approve of what was being done?—I would give him the same power of appeal as the overseers now possess.

6897. He would have the power of appeal as well, would he?—Yes, just as he had under the Agricultural Rates Act.

6898. Have you thought at all of the desirability of having periodical re-assessments?—That is our practice in the Barnley Union.

6899. What do you require with regard to them?—We call upon the overseers, or at least give them the privilege four times a year to send in supplemental valuation lists, correcting any changes that may have taken place either upwards or downwards.

6900. I had in my mind rather more when speaking of periodical re-assessments, such re-assessments as would take place every third year or fourth year?—I suggest that it should be done at least every three years.

6901. Would that be in addition to your supplemental lists?—Yes; I think it is as well to revise the list at least once in every three years.

6902. Would you explain to us how you would carry that out; you would first of all have your supplemental lists half year by half year, or quarter by quarter, as I understand?—Quarter by quarter, as the case may be.

6903. So that every year your supplemental lists would be made up satisfactorily?—Yes.

6904. And you deal with your re-assessment, we will say, once in three years?—I should take it as regards the three years, or biennially, as the case might be, that every hereditament should be examined—every one—and in the case of the special properties that a special valuer should be engaged to do the work.

6905. And should revise all the special properties for which you require a valuation?—Yes.

6906. Whether there is any change in the position or not?—Yes.

6907. Of course, in the re-assessment you would have the surveyor of taxes called in at the same time?—Yes.

6908. And sitting upon your assessment committee?—Yes. If, however, the union assessment committee's valuation is not accepted for Imperial purposes, then there is no need of a surveyor of taxes.

6909. Would you not, in any case, get a considerable amount of information for the assessment committee from the surveyor of taxes?—I do not think we should get any more than we could actually get ourselves if we had annual returns from the owners of the rents received in the same way that he has every five years; I believe he only gets it every five years.

6910. You get some returns made to the Assessment Committee that are now made to the surveyor of taxes?—Yes, only they are made annually.

6911. Have you anything you could tell us with regard to the deductions made as between gross estimated rental and rateable value in your union?—I think I have intimated that it is five per cent. on lands and that for buildings of a certain class—

6912. The proportions you have given us; have you any feeling as to the retention of the present system of rateable value or net annual value in the way it is made out?—Personally, I should prefer that the gross estimated rental should be also rateable value, and that all rates should be based upon the gross estimated rental.

6913. I do not quite understand what that means; will you explain it a little further; you start with your gross estimated rental, do you not?—Yes. We will say that a hereditament lets for 100*l.* a year; if it happened to be house property we should deduct 15 per cent., and that would make the rateable value 85*l.* Then the rate in the *£* would be upon that 85*l.*, and my opinion is that it ought to be upon the 100*l.*

6914. You would levy your rate upon the 100*l.*?—Yes, I should abolish that second column.

6915. You would not levy it upon the rateable value?—I should abolish that column altogether; by that means I think that throughout the country there would be greater uniformity. All assessment committees do not adopt the same scale of deductions. In the metropolis I believe it is laid down by statute what shall be deducted from the gross estimated rental to arrive at the rateable value. I daresay the Lancashire unions in the main make the same deductions, but I can easily imagine parts of the country where the farming element was very strongly represented on the assessment committee where they might take a greater per-centage off than the 5 per cent.

6916. What do you propose your reduction to come off—the rate?—No.

6917. You are going to take nothing off the gross estimated rental, I understand?—Nothing at all; that would make the rates so much less in the *£* of course.

6918. I see from your memorandum that you would deduct one-twelfth from the gross estimated rental of certain properties; what do you mean by that?—I say if,

Mr. J. S.  
Horn.

2 June '97

Valuation.  
Gross  
rental  
should be  
the rate-  
able value.  
Reasons  
for this  
view.

Deductions  
should be  
statutory.

*Mr. J. S. Horn.*  
2 June '97

on the other hand, to base all rates on the gross estimated rental is too sweeping a change, or impolitic, or anything of that kind, then for the assessment I would deduct one-twelfth part from the gross estimated rental on account of all lands, tithes, canals, navigations, docks, watercourses, reservoirs, quarries, brick-yards, sporting rights, woods and plantations; and one-sixth part from the gross estimated rental of all buildings (including farm buildings), mines, railways, gas and water works.

6919. Having done that you would then get what would practically be the rateable value?—Yes.

6920. You would come back to the same thing under that system, would you not?—Yes, only I think it should be laid down by statute what the deductions should be as in the case of the metropolis.

6921. With regard to each class of property?—Yes, although personally I do not see why between one class of property and another there should be that difference. Let me illustrate my point. There are two brothers, say; one takes a piece of land at 100*l.* a year, another takes a shop at 100*l.* a year; they both enter into business at the same time; the farmer brother pays his rates upon 95*l.* and the shopkeeping brother upon 85*l.*, because he gets a greater deduction. On the face of it it looks very hard that the farmer should be paying rates upon 95*l.* and his brother the shopkeeper upon 85*l.*

6922. Is there not a reason for that variation in the deductions?—As far as the tenant is concerned it is not very much; it is on account of repairs and everything to maintain the property in a state to command the rent. But the two individuals are ratepayers. True it may be argued that the farmer brother having to pay his rates upon 95*l.*, that is made a consideration in the rent. Probably it is—it may be so and it may not.

6923. You would like to equalise the charge all through?—Yes.

6924. And not take into consideration whether it costs more to maintain one class of property than another?—No.

6925. Do you think there is no reason for doing that?—I do not think so any more than there is reason to say that in this place you can easily make a profit of 50 per cent., and in the place over the way whatever you do you can only make 5 per cent. Take great works with power, in their case 25 per cent. is taken off, but it is just possible that the money earned in those places is infinitely more than the money earned in a small shop. You might as well, from my point of view, take that into consideration as the cost of the repairs, and so on.

6926. You have cases where the owner pays the rates instead of the occupier, have you not?—Yes, that is the borough of Nelson.

6927. In that case what deduction is made there?—He gets 15 per cent., or, if he pays whether occupied or unoccupied, 25 per cent. Now I say 15 per cent. is too much; it is only for collection, and any rent collector would do it for less than 15 per cent. It gives rise in many places to a good deal of quirk and dodging in order to bring the premises down to the 8*l.* rateable value.

6928. Are there any other suggestions that you have got to make to the Commission with regard to the subjects that have been referred to us?—I think we have already mentioned that there should be one rate for all purposes and that it should come under the purview of the district auditor. I feel sure that in the case of the poor rate where it does come under his purview it is better collected than in the case of corporations where it does not come under the purview of the district auditor.

6929. Is there anything you would like to add?—I may state about the composition of the assessment committee that where the borough and the union have the same boundaries, I cannot see any great objection to members of the corporation having seats upon the assessment committee, but I am not in favour of municipalities being the assessing authority. The municipality is the great spending authority, and I do not think it is wise that the municipality should also be the assessing authority, for a reason which you can see in the case of the Government. The Government do not pay rates but they give a contribution in lieu of rates

putting their own valuation upon their own property, and that is a very different valuation to what the assessment committee would put upon it—it is considerably less. My fear is that in the case of the municipalities if they had to value their own properties, their gas-works, their waterworks, their electric-works, their tramways, their town halls and so on; the value there would be rather depressed and of course other property would have to go up. I do not think, therefore, you would arrive at as fair a valuation.

6930. With regard to the way in which these contributions are paid upon Government property, do you think that is a satisfactory arrangement?—No.

6931. What would you suggest instead?—My suggestion is that there should be no exception on the part of the Government, that their property should be valued just the same as any cottager's house or any shopkeeper's shop, and that if it is wrongly valued the Government should have the same right of objecting and appealing as any other individual.

6932. Is there much Government property in your union of Burnley?—Not a great deal.

6933. It does not affect your union very seriously then?—Not very materially.

6934. But as a matter of principle you think Government property ought to be valued in the same way as any other property?—Yes.

6935. And should pay on the same basis?—Yes.

6936. (*Mr. Smith.*) I gather that you would entirely approve of the practice which I may tell you obtains in the city of Birmingham by which our improvement rate, which is a municipal rate, is collected by the overseers?—Yes.

6937. So that we have in Birmingham anticipated your idea that there should be one collecting authority as distinct from the municipality?—Yes, but I was not aware that that was the fact.

6938. We have, from different points of view, possibly, arrived at the same conclusion. One word about compounding. Do you think that throughout England it would be possible to collect rates from the very floating population of our large towns?—No, I think I guarded myself there by saying that I was speaking from the Burnley Union point of view; I stated that I was glad the Act was optional, so that every district could adopt it or not according to its necessities.

6939. You do not seriously suggest the abolition of compounding?—By no means, only I do suggest a revision of the terms.

6940. You would agree with me that in a place like Birmingham, for instance, it would be almost impossible, with the many changes that we know there are, to collect the rates direct from the occupiers of small house property?—Yes, I quite agree with that.

6941. You think a poor law union or a parish maintaining its own poor, is about as good an area of assessment as can be devised?—I am very strongly of that opinion.

6942. Do you think that anything like a county area would be too large?—It would be too large.

6943. You would probably agree with me that the authorities there would not possess the necessary local knowledge?—By no means. They could not possibly have the local knowledge. Further than that, may I just supplement my answer—that, having a number of assessment committees in the county, each one dealing with an area, the centre is easily reached, and persons who feel aggrieved have a readier means of coming to object against their assessments than they could have against a county assessment.

6944. The union, in point of fact, has been found a convenient modern area for local government?—That is so.

6945. But would you suggest that it would be desirable where a union has the same bounds as a municipal borough that there the town council might be represented on the assessment committee?—I think that is already provided for by section 3 of the Act of 1862.

6946. You are quite right, it is?—I simply stand by that section 3 of the Act of 1862.

6947. With regard to the attendance of the surveyor of taxes, there would be a little difficulty would there not, in his taking part in the business in the ordinary

*Mr. J. S. Horn.*  
2 June '97

Government property should be assessed to rates.

One collecting authority for a municipality desirable.

Compounding should be optional.

Area for assessment should be poor law union, not the county.

Representation of town council on assessment committee.

Compounding in the borough of Nelson.

One rate for all purposes desirable, audited by district auditor.

Assessment Committees. Municipality should be represented, but should not be the assessing authority.

Mr. J. S.  
Horn.

2 June '97

Surveyor  
of taxes  
should  
attend  
assessment  
committees  
and have  
right of  
appeal.

County  
rate basis  
unneces-  
sary, but  
county  
council  
should  
have right  
of appeal.

Valuation.  
Gross  
value  
should be  
rateable  
value.

Com-  
pounding.  
Allowance  
of 25 per  
cent. is too  
high.

Movable  
machinery  
not rate-  
able in  
Burnley  
Union.

way because, as you say, although he might have his experience he would only have one vote out of a large number; what would you say to his having, not a veto, but a right of protest against an assessment?—I think the most powerful protest he can make is to give notice of appeal, and I would give him that power. If he is not satisfied with the decision of the assessment committee he should have the right of appeal to the quarter sessions. I believe that if that power was in his hands the assessment committee would be very careful indeed as to running counter to his judgment.

6948. The same remark would apply to the county council; for the reasons you have given you would not give them representation on the assessment committee, but you would give them a right of appeal?—I would give them a right of appeal.

6949. That would render the county basis unnecessary?—I think so.

6950. I suppose you remember several valuation Bills being introduced into Parliament, do you not?—I have heard of them from time to time.

6951. They seldom get beyond a certain stage, I think?—I think that is generally the case.

6952. A good valuation Act throughout the country would deal with almost all the questions contained in your suggestions, would it not?—I think so.

6953. One word as to your suggestion, which is a novel one, that all rates should be based on gross estimated rental; you would assimilate, then, the practice to that in regard to the Imperial taxes?—To what it was with regard to the Imperial taxes at one time. I think within the last year or two, for what earthly reason I do not know, there has been a deduction made—it is one-eighth in a certain class of property, and perhaps one-sixth in another class of property.

6954. Of course you must recognise that these deductions are the results of the Act of 1862?—Yes.

6955. Which provided that the rateable value was to be subject to insurance and keeping the property in a position to command the rent, and so on?—Yes, but it leads you in this difficulty, that every individual who comes to object and obliges the committee to go into his own special case and show what the average annual cost of repairs is, would have the right of saying "I have nothing to do with your laying down a scale, that is a rough-and-ready method of doing it, and I have a right to my own way."

6956. If the scale were laid down by a valuation Act as I have suggested, that difficulty would be overcome?—Yes, it would.

6957. On the whole, do you not think it would be fairer to take the real value to the occupier rather than the accidental rent that he might be paying?—The real value to the occupier is the rent which he does pay. I am with you there, unless you have made a slip and intended to say the real value to the owner.

6958. The real value to the owner I think I meant?—I take it that it ought to be upon the real value to the occupier.

6959. Although you agree with me that you would not abolish compounding, you think the 25 per cent. much too high?—It is very much too high, because that class of property is generally well occupied, and is bound to be.

6960. Can you tell me—you probably have not personal experience—how they deal with the rating of machinery in the Burnley Union?—The shafting and some other matters are taken into consideration as enhancing the value of the hereditament, but machinery like looms, that can be readily moved by the tenant, and which is the tenant's property, as a rule is not taken into consideration as enhancing the value.

6961. You draw the broad distinction which is familiar to us between movable and immovable machinery?—Yes.

6962. You have not been much affected by the decision of the law courts?—In the Chard case?

6963. The Tyne boiler case, I think, is the important case?—No, we have not.

6964. I want to ask you one word about your assessment committee, we have it in evidence, I think, that, especially in the neighbourhood of London, the large manufacturers are quite unrepresented on the assessment committee.\* How is that in your union?—The

complaint, if there is a complaint, and I cannot say that there is a complaint, is that it is the other way about, and that the large manufacturers, the shopkeepers think, are rather too predominant.

6965. Then I was not far wrong when I suggested that it was mainly in the metropolis that the large manufacturers were not taking their fair share of local government?—Of course I have no experience of it.

6966. In your own case you find them taking possibly almost an excessive share?—I would not say "excessive."

6967. A large share?—They take a fair and an intelligent share. My own assessment committee is fairly representative of the various classes of property; the cotton industry is the chief, and they are well represented and ably represented. The farming interest is also represented.

6968. We have had an illustration given us in London and the neighbourhood of London where a number of very small ratepayers compose the Assessment Committee, and where they rate large manufacturers, you would not have any instance of that in your district?—No.

6969. Do you often have a compound householder on your assessment committee?—He is such a rare person that I do not think so; certainly in my 15 years I do not know of one. We do not believe in compounding at all in our district; we can pay.

6970. As a rule the large manufacturers are fairly represented?—They are well represented.

6971. Are companies represented at all? That is another point we have had, that large companies suffer at the hands of assessment committees, particularly in the metropolis?—I cannot say that that would be a legitimate source of complaint in my own case, not by any means.

6972. That grievance does not extend to the provinces then?—No.

6973. (Mr. Murray.) If you take the gross estimated rental as you propose as the value for all purposes of taxation, how do you propose to arrive at it?—It would be what the hereditament would be likely to let at, just in the same way as it is at the present time to a tenant from year to year; not necessarily the actual rental, but taking the definition given in the Act which defines gross estimated rental to be the rent at which the hereditament might reasonably be expected to let from year to year, and stop there.

6974. How are you going to treat tithe, for instance?—I would take no notice of it. I would take the case of insurance and repairs generally. Bear in mind that it is not a point that I am very strong about, but in the interests of uniformity I think that is rather desirable.

6975. Of course, such items as tithe and land tax would vary very much in neighbouring properties?—As regards tithe, I may say that practically I know nothing at all about it, for we have very little.

6976. How do you arrive at the two rates of deduction, the one-twelfth and the one-sixth?—I have simply adopted from the county rate assessment committee their scale, which I rather think is the one adopted for imperial purposes; perhaps that is one-sixth and one-eighth instead of one-sixth and one-twelfth.

6977. Why, for instance, should you allow a deduction of one-twelfth from tithe?—I really cannot say. I scarcely know what tithe is.

6978. Or from sporting rights?—Neither tithes nor sporting rights are very much in evidence in the Burnley Union.

6979. Or woods and plantations, I suppose?—We have got a few woods and plantations. I suppose the repairs required there would not be so great as in the case where the one-sixth is deducted from mines, railways, gas and water works.

6980. Is it your idea that the one-twelfth and one-sixth represent repairs only?—Repairs and insurance, and the keeping of the premises in a state to command the rent.

6981. Do you think it would be possible to have a uniform deduction to cover all those?—In the metropolis it is laid down by statute what you shall deduct.

Mr. J. S.  
Horn.

value  
should be  
rateable  
value.  
Deduct-  
tions.

\* See Mr. Humphreys-Davies' answer to question 4174.

*Mr. J. S. Horn.* 6982. Do you think that is an equitable system?—Personally, I prefer simply to take the gross estimated rental, what the premises would let for.

2 June '97

6983. (*Viscount Emllyn.*) Is there anything you would like to add?—No, except that personal property should bear a larger share of local rates than at present.

*Mr. J. S. Horn.*

2 June '97

The witness withdrew.

*Mr. ELIAS HENRY DAVIES, J.P., called and examined.*

*Mr. E. H. Davies.* 6984. (*Viscount Emllyn.*) You are the chairman of the assessment committee of the Pontypridd Union, are you not?—I am.

6985. Have you been chairman for some time?—I am chairman, and I have been a member of the committee for over 20 years.

6986. So you have an intimate acquaintance with the way in which the poor law union is worked in that district?—Yes.

*Assessment committees, different principles adopted by.* 6987. You have had sent to you, I think, the points upon which we wish to get information upon the subject referred to us?—Yes.

6988. I understand you wish to make a statement to us with regard to the principles adopted by the assessment committees in the different counties, do you not?—Yes, more especially in the county of Glamorgan.

6989. The principles adopted in the assessment committees in the different counties are not the same, are they?—No, they are not the same.

6990. Do they differ with regard to the method by which they arrive at the gross estimated rental?—I believe that in our county they try to arrive at the same methods of ascertaining the estimated gross rental but oftentimes with great imperfection.

*Deductions in Pontypridd Union.* 6991. Have you any suggestion to make as to how that could be remedied?—I think that a uniform basis with definite principles applied should be arrived at; in the union of Pontypridd for the small hereditaments we take 30 per cent., being the average amount of rates and taxes paid by the landlord to arrive at the gross estimated rental.

6992. To bring it down to the rateable, you mean?—No, to the gross estimated rental, and then from that we take 15 per cent. for repairs and insurance to obtain the net rateable value.

6993. What do you take the 30 per cent. off for?—For rates and taxes, for instance, a house at 13*l.*—and we have thousands of that class of property—

*Deductions. Uniform system in each county desirable. Results of want of uniformity of deductions on union contributions to county rates.* 6994. You mean assuming the rent to be 13*l.*?—Yes; we take 30 per cent. off in order to give the benefit to the landlord for outgoing expenses, and that will bring it down to 9*l.* 2*s.*; then we take 15 per cent. which will bring it down to 7*l.* 15*s.* rateable, and the assessable value will be 7*l.* 15*s.* In regard to shops we take 12½ per cent. off; for illustration, the gross estimated rental of 20*l.*, we take off 12½ per cent., making 17*l.* 10*s.* as the rateable value, but there are other unions in the same county which take 15 per cent. off and even more. What I would suggest is that we should have a uniform scale of deductions drawn up for arriving at the rateable value.

6995. A uniform system of deductions?—Yes.

6996. What is the effect of the inequality that exists now; how does the unequal practice you tell us of work?—It is unfair, inasmuch as we are obliged to contribute to the county upon the actual assessable value of each union, and when 15 per cent. is taken off in one union and 12½ per cent. is taken off in another as we do in the Pontypridd district, of course, we are under a disadvantage, comparatively speaking, to Merthyr, for instance, where they deduct the 15 per cent.

6997. The result of that would be, would it not, that, as far as the county rate was concerned, in any contributions to the county rate you had to make, you would be paying more than your share as compared with the neighbouring union?—Yes, we should be paying more than our share.

6998. Because of their deductions being heavier than yours?—Yes; there is the margin between 12½ and 15, which would be 2½.

6999. There is a county basis, of course, which embraces both the Merthyr Union and the Pontypridd

Union?—The county basis is supposed to be taken from the aggregate amount of each union, but the assessment committee of the county very often, on account of their holding a different opinion of the assessable value of the parishes, add to it very considerably.

7000. What I was going to put to you is this: does not the county basis put right the inequality? Take your own union and the Merthyr union, you may take 12½ per cent. and Merthyr may take 15 per cent. off, but the county assessment committee will put that right, will they not, because they will deduct whatever they think fit?—They will deduct the amount according to the rateable value of each union.

7001. Fixing the rateable value of each union themselves?—Yes.

7002. Not adopting the assessment committee's valuation?—Not at all times, often above.

7003. Then I do not quite understand how the difference between your deductions and the Merthyr deductions affect you as far as the contributions to the county rates are concerned?—Inasmuch as the precepts from the county will be to cover the liabilities of the county, they will be paying upon a lower scale by 2½ per cent. than we should be paying.

7004. Is that so with regard to the county rate?—Yes, that is so.

7005. Do they adopt for county rate purposes whatever deductions the assessment committee in the union may make?—As a rule they do, and sometimes above.

7006. And vary them from one union to another?—Yes, not always the union basis.

7007. For county purposes?—Yes.

7008. Have you any suggestion to make as to how uniformity of deductions throughout all the unions can be best carried out; how would you suggest it should be done, and by whom should it be fixed?—I think it could be done if we were to have one representative from the county assessment committee to sit with the union assessment committee.

7009. A representative of the county assessment committee?—Yes. I believe it is essential that we should have a uniform basis in each county at any rate with regard to the deductions and the amount deducted from the gross to arrive at the rateable.

7010. You do not suggest that the area should be altered; you still prefer to keep the assessment committees of the unions, I suppose?—Yes, for this reason, that the assessment committee, as a rule, represents the whole union, and its members have the local knowledge of the different parts belonging to the union.

7011. Has it occurred to you that it would be at all desirable to get the surveyor of taxes to sit with the assessment committee; have you thought of that point at all?—I believe that if the surveyor of taxes was allowed to sit with the assessment committee he would be able to render great assistance for this reason, that he obtains returns from the respective occupiers giving full rentals, and whether the property is subject to any lease, and who pays the taxes. For that reason I believe that he would be able to render very great assistance.

7012. In addition to his being present at the assessment committee, you would like to have representatives from the county council?—Yes.

7013. Have you thought at all in what proportions you would get those representatives; what number of representatives you would have representing the county as compared with the number of representatives of the assessment committee?—No; but I think you might have one or two from the assessment committee of the county to sit with the local assessment committee for each union, which would prevent disputes and appeals.

*Mr. E. H. Davies.*

County Rate Committee do not always accept the valuation of union assessment committee.

Uniformity of deductions in unions in a county could be obtained if a representative of county assessment committee sat on union assessment committee.

Assessment committee of the union should be assessing authority. Surveyor of taxes should sit on it, and representatives of county council. County could then take the actual basis of valuation of the union assessment committee.

Mr. E. H.  
Davies.

2 June '97

7014. What do you propose to do with your county rate basis committee; do you propose still to have a county rate committee?—I believe that inasmuch as we are supposed to have correct returns from the various overseers to the committees of each union, that the assessment committee of the county should be satisfied and take the actual basis of each union for county purposes.

7015. In fact, you would take steps to strengthen your assessment committees and be quite sure that, at any rate, those committees get a proper valuation of the district, and then you would adopt that valuation for county purposes as well as for others?—Yes.

7016. Is there any other point with regard to that part of the question you would like to say anything upon?—I had thought to call your attention to the Small Tenements Acts. In the metropolis, as you are aware, 20*l.* is the limit; in Liverpool, 13*l.*; in Manchester and Birmingham, 10*l.*; and elsewhere it is not to exceed 8*l.*; therefore the minimum is 8*l.* There is a general feeling, in Wales at any rate, of late years that the minimum of 8*l.* does not meet the requirements of the owners of the various hereditaments. The classes of working men's cottages are now altogether different from what they were at the time of the passing of the Act of 1869.

7017. In what way are they varied?—For instance, houses cost 80*l.* then, and they cost now from 150*l.* to 180*l.*

7018. The same class of house?—A little better. Of course, the various lessors as well as the urban district authorities now require that a certain class of property should be erected according to their form and taste, and also according to the requirements of the Public Health Act, with improved sanitation; so that it costs 180*l.* to do what they would get before for 100*l.*

7019. You propose, therefore, that you should extend in all parishes the Small Tenements Rating and Collection Act, 1868-9, from 8*l.* to 10*l.*?—Yes; that is my candid opinion.

7020. Do you think that is the general opinion in your district?—I believe that is the general opinion in our district. To illustrate this we have recently made a valuation in our union. The present rateable value of our union of Pontypridd is 844,896*l.*; under the previous rules adopted by the assessment committee there were 23,474 hereditaments of 8*l.* and under, but the new valuation, by adhering strictly to estimated gross rentals, has brought that number down to 16,279, or a decrease of 7,195, that 7,195 having to pass over to the next class of rating. The number of cottages which are now from 13*l.* to 15*l.* are 8,869, all of which are workmen's cottages, and would have been contracted out of the Small Tenements Act if it was possible to raise the limit of the standard of rateable value from 8*l.* to 10*l.*, the same as in Manchester and Birmingham. They would still obtain the benefit of the extra 15 per cent. abatement, provided they entered into the usual agreement with the overseers to become liable for the poor rates, whether the hereditaments were occupied or not.

7021. The amendment of this Act raising the amount to 10*l.* would make a very considerable difference in your union, would it not?—It would make a difference; I do not think it would be very great after all, if you take the deductions which we have now to make for unoccupied premises.

7022. Have you many unoccupied premises in your union?—We have, I daresay, 400 to 450 cottages at the present moment.

7023. Is that an average of what you usually have?—That might be beyond the usual number.

7024. Due to some local and temporary circumstance?—It is owing to some of the collieries being at a complete standstill. We have some of the collieries, especially in the Ystradfyfodwyg parish; the London and South Wales Colliery, Dunraven and other collieries have been idle for the last seven years. We have some of the largest collieries in the kingdom in our union.

7025. I suppose your union is almost entirely a coal district, is it not?—It is entirely a coal district, with the exception of few iron foundries.

7026. Therefore the fluctuations of occupied and unoccupied houses would vary a great deal according to the state of the coal trade?—Exactly. The collieries

i 97620.

and railways pay a trifle over one-half of the rates of the whole union.

7027. What is done with regard to these unoccupied houses as far as their being rated is concerned?—They are closed up, and then the rates are allowed by the overseers at the end of each six months.

7028. No rates are paid upon the unoccupied houses then?—No rates whatever, unless they are compounded.

7029. You have some suggestion to make, have you not, with regard to a uniform system of rating in different parishes; you suggest that the Chairman of the assessment committee should have some powers beyond what he has now?—Yes, I think that the chairman of the assessment committee who generally devotes a great deal of his time in going through the various valuation lists will be the safest one to ascertain from the overseers of the respective parishes as to the amount of deductions that should be actually allowed in each parish in order to have uniformity.

7030. But are not those deductions prescribed by the assessment committees?—Yes, they are prescribed.

7031. Are not they all a mere matter of figures, after once you have settled upon what deductions you are to make for different classes of property?—Of late they are strictly so. In the last assessment they were strictly adhered to, and that brought the number of cottages from 23,000 down to 16,000.

7032. Why did they vary before?—The overseers held different views upon rating questions. The overseers in some parishes thought that they were entitled on account of vacancies, and so on, taking a 13*l.* house for instance, to start it at 11*l.*, and then to apply the usual deductions of the union to the 11*l.* instead of to the 13*l.*

7033. What made them go from the 13*l.* to the 11*l.*?—People absconding and going away without paying the rents.

7034. That would not affect the value of the property as far as the overseers were concerned?—No; but that was their reason; some rural overseers hold most peculiar views.

7035. You think the chairman should act ex-officio with the overseers?—I believe so.

7036. In order to see the deductions properly carried out and properly imposed?—Yes, and that the same deductions should be applied throughout each parish within the union.

7037. Do you think the collection of poor rates is satisfactorily carried out in your district?—No. I should not suggest any alteration in the appointment. The guardians, as a rule, appoint the collectors unless there is a local act. The collectors should carry out the instructions of the guardians and collect the precepts according to the requirements of the different authorities, but they are not at all times looking after those rates which should be paid before the end of the half year, and when the unpaid statement is produced to the overseers they find that a great amount of rates has not been paid.

7038. Are there very large arrears of rates in your district?—As a rule there are.

7039. Can you tell us what sort of proportion?—No, I have not gone into the proportion.

7040. Still it is very considerable?—It is very considerable.

7041. How are the collectors who collect your poor rates paid?—They are paid by the guardians at a fixed salary, 100*l.* or 150*l.*, as the case may be. The collector of rates again may be employed as an assistant overseer, then he will be paid 250*l.* for that work, if it is a large parish; and he will be paid again for preparing the supplemental list, the list of voters, the jury list, and all other work connected with the work of the overseers.

7042. He is not paid in any way by a percentage on the rate levied?—No. But all that brings the amount he gets in the aggregate, to considerably more than what is fixed by the guardians.

7043. What is fixed by the guardians is for definite work done for the guardians?—As collector to the guardians.

7044. Have you had any experience in your union of professional valuers; do you employ them?—Yes, we

Mr. E. H.  
Davies.

2 June '97

Deductions. To obtain uniformity, chairman of assessment committee should act ex-officio with the overseers.

Collection of poor rates. Appointment and mode of payment of collectors. Arrears are considerable in Pontypridd Union.

*Mr. E. H. Davies.*  
 always employ an expert valuer for valuing collieries, railways, and different properties of that nature.

7045. You have, I suppose, in your union a great deal of property which requires that you should have a skilled professional valuer to assist you?—Yes, we have.

7046. Have you a permanent professional valuer?—No, we have been in the habit of employing different valuers such as Hedley, Fenwick, Eve, and others.

7047. Is there anything in your mind that points to it being desirable to have a permanent professional valuer?—I believe it would be to the advantage of our union, at any rate, to have a permanent professional valuer.

7048. Have you not the power of appointing a permanent valuer, if you please to do so, now?—That may be.

7049. I rather gathered from what you said that you thought there was not a power of that sort?—I think you should make it essential that large unions should employ professional valuers.

7050. Would you extend the valuation to other properties than railways, mines, and property of that kind?—I would extend it to all classes of property the gross estimated rentals of which may be in dispute.

7051. That means, does it not, that you would extend your professional valuer's valuation to all classes of property?—Yes, to superintend all.

7052. You think it is desirable to do that?—I believe so.

7053. That would probably mean far more to your union than it would to many others?—Yes, or any other similar to ours.

7054. Are there any other points you would like to call the attention of the Commission to?—I do not know of anything.

7055. (*Mr. Smith.*) You are in favour of having a uniform scale of deductions over the county?—Yes.

7056. Why not throughout the kingdom?—There might be different burdens which would make the rate in some counties much larger than in others.

7057. That would not affect the scale of deductions, would it?—The deductions are supposed to be on account of the rates or at least to assist people who pay the rates and repairs.

The witness withdrew.

Mr. Tom CUTTER called and examined.

7067. (*Mr. Murray.*) You are the clerk to the Woolwich Board of Guardians, are you not?—Yes.

7068. And also clerk to the assessment committee?—Yes.

7069. I presume you are acquainted with the working of the Valuation (Metropolis) Act?—I am.

7070. The metropolis differs from all other districts in the country, does it not?—It does. I may say I have been connected with both systems, because before I came to Woolwich I was clerk to an assessment committee in the provinces—in the Chesterfield Union, which is a very large union in Derbyshire. I am therefore familiar with the work of both Acts, and I thought perhaps the evidence I could give here as to the working might be an advantage to the Commission generally, because I think certainly the Metropolitan Act possesses great advantages over the other Act in some respects.

7071. Do you think there are any respects in which it is not an improvement on the other Acts?—No, I think there are none. I think that it is preferable in every way, but there might be some local circumstances in the district where you could not perhaps have the same uniformity as you have in the metropolis, I am not aware of any, but there might be.

7072. The main features of the Metropolitan Valuation Act are that the assessment arrived at under the Act is applicable to all purposes of taxation within the metropolis, is it not?—Yes. It varies in this way in the metropolis; it is applicable, as you say, to all rates, and also it is applicable to the Inland Revenue Department, and in the metropolis we have the advantage of the surveyor of taxes sitting with the assessment

7058. Do you not think it is possible to have a valuation Act in England and Wales in the same way as they have for the Metropolis prescribing within certain limits the deductions for all classes of property?—I do not know whether it could be applied to rural districts, especially where there are national schools and where the rates are so much lower than in urban and school board districts.

7059. You suggest that the limited rateable value under the Small Tenements Act of 1869 should be raised from 8*l.* to 10*l.*; are you acquainted with the working of the Public Health Act?—Fairly.

7060. Is there not this additional reason for doing that, that 10*l.* is the limit in the Public Health Act?—Yes.

7061. It would assimilate the two, would it not?—Yes, the basis for the district rate is that they copy the poor rate in order to arrive at their valuation, and they make a certain deduction and exceptions to that of the poor rate.

7062. The limit for compounding is what I am on now, and under the Public Health Act it is 10*l.*, is it not?—Yes, it is 10*l.* under the Public Health Act.

7063. Then your suggestion to raise the poor rate compounding from 8*l.* to 10*l.* would mean to assimilate it to the Public Health Act?—Yes.

7063*a.* That would be an additional reason for it?—Yes.

7064. Of course if your suggestion that the union valuations should be rendered so complete that the county could adopt them were carried out there would be no necessity for the county basis being made out separately?—No, there would not be, but of course every clerk of a union is obliged in December to send in the amount of the rateable value of his union for the current year for county purposes.

7065. I am taking your suggestion that the chairman of the assessment committee should act ex-officio with the overseers, and that some representative of the county should sit upon the assessment committee. If that were the case there would be no necessity for a separate basis for county purposes, would there? You could take the aggregate of the unions?—If that could be done it would meet my views.

7066. It would get rid of one assessment?—Yes.

committee. He has a right of appeal, and he is made respondent of course in all cases of appeal, and notice has to be given to him. Therefore he is with the committee and has his own private information, which of course he always gives to the committee, and I find that that is a very great assistance, because if there has been any attempted favouritism, or anything of that sort, there is a representative of the Crown present who has a right of going to the quarter sessions.

7073. What part does he take in the proceedings of the committee?—The part he takes is this: Of course the lists are made by the overseers in the metropolis as in the provinces: the list is sent to the clerk to the assessment committee by the overseers, and a copy of that list is served on the surveyor of taxes, who has notice given to him when the committee will meet to hear the objections. He looks through the list, and if he has any objection to the assessment as made by the overseers he gives notice of appeal to the clerk to the assessment committee stating what those objections are and he enters in a column provided for that purpose in the list the figures he proposes should be substituted; he also gives notice to the person rated in the list, and of course the assessment committee hear and adjudicate on his appeal as well as on the person rated.

7074. What information have the overseers for the purpose of preparing their list?—For preparing their list they serve a notice in the case of an ordinary tenancy, or in the case of new property or the occupier or owner as the case may be, and he has to make a return stating the amount of rent he pays, whether it is under lease or not—giving full detailed information, in fact.

*Mr. E. H. Davies.*

2 June '97

Compounding. Limit under Poor Rate Assessment and Collection Act, 1869, should be raised to 10*l.*

County could take the actual basis of valuation of the union assessment committee. Suggested procedure.

*Mr. T. Cutter.*

Preparation of lists in metropolis. Occupiers have to make returns compulsorily in metropolis.

*Mr. E. H. Davies.*

2 June '97

Professional valuer appointed for valuing collieries, railways, &c. Desirable for large unions to employ professional valuers for all purposes.

Deductions. Uniformity in a county desirable.

Valuation (Metropolis) Act preferable to system outside metropolis.

Valuation (Metropolis) Act. Valuation is applicable to all purposes of taxation. Surveyor of Taxes sits with assessment committee in metropolis. Advantages of.

Mr. T. Cutter.

2 June '97

Deductions in metropolis. Statutory scale of deductions works equitably. Consultation of rating authorities before the quinquennial valuation.

County rate in metropolis. Advantages of Valuation (Metropolis) Act.

Metro politan (Common Poor Fund.

Valuation is generally uniform in metropolis.

7075. The country assessment committees have not that advantage, have they?—They have not that advantage.

7076. But the information is compulsory in London?—It is.

7077. And that you think is a good system?—I think it is an excellent system.

7078. Then another respect in which the metropolis differs from the country is in the fixed deductions, is it not?—Yes, it is. The scale is fixed by the Act of 1869, or to be more accurate a maximum and minimum scale of deductions is fixed.

7079. There is a maximum in that Act?—There is a maximum and a minimum you may say. I may say that now that has resolved itself into almost a science of assessment, because we have a meeting of all the rating authorities in the metropolis before every quinquennial, they are convened by the county council, and we fix a scale which we apply to the whole of the metropolis for all properties.

7080. Do you find that a uniform scale works equitably?—Very, I think.

7081. And that there is not much complaint of it?—There is very little complaint indeed. For instance, the last quinquennial was made in 1895, and in 1896 we had no appeals to the quarter sessions except in the case of some of the large hereditaments, such as the gas companies, where there is always a difference between the valuers representing each party. We had no appeals to the quarter sessions from any private individuals at all.

7082. I suppose the properties are of a more uniform character in the metropolis than they are in other parts of the country?—Of course there is no agricultural property here, and there are no lands except just a few nursery grounds, market gardens, and that sort of thing. I think it is, of course, as you say, more uniform, and there is not the variety that you get in the country.

7083. Would it be necessary, do you think, if the Metropolitan Act were extended to the country, to have a more elastic scale of deductions?—I should say so, I think there might be a scale of deductions, a maximum and a minimum, but that it should be more elastic. There is another matter I might mention, and that is for the county rate, the metropolitan system is, I think, very much better. The valuation list applies to all purposes, and the totals of these lists are extracted, at least they are sent to the clerk of the county council and printed by him, and that forms the basis for the apportionment of all rates; it is the basis for the metropolitan common poor fund, a fund we have that is purely relating to the metropolis, for county purposes, and indeed for every purpose, the apportionment is made on the total of those lists.

7084. You have experience, of course, of the Equalisation of Rates Act?—Not very much.

7085. Do not the vestries and different local authorities come under that?—Yes, the vestries do; but my authority is more particularly the board of guardians, and we have more to do with the metropolitan common poor fund. That is a similar principle, certain charges in the metropolitan unions are all carried to one common fund called the metropolitan common poor fund; it is apportioned on the rateable value, and there are receiving unions and paying unions, of course; I mean that a very rich union like, we might say, Kensington, with a large rateable value, will have to contribute towards an East End union, that is the general charge of the staff and the maintenance of the paupers, &c. is thrown on this common poor fund, and is apportioned according to the rateable value of the entire metropolitan area. So that there is an equalisation of rates in a sense.

7086. Do you think that under the Valuation (Metropolis) Act the basis of valuation is tolerably uniform throughout the metropolis?—My experience is that it is decidedly so.

7087. And that the assessment committees practically act on one principle?—I think so. Five years ago there was some dispute; the County Council intervened and appealed against a number of assessments. There was not very much in the individual assessments; but in regard to leaseholds, there were a number of appeals in one union, I think; however, in the last quinquennial there were none, and I think practically now they are all acting in uniformity.

7088. How is increase or decrease in value during the currency in the assessment treated?—That is treated in the provisional list. The lists are made, as I think I have said, quinquennially in the metropolis; that is, there is absolutely a new list of everything once in five years; in each subsequent year, if any property has altered in value, either increased by the addition of some rooms or something in that way, or if it has decreased in value the overseers make a provisional list including all such alterations. A provisional list is a list which is frequently made. You may have them once in two months, or once in three months, or once in four months; but the provisional list only affects the rates as between the occupier and the overseers for local purposes, and does not affect the totals at all.

7089. Nor the gross value?—Nor the gross value, it does not affect that, I mean not for general purposes; it is only an alteration in the parish as between the overseers and the individual, and it does not affect the county rate basis or anything in that way for apportionment.

7090. But it does affect the value of the particular property for all purposes?—Yes, for all purposes connected with it; but I mean that for general purposes it does not disturb it; for calculating your contributions or making your apportionment, it does not affect it. Then, at the end of the year—for there is a special period fixed for making lists—there is a supplemental list, and that supplemental list includes every alteration which has been made in the provisional list. Then the totals are taken for the whole year; the increased amount is added to the old figure of assessment, and the decreased amount, whatever decrease there has been, is deducted; and there you have your gross and rateable for the next year. That, of course, is for the county rate, and all other rates throughout the metropolis.

7091. Have the overseers the right of making a provisional valuation?—They have a right to make it, and also an occupier has a right to call upon them to make it. If there has been any change in the value of the property he occupies, he can serve a notice on the overseers demanding a provisional list.

7092. Even if the property is the same in character as it was before?—Yes, the wording of the section is very wide. He can do it if there has been any alteration in value. The interpretation section is fairly wide.

7093. Any alteration arising from any cause?—Practically so.

7094. Your experience on the whole is, that it would be a great advantage to extend that Act all over the country?—I think so, and I think probably the reason is that the Metropolitan Act was passed subsequently to the general Act of 1862, and that they had had a little experience of the working of the other.

7095. What modification would you suggest in it if it were extended?—There is no modification I should suggest in applying the Act generally, but there are just one or two matters I wish to refer to which I think might be altered in the Metropolitan Act. So far as the general principles of the Act are concerned, I think it will apply to the provinces quite well.

7096. Do you wish to put forward this suggestion before us?—The only suggestion I wish to put forward is this: the principal local Act is the Act of 1862, the Union Assessment Committee Act; and by it assessment committees are appointed by the guardians of the union—usually a combination of the parishes, but in the Metropolis there are certain parishes which are so large that they are a union in themselves, and in the case of a number of them one parish forms the union, such as St. Mary, Islington. Under the Metropolitan Act power is given to the guardians of all unions to appoint the assessment committees; and then in those parishes which comprise the union some words are used which I think must have crept in by mistake, about the power to make the poor rate, or something in that way. As a matter of fact, the guardians have no power to make poor rates, the rates are made by the overseers. They would appoint an assessment committee for a separate parish if they had this special power, but as they do not possess it, then the vestry appoints the assessment committee. I do not think that this principle is right, and my reason for it is this: that before the Local Government Act, 1894, it did not matter, inasmuch as the justices appointed the overseers who, in the first instance, made the list; but since the Act of 1894 the vestry appoints the overseers, and the

Mr. T. Cutter.

Quinquennial valuation in metropolis. Provisional and supplemental lists, how made up.

Valuation (Metropolis) Act should be extended to rest of country. Suggested alterations in the Act with reference to appointment of assessment committees in certain cases.

Mr. T. Cutter.

2 June '97

same body appoints the assessment committee who revise the work of the overseers.

7097. What is the objection to that?—My objection to that is that you may have in one parish an election, and men of one particular party are put on who wish to favour particular property; they appoint overseers of one kind, and they appoint an assessment committee; therefore the one is not a check on the other. I would suggest that the board of guardians of the parish appoint the assessment committee the same as in other districts.

7098. Do you look upon the assessment committee as a check on the overseers then?—I do.

7099. They have an independent authority apart from the overseers, have they?—Yes.

7100. They could always alter the overseers' valuation?—Yes, they could alter the overseers' valuation, and therefore I think it is necessary that they should be an independent body who would act as a check on the overseers to some extent.

7101. Does it make much difference if they have power to alter the valuation, whether they appoint the overseers or whether they do not?—Yes, I think it does. You may have a certain parish where the property is very much of one nature. Take a union like mine. We have four parishes, there is one parish which is purely residential property, the parish of Kidbrook; then you come to Woolwich, where there are large manufactories; then you come to Plumstead, which has a large artizan population. The different parochial authorities would no doubt appoint men who represented a particular interest. In Kidbrook you could not take any other than a private resident or leaseholder, you put him on the vestry and make him an overseer, and his only interest is residential property; in Plumstead you would naturally take a working man who would be interested in cottage properties. If these people appoint not only the overseers for each of their own parishes but the assessment committee they might appoint who would favour the particular class of property they were there to represent; and therefore it is better, I think, for the assessment committee to cover a larger area and be an independent body.

Professional valuer appointed in metropolis in case of valuing railways, gasworks, &c.

7102. Have you any other suggestion to make?—I think that is the only thing I have to say as to the Metropolitan Act. You have not asked me on the system of the appointment of a professional valuer. That is a thing we generally do in the metropolis in the case of railways, gas-works, and large properties of that kind, which are beyond the powers of the overseers to assess; then the assessment committee appoint an independent valuer. That of course is done once in five years.

7103. He is not permanently employed then?—No. Of course something might happen between the five years if a new railway were made, or if new gas-works were put up or something of that sort, and he would be employed then, but as a rule he is only employed once in five years. We revise those lists, and in revising them, and in valuing them, we take into consideration what is likely to happen during the next five years, and it is a sort of understood thing between the companies and the assessment committee that they shall not be disturbed for five years so as not to have constant litigation and expense.

Valuation (Metropolis) Act is very satisfactory and might be extended with advantage.

7104. (Mr. Smith.) I gather from your evidence that you are thoroughly well satisfied with the working of the Valuation (Metropolis) Act?—Thoroughly.

7105. I think I understood you to say that you had experience both of the metropolis and of the provinces? Both.

7106. Do you remember any valuation bills being introduced for the provinces—are you old enough to remember them?—No, I am afraid not.

7107. But you are fully of opinion that an Act might be so introduced and passed with advantage?—I quite agree.

7108. I want to ask you one question now about the boards of guardians and assessment committees in the metropolis; it has been suggested in evidence that a

large manufacturer has a difficulty in getting represented or in getting fair treatment from the assessment committees in the metropolis; is that so in your union; do you think there is any ground for that suggestion there?—I think not.

7109. Do you find all classes very fairly represented on your board of guardians?—I think so.

7110. I will not refer to the union because we agreed that it should not be mentioned, but there were two or three witnesses from the metropolis who thought they did not get what they considered sufficient attention to their interests from the assessment committees, but you find that all parties, private gentlemen and others, are taking their fair share of local government in your district?—I think so.

7111. That there is not a predominating influence of any particular kind?—No, I do not think there is any preponderating influence. I think there is a great advantage of the union in that way. As I said certain classes of property are in the corner of it, and if you had a sort of parochial body they might favour their own particular class of property, but where you have it spread over an area where all interests are represented it acts better.

7112. Perhaps, being so near the edge of the metropolis you have imbibed a little of the provincial spirit. Do you know much of the circumstances of other unions in the metropolis?—Yes, I think so.

7113. Would you say that there is ground for the suggestion that was made to us that large manufacturers and companies were not quite fairly treated?—I think not. The only thing I can say is that I feel sure affairs are looked into very much closer in the metropolis than they are in certain of the unions I have known in the provinces. I do not, of course, know all the unions in the provinces, but I mean that in the metropolis once at least in every five years the professional valuer inspects these properties. But I think they are assessed on the same basis as other people.

7114. With your double experience you are satisfied that the system in the metropolis is a fair one?—I think it is a very good one. There is one matter I might have mentioned—might I just refer to it now—that is, I do not see the necessity for making two separate rates in the metropolis; I think one might cover the whole.

7115. (Mr. Murray.) You are referring to the general district rate and the poor rate?—Yes. There is no reason for making two rates at all. It seems to me a mere caprice which expenditure is put on the poor rate and which is put on the other rate. For instance, you get in the poor rate the libraries, baths, and wash-houses; and you get in the district rate the sewers' rate and probably the police rate; I am not quite sure, but I think the police rate is included in that, and the school board. One rate might cover the whole.

7116. (Mr. Smith.) Are not the deductions in favour of particular properties different?—No, not in the metropolis; one list is in force for the whole thing. I cannot see any reason for making the two rates; it seems to me a work of supererogation entirely.

7117. (Mr. Murray.) Would it not be as well to earmark the different amounts raised by the different rates?—Quite so, it could be done on the back of the demand note; that could be stated clearly, poor rate so-and-so, district rate so-and-so. That is done now; you get one demand note it is quite true, but you have two separate rates, and very often you have two separate collectors appointed. There is no necessity for it at all that I can see, not the least. I do not know whether that could be extended to the whole of England, perhaps not, because rates are levied on a different basis; there, for instance, is the one-fourth.—

7118. (Mr. Smith.) That is not the case in the metropolis?—No, it is not.

7119. But it would be fatal if the present system of exempting railways and other properties to the extent of the one-fourth were retained, the general district rate and the borough rate could not be collected together?—No, I quite agree, but in the metropolis there is no reason whatever that I can see for the two rates.

Mr. T. Cutter.

2 June '97

Assessment committees in metropolis, constitution of. All classes are fairly represented, and all interests are fairly dealt with.

Valuation (Metropolis) Act is a good one.

One rate for district rate and poor rate should be made in metropolis, though purposes should be earmarked.

Mr. ARTHUR FREDERICK VULLIAMY called and examined.

Mr. A. F. Vulliamy.

2 June '97

Union and Rural District Clerks' Association.

7120. (Mr. Murray.) I believe you are clerk to the Ipswich Board of Guardians?—Yes.

7121. You are also President of the Union and Rural District Clerks' Association?—Yes, I am.

7122. What is the object of that association?—The object of that association is to look after the interests of union clerks and district clerks, and also generally to assist with regard to local government so far as guardians are concerned.

7123. I believe you have made some inquiries of different clerks of guardians in England?—Yes, I have. Perhaps it might be convenient if I were to show you what those inquiries were; I have the form here (*handing in print*).

7124. These are the questions that you put to them, are they?—Yes, and their replies were all tabulated in a form like that (*handing in form*).\*

7125. Can you put in the questions and the results of the inquiry?—I am going to do so. We issued those questions, and, altogether exclusive of the metropolis, which we handed over to Mr. Cutter (I am dealing with the non-metropolitan part now) we got answers from a little over 330 different unions. Having tabulated them I divided the unions into unions comprising urban and rural districts, of which I have a complete list here, under the different counties, and in that list, unless otherwise stated, the assessing bodies are the overseers (whose assessments are revised by the assessment committee) the county councils, and the commissioners of taxes. The rates levied are the poor rate, highway rate, county rate, and general district rate. The spending authorities are the guardians, the overseers, the county councils, the rural district councils, urban district councils, parish councils, and parish meetings. The rating authorities are the overseers, the town councils or urban district councils, the rural district councils, and the parish surveyors. The spending authorities whose areas are smaller than, and comprised in, the union, other than urban district councils, rural district councils, parish surveyors, parish councils, and parish meetings are specified, and there is no authority other than a county council in whose area the area of the union is comprised. I made a complete list of them, which I hand in, giving all the special particulars with regard to each one of these. Then I made a list of the unions that were wholly rural. In that list, unless otherwise stated, the assessing bodies are the overseers (whose assessments are revised by the assessment committee of the board of guardians) the county councils, and the commissioners of taxes. The rates levied are the poor rate, highway rate, and county rate. The spending authorities are the guardians, the overseers, the county councils, the rural district councils, and the parish councils and meetings; the rating authorities are the overseers and the parish surveyors (where there is a highway rate). There is no spending authority other than a parish council, or parish meeting, or parish surveyors (where there is a highway rate) whose area is smaller than that of the union; and there is no authority other than a county council, in whose area the area of the union is comprised. Also I have got all the special particulars in regard to each union in the same way there. Then I have a list of unions or single parishes maintaining their poor, wholly urban, which are conterminous with urban districts or boroughs. In that the assessing bodies, unless otherwise stated, are the overseers (whose assessments are revised by the assessment committees), the county and town councils, and the commissioners of taxes. The guardians alone appoint the assessment committee; the rates levied are the poor rate and general district rate; the spending authorities are the guardians, the overseers, and the town or urban district councils; and the rating authorities are the overseers and the town or urban district councils. I have made a list with regard to that similarly. Then I have a list of unions partly urban and partly rural, where the urban districts are not wholly comprised in the union. In that list, unless otherwise stated, the assessing bodies are the overseers (whose assessments are revised by the assessment committees), the commissioners of taxes, and the county councils; the rates levied are the poor rate, highway rate, and county rates in the rural parts and urban parts not being county boroughs, and the general district rates in county boroughs and urban district council areas; the

spending authorities are the guardians, the overseers, county councils, town councils, rural district councils, urban district councils, parish councils, and parish meetings; the rating authorities are the overseers, town councils or urban district councils and parish surveyors; the spending authorities whose areas are smaller than and comprised in the union other than parish councils and parish meetings are specified, as are also the urban districts which extend into the unions, but are not wholly comprised in them. I have another list of unions wholly urban, but whose area is not conterminous with those of urban districts or boroughs. In that list, unless otherwise stated, the assessing bodies are the overseers (whose assessments are revised by the assessment committees) and the commissioners of taxes; the rates levied are the poor rate and general district rate; the spending authorities are the guardians, the overseers, and the town councils or urban district councils; the rating authorities are the overseers and the town or urban district councils; and the authorities over a portion of whose area the unions extend are specified. Then I have a list of boroughs in which more unions than one are wholly comprised. Those cover the whole ground. I should mention that with regard to the first of those the list shows that returns obtained from the union clerks in England give 174 unions in which there are boroughs or urban districts wholly situate, besides rural districts; that in 75 of these there are one or more boroughs wholly situate as well as in many cases urban districts, these last being sometimes numerous; in the Halifax Union to 23 and in the Halifax Union to 16. It also shows that the returns obtained from union clerks in Wales give 22 unions in which there are boroughs or urban districts wholly situate, and that in ten of these there are one or more boroughs wholly situate as well as in some cases urban districts. With regard to the second list there are 81 unions in England, and 5 in Wales wholly rural. With regard to the next list—those conterminous, the list shows that the returns obtained from union clerks in England give 26 unions or parishes maintaining their own poor which are conterminous with urban districts, of which 17 are conterminous with a single urban district and 9 comprise 2 or more urban districts. Then of those partly urban and partly rural, where the urban districts are not wholly comprised in the union there are 14 unions partly urban and partly rural, of which 6 comprise wholly at least one urban district in addition to that into which they extend. Going now to the list which gives the unions wholly urban, but whose area is not conterminous with those of urban districts or parishes there are 15 unions wholly urban and, of these, 9 are wholly comprised in a borough, 4 comprise wholly one or more boroughs or urban districts besides extending into another or others. There is only one borough which wholly comprises more than one union, and that is Liverpool. Then I have also prepared a list which I thought might be useful of all the unions in England and Wales which extended to more than one county. There are upwards of 150, some extending into three counties, and some even into four. Then, as it might be considered that after all the number of unions would give but comparatively little information, because some of the unions are so small, I have also prepared a list of the unions from which returns have been obtained with their population. We have obtained returns in England from 312, with a population of 14,267,021; and in Wales we have received returns from 27 unions with a population of 1,082,424, while those we have not obtained returns from number 260 in England with a population of 9,130,943; and in Wales 20 with a population of 436,431, so that we have obtained returns from a good deal more than half of the whole country. I would mention what are the general results. Returns have been obtained from 312 non-metropolitan unions in England, with a population in 1891 of 14,267,021; and from 27 unions in Wales with a population of 1,082,424—I have mentioned these particulars before. The unions from which returns have been obtained may be classed as follows: In England, 174 unions, both urban and rural, whose urban districts are wholly contained in the union, with a population of 7,262,420; 81 unions wholly rural with a population of 941,458; then unions wholly urban conterminous with borough or urban districts: (a) 17 unions, conterminous with a single borough or urban district having a population of 1,367,796; (b) nine unions, comprising two or more urban districts having a population of 1,131,773,

Mr. A. F. Vulliamy.

2 June '97

Poor law unions in England and Wales extending to more than one county, with population.

\* A summary of the returns is given in Part II. of Appendix to Vol. I. of Minutes of Evidence, pp. 129 and 130.

Mr. A. F. Vulliamy.

2 June '97

Rating areas, cases where the union or the borough would be the best.

Union assessment committees the best assessing authorities.

One valuation for all purposes desirable. Overseers should be retained, but assistant overseers of experience and skill should be appointed either by the guardians or the borough. Also only one local rate collected.

making a total under heads (a) and (b) of 26 unions with a population of 2,499,569. Then coming to the unions wholly urban but not continuous with boroughs or urban districts there are (a) nine wholly comprised under one borough with a population of 1,028,647, (b) four unions, comprising wholly one or more boroughs or urban districts, and extending into another, with a population of 819,359, and (c) two unions forming portions of two boroughs or urban districts, with a population of 248,726, making a total for (a), (b), and (c) of 15 unions, with a population of 2,096,732. Then unions partly urban and partly rural where the urban district is not wholly comprised in the union, (a) eight unions comprising a portion only of a borough or urban district, with a population of 720,984, and (b) six unions comprising one or more boroughs or urban districts, with a population of 460,480, making here a total of 14 unions with a population of 1,181,464. Then we have two unions forming part of a borough whose area is continuous with the areas of more than one union and having a population of 285,378. Coming to Wales we find only two classes of unions, the first, unions both urban and rural whose urban districts are wholly contained in the union, of which there are 22, with a population of 995,993, and secondly, unions wholly rural, of which there are five, with a population of 86,431. There are no counties in England, except London, and perhaps Northumberland, and none in Wales, that have not unions in them overlapping the county boundaries; there are upwards of 150 unions situated in more counties than one. With regard to the unions comprised in the returns some are so situated that it would seem that the union is the best rating area; there are others where the borough would appear to be preferable, and others where it appears to be immaterial which. They may be divided as follows:—In the case of 274 unions in England with a population of 10,615,490, and in the case of all the unions in Wales, the union is the preferable rating area. Then where the borough is the preferable rating area there are 11 unions in England with a population of 1,314,025; and where it is immaterial whether the borough or the union rating area is adopted there are 27 unions with a population of 2,337,506. I might mention that, of course, population, though an important element, is not the only one; that area has to be considered also. I might mention the instance of Bellingham Union in Northumberland. It has under 6,000 population, but it has an area 2½ times the size of the county of Rutland. Of course, therefore, both those points of population and area must be considered, and though the rural union may seem small as to population compared with a number of other unions yet often the area is very large.

7126. Have you any observations to make on the results?—There are some observations I should like to make. The results point, I think, very strongly to the guardians being the best assessing authority.

7127. In fact, the unions would be the best area for assessment?—Yes; the results point to that.

7128. Have you any suggestions to make for alterations in the law?—Yes, I think there should be but one valuation; and in order that that valuation should be a good one to start with, I think it is important that the present system of appointing assistant overseers should be altered. I think the foundation of all the valuations at present is the valuation made by the overseers in the parish; whatever may be done with them afterwards, that is the foundation and the starting point. I think there ought to be a somewhat skilled official who knows something of the law on the subject, to a certain extent at any rate, and who knows something of the practice in other parishes than one, in order to get anything like uniformity. Therefore, I think it would be advisable that, while retaining the overseers as having special local knowledge, the assistant overseer should be appointed in every case either by the borough or by the guardians. I may mention a country union consisting of 32 parishes, in which there are 28 assistant overseers but if the guardians appointed them they would appoint only four, and each of those four men would be a superior man to the great bulk of the present men, because he would have knowledge of more parishes than one. In that way you would get a better foundation, and a more uniform foundation, for the valuation list than you do at present. Then I cannot see why there should be more than one rate, which I suggest should be called the local rate, because it is hardly fair to call it the poor rate when the relief of the poor is a comparatively small portion of it. Then

there should be a uniform system for compounds. There are three places, as far as I have been able to find, in England, where there is but one rate, namely, Manchester, York, and Gravesend; those three, at any rate, I have been able to ascertain.

7129. Are the whole rates levied under one rate in those places?—The whole of the rates are levied under one in those three places.

7130. Are the rates made by one authority?—The rates are levied by one authority and the others send contribution orders in each case. In York there is no compound at all; the guardians, I think, but I will not be certain, have to levy it and they get contribution orders; I had a form of their demand note to look at.\*

7131. How did the guardians come to have power to make arrangements?—In each case by local Act; it could not have been done except by local Act. Of course the compounds differ, and I do not see the reason for it, I confess. Take a place like Ipswich; the compound for the poor rate is 15 per cent. if there is no agreement as to full or empty, and then 30 per cent., and it goes up to 8l.; but with the general district rate it is 50 per cent. only, and it goes up to, I think, 6l. 15s.

7132. Fifty per cent.?—Yes, and nothing beyond that; you jump at once from 50 per cent. to nothing; I do not see any reason for that difference at all. I think they should be uniform as they are at Manchester for all purposes; there I think it is 20 per cent. in the parish and union of Manchester (the City of Manchester includes portions of others as well), and in the others 25 per cent.

7133. Do you not think that the circumstances over the country differ sufficiently to justify different systems of compounding?—Yes, I am only saying that there is no reason for the difference between the general district rate and the poor rate.

7134. You would not have a uniform system of compounding all over the country?—No. I quite agree that the artisans in large towns pay a higher rent than they do in country places, and than the labourers do, and that therefore there should be a difference in the system of compounding, only I think there is no reason why there should be the two rates.

7135. (Mr. Smith.) Do you see any reason why the limit of the compound should be different?—No, I do not see the slightest reason for that.

7136. The allowance you arrive at may vary, but the limit of compounding should be the same?—I beg your pardon. I think the limit of compounding should vary too, for this reason, that, if you take Ipswich and Birmingham, for instance, at Ipswich for 4s. a week you would get a much better cottage that you would at Birmingham, and therefore a man who is earning 28s. a week would pay a smaller amount for his house at Ipswich than at Birmingham; and as the object of it was rather, I think, to help that class of property, it should be remembered that that class of property goes higher at Birmingham than it does at a place like Ipswich.

7137. (Mr. Murray.) Have you any suggestion to make for equalising the taxation between real and personal property?—Yes, I have. May I just mention before I come to that that one reason apart from what I have given already, why I think the guardians should be the assessing authority, is that I think guardians have to a certain extent the most important work in the country to do; I mean that the way they do their work affects the morals of the people rather than their material welfare, and I think it is important to keep up their status and consequence as much as possible. At present the assessing of property is looked upon, I do not know why it should be so, as the most honourable portion of their work: perhaps because it deals with material interests and not with moral interests. I make a suggestion as to the inequality between real and personal property at the present time, but I do not know that I need mention anything with regard to that because I think I may take it that it is accepted that there is gross inequality between real and personal property.

7138. So far as local taxation is concerned you mean?—Yes.

7139. Without putting in the adjective, I think we may assume that there is inequality?—I would suggest this (and it is founded on what I found to be done in Belgium) there may be a remission of taxation again, and if so I do not see why a portion of the income tax,

Mr. A. F. Vulliamy.

2 June '97

Com-pounding. A uniform system desirable, with regard to general district rate and poor rate.

Union assessment committees are the best assessing authorities.

Contribution to local rates in respect of real and personal property. Suggestion that part of income tax, except that derived from Schedule A, should be devoted to local purposes and distributed on basis of population.

Mr. A. F.  
Vulliamy.  
2 June '97

say one-eighth, should not be devoted to local purposes, that portion being taken to a central fund, an Imperial fund, and divided among the different counties in proportion to their population and then distributed in the different counties to the different unions also in proportion to their population.

7140. That would simply be an increased subvention from the Imperial exchequer?—But it would be a subvention which would particularly affect the people who now pay nothing. I should not take it on Schedule A.; I am not taking it on property, and I ought to mention that. I should take it upon other than Schedule A., as Schedule A. does pay now—all real property does pay now, but the property derived from investments of various sorts and of all sorts does not pay. It would pay then. Of course it does pay income tax and that is the only tax it does pay and it would then directly pay in every case. I do not see any difficulty in doing it.

7141. Does it amount to anything more than an increase of the Imperial subvention to the extent of one-eighth part of the income tax on all the schedules except Schedule A.?—Of course it would be that, and I think anything that is done must be in the nature of taxation of incomes.

7142. Would it not be exactly the same thing for your purposes if Parliament provided that, say, two millions a year should be distributed to the different local authorities in proportion to their population?—Yes it would, except that the other varies with the income, and it would go on increasing as the wealth of the country increased.

7143. Why do you think that under that system personal property would contribute more to local taxation than it does now?—Because personal property is precisely that which does not pay now for local taxation at all. Take the man who is a lodger with an income of 400*l.* a year, he pays nothing, but supposing it were paid as a portion of the income tax he would then.

7144. But if you take a fixed sum out of the total taxation of the country and apply it in aid of local taxation can you say that that is making personal property pay any more than other forms of property?—No, but what I have mentioned would be making personal property pay more than other forms.

7145. Would it?—Yes, because it would be a tax levied upon personal property only.

7146. But consider what has to be done to fill the hole in the Imperial exchequer which your demand is going to make upon it; the Chancellor of the Exchequer would have, say, two millions a year less to devote to Imperial purposes?—It would be equally done if, supposing, he were to make it 9*d.* in the £ instead of 8*d.*, and put a penny in the £ additional aside for that purpose.

7147. That would be one way of doing it?—Yes, and that would not diminish it at all, but it would be making them pay.

7148. Would it make them pay in the right places?—It would not if it were local, therefore I suggest it should be Imperial, and be all concentrated into one fund and then divided according to the population. You would then be making them pay in the right places, which you would not be doing if you tried any local scheme. A local scheme I think is impossible.

7149. Is population a good basis?—I do not think we can have anything better than population; the districts where local taxation is heaviest are, on the whole, populous districts.

7150. Where it is heaviest in proportion to population, do you mean?—Yes, in proportion to population and in proportion to property too.

7151. Do you say that that is the plan adopted in Belgium?—It is a somewhat similar plan that is adopted in Belgium. A man there pays for local taxation a sum (varying from time to time) proportionate to the amount he pays for imperial taxation, as well as rates on his house and on his furniture.

7152. On his income?—His Imperial taxes I should rather say he pays upon.

7153. Not on his income?—No. I do not know whether there is an income tax or not, it is on Imperial taxation. Whether there is an income tax pure and

simple I do not know, but it is put down as Imperial taxation.

7154. What effect do you think that system would have on the economical administration of the local authority?—I think it would follow almost as a necessary consequence that those persons should have votes for local purposes, which they have not now.

7155. Which persons?—Take the lodger, for instance, anybody who pays income tax who does not occupy a house has no vote at all now for local purposes, he has for Imperial purposes, but he has not for local; of course, he ought to have in that case, and you might then have only one basis of representation.

7156. Would you have a new franchise for local purposes the qualification for which would be the payment of income tax?—Yes, the payment of income tax, then you would get, I think, the interest of those people in local taxation too. I think that where we fail a good deal in the country is, that a great many people take no interest in local matters at all. We do not get the interest in those classes which we ought to have in local matters.

7157. They would not be interested in the local expenditure, would they?—If you take the general local expenditure throughout the whole country they would be, to a certain extent, interested in it, but it would not affect the amount they have to pay; that is quite true.

7158. Then I do not see why they should take much interest in it?—I think the very fact that they have to pay towards local taxation would make them turn their attention more to it than they do now.

7159. Have you anything to add?—I have nothing further with regard to that. I know the question of what is done in Scotland has been before you, but I do not know whether there is anything in regard to that in the form of a scheme which they have there of a valuer for the whole county upon which I might speak.

7160. Do they have a valuer for the whole county in Scotland?—They have a valuer of all properties for the whole county.

7161. A professional valuer?—Yes, either the Government valuer, or someone appointed by the county.

7162. I do not think we need go into that?—I was only going to mention that a county in Scotland is a very different thing from a county in England. A county in Scotland is not much more populous than a good sized union in England.

7163. There are two large counties in Scotland?—Lanarkshire and Edinburgh are the only counties which are more populous than the largest poor law union in England; if Edinburgh is, and I am not sure that Edinburgh is.

7164. (Mr. Elliott.) With regard to this proposal of yours as to the income tax, would you draw any distinction between income derived from property, and income derived from personal exertion or brain work?—I should not. Of course if you ask me generally on the whole thing I consider that income derived from brain work ought not to pay in the same proportion as income derived simply from investments.

7165. I rather understood you to propose that the income tax should be taken as it is?—Yes, I do not see how any one can make any difference for that purpose when one does not make it generally. I quite admit it ought to be generally made.

7166. Supposing a clerk to a poor law union, for instance, happened to be a bachelor who lived in lodgings would you require him to pay a penny additional income tax towards local taxation?—Yes, so far as he has to pay on the ordinary income tax and in the same way.

7167. That would not in any sense be a contribution from personal property, would it?—Why not?

7168. He would have no personal property?—Yes, the income he receives is not derived from land.

7169. You would not say that the salary that is paid to the clerk of a poor law union is derived from property, would you?—I should call his income personal property. I think anything that is not real property must be personal property.

7170. Is there any property in the case I put to you, is it not simply a payment for personal exertion?—Yes, I know; but I do not see how you can draw a distinction between that and other incomes.

Mr. A. F.  
Vulliamy.

Professional  
valuers for  
counties.  
Difficulties  
of such a  
system in  
England  
compared  
with  
Scotland.

Rating in  
respect of  
income  
derived  
from  
personal  
exertion  
and from  
invest-  
ments.  
Should any  
distinction  
be made?

Mr. A. F. Vulliamy.  
2 June '97

7171. You see the difference between the person who derives an income of 100*l.* a year from consols and the person in the receipt of a salary of 100*l.*, as the clerk of a poor law union?—Quite so.

7172. But you draw no distinction?—I should draw a distinction for the income tax altogether.

7173. Then, without the re-organization of the income tax, your scheme would not draw any distinction between the two?—Not without a re-organisation of the income tax.

Com-  
pounding.  
Present  
allowances  
give  
owners to  
great a  
benefit.

7174. You said just now, with reference to compositions, that the law as it stands was intended to help a particular class of property; did you mean to say that it was intended to give a relief to particular property, or simply to facilitate the collection of rates, and to make it easy for the collecting authority to collect?—I should say to make it easy for the collecting authority to collect.

7175. Not to give any special measure of relief?—No.

7176. Do you think that, under the present arrangement, the owner of property derives more than a proper benefit from these arrangements—do you think it operates so as to give him relief?—Yes, it does.

7177. Do you think that, supposing these allowances were not made, that the union would get more than it does now?—Certainly may I give you a decided illustration of it?

7178. If you please?—I live in Ipswich in a parish where there are no poor at all. There is another parish near where there is a large number of poor. We make our contribution orders upon the rateable value without allowing any compounding at all, and the result is that invariably the poor rate is 2*d.* in the *£* at least more in that other parish than in the parish in which I live.

7179. By reason of these compositions?—Yes.

7180. These compositions do operate, therefore, as a kind of bounty to a particular class of property?—They do.

7181. Do you think that is satisfactory?—No, I think it is too much. I think it is right that there should be some composition, and I am not objecting to a certain amount, but I think the amount now paid is too much.

One assess-  
ing and  
one col-  
lecting  
body in  
each union  
appointed  
by the  
guardians  
desirable  
for the  
purposes  
of local and  
Imperial  
taxes.  
Power of  
appeal.  
Assistant  
overseers  
to be  
skilled  
officials,  
and sur-  
veyor of  
taxes to  
attend  
meetings  
of assess-  
ment com-  
mittees.  
Boroughs  
to be re-  
presented  
where con-  
terminous.  
Position of  
the  
Imperial  
authorities  
and the  
county  
authorities  
under such  
a scheme.

7182. I gather from your paper that you propose that there should be one assessing and collecting body in each union?—Yes.

7183. And that that assessing and collecting body should be appointed by the board of guardians?—Yes.

7184. And that their decisions should be binding for all purposes for which rates are collected and for all purposes for which taxes are collected?—Yes.

7185. Do you think that would be satisfactory?—I think if the surveyor of taxes were allowed to attend all meetings, and there were, as I have mentioned, arrangements by which the assistant-overseer, who after all is an important person as starting the thing, should be a more skilled official than he is now, it would be satisfactory.

7186. Do you propose that the surveyor of taxes should be a member of the committee, or that he should simply attend?—I think he should simply attend, but I think it would not much matter which way it was.

7187. Do you think from a national point of view it would be satisfactory that the valuation for income tax should be dependent upon the decision of a local body constituted in that way?—If he had power to appeal, I think the power of appeal would ensure correctness.

7188. At present there are very great variations, are there not, between the income tax assessments and the valuations of the assessment committees?—Yes; of course the income tax starts with the same thing; the surveyor of taxes gets every five years a complete list of all the assessments in every union. Every year he gets a list of all alterations of properties wherever there has been an alteration of property or a re-assessment, but he does not ask for and he does not get reductions made by the assessment committee or increases made by them apart from alterations in the properties. Therefore, though at starting he may have the more correct list, because he supplements the valuation list which he gets from the assessment committee by information which he himself obtains by

sending notice to the tenants and so on, and in that way gets a more correct one at starting, before the five years are over he very likely would have one which is not at all correct. I may give an instance. At Ipswich we have been recently re-assessing all the public-houses; now unless that has been mentioned to him, and he has specially asked for it, that would not appear in his account at all, he would have all the old assessments, and perhaps there would be 3,000*l.* or 4,000*l.* difference in the yearly assessment.

7189. But, still, even taking that into account, it usually happens, does it not, that the valuation, as settled by the assessment committee, is substantially below the valuation as settled by the surveyor of taxes for income tax purposes?—It is very often, not always.

7190. What would you do as regards the county rate? Would you maintain on foot the present arrangement as regards the county rate basis?—No. I would have that for the county rate basis also. May I mention with regard to that, that the county being so large an area the making of a new county basis is an expensive matter, and, therefore, they do it but seldom. I give an instance in our neighbourhood at Brantham; some time ago, after the county basis was made, they established xylonite works; that probably has increased the assessment there for poor law purposes pretty nearly double, as it was a comparatively small agricultural parish. If it had not been that the deputy clerk of the county council was clerk to the guardians in that particular union, that would not have got into the county council's assessment till the next valuation.

7191. Under your scheme would you give the county council any representation upon the assessment committee?—I do not see any reason why they should not have representation.

7192. Then you would not propose simply to keep the assessment committee of the board of guardians as at present?—No.

7193. You would supplement it by the surveyor of taxes and by the representative of the county?—Yes.

7194. Would you give any representation to the boroughs?—I should, certainly, where they are continuous; there is a difficulty where they are not continuous, because then a portion of the union would get double representation.

7195. Would you sketch out to us what would be the constitution of the assessment committee, settled as you think it should be settled, taking all the circumstances into account?—At Ipswich, where it is continuous?

7196. Yes?—I would have the assessment committee appointed by the guardians.

7197. How many members would there be?—Twelve. I should have then, in addition, six, perhaps more, appointed by the town council, and I would have the surveyor of taxes. Ipswich is a county borough, and, therefore, it would have nothing to do with the county in that case, but if it were not a county borough, then I would have a representative appointed by the county council.

7198. Do you think that arrangement would be satisfactory to the town council in your case?—I know it would.

7199. They would be content with half the representation that the guardians have?—They would; they are content as it is, as far as they are concerned. They simply take our lists, and they do not trouble themselves at all further: they are quite satisfied as it is now.

7200. Would you give any representation to any other spending authorities—the school board, for instance?—I do not see why there is any occasion to give it to the school board. I do not want to have too many, and I think the town council may be looked upon as fairly representing other spending authorities.

7201. You think that with the power of appeal to which you have referred you would get a valuation which would be not only good enough for the purposes of the parish, but also fair as between union and union and as between county and county?—Yes, I should like also to say that I think it would be a great improvement if the one local rate were made, as the general district rate is now, for the whole union, and was in no way a parochial rate, but was a union rate so that a poor parish would not have to pay a heavier rate than a well-to-do parish.

One local  
rate for all  
local pur-  
poses  
desirable,  
to be levied  
as a union  
and not a  
parish rate.

Mr. A. F. Vulliamy.

2 June '97

Union assessment committee. Representation of town council, to what extent desirable.

Ipswich borough and union are conterminous.

Rates in the £ in Ipswich borough and union. Comparison of urban and rural rates.

7202. Could you give me any idea what the rates are which the union at present administers which are levied for the purposes of the poor law expenditure by the guardians, what is the amount in the £?—With us it is 6d. in the £ each half year—1s. in the £ for the year.

7203. What are the total rates which the town council requires for its expenditure?—Including the school board, for the year it is 1s. 3d., that is its share of the poor rate you understand; then the general district rate is about 3s. in the £.

7204. You think that a town council which has an interest in the valuation to the extent of 4s. 3d. in the £ would be satisfied with half the representation which you would give to the poor law guardians who have an interest in the valuation to the extent of only 1s. in the £?—I know that they would be satisfied.

7205. Do you think that that satisfaction is due to the happy local conditions of Ipswich?—I think they are satisfied with the way the assessing has been done at Ipswich. I think the power of appeal would meet any difficulty where there was anything like injustice likely to occur.

7206. (Mr. Smith.) I want to ask you a question or two about your local circumstances. You have given us a great deal of valuable information about England generally, and I think some of the questions I was going to put to you have been covered by Mr. Elliott's recent ones. Your union is composed of how many parishes?—There are 17 parishes in it altogether.

7207. It includes the Ipswich borough?—It is conterminous with the Ipswich borough.

7208. That is to say, Ipswich borough is contained within the union?—The borough and the union are the same thing now. Since the 1894 Act we have taken into the union certain portions that were in the borough, and we have given to adjoining unions certain portions that were not in the borough.

7209. Then Ipswich is a very large borough in area, is it?—In area it is a large borough.

7210. How many acres?—Speaking from recollection I think about 8,000 acres.

7211. When you say conterminous, that rather implies that the union and the borough are the same thing?—So they are.

7212. Then what becomes of other parishes?—There are no other parishes.

7213. The borough contains all the parishes, does it?—Yes.

7214. Then you have no rural parish, they all pay the borough rates?—Yes.

7215. They all pay the general district rate?—Yes.

7216. And those amount to 4s. 3d.?—Without the union, do you mean?

7217. Without the union, is it?—Yes; with the union it is another 1s., that would be 5s. 3d., and then there is a certain amount to pay the compounds.

7218. I understand that. As you have no country parish you cannot tell us what the rates in the country parishes would amount to?—I can to this extent, because I have acted in appeals on both sides.

7219. Just give me your experience, then?—They vary enormously, they have increased very much of late. With us, in Suffolk, there is the highway rate, which is a separate thing, and the highway rate is parochial.

7220. Not now, is it?—Yes, it is in Suffolk.

7221. I thought it all went to the district council now?—Not now; not in Suffolk.

7222. On what principle are you exempt?—There was a power in the Local Government Act for county councils to continue it.

7223. To keep on the old parochial arrangement for a certain number of years?—Yes, they did so and they have extended it another year now.

7224. That will come to an end some time or another?—It is to be hoped so. You can see at once that that affects us.

7225. I only want to know roughly what the average rates in a rural parish would be?—The average rates in rural Suffolk would be 2s. to 3s. in the £.

7226. And agricultural land now gets half of that remitted?—Yes, it gets half remitted of the poor rate.

7227. Do you think you have very much claim on, say, the artist or musician who is earning a salary, to get some of his income tax to pay your rates?—Yes, I do think so.

7228. How is he interested?—I will put four people side by side in one street: one person will be an artist or musician who is a lodger simply, the next will be a man like myself, a professional man, the next will be a large tradesman, and the next will be a clergyman; we all enjoy the same advantage of having a well-lighted street, well paved, with police—pretty well all the same advantages, but the first pays nothing for that, absolutely nothing if he does not smoke or drink. Then the next one, the man situated as I am—

7229. Are you correct that he does not pay anything?—I do not see that he pays anything at all.

7230. Well go on?—The next one would pay for his house and for an office.

7231. Allow me to suggest that the rent of the first one's lodgings would have some reference to the local rates, would it not?—I think not because it would depend a great deal more upon supply and demand than upon the amount of the rates.

7232. That would be applicable to houses too?—Yes, they pay more or less, undoubtedly, towards the rates according to the demand and according to the situation of the house.

7233. I mean the argument that the supply and demand governs the question of rent more than the question of rates, would apply equally to our friend the compound householder, would it not?—Perfectly. The compound householder in the country where the number of cottages is in excess of the demand, is not affected by the amount of the rates, as his rent, which includes rates, remains fixed.

7234. That has not been recognised, has it, in giving him a vote?—No, it has not.

7235. And allowing him practically to control the expenditure where he is in a majority?—It does not. He should not have been put in that position.

7236. I interrupted your illustration, will you go on please?—I should pay on my house and on my office which might be in the same building. The next one is a shopkeeper, and he must have much larger premises to get the same income that I do with my office, and has therefore to pay much heavier rates; while the fourth will have to pay rates, perhaps on his whole income.

7237. That is the clergyman?—Yes. These four have the same income, derive the same advantages, and yet are very differently taxed.

7238. I have great sympathy with the clergyman, but at the same time he chooses to be a landowner and he must pay as such?—He cannot help being a landowner.

7239. The tithe might have been redeemed. At any rate I understand your point. You did not intend to suggest in addition to my illustration of the artist or musician that he should also pay on his furniture, did you?—No.

7239a. I only wanted to know whether you had adopted the Belgian principle in its entirety?—No, I have not.

Mr. A. F. Vulliamy.

2 June '97.

Contribution to local rates in respect of real and personal property. How far equitable. Position of different classes compared.

The witness withdrew.

Adjourned till Thursday, June 17, at 12 o'clock.

## TWENTIETH DAY.

Thursday, 17th June 1897.

At 16, Victoria Street, S.W.

PRESENT:

The Right Hon. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

Sir E. W. HAMILTON, K.C.B.,  
C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. SYDNEY J. ELSOM called and examined.

7240. (*Chairman.*) We know that you are one of the witnesses whom Sir Charles Dilke recommended us to appeal to, saying that you would be able to give us information about the West Dean District, as you have represented West Dean on the County Council since the Council was established, and have worked in the local industry for a considerable time, and have, in fact, spent the best part of your life in that district?—That is so

7241. You are also Vice Chairman of the Forest of Dean School Board and Chairman of the Parish Council of West Dean, and you desire to speak only to facts which affect that particular district?—If you please.

7242. We understand that the township of West Dean extends over an acreage of 10,904, has a population of between 9,000 and 10,000, and a rateable value of 14,960l.?—Yes.

7243. We know that it is a mining district, and that, practically, the whole of its population are employed in the mines?—That is so.

7244. Is it in a prosperous condition at the present time?—It is not in a prosperous condition; it is in a depressed condition, and has been so for some years past, with the exception of a temporary quickening in the trade. We do not participate to the extent that might be expected in a general quickening in the mining trade, because very often when there is a very brisk trade in the coal fields raising steam coal, in a mining district like the Forest of Dean, where the coal is chiefly for household and domestic purposes, the trade may be slack.

7245. Are there any circumstances in the district which tend to keep the population to the district, or do they go about according as work is prosperous or slack?—There would, of course, always be a floating population; but I believe to a larger degree than in almost any other district in the Kingdom there is a larger number who will never leave the district. In times of prosperity they have managed by thrift and industry to purchase from the Crown a little plot of land upon which they have built their cottage, and they cling to it very tenaciously because it is their home. But through the distressed state of trade to which I have already referred, and in some cases through accidents or ill-health, they have been compelled to mortgage their properties, in many instances to the full value; and they find it to be almost impossible for them to leave the district; they still retain some interest in, and a great regard for, their little holdings. There is a large number who never leave the district for those reasons.

7246. Are they freeholders?—Yes, they are freeholders.

7247. Are their cottages built in rows as in some other mining districts, or are they detached?—They are detached, unfortunately; they are built anyhow. They purchase their plot just where they seem to take the fancy.

7248. That adds to the expense of organising sanitary work, and all the other things which a community does in common?—Yes, it does considerably.

7249. You, of course, have within your knowledge the collection of the rates of the district?—Yes, unfortunately.

7250. Are the rates well paid?—The rates are not well paid. At the present moment there is over 1,000l. of arrears of rates, some of them extending back for two years. We happened to have the parish council meeting only last Tuesday, and a large number of people came before us asking to be excused their rates. It then transpired, in answer to some questions that were put to one of the witnesses that four rates are due on one property, that proceedings had been taken before the magistrates for three of the rates, but that there were no effects, and the rates were therefore irrecoverable; another rate has fallen due, and we cannot get that. That is simply a sample of the kind of thing we have to contend with.

7251. What is, first, if you can state it to me, the gross burden per £ which the community of West Dean have to pay?—For all purposes?

7252. If you please, in the first instance; what does it amount to per year?—7s. per year.

7253. What does that 7s. include, could you give me a list of all the rates which are included in that 7s.?—There is a rate for the relief of the poor and other expenses of the Guardians, amounting to 2s. in the £; then the general expenses of the Rural District Council (including highways), amounting to 6d. in the £; then county contributions amounting to 10d. in the £; then expenses of School Board amounting to 3s. 4d. in the £; then the expenses of the Parish Council, amounting to 2d. in the £; and the expenses of the Overseers, also amounting to 2d. in the £. together making a total of 7s. for the year.

7254. I see in the memorandum you have sent in that there are in the various half years from 1894 to 1896 rates amounting in the gross to sums between 42l. and 60l. each half-year, which have been, as you say, "excused on account of poverty"?—Yes. The rate-payers in question have appealed in the first case before the vestry in the old time, and now before the Parish Council; they have stated their case, the case has been fully considered, it has been thought to be a case which deserved consideration and relief; and, therefore, they have been excused their rate.

7255. Do you excuse owners of property from the payment of their rate?—Under certain circumstances we do.

7256. Do you?—Yes, when the property is mortgaged to the full, and a man may be unable to work; in many instances that is so. Then the excused list has to be submitted to the magistrates and to receive their signature.

Mr. S. J. Elsom.

17 June '97

Arrears of poor rates in West Dean are considerable.

Excusals.

Total burden of rates per £ in the West Dean district.

Excusals on the ground of poverty in the case of small freeholders who are mortgaged.

Mr. S. J. Elsom.

17 June '97

Township of West Dean, particulars of.

West Dean District is in a depressed condition. A number of small freeholders reside there who are heavily mortgaged.

Mr. S. J. Elsom.

17 June '97

School board expenditure has been heavy in West Dean with regard to building. The Act for relief of necessitous schools will be a benefit. (50 Vict. c. 15.)

Rateable value of agricultural land in West Dean is comparatively small.

Poor rate in a mining population is high.

Excusals on the ground of poverty in case of small freeholders who are mortgaged.

7257. To what do you attribute the, comparatively speaking, high rate which is levied upon your district?—To two causes, first and mainly to the school board, and secondly, to the demands made upon us for poor relief—out relief. As I am vice-chairman of the school board, might I mention that our school board has spent in purchasing sites for schools, and in building schools since 1876—this is for the whole of the Forest—the united district of the two townships of East Dean and West Dean—45,600*l.*, and at present we owe, roughly, 36,000*l.* of that amount.

7258. I suppose, owing to the character of your district, you have practically had to build schools for the whole population during the last 20 years?—Not absolutely but practically we have had to do so; there are two or three British or Church schools in the Forest of Dean, and that is all.

7259. Can you tell me how much of that school rate is for debt upon buildings which have been erected?—I fear I can not, but I will put that in my proof.\*

7260. Will the Bill, which has become an Act for the relief of necessitous school districts have any operation in your parish?—I believe it will give us some relief. We are unable at present to say how much; but we are hoping that it will relieve us to the extent of about 6*d.* in our rates, and that instead of being rated at 3*s.* 4*d.* for the school board we hope we shall be able to manage with 2*s.* 8*d.* or 2*s.* 10*d.*; but it is all problematical.

7261. Can not you calculate it?—The clerk for the school board is unable to state definitely what we shall get, but he thinks it will range from 6*d.* to 8*d.*

7262. I assume that the Agricultural Rates Act of last year, owing to the character of your district, would not afford you much relief?—Not much relief, but I fear I made a little mistake in preparing my memorandum. I conferred with a man who acted as assistant overseer, and he said that the total rateable value of the farms in West Dean is 155*l.*; but at the parish council meeting on Tuesday that same man told me in a further conversation that he thought the total rateable value would be a little over 300*l.* There are, I believe, only three farms in the township.

7263. Do I understand that the whole rateable value in your district of agricultural land is only 300*l.* a year?—A little over 300*l.* May I further mention that in the past—though it is not so now—the men in the collieries used to have to work in very bad ventilation, and the result is that many of them are weak-chested, and become prematurely old, and, therefore, when other men are able to follow their work, these men must seek parish relief, and the result is that we have a large number of men and their wives, and, in some cases, younger men and their wives and families, constantly on the poor relief books.

7264. It is, of course, a matter of common notoriety that a mining population usually has a high poor rate, as I know from my own district and others?—Yes, that is so.

7265. I do not quite understand this statement which you make in our memorandum, that a number of small properties of the working classes are mortgaged, and in numerous instances, are not assessable to local purposes?—That is so.

7266. Why?—They are mortgaged to their full value, and the men, in many instances, are unable to work; they come to us, and say: "I cannot possibly pay the rates which you demand." Indeed, in some cases they are even getting relief from the parish.

7267. Do you relieve a man who owns property from the poor rate?—Under such circumstances we do.

7268. Do you?—If the property is mortgaged to the full, and he is unable to work, we have relieved and do relieve.

7269. Does your public burden not take precedence of the interest on the mortgage?—No, we cannot get at the man, he has nothing to pay with.

7270. Does he not pay interest on the mortgage?—Yes.

7271. Then is it not the fact that the public burden of the rate takes precedence of the mortgage?—I believe it is so as regards Imperial purposes, but not for local purposes, and there, we think, is an anomaly and an

injustice to the district. For Imperial purposes the mortgagee can be approached, but not for local purposes.

7272. I have now taken you through your memorandum; is there any other point which has occurred to you since writing it which you would like to bring before our notice?—Only this, that, bad as the existing state of affairs is, the prospect is even worse. The industries are declining, and the demands upon out-relief are increasing. The rateable value seems to have advanced a little, but that is through circumstances which could be explained. Until twelve months ago the Crown contribution was not reckoned in the rateable value, as it is only a contribution; but we have been compelled now to add it to the rateable value, and that has seemed to increase the rateable value, though actually the rateable value is declining rather than increasing. Our burdens, our responsibilities, are increasing, but we have decreasing resources.

7273. Is there any other point?—No, except to emphasise the fact that I am not acquainted with a district that is in a more deplorable state than West Dean, though, possibly, East Dean, too, is in an equally distressful condition.

7274. (Mr. Arthur O'Connor.) When you added the Crown contribution to your valuation you said: "We had to do it." What was your object—what was your purpose? Was it to increase your apparent security when you wanted to borrow money?—No. We had not put that in the rateable value because the Crown official, the Deputy Surveyor, if the demand note is handed in to him in the usual form, refuses to pay; the word "demand" must be deleted, the Crown recognising it merely as a contribution. Therefore our authorities thought that we could not put that in the rateable value. In the township of East Dean they had been reckoning the Crown contribution in the rateable value, and as both townships are associated together for school board purposes, the township of East Dean thought it was paying on a higher rateable value than it ought by reason of West Dean not putting the contribution from the Crown into its rateable value; they approached the Treasury, and the Treasury compelled us to put the contribution into our rateable value.

7275. When you went to the Public Works Loans Commissioners, and made a return of your rateable value, in order to show the amount of security that the Commissioners would have, you included the Crown contribution for both districts, did you not?—I am not sure that we did for West Dean; I question whether we did for West Dean, but we do now.

7276. You speak of "the township"; does that include both West Dean and East Dean?—No, they speak of each as a township; there is the township of East Dean, and there is the township of West Dean.

7277. Then you mean in your memorandum merely the West Dean district?—Yes.

7278. You say that the outstanding arrears of poor rates are more than 1,000*l.*?—Yes, they are.

7279. What proportion would that bear to the whole, what is the annual amount of the poor rate?—The annual amount would be, roughly, 8,000*l.*, I think.

7280. Then it is 12 per cent., or so?—Yes, about that.

7281. Twelve per cent. is irrecoverable?—No, I will not say it is irrecoverable; but at the present time these arrears are outstanding. The overseers are contemplating taking many of them before the magistrates unless the arrears are paid.

7282. But you have told us that, bad as the condition is, the future threatens to be worse?—It does, because we have an increasing number who seem to be unable to pay their rates.

7283. Therefore, what you have now as arrears is not likely to be diminished?—I fear not; though they have not taken the steps they ought to take by sending them before the magistrate and getting a return of "no effects." That will be done in the course of time.

7284. That will have an effect in one direction which possibly the increasing distress will countervail?—So I fear.

7285. So that we may assume that this 1,000*l.*, which is your present proportion of arrears, will be likely to remain?—I fear that is so.

Mr. S. J. Elsom.

17 June '97

West and also East Dean are in a depressed condition. Industries and also the rateable value are declining. Expenses on out-relief are increasing.

Contribution of Crown to rates added to rateable value of union.

Arrears of poor rates in West Dean.

\* The witness subsequently wrote: "The amount payable yearly for principal and interest on account of the debt on school buildings is £2,398 for the United School District."

Mr. S. J. Elsom.

17 June '97

Free-holders in receipt of outdoor relief in West Dean.

7286. So I was not far wrong in suggesting that 12 per cent. would seem to be permanently irrecoverable in your district?—I think you are correct.

7287. Under those circumstances do you think that these sums, "Excused on account of poverty," 42*l.*, 49*l.*, 60*l.*, and so on, are very large? A number of your small freeholders are actually themselves in receipt of outdoor relief, are they not?—Yes.

7288. What would be about the average size of their holdings, would it be a quarter of an acre?—Upon an average not quite so much; it would not average a quarter of an acre.

7289. Half a rood?—Yes, I should say about that.

7290. Just a house and a yard?—Yes, and two rooms up and two rooms down, with a back kitchen generally.

7291. There is nothing in the law in this country to prevent outdoor relief being given to a person in the occupation or even in the ownership of land?—I believe not; certainly we have given relief to such persons.

7292. You have no law here to the effect that if a man is in the occupation of land and wants outdoor relief he cannot get it, but must go into the workhouse?—I do not know of it.

7293. In that the law here differs from what it is in Ireland?—I was not aware.

7294. (Mr. Smith.) Upon that last question; surely the regulations of the Local Government Board do not authorise your giving relief to freeholders, do they?—If a man appeals for relief, and he informs us that his property is mortgaged, and that he gets no benefit out of it, we do relieve him.

7295. You treat him as destitute?—Yes.

7296. I suppose there is no other industry than coal mining in your district?—There are some small industries, but not considerable ones.

7297. What would they be?—There is a tin works at Lydbrook, which employs a few men; but Lydbrook is on the borders of The Forest, only partly in West Dean, and the tinworks are now closed, whether permanently or not I cannot say.

7298. Your coal, being household coal, is not useful for manufacturing purposes?—Generally it is household coal, but there are one or two exceptions to that; we have a colliery which is put down at Bream which raises steam coal, and there are one or two small collieries which raise a similar coal.

7299. Of course, previously to the mining, your district was literally a forest?—It was so.

7300. (Mr. Clark.) Are these houses which are owned by the men usually assessed at about 10*l.*?—No, not so much.

7301. How much in rates do you consider that an owner of one of these houses would pay in the year, would it be about 10*s.*?—I should suppose that cottages generally would be assessed on an average at 3*l.* or 4*l.*

7302. Then if a man pays about 8*s.* or 10*s.* altogether for rates during the year, that would be about the most any of them pays?—At present I fear it is more—much more.

7303. How much more?—If he pays 7*s.* in the £, and his property is assessed at 4*l.*, he would pay much more.

7304. Do you seriously mean to say that your school board rate is 3*s.* 4*d.* in the £?—Unfortunately it is so.

7305. And your poor rate 2*s.* in the £?—Yes.

7306. If you have to pay 2,000*l.* a year for outdoor relief, that alone comes to more than 2*s.* in the £?—Yes. In compiling my memorandum I looked at the last return of our Board of Guardians, and took down the names and amount of everyone.

7307. Supposing, for the sake of argument, the total amount of rates paid is 6*d.* a week, do you consider that if you took off all the rates altogether from these small houses it would bring back prosperity to the mining trade in the Forest of Dean?—I think it would contribute towards that.

7308. Sixpence a week?—I think it would be a contribution in the right direction certainly.

7309. (Mr. Elliott.) In what direction do you look for relief?—We have been dreaming in our district of county rating and of all our schools becoming an Imperial charge. If we were relieved of our school

board rate, and if the whole of the other charges were made a county charge, that would give considerable relief to the whole of the Forest—not merely to the cottagers but to the industries.

7310. You would propose, then, that the whole cost of your schools should be made a county charge?—No, I am speaking of the cost of the schools and of the educational cost being made an Imperial charge.

7311. You would throw the whole burden of maintaining your schools upon the Exchequer?—That is so.

7312. Would you increase the guarantees for economical and efficient management?—I do not know that it is necessary when you send the members of the school board back to the ratepayers every three years.

7313. But the ratepayers under the scheme which you propose would not pay; do you think therefore, that the same check would exist?—I should think so.

7314. Have you studied at all the amount of relief that you already get from the Imperial Exchequer?—I have not.

7315. Are you aware that the subventions of one kind and another are very considerable in amount?—Yes, I am quite aware of that.

7316. But you have not gone into the effect, say, of the legislation of 1888?—No, I have not.

7317. Does your evidence amount to much more than this; that the pressure of rates in this particular township is very heavy, and that you would like to obtain some relief?—I fear it does not amount to much more than that.

7318. (Mr. Dalton.) The main cause of your high rates is that you have a very low rateable value and a very large population, is it not?—Yes.

7319. What is the property of which your rateable value is mostly made up; have you any mines?—Yes, we have.

7320. What are they rated at?—At so much per ton on the output.

7321. Can you say what proportion of this 15,000*l.* rateable value is due to mines?—I cannot accurately.

7322. Should you say one-half or one-fourth?—No.

7323. Are the neighbouring parishes equally badly off?—Only the township of East Dean, not the agricultural parishes.

7324. If your parish was merged in any richer neighbouring parishes should you be better off?—Yes, in the matter of the relief of the poor.

7325. And in the matter of your other charges? You have got a very exceptional parish, with a large population and a small rateable value; is there any neighbouring parish with a large rateable value and a small population?—The parish of Lydney is our nearest neighbour, and if we were united with the parish of Lydney we should get considerable relief as regards the charges for the poor, but I do not think it would be practicable to unite West Dean and Lydney for educational purposes—the natural thing is that which exists, namely, the two townships of West Dean and East Dean uniting.

7326. Both of which are poor?—Both of which are poor.

7327. Where do the majority of your population work—in your parish or in a neighbouring parish?—In our own parish—in the township.

7328. How is it that the rateable value of the mines is not higher, if you have got a population of 9,000 or 10,000 people employed in mines? Have you got the right rateable value assigned to your mines, do you think?—I should quite think so.

7329. By being united with other parishes in your union you have a large proportion of the expenses of your poor borne by the parishes out of your common fund?—Yes.

7330. You get back from the other parishes more than you pay?—Yes.

7331. Considerably more?—Yes, we certainly do.

7332. So that, although you pay this 2*s.* in the pound poor rate, you get back in the parish a great deal more than that, probably for outdoor relief alone?—Yes; but, whilst admitting that, my point is that that only further shows the distressed condition of the township.

Mr. S. J. Elsom.

17 June '97

Suggested that educational charges should be defrayed by Exchequer, and that other rates should be thrown on the county.

Rateable value low and population large in West Dean.

Coal-mining industry in West Dean.

Free-holders in West Dean. Amount at which their properties are assessed and amount paid in rates.

*Mr. S. J. Elsom.*  
17 June '97  
7333. I was rather pointing to the fact that if you were amalgamated with some of these parishes for other purposes than the relief of the poor you might get more relief?—I do not think it would be practicable as far as educational purposes are concerned, and that is the main heavy charge. We have a school board for the two townships, but there is no school board in the Forest apart from that—not in the immediate neighbourhood of West Dean or East Dean. They have either National or British schools.

7334. The labourers get their education free at the board schools?—Yes, but I may remind you that many of them are householders and have to pay their school board rate.

7335. What would the school board rate come to—it would not come to very much per week per head?—I quite agree.

7336. They get their full benefit from it?—I quite agree.

7337. How does it come about that you have so high a county rate as 10*l.* in the pound in your county; because the county as a whole is not a poor county, is it?—No. We spend rather much on our highways, but we pride ourselves that we can show value for the money spent, and we have thought that our county council was almost a model county council. I do not think any extravagance could be pointed out in the expenditure of our county council.

7338. Although your county rate is high your local highway rate is low; I suppose that is owing to the main roads being taken over by the county?—I am the chairman of our district council. We have 10 or 12 miles of main roads, not more. I think, and we do manage to keep them in good condition at a very low rate. I may explain that although we have a surveyor we only pay him 16*l.* a year, and we only give the labourers 2*s.* 6*d.* a day. Thus we manage our local highways at a very cheap rate.

7339. What is the land in your parish worth an acre?—The Crown used to charge 240*l.* in West Dean, and 320*l.* in East Dean.

7340. Does that cover the whole of the land of the parish?—Chiefly; it is all Crown land except the freeholds that the people have bought.

7341. It comes out to about 6*d.* an acre, then, for the whole of the parish, I think?—I do not quite understand you.

7342. The area of your parish is 10,000 acres?—Yes.

7343. Do you say that is let at a rental of 240*l.*?—I beg your pardon. I thought you asked me what was the usual charge when a piece of land is bought.

7344. (*Mr. Smith.*) You were referring to freehold value?—Yes.

7345. (*Chairman.*) Would the sum which you gave include mineral value as well?—No. We have a peculiar set of rights and privileges existing in the Forest of Dean in reference to the mines. We have what are called "Free Miners' Rights." A person who has been born in the Hundred of St. Briavel's, and worked a year and a day in a coal mine in the Forest of Dean, and who is above 21 years of age, if he knows of a piece of unallotted mineral coal, has the right to go to the Crown representative, and ask that that be granted to him, and the Crown must then accede, unless there be conditions which make it impracticable.

to that application; a certain dead rent is at once fixed, and when coal is raised a royalty is fixed. No one else can have a tract of coal granted to him except a free miner, and the person who is interested in the surface has no interest whatever necessarily with the mineral below it. Of course the whole of the Forest was originally Crown property. If a collier went to the deputy surveyor and said "I want half an acre of land in West Dean," he would charge him at the rate of 240*l.* an acre for the half acre; but if a collier in East Dean went and made a similar request he would have to pay at the rate of 320*l.* an acre.

7346. (*Mr. Dalton.*) That is the purchase price?—Yes.

7347. That, if it was an annual value, would be about 10*l.* an acre, I suppose—that would be the rateable value of it, would it not?—Yes, I suppose so. But you will not find, if I might mention it, one cottager in ten with more than half an acre. They simply buy enough to put their little cottage upon and to raise the necessary vegetables to supply themselves and family for the year, and that is all.

7348. But I cannot understand how the rateable value of the township is only 11,960*l.* while the arrearage is 10,000?—I ought to have mentioned before, possibly, that there is a large quantity of woodland and of open forest belonging to the Crown. Upon the open forest the foresters have what they call a right of turn out. The Crown is obliged to pay nothing, of course, but upon the woodland they pay at the same rate as is paid for similar properties owned by private individuals.

7349. Is the greater part of the parish forest land?—Yes; I ought to have mentioned that before, possibly. In West Dean there are 2,474 acres of enclosed woodland, having a rateable value of 1,235*l.* There are also 3,772 acres of open woodland and 1,515 acres of open waste, neither of which are rated.

7350. (*Chairman.*) Is there anything you would like to add?—No.

7351. (*Mr. Arthur O'Connor.*) I do not quite understand your figures yet. You told us that the rateable value was about 15,000*l.*?—Yes, roughly.

7352. That your rates amount to 7*s.* in the £?—Yes.

7353. That would give 5,250*l.*, would it not?—Yes.

7354. Just now, when I asked you what the total was, you said it came to about 8,000*l.*, and that this proportion of 1,000*l.* in arrear represented 12 per cent.; but 5,250*l.* is a very different figure from 8,000*l.*?—I beg your pardon. You may have noticed that I hesitated; I had not gone into the figures, and I hesitated before answering your question; I merely gave it as an opinion, off-hand and I was mistaken. The exact figures are as follows:—Rateable value, 14,960*l.*; yielding, at 7*s.* in the £, in round numbers, 5,236*l.*

7355. We may assume that the rateable value is really 15,000*l.*?—At present, yes.

7356. And that your rates are 7*s.* in the £?—That is so.

7357. And that your arrears are 1,000*l.*?—Yes.

7358. That makes, you see, 20 per cent. of almost permanent arrears?—Yes. We have threatened the defaulters, and we are hoping, when we take proceedings, to get some of the arrears.

7359. That is some of the present arrears?—Yes.

The witness withdrew.

MR. ALFRED DUDLEY CLARKE, called and examined.

7360. (*Chairman.*) I understand that you are a land agent of 30 years' experience in the management of landed estates in Worcestershire, Shropshire, Oxfordshire, Sussex, Hants, and Suffolk?—That is so.

7361. You are a Member of the Surveyors Institution, and have contributed articles upon the subject of local taxation to various publications in the hands of agricultural societies?—Yes, that is so.

7362. The Worcestershire Chamber of Agriculture have asked you to come here to-day, to speak upon the points included in the terms of our reference?—Yes.

7363. As a matter of course, I suppose your evidence will go chiefly to the points which affect agricultural land?—Yes, it will be mainly confined to that.

7364. What are the chief points which you wish to make?—In the first place, that personal property, which receives a large share of the benefits from local taxation, does not contribute to the expense; and, secondly, that of the properties which do contribute, land is assessed at very much more than its equitable share.

7365. Taking the first of these two propositions as you put it; is it true that personal property does not contribute?—It is true that it does not contribute direct.

7366. I am taking your own memorandum, and I ask whether it is a fact. Personal property does contribute through the Imperial subventions, does it not?—Yes, it contributes indirectly.

K k 3

*Mr. S. J. Elsom.*

17 June '97

Rateable value of West Dean and rates in the £.

Arrears of poor rate in West Dean.

County rate is high in Gloucestershire, but management is economical.

Freehold value of land in West Dean. Local customs called "Free Miners' Rights."

*Mr. A. D. Clarke.*

*Mr. A. D. Clarke.*

Contribution should be made to local rates in respect of personal property in a larger proportion than is now done through the Imperial contributions.

Mr. A. D. Clarke.  
17 June '97

7367. Your point, then, is not that it does not contribute, but that it does not contribute in a proper proportion?—That it does not contribute in a proper proportion, and contributing, as it does, on such an inequitable basis of assessment that the contribution which arises from it is so badly applied that it does not adequately relieve incomes which I consider require it most, and does relieve those that do not require it so much. Applied on the present basis of assessment, I think that land does not receive the benefit that it ought to receive.

Valuation. Present system is inequitable when applied to different classes of persons.

7368. You complain of the injustice of the present system of assessment; would you develop that a little more, and tell us why you think it unjust?—I should like first to refer to the Local Taxation Returns of 1893. Those returns show that for the year 1891-92 the average rates in rural districts in England and Wales amounted to 2s. 3d. in the £.

7369. The average rate is not quite the point; I used the term "assessment," and I am referring to what we should otherwise, and, perhaps, more accurately, call the valuation?—I do not quite follow.

7370. There are the expressions the "assessment," the "assessment roll," and so on; the assessment roll

contains a list of the annual values of the various properties, does it not?—Yes.

7371. When you said that the assessment is inequitable, I thought you meant that the valuation was inequitable?—The valuation is inequitable, because it is made upon an inequitable system.

7372. I want you to explain to us why. It is not a question of the rate per pound; the question I put to you is why the system is inequitable?—In order to explain that I have prepared a statement in a tabular form showing the percentage of rates upon the income of the various inhabitants of a rural parish.

7373. That will not quite do. When we talk of the inequity of the assessment, as the word has always been used by those who come here, we mean the inequity of the way of making up the roll: is that what you mean to speak to, or do you mean to speak to the inequity of the burden which the people bear after the roll is made up?—That is so; I refer to the inequity of the burden as apportioned by the present system.

7374. I understand your point now; let us see how you wish to prove that?—I will illustrate that by handing in this tabular statement. (The witness handed in the following table):—

"STATEMENT showing the PERCENTAGE of RATES upon the INCOME of RURAL RATEPAYERS.

Occupation.	Property Assessed.	Ratepayers' Income.	Rent of Property.	Rateable Value.	Amount of Rate at 2s. 3d. in £.	Percentage on Income.
Farmer	House and Land	£ 150 0 0	£ 300 0 0	£ 222 0 0	£ 25 0 0	16½
Clergyman	Tithe	400 0 0	400 0 0	340 0 0	38 5 0	10
	House	50 0 0	50 0 0	42 0 0	4 14 6	
Tradesman	House and shop	150 0 0	30 0 0	26 0 0	2 18 6	2
Professional man	House and surgery	400 0 0	50 0 0	42 0 0	4 14 6	1½
Gentleman owning personality	House	1,000 0 0	55 0 0	45 0 0	5 1 3	½

Note.—In estimating the income of the farmer, one-half the rent is taken on the income tax principle; and the rateable values are arrived at by taking off the usual statutory allowances for repairs and other expenses."

Amount of rates paid by different classes of persons. Hypothetical illustrations given to show that the burden of rates paid in respect of land is too great. But payment of Imperial taxes by these classes should also be taken into consideration.

7375. This statement, which you have handed to me, is a statement showing the percentage of rates upon the income of rural ratepayers; now, perhaps, you would develop it, so that the Commission can understand what you mean?—The occupation is first of all taken. A farmer occupies a house and land; his income is 150l.; that income arises from the rent of property amounting to 300l.—

7376. (Mr. Elliott.) Are these actual cases that you are now giving us?—No. I might explain that in taking the farmer's income I have adopted the Imperial system of taking it at one-half the rent. This is a case where a man pays 300l. a year rent, and he is assessed for Imperial purposes at one-half that rent.

7377. (Mr. Arthur O'Connor.) But you know that is not right; it is not in accordance with actual facts?—I should be very sorry if it was not right. Sometimes it is too much, and sometimes it is too little; from my knowledge of farming at the present time, I think that it is a fair average.

7378. (Mr. Elliott.) Are you aware that that law has been altered, and that the half is no longer taken, but that it is one-third instead?—Yes, I am aware of that; but, approximately, I have taken it at the half. I have stated that the farmer's income is 150l., and his rent 300l., and that he is rated upon that 300l. rent at the sum of 222l.; that is after allowing the statutory deductions for repairs and other matters. The amount of poor rate which he pays, taking it at the local taxation return average of 2s. 3d. in the £, on that income would be 25l. in the 12 months, and that amounts to 16½ per cent. on his income. I will take next a clergyman occupying tithe of 400l. a year, who is rated at 340l. a year; the amount of his rate at 2s. 3d. in the £ comes to 38l. 5s.; he is rated on his house, say, 50l. rent, 42l. rateable value at 2s. 3d. in the £, which comes to 4l. 14s. 6d.; that makes the percentage on income of the tithe and house, taken together, 10 per cent. Then I will take a tradesman occupying a house and shop, with an income like the farmer's of 150l.; he occupies a place rented at 30l.; he is rated to the poor on that at 26l., which, at 2s. 3d. in the £, amounts to 2l. 18s. 6d.,

or 2 per cent. on his income. Then I will take a professional man occupying a house and surgery, with an income of 400l. a year, and a rent of 50l.; he is rated at 42l.; the total amount of his rate is 4l. 14s. 6d., or 1½ per cent. on his income. Then, lastly, I will take a gentleman owning personality, who is assessed for the house he occupies; his income from the personality, we will assume, is 1,000l.; his rent is 55l.; he is rated on 45l.; and the amount of the rate he pays is 5l. 1s. 3d., or one half per cent. on his income.

7379. (Chairman.) What is the inference you wish us to draw from this table?—These examples would show the results of a system which will be made apparent on the examination of almost every rural rate-book in the country.

7380. What is the inference you wish us to draw from it?—That the assessment, so far as land is concerned, is extremely inequitable, and that land pays a higher percentage on income than any other property.

7381. To rates?—To rates. A farmer earns an income of 150l. in a parish, and he pays 32 times as much in proportion to the income of the gentleman who lives there and has 1,000l. income from property in the funds.

7382. Just take those two instances for a moment; you are dealing only with local burdens?—Yes.

7383. Do you not think that in considering the relative amount upon which the two men are assessed, you must take into consideration Imperial as well as local burdens?—I do not quite follow the question.

7384. You know that every resident farmer and gentleman alike pays in the main two classes of subventions to the public service; he pays the local rates, and he pays the Imperial taxes?—Yes.

7385. When you are making a calculation of how much one man is burdened for public purposes in comparison with his neighbour, do you not think that you ought to take into consideration the amount that he pays to both those great sources of burden to him, and not to only one?—To a certain extent; but, broadly

Mr. A. Clarke.  
17 June '97

Mr. A. D.  
Clarke.

17 June '97

speaking, I should say that every man ought to pay to taxation, as near as we can arrive at it, in proportion to the benefits that he receives.

7386. What do you mean by taxation?—Either local or Imperial.

7387. In that case, before you can expect us to draw any inference from this table, ought you not to put in a calculation of what the gentleman and the farmer, respectively, pay to Imperial burdens?—They pay, so far as I know, alike.

7388. Would they? Would the farmer who has an income of 150*l.*, and the gentleman who has an income of 1,000*l.*, pay the same income tax, for example?—They would be liable to pay the ordinary income tax, and they would be exempt, or not, according to their income.

7389. Would they? That is just the point; would the farmer pay any income tax at all?—If his income—

7390. Wait a moment. You take him as having an income of 150*l.*; would he pay income tax?—No, neither would the tradesman.

7391. You take two instances. You put forward the farmer and the gentleman. I am taking your own instances, and I am following them out. We find that the farmer would not pay income tax?—Because his income is under 160*l.*

7392. Wait one moment; let us get at the facts. He would not pay income tax?—No.

7393. Would the gentleman?—Yes.

7394. When you are making a calculation of this kind, do you or do you not think it fair—I am asking for your opinion, I am not expressing my own—to take into account both classes of the burden that these individuals have to meet?—I do not think it would be fair or necessary to do so.

7395. Very well, that is your answer, and that is all I want?—Not for the present purpose.

7396. I take your answer that for the present purpose it is not fair. I only want your opinion, as I have said, and I am not expressing my own?—If one went into that question it would involve a good many points, and I should have to refer to what land pays.

7397. You say it is not fair. You are going, apparently, to lead up to the view of rating the gentleman who has an income of 1,000*l.* a year for local purposes on his 1,000*l.* a year, are you not?—It depends upon what one means by local purposes. In dealing with the poor rate, which is a kind of omnibus rate of 2*s.* 3*d.* in the *£*, I would dissect that, and one portion, I should say, ought to remain local; but the other, I think, probably, ought to be Imperial.

7398. Have you any other remarks you want to make on this table?—I wish to emphasise the fact that farmers, according to their income, pay 32 times as much as the gentleman owning personally to the local assessment.

7399. That is your point on the table, and that is not an inference from it. We need not have that over again, because that is what you have already said. Is there any other point on the table that you have not mentioned?—I should like to comment further upon the results made apparent by that table.

7400. If you please?—If we bear in mind that a farmer uses land, which he does to a certain extent, as a manufacturer would use a raw material and his machinery, I think it will be apparent that the farmer is very badly handicapped, and I question whether any other industry which is taxed to that extent could hold its own; that is to say, if we bear in mind that land not only pays this very inequitable sum to the poor rate, but that it also pays a peculiar charge in the shape of the land tax and the tithe. If we take the average land tax as being 9*d.* in the *£*, and the average tithe as being 3*s.* 6*d.* in the *£*—figures which were given by an authority at the Surveyors Institution a short time ago, and which have never been questioned—we shall find that it makes up a total of 6*s.* 6*d.* in the *£* paid by land really for local purposes. The tithe is almost like a local tax—at least, from my point of view—and the land tax is almost a local tax.

7401. Tithe is rather a rent than a tax, is it not?—It is a tithe rentcharge, but it is a burden on land.

7402. Is not tithe a rent as far as the farmer is concerned, rather than a tax?—Yes, but it is a burden upon land, broadly speaking.

7403. So is rent?—Yes.

7404. What is the difference, from a farmer's point of view, between tithe and rent?—There is no difference, but I am not speaking entirely from the farmer's point of view.

7405. You are putting forward the farmer's case here, are you not?—I am pleading for land generally. I look upon land as affording a means of occupation and livelihood for three classes, that is, the owner, the occupier, and the labourer; but if you take it, as I said before, as a raw material, that they have all three to live out of, and that that pays 33 per cent. for those taxes independent of the income tax, then I say it is taxed very heavily, and I do not think that it is possible for any other industry so taxed to hold its own for any length of time.

7406. You do not want me to include tithe as a tax, do you?—I merely mentioned that incidentally to show that land, as it has to support the church and to pay the remains of an old tax like the land tax—which was really a tax on personalty at one time—having still to pay these charges, should not be treated inequitably and harshly in the matter of the poor rate, but it ought to be treated on favourable terms.

7407. Of course you have told us quite candidly that the figures on your table, placed opposite to the different professions, are fictitious, but they are what you think might fairly be got from the examination of any valuation list?—Just so. I do not think I have exaggerated them at all.

7408. I put it right to you, did I not, in that last question?—Yes.

7409. There would be nothing to show that the column headed "Ratepayer's income" was exhaustive of the income to the particular ratepayer who is mentioned?—No.

7410. It might be much more?—It might be more or less.

7411. Or it might be much less?—Yes, I speak from my experience having lived in rural parishes all my life, and having managed properties, and, also, I speak from general observation.

7412. You agree with me that it might be much more, or that it might be much less?—Yes.

7413. If they are either much more or much less, it would break down the value of any inference which could be derived from this table, as to the amount of relative burden which the particular individual was really bearing?—Just so.

7414. Then, I think you said, secondly, that as between the properties which bear the burden of local rates, land contributes more than an equitable proportion?—Yes.

7415. Do you want to add anything on that sub-head?—I have already, I think, made that apparent by what I have said. I am not surprised that an industry which is so over-burdened with taxation should fail to find employment for the rural population.

7416. That is rather wide, I think, of our reference. As regards the statement which appears in one of your answers, that, as between properties which do bear the burdens of local rates, land contributes more than an equitable proportion, you do not wish to add anything, do you?—No.

7417. I believe you wish to give us some detailed particulars of the poor rate in rural districts, taken from the local taxation returns?—Yes.

7418. Would you proceed to do that now?—The average rate of 2*s.* 3*d.* in the *£* is apportioned according to the local taxation returns for the poor rate at 1*s.*—that is poor rate, pure and simple—and the county rate 5*d.*; the sanitary rate 2*d.*; the highway rate 6*d.*; and the school board rate 2*d.* I should like to deal with the poor rate entirely separate, because I think that it is a distinct charge, which, in order to obtain the proper redress, ought to be dealt with on different principles to the others. That brings me to the question of remedy, if I may be allowed to offer a few suggestions.

7419. Certainly. You have nothing more to say as to the examples and by way of comment on the examples?—No.

7420. Then we will take you now, if you please, to what your remedy will be?—I must say that I approach

Mr. A. D.  
Clarke.

17 June '97

Amount of rates paid by different classes of persons. Hypothetical illustrations given.

Burdens upon the land. Tithe and land tax. Tithe is a rent.

Maintenance of the poor and certain other expenses included in the sums raised by poor rates are subjects for national payment. Reasons given for this suggestion.

Mr. A. D.  
Clarke.  
17 June '97

the subject, which is a very difficult one, with a considerable amount of diffidence; but at the same time I think it is the duty of anybody who will take the trouble to come here and complain, to offer some suggestion of some kind, with a view to remedying the state of matters which they complain of. For this purpose, I should like to deal with the average rate of 2s. 3d. in the £ in a dissected form. First, as regards the 1s. in the £ for the maintenance of the poor, I consider that this expenditure relieves the incapable, the improvident, the idle, the worn-out and the honest bread-winner, who is no longer able to keep himself or his dependants, and that, broadly speaking, they are the residuum arising from the labour used, by means of which it has been possible to accumulate all forms of property, both personal and real. I think it is impossible to say with any amount of accuracy upon whose shoulders the cost of maintaining or relieving this residuum should fall. It seems to me that the only possible thing to do is to nationalize this portion of the poor rate. It must be evident that the owners of personalty have reaped a very great deal of advantage from the labour which has caused this residuum, whereas the cost of the relief falls, under the present system, almost exclusively upon real property. I think it would be a matter of impossibility to rate personalty locally for this reason, that in the case of a millionaire living in a small village, if we could collect the rate upon his personalty, it would be improper and impracticable almost to distribute it locally.

7421. I think the difficulties of practically carrying out the rating of personalty locally are very present to the minds of the Commission, and I do not think you need to expand that?—They have been so to me. That is my reason for making it a charge upon the nation's wealth. As the nation already has got such an excellent means of collecting taxes for Imperial purposes from all classes of property, I think that machinery should be made available to collect funds for local purposes; that is, as far as this poor rate is concerned.

7422. As far as concerns 1s. of the 2s. 3d., you have been speaking about?—Yes.

7423. Perhaps it would be convenient if you could tell us at this stage how you divide the other 1s. 3d. of the 2s. 3d., so that we may have your view before us; we shall probably have some questions to put on what you have already said?—The second portion comprises the county rate, which the returns show to be 5d. in the £; that is for the cost of pauper lunatics, police, main roads, prosecutions, reformatories, and general sanitary supervision.

7424. I want to know the average divisions that you are going to make for the balance; that represents 1s. 5d. of it, what is the other 10d. for?—That would be for the district highway rate, 6d.; the general sanitary rate, 2d.; and the school board rate, 2d.

7425. Now tell us about the 5d.?—As regards the 5d., for what is generally known as county purposes, that is the lunatics, police, prosecutions, main roads, and general sanitary supervision, I think it is so obvious that personal property derives a benefit to a very considerable extent from this expenditure, that I should not think it was a hardship, or inequitable, if we treated this portion of the rate in the same way as I have proposed to treat the 1s. poor rate—to nationalize it in fact. At any rate, if one did not collect the whole of the 5d. by means of Imperial machinery, a certain fixed proportion of it could be so collected, and the remainder could fall upon the local authorities. As regards the remaining portion of the 1s. 3d. that is the 10d., which includes the 6d. for the district roads, and 2d. each for the sanitary and school board rates, I think these are for distinctly local purposes, and that they might be continued to be raised locally, but on a more equitable basis of assessment. Land, I think, should contribute only in proportion to the extent to which it is benefited by each particular item of expenditure. It would seem that something in the nature of a local income tax would be a fair thing to suggest to meet the case.

7426. Is that not just running into the very difficulty that you indicated was very present to your mind, namely, that a local income tax was almost an insoluble difficulty?—No. I was going to say that that should be based upon the value of the houses and farm buildings, shops, and manufactories; and that a smaller proportion of the amount required at a smaller ratio should be collected from land for such purposes as it could be shown that land was benefited by. I think as

regards the general sanitary rate of 2d. in the £, that the benefits from it to land itself are so infinitesimal that it hardly deserves to contribute at all. The same I might say with regard to the school board rate. I omitted to say that, in nationalizing the poor rate, it would be very unwise to do so without there were considerable safeguards against extravagance of expenditure. It has occurred to me that the suggestion made at page 132 of the little book on Local Taxation, of which Messrs. Rathbone, Pell, and Montague are joint authors, is a very good one. They have there suggested that local authorities should still continue to administer this fund if it was collected on an Imperial basis, and that they should be allowed an Imperial capitation grant of so much per head for every pauper, and that that amount should be fixed at a little less than the minimum on which it had been found possible to keep a pauper.

7427. You would recognise this, at any rate, that any attempt to pay larger proportions of the Poor Law charge from Imperial funds would be likely, unless most carefully safeguarded, to lead to local extravagance?—Yes. There is another point as regards the poor rate of 1s. in the £. If this were collected on the basis of Imperial taxation, those incomes which at present are rated for the poor in the present assessments, and which are under 160*l.* would escape, because those persons are not liable to pay income tax.

7428. Do I understand you to propose to put all these charges upon the income tax?—Not exactly to put them upon the income tax, but that the income tax machinery should be used, and that so much in the £ as might be found necessary should be collected for the poor, and for these portions of the rate.

7429. Apparently, the basis of your proposition is, that, assuming the present rates reach an average of 2s. 3d. in the £, 1s. 5d. of that is to be transferred at once sweep to the Imperial Exchequer?—Yes, for purposes of collection.

7430. Is that to be put on the income tax?—No.

7431. Where is it to be got from; what is your idea?—That it is to be collected the same as the income tax for a local taxation fund.

7432. How do you mean collected the same as the income tax, if it is not to be put on the income tax?—For instance, the present income tax is 8d. in the £; it should be understood in collecting it that there would be, say, 1d. or 2d. for local taxation, or whatever it might be, and that should be paid over to a separate fund.

7433. Have you made any calculation to show what would be the effect of putting the 1s. 5d. for local rates upon the Imperial funds? Have you calculated what it would mean to the income tax?—No. I think this, at least so far as I am concerned, that we should arrive at those who receive the benefits from this expenditure, and that those persons should pay for it, let whatever changes may be take place.

7434. Have you calculated what similar charges to the 2s. 3d. for the rates would be in boroughs?—I have nothing to do with the boroughs. I think the local taxation is about 3s. 6d. on the average.

7435. You may have nothing to do with the boroughs, but I am afraid that those who went practically into such a scheme as you are indicating would have to take the borough population into account, would they not?—I have no doubt you will.

7436. Would you suggest that, as well as transferring all these from the counties to the Imperial fund, similar treatment should be given to the boroughs and cities?—Yes; any charge that I propose to relieve land of, and to put upon a broad Imperial basis, I should consider that property in towns ought to be similarly relieved of.

7437. But you have not calculated in any way, and you have no suggestion to make to us as to what the effect upon the Chancellor of the Exchequer's arrangements would be in consequence of these proposals?—No, not as a whole, but I have thought of it as a unit. For instance, in my own case I pay, like the professional man that I have quoted in my table, on 1½ per cent. of my income; but my neighbour, a small farmer, pays about 12 times in proportion to his income what I do.

7438. For local rates?—Yes. If I was charged so much more on the income tax, I should be relieved of what I do pay on the poor rate; if it is taken from the poor rate and put on an income tax basis, I should

Mr. A.  
Clarke.  
17 Jun

Purposes of expenditure which should be paid for by local taxation and Imperial taxation classified. Suggested method of raising such taxation.

*Mr. A. D. Clarke.* have to pay on that. But then I should be benefited in this way, that the whole of the immense accumulations of personal property which do not contribute would contribute to that Imperial fund. Although it amounts to 1s. in the £ collected locally on the present basis of assessment, it would not amount to anything like that; it would be very much less if it was spread over all classes of property.

7439. You do not know what it would amount to; you have never thought it out?—No. One cannot do everything. I am dealing with units, and I think, if we can show that unfairness and inequity exist, the remedy ought to be forthcoming at any cost.

7440. I think I have taken you through the memorandum which you have sent in; is there any point which you would like to add?—Yes, there was one point which I touched upon just now. If this is collected on an Imperial basis—

7441. If what is collected on an Imperial basis?—The cost of the poor.

Duty on imported wheat suggested.

7442. The 1s. 5d. ?—Yes. If that is collected on an Imperial basis, it is evident, of course, that those incomes which are under 160l. would escape altogether. They do not escape at the present time, because however small a man's income is, if he simply owns a cottage, or occupies a 10l. house, he pays something towards local taxation. It would not do to let those incomes escape altogether. There would have to be some means of getting at them. They are got at for Imperial purposes by means of a tax on popular articles of consumption. The man who does not pay income tax direct pays it on his tobacco, or his tea, or his beer. It seems to me that in collecting for local taxation one must levy duties of a similar kind, or otherwise these people would escape altogether. If that is not done, one will have to lower the amount, and instead of their being an exemption up to 160l., one would have to make it 60l. or something of that kind. But probably it would be better to impose a duty upon some popular article of consumption. I do not think it would be unfair to have a small registration duty on wheat to meet that; 1s. or so a quarter would probably only touch the middlemen up.

7443. I think we are getting now a little beyond our terms of reference, and I think we had better not, perhaps, go into that. Have you any other point?—It was necessary for me to explain that it was part of my remedy that there must be some means of getting at those incomes.

7444. It amounts to this, does it not, if I may put a general question, that you are not only going to relieve land, but you are going to put a tax on one of the chief products of land at the same time?—Not necessarily, I only offer that as a suggestion failing a better one.

7445. I mean to tax importation; because you do not mean, of course, to tax home-grown wheat with a registration fee of 1s. ?—Certainly not. My point is this: I quite understand that a suggestion of that kind would meet with a great deal of opposition, and that I should be told at once in certain quarters that I am taxing a necessary of life; but then, if you go and talk to the old lady in the village, she will tell you her tea is just as necessary as her bread, and the old gentleman will tell you that his tobacco is the same.

7446. I think we are getting rather wide again. Is there any other point you would like to speak to?—Yes. In addition to the average rate of 2s. 3d. in the £ there is a rate which is sometimes collected, and now more frequently than formerly, called the special sanitary rate for small sewerage and water schemes which have to be undertaken by local authorities, on which a special charge is made—under Act of Parliament, of course. To this special rate land is assessed at one-fourth of its value. Not only are these schemes brought about by the increased activity of sanitary authorities, but there has been a decision as regards sewers which has made a sewer of any drain which takes the drainage from two cottages, and such sewers have been consequently thrown upon local authorities to be kept in repair: they are their property in fact. One or two owners in the district in which I live have taken advantage of that, and have simply refused to drain cottages which they used to drain where two joined, and then these become small drainage schemes, which have to be undertaken and maintained at the cost of the local authorities, and which are chargeable as special expenses. Land is at a very great dis-

advantage in regard to this, and with your permission I should like to give an instance.

7447. You have mentioned that, and I think that is enough; I do not think we could take detailed instances of small things of that sort. Perhaps you will give us the reference to the decision so that we may consider it?—I will supply the reference to the decision in my proof.\* I have here a communication from a gentleman upon the matter which I should like to read.

7448. If you will leave the document with me I will read it, but we cannot cumber the evidence with the details of one person's grievance?—Might I say that this special sanitary rate for one of these schemes amounts to 1s. 4d. in the £ in a parish with which I am acquainted?

7449. You had better give us the name of the parish?—It is Clifton-on-Teme, in Worcestershire.

7450. As regards the details, leave the papers so that we may read them, and we will return them to you, but I do not think we can put them on the notes?—I should like to explain an important feature in regard to this. The owner who has to pay this 1s. 4d. in the £ for this drainage scheme on another person's property has himself only one cottage on his land, and he has spent 100l. in improving that.

7451. That is quite possible, but we cannot go into details of that sort; we must deal with broad general statements, and I say that if you will leave me the papers I will read them, and if we want any further information we will ask you for it?—I do not know whether it is much use to leave them; I should be very pleased to do so.

7452. I thought you attached importance to it?—I attached importance to the principle the papers illustrate.

7453. Unless I see them I cannot see how they do illustrate it?—I do not think your Lordship would understand the documents, they are not clearly drawn.

7454. Very well, then, it is no use leaving them?—Very good, my Lord.

7455. (*Sir Edward Hamilton.*) Have you had any experience of the working of the Agricultural Rates Act of last year?—Not much. I do know something of it, as I am a member of an assessment committee; but I have not followed it very closely.

Agricultural Rates Act, 1896, has proved beneficial.

7456. You do not know how it is working out, whether it is affording relief where it is most wanted?—I think it is affording relief, and that it is very welcome in one or two instances that I know of. I have just had the first demand notes under it for rates come in within the last few days, and I find there is a very distinct relief to be got.

7457. (*Mr. Arthur O'Connor.*) You say that land bears the burden, whereas personally rather gets a benefit out of proportion to any burden that it bears?—Yes.

Burdens borne in respect of real and personal property contrasted.

7458. Let us take your farmer, and let us take your millionaire, a man who has personally only derived from the dividends, say, earned by an Indian railway. Will you kindly tell me how his personal property is benefited by the local taxation?—If he occupies a house he is benefited by it.

7459. I am dealing with his personally, which is shares in an Indian railway. How does the local expenditure or income affect his personal property in that Indian railway?—Where would he live? Are you assuming that he did live in a country parish?

7460. Now you are asking me questions, but I want you to answer mine?—I should take it in this way, that he would enjoy that income, and expend it somewhere in England, and he would get the benefit of police protection, and all these other charges which fall upon local income.

7461. Then do you think, if he did not live in that particular parish, and get those advantages, it would be better for the parish that he went elsewhere, and did not become a charge for police purposes on the district?—He would have to live somewhere, and probably it might answer his purpose better to live out of the country.

\* The witness subsequently wrote: "This case is *Travis v. Utley*, 1884; reported in 1 Q. B. 233 and 63 L. J. M. C. 48; see also *Acton Local Board v. Button*, 28 Chan. D. 253, and L. J. Chan. 251."

*Mr. A. D. Clarke.* 7462. Does a man, by spending an income of 1,000*l.* a year derived from Indian Railway shares, benefit the district in which he lives, or does he burden it?—He would benefit it, I expect.

17 June '97

7463. Then the district, so far, has no complaint to make of him?—No.

7464. With regard to the roads and all the other charges met with locally, do they not benefit the district itself in which the land is?—Certainly.

7465. Then the land gets a benefit, at any rate, from the expenditure?—Yes. My intention as regards the roads is to leave them a local charge, except the main roads.

7466. You have had great experience as a land agent in a number of important counties for 30 years?—Yes.

7467. I suppose during those years, and especially of late years, you have found farmers exceedingly anxious to come and offer competition rents for land; and they are offering more and more every day, are they not?—Oh, dear me, no.

7468. They are not?—No.

7469. Is there any difficulty in letting farms anywhere?—Yes.

7470. There is?—Yes; I have one under my charge I should be very glad to let now.

7471. It is the landowner who seeks the farmer, rather than the farmer who seeks the landowner?—Yes.

7472. Then the farmer has something to say in the amount of rent that he will be willing to pay?—Yes.

7473. In offering rent, I suppose he is aware of the amount of charges in the way of rates that he will also have to pay?—Yes.

7474. When it comes to paying money out of his pocket, it does not very much matter to him whether he pays 10*s.* in rent and 4*s.* in rates, or whether he pays 15*s.* in rent and 5*s.* in rates—it comes to the sovereign, does it not?—Yes, it does not matter.

7475. If the rates were very low, possibly he might be willing to pay, and have to pay, a higher rent?—He might if he was taking a farm, and making his bargain every year; but, of course, tenancies run on.

7476. Your experience runs over 30 years; during the last 10 of those years a good many adjustments have been made as between landlords and tenants?—Yes.

7477. In view always of increasing rates?—In view of general circumstances affecting farming.

7478. I mean the farmers who take farms know perfectly well that such things as rates exist?—Yes. But may I add that I am not arguing from the farmer's point of view altogether; I am arguing from the point of view of the land.

7479. I am rather anxious to get at facts. You told us, at any rate, that you think the proportion of burden upon real property and the proportion of burden upon personal property are not equitable?—They are most inequitable.

7480. Will you kindly tell us what proportion is inequitable?—I consider that every person should pay according to benefits received. It would be very difficult for me to give an answer to a question in the abstract like that.

7481. You see we have, if we can, to furnish an answer to that question, and I thought you might possibly, as you have evidently so thoroughly and carefully thought it out, give us some practical assistance?—I can only do that by reference to the evidence I have given already in dissecting the poor rate, and first of all taking the 1*s.* for the poor—

7482. Now we are concerned with the proportion as between real and personal property; what proportion would you say is equitable?—I say it is impossible to answer that; I have already said that one must make a national charge for the poor payable out of the nation's general wealth derived from all classes of property.

7483. What proportion of contribution would that secure?—That would be similar to the income tax basis.

7484. What proportion does that secure?—That every £ of property, or annual value, you may term it, arising from personalty, should pay for the maintenance of the poor, the same as that which arose from realty.

*Mr. A. D. Clarke.*

17 June '97

7485. And what proportion is that?—A similar proportion.

7486. What proportion does personal property bear, and what proportion does real property bear in contribution to income tax?—Similar, or nearly so; of course there are deductions.

7487. Could you give me the percentage and how much is contributed by personalty and how much by realty?—Real property certainly contributed more for Imperial purposes in proportion than personalty, because it used to be paid on the gross rent instead of on the net; but there are now statutory deductions which make up for that to a certain extent, but not fully.

7488. I take it that you have not quite in detail cyphered it out as regards proportions; if you have, perhaps you will give us the figures?—For Imperial purposes?

7489. The proportion paid under income tax from personalty and from realty?—Not as a total, by reference to statistics, I have not done that. It could be done in no other way, I think.

7490. You gave us a very interesting division of the interests in land as being between the labourer, the farmer, and the owner?—Yes.

7491. The labourer is the man who does the work on weekly wages, is he not?—Yes.

7492. The farmer is the capitalist who superintends the labourer and the utilisation of the land?—He puts the floating capital into the land.

7493. And the owner is the gentleman who takes the rent?—He puts in the fixed capital and takes the interest upon it, which is a very poor one at the present time.

7494. "He puts in the fixed capital." What is that. Is that the earth, the mould?—No. Very often the money applied to the land as fixed capital for drainage, fencing, building-houses, putting up farm buildings, and rescuing that land from its prairie condition, amounts to a sum which would not yield at the present time 2 per cent. for rent, let alone anything for the original value of the land itself.

7495. As I understand it, then, if you look at a farm upon which rates are charged, there is, first of all, the brute earth, and then there are the improvements which the landlord has made?—Yes.

7496. Those improvements were paid for by money, were they not?—Yes.

7497. Money is personalty?—Yes.

7498. The charge on the farm for the rent is little more than the interest on the capital sunk by the landlord in improvements; a charge on a farm, by way of rent, will, therefore, be a charge on his sunk personal capital?—Precisely.

7499. Is that not contribution by personalty?—Yes, that which was once personalty.

7500. According to your theory you know the rent received scarcely represents a fair percentage of income or interest on the capital sunk?—In many cases.

7501. Therefore, in many cases there is absolutely nothing paid for the land as land?—Just so.

7502. And therefore the land, as land, does not bear any burden?—I should hardly go that length, I think. The land does bear a burden, because, taking the case of woods, where there are no improvements at all, we assess them at their natural value—

7503. Now we are going out of the question?—No; woods are land and are assessed in every assessment, and we assess nearly all woods at their natural value as land.

7504. The question I am putting to you was a farm, provided and made a going concern by the landlord—if we get into the woods we shall lose our way?—The parishes are made up of farms and woods.

7505. (*Mr. Smith.*) I think you were deputed to give evidence on behalf of the Worcestershire Chamber of Agriculture?—Yes.

Mr. A. D. Clarke.  
17 June '97

Personal property. Contribution to Imperial taxation.

7506. Did they see the memorandum which you have furnished before you gave it to us?—No, but in reference to that I have ready to hand in resolutions on the subject which they have passed.

7507. I only want to know whether they would agree with you in stating that personal property does not contribute to local taxation?—They would. I can show that by reference to these resolutions.

7508. You yourself are now satisfied that it was a mistake to say that, are you not?—Dear me! No.

7509. I must put the question, then. Are you not satisfied that it was a mistake to say in your memorandum that personal property does not contribute to local taxation?—No.

7510. I thought you distinctly admitted to the Chairman that you were mistaken in that statement?—Oh! Dear me, no! Not for one moment that I was mistaken.

7511. Do you still say that it does not contribute to local taxation?—Most decidedly and emphatically; that is, not directly.

7512. That it does not contribute?—That it does not contribute; that is, broadly speaking. Railways contribute a little.

7513. It is speaking very broadly, I should think, is it not? Surely you admitted, in answer to the Chairman, that any subsidy made out of the general taxation of the country was to that extent or to some extent a contribution from personalty?—I do not think the question of subsidy has been mentioned.

7514. (Chairman.) Subvention was the word I used?—Quite so.

7515. (Mr. Smith.) You adhere to your original statement, that personal property does not at present bear any part of the burden of local taxation?—Yes. It does indirectly by means of the subventions; but then, notwithstanding those subventions, the results shown in my table are what they are.

7516. Do you think it is fair to state broadly that personal property does not contribute to local taxation? You are an expert, you know, and you have had 30 years' experience, and you are a member of the Surveyors' Institution. Would you adhere to that as a simple statement of fact?—It contributes to a certain extent indirectly by means of the subventions; but they are only makeshifts, and they may be altered any moment. I want to do away with all makeshifts.

7517. You have stated that 2s. 3d. was the average rate that you found in rural districts?—That is the average shown by the local taxation returns for the year 1891-92, but they are increasing.

7518. Have you ever made inquiry as to what it is in boroughs?—No, I have not made any inquiries. I have studied the local taxation returns slightly. I believe that it amounts to a good bit more.

7519. You have not thought it worth while to go into that?—I have been interested in it; but then in boroughs a great deal of it is local service. A man living in a borough has his ash-bins emptied and so on.

7520. I am going to show you in a minute that a good deal of yours is local service. You probably do not know that we have had it in evidence that it is about 6s. on an average of 150 boroughs; would you be surprised to learn that?—I should be rather surprised to find it was as much.

7521. You are not prepared to substitute any other figure?—No.

7522. I want to ask you a question or two as to your hypothetical parish, and the occupants of the land in it; how much land did you assign in your mind to the farmer whose rent was 300l. a year, I think you said?—Say 300 acres, which is a very common rent.

7523. The occupation of how much land did you assign to the equally hypothetical gentlemen who had 1,000l. a year from some unknown source?—A little garden such as would go with a house of 55l. a year.

7524. Half an acre?—Half an acre altogether, with what the house stands on.

7525. I am going to put to you very seriously the same question that Mr. O'Connor did: Is not that man's living in that agricultural parish a great advantage to the parish?—Probably.

7526. Would you say that those two persons, the farmer and the gentleman, are equally benefited by local expenditure?—What do you mean by local expenditure? Local expenditure is under four or five different heads. If you will tell me the particular item of local expenditure to which you refer, I shall be pleased to answer it.

7527. Is the gentleman who lives in that house as much interested in the highways, for instance?—The highways are of two classes—which do you mean, the district highways or the main roads?

7528. Of course we all know that they are of two classes; I mean the highways generally?—I have divided them into two classes.

7529. Does the gentleman keep the same number of wheels to run upon the roads as your farmer?—No.

7530. That is an illustration?—Do you mean the county roads, that is, the main roads, or the district roads, because I have dealt with them on separate principles?

7531. I do not think it is necessary to differentiate, I speak of highways generally. Is the one as much interested in the highway expenditure as the other?—Yes. I should say, as regards the main roads, that the owner of personalty who probably rides his bicycle, and has some delicately adjusted carriages, and so on, receives as much benefit from the expenditure on main roads as the farmer; but, as regards the district roads, they are now repairable by district authorities at an average cost of, I think, 6d. in the £. Probably the farmer would get more benefit from these than the private resident. My idea is that the cost of the district roads should remain a local charge.

7532. Is he equally interested in the provision of a good supply of labour?—Yes, I should say there would not be very much difference.

7533. How many people ought a farmer to employ with 300 acres?—As a matter of fact they employ very few now.

7534. How many ought he to employ?—There would be the farmer himself, and two sons probably at work with him, and he might have four men.

7535. How much would the resident want for his half acre?—He would have a groom or two, and a gardener and a lad perhaps.

7536. On a thousand a year?—Yes, he would probably employ from three to four persons, and they would have families who would require schooling and everything just in the same way as the farmers' men.

7537. You seriously put that forward, do you?—Yes.

7538. Just one question as to your landowner, who is so very much injured by the special sanitary rate. He is only injured because he is a landowner in a parish where there is some scheme of drainage or water supply, is that not so?—Yes.

7539. Does that not imply that where there is a scheme of drainage or water supply, the land is growing from an agricultural into an urban district?—Not in the slightest degree.

7540. Does it not?—This a remote rural parish, and this scheme is half a mile from his property; he has put his own property in order at a considerable cost, and he has to contribute to the cost of putting the neighbouring proprietors' property in order by means of the rates.

7541. It is only a question of hardship as between landowner and landowner?—Or occupier; these rates first fall upon the occupier.

7542. I am quite aware of that; but you put it on the ground of hardship to the landowner, and I am placing it there?—On its general inequality.

7543. Of course you admit that he only pays one-fourth?—Yes, but he absolutely receives no benefit whatever and never will, and he has to spend the money on his own property.

7544. Is this a little town which has been drained or supplied with water?—No, it is a remote country village, and probably the drainage might extend to only about a score of houses.

7545. Would your suggestion be to make a special sanitary district of that?—Certainly, the owner of those houses who may be benefited by the scheme,

Mr. A. D. Clarke.  
17 June '97

Special sanitary rates prove burdensome to owners and occupiers of land.

Rates paid a rural and urban districts compared.

Amount of rates paid by different classes of persons. Hypothetical illustrations given.

Mr. A. D.  
Clarke.

17 June '97

which has cost a thousand pounds in this case, ought to contribute everything to the whole cost of making the sewer.

7546. Have you ever considered the difficulty of making special drainage rates all over England?—This is a special drainage rate.

7547. I mean a special district for a special drainage rate?—There may be a difficulty; but I think that if the principle is gone upon that everybody should pay according to the benefits received there need be no difficulty.

7548. That is very good as a general statement?—If I might offer a remark, any land which might have a prospective benefit by drainage schemes should be made to pay a certain fixed sum when it was built upon towards the initial cost of the sewer.

7549. Do you not know, as a practical man, that the difficulty is that directly you make a special drainage district people go and build just outside it?—I do not see that that affects the question.

7550. (Mr. Arthur O'Connor.) Is not this only the result of a construction put by a court of law on one of the sections of the Public Health Act, 1875, which made what was considered before to be a drain to be a sewer?—No; we are speaking now of a special sanitary rate levied under the authority of the Public Health Act.

7551. (Mr. Elliott.) I think you said that although you have not submitted these particular proposals to the Worcestershire Chamber of Agriculture, that Chamber has nevertheless passed resolutions which are generally in sympathy with the views which you have submitted to the Commission?—Yes, mainly, or generally, as you say.

7552. Do you think that feeling on the part of the Worcester Chamber of Agriculture reflects the feeling of the agriculturists generally in the districts of which you have a knowledge?—Undoubtedly.

7553. That feeling, I take it, may be summed up thus, that persons who derive an income from agricultural property are unduly burdened as compared with persons who derive an income either from industrial property or from property of a personal character?—Exactly so.

7554. Is that feeling a strong one?—It is.

7555. Do you think that sufficient knowledge has yet been gained of the effect of the legislation of last session?—No, I do not think sufficient knowledge has been gained of it. I think when farmers receive the actual remissions given by the Agricultural Rates Act they will be more appreciative of what has been done.

7556. I am very much struck by this that the evidence which you have given us might really have been given almost in the same terms before the legislation of 1888, and before the legislation of 1896; is that so?—Yes. I look upon the legislation of 1888, and the legislation of 1896, simply as makeshifts, and I think that the time has come when makeshifts in the shape of subventions and relief acts should be done away with. The existence of these is a practical admission of evils which I think are now admitted to be so extensive that the system ought to be entirely altered and these makeshifts done away with.

7557. Why do you call them makeshifts?—To begin with, the Agricultural Rates Act of last year is only a temporary one for five years, and I take it that that is to relieve land in a temporary way, while this Commission is making its inquiries and formulating its report with a view to getting some alteration which will permanently help land.

7558. Supposing that that legislation, instead of having been made temporary for a period of five years, were to be made permanent, would it go to any considerable extent to remove the grievances that agriculturists feel?—It would, but at the same time the present incidence, as shown by the tabular statement that I have handed in, is so utterly bad and unfair or inequitable, whatever you like to term it, that so long as it exists any assistance that you offered, administered while that basis is so imperfect, really misses the mark to a certain extent.

7559. Does that statement take into account the subventions given by the Act of 1888?—Yes.

7560. In estimating the contribution of a private resident in receipt of a thousand a year and living in a

house at 55*l.* rent, have you taken into account the fact that, through the probate duty, for instance, he makes a substantial contribution to the relief of the poor?—No.

7561. You have not taken into account, then, the subventions of 1888?—No, for this reason, that we all contribute to the Imperial fund from which that subvention issues, and, therefore, those incomes which are assessed lightly or not at all, and those incomes which are assessed heavily, to local taxation, both contribute to that Imperial fund.

7562. But in different amounts?—In a different amount.

7563. Have you taken into account the effect of the Agricultural Rates Act of last session?—No, because that is only temporary—it is only for five years.

7564. But a very substantial modification of your figures would have to be made if you take that Act into account?—Certainly.

7565. And that modification would be in a direction that you think called for?—Yes.

7566. With regard to your alternative proposal that the relief of the poor and the charge for police, lunatics, main roads, and so forth, should be nationalised, are you quite satisfied that the effect of that pooling, if I may so term it, would be more favourable to agriculturists than the subventions, and the relief that they get out of the Agricultural Rates Act?—I think so.

7567. Have you worked that out in figures?—No, but I take it in this way; if it was collected on those incomes, on the present Income Tax principles, which allow incomes of 160*l.* to go free, farmers would not contribute to the relief of the poor at all—at least many of them—the smaller farmers would not, except so far as they might contribute by the lowering of that exemption limit of 160*l.*, or by the consumption of some article that I suggested should bear taxes, similar to tea and sugar, in order to go into the fund for local taxation.

7568. You are not looking into the matter, I take it, entirely from the point of view of the farmer?—No, but from the point of view of the three classes who are interested in land.

7569. Are you quite satisfied that the landowner, for instance, would gain more by pooling those charges, throwing them into hotch-potch, than he would gain by the continuance of the present subventions, and by making permanent the Agricultural Rates Act?—I do not know that he would. If his property consisted exclusively of agricultural land he would be a gainer; if he had a certain amount of personalty besides, probably the one might balance the other, and the benefit he would get as a landowner he would lose as an owner of personalty.

7570. Do you imagine, for instance, that if the relief of the poor were to be made a national charge, the rural districts would gain as against the urban districts or *vice versa*?—I do not see that that would make any difference. It seemed to me so obvious that the care of the poor, as I call them, the residuum, was a concern belonging to the whole of us, that we ought all to contribute; in fact the nation ought to contribute out of its general wealth, out of the general system of taxation.

7571. But I understand that the foundation principle upon which you base that conclusion is that the persons deriving an income from agricultural land are unduly burdened at the present time?—Undoubtedly they are.

7572. But you have not made any calculations with a view to see whether those persons would actually gain by the adoption of these suggestions?—No.

7573. Are you not rather afraid to put them forward, then?—No, I simply deal with this question from this point of view—it is a very narrow one—that those persons who receive the benefit ought to pay for it, notwithstanding whatever changes might be brought about. Take my own case, for instance; if these suggestions of mine were carried out I should not benefit at all, I should have to contribute on my professional income, and I should be a considerable loser.

7574. But I gather, that from your knowledge of agricultural opinion in the districts with which you are acquainted, you would say that there is not so much unanimity as to the particular remedies to be

Mr. A. D.  
Clarke.

17 June '97

Purposes of expenditure which should be paid for by local and Imperial taxation, with the object of relieving the persons who derive income from agricultural land from the burden of rates.

Persons deriving incomes from agricultural property are unduly burdened by rates compared with those deriving income from other sources.

Persons deriving income from agricultural property are unduly burdened by rates compared with those deriving incomes from other sources.

Agricultural Rates Act, 1896, should be made permanent. Present basis of assessment is inequitable.

Amount of rates paid by different classes of persons. Hypothetical illustrations given. Effect of Agricultural Rates Act not taken into consideration.

Mr. A. D.  
Clarke.  
17 June '97

propounded, as that there is an unjust distribution of public burdens at the present time?—That is so. The ordinary rural ratepayers do not understand such a difficult question. In the abstract they do know this; that gentlemen who come into a parish and occupy a house and take all the benefits that have been provided in that parish by the expenditure on the rates, contribute little or nothing towards the rates; perhaps you may put it one in 32, as shown by my example; and they resent that most keenly.

7575. The feeling, then, is that the local resident deriving his income from some extraneous source does not pay sufficient by comparison with the contributions of those engaged in agricultural industry?—It is most strongly felt.

7576. (Mr. Dalton.) That is rather a matter of suspicion than knowledge, is it not?—The ordinary country ratepayers, of course, do not understand the meaning of the subventions; they know that the gentleman does not pay direct and that is quite sufficient.

7577. Apart from those subventions, this man who comes into the district with a property of 1,000*l.* a year, his income may come from railway shares, or waterworks shares, or gasworks shares?—Yes.

7578. If it comes from those, the man is paying the full rates before he receives his dividends?—He is, in the case of railways; I think that is about the only exception.

7579. No, it would be the same in the case of waterworks, gasworks, markets, electric companies, and indeed a very large number of properties?—That would have to be taken into account, of course; but that is only a small proportion of personalty taken as a whole.

7580. I do not know; I should think it a very large one. However, that is merely a matter of suspicion on the part of a person in the district; he does not see that the man in his district is paying rates elsewhere, but he suspects he does not; he does not know it because he cannot tell where that man's income comes from?—Just so.

7581. You have recommended that the relief of the poor should be made a national charge, and that it should be recognised that there should be certain safeguards; I am not sure that you have made it clear to the Commission what safeguards Mr. Pell recom-

mended?—The safeguard that he recommended was that, in the case of the indoor poor it should be limited to a capitation grant of so much per head, which is slightly less than the minimum amount at which a pauper could be kept in the house.

7582. I do not think you mentioned in the former part of your evidence that it was simply the indoor poor?—Probably not.

7583. If it was given on the total number of paupers it would clearly be a great incentive to the giving of outdoor relief and to multiplying the number of paupers?—Yes. In justice to Mr. Pell, I ought to say that as regards outdoor relief, he considered that that ought to remain a charge upon local rates, with a view to effectually stopping any extravagance.

7584. You are aware, I suppose, that, as a general rule, the poor rates in the urban districts, taking England as a whole, are higher than in the rural districts?—Yes; one sees that by reference to the local taxation returns.

7585. The result of giving a subvention throughout the country in aid of the poor rate, if it was fairly distributed, would be to help the urban rather more than the rural district?—Certainly.

7586. But you see no objection to that?—No, as regards the relief of the poor, I take it that if it is made national as far as the rural districts are concerned, it is only right that it should be made national as regards urban districts too.

7587. I think it has been pointed out to you that personal property contributes to the Imperial subventions; but it is also the case, is it not, that real property contributes at least, in some degree, to Imperial subventions?—Certainly; personal property does not alone provide that money, although it does provide a large proportion of it, of course. That money comes out of the common fund, to which all properties contribute, including real property.

7588. Therefore really is contributing, to a certain extent, to the relief which it obtains from the subventions?—Certainly; it is simply taking it out of one pocket and putting it into the other.

7589. (Chairman.) Have you anything you want to add?—I think not, except to hand in these resolutions of the Worcestershire Chamber of Agriculture (*handing in same*).

The witness withdrew.

Mr. WILFRED L. DODGSON called and examined.

Mr. W. L.  
Dodgson.

7590. (Chairman.) I understand that you are deputed to come here by the Shropshire Chamber of Agriculture?—I am.

7591. To give us information on their behalf affecting the terms of our reference?—Yes.

7592. Have you anything that you wish to say as to the basis upon which the valuation of properties is made?—The basis is not quite the same now for all taxation, and we, in the Shropshire Chamber of Agriculture, think that, instead of making the basis uniform, what is really necessary is to touch the incidence of the taxation.

7593. But you would agree, I think, with many other witnesses, that the foundation for any reform must be to get, as nearly as circumstances will allow us to get, an equitable basis uniform over as large an area as possible?—Certainly, through the whole country.

7594. As regards the incidence of taxation, what are the points you would like to bring before us?—The broad point is, that we think that every man who benefits from the civilisation and advantages and freedom of the country should personally contribute out of his means towards the expenses which are necessary for the attainment of those advantages, according to the Statute of Queen Elizabeth.

7595. Of course, that touches the substance of the reference to us. You give an instance in your memorandum, which I should like you to put into your own words?—This is what I say in my memorandum. A. has an income of a fraction over 500*l.* a year, received without labour, risk or expense. He occupies premises in the country at the rent of 50*l.*, the house being valued for duty at 40*l.*,

and the whole being rated to the poor at 40*l.* His contributions out of income are thus: Income tax, Schedule D., 16*l.* 13*s.* 4*d.*; house duty, 1*l.*; income tax, Schedule B., 2*s.* 6*d.*; and rates, say at 2*s.* 3*d.*, 4*l.* 10*s.*, making a total of 22*l.* 5*s.* 10*d.* B. occupies a tithe-free farm at the rent of 1,500*l.* 10*s.*, and rated at 1,350*l.*, of which 170*l.* is on the house and buildings, the house being valued for duty at 40*l.*; his income on the Government basis will be the same as A.'s. His contributions, however, are: income tax, Schedule B., 16*l.* 13*s.* 4*d.*; house duty, 13*s.* 4*d.*; rates, 85*l.* 9*s.*, a total of 102*l.* 15*s.* 8*d.*, about four and a half times the amount paid by A. on a similar income. Before the passing of the Agricultural Rates Act this contribution would have been 169*l.* 3*s.* 2*d.*, about seven and a half times as much as is paid by A. I should like to make one further remark about the uniformity of the basis. We think that to make that basis uniform all taxes should be raised on income and not on rental value; that is to say, that a farmer should not pay his poor rates upon the rental value of his farm, but should pay it upon the income that he is supposed to derive out of his farm.

7596. You have gone into the very centre of the whole question in making that statement, and applying it to the farmer; but if there is going to be any basis for local rating at all, and a man lives in more than one place, what are you going to do with him?—Every man would pay on his income, but he would not pay locally on his income. The idea that I have brought before you in this memorandum, no doubt, you will say are very far-fetched in many ways and are looking a very long way ahead. The idea was that all incomes should be taxed, that this taxation should be paid in the same way as the

Mr. A. D.  
Clarke.  
17 June '97

Government subventions, contribution in respect of real and personal property.

Mr. W. L.  
Dodgson.

Assessment. Income, and not rental value, should be the basis for assessment in respect of rates. Suggested scheme for defraying all local rates by means of a national charge. Questions of local benefit received, and local control discussed.

*Mr. W. L. Dodgson.* income tax is now paid, and that the several spending districts should have the funds paid to them out of the general fund of the country for the satisfaction of their needs, what they may fairly require for that district.

17 June '97

7597. Do I understand you to give up altogether any attempt to consider whether the property, or a man in respect to his ownership of property, benefits more or less by the particular burden which is laid upon him?—The only way that I could touch on that would be that where really local benefits are received from local causes there must be a local rate to meet those. We do not see how to get rid altogether of a local rate. For that purpose, where there are really local benefits they should have a local rate, and also where the spending district has exceeded the allowance made to it by the Exchequer, I think, unless they could show good reason for that, a special local rate should be laid in the following year to meet that. I may say that that suggestion is a suggestion of a gentleman whom, perhaps, you may know by name, Mr. Bowen-Jones, who is the Chairman of the Shropshire County Council, and who is one of the leading agriculturists, I think I may almost say, in England.

7598. I think I must ask you to develop that a little more in your own way, so as to give me an idea of what you are aiming at?—The difficulty we saw was to fix the amount of money that should be paid out of the Exchequer to each spending authority, and the difficulty that was put before me was, what would you do if they did not find it sufficient or if they found it too much? If they saved any money without losing the efficiency of their work, the spending district should have the benefit of that in the following year; and if they spent too much, unless they could show a good cause to satisfy the head authority that that outlay was reasonable and right, they should suffer for it by having that amount added on to their district rate for the following year.

7599. I am afraid I cannot quite grasp the ideal system you want to see brought into force, and, therefore, I must ask you to develop it a little more to me?—Do you mean the machinery?

7600. I do not understand how you are going to defray the charges which are now defrayed out of rates raised locally?—The whole of the income of the country would be chargeable in the first place; you may call it a national income tax.

7601. For what?—For every purpose for which these forty millions, or whatever it is now, are now used.

7602. Do you mean that every local charge is to be made an Imperial charge without exception?—Every local charge, in the first place, will be an Imperial charge.

7603. What do you mean by "in the first place"?—If there are special features in the local charges, which are entirely local, which are not shared in the same way by other parts of the country, those would be a local charge met by a district rate.

7604. What is your line of division?—The line of division would be in this way: the poor, for instance, would be spread over the whole country, and I do not see why the poor nor the roads, for everybody wants roads, and everybody benefits from roads —

7605. All roads?—The whole of the roads.

7606. All roads?—I should include all, in order to do it broadly. In every broad scheme it is impossible to do absolute justice to everyone, and it is no more unjust, in our minds, to throw the whole of those things equally over the whole country than it is to throw the whole of these things over a county, because, for instance, in our county, the county of Shropshire, one part of the county may benefit very much more from the money that the county rate is required for than another, yet we all have to pay equally. I see no reason why the same principle should not be applied to the whole of the United Kingdom or such part of it as the scheme would be suitable to.

7607. Does that apply to the drainage and sewerage and water rates?—Sanitary work in itself is national; that is to say, the keeping all of the people in health should be national; but where you made a special drainage district—

7608. About keeping the people in health. Suppose people's dustbins get too full and breed disease; do you suggest that country people, for example, are to pay for clearing away all the dirt of large towns?—No, certainly not.

7609. How is that to be done?—What I should say the whole country should pay for is the keeping up of the staff of medical officers and sanitary inspectors of district councils and county councils.

*Mr. W. L. Dodgson.*

17 June '97

7610. Their salaries?—Yes, the salaries of the sanitary inspectors and the medical officers of the district councils, and, of course, county councils now have their medical officers too, they should become a national charge because of the health of the nation. But where special works are required for special districts those would be, as now, specially charged. I distinguish between what are really national wants and national benefits, and what are purely local wants. Everybody wants their property protected, therefore the police would be a national charge.

7611. And administered nationally?—And administered nationally, only the spending districts, whatever those spending districts happened to be —

7612. Who is to control the police, who is to settle the number of police to be in any district, and who is to dispose of them?—They would be controlled exactly as they are now.

7613. Taking that as an example, what is to be the check on local expenditure and extravagance?—The check would be this: that if such a scheme ever came into force the first year's money would be calculated on an average of a certain number of years before—probably that is the best basis we could think of—and after that, if they exceeded the money and could not show good reason for exceeding it, they would have to pay that excess out of the local rates raised in that particular spending district.

7614. Is it not perfectly obvious on the face of it that by the shifting of population the gravest injustice would result? Supposing a basis such as you suggest had been fixed at the beginning of the Queen's reign, would that have been bearable and fair at the present time?—The basis would change—perhaps I did not make myself quite clear—every year, according to the expenditure of the year before, it is only the initial start where the difficulty is. If circumstances showed that such an expenditure was not required in a certain district the national subvention would be accordingly lowered. It is only the first year, we may say, of the full subvention that will raise any difficulty in our minds.

7615. It quite possibly may be my fault, but I did not grasp what is the test which is to be applied to say whether the local expenditure has been extravagant in a bad sense or not?—Of course, the Local Government Board would be the main governing body as now.

7616. No doubt, but what is the test that they are to apply to satisfy we will say, Parliament, or the local representatives, that the expenditure in any particular district has been too lavish; what is the touchstone that they are to put?—If the expenditure had increased then they would no doubt hold an inquiry to find out the reason of that increase; it would be then for the Commission or Commissioner, whoever held that inquiry, to decide whether that should be paid out of the national subvention or whether it is a mere matter of undue extravagance, and should therefore be saddled on the spending authority of the district. The main point I wanted to mention there was that it would make the basis of valuation more uniform if income was the only thing; whether the other incomes are taxed to the poor or not—at all events let the agricultural incomes be taxed instead of the rental value.

7617. I understand making a comparison between the income between agriculturists and another, although I think it might be difficult; but when you put it as broadly as you do, that the basis for local rating is to be income, I must ask you what you are to do with a man who lives in a house in three different districts, in each place for a third of a year?—As all the money would be paid into one national fund it would not signify where he lived or how many houses he lived in.

7618. For local purposes it would, would it not—those purposes, which would still remain local?—Yes, for local purposes; there would have to be a local rate raised for those particular purposes.

7619. Then it comes to this—that you do not get out of the difficulties and inequalities of local rating, by your scheme, but you simply propose to put a great deal more upon the Imperial fund than is so placed at the present time?—To be paid into it first; it would all be paid into the Imperial fund.

Rating in respect of income. Difficulty of carrying out such a proposal.

Mr. W. L. Dodgson.  
17 June '97

7620. But all the local machinery would still have to be kept up for the things which you admit are still to be local charges?—I do not think all the local machinery would have to be kept up, because the collectors who had to collect the national charge would simply have to collect the additional rate in their spending district where it was judged to be necessary to collect that rate. I quite know that there is a considerable difficulty in defining how much a man who is in several spending districts, should pay towards a particular spending district; but those are difficulties that I have no doubt the ingenuity and skill of the authorities would surmount.

7621. Have you any suggestion to make to us by which it could be done?—If it could be shown how much of a man's income be derived from the district in which that special rate had to be raised there would be no difficulty then at all.

7622. Supposing not a farthing of his income was derived from that district. I will take my own case—I do not draw any income from anything in London, mine comes from Scotland; what is to happen to me when I come and live for three months in London?—Your income would be charged; the national income tax would be paid into the national exchequer.

7623. But I derive a certain amount of benefit during the time I live in London from even what you admit would be local charges; how am I to pay for them? I live in a house in London; what am I to pay towards the lighting or the roadmaking or the dust collecting rates of London?—Take those things separately. Lighting I should put in the same category as I would the butcher's and the baker's bill, and the removal of dust in the same way.

7624. But I will take you on that; is it your opinion that the agriculturist in Shropshire is to pay his share of lighting the streets of London?—No.

7625. Then how is it to be raised from the man who benefits in London alone?—That would be entirely a local rate for the benefits a man receives in the particular place.

7626. How are you going to rate the man who receives those benefits in London—on income?—Yes, I think so; at least I see no objection to it.

7627. How are you going to rate me, then—I have no income in London?—It would not be your income in London, it would be your income wherever it was.

7628. Am I to be rated on the whole of my income? In London for the London lighting on the whole of my income, and again in Edinburgh for the Edinburgh lighting on the whole of my income, if I happen to live for 6 months in Edinburgh?—I do not think lighting can be brought into the list.

7629. Still it is a local rate now with which we have got to deal?—I see what you mean—that you could not rate a local thing like that; but a man would simply pay for the lighting he had. If a man had so many electric lights or so many gas lights he should pay as he does now.

7630. I mean the street lighting. I did not mean what is in my house; the street lighting has got to be paid for?—Yes, it has. It might be found to be necessary to do that on the same basis as it is now.

7631. Is there any other point in your memorandum on which you want to speak?—The only other point is the clause in the Agricultural Rates Act of last year which divides the buildings from the land. That clause has given a vast deal of trouble to assessment committees and overseers, and we should like to have it either explained to the country why this division should be made, or else to have it repealed and to have the land and buildings all in the same assessment. We do not understand why buildings which are quite as necessary to the agriculturist as the land should be charged on the full rate—that is on a different rate from the land—because it is a part of the same machinery. I have also pointed out in my memorandum one of the anomalies of the Act, namely, that the owner of the sporting rights is relieved of half his rates, while the agricultural owner of the buildings has to pay his rates in full. We think that at all events the agricultural occupier of buildings should not pay on a higher scale than the occupier of sporting rights.

7632. (Mr. Dalton.) On that last question, are you not mistaken in saying that in these cases the sporting rights are rated on one half?—The sporting rights

cannot under the Rating Act of 1874 be separated from the occupation of the land.

7633. I understand that you say in this case that the owner who reserves his sporting rights, and does not let them, is relieved of one half of the rates assessed upon those rights?—Yes.

7634. That is a case where an owner lets his farm to a farmer and reserves the sporting rights?—Yes.

7635. Is it not perfectly clear that under the Act and the regulations that have been made thereunder in such a case as that the sporting rights receive no benefit? Have you read the regulations which were approved by Parliament on the subject? Perhaps I may read them to you, and you will say if you recognise the passage—"Where any right of sporting is severed from the occupation of the land, and is not let, and the Assessment Committee have certified the amount by which the rateable value of the land is increased by reason of its being estimated as if the right of sporting were not so severed, such amount shall be included in the rateable value of buildings and other hereditaments"?—That is not in the Act, and is conditional.

7636. That is under the regulations made under the Act and passed by Parliament. In such a case as that, clearly the value of the sporting rights if certified by the Assessment Committee, is to be included in the rateable value of the buildings and the buildings pay upon their full value, therefore the sporting rights would pay upon their value?—Yes, they would if in all cases the sporting rights are to be included with the buildings.

7637. What was the case which you had in your mind when you said that the owner who reserves his sporting rights, and does not let them, is relieved of one-half of the rates assessed upon land?—I was simply in that referring to the district in which I live. In every case in the whole union the sporting rights are included in the agricultural land.

7638. Although the owner has reserved them?—Although they are reserved, and not let.

7639. And although the farm is let?—I was not aware of the interpretation of that instruction which you have read, I confess.

7640. That would meet your difficulty completely?—Entirely, and it shows that our assessment committee in doing as I have said did wrong.\*

7641. You have raised the question why the buildings on a farm should pay on the full; why should not the occupier pay as much on his farmhouse which he occupies for the purposes of residence as anybody else pays on his own house which he occupies for the purposes of his residence?—I quite think he should; it is the buildings I talk about.

7642. But the house is a building?—I mean to say the farmstead apart from the residence, because you cannot farm without buildings.

7643. Take those; buildings are used in other occupations besides farming?—The buildings are as much a part of the machinery by which the man makes his income as the land is.

7644. If the man makes his income from a manufactory he pays on the buildings to the full, and in any business in which he requires buildings to carry it on, those buildings pay on the full: why should the farmer be treated differently in respect of his buildings?—I thought there was a wish to give the agriculturist a relief from taxation and we did not see why that small amount should be withheld. It simply gives a very great deal of trouble to assessment committees and overseers.

7645. Still that trouble has been gone through now, and they have been separated?—It has been gone through and they have been separated.

7646. (Mr. Elliott.) You appear before us as representing the Shropshire Chamber of Agriculture?—Yes.

7647. Have the Chamber considered this memorandum which you have submitted to us?—The Chamber have not considered this actual memorandum, but we had a

\* Witness subsequently wrote: "I answered Mr. Dalton's question under a misapprehension as I understood him to say that, under an instruction of the Local Government Board, sporting rights were in all cases to be charged with full rates. That not being the case I adhere to my statement to the Chairman respecting the rating of these rights."

Mr. W. L. Dodgson.  
17 June '97

Agricultural Rates Act, 1896. Division of buildings from land not desirable.

Assessment/Income should be the basis of assessment in respect of rates and taxes.

Agricultural Rates Act, 1896. Division of buildings from land not desirable.

Rating in respect of sporting rights.

Mr. W. L.  
Dodgson.  
17 June '97

meeting at which I read rather a long and exhaustive paper on the subject, and they passed a resolution that all incomes, from whatever source arising, should be equally taxed for Imperial and local taxation.

7648. Apart from the question of grievance, is the Shropshire Chamber of Agriculture committed to the proposal of these particular remedies?—As far as I can I have embodied in this memorandum the opinions that were given then at the meeting of the Shropshire Chamber of Agriculture.

7649. Have the Shropshire Chamber of Agriculture considered whether the adoption of these remedies would, in fact, benefit agriculturists in the rural districts of England?—I think so, I think we all agree that it would do so.

7650. May I call your attention to a paragraph in your memorandum, in which you suggest that the value of agricultural holdings should be determined by reference to the income produced and not by rental value, and that if that were done they would then be assessed on one-third of the tithe free rental value; would you apply that principle to the valuation of other property?—I am only considering the question of agricultural property.

7651. Could you defend the adoption of that principle in the case of agricultural property and not in the case of other property?—Yes, I think so, because the great fall in the value of agricultural produce has benefited the general public, although it has greatly hurt the farmer.

7652. But there has been a great fall, has there not, in the value of commodities generally?—Yes, but not so much in the other commodities. In other commodities where the fall has been there has been in many cases a corresponding fall in the cost of production.

7653. Do you seriously think that the fact that agricultural prices have diminished would justify the adoption of a different system of valuation in the case of agricultural property than in the case of other property?—If it would save the future of the industry anything would be justifiable.

7654. Is it not much more defensible to say that the serious fall in prices of agricultural commodities justifies relief being given rather than that it justifies a particular system of assessment?—Certainly, this is only a suggestion of the way in which relief might be given.

7655. So long as that relief were given, I take it you are not seriously committed to that proposal?—Certainly not. The Agricultural Rates Act, as I point out in my memorandum, gives about five per cent. on the loss occasioned by the fall in the value of produce.

7656. Your general proposition is, is it not, that persons deriving an income from agricultural property either in the capacity of landowners, or in the capacity of tenants, are unduly burdened at the present time as compared with other classes of ratepayers?—Yes.

7657. And these are merely suggested remedies, but you do not put them forward as the only remedies to meet that condition of things?—No, we should be glad of any remedies.

7658. (Mr. Clarr.) If you throw the whole local expenditure, or practically the whole local expenditure, on imperial funds what interest will the local ratepayers have in the selection of representatives on the District Councils?—Because if they exceed the Exchequer allowance they would be fined for it the next year by an additional rate on that district; and if they had men who, without losing efficiency, could economise they would benefit from that.

7659. As I understand, you say the Government grant is to be based on an average of years preceding the date at which you make the calculation?—Yes.

7660. Then if a town increases in population the whole burden of the increase of population would fall upon the local ratepayers?—No, not if they could show that the increase of expense was not owing to extravagance, but was owing to causes over which they had no control, which the increase of population would be. They then could justly ask for a larger subvention.

7661. (Mr. Smith.) You practically would do away with the distinction between imperial and local taxation?—Yes.

7662. And in return you would give us the benefit of local administration?—Yes.

7663. (Mr. Arthur O'Connor.) I do not know whether I quite apprehend your view, but if I do it interests me very much. I gather that you consider that there are now certain local charges which are purely and essentially and necessarily local, but that there are now defrayed from local resources certain charges which in their nature are more general and Imperial?—Yes, national.

7664. You think that those latter charges should be defrayed from a national, and general, and central fund?—Yes.

7665. Whereas the purely local charges and services should be met from a purely local fund?—Yes.

7666. Then, I think, I follow you; you would propose that there should be, if I may use the illustration, a kind of central cistern from which should be drawn off by different taps for different districts whatever supply was considered proper for each particular area?—Yes.

7667. The only difficulty that occurs to me is this; how are you going to distinguish between that which is purely local and that which is not purely local; that is the only difficulty I have?—If the present machinery is kept of parish meetings, parish councils, district councils, and county councils, the purely local charges would go down quite to the lowest part of that; they would go down to the actual parishes—to the parish meetings. I think there are many charges now that there are great difficulties about, as, for instance, parish footpaths and things of that sort, which are thrown now on the district council, but which ought not to be thrown on the district council; those would be purely local, and they would be taken out of that category altogether.

7668. A man living in Northumberland cannot possibly be interested in the question whether a lamp post should be put in the district of Wool, in Dorsetshire, or not?—No, he cannot.

7669. That is a local charge?—Yes.

7670. I suppose such questions as the maintenance of one who may be a wandering lunatic and may be in Westmorland, or may be in Dorsetshire, you would regard, perhaps, rather as a national charge?—There would be a considerable difficulty, I know that quite well, in tying down what part of a man's income should contribute to local charges.

7671. I am now trying to distinguish between the charges which are properly local, and those which are properly imperial from your point of view. We agree that the gas lighting, or electric lighting is purely local, and concerns only the locality?—Yes.

7672. Then certain other services, such as providing for lunatics, and possibly the wandering poor, should be national?—Lunatics, poor, police, roads, and the general sanitary expenditure.

7673. I think I should agree with you with regard to the lunatics and police, and, therefore, we will not put any further questions on them; but with regard to roads, would you be inclined to draw any distinction between different classes of roads? Let me illustrate what I mean: in France they have a different system of administration; they have what they call the *routes nationales*; those are looked after by the central government; then they have the *routes départementales*, which are looked after by the departments, or what we might call the counties; and then there are the *routes vicinales*, which are parish roads, and those are looked after in part at least by different bodies. When you say "roads," do you mean all roads?—No, not quite all roads. I think that all roads which are thoroughfares and can be used, all roads that now come under the proper category for county and district councils to repair should be national.

7674. You mean arterial roads?—Yes. Where we get roads that may be called, as we now call them, occupation roads, they would be purely parish roads or district roads, as the case may be.

7675. But everything is the Queen's highway now where there is a thoroughfare, is it not?—Yes, but many roads are hardly what you may call of national importance—I mean roads which are called now occupation roads, which district councils and highway boards now refuse, or are trying to refuse, to repair.

7676. Those are private roads, are they not?—No, they are public roads, but they are occupation roads really.

Mr. W. L.  
Dodgson.  
17 June '97  
Purposes on which rates are expended, whether Imperial or local, discussed.

Local rates should be defrayed by a national charge. Question of local control.

Mr. W. L. Dodgson.  
17 June '97

Mr. W. L. Dodgson.  
17 June '97

7677. Are they thoroughfares?—Sometimes there are thoroughfares for bridle or footpaths. There are many roads which I could point out which are merely set out in enclosure awards, which have never been made at all, but which are still used locally.

7678. I do not mean to go into such fine detail as that; they are only hairs on the body; but would you draw, generally, any distinction between roads at all; would you make any roads local and some roads imperial, or would you make them all imperial?—I should make all imperial except those which could be proved to be entirely of no use except locally, such as a church footpath in a village from the village up to the church, across fields, and so on. I should not throw that now, on to the national funds.

7679. It has been suggested that if you raised from direct taxation as income tax and indirect taxation as from alcohol or tobacco, taxes which were to be applied in relief of local taxation, there would be great danger of extravagance locally; but, as a matter of fact, does not the system which you are advocating already exist—do you not now receive something locally from the spirit and the beer duties, and from the probate duties?—Yes, we have received subventions.

7680. Therefore, in a form, though not in precisely the same form that you suggest, the very thing in principle does exist?—Therefore carry the present principle out to its logical conclusion.

7681. You would suggest that that should be systematised which is now only in a fractional and haphazard way carried out under the probate duties and the local taxation legislation?—Yes. The probate duties, I suppose, are used a good deal as subventions, but then the agriculturist has to pay probate duty as well as the man who has his income from other things.

7682. Yes, but I suppose even the agriculturist, even in this country, does not propose to have it all take and no give?—No. The agriculturist would only pay the same national income tax for national purposes that all other incomes would pay.

7683. (Mr. Dalton.) Under the present system under which you receive your probate duty and your licences you have a fixed allowance practically from the Treasury; that is to say, that allowance is not increased if you spend more, or decreased if you spend less; is that not so?—I am not sure how the subventions are paid to the county councils.

7684. You receive the licences collected in your county, and you receive a certain proportion of the probate duty, therefore, you get a fixed allowance?—Yes.

7685. You have no incentive to extravagance there; and, if you save, you gain it; but if you had the whole of it paid as you propose, if whatever you like to spend was to be paid from the Imperial revenue—you would have every incentive to extravagance, would you not?—You would have for the first year under the scheme which I have brought forward here a fixed allowance as it is now.

7686. But if you spent more the next year you would get more?—No, unless you could prove that there was good reason for spending more.

7687. Unless the central commissioner or the central department could say you had been extravagant?—Yes.

7688. That is a very difficult thing: is it not an exceedingly difficult thing for any man, a stranger, to come down into the district and to be able to prove that you have been extravagant?—There are auditors; all these things are audited.

7689. You may have a perfectly legal expenditure, but it may be an exceedingly extravagant one, or it may not be; it is exceedingly difficult for a stranger to say, without knowing the local necessities, whether you have been extravagant or not?—Yes, no doubt it would be difficult.

7690. To disallow it he would have to prove the grossest extravagance?—He would have to prove that no increase of necessary expenditure had been shown, and yet that the excessive expenditure had taken place.

7691. Still the local people would give him very good reasons why it had increased, would they not?—If they could.

7692. They would not have much difficulty in regard to sanitary expenditure, or expenditure on education purposes for which expenditure is good, and on which it is exceedingly difficult to say that there has been any extravagance?—Of course when you suggest so much as we suggest we do not expect to get it all. We ask a great deal in the hope of getting a very little. That is the real fact of the matter. It is only to show that we feel that we want some help, and that we shall be very grateful for anything that can be done further for the agricultural interest.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

**TWENTY-FIRST DAY.**

Friday, 18th June 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Viscount EMLYN.  
Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.

T. H. ELLIOTT, Esq.  
ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. WILLIAM EVE called and examined.

Mr. W. Eve.  
18 June '97

Mr. W. Eve  
18 June '97

7693. (Chairman.) I understand that you are a Fellow of the Surveyors' Institution and Honorary Examiner at that Institution in the subject of parochial assessments?—Yes.

7694. Also that during your professional experience you have valued for rating purposes a very large number of hereditaments, which you put at 160,000, including a quarter of a million acres of land and

a number of important public undertakings?—I have.

7695. You agree with many other witnesses in thinking that there is a case for revising the present system under which our local taxation is assessed and laid on?—I do.

7696. I understand that, like others, you suggest that valuation lists should be made up periodically, instead

Valuation system o, requires alteration.

Mr.  
W. Eve.  
18 June '97

of its being left to the discretion of the overseers?—  
Yea. I was not aware that that suggestion had been made; but that, certainly, has been my view for a long time.

7697. One question occurs to me in connexion with that. In your memorandum you refer to the Metropolis; should you say that the valuations in the country should be done quinquennially or triennially, or at what interval?—I think, as a rule, about every ten years would be enough, certainly, for rural parishes. As for large cities, I cannot see any reason why they should be dealt with differently from the Metropolis. I think a quinquennial re-valuation throughout the United Kingdom would be unnecessarily frequent, taking the majority of parishes, and would be an unnecessary expense; but I would have a period fixed when there should be a re-valuation.

7698. Is that for the reason that it puts an invidious task upon the local people who are responsible, to stir the matter and would, perhaps, get them into bad odour with their neighbours?—That is one reason; and another is that what can be done at any time is frequently done at no time.

7699. Have you anything to say as regards the columns of the gross estimated rental and rateable value?—I have a very strong feeling that the gross estimated rental should be omitted altogether. It brings about very great difficulty. The justice of a reduction from the gross has been admitted by the Legislature, in allowing a sixth to be taken off; and if a sixth, why not the right amount, that is to say, if occupier A. has a property which needs for its repair a deduction of one-sixth from the gross, he gets the whole amount off—as he should, I think—and pays his Income Tax on the net amount; but another property, which requires one-third of its gross value to repair, merely gets the same deduction of one-sixth, and therefore pays for Imperial taxes more than the net amount.

7700. Would you see any objection to doing away with the rateable value, and putting rates on to the gross?—Very material injustice.

7701. Why?—The thing is, what is the "net value"—that is, what does the man not only get into his pocket, but keep there? May I give you this illustration? Supposing, for argument's sake, I came to you and said: "Will you build me a house, and lay out a couple of thousand pounds on it?" You agree. I say: "I do not want the trouble and responsibility of repairing it; I do not understand the matter. I want to pay you a fair rent for it, and I will pay you a fair interest on your outlay." You may, possibly, agree to accept six per cent. for that money. You lay out the 2,000*l.*, and I pay you 120*l.* You fix the six per cent. on the hypothesis, possibly, that it will take one per cent. to repair it, and that you will get and keep in your pocket five per cent. Supposing, after that arrangement had been satisfactorily carried out, I came to you and said: "Now, I want you to build me a manufactory. We have arranged terms; we have gone on very pleasantly in the previous transaction, and, therefore, we have got nothing to discuss." "No," you would say, "the basis of my arrangement was six per cent., because I should expend one per cent. of it in repairs and renewals, and retain five per cent. in my pocket; but you are now asking me to invest my 2,000*l.* in a factory which, you agree with me, will not require one per cent. to repair, but will require two per cent.; and, therefore, the result would be that I should keep in my pocket only four per cent." The consequence would be this: you would say: "If I carry out this arrangement, I must not have six per cent., but I must have seven per cent.; because I shall spend two of it, and even then I shall get a property which is not so saleable or so valuable as an ordinary house that would suit the requirements of everybody." Therefore, I think the rateable value is not only itself the real value, but it is the only one upon which taxation of any kind should be based.

7702. And you see no reason why the double entry should be in the assessment roll?—None whatever. I have experienced grave difficulties by its being there, because Quarter Sessions at present—I hope it may be altered—have no power to increase the assessment. They can only give relief under the Act, and if you appeal to Quarter Sessions and the deduction is too little, all the appellant has to do is to say:—"I admit the correctness of the gross and claim a deduction for repairs, which I show you are so and so." The

court then is bound to reduce the rateable value, even although by doing so the rateable value is put at too little, because the Act says you are to deduct from the gross the fair amount for the repairs, and if the gross is not right the Assessment Committee is still bound by it. That has been held on several occasions, and great injustice has followed.

7703. On those general points is there anything you would like add?—I think the Quarter Sessions should have power to raise as well as to lower assessments. I will give you a case which was only decided by the London Quarter Sessions last week, where this point has a very serious import. It was an appeal by the South Metropolitan Gas Company, in the case of 13 parishes, and I was concerned for a large number of them—10 out of the 13. The Court decided that the correct assessment was 2,104*l.* more than the total existing assessments appealed against; but, inasmuch as some were too much and some too little, they actually reduced the assessment, and were bound to reduce it by 531*l.* of the rateable value, so that this property now will be assessed at 531*l.* lower than it was assessed at, although the Court valuation of the group was 2,104*l.* more than it was assessed at. Now, after going to all the expense of a very lengthy investigation, as this was, it has brought about a manifest injustice, and as it was the same appellant in all the cases no injustice would have been done if these figures had been put right.

7704. Is there any other general point on those first heads that you would like to speak about?—There is one with regard to attending before an Assessment Committee. I think objectors should be obliged to give figures. That has been held in the Leyton case as unnecessary.

7705. These are rather details of procedure, are they not?—Yes, but it is very important.

7706. We are here rather on the general principles of the matter?—I am afraid that if these details are not gone into this will be overlooked. Of course, from practical experience it is upon these details that I am more able to give an opinion than I am on general principles of taxation.

7707. If you put it shortly, I do not object?—It has been held that an objector before the Assessment Committee need give no details whatever; but that he can then go to the Quarter Sessions, and allege that he has failed to obtain relief. I think he ought to give figures and details before he is enabled to say he has failed to obtain relief. The Assessment Committee is a Court of First Instance, and should have the opportunity of adjudicating upon the matter before the expensive procedure before Quarter Sessions is resorted to.

7708. Do you wish to make any suggestion to the Commission as to the burden borne by agricultural land relative to other classes of property which appear in the valuation list?—As to the highway rate and school board rate, I think they are unfair taxes on land, especially the highway rate. With regard to the highway rate, the user of the roads, during my recollection, has been very much changed. The roads are very much used now by brewers, bakers, grocers, and others, and I think less by farmers than hitherto, because of the introduction of railways. I think that the burden which now falls upon land in relation to the highway rate is much too great, and the only way I see of remedying that is by what was proposed some years ago; namely, a wheel tax.

7709. You use the word "highway;" do you draw any distinction between what are known generally as main or arterial roads, and those which are purely local or district roads?—It would apply equally.

7710. Your suggestion is that agricultural land is too much burdened in both cases?—Yes, in both; the only exception that I am aware of is that within a district where they are charged at the fourth rate only; there, I think that is a fair thing.

7711. Would you apply the same argument to any other local burden, the expense of which is charged out of the rate?—I would apply that to the school board rate equally.

7712. Do you think that the relief given by the Agricultural Rates Act of last year puts the matter upon an equitable basis or not?—It is a fairer basis, but not yet equitable.

7713. What would you suggest, would be required to make it equitable?—I think accommodation land and market gardens should have been excluded from it.

Mr.  
W. Eve.  
18 June '97

Objectors before an assessment committee should be compelled to give figures.

Owners and occupiers of agricultural land contribute too much towards local rates in respect of expenditure on highways and school boards.

Agricultural Rates Act, 1896. Accommodation land and market gardens should have been excluded from its operation.

Valuation lists should be subject to revision in country every 10 years, and in cities every five years.

Gross estimated rental as a basis for valuation, objection to. Reasons why rateable value should be the basis. Gross estimated rental column in lists should be abolished.

Valuations. Quarter Sessions should have power to raise as well as to reduce.

Mr.  
W. Eve.

18 June '97

7714. Are you prepared to suggest a definition of accommodation land?—That is very difficult. The only plan that I know of is testing it by rental value.

7715. How would you proceed in that?—I think all land that is let at more than 2*l.* an acre at any rate should be excluded.

7716. Why do you fix 2*l.*?—That is the difficulty. I have no grounds for it, but I say at any rate that should be the rent at which it should not be relieved. It is manifest that relief of sometimes 1*s.* an acre is a very important question when the rent is 5*s.*, because it forms 20 per cent. on it; but when the rent is 2*l.* it only forms 2½ per cent. on it.

7717. If you take into consideration the point of class of property which is benefited by the rate, do you then think it possible to draw any distinction between the benefit which a farm which is let at 5*s.* or 10*s.* an acre, and one which is let at 2*l.* an acre, derives from, say, a school board rate or a poor rate?—That, I think, depends entirely upon the relative proportion of farms and manufactories in the particular parish. If there is a large manufactory, of course, it is worse for the farmer than it is in a rural place.

7718. Do you wish to make any comment upon the decision in "*Purser v. The Worthing Local Board*"?—I should like to see the law altered so that that would not apply.

7719. In what direction?—Of course it is according to the law, but I cannot see the justice of rating a building of that character any different to other buildings.

7720. We have not actually had upon the notes the character of the building; I understand it was a glass-house for forcing vegetables, was it not?—Yes, vegetables and fruit.

7721. And what was the decision?—The decision was that it was merely land covered by the glass, and that it did not cease to bear the character of land; but if a covered homestead is put up by a farmer he has to pay the full rate on it.\*

7722. Do you think that if a yard for feeding stock is rated at the value of the buildings, a house for forcing vegetables is as much in fairness liable to the rate as the farmer's building?—I do.

7723. Do you wish to make any comment upon the principles which underlie the Rating of Machinery Bill which has been before Parliament in several sessions?—Yes. I think the law as it stands at present, if it is properly administered, is a very wise one; and that it would be a most serious misfortune to the agricultural interest if the change proposed was adopted—and unfair too. If a person puts down a railway siding or tramway he is rated for it, because that expedites the carrying out of his business; and I do not see the difference in putting down machinery. Besides that, the proposal, as I understand it, is to rate only direct power. A great deal of machinery now has the steam applied to each particular machine, and there would be a great deal of difficulty in separating and in knowing where to stop. Take, for argument's sake, a steam hammer—there are a great many other machines, but that, perhaps, is the most common illustration, the steam hammer is all one, and I do not know how you are going to say that the steam portion of it is to be assessed and the remainder is not to be assessed.

7724. If a farmer has a threshing machine in his buildings, is it rated at the present time?—By me, always.

7725. I mean, is it the law to rate it?—It is the law, and should be the practice, and for aught I know is. I understand you to ask me about a threshing machine inside the premises; I do not mean, of course, a moveable one—a portable one.

7726. Do you think there is much variation in the practice of Quarter Sessions as shown in the decisions that are given by them?—There is very great variation. In regard to special properties, with the utmost respect to the able magistrates who preside, it is almost impossible for them to understand the question in the course of the short proceedings before them, if they have not been used to dealing with these subjects; and you will find that in a great many cases the Quarter

\* It was held that the land with the greenhouses upon it constituted a market garden or nursery ground within the meaning of the Public Health Act, 1875, and that the appellant was liable to be rated to the general district rate in the proportion of one-fourth part only of the net annual value of the property (*Purser v. Worthing Local Board*, 15 Q.B.D. 819).

Sessions have not had a gas, or water, or railway appeal for, perhaps, years.

7727. It has been suggested here by more than one witness that there is a considerable diversity of practice amongst Quarter Sessions in the principles they apply and the decisions that they give, and that it would be very expedient in any reform of the law to have a special court, perhaps not absolutely constituted in the same way, but analogous in its constitution to the Railway Commission, which would be the final Court of Appeal for rating questions?—That is my opinion; certainly there should be such a court.

7728. You would advocate such a court as that?—Strongly. I would give the right to the appellant or the respondent to have the case investigated by such a tribunal whenever desired. I think to have one appointed in all cases would make it too expensive; I think you would satisfy the justice of the matter if you allowed the appellant or the respondent to select that tribunal when he desired.

7729. (Mr. Dalton.) With regard to your suggestion as to taking accommodation land out of the operation of the Agricultural Rates Act, is it not the case that certain parts of most farms would be worth a great deal more if let separately?—Yes, and the farm to which it belongs would be worth less if it was taken away from it.

7730. Would you propose to take out of the operation of the Act these particular parts of farms, homesteads, and so on, which would let at a higher price?—No. I think the first principle of rating is that you are to assess the property as it is used, not as it might be used.

7731. Then the result in most villages would be that little pieces of ground, adjoining, say, a tradesman's shop, or a public-house or anything of that kind, would be exempted from the benefit of the Act, though, as a matter of fact they were no more valuable than other adjoining land which happened to be in the occupation of a farmer?—But merely used with the farm. For instance, to take up your illustrations, it might be that the piece of land adjoining the public-house was valuable because it was close to the house, or because it was close to the butcher's shop; but a piece of meadow adjoining that, might be a mile away from the farmer's house.

7732. But the most valuable part of a farm is generally that adjoining the homestead, is it not?—Yes, but I am assuming that the homestead might be a mile away from that piece of meadow.

7733. If it was, it would not be worth much?—No.

7734. I am saying that if you adopt your plan you would have two pieces of land of practically the same real value in the village, and that which was occupied by the little man would be rated highly, and that which was occupied by the large farmer would be rated low?—That is how they are rated now.

7735. No, each gets the benefit of the Agricultural Rates Act?—I am speaking of the original Acts.

7736. I am speaking of exempting it from the Agricultural Rates Act?—The injustice, though, being such as you allude to, happens now just the same, only it is relieved by the Agricultural Rates Act, because they have to pay the rates now on that basis. If one man pays 3*l.* for a piece of accommodation land, and the other has a piece of land of equal value, if you please agriculturally, but which is agricultural land let with a farm at 1*l.* an acre; it is rated on that principle now.

7737. The reason it is rated at 1*l.* an acre is that it is thrown in with a lot of land which is worth much less than 1*l.* an acre?—May I say that it is my practice to value each field in valuing a farm, and that when I arrive at meadow-like land adjoining accommodation land worth 3*l.* an acre, I do not put that part of the farm at 3*l.* an acre, because I am quite sure it does not let at 3*l.* an acre.

7738. Do you not think the farmer pays the full value for his land?—The full value as a farm, yes, not the full value as accommodation land.

7739. Another result of fixing, say 2*l.* an acre, for the limit would be to discourage high cultivation, would it not? Certain land is worth a great deal of money to let because a great deal of money has been spent upon the cultivation of it and it has become very valuable land in consequence?—Yes, that would have a slight effect but not so much as the present injustice I think.

Mr.  
W. Eve.

18 June '97

Glass-houses should be the subject of valuation for rating purposes like farm buildings.

Rating in respect of machinery is equitable.

Special court for hearing rating appeals desirable.

Agricultural Rates Act, 1896. Accommodation land and market gardens should have been excluded from its operation.

Mr.  
W. Eve.  
18 June '97

7740. Then, as regards the market gardens, do you not think it is desirable to encourage market gardens in rural districts?—Certainly; and I think it desirable to encourage farming too. My idea is simply this: that this Agricultural Rates Act is only a question of relief where the burden has become too great to bear in consequence of the depression; there is not that depression in the market gardens, and therefore it does not need that relief.

7741. Then you think that land should be rated at the same value as other property, if there was no depression?—That it should not be relieved?

7742. That it should pay at the full?—Except in those cases that I have illustrated of the highway and school board rates. In regard to that sort of thing I do not see any reason why it should not be relieved.

7743. A market gardener, of course employs, a very large number of labourers?—Yes.

7744. It is desirable, you would agree, to keep the labourers, if possible, on the land and to find them occupation in the rural districts?—Certainly. My idea is that when you are taking off these half rates from a high rent you are putting money in the landlord's pocket. If 2*l.* will not bear the current rates the remedy is to reduce it to 3*s.*

7745. (Mr. Arthur O'Connor.) Reduce what?—Reduce the rent to 3*s.* or to whatever may be necessary.

7746. (Mr. Dalton.) But a market garden is generally let for a considerable period of years, is it not—it is not let from year to year, because a market gardener will not go to the expense of cultivating an ordinary piece of ground, and bringing it to this high state of cultivation unless he has a long lease?—Generally speaking, there is a lease; but in many cases there is only an annual rent.

7747. Where there is a lease the market gardener would get the benefit and the owner could not possibly get it until the end of the lease?—I do not think he ought to get it.

7748. He would not in that case; but I understand you to mean that he would get it directly in the case of a market garden which is let from year to year—which is a very rare occurrence I should think?—In your illustration it is worth the 2*l.* we are talking about. Your illustration is, as I understand it, that he has increased it in value from say 30*s.* or any sum you like to mention.

7749. That it is worth a great deal more if it is a market garden?—It may be worth up to 8*l.*; it depends on what we are speaking of, of course.

7750. (Mr. Elliott.) Do you attend here as a representative of the Farmers' Club?—Yes.

7751. Have the Farmers' Club had an opportunity of considering the representations you have made to us in your memorandum of evidence?—No.

7752. Then to that extent you put forward these representations as your own individual representations rather than as the representations of the Farmers' Club?—Certainly.

7753. You suggest that the gross value should be eliminated from the valuation lists, and that only the net value should be inserted?—Yes.

7754. I gather that your object is that the net value should be taken for the purposes of Imperial taxation?—Yes.

7755. Is it not much more difficult to arrive at the net value than at the gross value?—No, I think not; in fact in what we call special property, such as railways, gasworks, waterworks and that sort of thing, as a rule, we arrive at the net before we arrive at the gross, although technically under the Act it is not the right way to do it.

7756. Practically is not the law, at any rate as it stands in the Metropolis, this—that the gross value is arrived at and then the net value is obtained by taking certain fixed percentage deductions from the gross value?—That is so in ordinary properties, but not in special properties, which are so difficult to assess properly.

7757. If it was as easy to ascertain the net value in the case of ordinary properties as it is to ascertain the gross, why do you suppose Parliament thought it necessary to lay down those percentage deductions?—I was in correspondence with Mr. Goschen on the subject when he brought in his Bill fixing the

percentage. I pointed out to him that it was a great deal too much in the City, where the land forms so large a proportion of the total value. His reply was that it ought not to be deducted and that those were maximum deductions; but, as a matter of fact, they have been taken off as being both the maximum and the minimum, and a great injustice follows in the City of London; a great deal too much is taken off in consequence.

7758. Do you suggest to the Commission that in the event of any valuation scheme being applied to the whole of the country no attempt should be made to lay down the deductions to be taken from the gross value in order to arrive at the net?—No; I would eliminate the gross altogether and lay down the instructions as to how the rateable value should be arrived at.

7759. Do you suggest that that rateable value should be taken as the basis for Imperial taxation as well as for local taxation?—Yes, I feel very strongly on that point that it would be just.

7760. With regard to the Agricultural Rates Act, do you think that the views which you have just expressed with reference to that Act, and especially in regard to the manner in which land should be treated, if there were no such thing as agricultural depression, would commend themselves generally to members of the Farmers' Club?—With the rectification of these other rates I do not see why they should not.

7761. Do you think the Farmers' Club would endorse the view that if there were no agricultural depression there would be no case for the special treatment of land in regard to rating purposes?—No, I do not say that; because I say in my memorandum that the highway rate under any circumstances is a burden and that the school board rate is an unfair tax on land.

7762. Would you say that with regard to the poor rate?—I say the same with regard to the poor rate, only I say that the Agricultural Rates Act has adjusted that fairly in my judgment.

7763. But supposing that agricultural depression were to disappear, do you suggest to the Commission that the Agricultural Rates Act should disappear also?—I cannot contemplate the first, and I really do not know how to reply to the second.

7764. I am putting it to you hypothetically; I want to know whether you advocate the retention of the Agricultural Rates Act so long as agricultural depression continues?—I do; certainly.

7765. You do advocate that?—Yes.

7766. I want also to know whether the existence of agricultural depression constitutes the only reason in your mind for the retention of the Agricultural Rates Act?—No; I do not say it is the only reason, because I think it was unfair before to charge land with the full amount.

7767. Then you would say that under the old system, as it was, prior to the Agricultural Rates Act, land was unduly burdened in comparison with other properties?—I do say so.

7768. Would you not say that that is one of the main reasons, not only for the enactment of the Agricultural Rates Act, but for its continuance?—That is one of them, certainly.

7769. Apart from any question of agricultural depression?—Certainly.

7770. Do you not think that that would be the view that would commend itself to the Farmers' Club?—I have no doubt it would.

7771. With regard to the suggestion that for the purposes of the Agricultural Rates Act a limit of 2*l.* an acre should be taken, would that not exclude a great deal of *bonâ fide* agricultural land?—Not a great deal when you take the tithe off.

7772. Are you familiar at all with some of the rents that are obtained in Lincolnshire for grazing land?—Yes. Of course there are many thousands of acres let at 2*l.* and over, but there are a tremendous number let at a great deal less.

7773. There is a great deal of *bonâ fide* agricultural land, is there not, apart from any question of accommodation value, which is let for more than 2*l.* an acre?—Yes; I would not call it great in proportion.

7774. Supposing, as you have just now said, that the case for the Agricultural Rates Act depends upon the comparative burdens upon land and the burdens upon

Mr.  
W. Eve.  
18 June '97

Owners and occupiers of agricultural land contribute too much towards local rates in respect of expenditure on highways and school boards.

Agricultural Rates Act, 1896, has removed the injustice imposed on owners and occupiers of land in respect of their contribution to poor law expenditure.

Agricultural Rates Act, 1896. Reasons for its continuance.

Accommodation land should not be included in scope of Agricultural Rates Act, 1896. Definition of accommodation land.

Gross estimated rental column in lists should be abolished, and instructions given as to the method by which the rateable value should be arrived at.

Mr. W. Eve.  
18 June '97

other property, does the question of the rental value enter into the question very much?—I think it does, in this way: that where land has increased in value through its surroundings or through what some people call the unearned increment, there is not that reason why it should have relief as there is where the rent on the land now is not actually paying proper interest on the cost of its development, such as expenditure on buildings, roads, and fences.

Agricultural Rates Act, 1896. Suggested reason for its introduction.

7775. I will put a concrete instance. Supposing you had 10 acres of land valued at 8*l.* an acre in the neighbourhood of a town, and that, closely adjoining the land, you had a dwelling-house of a value of 80*l.* a year, do you think those 10 acres of agricultural land should bear the same burden as that house at 80*l.* a year?—I see no unfairness, because the land has been brought up to 8*l.* an acre by its surroundings, not through any merit of its own.

7776. Following up that case, what would be the income of the owner and occupier of 10 acres of agricultural land worth 8*l.* an acre?—That depends, of course. It might be a gentleman who turned his horses out.

7777. Take his income from that property only?—I do not know I am sure—I am afraid I cannot answer that question.

7778. Can you not, with your experience, form some rough idea of it?—Of course it would be much more in the case of the occupier of the house; but that is a question of rating personalty.

7779. Would you not say generally that the occupier of the house of the value of 80*l.* a year was able to pay a much larger annual contribution to the public burdens than the occupier of those 10 acres of land at 8*l.* a acre?—Certainly, and I would increase the Income Tax to meet it.

7780. Is that not the main reason for the Agricultural Rates Act?—I should not like to answer as to what was the intention of the Legislature in passing that Act.

Rating in respect of machinery is said to be equitable.

7781. With regard to the question of the rating of machinery, have you made yourself familiar with the actual terms of the proposal of those who advocate the amendment of the law in that matter?—There have been so many proposals; but, as I understand it, shortly it is this—that you should rate the motive power and shafting; that is, boilers, engines, and shafting.

7782. Have you looked at the terms of the Bill of 1894?—Yes, but not recently. Perhaps you would read it; I cannot remember the details.

7783. I will put one general question to you; considering that so much has been done in recent years to relieve the grievances of agriculturists, would you not say that, even from an agricultural point of view, it might be politic to remove this grievance as regards the rating of machinery?—I think not.

7784. You are aware that it is regarded as a very serious sore in some districts?—I am aware of that. I think, myself, that the principle at present adopted is a fair principle.

7785. You do not think that it would be desirable, from an agricultural point of view, to remove that sore?—No, I think a very severe burden would come on to the agricultural interest if it were removed.

Appeals. Not desirable that owners should have right of appeal.

7786. With regard to the question of appeals, do you think that it would be desirable that owners of property, as well as occupiers, should have a power to appeal against valuations?—No, I think not.

7787. Are not both owners and occupiers interested in the valuation put on their properties?—The occupier is so much more interested in it that I think it is well the burdens should be thrown on him.

7788. Would you say that the owner has no interest in the amount at which his property is valued?—When he does not pay the rates, I do not see what interest he has. Whenever he comes into possession of the property he has the right of appeal then; and until he does get possession the burden is on his tenant.

7789. Have you considered at all the expediency of dividing the rates between the owner and the occupier?—I think it would be very inexpedient.

Division of rates between owner and occupier would be inexpedient. Reasons for this view.

7790. On what grounds?—In this way: if you divide the rates, then you ought to let the landlord have a voice in the spending of the money, and that complicates matters. Further than that, it would

apply specially to ground rents, which are a very favourable security now, because they produce a certain income. Railway companies and other companies divide their capital into various categories in order to meet the requirements of the public, one person being satisfied with a small interest, provided that be a secure and uniform amount, another being satisfied with a little more risk, and a third being satisfied with the ordinary shares.

Mr. W. Eve.  
18 June '97

7791. I rather want to take you away from those special properties, like railways, with which, no doubt, you have had considerable experience, and to take you to the case of ordinary property, let it be either urban property or rural property. Do you not think some advantage is gained by making it clear that every person interested in the property should pay a certain contribution to the local rates?—And they do. I have the management of some houses now in two parishes; in one parish the rates are 5*s.* 6*d.* in the pound, and in the adjoining one they are 9*s.*, and the two parishes are absolutely adjoining. You can see by the rents that are paid that that difference is appreciated nearly to the extent of the 3*s.* 6*d.*

All persons interested in property pay a contribution to local rates. Evidence in support of this view.

7792. Is it quite clear to the minds of everyone?—It is quite clear to me, as agent for the houses, that they do; we are obliged to let them at 4*l.* to 5*l.* less.

7793. You are an expert in the matter; what I wanted to ask you was whether it is quite clear to the man in the street that every person interested in the property pays a contribution to local rates?—No, I think there is no subject upon which there is more ignorance than there is upon the subject of rating.

7794. (Mr. Smith.) I suppose you have a large experience of town rating as well as of country rating?—Yes, very large.

7795. The principle you would approve of in rating property is to take the actual value of the occupation, is it not?—Yes, the net value.

7796. But that principle is violated by the Agricultural Rates Act, is it not?—Yes, that certainly is so, no doubt.

7797. That is on account of the poverty of whom—of the owner or of the occupier?—That is a question, is it not, as to what was the reason of the legislation? I do not know what the object of it was, but I think it was very much needed.

7798. You have told us that the principle of remitting local taxation was on account of the poor land, and that you wished to restrict it to the poor land?—Yes.

7799. That is what I may call an appeal *ad misericordiam*?—If I may put it on this ground, I think that when land goes up to a high price there is a large portion of what is called "unearned increment."

7800. I am coming to that. You approve of the principle of the Agricultural Rates Act on the ground that it should apply to poor land?—Not the poor land, but to all land which is not enhanced in value by something it has not done itself.

7801. I thought you said you wished to take out of the Agricultural Rates Act anything like accommodation land?—Yes.

7802. On that principle?—Yes.

7803. Does not the principle of remitting local taxation on account of the low-rated land involve increasing taxation on land that has experienced an enormous accretion of value?—That is the result, but not under the Agricultural Rates Act.

7804. But, assuming your principle is correct, that primarily you should take the actual value to the occupier of any property as the basis of assessment, then does not the principle of remitting local taxation on poor land involve increasing local taxation on land that has experienced an enormous accretion of value by becoming building land?—Yes, unless relief is given by the State, as is the case in the Agricultural Rates Act.

Land, taxation in respect of. If principle of remitting taxation on poor land exists, then principle of raising it on land which has increased in value should also exist.

7805. You see nothing unreasonable in my suggestion that if you relieve the poor agricultural land on account of its poverty, you should increase taxation on land that has perhaps developed a thousandfold?—If you can get at the unearned increment on land, I would rate it; but I have never been able to know how to get at it.

7806. It is only a question of machinery, then; the principle you approve of?—Yes, certainly.

Mr. W. Eve.  
18 June '97

7807. (Mr. Arthur O'Connor.) I think you have very clear opinions upon unearned increment, have you not?—Yes, I have a very great desire to see it taxed, but I have always failed to know how to do it.

Value, suggested definition of.

7808. In order that we may understand, and I confess I do not understand a great deal of what has been said, I should like you, if you would, to give me a definition of the terms that have been used. What do you understand by the word "value"; would you define the word "value"?—The "rateable value"?

7809. No?—"Value," not "rateable value"?

7810. "Value"?—I must know whether you mean "gross value" or "rateable value" before I can answer.

7811. I am speaking in great ignorance, I admit; but I should like to know what you understand by the word "value" for anything?—It is what a man gets for his property, and retains of it; not simply what he gets, but what he retains in his pocket per annum.

7812. For the purpose of understanding your evidence, may I take this as a definition—the value of a thing is the measure of human effort which it can command at any given time and place?—Yes, I do not see any objection to that definition.

7813. Of course a cup of water in London is not worth much, but it might be worth a good deal to a solitary traveller in Central Asia?—Quite so.

Rent, suggested definition of.

7814. Now, will you kindly define for me the term "rent," because I see you have used it in your evidence; what is "rent"?—Will you tell me what part of my evidence you refer to?

7815. You say you would reduce rent, what is rent?—I suppose that is the same thing as value, is it not? Rent is annual value, because we speak of rent as annual rent.

7816. What is annual rent?—The amount which somebody is willing to pay the owner for the use of the property.

7817. It may be that one man will be willing to pay a great deal more than another?—Certainly.

7818. Then would rent depend upon the opportunities of somebody unknown as compared with somebody else who could not turn it to equal account?—No; rent is for rating purposes merely *prima facie* evidence of value. What we have to get at is value. In many cases where we find that the rent paid is a ridiculous one, is exorbitant, then in rating we do not adopt that figure.

7819. Let me suggest another definition to you for my own appreciation of your evidence. Is rent that which the owner can get another man to give him for the hire of his property?—That is rent, but not necessarily value.

7820. It may be that the man who gives it cannot help giving it?—I say it is not necessarily value. I must know the particular instance before I can say whether they are synonymous terms.

7821. There is not necessarily any correlation between value and rent?—None whatever—not necessarily.

Accommodation land, suggested definition of.

7822. Now, would you kindly define for me a third term; what do you understand by "accommodation land"?—Shortly, I should say it is any land which is of greater value to be used in connection with a private residence or tradesman's shop, as distinguished from farm land.

7823. Suppose there is a small market town, and a piece of land, not fit for building, but good for herding cattle on a market day, would you call that "accommodation land"?—Certainly, and we always assess it on that basis. We frequently have instances of that sort.

7824. Supposing there is a house let in a town with a field appurtenant let with it, would you call that "accommodation land"?—Yes, if it were not too large a field for the size of the house.

7825. There are cases in which a house goes with the field not far off?—Yes, but the more removed it is the less of an accommodation character it possesses.

7826. That, again, would all be controlled as regards its value by the amount which the owner can secure from any occupant?—Can reasonably secure, yes.

7827. Now who is to judge of the reasonableness?—That is a part of my profession.

7828. It is the surveyor who has to judge, then?—He ought to be able to judge.

7829. But who is to decide?—The Court of Quarter Sessions in rating cases, on case of appeal, according to the evidence.

7830. You put the deciding authority in the Court of Quarter Sessions, not in the higgling of the market?—The higgling of the market has got a great deal to do with it, but I do not call it the higgling of the market, where a person, as you say, is obliged to give the rent for some exceptional reason.

7831. I think I used the word "obliged" in another connection?—I beg your pardon.

7832. Will you kindly look at the fourth paragraph in your memorandum. You say there: "Overseers should have the right to appeal against the decision of the Assessment Committee in any particular case in the country as they now have in London"; what advantage is it to overseers, as distinguished from the Assessment Committee, to have a right of appeal?—So that their rates in the parish may be fairly assessed.

7833. Are not the interests of the overseers and the interests of the Assessment Committee practically identical?—No.

7834. In what do they conflict or diverge?—In any local rates which relate to the parish only as distinguished from the Union where common charges obtain.

7835. The overseers are officers of the parish, are they not?—They are.

7836. The assessment committee is a tribunal acting for the Union?—Acting for the Union and appointed by the Guardians.

7837. You think there may be a conflict of interest between the overseers, as representing the parish, and the assessment committee, as representing the Union?—I think so, distinctly.

7838. That is to say, as between one parish and the rest of a group of parishes?—The Act of Parliament does allow overseers to take proceedings under those circumstances, but what I am speaking of is an individual appeal. In London the overseers have that power, but in the country they have not.

7839. We are concerned now for the country; London is provided for?—Yes. I was merely alluding to it as being a strong argument why the country should be treated in the same way.

7840. I presume you do not press paragraph 4 very much?—I think it is very desirable to do it.

7841. Will you tell me exactly with regard to the country only, what is the force or value of that suggestion?—All the rates payable in the parish other than those raised under the head of poor rate may, and in many cases do, apply only to the particular parish in question; and, therefore, it affects that parish if one ratepayer in it is not assessed at enough.

7842. In paragraph 3 you say, "It is a very invidious task for overseers in small parishes to raise any individual rating"?—Yes.

7843. If that is so, where is the likelihood of an appeal against the decision of the assessment committee by any overseers, especially of a small parish?—Of course there are many cases where they are not small parishes. I am only speaking from my experience, where the actual difficulty has arisen.

7844. I am dealing with what you yourself have put into print for our guidance?—Yes; but then, do you not see, they never want to appeal against the assessment committee's decision, unless these steps have already been taken. There are two objections: in the first place it is invidious for the overseers to raise it; in the second place, if it has been raised and an objection to the assessment committee has been made, and the overseers think that that decision is not a just one, I think they should have the right of appeal to Quarter Sessions as has the ratepayer.

7845. Now do you think that, where an overseer finds it an invidious task in the first instance to raise an individual rating, and an objection has been lodged with the assessment committee, and it has gone in favour of the individual occupier, that the overseer would be at all likely to appeal from the decision of the assessment committee?—I have known where they have desired to do it and have been advised that they possess no such power.

Mr. W. Eve.  
18 June '97

Appeals. Overseers should have right of appeal against decision of assessment committees in the country as they have in London.

Mr.  
W. Eve.  
18 June '97

7846. Would that not be very exceptional?—There would not be many, but it would apply where a new valuation list has been made of the whole parish. Of course, what is called a substitutional valuation list is made in some parishes, but not very frequently, and when that is made the whole of the assessments are reviewed.

7847. I read in the fifth paragraph of your memorandum that the "gross estimated rental (or, as in London, "gross value) should be done away with in valuation "lists; the introduction of this value leads to great "difficulty, and not infrequently to a good deal of "injustice." Now, what occurs to me in connection with that suggestion is, what substitute would you propose?—The rateable value only.

7848. That is what I wanted to come to. There is now a distinction made between the valuation for Imperial purposes and the valuation for local purposes?—Yes.

7849. Can you see or suggest any reasonable ground why there should be any such distinction?—I have always failed in that; there should be none, in my judgment. The Government now has given way to the extent that they take a sixth off, as I have already mentioned to the Chairman. If they take a sixth off on some property that needs only a sixth for repairs and maintenance, why should they not take a third off if that property needs a third. My idea is, that imperial taxation should be on the same basis as local, namely, the net value.

7850. Let us drop the words "net" and "gross," and look at things from fundamental points. I suppose a thing does not vary in value accordingly as an imperial or a local officer looks at it, it is just the same thing?—Quite so.

7851. And the value is just the same?—Certainly.

7852. Therefore, for imperial or for local purposes a thing ought to be regarded as of constant value?—It ought; and that value should be the net value.

7853. What do you mean by "net" as distinguished from "gross" value?—The gross is what a man may put in his pocket, the net is what he keeps there from the property in question.

7854. He cannot put the property in his pocket if it happens to be an extensive area, can he?—No, it is the money.

7855. One farmer may make a fortune and another farmer may fail on land of equal value, the property as property remaining just the same?—Yes, I was speaking of the rent, not of the profit derived from the user of the land.

7856. But you represent farmers, do you not?—Yes.

7857. Now, a farmer in Essex told me that he had been able to weather the whole of the agricultural depression, and that if his neighbours had only attended to farming as he did, and done reasonable things, there would have been much less complaint about depression. I do not know whether what he said was reasonable or not, but that is what he told me, and, as a matter of fact, he has held on, and he appears to be doing well, while other farmers are throwing up their farms in their own immediate neighbourhood. Therefore, I find it difficult to believe that what a man makes out of a farm or any other property is a fair standard of the value of that property as a property?—It is not valued in that way. We are speaking here for rating purposes of the annual value, not any profit that the farmer makes out of it. I quite agree with you that one man may make a fortune and another lose one on the same property.

7858. Therefore property ought to be regarded, at least, I suggest to you that it ought to be regarded, not so much from the point of view of what a particular farmer or industrial may make out of it, but from what the thing itself is worth from a general point of view?—Yes, to be used for the purposes of farming; if there is no profit to be made out of farming he cannot afford to pay a rent.

7859. Supposing that there are two farms of 300 acres apiece, and one farm is in the possession of an intelligent, industrious, and sober man, and the other is in the occupation of a man who is neither intelligent nor sober nor industrious, is there any reason why those two farms should not be rated at the same figure?—None whatever.

7860. You have told us about two adjacent properties or Unions in one of which the rates were 5s., and in the other of which the rates were 9s. in the £?—5s. 6d. I think I said.

7861. Somewhere about that: at any rate, there was a considerable difference in the rates?—Yes, there was the difference between 5s. 6d. and, I think, 9s.

7862. You observed that it was easy to let land, or comparatively easy to let land, in the one, and that it was difficult in the other?—Yes, that illustration referred to houses.

7863. It referred to property, at any rate?—Yes, the rent in the parish where the rates were high had to be made lower to meet those high rates.

7864. Therefore the man in the omnibus who went to take property in the one or in the other was, to a certain extent, alive to the difference in the rating?—They are getting so now; some years ago they were not.

7865. You answered a certain question put to you a little time ago as to the difference between your knowledge as an expert, and the knowledge of the ordinary member of the public, that practically the ordinary member of the public knew nothing at all about the rates?—He knows very little.

7866. But in this case it appears that the public is waking up to an appreciation of the difference?—Much more than they were; they are inquiring as to what the rates in the pound are in a particular parish.

7867. Do you, therefore, think it is equally true of farmers as of other men, that they appreciate the difference in rating, or are farmers more stupid than other men?—No, I hope not. I am the son of a farmer; I remember the time when farmers took farms without ever asking about the rates, but they do not now.

7868. Possibly they might know something about rates without asking?—I am speaking of strangers coming into farms.

7869. Do they remain long in the neighbourhood?—When they find it out, do you mean?

7870. After they have farmed some years, or do they go away?—I do not know; I am speaking of a general principle, and I am afraid I cannot follow it up in that detail.

7871. (Sir Edward Hamilton.) With regard to the question just put to you by Mr. O'Connor, would you say that, as a rule, a farmer, when he is taking a farm, does not take into account the amount of rates that are payable in respect of that farm?—What I said was that I can remember the time when they really did not do that—that was some 30 years ago—but they do it now.

7872. They do so now?—Certainly. I had several cases many years ago where they actually did not know what the tithe was either.

7873. They have become more intelligent since?—No doubt about it.

7874. Do I understand from your remarks here that you consider that the Agricultural Rates Act of last year has redressed the grievance, so far as rates are concerned, in agricultural land, notwithstanding that you say, in paragraph 12, that the highway rate and the school board rate are still heavy burdens?—Yes, I think they want more relief on account of the highway rate and the school board rate now.

7875. Still more than what is given under the Agricultural Rates Act?—Yes, certainly.

7876. Though, at the same time, you would, as I understand, throw out a part of the land now which benefits under the Act of last session?—Yes.

7877. I think you have had great experience of valuing agricultural land as well as other properties?—Yes, a very large experience.

7878. Would you say, from your experience, that the greater part of the land which you have valued is held under lease, or is held at the present moment from year to year?—It is held from year to year.

7879. On such land do you consider that the benefit derived from the Agricultural Rates Act of last year would go into the pockets of the landlord or of the tenant?—As a general rule it would go into the pockets of the tenant on cheap land.

7880. In spite of its being held from year to year?—I think so.

Mr.  
W. Eve.  
18 June '97

Rent.  
Adjustment of rent in case of high or low rates.

Farmers used to take farms without considering the rates, but they consider them now.

Agricultural Rates Act, 1896, has to some extent redressed the grievances of agriculturists.

Agricultural Rates Act, 1896. Benefits derived from, accrue to tenants and not to landlords.

Mr.  
W. Eve.

7881. You do?—Yes, on cheap land. I will not say cheap land—let me correct that—on land at a small rental.

7882. You would not think that when the rent comes to be reviewed in the new year the landlord would be able to get a higher rent out of the tenant in consideration of the relief granted?—My experience is that rents are not reviewed annually, tenants are very seldom disturbed in that way; they are more likely to be reviewed in the cases of leases.

7883. I can quite understand that, as a rule; but are they not reviewed after so important a change as was the result of last year's Act?—You see there are many thousands of acres of land that it will not affect even a shilling an acre, very many thousand acres.

7884. Therefore, speaking generally, would you say that you think the tenant has got a relief out of the Act?—I would, generally speaking.

7885. (Mr. Murray.) Do you not think that the difference between gross value and rateable value represents a real distinction?—Manifestly it is a real distinction, because one is the value supposing the landlord did the repairs, and the other is the value supposing the tenant did the repairs. Practically that is the distinction; but it is a distinction which need not be made. All rates, Imperial or otherwise, should, in my judgement, be based on the net amount.

7886. But for the purpose of taxing the landlord's income, which is the proper basis?—The net, because he receives, for argument sake, say 100l., and perhaps has to spend 20l. of it, therefore he ought to be taxed on the 80l., no doubt.

The witness withdrew.

Mr. ALBERT PELL called and examined.

Mr. A.  
Pell.

7894. (Chairman.) We all know that you were for a considerable time, nearly 20 years, in Parliament, and that you succeeded Sir Massey Lopes as chairman of the Local Taxation Committee?—Yes. That Local Taxation Committee was formed after I came into Parliament, it was not in existence at the time when I came in; it was formed in, I think, about the year 1870.

7895. You have turned your attention at various times to this whole subject of local taxation, I presume?—Yes, I have.

7896. You have, also, I think, had a considerable experience in local affairs, having been a guardian both in London and in the Brixworth Union?—Yes. I think I have served every parish office, from special constable up to Member of Parliament; I have gone through the whole scale.

7897. That being so, you, perhaps, are able to compare, from your own experience, the system of assessments which obtains in the Metropolis, and that which is in existence in the country?—Yes. I am assessed in London as a proprietor of land and houses in the East of London, and in the country as a proprietor and occupier of land.

7898. Which of the two systems do you prefer?—I infinitely prefer the metropolitan system.

7899. Do you think that the metropolitan system should be universally extended?—I should be very glad indeed to see it extended. I think it would be most important, if there are no questions of detail that render it impossible; I have not, myself, noticed any.

7900. Do you think that a regular re-valuation at stated periods would be acceptable in the country?—I do not think it would be acceptable to a great many persons, but I think it is desirable.

7901. Do you think it would be just?—Undoubtedly. We have in our union a quantity of mineral property, some of which is running out, and, therefore, we are obliged to re-assess repeatedly. Then there is a great deal of house building going on, which requires re-assessment, and also additions to the railways which require re-assessment.

7902. Have you any special difficulties to bring to our notice with regard to railways?—I have with regard to the English system of assessing—of valuing rather—by the overseers. Of course, as your lordship is aware, the valuation of a parish is supposed to be

7887. Suppose he receives 100l., and the tenant spends 20l.?—Then the amount he receives is net.

7888. But that would not be the net value to the tenant, would it?—Yes, in this way: if one farmer rents a farm—you have used the 100l. a year, and we will continue it—at 100l. a year, and does all the repairs of maintenance, and everything that is necessary, and provides materials and labour too, that becomes rateable value if the rent be a fair one; if the next farmer pays 100l., and the landlord does all the repairs, then such repairs have got to be deducted from the 100l., and will reduce it down to 80l., or any sum that might be reasonable.

7889. Take the case of an ordinary repairing lease of a house, say?—An ordinary repairing lease of a house is rateable value if the rent be a fair one.

7890. What is rateable value—the rent?—The rent; if the rent be a fair one it is rateable value; the terms are synonymous. It is not the practice in London to do so; I thought perhaps you were thinking of that, so I tell you that the practice in London is to add 10 per cent. to the rent, and then to take off a sixth; but, in my judgment, it is not a right practice.

7891. (Chairman.) Is there any point that you would like to add in order to clear up any question that has arisen?—I think not.

7892. (Mr. Dalton.) I gather from what you have just said that you consider that a householder takes the rates into account quite as much as the farmer does when he takes property?—Yes.

7893. The illustration that you gave us points to the fact that the householder does take them into account?—Yes.

Mr.  
W. Eve.

House-  
holders,  
and  
farmers  
take rates  
into  
account  
when  
taking  
property.

Mr. A.  
Pell.

Valuation.  
Assess-  
ment Com-  
mittee of  
Union  
should  
make the  
valuation  
list for the  
parishes  
in respect  
of certain  
properties  
such as  
railways  
instead of  
the over-  
seers. Pro-  
fessional  
valuers  
should be  
employed,  
who should  
have  
access to  
the com-  
panies'  
books.

made by the overseer of the parish, not by the union. It is obvious at the first sight that it is impossible for an overseer, who may be a man certainly not educated for such a purpose, to make anything but the merest conjectural valuation of a railway. He makes his guess at it. He may ask other neighbouring overseers, and he may ask for a little information in other unions about what they are assessing railroads at per mile; but it is the merest possible guess, and he has no means, that I am aware of, of obtaining the necessary information. I understand, as far as my knowledge goes, that in order to assess a railway—we will take the London and North-Western, which is a line I have to do with as a proprietor, and as running through the parishes in the union which I represented—that in proceeding to assess that railway, to do it fairly you ought to have access to the company's books; you must take a survey of the whole undertaking before you can assess any portion. That is what I understand; I do not know whether I am wrong.

7903. I think it would probably be better if you would give me any suggestion that you would like to put before the Commission as a practical reform in that matter; the existing facts, I think, are pretty well known to us?—The practical suggestion I should make is this: First of all I think it would be better that the union should assess or make the valuation list for the parishes. It seems to me a great defect in the law that it should be left to each little spot, each little parish or township, to deal with that question. Then the union would, undoubtedly, have to employ a professional man, having access to the books of the railway, in order to form a just valuation. We had a very serious appeal by the London and North-Western Railway some years ago. I think the Northamptonshire Court of Quarter Sessions sat for three days to hear it. Our valuer, Mr. Hedley, could not really get to the facts until we came into the Court of Quarter Sessions, and the books were open to him. Then, as I understand it, in proceeding to make a county rate, the county rating authority has a right to go to the railway company, and say, "Give us the materials for forming a fair assessment." What I said was: "This is very tiresome indeed, the position we are placed in; we do not want to do anything that is unfair; we do not want to harass the railway in any way, but I do not see how we are to get at the facts unless I proceed—I am on the county rate committee—to disturb the county rate and get access to your books, by asking for a new valuation for the

Rateable  
and gross  
value. Dis-  
tinction  
between.

Assess-  
ment.  
System in  
metropolis  
better than  
that out-  
side. Its

unsatis-  
factory.

Mr. A. Pell. " county rate—but that is a very roundabout way of proceeding."

18 June '97  
Railways. Valuation. Scottish system is better than English.

7904. I rather want to know what you think should be done; what is the reform you would like to see introduced?—I should like the English system to follow the Scotch, and that there should be some officer or officers to assist the assessment committees or the assessing authorities in estimating for them. I would not make that officer's decision final in any way whatever; he should act by way of an assessor.

7905. I think, either myself, or some member of the Commission, made that suggestion to more than one former witness, and it was objected to on the ground that the number of English railways and their mileage is so vast that it would be almost an impossible duty to lay upon one department; what have you to say to that suggestion?—I do not see that its vastness upsets the scheme; those employed would have to be more numerous. I believe in Scotland there is only one assessor. The railroads are extremely numerous in Scotland; I am quite aware some are very lengthy and with very few branches, but if you get round Glasgow, Paisley, and Edinburgh, you will find they are pretty thick there, and so they are at Gartsherrie. There must be as much trouble in certain localities in Scotland as there would be difficulty in Lancashire with us.

7906. I think you made some proposals in a Bill which you introduced to Parliament while you were in the House of Commons?—I did.

7907. Would you like to say anything on that measure?—I could not get a copy of my Bill again, and I cannot charge my memory with it entirely. I know I got it a long way through the House before it was found out, by holding my tongue, and then some gentleman, who had a lively interest in railways, blocked it; I gave it up directly I was discovered.

Railways. Valuations raised by certain unions. Appeals.

7908. Then you do not propose to suggest to us that it was a good Bill, do you?—I think it was a good Bill. I gave a great deal of trouble to it. I do not know whether a copy of the Bill is here; I should very much like to see it again, if it could be procured. I will stand by my judgment, although it was some years ago. I do not think I brought a stupid Bill in—that I would not do if I could have helped it. I got all the advice I could upon the subject from people who knew more about it than I did. Might I say, with regard to railroad assessment, that an adjoining union in Northamptonshire attempted to raise the assessment of the railways—I think both of the Midland and of the London and North-Western; the assessment committee of the union were defeated, and the guardians were defeated. The question was put, I think, by counsel—"Take So-and-So's farm, it lets at 3*l.* per acre, does it not, what have you assessed it at?" That upset their case directly. But in the Brixworth Union, where I have been chairman of the assessment committee for a good many years, we have always assessed up to the full value of all property. Therefore, when we came into a contest with the London and North-Western they had not that ground of objection against us, and we succeeded. I do not know that we got all that we might have had, but we got a very considerable amount of rates from the company beyond what they were paying.

7909. You are, I understand, chairman of the Estates Committee of the Governors of Guy's Hospital, and they own a considerable amount of land in three counties?—Yes, in Herefordshire, Lincolnshire, and Essex.

7910. From your experience in that capacity have you any representation to make to us?—I should say that the Governors are not only owners of a considerable amount of property in Essex, but that they have a great deal in hand—between 2,000 and 3,000 acres—something like 2,500, so that we have experience as tenants as well as landowners. The Governors of the Hospital are also tithe owners in some parishes. Our agent, Mr. Strutt, complains, and I agree thoroughly with him, that we are most unfairly treated by the assessment committee. I have got the particulars of it here.

7911. Perhaps you will give us a statement in what respects you think you are unfairly treated?—We are assessed at considerably above the rent, and the assessment committees appear to me to be grossly ignorant. From what I know of the assessment committees in Essex, they are not people who should be

trusted with such a business, or else the owners and the occupiers of land are extremely remiss, and not aware of points which affect their own interest. Take this, for instance: An assessment committee in Essex does not allow the tithe to be deducted from the gross value of the hereditament. The result is that the rating authority is getting two rates out of the tithe; because, of course, they assess the rector, whether he is lay or clerical.

7912. Have you appealed on that account?—We have, indeed.

7913. To quarter sessions?—Yes—with what result? At a cost of 168*l.*, and we lost the case altogether. I got Mr. Strutt to send me up this morning some of the particulars of that case. Towards the conclusion of the hearing of that case, before the Court of Quarter Sessions, Mr. Fitch, who was chairman of the Maldon assessment committee, in giving evidence, is reported as follows in the newspaper I have got here: "In answer to Mr. MacMorran as to whether the price which the farm would fetch in the market would make any difference in the amount of the assessment, the witness replied, 'Certainly not.'"

7914. Have you verified that report; can you tell us that that is an accurate report?—No, I have not verified this report; but Mr. Strutt sent me this morning the report as an accurate one.

7915. The point of it bears upon a statement made by somebody who is not in your interest, and who is not apparently responsible for the report. We could take a report of the decision; but I hardly like to found much upon, or even to put upon, the notes, a report of what is said to have taken place in conversation in court?—This is what I have from Mr. Strutt himself upon that question; this has not passed through the reporter's hands. He says: "I send you a newspaper cutting of the case which was tried at Chelmsford Quarter Sessions, where we were beaten, though the whole of the evidence was given in our favour, and the chairman of the assessment committee said"—now this is what Mr. Strutt heard himself—"that what a farm was worth had nothing to do with the assessment." He says further: "I also enclose you a newspaper cutting." Then this case was followed up by Mr. Shaw Lefevre, who seems to have heard something about it, and wrote a letter to the "Times" which I can refer to afterwards. Mr. Strutt goes on to say this: "I am also forwarding the letter I received on the 20th of March 1894 from the Chelmsford Union assessment committee on appealing for the Guy's Hospital farms in hand. In no case was any reduction made, though the assessment was far beyond the price which can be obtained for the rent." I have got the figures here. I had them got out at the office.

Valuation above rental value; cases of agricultural land in Essex assessed above the rental value.

7916. We cannot very well re-try the case?—No. I will only give you just this: Mr. Strutt tells me "In no case was any reduction made, though the assessment was far beyond the price which can be obtained for the rent. That I can show, as I have the rental of these farms here, and the assessments; in fact, now, whenever I want to let a farm I invariably say to the intending tenants: 'We shall be very glad to let it at the assessment.' They then ask what that is; and when they are told, they laugh at the idea of taking it for such a rent. The enormous power in the hands of the assessment committee, and the cost of the appeal at quarter sessions is too much. Our costs in the case above referred to were about 168*l.*" Then he goes on to say: "Some of the unions are assessing more fairly," "Braintree is assessing more fairly," and so on. I have a statement here of some of the farms, which will show the difference between what is the real value and the assessment.

7917. What do you mean by real value?—Really what it would let at—its annual value—the value which it might, under the terms of the Assessment Act, be expected to make from a yearly tenant. Of course I hold that the term "what a farm may be expected to make" is what a tenant will give a landlord where there is no jobbing, where there is no relationship or no foregift, or anything of that sort. Take one farm—I do not know whether it is necessary to name the farm—it is Beaumont Hall. The gross assessment of it is 681*l.*, and the rent, less tithe, is 430*l.*

7918. Is that a rent actually being got from a tenant?—That is a rent actually being got.

Mr. A. Pell.  
18 June '97

Certain land in hand in Essex is valued above the rent.

Gross rental. Deduction of tithe. Certain assessment committees in Essex do not deduct tithe from gross rental.

Mr. A.  
Pell.

18 June '97

7919. How much is the tithe?—I cannot tell you; Mr. Strutt has not given me the tithe, I wish he had; but I have some other farms here—

7920. I think—if you will allow me to suggest it—rather than take this over the table, you might put in a statement giving all these particulars; then we can look through it; but I do not think, from the information in your possession just now, we shall get to a very satisfactory result here, and perhaps we may merely lumber the notes. If you will send it to us in a tabular form, I will undertake to look at it?—I will do so. In order to make out the contention that I have, I will just take this: Here is a statement that came out in evidence, I think, before a Royal Commission; it is evidence given by Mr. Pringle, and I can quite confirm what he says. Here is a farm in the Maldon Union; the rent is only 15*l.* 7*s.* 2*d.*; it is assessed at 67*l.* 18*s.*; the present value of the tithe is 48*l.* per year, and they have never taken the tithe off. That farm ought not to be assessed at a penny, because in that case they have got the tithe.

Assessment committees as at present constituted are not sufficiently competent bodies.

7921. We cannot go into individual cases. I take your statement to be that you want a cheaper and a more satisfactory form of appeal in cases where occupiers of agricultural property think they are over assessed?—Yes, and to make it safe in England I do not think this business can be committed to the assessment committees, especially as they are at present constituted. The change in the qualification for guardians has introduced into the boards a class of men wholly incompetent to deal with questions of this nature; they have no interest in it.

Valuation (Metropolis) Act should be extended to country generally.

VALUATION.

Assessment committees of unions should make up lists for parishes in respect of certain classes of property, such as railways, instead of the overseers.

Surveyor of taxes should sit with Assessment Committee.

Valuation, one basis of, for all purposes desirable.

County Rate Committee of Northampton. Attitude towards Union Assessment Committees in the county and union valuations.

7922. Do you wish to make any practical suggestion to us?—As regards the country, my practical suggestion would be that we should follow the metropolitan system of assessing, and should bring the assessment for land and houses to assimilate as closely as possible to the Income Tax assessment.

7923. I understand you to say that lists should be made up on a union basis and by a union authority, rather than parochially?—I think so.

7924. Would you, like many other witnesses, approve of the association of the imperial officer, the surveyor of taxes, with the local body?—Undoubtedly. With Sir Massey Lopes I resisted it for many years when I was in the House of Commons. I regret it exceedingly. There were Government bills brought in by both parties—both by the Liberals and by the Tories—having for their object the introduction or the assistance or the surveillance of the surveyor of taxes. We resisted it, and I very much regret it. Perhaps if one had not resisted it, things would have remained as they are; but I see the enormous importance of it now. In Brixworth Union, where I was chairman of the assessment committee for a great many years, I long tried to get the people to take the assessment of the property tax for our guide, to let rent, in other words, be our guide. They resisted it, but at last came and said: "Now, will you be our chairman?" I said: "Upon the condition that I am to take rent as the absolute criterion of value," and they accepted it.

7925. Which county is the Brixworth Union in?—The Brixworth Union is in Northamptonshire.

7926. You are also a member of the county rate committee of the County Council of Northamptonshire, are you not?—Yes, and they have passed a resolution which I have here.

7927. Would you tell us what the text of the resolution is?—It was passed by the Northamptonshire County Council on the 29th of April 1897, and it is in these words: "That this Council is of opinion that there ought to be only one basis of assessment for Imperial taxation, county rate, poor law, and all other purposes; and that copies of the foregoing resolution be forwarded to the Local Government Board, and to the Royal Commission on Local Taxation."

7928. Which district of Northampton are you most concerned with?—Brixworth, where I live; but I have no property in it.

7929. Do you know the Towcester Union?—I know a little of its proceedings, but I have very few friends in the Towcester Union.

7930. Do you know Mr. Whitton, who is the clerk?—No, I do not, except by name.

7931. Mr. Whitton asks us whether we have "received any evidence in opposition to the present mode in which the county rate committees discharge their

"duties?" And he says this: "The Northamptonshire county rate committee ignores the Acts of Parliament under which rating authorities act. When overseers appeal they take no notice, simply telling them that their basis is only temporary, and absolutely ignore requests from the assessment committees to go into the matter of their assessment with a bare, vague assertion that they cannot adopt the basis adopted by the assessment committees"?—Yes, I recollect now. I recollect Towcester coming up before us. It was very necessary we should act as we did. The assessment by the local officers in Towcester Union would never have done for the county rate, it would have been most unjust to the other unions. There, again, I should like to state that Brixworth being assessed almost upon the income tax assessment we had no trouble. We found out that our assessment was almost identical with the county rate assessment, and there was no trouble with it.

7932. Why would the Towcester basis not have done for you?—Because, as far as I remember, they would have been assessed at too low a figure for the county rate.

7933. In making such statements as Mr. Whitton suggests, and which, I understand, you do not contradict, you would put to us that you went into the circumstances of each case carefully?—I certainly did not, and certainly the committee did not, but I have no doubt that the clerk to the committee, the clerk to the council, did examine all the assessments for the property tax for each parish, and compare them with the assessments made by the overseers. The county rate committee have strictly to deal with every parish.

7934. The point here is this, is it not, that for county purposes, the county authority must endeavour to see that the unions, as related to one another, are fairly valued upon corresponding principles, is that not so?—Certainly.

7935. And that is the object of the county rate committee?—Certainly.

7936. Then you do not, I understand, remember enough of the special circumstances of this Towcester grievance to give us any information about it?—No, it was, as far as I remember, a sort of vague idea that their assessment was the right one, which was not unnatural. Other unions made the same objection, but they yielded. We pointed out to them that we must have one uniform assessment for the whole of the county, or that it would be unfair if we let a union in with its hereditaments assessed below their value; because then, of course, it would be making other unions pay their rates.

7937. Some witnesses have represented to us that it would be a great advantage if there could be one assessment for Imperial and for local purposes?—I think so. That would be pretty much as it is in London. In London I never make a return as an owner for my property tax at all; the surveyor of taxes having acted with the overseers in the east of London, they have settled what my rental is, and I pay upon the statement in the valuation list.

7938. You would approve of that?—I do approve of it. I have never been treated unfairly, and where there have been what you may call "accidents" in connection with the property, such as fires or anything of that sort, I have found no trouble with the authorities in getting a reduction, and the case has been met fairly. I feel satisfied with the assessments; I feel that the possibilities of jobbing are removed, or made less likely to occur.

7939. Do you approve of the introduction in the Agricultural Rates Act of last year, of the assessment of premises and houses on the farm separately from the holding?—Yes, I do. I have found very great trouble with that long before the Act was passed in dealing with assessments of hereditaments in the union. In this way:—the assessment committees have a scale of deductions; "naked" land as it is called, that is, land having no buildings on it, they allow 5 per cent. off, then land with buildings, I think has 10 or 15 per cent. off the gross value allowed. Then this happens. A man will have in one parish the buildings of a farm, and in another parish there will be the land; strictly speaking, the overseer for the parish where there is nothing but the land ought only to deduct the five per cent., but a man pleads "but I farm this with buildings," which are in another

parish, and in some cases in another union, "and, therefore, you ought to take off the 15 per cent." Now if we have the buildings assessed separately that difficulty would then be removed. In some unions, I think in Kettering, the adjoining union to us, it is done, and a separate assessment of the buildings has been made for some years. Upon the question of unfair assessment by assessment committees, might I just state what happens to myself in Cambridgeshire, where I am an owner and an occupier. One farm, a separate part of the estate, a poor farm, which I could not let for 50l. a year, was assessed at 200l.—at one time it made 200l. I objected, and I went before the assessment committee and there was a sort of bargain made. "Will you be content with 25 per cent. off, or shall we give you a little more?" I said it was not for me to higgler over the thing, it was for them to say what was the real value of it, and I am now assessed—I have got the figures here—at something like double the rent or triple the rent. In that case I think nearly all the assessment committee were farmers, and knew perfectly well what the value of that land was. I offered it to them; I said they were welcome to the farm at 50l. a year, but nobody seemed inclined to take it. With the Essex experience before me, I certainly do not mean to go to the Court of Quarter Sessions for relief; so, therefore, I go on paying.

7940. (*Viscount Enslin*.) I understand you to object to the assessment committee's valuation; but in the cases, or one of the cases, at all events, that you have given us it appears that, on appeal, the Court of Quarter Sessions upheld the decision of the assessment committee?—Yes.

7941. Therefore, your complaint there would be rather, would it not, against the court of appeal than against the preliminary operations of the assessment committee?—The assessment committee failed to do us what we consider justice, that is—to make a proper valuation list; and therefore we attempted to remedy the evil by going before the Court of Quarter Sessions, and I think we fell out of the deep sea into the hands of the devil.

7942. That being so, is not your objection rather against the court of appeal?—Yes, as constituted as it was, I think so. For instance, one of the gentlemen in the Court of Appeal told me himself—he is a friend of mine and a friend of yours, I will not name him, but he is a very active magistrate in Essex—he said to me "It would be manifestly unfair to assess the poor lands in Essex at their rent, the lands that are only letting at 5s. an acre." He said: "If we do that, we shall increase the burden on the better land which lets at 1l. an acre—we shall have a row." That was the argument. The Court that makes use of such an argument as that does not appear to me to be a sort of Court to deal with questions of this nature.

7943. Do you suggest, then, any alteration in the court of appeal or in its constitution?—I do not like the court of appeal in Essex.

7944. Because that court of appeal decided against you?—My experience is not wide enough in other counties to speak to that. Therefore I should not like to speak generally.

7945. I thought you might have some suggestion to make to the Commission as to some alteration in the court of appeal?—I think it should be an authority trained to arrive at judicial decisions. I should prefer going before a trained lawyer, having nothing whatever to do with the property which is being dealt with; that is to say, where his own interests are not affected by the decision of the Court.

7946. In fact, you would prefer a judicial inquiry?—Yes. In this instance, undoubtedly, my friend in the Court of Quarter Sessions, and, I daresay, his colleagues too, was affected by a general view of what would happen to their property, or to the property of others in Essex, if they assessed fairly; it really came to that.—"If we do not over-assess you who are letting your land at 5s. at 1l., then it will make inroads upon the land that is let at 1l. so heavy that there will be a disturbance." That is to say, that the rate will go up, and that will draw the attention of the ratepayers to the cost of local administration.

7947. That amounts practically to this, does it not, that in that particular case some members of the Court of Quarter Sessions at all events, took a view, which was contrary to yours, of what was fair and equitable

in the way of dealing with lands in Essex?—Yes, some; but, unfortunately, the "some" were in the majority. If the "some" had been in a minority we should have had a very different decision.

7948. Does that lead you to think that the decisions of Courts of Quarter Sessions in ordinary appeal cases are unsatisfactory and not judicial?—I do not like to say that with respect to these courts on the whole.

7949. Then, may we take it that your objection is that the Court of Quarter Sessions decided wrongly in that particular case?—I do not want to go further than what I have stated.

7950. With regard to the question of overseers, I understood you that overseers were not proper persons to value railways in the first instance?—It is manifest that it is utterly impossible for the overseer to do it, even if he was a genius.

7951. Do you think overseers are competent persons to value property in a general way, and apart from railways?—They are more competent than most, because they know pretty well what is the rent a parishioner is paying.

7952. There are a good many properties, are there not, besides railways, that require very special valuing?—Yes. Of course, mineral property does, but they can get at that a little by the accounts from the weighing masters of the metal and the ore that goes out of the pit, and if they fail they can call in an expert.

7953. Do you not think the best course is to call in an expert in the first start of your inquiry for certain classes of property?—I think it would be, undoubtedly. Following the precedent of Scotland, I would make the same authority that would assist the overseers with regard to railways also assist them with regard to canals and mineral property. I think in Scotland that is the case; I think the assessor is not an assessor of railways only, if I recollect aright, but that he takes the mineral property and canals as well. The Scotch Act is the 17 & 18 Vict. c. 91., and perhaps it would be worth while to consult it.

7954. I understood that you proposed that the books of the railway companies should always be produced; is that before the assessment committees?—Before the assessment committee or the person whom they appointed to act for them. The assessment committee would be wholly incapable of dealing with the books.

7955. I meant that they should be produced to the assessment committee, of course, for the use of the assessment committee?—Yes, for the use of the assessment committee, and to be submitted to the expert.

7956. Do you think it desirable to restrict that right of the assessment committee to call for books, simply to the case of railway property?—I am not sure about that, because if I am right, the assessment of a mile of railway in a parish in the middle of Northamptonshire cannot be made, as it ought to be made, without examination of the whole enterprise of the railway. You have got to consider Euston Station as well as what is doing in the parish of Hazelbeach—if Hazelbeach was the parish concerned. That is what I am given to understand, and I believe it to be the case, that the whole enterprise of a railway company has to be considered when you come to consider any one vertebra of it.

7957. Technically, at all events, the ground on which you are to rate a railway is exactly the same—the basis is assumed to be the same as that on which you rate anything else?—At what it would let.

7958. Yes?—I am told not.

7959. Is that not so?—You would know a great deal better than I do.

7960. Can you tell me of any other basis on which it is laid down you should rate a railway, except that which it would let for from year to year?—It would be impossible to assess a railway at what it would let for, because you have got to take into consideration all the working expenses, and then you come to the same thing—you come to really what is done now when an expert assesses the value of a part of the line.

7961. But is it not the case that with a railway you practically have got to try and ascertain as best you can what a railway will let for from year to year, and for that purpose you assume the railway company to be the hypothetical tenant?—Yes.

Mr. A.  
Pell.

Basis of  
valuation  
of railways.

Mr. A.  
Pell.

18 June '97

7962. Is that not exactly the same basis as in an ordinary case?—Certainly, but you must know what the hypothetical tenant can do with it; to ascertain that you must know what the present tenant is doing with it, and that you cannot ascertain unless you can examine the books of the present tenant.

7963. Ought not the same argument exactly to be applied to any other class of property? If you have the right with regard to a railway company to look at their books, you must have the right to look at the books of any other company in order to ascertain what the proper rate should be?—I should be very glad if it was applied to the farming business, and if we were spared paying where there is no profit.

7964. Whichever way it works, whoever makes the assessment should have access to the books?—I suppose it would be necessary in the case of large mining concerns.

7965. And in the case of waterworks?—I should think undoubtedly it would be so in the case of waterworks where they have got miles and miles of pipes. Take Manchester, for instance, with its water derived from Thirlmere, I could conceive that, in assessing the part of the aqueduct going through a parish between Manchester and Thirlmere, that the method which is applied now in assessing a short piece of railway between two termini should be applied there.

7966. The system of getting at your assessment, whether it was for a waterworks or for a railway, would, in your mind, be very much the same, or ought to be the same?—Yes, because the surface of the land under which the aqueduct goes is just as good as herbage; that is, it has its surface value, but then you have got to assess what is going on underneath.

7967. There is one point in your evidence I did not follow. I understood that you wish the overseers not to be the assessing authority in parishes any longer, but that the assessment should be made by the assessment committee over the union for each parish?—No, I would not say that; I do not think I can say that for the ordinary house property and farming property, for such property as that which the overseer is naturally acquainted with from his calling and his associations with his neighbours.

7968. Then it is only on the special property that the assessment committee should take up the rating as far as the parishes are concerned?—Yes. I think that where you come to the assessment of property like agricultural property, or house property, the overseers in the villages are very good people to make the start with the thing; then, if they get wrong their errors are corrected by an objection being made to the valuation committee.

7969. (Sir Edward Hamilton.) I think, in 1884, that you passed a resolution in the House of Commons in favour of relieving the ratepayers in respect of the charges for "national services." I think that was the expression that you used?—I thought I might be asked that, so I copied out the resolution. The motion was made on the 28th of March 1884. The House resolved: "That this House, while ready to entertain any necessary reforms in local administration, deprecates the postponement of further measures of relief acknowledged to be due to ratepayers in counties and boroughs in respect of local charges imposed on them for national services." That was the resolution.

7970. What was the definition you had in your mind, then, as regards national services?—The national services would be the police, the courts of justice, the militia houses (which, I think, we have got rid of now), and prisons (which we have got rid of). I think while I was chairman of the Local Taxation Committee we got rid of prisons from the local rates.

7971. In national services you would include the Poor Law, I presume, as far as the indoor paupers are concerned?—Well, certainly not the outdoor poor.

7972. Assuming that to be your definition of national services, considerable relief has been afforded in that direction since you passed your resolution?—Yes.

7973. Do you hold that relief to have been adequate?—No; I think that it went a very long way in doing what was fair by the visible property. But we have had the estates' duty since then, and now I think that we stand upon the same platform with personal property, and that we ought not to have these

exceptional charges imposed upon visible property. The exceptional charges are one-half the police, and although we have got rid of prisons, the Home Office is pressing for what are almost like houses of detention. We have had to borrow money in Northamptonshire in order to put up cells for detention, which are analogous to a prison; I do not see why that is to come out of the ratepayers' pocket alone. There are other things; the courts of justice, for instance, are kept up out of the rates entirely.

7974. (Mr. Arthur O'Connor.) Guy's Hospital owns a good deal of land, some of which it lets, and some of which it has not let?—Some of which it cannot let, at least it is better to hold it; we can do better with it than by letting it, a very great deal.

7975. If you cannot let it for the rent you wish to get for it, would you still value it at the rent which you cannot get for it?—In the case of the land which we occupy ourselves, we do not want to be assessed at any higher than the highest offer that has ever been made for the land.

7976. If I offer to take your over assessed land off your hands would you be willing to let me have it?—If you offer more.

7977. No; supposing you had land that you cannot let, and it is very highly and unjustly assessed, in your view, are you willing to let me have it and to give it up yourself?—If you were a competent farmer and had got capital.

7978. Have you found it an onerous property?—It is not onerous with us, we make it pay.

7979. Very well, then, why do you object to the assessment?—Because we should make it pay a great deal better if the assessment was a fair one. Because we farm our land well is no reason why we should be unjustly treated in the assessment: the assessment is higher than we can let the land for.

7980. But you can make out of the land more than you can get for it as rent?—No. You must remember that we are under the supervision of the Court of Chancery, and that we cannot play the fool with our rent; the Court is aware of all that we are doing with regard to the Guy's Hospital estates; our accounts are published and printed, and professional people make up and balance the books.

7981. There are two sums, that which you can get for rent and that which you can make as a profit out of the land you hold; which is the higher?—What we make as a profit by farming—that is the question—or the rent?

7982. Yes?—We make the conjectural rent, and we make an interest upon our capital employed in the cultivation of the farms, the two things being kept entirely separate. So much capital goes into the farm, it may be 2,000*l.*, it may be 10,000*l.*; those accounts are kept perfectly separate, and at the year's end we know exactly what interest we have made upon our money engaged in farming, taking the land at the rent which is as high as anybody would give us. If we could find a good tenant who would take the land at the rent which is put in our books we would let it directly; at least, that is the view of my colleagues. I would rather continue to hold the land.

7983. As a matter of fact, I think this will admit of the answer yes or no. Do you lose or do you make a profit on the land which you have in hand?—I can tell you that—

7984. Do you lose or do you gain?—We gain, but we are one of the few who do gain.

7985. Do you gain as much as you think you ought to?—We have gained for the last two years, that is perhaps the best way to put it.

7986. Do you, or do you not, yes or no, gain as much as you would expect a reasonable tenant to give you?—I hardly understand the question. Is it of this nature: We will take a farm, and say we make 100*l.* a year upon our capital; then is the question put to me that if the farm is let; do you put the rent at 100*l.* a year? Is that the question?

7987. Could you let it at 100*l.*?—I cannot tell you; we made seven per cent. interest on our money two years ago.

7988. Would you let it at 100*l.*?—I am afraid I do not follow the question; I do not see what that has to do with the profit made on our capital.

Mr. A. Pell.

18 June '97

7989. Would you object to its being assessed at 100l.?—Certainly I should, unless a man would give 100l. for it. If a good tenant would give 100l. for it we should not object to its being assessed at 100l.

7990. You make 100l. out of it, but you object to its being assessed at 100l.?—I do not know that we do. To answer that question, I should have to take a farm and tell you what the rent is. I can send the Commission, which perhaps would answer the question better, a full and detailed account of the rent of one farm or two farms, of 2,000 acres say, that we hold in hand, showing the rent we have put—the arbitrary rent, if one may say so—that we have put upon the land, and showing what profit we made in 1895, and what we made in 1896. What we shall make this year is all in the clouds at present, we cannot tell until we get to Michaelmas time. The books are so kept that we know where we are losing and where we are gaining.

7991. Will you let us have that statement?—Yes, if you wish it.

7992. Adding what you consider a fair assessment would be for each particular farm?—Yes. The assessment for one farm will be nothing; we had not a tenant for one farm for years, the one in the parish of Thaxted.

7993. That is the farm I intended to ask you about, a farm which nobody would offer anything for, and which a man could make nothing out of?—I do not think we ever let it lie vacant for a year, as we took it in hand at once.

7994. You have not made anything out of it, have you?—Yes, I should think we have, a little.

7995. You have?—Yes, I think we have, a little.

7996. Do you object to its being assessed at all?—It is assessed, and assessed at a most extraordinarily high valuation.

7997. That will be included in your statement?—That knocks our profit down; if we had got a fair assessment we should make a better return for our money. I do not know whether it would be interesting to the Commission to know what the effect of the Agricultural Rates Act has been by way of income on this property; it is really rather remarkable.

7998. (Chairman.) Could you send the figures to us in a statement?—I can tell you in one moment, it is equivalent to one per cent. on the capital we employ in working the farms; that is to say, if we were borrowing money to work these farms at five per cent., we should be let off at four per cent. in consequence of the Agricultural Rates Act, or in other words, it makes one per cent. more on our capital employed on the farms than we made before. From that point of view one can see what service it has been to us.

7999. (Mr. Arthur O'Connor.) Is there any particular point you want to emphasize?—No. I think I have stated that there should be only one assessment for imperial and for local purposes, that the houses and premises on farms should be valued separately from the land, and that there could be the surveillance of the surveyor of taxes. There is one point I should like to refer to: I heard Mr. Eve asked some questions about it. It would be very desirable, if one could see one's way, to have only one column, to get rid of either the gross value or the net value. That is one of the most tiresome things; in different unions the deductions are so extremely various between the gross and the rateable value.

8000. (Mr. Smith.) You said, I think, that the effect of the Agricultural Rates Act was only to benefit you to the extent of one per cent. on your capital?—On the capital employed.

8001. The benefit of that Act is half the poor rate?—Yes, half the poor rate upon the agricultural land.

8002. Does that not show that the question of rates has very little to do with agricultural depression?—Recollect that "rental" is a comparative term.

8003. If taking off half the poor rate, which is the principal rate in the country?—No.

8004. What is there besides?—The poor rate in the county is a compound rate.

8005. It is a consolidated rate?—Including the poor rate and others.

8006. That being the larger portion?—Yes.

8007. Then, if taking off the larger portion of the largest rate only affects you to the extent of one per

cent. of your capital, does that not prove that rating has very little to do with agricultural depression?—It has very little to do with agricultural depression if you compare it with the effect of a great fall or rise in the value of agricultural produce.

8008. It has nothing like the same influence that good or bad farming has?—No, undoubtedly not, nor yet what a flood would have; if one of our banks in the fens broke the rating question would be as nothing.

8009. We had some evidence given yesterday by gentlemen who were in favour of nationalizing the poor rate; you have given great attention to this subject for a number of years, and I should like to know what you think of that?—I am entirely against it; I would rather go in the other direction and parochialise it—certainly with regard to the out-of-door relief.

8010. You think poor relief depends mainly, after all, on administration?—I do.

8011. You can have a high poor rate or a low poor rate just as you choose to work your out-relief?—In Brixworth we brought it down to about 3d. in the £, and now it is running up as fast as in the old time.

8012. You are very familiar with the expression "relief in aid of wages"?—Yes.

8013. You know what all that means?—Yes, and all the preparations for it, medical relief, and so on.

8014. You do not suggest the nationalization of the charges either for district roads, or for sanitation, or for school boards, do you?—No.

8015. (Mr. Elliott.) You appear before us, do you not, as the representative of the Local Taxation Committee?—Yes, I do.

8016. Have the Local Taxation Committee considered your statement of evidence?—No, not in any way.

8017. Then the Local Taxation Committee are not responsible for these suggestions?—No, not at all.

8018. Are these all the suggestions that the Local Taxation Committee have to put before us on this subject?—I do not know that they are going to put any more than these before the Commission. I believe Sir Massey Lopes is going to be examined. I was very anxious that he should be examined; I saw him a little time ago, and he was very disinclined to come, but I hope he will.

8019. You are aware, of course, that there are several questions of the highest importance with regard to which the opinion of the Local Taxation Committee would be of the greatest value to us?—Yes.

8020. Such, for instance, as the continuance in force of the Agricultural Rates Act of last session?—Yes.

8021. Is there any probability that the Local Taxation Committee will consider these questions?—No, I do not think they will. They have not been so active lately in the House of Commons; they have not moved in the matter; we have had no parliamentary resolutions upon these points; in fact, no member seems inclined to take such work up—it is most trying work, and very little credit is got for it.

8022. Does that indicate to your mind that there is no very great sense of grievance?—I think there is a general sense of grievance, but I find that among the owners of property they are not able frequently to put their finger upon the point which is damaging them.

8023. Apart from this general sense of grievance, is there any feeling amongst the members of the Local Taxation Committee as to the particular classes which pay too little now?—Yes.

8024. What are the classes which it is thought pay too little; do you mean private residents?—No, I never heard them named, but in the country the rural population is getting now more powerful than the urban population, and is very sharp. Take the case of a union with a large town in it; there are a great many houses in it, the urban representatives are more powerful upon the board, and the valuation of the house property, as a rule is, as far as my experience goes, kept below its value, and the value of the agricultural property put above. If the surveyor of taxes came in we could get that altered.

8025. I gather that the mere re-constitution of the assessment committees would not exhaust the grievances that are felt by those whom you represent?—No, I do not think it would.

Mr. A. Pell.

18 June '97

Nationalisation of poor rate not at all desirable on administrative grounds.

Nationalisation of charges for district roads, sanitation, and school boards, not desirable.

Local Taxation Committee. Their views upon rating questions.

Assessment Committees. Increase of urban influence upon and over valuation of agricultural property. Surveyor of Taxes on Assessment Committee desirable.

Agricultural Rates Act, 1896. Value of the Act to agriculturists.

Gross estimated rental column in lists should be abolished.

Agricultural Rates Act, 1896. Value of the Act to agriculturists.

Mr. A. Pell.

18 June '97

Suggestion that funds for support of indoor paupers should be raised from a large area, such as the county, with a contribution from Imperial sources. Metropolitan Common Poor Fund, advantages of.

8026. You do not think there is any probability that those grievances would be further expressed by the Local Taxation Committee?—I am afraid not.

8027. (Mr. Dalton.) We were told yesterday by a witness that you were in favour of a capitation grant for every indoor pauper?—I was in favour of the funds for the support of the indoor poor being raised from a larger area, such as the county; in fact I was in favour of following there again the metropolitan system; I refer to the metropolitan common fund. We derive in the east of London, in the union I have had to do with, an enormous benefit from that fund. Poor Law relief in St. George's-in-the-East is administered very strictly, and the regulations of the Local Government Board are complied with, so that, I think, St. George's-in-the-East out of the common fund receives 8,000l. a year more or less.

8028. You did not suggest that the capitation grant should be paid out of the Imperial Exchequer, but out of the county rate?—I think the State might contribute something to the support of the indoor poor; but I should like to begin, if I may say so, by still keeping it a charge upon real property, only that it should come from a larger area for the indoor poor, and that the out-of-door poor should be maintained by the parishes, if possible.

8029. I was only anxious that we should know what your views were upon it, as we had them represented to us yesterday. As regards pauper lunatics, do you see any great objection to those being made a national charge?—We have a very considerable sum paid us now for the pauper lunatic.

The witness withdrew.

Mr. WILLIAM CUTLACK LITTLE called and examined.

Mr. W. C. Little.

8038. (Chairman.) I understand that you appear as the representative of the London Farmers' Club, of which you are a member and former chairman?—Yes, I may say that I was asked to represent the Farmers' Club; but I ought to state that I have never received from them any instructions as to the evidence I should give, I was requested to attend simply because I was an old member, and my views were pretty well known to the Committee.

8039. You are yourself a tenant farmer, an occupying owner, and also a landlord?—I am.

8040. I think I need hardly ask you, but for the sake of putting it on the notes, you have had considerable experience in local administration, you are a magistrate who has taken an active part in county work before the Local Government Act; since that time you have been Vice-Chairman of the County Council for the Isle of Ely for the first two years after its formation, and since then also chairman of that body, and chairman of the Joint Standing Committee?—Yes.

London Farmers' Club, constitution of.

8041. Would you describe to me the constitution of the London Farmers' Club?—It is simply a private institution of men interested in farming, who for a great many years past have met together for the purpose of discussing agricultural subjects. It is partly a social club.

8042. Is it a numerous body?—It is dwindling in numbers, I am sorry to say. It is an old established body; it has a considerable number of members, but not so many as it had some years ago.

8043. Is it representative of a large area of country?—Yes. It numbers in its ranks a great many of the most prominent agriculturists of the country, such as Mr. Clare Sewell Read, Mr. Pell, and men from almost every county in England who would be known as agriculturists.

Incidence of rates. Owners and occupiers of real property, and particularly of agricultural land, alleged to be unduly burdened.

8044. The main point of course, of the principles which we are here to consider is to report how far all kinds of real and personal property contribute equitably to the taxation which is raised for local purposes; and it occurs to me to put to you first the general question as to what you think of the present incidence of these local rates?—I have for a good many years past paid some attention to this subject. I began, I remember, to examine it in 1865, when the Union Chargeability Act came into operation, and there was a considerable shifting of burdens from urban property to rural property. I began then to inquire as to the principle upon which these rates for local purposes were levied. I read what I could find on the subject, and I came to

8030. But not for the asylum?—No, not for the asylum.

8031. That is a heavy charge?—The union gets for a pauper lunatic weekly about 4s.

8032. That comes out of the Treasury, I think, does it not?—No doubt. We do get a considerable contribution—about one-half. I think in the Northampton Union the cost of a pauper lunatic is something very near 8s.; it is very low indeed.

8033. That is the mere maintenance, and that does not represent the whole charge of a pauper lunatic?—No.

8034. You have to provide an enormous establishment for them in the county?—Yes; it does not deal with the debt on the building, or anything of that nature.

8035. Do you think that the imperial grants in aid of pauper lunatics and lunatic asylums might be increased with advantage?—Yes, I think they might. I think the State might take the whole of the cost of the pauper lunatics.

8036. You see no objection to nationalizing that charge?—No, I do not see the objection there. You would not create lunatics by doing it. If you tamper with the Poor Law you create paupers, but you are not likely to create lunatics.

8037. You draw that distinction between pauper lunatics—the cost of which is increasing very largely—and the ordinary relief of the poor?—I should do so.

8045. You are speaking, of course, of the time before the passage of the Agricultural Rates Act of last year?—Yes, my evidence will be mainly given as relating to the circumstances which obtained before the passing of that Act.

8046. Perhaps you would give me an outline of the arguments by which you would support that proposition which you have just mentioned?—I took as an axiom that declaration of Adam Smith's, in his book on the Wealth of Nations, "that the subjects of every state ought to contribute towards the support of the Government as nearly as possible in proportion to their several abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the State."

8047. I daresay most people would admit that, but then that leaves almost all the controversy unsettled?—Just so, then I proceeded to inquire what are the objects for which these rates are levied, and what is the character of the expenditure, and for what purpose is the money expended. Of course, we know that about one-half of the money raised in local rates is expended on the maintenance of the poor. I take it that the maintenance of the poor is a burden of a national character, and that it becomes more and more so with the facilities that are given for people going from place to place, the relaxation of the laws of settlement, and the general movement of population. I instance the evidence of Sir George Cornwall Lewis, who on this very subject described the relief of the poor as a species of insurance of property.

Agriculturists contribute too much in respect of expenditure on maintenance of the poor and on certain other objects which are burdens of a national character.

8048. (Mr. Arthur O'Connor.) Is Sir George Cornwall Lewis an authority?—I do not know, but I presume that he was in his day an authority.

8049. (Chairman.) I want you to make your proposition that you want to put before us as definite as you can?—The proposition that I want to put before you is, that taking all these rates into consideration, the majority of them, or at any rate those for which the larger part of the money is raised, have a national character, and that all people are interested in their objects. My attention is particularly directed to land, and I do not see why land specially should bear charges of this character out of all proportion to the interests of the owners and occupiers of land in them.

Mr. A. Pell.

18 June '97

Pauper lunatics should be paid for out of Imperial funds.

Mr. W. C. Little.

W. C. Little. June '97

8050. What I think, perhaps, I should interrene at this moment to ask, is whether you are addressing yourself just now to questions as between different classes of property which are now rateable, or as between all property which is now rateable and property which at the present time, though it contributes through imperial taxation, is not rateable by a local authority?—I should say that I recognise that all real property is under a disadvantage, and is unfairly rated; but that the owners and occupiers of land are specially injured by the present system.

8051. I think you would have to separate those two points in any statement you wish to make?—My attention has been particularly drawn to the incidence of the rates upon the owners and the occupiers of land. I am quite ready to admit that the owners and occupiers of other real property have a grievance; but I should separate the two, because I think that when you come to a great many items of expenditure you will find that the interest, if not national, is personal, and that the personal interest of the owner of a house in a certain object of expenditure is greater in proportion to the rateable value for which he is liable than it is in the case of agricultural land. A man with an income of 500*l.* a year pays rates for certain objects on a rental of, perhaps, 40*l.* a year, but the farmer who has an income of 400*l.* a year pays rates for the same purposes on perhaps, an assessment of 500*l.* a year.

8052. But does the farmer pay the rates—that is just the point. Of course I know, and we all know, and we admit, that the farmer is the hand by whom the actual pounds, shillings and pence are handed to the rate collector, but is the real incidence of that upon the farmer?—Of course, that is the most difficult branch of the whole subject. I maintain that whether it falls upon the owner or the occupier or upon both of them, divide it as you please, and in what proportions; you should take the incomes of the two, and then I say that the owners and the occupiers of land pay in numerous instances out of all proportion to their fair share.

8053. What is your reason for taking income; because income, you know, must necessarily mean a great deal more than rateable value?—I take the interest which a man has in these objects of public expenditure at his income, that is his stake in the country, and I say that if a man has an income of 400*l.* a year from Consols, or 400*l.* a year from a farm he is just as much interested in the poor, or in education, or in any other subject of expenditure.

8054. Now, in reference to that answer, are you putting forward the suggestion to us that he is to be locally rated on his income from Consols?—No, I am not.

8055. Then I do not quite see the force of the illustration?—The force of the illustration is this: Do the owners and occupiers of land pay more on their stake in the country for these objects which other people are interested in, than other people who have the same interest. I do not say as to the means by which the other people could be made to pay; but the question is, first of all, is the contribution a fair one?

8056. I want you to make out your case to me, I give you the opportunity?—I do not know what I could say to convince you; but when I went before the Royal Commission on Agriculture, of which I was a member, I put in a number of figures which showed the burden of rates on the farmers in different parts of the country, and, perhaps, I might refer to one or two of those cases. Here is a case that I took from Mr. Wilson Fox's report on Cambridgeshire. I worked out the figures, and I found that from 1877 to 1895 the rates had varied on an average of three-year periods from 33*5*/<sub>100</sub> to 288*1*/<sub>100</sub> a year. I found that the gross profit,—by which I mean the rent which the landlord received and the profit which the tenant received, that is treating the whole farm as being held by an occupying owner—amounted to 25,000*l.* on the whole period, the rates to 2,000*l.*, the ratio of the rates to the gross profit being 8*1*/<sub>100</sub> per cent., which is equal to 20*1*/<sub>100</sub> in the *£* on the gross rent, or 20*1*/<sub>100</sub> on the joint income of the landlord and tenant. That is in a district which is not highly rated, but I think it shows that the contribution of this tenant and his landlord to the purposes of local taxation is very heavy if it is equal to 1*s.* 8*1*/<sub>2</sub> in the *£* on the Income Tax.

8057. By what test do you compare it with the contribution of others?—I am not able to compare it with the contribution of others, but I should be very

much surprised to learn that any other class pays as much in proportion to its income.

8058. You would agree, I suppose, that the moment you suggest that these burdens are of a national character, that all the contribution which each individual makes out of his income, whether through local rates or imperial taxation, must be taken into account in making the calculation?—Of course, I should admit that what a man pays in one way and what a man pays in another should count. I am not suggesting for one moment that these subjects could be maintained by a rate levied directly upon property. I only wish to make this point: That the burden upon a particular class is out of all proportion to its interest in the objects of the expenditure.

8059. I bring you back to the point. You are speaking for the agriculturists as a class?—Yes.

8060. Do you give the answer which you have just given, that their rates are out of proportion to what they ought to pay as a class in regard to the owners and occupiers of other rateable property, or in regard to the owners and occupiers of property as a whole—I want you to separate those two points?—I said that I thought, up to a certain point, the owners and occupiers of other rateable property had a complaint, but I think not so great a cause of complaint as the owners and occupiers of land.

8061. Why not?—Because I think that they have, as occupiers of houses, a greater interest in many of the subjects of local taxation.

8062. Such as?—The house being better drained. The man's capacity to bear the burden as compared with the mere quantity of land.

8063. Now you come to the capacity to bear, which means income?—Yes.

8064. I cannot follow you. I want, if I can, to get you to take one of the points first—one or other, I do not care which you take—either the grievance as between the owner of personal property and the income which he derives from it, as against all the owners of property which is now rated, or else the difficulty as between occupiers of one class of rateable property and occupiers of another. Take which you like first, but I think we must keep them separate?—I cannot say that I have paid the same attention to the incidence of rates upon real property other than land that I have as to land, but I can conceive that an occupier of a house has a considerable ground of complaint as regards the rate for the maintenance of the poor, and some other subjects; whereas, with regard to such rates as education or town rates generally, I do not think that he has the complaint that the occupier of land has. Will you allow me to take a concrete case, which shows the position of an occupier and owner of agricultural land in a borough? This is a case which is within my own knowledge; it is the case of a farm within a few miles of where I live. It is a farm of 244 acres which lies partly in the borough of Wisbech, and partly in the urban sanitary district of March. The farm is about 9½ miles from the town of Wisbech; it is 3½ miles from the nearest gravel road—from the nearest post office, police station, or school. The parish, or the borough, does nothing whatever for it. It is a still further distance by any right of road from the March urban sanitary district, and it pays to both of these urban sanitary districts for objects which are distinctly urban objects in addition to the ordinary poor rate and highway rate.

8065. Such as?—The rates in the Wisbech Union were 4*s.* 9½*d.*, and in the March urban sanitary authority 2*s.* 8½*d.* The land pays, on its full value, its share of the salaries of municipal officers, municipal elections, corporation buildings, school board, burial board, parliamentary and legal expenses—that being a considerable item. Then, on the full value of the houses and the land on one-fourth of its value, rates are laid for the following objects: The scavenging and watering of the streets, sewage, public water supply, fire brigade, markets, clocks, recreation grounds, street improvements, port sanitary authority, and canal boat inspection. Those I have taken simply from the heads of the borough expenditure. This farm pays for the draining of the town, which is 9½ miles away; it pays for all the town purposes; it cannot derive any benefit from any of this expenditure, and the only wonder is that it ever can have been imposed upon land of that description.

Mr. W. C. Little.

18 June '97

Agriculturists contribute too much in rates towards expenditure on purposes of a national character.

Position of agriculturists and owners and occupiers of other rateable property with regard to benefits received from expenditure of rates.

Mr. W. C.  
Little.  
18 June '97

8066. Do you put this forward as a typical case, or as a case of extreme hardship?—I cannot say whether or not it is a typical case, but I can certainly say it is a case of extreme hardship. Then it comes in again for another urban sanitary authority; it is five or six miles away from this other town and it has to pay for lighting that town.

8067. You mean, of course, that one part of it which is within the boundaries of one of these urban districts pays for one, and the other for the other?—Yes.

8068. The land does not pay for both?—No. When the new local government board for the district was elected under the recent Local Government Act, the first thing they did was to extend the area for lighting, which had been confined to just the circuit of the town, to the whole parish.

8069. Who decided on that extension?—The board for the parish have that power.

8070. Is there no appeal on the part of the owner of a farm?—I do not think so.

8071. Nor of the occupier of a farm?—I do not think so.

8072. Do you know that to be so—that there could have been no appeal?—I could not be certain, but I feel sure; I could not say so on my own authority.

8073. Do you put this forward as a typical case?—It is a case of what may happen.

8074. May it happen now?—In this borough they may go on increasing these rates to any extent, and this man, who does not derive a farthing benefit from all this expenditure, has to pay towards it; they do nothing for him, they simply come to him for money. We had before us at the Royal Commission on Agriculture numerous similar complaints. I will not say any as gross as this, but we had cases where men were called upon to pay for lighting a town, or for draining a town. A man comes and says: "I have to provide myself with water at my farm at very considerable expense, but I have also to pay for the provision of water for a village five or six miles distant from me."

8075. But, on being rated for water, does he not get water?—No, not at all; he is five or six miles away from the place to which this water has to be supplied. In the same way every farmer has to drain his own farmyard and buildings; but he has to pay for the drainage of the village, however far he may be from it. In a straight line I am five miles from the centre of my parish, and I am eight miles by road; but I have to pay just the same for any expenditure of my village as a man who lives in the village and benefits by it.

8076. Again, of course, I must ask whether you put that forward, assuming the facts to be as I am sure they are, as you have stated them, as a typical case, or as one showing to what extremes the existing law can go?—I think I ought fairly to say that it is an extreme case, because I do not know another; but I know of many analogous cases where occupiers and owners of land are called upon to pay very considerable sums for improvements in which they have no interest, and which they have to perform for themselves in the case of their own farms.

8077. As that is an extreme case, and one which we certainly cannot take as typical, I should like you to develop to me the point you put to us as the grievances under which agricultural land, for which you chiefly speak, is labouring at the present time?—I think that the grievance is that the rate, as I have said before, is out of proportion to our interest in the expenditure, measuring that interest by the property which a man possesses. If all could be made to contribute according to their property we should have to pay very much less.

8078. Do I understand you to wish to bring into contribution to local rates properties which do not now so contribute?—I should certainly wish to bring them in in some way.

8079. That I am afraid is hardly definite enough for me; I want to get your view?—My own opinion is that the system which has been adopted up to the present time of lightening, or attempting to lighten rates by subventions from the State is certainly some advantage to the ratepayers, but it does not go far enough.

8080. Now, are you speaking for ratepayers generally, or for the agricultural ratepayers?—For ratepayers

generally I would say. It takes from a common fund to which real property contributes its full share—I think that might be maintained in view of Sir Alfred Milner's evidence before the Agricultural Commission—to which real property contributes its full share, and land contributes more than its full share; it takes out of that common fund a sum to relieve ratepayers. I think those subventions should be taken out of some fund to which real property does not contribute at all.

8081. Can you suggest one?—I do not pretend to be a Chancellor of the Exchequer, but I could suggest a special income tax on personal property or some personal taxes.

8082. Is that your suggestion—a special income tax on some special form of property?—I should be prepared to advocate a special income tax, or a special tax upon personal property for the purpose of relieving rates on real property.

8083. Have you thought that out?—How do you mean? I do not quite understand. I do not pretend to have considered the exact ways and means, but I say it would be perfectly fair—that is all.

8084. Is it your belief that the relative burden of local rates is increasing or diminishing?—I have found very great difficulty in ascertaining and making up my own mind whether rates have increased; they are increasing now, but they have periods of fluctuation. It is extremely difficult to discover whether, taking it through a long series of years, there has been any great increase.

8085. Take the poor rate—I mean the strict poor rate for the maintenance of the poor—has that increased in any district with which you are acquainted or not?—I think that the pure maintenance of the poor has very generally decreased; but in my own neighbourhood, in the union and the parish that I belong to, I cannot find that it has.

8086. What are the rates which, in your opinion, have increased in recent years, and the burden of which has increased?—Of course the school board rate in many instances is a very heavy and pressing burden; then there are the numerous charges which are put upon the poor rate, which is a consolidated rate for various purposes, which have kept up the poor rate to the same that it was, notwithstanding the decrease of pauperism. We might have expected that with the great increase of prosperity and the low price of provisions the poor rate would have diminished very largely, but it remains about the same because of the charges put upon it; new charges are constantly added to it. The county rate has increased in our neighbourhood very considerably, and highways are much more expensive. That part of the expenditure I do not complain of so much, because it is to some extent remunerative, but we have every year some fresh thing or other thrown upon the county council which causes expenditure.

8087. Have you any definite suggestion to make to us as to any direction in which you would like to see a reform made?—I was one of the majority of the Royal Commission on Agriculture who went further than the Agricultural Rates Act, and suggested that land should be rated at one-fourth. I think there are very good grounds for advocating such a reduction of rates. I do not think that upon any other principle than that of all property being liable the land should be charged for many of these objects at all; if all property was chargeable, then land ought to be charged, but seeing that the interest of those connected with the land is so small I think that a contribution of one-fourth would be quite sufficient.

8088. You say "all property," but do you mean all property or all rateable property?—All property.

8089. I put the question to you again: Does that not point in some way locally to rating according to income—I want to know what it is you are driving at?—Yes, it does. I do not see the possibility of localising personal property. The only way to get at personal property for objects of this kind is to get at them through the State, and for that purpose I think you must have a special impost upon personal property.

8090. Collected by the imperial authority?—Certainly.

8091. And handed over to the locality?—On conditions.

Mr. W.  
Little.  
18 June '97

Income tax on personal property suggested

Increase decrease of the burden of certain rates.

Agricultural Rates Act, 1897 Suggested that land should be rated at one-fourth

Income tax on personal property suggested for expenditure on purposes of a national character now borne by local rates.

Imperial contributions should be taken out of a fund to which real property does not contribute.

Mr. W. C.  
Little.

18 June '97

8092. Can you give me any idea of how you would proceed to allocate the portion which should be handed over to each locality, and the conditions which you would impose?—I am afraid I have not perfected a scheme now.

8093. (*Sir Edward Hamilton.*) I see, in the memorandum you have handed in, that you take exception to the present system of subventions, and that you do not think that the demand for re-adjusting the burdens of local taxation is satisfied by that means?—On the ground that I have stated.

8094. Is that on the ground that it is not sufficient, or is it on the ground of the principle of the subventions?—On the ground that you are taking out of a fund to which we contribute money to relieve us, and that, therefore, we are helping to relieve ourselves. We want to dip into a purse to which we do not contribute.

8095. In fact, you wish to impose some special tax, as I understand upon personal property which will go to the relief of the ratepayers?—Yes.

8096. Therefore you would entirely discard the idea that the contribution to local expenditure should have some regard to the benefit received?—I should not go so far as that. I think, for the purpose of these subventions, I should take those objects which are national in character, and I should not contribute to those where there is benefit received.

8097. You say national in character, but which purposes do you specially refer to?—I think that the poor rate, the police, the protection of life and property, including all the administration of justice, the coroner's charges, and education, are all purposes of a national character.

8098. In fact, you are in favour, as somebody else yesterday was, of nationalising the poor rate, for it practically comes to that?—I do not know how you could do that and still retain the local administration.

8099. The Poor Law is one of the principal items of expenditure?—It is only 49 per cent. of the total amount levied by the poor rate, but still it is the principal item.

8100. How would you get over that difficulty?—I think that a subvention might be given in aid of some particular part of the Poor Law expenditure. You want to retain some local administration. If, for instance, you paid towards the support of the indoor poor, leaving the outdoor poor more a local charge, you would be promoting a great reform, and you would be getting a contribution from other property.

8101. (*Mr. Smith.*) I think you said that you thought that all real property was overrated for local purposes, especially agricultural land?—I am quite prepared to admit that other descriptions of real property than that have ground of complaint, but that, from my point of view, land has a special ground of complaint.

8102. You have studied the question of rating; the rate that a tenant pays is not a rate on his income; it is a rate on the profit that goes to his landlord, is it not?—Yes.

8103. He pays his landlord's rate, practically?—That is conceding a very large point, which I should not be prepared to concede.

8104. Will you distinguish, if you do not take my view of it?—I say it is paid by the landlord and tenant, in what proportions I will not undertake to say.

8105. Say the rates are 2s. in the £; the tenant knows that when he takes his farm?—He may.

8106. He ought to, ought he not, as a man of business?—Yes.

8107. If he did not pay the 2s. he would pay 2s. more rent, would he not?—If the land were let at a rack rental, if it were put up to auction and let at its net rental.

8108. We must assume that we are dealing with business principles?—But, excuse me, that goes a long way.

8109. When you come and ask for remissions we must assume that you act upon the ordinary influences that would influence business people—we cannot admit sentiment, you know?—No, but the question of rates is only one consideration in estimating the rent, and it is a comparatively minor one, in my opinion.

8110. I think it is a minor one myself; but could not we agree upon this, that the tenant is not, as some

people have said, paying upon his income in any way when he pays his rates?—That is so. I only took the income of a landlord and of a tenant together as a measure of the burden for the purpose of comparison with other properties; on the assumption that people were bound to contribute to objects of national interest according to the stake that they had in the country, I only measured the contribution by income, I did not treat it as a taxable income.

8111. It is not in any sense a taxable income, is it?—No.

8112. The tenant is merely—I think the expression was used by the Chairman—the hand that pays the rate?—I do not know of any who have not paid more than they got again.

8113. I thought all commercial people, when they paid anything for others, got a profit upon it?—I have always found, when I have paid for other people—

8114. Really, does it not come to this, that the tenant is, after all, only the hand that pays the landlord's rates?—No, I cannot admit that; the rents are often not adjusted for a considerable number of years.

8115. I am assuming the rates have not been raised?—In many cases they have.

8116. You just now said you could not find out whether, speaking of rural England, the rates have been raised or not; assume, for the moment, that they have not; assume that they are about what they were 10 or 20 years ago; is the tenant, when he pays his rate, only paying something that he would otherwise pay in rent?—You are assuming average rates, but in a great many cases all over the country it would be found that rates have risen.

8117. For the purpose of argument, I want you to admit something in order that we may agree upon a basis; supposing that the rate was the same as it was 10 years ago, when we say the man took his farm, and he is paying 2s. or 2s. 6d. or whatever it may be in the £, is he not really paying something as rates that if he did not pay as rates he would pay in rent?—I very much doubt whether that can be accepted. As I say, the amount of the rates is only one consideration out of many when a farmer takes a farm, and very frequently he does not go closely into that.

8118. I have a case in my own mind of a farm of 120 acres, paying 180l. a year in rent; that happens to be exactly the rent of my own house and garden, which occupies 3 acres; when I pay my rates I know perfectly well that if my landlord paid them I should have to pay him so much more; does not the agricultural tenant take the same thing into consideration?—I doubt whether he does.

8119. Ought he not to do so?—Possibly; but I doubt whether the average tenant does. I should like to put this as bearing upon the question of whether the rates fall upon the landlord or the tenant. A small addition is made to a man's rates; I remember when the Union Chargeability Act was passed my rates were increased by about 16l. a year. I was paying 1,100l. or 1,200l. a year in rent, and I could not go to my landlord and say: "I want 16l. or half 16l." I bore that for many years, but it was just the same as if the Chancellor of the Exchequer had imposed an additional Income Tax of 7½d. in the £.

8120. If that was intended as an answer to my question, or as an explanation, you will pardon me; I wanted you to, first of all, tell us whether you think rates had risen or not, and I understood you to say you thought not; and, therefore, I took it they had remained about the same, and I think that is about the fact. I quite agree with you that any rate imposed since the taking of the farm would be a rate on the tenant; but, as we commenced the discussion by practically agreeing that there had not been much rise in rural rates, I thought we might assume that they were the same?—I certainly have said that I could not show that on the average there had been an increase; but I can give you plenty of instances where there has been, from one cause or another.

8121. (*Chairman.*) And, of course, many where there has been a diminution?—Certainly, and it is going on from time to time. There is hardly a year passes that some change is not made.

8122. (*Mr. Smith.*) I only want to get rid of an idea that I see constantly occurring in these papers, that the rate is a tax on the farmer's income?—I have treated it so in my evidence before the Royal Commission on

Mr. W. C.  
Little.

18 June '97

Poor law expenditure. Indoor maintenance should be assisted by Government grant.

Agriculturists contribute too much towards local rates in proportion to their income derived from the land. Incidence of rates as between landlord and tenant. Farmers often take farms without considering the rates.

Incidence of rates as between landlord and tenant.

Mr. W. C.  
Little.  
18 June '97

Agriculture, and I am prepared to give some information here of the same character. I treated the tax as influencing, by increasing or diminishing, the gross profits of the farm. I take it that there are certain necessary expenses which must be incurred to produce the crop of the farm—labour, manure, and other expenses—and that there is a certain balance left, which is divisible between the landlord and tenant in whatever proportions they may agree to; but the burden is on that balance, and that balance increases or diminishes according to the amount of the rates.

8123. (Chairman.) And also on account of the amount which the hypothetical tenant would pay?—No.

8124. Surely?—I am taking both together; I am not dividing it; I am saying that here is land which a man owns; he chooses to occupy it; he is obliged to spend 5,000*l.* and he reaps 6,000*l.*; there is thus 1,000*l.* for him as owner and as occupier, and it does not matter for the purpose of my argument whether he assigns 600*l.* of that to the landlord and 400*l.* to the tenant, or 500*l.* to the landlord and 500*l.* to the tenant. In whatever proportion you assign that amount there is still this sum to be dealt with. This 1,000*l.*, if the rates rise by 100*l.*, will be reduced, and if the rates fall it will be increased; therefore I have treated rates as a burden upon that margin of gross profits, whether it comes upon the landlord or upon the tenant.

8125. (Mr. Smith.) Do you not think it would be simpler to deal first with the tenant and then with the landlord?—It seems to me the tenant has very little to do with it; the tenant pays for the farm what he thinks he can fairly afford to do, and, no doubt, either takes, or ought to take, the rates into consideration. It seems to me that you will simplify the matter very much by dealing with it as it affects the landlord.

8125a. (Chairman.) I suggest to you that in dealing with it in your way you are confusing the issue because the issue is this; the rate acts upon what the hypothetical tenant would pay one year with another?—Yes.

8126. Over and above what he would pay there is his profit; that is, his income. If you mix up what the tenant is going to live upon and what he is going to pay it seems to me that you bring in an altogether confusing element. But I shall be glad to have your criticism upon what I have said?—I said before that I am not examining the burdens of the rates upon property, but I am asking myself whether the interest of the landlord and of the tenant together, or the occupying owner, who is both, is so great in this expenditure that he should pay so large a proportion of his income for it, and I ask whether any other person in any other sphere would pay as much for these purposes as an occupying owner would do under the circumstances.

8127. (Mr. Elliott.) You would say, I gather, that you must take the whole of the produce of the particular farm, irrespective of the distribution of that produce between owner and occupier?—That is the subject that must bear the burden.

8128. That is the subject that must bear the burden, and you would say that for public purposes a greater pull, as it were, is taken out of that aggregate produce than is taken out of the aggregate produce of any other industry?—That is my opinion.

8129. You think it is simpler to dismiss for the moment any question of the distribution of the produce between owner and occupier, and to look at the thing as one entity?—I did so because of the extreme difficulty of determining where the landlord's interest in the rates and where the tenant's interest in the rates begin and end. I have seen so many instances where undoubtedly the tenant has borne the rate for a considerable period, for many years. I know a good many estates upon which, in bad times, an abatement of rent has been made; that abatement has been a uniform abatement and irrespective of the amount of rates paid. I can name an estate extending into a great number of parishes where, for many years past, abatements were made, where the rates vary enormously, and where in some instances the rates have greatly increased and in others have diminished, and yet there has been a uniform abatement of the rent. Now it is clear that rates in that case cannot have entered into the question.

8130. You mentioned that in your view agriculturists, whether owners or occupiers, paid more in proportion to what you describe as their "stake in the country";

than other ratepayers or than persons who are not ratepayers at the present moment?—I think so.

8131. What do you regard as the test of a man's "stake in the country"?—The income that a man has.

8132. Not the aggregate produce of the property?—No. I take it that a man's interest in the country is the same whether it proceeds from one description of property or another. One might refine and say that one man is more interested in this particular expenditure, and another in that; but, taken altogether, I should say that a man's income is the test of his interest in the matters at stake. I will not say that incomes of 100*l.* a year should pay at the same rate as incomes of 500*l.* a year; but I would say that all incomes of 500*l.* a year, whether derived from Consols or from any other description of property, should pay at the same rate as incomes from land or farming incomes.

8133. In other words, you suggest that income is the best measure of ability to pay?—Certainly.

8134. Do you limit at all the definition of the word "income"; would you say that a man deriving an income from personal exertion, from brain work, can afford to pay as much towards local burdens as a man deriving an income, say, from Consols?—That is the old question which Mr. Gladstone has discussed over and over again about the Income Tax.

8135. I am not speaking about the Income Tax, I am speaking about ability to pay?—I take it that the same argument applies there as to the Income Tax.

8136. You would not propose, I suppose, to rate, say, a tenor at the opera in respect of his income from that profession?—I do not know why he should not be rated.

8137. Would you, then, propose that he should pay as much to public burdens as a person deriving an income from Consols?—I think so, taking the broad principle that a man's income is a measure of his interest in the government of the State.

8138. Apart from these questions, it is your clear and distinct opinion, from the study which you have given to the subject, that persons deriving income from agricultural property pay more of that income to public purposes than any other class?—I maintain that is the case.

8139. Now with regard to the remedies that have been at various times proposed. You are aware, of course, that certain revenues have been surrendered from the Exchequer for local purposes?—Yes.

8140. And you are also aware, of course, that those revenues have been selected rather with a view to avoid revenues to which the owners of real property contribute?—I am not quite prepared to admit that. I have heard it contended by Sir William Harcourt and others that you take this out of the common purse; it is all very well to say you take it out of these estate duties or that you take it out of that, but it all comes out of the public purse.

8141. Do you agree with the argument?—I do, rather.

8142. Then how would you propose to get over the difficulty?—I said by a special tax on personal property.

8143. Would not Sir William Harcourt's argument apply equally to that special tax on personal property?—No, I think not, levied *ad hoc*.

8144. You think that it must be a new tax?—Yes.

8145. Would an increase of the Probate Duty, in order to give a further contribution to local taxation, meet your views?—I imagine that the alterations in the Probate Duty have been made in view of the general fairness between one property and another as regards those particular duties. They were not advocated on the ground that they were to penalise a particular interest or that they were to impose a special charge on a particular interest; they were only supposed to have brought things up to a level.

8146. Would you say that additional revenues should be raised by the Imperial Exchequer and handed over to local purposes?—I was asked to suggest some means by which the complaint that I made against the present subventions should be obviated, and I said instead of dipping our hands into a common purse to which we contribute, I should like to dip our hands into a purse to which we do not contribute.

8147. And you think you do contribute to the revenues which are surrendered at the present moment?—I

Mr. W. C.  
Little.  
18 June '97

Ability to pay, income is the best measure of.

Agriculturists contribute too much towards local rates.

Income tax on personal property suggested.

Imperial contribution should be taken out of a fund to which real property does not contribute.

Mr. W. C. Little.  
18 June '97

think so, certainly, when it is shown by Sir Alfred Milner's evidence that real property contributes to Imperial taxation out of proportion to its value.

8148. You are looking now to Imperial taxation as a whole and not to the particular surrendered revenue?—Just so; I am looking at the present state of affairs, or rather at the state of affairs when Sir Alfred Milner gave his evidence. You may discount it as much as you please, but you cannot get away from this broad conclusion, that land at any rate pays to the Imperial Exchequer its full share of taxation, and if you go to that Imperial Exchequer for your subventions I say you are doing some good, but we are only getting part of that which we ought to get.

8149. The Chairman asked you a question which I also should like to ask you, so that you may amplify your answer; that is, as to the mode in which you propose that any additional revenues which might be surrendered should be distributed; have you considered that at all?—Yes. I have suggested an allowance for indoor poor. I quite agree with what has been suggested by Mr. Pell, that pauper lunatics are an extremely proper subject for the State.

8150. You are aware, of course, that under both those heads a grant is already made?—Yes.

8151. You would propose that that grant should be increased?—I think it might very well be. I am only speaking generally, of course, for the grant is for officers.

8152. For instance, take the increase of the grant on account of pauper lunatics; that could be done without bringing about extravagance in local administration, could it not?—Yes.

8153. I think you contemplate that there should be safeguards in regard to the increase of these contributions to local expenditure?—I take it that subventions are always given under conditions, and generally under rather onerous conditions.

8154. Have you considered at all, apart from the question of agricultural land, the possibility of the further development of what we call the grading system, by which different proportions are paid to local revenues in respect of different properties?—Yes. Many years ago, nearly 30 years ago, I suppose, I considered that subject and read a paper upon it. I was very much struck with the Scotch system, but I doubt whether Englishmen would ever submit to such a very complicated system. I think that upon the whole the fairest possible system of taxation for local purposes is that of the classification of property and a graduated rate.

8155. Have you considered at all the possibility of dividing the local taxation more obviously among the different interests in the property, say, as regards the mortgagee; do you think that an owner should have any right of recovery of local taxation as against a mortgagee?—I have not considered that, and I doubt very much whether you could effect any useful object.

8156. You are aware, of course, that that has been done in the case of the Income Tax?—Yes.

8157. Have you considered whether a similar principle might not be adopted with advantage in the case of rates?—I do not think it practicable.

8158. Have you considered whether there are any means of giving variety to local taxation; whether local revenues can be raised in any other manner than they can be raised now?—No, I cannot say that I have.

8159. Have you considered at all the propriety of dividing rates between owners and occupiers?—Yes. When I reported to the Richmond Commission on this subject, I was decidedly in favour of it. I have rather modified my opinions since the passing of the recent Local Government Act which diminished the powers of owners so very greatly. I think it would be manifestly unfair to the owners, unless they had some direct representation, that they should be called upon to pay directly. I think that in the past, if owners had had to bear their share of taxation immediately and directly, many measures which are carried out would not have been passed by the House of Commons; but I do not think now that that can be done without some guarantee that those owners should have a power in regard to the expenditure.

8160. In regard to those figures that you gave us, did you take into account the landowners' outgoings?—Do you mean the gross profits?

Mr. W. C. Little.  
18 June '97

8161. No?—I took the gross rent which the landlord receives.

8162. But you did not deduct the necessary outgoings by the landowner?—I did not; it would be in that case something like 58 per cent., I should think.

8163. (Mr. Dalton.) The fact that grants in aid are paid by real property as well as by personally gives an exaggerated impression as to the amount of relief that they give to real property, does it not?—I think so. I think that you will see it constantly stated that so much has been given from the taxpayers to the landowners or the landlords and farmers.

8164. But you do not dispute the fact that you do get relief from those grants?—No, not at all.

8165. But you get something very much smaller than appears to be the relief?—Of course, personal property is so large in comparison with real property that the subvention does give us substantial relief.

8166. You have seen a great deal in the past of subventions, and you have had a good deal to do, I think, with the valuation of property; do you consider that the past subventions have gone to the owners or to the occupiers?—The immediate benefit, of course, goes to the occupier. I cannot deny that eventually, and in the long run, the landowner must benefit, but certainly the immediate benefit goes to the occupier, often for a long time.

8167. In your experience, and you have had a very large experience in these matters, have you seen any traces of rents being raised after relief has been given?—If you remember I said before the Royal Commission on Agriculture that the only specific instance that I had ever come across of rent being raised in consequence of rates being diminished was one of a small farm in my neighbourhood, where a tradesman said to the tenant: "Now you will be better off by 10l. on your rates by this Union Chargeability Act, I must have 10l. more rent." That is the only instance I ever came across in my experience.

8168. A farmer after he had been for a long time in occupation of his farm was often unable when he came before us at the Agricultural Commission to state what his rates were, was he not?—Yes.

8169. If, after he has been in occupation for a great many years, he does not know what his rates are, how is it likely that when he took the farm he ascertained what they were and took them into account?—It is difficult to ascertain. There is a fluctuation in the amount of the rates that can hardly be accounted for in rural districts, it depends so much upon the overseers and the calculations of the Boards of Guardians. We have very great fluctuations.

8170. I was going to say that nobody, except the man who has paid the rates, and who has kept a good account, could tell—a farmer could not ascertain from any returns, could he?—He could go to the assistant overseer and get the information.

8171. But that would be about the only way?—Yes.

8172. Do you find that they do, as a matter of fact, go to the assistant overseer and ascertain the rates before they take a farm?—No. I remember some years ago putting a question to a country lawyer who had a great deal to do with two parishes which were intermixed. In one parish the rates were very low and in the other they were very high. One parish had a low highway rate, the other a high highway rate, one had no education rate, the other had an education rate, one had a low poor rate and the other a high poor rate. I said to him: "Do you find that this makes much difference in the rents?" He said "Well, you know, one must suppose that these things have an influence, but I have never discovered it myself, I have never discovered that it has affected the rent of the land in the two parishes."

8173. Should you say that the farmer is more likely to take into account the rates, when he takes the farm than is the occupier of a house in a town?—I cannot imagine any difference.

8174. It has been alleged, as you, I daresay, know, that in towns the rates fall upon the occupiers, but that in the country they fall upon the owners?—I have seen that argument.

8175. Have you thought that out?—I have never been able to see the basis of it.

8176. Supposing the occupier does take into account the rates, does it follow that he can get his rent reduced

Imperial contributions should be taken out of a fund to which real property does not contribute.

Imperial contributions and rates, incidence; of, as between owner and occupier.

Farmers often take farms without considering the rates.

Incidence of rates in urban and rural districts.

Imperial contributions should be increased in respect of maintenance of indoor poor and pauper lunatics.

Classification system is a fair one, but complicated.

Mortgagees and local taxation.

Local Taxation. New sources of revenue.

Division of rates between owners and occupiers. Question of representation by owners.

Agriculturists, rates paid by.

Mr. W. C. Little.  
18 June '97

to the extent of those rates?—No, really the amount of the rates is only one of many considerations in fixing the rent.

8177. But supposing he knew the rates, which you say you do not think he does know, supposing he did find out the rates for a particular farm were 30*l.*, do you think he would get his rent reduced to the extent of that 30*l.*?—The question would be a comparison between that farm and another where the rates were 25*l.*; whether the 5*l.* would determine him in taking that farm or not; I think if he wanted the farm the question of 5*l.* would not weigh.

8178. If it did not weigh with him, and if he did not get the reduction, to the extent that he did not get the reduction the rates would fall upon him?—Yes.

8179. Has it not been the case, looking back to the Parliamentary history of this question that whenever it has been proposed to extend the representation it has been urged that the rates are paid by the occupier?—Yes. It is a very curious thing that when what we call the Parish Councils Act was passed, when it was complained that the labourers in a great many instances paid no rates at all, and that therefore they ought not to have a vote, it was said "but they pay their rates in the rent"; now, if a labourer who pays no rates directly, and is not affected year by year by fluctuations in the rates, is still to be supposed to pay them, and to pay them all, it seems to me absurd to suppose that the tenant who has to pay them directly, and who is affected by the fluctuations, does not pay them at all. The two things seem to me to be quite incompatible.

8180. Whenever it is proposed to give relief to local taxation it is stated that the rates fall upon the owner; but whenever it is proposed to extend the representation it is stated that they fall upon the occupier?—That is so.

8181. As regards the contribution of non-rateable property to imperial purposes, was not the effect of Sir Alfred Milner's evidence that non-rateable property contributed more in proportion?—Yes. I purposely stated it at the very lowest. I said, "Make any discount you please." There were some attempts to diminish the importance of the statement, and I said: "Discount it as you please; you cannot resist the conclusion."

8182. That was mainly because the Inhabited House Duty and the Land Tax turned the scale, was it not?—Yes, I believe it was.

8183. The estate duties are now equalized?—Yes.

8184. And as far as we could see from the tables that were given to us there was no large charge that one bore which the other did not bear till you came to the Inhabited House Duty and the Land Tax?—I think that was so.

8185. That turned the scale as against ordinary property?—Yes.

8186. It has been proposed by various witnesses that the Inhabited House Duty should be applied to local purposes; have you any views on that point?—I remember perfectly well when Mr. Goschen made the proposition, I, at first, was inclined to think it was a very admirable scheme; but when I found that London would absorb nearly the whole of the money, and that the house tax in rural districts was a mere nominal sum, I was not so much enamoured of it; but, on the other hand, I do think that urban districts might fairly claim some remission of that kind.

8187. But if the Inhabited House Duty is mainly collected in the towns it also is the fact, is it not, that the Land Tax is mainly collected in the rural districts?—Yes. I do not know to what extent the towns pay Land Tax; all that I know is that it is a very small charge upon that land.

8188. Do you know any case where the land has gone out of cultivation in consequence of the burdens upon it?—No, I cannot say that I do personally.

8189. Not at the present time, but did it not do so under the old Poor Law?—I believe it did then, but that is beyond my recollection. I come from a part of the country where there is no land out of cultivation.

8190. (Mr. Elliott.) Supposing the House Duty and the Land Tax were surrendered, that would not meet your difficulty, would it, as to the contributions of the owners of real property to those duties?—No.

8191. You want new taxes imposed in order to get rid of that difficulty?—I want some money from some purse or other to which I do not contribute.

8192. (Sir Edward Hamilton.) That would be a very difficult thing to do?—Yes.

8193. (Mr. Dalton.) Do you not consider that the first step to take is to equalise the contributions of rateable and of non-rateable property to Imperial taxation before you set about taking out of a common fund grants in aid?—Yes. I have not been asked a question on one point which I should rather like to mention, and that is the hereditary burden theory; because, really, I find in talking to people who have not considered the subject very much, the one thing that weighs with them is this theory that land has always been subject to poor rates; and, therefore, it is no hardship it should bear them now. That is the hereditary-burden theory, and I should like to enter my protest against it. I think if you take the hereditary-burden theory you must also assume that those lands which paid no rates had a hereditary immunity; but the whole course of legislation for the last 30 years has been to disregard this hereditary burden, and to shift burdens from one part of the country on to another. The first Poor Law imposed a burden upon parishes and places which had no poor; then there was the Union Chargeability Act, which made the poor a common charge upon all parishes, irrespective of the pauperism in a particular parish; then we have had the Divided Parishes Act, which has transferred land from a parish where the rates are low to a parish where the rates are high. I could give you hundreds of instances of very greatly increased rates thrown upon the land in consequence of the operation of these Acts. As a question of general policy I do not object to this distribution and re-distribution of the burden, but if you are to justify the present system of taxation by the hereditary-burden theory I say that these were Acts of gross injustice, and that you have done what you had no right to do.

8194. (Sir Edward Hamilton.) You are aware that the hereditary-burden theory to which you refer has high authority?—Yes, and therefore I wish to attack it.

8195. It is not a new theory proposed in recent years?—No, I have traced it back to John Stuart Mill.

8196. I suppose you would allow this: that in the case of land which has changed hands in the last 50 years or so the burdens which were on it then, and which are on it now, would have been taken into account?—So I would say, in the case of a house that has changed hands, the house tax was taken into account; so I would say in the case of Consols that have changed hands, the Income Tax was taken into account. If you are going to say that because I buy a farm with 5*s.* rates upon it I do not bear those rates, because I have taken them into account, then I say I pay no rates at all, and you ought to begin to rate me again. In the same way, if I buy a house with a tax upon it I know perfectly well that I am going to pay so much in the £ house tax, and I pay that; but if it is no tax upon me you ought to begin to tax me again.

8197. I think that is rather more theoretical than practical, and, perhaps, our inquiry is more into the practice than into the theory; so, perhaps, we need not go into that point more; but is there anything else you would like to say to us—of course you can always supplement what you have said by sending us later on anything in writing?—I put, in the 9th paragraph of my memorandum, these words:—"Great efforts have been made to prove that in rural districts the aggregate amount of rates is not greater now than it was at some former period; there are reasons for believing that the comparisons which have been made with the view of establishing this fact are somewhat fallacious." I was prepared to explain some of those, but I have had my own opportunity at the Royal Commission on Agriculture and I will not detain you.

Mr. W. C. Little.

18 June '97

Non-rateable and rateable property, contributions to Imperial taxation. The "hereditary burden" theory objected to.

Non-rateable property, contribution in respect of, to Imperial purposes.

Inhabited House Duty and Land Tax applied to local purposes. How far desirable.

Rates in rural districts. Whether the aggregate amount has increased.

The witness withdrew.

Adjourned till Tuesday, June 29th, at 12 o'clock.

TWENTY-SECOND DAY.

Tuesday, 29th June 1897.

At 16, Victoria Street, S.W.

PRESENT :

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. EDWARD WHITTRED ILTYD PETERSON called and examined.

Mr. E. W. I. Peterson.  
29 June '97

8198. (*Chairman.*) You are the Secretary and Solicitor to the Tithe Rentcharge Owners' Union, and are instructed by that body to appear here to give evidence to the Commission in regard to the matters in which they are interested?—Yes.

8199. This paper which I hold in my hand is the memorandum\* which you have been good enough to prepare for us?—It is.

Real property. Owners and occupiers bear the burden of local rates.

8200. I shall take you through the points in it which seem to me to be most germane to the reference which we have in hand, and then leave other members of the Commission to ask you such questions as they may think necessary. I observe that you say in paragraph 4 that "at the present time the whole of the local burdens, except in so far as they are relieved by Government subventions, are thrown upon the land, and consequently upon the landowner"?—Yes, that is so.

8201. It is not, I think, necessary for us to discuss over the table where the ultimate incidence of the rate is; but I suggest to you that to say that the local burdens are thrown upon the land "except so far as they are relieved by Government subventions," is scarcely accurate, without taking into account houses, railways, mines, and other properties which exist in some of the communities which are assessed?—I do not mean by the term "land," simply agricultural land.

8202. By the term "land" what you mean is real property?—Real property.

Rates extended upon purposes which do not specially benefit real property would be aid in respect of other real and personal property.

8203. I think the first part of your contention is developed in paragraph 9—"But with regard to other rates"—by which you mean Poor Rate, Highway Rate, and Education Rate—"raised for purposes which do not preserve and improve any particular property alone, but which are of equal benefit to all the inhabitants of a district, different principles should prevail as to the manner in which, and the persons on whom, they should be assessed." I understand by that that the first division which you suggest should be made between rates is whether they are, to use a cant phrase, rates of burden or rates of benefit?—I do not know quite, whether I understand you.

8204. You do not suggest that it is in any way unfair that real property should bear the burdens of those rates which add to the amenity or the enjoyment of the property itself?—Certainly not.

8205. Of course it is a matter of opinion and of argument on which side of the line any particular rate should be put?—Yes.

8206. Your suggestion, as I understand it, is that such rates as the Poor Rate, the Highway Rate, and the Education Rate should not be thrown exclusively upon property which is now rateable?—Yes, it is.

8207. But that the rates should be assessed upon persons in respect both of real and of personal property and according to their ability to pay—which is the expression you have used?—Yes.

Ability of persons to pay local taxation. Contributions to Imperial as well as local taxation must be considered.

8208. In making any such calculation as that I presume you would also take into account the amount which the individual has to contribute to public burdens of another kind, such as Imperial burdens?—I do not know; I do not exactly see why I should.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 131 to 156.

Mr. E. W. I. Peterson.  
29 June '97

8209. I put that question to you on account of paragraph 15 in your memorandum in which you say, "I gather from the terms of the reference that the Legislature agree that personal property should contribute equitably with real property to local taxation." I do not wish to split straws with you, but of course the Legislature, as a Legislature, is hardly responsible for the terms of reference; the Government is responsible for the terms of the reference, but with that correction do you not think that the terms of reference suggest that in making any calculation as to the burdens borne by all kinds of real and personal property it is intended to include the burdens borne not only in respect of those subjects which are matters of local expenditure, but also those which are also the subject of Imperial expenditure?—Yes, I suppose so. You will forgive me, but I do not really see what bearing my answer to your particular question has upon the point before us.

8210. I suggest to you that the tenour of your memorandum being to put those rates, which I mentioned to you in a question a moment ago, upon what would be ultimately more or less of an income tax, you must take into account all the burdens which are borne according to the ability of the persons to pay?—Certainly.

8211. What exactly do you mean by the term "ability to pay"?—I mean that a man should be taxed, and should pay according to the amount of property of whatever kind he possesses *pro rata*.

8212. Of whatever kind?—Yes, of whatever kind, either personal or real.

8213. Wherever derived from?—Certainly.

8214. Take an instance which has been given in this room; would you rate a man who drew his income from Indian railways for local purposes in this country?—If that is subject to Income Tax, I should.

8215. Without regard to whether his property had received any benefit from the expenditure?—Quite so.

8216. That is your view?—That is my view.

8217. By the expression "ability to pay," do you or do you not mean to take into account the circumstances of the man and the question whether his income is a fixed income or is derived from his personal exertions?—In the case of income derived from trade and profession there would be deductions, of course, allowed in the same way that there are deductions allowed when a man is assessed for Income Tax.

8218. But no other in your opinion?—I do not see why. The assessment in the case of the Income Tax is considered fair, just, and equitable.

8219. For Imperial purposes?—Just so. I look upon such questions as education and the relief of the poor as Imperial in a sense—they are for the general good of the public, that is.

8220. You are aware that "ability to pay" is sometimes used in another sense, as, for example, a man who has an income of 500*l.* a year with a small family may be in a better or worse position than a man with a larger income and a larger expenditure?—Yes.

Ability to pay. Local taxation should be paid by persons in respect of all kinds of property according to their ability to pay.

Ability to pay; definition of.

Mr.  
E. W. I.  
Peterson.  
29 June '97

8221. Do you propose to attempt to take into account in the expression "ability to pay" any circumstances of that kind?—I never had the Income Tax people take into account or ask me how many members I had in my family.

8222. I did not ask that, but what I said was that the expression "ability to pay" has been sometimes used in that sense. I am asking you for information, not as to what is the existing practice, but what is the sense in which you use the expression "ability to pay," in order to avoid all subsequent ambiguity?—I use the word "ability" in a technical sense.

8223. Would you explain it to me?—In the same way in which the word was used, I believe in the first instance, in the Act of Elizabeth; that, as I understand it, means that some inquiry was made into a man's means and his apparent income, and then he was charged with so much rates or taxes. In the present day no doubt his ability to pay would be arrived at in the same manner that the Income Tax payer's ability to pay the Income Tax is arrived at.

8224. Assuming that to be accepted, do you contemplate that the administration of the Poor Law, the highways, and of education, should or should not remain local?—I think that it should remain local to some extent, but I think that the local authorities should be assisted by officials appointed by the Government to attend the boards—the district committees, as I think they are called now—and assist in the administration of the poor law.

8225. What do you mean by "assistance"; where is the ultimate power to lie?—The ultimate power would lie with the district councils. I think they are called, in the same way that it does now. I would suggest that that difficulty—if it is a difficulty—could be got over by assessors or assistants being appointed by the Government to sit upon those boards with the other members of the boards, and consult with them, having of course the same voting power, but not a preponderating voting power.

8226. The power, of course, would, under that arrangement, ultimately rest with those who had a majority?—Certainly it would.

8227. What is to be the check upon extravagance?—The county auditor.

8228. Is he, for example, to have the power to strike off people who, *ex hypothesi*, might be improperly put upon the roll for poor relief?—I think that he ought to have authority to surcharge any improper payments which were permitted by the district council.

8229. Is he to be a judge of whether a man is properly or improperly put upon the roll for poor relief?—I think that ultimately he would become the judge of that. I think that disputes would arise between the authority probably and the Government officials, and they would be decided in the courts, and so by degrees precedents would be created, and the auditor would be able to say: "This is an improper charge and that is not an improper charge."

8230. Would he ever be able to say that this or that man is or is not a proper subject for poor relief without practically taking over the whole administration?—I think he would, just in the same way that now the proper subjects for relief are arrived at.

8231. Yes, but by your proposed system, if I understand it aright, no locality, whose elected persons were extravagant in their administration would be in any way penalised, because the charge is to be an Imperial one?—Surely the person who objected to any charge if he made his case good, would throw the responsibility personally upon the members of the council.

8232. Who would have a title to object, whose interest would it be to object?—It would be the interests of those gentlemen that I suggest should be appointed to assist the district council.

8233. And it would, of course, be no local persons' interest to object at all?—It would not be any local persons' interest, certainly.

8234. I would like to call your attention to what you describe in paragraph 58 as "a very common fallacy" with regard to what took place at the time of the "commutation" of tithes and the procedure taken to make up the tithe rentcharge. Do I understand you to suggest that no calculation was made as to the rates

then existing?—In some cases no calculation was made.

8235. I understand you to put it higher than that, not only in some cases, but universally?—No, I think not. Can you point out where I say so.

8236. In paragraph 58 you say "At the time of the commutation a sum was added to the tithes to make up the tithe rentcharge, and thus to secure to the tithe owner a tithe value free of rates, that is to say, that tithe rentcharge equals tithes, plus rates;" that is what you describe as a very common fallacy "enunciated by persons holding high offices in ecclesiastical ranks and by Cabinet Ministers"?—That is so. I go on to explain that, if you look a little further on. There were three different cases provided for by the Commutation Act. In some cases the tithe was collected in kind, and in that case there was no calculation made as to what the rates were; it was not necessary. In other cases the tithe owner had entered into a composition with the owner or the occupier of the land—the occupier would be the more correct way of putting it perhaps; that is to say, the farmer, or the farmers, of the parish had agreed with the tithe owner to pay him so much a year to represent the tithes, the farmers paying the rates; then the commissioners were directed to ascertain what the amount was that the farmers had been paying for rates, and to add that to what they calculated the tithe was free of the rates; in that case, of course, the commissioners had to enquire what the rates were.

8237. In that case, in your view, who was by the bargain intended to remain liable to the rates?—The tithe owner in future had to pay the rates, because this composition business was all swept away by the Act.

8238. Taking in that case, of course, the risk of any increment of rates?—Certainly.

8239. And in the other case that you first mentioned, who remains liable to pay the rates?—The tithe owner; in every case the tithe owner is liable for the rates in future.

8240. And, of course, taking the liability for any increment?—Just so.

8241. I suppose that tithe so far as the land is concerned, and so far as the agriculturist is concerned is really rent under another name, is it not?—It is so; it is really part of the rent.

8242. And is not in that sense a burden analogous to rates in any way?—No.

8243. It is rent and not rates?—That is so. I contend that it is not a burden at all, any more than rent is. Here is a little pamphlet which, with your permission, I will put in on this point (*handing in pamphlet*).

8244. In paragraph 66 of your memorandum following on what I have just questioned you, you state, which is of course the fact: "Since the commutation fresh rates have been made and by the terms of the Acts creating them, these were placed upon the same persons and upon the same property as the poor's rate. Tithe rentcharge was one of the properties subject to the poor's rate, therefore tithe rentcharge became subject to these fresh rates. I am referring amongst other things to the general rate and lighting rate." Then you go on to one of the main points, I think I may say, in paragraph 67 of your memorandum—"Now, however right it might have been to have placed these fresh rates upon tithes, it was clearly wrong to place them upon the tithe rentcharge." I wish you would develop that for me, for I do not quite follow the difference?—Tithe before the commutation was a tenth part of the produce of the land, and subject therefore to all *pro rata* deductions proper to all the rest of the produce of the land, but tithe rentcharge was a rentcharge put upon the land representing that tenth produce after deductions had been made by the Commissioners as directed by the Act. They are what the actual value of the produce was found to be by the Commissioners, and these rates that have been imposed, I contend, were provided for in those deductions which were made by the Commissioners when they were arriving at the tithe rentcharge. They made deductions which under the Commutation Act I contend were intended to provide for all future contingencies except such rates as were then being paid, and were directed by the Act to be imposed upon the tithe rentcharge such as the poor rate and so on, and therefore the tithe owner has

already paid or had deducted from his property an amount to represent these rates.

8245. The rates which were in existence at the time of the commutation?—Yes.

8246. But not the future rates?—Not future rates of that class.

8247. Or any future rate?—Well or any future rate—I think I may say that.

8248. Assume for the moment that the Legislature had not put rates upon the tithe rentcharge—would that not have caused a great inequality between land which is subject to tithe rentcharge and land which is not—assuming for the moment, which I do not ask you to assume permanently, that it was right these burdens should be borne by property now rateable?—Possibly, that may be so, but then that raises another question.

8249. I want your comment; I want to draw it from you in your own words?—You see I contend that there have been a large number of rates put upon both land and tithes which it was never intended those properties should have been made subject to originally. It was never contemplated when the Parochial Assessment Act was passed, for instance, that there would be these particular rates. The Education Rate, for instance, has arisen since. If it had been contemplated at the time that the Parochial Assessment Act was passed that there would be this charge, I do not myself think the Act would ever have been passed.

8250. You must clearly understand from me that I am expressing no opinion at this moment, in any question I put, as to whether your contention is right or wrong, or whether the tithe rentcharge owner has or has not a special grievance. What I want to elicit from you to see whether you agree with me in this, is, assuming that the Legislature for expenditure for local purposes was right to rate certain classes of property among which the main one, the largest one, was land, would it not have been very inequitable in one case to rate the land which was not subject to tithe rentcharge on the value which a tenant paid to his landlord and leave out of account the tithe rentcharge in rating land which was subject to that charge?—Yes, I think it would.

8251. In other words, would you not in one case have got a very unfair value relatively to the other?—I think probably, you would. When you asked me about land not subject to tithe rentcharge I was going to say I hardly think there is any.

8252. I put it thus—it varies very much in amount; in some cases it is almost infinitesimal; in other cases it is very large; is that not so?—Yes, but it is all subject to the same law.

8253. Perhaps it is possible I was not accurate in saying, "Not subject to tithe rentcharge," but if the rentcharge bears a small proportion to the rent which goes into the landlord's pocket, the contention I put to you in that question would be clearly the same?—I do not think so, because you see all tithes would bear the charges to which it was subject in the same proportion, whether it was small as compared with the rent or large.

8254. I understand from you, that you think it a special grievance to the tithe rentcharge owner that his rentcharge is rated at all for these purposes?—What I said just now was that he is rated in the same way whether his tithe rentcharge is a small or a large amount as compared with the rent.

8255. I thought part of your contention was that a tithe rentcharge owner should not have been rated at all?—No, I do not think so.

8256. I misunderstood you; you do not then suggest that if land is to be rated the tithe rentcharge owner should escape?—Certainly not; I think he is in the same boat with the landowner.

8257. I think another of the points which you wish to make is that the Assessment Committees deal unfairly with tithe rentcharge in the values which they put upon it in their lists for rating purposes?—Yes, I do, certainly.

8258. Would you explain to me why?—Why they do this?

8259. Why do you think it unfair? I think I see the reasons in your memorandum, but I should like to have it on the notes in your own words?—In the first place the assessment committees are composed of farmers principally, and the interest of the farmer is

to cut down the assessment on his own land as low as possible.

8260. That is the interest of all of us, I suppose, is it not?—Yes, but we are not all of us on assessment committees, you see.

8261. I know, but I want to know if you wish it to appear on the notes that there is any special or original sin in the mind of the farmer; that is all?—This is a fact. I have had an opportunity of going before a great many assessment committees all over the country—a very large number of them—and I find that they are very nearly always, the majority at any rate, composed of farmers; their object, I also find, is to keep down their own assessments, and by that means throw the largest amount of the rate upon the shoulders of the other ratepayers in the parish. The tithe owner is in a very large number of instances almost always the largest ratepayer in the parish when you exclude the farmers and landowners, and he appears before a tribunal, whose personal interest it is to treat him unfairly. It is a matter of fact, and it does not matter what is thought about it, but what happens is, that he is dealt with unfairly, and that the law which rules assessments is improperly applied to him, and he is a heavy loser by that result, and has been for years and years.

8262. I want to get from you whether you think the tithe rentcharge owner is rated above what his property would let for to the hypothetical tenant, or whether the result of which you complain is arrived at by the cutting down of other properties?—Both.

8263. It is obviously easier to find out the value of a tithe rentcharge than of a farm, which may be in hand for example?—Yes, for this simple reason, that everybody knows what the tithe rentcharge owner is entitled to.

8264. Do you think the tithe rentcharge owner then is rated above what his property would let for?—Certainly I do; I am sure of it.

8265. Why?—I shall be very happy to explain that to you. The assessment committees, as far as my experience goes, never allow more than five per cent., as a deduction to represent tenants' profit and cost of collection. Now I unhesitatingly say that nobody would ever take the lease of a tithe rentcharge at five per cent. below the net value.

8266. What deductions would you yourself suggest apart from those matters of expenditure which you deal with later on in the memorandum, such as curates' stipend and so on?—In the case of an agriculturist, the Income Tax Commissioners allow him one-third of what they consider the annual value to represent what he calls his tenant's profit; and I do not see why a tithe owner should not be treated in a somewhat similar manner. I should think 25 or 30 per cent. a very fair allowance.

8267. I do not quite follow the analogy between the tenant farmer and the tithe owner?—May I put a supposititious case to you?

8268. If you please, I wish you would?—Supposing you are a tithe owner, and you own a thousand pounds' worth of tithe, that is, a thousand pounds annually at the present corn averages on the 1st of January last, and you want to let it to me, and I come to you about it and I say to you: Well, I cannot give you 1,000*l.*, because it is obvious it would be no use to me simply to collect 1,000*l.* and pay it over to you, simply to become the channel for carrying your income to you. I should sit down and make a calculation. I should deduct all those legal deductions, such as the payment of rates, according to the rates that were paid during the last 12 months. I should deduct something for the average losses, and for any ecclesiastical fees that had to be paid; repairs to the chancel, if you were liable for them.

8269. Perhaps you had better leave out the repairs to the chancel for the moment, because we will make that a special subject of question and answer afterwards?—Very well; then I should want to know about what share I ought to have as tenant's profit; that is to say, a living profit, because, presumably, if I am going to become tenant of your tithe I am going to make my living by taking a lease and making a profit out of it, and I should consider that I should not be asking for an extraordinary amount if I asked for 30 per cent. on account of that if I said—after deducting all these rates and other things that I know I must pay—I am going to deduct 30 per cent. So putting the rates and other deductions at 15 per cent., I should offer you a rent of 55*l.* for every hundred of your 1,000*l.*

29 June '97

8270. You put the deductions—what I call wastage—as high as 45 per cent. ?—I should.

8271. You base that upon a fair and full calculation as the result of your experience?—I do. I do not think that a tenant of tithes would be acting in the way in which an ordinary business man acts if he offered a higher rent than that.

8272. May I take it that the deductions to which you are now referring are embraced in these, which you mention in your memorandum, and these only, namely, expenses of collection, average annual amount of losses, average annual cost of legal proceedings for the recovery of rentcharge, allowance in respect of tenant's profit, tenant's rates and taxes payable out of the rentcharge, and ecclesiastical dues?—Yes.

8273. Could you, when you come to correct the proof of your evidence divide the 45 per cent. into those respective headings?—Yes, I could, and I shall be pleased to do so.\*

8274. Then there are certain other contentions which, I understand, you put forward; for instance, that out of the tithe rentcharge heavy payments have to be made in many cases by the owner of the tithe, such, for example, as repairs to the chancel of the church?—Yes. You are probably aware that there was a case decided in the Court of Appeal, just before Christmas, I think it was, in which it was held that the lessee of a tithe rentcharge would not be liable for the repairs of the chancel.

8275. I am putting it forward to you with great diffidence, because I do not profess to be an authority; but I have always understood in conversation on this matter that the person upon whom the repair of the chancel really fell was the rector, whoever he is?—I always supposed so till this decision.

8276. Does that decision strike at that principle?—I think so.

8277. Can you refer us to the decision?—Yes, it is "The Dean and Chapter of St. Asaph *versus* the Overseers of the Parish of Llanrhaidr," which is a parish in Wales. It is a reported case.

8278. Can you give us the effect of the decision?—The decision was this—the Court held that the occupier or tenant—in that case it was the hypothetical tenant—of the tithe rentcharge could not under any circumstances be called upon to repair the chancel.

8279. But that does not strike, does it, as stated by you, at the obligation which I suggested to you, lay on the rector?—With all submission, I think it does.

8280. I am about to put to you a case which, I dare say, as a solicitor, you will appreciate. If I am an owner of land adjoining another man's, and there is a dividing fence to be repaired, I may oblige my tenant to keep up the dividing fence; but my neighbour's recourse is not against my tenant but against me, is it not?—Quite so.

8281. Surely, however much the rector may let his tithes the recourse of those whose interest it is to have the chancel repaired is still against the rector, and not against the rector's tenant?—Then I suggest the court of appeal was wrong.

8282. I should not be so bold as to suggest that; but is it not so that, whether the rector lets his tithe or not, he is still responsible for the repairs of the chancel?—I think not after that decision.

8283. I will not carry it further just now; we will try and get the decision and look at it. Then you make a further suggestion that from the rentcharge there should be an allowance for the curate's stipend?—Yes, I do.

8284. Whether a curate is employed or not?—No, where it is necessary to employ a curate.

8285. Who is to judge of that?—I believe the Bishop is usually the judge of that. In a case where one of his clergy has a large parish I believe that it is the practice for him to bring pressure to bear upon the rector or the vicar, as the case may be—the incumbent—and compel him to employ a curate.

8286. Assuming for a moment that the rector was either an elderly man or a very rich man, and in charge

of a parish which for an able-bodied man who wished to do the whole duty for himself was within the compass of one man's ability to discharge, would you in such circumstances, because the rector or vicar employed a curate, allow him then to deduct it from the rentcharge?—No. I should be satisfied to leave it in this way—that where the Bishop certified that a curate was properly and necessarily employed, in that case the deduction should be made. It would be open to every incumbent who wanted to have a curate to go to his Bishop and ask for a certificate.

8287. I suppose I need hardly ask you—you would not allow the rating authority to have any say in that?—Certainly not.

8288. They are materially interested, are they not, though not ecclesiastically?—Considering the personnel of the Bench of Bishops, I think all ratepayers' interests would be safely left in their hands on that particular question myself. It is a matter of opinion of course. With your permission I should like to read you a letter on that point that I have here.

8289. Please, certainly?—It is from Canon Davys, the Rector of Wheathampstead. I wrote to him knowing that he had a parish of this particular class, which required a curate. He is not an old man; he has some means. He is a very active man, a very hard worker. He says:—"Dear sir,—I have only just observed that you have to give evidence to-morrow June 29th, or I would have made an effort to reply to your letter of the 25th, amidst the many engagements of last week, before; but I hope by posting to-night I may yet be in time. The enclosed schedule, which please return after use, to me here, tells its own tale, and shows how what is called a good living is reduced far below the amount required to live and work in it, the fact being that it could not be worked with a population of 2,371, and with 30 miles of road in it, or this house and grounds lived in as required by law and kept decent, without an outlay from private sources of more than 1,000*l.* per annum; a curate, too, has to be employed here of necessity, and I give my present helper 180*l.* per annum, including house rent, for which I am now not allowed to deduct a penny from the assessment to the poor and other rates. That I look upon as a great hardship, which should be taken off the shoulders of the clergy, who perforce must pay curates' salaries. I think these are the chief facts that should be brought before the notice of the Royal Commission on Local Taxation. Believe me, yours very faithfully, OWEN W. DAVYS." The figures are these; the value of the tithe rentcharge for the year 1896 is 543*l.* 12*s.* 9*d.*, the deductions allowed by the assessment committee amount to 143*l.* 6*s.* 11*d.*, leaving a balance of 400*l.* 11*s.* 10*d.*, and after deducting the curate's salary of 180*l.*, the net income going to Canon Davys is 220*l.* 11*s.* 10*d.*, out of a gross income of 543*l.* 12*s.* 9*d.* I submit that the ability of Canon Davys does not go to the extent of allowing him to make such heavy payments as these.

8290. Is there any other matter that you want to add about deductions?—No, I think not.

8291. I do not understand your suggestion in paragraph 83, that there should be an allowance for increase of charges, by which I think you mean an increase of rates?—What I mean by that is that a lessee in making the deductions in calculating what rent he could offer to give, would certainly if he were going to take the tithe for a term of years, make some calculation to cover the increase of rates.

8292. Obviously in the case of a man who kept his tithe rentcharge in his own hands it would be sufficient for him, if the rates and taxes of the year were deducted?—I think he is entitled to this tenant's profit.

8293. I am on the question of the deduction of an increase of charges?—I beg your pardon, quite so.

8294. You agree?—I agree to that.

8295. What is the import of the next head under which you claim a deduction namely "as to loss by reason of payments in advance"?—Under the Tithe Act, 1891, the tithe owner cannot sue for or apply to the county court where his tithe is not paid till three months after it becomes due. I think, therefore, that some calculation ought to be made of what the loss is to the tithe owner by reason of that delay because it is obvious, that 100*l.* to-day is worth more money to me than 100*l.* this day three months; I lose so much interest in the meantime.

Mr.  
E. W. I.  
Peterson.

29 June '97

Deductions.  
Tithe rentcharge.  
Repair of chancel.

Deductions.  
Tithe rentcharge.  
Curate's stipend should be allowed.  
Question who should decide if a curate was necessary.

Deductions.  
Tithe rentcharge let to hypothetical tenant.  
Increase of rates.

Deductions.  
Tithe rentcharge.  
Loss to tithe owner under Tithe Act, 1891, owing to inability to sue for it until three months after it is due.

\* The witness subsequently wrote: "I should divide it as follows—rates and taxes and other outgoings, 15 per cent.; personal services, 15 per cent.; and tenants' profits, 15 per cent. If nothing is allowed for personal services then I should put the tenants' profits at 30 per cent."

Mr. W. I. Peterson. June '97

8296. If you are the owner of it from year to year, there would be one deduction once for all of three months upon the 100l., and nothing more, would there? —Yes, you might put it in that way. At the same time I think you would be entitled to some further deduction to represent the average outlay. As a matter of fact, a great deal of tithe is not paid for four, five, even six months, and longer, after it becomes due. You see the Legislature has, unfortunately, invited debtors who are tithe-payers, not to pay their debts up punctually, but to delay; and they have got into the habit of doing so. That statement I make from my own experience.

Deductions. Tithe rent-charge. Tenant's profits.

8297. Then I came to your fourth heading, the tenants' or inhabitants' profit. I do not understand that as being anything distinct from what you have already spoken to?—It is not; we have dealt with that.

Deductions. Tithe rent-charge. Personal services.

8298. Then the last head is the deduction for personal services; how do you justify that?—In the same way, that in calculating income derived from other sources, a deduction is, I believe, always made to represent a man's personal services. He has either got to give them, or he has got to pay somebody else to do the work; that is a distinct loss to him; it is a distinct reduction of his income derived from that particular source, and I do not see why a clergyman who is a tithe owner should not have the same benefit.

8299. Can you give me an analogy in which a deduction of a similar kind is allowed?—It is allowed the farmer.

8300. But we have had that already, have we not—the tenant's or inhabitant's profit? I want to make it distinct from what is allowed for the tenant's profit. I understand the tenant's profit, but I do not understand the deduction for personal services?—I think they would be included in the two. I have got a little bit at cross purposes I am afraid there by the tenant's profits having been taken out of order.

Deductions which should be allowed in respect of tithe rent-charge.

8301. After all these deductions are made, how much do you think would remain for the tithe rentcharge owner to be rated upon in proportion to the gross income that he draws from the tithe rentcharge?—About 55 per cent.

8302. All these things are to come out of the 45 per cent. which you mentioned before?—Yes.

8303. Then I misunderstood your answer to a previous question. When I gave a list of deductions from your own paragraph, and asked you how much it was, you answered me 45 per cent.; then I asked you to divide them up amongst those six or seven heads; but it is quite clear from your last answer that you would have to include these other things in the list to make up the 45 per cent.?—Yes; I will tell you how I got at that. I reckoned that the personal services and the tenant's profits would come to 30 per cent., and the 15 per cent. would represent the other outgoings. I am sorry I was not clear about that before.

Deductions. Tithe rent-charge. Personal services.

8304. Possibly it was quite as much my fault as yours. If we did not see our way to agreeing to the suggestion of the deduction for personal services, how much of the 30 per cent. would be personal services, and how much tenant's profit?—I should be inclined to divide it in half.

Ability to pay. Doctrine cannot be applied to local rating.

8305. I do not take you through the last part of your memorandum, because it deals with matters which have been, and will be very fully before us on other grounds; and I think the first questions which I put to you are sufficient for me to have drawn out what you had to say. I would just like to say that I concur entirely with you in your statement of the objections which you say are sufficient to prove that it is practically impossible to assess a ratepayer locally to the local burdens in any way upon, taking your own phrase, his ability to pay. I do not think it necessary to go through that part of your memorandum with you, because we have had it all before us?—Very good.

Real and personal property. Contribution direct and indirect to rates in respect of.

8306. (Mr. Arthur O'Connor.) I should like to ask you one or two questions upon your memorandum which appears to me to be not only very interesting but very valuable. In paragraph 18 I notice that you suppose a case in which A, B, and C are the only inhabitants of a parish. A, a landowner holding land worth 20,000l., and deriving an income from it of 1,000l.; B, owning land worth 40,000l., which brings him an income of 2,000l. a year; and C, owning no land but having property invested in stocks and shares from which he

derives an income of 1,500l. a year. Then you assume that there is to be a poor rate raised to the amount of 100l., and you say that A would be rated on his 1,000l., and pay 33l. 6s. 8d.; and B would be rated on his 2,000l., and pay 66l. 13s. 4d., thereby making up the whole amount; whereas C would pay nothing. The first thing that occurs to me in connexion with your suggestion that C ought to be rated as well as A and B, is; how much does A pay for permission to be an inhabitant of that parish?—For permission to be an inhabitant?

8307. Yes; he owns land of his own, does he not, according to your hypothesis?—Yes.

8308. Does he pay anything for permission to be an inhabitant?—I should not have thought he ought to; this is a free country, so I always understood.

8309. A man can live on his land, can he not?—Certainly, he may do so.

8310. And B in the same way does not pay anything for mere presence in the parish, because he owns land too?—Yes.

8311. Now, I will take the case of C, who does not own any land at all; if he is an inhabitant he must be the occupant of the land of another?—Yes.

8312. Therefore, in this case, C would have to pay to A or to B something in the way of rent for permission to be an inhabitant of that parish, would he not?—I should have said that he paid the rent because he had the profitable occupation of the tenancy.

8313. I am not asking the reason, I am only trying to get you to assent to the obvious fact?—Yes, but I do not think I am quite prepared to do so off hand.

8314. If A owns half the parish and B owns the other half, and C is a third party inhabiting that parish, I put it to you that he must either be on A's land or on B's land?—Yes, that is so.

8315. And, as occupant, he makes some render to A or to B, whose land he occupies?—Yes, because it is presumably profitable to him to live there.

8316. I am not concerned with the reason, I am only getting you to assent to the fact?—He pays rent.

8317. Certainly; that rent goes to A or to B?—Yes.

8318. Then of the money which A or B has, as proceeding from his land, some of it comes from C?—If C lives in the parish, yes.

8319. That is your own hypothesis. You have said that A, B, and C are inhabitants of the parish?—Yes.

8320. Then of the money which A or B has as rent, part of it is paid by C himself?—Yes.

8321. And only a certain proportionate rate out of what is paid by C is charged against B or A, whoever the recipient of it is?—Quite so.

8322. Do you think that C does a service or the reverse to the parish by being an inhabitant, he having an income of 1,500l. a year?—I should not think he does one or the other.

8323. It is not an advantage to a parish to have a number of rich men living in it, then?—Well, the rates fall upon the land all the same.

8324. Yes, and the land of itself is brute?—It would not be any advantage to either A or B.

8325. Unless land produces something in the way of rent or crops it is not of much advantage except as standing ground, is it?—No, but in this case it produces 3,000l. a year.

8326. Precisely; of which C contributes a portion?—Yes; still the land might be let to people who reside outside the parish.

8327. Now I think you are departing from your own suggestion, which is that A, B, and C are inhabitants and the only inhabitants?—They are the only inhabitants; but a man might live across the border and rent a great deal of A or B's land.

8328. I do not find that in your suggested case, and I want to confine myself to your own illustration?—I think my case is open to that construction with all submission. "A, B, and C, are the only inhabitants of a parish"—that is, the only people who reside in the parish. Then I go on to deal with them. C, as you suggest, must rent part of the land of A or B, but there may be a number of other tenants who live somewhere else, but rent other parts of the land. For instance, now putting a case in point, I myself rent land down in Romney Marsh, but I do not live there, and I very often do not

Mr. E. W. J. Peterson. 29 June '97

Mr.  
E. W. I.  
Peterson.

29 June '97

go there from the 1st of January to the 31st of December, but I rent land, and I pay the rent for it.

8329. And when the rent gets into the hands of the landlord he pays rates, does he not?—As a matter of fact I pay the rates myself, but then I think I have explained somewhere in the evidence that I look upon it that all rates are really paid by the landowner.

8330. I know you do, and that is why I put it to you, that out of the money which A or B in this supposed case pays, some comes from C?—Quite so.

8331. Then C indirectly contributes—?—Part of the income—

8332. To the rates?—Indirectly yes, like any other occupier.

8333. Take the case of a lodging-house, the lodging-house proprietor pays the rates, does he not?—Yes.

8334. Does he not get it from his tenants?—He gets the rent from the tenant.

8335. He gets resources from his tenants—he gets money?—Yes; just in the same way I rent an office in a large block of buildings in Lincoln's Inn Fields; I pay so much a year to my landlord, I do not pay any rates, but I pay so much more than I should pay if there were no rates at all to be paid by the landlord.

8336. Precisely; that is to say, the means to pay the rates on that block you furnish under the name of rent?—Yes.

8337. Therefore, it may well be that a person who is not a landowner indirectly pays or helps to pay the rates?—Quite so.

8338. Therefore it is not the land necessarily or the landowner that ultimately pays, even though his be the hand which furnishes to the collector what is paid as rates?—Yes, I think it is; from my point of view it is. It does not matter who the individual is surely, that pays the rent; it is the land that fetches the rent, and it is the land that produces the rent; that is the way I should put it; just like my office would let to somebody else if I choose to give it up—being in a good position it would let to-morrow morning probably.

8339. You treat your office as if it were land?—Certainly I do.

8340. Who made the office?—It is a very old house; I am told it was built by Inigo Jones.

8341. It was built, was it not?—I believe so, originally—no doubt of it.

8342. Who made the land?—I must refer you to the first chapter of Genesis, I think.

8343. Thank you, I am glad to have that on the notes. In paragraph 15 you make an observation with regard to the terms of reference to this Commission: "I gather from the terms of the reference that the Legislature agree that personal property should contribute equitably with real property to local taxation"; I suppose the Legislature has nothing to say to the reference; you mean the executive?—I mean the executive.

8344. The executive has decided upon the terms of reference; do you think another executive might have framed a reference with a totally different implication?—Certainly.

8345. But you agree that the terms of the reference to this Commission, as you read them, do suggest the view that property, other than landed property, should contribute in some degree to the payment of rates?—Yes, I do.

8346. You think it is involved in the terms of the reference?—I do.

8347. Now with regard to the principle of rating land or other property, I suppose you admit at any rate, that the land has to bear the physical weight of the human race?—Yes, I do not know exactly what that means, but still I will admit that.

8348. Still it is necessary for the presence of man, necessary for his domicile?—Certainly.

8349. Necessary for his locomotion?—Certainly.

8350. For his food and his clothing?—Certainly.

8351. And all these things must come out of the land directly or indirectly?—Yes.

8352. If everything necessary for mankind is to come out of the land why should not rates?—Because it has been found, as I contend I have proved by the evidence

that I have put before the Commission, that it is unjust that the rates should be levied upon land entirely.

8353. With land alone without labour, could you have any of the things necessary to man?—No, and therefore I say that the people who labour and make profit out of it ought to pay some of the rate.

8354. But without labour the land would be useless, it would give forth nothing?—That is so.

8355. All that you could have in the way of wealth is the wealth of labour as applied to land?—Applied to land, yes. Do you include in that labour applied to minerals and all that sort of thing?

8356. I suppose so. I include all that men do in the way of professional and physical labour?—Yes, I do not think I can have any objection to that.

8357. I suppose the carpenter, the farmer, the miner, the manufacturer, the carrier, the agent, the lawyer, the doctor, and even the clergyman, may be said to labour in one form or another?—Yes.

8358. And without human labour this land would produce nothing?—No.

8359. As landowner simply what does the owner do?—As landowner simply, according to your way of putting it, if you will allow me to say so, the landowner would not have anything at all to pay the rates out of, that is just my contention.

8360. You are leaving the question a little. In his capacity simply as landowner what labour does the landowner do?—He looks after his estate; for instance, there is a book which has just been published by the Duke of Bedford which seems rather to show that he must have worked pretty hard. I do not know whether you have seen it, but I read a long review of it in the "Field."

8361. But that is a long story of administration—of an agency?—He administers then.

8362. That is in his capacity of manager or agent; I am speaking from the point of view of ownership only?—I say from the point of view of ownership only, that he will have nothing to pay rates out of, because the land would be, as you have already stated, unproductive.

8363. Precisely; ownership alone would furnish nothing out of which to pay rates?—Pure ownership, no.

8364. It is labour in some form or another which enables men to have and to pay whatever they do have, or whatever they do pay. That being so, do you suggest how rates can be paid at all except out of industry and labour—at any rate indirectly?—No, I do not propose to do so; it is my contention that they must be paid out of industry and labour, and that they ought to be.

8365. Now the land is held by a comparatively small number of persons, as owners, is it not?—Yes.

8366. And the rest of the human race are the industrials?—Yes.

8367. Out of whose labour everything comes by which rates can be paid?—Yes; and it is a curious thing that the people who do not own the land are in the more fortunate position.

8368. But the landowners, besides their bare ownership of the land, are, in fact, in receipt of rent for the land, are they not?—Yes.

8369. *Qua* owners they receive rent, but *qua* owners they do no work?—But they do work; they do not receive any rent unless they administer.

8370. I thought we had already settled the point that *qua* owners, simply and solely, they do not work. The land under those circumstances without labour applied to it would produce nothing?—Yes, and they would not have any tenants.

8371. *Qua* owners simply and—?—Surely, sir, you will excuse me—in that case we got into this position, that there would not be any industry because there would be no tenant.

8372. Exactly; without tenants the landowner would have nothing but his bare land?—Yes.

8373. Given the tenants and the industry of the tenants then there is something for the landowner to receive under the term of rent?—Yes.

8374. Which rent is produced by the industry of the tenants?—Yes.

Mr.  
E. W. I.  
Peterson.

29 June '97

Land,  
rating in  
respect of.  
To what  
extent land  
should be  
assessed  
to rates.

Mr.  
E. W. I.  
Peterson.

9 June '97

8375. And it is out of that rent that the landlord pays what he has to pay?—Yes.

8376. It is therefore produced to enable the landlord to pay, and it is produced by the industry of the tenants?—Quite so.

8377. It is the industrial part of the community who furnish the landlord with means to meet his rates?—No, they do not under the present system.

8378. Will you show me where the fallacy lies in my deduction?—They do not find him with enough; they find him with some. For instance, I will put this to you: Supposing, besides the rates and local taxes that are paid out of the land by the landowner at present or his tenant, the whole of the Income Tax were thrown on the shoulders of the landlord and everybody else was relieved from it, what would happen then?

8379. I do not want to argue with you?—You see the tenant of the land only pays part of the result of his industry as rent.

8380. I notice that in paragraph 28 you give a very interesting statement of assessments made a long time ago—in 1680, I think. You there show, in two columns, the rent set against the several persons' names in the first part of the return, and also the abilities of the several persons. Now, in paragraph 29 you say: "Unfortunately, there is nothing in these books to show how the overseers and churchwardens estimated the 'ability' of the inhabitants." I draw your attention to the fact that the two columns I have referred to of rent and abilities show a constant proportion—20*l.* rent, ability, 10*s.*; 6*l.* rent, ability, 3*s.*; Hone Barn, 40*l.* rent, ability, 1*l.*; 7*l.* rent, ability, 3*s.* 6*d.* Do you not see that the ability is in every single case 6*d.* in the £ for every one of those persons mentioned?—Yes, those you have quoted.

8381. I quote the whole column without exception?—Look at Mr. John Lamb, rent, blank, ability, 4*s.*; Mr. George Lamb, rent, blank, ability 8*s.*; John Simty, rent, blank, ability 6*s.*; Widow Harris and her daughter, rent, blank, ability, 2*s.* 6*d.* I presume that those people did not occupy any premises, but paid according to their ability.

8382. That is an assumption, of course, which is admissible, but it is not a conclusive assumption. In every single case in which the rent can be compared with the abilities you can observe a constant proportion; but in four cases, out of a large number, the rent is not entered?—Yes. You know this is only an extract from a very much larger book; I looked through the book, and thought it was a typical extract.

8383. I take what you have put before us, and I see there is a constant proportion between the abilities and the rent—a proportion of 6*d.* in the £. Do you not think that the word "abilities," as used in this particular assessment return, really meant rating—assessment?—Do you mean by the word "rating," assessment on land and hereditaments?

8384. Yes; the rent being 20*l.* he is assessed to pay 10*s.*?—No doubt it was in the case of those that are mentioned; but I also suggest that in the case of those where there is no rent given those persons were assessed to a rate without their occupying any premises.

8385. I should think that on the face of it—I do not know whether you will assent to it—that this very return shows by the constancy of the proportion that the abilities are evidently based upon the rent, and it is in the nature of a valuation list founded upon the rent or the land?—Of course it is a mere matter of opinion. I really, personally, do not see that I can say anything more than I have done. I have put before the Commissioners the extract. The books are at the Maidstone Museum, and can be seen there. I adhere to my view, of course.

8386. You say in paragraph 39, "Sir James Caird, a tithe commissioner, writing in 1876, states that the land rental of England since 1836 had risen 50 per cent." What do you understand by land rental there?—The amount of rent paid by the tenants for the occupation of the land to the landowner.

8387. Does it include houses?—Yes, it includes houses.

8388. In cities?—I have got Sir James Caird's words here. It was in answer to a question given before Mr. Inderwick's Committee: Asked before Mr. Inderwick's Committee: "Do you adhere to what you

said, that if the old right of participation had continued with regard to tithe, the annual income of the Church would now have been 2,000,000*l.* greater than it is, and the whole of the difference has gone into the pockets of the landowners?" Sir James answered, "So far as I know; I do not know where else the difference can have gone." So that I take it that Sir James Caird meant the land out of which the tithes arise—titheable land.

8389. But I thought you told the Chairman a little time ago that you thought all land was subject to tithes?—Yes, I do.

8390. Does it apply to all land?—To all land subject to tithe.

8391. If all land is subject to tithe it would apply to all land?—Then it would apply to all land. That is a matter of fact which I am not personally prepared to make any definite statement about; I do not know what lands —

8392. At any rate, whether it includes lands in cities or not, it is true that the land rental had risen in 40 years, 50 per cent.?—That is what Sir James Caird says; that is my authority for that statement.

8393. You have no reason to doubt it?—I have no reason to doubt it.

8394. We will take it so, that in 40 years the value of the land has risen 50 per cent.?—At that time.

8395. In 1876, when he was speaking, it had risen 50 per cent., he says, since 1836?—Yes.

8396. Can you tell us at all why it should have risen?—No, I cannot tell you that. I do not know.

8397. It did not rise by reason of anything done by the landlords as landlords?—I could not tell at all; I have no information on the point.

8398. Do you know whether the population of the country had increased immensely in the meantime?—I should think it had, but I do not, as a matter of fact, know it myself—I know nothing about the census returns.

8399. You do not know that the population increased from 1836 to 1876 very much?—I should assume it did, but I have never looked at the census returns.

8400. Together with the increase of population, step by step, I think, the land rental advanced also, is that not so?—As population increases in any place or district, rents go up. I should think that is a sound statement.

8401. It is always in proportion to the density of the population?—I should think so.

8402. It is the population that gives the value to the land?—Except in Ireland.

8403. Do you think land is more valuable in Ireland now than it was?—I know very little about Ireland, but I have always been told that the increase of population there did not make the land any more valuable; it did not enhance the value of the land.

8404. I am afraid the increase of population has not occurred during the last 50 years, has it?—What, in Ireland?

8405. Yes, we are speaking of Ireland?—I really do not know enough to be able to say.

8406. (Chairman.) I do not think you know much about Ireland?—I know nothing about it.

8407. (Mr. Arthur O'Connor.) I thought you were introducing it as an illustration, and I wanted to see the value of the illustration. Now, let us come to the Tithe Commutation Act; I have got the terms of it before me; have you a copy of it, if so, will you look at section 37? The Act deals with the value of the tithe to be calculated upon an average of seven years. I should like you to point out what there is in the 37th section that you think is unfair?—I do not say there is anything unfair in the section. Where do I say there is anything unfair?

8408. I do not say you do, but it appeared to me that you were dissatisfied with the arrangements made under that section?—No, not at all.

8409. You admit that it is reasonable and just, then?—I do.

8410. What interpretation do you put upon it with regard to the rates?—It imposes the rates—I think it is by that section—upon the tithe rentcharge.

Mr.  
E. W. I.  
Peterson.

Rent.  
Increase of rent in England between 1836 and 1876.  
Land-owners obtained a large sum representing the benefit which would have accrued to the church under the old right of participation.  
Sir James Caird's views.

Tithe Commutation Act, 1836. (6 & 7 Will. IV., c. 71.)

*Mr. E. W. I. Peterson*  
29 June '97

8411. Quite so ; I suppose that we may regard tithes as something issuing out of land or land values?—Yes.

8412. Let us assume that the property is represented by a circular cake, and that the tithe is a slice of that cake cut from the central point by two radii to points distant from one another one-tenth of the circumference ; that would represent the interest of the tithe owner, would it not?—Yes, if it was a tenth.

8413. Roughly it would?—That is, the tithe owner before the passing of the Tithe Commutation Act.

8414. Yes, taking the tithes in the theoretical sense of the term as a tenth. At any rate it represents a slice. Now, if there is to be any burden upon the cake as a whole, why should not that particular slice bear its share or contribute its share?—No reason at all.

8415. There is no reason therefore why tithe rent-charge or tithes should not pay a proportion of the burden on land?—No.

8416. Now, at the time of this Commutation Act, is it not true that there was a very great deal of agitation against the collection of tithes?—I believe so.

8417. Was there not almost civil war in connection with it—many disturbances at any rate?—There seems to have been a great deal of agitation about it. I do not know whether it amounted to civil war.

8418. Was it not considered that it furnished a very serious point of attack against the Church itself?—I really cannot answer that question, it was before my time.

8419. Do you think it would be inaccurate to say that safety and quiet were purchased by a compromise under the Commutation Act?—You see that is a matter of opinion ; I could give you my opinion if it is worth anything.

8420. With regard to the fact?—With regard to the fact.

8421. Do you know the history of the Commutation Act?—I know a good deal about it.

8422. Is that not shortly the history of it, that to meet agitation, to avoid disturbance, and to allay and prevent an attack upon the Church itself, it was thought better to do away with the system of collecting tithes from the tenants and to get the landlord to pay, the tenant then paying only indirectly?—I should rather have said that it was the result of the exigencies of the Government of the then present day.

8423. Very well, at any rate it was a compromise of some kind?—That is merely my opinion ; I really do not know whether it is worth anything. It was a compromise certainly.

8424. Did they not purchase by the compromise facility for getting in an assured sum as against difficulty in getting in an uncertain sum?—A large number of people thought they did.

8425. Is there any particular point which you would wish to emphasise, that you have not been asked about yet?—No.

8426. Is leasing a tithe rentcharge a common thing?—No, it is very uncommon ; in fact I do not know of any leasing of tithe rentcharge at the present time.

8427. It is a purely imaginary thing for practical purposes?—At the present it is ; it was a very common thing before the commutation.

8428. But since then it is a thing that practically one does not meet with?—No, I do not know of any case.

8429. Therefore, all this discussion on the supposed leasing of tithes is, one may say, a little beside the point?—It arises out of the fact that the courts of law have laid down that the way in which you must calculate the annual value is by assuming a hypothetical tenant.

8430. But as between tithes, you would draw a distinction between the tithes payable to a working rector and the tithe-impropriate in the hands of a layman, would you not?—Personally I should, because, you see, I ask for certain deductions in respect of personal services and curates' salaries, and so on ; and of course a lay impropriator has not given the personal services, so he would not be entitled to the deductions.

8431. Then you would draw a distinction between the two ; the lay impropriator receives his money simply

as a charge on the land without giving services for it, is that not so?—Yes, he does not have to give any services, so he would not be entitled to the deduction.

8432. The lay impropriator has a certain charge which has a money value upon certain land?—Yes.

8433. He does not give any services in return for that charge, does he?—No—no clerical services.

8434. Does he give any?—I do not know.

8435. The rector has his duty as rector to discharge?—Yes.

8436. And it is in consideration of that that he gets his tithes, is it not?—Yes, that is what I maintain.

8437. There is the difference—in consideration of that he has certain duties to discharge, so that between those two cases there is an important distinction?—There is that distinction, certainly, but the deductions that I claim I think you see would all work out fairly, because if a man did not give any personal services he would not be entitled to deductions in respect of them ; if he did not employ a curate he would not be entitled to deductions for it.

8438. Now with regard to the supposed case that you put to the Chairman. Supposing that a man is the owner of tithes to the extent of 1,000*l.*, and you propose to take those tithes on lease, you would stipulate for a deduction of 45 per cent.?—I should, personally.

8439. On account of certain necessary outgoings?—Yes.

8440. Would those outgoings be in existence if the tithe still remained in the hands of the lessor?—Yes, because I am assuming that I should have the same responsibilities thrown upon me that the lessor has.

8441. Then is it not a clear 1,000*l.* that he has to dispose of?—Not exactly.

8442. It is only 55 per cent. of it?—Just so ; that is what I have been trying to point out to the Commissioners.

8443. Then is it not a fallacy to assume that it is a 1,000*l.*?—Just so ; that is the fallacy the assessment committees all over the country fall into. That is what I am contending.

8444. I only want to get your point out clearly where I think you have made a good one. The 1,000*l.* nominal tithe in the hands of an ecclesiastical or clerical owner is in consideration of certain services which he is to discharge?—Yes, part of it.

8445. And you put those services down at 45 per cent.?—No, not the services ; I think I explained that. Of course I am obliged to use round figures ; I put the personal services at 15 per cent., tenant's profits at 15 per cent., and the rates and taxes and other outgoings at 15 per cent., and that makes the 45 per cent.

8446. The personal services you put down at 15 per cent.?—Yes, that is if he is allowed anything for tenant's profits.

8447. Out of the 100 his personal services represent 15, is that it?—If you allow him 15 per cent. for tenants' profits, otherwise I should put them at 30.

8448. Personal services represent 30 out of the 100, is that it?—Yes.

8449. And 70 do not?—That is so.

8450. Under those circumstances where is the hardship of his paying rates?—I do not say there is a hardship in his paying rates on the 55*l.*

8451. (*Mr. Clare.*) Will you kindly tell me whether I have correctly understood your point. As I understand it, it is this : that the farm tenant who keeps the land out of which the tithe rentcharge comes is allowed when his assessment is settled to have certain deductions made on account of the capital he will have to employ in order to earn the rent?—Yes.

8452. And that as the rentcharge is practically coming out of the same pocket as that which goes to the landlord, the same deductions ought to be allowed in assessing the tithe rentcharge as are allowed in assessing the farmer?—Yes.

8453. And therefore you claim to have interest on tenant's capital to be one of the deductions in arriving at the assessable value of the rentcharge?—Yes.

8454. (*Mr. Elliott.*) Arising out of that question you would say, would you not, that not only must the tenant's profit on his capital be taken into account,

*Mr. E. W. I. Peterson.*

Deductions. Tithe rent-charge. Personal services. To what extent should they be estimated.

Agricultural Rates Act, 1896. Tithe rent-charge. Reasons for omission of tithe rent charge from the Act. Inclusion of tithe rent charge in the scope of the Act would give substantial justice and satisfy tithe owners.

but the particular skill which he brings to bear in the discharge of his industry?—Yes.

8455. And that there is no more reason for allowing a deduction for the tenant's skill apart from the tenant's capital in the case of ordinary agricultural land than in the case of the tithe rentcharge?—Yes.

8456. With regard to what you said about the deduction for personal services, do you really think that the personal services of many an incumbent of a benefice could be fairly estimated at 15 per cent.?—No, I do not, but then, you see, I take it that you must apply some rough-and-ready rule to this sort of thing.

8457. Do you think that the per-centage rule would be the best possible rule?—I am not prepared to say that, I think it would. I do not really see without a great deal of further consideration, how to arrive at anything that I could put satisfactorily before the Commission about a per-centage rule.

8458. Is not your whole proposition with regard to the allowance of a sum for personal services somewhat dangerous, by reason of the fact that where the incumbent of the benefice, whether of small value or great value, discharges the duties, it may be said that the whole income of the benefice is in return for his personal services?—Yes, I quite admit that that is a great difficulty, and I do not see at present—although I have thought this over a good deal—how you are going to get over it except by applying one rough-and-ready rule, if I may call it so, to the whole class.

8459. Would you prefer the rough-and-ready rule of taking a fixed per-centage, or would you prefer the rough-and-ready rule which is adopted for income tax purposes in allowing an abatement of a certain fixed sum from incomes not exceeding a certain amount?—To be quite straightforward I never could make up my mind which I should prefer.

8460. Probably you would prefer that which was most favourable to the tithe rentcharge owner?—Probably I should.

8461. Do you favour at all the system of rating tithe rentcharge according to a fixed proportion of the tithe rentcharge as was done, I think in the case of the Public Health Act of 1875?—One-third was it not?

8462. No, one-fourth?—Yes, I think that that has a great element of fairness in it.

8463. Do you think that that principle should be extended?—Yes, I think it should.

8464. Supposing that the same proportion as that adopted in the case of the Agricultural Rates Act of last session had been applied to the case of tithe rentcharge, would that have substantially met the grievance which you have put before us with regard to tithe rentcharge to-day?—Do you mean as applied to all rates?

8465. As applied to all the rates which are the subject of relief under the Agricultural Rates Act?—I have never considered that point, but speaking offhand, I should say it would.

8466. Have any representations ever been made to you as the secretary of the Tithe Rentcharge Owners Union as to the omission of tithes rentcharge from the Agricultural Rates Act of last session?—Yes, a very large number.

8467. What have been the main reasons urged in favour of the inclusion of tithe rentcharge in the Act of last session?—That tithe rentcharge had always been rated, when rates were imposed, in the same way as land, and that, therefore, it was only fair that when the remission of rate was made, tithe rentcharge should share equally with land in that remission.

8468. Are you aware of the reasons which prevented the inclusion of tithe rentcharge in the Act of last session?—I know the reasons which were alleged.

8469. Do you see any force in those reasons?—None at all.

8470. You would say that, apart from any reasons which have been urged against the inclusion of tithe rentcharge in the Act of last session, the same rule ought to be adopted, and the tithe rentcharge ought to be rated, say, at 50 per cent. of its value?—I do.

8471. Do you think that that would substantially meet, and practically meet, the grievance which is now felt by tithe rentcharge owners?—Yes, I think it would.

8472. You think that, although that would be a rough-and-ready way, it would give substantial justice?—I think it would.

8473. You propose the increase of the Government subventions to local rates; do you not see the force of the objections presented to you in questions put to you by our Chairman as regards the effect upon local administration?—No doubt there is great force in them; I think that no doubt in the first instance, and for some time, there would be a tendency to extravagance.

8474. Have you studied at all the principles under which the existing subventions are allocated?—To some extent I have.

8475. Are you prepared to make any specific suggestions to the Commission as to increased subventions that might be given to local authorities and the danger of extravagance avoided?—No, I am not.

8476. With regard to your proposal that the money necessary for these increased subventions should be derived by means of a special addition to the Income Tax, have you considered whether any distinction should be made between income derived from property the income derived from personal exertion—brain-work, and so forth?—No; I think the present system of assessing both those properties for Income Tax is a very fair one.

8477. Would you draw any distinction between a person deriving income from Consols and a person deriving an income from a profession—from your own profession as a solicitor?—Personally I should not.

8478. You would draw no distinction at all?—No, I should not.

8479. Do you think that that would be acceptable to the country generally?—I think it ought to be.

8480. Do you think that it would be?—Yes, I think it would.

8481. Do you think that you could persuade, for instance, a clerk in the receipt of 150*l.* a year, possibly in your own office, that he ought to contribute as much to local burdens as a person deriving a similar income from Consols?—I do not think that a clerk with merely 150*l.* a year would pay any thing, would he?

8482. Let us say 200*l.*?—Yes, I think the present limit is a fair one.

8483. Do you think that the clerk in receipt of an income, say of 200*l.* a year, would consider that he was fairly charged to the rates in having to pay exactly the same amount as a person deriving a similar income from consols?—I think so myself. Of course, I know that is a question that there is a great deal of argument about *pro* and *con*, but I personally am not in favour of cumulative taxes.

8484. I want to ask you one question with reference to the series of questions put to you by Mr. Arthur O'Connor. Would you have drawn any distinction in your answers if the questions had been put to you with reference to income from consols, or from, say public debts, and anything of that kind?—No, none at all.

8485. You can draw no distinction between a landowner and the owner of a mortgage say, on the national income?—No, I certainly should not.

8486. (Mr. Dalton.) You think that in assessing the tithe for the local rates an allowance should be made for the personal services of the clergyman, but do you think that a similar allowance should be made in assessing the value of the glebe land?—I think that it is made already.

8487. When the glebe is in the occupation of the clergyman?—I will explain. I think that glebe land is assessed by the assessment committees throughout the country in the same way that other agricultural land is assessed.

8488. Even when it belongs to the clergyman or is in his occupation?—They may try to put it on him a little, but practically I think it is.

8489. On the present averages for every 100*l.* of tithe rentcharge, the gross income now received is about 70*l.* I think, is it not?—About that.

8490. Or a little below?—About 69*l.*

8491. You think that in assessing each of those 69*l.*, leaving out the question of personal services and taking the tithe belonging to the lay tithe owner, there should be a deduction of 15 per cent. for tenant's profits, and 15 per cent. for cost of collection?—No, not for cost

of collection; the 15 per cent. is for rates and other outgoings.

8492. Bates and other outgoings including that?—The cost of collection, I think, would come in the tenant's profit.

8493. At any rate you would take 30 per cent. off?—I would take 30 per cent. off.

8494. That would reduce it to under 50l. net?—Yes, it would reduce it to about 40l., would it not?

8495. It would be a little under 50l. Do you think that an ordinary lay tithe owner would accept for every 100l. of his tithe such a sum as would produce 50l. a year in consols; do you think that would be the value?—I think it would be a very fair value; I should not like to agree to pay any more myself.

8496. That would work out as something under 2,000l. for every 100l. of tithe appearing as commuted by the Tithe Commutation Act, if the tithe were redeemed at 40 years' purchase of its net value?—I have not worked it out, but I will take it at your figures.

8497. Does not tithe in the market generally fetch a great deal more than that?—No, tithe in the market now fetches about 13 years' purchase, I think.

8498. Thirteen years?—Yes.

8499. But it cannot be redeemed at less than 25 years' purchase, can it?—Not by the clerical tithe owner.

8500. Do you not think it would be a great advantage if it could be, and if the tithe owner could substitute consols for it?—Not at the present moment. I think, perhaps, after local taxation has been adjusted and we have got things all on a proper basis, that it might then be an advantage to go into that matter.

8501. You would get rid of all these grievances then. The tithe owner would have consols instead of his tithe rentcharge, and he would not be rated locally at all?—If you went into the question of redemption at the present time you would have to pay on a falling market; in fact at the very bottom of the tree; therefore you would get less capital money. I think it would be a

The witness withdrew.

Rev. EDWARD FRANCIS GEPP, M.A., J.P., called and examined.

Rev. E. F.  
Gepp,  
M.A.,  
J.P.

8510. (Chairman.) I understand you are the Vicar of the parish of High Easter, in the Dunmow Union, and that the income of the living is derived entirely from tithe rentcharge?—Yes.

8511. You are also the Rural Dean in the diocese of St. Albans, Justice of the Peace for the county of Essex, Deputy Chairman of Quarter Sessions, and an Alderman of the County Council of Essex?—Yes.

8512. You have had many years' experience as Chairman of Dunmow Union, also as Chairman of the first Assessment Committee for that union; you are on the council of the Tithe Rentcharge Owners' Union, and have therefore had a large experience of the questions which are submitted to us in our reference?—Yes, that is so.

8513. I do not think I need take you over the whole questions which we have been discussing this morning in any fulness, because I understand that you not only appear along with Mr. Peterson, but you agree very generally with what he has said?—Yes, generally.

8514. I shall not go into the question as between rateable property on the one hand and property which is not rated at the present time, but rather question you on your own memorandum,\* assuming for the moment that rates are rightly laid upon property now rateable; I would ask you to explain to us why you think hardship is inflicted upon the tithe rentcharge as compared with land generally?—Because I think that the land is not so fully rated as the tithe, for the simple reason that one sees our hand and knows exactly the value of our tithe, whereas, as far as my experience goes in assessing the value of the land, it is a mere matter of guess.

8515. On that point a really fair assessment between land and other rateable property would go some distance to meet your grievance?—Certainly, but from my experience it has not been fair, and I could give several instances to show it.

8516. Will you state them in your own way?—One of the first things that I did when I was elected chairman of the Assessment Committee, in 1863 I think it

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 157 to 160.

most inopportune time to go in for redemption as far as the tithe owner is concerned.

8502. Do you think it is likely to rise again? Do you think the price of corn is likely to go up?—I hope the efforts of this Commission will result in our getting a great reduction of charges, and then immediately that is done tithe will become a more valuable property.

8503. I think you said that you did not think there were cases in which land was free of tithe; but is it not the case, to begin with, that before the Commutation Act any land that was built on prior to the Commutation Act of 1834 was free of tithe?—As I have told the Chairman, I am really not in a position to answer that question, but I could easily look it up and find out.

8504. You quoted a passage from Sir James Caird in 1876 as to the value of the land having gone up then so largely in proportion to the tithe, but you are aware, of course, that since 1876, when Sir James Caird said that, the value of agricultural land has fallen enormously?—Yes. I think in answering Mr. Arthur O'Connor, I was careful to mention the date.

8505. Should you say that since 1876 agricultural land has fallen to a greater extent than the tithe or to a less extent?—That is a question that there is a great deal of dispute about. I am rather inclined to think that taking the whole of the agricultural land in the country and the whole of the tithe the tithe owner has been the heaviest loser.

8506. But in certain distressed districts the tithe now is worth the whole of the rent, is it not, or very nearly?—Certainly, there are districts in which that is so, but then the exception proves the rule.

8507. But those are the cases, are they not, where the tithe was very heavy?—Mostly they are on the east coast—in Essex and Lincolnshire.

8508. On corn land?—Yes, on corn land.

8509. (Chairman.) Is there anything you want to add?—No, except that I would like to put in this table in illustration of my evidence (*handing in table*).\*

Mr.  
E. W. I.  
Peterson.

J.P.

was, was that I ordered a copy of the Income Tax Return to be made and laid at my side. I tried all I could to get the values adjusted according to the Income Tax Return, which were returned as actual rent, but I could not for the life of me. I remember one guardian being kind enough to say, when I referred them to the Income Tax Return, "We do not want that; we had better pitch it out of the window." That was the sort of spirit they showed. I could not keep them to it at all; they would not recognise it. I give in paragraph 13 of my memorandum one or two instances which are almost amusing. In the town of Thaxted there was pasture land close to the town, and, therefore, of exceptional value; it belonged to a charity, and it was put up to auction to be let. It actually fetched in the open market 50s. an acre. Then I said, Now, at any rate, we have got no difficulty in fixing the value of that land; you will put it, of course at 50s. They said, No, that would not do, because they would have to raise all the rest of the land in proportion, and it was put at 25s.

8517. (Mr. Elliott.) In what year was that?—The Assessment Act was passed in 1862, was it not? This would be when we were making the first assessment in 1863 or 1864—as long ago as that. Then came the question of Lord Maynard's allotments, two acres being let out at 8l. a year, Lord Maynard having to pay all the out-goings of every description. I certainly thought they would assess them at 4l. an acre, but they assessed them at 2l. Of course all these things were injurious to the assessment of the tithe.

8518. (Chairman.) I understand that on that head your grievance and difficulty would be met if there was a really fair method of assessing the value of property which is now rateable?—How could it be fair if it was so far behind the rent actually paid.

8519. On that head your grievance would be met if there was a really fair method of assessing the value of a great deal of property now rateable?—Yes, a portion of the grievance would be met in that way unquestionably. I do not object altogether to the absolute sum at

Valuation  
of rateable  
property.  
A fair  
method  
desirable.  
Net annual  
value  
should be  
the basis.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 157.

Rev. E. F. Gepp, M.A., J.P.  
29 June '97

which my tithe rentcharge is put for assessment, but its relative amount to other property, that is the grievance.

8520. You do not wish to depart, I understand from the test which in theory is the one which is now applied—I say in theory—that is that the net annual value is what you should be assessed upon?—That is according to the definition of the Assessment Act, and of course that is fair enough. There was a very gross case which I have given in paragraph 13 of my memorandum. In my own parish, a year and a half ago, the overseers of the parish of High Easter were ordered to make a fresh valuation list. They, in company with the principal ratepayers, revised the existing list, and sent it back practically unaltered, thinking it low enough. The assessment committee, for the purpose of equalising it with certain other parishes, took off 4s. an acre, equal to a reduction of 20 per cent. on all the land, leaving the rentcharge untouched. You see the grievance at once that we suffered from there.

8521. All that is covered by the question which I put to you a moment ago?—Yes, quite so.

8522. We agree upon this, I think, that with the present law if properly carried out the arrangement is that the net annual value should be taken?—Yes.

8523. The question is how to find out the net annual value?—Of course you take the tithe average for the year, and after making certain deductions the remainder is the rateable and the gross estimated rental as well, because the only difference between the gross estimated rental and the rateable value as regards land is that a deduction shall be allowed in arriving at the rateable value, for repairs and insurance. It is quite clear that tithe is not subject to repairs and insurance, and therefore, I took care in making the valuation lists that the value of the tithe rentcharge both in the gross estimated rental column and in the rateable value column should be the same.

8524. On the question of deductions, I suppose I may take it that you agree generally with what Mr. Peterson has said?—Yes, generally. I might dispose of that question at once. I go in for an allowance for personal services.

8525. We will take that in a moment; you say you agree generally, but are there any points in which you do not agree with him?—Really, his memorandum is so voluminous that I cannot undertake to keep it all in my head. I will give a general acquiescence unless you wish to ask me on any particular point which he has stated.

8526. I will take the point which you yourself mentioned a moment ago, namely, personal services. How do you justify a deduction for personal services in addition to a deduction for tenant's profits?—I am rather inclined to think that in the case of tithe rentcharge tenants profits ought to be acknowledged, but I should not ask a very large per-centage on that account; personal services, I think, we can fairly claim for.

8527. When you talk of the tenant's profits of an agricultural tenant that includes the personal services of the tenant, does it not, because his profit is his payment for his services?—His personal services, and of course the maintenance of his family, and I suppose something besides to lay by. You take all that into account.

8528. I will put it in this way for you: can you suggest to me any other rateable property in the hands of any other person who has to pay rates in respect of which a deduction is made for personal services in addition to the tenant's profit?—No, I do not know that I can. I look upon it in this light, that a hypothetical tenant is to place himself in exactly my position, and, if he is contemplating taking the lease of a tithe rentcharge, he would take it with all its liabilities and all its obligations. Now, one most important class of obligations that are laid upon the tithe rentcharge—of course clerical tithe rentcharge, for I am not speaking of the lay improprator—would be this charge of clerical duties; and in reference to that I think we are not fairly dealt with; we are not on a level with other professions. We, as the Chancellor of the Exchequer said in the House of Commons a little while ago, were the only class of Her Majesty's subjects who are rated upon our professional incomes. That is the way I should put it. Perhaps I may say that I did all I could with the opportunities I had to induce the Government to include us in the Agricultural Rates

Act of last year. If I could have succeeded in that, and it seemed to me only fair and simple justice, I certainly should have been satisfied, and I think the great bulk of the tithe owners in the country would have been satisfied; but we were told that it was impossible. Then the Chancellor of the Exchequer threw out the hint that we might possibly get relief through an allowance for personal services.

8529. I suggest to you that if it was not for the condition precedent of personal services you would never be in a position to draw the tithe rentcharge at all?—If we did not discharge those duties our livings would be laid hold of by the bishop, and we should not get the tithe rentcharge, or at least a large portion of it.

8530. I observe that in paragraph 11 of your memorandum you seem to suggest that the rentcharge owner is entitled to deduct for personal services because it is allowed to the farmer?—I do not care to press that point.

8531. You did not prepare this memorandum?—No, I did not prepare that part.

8532. This memorandum was prepared for you, and you are speaking to it?—Yes, it was prepared for me and I give general acquiescence to it.

8533. Is there any other point in the memorandum that you would like to speak to?—No, I do not know that there is. My evidence would be principally confined to certain prominent grievances, and what I consider to be the remedy for those grievances.

8534. (Mr. Dalton.) Do you agree that the personal services of the clergy are taken into account in assessing the value of the glebe land?—I heard you put that question to Mr. Peterson, and I did not quite understand you. Do you mean the ordinary glebe land, the 3 or 4 acres attached to a living, or a glebe living?

8535. Both?—They ought to be.

8536. A certain number of the clergy derive their income from glebe, and a certain number from tithe rentcharge?—Yes, quite so.

8537. Do you consider that personal services ought to be taken into account in the one case, and do you think that they should be taken into account in the other?—It is a question which came with surprise upon me, but I should say offhand there should be no difference; I do not see why there should be; in each case it is a man's living.

8538. I rather understood Mr. Peterson to say that they really were taken into account in the same way in assessing the value of a glebe land; do you agree with that?—I cannot follow it; I do not quite understand it; inasmuch as a clergyman derives in certain cases the whole of his professional income from his glebe the same allowance ought to be made in the one case as in the other.

8539. Do you agree that it is taken into account?—I know nothing about glebe livings; we have nothing of the kind in East Anglia.

8540. As the chairman of an assessment committee, you must have had experience in the valuation of agricultural land as well as in the valuation of tithe rentcharge. I understand it is contended that there is a particular grievance in the case of the assessment of tithe rentcharge because the personal services of the clergy are not taken into account, but that no similar allegation is made with regard to glebe land?—I say again I should draw no distinction myself as far as I understand the question; but you see it never cropped up before us at our assessment committee at all. The glebe land was assessed as ordinary agricultural land.

8541. Do you think that in the assessment of what is ordinary agricultural land account is taken of the personal services?—I should say decidedly not, nor in respect of the tithe rentcharge.

8542. You have quoted some instances in paragraph 13 of your memorandum in which agricultural land in Essex, that is in your part of the county, is assessed at less than its annual value; we have had here some very strong complaints from certain districts in Essex that land is assessed at a good deal more than its rental?—Yes, no doubt you have.

8543. Do you think that is the case?—It may be so in particular districts, but as far as my experience goes it is not, and has not been.

*Rev. E. F. Gepp, M.A., J.P.*  
 8544. Do you agree with Mr. Peterson's evidence as regards redemption of tithe rentcharge?—No, I have not gone into that.

8545. Should you like to see it redeemed?—I should like to see it redeemed if I could secure anything like the same income as I am getting now.

8546. For you to derive the same income how many years' purchase of the tithe would be necessary?—Something was said, I think, about 40 years; I have not worked it out lately, but, I think, that it did come to something like that in order to secure a proportionate income.

8547. Forty years' purchase of the net tithe rentcharge that would be, I suppose?—No. I should think it would be the average of the year; I think that is how I calculated it. The gross average of the present year is about 69l. 10s.

8548. You think that the tithe is worth 40 years' purchase?—I have not calculated it lately.

8549. If it is worth 40 years' purchase of the gross amount that you receive now, I do not understand why it should be rated with a 45 per cent. reduction on the gross?—I have not said that I assent to that.

8550. I should like to have your opinion upon that; do you think there should be a 45 per cent. reduction on the gross for the purposes of the local assessment, or do you think that is too large a reduction?—It just depends on how you look upon it. My own view is that a uniform abatement should be made from every benefice in the country to represent personal services, because, for all we know, one clergyman is as good as another, and his education in one case has cost as much as in another case. Therefore, I consider that that abatement should be made, and that it should amount at least to what the law requires to be paid in the case of a stipendiary curate.

8551. Leaving out that question of personal services which accounted for 15 per cent. of the 45 per cent., you still have a 30 per cent. deduction from this gross 70l. that you receive now?—I should not. If I got the personal services allowed, I should not ask for the 30 per cent.

8552. That, I think, was what Mr. Peterson said?—He did not quite take the same lines as I do, I think.

8553. To get at the net value, after allowing for the personal services, what other deduction should you take from this 70l.?—I will tell you what the practice of the Dunmow Union is; it is not a legal system, but it has not worked unfairly, nor do I complain. Some years ago, they agreed to take the gross average annual value of the year, and from that to deduct 20 per cent. in the case of rectorial tithes, and 25 per cent. in the case of vicarial tithes to represent all deductions—not, of course income tax or land tax—but all deductions which the tithe was liable to, as between the tithe owner and the assessment committee. That was a fair and liberal allowance at that time—I think it was 20 years ago, or something of that sort—but considering how much the tithe since then has been reduced in value, and the still greater extent to which the land has been reduced, that 20 per cent. and 25 per cent. do not so fairly represent the outgoings as they did then. I tried to get that altered, but the assessment committee turned a deaf ear to us: I asked for 25 per cent. and 30 per cent. instead of 20 per cent. and 25 per cent. I do not complain of the assessment of the tithe, looking at it absolutely, but it is relatively in regard to the land that I complain. I should first like to draw your attention to one or two facts. I take the years 1883 and 1896 for comparison, 1883, because, then the tithe was precisely at par, and 1896, because it is the latest year at which we could get returns. I find that in 1883 the tithe was 100l.; the Dunmow Union was assessed at 97,953l., say, 98,000l., and the tithe was assessed at 14,947l., that would be 15,000l. the call from the union being 8,602l., and the proportion paid by the tithe that year, 1,310l. Then I come to 1896 when the tithe was reduced to 70l. the assessment for the union being 63,386l., the assessment on the tithe, 11,165l., the call from the union, 8,496l. which is a little under that of 1883, of which the tithe contributed 1,488l.

8554. You adhere, do you, to your statement, that you think a fair redemption money would be 40 years' purchase of the gross?—I have not had an opportunity of calculating it lately, but that is about fair, I should think. It would require nearly that to set us on the same level.

8555. How many years' purchase of the net, then, would it be; it would be 50 or 60 years' purchase of the net, would it not, if you make a deduction of 30 per cent.?—Yes, I suppose it would, but I am not committed to the 30 per cent.

8556. Or 25 per cent., as you say they do in the Dunmow Union?—That would be an average of about 22½, really, taking the great and small tithe together. I think I calculated it on the gross average value of the year, but I really cannot be certain.

8557. (*Mr. Elliott.*) I understand that you favour the proposal that a fixed sum should be allowed by way of abatement from the tithe rentcharge in order to get the amount upon which the owner of the tithe rentcharge is to be rated?—For personal services do you mean?

8558. For personal services and in regard to the general position of the tithe rentcharge?—Did I go so far as that? It may be all right. I think I said that there should be a uniform abatement to represent personal services in the case of every benefice, because one man's service is as good as another's, theoretically.

8559. Do you think that the owners of the larger livings would assent to that proposition?—Yes, I do not think they could refuse to assent to it, not fairly.

8560. The instances that you have given of inequality of assessment point, I understand, in your opinion, to some improved machinery for assessment?—Yes, certainly, the assessment committees, in my mind, in agricultural districts want some control.

8561. What suggestions do you make for the amendment of the constitution of the committees?—For one thing the surveyor of taxes should be always present.

8562. Do you think the mere presence of the surveyor of taxes would give you a satisfactory tribunal?—Not his mere presence, but I think he might have certain powers given to him.

8563. What powers do you suggest should be given to him?—To object to assessments.

8564. By whom should the objections be determined?—By the Commissioners of Land Tax at Somerset House, I should think, or by the Local Government Board—by some Governmental Department.

8565. Then you suggest there should be an appeal by the surveyor of taxes from the decisions of the assessment committee, to a central authority?—Certainly.

8566. (*Mr. Arthur O'Connor.*) I see that you state in paragraph 4 of your memorandum that land is not assessed at its net annual value, but much below it?—I do not know that it is much below it—it is certainly below it.

8567. Your opinion is that land, as land, has no particular grievance, because it is assessed below its value?—It has no particular grievance as regards assessment. I have got some figures here that I think will show that.

8568. Let us confine ourselves to one point at a time, so that we may get it clearly on the evidence. I take your statement to be that you think that land, speaking generally —?—Within my own experience—nothing else of course.

8569. Quite so. That makes it all the more valuable, because you are able to speak from personal experience. You think that land is not assessed at its net annual value?—Not in my opinion and according to my experience.

8570. I will go to the next paragraph in your memorandum, beginning:—"It is impossible to contend that the gross value of the rentcharge —"—that is in paragraph 5 of the memorandum which you have caused to be drawn up for, I understand, you yourself have not drawn it up?—No, I did not draw it up.

8571. It is not antagonistic to Mr. Peterson's?—No.

8572. It is not foreign altogether to it, is it, as regards its origin?—No. I think his memorandum\* covers a great deal that is in mine.

8573. But you do not entirely agree with all his conclusions?—No, I do not know that I do.

8574. We will go to paragraph 5 of your memorandum:—"It is impossible to contend that the gross value of the rentcharge, less tenants' rates and taxes, "law expenses, bad debts, costs of collection, and

“ecclesiastical dues, is the gross estimated rental of it,” by which I understand that you wish to convey that there is a great practical difference between the gross nominal and the gross real value of the rentcharge?—What do you mean by the gross nominal?

8575. You say, “It is impossible to contend that the “gross value of the rentcharge,” less certain things, “is the gross estimated rental of it.” You yourself have drawn the distinction, I have not. I only want to draw out the meaning of your own words. I do not press it if you deny the paternity of the language?—Stay a minute, I want to take it all in. I do not quite at the present. I do not know whether that means gross estimated rental as it appears in the column of the rate book and the valuation list.

8576. Well, never mind, we will go on?—I do not think there is much in that.

Hackney cases.

8577. In paragraph 6 you refer us to certain judgments in cases known as the Hackney cases in which Mr. Justice Coleridge gave some pronouncements, and at the end of the extract from the judgment which is given in this memorandum, you say: “With these observations I quite agree. But when they are compared with the manner in which both in this and other cases rentcharge has been treated, I cannot see how they are applied.” I presume that a fair deduction from that observation is that these learned judges did not practise what they preached?—Perhaps not. “I do not observe,” I go on to say, “this large and liberal analogy” which Mr. Justice Coleridge laid down, has been adopted.

8578. You think that the decision did not entirely harmonise with the very wholesome principles by which the decision was preceded?—He says they proceed by analogy.

Tithe rentcharge. Hypothetical tenant. Difficulty of conjecturing what a lessee would give.

8579. I shall assume you say “yes,” as I entirely agree with you. Let us go to paragraph 8, “the thing then to be got at is the letting value.” We are speaking now of tithe rentcharge in the hands of a hard-working ecclesiastical tithe owner; now let, let us assume for a moment that it has to be let, not only with its advantages but with its duties and responsibilities. Supposing that the tithe owner says to an intending lessee: “Now I will let you this, I will lease this tithe rentcharge to you for what it is worth, if you will undertake the duties and responsibilities, as well as the benefits,” who is there that could offer to lease it at all?—Exactly.

8580. The clergyman does his duty to the community, to say nothing about higher references, by inculcating lessons of order and peaceful and patient labour and justice, all of which are of material value to an industrial community and to society at large; but will he find a lessee for that duty as well as for his tithe rentcharge?—Certainly not, I should say.

8581. Then is it possible, when we take the case of a clerical tithe owner, to talk about a lease of tithe rentcharge and disregard altogether the moral and religious duties which are bound up with it?—I should say not.

8582. The clerical tithe owner has a duty to that portion of the community which constitutes his flock in respect of which he receives this tithe rentcharge?—In consideration of which he receives it.

8583. He does work, if it is only work of a lubricating character?—Yes.

8584. The lay impropiator does no work, as I understand it?—Not at all; nothing in any shape I should say.

8585. The clerical tithe owner, as distinguished from all other people who have interests in land, is a man who has a daily and hourly duty to the community?—Certainly.

8586. Very often a duty most inadequately recompensed by the tithe or the income of whatever description he derives from his living?—Certainly.

8587. In dealing, therefore, with the income, such as it is, that he gets, he ought to receive—I suppose this is your suggestion—at any rate as much consideration as any other member of the community in respect of that in regard to which he is taxed?—Yes.

8588. What do you say are the considerations which ought to be kept in mind in view of the working clergyman's income?—I do not quite understand the question.

8589. We have heard a great deal about farmers and of their tenants' profits, and all that kind of thing, but I suppose very often a clergyman finds that his duties are more heavy than, with a conscientious regard to their full discharge, he can possibly undertake single-handed?—Yes.

8590. In which case he is at the necessary expense to provide some kind of assistance to himself?—Yes. That is the question of curate's stipend.

8591. Yes?—Of course, I think that ought to be allowed as a deduction.

8592. That is one item. Are there any other deductions you think ought to be made?—First, I should claim a uniform deduction for personal services; of course, if a curate is required besides, there must be a deduction for that.

8593. We have already, I think, understood that the consideration is his personal service, which he cannot delegate to a layman?—No.

8594. Which he, and he alone, can discharge, unless he happens to have a curate who is a mere *alter ego* for certain purposes; the personal services are the consideration for which he receives this income?—Yes, quite so.

8595. It is not a question of deduction at all?—You are asking about other deductions; of course there are the ordinary deductions, the normal deductions for expenses of collection, and all those things.

8596. Are you not putting it upon a level too low altogether for a man in the position of a clergyman to talk about personal services; he is in a unique position, and nobody can replace him; he is not like a journeyman tailor?—Quite so; but I do not see why he should be unfairly rated on that account.

8597. I want you to bring out that point?—Therefore I say his services should be valued at so much; I do not know what the figure may be—that is a matter of comparative unimportance.

8598. Do you think that the whole of the tithe rentcharge put together equals the services of the clergyman of a parish?—No; but he must be rated on something or other.

8599. Do you think, seriously speaking, that the theory of a hypothetical tenant is at all reasonable, or anything but a simply ridiculous and laughable suggestion in respect of tithes and of tithe rentcharge for a working clergyman?—It is the only legal definition of a hereditament.

8600. Apart from your existing laws, and looking at it from first principles, do you think that the test of a hypothetical tenant can in reason and common sense be applied to the case of a clergyman who has special and exceptional duties of a unique character to discharge in a particular parish?—If his services are worth more than he receives for those services he ought not to be rated at all; I was not going so far as that, and do not propose to.

8601. That is your opinion?—Well——

8602. (Chairman.) Is there any point you would like to add?—There was one point that I did not finish with regard to the depreciation of land. I have here figures showing the instance of my own parish. Still, returning to the year 1883, the average then was at par 40*l.*, my rateable value was 31*l.*, and I paid 4*l.* for rates. In the year 1896 my annual average had gone down to 29*l.*, the rateable value was 22*l.*, and I had 5*l.* to pay, the calls from the union in the two years being precisely the same. Then I take a farm in my parish of 210 acres. In 1883 it was rated at 182*l.*, and paid 26*l.* in rates; in the year 1896 it was rated at 94*l.*, and paid only 20*l.* in rates. So that you see the payment of rates by the farmer is reduced and the payment of rates by the tithe rentcharge owner is increased; and, of course, that is a very tangible hardship indeed.

8603. Is there any other point?—I do not think so.

Rev. E. F. Gepp, M.A., J.P.

29 June '97

Deductions. Tithe rentcharge. Curate's stipend and personal services.

Tithe rentcharge. Hypothetical tenant. Difficulty of conjecturing what a lessee would give.

More rates paid proportionally in respect of tithes than of land since fall in value of land.

The witness withdrew.

Rev. CHARLES ABBOT STEVENS called and examined.

Rev. C. A. Stevens. 8604. (Chairman.) I understand that you are Vicar of Portslade, near Brighton, and an author of a number of papers and pamphlets on the subject of rating and taxation?—Yes.

29 June '97

8605. What have you to say as to the classification of contributors?—Will you allow me, first, to take what appears first in my memorandum?

8606. I do not think we need take you over that first part; we have had the law very fully brought before us already?—It is rather a new point I have to mention; it is as to the policy of the three Acts, 43 Eliz., Parochial Assessment, and Inhabitants Exemption Acts.

8607. I must be allowed to judge, if you please. What have you to say about the classification of contributors?—The Act of Eliz. distinguishes them into two classes. (1.) Inhabitant, parson vicar and other. (2.) Occupiers of lands, tithes impropriate, appropriations of tithes, and so on. The judges have thought fit without any authority in the Act itself to limit the liability whatever it may be to property, first, personal, then real, within the parish.

Assessment, rent the basis of. Is not now a fair basis.

8608. Is it a matter of history that the Parochial Assessment Act fixed the test of rent exclusively upon hereditaments?—It did so for the first time; it fixed it upon hereditaments exclusively. Then comes the question of the suitability of that test of rent; I am not prepared to assert that that is a fair test of rateable value.

8609. Why not?—Because you cannot apply it equably to land, tithe rentcharge, houses, let or owned, mills, ground rents, betterment, and machinery; it is impossible to apply the test of rent equably to them. All these questions are questions now upon the tapis. Machinery, everybody knows, is a very difficult question to settle; then there are ground rents and betterment, and the principle on which they should be assessed is wholly uncertain. Rent might possibly have been a fair test at one time as regards land when land was the only property of any value at all, because Professor Jones states that the proportion of real value in the time of Elizabeth was four times that of other property, whereas now, of course, personal property is 20 times as large as real property. What might have been, therefore, a very fair test and a reasonable test at one time becomes a very unfair test at another, because it is now confined only to real property. The Parochial Assessment Act has done this by ruling that the parson and vicar are occupiers of a hereditament, and so has, in fact, transferred them from the class Inhabitant to the class Occupier, and for the first time they have been taxed as occupiers. It is a very open question whether the right of the parson and vicar is a hereditament at all, because what is his right? It is that only to receive the rents during the time that he renders certain services.

Inhabi- tants and occupiers. Position of parsons and vicars.

Mainte- nance of the poor and highways, &c., should be defrayed out of the general income of the country through Imperial contribu- tions. Question of admin- istration.

8610. Would you agree with me that if a property which is now rateable is the proper basis upon which to levy the charges for this class of expenditure; you cannot get the whole value of the land which is subject to tithe rentcharge unless the tithe rentcharge is included?—I am not prepared to admit that all subjects to which rates are applied are properly chargeable upon real property; on the contrary, I think it is not so. I think the whole of the income and profits of the country all arise out of labour. Labour, I maintain, is that which produces all profit of any kind or sort. Labour is what the profits all property, personal as well as real, have to look to for their very production and existence; and therefore they are bound to maintain it under all circumstances. I therefore do strongly urge that the maintenance of the poor and highways, and all of those things which are not distinctly for the improvement of property, ought to fall—I will not say upon the income tax—but ought to fall upon the whole exchequer of the country. It is very hard to put it upon the income tax only, for reasons which appeared this morning, but I think it ought to be paid out of the general income of the country. The whole income of the country is derived from labour, and ought to pay all the expenses of the support of that labour. Therefore I do not think that the application of the test of rent to tithe rentcharge and land as the basis of taxation is maintainable at all.

8611. It is a matter of history, is it not, that the condition of assessing for poor rate according to so-called ability was really given up because it was found

to be impossible?—It was just for that reason that I wanted to start with that point first of all.

Rev. C. A. Stevens.

29 June '97

8612. It was not necessary to give that in evidence; I thought everybody admitted that. You say that it ought to be an income tax upon the country; the question that you have to direct yourself to if you make that statement is how the administration is to be carried out under those circumstances?—I am not prepared to say there are not difficulties, but one has implicit confidence in the wisdom of Parliament. And moreover things are altered from what they were. In the time of Elizabeth there was no possibility of an income tax; it did not exist, and the very point of the Act of Elizabeth was to fix the population, because previously to the time of Elizabeth the monasteries had really been for hundreds of years the support of the unsettled poor. After their suppression people were wandering about the whole face of the country, a danger and nuisance to everybody. That appears in the Act of Elizabeth—it is distinctly stated so—and also in the Act of Charles II. Those Acts stated they were particularly for the purpose of fixing the population. Then came the laws of settlement, all to carry out the same object. In order to provide for them when settled there was this Act of the 43rd Elizabeth; but everything has altered since then.

8613. Your memorandum gives me such a very slender idea of what you are going to say that I am not able quite to take you over the points which are new to us, or to distinguish those which it is not necessary to go over. We have had a good deal of what you are suggesting to us from other witnesses, and I do not propose to take you over those points. If you would address yourself to any particular grievance under which you think the clergy are labouring, or any special remedy which you would like to suggest to us, within the terms of our reference, I should be glad to hear you?—Under the existing Act there is no remedy.

8614. Then what is your suggestion?—My suggestion is to revert to the principle of the 43rd Elizabeth, extending the liability for maintenance of the poor and highways to the ability of the personal inhabitant, from whatever source derived, not only within the parish—which was a mistake. That limitation within the parish simply arose from the desire of Elizabeth to fix the population; that has now been washed away, and we have done with the law of settlement almost entirely.

Mainte- nance of poor and highways should be paid for out of the general income of the country through Imperial contribu- tions and according to the ability of the inhab- itants. Question of admin- istration.

8615. That suggestion has been made to us on several occasions, and also the following one, which I observe in your memorandum, namely, that local taxation should be limited to the properties benefited or improved thereby. One of the questions which the Commission always put to those who make that suggestion is, whether you propose to make the management of the poor a matter for the central authority and an Imperial concern, or whether you propose to continue local administration?—I say that in those days there was no local administration at all except the overseers, but now in the last few years you have got county councils set up, you have got parish councils, you have got an organisation now which never existed before, and what was perfectly impossible when these objections were raised is now perfectly practicable, and I do not see why it should not be managed.

8616. Do you propose that while the charge is to be Imperial the administration is to be local?—Precisely in the same way that the relief now given to the rates through the Exchequer subventions is also administered locally.

8617. Under present circumstances you know that when the charge is local the penalty of extravagance falls upon the locality; if I understand your proposal aright the charge is to be Imperial, and the penalty for extravagance would cease to fall upon the locality, but would fall upon the general taxpayer?—Does not that argument apply equally to the subventions already existing?

8618. If you ask me the question I do not think it does, because there is a very large part of the penalty which still falls locally; but I understand your proposal to be that all local rating for such purposes as poor rate is to be done away with and the whole thing to be put upon an Imperial fund?—I should increase the present subventions from 2,000,000*l.* to cover the whole of it.

Rev. C. A.  
Stevens.

29 June '97

8619. Is there any other suggestion you wish to make to us?—There is a great deal more I should have to say. I am here not for the purpose so much of construction as of destruction, and I say that under the present Parochial Assessment Act it is perfectly impossible—

8620. I am afraid if you want to put that before us you must put it in writing in such a way that we can consider it. It is not possible for anyone to make it the subject of question and answer across the table without much more elaborate preparation than is contained in your memorandum, or else we should be going over the same ground over and over again. We have had witnesses from the Local Government Board and from central authorities, and if you choose to send us a paper we will be glad to consider it, but I am afraid I cannot take it in a vivâ voce examination without more preparation?—The whole thing has turned upon the decision of the Mersey Docks case, which has knocked away all the old principle of beneficial occupation which had before been accepted by the courts.

Inhabitants and occupiers. Position of parsons and vicars.

8621. We have had the law very carefully stated to us by Sir Harry Poland after a great deal of careful preparation. I think he was two days here?—I say that the Inhabitants' Exemption Act, which excepts the parson and vicar from the exemption accorded to all other inhabitants, together with the Parochial Assessment Act, shuts them out entirely from their position as inhabitants, and makes them now to be rated as Occupiers and not as Inhabitants.

Monasteries. Confiscation of property. Maintenance of the poor.

8622. (*Mr. Arthur O'Connor.*) I understand you to say that in the good old times the monasteries used to look after the poor?—Yes, to a very great extent they did. They were the main sources then of charity. There was no poor rate.

8623. The property of the monasteries was confiscated?—It was.

8624. Do I understand you to suggest that the charge should follow the benefit, and that the property confiscated from the monasteries should continue to bear the charge for the poor?—No. The property confiscated of the monasteries was granted or sold by Henry VIII. and his successors down to William and Mary for money, and so that accounts for the totally different position in which the owner of tithes inappropriate is placed by Elizabeth—in the position of occupier and not of inhabitant.

8625. That the land which bore the charge for the poor in the time of Henry VIII. and later passed into other ownership, is that your suggestion?—The land to a certain extent, but not the whole of the rectorial tithes; only about one half, roughly speaking, of them had been granted or given by the founders to the monasteries, and the other half remain to this day as rectories.

8626. I put to you the short point, whether you say it is equitable and just that those who took the property of the monasteries should bear the burdens which the monasteries bore in respect of that property?—I think it is fair that the owners of tithes inappropriate should bear their share in the Imperial taxation for the poor.

8627. The monasteries bore before all the poor's rate?—Not the poor's rate, because it was entirely and purely charity.

8628. All the poor burden?—Yes, practically all the poor burden of those persons wandering about the country.

8629. Therefore, if the tithes inappropriate were now made to bear the whole of the poor's rate it would only be historically just?—In so far as I have said. But you must remember also the enormous increase of population since then.

8630. And with increase of value of the property concerned?—Not of tithes, certainly.

8631. Do you not think that the tithe of a particular county is more valuable now than it was in the time of Henry VIII.?—I would not say of a county; I am speaking of those belonging to the monasteries.

8632. Well, the monasteries in any particular county?—Then you must take into account the different value of money; money is worth three times what it was.

8633. It is the same thing in another form?—Only the population has increased very much also. The question was asked a little while ago how much our

population has increased. Since 1843 it has increased 90 per cent., and the clergy now are called upon to provide duty for all that increased population with a falling compensation.

8634. With a corresponding increase in the value of landed property?—In paragraph 55 of a paper\* which I have ventured to submit to your consideration there is a comparative statement which I think you would like to hear. From 1843 to 1895 the gross value of Schedule B decreased from—

8635. You are now coming to the present century?—I am about to show you how these values have increased or decreased since—

8636. I want to confine myself for the moment to the very interesting point you referred to yourself of three centuries ago—not the present century. In the days of Henry VIII., the time you refer to, and of Elizabeth, the charge for the poor was entirely on land?—Almost exclusively. But there was no charge; all relief was voluntary until 43 Eliz.

8637. And since then such charge as there is on personal property, other than landed property in respect of the poor is a growing innovation?—Simply because that property did not exist.

8638. At that time?—At that time; therefore, of course, it has been a growing innovation.

8639. Whatever the reason, it is an innovation as compared with the time of Elizabeth and Henry VIII.?—Hardly innovation; innovation implies something that is innovated; it is not innovated; it is a novation, not an innovation.

8640. It is something which exists now which did not exist in the origin?—True.

8641. (*Mr. Dallon.*) Do you consider that the Church has gained or lost by having its property in land and tithes, instead of having changed it and put it into personal property? The Church is a great landowner and tithe owner; do you think it has lost or gained during the last 200 or 300 years by being the owner of land and the owner of tithe, instead of the owner, we will say, of consols?—Do you put it as a pure money question?

Property of the church in land and tithes. Whether a profitable security.

8642. As a money question; purely financially?—That I cannot answer without going into figures; it is impossible.

8643. Cannot you ascertain in this way? If you look back at the value of livings as entered in the Queen's Books, as they used to call them in the time of Queen Anne, do they show so large an income or a smaller income than they do now?—Very much smaller of course, because the value of money has altered.

8644. But if the property instead of being in land, had been invested, we will say, in the National Debt, would it have risen to the same extent?—That is a question purely of figures; I could not give you an opinion on that.

8645. Is there not a difficulty in treating Church lands and tithe for rating purposes, differently from other lands and tithe? It is the property of the Church; it is property belonging to a particular landowner, and why should it be treated differently for rating purposes because it belongs to one landowner and does not belong to another landowner?—Do you mean to draw the distinction between landowner and tithe-owner?

Tithe or tithe rent-charge belonging to the Church should be treated differently from the tithe belonging to a lay tithe owner. Question whether tithe or tithe rent-charge is a hereditament.

8646. For rating purposes?—Between landowner and tithe owner, is that your comparison?

8647. Why should the land belonging to the Church be differently treated from the land belonging to another owner, or, why should tithes belonging to the Church, be treated differently for rating purposes from tithes belonging to another owner?—In the case of tithes belonging to another owner, it is really and truly a hereditament, which can be bought and sold.

8648. Suppose the income of the church were put in consols instead of in land, should you then claim that the consols belonging to the church should be treated differently for purposes of taxation from consols belonging to other owners?—If they were to contribute to the maintenance of the poor, on the principle I maintain, out of the general exchequer, the question would vanish.

8649. I do not understand that you claim to have glebes treated differently from other agricultural land

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 189 to 214.

*Rev. C. A. Stevens.*  
for rating purposes, do you?—I have not said a word about glebes.

29 June '97 8650. For tithe then, do you claim that the tithe belonging to the church should be treated for rating purposes differently from the tithe belonging to a lay owner?—Certainly, for the very obvious reason that it raises the whole question that I raised before, whether or not tithe or tithe rentcharge received by a parson or vicar is a hereditament. He has merely the right to receive that income from tithe, not as a matter of ownership, but so long as he does the duties.

8651. That is equally true of any endowment that belongs to the church; if you have got a living, the property of which is invested in consols, do you make a similar claim with regard to exemption from taxation in the case of that living?—If it is in consols it will go into the general taxation of the country which I fall back upon.

8652. I do not understand what is the ground on which you say that if one living has its income from tithes it should have certain exemptions, but that a more modern living, for which an endowment has been left, which is invested in consols, should not have similar exemptions?—I have no objection to its being exempted at all; I have not put that forward.

8653. If there is a claim in the one case is there not an equal claim in the other?—That is not a question arising under the present law; there is no local taxation of incomes held by parsons in consols.

8654. No, but there is in glebe lands?—That is a separate question altogether from tithes.

8655. Do you put the glebe land rating on a different principle from the tithe rentcharge rating?—That I will answer upon consideration; I am not prepared to

answer it at a moment's notice. My impression is that I should consider it in the same way, because it is dependent upon the labour withdrawn from other occupations and given by the parson. In neither case is he the actual owner.\*

8656. (*Chairman.*) A good deal of the points you apparently wish to speak upon deal purely with questions of law?—May I say that my point is that I object to the existing law, and I want to go back.

8657. That is what I say; your memorandum deals entirely with questions of law. We have gone very fully into questions of law, and the whole Commission spent two days over them after a great deal of preparation, with Sir Harry Poland, who is one of the Queen's Counsel; and therefore we could not possibly, I am afraid, even if I was competent, spend time in going over a great deal of the same ground again; but if you choose to put in writing the points on the law which you would like to bring before us in such a form that we can read it in a connected narrative I shall be very glad to put it before the Commission. It is quite unsuitable to be made the subject of question and answer over the table without careful preparation beforehand, and I have not in any paper that was sent to me got the means of taking you intelligently over the ground?—I have troubled you with two or three very long papers which I have no doubt you have not had time to consider, but I have sent in papers explaining the whole matter and going into it most thoroughly.† I am confident that no satisfactory conclusion ever can be come to under the existing two laws, the Parochial Assessment Act, and the Inhabitants Exemption Act, and the only remedy, the only solution of all these various questions, machinery among others, can only be arrived at by falling back upon the general taxation of the country and upon the ground that labour is the source of all profit whatever.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## TWENTY-THIRD DAY.

Wednesday, 30th June 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. C. B. STUART-WORTLEY, Q.C.,  
M.P.

Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.

C. A. CRIPPS, Esq., Q.C., M.P.  
E. O. SMITH, Esq.

JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, *Secretary.*

Mr. GEORGE LAURENCE GOMME called and examined.

*Mr. G. L. Gomme.*  
30 June '97 8658. (*Chairman.*) You are Statistical Officer of the London County Council and have been good enough to prepare this memorandum which I hold in my hand for submission to the Commission?—That is so.

Papers put in by Mr. Gomme.  
8659. That memorandum the Commission will print in their Appendix;\* therefore you will not be taken through it in the form of an ordinary examination, but questions will be put by different members of the Commission to elucidate points on which they may wish further information. You have also, I think, handed to us two other papers, one of which is a return prepared pursuant to an order of the London County Council, dated 28th July 1896, and is for the purpose of showing the amount of expenditure by local authorities in respect of each

*Mr. G. L. Gomme.*  
30 June '97 parish in the administrative county of London in the year 1895-6,† analysed according to the principal heads of charge?—That is so.

8660. That paper was published by the London County Council in the month of May last?—Yes.

8661. I understand that you wish to refer to it in the course of your examination, but being a public document we do not propose to print it specially for this Commission.

\* The witness subsequently wrote:—"I think that the parson or vicar ought equally to be relieved from undue pressure of taxation, whether he derives the wages of his labour from land, corn rents, or tithe rentcharge, because there is the same reason in each case. All the incomes equally accrue to him upon the residence and performance of duties to which he is statutorily compelled. In no case is he the actual, indefeasible owner."  
† Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 161 to 214.  
‡ County of London, Expenditure and Rating per cent. of rateable value, 1896-6.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 215 to 307

Mr. G. L. Gomme.

30 June '97

Local taxation in London. Amount of. Proportion to England and Wales.

London. Expenditure of the local authorities in London. Amounts.

London. Expenditure. Principal heads of expenditure. Receipts in aid.

sion?—I have used that return for the purpose of preparing my evidence.

8662. You have also sent us another paper, which is a tabular statement of the Exchequer contributions for the year 1893-4, showing the relationship of London to other counties and county boroughs in respect of rateable value, rates raised and contributions received from the Imperial taxes for the year 1893-4, and in respect of the proportions of local taxation borne by Imperial taxes and by rates?—Yes, that is so.

8663. That paper is also available to anybody who chooses to purchase it of Mr. Stanford, of Cockspur Street?—Yes, it was prepared for the Council in October last.

8664. (Mr. Stuart.) Will you just give me, in one word, what is the total amount of local taxation in London?—Nearly twelve millions of money, namely, 11,995,673*l.*

8665. What proportion does that bear to the total local taxation levied in England and Wales?—I cannot give the exact figures, because I do not know the indirect taxation of the rest of the country, but of the amount just quoted, 9,904,675*l.* are the assessed rates levied in London, and that is equivalent to 28 per cent. of the whole rates levied in the kingdom.

8666. (Mr. Stuart Wortley.) In England and Wales, I suppose?—In England and Wales.

8667. (Mr. Stuart.) So that in presenting the case of London before the Commission you are presenting a very large proportion of the whole case of urban rating?—Yes, I suggest that is so.

8668. Taking the expenditure of the local governing authorities in London, could you shortly state what the amounts are, or refer me to the page in your memorandum on which they can be found?—On page 216 I set out what the municipal expenditure of the different authorities is, and I can give them very shortly. The expenditure of the county authorities is 6,480,296*l.*; of the district authorities, 1,610,674*l.*; of the union authorities, 1,318,275*l.*; of the special district authorities, 164,522*l.*; and of the parish authorities, 3,572,367*l.*, making a total of 13,146,134*l.*

8669. I need not go into any more detail about that, because you have got it in the memorandum on the page you have referred to. What are the local governing authorities who deal with these amounts?—There are a great many in London. There are four county authorities, 16 district authorities, 17 union authorities, 34 special district authorities, and 331 parish authorities. Those 331 parish authorities include 112 parishes in the city of London.

8670. What are the principal heads of your expenditure? I do not wish you to go into detail about it, but if you will point out to me where, in your memorandum, those are shown, that will be quite sufficient?—The table which begins at the top of page 217 and finishes on page 218, sets out the principal heads of expenditure, beginning with the maintenance of the poor, and finishing with a few special services which are administered by the different authorities.

8671. A portion of this expenditure is met, I presume, by receipts in aid?—Yes.

8672. How much does that amount to out of the total expenditure?—The total amount is given on page 219 of the memorandum; it is 1,311,744*l.*

8673. That is the total amount of the expenditure of London, all the bodies included, which is met by receipts in aid of expenditure?—Yes, these receipts in aid, consist, as you will notice from the headings to the table on page 219, of repayment for services, receipts in aid (which are of a general character) and revenue from municipal property.

8674. These receipts in aid amount in all to what did you say?—1,311,744*l.*

8675. That is in reduction of a total local expenditure of what amount?—It is in reduction of a total local expenditure of 13,146,134*l.*

8676. Then, dealing with that same matter, what is the comparative value of these receipts that you have now referred to, as they are distributed among the several governing authorities?—That is rather an important matter, and I set it out in the table given on pages 220 and 221, reducing the amounts to a percentage of the rateable value, so that the Commission could

compare the value of these receipts as they come to the different authorities.

8677. I do not suppose I need ask you to repeat those if they are all shown in the table on pages 220 and 221?—They are in that table.

8678. Still, in respect to that I might ask you this question: I observe you there discriminate between receipts, which, as you say, lessen expenditure and receipts which reduce taxation; what do you mean by that distinction?—I mean by that that the receipts which lessen expenditure are receipts coming from services which caused expenditure; for instance, if a local improvement is carried out, it is carried out with a certain amount of cost, which is recovered by the local authority. There are also the services which are rendered by local authorities and are paid for; as an instance we might take the payment by relatives for maintenance of the poor. I classify those items as receipts which really lessen expenditure in quite a definite way, whereas the other receipts are independent of any cause of expenditure, as they flow in from various sources which have nothing whatever to do with expenditure. Therefore, the two classes of receipts in aid become divided in that way.

8679. And these two classes which are very nearly, according to your allotment, equal in amount, come altogether to 1,311,744*l.*, and when you deduct those receipts in aid you leave a balance to fall upon taxation of 11,834,390*l.*?—That is so.

8680. How is this remaining balance that falls upon taxation distributed?—That is set out in the table given on pages 221 and 222, which is divided as in the other cases according to the authorities which incur the expenditure.

8681. And which in each case is somewhat reduced from the sum which you mentioned in reply to an earlier question?—That is so.

8682. Now you say, as I make out from your paper, that there are three classes of local taxation; what are those three classes, and the amounts received under each?—In analysing the taxation of London I find that there are three classes; first, the class consisting of the amounts appropriated to local taxation from Imperial taxes; secondly, there are certain indirect local taxes levied by various authorities; and then, thirdly, there is the final balance of expenditure which is met by levying assessed rates.

8683. Could you give me the amount receivable under each of these heads?—That is given in the table beginning at the bottom of page 222 and going over on to page 223. The appropriations from imperial taxes amounted to 1,792,732*l.*, the indirect local taxation amounted to 298,266*l.*, and the direct local taxation, that is to say, assessed rates, amounted to 9,904,675*l.*, making in all 11,995,673*l.*

8684. In other words, of the total sum that falls upon the taxation expenditure of London, the three items, the contribution from Imperial taxes, from indirect local taxation and from direct local taxation amount respectively to about 1,800,000*l.*, something nearly 300,000*l.*, and something just short of 10,000,000*l.*?—That is so.

8685. The question of the amounts receivable from Imperial taxation has received your attention for some years past, has it not?—Yes, the Council have for the last two or three years been investigating that subject, and I have reported two or three times to the Council upon it. There is before the Commission my last report on that subject.

8686. That is to say you have examined the position of London in detail in the separate return to which the Chairman has just referred entitled "London County Council, Exchequer Contributions, 1893-4" and which can be obtained for 7*d.* from Edward Stanford, Cockspur street?—Yes.

8687. In respect to that I only wish to ask you a very few questions in order to bring out one or two of the points. You have in that furnished an investigation, from your own point of view, as to the contributions in aid received by London from the Exchequer and by other places?—Yes.

8688. Without going in detail into that, you have accompanied that reasoning and argument by several tables I see; these tables, as I understand, are first intended to bring out the proportion of local taxation in each district of the country including counties and boroughs and London?—Yes.

Mr. G. L. Gomme.

30 June '97

Receipts which lessen expenditure and receipts which reduce taxation, distinguished.

London. Local taxation. Three classes. Amount of each class.

London County Council. Imperial contributions. Position of London. Statistical tables.

\* "London County Council, Exchequer Contributions, 1893-4," Return No. 313, price 7*d.* Edward Stanford, Cockspur Street, S.W.

Mr. G. L.  
Gomme.  
30 June '97

8689. Then the proportion of local taxation expenditure which is borne from the rates and which is borne from grants in aid?—That is so.

8690. You have brought that out first in respect of local taxation for all purposes other than education?—Yes; that is the first table.

8691. In the second place you have brought exactly the same comparison out in respect of local taxation for education purposes?—Yes, that is the second table.

8692. And thirdly you have brought it out in respect of local taxation for all purposes including education?—That is so; that is the third part at pages 8 and 9.

8693. Then on page 10 you have brought it out in respect of local taxation for all purposes other than education?—That is a comparison of two years.

8694. The three principal tables are the three first to which I have referred?—Yes.

8695. Why did you bring education in separately; why did you separate education?—Because the immediate object of this return was to discuss the basis of the Exchequer contributions under the Local Government Act, 1888, and the education grant is a grant made upon a totally different footing. Although it is a grant from the Imperial Government, it does not come into the same category as grants which are from the Exchequer contributions under the Local Government Act.

8696. Then, taking for one moment your first table for all purposes other than education, would I be right in saying that the general view that you set out from those figures in the previous part of your paper is that London and the boroughs generally receive a smaller proportion of each 100l. that they spend from Imperial sources than the counties do?—Yes, that is the general conclusion. Of course, I have been more particularly interested in London, but in the figures which are given at the bottom of pages 4 and 5, I have separated the totals into the three classes of London, county boroughs, and counties. Of course, in the counties are included ordinary boroughs, as I have not been able to separate those areas. That summary shows that while the rates raised in the year of this return, namely, 1893-4, amounted in London to 22·41 per cent. of rateable value; the rates raised in the county boroughs amounted to 22·32 per cent.; and the rates raised in the counties (that is including all the urban districts and including municipal boroughs which are not county boroughs) amounted to 14·36 per cent. of the rateable value. But although those three proportions obtained so far as the rating was concerned, the grants that are respectively received from Imperial taxation as given in column 19 on page 5 were, for London 18·45 per cent. of the total, for the county boroughs 22·03 per cent., and for the counties 59·52 per cent., or calculating that on rateable value London received 3·37 per cent., the county boroughs received 4·09 per cent., and the counties 3·83 per cent.

8697. Am I right in saying that you bring out finally this: that in London on every 100l. spent 13·07 comes in relief from the centre, in the county boroughs 15·49, and in the counties 21·07?—That is so. It is given in column 28 on page 5.

8698. Would you just exactly say what is the meaning of those figures which I have last quoted and which you have corroborated?—They mean that, of the total local taxation for all purposes other than education, London receives from the Imperial Exchequer 13·07 per cent. and pays the remaining 86·93 per cent. out of its rates, the county boroughs receive 15·49 per cent. and pay 84·51 per cent. out of their rates, and the counties receive 21·07 per cent. and pay 78·93 per cent. out of their rates.

8699. Then further than that, and without going into detail at all, I am right in saying, am I not, that there are great variations between the counties themselves of which you have here given the average, great variations also among the county boroughs themselves of which you have here also given the average annual receipts?—That is so, as far as the counties are concerned, and to some extent it is so in regard to the county boroughs.

8700. You have included in these receipts from what I may call Imperial sources everything except education, have you not?—Everything except education, but now, of course, since this return was made, the Agricultural Rates Act has been passed, so I have not included that

8701. I quite understand that; this return refers to 1893-4?—Yes.

8702. Since then, of course, the relief to local taxation, in counties at any rate, is very much greater than this table shows?—I think it would turn out to be so.

8703. In fact it comes to all that has been granted under the Agricultural Rates Act as far as it goes to those counties?—Yes.

8704. This table is earlier than that?—This table was prepared before that Act was passed.

8705. The inequality between London and the county boroughs, on the one hand, and the counties, on the other, will probably be increased by that?—It will be greatly increased so far as London is concerned certainly.

8706. You cannot give me any idea of the increase yet?—So far as London is concerned, I have dealt with that in my memorandum of evidence; it will come a little later on, in order, unless you would like to put it to me now.

8707. I would rather take it in the course in which it would come naturally, if it does not quite arise out of this table. When you come to take education, which is in your next table, what do you include in that? When you take the grants that are given for education, and you speak of "taxes (through the education grant)," do you include science and art?—Yes.

8708. Do you include the grants to voluntary schools?—Not the grants to voluntary schools. Again, this table was prepared before the Act of this year, and I did not include the previous grants to voluntary schools, because it was almost impossible to get the information from the point of view of rating, and, of course, there is a question whether that is a contribution to rates or not. In some sense, of course, a grant to a voluntary school is a contribution to rates.

8709. In any case it is not included here?—No, I have not included it there.

8710. But if you were to include it, have you formed any conception how it would affect London and the great county boroughs in altering the proportions?—I have not considered it from the point of view of the county boroughs, but in a special report, which is not before the Commission, that I prepared for the Council I did go into that question, and if the Commission wished it I could supply the information.

8711. At the very bottom, in columns 39 and 40 on page 7, you give the final gist of your figures in respect of local taxation for education purposes?—Yes.

8712. Will you state what those are?—For education purposes London receives 28·4 per cent. from the grants, and pays in rates 71·6 per cent.; the county boroughs receive 46·1 per cent. and pay in rates 53·9 per cent., and the counties receive 50·9 per cent. and pay in rates 49·1 per cent.

8713. Then these figures which you have now given me are exclusive of any grants to voluntary schools?—That is so.

8714. You say that since then you have made an investigation as far as you can into the effect of the grants to voluntary schools upon the relation of London to the rest of the country?—That is so.

8715. Would you give me, in the shortest possible way, what the character of those results is?—I cannot charge my memory to give the exact facts, but I could at any future time, if the Commission thought proper, give them that information.

8716. Does it increase or decrease the discrepancies between London and the rest of the country?—It increases the discrepancy.

8717. (Mr. Cripps.) Does that apply both to county boroughs and to counties?—I did not investigate it from the point of view of county boroughs: I only took it for London.

8718. (Mr. Stuart.) The comparison to which you refer as increasing the discrepancy is as between London and the whole of the rest of the country?—The whole of England and Wales.

8719. I do not think I need go further into this return on the Exchequer contributions, than to ask you in respect to the third table that you have in that document, in which, as I understand it, the results of the last two tables are put together?—Yes, they are put together there.

Imperial contributions in London, in county boroughs, and in counties. Proportion of Government grants and of local expenditure out of rates.  
Imperial contributions, London. Alleged inequitable distribution. Reasons for this. The year chosen for fixing the basis of apportionment by icon- sidered rates not in London.  
Imperial contributions. Alleged inequitable distribution. Reason for this. City police paid for from City states, and London. Part portion of Govern- ment grant. Also grant to London for main roads very small; and for medical officers and sanitary inspectors nothing.  
Imperial contribu- tions. Metro- politan police pension grant on satis- fac- tory basis, but not other grant.

8720. We have at the bottom of the two last columns on page 9 certain results shown, which perhaps you will state to me in your own language?—London receives for all local taxation services 16 per cent. of the total out of grants, and pays 84 per cent. by rates; the county boroughs receive 21.1 per cent. and pay 78.9 per cent.; and the counties receive 24.5 per cent. and pay 75.5 per cent.

8721. These figures are the best that you can lay before us—I mean are as correct as you can lay before us, but they do not include the voluntary school grant, and they do not include the effect of the recent Agricultural Rates Act?—That is so.

8722. But both of those things increase the discre- pancy as between London and the rest of the country? —Yes, both do. I should just like to mention that the figures here for each county and county borough had to be apportioned to some extent, and I have explained the method by which I have done that in the memoran- dum. I am fairly satisfied that that is the proper way to do it.

8723. To what do you attribute this discrepancy in the proportionate relief of expenditure that London receives, comparing it with the large boroughs which are more approximate to London on the one hand and with, say, the counties on the other?—I have set that out in the memorandum which prefaces the return on which you have just now questioned me, and I shortly summarise the points on page ix. I first of all point out that the particular year chosen for fixing the basis of apportionment by discontinued grants was not fair to London. By that I mean that the Local Government Act of 1888 fixed the basis for distributing these grants upon the actual grants made in the year 1888, with this exception, that in one or two cases—I think the Isle of Wight was one case and some counties in Wales were another—they made some special adjustment; but practically the amounts paid by the Government to the local authorities in the counties in the year 1888 were made the basis for all future grants. By comparing those grants with the four previous years, I find that it so happens—I am quite sure by accident, but it does so happen—that the London proportion was a low one in that particular year. I think that is one of the objec- tions for fixing upon an arbitrary basis like this of one particular year instead of taking an average of years.

8724. You have now explained point (1.); but there are other points at the bottom of page ix, which I will ask you to enumerate briefly, unless there is some particular explanation that you wish to offer on any one of them, or any additional statement that you wish to make about them?—The second point is that the discontinued grants do not contain provision for certain elements which operate unfairly against London, namely, in the first instance, the Government being relieved from paying a portion of the cost of the city police. It so happens that the city of London pay the equivalent of the Government police grant from the city estates, and, therefore, the amount paid in 1888 for the whole of London, was deprived of that portion of the amount in estimating its proportion, and the rest of the country really therefore benefited at the expense of London. Then the next item is the inade- quate sum paid for main roads, the main roads of London being very small and very trifling, whereas, of course, in the rest of the country they are rather important. The third item is the amounts paid to county authorities for medical officers and sanitary inspectors; it was *nil* in London.

8725. These three items to which you have referred are items in the discontinued grants?—They are items which made up the basis for the present grants and which operated unfairly to London. In connection with that I might point out that where a grant operated unfairly elsewhere, I think in the Isle of Wight, and in the counties of Wales, some little adjustment was made to obviate any injustice.

8726. Will you pass briefly to the other points?— The third point is the question of the grant for the Metropolitan police. The pension grant is based upon a very satisfactory basis for London, being practically the cost of the police, whereas the other grant is upon the old amount paid for the police in London, which is less than that paid for in the country.

8727. Then your next point?—The next point is a general one, namely, that, taking the distribution of the contributions as a whole, London is worse off in proportion both to rateable value and to local taxation

than nearly every other county and county borough. The next point is that a comparison of the results of two years seems to suggest that the position of London as time goes on does not improve, but tends to become worse.

8728. You mean a comparison of those two years that you have compared in the table at the end of this return?—Yes. That comparison tends to suggest that the figures do not improve so far as London is concerned. The sixth point is the operation of the Diseases of Animals Act, 1894, by which the Government deduct from the local taxation account a certain sum for compensation for diseased animals from swine fever; inasmuch as that is very slight in London, London is deprived of a proportion of the amount which would otherwise have come to it out of the local taxation account.

8729. I observe that you have in this said nothing as to the question of the licences which London receives? —I have not specified it in examination, but I have set it out in due form in the return. The licences are based upon the amount collected in the county, so that, assuming that they are properly collected within the county area, we have nothing to say about that except to say that it is a proper system.

8730. You approve of London getting the licences?— Yes, getting the licences in the area in which they are collected.

8731. Surely, when you compare what is received from Imperial sources to relieve the ratepayer, the inequality as between London and the counties is seen to be due partially to the extremely small proportion of licences which are thus received by London?—Yes, that is so. I think Mr. Ritchie, at the time when he introduced the Bill, pointed that out in the House, and suggested that the other method of apportioning the grants would remedy that evil; but my figures now suggest that it has not really remedied it.

8732. Have you anything to say upon this part of the question—the comparison of relief between London and the county boroughs on the one hand, and the counties on the other?—One or two questions will crop up in the memorandum as we go along; I think that is all.

8733. You have now completed, as far as the present moment is concerned, dealing with the first of the large means of obtaining money for local expenditure, namely, contributions from Imperial sources?—That is so.

8734. Then I may pass on. Returning to your memo- randum of evidence, which is going to be printed in our Appendix, I see that on pages 224 you give us various items of the indirect local taxation to which we have now been referring partly; would you explain the items which you call indirect local taxation?—Shortly, they consist of the licences and the duties which have been transferred from the Government; then they consist of a tax upon fire insurance companies, which is collected by the London County Council; and certain licences for petroleum, explosives, and so on, which are also collected by the County Council; then they consist, further, of the hackney carriage licences, which are collected and applied by the Metropolitan police.

8735. That shows the character of them?—Yes.

8736. The remainder of them are to be seen in the table on page 224?—Yes.

8737. That raises a point that I wish you to make clear to us. You put, as the first item of indirect local taxation, the licences that are received inside the county?—Yes.

8738. These, of course, are raised in this way, are they not? They are raised by the Central Government and handed back to us?—That is so.

8739. That first item amounts to 438,644l.; I presume that that large sum is included in the figures you have been recently giving us of contributions through the taxes?—That is so.

8740. Is the area of the collection of indirect local taxation always coincident with the area of administra- tion?—No. In the particular case, for instance, of the Metropolitan police, they collect the hackney carriage licences in the city of London; they have no jurisdic- tion there *quá* police, but yet they collect the hackney carriage licences from that area. Again, the City of London Corporation collect the grain duty and the market tolls over a larger area than the city, and apply

Mr. G. L. Gomme.

30 June '97

Imperial contribu- tions. Distribu- tion of London said to be worse off in propor- tion to rateable value and local taxa- tion than counties and county boroughs, and the position gets worse. Unfavour- able opera- tion of Diseases of Animals Act, 1894.

Licences received in London. A satis- factory basis though relatively small pro- portion received by London.

London. Indirect taxation. Licences and duties collected by London County Council and Metro- politan Police.

London. Indirect taxation. Area of collection not always coincident with area of adminis- tration.

Mr. G. L.  
Gomme.  
30 June '97

the proceeds to city purposes. Then there are three small local markets, Southwark, Whitechapel, and Woolwich, where the area of taxation is certainly not coincident with the area of government. In those cases this discrepancy does occur.

London.  
Levying of direct local taxation.  
Map showing degree of rating and rate in the £ in every parish.  
Administrative parishes and non-administrative parishes defined.

8741. Then we come to the last of the three sources from which some of the means for meeting local expenditure are supplied, that is the direct levy according to rateable value?—Yes.

8742. Will you explain that system, which you deal with on page 226 of your memorandum?—I have prepared for the Commission a map which I should like to hand in (*producing map*).\* This map is shaded according to the degree of rating which is the subject that I am now being asked about, and shows the rate in the £ for every parish. The colouring represents the amount, the darker colours representing the higher amounts, and the lighter colours representing the lower amounts. The unit of rating is always the parish. A charge comes down from the central authorities by precept upon the parishes, and then the parish collects the amount required within its own area. The district rates are collected in the same manner by precept upon the parish authority and the union rates also by precept upon the parish authority. Then in addition to these precept rates there are the parish rates; they are added to the precept rates, and make up the total levy which in each rating unit is made every year. The fact that this rating unit, for instance, is separated from that (*indicating examples on the map*) is a matter of great importance I consider, and to some extent no doubt accounts for the difference in the various rates. In some cases, as in the centre of London like the City itself, and in the Strand, Whitechapel, and some of the smaller places on the south, the rating units are very small. I give a table on page 227 showing the largest and smallest.

8743. What is the largest administrative parish, and what is the smallest administrative parish?—The largest is Camberwell with 4,450 acres, and the smallest is St. James Westminster with 163 acres.

8744. Now let us take the non-administrative parishes?—The largest non-administrative parish is Lewisham with 5,773 acres, and the smallest is the Old Artillery Ground with five acres, each of them being a rating unit.

8745. To make it clear, what is the difference between a non-administrative parish and an administrative parish in London?—An administrative parish has the whole of its local concerns governed by a vestry; a non-administrative parish is combined with other parishes, and is governed by a district board.

8746. I notice that the expenditure incurred by the different authorities, and the taxation imposed by those authorities, which one would expect to be equal, do not agree in amount in various cases, that is to say, you find, am I not right in stating, an authority spending a certain amount and that same authority raising by taxation a certain amount, and these two amounts do not agree?—Yes.

8747. What is the reason of the difference?—I have set that out in the table on page 228. The reason, without giving the figures, is the system of equalisation of rates which obtains in London.

8748. The Commission understands the question of the equalisation of rates, and therefore I will not enter into that?—Very good.

8749. (*Mr. Dalton*.) The table which you give on page 228 is not the equalisation table is it?—The table simply gives—this is in reply to Mr. Stuart's question—the difference between the expenditure incurred and the taxation imposed; then I was asked, what was the reason of that, and my reply was that it was due to the system of equalisation which obtained in London.

8750. (*Mr. Stuart*.) I will only ask about equalisation whether you have anything to say as to the reforms necessary in the system of the equalisation of rates which now obtains in London?—May I correct myself—I was looking at the wrong table. In the table on page 228 I have, for the purposes of arriving at the amount of total rates raised, added the balances to the expenditure, and I had forgotten that; it is the table on pages 228 and 229 which deals with the difference between expenditure and taxation imposed.

8751. Without going into the system of the equalisation of rates, which is complicated and involves a considerable number of statutes, have you anything to say

as to the reforms which you believe to be necessary in that system?—Yes. I think that I have reported on several occasions to the Council that it would be of great importance that we should clear, first of all, the county rate itself of all charges which really are of the nature of an equalisation charge. For instance, we pay over to the local authorities certain sums of money; that does not increase really the taxation of London, it simply operates to equalise the charges, and yet it appears in our county rate as if we were levying for our own purposes a larger sum than we really do levy. We levy so much for our own purposes, and so much for the purposes of the local authorities. I think that, therefore, to clear the county rate of all extraneous charges of that sort and add these equalisation charges to the equalisation rate proper would be a very important thing. Further than that there is the great equalisation charge administered by the Local Government Board—the common poor fund—which deals with certain of the services which the Council deals with; and it does occur to me that the double machinery which now obtains first of all with the Council and then with the Local Government Board might very well be assimilated and all brought under one common system.

8752. You refer in your memorandum to cases of taxation which are in other hands than those of public authorities; what do you mean by that?—First of all there are the appropriations from Imperial taxes to the voluntary schools; that seems to me to be a case where a non-government authority has the administration of taxation. The second class are the three markets in London where the municipal service is in the hands of a private authority which collects taxation, namely, Covent Garden Market, Spitalfields Market, and Shadwell Market. The third great class is that of the water companies which levy taxation, and at the same time are in the hands of private authorities.

8753. Take the larger and more important one; what does the water company rate come to on an average?—That I state on page 231. It comes to 1,220,901*l.*, which they levy by rates.

8754. You mentioned a few moments ago, and it is shown in that map which you have handed to the chairman, the variety of rates in various parishes in London; can you tell me what is the range of that variety?—It ranges from 23*l.* 15*s.* per cent. in St. James, Westminster, to 42*l.* 1*s.* 8*d.* in Rotherhithe.

8755. The whole list is given at page 232 of the memorandum, which will be published in our appendix?—That is so.

8756. How has that differentiation been altered by the equalisation of rates? I mean by all the systems which have been adopted from time to time and added one upon the top of the other for equalising the rate; how has that range been altered?—That I state in the table on page 234. The range would have been, without any equalisation at all, as shown in the first column, from 19*l.* 7*s.* 8*d.* per cent. in the case of St. James, Westminster, to 48*l.* 11*s.* 9*d.* in the case of St. George-in-the-East; but by reason of the systems of equalisation, first of all, of the common poor fund, secondly, as further altered by the county fund and finally as further altered by the equalisation fund, it now ranges from St. James, Westminster, which still remains lowest, at 23*l.* 15*s.*, up to Rotherhithe at 42*l.* 1*s.* 8*d.*

8757. That table gives the range of rates between one part of London and the other?—Yes.

8758. (*Chairman*.) This table of which you are now speaking, in answer to Mr. Stuart, is compiled on a somewhat different basis from the others. The first column is headed "Rate per cent. of the charge on rates": does that mean that the first item is 19*l.* 7*s.* 8*d.* per 100*l.* of rent?—That is on the same basis.

8759. This map that you put in gives the rate per £ in shillings and pence?—That is so.

8760. But you have changed it now and make it rate per cent. per 100*l.* of value, is it?—That is so throughout the whole of this memorandum; I have treated it per 100*l.* rateable value.

8761. (*Mr. Stuart*.) But you have given the rate in the ordinary way in shillings and pence per £ in the tables at the end of your memorandum?—That is so.

8762. (*Chairman*.) But if we want to find out the shillings and pence per £ we can do it from these figures?—Yes.

Mr. G. L.  
Gomme.  
30 June '97

London.  
Taxation in hands of private authorities.  
Voluntary schools; certain markets; and water rates.

London.  
Levying of direct local taxation.  
Map showing degree of rating and rate in the £.  
How far the differentiation has been altered by equalisation of rates.  
Principal causes of the differentiation.  
Special county rate not levied in the City;  
Asylums Board charge not levied upon certain places;  
common poor fund not levied on Penge.  
Also exemptions from rating cause inequalities.

Mr. G. L.  
Gomme.

30 June '97

8763. There is no change of basis; it is a mere change of statement?—A mere change of statement.

8764. (Mr. Stuart.) What are the principal causes of this great differentiation in the rates between one place and another? First, let me ask you if it is not the case that, roughly speaking, it is the poorer quarters which are heavily rated?—That is so.

8765. What are the principal causes of that differentiation?—The first cause is the fact of the special county rate being levied in all parts of London except the city, by which the city escapes, as I say on page 236, a rate of 13s. 10-29d.

8766. That is to say, a rate of that amount per 100l. ?—Yes.

8767. You are now going to speak in that form of language during the remainder of my inquiries?—Yes. The city escaping that, consequently throws on the rest of the county a proportionately larger sum.

8768. Now can you give us the next cause of this differentiation?—The Asylums Board charge is not levied upon certain places like Lincoln's Inn, Gray's Inn, the Inner Temple, the Middle Temple, and Penge in the county of London; that again makes a slight differentiation.

8769. Now will you give us your next cause of differentiation?—The common poor fund is not levied upon Penge. Those are what I call the county exemptions, and I summarize the results of that in the table which I give on page 237, showing the increase or decrease upon the several parts. The City of London, for instance, is decreased by 13s. 9-64d. per cent., the Inner Temple by 2l. 0s. 7-22d. per cent., and so on, and the remainder of the county of London is, by reason of these exemptions, charged with 2s. 0-04d. per cent. more.

8770. That is so far as the county is concerned?—Yes.

8771. You are still speaking of so much upon the 100l. of rateable value?—That is so. I choose the 100l. because that is so much easier to deal with than decimals of a penny and so on.

8772. Will you now proceed on the same basis, to tell us of any further causes of this great difference of rates?—The next cause of the difference of rates is the exemptions from rating which obtain in various ways.

8773. What are those?—The first exemption is properties at and below 20l. in value, which by statute are allowed a deduction of 15 per cent. from the rates. That particular property in the several rating areas is not distributed equally all over London, and on page 238 I give a list of the parishes to show how this property under 20l. is distributed.

8774. Is it the case that in Plumstead, where there is the greatest amount of property at or under 20l. in rateable value, 52 per cent. of the whole property is of that class?—That is so.

8775. Whereas if you come to St. George, Hanover Square, you have only 1 per cent.?—That is so.

8776. When you say 52 per cent., do you mean 52 per cent. of the whole rateable value of the district, or do you mean 52 per cent. of the tenements of the district?—I mean 52 per cent. of the rateable value.

8777. So that 52 per cent. of the whole rateable value, and therefore a very large quantity—more than 52 per cent.—of the tenements?—Yes, probably it is.

8778. In Plumstead more than half the property is of 20l. or less rateable value?—Yes.

8779. Of course the Commission knows perfectly well, and need not go into it, that there are certain exemptions in those houses, but I just put the fact to you?—Yes, there are.

8780. Have you anything to say with respect to those exemptions?—No, except generally I think all exemptions should be thrown on the county rate; all exemptions, that is to say, that are properly allowed exemptions. Without going into the merits of particular exemptions, or whether this particular one should be allowed or not, I think that all exemptions which obtain should be thrown upon the county rate and become a county charge in London.

8781. Meaning that where for instance, there are exemptions of a very great amount which raise the rates largely, as in Plumstead, on the rest of the

i 97620.

property in Plumstead, these exemptions should be paid for by the whole of London and not by Plumstead?—I think that should be so.

8782. What is the basis on which you make that proposal?—Because the bulk of the rates in London at the present moment are central rates—to the extent of two-thirds of the whole of the rates in London they are levied centrally; and therefore it is obviously unfair that any property which is exempted from rates levied for the benefit of the whole of London should cause that exemption to operate locally; when a parish has to pay two-thirds of the rates that it levies for central purposes the exemption should fall centrally.

8783. Let me follow what you mean; it is this, I think: that the central bodies impose a certain rate upon the total rateable values of these various parishes?—That is so.

8784. That that total rateable value is made up whether the houses be subject to exemption or not?—Yes.

8785. That the parish has then to pay us without our taking account of the exemption, and it has to lose because of the exemption?—That is precisely the process.

8786. We have now spoken of exemptions owing to being under 20l. in rateable value, but there are other exemptions, are there not?—Yes; the next one, a very important one, is that of unoccupied property.

8787. Where do you give an account of that?—On page 238 I state that, and in Table 6 at p. 284 I give a summary of the local statutes, which have enabled the parishes from time to time to levy half rates upon unoccupied property.

8788. Have you formed any numerical conception of how, in a place like Plumstead, these two considerable exemptions of unoccupied property, and of property where remissions are given, affect the total rate in the parish?—Not from those two particular causes. One must include and take account of all the exemptions, and that I have stated in the table on page 240.

8789. Then I need not question you further than by reference to that table?—No.

8790. Is there any other point about exemptions that you wish to mention, or have you stated everything that you want to say?—I think I have said all, except to refer to the table where I give a list of the statutes by which the parishes at all events used to have the power to levy half rates on unoccupied property.

8791. Will you refer me to that table; on what page is it?—I am referring to pages 284 and 285.

8792. You mean that there are old Acts of Parliament still in existence and unrepealed, by which all the parishes which are set forth in pages 284 and 285 would have a right, if they like, to charge a certain proportion of the rates upon the owners of empty property?—I am not quite certain about saying "unrepealed" because I think that since the general statute of 1855 there is some legal difficulty about that.

8793. (Mr. Cripps.) These are all private Acts of Parliament, are they not?—They are local acts. I may point out that in the city the Commissioners of Sewers do at the present moment levy half rates upon empty property. They do not consider that any general Act prevents them from doing it.

8794. (Mr. Stuart.) You have been dealing with the question of exemptions: with reference to the way in which those exemptions are dealt with in the parish demand notes, are there any amendments which in your judgment would be beneficial?—Yes. We have had a great deal of difficulty with the parishes in getting them to state correctly, for instance, the central rates, particularly the county rate, with which I am more concerned; by that I mean that the council makes a rate of a given amount; take last year, the year with which we are dealing, when the rate was 1s. 3d. in the £; the parishes have throughout London the practice of adding to that 1s. 3d. the cost of all these various exemptions, in one place it may be a matter of 2½d., in another place it may be a matter of 3d., in another place it may be a matter of ½d., and so on; so that throughout all London the county rate, which is, according to the statute, a fair and equal county rate, is stated on the demand notes at a different figure. But that different figure is not exactly the truth, for this reason, that over and above the exemptions which obtain in each parish, there are

charge in  
London  
and borne  
by London  
as a whole

Mr. G. L.  
Gomme.  
30 June '97

certain set-offs by reason of the fact that property when it first comes into rating may conceivably exist for a year in a parish, contributing the whole of the rates to the parish, and yet not contributing anything to the central authorities. Therefore the amounts collected for the central authorities and not sent to the central authorities are so much profit to the parish. On page 241 I give an instance of how that happened to work in the parish of Westminster last year. The county rate was 1s. 3d., the parish demanded 1s. 4d. of the ratepayers, the school board rate was 11½d. and they demanded 10½d. I do not know why they made that distinction in the two rates, but as a matter of fact in that particular year they had no cause to levy anything for exemptions, because a large amount of new property was built and the Government paid a large amount on the Government property which entirely set off the loss arising from exemptions.

8795. Your complaint is, that the central rate is conveyed erroneously to the ratepayer in the demand for rate, and you would like it to be conveyed, exactly as it is put, and that in some separate item there should be these other charges that are borne by the parish at present on account of exemptions—other charges, however, which you feel ought to be borne really by the central rate?—That is so; I think it ought to be separately stated, and not mixed up with the different rates.

London.  
Levying of  
direct local  
taxation.  
Differentia-  
tion in  
rates also  
caused by  
amounts  
payable for  
loans in  
different  
parishes.

8796. A good deal of the differentiation in rate, surely, arises from a cause that you have not yet mentioned, namely, the amount payable for loans in the different parishes; that varies very greatly, does it not?—Yes, it does, very considerably. It bears upon the question of the differentiation, in that it represents the amount due to the degree of equipment, one might almost say, which each parish has reached for municipal purposes; for instance, all the central parishes of London have done all their sewerage, they have done all their paving, and they have practically completed their loans and paid them off; whereas, in the outlying places, a good deal of land is still unbuilt upon, or only now being built upon, and the parishes are heavily charged with loan in order to bring those places up into line with the parishes that have already done all this work. So that it is simply a matter of date with them; it is not so much a real differentiation as it is that they are doing now what the other parishes had done at a previous period.

Valuation  
of build-  
ings. Site  
values not  
separately  
valued.  
Effect of  
this in  
London.

8797. You have estimated the result of land not being separately valued under the present system, I believe?—Yes.

8798. Will you now say what you wish to say on that point?—The Valuer of the Council who will give evidence, I believe, before this Commission, has made an estimate of the value of the land, and I have, on page 244, put into figures the result of not separately valuing land in London. By that I mean that the land values vary at different places, being, in the city of London for instance, extremely high, and in some of the outlying places very low.

8799. (Chairman.) What do you mean by land values?—The value of the land apart from the buildings.

8800. (Mr. Cripps.) You mean, what are called site values?—Yes.

8801. (Mr. Stuart.) I see in one of the tables you have given, Table 12, which appears on page 296, you show the land values in relation to rateable values; there you set out what you call "land estimated by valuer," and buildings estimated by valuer. You give that information for each parish, and bring out a total gross value for these two of 43,614,133*l.*, according to the last valuation, of which 15,096,620*l.* are land estimated by valuer, which, I suppose, means site value, and 28,517,513*l.* are buildings. What was the basis of these figures?—The valuer will deal with that. I have no information on that point. I have simply confined myself to bringing out the differentiation among the several parishes, which is caused by the fact of land being now mixed up with buildings, and being subject to the same reduction for repairs and so on, under the Valuation (Metropolis) Act, as buildings.

Rates in  
City of  
London  
said to  
have  
decreased.

8802. Going back to these figures, which you refer us to at page 244, I see opposite the city of London that the "rates decreased per cent. of rateable value" by 1*l.* 2*s.* 11*d.*; does that mean that that is the decrease for every hundred pounds of rateable value?—Yes.

8803. I suppose you have nothing more to say upon this point?—No; I think the valuer will deal with it.

8804. Taking all the exemptions now allowed in rating, have you made an estimate of the position of the parishes as they are severally affected by them?—Yes, on page 246.

8805. In the table, on page 246, do you give the sum total of all these exemptions?—That table gives the sum of all the differentiations due to causes which are non-preventable causes, and leaving therefore the total which is given in column 7 of what I call the real differentiation of rates in London.

8806. Now you have got to the real differentiation of rates in London, missing out those which you have just been dealing with?—Yes.

8807. The things that you have just been dealing with do affect the actual rate which the ratepayer has to pay?—Yes, that is so.

8808. But your case is that they ought to be borne by the whole town uniformly?—Not entirely; I say that the exemptions should be borne by the whole of London; that the element of site value should be dealt with, but that the loan charges and the special services which are given in column 1 and column 4 are due to local circumstances which we cannot at the present moment disturb, or need not disturb.

8809. Will you tell me what are the extremes of rating in per-centage of rateable value after these adjustments you have mentioned have been made?—I make it out that the range of differentiation is from 23*l.* 0*s.* 11*d.* in St. George, Hanover Square, to 34*l.* 11*s.* 7*d.* in Rotherhithe, both per cent. of rateable value.

8810. Then your residual difference is a difference, I presume, principally owing to the poorer place on the one hand and the richer place on the other having to perform very largely the same services?—That is so.

8811. Now, turning to the appropriation from Imperial taxes to London, I do not think I need deal further with the methods of allocation, unless there is anything you have got to say; I think we have gone sufficiently into that?—We have gone into the method, but in the table on page 247 I might point out that I have reduced those methods to figures, showing that London receives from the licences 13·54 per cent. of the total—that is London's proportion; from the estate duty and the customs 21·96 per cent. of the total; on the police pensions 38·75 per cent. of the total; on the education grants to school boards 21·36 per cent. of the total; under the Diseases of Animals Act, 1894, 1·72 per cent. of the total; and under the Agricultural Rates Act I estimate we receive 24 per cent. of the total. The total that we get from all appropriations of Imperial taxation amounts to 16·37 per cent.

8812. What is the per-centage of local expenditure in London—I think you give that on page 248, do you?—Yes, it is 26·17 per cent.

8813. That is to say, of the total local expenditure of the country, that is London's proportion?—Yes.

8814. And the total local taxation; what is London's proportion?—It is 27·95 per cent.

8815. That is to say, we bear more local taxation in proportion to our local expenditure because we do not get so much relief from the central funds?—Yes.

8816. Then, in licences; what is London's proportion?—London's proportion there is 13·54 per cent.

8817. Of all the inhabited house duty of the country we collect 45·15 per cent.?—Yes.

8818. Supposing we get the inhabited house duty as well as the licences, we should get a better haul?—My point on that is, rather, that the Government, in selecting a local tax to be a portion of the grant from Imperial taxes, fixed upon the licence duties by which we receive only 13 per cent.; but, supposing they had fixed upon another local tax, namely, the inhabited house duty, we should have received 45 per cent.

8819. There is a point we need deal with only very slightly, and that is the relationship of the local taxation of London to that of other areas by which, I suppose, you mean other areas in the metropolitan district?—No, I mean something more than that.

8820. Will you explain exactly what you do mean?—I think that the question of the area with which a local

Areas.  
Question of the area with which a local authority shares its taxation. London said to be disadvantageously affected. Police area. Water companies area.

Inhabited House Duty. Position of London with rest of country compared.

Poor law. (London). Rates in respect of. Differentiation in these rates in London. How far due to differences in administration.

authority shares its taxation is a matter that has not really been fully considered at the present moment. It so happens that London, in the first instance, shares taxation with the police area, and, of course, so far as the water companies are concerned, it shares taxation with the water companies area outside London. The importance of that to London is, that the rateable value of London being so very much higher per house than the outside areas, wherever it has to share taxation with an outside area it pays a very large amount in excess of its due proportion to expenditure.

8821. (Chairman.) Is that quite certain?—Yes.

8822. Is it not relatively the fact that they get more money out of London because the water companies have more population to supply in that area?—They have more population to supply, but not more population in proportion to the amount of taxation that they get.

8823. Is that so; are you sure; have you worked that out?—I have worked that out in separate tables, and I should be prepared to show the results to the Commission, if they wish. I have considered the matter very fully, and my own distinct opinion is that London does contribute a much higher amount in consequence of its high rateable value, than the benefit which it receives from the water supply.

8824. (Mr. Stuart.) Will you proceed?—Then, of course, it shares with England and Wales the local taxation of the inhabited house duty and the land tax, and in the case of the inhabited house duty, as we have just now pointed out, London pays 45 per cent. of the whole, or approximately so, without getting the same proportionate benefit, so far as we know, out of the inhabited house duty. That being a local tax I point out that the sharing of a local tax with a larger area is a very important question to London. Then, about the rates under the poor law, of course, in comparing the London taxation with that of other places, the question of the poor law is upon a different footing, because the poor law is governed to so large an extent from the centre—to a very much larger extent from the centre, I should say, than with any other form of local taxation. There is not so much reason why poor law taxation should be different in different parts of the country, as there is in the case of ordinary municipal taxation. It is just as important that the poor should be supported in one place as it is in another; and yet at the same time we find that the range of rates, if you take the London area to begin with, for poor law expenditure alone—

8825. In London itself?—In London itself, is in Bethnal Green 3s. in the £, whereas in Hampstead it is only 1s. 2½d.

8826. Now you are returning to the old form?—Yes.

8827. (Chairman.) What is Whitechapel?—I could easily get it.

8828. What is St. George-in-the-East?—That I have not got.

8829. I think I know the reason why?—I can very readily get it for you.

8830. Does not the poor law expenditure vary more than any other in relation to the efficiency of local administration?—In London I think the principal reason for the difference is the fact that in some places outdoor relief is given, and in some places indoor relief only or principally is given, indoor relief being to a large extent equalised, and outdoor relief not being equalised.

8831. (Mr. Stuart.) Now, on pages 250 and 251, you give a list of the equivalent rates in the £ for poor law purposes over different parts of England, but I do not think we need go into those further than to ask if that is so?—Yes, that is so. I should like to point out here that London is higher for poor law expenditure than almost any other place in England, except a few county boroughs. There does not seem to be any great reason why it should be; assuming that there is no wrong doing in the administration of the poor law in England there does not seem to be any reason why the poor rate of London should be higher than the poor rate of Birmingham.

8832. There is a very strong pressure in London by the form of the law to bring about indoor relief as compared with outdoor relief?—Yes, the advantages to the parishes of course would be to have indoor relief.

8833. This question that we are really dealing with—that of the relationship of Imperial to local taxation—I suppose you regard as one of the most momentous

matters?—Yes, I do. I consider that to be a matter that deserves the most serious attention.

8834. Will you just explain very briefly what your position is about that?—I think I have practically said all that I have to say, except to refer you to the top of page 252, where I rather summarise my observations on the point. I do not know that I need read that to the Commission.

8835. If you refer to the top of page 252 as being what you wish to place before the Commission on this point in addition to and beyond what you have already said it will be enough?—The special point is that the present system of contributions causes a sort of zig-zag fluctuation in rates—I think that is the term I have used here. Sometimes we get a large amount from the estate duties ranging in several years from 358,000l. to 493,000l.—that is a difference of 135,000l., which means a penny rate—without really knowing whether we are going to receive that amount. Therefore, in one year our rate may differ to the extent of 1d. simply from the fact that our share of the estate duty was a very considerably less amount than in the previous year. It occurs to me that that state of things is not quite good from the point of view of local taxation, and that we should have a more settled income to rely upon than what is caused by these amounts receivable from Imperial taxation.

8836. You point out on page 252, as I understand, that you divide first the grants in aid, so to speak, between the various portions of the United Kingdom in a somewhat arbitrary manner, and then you proceed to subdivide them again in a somewhat arbitrary manner?—Yes, I point out that the system which has obtained is to first of all divide the taxation among the countries in the proportion of England and Wales 80 per cent., Scotland 11 per cent., and Ireland 9 per cent., although I do not quite know how these proportions have been arrived at.

8837. (Chairman.) Is that not according to the basis of contribution?—Yes, that does start the basis of contribution, because out of the total local taxation England and Wales get 80 per cent., then that 80 per cent. is divided up among the counties upon another arbitrary arrangement. My suggestion is that the two arbitrary arrangements are at all events not a scientific treatment of the subject.

8838. (Mr. Stuart.) You further suggested that in London all this is still more complicated by the fact that certain local services are paid for out of Imperial taxation and certain Imperial services are paid for out of local taxation?—Yes; the position of London is peculiar in that way.

8839. I do not know that I need ask you about it now—for I think in the present circumstances it is at an end—but one of those, the police courts question, has been dealt with?—Yes; the police courts question is one of those cases.

8840. There is a Bill\* which has just passed through Committee in the House of Commons which makes a very considerable change in regard to police courts?—Shortly, it transfers the cost of the police courts from the Imperial funds, which formerly paid it, to the Metropolitan police funds.

8841. (Mr. Stuart-Wortley.) Not the whole of the cost, is it?—There is a certain amount of it met by fees and so on; but the balance of the cost, whatever it may be in the year, that falls upon taxation and used to fall upon the Imperial taxation, according to the Bill of the Government of this year, is now to fall upon the funds of the Metropolitan police, although the area of administration of the police courts is practically coterminous with the county of London, and the area of rating of the Metropolitan police extends 15 miles out. Although the amount is not large, yet here again is an element of confusion between the area of rating and the area of administration, which seems to me to be one of those unhappy kind of things that should have been prevented.

8842. (Mr. Stuart.) Without dealing with that question which is rather being argued for the moment in the Legislature having just stated that, there is the other side of the thing where there are local taxes which are applied to Imperial purposes in London?—Yes.

8843. What are those?—I suggest that the inhabited house duty is really a local tax.

\* The Bill introduced in 1897 for "transferring the expenses of police courts to the Metropolitan Police Fund, and for making provision with respect to the courts of the stipendiary magistrate of Chatham and Sheerness," received the Royal Assent on 6th August of that year (Metropolitan Police Courts Act, 1897. 60 & 61 Vict. c. 26).

Mr. G. L.  
Gomme.

30 June '97

Relationship of Imperial to local taxation (London). Imperial contributions. Estate duty varies in amount. A settled income for purposes of local taxation desirable.

Local taxation (London). Certain local services paid for out of Imperial taxation. Police courts, inhabited house duty, land tax.

r. G. L.  
Gomme.

30 June '97

8844. You refer to the whole country now?—Yes. I also suggest that the land tax is really a local tax. Both of those taxes are collected locally and they are applied imperially. I think in looking at taxation from a scientific point of view, if I may use that term, that is one thing which could very well be remedied, namely making local taxes apply to localities, reserving for Imperial purposes the taxes that cannot be applied to localities.

8845. You mean that in fact the raising of the inhabited house duty as a central tax and then keeping it; and the raising of the licences as a central tax and then paying them back, is an element of great irregularity?—It is inconsistent at all events.

8846. Now about Imperial services paid for out of local taxation, you raise some question on that point at page 256, I do not know whether you wish to say anything about it now?—That is rather an important matter in connection with the Metropolitan police. I have gone into it at some length and pointed out practically that the Metropolitan police does perform Imperial services, and that although some of those services are paid for by the Government, yet I suggest that the evidence goes rather to prove that there is a balance of Imperial cost cast upon the ratepayers of the Metropolitan area.

8847. (Chairman.) You say "goes rather to prove," can you prove it by figures?—I cannot prove it by figures because I have not access to the whole of the documents. I have only access to the public documents, but so far as the public documents can be examined. I have stated the result of my examination of those documents in this memorandum.

8848. Just refer me to the page will you?—I have dealt with this question of the Metropolitan police in pages 256 to 261.

8849. What is the largest amount that you can suggest the London police is being charged with for Imperial services now not met by repayments; what do you suggest?—I am afraid I am not in a position to give any figure, because I have really only had before me public documents.

8850. 5,000*l.* or 10,000*l.*, or 20,000*l.* or what?—I should take it at a great deal more than that.

8851. Show me any table which I can discuss, and see whether I can check your calculation. (Mr. Cripps.) Turn to page 258. Is that in the "estimated cost of special services not met by repayment"?—No, that is only a portion of the amount. I point out that the figures show that taking into account the special services and the repayments for the special services, according to the police accounts themselves, there is a balance of cost on special services which is not met by repayments; but then there are other points that seem to me not paid for that are not considered to be the special services of the police. For instance the Government mentioned in the House of Commons so recently as the 4th May 1897, in connection with the Police Courts Bill, that they had agreed to pay 7,000*l.* per annum into the police fund in respect of the services rendered by the police to the House of Commons. My point about that is that if they have discovered that that 7,000*l.* is due to the police fund now, it is not due to it in this particular year, but it has been due to it for a series of years. That is one of the items I have questioned as coming out of the charge which has been hitherto borne by the police fund, but which really is an Imperial service. I think I give in a foot note on page 37 some quotations from the "Times" showing where the Metropolitan police have been employed out of London. I have no means of knowing whether the cost of that has been paid back again to the police fund, but my suggestion is that the Metropolitan police are so largely used for Imperial purposes that the consideration of the point from a different standpoint than that hitherto obtaining is really urgently needed.

8852. You do not know that these services are not paid for?—I do not know that they are not paid for.

8853. As a matter of fact, my information is that they are, but I cannot give you chapter and verse for it?—Even if that is so, I suggest that the keeping of a large force which may, occasionally, have to be used in different places is an expense to the locality—that if there are men who may be transferred from London to other places, then, while they are not employed imperially they are being paid for out of the local resources.

8854. Do you suggest that they are in idleness while they are not paid for imperially?—No, I do not suggest that they are in idleness, but I do suggest that the cost falling on the local funds is very much higher than it need be.

8855. You say "very much"—how much. I mean compared with your total expenditure it is very trifling, is it not?—I would not like to give a figure, but I should say it was not trifling. The reason I say that is, because I have compared the cost of the Metropolitan police with that of the other police forces, and the items of charge in it with the items of charge in other forces.

8856. (Mr. Stuart-Wortley.) These services mentioned at the bottom of page 257 are all repaid, the most conspicuous case is that of the dockyards, for which I know you will find a charge in the Admiralty Votes?—The dockyards are paid for, I know.

8857. (Mr. Stuart.) I have only one point now to deal with, but it is an important one, and I will deal with it quite shortly. There has been a remarkable growth of the amount of local taxation in London in recent times, and I think you can refer us to some figures in your memorandum which show that?—Yes, on page 262. The growth of local taxation in London has been very considerable. In 1889-90 the average over all London was 5*s.* 5*d.* in the £, and in 1896-7 it was 6*s.* 2*d.* in the £.

8858. For the sake of making it clear, I will just ask you this: I believe that that 5*s.* 5*d.* and that 6*s.* 2*d.* in these relations mean that, if you take the whole expenditure of London, which comes ultimately on the rates, and then find what rate all over London, if it were paid, would produce that, that is what that figure is?—That is so; this is the true average rate.

8859. So that the real rate that any individual had to pay would, on an average, be greater than that by probably something like 6*d.* or 7*d.*—I will not ask you to say, probably, 6*d.* or 7*d.*, but would be greater?—It would be more by reason of the exemptions and other things we have talked about. Before passing from that, may I just refer back to page 216, where I point out that the amount levied in London for rates in 1878-9 was 5,203,243*l.*, whereas, in 1895-6, it was 9,904,675*l.*, which means an increase of nearly 90 per cent. in 17 years.

8860. (Chairman.) Yes, but before that is of any value you must take population and many other things into consideration; a mere big figure taken like that is of no use?—I am simply giving you the fact, I am not accounting for it.

8861. (Mr. Stuart.) You have endeavoured to roughly estimate the expenditure on local services in its relations to benefits to property; now will you explain what you mean by them?—The municipal expenditure, more or less, either directly or indirectly, goes to the benefit of property. Some of that benefit is a direct benefit and has always been accepted as such by statute and other authorities; and that I put down in column 1. There are other services, which are indirect, such as maintenance of the poor, education, and other things, which I put down in column 2, and then there are other services which are of more remote benefit, which I put down in column 3.

8862. You are now referring to the columns in a table on page 263 of your memorandum which the Commission is to print?—Yes, it being understood that these are approximate estimates, and that I do not pretend to say they are exact figures. I estimate roughly that of the total municipal expenditure in London, 7,180,170*l.* are practically direct benefits to property, and 5,282,552*l.* are indirect benefits, and the remainder 683,412*l.*, are more or less remote benefits.

8863. What is the important point under this head which appears to you to bear upon the reference to this Commission as to the incidence of rates?—The point seems to me to be that if municipal expenditure is an expenditure which directly benefits property, then the question of the incidence of the charge in respect of that expenditure as a question of the incidence of taxation does not really come in. My point being that it is expenditure which in old days fell directly upon property owners and was paid for by property owners, that gradually the services, such as road maintenance, sanitation, sewerage and drainage, which were formerly, particularly in London, under some of the old Estate Acts, made a direct charge on the owners of property, have now become municipalised services, and

Mr. G. L.  
Gomme.

Local taxation (London), growth of, in recent years.

Local expenditure which benefits property. Direct and indirect. Classification. Statistics. Payment of local taxation in respect of property.

Mr. G. L.  
Gomme.

30 June '97

that as municipalised services they are just as much a direct benefit to property as they were before, when they were incurred by the owners of property themselves. Therefore that portion of taxation which is for municipal purposes does not seem to me to come into the question of incidence, because it is in the proportion that I have suggested, a charge which property ought properly to bear.

8864. Have you made any calculation, or have you made any estimate as to the increase in rateable value in London as compared with the increase in the rates levied?—Yes, on page 264 I have attempted that, and I must qualify that table by saying that it is only an estimate—I think it is a reliable estimate, but it is an estimate only. I have taken the property as it stood valued in 1871, and by a rather elaborate process I have endeavoured to trace the value of that property out through the succeeding years as it was re-valued at each quinquennium.

Rateable  
value of  
property  
and rates  
(London),  
increase of.

8865. Do you mean that in the first column of this table on page 264, you have, from 1871-2 to 1897-8, taken the rateable value on absolutely the same subjects as nearly as you could obtain it?—That is what I mean. Of course, it is, as any member of the Commission will readily understand, subject to the fact that property which was erected in 1871 has since been destroyed here and there, and new property put into its place; but the great bulk of the 19 millions which appear in 1871-2, I suggest, also appear in the 25 millions which it is valued at in 1897-8.

8866. In other words, what you suggest is that the rise in certain definite subjects, certain definite pieces of property, has, from 1871 to 1897, been fairly measured by the rise from 19½ millions to 25 millions?—That is so.

8867. That is the best estimate you can form of the rise in value of that property, which has remained the same subjects during that time?—Yes.

8868. What about the rise in the total rates that are levied on the property?—I can only give that for a portion of the period, as it appears in the second column of that table, namely, from 1878-9 to 1893-4. There I show that the rates levied upon this particular property, that is to say, that portion of the total property of London which appeared in the valuation in 1871-2 was, in 1878-9, 4,596,969*l.*, and that amount of rates was increased in 1893-4 to 6,479,101*l.*

8869. If you look at the column of rateable value for the corresponding years 1878-9 and 1893-4, over which you have got the rates levied, am I not right in supposing that what you say is this, that whereas the rates have risen between 1878-9 and 1893-4 upon certain pieces of property, from 4½ millions to 6½ millions, the value of that property, as nearly as it can be got at by taking the rateable value, has risen from 21½ millions to 24½ millions?—That is so.

8870. In other words, the same subjects having been taken, their rise in value during those 15 years is, according to you, 2½ millions, and the rise in the rate that it has to pay is short of 2 millions?—Yes, something short of two millions.

8871. In other words the rise in the value of the property has rather more than kept pace with the rise in the rates which it has to pay?—Yes.

8872. Do you, then, say that there is any connection between those two?—Yes; I suggest that among the elements which cause the rise in the value of property, has been the municipal expenditure in that period, and that my previous observation that municipal expenditure increased the value of property is borne out by the condition of things in London as shown by those figures.

8873. Then what you mean to infer is that it would be just—I do not ask whether they do pay it or not at all, as that is a highly theoretical consideration—but that it would be just that the owners of that property should pay the rise?—Yes, that seems to me to be the conclusion to be drawn from those figures.

8874. Is there anything more now that you wish to say on that point?—No.

8875. Is there anything that you wish to remark, or anything that you have not brought out that you wish to make any further statement upon?—There is just this one point, that municipal expenditure and local taxation not being the same thing, that is to say, the rates being less than municipal

expenditure by reason of the indirect taxation and the grants from Imperial sources, property, if I am right in my suggestion, receives the benefit of the expenditure which now falls upon indirect local taxation and upon the Imperial grants, and, therefore, in addition to being charged with the rates which are levied directly, following on the analogy of my previous answer, it should be also charged with the proportion which now falls upon indirect taxation and upon Imperial taxation.

8876. (Chairman.) Before I put to you the questions which I have to put, let me say that I am sure, along with myself, the Commission recognise the extreme amount of care with which your memorandum has been prepared, the amount of labour which you and your staff must have bestowed upon it, and the ability with which you have expounded the various parts in relation one to the other. I think early in your examination you laid a foundation by attempting to show that the proportion received in London from Exchequer contributions was 16 per cent. of your expenditure, and 84 per cent. from local sources?—Yes, quite so.

8877. That was for the year 1893-4?—Yes.

8878. I have had a series of calculations prepared which I will not ask you to accept from me without checking, but which I think will show that for the year 1895-6 the relative proportions were not 16 and 84, but leaving out decimals, of course, 18 and 81, taking Exchequer contributions for all purposes, other than education?—That 16 and 84 is including education.

8879. Including education?—Yes, including education, in which London is not so well-off.

8880. Can you give me the figure excluding education?—The figure excluding education is London 13 per cent. from Exchequer contributions, and 87 per cent. from rates.

8881. When you say excluding education do you mean excluding education altogether?—Yes.

8882. I will ask you to comment on this table, of which I will give you a copy, but for the purpose of my examination I am going to take your own figures of 1893-4, upon which your whole examination in chief has been based. The first suggestion that I make to you is that that calculation has for its basis a comparison between the grants from the Imperial Exchequer and the whole expenditure from local sources in relation to one another?—Yes.

8883. Your suggestion to us, as I understand it, is, that London is put at a disadvantage to other places because it receives less of its total expenditure?—Yes.

8884. Do you think the total expenditure taken in that way is a fair or safe basis to take for making such a calculation as you suggest to us?—No, I do not suggest that expenditure is the only or the best standard to take. I have taken it as being one of the means by which we can test the relative position of London in this matter.

8885. Still it is the only one which you put before us?—No, because I have also put to you the ratio per cent. upon rateable value.

8886. It is the one upon which you base the whole of this return of Exchequer contributions 1893-4, and those tables which were published by the County Council in October 1896?—It is the one upon which that return is mainly based.

8887. I daresay you would not disagree with me that it is the method of calculation which most directly would lead to local extravagance?—My own opinion is that the whole principle of making Imperial grants to local authorities upon any basis other than local taxation is bad.

8888. Various methods of calculation have been suggested, but is this not the one which would be most likely to be a premium upon local extravagance?—I do not think it would lead to local extravagance any more than the present one, because the present one, we must bear in mind, is really based upon local expenditure that is to say, upon the local expenditure of 1888.

8889. Exactly, but is it not your suggestion which underlies this table in the return of Exchequer contributions that a fairer basis to London would be to give the proportion of London's total expenditure?—I think it would be a fairer basis altogether than the present basis, but that does not commit me to it as being the best basis.

Imperial  
contributions  
in London.  
Proportion  
of grants  
and of  
local ex-  
penditure  
out of  
rates.

Imperial  
contribu-  
tions.  
London  
said to be  
at a dis-  
advantage  
because it  
receives  
less of its  
total ex-  
penditure  
than other  
places.  
Expendi-  
ture should  
not be the  
test.

Property  
receives the  
benefit of  
expendi-  
ture which  
falls upon  
indirect  
taxation  
and Im-  
perial con-  
tributions,  
and should  
be charged  
with a pro-  
portion of  
these in  
addition to  
the rates  
charged  
directly.

Mr. G. L.  
Gomme.  
30 June '97

8890. Would that not directly lead not only in London, for London is not worse than any other district; but if you were to take that for all districts would it not tend to undermine even the existing premium upon local economy in administration?—Not if you left a sufficient margin to fall upon the rates. No one would suggest, I think, that the Government would be likely to give such a proportion of the total taxation as would lead to very great extravagance.

8891. But is it not the whole basis of this table, which you elaborate at some length, that London is prejudiced because it does not get a definite proportion of its total expenditure?—No, I do not think that that is quite the way in which I have presented this document to the Council. What we have had to deal with is an entirely artificial and arbitrary mode of dividing up local grants. I have endeavoured to find out what is the result of that arbitrary mode of dividing up local grants, and one of the methods, and indeed the only method by which we can show whether that result has been fair as between place and place is the relationship of the grants to the total local taxation expenditure.

8892. Will it take you even the length which you desire to go? At the very conclusion of your examination I understood your figures to be that your rates from 1889-90 had increased from 5s. 5d. in the £ to 6s. 2d. in the £ in 1896-7?—That is so.

8893. And in the subsequent questions I understood you to admit, and I think to take credit for—which I have no doubt you are entitled to—the fact that your municipal expenditure had increased the value of your property, and that, therefore, you had made a good investment?—I would suggest it had increased the value of the property.

8894. Then would it be at all right to take the basis of your total expenditure, which includes the thing that has increased the value of your own property as the measure of the Imperial contribution to your local rates?—No, certainly not, but I have never advocated that.

8895. I am glad to get the disclaimer, because I thought it was otherwise?—I say so most strongly; I do not agree with that.

8896. You think I am right?—I think you are right.

8897. It is, comparatively speaking, a small point, but that calculation of 16 to 84 leaves out, in the first instance, the police courts, for which in that year some 37,000*l.* was paid from Imperial funds?—It leaves out the police courts, because at that time that was a municipal expenditure which was paid for out of Government funds, but it was not to the extent of 37,000*l.*

8898. I take it from your own figure. If you look at page 253 of your memorandum you will find that it is over 37,000*l.*?—That includes the salaries of the magistrates which still remain as a charge upon the consolidated fund.

8899. Why should they?—It is simply the wisdom of Parliament that it should be so.

8900. Never mind that. The basis of my question was right, namely, that your calculation of 16 and 84 in that year did not take into account the 37,700*l.* which was spent upon police courts and police magistrates?—That is so.

8901. Another matter which it did not take into account was the expenditure upon the London parks?—That is so; but then on that one must point out that there are parks elsewhere than in London which are royal parks.

8902. Only in Edinburgh and Linlithgow, I think?—Richmond, Edinburgh, Dublin, and Kew Gardens; I think that is all.

8903. Subject to that comment I am right that you did not take into account the parks in and around London?—Certainly.

8904. Would you agree with me that the expenditure on maintenance was 102,466*l.*?\*—I have not the figures, but I am quite prepared to accept that that is so.

\* This figure represents the cost of maintenance in 1895-6 of the following Royal Parks, &c. in and around the Administrative County of London, and includes the salary of the Bailiff of all Royal Parks:—Busby Park, Greenwich Park, Hampton Court Park and Pleasure Gardens, Kensington Gardens, Kew Botanic and Pleasure Gardens and Green, Regent's Park and Primrose Hill, Richmond Park, St. James's Park, Green Park, and Hyde Park. The receipts from licences, grazing and other rents, &c. amounting to 4,291*l.*, have not been deducted, the Civil Service Estimates only giving the sum total received from all the Royal parks and not the amounts received from each of them.

8905. It is on that paper I propose to give you, and it is taken from the Civil Service estimates for last year?—I am quite prepared to accept that figure.

8906. Perhaps you would not agree with me, but some of us might think that in calculating the advantage as between London and the country we ought to make some allowance for the capital value of the property which is enjoyed in this way?—I think allowance ought to be made, and I have mentioned those particular things as being items which the Government pay for on behalf of London in my memorandum, page 254. I should like to make this additional observation that supposing the Government were to charge the cost of the parks upon London, of course the administration of those parks would be in the hands of the municipality. I am not here to suggest that that is either a wise or a necessary proceeding.

8907. Clearly; and you are entitled to this, that probably, if you had to buy the parks, you would not have them in that particular place. You are entitled to all that; and I am not going into a matter of figures; but when we come to account and reckoning, I think it is desirable to put upon the notes that there are these things upon the other side?—Quite so.

8908. I do not carry it too far against you. The proportion which was the basis, as I said, of your examination-in-chief, that is, the proportion of 16 to 84, is the proportion of the total expenditure?—Yes.

8909. What I understand is the point of your complaint, is that that is not a sufficient contribution from the Imperial funds, and you ought to have something more?—It is not quite that. I will put it in this way: that the present basis proves that London gets 16 and pays 84, but it also proves that Bedford, which is the next county on the list, gets 27·3 as compared with 72·7.

8910. Does that include the county boroughs as well?—No, that only includes the counties.

8911. Why do you take counties?—Because the county is the area upon which the grants are made. I am bound to take the counties. My point is, that if the present system results in giving London only 16 per cent., and it gives Bedford 27 per cent., while it gives Birkenhead only 14 per cent., there is something that requires examination, at all events, to prove that those proportions are the correct proportions.

8912. I did not quote your exact words, and I do not want to be unfair to you, I want to get it quite accurately.—your exact words to which I refer, which appear on page vii. of the return on Exchequer contributions, 1893-4, are these: "The result is, that London is worse off relatively to its rateable value and its local taxation than nearly every other county borough or county in the Kingdom in respect of its receipts from Exchequer contributions" ?—Yes.

8913. You take two methods there—rateable value and local taxation?—Yes.

8914. Local taxation being, of course, the 16 and the 84?—Yes.

8915. Now will you submit to be judged by rateable value?—No; as I have explained, or tried to explain, before, I do not think that any form of arbitrarily dividing an Imperial sum among local authorities is a good or wise plan to proceed upon for the purposes of local taxation.

8916. I want to get a suggestion from you as to the standard by which you would consent to be judged?—I would only consent to be judged by this, that what is levied within a local area should be appropriated to that local area.

8917. Then take the licences—the public-house licences, the auctioneers', hawkers', pawnbrokers', plate dealers', tobacco dealers', male servants', carriage, armorial bearings, game licences, and so forth, which are the amounts handed over to you under that branch which, I think, come to 438,000*l.*?—Yes.

8918. That I gather from your own memorandum, if I understand it aright, amounts to 13·6 per cent., does it not?—Yes, that is so.

8919. That, you agree, is a reasonable method of ascertaining the proper share of that class of Exchequer receipts which is due in London?—I do.

8920. I suppose I need hardly ask you the question; you would not be satisfied with 13 per cent. of all the Exchequer contributions?—No; because licences are not the only local taxes levied by the Government for

Mr. G. L.  
Gomme.  
30 June '97

Imperial contributions. Distribution of London said to be worse off than counties and county boroughs in proportion to rateable value and local taxation. What is the best basis or standard?

Imperial contributions. Distribution. Amounts levied in a local area should be appropriated by that area. But the same method would not be fair to apply to all kinds of grants.

\* See footnote on p. 323.

Mr. G. L.  
Gomme.

30 June '97

Imperial purposes. My point is that if you give us the whole of the local taxes which are levied by the Imperial Government, we should get in addition to the licences the inhabited house duty, and we should get the land tax. I should be quite prepared to be measured by the amounts that are collected at the present moment within the local area, but I am not prepared to take, and I do not think it would be fair to take, nor can I understand, any basis by which one particular class of taxation should be fixed upon as the measure for all other purposes.

8921. Possibly no one method is probably fair. Do you suggest now that the measure of population should be left out altogether?—Yes, I do.

8922. Why?—There are several reasons why it should be left out. My first point is, that population has never been adopted as a measure of distributing Imperial funds, and that the very last distribution of Imperial funds which took place was not based upon population, namely, that under the Agricultural Rates Act; but it was based upon the rates levied, which is the very foundation of the memorandum to which your Lordship has just now referred.

8923. You mean upon one class of property?—Upon a particular class of property. The only case where population has been made the basis of distribution of anything like a central fund is that of London, and there are very good reasons, which I could explain if you desire, why I think that that is by no means a good example or a good parallel to adopt for the country at large.

8924. I am not prepared to suggest to you that population should be the sole basis, but I should like to know your reasons for saying that population should not be taken into account?—I do not think it should be taken into account because, shortly speaking, *quâ* municipal expenditure, I can conceive of no reason why London should share with the population of Northumberland any grants for the purposes of municipal expenditure. The municipal expenditure of London is one thing surrounded by a ring fence for the purposes of London, and having results upon London; the municipal expenditure of Northumberland is another thing, surrounded by a ring fence for the purposes of Northumberland, and having results upon Northumberland. I can conceive of no reason why the population of the two should be merged for the purposes of founding a basis. I see nothing in common there. Further, the municipal expenditure of Northumberland, or of any one place, may be of an entirely different character from that of London.

8925. But, if in proportion, for example, to population the expenditure by the decree of that population is kept within reasonable limits, should they not get, in proportion to their total expenditure, a larger subsidy than if they are extravagant?—I do not quite understand the question.

8926. There are some things which are a necessity, and some things which are a luxury?—Quite so.

8927. Do you, or do you not think that, if a population resolves that it will do without luxuries, it should or should not be penalised, in consequence of that decision?—I do not think it should be penalised; certainly not.

8928. Therefore, if a population in an area does not go in for large improvements in the exercise of its own discretion, if it is economical in such matters as the administration of poor relief, and so on, do you not think that it is entitled to a larger proportion of its total expenditure than a community which spends large sums of money upon what I have ventured to describe as luxuries, and things which increase the total value of the property in its area?—I cannot answer that question with a single eye, or no.

8929. I should like you to comment upon it; I put it forward for that purpose, not necessarily as my own opinion, but to elicit yours?—My own opinion is that the municipal expenditure of every area being so intimately connected with the requirements of that area should be borne by the taxation of the area, and that there is no connection between the municipal expenditure of one area and another by which you could gauge the proportion that one should receive out of the common fund more than another.

8930. Assuming for the moment that the Exchequer contributions for a given year, I am taking the year 1895-6, are 6,164,000*l.*, what is the basis upon which

you and the County Council of London are prepared to suggest that that sum, or any other sum that Parliament gives, should be distributed amongst the various local authorities?—I am not aware that the Council has considered it from that point of view, but so far as I know the opinion of the Committee of the Council, and so far as my own opinion is concerned I do not look at it in that way at all. I do not consider that any sum, 6,000,000*l.* or otherwise, should be distributed to the authorities from the Imperial Exchequer. What I suggest is that the Imperial Exchequer should free itself from its present local taxes, and should hand over to the authorities the local taxes which it collects, and that having done that it replaces the sum of 6,000,000*l.* that it may now distribute, and simply leaves in the hands of the local authorities the local taxation which it now collects; and that therefore it is not a question of distributing any sum of Imperial taxation, it is simply handing over what it now collects as local taxation.

8931. I appreciate your point. What do you mean by local taxation; why is one a local thing and another not a local thing?—The inhabited house duty is a local tax simply because it is levied upon the rental value of a locality.

8932. Can you draw a distinction between one municipal area and another, and say this is a local tax and that is not?—As between one municipal area and another, certainly not, but I can as between one tax and another. I say that while the inhabited house duty in London, and in Birmingham, and in all other places is really a local tax levied locally and administered imperially—the present system of Exchequer grants is an imperial tax levied imperially and administered locally—and my whole point is that the exact opposite of this should be the true way of settling the question.

8933. What do you mean by "the exact opposite"? I would rather have it put into words so that I could deal with your proposition?—I mean that instead of allowing Imperial taxation to be appropriated to local taxation upon any basis whatever, the scientific process, if I may use that term, would be to clear Imperial taxation of all local taxes such as the inhabited house duty and the land tax.

8934. Would you give the locality the right to raise or lower the inhabited house duty for its own purposes?—I would within certain limits. I think that the Government might very properly put a limit on the amount of the tax, so as not to make it exceed its present incidence. The inhabited house duty is a differentiated tax among certain classes of property; within the limits of that differentiation I think the local authority should have power to abate, because I can quite think that a house under 20*l.* in a city should be exempt, but a house under 20*l.* in the country is a very different thing indeed from a house under 20*l.* in London, for while a house under 20*l.* in London might be very properly exempt, a house under 20*l.* in the country might not be so properly exempt because it would be occupied by a totally different class of person.

8935. I presume that if the inhabited house duty was collected locally and expended locally in London, you would suggest that the County Council should be the authority to administer the proceeds of the inhabited house duty?—Certainly.

8936. You would not carry your principle to the extent of allowing a district of London to get the benefit of its inhabited house duty only—and only to get that; you mean that you would take it over such an area as London, and not over each parish of London?—Simply for the reason that if you take it over the smaller areas you would increase very materially indeed the present inequality of rates in London, which it has been the policy of Parliament to obviate.

8937. Then do you suggest a general change, so that the poor law shall become a universal charge over the whole area of London, and not over the different parishes?—I am afraid personally, I go a little bit further than that. I think that a considerable part of the poor law expenditure should be a national charge.

8938. And locally administered?—No; to a large extent nationally administered. But that is my own individual opinion; I am not aware that it is worth very much.

8939. Quite so, I know that in your position it would not be fair to press you far. You would probably agree

Mr. G. L.  
Gomme.

30 June '97

Imperial contributions. Inhabited house duty and land tax, which are really local taxes, should be handed over to localities instead of equivalent sums being paid by the Government on the present basis.

Poor law expenditure, considerable part should be a national charge. Question of administration.

Mr. G. L. Gomme.  
30 June '97

with me if I suggest to you that there is no branch of local expenditure in regard to which it is more desirable to keep up local responsibility than the administration of the poor law?—Yes, so long as the administration of the poor is done locally I quite agree that it is most important to keep up local responsibility.

8940. Do you think that as a matter of practical arrangement you could administer the poor law over so large an area as London?—That is rather entering into a subject that involves a large amount of argument. I am not quite prepared to say that I should admit that.

Imperial contributions received by counties and county boroughs.

8941. Many of these Imperial contributions are not given to governing bodies which govern such large areas as the administrative county of London; many of these subventions, to use the current term, go to bodies which administer much smaller areas than the county of London?—Only county boroughs.

8942. No; to parishes or unions?—No; the subventions of the Government are first of all allocated to the counties.

8943. Perhaps I am misled by my Scottish analogies; I thought that the poor law areas derived direct benefit from Imperial contributions?—They derive it indirectly. The process is this: first of all the counties receive a certain quota from the Imperial amount, and then those counties under the Act of 1888 have to contribute certain sums to the parishes and unions; but the main division comes to each county or county borough.

Imperial contributions. Position of London. Poor law, Criminal prosecutions, Main roads, Police.

8944. I should like to follow a little more distinctly than I think was brought out in your examination-in-chief what you desire we should infer from the four tables upon pages iii and iv of the return on Exchequer contributions, 1893-4, they are continuous, and as I understand it, they refer to the four paragraphs which immediately precede them?—That is so. What I mean by that is that London, so far as the poor law and the criminal prosecutions are concerned, shared with the rest of the country on an equal footing, because they received in full and proper proportion in respect of the expenditure on poor law and in respect of the expenditure on criminal prosecutions, which was a full expenditure in both cases—both in London and in the country—and there was no differentiation in the expenditure as between London and the rest of the country in those items.

8945. With the result that London gets something under 20 per cent?—Yes. Then under the second head I point out that London is at a great disadvantage with respect to the rest of the country, that is with regard to main roads, because the main roads in the county of London are so small and insignificant that the grant upon which the contribution is now made, only amounted, as I point out, to 72 per cent. of the whole, and therefore in that particular case London was at a disadvantage compared with the rest of the country.

8946. If there are no main roads, London could not expect to get a grant for them, could it?—Quite so, but my answer to that is that there were no main roads in London, not because there were not roads which had the essential features of being main roads, but because the statute debarred them from being main roads to which the Government contributed. They were just as much main roads, and just as important roads to London, going right across London and through the heart of London, as a main road through the heart of any other county; but the Government did not contribute to the expenditure on those main roads in 1887-8 and therefore the disadvantage that occurred in 1887-8 is now stereotyped and becomes a part of the disadvantage of London.

8947. Is not the answer to that that London for its own purposes requires to keep up those roads in a better condition than if they were only main roads?—Hardly, I think, taking the great arteries of London. Surely if you take the great western roads, the great eastern roads, the great northern roads, and the great southern roads out of London, they have always been roads, some of them ever since Roman times, and they are main roads in a very special sense.

8948. Still, while London requires them to be paved with wood or asphalt, the country would be satisfied with a macadamised road, is that not a difference?—That is so, but supposing the Government had given the grant on the footing of macadamised roads it would have made London's proportion better, but they did not even do that.

8949. I think you are entitled to that comment; I am only now asking you for explanation. The next one, number 3, is hardly worth much comment, is it, it is so very small?—It is a very small amount, but it is an element of consideration.

8950. It would be about 10,000l. a year to London, I believe, or hardly that?—Hardly that, I think.

8951. The next one, number 4, is a really important one, as it deals with the police?—Yes.

8952. In that case you get nearly 32 per cent.?—Yes.

8953. But I understand that you are not satisfied with that?—On the contrary, I think I have said that in respect of the police, the Government made what I think was rather an arbitrary proportion, namely, 150,000l., for instance, out of the pension fund—

8954. That refers to pensions, but I am speaking of the main expenditure on the police. I say that you are not satisfied, but I am perhaps not quite fully understanding it, and it is for that purpose I am asking; immediately below in the next paragraph I see you say "as between the Council and the police, therefore, the "new arrangement is not satisfactory"?—That relates rather to a domestic concern, because the grant on account of the police is taken from the county grant at an increasing amount each year; and by reason of excluding from the basis all consideration of the City police paying their proportion out of their estates; whereas my point is that whatever benefit arises from the City police paying their proportion out of their estates should accrue at all events to London only and not to other parts of the country.

8955. There need be no difference between us in this. That is not the fault of the Government, it arises from the fact that the City does not choose to take its grant?—Perfectly so; I am not suggesting it is the fault of the Government; it is simply a flaw in the present basis of grant.

8956. If the City did take this money, it would not go to the area which you administer, but to the City area, would it not?—That is perfectly true, it would go to the City area, but, then, London as a whole, would be receiving from the Imperial grants more than it does now receive.

8957. I do not know that I quite follow the criticism which comes immediately after, and which is in these words:—"In London this was four-ninths of the cost of the Metropolitan police falling upon the rates, while in the country it was one half the cost of pay and clothing. But the four-ninths taken as the London grant was not four-ninths of the entire cost of London police, because it did not include any grant in respect of the City of London police, nor was it four-ninths of the total cost of the Metropolitan police, because a certain portion of the total cost was charged upon fees, licences, &c., instead of upon rates." In one case you use the expression "half the cost of pay and clothing," and in the other, "four-ninths of the entire cost of London police"; these two things are not the same, are they, because one half of the entire cost of pay and clothing takes no account of the police stations and equipment, which are included in the four-ninths?—That is so.

Imperial contributions. Police. Metropolitan grant of four-ninths of cost of police, and county grant of half the cost of pay and clothing, compared.

8958. I wish you would put that right, so as to make sure we are dealing in each expression with the same thing?—The meaning of that paragraph is to say that the one half of the cost of pay and clothing which is the country grant, was on the one side, and four-ninths of the cost of the Metropolitan police was on the other side, which was the London basis. My point is, that it must not be supposed that there is any real difference between those two things, because, when you come to analyse what four-ninths of the cost of the Metropolitan police is, you find that by reason of the fact that a portion of that cost is paid for out of hackney carriage licences, for instance, and other considerations, it really practically amounts to something less than the equivalent of half the cost of pay and clothing in the country. What I mean by that is that the peculiar circumstances of the Metropolitan police make the four-ninths of the whole cost something less in value to London than half the cost of pay and clothing is to the country police.

8959. I am not quite sure whether you are accurate about that, and I suggest to you that the percentage of the total exchequer contributions to the amounts obtained from local rates is, in the case of the Metropolitan, 99, and in the case of the midland, northern,

Mr. G. L. Gomme.  
30 June '97

Imperial contributions. Police. Position of London. City police paid for out of City estates, and London lost portion of Imperial contributions.

Mr. G. L.  
Gomme.

30 June '97

and southern districts of England, only 83; I cannot ask you possibly to accept these figures over the table, but I have had a statement prepared which I propose to give you to comment upon and possibly hereafter we may have a meeting to say whether we agree to the figures\*?—I shall be most pleased.

8960. I am not going into it now, because I could not ask you to take my calculations without checking them; but if I should happen to be right, of course it would make a material difference upon your argument?—Certainly.

8961. Leaving the return on Exchequer contributions, I call your attention to your own special brief; near the bottom of page 247 you will find a table with six items, number four of which is headed "Education grants to school boards according to education results," the proportion which you bring out in the second column of that table is 21.36?—Yes.

8962. With which you profess yourselves as satisfied, as being a fair proportion?—We cannot help ourselves because it is according to results.

8963. I think you quite fairly told Mr. Stuart that that calculation included nothing for the grants to voluntary schools?—That is so.

8964. Do you know what the proportion would have been if you had included the grants to voluntary schools according to results?—I cannot quote the exact figure, but I could, if the Commission wish it, give them the information, because I have prepared similar information for the Council.

8965. I only wished to know whether you could give it, because I have myself got it out. I believe the proportion is 13.6. The figures have been furnished to me by the Education Department, and like the other papers—I wish to treat you perfectly fairly—I will give them to you, and you shall comment upon them if you can\*?—I am reminded by my assistant that that is, so far as our recollection serves, something like the figure that we have.

8966. Will you, or will you not, agree with me that even on that calculation your 16 to 84 that you get for London from the Imperial contribution is shown by another possible calculation to be not so unfavourable to London as you would seek to make it?—That depends upon so many other questions, the efficiency of the voluntary schools for instance, and I am not prepared at the present moment to enter into that. Of course the grants to the voluntary schools depend upon their efficiency, and I am not prepared to say whether they are efficient or not.

8967. I want to make perfectly plain to you what my objection is. The basis of the London County Council's complaint is, that 16 to 84 puts London at a disadvantage?—Compared with other places.

8968. I am suggesting to you various methods of calculating which in some cases show that the 16 is a disadvantage to London, and in some that it is an advantage; I do not ask you to accept my suggestion, only it may be led in evidence by other bodies, and I thought it right to put to you in examination in this way these considerations, and to give you any opportunity of making any comment upon them that you wish?—Thank you. In answer to that I would point out that the educational system, so far as it is administered by the school boards and is therefore under the aegis of the Government and of the governing authority, results in London receiving 21.36 per cent., but if we include the voluntary schools which are not under a local governing authority, London receives only 13 per cent. I am not prepared to say whether that is due to the inefficiency of the voluntary schools or not, because I am not an expert upon education, and therefore I am not in a position to do so; but I do suggest that I could not answer your question and say that I should be satisfied that the voluntary school grant is a proper basis, because on the face of it there is something between the voluntary school grant as compared with the school board grant which needs explanation, which at the present moment I have no means of giving.

8969. When you are drawing a comparison, as you have largely been doing, between the burdens borne by one community and another, it would not be fair, would it, to add to the total burdens of those communities which have school boards the cost of the school rate without taking into consideration something for the burdens borne by those communities which are bearing the educational burden though not in the same way as

the school rate?—I think there is some consideration to be given to that, certainly, but what that consideration is I am not able to say.

8970. In all the statements that you have put before us I do not think you have attempted to differentiate between the incidence of those burdens which are real burdens for which the community receives no direct return, and those burdens which are more or less of benefit to the community and to the district which bears them?—In some way I think I did do that.

8971. Would you refer me to the page?—It is in the table on page 263, where I separate the municipal expenditure into three classes—that expenditure which gives benefits direct, that which gives benefits indirect, and that which gives benefits remote.

8972. You are quite right to call my attention to that table. The first point which occurs to me upon that is: why you separate the maintenance of the poor, indoor and outdoor, into two different categories. Why is the maintenance of the outdoor poor more remote than the maintenance of the indoor poor?—I conceive that the maintenance of the indoor poor is an indirect benefit to the property, for various reasons, whereas the benefit by maintaining them outdoor is not so palpable, for the simple reason that if you maintain them in their own poor places—their own tumble-down houses—you are not benefiting the neighbourhood by clearing it of poor people and tumble-down houses, but you are rather accentuating the poverty of the neighbourhood: you are, I will not say adding to, but you are rather keeping up the present standard of, poor living, and therefore although you do benefit to some extent, yet the benefit is remote compared with the other.

8973. Your argument, or your suggestion at least, would lead us to this, would it not: that the local authority ought to get more assistance when it has its poor outdoor than when it has them indoor?—No, I think not.

8974. Would it not? The argument here is that the more remote the benefit to the locality the more it ought to be helped from the Imperial Exchequer?—No, I think not; I have not suggested that.

8975. Do you not think that?—No, I do not.

8976. What line would you draw? Do you not think that when a benefit is direct to the locality, the locality ought to pay for it, and when it is general, or remote—to use your own word—the Imperial contribution should come in?—I have not considered it from that point of view. Of course, this particular table was not drawn up in consideration of this special purpose.

8977. No, but often a table which is not drawn up for a special purpose is more valuable to one than one that is; do you not see?—Yes, I quite see that, but I do not follow the argument put to me.

8978. Take the direct benefits—we will just go down that table for a moment; you say, roads and sanitation are direct. In "roads," do you include all roads?—Yes.

8979. All of them?—Yes.

8980. That would be, of course, because in London you have, comparatively speaking, no main roads?—I suggest that we have main roads in London.

8981. You would agree with me, would you not, when you come to the country as a whole, that there is a distinction between the burden which a locality might be expected to bear for the arterial roads and for the local roads?—Yes, I do say that, but in London the roads are borne not upon the whole of it—not upon the county of London as a whole—but upon a little piece of London like St. James's, Westminster. For instance, you get a small piece of Piccadilly which is charged upon St. James's, Westminster; you get the next piece of Piccadilly, which is charged upon St. George, Hanover Square; you get the next piece of Piccadilly, which is charged upon Westminster; and you get the next piece of Piccadilly, which is charged upon Kensington, and so on; and yet the traffic which goes over this road is not local and particular traffic to those particular places, but it passes right through the county, often from one side of the county to the other.

8982. I do not think you and I will differ as to that being an illogical system, but I will take your illustration and follow it out a little further. You would agree with me, would you not, that Oxford Street and Piccadilly are of more general benefit than, we will say, Herford Street, Down Street, Stratton Street, out

Mr. G. L.  
Gomme.

of Piccadilly, or one of the small side streets leading out of Oxford Street such as Berners Street?—More general benefit to whom?

8983. More general benefit to the larger area?—Perfectly so.

8984. Therefore it is not illogical to suggest that the main road is more properly a subject for outside assistance than the district road which goes from one place to another in a district?—That is assuming that I agree with outside assistance, but then that is a point that I have before suggested I do not.

8985. Very well; but I presume that the division here in the two heads in this table of "Loans" and "Establishment Services," part of which are put under the heading "Benefits Direct," and part under the heading "Benefits Indirect," are calculated as best you can according to the purposes to which they are applied?—That is so.

8986. More or less arbitrarily?—More or less arbitrarily.

8987. But, still, as well as you can do it in the exercise of your discretion?—Quite so.

8988. (Mr. Dalton.) As we are on page 263, perhaps I might ask a question or two upon it. I see you regard the amount expended on parks, commons, and open spaces as a direct benefit to property?—Yes.

8989. Then you would regard expenditure on the royal parks as a direct benefit to the property near them, I presume?—Certainly.

8990. And that is met out of Imperial revenue?—Yes, certainly.

8991. I am not quite sure why you have put the lunatics amongst the purposes, the benefits from which are remote. I should rather have thought that the reasons you gave for putting the out-door poor there would exclude the lunatics from that column. Is it not a benefit to the public that the lunatics should be properly maintained in the same manner as the indoor poor?—I am not at all sure that that would not be a better classification, but in considering this point, of course, there are several sub-headings that one might adopt if one went into it a little more minutely, as I should like to have done, but looking at the whole I consider that of the 422,343*l.* more of it would be remote than indirect, so I put the whole into that column. But I agree that the expenditure upon lunatics is quite a parallel to that on indoor poor, and probably would be better there than where it is.

8992. I think in these two pages, 263 and 264, you make out a strong case to show that property gets the full benefit of this expenditure upon it?—Yes, that is my point.

8993. You would not in any way consider that a purpose to which the Imperial revenue should in any way contribute?—Certainly not, subject, if I may say so, to the observation that I before made, that the Imperial revenue should be clear of local taxes—I mean of inhabited house duty, and other things—subject to my reservation that while on the one hand I do not think that Imperial taxation should pay for services which benefit property, on the other hand, I do not think that property should pay locally for services which are for Imperial purposes.

8994. Do you think that the County Council would be willing to give up the whole of their existing grants and also the whole of the education grant for London, and to take in return for them the licences, the inhabited house duty, and the land tax collected in London?—Not for the education grant as well, because I think that to a very large extent indeed the education service is an Imperial service; it is just as important to the country that people should be well educated as it is to a locality.

8995. I rather understood you to say that you would like to get rid of Imperial grants altogether, if you could take those sources of income which are collected in the locality?—Yes.

8996. But I understand you now to say that some grants you would not give up in that way, and the education grant would be one of them?—No, I should scarcely put it like that. I should say that before that is done you want to discriminate between that portion of the present local expenditure which is really for a national purpose; for instance, in my own opinion—I do not put it forward as the opinion of the Council in any way—I consider that a large part of the expenditure

of the poor law is a national purpose; I also consider that a large portion of the expenditure upon education is a national purpose, and therefore should not come upon local taxation at all. That at the present moment it is met by a system of grants from Imperial funds is partly a justification of my suggestion.

8997. Have you worked out the effect as regards London and the rest of the country, if these suggestions of yours were adopted? I do not find any figures in any of these very voluminous tables which give us any idea of what the result of working it out would be. Have you worked it out at all?—I have as a matter of fact worked out what it would be, retaining the licences and substituting for the probate duty and the beer and spirit duties, the inhabited house duty and the land tax.

8998. How does that work out?—Taking the average of the five years ended 1894-5, on the present plan London has received 1,018,192*l.*, and the rest of the country has received 4,792,543*l.*; if you substitute those taxes London would receive in the same period 1,148,567*l.*, and the rest of the country would receive 4,314,126*l.*

8999. You have lost about 30,000*l.* in five years—6,000*l.* a year?—No, it is 130,000*l.* per annum, but then that is not the whole of the question, because, of course, there is the fact that the land tax has been redeemed in some portions of the country to a greater extent than it has been in other portions. Supposing such a plan as this were adopted, you would have to make good, in all fairness, the discrepancies at all events, between the different proportions in which the land tax has been redeemed.

9000. Have you calculated to what extent?—I have calculated that. Supposing you do that, London would in the end receive 160,000*l.* more a year than she does at the present moment, and the rest of the country would receive 121,000*l.* less than it does at the present moment.

9001. That would make London receive 136,000*l.* more than she receives at the present moment?—160,000*l.*

9002. Taking that and the result of your former calculation as regards handing over those taxes?—Yes.

9003. Therefore you put it—not speaking for the County Council now, but taking your own view—that if you were to sweep aside everything that has been done for London in the matter of these Imperial subventions, and substitute the plan which you have now suggested to us, London would get 136,000*l.* more a year?—160,000*l.* more a year.

9004. But I think it has already been pointed out to you that on the parks and the police courts, which have not been included in your calculations, it gets considerably more than 130,000*l.*?—Unquestionably it gets back something in respect of parks, and in respect of police courts.

9005. Would not that redress the whole of your grievance, assuming that we took every one of your proposals, and carried them out in their entirety?—No, I do not think it does entirely, because there are very many reasons why the royal parks in London should remain royal parks. In the first instance, I think that London as the capital of the empire surely has some claim upon the country in that respect, and no one would suggest, at least I have never heard it suggested, that one would like to see Hyde Park or Kensington Gardens treated otherwise than they are at the present moment. That the Government does give London Hyde Park and Kensington Gardens, while it gives Edinburgh Holyrood Palace and the gardens there, and Dublin the Phoenix Park and so on, is only treating the capitals of the three kingdoms on a par. I myself cannot see that there is any real justification in taking that as a set-off against a distinct grievance on a distinct point.

9006. (Chairman.) Have you ever seen Holyrood and the grounds around it?—Yes.

9007. Do you put it in the same category as Hyde Park?—I do not put it in exactly the same category, but Edinburgh is not London.

9008. (Mr. Dalton.) Supposing London had to buy those enormously valuable places, leaving out of account the amount expended at the present time out of the Exchequer for keeping them up, which expenditure I think you have stated is a direct benefit to the neighbouring properties?—I would not go so far as to

London parks.  
How far the benefits which London receives from the parks should be considered when reckoning what the rest of the country has had out of the Exchequer.Imperial contributions.  
Distribution. How far population should be a basis. Equalisation of Rates Act (London). Distribution on basis of population.

say that the expenditure is, because it might very well be conceived that supposing you put Hyde Park in the hands of London, London would not keep it up to the same extent as it does now; and in the same way various other economies might happen. Of course, again, I want to guard myself against suggesting that I advocate that plan—I do not; but you cannot quite say that the present expenditure by the Government upon Hyde Park is the expenditure that would be the expenditure if it were in municipal hands.

9009. I think Battersea and Victoria Parks were formerly maintained by the Government, but that they were transferred to the Metropolitan Board, and then to the Council?—They were.

9010. I presume they were transferred free of cost?—Free of capital cost, yes.

9011. They were then presented by the Government to London?—Yes.

9012. What do you consider their value—were they a valuable present or not?—I consider it a very valuable present and just one of those presents that the Government ought to grant to London.

9013. I am not suggesting that it was not right, but do you not think you should take in account all these benefits that London has received when you are reckoning what the rest of the country has had out of the Exchequer?—No.

9014. You would exclude them altogether?—I did not. I think that London as the capital of the empire does not receive at the hands of the Government what it ought to receive in matters of that special kind of consideration; I could suggest a few—not at the present moment, but I could suggest very many cases indeed where I think that the Government might, on account of London being the capital of the empire, be a little bit more generous to London.

9015. Are you aware what percentage the population of London is to the population of the rest of the country?—Yes, I have that.

9016. I think it was 14·6 at the last census?—I have it as 14·59.

9017. Going to page 247, where you add all the grants together that London gets under the Agricultural Rates Act, and everything—excluding all questions of the parks and the police courts, I see that London gets 16·37 of the whole amount?—Yes.

9018. Therefore, putting the parks and the police courts and everything of that kind on one side, it does receive considerably more than it would on the basis of population?—Quite so.

9019. I did not quite follow your argument against taking population in any way into account in the distribution of the Imperial funds. I think you admitted that it had been taken into account in the distribution of local rates in London by the Equalisation of Rates Act?—Yes.

9020. Under that Act the rates were raised on rateable value and distributed inside London on population?—Yes.

9021. On the ground, I presume, that population formed a certain indication of the needs of the locality inside London?—No, I do not think that was so. I think it was done on the ground that we wanted in London to equalise the rates, and after a series of very important tests in all sorts of ways, which I myself conducted, we found that the way which gave us the least trouble at the present moment—subject to an entire revision of the whole question—was that of population. As a matter of fact, since the operation of the Equalisation of Rates Act, we have found that there has been a reasonable approach towards the equalisation of rates in London, that is for the purpose of the equalisation of rates, but no one has ever pretended that the grants from the Imperial Exchequer have been for the purpose of the equalisation of rates, and as a matter of fact they do not equalise rates, they rather unequalise them.

9022. The same accusation was brought against the London Equalisation of Rates Bill by its opponents, I think, in Parliament?—That accusation was made I perfectly well remember, but the value of our experience has been that that accusation was not quite well founded.

9023. But you would agree that the needs of the locality depend to some extent upon population, would

you not?—I would not agree that the municipal needs of a locality should be in any way decided by population. I quite understand that the population of London, being a homogeneous population, to a large extent intermixed, to a large extent having a common interest, and at the present moment, to a large extent, having a common expenditure upon them, should be taken as a rough means of distributing money between that population which is so intermixed; but to make population the basis of grants, and to say that the London population has anything in common with the population of Newcastle-upon-Tyne, *qua* municipal expenditure, is what I cannot subscribe to in any way.

9024. You have seen a good deal of the local taxation statistics in the provinces as well as in London?—Yes.

9025. Have you never observed that where the rateable value of a district is low in proportion to population outside London the rates have been high?—Where?

9026. Where the rateable value per head outside is low, *i.e.*, where the population is large, and where the rateable value is small the rates are inevitably high?—Very likely, but that is due to questions of valuation and other matters.

9027. It may be due, and is more frequently due, I imagine, to the fact that you have a large poor population collected together the same as you see in the East End?—Yes.

9028. If you get a large poor population together and a small rateable value the rates are invariably high?—Yes.

9029. Take as an instance, West Ham, outside London?—Yes.

9030. Having regard to that consideration, do you not think that the population is in any way a test of the needs of a locality outside London to relief from the Imperial Exchequer?—No, I do not. I should like, if I can, to state as clearly as possible that I regard municipal expenditure within the municipal area as belonging to that area. You cannot by any process logically say that you should take away, for instance, from London a certain portion of money and hand it over to West Ham or any other place—I am only taking that as an example—simply because the population of West Ham is poorer than the population of London, unless you make the population of West Ham and of London joined together in one common municipal expenditure. I can see no justification for separating the expenditure and putting the population upon a common footing.

9031. Leaving London out of account, if you were dividing Imperial money between a poor borough, like West Ham, and a rich residential borough, you would think population was not at all a fair basis to take?—No, I should not.

9032. You would take the whole of the local taxation, without any question as to whether it benefited the area or not?—But then I do not think that question arises; I think it always does benefit the area.

9033. But if it benefits the area, why do you take as your main grievance here on behalf of London that if you divide the grants in proportion to the local taxation or rateable value you do not do so well as other places?—But then, I scarcely think that that is my grievance. My point is that the present system of dividing the grants proves that the result of the present system is that London, in proportion to its expenditure, is treated badly, and that the whole of the country is treated erratically.

9034. In proportion to their expenditure?—Yes.

9035. And in proportion to their rateable value?—Yes.

9036. But you would not say it was right if it came out that they were treated uniformly in proportion to their rateable value, would you?—No, and I have never suggested that.

9037. If you make it a grievance that they come out erratically when they are taken in that way, surely the inference is that you think they should not come out erratically, but should come out uniformly?—No, my inference is that, if the basis were the true basis they would come nearer at all events; you would not have such a remarkable divergence as you see; it is not as if the divergence is a very small one.

9038. In which case?—Take pages 2 and 3 of the return on Exchequer contributions where you will find that, excluding education, London's proportion is 13 per cent.

Mr. G. L.  
Gomme.

30 June '97

Imperial contributions, distribution of. London said to be worse off than counties and county boroughs in proportion to rateable value and local taxation. But the purposes of expenditure in different localities must be taken into consideration.

Mr. G. L.  
Gomme.  
30 June '97

Mr. G. L.  
Gomme.  
30 June '97

9039. Of its local taxation?—Of its local taxation paid for out of Imperial grants.

9040. And you find that Bedford has 22?—Yes.

9041. But, on the other hand, you do not suggest that any such proportion of the local taxation has been expended in Bedfordshire in the improvement of property as has been expended in London?—No. All I suggest is that the result of the present grant gives such a wide divergence between different areas which are supposed to benefit by those grants as to make, on the one hand, London 13, and on the other, Buckingham 26—just double.

9042. (Chairman.) You always go back upon that; but I think you must, before you go into that argument, split up the expenditure into that which is of local concern and that which is not before you draw any inference from it at all?—But is not all municipal expenditure of local concern?

9043. No?—My suggestion is that it is.

9044. (Mr. Dalton.) But in Bedfordshire or Buckingham it cannot be municipal, because the greater part of both those counties is agricultural?—I use the term municipal in its widest sense.

9045. (Chairman.) I want to take your own point. Supposing in one of those districts the proportion of the expenditure which gets a large Imperial subvention was largely on poor law, which you say ought to be national, and in another district the local taxation was very much, not for poor law, but for the improvement of property, surely the whole inference to be drawn from the gross expenditure, as you give it, would fall to the ground?—That I quite admit; but in order to test that and see how it operates I have taken out separately the poor rates.

9046. But they are not given in this table?—No, they are not given here.

9047. I can only take the table you put in?—Of course, I was quite aware of that difficulty, and I had taken out in a separate table the proportion of poor rates contained in all those rates, which, if the Commission wish, I could put in.\*

9048. (Mr. Dalton.) I see you treat the charges of the London water companies as direct taxation?—Yes.

9049. That has not, however, I presume, been included in these tables in local taxation?—No, of course not, because it is in the hands of private companies.

9050. Should you treat that as a taxation which benefited the property?—Certainly.

9051. You do not treat it in any way as a price paid for a commodity by the consumer?—It is not the price paid for a commodity, it is a tax upon the house.

9052. They do not get the water without paying for it, do they?—They do not pay for the water.

9053. They pay a certain sum of money and receive the water?—Only in the same way that they pay a certain sum of money and get their sewage taken away from the house; the water supply is first of all for sanitary purposes, flushing purposes, which are entirely sanitation, and just in the same way as a municipality takes away the sewage and charges in respect of that service a rate, so the water companies in supplying water to aid in sanitation charge a rate. There is no difference.

9054. But you have not included it in your tables?—No.

9055. Why do you exclude it?—Because it is in the hands of private companies, and it is not a part of the local taxation of London.

9056. You do not consider it local taxation?—I have not been able to include it because I have not the materials.

9057. (Chairman.) Is the Birmingham water in the Birmingham table?—I am not aware how that is.

9058. (Mr. Dalton.) Is it in the other towns, do you know; have you examined it in your tables?—It is not in any of these, if you mean that.

9059. Not if the water supply is in the hands of the municipality? Are you clear on that?—I am perfectly clear they are not in there.

9060. How have you dealt with Southampton, if I may ask that one question? In Southampton the cost

of the water was, until very recently at any rate, charged entirely upon the local rates?—We have eliminated the water in every case.

9061. It does not appear as a water rate in the local rates?—It appears in the local accounts.

9062. In Southampton it used to appear in the general district rate, I think; if so, Southampton is a very exceptional case, but there are two or three others. There would be nothing, I take it, there in the returns to show you that it was a charge upon the rates?—Not in the local returns?

9063. I should say not; it would appear in a general district rate. They make no charge for the water, they supply the water gratuitously—at least, I am speaking of what they used to do?—I will look up that point.\*

9064. You have not gone through the towns with a view of ascertaining that?—I have gone through the towns with the view of eliminating all charges for water and gas, but if it happens to be wrapped up in a peculiar rate of that kind, I would not say absolutely that I have been able to eliminate it.

9065. I think, on the questions that were asked you just now, you would not come up to a larger percentage than 20 per cent. of the whole proportion of the local grants, which you think should come to London if your plan was adopted. At present, they get 16'37, and you suggested that 136,000l. more should be added?—Yes, 160,000l.

9066. That would not bring it up to anything like the percentage of your proportion of the estate duty, to which you take such strong exception?—I have not worked out the exact percentage that I should get.

9067. Your main objection is to the division of the estate duty, and beer and spirit duties?—Yes.

9068. Of which you get 21'96 per cent?—Yes.

9069. That seems a large proportion to get for the whole of London, as compared with the rest of the country?—It depends upon the basis upon which you make that comparison.

9070. It is considerably more than one-fifth, of course?—Yes; but why more than one-fifth should be a large proportion I do not quite see.

9071. You take the licences and you get 13'6, which is the actual sum collected in London?—Yes.

9072. If you took the land tax you would get 10 per cent. Do you suggest that London contributes more than one-fifth of the estate duty?—No; but then you have left out of consideration there the inhabited house duty which is 45 per cent.

9073. Have you made any attempt to estimate what proportion of the estate duty and of the beer and spirit duties come from London?—No. I have not. I think it is utterly impossible, at all events without access to revenue documents which I have not got.

9074. Concerning the beer and spirit duty, at any rate you would agree that London probably does not contribute anything like the fifth part of it?—I am really not capable of giving any opinion on that.

9075. (Mr. Smith.) I think your theory and the problem that we have to dispose of is that you would re-classify Imperial and local taxation, would you not?—Yes, I would.

9076. And having re-classified it you would let each locality bear its own local burdens?—I would.

9077. I think Mr. Dalton asked you, but I really forget your answer; have you considered how that principle would apply outside London?—I have not been able to consider that, because I have no means of estimating what is the proportion of the inhabited house duty that is collected in other towns.

9078. Yours is 45 per cent. of the whole, is it not?—Ours is 45 per cent. of the whole. But I would just add this observation, that while in London we are obliged to screw up our valuations to the very highest point by reason of the fact that the surveyor of taxes has a voice in the matter, all over the country that is not so, and it is quite conceivable that for the purposes of keeping down taxation the valuation might be, as long as it was fairly distributed between the parts, very low.

\* The witness states that—"The expenses of water supply in Southampton, and also in Hastings and Worcester, is paid for out of the borough rates and not by a special water rate. In this case it would be included in the local rates levied by these three towns. There are no other similar cases, though any deficiency on the water account is in a few cases made good out of borough rates."

Imperial contributions. London. Distribution of. Mr. Gomme's objections and proposals. London's share of estate duty, beer and spirit duties. Also what its share would be of land tax and inhabited house duty.

Imperial and local taxation should be re-classified, and each locality bear its own local burdens.

Valuation in London high owing to action of surveyor of taxes.

Mr. G. L. Gomme.  
30 June '97

Parks. Large towns like Liverpool, Manchester, and Birmingham, have to buy parks, whereas London does not.

Imperial and local taxation, re-classification of. All taxes collected locally, including inhabited house duty, should be applied to local purposes.

Expenditure on most of poor law purposes, education and lunatics, should be paid out of Imperial sources. Question of administration discussed.

9079. The inhabited house duty, which we were speaking about, follows the surveyor of taxes' valuation, does it not—it follows the income tax Schedule A?—I think in the country it follows the poor rate valuation, the gross valuation; but that I do not know.

9080. I think it is not applicable to the tax that I was speaking about. I have only one or two very trifling questions now. You have said a great deal about the parks being given to you as the capital of the empire, but if you were not the capital of the empire but simply a town of five millions of people, you would have to buy an enormous number of parks?—No doubt.

9081. As Liverpool and Manchester, Birmingham and Nottingham and others have had to do?—Yes.

9082. The capital cost would be enormous, would it not?—Yes, very great.

9083. Calculating interest and sinking fund and maintenance, would that not make a good deal of addition to the Imperial benefits that you get at present?—If you put it in that way it would be so, but I have tried to explain before that I do not see my way to accept that as a part of the Imperial grants.

9084. It is one of the disadvantages of this Commission that whatever we give to somebody we have to take away from somebody else, and I want to show you that, although you may have a little bit the worst of it as regards the Exchequer contribution, you have corresponding advantages. I should like to know, just for my own curiosity, how you would re-classify Imperial and local taxation. Just tell us what you would leave local and what you would consider Imperial; and also in regard to the purposes that are at present local which you, I gather, would make Imperial; I should like if you would just kindly tell us that?—I would first of all take all taxes that are locally collected and apply them to local purposes.

9085. That are locally collected?—Yes, such as, for instance, the inhabited house duty.

9086. The income-tax is locally collected?—The income-tax is not locally made; a man pays on his income in London, but he may make it in Timbuctoo.

9087. You said locally collected?—What I mean by that is, that has a local incidence; for instance, the inhabited house duty is collected upon houses within a given area.

9088. "It is charged upon some visible local property"—would that meet you?—That would meet my case exactly: then I would eliminate from the local charges such things as are now, or as I deem them to be, of an Imperial nature, rather than make grants from the Imperial Exchequer.

9089. I can quite follow your suggestions?—Those services are, first of all, the poor.

9090. The whole of the poor?—No, not the whole of the poor, necessarily; secondly, education—

9091. Before we leave the poor, do you distinguish between indoor and outdoor?—No, I do not distinguish between indoor and outdoor poor, but there is a large amount of poor law administration which, at the present moment, is so stamped with central ideas and central government from the Local Government Board, and the authority of the Local Government Board is so great in poor law matters, that it is, to a very large extent, at the present moment Imperial in nature.

That, I think, could be carried to a greater extent, and you could relieve local taxation to that extent.

9092. Do you propose to leave that in the hands of local administrators?—No, I do not; I propose that whatever is Imperial should be imperially administered.

9093. How could you administer an Imperial poor law throughout the country?—There are various ways of doing it. I do not know that I am quite ready to answer that at the present moment, but I think, for instance, that the appointment of Imperial officers, instead of local officers, and paying their salaries out of the Imperial funds would be one large way towards it. Then the capital cost of the workhouses and buildings that are required for them—

9094. The whole thing to be controlled by an army of officials?—Yes, if you please to put it in that way, I can see no objection to it. At the present moment the Imperial Government, I think, has a say in the appointment of every poor law officer; each officer has to be appointed under its sanction, and I do not see why you should not extend that system a little bit further and make him an Imperial officer at once.

9095. You draw no distinction between the administration of the poor law as regards outdoor and indoor relief?—No, I think not.

9096. What do you say about lunatics?—The expenditure on lunatics is very much in the same category.

9097. You would put it in the same category?—It is very much in the same category.

9098. And I think you have told us education also?—Yes, education. I think a member of this Commission did suggest in the House that one way of meeting the education question was to make the officers of the education authority Imperial officers.

9099. I have frequently heard that suggestion made with regard to education?—Therefore the idea is not mine, and it is not new.

9100. But your suggestion as to the poor law is quite novel to me?—Yes.

9101. (Chairman.) There are the three statements which I hand to you, on which I founded some observations in the course of my examination, and I shall be glad if you will take them and examine them (handing statements to witness)?—I shall be happy to do so.\*

9102. (Mr. Dalton.) I do not notice in your paper any reference to the Metropolitan Fire Brigade; is there not 10,000*l.* a year paid to the Metropolitan Fire Brigade by the Government?—Yes.

9103. That is not included, I think?—I call that payment for services rendered. The Government do not pay the Fire Brigade rate.

9104. Is that the case—I am not sure?—They only pay the contribution in lieu of rates and we submit that that contribution in lieu of rates is far and away too low

9105. They do not profess to exclude the Fire Brigade rate do they?—They do not exclude the Fire Brigade rate on such value as they pay upon. They pay upon a low value, but that 10,000*l.* is evidently in payment of services rendered.

\* The three statements referred to with the comments thereon by the witness and his further examination on 11th February, 1898, will be given in Vol. II. of Minutes of Evidence and Appendix.

Mr. G. L. Gomme.  
30 June '97

Fire Brigade (London). Sum paid by Government. Contribution in lieu of rates.

The witness withdrew.

Adjourned till Tuesday next at 12 o'clock.

## TWENTY-FOURTH DAY.

Tuesday, 6th July 1897.

At 16, Victoria Street, S.W.

PRESENT :

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.  
H. E. CLARE, Esq.

T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. HARRY EDWARD JONES called and examined.

*Mr. H. E. Jones.*  
6 July '97

9106. (*Chairman.*) You are, I think, a civil engineer, and for 35 years have practised in all matters connected with the construction and the valuation of gasworks, and, occasionally, waterworks?—Yes.

9107. You are also a director of several gas companies near London, Engineer and General Manager of the Commercial Gas Company, and standing consulting engineer to some other gas companies?—Yes. I may say that the Eastbourne Gas Company yesterday empowered me to speak on their behalf. I come here to speak chiefly for the Commercial Gas Company and for the Wandsworth and Putney Gas Company, of which I am the Deputy Chairman, and for the Epsom and Ewell Gas Company, of which I am also Deputy Chairman.

9108. Of course you will understand that we do not want to take in detail the circumstances of any special company, except as illustrative of any general point you may want to put to us?—I understand that.

9109. Our business here is not to look into the affairs of any particular concern but to see whether the general principles which are in operation are satisfactory, and to receive any suggestions for their amendment?—Quite so. I should like to add that I am a member of both the institutions of Civil and Mechanical Engineers, that I am a Justice of the Peace for the county of Essex, that I have sat upon the Essex County Council for six years, and also on the Joint Police Committee of the county. I mention that to show that I am likely to take a general view of the question.

*Reg. v. Lee (L.R., 1 Q.B. 241).*  
Now circumstances, such as introduction of sliding scale, &c., have arisen since this case.

9110. We know generally, as we have had it put before us, the existing system of valuing such undertakings as you speak of; and we should like to have from you, in the first instance, any comments on that system as now in vogue?—I may say that I think, in the first place, the law, as it has been laid down by decisions of the courts, is derived from rather antiquated precedents. We have no more recent case in the Queen's Bench in gas than *Reg. v. Lee*; that is very ancient history now, and the importation of various different practices like the sliding scale, for which we are largely indebted to Mr. Livesey, the supply of fittings, and the supply of gas to working people through prepayment meters, has varied our circumstances, and I am of opinion personally that the legal precedents are too long past to be useful.

*Quarter sessions not a satisfactory tribunal of appeal. Procedure. Objection to appellants having to open their case.*

9111. Why has there been no recent appeal to the court of Queen's Bench?—Because when you go to quarter sessions their decision is practically final. If they disclose to you that they have been deciding any principle you can ask for a case, but if they give you the finding on the facts that an appeal is allowed or dismissed, which you generally do get from quarter sessions, without giving you arguments, then you really do not know quite how far they have worked upon principle, and therefore you are not able to get a statement of a case because, as you are aware, quarter sessions are final judges of fact.

9112. Do you regard quarter sessions as a suitable tribunal to which to take an appeal?—No, I do not, and I speak with that respect which is due to the fact that I occasionally sit on one. These appeals, according

to the law, as laid down by precedents, are complicated by the hypothesis of the tenant. There are a great number of calculations at different points, and there are a great many points on which there may be great divergency of opinion between the parties on either side. A quarter sessions has, if it tries to be careful, not only to decide one point, but perhaps 20 points in the whole course of the case, because of the mode adopted. Quarter sessions again have to go through a great many calculations which are not very difficult, but which are numerous, and they have to inform themselves, more than I think you would expect of an ordinary tribunal of that kind, of the state of the law, and of the state of the precedents. There is some divergency of practice. It is a misfortune that most of the county sessions insist on the appellants opening the case; in some, I am glad to say, they ask the respondents to state the basis on which the assessment appealed against has been arrived at. If that were more generally done I believe it would be better, because it would show how hastily and imperfectly many of the assessments were arrived at; but unfortunately on appeals the appellants, who are generally the gas undertakers, have to give all the necessary figures to show that there must be an error in the assessments.

9113. Is that not right? Is that not just, putting before the court a basis upon which an independent decision must be arrived at?—Yes, but I think that the light thrown upon the original assessment by evidence given by those who produced the assessment as to the lines and figures they took would be very instructive to the court.

9114. That does not amount to more than this, does it, that everybody likes to know their opponents' case before they disclose their own?—No, it goes farther than that. I think the tribunal would learn how hastily and unsatisfactorily the assessment had been prepared. May I say that I know it to be a common practice with some surveyors to spend about a quarter of an hour on a gasworks that they have got to assess, and to go home and raise the assessment to an arbitrary per-centage upon the receipts upon the mains. I have heard surveyors discuss between themselves that they thought 15 or 16 or 18 per cent. upon the receipts upon the mains would be the right thing, without going into any further question.

9115. I do not want to take you deeply into it, but what other procedure is open to them under the existing conditions?—Under the existing conditions the proper method is to find out what would be the proper tenants' profit out of the receipts, and having deducted that what would be the proper allowances to the landlord for the renewal and maintenance of his fabrics and his interest; and then, having deducted the rates, to declare the net rateable value.

9116. Have they the means to do that?—Yes, they can get that information, and are almost invariably furnished with it.

9117. You say they can get it, but have they compulsory powers to get it?—They have not compulsory

*Mr. H. E. Jones.*  
6 July '97

*Valuation of gasworks. Unsatisfactory method of valuing by some valuers upon receipts upon the mains.*

*Valuation of gasworks. Net rateable value, proper method of ascertaining.*

*Mr. H. E. Jones.*  
6 July '97

powers to obtain it, but they do obtain it in this way—that the gas companies would know very well that they must produce the figures before any tribunal that dealt with the matter, so they produce them in the first instance freely and willingly. I have never known a case where information was withheld at the outset.

9118. You would, of course, regard it as an extremely inexpedient thing that a gas company should withhold information if asked for in a fair way?—Very; and inasmuch as all our accounts are published according to a parliamentary form in the fullest detail it is almost impossible to withhold any information or to mislead.

9119. Supposing you had to build up a new system for the valuation of public undertakings such as you represent, what would you suggest as an expedient method for the Legislature to set about doing it?—If some automatic method could be found, if some ratio could be established between the gross earnings, or the net profit and the rateable value, I think it would be an improvement on what we have now. But to arrive at that ratio seems to me so complicated and so difficult a question—it would be so difficult to make a system fit all cases—that I am rather disposed myself to favour an assessment as made in Scotland, to which I have referred in paragraph 18 of my memorandum,\* by a perfectly independent assessor. If gas companies and gas undertakings—for I have acted for both; I acted for the Corporation of Birmingham, for instance, in an appeal, but they did not give us much relief, I am bound to say—if gas undertakings were not met in the first instance, as it were, by an aggressive demand for a much higher rating, but an assessor of competence, independence, and impartiality, appointed by a superior power, not appointed by either side, were employed in the first instance to determine what the rateable value should be, I think there would be very few appeals and very little discontent.

9120. Are you pointing to an appointment of an official or a series of officials by the central authority?—Yes, I am. I think that the assessments should be made by an officer such as works in Scotland under the Acts there, with an appeal from him to a special tribunal which would be specially experienced in the class of case, and not to an ordinary quarter sessions.

9121. What undertakings would you include in the purview of that official?—I think every undertaking corresponding with the supply of gas and water, canals, docks, and railways—I think all that kind of undertaking.

9122. Have you formed any idea of the number of separate undertakings that would have to go through the hands of that official or department at each valuation?—No, I have not. In the metropolis we come under review every five years.

9123. But, of course, by the local officers, not by any central department?—Quite so.

9124. I was not asking you at the moment how often you thought this valuation should be gone through, but whether you could either give me, or direct the Commission where we could get anything like a complete enumeration of the undertakings which would come under your list, and which this body would have to value?—No, I have not prepared such a list. I might give attention to it and send you a supplementary note. I cannot think, however, that that raises any obstacle, because all those undertakings are re-assessed under the present system.

9125. Do not think for a moment that I want to raise unnecessary difficulties, but when a suggestion is made I want to see what it would involve us in; how many thousands of them would there be?—I do not fancy many thousands. The whole of the most important gas undertakings in the country are included in Field's tables which I have here.† Field's book gives the cases that chiefly come to be fought, and they are not much more numerous than some 50. I suppose there would not be more than probably 500 gas undertakings at the very outside.

9126. Every municipality has one, and some urban districts, too, have they not, and a good many others besides?—Not many urban districts have gas undertakings. I am informed by Mr. Livesey that there would be about 1,200 gas undertakings, but some of these would be very small and insignificant village

works, which it would be a very trifling matter to settle. I think that such assessors, instead of travelling wide over all the variations that we get with the present assessors, would lay down fixed principles for themselves, and that they would not be dragged in their judgments by weight of evidence, one side or the other, from what they knew in their experience to be about right.

9127. Whoever did it, clearly in your opinion, would have to have some fixed principles laid down by the Legislature for his guidance?—Yes. I think that would be preferable, but if you took the law as it stands it would be a great deal safer than the present pulling and dragging that goes on in these appeals.

9128. Could you put briefly before the Commission what principles you would suggest should be gone upon?—Undoubtedly I think, unless the whole law of rating throughout the country was to be changed, the assessor should not deal with trade profits, and trade profits should not come into the assessment. Taking the case of gas companies of late years, our great advantage has arisen from the improved value of residual products. Those things are sold from the works, practically passed over the counter. They cannot be differentiated in any way from the sale of candles, we will say, and wax, and the other products of those who manufacture candles; for instance, soap may be a bye-product of the manufacture of the best candles, but the sale of soap and wax and tallow and oil and candles does not in any way enter into the assessment of Price's candle works in Battersea, which are assessed, as all other hereditaments are assessed, on their land and buildings—on their occupation. Until personal property comes under rating generally, I think the consideration of trade profits ought to be expunged.

9129. I have some sympathy with the view, but what I want to get from you is what is the barometer which you yourself would use in testing the value of an undertaking?—For myself, having ascertained that the undertaking was answering its aim and object, that it was, what shall I say, a successful undertaking, I should be guided very much by the amount of capital—not the amount of capital represented in the accounts of the undertaking—but the amount of capital represented by the fixed plant, and by the value of the land occupied, and in that I would include the land occupied by mains, although it was under the streets, and would have no other value.

9130. You say you wish to ascertain that it has been successful; surely there is a very narrow line dividing success from trade profits, is there not?—Yes, there is a narrow line. What I would wish to point out is that the landlord's interest might fairly be taken to represent a somewhat better return on his capital if the amount of buildings and plant that he had provided were generally, and, as a rule, successful in their operation compared with other plant and buildings, which another landlord might have which were not so successful; that is to say, I could imagine land and buildings for a railway company might be very fully assessed at a 4 per cent. rate upon the structural cost, and gas works at 6 per cent.

9131. Do I understand that you are to take capital value?—Yes, the capital value of the structure, not the capital as it stands in the accounts, because many things come in like Parliamentary expenses, and losses, and capital perhaps wasted, or perhaps mis-spent.

9132. What calculations would you make to see whether the capital value was a fair test after a building had been up for a considerable number of years?—I am afraid I do not appreciate the question.

9133. I will take your own business, with which you are most familiar. I will take a gasworks which was put up forty years ago; during that time there have been many alterations and additions and repairs; the capital we will say, taking a round sum for the moment, was 100,000*l.* forty years ago; what process are you going through to estimate that?—I should make a structural valuation at the price of the day, not at what it may have cost 40 years ago. I should take it that if the materials had gone up or down in the interval, the landlord would have provided for that out of his rents during the interval that has passed.

9134. You would make a separate estimate of the site from the buildings which are upon it?—Yes I think so because capital sunk in land would not carry so large a remuneration as capital sunk in plant.

*Mr. H. E. Jones.*  
6 July '97

Valuation of gas companies. Trade profits should not be the basis, otherwise the profits arising from by-products, would be assessed.

Valuation of gas-works. Suggested basis for valuation. Capital represented by the fixed plant, and value of land occupied. Method of valuing structures and sites.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 310 to 312.  
† "An analysis of the accounts of the principal Gas Undertakings in England, Scotland, and Ireland for the year 1896," by J. W. Field, (Eden, Fisher, & Co., Clement's Lane, E.C.)

Mr. H. E.  
Jones.  
6 July '97

9135. Would you take the price of the site at the price that it was 40 years ago, or at the price which it would presumably fetch at the present time?—I should take it at the price of the present day; I should take everything at the value of the present day.

9136. Would you think that applied to other structures than gas companies, or that it would be a proper principle to take, say, in regard to manufactories in private hands or even private houses?—Yes, I think so.

9137. You think that that is a thing which could be done?—Yes, I think that could be done.

9138. And ought to be done?—Yes, I think that ought to be done, especially in gas undertakings; if the growth of building had developed so much as to make land dearer *pro tanto*, the business of the gas undertaking would have grown, and made it better able to pay a higher rateable value.

9139. (Mr. Arthur O'Connor.) I did not hear the beginning of the sentence?—Taking a gasworks, if the extent of the buildings increased, so as to enhance the value of the land on which the gasworks stood *pro tanto*, the rateable value of the gasworks would have increased, because they would have the means of paying the rate; a certain prosperity would have come to them through those buildings. That is why I used the expression "success" a little while ago.

9140. The site value would have increased?—Yes, the site value would be increased, and they would proportionately be able to bear a heavier rate.

9141. (Chairman.) I notice that in paragraph 9 of your memorandum you say: "One of my companies in 1884 failed at the quarter sessions to obtain relief from an assessment which raised the expenditure on rates to the large sum of 5*d.* per 1,000 cubic feet of gas sold. At that time the average charge for the same purpose among the most important and profitable gas undertakings in the kingdom was about 1½*d.* per 1,000 cubic feet of gas. As the works was actually rented by a tenant at a rent just equal to the assessed net value, it is clear no landlord's deductions could have been allowed. In that instance the price of gas had actually to be raised by 3*d.* per 1,000 cubic feet, as the receipts did not allow of the extra expenditure caused by the extra rates" ?—Yes, that is so.

9142. What is the lesson you wish us to draw from that special instance?—Why, the unsatisfactory nature of the present system even including an appeal to the quarter sessions. My father was the tenant of that gasworks, and I acted for him. It was the Epsom and Ewell Gas Company, spreading its mains over a very large area, and it was at that time much smaller than today, and was struggling for existence. The price of gas had to be rather high because of the large amount of capital required in mains compared with the small business in gas sold upon those mains. An assessment was made which increased the previous assessment something like three-fold. We could not stand that, so we went to quarter sessions, and we thought we were succeeding, but after a short interval the Court came back and told us that they could not make any abatement. Now that assessment was 1,719*l.*, and the whole amount that the tenant was paying to the landlords—it was about the last works let on lease within my knowledge, for that practice has gone out—was about 1,725*l.*; so that it is perfectly clear that there the whole rent was assessed, and that assessment was confirmed by quarter sessions. Now surely whatever the rent the landlord had, he was entitled to his statutable deduction for the expenses of maintaining the corpus of the undertaking in a condition to command the rent. He could not by any possibility be rateable to the whole extent of the receipt from the tenant because he had his renewals. In a gasworks like that not far from London, where the growth of building is not always at the same rate, but sometimes goes forward very rapidly, the landlord would have to see that he renewed his plant, because before it would be worn out, it would be outgrown. That is one of the incidents of the undertaking, that it becomes outgrown by the extension of the district.

9143. I understand you to say that the practice of renting a gasworks has now practically disappeared?—It is abandoned; you cannot find men of good enough substance for renting works on the large scale on which they are now.

9144. Besides, almost every public authority own their own now generally, do they not?—A great many of them do, I would not say everyone but all the larger bodies do. The effect of that extra 3*d.* upon the rate handicapped that little company very seriously. We put up the price of gas because we could not meet the rent when we had paid the rates on the new assessment, we could not find the money for the rent, so the price of the gas had to be raised, and that had the effect of choking off a lot of consumers who were already paying rather dearly because it was, as I say, a struggling company with a large capital and a small business.

9145. Is there any point in your memorandum that I have missed that you would like to add a word upon?—No, I think not. But whilst we are upon the point of the practice and the state of the law I may say that there is divergence in the views given to us from the bench. In London, in the great Gas Light and Coke Company's case, in which I was the chief witness for the appellants, because we had raised the price of gas in the six months succeeding the year on which the assessment had been made, the respondents asked the court to make us bring the accounts on till the following June to cover a period during which the higher price of gas was got. That was allowed and we had to go back and revise and prepare fresh accounts. Only last quinquennial re-valuation my Wandsworth company was in appeal, as we are generally, in fact, and there the court held that we could not go on to the succeeding six months. I had prepared my figures up to June in the same way that I had been told to do in the Gas Light and Coke Company's case five years previously; but we were told we must not do that although it was important to us that we should have done it because in the meanwhile the residual products had gone down in value. It was a much fairer year finishing at the June than at the December. That is a divergence in practice which illustrates to my mind the rather unsatisfactory condition of things.

9146. (Mr. Dalton.) I think you have suggested that the best way of assessing gasworks would be to take the capital value of the structure and site at the day?—I think it would be a better way than the present. My view is shown in the latter part of my memorandum, in which I say it would be better really to employ an independent assessor. I would be contented with his views even if he went on the present lines rather than to have the present system in its entirety.

9147. Would that capital value represent what a purchaser would be prepared to pay for the works?—No. I have acted in a good many arbitrations of that sort, and I am able to say therefore that the purchaser would buy the goodwill of the business, as well as the bricks and mortar, and the land, and the pipes.

9148. Then you do not propose in any way to assess the goodwill?—No, because I think that is profit on trade.

9149. How would you get at this capital value?—It would be quite easily ascertained. A gentleman like Mr. Livesey could go into most gasworks, and having been furnished with their dimensions, could tell you what such a gasworks would cost to erect to-morrow.

9150. Then you do not take the value, but the cost that it would now take to build it?—The structural cost.

9151. Your expression "value" misled me for a moment, because, of course, cost and value may be different?—They would not be different if they are synchronous; but if they are separated by 40 years they might be very different; I do not mean value in the sense of valuing a growing undertaking with the power to make profit.

9152. That is the manner in which, I think, you have suggested a successful undertaking should be valued; what would you do in the case of an unsuccessful undertaking?—Pardon me, I attach the word success to a subsequent stage. If I were valuing two different things, one a waterworks we will say, the other a gasworks, and one was making a large percentage of profit, I should say that in that case the landlord might receive, we will say, 5 per cent. or even 6 per cent. upon his outlay; and if the other were not doing such a large business, or earning such a large amount of profit, I should say that there the landlord would be fairly represented by about 4 per cent. I attached the word success rather to the rate per cent. upon the capital cost of the works ascertained at the day than as a measure of the capital cost.

Mr. H. E.  
Jones.  
6 July '97

Companies' accounts, making up of. Quinquennial valuation. Period. Difference in practice allowed by the Courts.

Valuation of gasworks. Suggested valuation on basis of capital value of structure and site, not including goods-will. Percentage to be taken on capital cost, having regard to the success of the business. Trade profits should not be the basis, though they would have to be considered

Valuation of gasworks. Large increase in valuation in case of the Epsom and Ewell Gas Company, necessitating increased charge for gas. Gross rent taken as net rateable value.

Mr. H. E. Jones.  
6 July '97

9153. In some classes of undertakings, I suppose, it would no longer be worth anybody's while to construct them in exactly the same way as they are constructed now—I am not speaking of gasworks but of some other undertakings, a railway for instance?—Probably not.

9154. Would not your system break down there?—No, I think not, because if there were a better and cheaper way of doing it the undertaking ought not to be rated upon the heavier and more expensive and more antiquated way. Everything should be done at the cost of the day, or with what would accomplish the same object at the cost of the day.

9155. Having got at this capital cost you allow a percentage in order to get at the annual value?—Yes.

9156. And you leave it entirely to the valuer to settle that percentage, having regard to the question whether the undertaking is more or less successful?—Yes, that is a point where I think you would have to take the individual judgment of some impartial and competent man.

9157. Still he would have to be guided by the trade profits to some extent?—Yes, indirectly I quite agree, but it is the direct inclusion of trade profits that I object to. If you were to see a rating scheme of a gasworks you would see the direct inclusion of every shilling of profit after certain arbitrary deductions; I think I could amplify that, but that will be done by other witnesses.

9158. You do not think it is more difficult to get at this capital cost and then allow the percentage you are going to allow upon it, in order to get at the annual value, than to get at the annual value in the first instance?—No, because it is part of the present process. These surveyors with their hypothetical myth, as I call it, actually do the same thing, or profess to go through the same thing, because in the allocation of the first part of the rateable value, the works and stations, they actually do make the valuation that I suggest should govern the whole. I should carry it a little further and make it include the pipes in the streets. Those pipes in the streets at present, instead of paying a rental value to the landlord of 5 or 6 per cent. on what they cost, are paying a rateable value upon a rent of four or five times what they cost, because the system appropriates the whole of the profits, beyond 5 per cent. upon the gasworks which produces them, to those mains in the public streets, and yet those mains in the public streets, as you will easily see, do not derive any benefit whatever from a great deal of the expenditure in rates.

9159. I am not defending the present system, I am only trying to ascertain what your views are?—I am only wishing to bring that out; that is one of the points that I am afraid I have missed, so far.

9160. What do you consider a fair average profit of a gas undertaking on its mere structural cost?—I think I should go as far as to say 6 per cent. on the structural value.

9161. Would you allow that for the rating?—For the rating for the whole thing. I venture to say that landlords could be found in abundance only too glad to buy land to build the works, and to put down plant and the mains for 6 per cent. upon the outlay; in respect of all beyond that, I say you are really trenching on the trade profit of the manufacture.

9162. A gas company has practically a monopoly, has it not?—Of gas it has, but not of light.

9163. Of the supply of gas for the district?—Yes.

9164. Would you take that monopoly in any way into account for the purposes of assessment?—Yes, I should, in giving the 6 per cent., because we all know that a 6 per cent. return upon capital is a very large one nowadays.

9165. Do you think 6 per cent. is about the average that is made by a gas company; are not the net profits very much higher than that?—They are much less now. For many years now we have been under auction clauses—and that occasions me to think that I am answering unconsidered questions—and we have been selling our shares at such a price to the general public that we get the money practically at 4 per cent., 6 per cent. would be too high an amount to give.

9166. Would that be a percentage upon the whole of the capital expenditure, or merely upon the share

capital?—That would be upon the whole of the capital expended, from the date at which the auction clauses came into use. This is far away from the memorandum that I have prepared, and therefore I would like you not to take that 6 per cent. from me, except as a suggestion to distinguish between the prosperous and the unprosperous properties of a landlord.

9167. This rather points to the great difficulty in fixing the percentage for the purpose of the assessment, does it not?—It does, and that is why in my memorandum I say that there should be an independent assessor, and that there should be no appeal from him except to a body of an expert character.

9168. (Mr. Elliott.) Did I correctly understand you to say that in the case of your own company the rates amounted to some 16 or 18 per cent. of the receipts?—No. The assessments are sometimes in the Commercial Company very nearly 15 per cent. upon the receipts of the mains.

9169. Are those receipts the whole receipts of the company?—Yes, they are the whole receipts for gas and meter rent.

9170. The whole of the receipts for gas and meter rents, not including receipts from residual products and other sources of income?—These are included in getting up to that figure. You must not suppose that I am suggesting that we are assessed on the basis of a percentage, but it works out to that result; and sometimes the surveyors try to short circuit it to that result by omitting all the preliminary calculations altogether and asking you whether you will not take 15 or 16 per cent.

9171. I understand that the actual rates that you pay work out at something like 15 per cent. on the gross receipts?—The gross receipts for gas and meter rents.

9172. Have you worked out at all what the percentage would be on the profits of your company?—Yes, the assessed value would be nearly half the profits, or rather better than half.

9173. Do you say that an amount is contributed by your company to purposes of local taxation equivalent to 50 per cent. of your profits?—Quite.\*

9174. Supposing that you paid no rates at all, your dividends would be increased; but, of course, part of the relief in your particular case would go to the consumers?—Yes, it would. I may say that Sir Peter Edlin's decision in the Gas Light and Coke Company's case apportioned between landlord and tenant the average net annual profit, because we were only making 6 per cent. in the year on which we made the appeal. I want to emphasise that, and I have something to say about it, because I believe it is going to be commented upon by another witness. We went in a year when we were only earning 6 per cent., but I felt, in spite of the opposite instruction of counsel, as the judge afterwards decided, that we must take the probability and not the actual fact—that was against the view of eminent counsel—and as 12 per cent. was being divided by the company largely from reserves, he took 12 per cent. as the profit, and from that sum 58 per cent. was his decision in rateable value.

9175. Do you consider that a payment for the purposes of local taxation, amounting to some 50 per cent. of your net profits, is an excessive contribution?—Yes, that is my recollection of it—I have not got the figures here—and I think it is excessive.\*

9176. You would say excessive, I suppose, in relation to the contribution of other classes of undertakings?—Yes, quite so.

9177. Have you formed any idea as to the classes of ratepayers which pay too little if you pay too much?—Nearly the whole of them, because you see we are practically being rated on personal property when they go into our trade profits; and it is not the custom to rate personal property in any other class of undertaking that I know of.

9178. Have you any agricultural property in the districts in which your works are situated?—No, none.

9179. Have you compared the percentage which you have just given us with the percentage of any other class of undertaking?—No, I have not specially, except

\* The witness subsequently wrote: "There is a misunderstanding here. I had been speaking altogether of rateable value, not of rates paid. The rates paid are about 7s. in the £ on a rateable value, equivalent to 50 per cent. of the profits."

Mr. H. E. Jones.  
6 July '97

Valuation of gasworks. Independent assessor desirable.

Rates paid by the Commercial Gas Company represent 15 per cent. on gross receipts for gas and meter rents, and rateable value represents 50 per cent. of the profits.

Gas mains and pipes. Suggested method of valuation.

Valuation of gasworks. What is a fair average profit on structural value.

Gas companies are said to be rated in respect of trade profits.

GAS COMPANIES pay in respect of rates a much larger percentage on their capital outlay than

Mr. H. E. Jones.

6 July '97

owners of small residential properties, and a much larger proportion comparing the incomes derived from their properties.

Valuation of gas companies. A uniform and simple method desirable. Quarter Sessions. Appeals are unsatisfactory.

Valuation of gas companies. Statutory monopolies, privileges, and obligations. Difficulty of ascertaining what a hypothetical tenant would pay for such undertakings.

that it is very obvious that, taking the bulk of the properties round about our works small residential properties, inhabited probably by compound ratepayers, the rating must be a very small per-centage on the capital represented by the outlay.

9180. And on income?—Yes.

9181. Do you say as representing the Commercial Gas Company, that you have a grievance as against the owners of the small residential property in your district?—Distinctly, and they are the people who, for the most part, are represented on the assessment committees and spend the rates.

9182. You think they pay a smaller amount in proportion to their incomes than your company does?—In proportion to the income from the property it is very much smaller; and in proportion to their general income it is enormously less.

9183. (Mr. Clave.) I understand that the one great point that the gas companies wish to arrive at is that there should be a uniform and simple method of assessment?—Yes.

9184. You consider that the appeal to the quarter sessions is at present unsatisfactory?—Yes, and very uncertain and very expensive.

9185. You find that even in large towns?—Yes.

9186. Where the quarter sessions are composed of men of undoubted ability and very often with great legal experience?—Yes, I find that. It is worse in the country places, of course, but I find it even in the ordinary quarter sessions of a large town or of a county. We had to go to the Stafford Quarter Sessions in the Birmingham case, and there a very capable man was the Chairman.

9187. Take the case of a water company or of a corporation owning waterworks which are, say, for the sake of illustration, 50 or 60 miles away from the town which wants the water, and which are in a country district; it is a little bit unsatisfactory, is it not, for that company to have to appeal to quarter sessions composed of men who live entirely in the district, and whose interests, more or less, are wrapped up in increasing the assessment?—Yes, and whose interests are in land which everybody knows has gone down, and although land only pays a fourth of some of the rates compared with other properties, it can barely afford to do that. I am afraid you cannot get rid of it; it is human nature that there should be a little disposition to get the rates out of what they think are very prosperous and wealthy corporations.

9188. Gas undertakings are all constructed, are they not, under Acts of Parliament or provisional orders?—Nearly all.

9189. These give to the companies certain exceptional privileges, and also throw upon them certain obligations?—Yes.

9190. So that assuming that the undertaking is one which pays, it has an exceptional value attached to it by reason of the privileges which the company acquire under their Acts of Parliament?—Yes, especially in the case of a water company, because it supplies a necessity of life.

9191. Let us take the case of a public house. The value of the building is immensely increased in annual value if it has a licence attached to it, is it not?—Yes.

9192. Therefore the rent that a tenant would be willing to pay for a building with a licence attached, is far in excess of the rent that he would be willing to pay for a building without a licence?—Yes, and beyond that he often pays a large premium to go in.

9193. It does not matter whether he commutes his rent or not—it all means increased annual value, does it not?—You are quite right.

9194. So that a tenant would be willing to pay a higher rent for a property which has certain privileges attached to it than for a property which has not?—Clearly.

9195. In the case of gas companies as a rule, I think the dividends are limited in the metropolis by a sliding scale?—Yes.

9196. Take the case of the company you are now representing, they pay, I think, beyond the maximum dividend?—Yes, they pay 12½ per cent. on part of the capital and 10½ per cent. on another part.

9197. Their position is such that they can look forward, can they not, to fairly calculating upon paying a dividend of about that amount?—Yes, from year to year.

9198. I presume the maximum charges allowed by their Acts give them sufficient margin to raise the price of gas in case there is any probability of the dividend being less than 12½ per cent.?—But the dividend must fall then; whenever the price is raised the dividend must fall under the sliding scale. We cannot maintain the present level of dividend and alter the price of gas; we must not increase the price of gas to maintain the present level; we have to share the loss.

9199. But, subject to the possibility of a slight variation in the dividend, the shareholders of gas companies can fairly calculate upon a pretty safe 10 to 12 per cent. dividend upon the nominal capital?—Yes.

9200. If, then, you have to let an undertaking with practically parliamentary powers enabling you to pay a pretty certain 10 to 12 per cent. dividend, what rent do you think a tenant with capital, which he would be quite willing to invest at 3 per cent., or, say, 4 per cent., would be willing to pay for the sake of getting that income?—That is to say, what consideration would he give a landlord under those circumstances?

9201. No. What rent would a man be willing to pay, to buy what is practically a pretty safe dividend, varying from 10 to 12 per cent., a dividend that is practically guaranteed by an Act of Parliament?—He, of course, would pay more than for a similar undertaking where he had not the parliamentary licence, so to speak; but how much more he should pay on that account, and purely on that account, I really have not considered. I do not quarrel with the principle of ascertaining what a tenant would pay, but rather with the way it is worked.

9202. The Assessment Act requires the assessing authority to ascertain the rent that a tenant would be willing to pay to occupy that particular property?—Yes.

9203. Now, we will assume that you have to let a property which is practically guaranteed an income varying between 10 and 12 per cent. upon the nominal capital: would not the rent that the tenant would be willing to pay depend, to a great extent, upon his view as to the certainty of that income?—It would, and also upon his view as to what return he had a right to get for his own good management, and for his working capital. A man does not generally expect to get a business along with the premises.

9204. But that is what you have to let?—Suppose I am a shareholder in a bank, and I look with equal certainty to getting a large dividend on my bank shares; my bank premises are only rated as building and land, and although it is quite certain that the London and Midland Bank will pay 15 per cent.—and it has just gone up to 18 per cent.—there is no attempt made to consider the rateable value of these buildings and premises as being dependent upon that 18 per cent., no more than a great jeweller in Bond Street, who is pretty certain, from year to year, that he is going to sell his diamonds, would expect to be assessed upon the thousands or millions of pounds' worth of diamonds that may pass through his hands. I do not in the least object to pay on a liberal assessable value for the land I occupy, and the buildings I occupy, and such fixed plant as I use and occupy; but I do object to the consideration being imported that I am a shareholder in a trade which returns me 12½ per cent. or 10½ per cent. profit even though I have this parliamentary licence.

9205. May I point out what appears to me to be the difference between the two cases? In the case of a bank you can earn your 18 per cent. dividend whether the bank is situate at one end of the street or whether it is situate at the other, and your dividend is not necessarily dependent upon the exact situation of the building; but in the case of a gas company you have parliamentary authority to supply gas within a given district, and that authority excludes any one else coming and competing with you in that district?—For gas.

9206. Therefore you have attached to the particular locality a certain advantage and profit which does not attach to an ordinary trade not protected by an Act of Parliament?—That is so; but you must not lose sight

Mr. H. E. Jones.

6 July '97

Valuation of gas companies. Question of the equity of taking trade profits into account discussed.

Mr. H. E.  
Jones.  
6 July '97

of the fact that protection does not give an actual monopoly. We have got to compete with oil very heavily, with electric light partially, and with candles partially. There is no distinct monopoly of trade enjoyed by gas companies.

9207. But those considerations come in in calculating whether you think your dividend is well secured or not?—And they would come in in the percentage that as an assessor I would give upon the capital spent.

9208. May I take the case a little bit further? We will assume two works in a given town costing a given amount of money. In the one case the Act of Parliament limits the maximum dividend to 7 per cent.; in the other case it limits the maximum dividend to 10 per cent. I will assume that the works are such that the company is practically certain of getting its maximum dividend; would not a tenant be willing to pay a higher rent if he could get a maximum dividend of 10 per cent. than if he could only get a maximum dividend of 7 per cent.?—I am not so sure, I think the tenant would say, "This will take the whole of my time"; it would involve so much capital according to the volume of trade done, and the capital he must bring in would be in proportion to that, so he would say, "I must first of all satisfy myself before I hand anything to the landlord."

9209. You would not pay any more to get 6 per cent. than you would to get 4 per cent.?—I do not think it is a landlord's question at all; I think it is a tenant's question.

9210. I am not putting it as a landlord's question; I am putting it as a question of what the tenant can make out of this property. I am ready to let to you a property from which you can get a safe dividend of 10 per cent.; I am also ready to let you an exactly similar property from which you can get a safe dividend limited to 7 per cent., and I ask you whether you will not pay me a higher rent for the property which produces 10 per cent. than you will for the property which produces 7 per cent.?—I think it would depend. There would be circumstances in both cases that might make it not a dead certainty upon the face of it. It obviously looks as if one would; but you must look into the nature of the two businesses and see what amount of return the tenant himself should have. This I am strong about, that you have no right whatever unless you are going to rate people for their personal property generally and their personal income generally, to rate trade profit; it seems to me most unfair and unreasonable to rate trade profit. If I happen to be a gas maker and carry on a very profitable business, I have a right to the profits of that business, it is my risk and my undertaking and the landlord ought to be contented with a proper return upon his capital merely, for if he does not take the risk of the business he has no right to take the trade profits. If his buildings and pipes are a little more suitable than some other buildings and pipes will be for my purpose, I will pay him more rent, but only to that extent.

Capital  
value, de-  
duction of.

9211. I think I followed you in what you said about capital value; if I understood you correctly, capital value, according as you wish to interpret it, means not necessarily capital cost, but what the premises would be worth for anybody to purchase subject to the Acts of Parliament under which they were constructed, having regard to the fact whether they are suitable to fulfil the obligations of the Acts?—Yes.

9212. That is capital value?—Yes.

9213. So that if you have works where capital has been foolishly spent which turn out to be useless that would not be included in the capital value?—No; I should say a tenant would not pay rent—

9214. For dead capital?—For dead capital.

9215. In the same way he would be willing to pay rent for capital which has increased in value owing to outside circumstances since the works were constructed?—Clearly; a bank would pay more rent for premises near Lombard Street where property has developed than it would for premises near Putney.

Valuation  
of gas-  
works.  
Suggested  
valuation  
on basis of  
capital  
value.

9216. You suggest that capital value should be the basis of assessment, not only in the case of gas companies, but in the case of all properties?—Yes, but I think the percentage taken in order to find the assessable value—the rateable value—should differ according to the success or otherwise of the various purposes to which the plant and buildings were directed.

9217. Supposing you have a corporation owning gas works, and they are prohibited from earning any profit, that is to say, they have to supply gas at cost price, would you assess them at the same value that you would a company that is allowed to earn a dividend of 10 per cent. out of the same works?—Yes; because a company makes a trade profit, and the corporation are prohibited from making a trade profit. That is the only difference; it is a question of trade profit. The whole question turns upon rating of personal property, and I look upon the trade profit of a gas undertaking as a personal property, not as a rateable hereditament.

9218. Surely the profit arises from the occupation of particular premises, does it not? The profit of a gas company arises not from the fact that you are able to burn so much coal and to consume it, but from the fact that you are able from the situation of the premises to sell your gas to people living in the neighbourhood?—Yes, the profitable element in a gas works and a water works has been laid down by the courts to be the attachment of the service pipe in the street to the main, not the position of the works.

9219. We are not following what the courts lay down at the present moment; we are trying to find out whether we cannot suggest some better method. I must confess I fail to see at the present time why it is a tenant would not pay a higher rent for the occupation of premises out of which he can make an income of 10 per cent. than he would for the occupation of premises out of which he can make an income of 7 per cent.?—That is to say, you suggest to me that if it is derived from trade profit he would be disposed to share more of his trade profit with the landlord on the 10 per cent. works than he would on the 7 per cent. works?

9220. Not at all; I think it is according to human nature that a man would rather get 7 per cent. for his capital than 4 per cent.; that is all I suggest?—Without taking any of the risk of the trade?

9221. Yes; and that if he was willing to get 4 per cent. he would pay so much more to get a 7 per cent. than he would to get the 4 per cent.?—Of course it looks on the face of it pretty obvious according to human nature a man will pay more to get more.

9222. If that is so, then, is it not essential that in assessing gas works you must have consideration to the profits you can make out of them?—I might go so far as to agree that you must take the profit actually arising in the parish concerned; but here we are rated upon profits derived (in a different parish altogether) from the sale of certain things which in my view ought to be excluded, and cannot fairly be included unless you are going to include the profits of manufacture of every trader or manufacturer in Manchester or Birmingham.

9223. Just one point more. I notice that you say that the pipes of gas companies do not have the three-fourths exemption which is given to railway companies in respect of the railway lines?—And given in Scotland to pipes under their Act.

9224. I presume that if the three-fourths exemption were given to gas pipes it would also be given to the water pipes?—Yes.

9225. (Mr. Arthur O'Connor.) I suppose we may assume that any person would rather receive 7 per cent. on his capital than 4 per cent.?—Yes.

9226. Now, assenting to that general proposition, let us come to facts. Does a gas company get its Act of Parliament, and then having ascertained what amount of profit it is to be allowed to make, look about to find a landlord?—No.

9227. Therefore that question of the amount of rent he would be willing to pay, whether he was entitled to 7 per cent. or 12 per cent., has no practical immediate bearing upon the rent paid by the gas company?—No; it is impossible nowadays—and I say so in paragraph 13 of my memorandum—to prove the rent by any direct transaction, or by any indirect transaction.

9228. I suppose that when a gas company goes into any locality for the purpose of its business it requires to occupy land at any rate for pipes?—Yes it must, for pipes.

9229. The occupation of the land may be slight, it may be little more than a red thread through a blanket, but still it has to occupy land?—Yes.

9230. I suppose your company would not object to being assessed for the land it so occupies?—No, not in the least.

Mr. H. E.  
Jones.  
6 July '97

Valuation  
of gas  
companies.  
Question  
of the  
equity of  
taking  
trade  
profits into  
account  
discussed.

be taken  
into ac-  
count.

Mr. H. E.  
Jones.  
6 July '97

9231. On the other hand when a gas company starts an undertaking in a district, or extends its works, it sinks capital in the district?—Yes.

9232. It may employ labour?—Yes.

9233. So far it serves and benefits the district?—Yes.

9234. It is rather a benefactor than a charger?—We think so.

9235. Now in regard to Price's candle factory, is Price's candle factory assessed according to the number of candles it makes?—Not in the least.

9236. Or according to the real property it has there?—According to the real property, land, buildings, and plant.

9237. I understand you to say that you do not see any difference in principle between a gasworks and a candle works?—No, except for the Act of Parliament.

9238. But apart from the Act of Parliament you do not see any difference in essentials in the position of a candle works and a gasworks?—No, and I go the length of saying as to our income for residuals that they are on absolutely the same footing.

9239. Similarly a butcher, who makes live meat into legs of mutton and legs of beef, is assessed according to the value of his premises, not according to the extent of his trade?—That is so.

9240. He also has residual products?—Yes.

9241. Price's candle factory has residual products?—Yes.

9242. And they are not assessed in respect of them?—No.

9243. I understand you to say that you cannot see any principle upon which gasworks should be assessed in respect of their residual products?—No.

9244. You make a number of things which you call residual products, but is there any difference in point of principle in the production of those things which you call residual, and gas itself?—No difference.

9245. Is there any particular reason then in principle why you should be assessed even upon the amount of gas you make?—No.

9246. As I understand it, you object to assessment for local taxation upon the amount of business done?—That is it exactly.

9247. You are satisfied enough to be assessed in respect of the land within the area which you occupy?—Yes.

9248. You do not object to pay for the occupation of the land?—No.

9249. You did not sink any capital in creating the land?—No.

9250. You sink capital in labour, do you not?—Yes.

9251. You sink capital in movable tools?—Yes.

9252. You sink capital also in structure, and in fixtures or partial fixtures?—Yes.

9253. I want you to draw any distinction in principle that you can between your moveable tools, your removable fixtures, and your absolute fixtures, or your structure; they are all the production of capital?—Quite so. The only distinction that I could draw between them is that the one would pass upon sale or death with the land and buildings, and the other would be personal property.

9254. You can remove your moveable tools?—Yes.

9255. If you like you can pull down your structure?—Yes.

9256. It is an artificial creation?—Yes.

9257. Put up at the expense of your capital just as your tools are made?—Yes. Of course, I cannot divest myself of the difference in the legal view always taken of fixtures.

9258. I must ask you to clear your mind, if you can, of existing arrangements; I suppose you will agree that the littleness of the wisdom with which the world is governed is pretty well exemplified in the assessment of gas companies. Let us get rid of legal technicalities and existing legal arrangements and come to bottom facts. You do occupy land, and you are willing to be assessed in respect of that?—Yes.

9259. You object to be assessed in respect of your industry?—Yes.

9260. You object to be assessed in respect of personality?—Yes.

9261. Now I am afraid I am getting into technicalities myself; but in what respect is a building which is the production of capital and industry different in principle from any other production of industry?—A building differs because you cannot move it without destroying it.

9262. You cannot use a cigar without destroying it. What is the amount of your capital?—Something like 850,000*l.* in the case of the Commercial Company.

9263. How long has that company been established?—Something like 50 or 60 years.

9264. What was the original capital?—I am afraid I could not tell you—it was very small.

9265. How much fresh capital has been created in the last 20 years—roughly?—About 200,000*l.*

9266. About a quarter?—Yes.

9267. So that the auction clauses would apply to something less than 200,000*l.*?—They do not happen to apply to my company; we are just the one exception to the general rule in that.

9268. You are just out of it?—We are just out of it; we are the last company that escaped. That is because we were the first company to accept the sliding scale, and Mr. Forster's Committee gave us a sop for that.

9269. Do you know anything about Birmingham?—Yes; I advised the Corporation about the assessment.

9270. Who makes the gas at Birmingham?—The Corporation.

9271. Does it supply gas outside its own limits?—Yes.

9272. Does it make a profit on that supply?—Yes.

9273. That, therefore, is a case of purely trade profit in respect of the outside area?—Yes.

9274. Do you think it would be fair to assess the gas producers of Birmingham on the profit which they make outside their area?—No, not on the trade profit; but as they have to make the gas inside, they necessarily have to be assessed on the buildings and plant involved in making the gas.

9275. To go to the question of assessment; you say that different authorities adopt different forms of procedure?—Yes.

9276. And that before one committee or court the onus is thrown upon the appellant to show why he should not be assessed at a certain figure; and that elsewhere the onus is thrown upon the assessor to justify his figures?—Yes.

9277. You would be in favour, as I gather, of putting the onus of justifying on the assessor?—Yes. I think he ought to show that he is right.

9278. I suppose in most cases where that is done, the assessor is rather in a difficulty?—Very much indeed.

9279. I suppose that assessors have indicated all sorts of different standards and modes of calculating?—They generally adhere to the hypothetical tenant, but they give themselves a good deal of play in the suggestions as to what the hypothetical tenant would require in the way of capital, profits, and so on. As I say in paragraph 4 of my memorandum, they sometimes actually instigate the whole thing by writing to the assessment committee and offering to assist them in raising the assessment.

9280. I suppose that sometimes, at any rate—we will not go into details—there is a temptation on a valuer to put up an assessment to the highest point short of that at which a successful appeal could be lodged?—Yes. I produce the only copy available to me of a report of the proceedings of the case of the Salisbury Gas Light Company's works, in which I was a valuer and witness. Mr. C. A. Cripps was counsel for the appellant—

9281. Is this a published case?—Yes. This is what he said in his speech: "He was instructed that the manner in which the assessment first came to be raised was, that a gentleman made an offer to the guardians to the effect that he was prepared to take the matter in hand on the understanding that his remuneration was to consist of a commission of 6 per cent. on the increase of the valuation." I was a witness in the case, I may tell you, by subpoena; we had the letter produced in court and read, and it did justify every sentence of Mr. Cripps's observations.

Mr. H. E.  
Jones.  
6 July '97

Quarter sessions not a satisfactory tribunal of appeal. Procedure. Objection to appellants having to open their case.

Payment of value in proportion to increase of valuation.

**Mr. H. E. Jones.** 9282. That is to say, the personal interest of the assessor jumped with the increase of the assessment?—Yes.

**6 July '97** 9283. (*Mr. Murray.*) If you adopted capital value as the basis for the rating of all property, do you think you would arrive at a much less hypothetical result than the one you get at now?—Very much less. You would be sure then of knowing what amount of capital a landlord really had to let, you would get in amount of money what the value is of the property, buildings, land, and otherwise that he has to let. Any reasonable man could then form his own judgment as to whether in a very prosperous thing like a gasworks a per cent. was the proper allowance to give him as a rent, or in a less remunerative thing like a dock company whether a—2 per cent. was the proper amount to allow; but when you get to structural value you do get to something that is definite, and truthful, and accurate, and at present in these assessments we are in a perfect sea of suggestion and theory, and some of it is instigated in the spirit of that 6 per cent.

9284. But is it more definite, and more accurate, and more truthful than an estimate of the annual rent that the hypothetical tenant will give?—Yes, as determined at present, very much more. If you had been with me for 13 days on the Gas Light and Coke Company's appeal at Clerkenwell you would have realised how entirely the whole thing was a matter of swaying of counsel; it was a sort of tug-of-war. The only way in which I can keep the assessments for my various companies in anything like order is that I always declare war at the outset; every quinquennial I go and retain surveyors, and I retain counsel, and I let all the assessment committees know I am going to fight; that is the only way in which I can keep the proceedings in order.

9285. Would you not have the same tug-of-war over the question of capital value?—I think if you take the suggestion in paragraph 18 of my memorandum there would be no tug-of-war, because the thing would be gone into by someone entirely independent of any kind of interest. At present there is a large body of men who really live by the litigation that is forced upon companies through these extravagant assessments.

9286. Would there not be the same amount of litigation over the capital value that there is over the annual value now?—No, because that is a matter that can be determined. I think he would be a very bold man indeed who, if either myself or Mr. Livesey went into a works and declared the structural value to be so much, would upset it—it would be impossible to upset it. I do not suggest a plan of sweeping away the whole thing, but I do suggest a plan of getting rid of the partial and unfair assessments that now go on, and of removing some of the difficulties in getting justice from, first of all, an appeal to an assessment committee who may be every one of them incapable. I have gone before some who have been incapable of making the essential calculations or of following them. Sometimes you go to quarter sessions and you will find very able country gentlemen there who manage their estates very well, but who will not give the time and patience, and the trouble to work out a case of this sort, or to keep in check the kind of statements that are made before them.

9287. Whom do you propose to substitute for that body?—Among the present assessors there are plenty of good men; I am not condemning the whole class. I know and respect a great many surveyors of eminence who are quite capable of filling the position that I suggested in my memorandum of being the primary assessors following the Scotch plan; and then I am perfectly certain it would be competent that a tribunal of three who should be, as I say, a capable lawyer, a capable engineer, and a capable representative of municipal interests, to decide whether the first assessment had gone far wrong; at any rate in such hands as those we should be able to see where we were getting, but at present we do not know in the least.

9288. You would have a great many assessors and one central body?—I should have one court of appeal. I do not know whether the court of appeal could deal with the whole of the interests that I have suggested—railway, dock, gas, water, canal, tramway, and electric lighting companies—but I should think that probably one for England, one for Scotland, and one for Ireland

would do it very well. The assessors would have to be more numerous, because, of course, there would be a railway assessor, there would be a gas assessor, there would be a waterworks assessor, and there would be a canal assessor. These would all be men so trained to begin with and acquiring such experience in their work that they would be bound to do it better than it is done at present; and then, having no interest whatever in the result, there would be this grand feature for us, that there would be independence.

9289. Would you not have the same want of uniformity that you have now?—No, I think not, because one man must act upon the same lines. No doubt he would confer with other assessors where he was in difficulty at all. I forgot to show you what the effect of the present system is; I have got here Mr. Field's analysis of the different gas companies. The average assessment paid by the large corporations of Birmingham, Bolton, Carlisle, Leicester, Manchester, Nottingham, Oldham, and Salford is 1'47d.—that represents the rates they pay on each 1,000 feet of gas they make. The great companies of Bath, Brighton, Bristol, Derby, Liverpool, Newcastle-on-Tyne, Plymouth, Portsea, Rochester, and Sheffield pay 1'31d. When you come to the neighbourhood of London you find Lea Bridge—one of the cases I was on appeal for where they put them up to nearly 6d.—is still 3'3d., and just above it there is the Crystal Palace Company paying 1'39d. I would rather have shares in the Crystal Palace Company than in the Lea Bridge Company a great deal, yet the better company is assessed at the lower rate.

9290. (*Chairman.*) Do I understand you to suggest that the assessment upon the gas companies should be confined to the value of the land which they occupy?—Land, buildings, and plant.

9291. You include all?—All what I call fixed expenditure, apart from the floating capital which the tenant would employ.

9292. (*Mr. Dalton.*) If free trade were allowed in gas do you think the price of gas would be higher or lower than it is at present?—I think it would have been lower.

9293. Would it be now if for the future no more monopolies were granted?—I think the tendency would be to lower it, because the only stimulant for getting more consumption would be the cheapening of the price. There the sliding scale has come into play, and we are now being really rated for our improved management on the sliding scale. The sliding scale has cheapened the price of gas to a degree that nothing else could have accomplished, and so much was not expected of it. But the extra profits and dividends that we make by extra attention under the stimulus of the sliding scale is made the very ground for a further assessment.

9294. If a company had no monopoly for the supply of gas do you not think that competing undertakings would be started in the same district?—They would probably carve it out amongst themselves. The London companies did agree, and carved out London long before Parliament approved of it.

9295. But they had a monopoly against any outside company?—No.

9296. I mean to say nobody might come in without parliamentary powers and sell gas?—They had general powers of competing against each other, but they partitioned the districts off.

9297. Just so; but a company could not be started without having parliamentary powers to come in and compete against those companies?—I am not so sure. There was no monopoly actually given originally. In the 1860 Act there is a clause, for the first time, giving the monopoly; but before that there was no actual monopoly contained in the Acts of Parliament.

9298. You are quite clear that you would not take this question of monopoly in any way into account for the purposes of assessment?—I did not think I said that; I did not go so far as to say that.

9299. What is your opinion?—I said, like the public-house, I would regard it as having some element in the success which would increase the percentage upon the capital value that I would give.

**Mr. H. E. Jones.**

**6 July '97**

Valuation of gas companies. Rates paid by certain companies.

Valuation of gas companies should be in respect of value of land, buildings, and plant.

Valuation of gas companies. Monopoly enjoyed by gas companies. How far an element to be taken into consideration for the purposes of valuation.

Valuation of gas-works, railways, docks, water-works, canals, tramways, and electric light works. Independent assessors, as in Scotland, desirable.

The witness withdrew.

Mr. GEORGE LIVESKY called and examined.

Mr. G. Livesey. 9300. (Chairman.) Since 1871 you have acted for the South Metropolitan Gas Company, and in 1882 you became Deputy Chairman, and you have been Chairman since 1885?—Yes, I have been connected with the company all my life.

9301. I understand you are also the Chairman of the Crystal Palace District Gas Company, and that you represent those two companies before the Commission?—Yes, I do. I may say that I have been in communication with a number of other gas companies, and I represent, I think, absolutely all of them that I have been in communication with, as to the unsatisfactory nature of the present system, but I do not represent them as to the suggestions.

9302. I say the same to you as I said to Mr. Jones—We do not want so much to investigate the details of any particular company, as to receive suggestions of general principles which are applicable to all these undertakings. The subject very naturally divides itself into two or three parts; one, and certainly not the least important of which are the criticisms upon the existing state of affairs. I do not propose to take you at length over the points on which you heard us questioning Mr. Jones, but I put this general question to you: In his criticism upon the existing system and existing state of affairs, do you associate yourself with him?—I do, most certainly; in fact I should be inclined to speak more strongly even than he has done.

Payment of valuers in proportion to rateable values finally sustained condemned.

9303. Is there any point which you would like specially to emphasise upon the existing state of matters without going into the details which have been already amply covered?—I should like to state this as to the remuneration of rating surveyors. I have obtained extracts from the minutes of different parishes. Here is one from the minute books of the Wandsworth and Clapham Union: "For the re-valuation of the special properties which they valued at the last quinquennial a fee of 7s. 6d. per cent. upon the rateable values finally sustained, and for special properties not valued by them a fee of 15s. per cent. upon the rateable values finally sustained, including attendances, &c. The minute then recorded the resolution to employ Messrs. Hedley, Mason, and Hedley on the above terms." This is from the minutes of the Lewisham Union: "Resolved unanimously that Mr. Dinwiddy be appointed to value and assess the several railways, gasworks and mains, waterworks and mains, tramway, and any other properties of a special character which the committee may deem it expedient to place in his hands for that purpose, at a uniform charge of 15s. per cent. upon the rateable values finally sustained, such charges also to include attendances before the committee when required, but in the event of appeals that he be allowed a fee of five guineas per day when engaged upon appeal work"—in the Woolwich Union it is practically the same; Mr. Dinwiddy was engaged at 15s. per cent.

9304. I suppose your point of view is, that, in so far as the element of personal interest in a high valuation comes in, you regard it as a vicious system on which to proceed?—I do so, and the courts have condemned it.

Valuation of gasworks. Present system very unsatisfactory.

9305. Is there any other point in regard to the existing state of matters which you wish to comment upon?—I say that the system adopted by the rating surveyors for assessing gas properties is the most uncertain and the most unsatisfactory that could possibly, I think, be devised. These rating surveyors are the professional advisers of the assessment committees, and the assessment committees do not even pretend to understand the question. I have attended a great many committees, and I have never met a single case in which the committee even pretended to understand the system. I know some of the chairmen, and they have said to me: "Well, we must be guided by our professional adviser." Then, I would say that the system is not only unintelligible to the assessment committees, but I have just now had an experience of 10 or 12 days—12 days, really, but I was not present all the time—in respect to the South Metropolitan Company which had an appeal to the sessions. I am quite certain that it was equally so to the court. The court gave the most careful attention to it, but the manner in which the case was put before them on the one side and on the other, the disputing, the contradictions, were such that it is perfectly clear to both sides that the court did not understand the question.

9306. In so far as the suggestion for an authority to value gas and water undertakings, docks, and railways, which have also been mentioned, do you, or do you not agree with the suggestion made by Mr. Jones?—I want to get rid of all this uncertainty. I should be very glad indeed to see some independent and capable authority appointed to deal with these questions that are now dealt with by these surveyors. It would be a great improvement undoubtedly, but I think it would be infinitely better to settle a definite basis, such as has been suggested by Mr. Wilkins, or is to be suggested by Mr. Crowther Smith.\*

9307. I do not want you so much to refer to their evidence as to give me your own opinion?—Then I say, let us have something definite and fixed and certain; let us have a certain basis on which we can act. I cannot refer to Mr. Wilkins as you say you have to hear him presently; I wished to have come after him to have supported him. My own suggestion is that there should be ascertained, by a body appointed for that purpose, a competent and capable body, say, three men—what is the fair rateable value for gas undertakings per 1,000 feet on the price of gas. Let that be fixed and settled, and then it can be calculated in five minutes every year. I do not think there is any difficulty about the matter.

9308. Then you do not agree with Mr. Jones as to taking the structural value?—I think there is this point. I agree with Mr. Jones that theoretically he is right. Compare the rating of gas undertakings with the rating of other concerns; for instance, a brewery is rated on its structural value, and a warehouse is rated on its structural value, and the profits do not come into the question at all. But I quite see what has been said by the Commissioner on my right, that in assessing the rent of a gas undertaking the tenant would be willing to pay more if he were to get a larger interest.

9309. I understood it to be a part of your evidence that you wish to get rid of the hypothetical tenant altogether?—Yes, I do; and I should suggest either of these plans—either the one I have suggested in my memorandum,† or Mr. Wilkins' or Mr. Crowther Smith's\*—would get rid of the hypothetical tenant absolutely.

9310. I want you to choose which side of the fence you are going to sit upon, and then defend it before us?—Then I will take my own; of course I can take no other. I say that the Scotch system would be a very great improvement on the present system; that is, the appointment of independent assessors instead of the present method of employing surveyors. If that were adopted I should approve of it; but I say the hypothetical tenant is a delusion, and I want to get rid of him altogether.

9311. Do not go back upon that. You say you would like to take the independent assessor. What I want to know from you is what directions you are going to give him?—I am going on with my suggestion. I cannot put it better than I have expressed it in my memorandum. I say in paragraphs 39 and 40: "Seeing that the final result of the rating assessments is a charge at so much per thousand feet to the gas consumer, why cannot a short cut be made direct from the rating authority to the consumer, and thus get rid of the hypothetical tenant, rating surveyors, estimates of all kinds, and all appeals to the courts. Let the rates be so much per thousand feet on the gas sold. I am satisfied that the thing is perfectly practicable and that it would result in a nearer approach to absolute justice than can be attained"—I will not say, "in any other way" now. "Three capable men, a judge or a barrister of extensive rating experience, a rating surveyor, and a gas engineer could determine a fair basis."

9312. Why do you take the gas sold as the test?—You must allow me to go back and to say that gas companies differ from all other companies in this particular, that they transfer the whole of the rates to the gas consumer. Gas companies, as a

Mr. G. Livesey. 6 July '97

Valuation of gasworks. Rateable value to be based on the price of gas suggested.

Valuation of gasworks. Basis of hypothetical tenant should be abolished. Independent assessors should be appointed as in Scotland.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 318 to 327.  
† *Ibid.*, pp. 312 to 318.

Mr. G. Livesey.  
6 July '97

Consumers of gas would pay in an increased price of gas excessive rates put upon gas companies. Position of gas companies in this respect compared with that of railways and other undertakings.

Valuation of gas-works. Rateable value based on the price of gas suggested.

rule, I think I may say, almost without exception, are paying their full dividends. If an excessive amount of rating is put upon them, or if other charges come upon them which would prevent them paying the full dividends, up goes the price of gas. We are, therefore, in a position to transfer, directly, any increase in rates to the price of gas. Therefore I say, seeing that it is a charge upon the consumers, let us ascertain what that fair charge is and settle it definitely once for all; or if it were necessary to make variations or to differentiate between the consumers in different towns, perhaps the consumers in London might have to pay more than the consumers in another town or district; still there would be no difficulty whatever in arriving at what is the fair charge per 1,000 feet in London, and in Manchester or Birmingham, or what not.

9313. Why is the number of thousand feet sold, in your opinion, to be taken as the test?—Because the rates come to so much per 1,000 feet in every case, Mr. Jones quoted from Field's tables which he had in his possession; he showed that in some places it is a 1d. and in some places it is 2d. per 1,000 feet. In every case you will find that the rates go on to the price of gas.

9314. You do not think that any principles which you can suggest for the rating of gas companies would be applicable to any other undertaking?—I am not sure, but there is this great difference—a railway company cannot raise its fares or never does, and a water company cannot raise its rates.

9315. Are you accurate in saying that a railway company cannot raise its fares or rates?—They never do; they cannot raise the penny a mile, they cannot raise the third class.

9316. If they are already charging their maximum they cannot raise it?—No.

9317. But you and I know very well as a matter of fact that, in the great majority of the rates, railway companies are not now charging their maximum and that if it was not for competition they could raise their rates?—Practically they never do; a railway company that has been charging 1½d. a mile, say, for second class, never puts it up.

9318. They cannot go beyond the 1½d. a mile?—1½d. is the maximum, and what is the first class?

9319. 2d.?—The South Eastern charge 3d.

9320. They vary?—Yes; as a matter of fact I think I am correct in saying I have never known a railway company raise its fares.

9321. Its fares or its rates?—Its rates? Yes, they have done that.

9322. What is the difference for our purpose between raising fares and raising rates?—There is not much difference, but still there is this great difference—I think scarcely any railway companies and very few water companies are paying their maximum dividends, but it is a fact that whenever a gas company is in a position not to be able to pay its maximum dividend up goes the price of gas.

9323. (Mr. Murray.) What do you mean by the maximum dividend of the railway company?—I think railways are limited to 10 per cent.; that used to be so in some cases I know, as the gas companies were and as the water companies are.

9324. (Chairman.) What limits a railway company's dividend is this, is it not, that if any railway was to approach anything like 10 per cent. there would be a competitor coming into its district?—Yes, I suppose so; there is that difference again between gas and railways.

9325. I come back to this—I am anxious to get some general principles which will apply not only to gas companies, but to other quasi-public undertakings of an analogous character; do I understand from you that in your opinion you think that is impossible?—I think either Mr. Wilkins' or Mr. Crowther Smith's system would apply all round.

9326. Supposing your system were to be adopted and a price per 1,000 feet of gas sold was to be chosen as the test of rating, how would you proceed to divide that between the different rating authorities in whose districts the gas company might have property?—I do not think there is any difficulty in that. Follow the present plan of taking the structural value of the works, the manufacturing stations, and charge a certain percentage on that; at present the percentage on the works

is 5. I think that is too high, but that could be fixed at any figure that was considered fair; then let the rest be divided amongst the parishes or districts in proportion to the gas rental as it is now.

9327. In proportion to what?—To the receipts in those districts.

9328. Altogether apart from the amount of property which the gas company has in the rating authority's district, or the amount of land it occupies?—Take a gas company; a gas company has works in a certain parish, and we will suppose the rateable value of the gas company is 20,000l. The works are estimated at 200,000l. value, and they are rated at 10,000l.; that leaves another 10,000l. to be distributed over what are known as the productive mains.

9329. I do not think there is any point special to your memorandum on which I need ask you any question, but if there is any point which you would now like to emphasise particularly please draw our attention to it?—In paragraph 3 of my memorandum I explained the two systems on which gas companies work—the old system of a maximum price and a maximum dividend, and the new system known as the sliding scale, which Mr. Jones has described;\* then I say that the effect of the sliding scale is to make gas consumers and shareholders partners, and I give the proportions in regard to the South Metropolitan Company. This point I wish to emphasise, that it is the interest as well as the desire of gas companies to sell gas as cheaply as possible, and it seems that the local authorities consider it their interest to get as much out of the gas companies as they can. The quinquennial system as at present worked I should like to speak about. It was intended to avoid intermediate appeals, but being based, as it is, on the accidental profits of the quinquennial year, intermediate appeals become almost necessary. Take the South Metropolitan Company's case of 1889; I give in paragraph 17 of my memorandum the profits earned and the profits divided during the last 10 years—

9330. That difficulty would be got over by averaging the five years instead of taking the one that happens to be last?—Yes, it would, or by taking the divisible profit; but they do not do that—they take the quinquennial year. In 1889, which was a bad year, it was said to us: "Oh, but you will not make such a small profit during the five years; you will pay your regular dividends." "Yes," we said; and in consideration of that we agreed that the assessment should be on what was a fair average. When it comes to 1894, a very good year, they will not look at it in that way. They say: "No, we are entitled to the profits on the quinquennial year as the basis of the next five years"; and it was actually said in court: "If the gas companies are so ill-advised as to throw away 30,000l. a year by reducing the price, that is no reason why the ratepayer should suffer." The result is that the object of the Quinquennial Act is defeated, and intermediate appeals are necessary. Then I give an instance of a case in the parish of Lewisham, where there are two companies supplying gas, one is assessed at 4 per cent. on its receipts—the company that charges 4d. per 1,000 more for its gas—and the other is assessed at 16½ per cent., while 21 per cent. was claimed. The consumer in the one case pays 1'38 per cent. of the price of gas for rates, and the consumer in the other pays 5'8 per cent. There is one other point, if you will allow me. I take up Mr. Jones's contention that the profits of gas companies are not entirely from the sale of gas. We obtain our profits partly from the sale of residual products, and the system that has been adopted by the surveyors is this:—they take the cost of coal, deduct from it the receipts for residual products, and say the net cost of coal is so much, and so throw the profits from the whole business on to the sale of gas. Now, in the South Metropolitan case, the receipts for gas and meter and stove rents in 1894 were 847,000l., and for coke, tar, and ammonia 341,000l.; but the profits on the coke, tar, and ammonia are ignored altogether. Then I say, again, that the effect of an excessive rate is simply to unfairly tax the consumers of gas.

9331. (Mr. Murray.) If the rates, as you say, are paid by the consumer, what is the interest to the gas companies in this question?—Our interest is only this—Mr. Jones's and mine, and I can speak for others—our interest is to sell gas as cheaply as possible because we have very serious competitors; the more cheaply we can sell gas the more secure does our position become. Moreover, being under the sliding scale, we

Mr. G. Livesey.  
6 July '97

Sliding scale, effect of, to make gas consumers and shareholders partners.

Quinquennial valuation. Gas-works. Profits of quinquennial year taken, which conduces to appeals. Desirable to have the average of five years.

Gas companies. Unequal valuations. How far consumers pay the rates.

Valuation of gas-works. Residual products.

Gas companies. Their interest is to be rated lightly to produce gas as cheaply as possible.

\* See Mr. H. E. Jones's answers to questions 9195-9199.

Mr. G.  
Livesey.

6 July '97

are entitled to divide an increase of dividend for every reduction in the price of gas.

9332. But the consumer himself would be in much the same position; he would pay more in rates and less in gas?—The ratepayer would have to pay more in rates; it does not naturally follow that the consumer would.

9333. Substantially. I suppose, he is the same person, is he not?—No, not by any means; the proportions are not the same; one man burns a great deal more gas than another.

9334. (Mr. Arthur O'Connor.) The local authorities themselves are gas consumers, are they not?—Yes.

9335. They would be taking out of one pocket and putting into another?—Yes.

9336. Anyhow, the shareholders can look on with perfect equanimity?—Well, the shareholders can; it does not affect them appreciably. If we have to charge 1d. per 1,000 ft. more for gas, we divide a quarter per cent. less dividend; that is what it comes to.

9337. You simply transmit the pressure to the consumers?—We do transmit it to the consumers.

9338. To transmit the pressure of rating, perhaps, is sometimes better than to transmit the pressure of gas. But in the case of the district you were speaking of, only one part is assessed at 4 per cent., I think, and the other at 16 per cent. upon the capital, or the receipts?—The receipts.

9339. Is that not precisely what happens to two tradesmen—two tailors—one of whom is making a large income, and the other of whom is approaching the Bankruptcy Court?—Yes; but in the case of these two companies the one required 9½d. per 1,000 ft. to pay its interest and dividend, the other required 11½d.; the 9½d. one was rated at 4 per cent. on its receipts, and the 11½d. one was rated at 16½ per cent.; if in proportion, the other one ought to have been 5 instead of 16½.

9340. I suppose you would apply that principle to a couple of tailors as well as to a couple of gas companies?—A tailor, I suppose, is rated on the value of his premises, whatever it may be.

9341. It is not a question of what he is, but of what you think ought to be; if you think that the two gas companies in a given district should be assessed at the same rate upon their receipts, why would you not apply the same principle to a couple of tailors in the same district?—I do not say that the two gas companies should be assessed at quite the same. As far as the consumer is concerned, I say the two gas companies ought to be assessed at the same rate; but if you look at them as two gas companies earning different rates of profit and requiring a larger profit in the one case than in the other to pay the dividends, then the one that requires the larger price should be assessed at rather a higher figure.

9342. I do not quite understand on what particular foot you are standing, if I may so express myself; what do you say is the standard by which the rating of a gas company should be settled?—I say that seeing that the consumer has to pay it, it should be on the price of gas, but that not being recognised as a principle at the present time, the rating of gas companies is now based on what a tenant is willing to pay, and I am quite prepared to admit that a tenant would pay more for one gas concern than for another.

9343. Assume that you are a rating authority, and that a gas company has been instituted or is discovered in your area, and you proceed to rate it; on what principle or according to what system do you think it ought to be rated?—I should like to take the average of the present rates, ascertain what that amounts to on the price of gas, and say the rate shall be so much per thousand on the price of gas.

9344. Then may I take your answer to be this: gas undertakings should be assessed for rates according to the price of gas?—A certain rate per thousand feet.

9345. I only want to know what your answer is?—Supposing a penny per thousand feet is found to be the fair equivalent of the fair rateable value of a gasworks, then the penny per thousand feet should be taken as the amount the concern contributes to the rates.

9346. I want to get in reply to a clear question a clear answer; I daresay we shall do it in the end?—I am very sorry.

9347. A short answer so that we might get it on the notes. What do you say is the principle upon which a gas company should be rated—I only want to get your own phrase?—It should be commuted—that is how I would rather put it—into so much per thousand on the price of gas.

9348. What should be commuted?—The rates.

9349. We have not arrived at the rate which is to be commuted?—No.

9350. How are we to arrive at the rate; what is the principle upon which you arrive at the rate?—I should suggest that a competent committee or body should be constituted to ascertain what is the proper rateable value of a gasworks, and that then that should be commuted into the price of gas.

9351. What do you say is to be the principle of estimate which that competent body is to adopt? What instructions would you give them as to the mode in which they are to arrive, and the principle upon which they are to arrive, at their assessment?—I am afraid they must go very much on the present system. They must ascertain on the present system what a tenant would give. I am not at all sure that a short cut could not be made to it by taking the rates paid by a large number of gas undertakings, and ascertaining from that what is the proper amount of assessment—that is by taking the facts.

9352. But if that is to be the standard, your position must be that, taking the average of existing assessments of gas companies, that average is fair?—Yes.

9353. Then what have the gas companies to complain of?—We should get certainty; at present we have the most absolute uncertainty and infinite trouble every quinquennial, besides great expense. What we want is to know where we are; we want certainty above everything.

9354. Then you really do revert to the principle of the hypothetical tenant?—We must work it out from that.

9355. I was going to put it to you that the system of the hypothetical tenant was altogether fanciful and inapplicable to the real facts of the case?—So it is.

9356. And yet you say you must practically revert to it?—I think the system of the hypothetical tenant has, on the whole, worked out to about this—that the rateable value of gasworks is about half the divisible profits.

9357. (Mr. Elliott.) The rateable value, or the rates?—The rateable value is about half the divisible profits.

9358. (Mr. Dalton.) In London?—Generally.

9359. The rates vary very much in general?—Yes; there are some cases where it is more and some cases where it is less, but the average would come to about that.

9360. (Mr. Arthur O'Connor.) That is an answer which goes to existing facts?—Yes.

9361. Not which goes to that which ought to be, but we are concerned with what you think ought to be. Are you content with the existing facts?—Yes.

9362. (Mr. Elliott.) Could you inform us what proportion to the net profits of the company the actual amount paid in rates bears?—Taking the rateable value at about one-half the profits, the amount paid in rates is about one-third of that in London; the rates are about 6s. 8d. in the £ you may take it, so that the rates would be about one-sixth of the profit. If the rateable value is half the profit, the rates are one-third of that, and, of course, one-third of half is one-sixth of the whole.

9363. Have you made any study as to the proportion which exists in the case of other rateable property?—I have tried to do so, and have not been able to get any comparison in relation to profits; I cannot get at their profits.

9364. You would agree, I suppose, that in many other industries the proportion of the amount paid in rates to the aggregate profits is very much smaller than that which you have just mentioned?—I believe so, very much.

9365. It would be so, would it not, in the extreme case, say, of a bank?—It would be very much smaller.

9366. Do you feel any grievance under that head?—Yes, we feel that we are unfairly rated on that head, that we are rated more highly in proportion to our profits than most other concerns.

Mr. G.  
Livesey.

9367. Leaving out of account any question of practical administration and of benefits received, would you say that the amount received by way of profits constitutes a fair test of the ability to pay towards local taxation?—I suppose it must be taken so. Of course it may be said that the proper basis of local taxation is structural value, but I think it has been so long recognised that ability to pay is one element, that I am prepared to recognise it in the matter of the settlement of a system.

9368. Do you feel a sense of grievance as against those undertakings in which the proportion of the rates to the profits is very much less than your own?—Yes. It came before me the other day in quite another matter. Barclay's brewery is rated at 18,000*l.*, they pay 6,000*l.* a year in rates, and they must make more than 36,000*l.* a year profit—I do not know what they make, but I expect it is a great deal more than that.

9369. As representing your gas company, you feel that as against Barclay's Brewery Company, you have a distinct grievance?—Yes.

Valuation of gas companies. Basis of gas sold or profits discussed.

9370. (Mr. Dalton.) In paragraph 17 of your memorandum I observe a table showing the profits earned. In the three years, 1889-91, the profits were very much less than in any of the other years—is there any special reason for that?—In 1889 came the strike, and part of the cost of the strike was carried into 1890; it began in December and ended in February. Then in 1890 we had a considerable rise in the price of coal, which was continued into 1891. At the end of 1891 we had to raise the price of gas; we had exhausted our reserves. We had a very large amount in reserve, to begin with, and rather than raise the price of gas we used up our reserves, and when they were practically gone we put up the price; then coal went down and up went the profit, and in the next two or three years we were able to reduce the price again.

9371. Did the profits bear any relation to the amount of gas sold?—No, not in those years. The profits in relation to the gas sold varied from year to year. The gas sold was a constantly increasing quantity; it was more in 1890 than it was in 1889.

9372. Was it as much in 1889 as it was in 1888?—It was more in 1889 than in 1888.

9373. Then it would make a considerable difference to you whether you were rated in proportion to the profits, or according to the amount of gas sold. If it had been on the amount of gas sold you would have paid higher rates in 1889 than in 1888, but if it had been on the profits you would have paid very much less?—Yes, but if you take the profits over an average of years they come about right.

9374. About the same as the gas sold?—Yes, or as the profits divided.

9375. Have you any information as to which was the fairer system? I think you recommend the gas sold; do you see any objection to the profits being taken?—No; I am quite willing to accept that system as a fair one.

9376. (Chairman.) Is there anything you want to add?—I do not think so.

9377. (Mr. Arthur O'Connor.) You have just mentioned a brewery; can you give us any information

with regard to the valuation of the structure of that brewery as distinguished from the site?—I do not know that I can give it you for that brewery, but I have been furnished with some figures, I must not say to what property they belong, but it is a brewery. The site is valued in the first instance—value of site and river wall so much; structural value of building so much; the structural value is taken, and on that 6 per cent. is taken as the gross rateable value. Then the total structural value of plant and machinery is taken, and 7½ per cent. on that is taken as the gross rateable value. But then I find there are certain deductions from the annual value of the site and river wall. 10 per cent. is taken off for renewals, insurance, and maintenance, 25 per cent. is taken off for the buildings which reduces the 6 per cent. to 4½, and 33½ per cent. is taken off the machinery, which reduces that to 5 per cent. as the net rateable value.

9378. The first point I want to bring out, or was in hopes of bringing out, was this—that there is known to actual practice a distribution of the assessment as between the site first of all, secondly the structure, and thirdly the machinery?—Yes, here it is all set out in this case.

9379. In that case, at any rate, there must have been no impossibility, possibly no difficulty, in distinguishing between the site value, the structural value, and the machinery value?—I believe these are the agreed figures.

9380. Now in respect of the site there has been made a deduction in that particular case, but that was because there was something artificial in the shape of a river wall?—Yes, I suppose so; 10 per cent. is taken off for that.

9381. If you had an assessment of site alone there would be no deduction?—I suppose not.

9382. The thing would be simple, we should have got down to bottom rock?—I should think so.

9383. Do you know any reason why they should not extend that system of separating site value from structural value, and from machinery value?—In valuing our gasworks they value the site as worth so much per acre, and then they take the buildings very much the same as they do these. That is for ascertaining how much of the total rateable value is to be appropriated to the gasworks, to the working part.

9384. Therefore if it was suggested that a simple, just, and practical mode of assessment was the assessment of the site value, and the site value only, throughout the whole kingdom, in country and in town, there would not necessarily be any practical difficulty in establishing the basis?—No, but I certainly think the structures ought to be rateable too.

9385. You are departing from my question; supposing that it was decided or suggested that there should be a system of valuation of site values alone, there would be no practical impossibility in separating the site value from the structural value?—I think not; it is done constantly by surveyors.

9386. There would be no practical difficulty at all in ascertaining the site value of every site in the kingdom?—I should think not.

The witness withdrew.

Mr. CHARLES CROWTHER SMITH called and examined.

Mr. C. C. Smith.

9387. (Chairman.) You are, I understand, Secretary of the Southampton Gas Light and Coke Company, and were lately Clerk to the Guardians of the Southampton Incorporation?—Yes.

9388. You have had 36 years' experience in the latter capacity, that is with the Southampton Guardians?—Yes.

9389. They, under a local Act, assess all properties and make the poor rates?—They do.

9390. During that time important appeals to quarter sessions concerning dock and gas companies' ratings were heard?—That is so.

9391. Without going into detail over it, and asking you to emphasise any point on which you wish to speak, I understand that you concur with the two previous witnesses whose evidence you have heard in con-

demning the existing system as expensive, uncertain, and unsatisfactory?—I do.

9392. Is there any point in regard to it which you would like to emphasise more than they have done?—First of all there is a very important opinion given by Lord Esher, the Master of the Rolls, as to the uncertainty of this proceeding, namely, seeing how difficult is the calculation in all great works, such as waterworks and railway companies, "no two calculations, though made by the most skilled persons in these matters, will ever agree in the figures." In addition to that I have a number of cases here in which the utter absurdity of the present system of valuation, I think, will be apparent to the Commission if you will just allow me to give you two or three figures. With regard to the Southampton Dock Company the rating authority's valuer put it at 18,940*l.*, and the company's

valuer put it at 9,000*l.*, being just one half. With regard to the Bristol Gas Company, the profits being 33,000*l.*, the rateable value was put at 16,000*l.* odd by the rating authority, and at 7,000*l.* by the company's valuer. This same gentleman in valuing the Southampton Gas Company where the profits were only 14,800*l.*, as against 33,000*l.* in the case of the Bristol Company, made the rateable value of the one with only 14,800*l.*, 8,801*l.*; but in the Bristol case, with its 33,000*l.* profit, he made the rateable value 7,000*l.*

9393. Who was the gentleman?—I know his name, but he is now deceased, and I do not know whether you like it mentioned in confidence.

9394. I do not care about having it mentioned. What I want to know is this; was he in one case retained for the rating authority, and in the other for the corporation?—That is just the case.

Appeals,  
great cost  
of.

9395. Then I do not think you need go further into it?—That explains it entirely. One thing I wish particularly to show you is with regard to the enormous cost of the present system. In the Southampton Dock Company's appeal the costs were 4,638*l.* for trying the question what the proper rateable value ought to be. In the case of the Southampton Gas Company's appeal—a small matter comparatively—the costs were 4,224*l.* for deciding what their assessment ought to be. I need hardly point out to you that that is a very serious charge, because it is divided between the ratepayers and consumers, and it certainly points to the fact of its being desirable to obtain some better or more simple tribunal or mode of assessing public companies.

Valuation  
of com-  
panies now

basis of  
hypotheti-  
cal tenant.  
Suggested  
basis to be  
half the  
net profits  
taken from  
income tax  
returns for  
each year.

9396. I understand that a part of your desire is to get rid of what you describe—quoting an eminent counsel—as the “very greatest difficulty in setting up “in flesh and bone the dreadful skeleton of the hypothetical tenant”?”—That is so.

9397. What principle do you want to adopt?—After having had the experience that you have just kindly mentioned in both capacities, I have come to the conclusion that the most equitable and the least argumentative principle would be to take the income tax first, as showing the total amount of profits earned annually by each public company. This would apply to all public companies, not simply to gas companies. Having got that, about which there is no difficulty, there is this to be said with regard to it, that the surveyor of taxes and the companies all have an opportunity of being heard by an inexpensive method by going before the Commissioners to appeal against any assessment which the companies may think is excessive; and if, after hearing all sides, the amount is decided, I submit to the Commission that that would form a very equitable and decided basis upon which the rating of all public companies might be based.

9398. You do not object to being rated on your profits then?—No; I have studied all the different opinions that have been put before me, and I have come to the conclusion, in endeavouring to reconcile all that has previously gone before as to the hypothetical tenant and the actual equities of the case, that one half of the profits as ascertained by the surveyor of taxes for each year would be the fair and equitable basis upon which any public company should be assessed to the local rates.

9399. Do you apply that to the case of a gas company which is in the hands of a corporation, as well as to a gas company which is in the hands of a private body?—Yes, I think so.

9400. How do you get at the profits of a gas company in the hands of a public corporation?—They are bound to keep separate accounts, the same as a gas company would be. All local authorities have to go to the Local Government Board for power to borrow loans to enable them to purchase, and one of the conditions under which they are put is to keep separate accounts.

9401. If they do not make a profit how are you going to ascertain it?—They all make profits. What they do is to vote so much out of their profits in liquidation of the local rates. It is a simple question of receipt and payment. If their accounts are kept separately, which they are bound to be, it is easy for a local authority to show the absolute profits they make; but instead of reducing the price of gas they generally vote so much towards the payment of the local rates out of their

profits—that is a very usual practice in fact with a corporation—and thereby they very often keep up the price of gas beyond what it would be under a gas company.

9402. Assuming that to be so, over and above the sum which they may vote, as occasionally is done in supplement of the rates, are they not bound to reduce the price of gas in such a way as to prevent their making the same profit that the same corporation in the hands of a private body of shareholders would make?—I think I am right in saying that there is no limitation of any sort; it is in the entire discretion of the corporation. They can keep the price of gas up as high as they please, and keep on contributing to the rates out of the profits which they make, and that is the usual custom.

9403. As a matter of fact they do not do that, do they?—I think it is the usual custom to contribute out of their profits a sum of so much, which goes towards the lowering of the local rates.

9404. In the event of your assessing the profits in that way, would such a corporation not have a great temptation, instead of voting the sum, as you suggest, to reduce the price of gas, and so not to show the profit on which you would rate them?—Then, you see, the ratepayers and the consumers would equally get the benefit of that in the reduction of the price of gas.

9405. Yes, but how if they are not the same persons?—They are not—all of them certainly are not. That would be so, but you see the principle, I take it, would hold that public opinion would induce the corporation to reduce the price of gas as low as possible, so as to show that they were not charging more than private gas companies, because there is a competition between the gas companies, which would always induce the corporations to endeavour to show that they were managing their affairs as well as the gas companies were theirs.

9406. (Mr. Murray.) Would you rate all public companies on this principle?—I think it is applicable, as far as I understand it.

9407. Take the London and County Bank?—I do not call that a public company for this purpose. I say that my limitation would simply be, that whatever public company at the present time is rated by this hypothetical tenant principle, the principle I now suggest should be adopted in place of that. You know, of course, that county banking companies at the present time are not rated on their profits; they are only rated on their buildings.

9408. (Chairman.) As I understand it, the principles that you desire to lay down, on which I am not expressing any opinion at this moment, are two: first, that the amount of the income-tax assessment for each year should be taken as conclusive evidence of the total net profits earned by the company; and, secondly, that half of such total net profits should be the amount of the net rateable value of the whole undertaking for that year, upon which the local rates should be levied?—That is my proposal.

9409. How do you arrive at that as being a just thing to do?—The reason that has induced me to arrive at that conclusion is, that the practice of all the oldest surveyors, with whom I have been acquainted for a great number of years, has been, whatever mode they adopted to arrive at it, to come more or less to about one half of the profits of the company; that is a matter of practice.

9410. (Mr. Arthur O'Connor.) I do not understand the terms used. What do you mean by the word “public”? Do you mean a company that is a limited liability company or do you mean a company that is supplying a public service?—What I mean is this, that this system should apply to all companies which are now assessable upon the principle of a hypothetical tenant, that is to say, it would apply to gas, water, railway and canal companies, and to any company of that sort, which is not merely rated upon their buildings or structural values.

9411. Doing something for the public at large for money consideration, is that what you mean?—I think I must put it, if you will allow me to say so, that I intend this principle should apply to all companies which at present are rated upon the principle of the hypothetical tenant. I could not go beyond that. There are a number of companies which carry on commercial businesses to which a hypothetical tenant is never

Compounding. Provisions in Public Health Act better than in Poor Rate Assessment and Collection Act.

applied, it is simply structural value of the premises that is brought in there; and therefore I did not intend to include those in it.

9412. You do not mean companies under the Companies Acts of 1862 and 1871?—No, I do not.

9413. You do not mean limited liability companies?—No, I do not.

9414. But a company supplying some service to the public?—I have named the particular class of company—gas, water, railways, docks, canals, and so on; that is what I intend to limit it to.

9415. (Chairman.) In other words the present system while leading to expense and to a difficulty in collection has been reduced, according to your belief, to a system of which you quote the result?—That is so.

9416. And you are prepared for the sake of convenience and peace to stereotype that in the future?—That is so. Perhaps you will allow me to state another additional fact that I have ascertained. I have obtained the profits and rateable values of 50 gas companies. Of course I am not going to trouble this Commission or your Lordship with any of those, but I wish to give you this simple statement:—Of those 50 companies, 20 are rated above one-half and 30 below one-half of their annual profits; the average, taking the whole of the 50 companies, works out at about half their profits, namely, half the profits of the whole of these 50 companies amounts to 659,847*l.*, and the present rateable value of them is 636,931*l.*; so that I give you 50 companies in which if that system were applied it would really come within 23,000*l.* of the half of their profits.

9417. Of course you are reading from a number of figures which I have not got here, and therefore I have no means of checking them?—That is so. I could not put the companies names down because it has been returned to me anonymously, but I could let your Lordship have a list of them. I have a printed form here from which you will see that what I tell you is correct; it is not entirely made up from that, but that contains the greater number of them (*handing in table*).\*

9418. (Mr. Arthur O'Connor.) What is the general result?—The general result of that is that the one-half total profits of the 50 gas companies would be 659,847*l.*, and the present rateable value of those 50 companies is 636,931*l.*

9419. (Chairman.) As I understand, you do not complain of the results, but you do complain of the expense and inconvenience by which those results are arrived at?—That is so. What we say is that the system is tedious, uncertain, and simply dependent upon which side a surveyor is engaged as to how his judgment will come out, and that that is an unsafe and an unfair system on which litigation ensues between the company and the local authorities.

9420. Passing from your experience as an official of a gas company, I think you have something to say as to the inconvenience of the present system of so many separate authorities collecting various rates?—That is so. What I say in paragraph 15 of my memorandum† is perhaps nothing very novel. I believe in London it really obtains in some parishes, I think they do make a consolidated rate. I thought it important and desirable whilst I was here to make this suggestion to the Commission.

9421. The suggestion has been made to us by several witnesses, and I would like to have your opinion that the fewer separate demands which are made upon the individual ratepayer, the more it is for the general convenience?—That is so; the number of separate demands that are made by separate collectors at present is very vexatious and annoying. I think it would be a very great improvement to abolish that. Supposing the present occupiers of the office of collectors were superannuated or compensated, as soon as they were got rid of there would be a very large saving to the ratepayers in the cost of collection.

9422. Do you say there is a material loss on the collection of the poor rates, for example, at the present time?—Yes. The poor rate authorities at present have not the same powers over the owners of small property as the local board of health or special district rating authorities have; the consequence of which is that a large sum of money becomes irrecoverable and lost, or is excused from the poor people. But if the Legislature thought it wise, and I cannot see myself any objection—of course, I am only making my suggestions with submission to you—there is no reason why the authorities

collecting the poor rate should not have equal powers with the local board authorities.

9423. Power to do what?—To collect the rates from the owners of small properties instead of losing the money by trying to get it from the tenants.

9424. Giving the owners an allowance?—Yes, giving the owners the same allowance that they would get on the local board rates.

9425. We have had several witnesses on that point but the majority of them I think, speaking from recollection, have been against those deductions upon the ground that it was unfair to other ratepayers to give a general deduction when, if the local authority took trouble and collected the rates, a much larger proportion of the gross amount would be got in for the general benefit; I should like you to comment upon that?—I think I can give certainly most explicit evidence upon that subject, because we have had experience both before and after the legal powers were given to collect from the owners. When we had power only to collect from the occupier we lost very large sums of money. The poor people, you see, are really in and out of tenements from week to week, or less frequently, and the consequence is that it is impossible for the collectors to recover the rates from those people. The landlords always get their rents weekly, and they take good care that the rents are paid, and the small proportion of the rates which would be collected with the rent enable the landlords to do the business both for themselves and for the rating authorities.

9426. What percentage would you suggest should be allowed to the landlord for his trouble and risk in collecting and paying over the occupant's rate?—With regard to the poor rate at present, if they choose to compound for payment, they get 30 per cent. allowed them off the rate; that would be nearly one third of the rate is allowed off, which, of course, is a sufficient sum to indemnify them against their losses.

9427. Is it more than sufficient?—That is a mere matter of opinion.

9428. That is exactly what I want; I want your opinion?—I am not prepared to say that it is too much because they really are collectors—they are collecting the money for the local authorities, and if they do not collect it the ratepayers would have to pay a very much larger sum in the losses on the rates than they do by the allowance of the commission.

9429. I am sure you have got an opinion, do not be afraid to express it—what is your opinion—is it, or is it not, a proper proportion to allow?—The 30 per cent?

9430. Yes?—That is where they agree to pay that whether the premises are occupied or not.

9431. Is that not another deduction rate?—No, not for the poor rate. There is 15 per cent. allowed on the tenants' rates if they compound, and if they agree to pay whether the premises are occupied or unoccupied, then they are allowed an extra 15 per cent.

9432. Do you collect the gas rate from the owner or from the occupier?—From the occupier, always.

9433. Why is it more difficult to collect the local rates than the gas rate?—I must remind you that the premises to which we have been referring are small tenements in the hands of weekly occupants, and that the gas consumers, as a rule, of course, are a much better class.

9434. These people do not use gas?—No, they are a smaller class of property altogether.

9435. (Mr. Arthur O'Connor.) You have put in a very interesting paper showing the statistics as to rating the various gas undertakings, which is brought down to December 1896?—Quite so.

9436. There are 51 of them enumerated here?—Yes.

9437. That is only one-tenth of the existing gas undertakings in the country?—Not so much; it is less than one-tenth.

9438. It is not more than one-tenth, anyhow?—No, certainly not.

9439. I see this shows, first of all, the population, then the rateable value, the rates levied in the town from the borough treasurer's return; then come certain gas companies returns of the annual consumption, the amount expended on works, mains and meters, the income from gas, coke, tar and liquor, not including

† *Ibid.*, pp. 318 and 319.

Mr. C. C. Smith.  
6 July '97

meter rents; then there is a column for profit; after that comes the rateable value of gas undertakings, then comes the amount of rates paid by the gas undertaking exclusive of income tax, and the proportion of the total rates of the town paid by the gas undertaking; then come three sub-columns for the rateable value of the gas undertaking, and then three sub-columns for rates paid by the gas undertaking, and of those sub-columns the last is the rate per 1,000 feet of gas sold?—Yes.

9440. I notice that some of these are as low as 75d of 1d. P.—Quite so.

9441. And some are as high as 3'35 P.—Quite so.

9442. So that in the one case you would have a rate which is only one-sixth of the rate of the other?—Yes, that is so.

9443. We have already had evidence in which the suggestion was made that rates should be paid according to the thousand feet of gas sold?—Quite so; I heard the evidence.

9444. In view of these figures of yours, in which three is the figure in one case and less than one is the figure in the other, what do you say to that suggestion?—Mr. Livesey we know is a great authority on all gas matters, and therefore I should be very careful how I said anything against any evidence he has given, but I may say this, that Mr. Livesey, you remember—

9445. Do you agree, or do you not agree?—With those figures?

9446. No, with the suggestion?—I think it would be rather a dangerous principle.

9447. That will do?—I might say that these figures which you have quoted corroborate Mr. Livesey's own statements that there were great varieties of rating per 1,000, and he suggested, you remember, in his scheme, that you should have a scale propounded which would meet those inequalities.

9448. Yes, you need not labour that point?—I do not wish to, I merely explain that.

Valuation of gas companies. Basis of gas sold, as suggested by Mr. Livesey, not approved of.

Valuation of companies, now rated on basis of hypothetical tenant. Suggested basis to be half net profits taken from income tax returns for each year.

9449. The basis for assessment under your scheme is one of income and profits?—One-half of the income tax assessments for each year annually, in order to do away with the quinquennial principle which would affect us unjustly unless it went over all the five years.

9450. I want to see how; we will work that out; first of all you have your headquarters at one place and you have your customers at another?—Exactly.

9451. Are you going to make your rates at your headquarters, or are you going to make them fractional, or are you going to make them over the whole system?—If you will refer to paragraph 11 of my memorandum you will find that I state: "Where it is necessary to divide the assessments between buildings and mains, 4 per cent. of the structural value to be taken to give the rateable value of works and stations, the remainder, being the rateable value of mains, to be divided among the various parishes, in accordance with the present system, based on the earnings in the individual parishes."

9452. I thought you would say that?—That is what I propose to do.

9453. Let us take the case of Birmingham. The Corporation supplies gas to its own people and also to people outside?—Quite so.

9454. Is there anything in their Act which requires them to charge the people outside their proper area the same rate for gas as they charge to people in Birmingham proper?—I am sorry to say I could not answer that; I should think it is probable they charge a little more.

9455. Exactly, I think you are right?—We do in our district, certainly.

9456. I am sure you would, and the Birmingham people would not be likely to be behind you in that respect?—Quite so.

9457. Let us assume that outside the Birmingham area is a charge which gives a higher rate of profit than within the area; let us assume that the corporation of Birmingham manages to make expenditure and income balance in respect of consumption and production of gas within their area, but that they make a profit on the supply outside at a higher price than is charged inside; now do you propose on your principles to assess that?—First of all I must say that the Birmingham corporation make a very large profit on their

gas affairs, and hand over very large sums to the local rates, so I think your hypothetical case would not be exactly supported by facts.

9458. You do not follow me, I think. I am concerned only with the outside area; how do you propose to assess your gas company with regard to the outside area?—By the amount of the earnings in those various parishes.

9459. That is to say, in the case of a corporation you would assess their profit on the business in an outside area?—Yes, I should assess the outside areas on the earnings in the various parishes.

9460. Now let me take another Birmingham producer; he produces, we will say, idols for the inhabitants of India, do you assess him for rating purposes upon the profits he makes in India upon his Brummagem idols?—No. You see gas companies and these public companies we have named are by the present practice and by the sanction of the courts—because there have been plenty of cases before them—assessed on the hypothetical tenant principle; but this man is a mere manufacturer who is only assessed for the premises which he occupies, and in which his manufactures are carried on.

9461. We are concerned with first principles, existing law is nothing to us; we have to recommend an alteration of the law because it is found to be defective. Therefore let us put that aside for the moment and let us go to first principles. If you are to assess the manufacturer of gas in Birmingham upon his profits in an outlying district outside Birmingham, why do you not assess a Birmingham manufacturer of Brummagem idols for consumption in India?—The only reason in answer that I can give you is that the law at present does not permit of it.

9462. Yes, but then you are bringing in an element for which I postulate the exclusion. I notice that the companies you refer to in paragraph 12 of your memorandum, according to your definition, which you gave me incidentally, are all monopoly companies?—Yes, I should say it was so.

9463. Would you suggest that, in the case of a monopoly company, there should be a different principle of taxation, or rating, from that which would be applied in the case of any other company or private venture?—I think not, for this reason, that you see whatever advantage the company possesses from having a monopoly, from being a company with statutory obligations and powers, whatever advantage that company derives from that position is shown by the amount of the profits that it earns. Therefore, if that monopoly enables it to earn more money, so the rateable value would be proportionate to its earnings. I think that would cover all the advantages which these companies possess as monopolies; the profits which they earn are due, no doubt, to a great extent to their being monopolies, but then that advantage would enable them to receive a sum of money as profits, which upon my system would be rated accordingly.

9464. Then do I understand that in the case of what I call monopoly companies, you agree that one half of the net profits should be the amount of the net rateable value of the undertaking?—That is the result of my experience.

9465. Is that what I understand your suggestion is?—Yes, that is my suggestion.

9466. Now, I ask you to distinguish between the monopoly companies and any other companies, or private undertakings; if that is good in the case of monopoly companies why should it not hold good, in principle, in the case of other producers?—You see what we are giving in evidence before this Commission now, is, that the system which at present obtains by law, by Act of Parliament, and practice in the courts, and by surveyors, is an unjust, vexatious, and expensive one, and my suggestion is really to try and improve that.

9467. That is agreed; I think everybody admits that?—Yes. I admit at once that I have not studied the question whether you ought to rate all companies irrespective of their being at present under this hypothetical system; that is a wider question than I think I was prepared to go upon.

9468. You have suggested a certain standard or principle?—Yes.

9469. We are starting now a fresh inquiry; this Commission would not exist if it was not admitted that

Mr. C. C. Smith.  
6 July '97

Monopolies. Companies having monopolies. Valuation of.

*Mr. C. C. Smith.*  
6 July '97  
some alteration in the existing arrangement was required; and beginning afresh we want to get some kind of guiding principle. You have suggested a principle with regard to certain classes of companies, and I ask you why do you distinguish, if you do distinguish, between this class of company and any other class of company?—I distinguish between these companies and the others for the reason that the legislature and the courts, and the surveyors have all gone in unison together, that these are the only class to which such a principle is applicable.

9470. Let us assume for a moment that the question is settled so far as this class of companies is concerned; what other principle is applicable to what other class of companies?—I think that perhaps I might be allowed to say that I hardly came here prepared to discuss the rating of any other companies than those which are affected by the hypothetical tenant principle.

9471. Very well; then let us confine ourselves to this particular class. What have you to say on points of principle in support of this proposal that half of the net profits should be the net rateable value?—I think it would be summed up in these few words, that I believe that if this system were adopted it would be the "simplest method which can be devised for the assessment of public companies, and, if adopted, would be the means of avoiding great expense to both ratepayers and companies, would prevent much friction with the local authorities and save a great amount of time at quarter sessions now taken up by rating appeals." That is the summary of my opinion.

9472. Supposing there are two such companies, one managed by a man of great ability like one of your predecessors as a witness, and another very badly and very greatly mismanaged, and that one results in profit, and the other results in loss, how does your principle apply?—Exactly, because the persons who have made the least profit would be rated at the least sum, and those who made the greatest profit would have to pay the highest amount.

9473. But would that not be making the amount of rate dependent upon personal managerial ability and not upon the value of the occupation of the premises?—Yes, but you see I do not profess to go upon the structural value.

9474. Then you are taxing managerial ability?—You see those abilities are used for the general benefit of the company, not for his own individual benefit.

9475. A company which conducts its affairs well and makes a profit has to pay more?—That is so. That is my objection to Mr. Livesey's system of taking it per thousand cubic feet. Mr. Livesey may, with his talent and experience, produce, say, 11,000 cubic feet of gas per ton of coal, and another company may perhaps only produce 9,000 feet owing to bad management; Mr. Livesey then would be taxed more for his ton of coal

than the badly-managed company. Therefore I object to the per thousand feet being taken.

9476. Equity is equity, not only for the gas companies but for all mankind; if you apply your standard of equity to mankind at large, do you think it is fair that a man who because he makes, by good administration, a profit in his business sufficient to justify the occupation of good premises should be taxed heavily beyond his neighbour with similar premises who, because he cannot manage well, loses instead of gains?—I must point out to you the effect of that good management would be to give himself and his shareholders a higher dividend, therefore he gets some reward for his extra science.

9477. (*Mr. Clave.*) I understand that your proposal is that in the case of all companies which are limited by Acts of Parliament, that half of the net profits should be taken as the rateable value?—That is so.

9478. You are acquainted, I suppose, with the Waterworks Acts?—Yes, with some of them.

9479. How would you assess a corporation which is prohibited by its Acts from raising a higher revenue than is sufficient to cover its annual expenditure?—I think that has been decided in the courts, that you are not to follow the same principle as we should follow here.

9480. I understand that your principle is to apply to all gasworks, waterworks, and railways?—Yes.

9481. I want to know how I am to assess Liverpool Corporation Waterworks, where the Corporation are prohibited by their Acts of Parliament from raising any revenue beyond what is necessary to meet the annual expenditure?—I think that case having been decided in the courts of law it would be binding, would it not?

9482. Then I understand you do not intend it to apply to companies and corporations which are prohibited by their Acts of Parliament from getting a profit?—That is so.

9483. And that where in the case of gasworks, corporations can earn a profit if they choose, their rateable value will practically depend upon the decision of the council as to whether they shall raise more money from their gas consumers for the benefit of their ratepayers, or whether they shall supply cheap gas and let the ratepayers go without profit?—That is so. If a gas company were to reduce the price of gas or light, so that they could not make a profit, my system would be that they could hardly be assessed.

9484. The assessment then depends upon the—?—Upon the profits.

9485. Upon the opinion of the town council from year to year?—No doubt it would as to the price of gas.

The witness withdrew.

*Mr. HARRY WILKINS* called and examined.

9486. (*Chairman.*) I do not propose to take you over all the points which we have had from the other witnesses, but rather to confine your evidence to the definite scheme which you have put forward. Perhaps you would just put before us, so that we can have it upon the notes, the scheme that you propose?—The paper which I was authorised to hand in is embodied in my memorandum,\* and I think practically includes only two points.

9487. Perhaps I should put it to you distinctly—while you are Secretary of the Lambeth Waterworks Company you appear here in your personal capacity, with the sanction of your directors?—That is so.

9488. You hand in this memorandum, which I hold in my hand, on the rating of public companies?—Yes, as a personal document.

9489. As we shall print this memorandum, I need not take you over the definite points. I want you to state to us shortly the principles upon which your scheme is founded?—The principle upon which the scheme is founded is a combination of structural value and the profits made, following the analogy, for instance, of ordinary house or shop property; that is to say, if you take a grocer's or a baker's shop which is at the corner of the street, having either a flank frontage, and so being able to make a better show of goods, or a back

entrance, and so being able to carry on the trade more conveniently, that house will command a higher rent, irrespective of the actual structural cost, than a house without those conveniences. Therefore, the scheme which I have ventured to put forward combines these two elements.

9490. You do not think either one of them taken separately will work absolute justice?—I think not. If either one or the other were to be taken as the sole basis, I certainly should give the preference to structural value, because that certainly excludes all elements of trade profits which, under the present system, are included to a very large extent in arriving at the assessment of water companies.

9491. Have you made any calculation in regard to any existing undertaking with which you are familiar to show whether this system would produce an increase or decrease in the rates the undertaking would have to pay?—The illustration which I give is, roughly, the facts connected with the Lambeth Water Company. The present rateable value of the whole undertakings of the Lambeth Water Company is, I think, about 85,000/.. so that under my scheme there would be a slight diminution, but not to such an extent as to make the matter a question of principle at all.

9492. Have you tried to apply this to a gas company?—I did try, but I had some difficulty, because

*Mr. C. C. Smith.*  
6 July '97

Valuation of gas companies now rated on basis of hypothetical tenant. Suggested basis to be half net profits. Valuation of corporation gasworks restricted by Act of Parliament from making a profit.

Valuation of gas works of a corporation who can earn a profit if they choose. Result of application of suggested basis of taking half net profit as basis.

*Mr. H. Wilkins.*

Valuation of gas companies. Basis of gas sold, as suggested by Mr. Livesey, not approved of.

Valuation of gas companies and certain other companies. Mr. Wilkins' scheme described. Combination of structural value and profits made.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 323 to 327.

Mr. H. Wilkins.

6 July '97

the question of the profits on residual products came in, and I found that I did not possess sufficient knowledge of that branch to allow of my coming to any conclusion.

9493. Are we to understand that it is only put forward as the basis for assessing water companies?—No, I think it would be applicable to all companies—railways, gas, electric lighting, and tramways; but it is quite possible that the percentage on profits might require variation, according to the class of property to be assessed. But that, of course, would not affect the principle of the scheme.

Valuation of water companies. Valuation of pipes.

9494. I think you wish to say something as regards pipes?—I should like before passing away from this to say that the underlying principle is an effort to exclude trade profits; for instance, if you take an ordinary water company and a mineral water manufacturer, both of which supply water under different conditions, in the one case you assess on the present principle, according to profits or net receipts; in the other, simply according to the structural value of the premises. That, I think, can be pushed a little bit further, because in our case, the case of the water companies, you assess the means of distribution, that is the pipes laid underground, whereas the means of distribution, vans, and bottles, used by the mineral water manufacturers, of course, are not rated at all.

9495. Unless you do something with the underground pipes how are you going to divide the assessment between the various assessing areas?—I quite admit that the pipes should be assessed.

Valuation of water companies. Element of trade profits should be excluded.

9496. Is there any other point? I may tell you that your memorandum requires careful reading, and we must look into it and see how it would apply to other places. I do not want to express any opinion about it at the present time. Is there any other point you would like to speak to?—I should like to call your attention to the general dissatisfaction which exists with regard to the present system.

9497. I do not think you need go over that again; have you anything different to say to what these other gentlemen have stated?—No, except that I wish to emphasise the importance of excluding trade profits as an element in arriving at the value of a waterworks undertaking.

Valuation of water companies. Present results not unsatisfactory, i.e., resulting in rateable value being half net profits. But apprehension is felt for the future.

9498. (Mr. Clars.) I understand you to say that your suggested method of assessing would work out to very much the same thing as the present assessments?—Yes.

9499. The present assessments are based upon profits?—Yes.

9500. How does it matter to the company, then, whether the surveyors arrive at the decision by taking the profit or by taking the other things if they arrive at the same conclusion?—Because the tendency of surveyors is to diminish the amount of capital allowed for tenants as tenants' capital, and also to reduce the percentage of interest on that tenant's capital. There is a constant tendency to increase the rateable value. I should have no objection at all to stereotype the present rateable value which I agree with the preceding witness, is about half the net profits.

9501. As far as I can make out, the present system and your suggested system arrive at the same conclusion, but by different ways?—Yes, but the present system will not arrive at the same conclusion probably 10 years hence.

9502. (Mr. Dalton.) If you take the structural value as the sole basis of assessment, you allow nothing for the monopoly of supply?—No. I think there comes a distinction between a company's waterworks and a corporation waterworks. In the case of the corporation waterworks you would take the bare structural value; in the case of the company you would take the structural value according to the profits made.

9503. Mr. O'Connor drew attention to the fact, which is rather a remarkable one, that the only companies which are rated on their trade profits are companies which have monopolies; you do not attribute any importance to the fact that they have monopolies?—The London water companies have no statutory monopoly.

9504. They have a practical monopoly, have they not?—They have a practical monopoly.

9505. And outside London they have a legal monopoly?—As against the local authority.

9506. You do not think it would be fair to charge them anything extra in the way of assessing because they possess that advantage?—Yes; and I think my scheme meets that by taking the receipts as an element in the basis of assessment.

9507. I thought you only proposed to take the structural value?—Only in the case of corporation waterworks, that is the distinction—while the corporation can only be assessed upon structural value, we should be assessed upon structural value according to the receipts which we make upon a sliding scale.

9508. Can you say how the corporation waterworks are treated for the purpose of the income-tax assessment?—No, I have no knowledge of the income-tax assessment.

9509. (Mr. Stuart.) Is there anything more you wish to state?—I should like to bring out the first point in my paper with regard to the rating of underground pipes. I wish to call attention to the ancient principle of rating according to the benefit derived, which was continued in the Lighting and Watching Act, 1833, and in the Public Health Act, 1875, with regard to certain classes of property, and to suggest that underground pipes certainly do not derive the full benefit of the sewers or lighting rate, for instance, and, therefore, should be assessed upon the same basis as agricultural land and railways.

9510. Would you like to explain that any further?—I do not know how far the Commission may be in possession of the facts.

9511. I think we know the facts, and that we are aware of the point you are indicating?—Very good.

9512. (Mr. Clars.) Do you mean to say that the undertaking of a gas company in a town is not improved in value by the judicious administration of the town by the corporation, and by the expenditure upon works, such as sanitary works, street improvements, and other things which have a tendency to increase the population, and to increase the number of people who take gas?—They are not increased to the full extent of the rate, I think. I suggest they should be charged one-fourth the rate, the same as a railway, for instance.

9513. I am speaking of the undertaking as a whole. The question of the gas pipes is simply a question of distributing the whole rateable value between the different classes of works; but taking the undertaking as a whole, do you mean to say that it is not benefited by the expenditure of the local authority?—The extent to which it is benefited would be shown in the net receipts, and the net receipts are one element in my scheme of arriving at the annual value.

9514. The net receipts to a large extent are dependent, are they not, upon increased population and increased consumption of gas?—Quite so.

9515. Therefore, if the corporation by its expenditure induces people to live in the town they increase the population and increase the consumption of gas, and, consequently, they increase the value of the gas company's undertaking?—Yes, and the rateable value would increase correspondingly under my scheme.

Mr. H. Wilkins.

Monopolies. Companies having monopolies, valuation of.

Pipes underground should be included among the hereditaments subject to partial exemption under the Public Health Act.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## TWENTY-FIFTH DAY.

Wednesday, 7th July 1897.

At 16, Victoria Street, S.W.

PRESENT :

THE RIGHT HON. SIR J. T. HIBBERT, *in the Chair.*

Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
C. N. DALTON, Esq., C.B.

T. H. ELLIOTT, Esq., C.B.  
ARTHUR O'CONNOR, Esq., M.P.  
THE RIGHT HON. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Captain ERNEST GEORGE PRETYMAN, M.P., called and examined.

9516. (*Sir John Hibbert.*) What is the position in which you are giving evidence to-day? Is it personal, or is it as an official?—I am giving evidence on behalf of the Committee on Local Taxation of the House of Commons.

9517. Do you give it as an owner or as an occupier?—I shall give evidence as an owner, an occupier, and a member of the Local Taxation Committee.

9518. Are you in any official position with respect to the Local Taxation Committee beyond being a member of it?—I am on the council.

9519. How long have you acted upon the council?—Since I have been a member of the House; I was placed on the council soon after I was elected, two years ago, I suppose, it would be now.

9520. I believe you wish to place before the Commission some statements which you refer to as Tables I., II., and III.\*?—Yes, I do.

9521. What are those statements intended to prove?—They are intended to prove that the incidence of the rates upon the agricultural land which I have been farming has been heavier than my ability, as owner and occupier, to bear those rates in proportion to the profits which I have made off the land.

9522. That is taking into consideration your own particular property and your own case?—Yes.

9523. Do you wish to give any evidence with respect to the general questions before you enter into the evidence with respect to your own case?—No, I do not, except that I would say that I think my case is a typical one. The reason I wish to give it in this form is that I only wish to speak as regards the actual facts from my own personal experience of what I can actually speak to, and that I have no reason to suppose that my case is any harder than that of anybody else, and that I think it is simply a typical one of the amount of rates levied in the eastern counties.

9524. From this memorandum† that you have placed before us do I understand that you have been in possession of this estate since the year 1889?—Yes.

9525. You then succeeded to that property?—Yes, I did.

9526. The estate has an area of about 20,000 acres, I believe?—Yes.

9527. Two thousand acres of which is heath land only?—Yes.

9528. That heath land is used as a sheep-run?—Yes.

9529. How many farms is this property divided into?—I should think into about 50 or 60.

9530. Are they large farms or small farms?—The largest farm is nearly 800 acres, and the smallest is about half an acre. There are 40-acre farms and 20-acre farms, and so on, on the estate. I have recently built some cottages with small farms attached to them.

9531. The two properties, according to your memorandum are about 20 miles apart, one of them extending over 18,000 acres and the other over about 1,700?—That is about it.

9532. What is the character of the land of the larger area?—It is light land, merging to good mixed land. It extends from the sea, inwards, for about 12 miles, and from Felixstowe towards Woodbridge. The Felixstowe end of the property is good mixed land, which will grow excellent barley, and it is about as good quality land as is to be found in England. As you get inland it gets lighter and lighter until you get on to the heath district. Of course, I can let the good land, and the light land is all on the larger property, or nearly all of it is light land.

9533. The smaller area is all clay land?—Yes, heavy clay land.

9534. What is the number of acres that you have in hand?—I may say that in Table II., for each year from 1890 to 1896 inclusive, you will see a statement of all the land in hand. I may say that I have also in hand the Home Farm; but as I think the Home Farm is in a somewhat exceptional position, selling produce to the house, and so on, I do not think it is fair to give that as an instance of profits on agricultural land generally, commercially farmed. I have therefore excluded that; so that I have really more land in hand than appears on the table. The Home Farm is 500 or 600 acres in extent; but, as I say, I have excluded that entirely from all these statements.

9535. What are the number of acres you have in hand, excluding the Home Farm?—You will see that stated for each year in Table II. At the end of 1896 I had 4,000 acres practically—actually 3,994 acres of land, and 1,066 of heath—exclusive of the Home Farm.

9536. You have not had the whole of this land in hand for many years, have you?—You will see each farm stated in the tables. Some have come in hand during those years, and some have been let. The farms which appear in the table for 1890 are not all the same farms as appear in the table for 1896. You will see there is a certain variation which is stated in each year; perhaps one year one farm is let and another farm comes in hand, but some of the farms were in hand continuously.

9537. What is the argument you wish to use with respect to the result of farming?—If you will look at Table II., (the summary of the expenditure on these farms in hand for the six years 1890–96), at the bottom, in black figures, you will see that the result of the seven years farming of this land practically consisting of 4,000 acres, is that the labour bill has exceeded 30,000*l.*, that the rates are approximately 2,000*l.*, being 1,989*l.* 15*s.* 11*d.*, so that we can call it 2,000*l.*; and that the tithe exceeds 3,300*l.*; whereas the profits to the owner are only represented by the small sum, possibly, of 1,000*l.* increased value of the land; that is to represent rent and interest on the capital outlay, and that would be the profits both of the owner and of the occupier. I arrive at that in this way: I think you will see in the statement that I have prepared, that the actual cash disbursements exceeded the actual cash receipts by some 5,300*l.*, but that represents an additional 700 acres. There were only about 3,300 acres in hand at the commencement of that period, and there were 4,000 acres in hand at the end of that period, so that that extra disbursement would just about represent the extra stock and capital required for stocking the extra 700 acres; and, of course, that has gone into the land. About 6*l.* 5*s.* or

6l. 10s. is a fair average sum for the stocking of light land and paying of valuations, and taking it in hand. You may, therefore, practically say that taking that into consideration, the disbursements and receipts are equal, and that there has been neither profit nor loss upon farming that land. This gives the actual disbursements in farming, and is exclusive of rent, and exclusive of interest upon my capital. Naturally, getting the land in hand as one does when a tenant gives land up, it is in bad condition, and I have improved the land; I think it would be fair to say that the improvements would represent somewhere about 5s. an acre; in other words, I might say that the land would be worth 1,000l. more than it was.

9538. As I understand it, these farms as they fell into your hands were in a very bad and foul condition?—Yes, many of them were.

9539. Therefore, the cost of putting them into a better state must have added to the disbursements very considerably?—I could not quite say that. It would rather reduce the receipts than increase the disbursements; of course it would do both, but you see you clean land in rotation; you do not take a farm and clean it all at one turn; you take it in rotation. I consider that it takes two courses of four years each to really clean a farm; you cannot clean a farm once round, and, of course, during that time the land will not grow two crops; it will not grow weeds and corn equally; and while the farm is foul the profits are considerably less, and, of course, the disbursements, as you say, are greater.

9540. Has there been much extraordinary expenditure on it, such as draining and fencing?—No, there is a little, but very little included in this statement. All the fencing, and a portion of the draining, including the cost of the pipes goes down to the estate expenditure, and is not charged against the farms at all; all that is charged against the farms is the labour of men employed upon the farms who occasionally assist in the draining.

9541. But the expenses of the draining and the fencing are not included?—No, they are not.

9542. That is a very important matter to have clearly set out?—Yes, it is so. A portion of the labour on the draining is included, but not the tiles.

9543. That is the labour of your own labourers who are employed upon it?—Yes, that is so, but the fencing goes into the estate account and is kept entirely separate, and is not included in this at all.

9544. With respect to the buildings, has there been any large amount spent?—There has been a very large amount, but not one farthing is included in Table II.

9545. I understood that you had spent a considerable sum upon improving the buildings?—You will see that in Table III. which I shall come to presently. I consider that putting up new fences and buildings and draining—certainly the purchase of the tiles in draining—are absolutely items of landlords' expenditure, and as such I should not be justified in giving them as part of the expenses incurred by the occupier of a farm as set against his receipts. I have here the actual farm accounts for the whole of these farms for the seven years I have had them, and if you wish to ask any questions about any particular farm I can give you exactly the items of all the expenditure which has been incurred upon it. All the items charged to the farms are really perfectly fair tenants' expenses; the landlord's expenses come into the estate expenditure.

9546. This is not a case in which it might be said against you that accounts had not been properly kept?—No.

9547. You have very carefully kept them?—Yes. I can produce the farm accounts, and I should be very glad to leave them as long as I may have them back, because they want them in the estate office. If it is desired I should be very glad to leave them with the Secretary of the Commission if you would like to look through them.

9548. Of course, if all this outlay has taken place, the value of the estate must have much increased since it came into your hands?—I think that the fall in the value of land, from an agricultural point of view, has kept pace with the increase of comparative value that I have been able to put into my land, because my improvements as regards draining and building have been quite equally distributed over the land I have in hand, and over the much larger area where I have tenants. If you will look at Table III. you will observe that notwithstanding the enormous expenditure which has gone on for seven years the rent roll has steadily and continuously fallen; the

steady fall in the actual receipts for rents has more than equalled any improvement in value which I have been able to put into the land or buildings.

9549. Then, I presume that if you had not put this improvement into the value of the buildings and the other matters connected with the farms the estate would have been in a very much worse position?—I should not have been able to let any of it, probably, or very little of it.

9550. You say in your memorandum that in the seven years only 1,000l. have been earned?—Yes, that is the outside.

9551. Whereas 2,000l. have been paid in rates and 3,300l. in tithe?—Just so, and 30,000l. in labour. I think that is an important point.

9552. What would be the labour bill over the whole of this estate?—I have noticed that in my memorandum, and I think it works out, as any practical farmer will tell you, very fairly. You see the labour bill is 30,000l., and it works out at a little over 1l. an acre.

9553. I suppose it varies on different farms?—Yes.

9554. Your labour bill is about 25s. an acre, I see?—Yes. The Manor House Farm has a much higher labour bill relatively to the others. This is because it is a heavy land farm, and also some of the labour is for draining. A labour bill of 30s. an acre is about the average upon well-farmed heavy land, and 1l. an acre, or slightly more, upon light land. I think any practical farmer will bear that out. I quote that because I wish to make it very clear that all this land is farmed on an absolutely commercial basis, and with good overlooking, and with no extra expenses. I consider it to be a really fairly typical specimen of farming light land without any attempt at fancy farming, but farming it just exactly as a tenant farmer would farm it.

9555. It has been really carried out on commercial principles, you state?—Absolutely on commercial principles.

9556. What has been the net result of the ownership of this property for the past seven years?—If you look at Table III. you will notice that the net result has been a loss of 14,000l. Of course the property has been improved, but the actual receipts on the property have been less than the outgoings by 14,000l.; in other words, it is 2,000l. a year to the bad. It is only fair to say that an inconsiderable portion of that expenditure has been on what might be called personal expenses; the shooting is included in that, and the gardens, but not the upkeep of the house.

9557. The gardens, you mean, attached to the house?—Yes. I have since I wrote my general statement looked over the annual estate accounts for every year from 1890 to 1896 inclusive, showing every item of the agent's expenditure during that period. I have taken out from those statements an abstract of every single item of expenditure which would be considered as of a personal nature, and I have also deducted from that, as regards the shooting, the game sold. For instance, there is a decoy, and the amount of expenditure in connection with that decoy very nearly equals the receipts; but still I look upon that as to a certain extent a luxury, and, therefore, I have added all the expenses for the decoy into the private account, and I have deducted from that the receipts from the decoy which, of course, is only fair. With regard to the shooting, I have deducted the game sold, and I have put in the expenses of the shooting. I have taken account of anything paid to my private account, for the gardens, the game, the decoy, and a small expenditure on yachts, and I have also deducted the subscriptions which are paid through the agent. I hardly think that those subscriptions ought to be deducted because they are on account of my ownership of the estate, and they are only a small part of what I have to pay otherwise, but I have made them go into the account.

9558. What would be the total of this personal expenditure?—The total of this personal expenditure, after deducting all receipts on those accounts, amounts to 11,610l. within the time; that includes 730l. of subscriptions, so that without the subscriptions it would be just under 11,000l. That would still be below the 14,000l., you see. In compiling it I have thought it right to put in my statement a comparison with the estate in the seventies. If you will look at Table III., you will see there that although all these personal expenses were included in the outgoings, the income to the owner approached 20,000l. a year.

9559. What was the difference in the rent in the two periods 1873, 1875, and 1876, and 1890 to 1896?—You can see that in the table. In the years 1873, 1875, and 1876 the rent-roll was about 22,000l. to 24,000l. a year.

9560. (Mr. Arthur O'Connor.) And there were no farms in hand?—No farms were in hand then. There was, I am bound to say, a considerable receipt amounting to 3,000*l.* or 4,000*l.* a year in those days from coprolites which were raised on the estate.

9561. (Sir John Hibbert.) Has that ceased?—Absolutely.

9562. Ceased as matter of fact?—No, as a matter of commerce, because the introduction of the foreign ores has completely stopped that. The price which we used to obtain was remunerative for getting out this ore. These coprolites were at a depth of 20 feet a great many of them; but now that they can get them on the surface in South America and bring them over here, the price is unremunerative, it is not a farthing.

9563. I remember being told in Bedfordshire that they were worth a thousand pounds an acre?—They might be that. It all depends on the thickness of the bed, and the expenses of working. I have heard that as much as 300*l.* or 400*l.* worth was obtained out of an acre, but in my time I have never had anything out of coprolites.

9564. I was referring to some time ago. Have you made any effort of late years, or at least during the last year or two, to re-let any of the farms which you have in hand?—I have re-let several. If you will look at the tables you will see that several farms have been re-let. But then, when I have got a farm in good order, I will only let it to a thoroughly good tenant that I can trust, because if you let it to a wrecker after you have probably put down a great deal of cake upon the farm, and put it into thorough good order, he can make a good profit of it for three or four years and then throw it on my hands, and I have to begin all over again. That will not do at all. When a tenant leaves I get the farms left on my hands in bad condition.

9565. What course do you take in obtaining fresh tenants for these farms? Do you advertise, or do you do it on some other plan?—I rarely advertise; I wait until I get an application.

9566. Have you any difficulty in obtaining good tenants?—I should be very glad if I could get good tenants to let all these farms to-morrow; but I cannot get good tenants. You see the result of the farming of this land, and they know it as well as I do.

9567. Is it not the case that very often a farmer will be able to make more out of the farm than the owner can?—A little, yes, I do think so.

9568. I do not know how it is, but it is the case?—I think the reason is because it is a word and blow with him. There are many little things on a farm, as the opportunity offers in small ways as well as large ones, where a man who is on the farm and who is master and sees what is required does it immediately; then with the labourers he can give a fellow half-a-crown out of his own pocket when he sees the man has done a good bit of work and things of that description. A bailiff, of course, cannot be allowed the responsibility of those things, he has to apply to the agent, and sometimes it has to go to the owner, and delay is caused and the opportunity is lost.

9569. In respect to the expenditure on the buildings, has it been principally upon houses, or upon farm buildings generally?—It has been, perhaps, half and half. You will see in Table III. that I have spent 56,303*l.* on buildings in the seven years; that will be 8,000*l.* a year. For one thing I have built over 100 absolutely new cottages; but then those, in many cases, replaced old cottages which were not fit for habitation, so that they did not mean any increase of rent at all. Where a pair of old cottages is pulled down, and a pair of new cottages built, the people, of course, shifted out of the old cottages, and they paid no extra rent.

9570. Those cottages are generally, I suppose, let with the farm?—In some cases.

9571. Not in all?—Not in all. I prefer to let to a labourer direct, if I can; but where there is a large farm, and the cottages are situated on the farm near to the buildings, it is an impossibility to let to the labourers direct—the tenant must have the cottages.

9572. How do you account for the very large amount of rates, 1,990*l.*; what would that be per acre?—If you will look at the particulars in Table I., I think you will find that these particular rates are low rates in proportion to the rates in other parts of the country. I may say that our roads in that district are very bad sandy roads. There is material on the spot which makes roads of an indifferent character. You have nothing to do but to get the shingle out of the ground. The system adopted is that the farmer

who is responsible gets out the stone, which is rather of a soft character, and puts it upon the road, and merely charges the cartage against the parish. The consequence is that the roads are indifferent, but they have the merit of being extremely cheap. You will see that the highway rate is very low indeed. If you look at Table I. you will see that the highway rate, for instance, is only 1*d.* or 6*d.*, or 8*d.*, or 8½*d.*, and that the poor rate is much about the same thing.

9573. What is the poor rate?—You will see the poor rate for the first year on the table is 6*d.* and 8*d.*; that would have to be added together, of course, as those are two half-yearly rates, and that would mean, therefore, 14*d.* for the year.

9574. Does it include the county rate, or is this the poor rate proper?—That includes the county rate.

9575. I thought it would?—It does. In Table I. every payment of rates that was made on the farm is included and separately stated.

9576. What is the union in which you are?—The Woodbridge Union. I do not know whether you would wish to ask me about the assessments. I should like to say a word about them.

9577. If you please?—You would naturally say, considering the profits of the farms, these assessments might have been properly lowered; but in these poor agricultural unions in the Eastern Counties the only result of lowering the assessments upon the farms is to increase the rate, because the district in many of those unions is entirely rural, and if it is taken off the farms it is put on to the cottages, and is paid by the same class of people who are dependent upon agriculture just the same. My cottages, in fact, are rated at a considerable sum above what they are let at. The principle, of course, is under the law—

9578. Have you not appealed?—I have appealed, but I will tell you the answer I got. My system of building the cottages is that I put a pair of cottages always in half an acre of land, and I divide that half-acre of land between the two cottages, the land and the cottages covering the half acre, half of the land going with each cottage. The cottages are built with three good bedrooms, two downstairs rooms, and outer offices, pigsties, and, I think, everything that is really necessary, on the cheapest possible plan. Doing it in that way, those cottages cost me 350*l.* a pair to build. The rent at which they are let—and when they are let through a tenant he is not allowed, by the rules of the estate, to charge more than that which is charged to him—is 4*l.* each. Then I have to keep them in repair and paint them, and that rent does not do much more than keep them in repair and paint them; but at the same time that is the rent at which they are let—4*l.* a year. They are rated in many cases at 5*l.* 10*s.* and 6*l.* a year, and when I appeal and say they are only let at 4*l.*, they say if I choose to let them at 4*l.* a year that is because the men are working upon my own farm, and that they might reasonably be expected to let at more. Of course those are the terms of the Act. The members of the assessment committee say: "I shall be very glad to take one of these cottages, and to pay you 6*l.* or 7*l.* a year for it." That is the answer I get; but I think it is extremely hard that where the actual letting value is 4*l.* a year, and the landlord who receives that rent has also to keep the cottages in repair out of that, that it should be rated on a sum exceeding the rental; but under the present law I allow that that is legal.

9579. Are the majority of the members of the Assessment Committee farmers?—Yes, certainly. The only effect of getting these assessments down is to raise the rates.

9580. That is, it would raise the rates upon the other classes of property, such as railways and houses?—Yes, it would.

9581. Probably more than upon the cottages?—Slightly more; but it would raise the rates, of course, on the agricultural land as well. In some of the unions in Suffolk, notably one union adjoining us, the Bosmere and Claydon Union, there is not a single parish in the union which cannot be described as purely rural. As far as I am aware, there is no property in the whole of that union which is not absolutely dependent upon agriculture; so that if you lower the assessments it merely has the effect of taking money out of one pocket instead of the other—with the exception, of course, of the railway, and there is one short line of railway that goes through that union.

9582. Can you say, with respect to the amount of rates given in your paper, namely 1,990*l.*, how much of that you would be relieved from under the Agricultural Rates Act of last year?—It cannot be more than 1/5 of course.

9583. I mean generally over your estate?—This 1,990*l.* represents rates on the particular farms in hand, and does not represent the rates on the whole estate.

9584. I do not mean the whole estate, I mean those that you have in your own hands?—On those that I have in my own hands. I can only say that it would be on the same proportion as everywhere else; I think the relief would be probably a little bit less than  $\frac{1}{8}$ . Of course buildings are excluded, and the buildings cannot be valued at less than  $\frac{1}{4}$ , so that assuming the maximum to be allowed for the land, and the buildings to be valued at  $\frac{1}{4}$ , I should get a relief in respect of half the remaining  $\frac{3}{4}$ , which would be a relief of  $\frac{3}{8}$ . Of course, I should not get that entirely, because in some cases the buildings would not be valued at the minimum. Where the buildings are valued at above the minimum, in that case the relief would be rather less than the  $\frac{3}{8}$ ; so that, I suppose, it would be fair to say the relief would be somewhere about  $\frac{1}{8}$  of that sum—say  $\frac{1}{4}$ ; that would not be far out.

Tithe Act,  
1891.  
Effect up-  
on land-  
owners.  
Incidence  
of the tithe.

9585. Have you anything to say with respect to the question of tithes paid?—I have this to say, that I should like to call attention to the question of the landlord paying the rates. I think it is very instructive to look at the rentals in Table III., and also at the tithe. You will see that in 1890 the total tithe paid by me, or rather by the tenants, was only 166*l.*; in 1891, apparently, the Tithe Act partly came into effect, but I would not be sure of that; at any rate, it fully came into effect in 1892, and from 1892 onwards the tithe which I have paid on the whole estate has exceeded 2,000*l.*, and if you will look at the rentals you will see that no part of that has been added, but, on the other hand, the rentals have been steadily decreasing.

Rates paid  
partly by  
landlord  
and tenant.  
Suggested  
that land-  
lord could  
not bear  
the addi-  
tional bur-  
den.

9586. That has been an additional hardship upon you in that way?—I am not quoting that as a hardship, because, of course, the tithe is a burden upon the land which one must bear. I do not, therefore, quote it as a hardship, but I do quote it as a proof that anything of that kind which is taken off the tenant and put upon the landlord is not again put upon the tenant in the form of rent, as is sometimes argued, but when times are as they are now it simply remains as a burden upon the landlord. I believe one of the suggestions made in the House of Commons has been that some part of these rates should be removed from the shoulders of the tenant and should be put upon the landlord.

9587. That is so in Scotland?—Yes, I know it is. I wish to say here that, as far as that is concerned, while the tenant is quite unable to bear the burden, the landlord would also be unable to bear it if it were shifted upon him, because I show by Table II. that the profits are almost *nil*, out of which these rates have been paid, and I also show by Table III. that the landlord's rent, after he has expended it upon the land, is also *nil*. Therefore, he is unable to bear the burden, and it would be putting too great a burden upon him. Of course, an estate like this is not self-supporting, and if I had no other means of any kind, outside the estate, I could not live upon it.

9588. Of course, if instead of being no competition there had been considerable competition for farms, you would have been then able to throw this tithe upon the tenant in the way of additional rent?—If times were better.

9589. Yes, I put that?—One would have been able to do it then certainly.

Tithe-  
Position of  
the clergy  
and land-  
lords.

9590. Have you any suggestion to make with respect to the question of tithes?—Is that included in the reference to the Commission?

9591. We are going to take evidence about the question?—No. I cannot say I have in regard to tithe. The tithe is a burden upon the land; it is an extremely heavy burden in the Eastern counties, and some form of tithe redemption would, perhaps, be desirable. But I am bound to say that the clergy who receive the tithe are quite as badly off as the landlords who pay it. They most certainly have not suffered in the same proportion in respect of tithe as the landlord has in respect of rent; but, of course, they are extremely poor. Their duties are enormously valuable in those poor agricultural districts, and they are, many of them, in a state of extreme distress, owing to a fall in their tithe of about 30 per cent. There is nothing to be done that I can see but to pay it; the rates are a different matter.

Orwell  
Park and  
Bacton  
Estate  
rental.

9592. May the statement that you have made about your own case be taken as a specimen generally holding good in your county?—Yes, with this reservation, that, as I have already mentioned, the land which I have in hand

is distinctly poor sandy land, and the better land, of course, I am able to let. If you take the rentals you will get an approximate idea. You will see that the total rental of the land let is 12,000*l.* latterly; but then these rents include all cottage rents—that is, the total rental of the estate.

9593. And not merely the farm rents?—No, that is the total rental of the estate, and includes all cottage rents.

9594. Does it include any houses?—Yes, it does in Felixstowe. That is the whole of the agent's receipts on the estate that I have, it includes all rentals. There is no considerable house rental at Felixstowe, because most of the land has been sold freehold, but there is some, and that includes all. If you take the purely farm rentals, I got my farm rentals in a few days ago for the last half-year, and the total amount received was only 4,500*l.* for the half-year; there will be a certain amount not paid, so I put it that at the maximum it would not be more than 5,000*l.*

9595. Then there are 500*l.* of arrears?—It will not be arrears. Men do not pay to the day always. The arrears are very small, as I will not have arrears if I can help it. I never have arrears. I would sooner meet a man. If a man cannot pay his rent one half-year, he cannot pay two rents the next. Even in these bad times I have reduced the arrears down much below what they were when I succeeded. The total farm rentals would be about 10,000*l.* only. If you look at the acreage, you will see there are about 4,500 acres in hand. Excluding the heath, the total area will be 18,000, of which about 4,500 is in hand, so that that rental of 10,000*l.* would be a gross rental on an area of somewhere about 14,000 acres, or something of that kind, and part of that is extremely good land, near Felixstowe.

9596. You say there is a difficulty in letting the light land which you have; how is that generally farmed, in what way? I mean what are the products of this light land?—It very rarely fails in a turnip crop, because we can sow our turnips very late, and we can sow them over and over again. It is not like heavy land; if we do not get them the first time, we get them the second or the third. It is very rarely that turnips fail on light land. It is very healthy, good, sheep-breeding land; in fact, it is what you would call turnip and sheep land. It will grow good barley.

9597. I was going to ask you about the barley?—It will grow good barley when we get rain. The last three or four years have been exceptionally droughty years, and the consequence is that the crops have completely failed. This year there is very much better promise, as we have had rain in June. I ought to have added, when speaking about that rental, that the point I was upon was this, that is the rental I receive, and a good deal of that land is very good land, and I have no doubt at all but some profit is made upon it by the tenants; and they would not be, of course, in quite such a bad position as I should be in regard to the rates they pay in proportion to their profits. I mean to say, I would rather argue from this, not that everybody is in as bad a condition as I am in regard to these particular farms and the relative proportion of profits to rates, but I would argue from this that the fact of there being no profit does not exonerate from rates. Where there is a profit I do not see why a man should not pay rates, whether his profit is on land or on any other form of property; but my point is to show that where profit is non-existent, even though the farming is commercial, and good, and good accounts are kept, the fact of their being no profit does not exonerate a man from the payment of rates.

9598. Is there any other point you would like to raise?—I do not know whether you wish to ask me what remedy I consider possible in the matter of rates?

9599. Have you any remedy to suggest for the relief of the landowner or the tenant as regards rates?—I should not wish to separate the two at all. The occupier, of course, at present pays the rates, but whether he is tenant or landlord—and I look upon it as a question for the land, not as a question for any individual man—of course where the outgoings are on such a scale as you will see here, where 30,000*l.* is for labour, it stands to reason that if I had been farming this land without any capital behind me, I could not have afforded to pay that 77,000*l.* while I was only getting 71,000*l.* out of it. I must have kept back a portion of that 30,000*l.* which has been spent in labour for my own subsistence. I must pay the tithes, I must pay the rates, and, therefore, the only item of expenditure on the farms from which I could have extracted my subsistence would have been the labour bill. I think that that

is conclusive. Therefore, if I had been in the position of an ordinary farmer, in order to pay these rates, I must have kept my labour bill down, reserving merely a bare subsistence for myself. That labour is only a fair amount of labour for the land in order to keep it in a proper state of cultivation, and the result of docking the labour bill would be that the land would get into bad condition, and that the possibility of profits would be still further reduced, and the result of that would be that the land would go out of cultivation altogether. Therefore, I look upon it as a question that affects the landlord, because he gets no rent, that affects the labourer, because the tenant cannot pay him in wages what he has to pay in rates, and that, of course, directly affects the tenant's subsistence and capability of farming. Therefore it is absolutely fair to say that the question of the rates is not a question of the relief of the landlord; it is not a question of the relief of the tenant, it is not a question of the relief of the labourer, but it is a question of the relief of the land, and of the capacity of all those three persons and classes to get a living upon that land. Approaching it from my point of view I would say that I do not see why the land as a property —

Personal property should be assessed to local rates for purposes of a national character just as much as agricultural land.

9600. Do you mean agricultural land?—Yes, I mean agricultural land; I see no reason why land as a property which either does produce, or ought to produce, some profit to the persons engaged in cultivating it, should be charged on a different scale to provide rates for Imperial purposes as apart from purely local purposes. For Imperial purposes—that is to say, rates which are of Imperial interest, such as the poor rate, the highway rate, the police rate, the lunatics rate, and those kinds of rates—I see no reason why property of that description should be rated on a different basis to property producing income of any other description. I see no reason why I, for instance, and others should receive incomes in respect of shares held in certain foreign investments, and in regard to which there is an ability to pay rates, although in regard to it we contribute nothing to local taxation, should not be rated to local taxation in respect of those incomes. I see no reason why a man who is living in this country, and who has property in investments from which he derives an income, should be rated on a different basis to a person who is deriving an income from agricultural land. He is just as much under the original Act. I believe it is generally agreed, taking the poor rate, for instance, that a man should contribute to the poor rate in proportion to his ability to pay, not according to the proportion of his ability to pay on land only. A man who has 500*l.* a year has an ability to pay on an income of 500*l.* a year, and, although it is in investments, I see no reason why he should be treated differently to a man who has 500*l.* a year from agricultural land. Of course the system is entirely changed. In the old days land was practically the only source of income which was visible. There were no income-tax returns then, and it was practically the only taxable entity which local authorities could deal with. Now land bears a very small proportion to the taxable income of the country. Of course you are met at once with the difficulty that a local assessment for foreign investments is an impossibility, and therefore you are thrown back at once on an Imperial basis.

9601. Does not your argument also include other investments of a personal nature?—Everything.

9602. You speak of foreign investments, but you mean all personality, I presume?—Not to the same extent, because, for instance, if I have got an investment in an English railway I do not pay rates on that money, but the railway company pays it indirectly. My profits are reduced by the amount of rates, which are very heavy, and which are paid by the railway company itself. Therefore, it would not be fair to say I do not pay any rates in regard to that property. There may be a great many investments in England which do pay rates in the course of their business, though they do not pay rates on the actual income; but, of course, they would be relieved in proportion if the system that I advocate were to be adopted—they would escape. I do not want to ask for any favour for agriculture.

9603. Of course you are aware that it is owing to the difficulties of rating anything in the nature of personality that fixed property like land has been used to so large an extent for rating purposes?—I am perfectly aware of that. I think I began by stating that land was visible property, that it was easy to be taxed, and that, therefore, it has been taxed. All legislation appears to me to be a compromise. It is a choice of evils. If we were all agreed that something was unobjectionable or very useful there would be no need for Commissions to sit, and there would

be no need for debates in Parliament; we should simply pass the laws. But all legislation is a compromise, and when this form of taxation was imposed the evil of eliminating personality, personality being at that time so very small in the country, was infinitely less than would have been the difficulty of trying to include personality in rating. Now the position is entirely reversed. The position of personality in regard to the proportionate wealth of the country has so enormously increased, whereas the position of land has so enormously decreased that the boot is quite on the other leg, and, in my opinion, the balance of convenience in regard to that particular compromise is exactly in the opposite scale to what it was when this form of taxation was imposed. Therefore, though I quite allow that to rate personality on an Imperial basis, and to distribute the money so raised to local centres would raise the very difficult question of an Imperial poor rate, and would open the door, of course, to certain evils, I think at the same time the evil which would be there encountered would be infinitely less than the present evil, namely, that land is being thrown out of cultivation, and that living upon the land is impossible on account of burdens which ought to be borne and shared by other people. The only form of tax which appears to me to be a really fair one to adjust itself to the condition of the moment is a fair tax upon income, because where a tax is thus placed upon income, if from any outside circumstances that income is reduced, the tax is proportionately reduced too, and if from any other sources the income is increased the tax is also proportionately increased; whereas, if you place a tax upon some particular entity, such as a piece of land or a particular business, the profits from reasons absolutely outside the control either of the Government who imposed the tax or of the person who is running that industry or land, the profits which, after all, are the taxable entity absolutely disappear, or they may be, on the other hand, enormously increased, and there is no change made in taxation to meet that increase, or to meet that decrease of capacity to pay. Our ancestors, when they originally imposed taxation, tried to impose it according to ability to pay; our taxes now upon land are not in proportion to the ability to pay at all, and the only method which seems to me a possible method of meeting that difficulty, and of taxing upon ability to pay, is to tax upon income, and the only basis of taxing upon income is an Imperial basis.

9604. Would you propose that the income tax should be increased for local purposes so as to distribute that money for local purposes?—Yes, I should. I should not propose that the income tax as at present apportioned should be increased, because I do not see that it is fair that men with small incomes, however small, who are responsible for rates now in agricultural districts, such as small farmers, should absolutely escape. All I ask for is absolute plain justice to agriculture. We do not want any advantage over anybody else in any one respect. We say that where a man earns an income from agricultural property, he ought to be just as liable to pay taxes in respect of that income as if he derived it from any other class of property. But where he does not derive an income he ought not to pay that tax. At present a man, of course, is liable for rates in his parish if he occupies only quite a small holding. Therefore, in respect of an income tax in lieu of rates, I consider it ought to be kept separate from the present income tax entirely, and should have a slightly different name and that there ought not to be the exemptions which are now granted in respect of the income tax. This tax ought to go down to very small incomes indeed. There, of course, you would come to the great difficulty, I do not profess to be able thoroughly to give complete evidence upon the whole question, which would require enormous consideration; but you would, of course, have to exempt incomes directly derived from the labour of the person who is taxed; and, of course, where that line has to be drawn would involve enormous difficulties. But if it were practicable and if it is found to be practicable, I think that is the only direction in which we can hope for relief on a fair basis. If we tried to exempt agricultural land, as was done last session when the Agricultural Rates Bill was introduced, we should be told, as we were told then, that agriculture is demanding exceptional treatment. So it is. It is getting exceptional treatment. That puts us in great difficulty in the House of Commons, and lays us open to the charge that we get relief and that we are getting a dole from the State. We are in one sense and we are not in another. All that we demand is fair play, and that we should be taxed on our incomes as other people are on theirs.

9605. I suppose you admit that relief has been given largely during the last few years in aid of the rates from the Imperial taxation?—I do. That is the direction in

which I wish to see an extension, absolutely. Great relief, of course, has been given, but it is in a form which to a certain extent, in its later form in the Agricultural Rates Act, lays us open to the charge of receiving a dole.

9606. I did not mean to include that?—No, you did not mean to include that; in other respects it is absolutely in the form you mean, and we have the precedent.

9607. Do you wish to say anything on behalf of the Local Taxation Committee, or do you merely wish to state your own views?—I believe my view is the view of the Committee as far as I have been able to ascertain it. I should be sorry to say that my view as to the income tax was the absolute view of every member of the Local Taxation Committee, but I believe that the general view I have adopted is that which has been taken by them. I know that they consider that it would be better for me to be sent by them to give this particular evidence, concrete evidence, which I am able to give on my own personal knowledge of my own typical case, than to go into generalities on which I could only give hearsay evidence.

9608. Do you wish to add anything?—I think not, beyond what I have written in this statement.

9609. (Mr. Murray.) May I take it that your Table II. represents the case of the occupier, and your Table III. represents the case of the owner of the property?—Yes, practically.

9610. Roughly, that is so?—Yes, quite so.

9611. Could you tell us how your last column in Table II. is arrived at, the column headed "Rent made or Loss Incurred"?—Yes; I have stated that in my written statement. That is arrived at by taking the total of the two preceding columns and combining with the valuation at the beginning and the end of the year. You see the valuation upon the farm at the beginning of the year has to be added to the disbursements, and the valuation of the farm at the end of the year has to be added to the receipts. But as I have further stated in my paper, I do not consider that as absolutely reliable, because those valuations, of course, have to be made for income tax purposes at the actual value of the stock at the moment when the valuation is made. Take sheep, for instance, the principal stock on those farms is valuable breeding flocks of sheep—the Suffolk and Southdown sheep. The market value of those sheep varies as much as 10s. a head from year to year according to the season and the price of the sheep in the market at the moment. If I were to dispose of one of those flocks in the autumn of one year I might make 10s. a head more, or 10s. a head less than I should the autumn before or the autumn after. They must be entered in the valuation at the actual price at the moment, in order to enable my agent to go before the Revenue Department, and to state the actual profit and loss upon the farm in which the valuation must be counted. The valuation has to be taken actually at the value of the moment, as if it were a realisable property; but, of course, those flocks are never sold, they are carried on from year to year, and therefore that value is one which simply automatically rises and falls with the prices and does not really affect the profit and loss of the farm at all. The same applies to cattle and to horses, to a certain extent; and all the saleable property, which is actually sold during the year is included in the receipts, and therefore it is a perfectly fair statement of profit and loss. But when you take the rents made or loss incurred, though it works out to a certain extent to more or less the same figure as I have stated, namely, a profit of 1,000l. for the seven years' farming, it is not an absolutely reliable statement for our purposes, and therefore I have preferred to rely upon the receipts and expenditure, which are absolutely reliable.

9612. In fact, the last column represents the result of a balance sheet, and not a profit and loss account?—That is it, exactly.

9613. In the column headed "disbursements," how much of those other columns do you include, if any?—The disbursements would, of course, include the whole of the expenses and the labour bill.

9614. Would it include labour, tithe, and rates?—Everything; the entire disbursements. It would include, for instance, the entry on taking a farm. Take Brightwell, in the last column but one; you will see the receipts were 825l. and the disbursements were 1,343l. That farm had just come in hand, and there would be the tenant right, and so on, included in the disbursements; but I have all the farm sheets here with every item for each year, so that, if it is desired by the Commission, I

shall have the greatest pleasure in leaving all my annual statements for the Orwell estate, and my farm accounts for each farm; and should the Commission desire the Secretary to look through them he can do so and return them to me at leisure, provided I get them back.

9615. Thank you; but if Table II. represents the case of the occupier, why do you include tithe amongst his disbursements?—For the earlier part of those years the tithe was paid by the occupier, and, of course, when I say it does represent the case of the occupier, I mean it represents the case of owner and occupier also, to a certain extent.

9616. I thought you were trying to separate those two?—Yes, I was. The tithe would not now fall upon the occupier; it would be an additional burden upon the landlord.

9617. It is no more a charge upon the occupier than a mortgage on the land?—No, not now; certainly not.

9618. Then, as regards the grievance about the rates; they are very low, I should imagine?—They are in this case.

9619. Probably they would not come to 2s. in the £, would they?—It depends on what you take. They are more than 2s. in the £ on what is made.

9620. On the hypothetical value of those 5,000 acres?—No, I should think not. You can see the assessment in Table I.

9621. Your argument is that as the land is practically making no profit it ought to pay no rates?—Not for Imperial purposes.

9622. To local purposes?—Not for Imperial purposes. If there is any local thing, then I do not see how to escape.

9623. By Imperial purposes you mean the poor rate and things of that sort?—Yes, I do.

9624. If it is the case, as you represent, that the land is making no profit, ought not the rateable value to be nil under the existing law?—Quite so. That would be another way of arriving at it.

9625. Why is it not so, then?—Because there is nothing in many of these unions but agricultural property, and if you treat the rateable value of agricultural property as nil, you would have no rates, and you would not be able to support the population at all.

9626. That may be?—How would you carry on the local work?

9627. Can you not get all you want under the existing law, which practically says that the rateable value of the farm is to be what the hypothetical tenant would give for it from year to year. According to your case he would not give anything, therefore it has no rateable value?—On the other hand, I would repeat what I said before, that there are a lot of cottages attached, and there are buildings and houses attached, and the law does not say that you are to be rated upon what you do get as rent. It says:—"What it may reasonably be expected to let at," and if it was all taken off the land they would put it on the cottages, and as long as there is something to let you would have to pay the whole of the rates upon that particular property which is rateable. Where they can say under the law, as they do say here, "You have so many cottages which we may reasonably say would let, supposing desirable tenants could be found, for 6l. or 7l. a year each; we shall assess those at that rate, and therefore you will have to pay rates upon those. If you pay none upon the land, you will have to pay all the more upon the cottages." So we cannot escape under the existing law.

9628. You could not complain of that, could you, if the cottages would let for the assumed sum?—No, but I do not think they would.

9629. That is a matter for the assessment committee, of course?—You would not be able to let them all. Of course, you might take an individual one by itself. I have no doubt I could let some of them, but I could not let them all at that rate.

9630. Then, as to Table III., could you give us any idea of how much that represents of agricultural income and agricultural expenditure?—Yes, I have already stated the rent from the farms at the present moment, but I would include the rent from the cottages let to the labourers. You would call that, I think, an agricultural expenditure. They are let simply as part of the farms of course. If you include those, the agricultural rent would probably be 11,000l.—there would be about 1,000l. a year from cottages

and 10,000*l.* from farms in the agricultural receipts. Then to that you would have to add either the profit or loss on the farms in hand, which would also be agricultural. As to the expenditure, you may take first of all the expenditure on the farms in hand, and then, if you take the buildings and improvements—56,303*l.* in the last column but two—that is practically all agricultural.

9631. That is what I was coming to. I was so struck with the amount of the expenditure; on a rental of 13,000*l.* a year you lay out on the average of the last seven years about 8,000*l.* a year in buildings and improvements?—Yes, I think you will see, if you look into my statement, that the expenditure on buildings is very heavy, and certainly exceeds a fair average. The estate had been very much let down in that respect, and the present rate of expenditure must be continued for some three or four years, at least. I think, over a long period, 5,000*l.* a year would be a fair estimate of the landlord's expenditure on this property for repairs and maintenance, exclusive of management. I have already stated that in writing.

9632. That is supported, too, by the fact that in the three years you give in the first part of Table III.—1873, 1875, and 1876—the expenditure is only a little over 2,000*l.* a year?—Yes. That was the period when the letting down was going on rather. It was in this way—I think I may perhaps explain that the buildings in that part of the country were originally, and up to recently, all wooden buildings, thatched with straw, which were the sort of buildings which a tenant who is making a profit can keep perfectly well in repair. My predecessor's policy was to charge a reasonable rent on the distinct understanding that those buildings were kept in repair by the tenants. As long as times were good the rents were never raised, on that distinct understanding that the tenants did keep the buildings in repair. Then when the times got bad, naturally the landlord did not like to begin lowering the rents, and the tenants stopped the expenditure which they were not absolutely obliged to carry out. The consequence was the buildings all began to fall into ruin, and they practically, most of them, fell into ruin just about the time I succeeded, and I had to take it all in hand. But I may say that, so far as my predecessor's expenditure on the estate was concerned, it is given in these tables; but exclusive of anything that is put in the tables, he spent 350,000*l.* on building a railway and a dock. The railway went right through the very centre of the estate, and was 14 miles long, and the dock was constructed at Felixstowe, also upon the property. Both of these undertakings have largely contributed to maintain its value; and to arrive at a fair estimate of the losses here, you ought to add the interest of that money to the fall in rents, because the farms down by Felixstowe, of course, are largely increased in value by the proximity of the town, where there is a great demand in the summer for milk. Just at the time when milk is cheapest, they can sell their milk there at a very much higher value than they can obtain for it in London. They keep cows, and in other ways it is, of course, a great advantage to them. Being very good land down there, and having that market handy, those farms are very lettable, and bring in fair rents at this moment. That is, owing to that expenditure of 250,000*l.* upon the railway, and 100,000*l.* upon the dock; so that though he did not spend the money upon buildings he still spent it upon the estate and in the employment of labour in another form.

9633. On the other hand, do you not think that looking at the agricultural question alone the cost is so abnormal that we could hardly draw any useful inference from it?—I do not think it is abnormal at all.

9634. Not owing to the large amount of repairs?—No. Take the average that I stated, of 5,000*l.*, and you will see then what is the position of the estate. I had written it down beforehand, that I think a fair average would be 5,000*l.* a year. When the estate came into thorough working order, you would have to say that the income would be 3,000*l.* a year better than it appears in the tables no doubt, but then the loss as it appears in them would have been 2,000*l.* a year, so that would only leave 1,000*l.* a year to the good.

9635. When the estate has been got into proper order, surely on an estate of 18,000 acres of tillage land you would not require to spend 5,000*l.* a year regularly in upkeep?—I do not think it would be very much less. Things come round very quickly. There is a great amount of building to be done. Take it in this way, which I think would be a very fair way of looking at it. When I came into the property everything was in great disrepair, and we estimated then that it would cost pretty nearly 100,000*l.* to put the whole estate into proper order.

At any rate it would be below the estimate to say that to start *ab initio* and to put buildings upon the estate would cost 100,000*l.*; it would cost a great deal more than that, and I do not think the 5 per cent. is a very high amount to say would have to be expended to keep those classes of buildings in order. The 5,000*l.* would be only 5 per cent. you see.

9636. (Sir John Hibbert.) Are the buildings of brick and slate?—No, not entirely. I have taken advantage of my natural opportunities I think, and I have got as cheap a plan of building as can possibly be devised. We have got shingle on our coast of very good quality, which I can get for picking up, and we have also cement extremely cheap. The system I use for all farm buildings which are not close buildings—close buildings I treat rather differently because of the ammonia—for all buildings which are not close buildings I dig a hole three or four feet deep and about two feet in diameter; I put concrete into that, made of this shingle and cement, and into that I put wrought iron rolled girders as columns; I put a wall plate on the top of those girders, and a corrugated iron roof on the top of that. That is practically everlasting. Where a wall is required, it is filled in with concrete between the girders. The girders break up the long lengths of concrete, and prevent it from cracking. Supposing the concrete wall were to be knocked down, or broken down, or worn out in any possible way, that does not affect the structure in the least, as there is nothing upon it. That comes about 3 feet or 2 feet 6 inches above the ground. On that is a wood latting; *i.e.*, on the top of the concrete wall is just laid a small plate, and from that to the wall-plate at the top is latting, upright wood. What is called latting is pieces of wood of about a foot wide, ordinary 11-inch deals side by side, sawn from the estate, with perhaps  $\frac{1}{4}$ th of an inch between, and then a narrow one put across the joint. On that principle I do not have to employ skilled labour; a labourer can do everything except the carpentering. No bricklayer is required, which of course means a very great difference in the wages bill. I am able to put up buildings like that, I think, as cheaply and as efficiently and as durably as can possibly be erected.

9637. (Mr. Murray.) You think that on an average, taking England all over, 5,000*l.* a year on buildings and repairs for an estate of that size would be about right?—On an arable estate. I have shown that it is not five per cent. on the original outlay. If you ask any builder he will tell you that is not too much for those classes of agricultural buildings which are subject to be knocked about; they are not occupied by the person who has to build them, mind, and that makes a good deal of difference; I do not say that tenants are worse than other people, but they do not take the same care of other people's property as they do of their own. It is less a great deal than five per cent. on the outlay, because 100,000*l.* only represents what it would really cost me to put them in thorough repair, allowing for all that existed when I took the property, and to begin *ab initio* to put them up I am sure would cost 200,000*l.*

9638. What would the 5,000*l.* represent on the gross annual value?—Oh, the gross agricultural value, somewhere about 50 per cent.

9639. Surely that is very high?—Indeed it is not so. I assure you it is a most common case. Hundreds of landlords could come here and tell you that their expenditure upon buildings is so great that their total income only yields them perhaps 5 or 6 per cent., or less, by a great deal, on their outlay in buildings, since they have had the property without allowing anything whatever for the value of the land. It is a common case; ask Lord Ancaster, ask many other landlords.

9640. Then as regards your scheme for an assessment upon income, that would practically abolish local taxation altogether, would it not?—Yes, as far as Imperial taxes are concerned, so far as those particular rates are concerned that I have referred to.

9641. It would cease to be local in fact?—It would cease to be local.

9642. How would you apportion among the different localities the money that you would raise?—You would have to apportion it in proportion to the expenditure which was actually required. It would have to be passed by a Government official.

9643. Do you mean that the central Government should undertake the administration of that expenditure?—No, I do not mean that they should administer it, but they would have to supervise it. The expenditure would have to be audited by a Government official.

9644. (Sir John Hibbert.) To distribute it?—It would never do to allow one authority to spend the money and another authority to supply it.

9645. (Mr. Murray.) Is that not practically what you are proposing there?—No, certainly not. I propose that it would have to be calculated on the present basis, and that any increase on the present expenditure would have to be passed by a Government authority before it could be allowed; they would have to show good cause for any increase.

9646. Say that in a particular parish the guardians took to distributing a large amount of out-door relief, how would you deal with that?—That would have to be disallowed, and there would have to be a rate raised to meet it.

9647. Who is to say whether the outdoor relief is proper or improper?—The Government Department which would be responsible the same as now.

9648. Do you think they could possibly give an opinion on that?—Yes, I do.

9649. In the case of every parish all over the country?—It would not be likely to arise in the case of every parish, because no parish has the power of giving outdoor relief.

9650. Every union I should say?—I see no reason to suppose they would be more anxious to spend their money if they paid it in the form of Imperial taxes than they would if they paid it in the form of rates, or very slightly.

9651. Except that in one case they would be spending money that they raised themselves, and in the other they would not?—Yes, they would. They would pay the rating tax, if you call it that, just the same as they have to pay the rates now.

9652. They would have to pay a larger income tax according to your scheme?—Yes; I call it a rating tax.

9653. It would fall on income tax payers generally, and not on the people in that particular locality?—It would fall on them as much as on anybody else.

9654. Yes, as much, if not more?—Why should it fall on them more?

9655. Because they are spending the money?—Not for their own benefit.

9656. For the benefit of their locality?—Yes, but then so would everybody else be doing; I think that is a very much exaggerated bugbear. I can quite understand, in the old times when every locality was so very much dependent upon itself, and when communication was so difficult that that was a very dangerous principle; but now that communication is so easy and the country is so much more one unit, a thing of that sort is so much more easily got at, and people realise so much more their imperial responsibilities and that they do pay imperial taxes as well as local; I think it is very much exaggerated, although I quite allow that it is a weak point.

9657. I cannot see what check you would have or what check the central government could possibly have on local expenditure of that sort all over the country?—They could surcharge. The auditor, the government official, would surcharge any expenditure exactly as the Local Government Board can surcharge the expenditure now of any rural district council or of any urban district council.

9658. All that he can do is to say that certain expenditure is not within the law; he cannot say it is not within the discretion of the people if it is within their discretion?—Of course the law has yet got to be made upon that particular point, and I can see no difficulty in it being part of the law that any expenditure which exceeds the present average expenditure for, say, the last five years in those districts would be chargeable to a local rate unless it had been previously sanctioned by that Government official whose duty it would be to sanction it.

9659. That would be stereotyping the existing expenditure everywhere as the standard?—As the original standard, but any reasonable increase which would be necessarily due to increase of population or to local necessities which were obviously necessities, the official could not of course withhold his sanction from, and if he did, it could be brought to the notice of Parliament.

9660. I think the duties of Parliament would be very largely increased in that case?—Parliament has given a great deal of attention to Imperial taxation, and by the time it has given the same amount of attention to local taxation, we may get it on a better footing.

9661. (Sir Edward Hamilton.) I see that according to Table III., in which you gave a comparison by the two periods 1873-76 and 1890-96, that whereas in the first period there was a net annual profit of about 16,000*l.* or 17,000*l.* a year —?—More, really.

9662. I am taking the average?—According to that table, if you will look at the note at the bottom, you will see that there was a good deal of money spent on the Felixstowe Tramway, Pier, Hotel and so on, which really ought to be added. It is about 20,000*l.*

9663. That is not very material; in the latter period there has been an annual net loss of about 2,000*l.* a year?—Yes.

9664. Therefore I presume from what you have said that *quâ* owner of the Orwell Park and Bacton estates, you would claim to be exempt from rates altogether yourself?—I am now.

9665. You are paying rates *quâ* the house that you are living in?—That is a different matter altogether. I am not living in my house on this income.

9666. I understand you to say the only fair basis for the assessment of rates is income?—Exactly.

9667. I assume for the sake of argument that you have no other income except that derived from those estates?—I should not live there then.

9668. Therefore you are in a minus condition?—I should not live in that house then; I should not be able to. Somebody else would have it, and would pay the rates upon it.

9669. However, you claim that the income is the fair basis of assessment for rates?—Yes.

9670. And, as I understand it, in order to carry out your scheme, you would increase the income tax largely?—Yes.

9671. That is the least impractical way which suggests itself to you, as I understand?—Yes, that is so.

9672. How would you draw a distinction between the man who had 1,500*l.* a year in Consols and the man who had 1,500*l.* a year derived from personal exertion? I presume you would say that the incomes were not on all fours? I daresay you know that the income tax draws no distinction and can draw no distinction between the sources of income?—I know that.

9673. How do you think that difficulty would be got over?—I do not think you could get over it, I do not think it would be possible to draw the line.

9674. Do you not think it would be extremely unfair?—I quite allow that these things are a compromise. I should like to see a distinction drawn if it could be done, but I think that evil would be a very much less evil than the present one.

9675. Do you not think you would be substituting one inequity for another inequity?—Yes, but a very much less one.

9676. You think it would be a much less one?—Yes, I do; much less.

9677. Do you not think, in addition to the income which you consider to be the fair basis of assessments for rates, there is another consideration, which is value received in respect of expenditure incurred locally; for instance, supposing two men live in the same district, one with 1,500*l.* a year and one with 15,000*l.* a year—I will assume, for the sake of argument, that both incomes are derived from investments in Consols, and that they live in houses not materially different in size; do you think one man ought to contribute 10 times more than the other towards, we will say, the police rate?—If they have both got the same income, do you say?

9678. No, I assume one income to be 1,500*l.* and the other 15,000*l.*?—Yes, certainly I do.

9679. Without regard to value received?—There would be no difference in value received from those particular rates—none whatever.

9680. You say there would be no distinction between value received, but one man would have to pay 10 times more than the other?—I mean in proportionate value received. For those particular rates, my opinion is that people ought to contribute according to their ability to pay—in those cases I specially said, and I am only referring to rates, which would be judged by those competent to decide as of Imperial interest.

9681. You leave out of account altogether value received? Surely there is a certain value received in having your house looked after by a policeman?—I do not think there

*Captain E. G. Pretymann.* is very much in that in the country; I do as far as the roads are concerned, and as far as the poor are concerned, which are the main things, I think, that the two persons ought to contribute to according to their ability to pay.

7 July '97 9682. Do you consider roads among Imperial purposes then; do you classify roads so?—Yes, except certain parish roads, which would be of purely local interest. Roads are used generally now not as they have been in the past, when the locals were the only people who used them; now you have people from all parts of the country on bicycles and every sort of conveyance, who go from Land's End to John o' Groats, and they make much more row about bad roads than the locals do. Consequently I do consider that roads are rapidly becoming entirely a question of Imperial interest. I only say that under correction, as what is of Imperial interest would be for those competent to judge to decide. But I think where a rate can be shown to be of Imperial interest, the two persons that you name, the one with 15,000*l.* a year and the other with 1,500*l.* a year would be fairly rated upon those incomes—one 10 times as much as the other. That is exactly what I do mean.

9683. You think that an enormously increased income tax would be preferable to the present plan?—I do not think it would be so very enormous.

9684. Would it not be very considerable?—I think Mr. Rew would be more competent to speak to that than I am, because I have got here Mr. Rew's pamphlet. Perhaps he will put it in himself, and I do not want to anticipate his evidence; but he has taken a great deal of trouble over this question, and he has in his pamphlet tabulated all these rates and given the totals. There is the rate for the relief of the poor, which amounts to about 7½ millions; there is the rate for pauper lunatics, which is nearly 2 millions—that would be 9½ millions nearly; then there is the police rate which is 4½ millions—that would make it 14 millions; and the education rate, which would bring it up to 20 millions; and the highways rate, which makes it 27 millions. Altogether, therefore, it would be about 27 millions.

9685. Twenty-seven millions to raise?—Yes, supposing all those rates should be considered to be of Imperial interest.

9686. That is about 14*d.* in the £ additional, and that added to the 8*d.* would make it rather high, would it not?—Wait a minute, I have not done yet; there will be no exemptions, and you must remember that the persons who are going to pay that tax are going to escape another one. You must not consider it as an additional tax, it is merely a shifting of the same burden.

9687. I beg your pardon, it would not be a shifting of the same burden; take a man with 200*l.* a year derived from personal exertion, how is he better off? He is only paying a very small rate now, and how does he get better off by having to pay an additional 14*d.* in the £ income tax?—It would not be an additional 14*d.* in the £, I take it. The income tax at present raises more than 2 millions, nearly 2½ millions, on the 1*d.*

9688. You cannot put it at 2½ millions; it would be about 2,200,000*l.*?—Yes, but all incomes below 160*l.* are absolutely exempted, and below 400*l.* they get an exemption; if you included all those incomes the produce of a penny would be enormously increased.

9689. Would you subject the incomes of 160*l.* and lower to this new tax which you suggest?—Certainly I would, except in the case of labour. I would not do it where a man earned it by actual labour; where a man earned his income by actual labour he would of course be exempted the same as he is now. He pays no rates now, and he should pay no taxes. But all those persons who now pay rates on their properties should also pay the tax in lieu of them.

9690. I very much doubt whether any Chancellor of the Exchequer would ever propose that in the House of Commons?—I do not see how else it is to be got at.

9691. Have you yet been able to at all see what the effect on your property is of last year's Agricultural Rates Act?—I have already answered that question as far as I can, that I imagine it will be much the same as it is on the average.

9692. I put it in this way: Most of your property is let on annual tenancies—?—I have not any leases; I think I have one small lease though.

9693. How will the Act work practically?—You will be able to raise your rents accordingly?—No, at what happened in the case of the tithe; the rents were worse now than they were then. That is what is particularly pointed out about the tithe; the same applies now.

9694. Do you consider that the whole of the relief which your property would derive under the Agricultural Rates Act of last year will go into the pockets of the farmer?—Every farthing, except that the labourers get some of it, because wages in my district were raised directly on account of the Rates Act having been passed.

9695. They have been raised?—Yes, and the farmer have told the men that that was the reason. They have been raised 1*s.* a week in a considerable part of the district in consequence of the Rates Act having been passed. Of course it would be only fair to say that I absolutely agree with this, that the Rates Act, if it were made permanent, and, at any rate, for as long as it lasts, is distinctly a relief to land; and as an owner of land, if I took that land into the open market, that land is relieved of a burden, and in that sense I do, of course, derive, I may fairly say, I suppose, the whole benefit of the Rates Act, as regards the ownership of the land. But, as far as the present position is concerned, in regard to all land let to tenants, I do not get one single farthing of advantage pecuniarily. I will not say that some tenant, perhaps, who may have been thinking of giving notice to leave may have found the relief of such value to him that he has determined to hang on another year, or to hang on altogether. I cannot say that that is the case, as I know of no such case; but in that indirect way, as landlord, it might make my land more lettable.

9696. Do you, in fact, see no means by which you can retain your tenants, and at the same time increase the rents by the amount of relief which the farmer *quâ* occupier is getting by the Act of last year?—I do not suppose my tenants would all give notice to quit if I did so for the moment; the feeling is too good. They would not give it, I daresay. I do not say for a moment I should not be able to put it on, but I do say I should consider it most unfair, and I should never think of doing such a thing.

9697. You regard the Act of last year as intended to benefit the farmer immediately, at any rate?—Yes.

9698. Not the landlord?—I do not see that there is any intention to benefit him alone. I come back to what I originally stated. I want to look upon the whole of this as a matter that is not a question for the farmer, that is not a question for the landlord, that is not a question for the labourer, but that is a question for the land. I think that if relief is given, we may be perfectly able to settle it between ourselves, and you can see that the occupier gets no profit, and that the landlord gets no profit. I think my statement shows pretty clearly that in the case of my property the landlord and the tenant have each managed, as far as they could, to live upon little or nothing and to keep the land in good order. The relief that is given to any one of us none of us would ever attempt to grab from the other. We look upon the relief as given to the land, and the first object from a national point of view is to keep the land in cultivation. We have borne the burden between us, and I do not suppose that there are any two classes in this world where the feeling is better, generally speaking, than it is between landlord and tenant in England at this moment. We have gone through the mill, and we are going through the mill, but we are doing it together, and we are each bearing the burden as far as we can. The labourer cannot take less. His wage is a minimum wage for a man to live on, and bring up a family decently on—10*s.* or 12*s.* a week; he cannot do it with less. We must pay a man what will keep body and soul together. This 30,000*l.* looks to be much more than his share, but he cannot do with less. It is a necessity, it is a minimum wage; I believe it is absolutely the minimum wage for a man. A man cannot do with less; it is a necessary factor. If a man was a horse, putting aside all feelings of humanity, and all the rest of it, if you are going to keep a horse to work on the farm you must feed him, and he will cost you something. Putting aside all questions of right and wrong, which are, of course, of enormous importance, you have the question of having your work done properly, and you cannot get a good man without a living wage, and that living wage is all that the land gives in certain cases. It has produced a living wage for a certain number of labourers and nothing else, as the landlord and the tenant have got nothing, and we can only do the best we can, as we have done, for each other. That is the position.

9699. (*Mr. Arthur O'Connor.*) Do I understand you to say that for some years on your property the landlord and the tenant have lived upon nothing, and have left the estate better at the end than it was at the beginning?—No. I said that as regards my own farms in hand, because of other resources, but I could not say that the land let to the tenants is better than it was, and I do not say that it was any worse. One farm might be better, and one farm might be a little worse.

7 July '97

Ownership  
of land and  
payment  
of rates.

9700. Would you assent to the general proposition that the man who enjoys the benefit should bear the burden?—Yes.

9701. Now, extending our view from your own immediate property to the whole of the country, I suppose I may say that landlords generally own the country?—I suppose it is a self-evident proposition that the landlord owns the land.

9702. Why should not they bear the burden?—They should bear the burden in proportion to the profit that they derive from their ownership. You say, "Own the country." They own the land of the country; they do not own all the wealth of the country.

9703. Dealing only with the island which is called Great Britain, or that part of it called England, landlords own it, every yard of it?—They have the title deeds, except when they mortgage it.

9704. But so far as there is ownership recognised, it is the class of people called landlords who do own the country. I suppose that is hardly a contestable proposition?—No, I say that is a self-evident proposition, as far as the legal ownership is concerned.

9705. Going outside, not only other property, but also other persons, we find landlords in the ownership of the country from end to end. Now, I ask you, why should they not bear the burden?—All the burdens of the country?

9706. Yes?—The whole lot?

9707. All of them?—Under those conditions you would get nobody who would accept the position of landlord.

9708. Now, let us see—?—As far as agricultural land was concerned, if that bore all the burdens.

9709. I understood you to say that you were exempt from rates. What did you mean by that?—I meant to say that as a landlord owning agricultural land, I do not pay rates directly as owner; they are paid by the tenants; they are paid by the occupiers. That is the law in England.

9710. In respect to the property which is in hand, you pay the rates?—Yes, and I certainly said so; but as occupier, not as owner. As owner I may fairly say I do not pay rates upon agricultural land. Of course, I pay rates upon my house, but I might live in that if I owned no land.

9711. You unite in your individual person the full interest in the land; you have the fee simple and you also have it in possession?—Yes.

9712. And you pay rates on it. Another thing I did not quite understand in your evidence was this: In reply to Sir John Hibbert you said that you do not have arrears of rent; how do you manage not to have arrears of rent?—I will not say I have not any, but I have managed even to reduce them below what they were by going into each individual case personally with the particular tenant concerned, and finding out, first of all, what his ability to pay is and endeavouring to meet him; and secondly, whether he is capable of carrying on the farm at all. I have never given a man notice to quit a farm—never; but where a man is incapable of carrying it on, and appears from his conversation with me to have no prospect whatever of being able to carry it on, I have once or twice advised the tenant that it would be far better for him to give up while he had something left and to go in in a smaller way, and under these circumstances my loss being less I have been able to give him a little pecuniary assistance in addition. It is better for him to do that than it is to let him go on accumulating arrears and then go bankrupt and end without a farthing.

Arrears of  
rent.  
Practically  
none on  
Orwell  
Park and  
Bacton  
Estate, as  
owner will  
not allow  
them to  
accrue.

9713. You would rather resume possession than allow arrears to accumulate?—Yes, I would, but I have never given a tenant notice to quit on that account. I have always done it by persuasion where a man has gone; I have never said to a tenant: "I give you notice to quit because you are in arrears."

9714. If a man is so far unable to pay rent, and is suffering further loss even beyond the amount of rent which he ought to pay, you think it is better for him to give up the property?—Yes, I do. I might say, as far as the rent is concerned, you must not look upon that rent which I receive as absolute, because I show that all that rent and more goes back upon the land. As far as that rent is concerned my agent receives that rent and again expends it.

9715. I was only thinking for the moment of the position of the occupant; you think it would be better for him to give it up than to continue losing money on it?—Yes, I do.

9716. That is a reasonable view from a landlord's point of view or from any point of view?—Yes, because if there was not a landlord that money has got to be spent.

9717. Let us take the case of a landlord: supposing he has property on which he has for five or six or seven years been losing; would it not be better for him to give it up too?—I do not think so, not necessarily. It may give him up. If it gives him up he cannot help it, but as long as he can hold on to it himself, if he has any other resources, a man cannot go on if he has no money, but if he has any other resources I say the best thing he can possibly do is to go on spending those resources upon the land in order to keep it in cultivation or to keep labour employed upon it in the hope that some improvement may result.

9718. There is, at any rate, a possibility of improvement, and of a picking up in future years?—I hope one of the results of this Commission will be that. That is what we are looking to.

9719. That, of course, would affect what is called the value of the property; the prospective increase of income would affect even the present value of the property?—I do not think you would borrow much on that prospect; I do not think it would be worth much in the market.

9720. You say in the absence of profit there ought to be no rates paid, I understand you?—Yes, in the absence of income.

9721. Is a tradesman exempted from payment of rates if he does not happen to make his business pay?—No, certainly not. He is entitled to the same consideration; I speak in that respect; he ought to be treated in exactly the same way.

9722. You would not draw any distinction between the agricultural interest and the commercial interest?—Certainly not; we only want the same treatment as other people.

9723. What is the number of people present on your land as population, do you think, approximately and roughly?—Do you mean men, women, and children together on the estate?

9724. Yes?—It would be very difficult to say. I could not answer that question absolutely.

9725. In tens, or hundreds, or thousands?—I know that I am actually paying weekly wages to 250 men myself, that is on the farms in hand.

9726. That would represent 1,000 persons, I suppose?—Yes; then besides all that there is the land let to tenants.

9727. Would you say 2,000?—Many more than that.

9728. Three thousand?—Fully; I should say more.

9729. Four thousand?—I should think so.

9730. Five thousand?—I should think 4,000, perhaps 4,000 to 5,000.

9731. Not 10,000?—No; there are perhaps 4,000 to 5,000 all told on the estate.

9732. Would that be about the proportion in the country generally, 5,000 non-owners for one owner?—No, not 5,000 to one, because some of those tenants may own land of their own and are owners too; in fact I know two or three are; they may be my tenants upon my estate, but all those individuals, I suppose, include tenants who may be owners as well as labourers.

9733. Quite so, and similarly you might be a tenant elsewhere?—I am; as a matter of fact, I do rent a small amount of land from other people—I think 20 or 30 acres. I have got labourers working for me on my estate, who own little bits of freehold land themselves, I have also tenants who own freehold land; I have one tenant who owns 300 acres. So that that proportion would be altogether fallacious.

9734. You think it would not be so high?—No, certainly not. You can arrive at that from statistics; my evidence would be worthless on that.

9735. Would you mind telling me how many thousands of hares and partridges were shot on your estate last year?—I thought that probably would be asked for, and I had prepared the information, but I am afraid I have left it behind. I have practically no ground game at all. It is

7 July '97

very light land, and no man can farm on light land against rabbits. It is absolutely impossible. I always say, and I adhere to its truth, that every rabbit costs me 19s. He is worth 1s. when he is dead, and he does a pound's worth of damage to light land. It is impossible to kill all my rabbits; the amount of rabbits killed to the guns on the shooting on the whole of my property last year was about 200.

9736. Pheasants?—The pheasants and partridges were about 11,000, but most of those are wild birds. It is an exceptionally good game property, and last year was a very good year for wild pheasants. I reared a certain number just round my house; but, generally speaking, the wild pheasants are allowed to take care of themselves.

9737. Do you think that the amount of game has anything to do with the letting of the land?—No.

9738. Not in the least?—No.

9739. Not indirectly?—Pheasants and partridges do no harm unless beyond a reasonable amount. I can only say that on the land that is let, the keepers sometimes say that they think the tenants treat them better than the bailiffs do. As far as the land which is in hand is concerned, I do not think there is the slightest difference; I have no more game on the land I farm myself than I have where it is let to tenants; and there are no complaints and no difficulties of any kind about it.

9740. (Sir John Hibbert.) Hares?—Probably we kill about 300 or 400 a year, or something of that kind.

9741. (Mr. Arthur O'Connor.) On the principle that he that bears the burden should have the benefit, what benefit does your income from foreign investments derive from the parish or the union with which you are concerned in this paper?—I do not quite understand you.

9742. You say you have an income from foreign investments?—I think you have put a sort of conundrum. You said on the principle that he who derives the benefit should bear the burden.

9743. Yes?—I am not saying that my foreign investments should pay; I am saying that I should pay as owner of them. If you ask me what I bear I should be able to answer you, but you have put another thing to me.

9744. You have an income from foreign investments?—Yes.

9745. Are those foreign investments in any way benefited by the locality with which we are now concerned in this paper, or by anything in it?—I have not suggested that the foreign investments should bear a tax. I have suggested that I, as their owner, should bear a tax. If you ask me whether I derive a benefit—

9746. At any rate, I suppose you admit the foreign investments or the income derived from them are not benefited by anything in the locality?—I do not quite see what you mean. How can you speak of income being benefited? An income is not a person. I do not see how you can speak of an income as being benefited; I do not understand you.

9747. That particular income is dependent for its existence upon industry abroad?—Yes. If you ask me whether the foreign industry is benefited then I can answer you, but if you ask me whether an income is benefited, then I do not understand you.

9748. If you prefer it in that way then, I put it so?—Yes, I do very much.

9749. Do you think a foreign industry is benefited by anything in this locality?—Certainly not.

9750. Why should it in any way contribute towards the charges in this locality?—It should not contribute, and I do not suggest it should. The income derived from abroad would not be increased by one farthing, or decreased by one farthing, nor would the foreign industry be affected in the remotest degree. They would pay me my share of the profits which they earned, and I, as the owner of that income derived from those profits, should be rated. As far as the foreign industry was concerned they would not even know that such legislation had taken place; it would not even affect them in the remotest degree.

9751. Supposing you invested capital in half-a-dozen different unions, should you be assessed in the whole of those unions on your income?—Certainly not, and I have never suggested such a thing.

9752. How would you arrange that?—I should be assessed imperially and I should pay my share the same as other people would to the Imperial tax, which would

i 97620.

represent the present incidence of local taxation, and each of those unions would have their share of it, the same as they would of other people's.

9753. Then, as I understand it, you would still leave for local taxation certain local charges which you do not regard as Imperial?—I should not interfere with those at all. They would be taxed as they are now, and I should be taxed on what I had only in that particular parish, where there was only a local benefit.

9754. Then with regard to that which is purely local you would leave it a local charge?—Yes.

9755. And you would levy that charge according to the value of the occupation?—Yes, as now. I think it would be so small in the agricultural districts that it would not be worth special consideration. There might be some objection to it, but I do not think that the objection would weigh against the inconvenience of the fresh basis for that small amount.

9756. In an exclusively rural district how could any rates be raised except from the agricultural interest there?—Practically everybody who would pay the rates in that district would be concerned in agriculture. Some of the property might be technically non-agricultural, such as houses, but the persons who live in those houses would, of course, be dependent on agriculture. A man may be a miller, for instance, grinding the corn, he is not an actual agriculturist, but he is dependent upon local agriculture for his living.

9757. I understood you to say that there had been such an amount of capital sunk in this particular property that the rent received or the profits made represent a very small percentage upon the capital so sunk?—Certainly.

9758. And that practically the land as land is not represented in it at all?—In many cases that is so—in many large estates the income received is only interest upon expenditure and not a high interest—without allowing for anything else.

9759. There is nothing for the land, strictly speaking?—No, that is so.

9760. That capital which is sunk, is it personalty?—That is rather a wide and difficult question. I suppose all capital may be treated as such.

9761. It is money, and I suppose your answer is yes?—Yes, I suppose so.

9762. If that is so, how can you say that personalty is not now bearing its share of the burden?—Because you cannot expect people to pay taxes now on what they had spent, say, last year, or the year before, or the year before that. You expect them to pay taxes on what they have got now.

9763. If I sink 100,000*l.* in railway shares and pay income duty on that, or if I sink 100,000*l.* in improvements in land, it is still 100,000*l.*?—I do not think you would find it so.

9764. As far as my pocket goes?—No, very much the reverse.

9765. The effect would be that the 100,000*l.* would be gone?—Yes, it would be gone, that is quite clear.

9766. It is still personalty. If I have 100,000*l.*, and I am putting it into land—?—When you have put it into land it is not personalty, it then becomes realty absolutely. There is no doubt whatever if you spend 1*l.* upon land it is merged in the realty, any lawyer would tell you that.

9767. But the 100,000*l.* expended in either case is personalty in the first instance, at any rate?—Certainly.

9768. And that which is produced by it is the produce of the personalty as applied to land, if you will?—Absolutely; certainly.

9769. Would you not say that that personalty is charged and its products are charged with rates?—I would say this, that in the case of the railway you charge, as I wish to see it charged, upon the income which is annually produced as the result of the expenditure, and what I ask is that land should be treated on exactly the same principle and should be charged by an income tax upon it.

9770. If the rent which you derive from the land is only a percentage upon the 100,000*l.*, we will say, of personalty which you have sunk in it, you are paying rates upon the product of personalty as applied to land?—Yes.

9771. You have already told us that practically there is nothing charged in the way of rent for the land itself?—Upon the product of personalty you mean.

Captain  
E. G.  
Pretzman.

7 July '97

Expenditure on improvements on estates. In many cases rent received represents only interest on expenditure on improvements.

Agriculturists should be assessed upon the income they derive from the land.

Y y

Captain  
E. G.  
Pretyman.  
7 July '97

9772. Therefore it is personally which is the foundation?—No, certainly not; I absolutely refuse to allow that. It would be absolutely as true to say that you have got an estate, that you paid 100,000*l.* for it in the first instance, that you have spent 100,000*l.* afterwards upon it, and that that is an expenditure of personality.

9773. No, excuse me; by there you postulate that you buy the land as well as the improvements. If you buy an estate you buy the land?—Certainly.

9774. In your rental returns you say you do not make any allowance for the land cost?—No, excuse me, I am merely making the statement to show the position of the landlord, in which I say that the rent that he receives only amounts, as a sum, to the bare interest on his expenditure. But it is equally true to say that it only amounts to 1*s.* an acre or to 10*s.* an acre. To pick out one particular expenditure, and to say that his rental is due to that is absolutely unfair and fallacious. The money which he has expended upon the buying of the property is just as entitled to interest as the money which he has expended in improving it; and it is equally true to say that he has got nothing upon the one as it is true to say that he has got nothing upon the other, and it is equally true to say that he is getting 5 per cent. upon the one as it is true to say that he is getting 5 per cent. upon the other. You cannot separate expenditure upon land and say that the whole of the rental is due to certain items. I merely made that statement as showing that the amount received was so small as to be only an interest upon the capital if it were treated in that form; but you have no right to take it as a summary of the interest upon that money exclusive of all the other money which has been expended in any way.

9775. I suppose without the application of capital and labour to the land the land would produce nothing?—Certainly nothing of any value.

9776. Now with regard to the assessment of cottages. I understand that your cottages are assessed at, perhaps, 5*l.* or 5*l.* 10*s.* a year?—Yes, not all. I do not wish to say all, but a great many are.

9777. Some for which you are getting only 4*l.* a year in rent?—That is so.

9778. And do I understand you also the 4*l.* was really required to paint and keep the cottages in proper repair?—I would not absolutely say the whole of it. You would be as good a judge of that as I. You build a pair of cottages for 350*l.*, you get 8*l.* for the two cottages, and you have to keep them in repair.

9779. Are you not entitled by law to have a deduction made for what is necessary to keep the property in repair?—Certainly, and that allowance is made; it is considered.

9780. It is made?—Yes, that is taken into consideration.

9781. Is that taken off the 5*l.* 10*s.*?—No, the 5*l.* 10*s.* remains after they have taken that off.

9782. Then what is the hypothetical tenant supposed to pay as full rent, 9*l.*?—A man in a town would have to pay 20*l.* a year for such a house as I build for the labourers in the country upon my land, perhaps 10*l.* or 15*l.* it would be.

9783. If it was in Cornhill he would pay more, but being where it is, what would you put as its full gross rental?—I am bound to say that I think there are many men who want a little house like that, and who would come out from a town and live in the country. I dare say there would be many of them glad to pay, perhaps, 7*l.* or 8*l.* for such a house. I do think that. May I just put it further? You must take a parallel case to make it very clear. It is very common that a landlord or a tenant, who is in possession of a cottage, may agree with a labourer that he should live in that cottage rent free. You would not expect that he should not be rated for the cottage in consequence. It is a perfectly fair statement that the letting of those cottages to labourers at 4*l.* a year, which is distinctly, I allow, less than their actual value in the market, is a contribution on behalf of the landlord towards the labour bill of the farmer, because the tenant will get that man's labour at a cheaper rate, or, perhaps, I should say, he will get a better man at the general wages of the district, say 12*s.* a week, if he has got a good house and garden to offer a man at the rent of 4*l.*; he will get a better man to come and do his work at 12*s.* a week than if he has no house and garden to offer him. Consequently the provision of that house and garden by the landlord is clearly a contribution by the landlord towards the labour bill of the farmer to enable the farming work to be done cheaper.

9784. You need not labour that point, it is very clear. You do not take any steps to find tenants?—It is generally known in the district that I have got the land to let.

9785. Tenants come to you?—Yes, they do. I may say in regard to that, that if I were to advertise it would be extremely difficult. In Lincolnshire I have some property which lets easily. I have no difficulty; it is very good land, and I get a fair rent for it. I have had men in Lincolnshire who would be willing to come to Suffolk, but the Suffolk entries are so bad. The Michaelmas entry is a very bad entry for a farmer. The tenant who comes in at Michaelmas, in Suffolk, has to pay for all expenditure on the root crop, irrespective of the fact whether there is a single root in the field or not; he has also to thresh out the whole of the outgoing tenant's corn, but he only gets the straw, and he has to deliver the outgoing tenant's corn into the market. He gets no harvest himself till the following autumn. He has to pay a very heavy entry, and has to be out of any possible receipt from the farm for more than 12 months.

9786. Those are the customs of the locality?—Yes; I merely give that to account for the difficulty I have in getting tenants from a distance.

9787. You do not take any steps, actively, yourself, to get tenants?—Beyond talking to farmers.

9788. You do not advertise, and you do not use an agent for the purpose?—My agent has advertised once or twice, but not persistently. He has advertised once or twice in a Scotch paper.

9789. I see that at any rate, occasionally, you let?—Yes.

9790. How do you account for the fact that when things are so bad that neither landlord nor tenant ought to be expected to pay these rates, men come and take your farms as tenants, especially when you tell us that you like to have a good solvent man that you can depend upon how it is that a responsible solvent man will come into such a terrible neighbourhood?—There are many neighbourhoods that are even worse than ours, because, as I have explained to you, this statement covers a considerable area of land, some of which has come freshly in hand in a bad condition. Where I get a farm into good order, perhaps one of the better farms, and a man farms thoroughly well, a farmer will take it, and may perhaps manage to make a little rent of it; if he can make a profit, then he ought, of course, to pay proportionate rates on the profits he makes.

9791. Of course the farmer, in your case, is not only a solvent man, presumably, but he is dealing with you at arm's length, and independently?—Absolutely.

9792. And yet, presumably, he finds it worth his while to come and take one of these farms "Leach's land, 29 acres, let from Michaelmas, 1895"?—That was let at 15*s.* an acre.

9793. Was that better or worse land than the rest of the Howes?—It was about the average, certainly no better.

9795. I notice in your statement that for Howes you made a loss of 195*l.*?—Yes, last year there was a drought.

9796. In the very year that this man took it at 15*s.* an acre?—Yes, that is so.

9797. I presume he anticipated that he would be able to make some profit?—Exactly, and I can answer that I think very fairly. That is a very just criticism. The fact is, that where a man takes a farm of 29 to 30 or 40 acres, the tenant-farmer is practically eliminated. The man does his own work, he has perhaps one man, and he has the very great advantage of being always in the same field with him, and he probably gets more out of him. He works longer hours, and as the result of putting that extra amount of work into a small area of land, and of his own personal supervision, and the elimination of one of the three persons concerned, the landlord, the tenant and the labourer, he is just able to pay such a rent. Of course there are repairs and other things to be done out of that 15*s.*, and tithe has to be paid out of it, and all the landlord's outgoings, so I do not get the 15*s.*, or anything approaching to it.

9798. Is that not all very much in favour of what the French call *la petite culture*?—Up to a certain point, where you can find the right man. I have done a good deal of that since I have had this property. In these seven years I have created, I think, somewhere about 400 allotments, and several small holdings of from 30 to 40 acres. But where you have got to start *ab initio* on virgin land, and simply take a piece of a big farm with no particular advantage in the shape of small buildings upon

Captain

Suffolk custom for incoming and outgoing tenants.

Expenditure on improvements. In many cases rent received represents only interest on expenditure on improvements.

Cottages assessed above the actual rental.

Small and large farms. Advantages of small farms.

it, or a cottage to start upon, the outlay upon putting up the necessary house and buildings for such a small holding as that will exceed the profit which can be derived from it. That is the difficulty.

9799. If we look at the year ending the 31st August 1893, we see that on every single one of those farms you appear to have incurred a loss, except in the case of Steel's?—That is quite right.

9800. The Red House, one of the farms in question, on which the loss was 265*l.*, appears to have been let?—Not the Red House, the Red House was never let.

9801. There is a letter against it, and there is this note: "Thirty-two acres of marsh let with Kirton Hall Farm" ?—Thirty-two acres of marsh belonging to Red House was let. The grass land will let. It is a farm of several acres of arable land, with 32 acres of marsh attached to it. The formation of that district is that all that high backbone land is arable, and there are marshes along the sides of the rivers; if I could detach those, and let them, of course they would let, but then the arable land will not let. If you look at the year before, 1892, you will see that Kirton farm was let at 400*l.* per annum; I should like to explain that.

9802. And you made 317*l.*?—Yes. In that particular year there was a great rise in the price of wheat. The tenant was a very excellent fellow, indeed, who took the farm with the hope that the price would rise. But the let included the 32 acres of additional marsh land and there has been a 20 per cent. reduction given upon that ever since, so that I have never had the 400*l.*

9803. Then in the year 1891, I see Alston Hall; you made 71*l.* out of it, and let it at Michaelmas at 130*l.*?—Yes; that rent is now reduced to 100*l.* I never had the 130*l.*

9804. You got more than you made out of it?—More than I did in that particular year; but then you must remember there is a great deal of putting in and improving and cleaning the land to be considered when the landlord gets it in hand.

9805. Do you mind looking at Bloomfield; in 1891 I see that Bloomfield involved a loss of 140*l.*?—Yes, indeed it did.

9806. But Bloomfield was afterwards let was it not?—No, I wish it had been.

9807. In 1896 there was a profit of 64*l.* on it?—Yes, there was.

9808. So that that has been improving?—Yes. The farm when I took it over was in a fearful state. There was not a fence upon it, and it was overrun with rats and vermin, and had been most shamefully farmed. I had to pay a big valuation upon it. A good deal of it is poor light land. I have spent a good deal of money on that and have started on the rough valley there is upon it—not exactly marshes—a herd of breeding cattle, and I make a little money out of them by passing them on to other farms.

9809. Take Rowell's and Old Bells?—That is on the heavy land at Bacton.

9810. You show a loss of 210*l.* on that in 1896?—Yes.

9811. But before then you seemed to have had a profit each year?—Yes. I must recall to you that that last column, as I have already stated, is not absolutely reliable, because it includes valuations. You see the valuation may rise and fall with the price, and these valuations are taken at the market prices on the 31st August. If on the 31st August in any particular year, the price of sheep is higher or lower, or the price of stock is higher or lower, the stock on the farm has to be valued at the price due to the markets at the moment.

9812. The point that attracted my attention was this that some of the farms which involved a loss in earlier years, showed a profit in 1896, and some of the farms which showed a profit before, showed a loss in 1896?—That is so.

9813. So that it seems to be going up and down as between all the farms?—Yes. A great deal of this is what is called season land, and the result depends very much on the season—whether there is a drought, for instance. This year, I hope, if all goes well, to do much better.

9814. In 1894 Hasketon was let?—Yes, at 250*l.*

9815. For what period was it let?—That is the one farm I mentioned which is let on lease, but that has rather peculiar conditions. It is one down at Woodbridge; there is a lot of shedding upon it, and the gentleman who has

taken it is a man of private means. He has got thorough-bred horses there, and he keeps a pack of staghounds, and so on.

9816. With regard to the tithes, I notice that in 1873, 1875 and 1876, the tithes were very considerably higher than they were in 1890; how is that?—Of course, the tithe was higher a great deal; it was 100*l.* then, and it is only 70*l.* now. The tithe was over 100*l.* I suppose, in the seventies.

9817. By reason of the price of corn?—Yes; of course, the tithe averages rise and fall, that would account for some of it; but I do not think it would account for quite all the difference. The tithe in 1890 appears to have been exceptionally low. That is the actual payment by the agent, and there may have been some particular reason for it.

9818. It may have been outstanding?—Yes, something of that kind; I could not say.

9819. I notice, in your explanatory memorandum you state that your predecessor, Colonel Fomline spent over 350,000*l.* in constructing that railway and dock which has developed the property?—Yes.

9820. And has certainly done much to maintain the value of the farms in the Felixstowe district?—Yes.

9821. So that it is clear that commercial work in the neighbourhood may add to the value of agricultural property?—Certainly.

9822. Though belonging to a totally different person?—Certainly; that is so.

9823. The agricultural interest, therefore, benefits by the commercial and industrial occupations of the neighbourhood?—Certainly.

9824. And is better able to bear the burden by reason of the presence of those?—Yes, certainly. When that additional ability to bear is present then they ought to pay upon it, but not when it is prospective; when they get that benefit then they ought to pay the same as other people.

9825. (Mr. Elliott.) I am not quite sure that I understood correctly the answer which you gave to Mr. Murray, with reference to this item in Table II., which is headed "Cash receipts." Those are the actual cash receipts, are they not, and no question as regards the amount of the valuation enters into that column at all?—No, nothing. If a farm was let, the cash receipts at the moment of letting the farm would include the tenant's valuation received. That would be an exceptional case. Take Kirton Hall, in the year 1892, where there is a letter against it; you will see that the receipts were 1,847*l.*, and the disbursements were 1,004*l.* In that particular case, the farm was let and that would include the valuations.

9826. So that the gross product of these farms would even be less than the 72,000*l.* mentioned in the summary?—You see some farms came in, and I had to pay the valuations of them; other farms were let and I received the valuations of those; but on the gross, the amount of land which came in exceeded what was let by nearly 1,000 acres.

9827. May I take it that, roughly speaking, 72,000*l.* represents the gross product of these farms during these seven years?—Yes, you might.

9828. I gather from the explanatory memorandum which you have put in that out of that gross product of 72,000*l.*, the profit to yourself as owner and occupier has only amounted to about 1,000?—Yes, and that is in the land.

9829. You have, of course, eliminated from consideration that expenditure which was in the nature of capital expenditure?—Yes.

9830. Out of that gross product I understand that you have paid a total sum of about 2,000*l.* in rates?—Yes.

9831. And you have also paid 30,000*l.* for labour?—That is it.

9832. And 3,300*l.* to the tithe owners?—That is so.

9833. Are you able to form an opinion as to how far the figures as regards the amount of rates paid, and the total product of the land would be applicable to your estates generally?—I should think that these particular farms would certainly be as lightly rated, if not the most lightly rated upon the whole property, because they lie in rather out of the way parishes, where the roads, as I have already explained, are made in an extremely cheap fashion, and where there are no extra rates of any kind beyond the

poor rate, and the highway rate, and the county rate. As you will see by the figures, on the particular farms the rates are distinctly low; on the other hand the land is certainly the poorest on the estate, and, therefore, its ability to bear those rates is less than the average of the estate.

9834. Supposing that, in order to eliminate any possible discussion, we added the amount of the tithe to the amount of your profit, so as to give a total profit to the landowner, occupier, and tithe owner, of 4,300*l.*, you have paid 2,000*l.* in rates, or nearly 50 per cent., have you not?—Yes, and then the rates on the tithe would have to be added to that; they are not included in that.

9835. If you added the rates on the tithe it would probably be over 50 per cent?—Yes, it would.

9836. Do you think that proportion or anything like that proportion holds good with regard to your other property?—I should hardly like to say it would be quite as high, because there is certainly a part of the property which has a much higher power of bearing rates than this, which is land down near Felixstowe; I believe there is a certain profit made off it, and though the rates are higher, I think, perhaps, the relative power of bearing those rates is even greater than the rise in the rates themselves.

9837. You have not made any enquiries which would enable you to state to the Commission any approximate idea of the percentage which the rates bear to the aggregate profit of tithe-owner, landowner and tenants?—No, I cannot say that I have absolutely. You can see, if you look at Table III., what was the total tithe paid. You must eliminate the first two years. When the tithe was paid by the tenants, I cannot state definitely what it was, but it was approximately the same, of course, and you may take it that the tithe has been somewhat over 2,000*l.* a year on the whole property for all that time.

9838. I rather wanted to eliminate any question as to whether the tithe was a burden on the land or a part of the profit arising from the land, and to ascertain whether you were able to express an opinion to the Commission as to whether the high percentage of over 50 per cent. which the rates bear to the aggregate profit arising out of the land might be applied, and if applied, to what extent, to the other properties which are in your possession?—I should think very nearly, but, of course I should not like to make a definite statement—it is a supposition and it is not a definite statement—but it would not be very far from the mark in all probability.

9839. Of course that percentage is an enormously high percentage, and I suppose is really the foundation of the case which you present to the Commission?—That is so.

9840. Have you formed any opinion as to the pressure of rates upon profits in the case of any other industry?—Not from personal experience, except you may call an industry from my own profits in payment of shares which I hold in any other industry; and from what I know of those industries in which my shares are held I should say that the pressure was not at all so great upon any of them as it is upon the land.

9841. But you are not able to put any comparisons before the Commission to support that general opinion which you have formed as to the excessive pressure of rates in your own particular case?—Beyond the fact that I could, of course, have produced the accounts of companies in which I hold shares, but I think that is rather second-hand sort of evidence. I only want to say what I know from my personal experience, and I should not be able to answer that.

9842. Of course, the grievance which you have presented to the Commission, namely, that agricultural property such as that of which you speak is excessively rated, depends, does it not, upon the proposition that other property is not sufficiently rated?—Perhaps I might correct it. I could give this evidence; for instance, I have a dock down at Felixstowe which practically is my own property; though it is a company I own all the shares; and the rates that I pay upon that are far less in proportion than the rates which are paid upon the agricultural land.

9843. They do not amount to anything like 50 per cent. of the profits, do they?—No, they certainly do not.

9844. Do you know at all whether they amount to anything like one thirty-sixth of the gross amount received?—You see the profit on the dock is not at all large, but still it does amount to, perhaps, 500*l.* or 600*l.* a year, and the amount of rates that we pay is not directly, of course, even in that case proportionate to the profit. The rate is not on the profit; the rate is on the premises.

9845. Therefore, you would say that those who are interested in the working of agricultural land have a grievance as regards local taxation as against those who are engaged in the working of a dock?—Certainly.

9846. And that opinion of yours is based upon an examination of the accounts of the two properties?—Certainly; they are both in my own possession.

9847. Now, with regard to any remedies which might be devised for this grievance, assuming for the moment that it were impracticable to adopt your proposal with regard to the income tax, I think you quite appreciate the administrative difficulties which would have to be surmounted?—I do; quite so.

9848. Are you able to offer any alternative suggestions to the Commission?—Failing that, it appears to me to be only a matter of altering the law of assessment.

9849. Take, for example, the mode of relief which was given by the Agricultural Rates Act last session; that was a mode of relief, was it not, based upon this proposition that agricultural land should be rated on a differential scale?—Yes, it was so.

9850. Even assuming that that is not the most perfect mode of meeting the hardship which you present to the Commission, would you propose, in the event of no better mode being available, that that mode of relief should be continued?—In the event of no better mode of any kind being available, I would rather see that mode of relief continued than revert to the old state of things, but I think it is a bad method.

9851. Do you think it bad in principle, or do you think it bad by relation to the amount of relief given?—I think it is bad because it exposes agriculture to the reproach, which it is very difficult to controvert, that it is exceptionally favourably treated in regard to other property.

9852. Would that not arise in regard to any system? Supposing, for instance, that you had an income tax in aid of rates, would it not be said that you were taxing the poor income-tax payer, the smaller income-tax payer, in order to relieve the landlord?—It might be said so, but so far as actual treatment was concerned, the basis of treatment would be identical in all cases. You would say that quite irrespective of whether a man is a landlord, or a farmer, or an owner of docks, or a shareholder in industrial enterprises, or whatever he may be, we rate him upon his income, and therefore the treatment of all would be identical.

9853. You are aware, are you not, that the principle embodied in the Rates Act of last session is no new principle, that it is a principle which has been on the Statute Book now for a very long period of years; I mean the principle of charging a differential rate according to the character of the properties?—I cannot say that I was aware of that.

9854. Are you aware that under the Public Health Act, 1875, for instance, agricultural land was graded for the purposes of rating at one-quarter of its value?—That was, I submit, on a different principle altogether. That was in respect only of certain rates. That principle has never been applied to all rates, at least, not to my knowledge. It was applied only to particular rates, and because those rates were of such a nature that they were expended upon town improvements, which were not of direct value, or were of less value to the owner of agricultural property than they were to the owner of urban property. That principle was applied only in respect of those particular rates, and I do not think that principle, as far as I am aware, has ever been adopted in regard to the rates of which it may be fairly said that the expenditure may be of equal interest to all.

9855. Under the Public Health Act, 1875, it was considered inequitable, was it not, that land should continue to pay rates, levied for the purposes of that Act, at its full annual value?—It was to those particular rates.

9856. And under the Agricultural Rates Act of last session it was held that for the purposes of other rates it was also inequitable that land should contribute at its full rateable value?—Yes, it was, but from two totally different points of view. The one point of view, in the first instance, being that the product of that rate was applied to a purpose from which agricultural land did not derive equal benefit with other rateable property, and the second point of view being that the principle of last year was one totally different, namely, that land was to be relieved from a rate from which it could not be pretended that it did not derive equal benefit with everybody else, but simply because of its inability to bear the expenses of that rate.

Pretyman.  
7 July '97

9857. Was that really so? Was it not considered desirable that there should be a further contribution out of the Imperial Exchequer, towards the expenditure raised by means of the rates which were scheduled for the purposes of the Agricultural Rates Act?—Yes, certainly.

9858. Therefore, there was really a transfer of the burden in respect of particular rates from agricultural land which was unduly and too heavily assessed to the general taxpayer, who paid too little?—Certainly that was so.

9859. I gather that that principle has your entire concurrence?—Quite so.

9860. Would you propose that the application of that principle should be further extended, and that in the event of its being decided that that is the most convenient way of remedying your grievance, that land should be rated not at half, but at a lower proportion still?—No, I cannot say that I think it is entirely satisfactory, because the relief is given then to the land which is best able to bear the burden—that gets the most relief; and the land which is least able to bear the burden gets the least relief. That is inseparable from that form of relief, and that is one of the reasons, I suppose, why it was made only temporary.

9861. But whether land is poor land or rich land would affect its rateable value, would it not, and would affect therefore its contributions to the purposes of local taxation?—Yes, but you forget that very important element, that where you have got a small rural area, the lowering of the assessment merely results in the raising of the rate.

9862. Yes, but where, as in that case, you make up the deficiency out of the Imperial Exchequer, you get rid of any difficulty under that head?—Yes, you get rid of a great part of the difficulty. Of course, I do not like the principle. As I say, I would sooner have it than nothing, but I would very much prefer to see every possible remedy well considered before that is resorted to, because I should have a feeling that, apart from its justice or injustice, it is very doubtful whether it would be permanent.

9863. Speaking from your general knowledge, not only as an eminent agriculturist and as an experienced landowner, but also as a member of Parliament acquainted with the feelings of your constituency, would you say that the remedy you have proposed with regard to the income tax would be more acceptable to the feelings of the public generally than the remedy that was embodied in the Agricultural Rates Act of last session?—I think as far as my own constituency is concerned it would; whether it would be as acceptable in the towns of course it is for other people to say; it would depend so much upon detail. That is a very big and difficult question to answer.

9864. You have rather presented to the Commission, have you not, a particular remedy?—Yes, that is so.

9865. I wanted to ascertain how far you were satisfied that that remedy would be generally acceptable?—I do not think you would ever find any remedy would be acceptable to anybody which involved their paying more than they do now.

9866. Do you think that the proposal, if it were practicable, which many of us might think it would not be, to assess a person in respect of income, whether he was within the income tax limits or not would be generally acceptable?—I think it would be by nearly all those persons who have small incomes derived from industrial property and who are now paying rates upon that property. They would, I imagine, have no increased burden to bear, and whether they paid a tax in the form of a rate or in the form of an income tax, I imagine it would be immaterial to them. They would rather prefer it because it could be shown to them that, if their incomes were reduced their tax would be reduced, and if their incomes were increased, their tax would be increased, to which they ought to have no objection. But at present they pay that tax quite independent of any profit or income they may receive.

9867. Take, for example, the case of a woman keeping a small huckster's shop in any of your villages and receiving, perhaps, an income in the year from that shop of 30*l.* or 40*l.*; do you think it would be practicable to assess that woman in respect of that 30*l.* or 40*l.* a year in order to give relief to local taxation?—She is probably paying more rates now on her shop than she would have to pay in the form of income tax.

9868. Do you think that is really the case?—Yes.

9869. That if she were to be charged on the income tax rate possibly of 7*d.* or 8*d.* in the pound, possibly more, she would really benefit? Would she not be *ex hypothesi*

more heavily assessed?—Supposing she were making 40*l.* a year, and she had to pay 7*d.* in the pound, what would that come to?

9870. Something about 25*s.*, would it not?—What would she pay now in rates on her premises? Probably she would not pay much less than that. She would probably be assessed on a little shop of that kind, at 15*l.* a year for the shop and premises; she would pay an average rate of 2*s.* 6*d.* in the pound, which would be 15 half-crowns, and that would be more than she would pay under the system I have suggested.

9871. Perhaps I may proceed to the other mode, in which the legislature has attempted to meet the special grievance which you have presented to the Commission, that of subventions out of the Imperial Exchequer. Have you considered at all the nature of the present subventions?—Yes, I have certainly considered them.

9872. You mentioned, I think, that you paid nothing to local taxation in respect of your shares in foreign countries?—Yes.

9873. But is that really the case?—Yes. I see what you want. I will begin by saying that I absolutely hold that it is impossible to say that you give a contribution from Imperial taxation from a particular source. A man might just as well pour a bucket of water into a pond, and then go and hook it out again and say he had hooked out the same bucket of water. The taxes are paid to the Imperial Exchequer, and the contribution is made from the Imperial Exchequer, and to say that you select a particular sum of money as the produce of a particular tax and that you hand that over is, I think, a fallacious statement altogether.

9874. Supposing that you were to put a new tax on personal property next year, and applied the proceeds to the purposes of local taxation, would you then say that you paid nothing to local taxation?—Of course, you get into a very difficult region in that way, where you stop a tax and apply it from that moment to a particular purpose.

9875. I was rather putting to you the case of a new tax?—That is even more so. I should say that where you create a new tax and apply it to a particular purpose, of course the question then arises: Do you put that tax into the Imperial pond that I spoke of, or do you not? And that question might be argued *ad infinitum*. But I do hold as a general proposition that where you raise an Imperial tax that goes into the lump of the Imperial revenue, you cannot differentiate between that tax and another one with regard to contribution. Of course, if you were to raise a new tax for the express purpose of the relief of local taxation, and it never went into the Imperial Exchequer at all; that is what I advocate.

9876. Have you considered at all the relative merits of obtaining a contribution from personalty towards local taxation by means of, in the first instance, an income tax, and, in the second instance, a new probate duty?—I do not think you could very well increase the present probate duty, it is so heavy as it is. I think I am known to have attacked it pretty hotly. I think it is a tax the incidence of which is so uneven, and that it falls so hard for the moment upon a particular individual, that it would be very wrong to increase that tax at all.

9877. Supposing, for example, when the new estate duties were imposed, that instead of stereotyping the contribution to be made out of the estate duties to local taxation, a portion of the increased duties had been applied to the purposes of local taxation; would that have given you a substantial measure of relief?—I do not quite see the difference; we get the money anyhow.

9878. You are aware, of course, that when the estate duties were increased, there was no increase of the contribution to local taxation?—Not at that moment; it was afterwards.

9879. What would you say to the appropriation of those increased duties, or a portion of those increased duties, to purposes of local taxation?—They have been already appropriated, as you say; when the increase was made, there was no contribution then; but since that time the contribution has been increased, and nominally out of those duties, by this last Agricultural Rates Bill.

9880. That is a different thing. There you have a differential system of rating; under the Local Government Act, 1888, you had a general contribution out of personalty?—I was referring to the Rates Bill.

9881. I was rather trying to get your opinion as to whether the increase in the contribution paid out of the estate duties towards purposes of local taxation would be a satisfactory way, in your judgment of meeting the

grievance of which you complain?—No, I do not think it would be, because you would increase again a tax which only falls upon a particular section of the community, and only at certain times upon particular units of that section, and yet you would apply it to the general benefit. I should not wish at all to enter into the question as to what particular form it should take. I have suggested that the income tax, in my opinion, would be the best form in which to get the increased contribution; but I think that as long as that contribution goes into the Imperial exchequer, it must be considered as pooled with all the rest, and that what is taken out and given to local taxation must be regarded as coming out of Imperial taxation generally.

Tax upon  
income a  
more  
practical  
suggestion  
than an  
increase of  
death  
duties.

9882. May I put it very simply to you in this way: supposing it were a question between increasing the income tax and increasing the probate duty with a view to the relief of local taxation, which of the two would you prefer?—The income tax.

9883. And do you think that that would be the most feasible politically?—I do not know whether it would be the most feasible; I think it would be the most just.

9884. You, yourself, said that these questions were questions of compromise?—Certainly.

9885. Do you think it would be the alternative which would be the most acceptable to the general sense of the community?—That the income tax would? Yes, I think it would. I do not think they would stand any further increase of the death duty.

Mort-  
gagees.

discussed.

9886. With regard to another point, which is not mentioned by you in your evidence, but upon which I should be personally glad of your opinion: that is as to the propriety of giving an owner of property the right to deduct a certain proportion of his rates from any mortgage interest or other charges upon his property which he may be called upon to pay; have you considered that?—I have heard it mentioned. I think you would open up such a wide field there that I do not think it could be done.

9887. Would you take the two cases of the owner of property which is heavily mortgaged, and of the mortgagee; do you consider that those two persons pay equitably towards local taxation in proportion to their ability to pay?—No, I do not.

9888. How would you rectify that inequality?—The method I propose would absolutely rectify it, because the man who was deriving the income would pay the tax.

9889. But in the case of the mortgagee he would pay the tax, would he not, by way of deduction? The owner would have to pay the income tax on the full value of the property, and he would recoup himself by deduction out of the mortgage interest?—Yes, I imagine that would be the form in which it would be paid.

9890. Would you suggest that, with regard to the rates it might be desirable that a similar scheme of deduction to that which exists in the case of the income tax should be adopted?—I think the two cases are totally distinct. In the one case you would impose a general system of taxation under which the mortgagee would fall in with everyone else, and there would be no hardship and no selecting of one particular individual by transferring the burden from A to B. But in the second case you pick out B, and say B for the future shall share a portion of A's taxation; that would be very unjust. If, on the other hand, you imposed an entirely new system of taxation upon the entire country, evidently B would, in common with everybody else, pay on a different basis; but then there would be no hardship, and you would have some ground to go upon.

9891. But that assumes, does it not, that other classes than the class of rateable property should be brought into the rating area?—Yes.

9892. Assuming for the moment that that proposition was negatived, and that it was held that rateable property as it is now should continue to bear the burden of the rates, would you see, then, any advantage in making the mortgagee, or other persons interested in the income, bear a share?—Not a permanent advantage, only a temporary one. It would be in exactly the same position as the Irish Land Legislation, where you go on the fallacious principle of saying "Let us give A's shilling to B and call it sixpence, and it will still be worth sixpence."

9893. (*Mr. Arthur O'Connor.*) Will you please repeat that?—That is now being partially remedied. The original principle of the Irish Land Legislation was to transfer a part of the property of A to B, or, rather, that A should let to B a property at less than it is worth, and

then to imagine that B is going to again let it to C, or to pass it on to C at the same value.

9894. Do you mean that that is the present system?—Not entirely; it is the system of land legislation; but where purchase has supervened, that is to put it right again.

9895. Current land legislation, do you mean?—Not that. It is the result of recent land legislation in Ireland.

9896. Do you say that on your own behalf, or from a certain party point of view?—Not at all from a party point of view.

9897. From a personal point of view?—From a personal point of view. What I mean to say is that the eventual benefit does not accrue to the particular tenant of that farm for ever; it is temporary. It may be perfectly right, and I do not question at all whether it is right or wrong from a party point of view. A is the landlord, and B is the tenant, and you say that if this farm is put into the open market the landlord can get 11. an acre for it, but owing to certain improvements possibly—I do not question whether it is right—you say B is to have this farm at 10s. an acre. I say that is only a temporary expedient, and that the result will be that when B passes that farm on to C, C will have to pay B—and this is all I am suggesting—the capitalised difference between the 11. and the 10s. The result is that when C has got that farm he is standing at this 11. an acre rent; he is paying 10s. to the landlord, and he has had to pay the capitalised 10s. to B in order to get into the farm. Therefore, although giving B the benefit it will not be a permanent benefit to the tenant, and you will not permanently reduce the rent of the farm by one farthing. That is what I meant by saying that in this same case you would transfer a portion of the burden borne by the present owner of the property on to the present mortgagee, but that would only be a temporary benefit and would not be a permanent and enduring shifting of the burden, because in the future relations it would go back.

9898. I suppose you are aware that all the expenditure which in England is borne by the landlord, and in respect of which alone rent is now received in England, is in Ireland all borne by the tenant?—That is rather a wide saying, but it is practically so, and that is what I meant when I used the expression that you may be perfectly right; I am not questioning whether it is right or wrong; that is an arguable point. Although you may be perfectly and justly right, I am not questioning about the right or the wrong; I only say that that method of shifting the burden is not permanent; I do not question the justice.

9899. (*Mr. Elliott.*) When the Legislature transferred the burden of the tithe from the occupier to the owner, I think you told us, and I should quite agree with you, that the owner was not able to recoup himself at the expense of an increased rent from the occupier?—That is so.

9900. And, therefore, there was a real transfer, in addition to a paper transfer?—No, I think there was not a permanent transfer, because, owing to the exigencies of the moment, the fall in the value of land, which was continuously going on at that time, made it impossible for there to be any re-adjustment of rent. But I do say that you cannot get away from this, that if that farm is again to let, the fact of that burden of tithe having been shifted from the occupier to the owner, will enable the owner to get a better rent for it; the rent will be higher than it would have been; you do not shift it.

9901. Do you not think that as regards the mortgagee the position is very much the same, that with accumulating capital in the country seeking investment, there is a tendency on the part of the rate of interest to fall, and that it would be impossible for the mortgagee to raise his rate of interest to recoup himself for any transfer of rates from the nominal owner of the property to the mortgagee?—He would not raise the rate of interest because it would not be in the agreement, unless the Act allowed him to do so. The rate of interest raised on mortgage is the subject of agreement. The only way he could do it would be by calling in the mortgage.

9902. Do you think that the result of giving the owner of property the right to deduct a certain proportion of these national burdens from any mortgage interest which he paid would be to raise the rate of interest?—No, I do not think it necessarily would, but I think it would be a very unsound transaction: I do not think it would be a financially sound transaction at all.

9903. Would it not extend the number of persons who contribute, according to their ability, to local taxation?—

To a certain extent it would do that, but I do not think you could afford to take a step of that kind, which would be so commercially unjust, and then you would break contracts.

9904. I am rather putting the question to you apart from any question of existing contracts, which is a consideration that has always to be borne in mind?—You could not touch future contracts you see, because anything you did would be borne in mind, and would be taken into account in raising the mortgage. If you are only going to touch future contracts I do not think you would do anything, because a man who is going to pay a rate of interest would take that into consideration. Before a bargain is completed every factor is taken into consideration, and the fact of having to pay that additional rate would materially affect the rate of interest which he would demand; that rate of interest would be a compound of the value of money in the market at that time, and of the burdens which the land would entail upon him.

9905. Do you think there would be no transfer between the owner and the mortgagee?—If you only affect future mortgages there would not be any.

Fresh sources from which to raise revenue for local purposes are very few.

9906. Have you considered the possibility of raising local revenues by any other means than what we call rates at the present time?—Yes, I have considered it, but I do not see how it is possible. I have considered the question, certainly, often in my own mind, but I can think of no satisfactory method in which it could be done, because any fair assessment to rates, in my opinion, must include personal property, and it is impossible to rate personal property locally.

9907. Have you considered the possibility of imposing any new local duties in respect of expenditure?—I do not know that I have considered it, because it seems to me that what you want to do is to encourage expenditure as much as possible in the country districts, and if you rated expenditure you would do the very reverse.

9908. You are aware, of course, that on many items of establishment expenditure licence duties are levied which eventually go to the relief of local taxation?—Yes, that is so.

9909. You have no suggestion to make to the Commission with regard to the increase of those duties?—No, I have not. I think the only thing that could be done would be, perhaps, to increase to a certain extent the duties upon luxuries, I mean such a thing as servants, and so on; but the amount that you could so hope to obtain would be so small that it would not be of any value.

Orwell Park and Bacton Estate. Expenditure has benefited the property.

9910. (Mr. Dalton.) I see that, bad as is the state of things shown in Table III. of your proof, you think it would have been considerably worse if your predecessor had not spent 350,000*l.* in constructing a railway and dock to develop the property?—Yes, I do.

9911. Have the railway and dock paid a fair interest on this expenditure of 350,000*l.*?—Indeed, they have not.

9912. Can you say what rate of interest they have paid?—They have never paid any, except that the railway has been sold to the Great Eastern since, and some of the money has been got back in that way.

Rates in Suffolk are low. Partly due to fact that valuations have not been reduced in proportion to reduction of rent, and partly because district is poor and spends very little.

9913. If that 350,000*l.* is added to the loss, or if a great deal of it is added to the loss shown on Table III., it makes the position about twice as bad as it appears from the table?—Yes, I have already stated that the railway was sold again after a certain time; it was sold in 1883, I think it was, to the Great Eastern.

9914. Can you give any further explanation of the rate in Suffolk being so low? Should you say that they were low because the district is poor, and keeps down its local expenditure in consequence?—Yes, I should; that is one of the reasons, certainly.

9915. Is it partly due to the fact that the assessments have not been reduced to the rent?—Yes, it is partly due to that. Of course had the assessments been reduced to the rent the rates would have been higher no doubt.

9916. That is what I mean; the rates in the pound in these tables look very low, so they do throughout the greater

part of Suffolk in the Local Taxation Returns?—That is so.

9917. Would you attribute it partly to the fact that the valuations have not been reduced as they should have been, and partly to the fact that the district spends as little as possible because of its poverty?—Yes, that is so. I may say that lately the assessments have been in some cases appealed against. I am now appealing against these assessments and trying to get them reduced. Some of my neighbours, farmers, have got their assessments reduced. There has been a great deal of talk about this question lately, and the farmers have seen that their remedy to a certain extent is to get their assessments reduced. Of course where an urban district comes into the taxable area, there is no doubt that they are thereby shifting a portion of the burden on to the urban district. But the urban rates are very high too, and they deserve consideration as much as we do, or very nearly.

Captain E. G. Pretymann,  
7 July '97

9918. It is because agriculture is an unremunerative or badly remunerative business that you would like to see it rated upon its profits, is it not?—Yes.

Rating upon basis of profits desirable.

9919. We have had great complaints, on the part of certain remunerative undertakings, that they are at present rated upon their profits; but that of course is natural?—Yes. My feeling is that if a man has got a profit, he ought to pay according to that profit to the country.

9920. Independently of that, if railways and docks and other properties are practically rated upon a proportion of their profits, you would say that the same principle should be applied to agricultural land?—Yes, absolutely.

9921. I think a question was asked you as to the large expenditure for buildings and improvements shown in table III.; is it not the fact that of late years, speaking generally, it has been necessary for landlords to spend more on buildings and improvements in order to get tenants for their estates?—Just so.

Orwell Park and Bacton Estate. Increased expenditure on buildings &c., in recent years necessary to secure tenants.

9922. And that the proportion which that expenditure bears to the rent, must always be an increasing one, or has of late years been a very increasing proportion, because the rent has been falling and the demand for the buildings has been increasing?—That is absolutely so.

9923. The same quantity of buildings are absolutely required for the cultivation of this estate, although the rent has fallen so enormously?—That is so, and even more.

9924. Some questions were also asked as to the rent that has been charged for some of these farms on which there had been a loss while you had them in hand; the farmer who rents his own farm gets a considerable advantage from having the farmhouse for a residence?—Yes, he does.

Profit made by tenant farmer and landlord farming through bailiff. Their positions compared.

9925. And from being able to live on the produce of the farm?—Yes, that is so.

9926. He gets a greater benefit from it than the bailiff would, I suppose, who was taking charge of it?—Yes. Of course the bailiff would not require or expect to get so good a house; he would not be in a position to do so. He lives in the farmhouse, because it is the only one available.

9927. Therefore it may very well be that, although the farmer is paying a higher rent than you can make from the farm when it is in your own hands, he is doing very much better?—Yes. If he is a man of capital, he is getting a residence and certain amenities; he is getting what a farmer calls his home included in the rent of the farm. Of course every man must have a home, and he gets it in that way.

9928. As a general rule, a farmer does not reckon the money which would represent that as profit, although he should, I suppose?—I think farmers realise that now. It has been pressed home on them as one of the considerations they must have in view when talking to their landlords about their rent going down.

9929. The farmer not only has his residence but he has his keep?—Yes, to a certain extent.

9930. Such as milk and all that?—Yes.

The witness withdrew.

Mr. SAMUEL ROWLANDSON called and examined.

Mr. S. Rowlandson.

9931. (Sir John Hibbert.) I think you occupy and reside at a farm in the North Riding of Yorkshire?—I do.

9932. That farm consisting of 507 acres pasture and 343 arable?—Yes.

9933. You also have another farm in the North Riding of 131 acres grass and 99 arable?—Yes.

9934. And another at Saltholme, in the county of Durham, consisting of 930 acres grass and 80 arable?—Yes.

Mr. S. Rowlandson.

Mr. S.  
Rowland-  
son.  
7 July '97

9935. And about 700 to 800 acres of sea bankings?—  
Yes.

9936. Therefore, being the occupier of those three farms, you have had some experience with respect to the matter of the taxation or rating of farms?—Yes.

9937. You also hold several public appointments?—  
Yes, I do.

9938. You are Vice-Chairman of the North Riding County Council, Vice-Chairman of the Darlington Board of Guardians, and Commissioner of Taxes for the County of Durham?—Yes.

9939. You also occupy several other positions, such as Chairman of the Croft District Council and Chairman of the Barton Parish Council?—Yes.

9940. That, I presume, has given you experience of local administration?—Yes, it has.

9941. In addition to that you are a Member of the Council of the Royal Agricultural Society?—Yes.

9942. As a member of the assessment committee of the Darlington Union, and also of the county rate committee of the North Riding of Yorkshire, you have some comparisons, I think, to bring before the Commission with respect to the rating of farms and the rating of the occupier of a business in a town?—I gave evidence before the Duke of Richmond's Commission in 1881, and I then put in some figures which are the actual payments made in the town of Darlington and in the rural townships in the same union.

9943. They would be figures for the years 1879-80?—  
Yes, and I gave my evidence in 1881.

9944. Would you just give us the total of those? I do not think you need go into the details of the separate rates?—The total figures upon the income, as taken by the surveyor of taxes, of 250*l.* a year as paid by the rural ratepayer was 54*l.* 14*s.* 8*d.*, and as paid by the towns ratepayer 26*l.* 17*s.* 4*d.*, or a balance of 27*l.* 14*s.* 4*d.* in favour of the town ratepayer.

9945. In both the town ratepayer and the rural ratepayer supposed to have an equal amount of profit?—Yes, excepting that in order to compare the two I took the income at 250*l.*, whereas in the majority of cases the income was taken by the surveyor of taxes at 300*l.*

9946. Then you have come down to a later period, I think, in your memorandum?—I have got precisely the same figures for the present period.

9947. For the same union?—Yes, in the same union. On an assumed profit of 250*l.*, of course that is taken on a rental now of 750*l.*, whereas before it was taken on a rental of 500*l.*, the payments made by the rural ratepayer are 86*l.* 19*s.* 3*d.*, and the payments made by the towns ratepayer are 31*l.* 11*s.* 5*d.*, or a balance in favour of the towns ratepayer of 55*l.* 7*s.* 10*d.*, which is a much greater proportion in favour of the townsman than it was in 1879-80. I have also had similar statements sent me from a Northumberland union and from the town of Newcastle-on-Tyne.

9948. Are both instances in the same union?—No, they are adjoining unions. Newcastle is practically a union of itself, and then there is the adjoining union of Castle Ward. There, the amounts, as given to me, are 84*l.* 4*s.* 10*d.* paid by the rural ratepayer, and 31*l.* 8*s.* 7*d.* paid by the towns ratepayer, or a balance in favour of the townsman of 52*l.* 16*s.* 3*d.* as compared with 55*l.* 7*s.* 10*d.*, the second balance I mentioned. Then, again, I have also had a statement sent to me from the Middlesbrough union and from the Stokesley union, which is adjoining, in North Yorkshire. Middlesbrough, I may say, is a very heavily rated place indeed. I may mention that the rates there are, I believe, 9*s.* in the pound.

9949. You do not mean throughout the whole Middlesbrough Union do you?—No, in the borough of Middlesbrough. The borough of Middlesbrough is practically the union, and there is very little land attached to the Middlesbrough Union. The statement as given to me is 71*l.* 6*s.* 10*d.* as paid in the Stokesley Union by the rural ratepayer, and 42*l.* 17*s.* 1*d.* as paid in the Middlesbrough Union by the towns ratepayer, the balance there in favour of the townsman being 28*l.* 9*s.* 9*d.*

9950. What argument do you wish to raise upon those figures?—The argument that I raise is this, that the payments for rating purposes and for imperial taxes are very much in favour of the townsman as against the countryman, and I certainly think they ought to be taken more upon income than they are at the present time, they ought to be based upon income. In addition to that,

although the townsman pays much less in proportion to his income than the countryman, the townsman has every benefit of living in a town; he has good footpaths, sewerage, watching, street watering, and indeed every advantage of a town, whereas the farmer is liable to pay sanitary rates from which in most cases he receives no benefit, as the money is invariably spent in the villages, and he, the farmer, has to provide his own footpaths and his own sewerage.

9951. Can you say that the farmer pays much in sanitary rates, having regard to the fact that the rural sanitary rate is a very small amount indeed?—It is a small amount; but still the farmer is rated upon his land for that purpose.

9952. Is he not rated at one fourth?—Yes, he is rated at one fourth. The farmer is also in many cases now liable for the lighting rate on one third of his rateable value, and in 99 cases out of 100 he receives no benefit from it in any way.

9953. That would only be of small application would it?—That is only a small rate, a penny in the pound, probably.

9954. And it is of small application?—Yes.

9955. I see you state in your memorandum that you consider land to be the same as a grocer's stock-in-trade, and that it is the raw material?—I consider land is the raw material, and that it is precisely the same as a grocer's stock-in-trade. I have always held that land, as land, should not be rated at all.

9956. You think it should be like the grocer's stock-in-trade, free from rating?—Precisely. You should simply rate the house and buildings.

9957. You have something to say also, have you not, with respect to the school board rates and the parish council rates?—Yes. The school board rates and the parish council rates have, of course, added to a certain extent, in some cases very heavily, to the burden on the farmer.

9958. Should you not modify that rather? You cannot refer to the parish council rates in that sense, can you?—The parish council rates, of course, are not heavy.

9959. Then will you deal with the school board rates?—The school board rates in some parishes are very heavy upon the farmer, and I must say especially so in the county of Durham. Where collieries have been laid aside, and where school boards have been commenced when those collieries were in full work, but since their commencement those collieries have been laid aside, the burden of the school board rate has come very heavily indeed in many cases upon the farmer.

9960. The farmer where a school board exists pays the full rate upon his assessment, does he not?—Yes, he pays the full rate.

9961. There is no deduction?—There is no deduction there. I must say this, that the rate that has hit us the hardest in the district in which I reside, is the rate under the Union Chargeability Act of many years ago. That Act threw the charge of the paupers and any incidental expenses relating to union charges over the whole body of ratepayers in the union. Although I am in North Yorkshire, I am yet in the Darlington Union, which includes 11 townships in North Yorkshire, and, I think, 36 townships in the county of Durham and the town of Darlington. In the years 1877-79 a stone-yard was opened, and we had 386 men employed in that stone-yard. The total cost of that stone-yard was 7,550*l.* 14*s.* 7*d.* which, deducting the cost of the stone, sold for 2,486*l.* 12*s.* 0½*d.*, left a balance of 5,064*l.* 2*s.* 6½*d.*; the net amount debited to the common fund was that 5,064*l.* 2*s.* 6½*d.*, and the amount which would have been debited previous to the Act being passed was 1,650*l.* 14*s.* 0½*d.*, leaving a balance of 3,413*l.* 8*s.* 6*d.*, which was an excess debit to the common fund over what ought to have been.

9962. What is the argument you wish to raise there?—The argument that I use is this, that the country townships had a very heavy burden thrown upon them at that time by the Union Chargeability Act, for which they received no *quid pro quo*. People say that the country townships are benefited by proximity to a town. I quite admit that, to a certain extent, but, as I stated in my evidence in 1881, I consider that the benefit which the country townships receive from a town is limited to a certain area, that is the milk area, and in the case of a town of 30,000 or 40,000 inhabitants, the milk area, as a rule, does not extend beyond two miles and a half.

9963. You think no benefit accrues much beyond?—  
When you get beyond the milk radius, I consider that the

Mr. S.  
Rowland-  
son.  
7 July '97

Agricultural land should not be assessed to local rates.

School board rates a considerable burden upon farmers in some parishes.

Union Chargeability Act. Effect was to throw heavier burden upon certain parishes. Benefits which country parishes receive from their proximity to towns. Radius within which such benefits accrue is limited to 2½ miles.

Rates paid by agriculturists and by business men in towns compared. Contribution to local taxation should be based upon income.

Mr. S. Rowlandson.  
7 July '97

country townships are in no way benefited practically from a town, because they have to pay more for their labour. They are beyond the manure radius, and they are beyond the milk radius, and a good many of the labourers go for the week into the town, and that raises the price of their labour in quite as great a ratio as any small benefit that the farmers may receive from the proximity of that town.

9964. But having those views, do you suppose it is at all possible to alter the principles of the Union Chargeability Act, which has now been in operation for so long?—Of course, there is that consideration. I always considered it as a very unjust Act, as country ratepayers in a very great number of instances have had to pay very heavily indeed for it, although they have received, in my opinion, no benefit whatever from it.

9965. Do you know whether, in this particular union, there is any very large expenditure upon out-door relief?—There is not. I think I may say—I think it was quoted at our board—that within the last three months, when the inspector was there, it stood one of the lowest in out-relief.

9966. That is very satisfactory. You have also, I think, some further statistics, have you not?—Yes. There was another stone-yard opened in 1895, which cost 3,807*l*. We have had three, I think, during the last 20 years.

9967. These stone-yards are used as tests, I presume?—They are used as tests. Two of them, I think, have been started in the case of strikes, and one in the case of a lock-out.

9968. The view that you wish to press upon the Commission in regard to these statistics about the Darlington Union is, I think, that the incidence of the rate has been very unfair against the country parishes?—It has been very unfair against the country parishes, and some time ago the 11 townships that were in North Yorkshire petitioned the Local Government Board to have those townships transferred to the Richmond Union; an inspector was sent down, and the report was rather in favour of that. Then when it was stated in the 1887 or 1888 Act that county boundaries were to include all the townships in the county, we again petitioned, but our petition has been refused. We think that those townships in the North Riding of Yorkshire ought certainly either to be included in one of the unions of the North Riding, or else be made into a separate union of their own. If they were made into a separate union of their own, it was estimated, when the inquiry was heard, that those 11 townships would save 660*l*. a year.

9969. After going into all the expense of setting up a fresh workhouse, and everything of that kind?—No; that was making it a contributory union for the indoor poor.

9970. There was power to do that?—Yes.

9971. Did the county council of the North Riding take any action in this case?—There was a meeting of the joint committees of the North Riding County Council and the Durham County Council, and they decided at the very first meeting—the North Riding having a majority of one vote upon that occasion—that those 11 townships should be formed into a separate union. The Durham County Council refused to confirm the whole of the decision of the joint committee; they confirmed a portion of it, but not the whole. We had a long correspondence with the Local Government Board on the question, and the Local Government Board decided not to take any action in the matter, because the Durham County Council did not confirm the whole of that decision.

9972. Of course it was owing to the disagreement between the two councils that this matter was not carried out years ago?—Yes, that is the reason. Had that been carried out, those 11 townships would have saved 660*l*. a year.

9973. Then you have, I think, something to say with respect to the cost of building asylums, workhouses, and county buildings?—The cost of building asylums, workhouses, county buildings, schools, and all permanent structures falls very heavily on annual ratepayers, and being practically an improvement of the value of property, is a very strong argument that a portion, if not the whole, of this outlay should be borne by the owners of property, and not by the occupiers; and for this reason I am, and always have been, strongly in favour of all rates being paid, one moiety by the owner, and the other by the occupier. The same applies in Scotland.

9974. Do you think it would be a much fairer way of charging for permanent structures?—Yes, I do think so.

i 97620.

Darlington Union. Position of certain country parishes said to be unfair with regard to their contribution to rates.

Division of rates between owners and occupiers suggested.

9975. You also are in favour of one assessment for all purposes?—I am.

9976. Have your county council taken any action on that, and passed any resolution?—No, I do not think they have; but I know there is a very strong feeling on the part of many of its members that one assessment would be very much better than three or four, as there are at present.

9977. I suppose you are aware that there is a very strong feeling at present throughout the country in favour of this principle of one assessment?—Yes, I know there is.

9978. Is there any other point you would wish to refer to?—I simply say this: that I should advocate the basis of the income tax.

9979. As being the most fair of all?—Yes, as being most fair.

9980. Would you be satisfied with an assessment committee acting over the whole county in the case of each county, for the purpose of getting uniformity of assessment?—I certainly think there ought to be some system of getting uniformity of assessment. I may say that in the North Riding of Yorkshire we found the assessments in the different unions were very unequal, and I myself gave notice about them to the county committee, and as a member of that committee insisted upon several of the clerks of the different unions being summoned before the committee, in order to investigate the case, and to see what was the reason of this.

9981. I presume you have a county rate committee?—Yes, and I have been a member of it for some years.

9982. That is one means of obtaining uniformity, is it not?—It is. Of course you require local knowledge to that extent.

9983. Do you perambulate the county; do you go from place to place?—No, we do not.

9984. Have you any county boroughs in the North Riding?—Yes, we have two.

9985. Do they send representatives to the county committee?—To the county council, yes.

9986. I mean to the county rate committee?—There is one.

9987. You know that under the Act of 1888 there is power to do that?—Yes.

9988. (Mr. Dalton.) Is there much agricultural depression in your district?—There is no doubt of its being very heavy for some years now.

9989. What is the average rent per acre; can you give us any idea of it?—I should think the farms at the present time run from poor land at about 8*s*. or 9*s*. an acre to as far as 36*s*. an acre.

9990. You do not think that their proximity to large towns in any way affects the farmers?—When we get beyond a certain radius, I do not think it does.

9991. You say, I think, when you go beyond a radius of 2½ miles?—Of course that radius of 2½ miles increases as the population increases.

9992. Supposing we say 3 or 4 miles: would you think that a farm 4 or 5 miles from a town is no better off than one 20 miles from a town?—I do not think there is much—upon the condition that the one 20 miles away has anything like similar railway accommodation.

9993. But it generally would not, I suppose?—I do not know that.

9994. Does not the town bring the railway?—The town to a certain extent does bring the railway.

9995. You are in favour of dividing the rates equally between the owner and the occupier?—Yes.

9996. What do you think is the present incidence of the rates in a rural district?—In what way?

9997. Do you think they are borne by the owner or by the occupier?—They are borne by the occupier as long as he is a sitting tenant.

9998. He pays them in the first instance; but do you think they are taken into account in fixing the rent?—They are taken into account, to a certain extent, when there is a change of tenancy.

9999. And I suppose if half were paid by the owner and half by the occupier, one-half only would be taken into account on a change of tenancy?—There would be one-half taken into account on a change of tenancy.

Mr. S. Rowlandson.  
7 July '97

One valuation for all purposes desirable.

Income tax suggested as a means of raising local taxation.

Valuation. Uniformity of it a county desirable.

Agricultural depression in north Yorkshire.

Benefits which country parishes receive from proximity to towns. Radius within which such benefits accrue is limited to 2½ miles.

Division of rates between owner and occupier discussed. Incidence of rates.

Mr. S.  
Rowland-  
son.  
7 July '97

10,000. Do you think it would alter the ultimate incidence much?—Of the rental, do you mean?

10,001. Of the rate; do you think it would make really much difference to the owner or to the occupier if they were halved in this way?—It would make a difference to the sitting tenant.

10,002. When they rose, but not if he had taken them into account in his rent, I suppose?—Not such a very serious difference. I do not suppose it would.

10,003. Do you think it would conduce to extravagance if they were halved?—I do not.

10,004. The administration is mainly in the hands of occupiers, is it not?—No, certainly not.

10,005. Not?—Certainly not.

10,006. You do not think the occupiers are more represented on the local authorities than the owners?—No, certainly not; on the county council certainly not.

10,007. What about the board of guardians?—I should say our board of guardians is comprised of a great many town members.

10,008. The voters must be mainly occupiers surely?—By the voters do you mean the electors?

10,009. Yes?—Certainly.

10,010. Therefore, the local authority is representative of the occupiers, and not of the owners?—Yes, but in the case of the county council I should certainly say that three-fourths are owners.

10,011. (Sir John Hibbert.) But still, they are returned by the occupiers?—They are returned by the occupiers, excepting in the case of the aldermen.

10,012. (Mr. Dalton.) Is it not desirable that the occupier should feel the first increase in the rates if you want to preserve economy?—I quite admit that; and he would feel the increase of the one-half.

10,013. Yes, but to the extent of one-half you diminish the fear that he has of raising the rates?—I do not think there is any fear of their being more negligent in the performance of their duties.

10,014. (Mr. Elliott.) With regard to your figures, which bring out very clearly facts which have already been put before the Commission, you have rather assumed, have you not, that the whole burden of the rates falls upon the occupier?—Do you mean in the figures that I have quoted?

10,015. Yes, and which you show in your memorandum?—No, I take it that the burden is upon the land.

10,016. Would it not somewhat alter these comparisons, if to the profit of the occupier you added the profit of the owner, in other words, the rent?—I do not quite understand your question.

10,017. May I put it in another form; take the example which you gave second; the landowner, according to the assumption, receives a rental of 750*l.*?—Yes.

10,018. Of course, out of that rental, we all know that he would have to pay a very considerable sum for necessary outgoings?—Yes.

10,019. But he might easily derive from a rental of 750*l.* a net profit of 500*l.*?—Yes.

10,020. If you add his net profit of 500*l.* to the tenant's profit of 250*l.* you get an aggregate profit from that property of 750*l.*, do you not?—Yes.

10,021. Whereas, in the case of the townsman, the aggregate profit is only 350*l.*?—Yes.

10,022. Therefore, leaving out other considerations, it would not be unreasonable that the rates paid in respect of the first property should be double the rates paid in respect of the second property; is that not so?—Do you take it as a question affecting the land as a whole between the owner and occupier?

10,023. That is what I want to do?—Yes; but, even then, you will see that the rate would be very greatly in favour of the townsman.

10,024. Is that so? I rather wanted to give you the opportunity of explaining this a little more fully in anticipation of any other criticisms, assuming that out of that first property there is an aggregate profit of 750*l.*, and on the second property in the town an aggregate profit of 350*l.*, the proportions are fairly equal, are they

not?—No. You would want double the profit obtained in the town.

10,025. The rent there is 100*l.*?—And the assumed profit is 250*l.*

10,026. That is a total of 350*l.*, is it not?—Yes.

10,027. And in the other case you have got a total profit of, say, about 750*l.*?—Yes.

10,028. Therefore, the townsman is about half?—Yes, nearly so, but the rates paid in the town are 31*l.* 11*s.* 5*d.*, as against 86*l.* 19*s.* 3*d.* paid in the country.

10,029. So that there is a substantial difference even then?—There is a very considerable difference.

10,030. You would say not only is there, even then, a substantial difference in favour of the townsman, but that it is essential to take into account what is, perhaps, more important, the benefits received by each?—Certainly. I think that is one very great point. The benefit received by the townsman is certainly very much more than the benefit received by the countryman.

10,031. I gather that you wish to emphasise that point?—I do, particularly so.

10,032. And to bring before the Commission the very different benefits received by the townsman in respect of these rates compared with those received by the agriculturist?—Certainly. That is what I said afterwards; the townsman receives a full *quid pro quo* whereas the countryman does not. The townsman has got footpaths, sewerage, watching, street watering, and every advantage of a town, whereas the farmer is liable, and has to pay for sanitary rates, from which, in most cases, he receives no benefit, and he has to provide his own sewerage as well.

10,033. Now, as regards remedies. What remedy would you submit to the Commission for this condition of things?—One thing is that I say land itself ought not to be rated at all. It is precisely the same as a draper's and grocer's stock-in-trade, and I should simply rate the buildings and the house.

10,034. Then you would further extend the principle of the Agricultural Rates Act of last session?—I should extend the principle of the Agricultural Rates Act of last session, and bring in personal property on the basis of the income tax.

10,035. Supposing Parliament could not see its way to adopt your proposition in its entirety, you would still urge that not only should the Agricultural Rates Act of last session be made permanent, but that the proportion should be again considered?—Certainly.

10,036. Do you think that the proportion in the Act of one-half as the rateable value of agricultural land is sufficient?—No. I think it ought to be put at a quarter.

10,037. I gather that you would even go farther, and that you think that agricultural land ought not to be rated at all?—Yes, I have always said that agricultural land ought not to be rated; I have said that for many years.

10,038. How do you propose that the deficiency arising should be made up?—It would have to be made up out of the imperial fund somehow.

10,039. Have any particular suggestions occurred to you as regards the sources from which the deficiency should be made up?—No, I cannot make any suggestions.

10,040. What classes of persons do you think contribute too little to local taxation?—Many people residing in this country. I have talked this question over with some of my own friends who reside in hotels in London, who have large incomes from India, and who pay no rates and no taxes in any way whatever.

10,041. Would you say, generally, that you think the private resident deriving his income from personal property pays too little?—Certainly. He receives every benefit that we heavy ratepayers receive in this country, and he certainly ought, I think, to pay his fair share.

10,042. Would you suggest to the Commission that any deficiency which arises in consequence of the lower rating of agricultural land should be made up in some way by a contribution from personalty?—From personalty, certainly.

10,043. Do you see any objection to the present system under which a contribution from personalty is made through the estate duties?—Do you mean with regard to the last contribution?

10,044. With regard to the contribution made in 1888?—No, I do not see any great objection to that.

10,045. But would you propose that it should be further extended?—I think so.

Mr. S.  
Rowland-  
son.  
7 July '97

Benefits received from local expenditure by agriculturists are less than those received by townsmen.

Agricultural land should not be assessed to local rates.

Agricultural Rates Act. Further relief should be given, and the Act made permanent.

Agricultural land should not be assessed to local rates.

Personal property. Persons owning personal property should contribute in respect of it to local rates.

Rates paid by agriculturists and by business men in towns compared.

*Mr. S. Rowland-son.*  
7 July '97  
10,046. (*Sir Edward Hamilton.*) You have three farms, I think?—Yes, I have three.  
10,047. Therefore you are, I suppose, now feeling the effect of last year's Act?—Yes.

10,048. Have you felt the full effect of it? Has rent been raised against you in any case?—No, certainly not.

10,049. Therefore the full benefit has gone to yourself?—Yes.

*Mr. S. Rowland-son.*  
7 July '97

The witness withdrew.

Adjourned till Thursday next, at 12 o'clock.

**TWENTY-SIXTH DAY.**

Thursday, 15th July 1897.

**At 16, Victoria Street, S.W.**

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Viscount EMLYN.  
Sir E. W. HAMILTON, K.C.B.  
G. H. MURRAY, Esq., C.B.  
T. H. ELLIOTT, Esq., C.B.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
The Right Hon. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. GABRIEL PRIOR GOLDNEY called and examined.

*Mr. G. P. Goldney.*  
15 July '97  
10,050. (*Viscount Emllyn.*) You are the City Remembrancer, are you not?—Yes, I am, and I have been for the last 16 years.

*Inhabited House Duty. Question of importance in the city of London.*  
10,051. You appear to give evidence on behalf of the City before the Commission?—I appear to give evidence on behalf of the City Corporation to this Commission on the question of the inhabited house duty, which is a subject that has attracted a very great deal of attention in the city of London, not only attention on the part of the Corporation, but also to a very great extent attention on the part of the citizens and taxpayers.

*Valuation (Metropolis) Act. Valuation list conclusive evidence of gross rateable value for all purposes. Inhabited House Duty levied on assessment.*  
10,052. I do not know whether that actual point is quite within the terms of our reference; but I suppose you have considered it, and could state to us your opinion upon it?—I confess that it is rather near the edge of your reference, but I think it is within it, because the inhabited house duty is levied on the assessment; I say "assessment," because, curiously enough, it is one of the surviving instances of an impost being levied on the gross and not on the net value—the difference in the City you may take roughly as being 20 per cent., that is a fifth. It is a tax that the occupier pays because he is rated as an occupier.

10,053. It appears to be rather near the edge of our inquiry, at all events, but I do not think the Commission will want to stand upon technicalities; we shall, therefore, be very glad to hear any evidence you may like to give on that subject?—Of course, I am speaking only of the City and of the Valuation of Property (Metropolis) Act, 1869, the Quinquennial Act as it is generally known. By section 45 of that the valuation list is to be taken as conclusive evidence of the gross and rateable value of the hereditament for all purposes, amongst others for the house tax.

10,054. Will you follow on your own line the points you want to bring to our notice?—On that point about the valuation list being conclusive evidence, I say that there we arrive for the first time at the point where the shoe really pinches. You cannot go behind that valuation list for any purpose at all; once on the valuation list, there you are for all purposes, this house tax amongst others.

10,055. Have you no appeal?—You have the appeal provided for under that Act. I am not so much questioning whether you are rated for 100*l.*, or whether you are rated for 200*l.*; I am pointing to the fact that when you are rated for a specific hereditament there you are, and you cannot dispute it. I shall come back presently

to the point of what we suggest might be the hereditament for the purposes of rating, having regard to the incidence of this house tax.

10,056. Do I understand, that though you might appeal against the amount you are rated at, you could not appeal with a view to getting yourself taken off the list?—Yes, you cannot appeal, apparently, except on the facts. You are rated for a hereditament, and that hereditament is taken to be your occupation of this house, or your occupation of that house, or your occupation of the next house. But you cannot divide it, and there is the real difficulty of the incidence of the whole of this tax, because of its being levied on the assessment. In the city we have always urged, when I say always I mean in modern times, because the tax has only been imposed in modern times, that there ought to be, at all events, for the purposes of this tax, a power of dividing up the hereditament, but you cannot do that under the existing Act; however willing all the quarter sessions, and special assessment sessions and so on, may be to do it, they cannot do it.

10,057. They are debarred from it?—They are; they have no power to do it. However much they may think it right, and fair, and just, they cannot do it. This house tax is a survival of the old window tax. The old window tax was repealed by the 45th William IV., chapter 19, and there were no duties similar to it levied on inhabited houses until the House Tax Act of 1851; the Act of 1851 was amended by the Customs and Inland Revenue Act of 1890, which graduated the amount, that is, instead of being 9*d.* in the £, it was reduced to 6*d.* in the £ for assessments between 40*l.* and 60*l.*, and to 3*d.* in the £ for assessments under 40*l.*

10,058. Do these difficulties which you have mentioned apply to all classes of house property, or do they bear more hardly upon one class than upon another?—In the City, I take it that they apply only to the higher assessments which, of course, are very considerable when you get to 9*d.* in the £. I think I should mention exactly how it affects, not the Corporation, because it does not affect the Corporation at all, but the citizens whom they represent. The Customs and Inland Revenue Act, 1881, by section 24, defines the meaning of the term "menial or domestic servant" to "mean" and include only a menial or domestic servant employed by the occupier, and the expression "other person" shall be deemed to mean any person of a similar grade or description not otherwise employed by the occupier, who shall be engaged by him to

*Mr. G. P. Goldney.*

15 July '97

*Inhabited House Duty. Hereditament cannot be divided for the purposes of this tax.*

*Inhabited House Duty a survival of the window tax.*

*Inhabited House Duty. What constitutes "inhabiting." Hardships falling on large businesses in the City of London and other towns.*

Mr. G. P.  
Goldney.

15 July '97

" dwell in the house or tenement solely for the protection thereof." In the Inhabited House Duty Acts a house is not deemed to be inhabited by reason of a watchman or caretaker living in the house for the protection of the house. The great difficulty that we have encountered in the city was put into a concrete form, and it was argued and decided. It could not be put perhaps more concisely than by taking the case of one of the very large banks in the city. They had one or two watchmen living on the premises, whose business it was to look after fire, to keep out burglars, and so on, but they also had an arrangement by which there should be always one of the junior clerks, in rotation, sleeping on the premises, not to watch the premises but, so to speak, to watch the business, because they had large foreign transactions, and they were constantly getting important communications arriving after bank hours, in the night and early morning, and so on. The Inland Revenue Department came down upon them and said: "This is an inhabiting of the house; the clerk is not there for the protection of the house; he is in no sense a watchman, he is 'nothing of the sort; he is living there so that he may 'live on the premises and be there always.'" The consequence was, these premises, which were rated at 10,000*l.* a year, had to pay the inhabited house duty; of course, they afterwards had to make different arrangements so as to avoid that charge.

10,059. Are those difficulties in any way peculiar to the City?—They are not peculiar to the City of London, but they would be peculiar to all exceedingly large towns, where the property is of such very high assessable value.

10,060. Then you would apply it to all those large towns?—Yes. Mr. Smith, I have no doubt, could give you the same information with reference to Birmingham. I will give you another instance on that same point. I daresay there would be no object in my giving you names, but I know the premises; they are very large and important premises in Upper Thames Street, occupied by a firm carrying on a very large and important business, requiring considerable space. It is property that requires a good deal of looking after, and people have to be there constantly by reason of the early and late deliveries. They have an arrangement with the police with regard to the watching, employing what they call private constables, it is the ordinary arrangement; and they have two clerks who do not live on the premises but next door to their premises; there is a house that is let out as offices and this particular firm and another firm take the upper part of that house which is an inconvenient and lowly rated house, solely for the purpose of affording accommodation for these men to live in. It happens to be a different landlord there, so that there is no question about the different assessment; they get over the difficulty in that way; and at the top of their own warehouse there are most beautiful residential apartments absolutely vacant.

10,061. Do you think this has very much affect upon the population of the city?—Yes, undoubtedly it has. As a matter of fact the point has attracted a great deal of attention for some years now in the Corporation, and we have one or two associations in the City who have taken the matter up very strongly. It would perhaps be better for me to give you at once the differences in the population; I do not say that they are absolutely and entirely owing to this difficulty alone, but it has had a very great effect upon the population. In 1861 the residential population of the city was 112,063.

10,062. What do you mean exactly by "the residential population"?—That is the population taken by the Government census at night. In 1871 it had fallen to 74,897, in 1881 to 50,652, and in 1891 to 37,694; that is it had fallen off 74,369 in 30 years.

10,063. Have you for the same period, or for approximately the same period, the increase in the day population?—Yes. The first time the census of the day population was taken was in 1866.

10,064. That was restricted to the City, of course?—Yes, exactly the same area. In 1866 the day population was 170,133, in 1881 it was 261,061, and in 1891 it was 301,386, so that the day population has been enormously increasing whilst the residential population has been enormously decreasing.

10,065. But you would not, of course, put down the whole of that result to the difficulty which you have been stating to the Commission?—No, but from the

enormous number of vacant apartments and living rooms that there are in the City, we know that it has undoubtedly had a very great effect.

10,066. But there must be some strong reason besides this question of the inhabited house duty which has tended to make the night population of London decrease, must there not?—Yes.

10,067. Can you tell us what that reason is?—I think it is partly accounted for by the fact that, whilst it was once the fashion for people to live on their business premises, to a great extent, now they go and live in the suburbs, and let their first and second floor rooms for offices.

10,068. Is there not also a greater demand for warehouse accommodation and office accommodation in the City than there was formerly?—There is for office accommodation, but I do not know that there is for warehouse accommodation particularly.

10,069. But in so far as there is a great demand for office accommodation that would tend, would it not, to diminish the night population of the City?—Yes, that has a considerable effect. I have taken out some fresh figures which I think will rather point to the same result in a strong way. In 1894-5 the gross assessment of the City was 5,056,318*l.*, and the amount collected for inhabited house duty was 29,457*l.*; in 1888 the gross assessment was 4,556,252*l.*, and the inhabited house duty collected amounted to 33,256*l.*; so that while the assessment went up half a million exactly, the amount collected for inhabited house duty fell 4,000*l.*, in those very few years.

10,070. Is it your opinion that an alteration in the law, such as you suggest, would prevent, to some extent, the great congestion that there is in the poorer districts of London?—Yes, we think so very much, because there is a very large number of clerks who are not earning large salaries, but who have large families who would only be too thankful to live in these beautiful rooms that exist, and were purposely built for the purposes of residence, at the top of so many of these warehouses and offices, where they could live at a moderate rent, on the spot, and which are very healthy and quiet at night; but the owners cannot afford to let them do so for fear of having the assessment of the whole premises put up. Our suggestion always has been that some amendment of the Valuation of Property (Metropolis) Act, 1869 should be made, which even if it was only a separate column would enable the overseers, in the first instance, to distinguish between property that is occupied for business purposes, and property that is occupied as a residence, although in the same occupation. No doubt if that was done the amount of duty collected would be very much larger. It is true that it might be less in the suburbs, or in some other parts where these people go to, but from the City point of view the amount of duty collected would be very much larger.

10,071. Would that be owing to parts of these buildings being charged to the inhabited house duty, instead of their being as now void altogether?—Yes.

10,072. Do you think there would be any difficulty in carrying out such a suggestion as that?—I have made inquiries at the office of the Commissioners of the Inhabited House Duty, and they tell me that they do not think there would be any difficulty whatever in doing it. There might be a trifling difficulty in the first year in the overseers getting the necessary information, but after the first year there would not be the slightest difficulty; there would be no difficulty in adjustment; the only difficulty would be in getting the facts.

10,073. Has there ever been any endeavour to legislate in that direction, do you know?—Yes, there has been, though we have never had any luck in the matter. Over and over again the matter has been brought forward in the House.

10,074. In the shape of a Bill?—Or in the shape of amendments to a Bill. The Government are always trying to consolidate the house tax, and we are always opposing them on the ground that if it is more consolidated we shall never get a chance of a fight again; therefore, whenever the Government bring in a Consolidation Bill, we invariably attack it, and we have done a little to prevent this tax being consolidated. Mr. Parker Smith, in 1895, took the point up and fought it very much, then there came the dissolution, and there was an end of it all. The point has been constantly brought before the House, and I do not think at any time has

Mr. G. P.  
Goldney.

15 July '97

Inhabited House Duty in the City. Case of barmaids not able to sleep on the premises.

Inhabited House Duty in the City. City police who are married cannot live in warehouses.

Inhabited House Duty in the City. Property occupied for business purposes, and property occupied as a residence, though in the same occupation, should be distinguished.

Inhabited House Duty in the City. People will not pay Inhabited House Duty on business premises, and they let the residential parts stand empty.

Inhabited House Duty transferred in aid of local rates would be an advantage to the City if their wishes could be carried into effect.

it ever been opposed on its merits by anybody. Of course the Government would profit by it.

10,075. Are there any other points with regard to it that you would like to draw our attention to?—I have several other instances of hardship in working. There is the case which I have mentioned in my memorandum of a tavern keeper. I know about the case myself. Out of consideration for his barmaids he allowed one attendant each night to sleep in the house so as to escape the long journey to her home late at night, but the whole tavern was charged by the Inland Revenue Department as a dwelling-house, and so the proprietor was obliged after one year to send those women home, as he said he could not afford to pay the rate.

10,076. Would cases of that kind be very numerous?—They were, but they are not now, because the Inland Revenue followed the thing up and cleared them all out. There is another difficulty that they have made, but I think it has been got over in some way. We have the greatest difficulty in housing the City police anywhere in or near the City now, but there is a great demand for married constables to live at the top of warehouses, and so on, for the sake of protection. But there is always a fight on the question. Is he there for the purposes of protection; and if he is a married man what is his wife there for? Now, I believe, they are holding that, if it is a married constable there with his wife, it is an inhabited house. The Commissioner of Police says that until this thing is settled we must get lodgings for the men elsewhere, but we have the greatest difficulty in lodging the police. If we could get some fair and reasonable adjustment of this we should be probably able to house nearly the whole of our City police in the City, but there are very few of them sleeping in the City now except under those circumstances or at the barracks.

10,077. Are there any other points you would like to bring before the Commission?—I do not think so.

10,078. (Mr. Elliott.) The mere fact that the valuation list was made up in the amended manner that you suggest, would be of no value in itself, would it, unless the Chancellor of the Exchequer were willing to recast the house duty?—Yes, I think it would be. As I read the Acts, supposing there was a separate assessment, that is, that you could cut the house off horizontally, and charge the occupier on two different assessments, then the Chancellor of the Exchequer would only charge his house tax on the particular slice that was inhabited.

10,079. But still the Chancellor of the Exchequer would have something to say to this change, would he not, from the point of view of the Imperial Exchequer?—Yes. As far as the City is concerned, of course, it would be a great advantage to him.

10,080. Did I understand you to express the opinion that if this change were made the result would be to increase the amount of house duty which the Chancellor of the Exchequer would collect in the City?—It would very largely increase the amount. I have no hesitation in saying that we should very soon fetch up this 3,000£. or 4,000£.—in fact in the very first few months.

10,081. But if you were to take the Exchequer receipts as a whole, he would lose considerably, would he not, by the exclusion from the house duty of all those parts of business premises which were occupied for the purposes of business?—I do not think there would be any loss. The assessment has got so high that people do not pay inhabited house duty now on business premises. They will not do it; they would sooner let the premises go void, and leave them to the police to protect.

10,082. I understood you to say that there was a good deal of accommodation at the top of some of these warehouses which would constitute very eligible residential tenements for clerks and others?—Yes.

10,083. What is done with that property now?—It is absolutely void.

10,084. Absolutely empty? Is it not used for any purposes at all?—It is absolutely empty above a certain height. In the ordinary warehouses it does not pay to take the goods above a certain height unless they are very pressed, and for business premises the third floor is hardly worth anything.

10,085. It has several times been suggested that the inhabited house duty might be transferred from the Exchequer for the relief of local taxation; have you considered that proposal at all?—I have not considered

it from a city point of view, but I think from a country point of view there would be great advantages in it.

10,086. Do you think if that proposal were made the City would still be enthusiastic about these particular changes you have recommended?—If it could be accompanied by the mode of levying it which I suggest, that is, assessing the inhabited and the uninhabited part of the hereditament separately, then it would be a great advantage to the City undoubtedly.

10,087. You have made a suggestion, which is practically a suggestion for the relief of a certain number of the taxpayers at the expense of the Exchequer; would you make that suggestion if your proposal was for the relief of the ratepayers at the expense of the rates?—I do not suggest that it would be any relief. I say it would bring in a great deal more money. It is not any question of relief, because the citizens have relieved themselves. They say: "If we have got to pay " for a house we do not inhabit, of course we will not " inhabit it."

10,088. You advocate this change in the interests of the Chancellor of the Exchequer?—Really in the interest of getting the residential population of clerks, porters, and so on, back into the City, who have been driven out by the house tax. As I say, incidentally it would help the Chancellor of the Exchequer.

10,089. (Sir Edward Hamilton.) You seem to have given a great deal of attention to the inhabited house duty, have you formed any views as to whom the real incidence of the tax falls upon?—In the City undoubtedly, on the leaseholder; on the business, in fact.

10,090. On what you might call the consumer—on the general public?—Yes. If it is a bank it falls on the shareholders. It is a tax on the business where it is levied at all, but in the City of London, as you see, it is a very small amount; there are hundreds of properties which pay nothing towards it.

10,091. (Mr. Arthur O'Connor.) Sir Edward Hamilton's question suggests to me that your evidence may have a very important bearing upon the question of the incidence of taxation. You tell us that the night population has very much decreased, and that the day population has very much increased?—Yes.

10,092. Clearly, therefore, it is not as a residential area that the value of the City has gone up?—No; purely as a business area.

10,093. It has gone up, as you say, because it is a business area and there is a constantly increasing resort of men to that area?—Yes.

10,094. It is the influx of business men there during business hours that gives the place its value?—It is solely the business that gives the place its enormous rateable value.

10,095. Would it cost more to build a house in the City than to build the same house, stone for stone, in the middle of Salisbury Plain?—I know Salisbury Plain very well indeed. It is a very difficult job to get anything in the middle of Salisbury Plain.

10,096. Would you say it would cost more or less to build a given house in the City than to build the same house in Salisbury Plain?—You can build very cheaply in the City and very dearly on Salisbury Plain.

10,097. Therefore, may I put it to you in this way, that it is rather the value of the site that is in question, than the value of buildings as buildings?—That is so.

10,098. The value therefore attaches to the area of the City as a site?—Yes, as a site; in the same way that a shop in Piccadilly with a good corner to it is more valuable than, say, a shop in a poor neighbourhood.

10,099. The same would hold anywhere else?—Yes.

10,100. Who owns the City?—There are a very large number of freeholders in the City.

10,101. The City is owned by a large number of persons who are called freeholders?—Yes; it is not like the large West End estates.

10,102. With the increase of business resorting the freeholders find the value of their property going up from year to year?—In certain parts of the City.

10,103. Where there is a greater demand, a greater influx?—Yes; but it is very remarkable how the value of City property shifts periodically from one part of the City to another.

Mr. G. P. Goldney.

15 July '97

Inhabited House Duty in the City should only be levied in respect of the parts of the premises inhabited.

Inhabited House Duty in the City. Incidence of the tax.

Value of land in the City.

Mr. G. P.  
Goldney.  
15 July '97

10,104. It may go down, rather, comparatively, in some places and in other places go up, but always by reason of the resort to that area of other persons than the owner?—That is it. It is the resort to a particular part of the City that instantly increases the value of that part and lowers the value of another part, which the people formerly resorted to for specific trades, or for specific purposes.

10,105. And the particular freeholder where this increase of value is found does not himself do anything very material towards that increase?—No.

10,106. Is it due to causes independent of him?—It is due to trade causes.

10,107. And those trade causes are brought about by the energy of persons other than the freeholder?—Yes, certainly. Of course the freeholder in many cases goes to great expense in adapting his premises, for instance, in modern days, by putting in lifts, which is a very expensive process.

10,108. He is only too glad to facilitate the increase of the resort to his property?—Yes.

10,109. And it is the industrial population that gives the increased value?—It is the desire to do business rapidly, and to concentrate it in one area that gives the increased value.

10,110. What I mean is that those persons who are engaged in business, other than the freeholder, do, by their constantly increasing resort to that area, add to the value of the freeholder's property?—Yes; it is the concentration of trade in a small spot; people will almost pay any money to get their foothold on that small spot.

10,111. Under those circumstances, do you see anything unfair in principle in making the freeholder, who gets the benefit of the other men's industry, bear the local burdens?—That is opening a very wide question.

10,112. That is a question of the incidence of local taxation which your evidence suggests?—Yes, it is a question of the incidence of local taxation. The freeholder makes his bargain with the leaseholder for so many years to pay him so much; it is quite open to the freeholder, as, of course, is constantly done in country districts, to pay all rates and taxes himself, but, as long as they fairly ascertain the amount of the rates as they are in the City, the rates may go up or the rates may go down within certain pretty well known limits. It is really very immaterial what his bargain is, whether he says the tenant shall pay every time the overseers come round and collect it, or whether he shall pay it himself.

10,113. Let us imagine for a moment that the City area belongs to a personified freeholder—the freeholders at large?—Yes.

10,114. As I understand you, between the years 1888 and 1895 there was an increase in the rateable value of a good portion of a million?—Of about half a million, as nearly as possible.

10,115. I take it that that increased value attaches more to the site than to the buildings?—More to some sites.

10,116. Certainly; it is more in some districts than in others, but the general outcome is an increase of half a million?—Yes.

10,117. Due to the influx of more commercial people or more business people?—Yes, in a particular part of the City.

10,118. It is the freeholder that benefits to the extent of, say, half a million?—No, I do not think he does. Practically, they are all out on long leases. Take King William Street, for instance, which has not gone up very much in value. King William Street was built under an Improvement Act, so one knows the dates approximately; the King William Street houses begin to fall in about 1915, and I think they will pretty well all have fallen in by 1925.

10,119. I suppose, year by year, the reversion gets more valuable to the freeholders?—Does it?

10,120. I am asking you?—Still taking King William Street, a great insurance trade has concentrated itself in King William Street, and there is a large number of insurance offices there. I know about it, because the Corporation own a good deal of King William Street. For purposes, not very long ago, as you may have seen in the papers, we brought out a large loan, and we had to consider what the

assets of the City Corporation were, and what was the proper way of arriving at the value of them. Among other points, King William Street was considered. Now King William Street is one of those streets that has not gone up very much in assessable value or in letting value; it has been very stationary. It was considered on the whole that if one took King William Street at its present value, that was more likely to be right than to assume there would be any increase by about 1916, when, I think, the first house comes in. The Ludgate Hill property, as of course we all know, has gone down very much, but I am told that they now think it is going up again. All of this may happen whilst the 60 years leases are running—and most of them are 60 years' leases.

10,121. But I suppose that if the taxation were placed upon the freeholder, and the value of the site went down, the burden upon him would be less, whereas if in a particular district, the burden still being on the freeholder, the value went up, his charge would go up, it is only a per-centage at the most?—You see the freeholder does not benefit at all; it is a great chance whether he benefits at all. If his lease happens to fall in when that particular property is on the ascendant, of course, it is a very lucky thing for the freeholder. But take Ludgate Hill, where I happen, personally, to know some of the property very well indeed. A very large and important property fell in by expiry of the lease some three, or four, or five years ago, close to the Old Bailey turning, property that used to let at enormous sums of money; they cannot let it at all now, and it has been broken up into little shops for cheap stationery and so on. Take Lavington's great place immediately behind; they are carriers, and they stand at about half the rent that they used to pay.

10,122. Then the valuation has gone down?—It has gone down immensely.

10,123. And the charge would go down?—The freeholder had no advantage there. If the freeholder had sold, even with the outstanding leases upon it, 20 years ago, he would have done very well, but he cannot get, shall I say, half, now of what he would have got 20 years ago. It is not all advantage to the freeholder.

10,124. These are rather details; I was asking you in broad outline, and in a general way. I suppose the value of the City is very much greater now than it was 100 years ago?—Yes.

10,125. Than it was 50 years ago?—Certainly.

10,126. Than it was 25 years ago?—Yes.

10,127. Than it was 10 years ago?—Yes.

10,128. The successors in title of the men who were owners 100 years ago have a very much more valuable property than their predecessors?—Yes.

10,129. And that increased value has been brought about, I gather from your evidence, by the constantly increasing influx of commercial and business people within the area?—Yes.

10,130. The owners of the City, the freeholders, therefore, during the last 100 years, have seen the value of their property advance by leaps and bounds, taking them collectively?—Some of them have.

10,131. Taking them collectively?—Yes, taking them collectively.

10,132. I suppose the value of sites in the City is many times greater now than it was 100 years ago?—Hardly that; it is a great deal more valuable, but not many times.

10,133. That has been brought about by the agency of persons other than the freeholder?—Yes.

10,134. Where would be the inequity of causing the freeholder of the City, assuming he is one person, out of the benefit he so derives to meet the local charges?—It depends on what the local charges are. You would not suggest that the freeholder should pay for the watching and cleaning of the streets, lighting, and all that sort of thing.

10,135. Those are for services rendered?—Yes, and the great bulk of the local charges are for services rendered.

10,136. I should not expect him to pay for gas or for electric light, or for water?—Local services which are rendered for the benefit of the occupier he should not pay.

Mr. G. P.  
Goldney.  
15 July '97

Incidence  
of local  
taxation.  
Upon  
whom  
should  
taxation  
fall.

Value of

City has  
increased.

Incidence  
of local  
taxation.  
Upon  
whom  
should  
taxation  
fall. Rates  
of benefit  
and rates  
of burden.

**Mr. G. P. Golduey.** 10,137. But channelling, sewerage, paving, making roads—all these things improve the freeholders' property?—Yes.

15 July '97 10,138. Is there any reason why these should not be defrayed by the man who gets the benefit of other people's industry?—That is a little bit beyond me; that is a great question of policy.

10,139. You do not wish to offer an opinion?—No, I have never sufficiently considered it from a very broad point of view.

Population of City of London by day. How ascertained. 10,140. How do you arrive at the day population of the City?—I have got a book here setting it all out. It is a very expensive process. We place people at every entrance to the City.

10,141. Omnibuses, railways, foot passengers?—Every foot passenger is counted; every mortal thing, I was going to say, alive or dead, that comes in; and they are all classified. It is a very expensive process; we carry it out with the assistance of our police.

10,142. Have you also taken the trouble to ascertain anything about the increase in ground rents in the City?—Do you mean ground rents on building leases? No, you see so many of the houses are let at full rents, not at ground rents. Of course a re-building case is let at a ground rent.

Inhabited House Duty in the City should only be levied in respect of the parts of the premises inhabited. 10,143. You talked about dividing houses horizontally, the Temple is technically in the City is it not?—For many purposes.

10,144. Some of the floors in the temple are held to be freeholds, are they not?—I will not say they are freeholds, they are something more than ordinary leaseholds, or claim to be.

10,145. So that it might be suggested that there is already a precedent?—Of course, you get a precedent in what you call tenement houses, but then, you see, the occupier is a different person in each case, and here the objection is that it is all one occupation: that is, Messrs. So-and-so have the whole building.

10,146. You would regard the occupier in two different capacities, as I understand you?—I would.

10,147. One a purely business capacity, the other a house holding capacity?—I would do it as it is done in a great many parts of London and in a great many parishes. I know that where a man has got a house and stabling at the back in a great many parishes they will rate you separately, if you ask for it, for your house and for your stable, although really it is all one occupation, I would carry that sort of idea further, and would rate the living rooms apart from the business rooms if the occupier applied for it—the gross amount remaining the same.

Value of residential property for assessment purposes has fallen in the City. 10,148. The general outcome of your evidence, I take it, is, that whereas the total value of the City, (especially regarded as a site, has gone up considerably, the value of residential property for assessment purposes has gone down very much?—Very much indeed, it has gone down to nothing; I mean the money value at the present moment—although it would be a most valuable thing to have—the pecuniary value of it at the present moment has gone down.

Population of City has decreased at night to some extent owing to increased facilities of transit, but the porters, &c. who could live in warehouses have not gone to the suburbs. 10,149. (Mr. Wharton.) Have not the numbers of what I might call the night population decreased rather in proportion to the means of accessibility to the outside?—That has had a great deal to do with it, no doubt.

10,150. I mean as the number of railway trains or accommodation, and tramways, and so forth, has increased have you not found that that has rather gone *pari passu* with the decrease of the night population?—Yes, but it has all gone on together, and it is hard to distinguish.

10,151. That has been an apparent cause at any rate?—Yes.

10,152. People naturally desiring to get into the outside air, and finding means for doing so, that has rather caused it?—The class of people that have had to leave these top floors are not the people that have gone into what you would call the real suburbs, but they are the people who have gone away into other parts of London, such as around Drury Lane, and such places, which have got a little bit improved, just upon the verge of Bloomsbury, and so on; but they are not the people to go far away; they must be within very easy reach of business. They are porters, and people of that sort especially.

10,153. With regard to the rating of these unused upper floors, would it not be perfectly possible to rate them as tenements by putting a separate approach to them; for instance, if there is a street where there are, we will say, one or two upper floors which are unoccupied at the present time, by making those into a flat and giving them a separate staircase they might be separately rated?—Then you would have to get your separate access.

10,154. Quite so, but if the value of them is worth putting a separate access, that would be a means whereby they might be separately rated?—I suppose so. Whether they have actually considered that I cannot tell, but they have tried a great many different arrangements and they have never been successful. The one thing that I think has been referred to over and over again is this horizontal dividing, but they say the Act of Parliament will not allow them to do it.

10,155. You have, I think, only one basis of assessment in the City for all purposes?—Only one, under the Valuation Act.

10,156. Not like we have in the country?—It is under section 45 of that Act, and it applies not only in the city but all through the metropolis.

10,157. (Mr. Smith.) I think that you said that your assessment to inhabited house duty was based in London upon the "Valuation (Metropolis) Act, 1869"?—Yes.

10,158. Do you know how it is based in the country?—It is based on the assessment.

10,159. Is it on the assessment, or on Schedule A?—On the annual value.

10,160. On the gross estimated rental?—Yes.

10,161. That is the same thing, is it?—Yes.

10,162. Are you quite correct about that?—I have got the Act of Parliament, and I can refer to it.

10,163. I am not quite certain about it myself; it is collected, of course, by the Imperial authority, and I thought it followed Schedule A?—The Act says that it is "payable according to the annual value of such dwelling houses."

10,164. What Act are you quoting from?—From the Act of 1851. The subsequent Act only altered the amount.

10,165. The annual value I think you said?—Yes.

10,166. Is that the amount of the Government valuation?—It is the annual value.

10,167. My recollection is that the inhabited house duty is charged upon the gross?—It is.

10,168. Everywhere?—Yes.

10,169. Therefore, it is not charged upon rateable value?—No, but upon annual value, and that has been held to be the gross.

10,170. Annual value has been held to be rateable value for the purposes of water undertakings?—That was so in McCullagh Torrens' Act.\*

10,171. My point is, that there is no practical distinction between the case of the City of London and the case of other large towns?—I do not know of any.

10,172. I think you have said so already, but I only want to be sure; there is no special grievance?—There is no special grievance, only in the City it points a stronger moral.

10,173. The effect of your evidence is this: your object is, on the one hand, to make use of valuable premises which are at present unoccupied, owing to the peculiar way in which the inhabited house duty is collected?—Yes.

10,174. And, on the other hand, incidentally to bring into taxation an amount of property that escapes taxation?—That is so.

10,175. Because of the excessive burden of the tax, people avoid it on that account?—Yes.

10,176. That is the general purport of your evidence?—Yes, not that I am anxious to increase the taxation, but, incidentally, I have pointed out that the Chancellor of the Exchequer would benefit by it.

10,177. Having half an eye on the prospect of this being one of those taxes diverted to local purposes,

**Mr. G. F. Golduey.**

Unused residential portions of warehouses. How far possible to make a separate access

Valuation, one basis of, in the Metropolis.

Inhabited House Duty in City based on gross rental.

City of London desire to make use of premises at present unoccupied owing to operation of Inhabited House Duty.

Inhabited House Duty transferred in aid of local rates would be valuable to the City if their wishes could be carried into effect.

Mr. G. P.  
Goldney.  
15 July '97

10,104. It may go down, rather, comparatively, in some places and in other places go up, but always by reason of the resort to that area of other persons than the owner?—That is it. It is the resort to a particular part of the City that instantly increases the value of that part and lowers the value of another part, which the people formerly resorted to for specific trades, or for specific purposes.

10,105. And the particular freeholder where this increase of value is found does not himself do anything very material towards that increase?—No.

10,106. Is it due to causes independent of him?—It is due to trade causes.

10,107. And those trade causes are brought about by the energy of persons other than the freeholder?—Yes, certainly. Of course the freeholder in many cases goes to great expense in adapting his premises, for instance, in modern days, by putting in lifts, which is a very expensive process.

10,108. He is only too glad to facilitate the increase of the resort to his property?—Yes.

10,109. And it is the industrial population that gives the increased value?—It is the desire to do business rapidly, and to concentrate it in one area that gives the increased value.

10,110. What I mean is that those persons who are engaged in business, other than the freeholder, do, by their constantly increasing resort to that area, add to the value of the freeholder's property?—Yes; it is the concentration of trade in a small spot; people will almost pay any money to get their foothold on that small spot.

10,111. Under those circumstances, do you see anything unfair in principle in making the freeholder, who gets the benefit of the other men's industry, bear the local burdens?—That is opening a very wide question.

10,112. That is a question of the incidence of local taxation which your evidence suggests?—Yes, it is a question of the incidence of local taxation. The freeholder makes his bargain with the leaseholder for so many years to pay him so much; it is quite open to the freeholder, as, of course, is constantly done in country districts, to pay all rates and taxes himself, but, as long as they fairly ascertain the amount of the rates as they are in the City, the rates may go up or the rates may go down within certain pretty well known limits. It is really very immaterial what his bargain is, whether he says the tenant shall pay every time the overseers come round and collect it, or whether he shall pay it himself.

10,113. Let us imagine for a moment that the City area belongs to a personified freeholder—the freeholders at large?—Yes.

10,114. As I understand you, between the years 1888 and 1895 there was an increase in the rateable value of a good portion of a million?—Of about half a million, as nearly as possible.

10,115. I take it that that increased value attaches more to the site than to the buildings?—More to some sites.

10,116. Certainly; it is more in some districts than in others, but the general outcome is an increase of half a million?—Yes.

10,117. Due to the influx of more commercial people or more business people?—Yes, in a particular part of the City.

10,118. It is the freeholder that benefits to the extent of, say, half a million?—No, I do not think he does. Practically, they are all out on long leases. Take King William Street, for instance, which has not gone up very much in value. King William Street was built under an Improvement Act, so one knows the dates approximately; the King William Street houses begin to fall in about 1915, and I think they will pretty well all have fallen in by 1925.

10,119. I suppose, year by year, the reversion gets more valuable to the freeholders?—Does it?

10,120. I am asking you?—Still taking King William Street, a great insurance trade has concentrated itself in King William Street, and there is a large number of insurance offices there. I know about it, because the Corporation own a good deal of King William Street. For certain purposes, not very long ago, as you may have seen in the papers, we brought out a large loan concentrating our debt. We had to consider what the

assets of the City Corporation were, and what was the proper way of arriving at the value of them. Among other points, King William Street was considered. Now King William Street is one of those streets that has not gone up very much in assessable value or in letting value; it has been very stationary. It was considered on the whole that if one took King William Street at its present value, that was more likely to be right than to assume there would be any increase by about 1916, when, I think, the first house comes in. The Ludgate Hill property, as of course we all know, has gone down very much, but I am told that they now think it is going up again. All of this may happen whilst the 60 years leases are running—and most of them are 60 years' leases.

10,121. But I suppose that if the taxation were placed upon the freeholder, and the value of the site went down, the burden upon him would be less, whereas if in a particular district, the burden still being on the freeholder, the value went up, his charge would go up, it is only a per-centage at the most?—You see the freeholder does not benefit at all; it is a great chance whether he benefits at all. If his lease happens to fall in when that particular property is on the ascendant, of course, it is a very lucky thing for the freeholder. But take Ludgate Hill, where I happen, personally, to know some of the property very well indeed. A very large and important property fell in by expiry of the lease some three, or four, or five years ago, close to the Old Bailey turning, property that used to let at enormous sums of money; they cannot let it at all now, and it has been broken up into little shops for cheap stationery and so on. Take Lavington's great place immediately behind; they are carriers, and they stand at about half the rent that they used to pay.

10,122. Then the valuation has gone down?—It has gone down immensely.

10,123. And the charge would go down?—The freeholder had no advantage there. If the freeholder had sold, even with the outstanding leases upon it, 20 years ago, he would have done very well, but he cannot get, shall I say, half, now of what he would have got 20 years ago. It is not all advantage to the freeholder.

10,124. These are rather details; I was asking you in broad outline, and in a general way. I suppose the value of the City is very much greater now than it was 100 years ago?—Yes.

10,125. Than it was 50 years ago?—Certainly.

10,126. Than it was 25 years ago?—Yes.

10,127. Than it was 10 years ago?—Yes.

10,128. The successors in title of the men who were owners 100 years ago have a very much more valuable property than their predecessors?—Yes.

10,129. And that increased value has been brought about, I gather from your evidence, by the constantly increasing influx of commercial and business people within the area?—Yes.

10,130. The owners of the City, the freeholders, therefore, during the last 100 years, have seen the value of their property advance by leaps and bounds, taking them collectively?—Some of them have.

10,131. Taking them collectively?—Yes, taking them collectively.

10,132. I suppose the value of sites in the City is many times greater now than it was 100 years ago?—Hardly that; it is a great deal more valuable, but not many times.

10,133. That has been brought about by the agency of persons other than the freeholder?—Yes.

10,134. Where would be the inequity of causing the freeholder of the City, assuming he is one person, out of the benefit he so derives to meet the local charges?—It depends on what the local charges are. You would not suggest that the freeholder should pay for the watching and cleaning of the streets, lighting, and all that sort of thing.

10,135. Those are for services rendered?—Yes, and the great bulk of the local charges are for services rendered.

10,136. I should not expect him to pay for gas or for electric light, or for water?—Local services which are rendered for the benefit of the occupier he should not pay.

fall. Rates  
of benefit  
and rates  
of burden.

**Mr. G. F. Goldney.** 10,137. But channelling, sewerage, paving, making roads—all these things improve the freeholders' property?—Yes.

15 July '97 10,138. Is there any reason why these should not be defrayed by the man who gets the benefit of other people's industry?—That is a little bit beyond me; that is a great question of policy.

10,139. You do not wish to offer an opinion?—No, I have never sufficiently considered it from a very broad point of view.

10,140. How do you arrive at the day population of the City?—I have got a book here setting it all out. It is a very expensive process. We place people at every entrance to the City.

10,141. Omnibuses, railways, foot passengers?—Every foot passenger is counted; every mortal thing, I was going to say, alive or dead, that comes in; and they are all classified. It is a very expensive process; we carry it out with the assistance of our police.

10,142. Have you also taken the trouble to ascertain anything about the increase in ground rents in the City?—Do you mean ground rents on building leases? No, you see so many of the houses are let at full rents, not at ground rents. Of course a re-building case is let at a ground rent.

10,143. You talked about dividing houses horizontally, the Temple is technically in the City is it not?—For many purposes.

10,144. Some of the floors in the temple are held to be freeholds, are they not?—I will not say they are freeholds, they are something more than ordinary leaseholds, or claim to be.

10,145. So that it might be suggested that there is already a precedent?—Of course, you get a precedent in what you call tenement houses, but then, you see, the occupier is a different person in each case, and here the objection is that it is all one occupation: that is, Messrs. So-and-so have the whole building.

10,146. You would regard the occupier in two different capacities, as I understand you?—I would.

10,147. One a purely business capacity, the other a house holding capacity?—I would do it as it is done in a great many parts of London and in a great many parishes. I know that where a man has got a house and stabling at the back in a great many parishes they will rate you separately, if you ask for it, for your house and for your stable, although really it is all one occupation, I would carry that sort of idea further, and would rate the living rooms apart from the business rooms if the occupier applied for it—the gross amount remaining the same.

10,148. The general outcome of your evidence, I take it, is, that whereas the total value of the City, especially regarded as a site, has gone up considerably, the value of residential property for assessment purposes has gone down very much?—Very much indeed, it has gone down to nothing; I mean the money value at the present moment—although it would be a most valuable thing to have—the pecuniary value of it at the present moment has gone down.

10,149. (Mr. Wharton.) Have not the numbers of what I might call the night population decreased rather in proportion to the means of accessibility to the outside?—That has had a great deal to do with it, no doubt.

10,150. I mean as the number of railway trains or accommodation, and tramways, and so forth, has increased have you not found that that has rather gone *pari passu* with the decrease of the night population?—Yes, but it has all gone on together, and it is hard to distinguish.

10,151. That has been an apparent cause at any rate?—Yes.

10,152. People naturally desiring to get into the outside air, and finding means for doing so, that has rather caused it?—The class of people that have had to leave these top floors are not the people that have gone into what you would call the real suburbs, but they are the people who have gone away into other parts of London, such as around Drury Lane, and such places, which have got a little bit improved, just upon the verge of Bloomsbury, and so on; but they are not the people to go far away; they must be within very easy reach of business. They are porters, and people of that sort especially.

10,153. With regard to the rating of these unused upper floors, would it not be perfectly possible to rate them as tenements by putting a separate approach to them; for instance, if there is a street where there are, we will say, one or two upper floors which are unoccupied at the present time, by making those into a flat and giving them a separate staircase they might be separately rated?—Then you would have to get your separate access.

10,154. Quite so, but if the value of them is worth putting a separate access, that would be a means whereby they might be separately rated?—I suppose so. Whether they have actually considered that I cannot tell, but they have tried a great many different arrangements and they have never been successful. The one thing that I think has been referred to over and over again is this horizontal dividing, but they say the Act of Parliament will not allow them to do it.

10,155. You have, I think, only one basis of assessment in the City for all purposes?—Only one, under the Valuation Act.

10,156. Not like we have in the country?—It is under section 45 of that Act, and it applies not only in the city but all through the metropolis.

10,157. (Mr. Smith.) I think that you said that your assessment to inhabited house duty was based in London upon the "Valuation (Metropolis) Act, 1869"?—Yes.

10,158. Do you know how it is based in the country?—It is based on the assessment.

10,159. Is it on the assessment, or on Schedule A?—On the annual value.

10,160. On the gross estimated rental?—Yes.

10,161. That is the same thing, is it?—Yes.

10,162. Are you quite correct about that?—I have got the Act of Parliament, and I can refer to it.

10,163. I am not quite certain about it myself; it is collected, of course, by the Imperial authority, and I thought it followed Schedule A?—The Act says that it is "payable according to the annual value of such dwelling houses."

10,164. What Act are you quoting from?—From the Act of 1851. The subsequent Act only altered the amount.

10,165. The annual value I think you said?—Yes.

10,166. Is that the amount of the Government valuation?—It is the annual value.

10,167. My recollection is that the inhabited house duty is charged upon the gross?—It is.

10,168. Everywhere?—Yes.

10,169. Therefore, it is not charged upon rateable value?—No, but upon annual value, and that has been held to be the gross.

10,170. Annual value has been held to be rateable value for the purposes of water undertakings?—That was so in McCullagh Torrens' Act.\*

10,171. My point is, that there is no practical distinction between the case of the City of London and the case of other large towns?—I do not know of any.

10,172. I think you have said so already, but I only want to be sure; there is no special grievance?—There is no special grievance, only in the City it points a stronger moral.

10,173. The effect of your evidence is this: your object is, on the one hand, to make use of valuable premises which are at present unoccupied, owing to the peculiar way in which the inhabited house duty is collected?—Yes.

10,174. And, on the other hand, incidentally to bring into taxation an amount of property that escapes taxation?—That is so.

10,175. Because of the excessive burden of the tax, people avoid it on that account?—Yes.

10,176. That is the general purport of your evidence?—Yes, not that I am anxious to increase the taxation, but, incidentally, I have pointed out that the Chancellor of the Exchequer would benefit by it.

10,177. Having half an eye on the prospect of this being one of those taxes diverted to local purposes,

**Mr. G. F. Goldney.**

15 July '97

Unused residential portions of warehouses. How far possible to make a separate access

Valuation, one basis of, in the Metropolis.

Inhabited House Duty in City based on gross rental.

City of London desire to make use of premises at present unoccupied owing to operation of Inhabited House Duty.

Inhabited House Duty transferred in aid of local rates would be valuable to the City if their wishes could be carried into effect.

Population of City of London by day. How ascertained.

Inhabited House Duty in the City should only be levied in respect of the parts of the premises inhabited.

Value of residential property for assessment purposes has fallen in the City.

Population of City has decreased at night to some extent owing to increased facilities of transit, but the porters, &c. who could live in warehouses have not gone to the suburbs.

*Mr. G. P. Goldney.*  
15 July '97

possibly your opinion might be altered a little; I mean to say taxes must come from somewhere, and the City of London, it seems to me, if it could increase its inhabited house duty would have a very valuable tax?—Yes, no doubt it would be very valuable.

The witness withdrew.

Mr. JOHN RICHMOND COOPER called and examined.

*Mr. J. R. Cooper.*

10,179. (*Viscount Emllyn.*) You are the Town Clerk of the County Borough of Walsall?—I am.

10,180. And you appear to give evidence on behalf of the Corporation upon certain specified points, do you not?—Yes.

10,181. Would you tell us the first point you wish to call our attention to?—The first one is as to the general effect of the provisions of the Local Government Act, 1888, in relation to the financial adjustment between counties and county boroughs.

10,182. What are the particular provisions of that Act that you want to call our attention to?—The Act provided that certain licence duties should be given to counties and county boroughs in lieu of certain discontinued grants which had been formerly received from the Exchequer, and I contend that it was contemplated during the passing of the Bill in Parliament, and also by the very language of the Act itself, that each county and county borough should take the licence duties raised within their respective areas, subject to an adjustment to be made either by an agreement, or in case of difference by the Commissioners appointed by the Act of 1888.

10,183. Would you tell me the exact words of the Act you are referring to?—By section 32 it is provided that "An equitable adjustment respecting the distribution of the proceeds of the local taxation licences, and probate duty grant, and respecting all other financial relations, if any, between each county, and each county borough specified in the said schedule as being deemed for the purposes of this Act to be situate in that county, shall be made by agreement, within 12 months after the appointed day, between the councils of each county and each borough, and in default of any such agreement, by the Commissioners appointed under this Act; and such adjustment shall provide, in the case of any expenses which may in future be incurred by the county wholly or partly on behalf of the borough for the liability of such borough to contribute, and save as provided by this Act, any existing liability to contribute or to incur expense shall, after the appointed day, cease, and an equitable provision for such cessation shall be made in the adjustment."

10,184. Were there any instructions in the Act given to the Commissioners as to how they were to deal with this question when they were appealed to?—The Commissioners received their instructions from the Local Government Board.

10,185. Can you tell us what those instructions were?—A statement was made in the House by Mr. Ritchie, who at that time was President of the Board.

10,186. That would not amount to an instruction from the Local Government Board, would it?—No, I have not got a copy of the instructions of the Local Government Board.

10,187. (*Mr. Wharton.*) Do you mean to say there were actually instructions given from the Local Government Board to the Commissioners?—I understood so.

10,188. I may say I was one of the Commissioners, and I cannot recollect it?—I was going to quote from Mr. Ritchie's statement in the House.

10,189. (*Viscount Emllyn.*) There are in the Act itself certain instructions to the Commissioners, are there not?—Yes. The instructions are to this effect, that "in such adjustment regard shall be had to the existing property, debts and liabilities, if any, connected with the financial relations of the county and borough, and to the consideration that the county is not to be placed in any worse financial position by reason of the boroughs therein being constituted county boroughs, and that a county borough is not to be placed in any worse financial position than it would have been in if it had remained part of the county, and had shared in the division of the sums received

10,178. (*Viscount Emllyn.*) Is there anything you would like to add to what you have told the Commission?—No, I have got large volumes of statistics here, and if you want any further figures I shall be delighted to supply them, but I do not suggest any at the present moment.

"by a county in respect of the licence duties and the probate duty grant."

10,190. Apart from that, are you aware of any definite instructions given to the Commissioners on that subject?—I am not.

10,191. You wish to refer to some statement made by Mr. Ritchie when he was President of the Local Government Board, as bearing upon this point?—With your permission, I do. In reply to questions in the House, Mr. Ritchie, on the 3rd July 1888, stated that "the Government desired as far as possible that the boroughs should have the same control over their licence duties as that which was given to the counties," and further that "he had put down amendments under which questions of financial re-adjustment between the boroughs and the counties out of which they were taken would be referred to a Commission, and the instruction to the Commission was that regard should be had to the amount derived from licence duties."

10,192. Does that bear out to your mind the words of the Act you have just read to us?—I think so.

10,193. Then I see in your memorandum you refer to the Annual Report of the Local Government Board as bearing upon this?—I go on to point out that by the 18th Annual Report of the Local Government Board, for the year 1888-89, it is stated that "the amount of the local taxation licences collected in each administrative county and county borough will be certified by the Commissioners of Inland Revenue, and paid under our direction to each such county and borough subject to the deductions and adjustments herein after referred to."

10,194. What conclusions do you draw from these statements, and from the quotation from the Act?—That it was the intention both of Parliament and of the draftsman of the Act, that each county borough and each county should, subject to the equitable adjustment to be made under the Act, receive the amount of licence duties which they respectively contribute.

10,195. What has been the result now of the awards of the Local Government Act Commissioners, with regard to this distribution?—The general result has been that counties and county boroughs do not receive the amount they contribute, and that, in my opinion, has arisen from the fact of the Commissioners adopting rateable value as the basis of the distribution of the residue of the local taxation licences and the probate duty grant.

10,196. (*Mr. Wharton.*) How do you claim to know that the Commissioners adopted rateable value only?—My reason for stating it is, that I appeared before the Commissioners at the time the award was made in the case of Staffordshire, and that particular question was brought before the Commissioners, and the Commissioners said that they saw no reason for departing from the course they had taken in other cases in adopting rateable value.

10,197. Did they say "in adopting rateable value"?—I understood them to say so. It was the case of Nottingham in which the principle of rateable value was first adopted; that was followed up in the case of Derbyshire, and subsequently in the case of Lancashire; and I believe, so far as one is able to gather from the published award of the Commissioners, in nearly every case of dispute which was submitted to them for determination.

10,198. (*Viscount Emllyn.*) Do you suggest there is any statement made by the Commissioners that they adopted rateable value and not population?—Yes.

10,199. Can you give us a case in which that statement was made by the Commissioners?—I believe it was made in the case of Lancashire, in the case of Nottingham, in the case of Derbyshire, and certainly in the case of Walsall.

*Mr. G. P. Goldney.*  
15 July '97

*Mr. J. R. Cooper.*

Imperial contributions. Financial adjustment between counties and county boroughs. Alleged that the Commissioners adopted rateable value as the basis of the distribution of the residue of the local taxation licences and the probate duty grant.

Mr. J. R. Cooper.  
15 July '97

Imperial contributions.  
List of county boroughs and also counties receiving more and also less than the amount they contribute to the local taxation licence duties.

Imperial contributions.  
Financial adjustment between counties and county boroughs.  
Customs and excise duties.  
Alleged that the Commissioners adopted rateable value as the basis of distribution.  
Statistics showing distribution in certain county boroughs and counties.

10,200. Have you any award that you can quote, made by the Commissioners?—I have not the awards with me, but the awards are published.

10,201. Have you anything to say also as to the distribution of the residue of the customs and excise duties?—I have; but I would first wish, with your permission, to put in a statement showing the names of each county borough receiving less than the amount which they actually contribute to the local taxation licence duties and probate duty grant.

10,202. Is that extending over the whole of England?—Yes. Here is a list of the boroughs showing that altogether in the aggregate they received 63,958*l.* less than they contributed (*handing in table*).\*

10,203. Is that as regards the local taxation licence duties and share of the probate duty grant?—Yes.

10,204. But it does not include any reference to the customs and excise duties?—No, I am coming to that in a moment, if you will allow me. I also put in another table giving a list of county boroughs receiving more than they actually contribute in respect of the local taxation licence duties and the share of the probate duty grant. They received 61,985*l.* 15*s.* more. I would also like to put in a similar table as to the counties in each case. 18 of them received 30,120*l.* more than they contributed, and eight receive 28,147*l.* less than they contributed.\*

10,205. Passing to the customs and excise duties, have you anything you wish to say to the Commission upon that point?—Yes. The Act under which those duties were directed to be paid to the local authorities, that is to the counties and county boroughs, in case of dispute left the apportionment to be determined by the Local Government Act Commissioners, and the Commissioners again adopted rateable value as the basis of their distribution.

10,206. Can you tell us of any award that states that that was the basis for distribution which they adopted?—The Staffordshire award.

10,207. Did that state that rateable value had been adopted by them as the basis for distribution?—The original award made with respect to the local taxation licences and the probate duty grant, set out at the foot of it the rateable values of the county, and each county borough, in proportion to which the duties were to be distributed—that I am sure of; and the same principle was adopted in relation to the customs and excise duties.

10,208. (*Mr. Wharton*.) Did it not also set out the population?—No, it did not. I would like to put in a table showing the distribution of the customs and excise duties in county boroughs (*handing in table*).\* This is not a complete statement of all the county boroughs, but it is a statement containing particulars of 23 of them. It shows that the amount received per head of population for the year ending March 1896 was in the case of Walsall 3*l.* 1*d.*, Bootle, in Lancashire, another county borough, received 10*l.* 3*d.*, practically three times more than Walsall. Take the county boroughs in Staffordshire, and compare them with Walsall; West Bromwich receives 4*d.* as against Walsall's 3*l.* 1*d.*; Wolverhampton receives 4*l.* as against Walsall's 3*l.* 1*d.*; and Hanley receives 4*l.* 3*d.* as against Walsall's 3*l.* 1*d.* I would like to state that in the case of Staffordshire the county receives 5*l.* as against Walsall's 3*l.* 1*d.* With your permission, I will also put in this table, showing the distribution of the customs and excise duties in the counties (*handing in table*).\*

10,209. Have you any suggestion to make for an alteration in the law which you think necessary to avoid the inconveniences you have mentioned?—Yes, the principle upon which the rateable value is ascertained varies in almost every union in consequence of the allowances which are made by different assessment committees; therefore, I would suggest that instead of the residue being distributed in proportion to the rateable value, population should be taken or, as an alternative scheme, the residue should be distributed in proportion to the amount contributed by each county and county borough both to the local taxation licence duty, and to the customs and excise duty. That seems to be the fairest method of distribution, because each county and each county borough would get back in proportion to the amount which it actually pays, whereas the counties would not be any worse than they were

before the passing of the Act of 1868, because they will have taken out in pursuance of the Commissioners' award the amount of the old grants which they formerly received, and also the amount of the new payments which are substituted for the grants formerly made.

10,210. You spoke just now of the difference of the basis for the rateable value in the different counties and in different unions; have you got some examples with you that you would like to put before the Commission?—I have. At the time the Local Government Act Commissioners made their award there were four county boroughs in the county of Stafford, Hanley, Walsall, West Bromwich, and Wolverhampton. The rateable value of Hanley was 172,542*l.*, or 3*l.* 2*s.* 9*d.* per head of population; the rateable value of Walsall was 171,646*l.*, or 2*l.* 7*s.* 10*d.* per head of population; the rateable value of West Bromwich was 186,248*l.*, or 3*l.* 2*s.* 7*d.* per head of population; the rateable value of Wolverhampton was 261,955*l.*, or 3*l.* 3*s.* 4*d.* per head of population; while the administrative county had a rateable value of 3,300,349*l.*, or 4*l.* 0*s.* 8*d.* per head of population.

10,211. What conclusions do you draw from those figures?—That rateable value is not a fair basis upon which to distribute these licence duties; the differences are so wide in almost every union in a county. At the time the award was made information was obtained as to the rate at which houses with a small weekly rent were rated in the county boroughs. Three houses were taken as an illustration; one letting at 4*s.* per week, one at 5*s.* per week, and one at 6*s.* per week. The rateable value of these three houses in one borough amounted to 33*l.* 10*s.*; in another to 24*l.* 15*s.*; while in Walsall, I am sorry to say, it only amounted to 23*l.* 15*s.*; the difference in the case of three houses between the highest and the lowest being 9*l.* 15*s.*

10,212. (*Chairman*.) Does that not only prove that your rateable value in Walsall is too low?—The rateable value is undoubtedly low.

10,213. I mean lower than it ought to be?—That I will admit.

12,214. You believe that?—I do.

10,215. If you have a low rateable value that is why you get less money out of the Imperial Exchequer?—Does it not show, when we cannot control rateable value that it is unfair to take that as a basis on which to distribute that which Parliament intended to give.

10,216. That may be a matter of argument; you must leave us to suggest the remedy?—You must remember that the corporations who receive these moneys do not settle rateable value; that is a matter outside their functions altogether.

10,217. If your rateable value was higher, would not your grievance disappear on this head?—No, it would not.

10,218. Why not?—It would disappear to an extent, but the rateable value in the boroughs would never reach the rateable value in the counties unless a universal assessment was adopted.

10,219. Would it not disappear as between borough and borough?—It would not in the case of boroughs, because there are great differences existing between the boroughs. Take one of the county boroughs of Staffordshire, West Bromwich; they have a large number of exceptionally large works, iron works, chemical works, and so forth, and their rateable value is correspondingly high; take another borough like Walsall, where there are no exceptionally large works, but a large population of the workman class, there the rateable value is low and must of necessity be so.

10,220. (*Viscount Emlyn*.) Have you any knowledge of the general effect of the awards of the Commissioners throughout England and Wales?—I have, and I have already put in tables showing the result. Altogether, according to the Parliamentary returns of the Local Government Board on the 31st of March 1896, there were 64 county boroughs, 34 of them received 63,958*l.* 3*s.* 9*d.* less than they contributed, while 25 received 61,985*l.* 15*s.* 0*d.* more than they contributed.

10,221. (*Mr. Elliott*.) Do you mean for licences alone?—No, I mean for licences, and also for the share of the probate duty grant. But with respect to that I would like to point out that the share of the probate duty grant was to be ascertained according to the amount formerly received in respect of the old grants which were discontinued by the Act of 1868.

Mr. J. R. Cooper.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 334 to 337.

Mr. J. R. Cooper.

15 July '97

Imperial contributions. Financial adjustment between counties and county boroughs. Alleged loss sustained by Walsall. Also the case of Bootle and Wigan.

10,222. (*Viscount Emlyn.*) Are there any other points with regard to that which you would like to bring under the notice of the Commission?—I would like to point out the great loss which Walsall has sustained during the seven years ending March 1896. The administrative county of Stafford had, according to these same returns of the Local Government Board, contributed in licence duties and share of the probate duty grant 862,095*l.* 5*s.* 0*d.*; and the county received in accordance with the Commissioners' award, 866,319*l.* 8*s.* 1*d.*, showing that they received 4,224*l.* 3*s.* 1*d.* more than they contributed. Hanley contributed in licence duties 31,172*l.* 13*s.* 2*d.*, and in probate duty 21,002*l.* 5*s.* 7*d.*, making a total of 52,174*l.* 18*s.* 9*d.*, and in accordance with the Commissioners' award, received 59,595*l.* 12*s.* 1*d.* or 7,420*l.* 13*s.* 4*d.* more than they paid. Walsall contributed in licence duties 48,128*l.* 4*s.* 2*d.*, practically 17,000*l.* more than Hanley, and its share of the probate duty grant was 17,630*l.* 16*s.* 0*d.* making a total of 65,759*l.* 0*s.* 2*d.*, and, in accordance with the Commissioners' award it received 56,689*l.* 9*s.* 10*d.* showing a loss of 9,069*l.* 10*s.* 4*d.* West Bromwich contributed 33,199*l.* 15*s.* 9*d.* for licence duties, and 17,431*l.* 13*s.* 2*d.* for the probate duty grant, making a total of 50,631*l.* 8*s.* 11*d.*, and, according to the Commissioners' award, they received 55,918*l.* 1*s.* 0*d.* or a gain of 5,286*l.* 12*s.* 1*d.* Wolverhampton received 66,208*l.* 11*s.* 7*d.* for the licence duty, 26,429*l.* 19*s.* 10*d.* for the probate duty grant, a total of 92,638*l.* 11*s.* 5*d.*, and received, in accordance with the Commissioners' award, 84,776*l.* 13*s.* 3*d.* or a loss of 7,861*l.* 18*s.* 2*d.*

10,223. (*Mr. Wharton.*) For what period is that?—That represents the aggregate receipts for the seven years ending March 1896. I would like to point out that the figures I have given you do not show really the loss to the borough of Walsall. I took these figures from the Local Government Board annual returns and that does not show a payment which the Commissioners directed to be made by certain of the county boroughs to the county council under the temporary agreement which had been made between the county and the county boroughs comprised in it. In addition to the loss of 9,069*l.* 10*s.* 4*d.* which I say Walsall sustained, she had to refund to the county 2,095*l.* 13*s.* 4*d.*, bringing up the total loss to 11,165*l.* 3*s.* 8*d.* Wolverhampton also had to repay 3,349*l.* 5*s.* 10*d.*, making the loss in the case of Wolverhampton 11,211*l.* 4*s.* 0*d.* I respectfully submit that any basis which shows a result like this cannot be an equitable basis upon which these duties should be distributed, the result being, that one locality is taxed, and the money is paid to another.

10,224. Do you think that condition of things applies more or less throughout England and Wales?—It does, undoubtedly.

10,225. And is not peculiar to the district you are speaking of?—It is not peculiar to my district at all. I think there can hardly be a better illustration than the case of two boroughs in Lancashire, Wigan, and Bootle. They are both county boroughs. Bootle has a rateable value of 8*l.* 3*s.* 10*d.* per head, due entirely to the character of its buildings, large cotton warehouses, and so forth; whereas Wigan has a rateable value of only 2*l.* 19*s.* 5*d.* per head. Last year—I am speaking for the year 1896—Bootle received out of the residue, that is, after it has had its old grants, and after it has had the new payments provided for by the Act of 1888, 4,281*l.* 14*s.* 7*d.* more than it contributed to the local taxation licence duties, and probate duty grant, whereas Wigan, the poor borough, received 3,076*l.* 1*s.* less than it contributed to the local taxation licence duties, and probate duty grant. Now, taking the discontinued grants they were only 1,296*l.* more in Bootle than in Wigan, and Bootle contributed in local taxation licence duties, in which I am not including now the share of the probate duty grant, 2,760*l.* 15*s.* 9*d.*, whereas Wigan contributed 6,439*l.* 14*s.* 10*d.*, yet Wigan received in the award 4,291*l.* 4*s.* 8*d.* less than Bootle.

10,226. Is there any other question you wish to lay before the Commission besides the points you have mentioned?—Yes. I wish to call attention to the desirability of extending the limits of compounding for the purposes of the poor rate.

10,227. (*Chairman.*) That is a point we have had very fully before us, and I think, perhaps, I could take it shortly from you by referring to the practical suggestion that you make. You need not go into the existing state of the law, because we have had many gentlemen employed as you are who have told us all about that, and it is already upon the notes. I understand from

the last suggestion on your memorandum that you would like to see one limit for compounding for all rates and that that should be 10*l.*?—That is so.

10,228. Then that each local authority should have the power to determine within the limits prescribed by the Public Health Act, 1875, what allowance should be made to the owner when he pays the rate, whether the premises are occupied or not?—That is the suggestion of my council.

10,229. You think, with the local knowledge which your public bodies have, they would be able to make a fair bargain, having regard to the particular conditions of their own district?—I think they would.

10,230. (*Mr. Elliott.*) What is the amount of the gain to Walsall by reason of the operation of the Local Government Act and the further legislation which has taken place since that time?—The net gain per annum would be about 2,000*l.* under the Local Government Act, and 900*l.* under the Local Taxation (Customs and Excise) Act, 1890.

10,231. You have only gained 2,000*l.* per annum?—That is so under the Local Government Act, and about 900*l.* under the Local Taxation (Customs and Excise) Act.

10,232. Out of all those duties?—Yes.

10,233. Supposing your suggestion were adopted, what do you calculate your gain would be then?—We ought to gain another 1,100*l.* per annum.

10,234. How do you get at that 1,100*l.*?—I have worked out the calculation to show that if Walsall took a share of the residue in proportion to population it would receive 9,192*l.* as against 7,915*l.* 18*s.* 4*d.*

10,235. Is that a sum ascertained according to the rateable value, or according to the Commissioners' award?—According to the Commissioners' award, which is based on rateable value, and is expressly stated to be based on rateable value.

10,236. (*Mr. Wharton.*) May I ask again, where?—In the award itself, I am sure you will find it so.

10,237. Have you got the award with you?—I have not.

10,238. As a matter of fact we did not decide on rateable value?—I can assure you that I have a distinct recollection of the form of the award. First of all you, or the Commissioners directed—

10,239. I do not want to lead you into a long answer. You have stated as a fact that the Commissioners decided to base it on rateable value; I want to tell you that the Commissioners did not so decide, but that the Commissioners took rateable value and population into consideration in every case?—With the permission of this Commission, I would like to point out what the award with regard to us was.

10,240. (*Mr. Elliott.*) Have you the award with you?—I have not the award with me; it is in a bound volume, and I did not trouble to bring it up.

10,241. We can, of course, refer to the award for ourselves. You said you made a calculation just now according to population; did you take the proportion of the population of Walsall to the whole of the county of Stafford?—I did.

10,241a. Have you made any calculation of what would be the effect of taking the population as a whole through all the counties of England?—No, I have not; but I must be candid and admit that there is a difficulty in the way of population, although I think perhaps that is the fairest thing to do so far as the county boroughs are concerned. It would no doubt operate against the counties, and probably the fairest thing for the counties and the boroughs together would be to divide the residue in proportion to the amount contributed to local taxation licence duties, and the customs and excise duties.

10,242. I understand that you agree with the principle that all the discontinued and new grants should continue to be paid as they were paid prior to 1888?—I do.

10,243. And that you are dealing simply with the distribution of the residue?—Simply with the residue.

10,244. (*Mr. Murray.*) What do you think would be an ideal basis for distributing any Imperial subvention in aid of local taxation—putting the Local Government Act, 1888, out of the question?—In my opinion the ideal basis should be in proportion to the contributions

Mr. J. R. Cooper.

15 July '97

Imperial contributions. Position of Walsall if residue given in proportion to population.

Imperial contributions. Financial adjustment between counties and county boroughs. Alleged that Commissioners adopted rateable value as the basis of distribution.

Imperial contributions. Financial adjustment between counties and county boroughs. Suggested that distribution of residue should be in proportion to population or in proportion to the amount contributed by each county or county borough to local taxation licences. &c., &c.

Compounding. Limit of 10*l.* for all rates desirable, and that each locality should exercise discretion as to allowance when owner pays the rate whether the premises are occupied or not.

Mr. J. R. Cooper.  
15 July '97

to the licence duties. That is the fairest thing; it is fair to the counties and fair to the boroughs, and the counties would be better off under that distribution than they would under a distribution according to the population; though I would like to remind the Commissioners that the proceeds of these duties are required most where the population is the heaviest.

10,245. Why do you think that the sum received for licence duties would be an equitable basis for distributing Imperial subventions?—I have tested that, and I find that the contribution is more equal if you take it in proportion to the amount contributed by each county borough and county in respect of the licence duties. When I say the licence duties I mean both local taxation and customs and excise duties.

10,246. You say it is more equal?—Yes.

10,247. Equal to what do you mean?—Equal to the amount contributed and the amount they would receive under the Commissioners' existing award: there would not be the difference between the amount awarded by the Local Government Act Commissioners and the amount which would be paid if the award were amended so that each county and county borough should receive an amount in proportion to its contribution to the licence duties, as there would be if the amount to be received by each county and county borough of the residue was based upon population.

10,248. Putting the Local Government Act, 1888, out of the question, and the award of the Commissioners under it, and supposing you have got a clean sheet of paper, how would you proceed to distribute the 10 or 11 millions?—Putting that on one side, I should certainly say according to population.

10,249. Solely?—Solely; and I say that for this reason: that the greater the population the greater the necessity for relief of taxation.

10,250. Is that necessarily so?—I think you will find it so. You will notice, if you take out the figures as I have done in these returns, that it is the poorer boroughs which are hit most severely.

10,251. Does local taxation vary in its burden according to the population?—Clearly. Take for instance the police; in the case of Walsall the annual cost of the police force since the Commissioners' award was made has gone up quite 1,200*l.* a year.

10,252. Is that because the population have become more disorderly, or what?—The population, of course, is growing. Ours is a growing borough. Our population has gone up from about 58,000 to 71,000—13,000 in the last decade, and 12,000 in the decade before.

10,253. Do you think that on the whole your local expenditure increases substantially in proportion to population?—Undoubtedly. There are public baths and public parks, for instance; every item of expenditure depends upon population.

10,254. If the rateable value is not going up in the same proportion the burden is heavier?—That is so.

10,255. (Sir Edward Hamilton.) You prefer the basis of population to rateable value?—I do.

10,256. Have you ever considered a third alternative, which was originally suggested by the Government when the Act of 1888 was introduced, namely, taking the number of indoor paupers?—No, I have not. I remember that suggestion being under consideration, but I have not considered it in such a way as to make my opinion of any value to the Commissioners.

10,257. (Mr. Wharton.) With regard to the Commissioners' award, what was the date of that?—1890, I believe it was.

10,258. At the time was there an objection to the award?—There was an appeal to the Commissioners, but it was not possible to make any objection to the award.

10,259. You say there was an appeal to the Commissioners. Who was the appeal by?—The county and the county boroughs failed to agree, and they entered into a temporary agreement.

10,260. Then they came to the Commissioners?—Yes.

10,261. And the Commissioners made an award?—Yes, after hearing counsel.

10,262. Was there any objection lodged against that award?—No.

10,263. There was not?—No.

10,264. Why not?—It was felt that it would be useless having regard to the expressed opinion of the Commissioners appointed under the Act of 1888 to attempt to upset the decision which they had then come to.

10,265. Under the Act there is a power to appeal to the Local Government Board at the end of five years, is there not?—Yes.

10,266. Have you appealed?—No.

10,267. Why not?—Because my Corporation felt that as under the Act of 1888 the matter would have to be referred to an arbitrator appointed by the Local Government Board, there was little probability of an arbitrator setting on one side the decision arrived at by the Commissioners appointed under the Act.

10,268. But why not, if the circumstances may have varied very much in those five years?—I can quite understand a single arbitrator saying: "This was a decision arrived at by Commissioners specially appointed by Parliament, and I am not going to review their decision as to the basis on which the residue shall be distributed."

10,269. Supposing the circumstances five years after that period had varied considerably, would it not be perfectly fair for any arbitrator to say: "The circumstances having varied I vary the award accordingly"?—One has to consider their chances in these matters, and I can quite understand that an arbitrator would be very loth to say that. My advice to my Corporation has always been to wait until the opportunity came which has now come of making their grievance known.

10,270. They had a substantial power of altering that agreement by referring to the Local Government Board, who would appoint an arbitrator?—Yes.

10,271. If there be this injury, this wrong which you say exists, I want to know why they have not taken the opportunity of that appeal which they are empowered to do by the Act?—Because as I tell you they felt there was grave doubt as to whether any single arbitrator would take upon himself the responsibility of upsetting the decision of the Local Government Act Commissioners.

10,272. Even although the circumstances may have changed during those five years?—Yes, but then he would be bound, or feel himself bound, by the principle of rateable value having been laid down for the distribution of the residue.

10,273. Again I must remind you of the fact, of which I can assure you, that the Commissioners did not adopt the principle of rateable value as their guide. They adopted the principle of rateable value and population as they found most fitting and most equitable in the various cases they had before them?—Shall I tell you what they did in the case of Staffordshire?

10,274. (Chairman.) Mr. Wharton was a member of that Commission; surely you can take his word?—Yes.

10,275. (Mr. Smith.) The primary object of the Commissioners was to divide certain subventions equitably between counties and county boroughs?—That was so.

10,276. You have told us that as regards 34 county boroughs they got 63,958*l.* less than their licence duties amounted to?—That is so.

10,277. And that as regards 25 other county boroughs they got 61,985*l.* more?—Yes.

10,278. So that substantially as between counties and county boroughs, which was the purpose of the Commission, justice was done?—I think you are comparing the two sets of county boroughs in your question?

10,279. Yes; I mean to say that if one set got 64,000*l.* less and another got 62,000*l.* more there was no great injustice as regards the county boroughs as a whole?—Not as a whole.

10,280. I am asking you to take it as a whole. I asked you whether the primary object of the Commission was not to divide certain subventions between counties and county boroughs?—Yes, it was.

10,281. You say by your own figures that whereas 34 county boroughs receive 63,958*l.* less than they were entitled to, 25 county boroughs received 61,985*l.* more. So that there is no substantial difference as between counties and county boroughs, and justice was done?—Not as between counties and county boroughs, but as between the two sets of boroughs you have referred to,

Mr. J. R. Cooper.  
15 July '97

Imperial contributions. Financial adjustment between counties and county boroughs. Contention that distribution made partly on basis of rateable value and population.

Imperial contributions. Adjustment between counties and county boroughs. General results in counties and county boroughs.

Imperial contributions. Financial adjustment between counties and county boroughs. Case of Walsall. Commissioners' award, no appeal made against.

*Mr. J. R. Cooper.*  
15 July '97  
the 34 boroughs which received 63,958*l.* less than they contributed, and the 25 boroughs which received 61,985*l.* more, practically no injustice would be done; but then that is not the question, if you will excuse me.

10,282. But that is my question. As regards the counties there seem to have been similar difficulties with regard to them, but the gains and the losses nearly balance?—Yes.

10,283. The counties seem to have gained on the one side 30,120*l.* and lost 28,147*l.*?—Yes.

10,284. My point therefore is this: that as between counties and county boroughs, which it was the primary object of the Commission to distinguish, no great injustice was done?—With that I cannot agree. What I say is that the object of the Commission was to distribute the duties equitably between each separate county and the county boroughs comprised therein; and therefore it is unfair to take the whole of the boroughs and the whole of the counties in England and Wales.

10,285. I thought you rather admitted that the primary object of the Commission was to divide certain subventions equitably between counties and county boroughs?—Yes, equitably between each county and the county boroughs comprised therein.

10,286. There would be no necessity for the Commission at all if the county boroughs had not been created by the Act?—With that I agree.

The witness withdrew.

*Mr. CLARE SEWELL READ* called and examined.

*Mr. C. S. Read.*  
10,293. (*Chairman.*) We all know that you were long in Parliament, that you are also, at the present time, a county councillor, guardian, chairman of an assessment committee and of a parish meeting, and that you are a well-known agriculturist and entitled to express the opinion of the Farmers' Club, on whose behalf you appear to-day?—Yes. I was for from 30 to 40 years guardian, and I was chairman of the Cattle Diseases Committee for 27 years, but at the present moment I have declined those honours—since last Michaelmas.

*Education Act, 1870. Tendency of new rates to increase in amount.*  
10,294. I think you were in Parliament at the time that the Education Act of 1870 was passed, and voted for Sir Massey Lopes's motion in 1872?—I did. If you would allow me with regard to the Education Act I should like just to make this observation, that it illustrates in a marvellous degree how new rates, when they are imposed, have a tendency to increase. Mr. Forster and Mr. Gladstone assured us that the rate would not probably exceed 3*l.*; since I have been in London I have paid an education rate of 1*s.* 1*d.* Also I should like to observe that when Mr. Albert Pell brought forward an amendment to the Education Bill to the effect that agricultural land should be assessed at one-fourth of its rateable value, Mr. Gladstone said it was revolutionary, and I ventured to draw his attention to the fact that he was a member of the Government which passed the Free Libraries Act, which assesses the agricultural land at one-fourth of its value. Since then, there has been a great number of Sanitary Acts which have assessed the agricultural land in the same manner. I thought that the Free Libraries Act was a sort of Educational Act, and that land ought to be assessed under the Education Bill in the same manner.

*Sir Massey Lopes's resolution in House of Commons, 1872.*  
10,295. What was the effect of Sir Massey Lopes's resolution in 1872?—It was to the effect that it stopped the imposition of new rates upon real property to a considerable extent. In the speech that I made on that occasion I wound up by saying: "They would not get very much help from the present Government, or, perhaps, from any future Government; but the great thing was to take care that their rates did not increase and, above all, that fresh charges were not thrown upon them." That, I think, has been carried out fairly well.

10,296. Perhaps you would read to me the exact text of Sir Massey Lopes's resolution on that occasion?—"That it is expedient to remedy the injustice of imposing taxation for national objects, on one description of property only, and therefore that no legislation with reference to local taxation will be satisfactory which does not provide, either in whole or in part, for the relief of occupiers and owners in counties and boroughs from charges imposed on ratepayers for the administration of justice, police, and lunatics, the

10,287. Therefore the primary object was to divide the subventions between the counties and the county boroughs; whether some boroughs got better terms than others depended, no doubt, upon the terms of the award?—Yes, but then I would remind you that the Commissioners considered and gave an award in each case separately.

10,288. There is one extraordinary case I notice in your tables; can you give me any explanation of it? It is the case of Manchester, which appeared to have made a gain of 23,053*l.* 5*s.* 0*d.*?—Yes.

10,289. Can you give me any explanation of that?—I cannot, except that the rateable value of Manchester is very large.

10,290. Can you tell me when your last general assessment was made in Walsall?—There is an assessment just being completed now; the one previous to that was made 20 years ago.

10,291. Then your rating authorities have grossly neglected their duty apparently?—The assessment committee have undoubtedly neglected their duty, but the council cannot control the assessment committee.

10,292. Did the council ever appeal against the existing assessment?—Certainly, and it is upon their urgent solicitation that a new assessment has just been undertaken; but it has taken me seven years to work the assessment committee up to that point, and I have been at them repeatedly.

"expenditure for such purposes being almost entirely independent of local control."

10,297. That was at the time or about the time when Mr. Goschen presented his well-known report?—It was previous to that report.

10,298. A good deal has been done since then in the way of contributions from the Imperial Exchequer?—It has.

10,299. I should like your comments upon the policy of those grants?—Those grants have been very just, and have contributed materially to the reduction of the burden on the ratepayers. But with the establishment of county councils, I find, as with all large bodies, there is a great tendency to increase expenses, and I think I may say without offence that, generally speaking, very large bodies are more in the hands of their officials than a smaller body is.

10,300. Do you think that the distribution of the responsibility over a large number of people tends to decrease the sense of personal responsibility, and so to counteract the check upon expenditure?—Yes, I do, very much. Might I read just one word from Mr. Pell's article in the "Royal Agricultural Journal," in which he says: "With no minister of the Crown officially commissioned to promote or encourage local economy, with no powerful organisation among ratepayers having the same object in view; the theorist, philanthropist and 'politician' have the ratepayer almost at their mercy, and the poor helpless creature is offered up at the shrine of popularity."

10,301. What is the date of that?—1895.

10,302. You must excuse my comment upon that; it is a broad, general statement and laid down in bright colours with a large brush, but do you think it is absolutely true?—As far as my experience goes it is absolutely true that the larger the board the greater the expenditure and the extravagance.

10,303. Do you suggest that you should go back again to the days before the Local Government Act was passed?—I should suggest that you should go back to the days of the Reform Act of 1867, and abolish the compound householders.

10,304. Then, that being so, have you any practical suggestion to make to us to counteract the tendency which you regret?—No, I have no suggestion to make, because I feel that there is a very great danger now that the representatives in all our local institutions are practically elected by the majority of people who pay no rates; I doubt not that the tendency to extravagance will continue.

10,305. In the county, which I think is Norfolk, with which you are mostly connected, has there been, as a matter of fact, an increase of expenditure during

*Mr. J. R. Cooper.*

Valuation of Walsall has been too low for a number of years.

*Mr. C. S. Read.*

Imperial contributions have contributed materially to reduction of burdens upon ratepayers.

County councils. Tendency to increase local expenditure. Increased expenditure for main roads, and in consequence of new responsibilities and duties imposed upon them, as well as increased expenditure in respect of old duties. How far present constitution of local bodies responsible for this. Position of Norfolk

Mr. C. S.  
Read.  
15 July '97

the last eight or nine years?—Very considerably. We have taken over 1,300 miles of main roads, and those main roads absorb the whole of the Government subvention which is equal to 6*d.* in the £. In the last days of the quarter sessions the county rate was 3½*d.* and now it is 6½*d.*

10,306. You would agree with me on this, that, of course, taking over a new expenditure, new matters on which local money is to be expended, is not the same thing as extravagance upon those charges which were before laid upon the local authority. What my question was directed to was this, to find out whether in the things which were formerly under the direction of the quarter sessions, the administrative work I mean, but which are now done by the County Council you can trace a tendency to extravagance?—There has been a great amount in the increase of the cost; I would not say that it is extravagance. Of course under the quarter sessions we had only the maintenance of half the main roads.

10,307. That touches a large question of policy. What I wanted to get from you is, has the new local authority increased expenditure; you say the county rate was formerly 3½*d.*, and it is now 6½*d.*, leaving out of the question main roads, which you say is equivalent to 6*d.* in the £, and accepting that statement would you trace for me how the difference has arisen between the 3½*d.* and the 6½*d.*, which is expended on that county rate?—If you leave out the roads, a great portion of it is in consequence of the new duties that have been placed upon the County Council which did not fall upon the quarter sessions.

10,308. I am only leaving out the main roads because you leave them out yourself and say it is equivalent to a 6*d.* rate, the Government subvention coming in place of it?—Yes.

10,309. I call attention to what you say, namely, that the county rate was formerly 3½*d.*, and now it is 6½*d.*, and I want to give you an opportunity of expressing your opinion as to how that increase has come about?—I think there is a very great increase as a matter of course in salaries, and in the new work that has been thrown upon the County Council since the days of the quarter sessions.

10,310. What new work do you specially allude to?—I allude to such new work as the Weights and Measures and the Adulteration Acts, and those minor matters which have cropped up since, but I cannot remember them just now.

10,311. I put this to you, that the rise in the rate, whether in itself right or wrong, arises not from extravagance in the performance of old duties, but from the performance of duties which are new, and, therefore, likely to cause an increase in expenditure?—I should like to say that I think the old duties have cost a great deal more than the new, and that there is a very large accession of fresh duties which are put upon the County Council since the days of the quarter sessions.

10,312. What are the temptations to increased expenditure under the present system, which was introduced in 1888?—I think generally that the County Council likes to do things really well. We pride ourselves very much on the excellence of our county roads, and we are told that we have an immense acquisition in the shape of cyclists that come down in consequence of it, and I think spending money gives a large amount of popularity.

10,313. Do you think there is less power of resistance when proposals for increased expenditure are brought forward?—I think there is, now that these councils are more popularly elected.

10,314. For example would you say, as some witnesses have said—of course it does not affect county councils, but it affects district councils—that there has been an increase of outdoor relief since the establishment of the popular election of the district council?—I am quite sure of that; there is no doubt about that, I am old enough to remember the old poor law and the universal system of outdoor relief which then prevailed, and its demoralising and pauperising effects.

10,315. What unions would you refer to as establishing that opinion of yours?—I take all the unions with which I am personally acquainted; I will take the unions of Forchoe and St. Faith's; those are the unions that I was absolutely connected with as a guardian; I think you might say so generally throughout Norfolk too.

10,316. Do you think it has arisen from the popular election of district councils or from the unfortunate state of agricultural matters in those counties, which, as we know, is extremely disastrous?—It is entirely in consequence of the democratic constitution of the new bodies.

10,317. Is it not also the fact that that particular district has been, agriculturally speaking, one of the most depressed in the kingdom?—Yes, it has been, but I do not think it is any worse now than it has been for the last 10 years. What I go upon is this—the increase in the amount of outdoor relief, and also the increase in the number of paupers.

10,318. I want to be quite sure that we are, either of us, or both of us, putting the saddle upon the right horse; I want to be quite sure whether it is owing to the popular election of district councils or whether it is owing to circumstances which would have had their effect whether the Act of 1888 had passed or not?—I do not think there has been any change in the position of the agricultural depression in Norfolk during the last few years.

10,319. You think it was as severe before 1888 as it is now?—We have had a great number of bad years since, certainly, but there is not very much difference, I think. Of course, in this year we have got a turn in our favour happily.

10,320. Are you still a guardian?—No, I have nothing to do with the administration of the poor law now.

10,321. Then you do not speak from actual personal knowledge on that point?—I do not from actual personal knowledge at the present moment, but I left Norfolk only last Michaelmas, and, therefore, I have had a pretty good experience, having been a ratepayer, and, indeed, I am now a ratepayer in the county of Norfolk to a considerable extent.

10,322. Have you served on assessment committees?—I was chairman of an assessment committee for a good many years—the assessment committee of the Forchoe Union, of which Lord Kimberley is now chairman.

10,323. What do you think the best basis for fixing a valuation for both Imperial and local taxation?—We have always taken rent, and we have had no trouble in our union except in the case of some landowners who have been, I suppose, compelled to farm their own land, and also in the case of some yeomen, who have objected to their assessment being fixed by the committee rather than accepting their own valuation.

10,324. What do you do in the case of land which is in hand—whether in the hand of the large landlord or in the hand of the yeoman; how do you proceed to fix the value?—We generally fix it by comparing it with adjoining farms.

10,325. Do you think that the local knowledge which the members of the assessment committee possess is fairly exercised as between man and man?—I can only answer for my own assessment committee; I think it was absolutely as far as our knowledge went; I think it was very fairly carried out.

10,326. To diverge for a moment into a matter which is, in some aspects, rather a pressing grievance; it has been suggested to us more than once by those who are interested in the rating of the tithe rentcharge that many of the assessment committees, being composed of farmers, while they are willing enough to reduce the valuation of farms, they do not reduce the valuation of the tithe rentcharge to the point to which it ought to be reduced; what have you to say to that contention?—I say that as far as our assessment goes it is absolutely untrue. You take the value of the rent-charge for the year and you assess it annually accordingly. It passes through the hands of our clerk, and he appropriates it entirely. He is bound to do it. Every year you ought to take a fresh assessment of the rent charge because it varies. I cannot conceive that anybody could make that objection. I quite understand the parsons saying, and with great justice, in my opinion, that as nine-tenths of the produce of the farm have been now assessed at half, the one-tenth that they have, should be assessed also at one half. I think that is a very good ground for their appeal to Parliament, but I cannot think that there is any objection on the other point.

10,327. But they go further in the particular point which I am here putting to you than that, and say that the letting value of what would be given by the hypothetical tenant for the rentcharge is the basis of

Mr. C. S.

Valuation of agricultural land. Rent the best basis. Valuation of land in hand.

Assessment committees deal fairly in matters of valuation with all interests concerned. Valuation of tithe rent-charge is fairly dealt with by assessment committee composed of farmers.

Mr. C. S.  
Read.

15 July '97

Valuation of tithe rent-charge. Deductions from tithe rent-charge, what would be equitable and what would not be.

Surveyor of taxes. Representation on assessment committees. Reasons suggested against such representation.

Ability to pay. Rental of a house apart from land in agricultural parish is a rough criterion, representing a tenth of income, but the parson and farmer pay more than this proportion.

the valuation, and they say that the hypothetical tenant would not give, say, 100*l.* for the purpose of collecting 100*l.*, but that there are various deductions that should be taken off it—deductions for bad debts, for payments to curates, and so on, and that these things are not sufficiently allowed for by the local committees—what have you to say to that?—I have to say in the first instance that you have no more right to deduct the salary of a curate from the parson's assessment to his tithes, than you have to reduce the farmer's assessment in consequence of his paying money to his bailiff. With regard to the other point which you mentioned, I think the man who, in the present state of the law, allows many bad debts is an absolute fool. I would collect anybody's tithe nowadays from the owner of the land at 2½ per cent., and that is what is always allowed off, at least that is what we have always allowed. Of course, in addition to that there are the repairs to the chancel, insurance, and all the rates to come off, and it is very well known now that you cannot assess tithe at 100*l.*, but you have to take the value for the year, which is about 70*l.*

10,328. You would I suppose agree with me in this would you not, that the most desirable thing to do is to get the fairest value as between one class of property and another for rating purposes?—Yes.

10,329. Would you like to see the Imperial officers; the surveyor of taxes, associated with the local bodies for the purpose of bringing to bear the benefit of their experience and interest?—I know it is a very popular notion at the present time that you should have only one basis for Imperial and local taxation, and, of course, in that case you must have the surveyor of taxes present; but the surveyor of taxes is an officer whose duty it is to get the greatest possible amount of taxes out of the district where he lives, and the duty I think of an assessment committee is to make an assessment that is equal throughout the district. I know that some assessment committees take a low value and some people take a high value, and others take rent.

10,330. Is it not very desirable not as between one man and another in the district, but as between district and district that a uniform principle should be adopted?—Yes, but then comes the question, as to what is that principle. If it is the principle that you are to get the greatest amount of rate as well as taxes out of a certain district, then I cannot think it is justified. I might perhaps illustrate what I mean by what has happened to me since I have been in London. The Surveyor of Taxes there is upon the Assessment Committee, and I am assessed at 60*l.* above the rent I pay, above my gross rental, in consequence, I believe, of some other people having 25 years ago taken leases of houses in the district which was then fashionable and which now is not. I do not particularly like paying the Government on this 60*l.* house-duty more than I ought to pay, but I have in addition to that to pay my landlord's property tax. I cannot charge him for more than I pay him. And the water rate is also on the same assessment; so that I am not quite so favourable to one general assessment as I was before.

10,331. Do you wish to say anything about the question of whether a man's house is a rough criterion of the ability of the occupier to contribute to the rates?—If you take an agricultural parish I think you may say very roughly the rental of the house is a fair criterion of the ability of the man to pay.

10,332. (Mr. Elliott.) Of the house as distinguished from the land held with it?—Yes, exactly. Then, if you do that, you will find in taking the assessment of any agricultural parish that the professional man and the trader, and the artisan and the labourer, pay upon one-tenth of their income, but you will find the parson pays on his net income, and the farmer, until lately, on double his income.

10,333. (Chairman.) By what process do you arrive at the statement that the farmer pays on double his income?—Because he is assessed on the rateable value of his property, which is based invariably on the rental that he pays, and his income is supposed to be half his rental. It is different now, as a matter of course, because he is now assessed on only half the value of his agricultural land, and that, I think, certainly ought to exist until such time as all other property contributes fairly to the rates.

10,334. I see an indication in your memorandum that you desire to draw a contrast between two men, one of whom is a trustee upon an estate of 563,000*l.* of

personality, and the other a trustee upon an estate of 30,000*l.* of real property?—Yes; that individual is myself, and therefore I can speak with very good authority upon that. The 563,000*l.* is entirely composed of stocks, shares, and Government securities; it is mainly in Consols—Indian 3 per cents.—I think there are a few railway debentures—and the rest of it is in first class North American securities. For years the administration of that estate, which brings in something over 4 cent. on the capital, has not cost more than 4*l.* per year.

10,335. What do you mean by cost?—That is the only thing we pay out of it. Every dividend is paid into the bank, of course minus the property tax, but there is nothing whatever that goes out, except 4*l.* a year for the clerk who keeps the account. Now with regard to the other, the 30,000*l.* in real property, which I fear is not worth now above 15,000*l.*, that is the most troublesome property to manage that I have ever had anything to do with. It is composed mainly of land and what I call industrial buildings, that is to say, maltings, brickfields, tan yards, a few houses, and a good many cottages. By the time that you have paid the tithe, the rates, the taxes, the quit rents, the repairs, the insurances, the empties, the loss of rent—and there has been a good deal of abatement which I suppose might go also as loss of rent—the law charges and collections, we do not net above 50 per cent. of the gross value.

10,336. So far as the first estate you mentioned is concerned, you have left out the income tax, have you not?—No, I have not left it out; I said I deducted it.

10,337. In dealing with one estate and another as a matter of comparison you would, of course, take in the income tax?—Yes, of course you would.

10,338. If any of it was derived from property in this country, such as railway property, it would have paid its share of the rates before the net profit was declared, would it not?—Yes, certainly; no doubt about that.

10,339. I want to get from you exactly what is the moral you want us to draw from the comparison between the two?—I think that the income of that 563,000*l.* ought to contribute something to the local taxation of the country more than it does. It is equally benefited by the laws of this country, I believe.

10,340. You do not, of course, leave out of sight the fact—I am far from saying it is sufficient—that is a matter of argument that I do not want to go into, that it does contribute something through the income tax?—Yes, and so does the agricultural interest. If you take the report of the last Royal Commission it clearly proved that the agricultural interest, and land particularly, paid more Imperial taxes than personal property does, and I hope that will not escape the notice of the Commission. They always keep saying: "Look, what personal property pays towards Imperial taxation." Yes, but the whole of the real property in the country contributes in a similar and, in my opinion, in a larger way.

10,341. My only object in asking the question was this, that of course you would agree with me that when you are going to consider under our terms of reference the basis under which taxation is raised for local purposes, and to report whether and how far all kinds of real and personal property contribute equitably to such taxation, of course you must take into consideration all the burdens which each kind of property has to bear at the present?—Quite so.

10,342. Have you anything to say upon what you describe as "hereditary burdens"?—If I might illustrate what I mean, I would take the case of the farm which I recently quitfied at Honingham. Honingham is what we used to call a close parish, that is to say, it maintained its own poor only, and was not subjected to the rates of the union. In the year 1862 and I think again in 1864, the Union Assessment Acts were passed, which in my opinion were quite just—there is no doubt about it. I do not find fault with that legislation, but the net result was that I think it put something like 40 per cent. more rates upon my farm. I did not get any reduction of rent in consequence of that augmentation of the rates.

10,343. Do you not make a new bargain with the landlord?—No, we did not make new bargains with the landlord, except that in the last 10 or 15 years, he has been good enough to return us 25 per cent. off the rent

Mr. C. S.  
Read.

15 July '97

Real and personal property. How far do these classes of property contribute to local and Imperial taxation.

Increase or decrease of rates on agricultural land never affects the question of rent. How far agriculturists take rates into account when taking a farm. They ask for no adjustment of rent if rates increase.

Mr. C. S.  
Read.  
15 July '97

10,344. Ought you not to make bargains?—I have not done so, and on the whole I consider that it was not for me to make bargains with my landlord, who was considerate, liberal, and just.

10,345. I suppose a man in going into a new parish at the present time to take a farm would take into account, would he not, the amount of the rates which he would have to pay?—A new tenant might take them into account, but I can say in my long and varied experience I have never known the question of rent paid by a sitting tenant to be affected by the rates. I know it is theoretically wrong altogether, but I suppose we are very old and conservative in our notions as farmers, and I have never in my life known a single instance of an alteration in the rent based upon either an addition or subtraction of the rates, but I have heard of some landlords who have paid half the Education Rate.

How far lessees of houses in towns take rates into account when taking a house.

10,346. I do not say people to whom a few pounds more or less does not make much difference; but when an individual is going to take a house in London or in any other large town and he is balancing the advantages in his own mind between one suburb and another, do you not think that he takes into account the rates that he will have to pay as well as the rent?—Yes, and so did I in coming into my house, but I find that I have to pay rates upon an assessment of 60*l.* more a year than I expected. I do not suppose my landlord will in any way reduce my rent.

10,347. I do not want to have any appearance of arguing with you, but if you are calculating the advantages between living, we will say, in Belgrave Square and in somewhere north of Hyde Park, do you not think it is a fair thing and a reasonable thing to take into consideration whether in addition to the rent that you have to pay to your landlord you will have to pay 2*s.* 6*d.* or 3*s.* in the £ to the public rating authority?—I do not know whether you would in the first place think of the sixpence.

10,348. Do you not think it makes a difference to you in balancing the relative advantages of the two places?—I daresay it would in the mind of a valuer, but not in the mind of a common farmer, who has been rated upon double his income and now upon only one-tenth; it did not to me.

Rates in respect of new purposes of expenditure have increased.

10,349. You were speaking a moment ago about hereditary burdens, have you anything to say as regards rates which are comparatively new rates such as road rates, education rates, sanitary rates, lunacy charges, and so on?—Yes I would say that since I have been a ratepayer the police is an entirely new charge, the abolition of the turnpikes, of course, has very much increased the highway rates, and the education rate is entirely new, although in my individual case we had a national school for certainly more than 50 years to which we contributed.

10,350. But not by means of a rate, you contributed voluntarily?—We had a sort of voluntary rate. Then there are the sanitary rate, the sewage rate, the Weights and Measures and the Adulteration Acts which have come on of late, all of which are very good things. I do not complain of them, but I say as far as agricultural land is concerned it is not benefited by them to the extent to which it is charged for them.

Government should bear the cost of certain expenditure now paid locally such as expenditure on lunatics, &c.; also half cost of indoor poor, but not outdoor, and, perhaps, whole cost of police. Question of administration discussed.

10,351. Do you desire to put forward to us any practical suggestion as to the lines upon which any recommendation of ours should go?—I think that the Imperial Government might take over the whole cost of the lunatics, and I am certain that it ought to take all the charge of the administration and justice and the salaries of the coroners. I myself individually should not mind their taking over the whole of the police, but I know there are grave objections to that which have been put forward by people who are much more capable of giving a proper opinion upon that.

10,352. One of the disadvantages would be this, would it not, that if the whole cost was Imperial you would have to have Imperial instead of local management?—At the present moment, really, local management as far as regards cost is regulated by the Government inspector. If he comes down and finds your men not properly clad; if he comes down and thinks there is not a sufficient quantity of police constables in a certain district he will threaten to stop the subvention. So that I do not think there is very much in that, although, of course, I quite agree that there is that fear; then I should suggest that half the cost of the indoor poor should be defrayed by the Government.

10,353. In that you would draw a great distinction between the indoor poor and the outdoor poor, of course?—I should entirely, because the indoor relief is so totally different from that of the outdoor.

10,354. You would not agree with a witness who said that the outdoor poor should be made a charge upon the Imperial Exchequer?—No, I know what that would mean, half the people would be pauperised.

10,355. Is there any other point that I have missed?—I think the land tax might be given to the county councils, in aid of the local rates. I daresay you will say what an extraordinary difference there is in the land tax. That happens to be just because of this, that the land tax presses heavily upon the most impoverished and pauperised part of the kingdom, that is to say, East Anglia, and some of the home counties, pay more of the land tax than any other district in England. I do not think that giving those counties that land tax would in any way be unfair considering how they have suffered from the agricultural depression. With regard to the half rating between owners and occupiers, I think that is a recommendation of the last Agricultural Commission.

Land tax. Proceeds might be given in aid of local rates.

10,356. (Mr. Elliott.) The Duke of Richmond's Commission?—Yes; there was a time when I was rather in favour of that, because first of all the magistrates in quarter sessions had the management of the county rate, and they were also all of them *ex officio* guardians, so that they could be if they liked properly represented on those bodies. But now that their influence is ended, and that they have no sort of control over the expenditure of the rates, I think it would be exceedingly unfair, unless you had a separate assessment for the owners, that half the rates should be paid by them, and especially now-a-days when the majority of the people who spend the rates do not contribute anything directly towards them.

Division of rates between owners and occupiers would not now be fair, as owners have so small a representation on local bodies and so little control over the expenditure.

10,357. (Chairman.) Do you think it much matters who lays on the rate or whether it is paid directly through the hand of the occupier? Do you or do you not think that really it is a charge upon the owner?—It may eventually be a charge upon the owner, but it does matter very much indeed who has the expenditure of the rates. I will illustrate it in this way: I was chairman of a local parish meeting in which there is no compounding for cottages. At the first meeting which we had under the new Act, one of the labourers asked whether a man who occupied a house with an orchard that was assessed at 6*l.* was a proper recipient of poor law relief, and another man asked whether, in the case of a labourer in the receipt of full wages who had his mother to keep his house, his mother was a proper recipient of the poor rates. I will venture to say there is no parish in the county of Norfolk where compounding is in vogue, in which those two questions would have been asked by any labouring man. It is when the collector goes direct to the labourer and asks him for his quarter's rate of 1*s.* 0½*d.* or something of that sort, that he feels the pressure of local taxation.

10,358. You think if it is 1*s.* 0½*d.*, and it mounts up to 1*s.* 4*d.* or 1*s.* 3*d.* in the next quarter, it causes a searching of heart which nothing else will do?—I am sure of it. It is just the same with a farmer; if he has to pay a 2*s.* rate one year, and a 2*s.* 6*d.* rate the next, he will grumble and growl, and, in all probability, if he is a guardian he will have a rough time of it.

Farmers ask for no adjustment of rent if rates increase.

10,359. But he will not go the length of making a new bargain with his landlord?—He will not go that length.

10,360. (Mr. Smith.) I suppose the objection to making a new bargain is that sometimes the question of rent as well as the question of rates would have to be considered?—Not in these days; it would in olden times; but now any question that will upset rent is against the landlord and in favour of the tenant.

10,361. Are you now a ratepayer in Norfolk?—I am a large ratepayer in Norfolk; I have a farm there still.

Rural and urban rates. Amounts compared, and purposes of expenditure.

10,362. What are your rates there, all told?—I should think they are about 2*s.* 6*d.* in the £.

10,363. That is about the average throughout England, of the rural rates, is it not?—I think so. It will not be that now, I think, but I have not had my last demand note.

10,364. I am not speaking of the deduction under the Agricultural Rates Act?—It was about half a crown previously.

10,365. With regard to those main roads, you seem to have an increase there you say, of from 3½d. to 6½d., but of course, those main roads had to be repaired before by somebody; they were repaired by the parishes, I suppose?—They were repaired half by the county and half by the parishes.

10,366. Now they are repaired wholly by the county?—Yes.

10,367. I mean to say somebody must have maintained them so that that 3d. is not all loss?—It is not all loss. We have got very capital roads: there is no doubt about that.

10,368. You have got efficiency, but perhaps you think it a little extravagant?—I think it is very extravagant. Our parish roads did cost us about 7l. a mile, and our county roads cost us 35l. now.

10,369. You have found a good deal of difference in the urban rates since you came to London, have you not, in the amount in the £. I do not mean to say that that difference has occurred since you came, but that you have found a great deal of difference as compared with the country rates?—I think I am assessed to the rates in a fairer proportion to my income than I was before.

10,370. Shortly, what are your rates in the £ where you are living in London?—I do not know.

10,371. 6s. or 7s. probably?—5s. or 6s., but then they rate for so many things that I never get any advantage from in the country.

10,372. You have never taken the trouble to analyse the rate that you pay in London to see how much of it is for things that you paid for in the country, and how much you pay for things which are new luxuries since you came to London?—I have not done it.

10,373. It would be interesting to divide it in that way?—Yes it would. There is one very considerable item which I think is quite right, namely, that I, living in the West End, have to contribute towards the expenses of the poor in the east.

10,374. That is under the Equalisation of Rates Act?—Yes, I think that is right.

10,375. Do you share the views that have been put before us, that personal property should be taxed by a tax in the nature of an income tax for local burdens?—I think it should be taxed, but I am not prepared to say I could tell you how it should be assessed.

10,376. It has been suggested by several witnesses from the agricultural districts that the proper thing would be to have a kind of income tax on personal property including, some of them said, taxes on industry and personal exertion for local purposes; do you share that view?—Yes, I do; I think that everybody ought to contribute according to his ability, according to the old law of Elizabeth, and I do not know of any other way of getting at it except through income.

10,377. Cases have been put to us which I will put to you. Do you think a man who is getting a large income as a public singer should be taxed on his income to pay the rates of country parishes?—Yes, most certainly if he has a good income from any source whatever he ought to be taxed, but whether he ought to be taxed in consequence of his having a fine voice in the same proportion as a man who has the same amount of income from consols, is a different question altogether, and into that I do not enter.

10,378. Do you think he is much interested in your local expenditure?—I think he is an Englishman and ought to contribute towards the local taxation as well as towards the Imperial taxation.

10,379. If he is a good tenor I am afraid he is not often an Englishman?—That is all the more reason he should pay.

10,380. But you see his income is as secure to him probably in any other capital as in London?—That may be, but I would tax him on the income he made in London.

10,381. (Mr. Wharton.) You have suggested as a possible relief for local taxation the taking over by the Government, and consequently, of course, defraying from Imperial funds the cost of the police and lunatics for instance; if that were the case that would be relieving local taxation practically out of the income tax?—Yes.

10,382. And consequently it would accomplish the purpose that Mr. Smith has just alluded to; you would

get that out of a public singer or out of the holder of consols—you would be providing for the cost of that which now comes, according to the opinion of many, too heavily on local taxation?—I do not care how the money is levied as long as we get it fairly.

10,383. You have spoken about the increase of the rates arising from the County Councils Act; with regard to the Parish Councils Act have you had much experience of a rise of rate due to that Act?—No; in the case of the parish meeting over which I presided we had to make a return to the Local Government Board, I think, of the property of which we were possessed. We were possessed of an account book which cost 4l., and of a very nice iron seat that I had put upon the footpath for the accommodation of the old men. That is the only property we had, and we have never spent a shilling of the rates.

10,384. You did not charge the iron seat on the rates—I need not ask you that?—I did not.

10,385. Have you heard of such cases, as I am afraid exist, where the rating authority is composed of men who are almost entirely non-ratepayers, and who have laid a very heavy burden upon their district in the way of electric lighting, and so forth—that has not come within your knowledge?—It has come within my knowledge, but not within my actual experience; I do not say electric lighting, but I know this, that there are some parishes in the county of Norfolk where they have spent all they could, as far as regards the extent of the rate, which is limited by Act of Parliament.

10,386. Have any of the adoptive Acts been taken up; I mean the Baths, Washhouses, Paving, and Lighting Acts?—I do not think they have come to that.

10,387. You have suggested the lunatics, the police; would you make any suggestion about the relief of the roads from Imperial taxation on the French system?—I fear I do not know what that is.

10,388. They have the *routes nationales*, which would be, what I should call the arterial roads, in France, which are maintained by Imperial funds, whereas the smaller roads are maintained out of local funds. I do not know whether you have given any attention to that idea?—Hardly. In Norfolk I should rather object to that. We have no arterial roads there; we run right into the sea, and, therefore, I doubt we should come off rather badly. Otherwise, I daresay, there is a great deal in it.

10,389. (Mr. Murray.) As regards your practical suggestion that the nation should defray all the cost of the lunatics, the administration of justice, and so on; is it partly your suggestion also that the administration of those services should remain as it is now?—I fancy that you might do just the same as you manage the prisons. You have a visiting committee for the prisons now, and the Government defrays all the expenses. I cannot think but that you might have a visiting committee of the county council just in the same way. Then I would say this, that really the Lunacy Commissioners absolutely control the expenditure, for they are always suggesting something fresh, and I never knew them in any way make a suggestion in favour of economy.

10,390. The indoor paupers the same?—Yes, I would not have the whole charged to the Government; half the cost of the indoor paupers might, I think, very well be paid out of the Imperial Exchequer.

10,391. Do you think that would tend to economy?—I do not think it would make any difference one way or the other, because the poor law inspectors are just like other inspectors; they are constantly suggesting some improvement in the condition of the workhouse, and, generally speaking, in the diet and comforts of the poor.

10,392. But there is a good deal of difference between inspection and administration, is there not?—If you have an inspector who tells you to do things, we find, generally speaking, we are obliged to do them, whether we like it or not, especially in the case of lunacy, because they would not give us the grant if we did not do it.

10,393. Do you not think that a good deal of the extravagance of these local bodies that you complain of is due to the fact of their getting these large contributions?—I do not think it at all; I really do not think that is the cause. I think the cause of the extravagance is the popularity which spending money gives to the body and to the individual who promotes it.

Mr. C. S.  
Read.  
15 July '97

County councils and parish councils increased expenditure. Constitution of rating authorities, how far composed of non-ratepayers.

Main roads. Should they be paid for by the Government.

Government should bear the cost of certain expenditure now paid locally. Question of administration discussed.

Imperial contributions do not tend to extravagant administration.

Income tax in aid of local expenditure. This suggestion discussed.

Government should bear the cost of certain expenditure now paid locally.

Mr. C. S.  
Read.  
15 July '97

10,394. There is a certain amount of unpopularity on the other side, I suppose?—But that is such a minority; they are most influential as far as regards their position, but their numbers are so small in comparison with those people who like to spend money. Popular feeling is with you invariably when you spend money.

10,395. (Mr. Elliott.) With regard to the assessment committees, do you think that the union is the best possible area for the purposes of assessment?—I should say so; you must not have it too large.

10,396. Do you think that the county would be too large an area?—I think the county might revise it. I should like to see a committee of the county council acting as an assessment appeal court rather than the quarter sessions; the quarter sessions is an unsatisfactory appeal court, in my opinion, against assessments.

10,397. Do you think that that would give a better result than the present results?—I mean a more equal result?—Yes, I think it would most certainly give a more equal result if you had an appeal to a body that would be appointed generally by the county.

10,398. With regard to your suggestion as to the land tax, do you think it would be better that the land tax should be handed over to local authorities or that the land tax should be further reduced if not repealed altogether?—One is a direct relief to the individual who pays the land tax, and the other is a relief to the county in which that property is situated; possibly it would be more absolutely just to give it to the owner.

10,399. The land tax is very unequally levied now, is it not?—Very.

10,400. Would not the handing over of the land tax to local authorities tend to stereotype that inequality?—Yes; but I do not see how you can by any possibility alter the inequality.

10,401. Already, as you know, by an Act which was recently passed, no land tax can amount to more than 1s. in the pound, can it?—That is so.

10,402. Would you favour further legislation in a similar direction which would get rid of the inequalities altogether, or would you prefer, as you suggest, that the land tax should be handed over to the local authorities, which I am afraid would tend to keep on foot those inequalities for all time?—I have not considered it in that light. I should have thought the easiest way would have been to have given it to the counties; I do not think the landowners would object to pay it as they do now.

10,403. Do you think the county councils would ever give it up if they once had it?—I should hope not.

10,404. Do you think the Chancellor of the Exchequer is more likely to give it up?—Yes; I think he is. That is an argument in favour of what you suggest.

10,405. There is one question I should like to ask you with reference to the position of mortgagees under the present system; do you think that mortgagees contribute equitably to local taxation?—They do not contribute anything.

10,406. Do you think it would be reasonable that they should contribute something?—I think that their income should be taxed for the purpose of local taxation; I do not say specially, but the way I suppose they are taxed now for Imperial purposes.

10,407. Would you be disposed to favour the suggestion that a certain proportion of the rates should be deducted from the mortgage interest in the same way that income tax is deducted?—I think that would complicate matters very much. I would rather have them charged on an increase of the tax that they pay to the Imperial Exchequer than take individual cases.

10,408. You suggest that the Agricultural Rates Act of last session should be continued in force until personally pays its full share of the rates?—Yes; I do sir.

10,409. What is your view as to the full share that personally ought to pay to the rates?—I think a man ought to pay according to his ability, and the best test of his ability is income.

10,410. But he now contributes something, does he not, towards the relief which is given to agricultural land by the Agricultural Rates Act of last session?—Yes, he does, and so does the farmer himself, and so does the landlord himself. Agricultural land and agriculturists pay exactly the same, at least rather more to Imperial taxation than other people.

10,411. (Chairman.) What Imperial taxation does a farmer with an income of 100l. or 150l. pay?—He pays in just the same way as any other man who has the same income would.

10,412. He pays no income tax?—He does not pay any income tax.

10,413. It amounts to this does it not, that with the exception of the probate or tithe duties, and what he drinks or smokes he pays nothing?—He pays just like any other individual. He pays on his cart which he drives to market, he has to pay a tax upon his gun; he pays a tax upon his dog if he keeps a dog for the purposes either of sport or pleasure. He has to pay exactly the same as any other man, and I cannot understand why the farmer and the landlord are alone put down as going to be relieved of these rates. We say real property ought to be relieved of them because other people contribute but very little towards them. Then, of course, these other people say we have contributed considerably. We reply: Yes, you have contributed, but it is not enough and that whereas land and farming have gone down in value, and in profit, personalty is increasing by leaps and bounds, and escapes with nothing but an income tax.

10,414. (Mr. Elliott.) With regard to the Act of last session that Act transferred, did it not, a burden equal to half the rates on the agricultural land to the general exchequer of the country?—Yes, to which the farmers and the landlords have contributed.

10,415. Would you suggest that the farmers and the landowners have obtained no benefit by that transfer?—Most certainly they have.

10,416. They did obtain a benefit?—We did obtain a benefit and a just benefit.

10,417. Do you think that that principle ought to be extended?—You are here in order to find out something better, and I hope you will, but until you do find out something better I hope that will be continued. That is all I can say.

10,418. Do you think the proportion of one half was a satisfactory proportion?—I should like to have had it three-fourths, and I should like also even in this present Act to have the agricultural buildings included at one half, which exemption has been a source of considerable annoyance to assessment committees.

10,419. You still think that, notwithstanding the provision in the Agricultural Rates Act of last year, the agriculturist in a broad sense of the term, including both the owner and the occupier, is unduly burdened as compared with other classes of the community?—I would not say that now, but if you had asked me that question 12 months ago, I should have said "Most certainly." There is no doubt that the Act of 1896 was a considerable relief to the cultivators of the soil.

10,420. I rather understood you to say that the relief had not gone far enough, and that you thought it more equitable that three-fourths should be given instead of one-half?—What I should prefer, and what is right, perhaps, may be two different things. I cannot help saying that I think it did not go far enough, but I am very grateful and thankful to the Government for having done what they did; I hope they will stick to it.

10,421. Is that view based on your opinion of what is equitable in the case, or because you would like something more?—I believe that if you come to fathom this question to the bottom, you will see that even the rates as now levied upon agricultural land are more than is just or equitable.

10,422. (Viscount Emlyn.) You took a good deal of part, I think, with Sir Massey Lopes, with regard to his motion of 1872 and with regard to several other motions of the same kind when you were in Parliament?—Yes.

10,423. Since that time a considerable number of these subventions have been given in relief of local taxation?—Yes.

10,424. As you suggested just now, we have got to suggest, if we can, anything better than those subventions; do you yourself consider that mode of contribution a satisfactory one?—I think it is the very best that I know that could exist at the present moment; whether there is anything better, I cannot tell.

10,425. You have got no suggestion to make on that point?—No.

Mr. C. S.  
Read.  
15 July '97

Agricultural Rates Act. Agriculturists have benefited by it. A greater measure of relief should have been given, and buildings should not have been separated. Even now rates levied in respect of agricultural land are more than is just.

Imperial contributions a satisfactory mode of contribution.

Valuation, area for. (Union is the best area. Appeal court composed of committee of county council better than quarter sessions.

Land tax. Proceeds might be given in aid of local rates.

Mortgagees should contribute towards local taxation.

Agricultural Rates Act should be continued until contribution is made to local rates in respect of personalty.

Mr. C. S.  
Read.

15 July '97

Government should bear the cost of certain expenditure now paid locally. Question of administration discussed.

Surveyor of taxes. Representation on assessment committee. Reasons suggested against such representation. But Schedule A. found to be a useful guide for assessment committee.

10,426. With regard to your suggestion that the police should be taken over, and the cost of the lunatic asylums should be taken over, I understood you further to suggest that the police and the lunatics should be dealt with much in the same way, as far as control is concerned, as the county prisons are at the present time?—Yes.

10,427. Do you not think that the county prisons at the present time are absolutely, for all practical purposes, under the control of the Executive Government and not of the counties?—I daresay they are, but at the same time, it is a very great safeguard, I apprehend, to have a visiting committee.

10,428. But their powers are very small, are they not?—I have never been a visitor since the new arrangement as to prisons.

10,429. (Chairman.) As a matter of fact, the visiting committee have no power of administration at all, have they?—No.

10,430. (Viscount Emlyn.) As far as administration is concerned they have no control of any sort or kind?—No, and I have every reason to believe that those prisons are as well regulated, perhaps better regulated than they were, and certainly more uniformly regulated than they were under the old system.

10,431. Then I come to this—would you be prepared to put your police and your lunatic asylums into the same position?—Certainly, the lunatic asylums.

10,432. You would see no objection to that?—Not in the least.

10,433. Do you see any objection to putting the police under the Government?—I have none myself, but I have heard people, who know much more about the administration of the police than I do, say they should not like it. Therefore I have no opinion to offer upon that point.

10,434. With regard to the surveyor of taxes, it has been suggested that it is very desirable to bring in the surveyor of taxes and to get him in touch with the assessment committees at the first start of making the assessment for the parish or the union; have you considered that question at all?—At the assessment committee over which I presided we have always asked the surveyor of taxes to furnish us with Schedule A. every year.

10,435. Have you worked with him in that way?—We have not had him in the room, but we have always been guided by the returns that he made.

10,436. Have you always had his figures before you?—Yes.

10,437. Is that a general practice throughout assessment committees?—No, it is not. Some people go for what they call equality, and they say we will have a high value, and they go in for high values; others will go in for low values, and so on; so there is no uniformity. As far as regards our county rate, that is always levied with us upon Schedule A.

10,438. Have you found that having the surveyor of taxes' figures always before you has been of assistance to you in coming to a fair valuation?—Yes. I think it is a very useful help indeed. My point is this, please: that if he is to come into the assessment committee and say that Mr. A. has been simple enough to

give 50*l.* more for a farm than his neighbour, and therefore his neighbour should be assessed at the same rate, that ought not to be; but that is what I am afraid of. Of course, you want equality. But it seems to me that there are two different principles; the principle of taxation is to get all you can out of the district fairly; I do not mean to say unfairly, but all you possibly can; the other principle is to give a fair assessment between the different properties.

10,439. In any case, you would like to get all the figures you could and all the experience you could to help you to get to your first figures on the assessment committee?—Certainly.

10,440. Instead of waiting for further proceedings?—Yes.

10,441. (Chairman.) Is there any point we have missed?—I should like to say one word to you about my experience as chairman of the Cattle Diseases Committee for a great number of years. I think that I have spent thousands and thousands of the ratepayers' money in successful endeavours to exterminate foreign cattle diseases: those cattle having been imported for the benefit of the towns and certainly not for the benefit of the rural districts. Then I would also beg respectfully to call the attention of this Commission to the fact that when the Board of Agriculture took over the extirpation of swine fever it was understood and believed by everybody connected with the agricultural interest that the funds for that purpose were to come out of Imperial sources and not out of local taxation. I think I am right in saying that last year the Department spent not only the 40,000*l.* which was passed for the purposes of extinguishing pleuro-pneumonia, but they took 145,000*l.* out of the local taxation fund, which is really taking money away from the ratepayers. That I fancy is wrong, and I should say that Parliament ought to supply the deficiency.

10,442. (Mr. Elliott.) Are you not aware that the arrangement which you have just indicated is a statutory one, and the result of a settlement by the late Government, and mainly by the late Chancellor of the Exchequer?—I do not doubt they got out of it somehow or other, but at the same time they shirked the responsibilities, which were, that the Government should find the money.

10,443. Was it not quite clearly set out in the Act which was passed when the administration of swine fever was taken over that the whole cost would not come out of the Exchequer?—That I do not know, but I know this, that it was generally understood that the Board of Agriculture should take over the whole of the administration of this swine fever extermination, and that the Imperial Exchequer, and not the local rates, should find the money for it.

10,444. (Chairman.) Is there any other point you want to speak to?—With regard to the hereditary charges, I can only say that when I was at the Local Government Board I helped to pass an Act for making coal mines, woods, and sporting rights contribute towards local taxation from which they were exempt. I think that is quite right. May I just add one general observation: it takes 40 per cent. more of our cereal produce to pay the same rates than it did 25 years ago.

Mr. C. S.  
Read.

15 July '97

Cattle disease and swine fever, cost of, to local taxation.

Agricultural produce. Decrease in value.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

## TWENTY-SEVENTH DAY.

Friday, 16th July 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

THE VISCOUNT EMLYN.  
Sir E. W. HAMILTON, K.C.B.  
O. N. DALTON, Esq., C.B.  
T. H. ELLIOTT, Esq., C.B.

ARTHUR O'CONNOR, Esq., M.P.  
E. O. SMITH, Esq.  
The Right Hon. J. L. WHARTON, M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. ROBERT HENRY REW called and examined.

Mr. R. H. Rew. 10,445. (*Viscount Emllyn.*) You are Secretary of the Central Chamber of Agriculture, are you not?—Yes.

16 July '97 10,446. And of the Local Taxation Committee?—Yes.

10,447. You are also, I believe, an Assistant Commissioner of the Royal Commission on Agriculture?—Yes.

Central Chamber of Agriculture, objects of. 10,448. Will you tell us what the objects of the Central Chamber of Agriculture have been since its establishment?—One of its foremost objects has been to obtain some relief from the undue pressure of the burden of local rates on land; it has from the first put the question of local taxation among the foremost of its objects.

Local Taxation Committee, objects of. 10,449. Can you tell us what the objects of the Local Taxation Committee have been?—The object of the Local Taxation Committee, which is a body which was originally formed in 1869 out of the Central Chamber of Agriculture, has been exclusively to devote attention to the subject of local taxation, and to obtain a more equitable adjustment of the burden of local taxation upon different classes of property.

10,450. I do not think you have told us when the Central Chamber of Agriculture was established?—It was established in 1866.

An undue proportion said to be paid in rates in respect of real property compared with personal property, and also in respect of agricultural land compared with other real property. Sir Alfred Milner's figures. 10,451. Speaking for both those bodies, will you tell us what the contentions are that they would like to put before the Commission?—Their main contentions are, first of all, that real property pays an undue share of local taxation as compared with personal property; and, secondly, that agricultural land pays an undue share of local taxation as compared with other real property.

10,452. Have you any figures bearing out those contentions which you would like to submit to the Commission?—Those are the two branches of the subject. The first branch is as regards real property as compared with personal property, and upon that point the figures arrived at by Sir Alfred Milner, when Head of the Inland Revenue Department, form the foundation of the case. Sir Alfred Milner gave figures which showed the annual value of lands, of other rateable property, and of property subject to taxation but not rateable.

10,453. Would you give us those figures?—The figures he gave were as follows:—the annual value of lands he gave as 49,918,740*l.*, the annual value of other rateable property he gave as 160,640,835*l.*, making a total of rateable property of 210,559,575*l.*; and the non-rateable property subject to taxation he put at 228,839,471*l.*; or a total annual value for all classes of property, rateable and non-rateable, of 439,399,046*l.*

10,454. Can you work out from that the percentage of the property on which local rates fall?—From those figures it appears that local rates fall exclusively on 47·8 per cent. of the property of the country subject to taxation, and the remaining 52·2 per cent. contributes nothing towards them, except indirectly through the Treasury subventions and payments out of the Local Taxation Account.

10,455. Will you have, further on, something to tell us as to the amount of those subventions, and how they work out?—Yes.

10,456. Can you tell us whether this inequality which you have pointed out tends to increase or decrease?—Our contention is that property which is rateable, although, of course, it increases, does not increase in anything like the same ratio as property which is non-rateable. For the purpose of supporting that contention, in a rough and ready way, I have taken figures which show the assessments under Schedule A and Schedule D of the Income Tax for a series of years. Those figures are taken from tables prepared by the Board of Trade, and, taking quinquennial periods, they show in round millions the gross annual value of property and profits assessed to Income Tax for the different periods. Taking Schedule A, for instance, the annual average value of property assessed under that schedule in 1855-9 was 131,000,000*l.*; and running down the column of the quinquennial averages, the figures are as follows:—in 1860-4, 147,000,000*l.*; 1865-9, 151,000,000*l.*; 1870-4, 154,000,000*l.*; 1875-9, 172,000,000*l.*; 1880-4, 190,000,000*l.*; 1885-9, 196,000,000*l.*; 1890-4, 202,000,000*l.*

10,457. Then, will you take the Schedule D?—Taking Schedule D for the same periods, there is shown an annual average value in 1855-9 of 90,000,000*l.*; in 1860-4, of 101,000,000*l.*; in 1865-9, 155,000,000*l.*; in 1870-4, 210,000,000*l.*; in 1875-9, 263,000,000*l.*; in 1880-4, 268,000,000*l.*; in 1885-9, 292,000,000*l.*; and in 1890-4, 350,000,000*l.*

10,458. Then, following that up, can you tell us what the effect has been during the whole of those 40 years?—Taking those figures as a rough index of the relative increase of the two classes of property, they show that Schedule A, representing rateable property, has increased 54 per cent., while Schedule D, representing non-rateable property, has increased 288 per cent. Of course, I am not taking those figures as showing, either now or then, the absolute relation between rateable and non-rateable property at all; I am merely taking them as a rough index of the relative increase of the two kinds of property, for want of a better means to show the point I have here in view.

10,459. Have you any figures that you can put before us showing us in what way Imperial taxation falls on the different classes of property?—Going back to the calculations which Sir Alfred Milner laid before the Royal Commission on Agriculture, I should like to point out that he showed that Commission that Imperial taxation, excluding the Land Tax redeemed, fell at the following rates in the £ on the annual value:—on lands, 16·18*d.*; on other rateable property, 15·31*d.*; and on non-rateable property, 14·41*d.* He also estimated the burden which would fall upon the different classes of property when the new death duties under the Finance Act came into full operation; the figures he put in were these:—on lands, 2·90*d.*; on other rateable property, 1·49*d.*; and on non-rateable property, 1·15*d.* respectively. Perhaps I may be allowed to repeat that those figures are excluding the Land Tax redeemed

Mr. R. H. Rew.

16 July '97

Non rateable property said to increase to a greater extent than rateable.

Imperial taxation. Contributions in respect of different classes of property. Sir Alfred Milner's figures.

**Mr. R. H. Rew.**  
16 July '97

If, however, the redeemed Land Tax is included, as in the opinion of the Royal Commission on Agriculture it should be, and as Sir Alfred Milner included it, the figures would be as follows:—on lands, 19'51*d.*; on other rateable property, 15'60*d.*; and on non-rateable property, of course, the same, 14'41*d.*

Ability to pay. The legislature intended that individuals should be taxed for local purposes according to their ability to pay.

10,460. We have had a good deal of information before us as to the system on which our local taxation is based, and I think its nature is fairly before us; but if there are any particular points in it which you would like to mention we shall be glad to hear what you would wish to say with regard to them?—I do not imagine the Commission would wish me to go into the history of the subject, which is rather voluminous. I merely wish to point out that it was evidently the original idea of the Legislature to tax not property but individuals when the rates were first imposed.

10,461. Are there any special points like that which you have just now mentioned, if so by all means mention them shortly?—Beyond mentioning that single point, that it was obviously the intention of Parliament in the first instance to tax not property but individuals, I need not labour that, I think.

10,462. (*Mr. Elliott.*) And to tax individuals according to ability?—According to ability. I should like just to say that Parliament, in 1840, at the instance of the Poor Law Commissioners, passed for one year the Act under which the liability of persons to be rated in respect of stock-in-trade was abolished; and I should also like to observe, what is pretty evident, that that Act, under which stock-in-trade continues to be exempted, was evidently passed by Parliament merely as a temporary expedient and not in any way as a settlement of the subject.

10,463. (*Viscount Emlayn.*) Apart from the legislation which has taken place with regard to the principles of rating, could you tell us what has been done with a view to trying to remove the inequality of the incidence of local taxation?—The Local Taxation Committee has, of course, concerned itself exclusively with attempting to call attention to the question of the inequality of the burdens of local taxation on real property.

10,464. Since the Local Taxation Committee has come into existence can you tell us what the result of their endeavours has been?—Taking the figures from Sir Henry Fowler's Return of 1893, I find in 1868 the following grants were made by Parliament to local authorities annually:—For teachers in Poor Law schools, 34,500*l.*; for Poor Law medical officers, 104,500*l.*; for police, counties and boroughs, 225,000*l.*; for the metropolitan police, 164,848*l.*; for criminal prosecutions, 150,000*l.*; for county and borough prisons (including removal of convicts from these prisons), 109,000*l.*; for the Metropolitan Fire Brigade, 10,000*l.*; for repairs of Berwick Bridge, 90*l.*; and for industrial schools (local authorities), 3,574*l.*, making a total of 801,512*l.*

10,465. Following on since then, can you tell us of any successive grants made by Parliament?—Of course many alterations have been made since then, the chief alteration having been made in 1888, under the Local Government Act. In 1892 the statement of amounts paid over to local authorities was as follows:—For the Metropolitan Police, 4,300*l.*; for the Metropolitan Fire Brigade, 10,000*l.*; for the repairs of Berwick Bridge, 90*l.*; for industrial schools (local authorities), 28,300*l.*; grants under Local Government Act, 1888, 5,313,278*l.*; and grants under the Local Taxation (Customs and Excise) Act, 1890, for police superannuation, 300,000*l.*, and residue of duties, 815,801*l.*, making a total of 6,482,269*l.*

10,466. In addition to those grants were there not some other amounts which, in your opinion, would not exactly come under the same category?—Yes, in Sir Henry Fowler's Return the grants in respect of education were included.

10,467. Could you give us the amount of those?—The annual grants for day and evening scholars for elementary education (school boards) given in Sir Henry Fowler's Return amount to 1,508,427*l.*, the fee grants to 329,285*l.*, and the grants to school boards in poor districts to 8,395*l.*, making a total of 1,846,107*l.*

10,468. Do I understand that you would not put those last amounts which you have mentioned in the same category as the previous ones?—No. We should like to point out that, although, in Sir Henry Fowler's Return, they were included as being grants in aid of

local rates to a certain extent in the same category as the other grants previously mentioned, yet we consider that it is not fair to treat them in that way.

10,469. Would you tell us why?—Because if Parliament institutes a new liability for a specific object and throws it upon the rates, it saddles the ratepayers with an additional burden; but if it decides to defray the cost either wholly or partially out of Imperial taxation, it is not considered justifiable to claim that amount as a relief of the rates. Of course the liability to provide education out of the rates was imposed upon localities in the first instance by the Education Act of 1870. May I be allowed to point out also, with regard to the grant under the Local Taxation (Customs and Excise) Act, that the whole of the amount was practically appropriated for specific objects; 300,000*l.* was specifically allocated to police superannuation, and the residue of the duties, although not absolutely allocated to technical education, has been, almost the whole of it, swallowed up for that purpose.

10,470. By the action of the county councils?—Yes, by their action.

10,471. What conclusion do you draw from that—that it is not a general relief of taxation?—The point is that it has not gone really to the relief of local taxation generally, but that it has been simply a grant out of Imperial funds, which has gone to special objects which were indicated when the grant was made; one was a specific liability which was imposed upon ratepayers; that is to say, that 300,000*l.* was simply imposed in respect of a specific liability, and the residue of the money has been practically treated as if it were intended for a specific purpose.

10,472. But still, though it was applied to certain definite purposes it was a relief to local taxation, was it not?—It was not a relief of local taxation as then existing, because I think that the money which has been spent out of the funds under that Act for the purposes of technical education has been newly spent, so to say; that is, it has not taken the place of previous expenditure but has been applied to a burden newly put upon the ratepayers.

10,473. It went to relieve a burden recently put on?—The burden was not absolutely put on, of course; but it was a new charge upon the ratepayers.

10,474. With regard to the contributions from the Exchequer, have you anything to say on that point?—I have merely to point out that, so far as they go, they are a recognition by Parliament of the injustice of placing the burden of local taxation on real property alone. I have also—and this is a point which the Local Taxation Committee have made once or twice—to point out that the contributions from the Exchequer do not really come out of personal property alone. It is true that under the Local Government Act in the first instance, and under the Finance Act, and also, I think, under the Agricultural Rates Act, it is stated that certain money is taken out of the proceeds of a tax which falls upon personal property, but it seems to the committee evident that the real charge does not come upon personal property alone but comes upon the general taxpayer, because the deficiency which is made in the proceeds of that particular tax has to be made good out of general taxation.

10,475. Can you tell us how much you would allocate to personal property, and how much to real property, out of the contributions from the Exchequer?—I think I would go back to the figures of Sir Alfred Milner, which show the relative contributions of realty and personalty to Imperial taxation, and which also show that realty contributes more than its share to the general taxation.

10,476. You put it in the same proportions as the proportions which are given in Sir Alfred Milner's return?—Yes.

10,477. You say that the contributions from the Exchequer do not come alone from personal property, but also come from real property; I do not know whether you have worked out at all in what proportions they fall respectively upon personal and upon real property?—We say that the contribution which ostensibly comes out of the Probate Duty, for instance, is really made up out of general taxation. Referring back to Sir Alfred Milner's figures they show that to that Imperial taxation land contributes, say, 19½*d.* per £ of annual value while other kinds of property contribute in the one case 15½*d.*, and in the other 14½*d.*,

**Mr. R. H. Rew.**  
16 July

Imperial contributions. Purposes for which given, and amounts. Contributions made to defray cost of new burdens should not be considered as contributions made in relief of local taxation generally.

Imperial contributions are contributed from a fund derived from taxation in respect of both real and personal property. Contribution of land; other rateable property; and non-rateable property. Excise and customs not taken into consideration. Sir Alfred Milner's figures.

Mr. R. H.  
Rev.  
16 July '97

so that Sir Alfred Milner showed that towards the burden of general taxation land contributes in a larger proportion than other property.

10,478. (*Mr. Smith.*) I thought Sir Alfred Milner's figures were 16'18d. for lands?—I beg your pardon, I was at this moment taking the figures including Land Tax Redeemed.

10,479. But that was not Sir Alfred Milner's calculation, was it?—Yes, Sir Alfred Milner put both calculations before the Agricultural Commission.

10,480. You do not give the figures in your memorandum?—No. In my memorandum I have put the figures exclusive of the Land Tax Redeemed, but in my evidence I have also given the figures including Land Tax Redeemed.

10,481. (*Mr. Arthur O'Connor.*) It would be 19d. from lands, and 29d. from the other property, adding the 15d. and 14d. together?—This is the amount in the £ of annual value which the different classes of property pay towards the general burden of local taxation. Sir Alfred Milner divides all kinds of property contributing to taxation into three classes. He divides it first of all into two classes, that property which is rateable and that which is non-rateable; and then rateable property he sub-divides into two classes, first, lands, secondly, other rateable property. He showed that, including redeemed Land Tax, land contributed 19½d. per £ of annual value, while other rateable property contributed 15½d. per £ of annual value, and non-rateable property contributed 14½d. per £ of annual value.

10,482. Your suggestion now would be that lands actually pay more than any other kind of property to Imperial taxation?—Those are the figures which Sir Alfred Milner laid before the Commission.

10,483. (*Sir Edward Hamilton.*) You are only taking the total taxation in respect of property, and you are leaving out of account the Excise and Customs?—That is so; Sir Alfred Milner did not include the Excise and Customs.

10,484. All that Sir Alfred Milner did in that statement was to separate rateable property from non-rateable property?—Yes.

10,485. And to show to the best of his ability what amount of taxation falls upon those two properties respectively?—Quite so. Of course, it is evident that the Excise and Customs could not be so allocated.

10,486. (*Mr. Arthur O'Connor.*) But Excise and Customs are the principal items of Imperial taxation?—Yes, but there is no reason to suppose that they fall unequally on different classes of property or that an inequality in respect of direct taxation is redressed by indirect taxation.

10,487. (*Viscount Emllyn.*) Is there anything else under that head that you would like to add before we go on to the next point?—Perhaps I may be allowed to put Sir Alfred Milner's figures at what I may call their highest; that is to say, at what they work out including redeemed Land Tax, and also including what the effect of the new Death Duties will be. Putting those figures together it will be seen that lands will then bear 22'4½d. per £ of annual value, other rateable property will bear 17'09d. per £ of annual value, and non-rateable property 15'56d. per £ of annual value.

10,488. Is there anything you would like to add with regard to those figures?—No.

10,489. Have you anything that you can tell us with regard to the increase of the rates as compared with the increase in the amount of Imperial taxation during some term of years?—Yes. In 1868 the total amount of rates raised in England and Wales was 16,503,437*l.*, and in 1894 the total amount was 32,223,972*l.*, which shows an increase of 15,720,535*l.*, or 95 per cent., in 26 years. Perhaps I may be allowed to point out that during that same time the total amount of Imperial taxation increased by 21'5 per cent., while the population of the United Kingdom increased by 26'6 per cent. That is merely to show in a general way to what extent the burden of rates is increasing in the country.

10,490. Have you gone at all into the question of the division of those figures as to the rates between town and country?—No; but I should like to point out that at the present moment the whole of what I have been saying is dealing simply with the question of reality and personality, and of course includes town

just as much as country; I am not speaking now from the point of view of the country specially.

10,491. You are not dividing the country from the town?—No; it is simply a question now of all rate-payers against other property not contributing to the rates.

10,492. With regard to the loans to local authorities, have they increased of late years?—Yes. I have the figures here showing the amount of the outstanding loans of local authorities in England and Wales. In 1875 it was 92,820,100*l.*, and in 1894 it was 224,158,379*l.* that showed on the outstanding loans of local authorities an increase of 142 per cent. in 20 years.

10,493. And during that same period can you tell us what has happened with regard to the National Debt?—Yes, during the same period the National Debt has decreased by 13'6 per cent.

10,494. (*Mr. Arthur O'Connor.*) Those figures of the local loans liability do not represent Imperial money only. The 224,000,000*l.* are not owing to the Government and have no connection with national debt?—No; and I was not saying there was any resemblance between the two. I was simply showing, what I think is a rather striking fact, that the borrowing of local authorities increases at an enormous ratio, while at the same time the whole tendency as regards Imperial finance is to decrease the burden of loans. I think that concludes what I had to say particularly, with regard to the question of real property as against personal property as a whole. Then, going on to the other point which I wish to mention, namely, that agricultural land bears an unfair share of local taxation as compared with other real property, the hereditary burden theory has been a great deal brought out in connection with the discussion of this subject, and the local taxation committee have more than once expressed their views.

10,495. (*Viscount Emllyn.*) Would you tell us what those views are?—As defined by Sir Henry Fowler, the theory of hereditary burdens applies to old rates, that is to the poor, county, and highway rates, which, he says, "constitute an hereditary burden on real property, subject to which land has been bought, sold, and inherited during a long series of years."

10,496. Are you quoting now from a report of Sir Henry Fowler's?—That was a quotation from the report of Sir Henry Fowler.

10,497. The report of 1893?—Yes. In the same place an old rate is defined as one which has been levied for 70 years, and it is implied in the report that all rates may in due course qualify by lapse of years as "hereditary burdens." This theory is commonly used as if it applied to land and especially to agricultural land, though Sir Henry Fowler distinctly says: "an hereditary burden on real property." It is evident that it must be as applicable to houses and buildings, for example, which have stood for 70 years as it is to land. And here arises the first difficulty in applying it, say, to a farm. On hundreds, perhaps thousands, of farms new buildings have been erected within the last 70 years. Are the rates, therefore, to be considered an hereditary burden upon the land and not an hereditary burden on the buildings? There might be some better basis for arguing that rates were an hereditary burden on real property, if Parliament had ever deliberately decided that real property and real property alone was subject to local rates. It has not done so. On the contrary the "hereditary burden" of rates was placed by the Act of Elizabeth on "every inhabitant." Up to 1840 they were certainly an "hereditary burden" on stock-in-trade, and they would be so still but for the existence of an annual Act, which might, in theory at least, be dropped at any time. The committee think that no theory of the kind can be held to give the State or the community a right to continue taxation for all time on one class of persons, notwithstanding any changes which may take place in the circumstances affecting that class.

10,498. What committee are you now speaking of?—Of the Local Taxation Committee. If the hereditary burden theory were pressed against agricultural land, it would be equally fair to advance a claim to hereditary privileges. The advantage long enjoyed by agriculture under the corn laws was taken away by Parliament, and no compensating advantage in respect of taxation was afforded to it. If circumstances reducing the value of a particular commodity cannot be considered without relieving the owner of an hereditary burden, circumstances which induced him to give

a higher price for it could also not be altered without injustice. If the relief of the poor is an hereditary burden—not on the community but on real property—it would follow that every pauper, including alien paupers, has an hereditary claim for maintenance on the real property of this country.

Value of land, buildings, rail-ways, and other rateable property in England and Wales in 1870 and 1894. *Mr. Shaw Lefevre's return.* (No. 204 of 1895.)

10,499. Have you any tables to put before us, or any figures to give us as to the relation which land bears to other kinds of rateable property?—Yes, the figures which I would give are those which are given in a return of *Mr. Shaw Lefevre's* in 1895, in continuation of a previous return. That return showed that in England and Wales, in 1869-70, the rateable value of land was 39,835,088*l.*, of buildings, 55,157,300*l.*, of railways, 4,871,048*l.*, and of other rateable property, 5,006,898*l.*, making a total of 104,870,334*l.* In 1894 the figures were:—Land, 33,654,550*l.*, buildings, 102,661,924*l.*, rail-ways, 13,871,050*l.*, and other rateable property, 10,894,434*l.*, making a total of 161,081,958*l.*

10,500. What, shortly, do those figures tell in regard to the burdens on land?—They show, of course, that the rateable value of land has considerably decreased during the period 1869-70 to 1894, the decrease in rateable value being about six millions.

10,501. And buildings?—Buildings have largely increased; they have practically doubled in rateable value.

10,502. (*Mr. Wharton.*) Does "buildings" refer to every class of rateable building without respect to whether the building relates to land or not?—"Land" includes the buildings on a farm.

10,503. Then when you say "buildings," does it mean the rateable value of buildings of every sort?—It means practically houses.

10,504. (*Mr. Smith.*) If I might interfere at this moment, "buildings" include the land that the build-ings stand upon?—Urban land certainly.

10,505. (*Sir Edward Hamilton.*) But "land" includes all farmhouses?—Yes.

10,506. (*Mr. Smith.*) In the great increase which you show on buildings you have got the increase of the land on which they stand?—Certainly; perhaps it might be clearer if "buildings" were expressed as houses.

10,507. (*Mr. Dalton.*) And shops and factories as well?—Certainly.

10,508. (*Mr. Smith.*) Taken all round, the land of the country has enormously increased?—Including urban land certainly; "land" here practically and substan-tially means agricultural land.

10,509. (*Viscount Emlyn.*) Including no buildings in it but the buildings of the farm?—Yes.

10,510. (*Mr. Smith.*) The whole land in the country has enormously increased in value, has it not?—The whole land in the country has greatly increased in value, having regard to the urban land, but not agricultural land, the position of which, as far as rateable value is concerned, would be represented by those figures showing a decrease of six millions.

10,511. (*Viscount Emlyn.*) Railways and other rate-able property in the same time have increased?—Railways have increased largely, from 4,871,048*l.* to 13,871,050*l.*; and other rateable property has about doubled.

Rates in the £ in respect of agricul-tural land. *Sir Henry Fowler's* figures discussed.

10,512. Can you give us any information as to what amount of the rates borne by lands, houses, and other property is respectively?—Yes, but I should like just to mention one or two facts with regard to the average rates falling upon agricultural land. I refer first to what *Sir Henry Fowler* stated in his Report, namely: "In the absence of special returns from every parish in the country it is impossible to ascertain precisely what was the total amount of the rates borne by lands, houses, and other property respectively in 1891; but it is practicable from such statistics as are available to arrive at an estimated sum." He then worked out that the average rate in the £ falling upon land—that is, rural land, agricultural land—was 2*s.* 3*d.*, and with certain additions for rates on land situate in urban districts, and for rates raised by commissioners of sewers and drainage and embankment boards, he arrived at the total of 4,259,473*l.* as the amount of rates actually borne by lands. That estimate of *Sir Henry Fowler's* was at the time objected to as representing the figures for only one year, and that

year was believed at the time to be a year of excep-tionally low rates. The returns which have appeared subsequently go to prove that that contention was correct. Rural rates have, we believe, since that time increased. The local taxation returns, which are latest out, show that the following were the average rates in the £ raised by various local authorities in rural districts in 1893-4; by Poor Law authorities, 10*s.* 8*d.*, by county councils, for general county purposes, 3*s.* 6*s.* 8*d.*, and for special county purposes, say, 3*d.*, by rural sanitary authorities 2*s.* 4*d.*, by school boards in parishes 8*s.* 1*d.*, and by highway authorities in rural districts, 6*s.* 9*d.* This would give a total of 2*s.* 10*s.* 8*s.* 8*d.*, practically 2*s.* 11*d.*

10,513. How would that compare with the figure given in 1891?—That compares with the 2*s.* 3*d.* at which *Sir Henry Fowler* arrived in 1891. I believe I have taken exactly the same rates which he took. But I should like to point out that the figure I have given is not a statistical average. For instance, it does not give the average for special county purposes because there are no means of arriving at it. The returns only say that the special rate ran from 1*d.* to 6*s.* 1*d.*; of course, if you take either extreme it would affect the figures, but I think it is fair to take something like the mean between the two for the purpose of arriving at the total.

10,514. Then you do not know that that is the average?—No, it is not the average, but it is the only fair figure which one can take in trying to arrive at anything like the average.

10,515. (*Mr. Smith.*) There are an enormous number of country parishes that have no special rate at all, you are taking the average of such where special rates exist and applying it to the whole of England?—Yes.

10,516. But the vast majority of rural parishes have no special rate of this kind. It is an average that only applies to certain parishes, and you have spread that average over the whole, whether it applies to them or not. Supposing it only applies to 100 parishes in England, it would be correct to say that it has risen from so much in the £ to so much, but if you apply it to all the thousands of parishes in England it would give a very fallacious result?—It is an average in respect of all those parishes in which these rates which I set out exist.

10,517. (*Viscount Emlyn.*) Not an average in all the parishes, because in many of them these rates do not apply?—I was going to point that out. School boards obviously do not exist in every parish, but they do exist in a large number of rural parishes. I am not sure that I can put my hand on the exact number.

10,518. (*Mr. Smith.*) They exist in a distinct minority, is that not so?—They exist in a minority of rural parishes.

10,519. In a very distinct minority?—Yes.

10,520. (*Viscount Emlyn.*) Would not that to some extent modify the figures you have given to us?—Yes. The general result of the figures, and what I was wishing to draw from them, is that the average of 2*s.* 3*d.*, although right at that time, is not so now, but that there has been an increase.

10,521. (*Mr. Dalton.*) Yes, but in the 2*s.* 3*d.* the school board rate was taken at 2*d.*, being spread over the whole country?—I took the rates which *Sir Henry Fowler* has given in his return. *Sir Henry Fowler's* statement is that it includes poor, county, and highway rates with the rural sanitary and the rural school board rates. Perhaps I may be allowed to explain to the Commission that I have taken these figures from the summary of the Local Taxation Returns, Part VII., 1893-4.

10,522. (*Mr. Arthur O'Connor.*) May I ask whether some of these headings do not really overlap, for instance, the "Highway authorities in rural districts." Is that charge not in some cases under the county councils?—No, I think not. There are always high-way authorities in addition to the county council; the county council has only control of the main roads.

10,523. (*Viscount Emlyn.*) It would come under the district council?—It would be the district council in almost every case, I think.

10,524. (*Mr. Smith.*) And I think for the year which you have taken it had not generally passed to the district councils, and that that is the explanation—that the highways in the parishes had not passed to the

*Mr. R. H. New.*  
16 July '97

*Mr. R. H. Rev.* district councils at the time that return was printed? —That would be so, I think.

16 July '97 10,525. (*Mr. Dalton.*) The main difference between your figures and Sir Henry Fowler's is in the school board rate; he takes the average rural rate for the school board at 2*d.*?—Yes.

10,526. And you take it at 8*d.*, which, of course, is a difference of 6*d.*?—Yes.

10,527. That is the figure on which he took it, namely, 2*d.*, and if you are to compare the two years, you should go on the same figure in both?—Yes; I quite admit that.

10,528. (*Mr. Smith.*) There seems to be an overlapping between the general county purposes and the special county purposes. You have averaged them both, but the special county purposes only existed in certain cases, as Mr. Dalton has pointed out, and by taking them both you are counting them twice over, because you are taking the general county purpose, which applies where there are no county boroughs; and you are also taking the special county purpose, which only applies where there are county boroughs?—Yes, that is so.

10,529. (*Viscount Emlyn.*) Can you explain that at all?—As I have pointed out, in point of fact in my memorandum, I do not rely upon the figures for the special county purposes at all in making up the average. As regards school boards, it is the fact that I have only taken in the figures the average rate in those parishes in which the school board exists.

10,530. That would make a difference, as between your figures and Sir Henry Fowler's figures, of something like 6*d.* under that head alone?—Yes.

10,531. (*Mr. Wharton.*) And that would raise the 2*s.* 3*d.* into 2*s.* 9*d.*, and consequently the 2*s.* 9*d.* and the 2*s.* 11*d.* would not present so striking a difference?—That is so.

10,532. (*Mr. Arthur O'Connor.*) It would not be as much as 6*d.*, because, as a matter of fact, the school board rates have gone up?—Yes.

10,533. (*Mr. Elliott.*) All this is not very essential to your argument, is it?—No. The point I wish to draw your attention to, first of all, is that it is not quite fair to assume always through this controversy that the average rural rate is only 2*s.* 3*d.* I think, whatever criticisms might be made of individual figures here, it could easily be shown that the rates in various respects have increased; certainly the Poor Rate has increased since 1899, unless I am greatly mistaken.

10,534. (*Viscount Emlyn.*) By any considerable amount?—I am afraid I have not got the Poor Rate Return with me.

10,535. Can you give us the figure of the Poor Rate in the two years?—I am afraid I have not the Poor Rate figure with me; I thought I had. But I have a remark in my memorandum with regard to the Poor Rate to the effect that the figures in the Poor Rate Return show that there has been an increased cost per inhabitant, if it is not an absolute increased cost per £ of rateable value.

10,536. (*Mr. Dalton.*) Since the figures for 1893-94 were prepared, parish councils have been constituted, have they not?—Yes.

10,537. That would make some increase, would it not?—Yes; but it is unnecessary to rely upon any particular statement that the average rural rates have increased, as between 1891 and 1893-4. What I was endeavouring chiefly to point out was that it was not quite fair to assume that what they were in 1891, or even what they were in 1893-4, is what they are now.

10,538. (*Viscount Emlyn.*) You would be inclined to put it at a somewhat higher figure than the 2*s.* 3*d.* which was given in the return for 1891?—We think that, on the whole, the burden of the rural rates in parishes has increased.

10,539. We have had it put down by other witnesses at 2*s.* 6*d.*; are you ready to adopt some figure of that sort?—Yes; I think that would be so from the general evidence, of farmers particularly.

10,540. Taking it at 2*s.* 6*d.* in the £, what would you like to say, then, as to the rateable value of land and the amount of land in urban districts; have you any comparison to make between those?—What I should like to point out is that, of course, the average rate in the £ is higher in urban districts than in rural districts.

10,541. Can you give us figures upon that?—In 1890-1, when the average rate in the £ for the whole of England and Wales was 3*s.* 8*d.*, Sir Henry Fowler calculated that it was, in county boroughs, 4*s.* 6½*d.*, in non-county boroughs 4*s.* 4½*d.*, and in other urban districts 3*s.* 11*d.* In 1893-4 the average for the country had risen to 4*s.* 0½*d.*, so that the other figures also would, no doubt, be increased. I think on the basis, practically, of Sir Henry Fowler's figures it seems to be fair to assume that the average rate in the £ in rural districts is something like 2*s.* to 2*s.* 6*d.* less than in towns.

10,542. (*Mr. Arthur O'Connor.*) Are you not comparing the average of the whole country with the distributed average—an average distributed between county boroughs, non-county boroughs, and urban districts?—No, I am taking again Sir Henry Fowler's figures, in which he showed that the average rural rate in rural parishes was 2*s.* 3*d.* He also showed that the rate in county boroughs was 4*s.* 6½*d.*, in non-county boroughs, 4*s.* 4½*d.*, and in other urban districts, 3*s.* 11*d.*

10,543. (*Mr. Wharton.*) Do you take the average of those three figures?—Taking those three figures alone as they stood they support the contention that the difference, as between the highest and the lowest—namely, 4*s.* 6½*d.* in the county boroughs and 2*s.* 3*d.* in the agricultural districts—is a difference of 2*s.* 3*d.*, practically; it is therefore a fair conclusion to draw that the difference on an average between the town and country is represented by something between 2*s.* and 2*s.* 6*d.*

10,544. (*Viscount Emlyn.*) Then, with regard to the benefit received by the different ratepayers, have you anything to say to that?—I have no doubt the Commissioners have had evidence as regards the contention that if the ratepayer in the town pays a higher rate per £, he, of course, in respect of that payment obtains benefits which the ratepayer in the rural district does not obtain, but I do not know that it is necessary for me to labour that point, because you must have had much evidence as to that.

10,545. I think we have had that put before us pretty fully already?—The other point I should like to suggest as accounting to some extent for the difference between the burden in the town and the burden in the country is the charge in respect of loans. The total amount of outstanding loans of local authorities at the end of the financial year 1893-4 was 224,158,370*l.*, which involved an expenditure during the year of 12,398,329*l.* for payments in respect of principal and interest of loans, including payments to sinking funds. But of the total loans outstanding no less than 88·4 per cent. are classified as incurred by purely urban authorities, and only 0·9 per cent., as incurred by purely rural authorities. Of the remaining 10·7 per cent., divided between urban and rural authorities, school boards outside London are responsible for more than half, Poor Law authorities for less than one-sixth, and county councils for less than one-eighth.

10,546. Can you give us the figures?—Yes, the figures for the outstanding loans of the local authorities in England and Wales in 1893-4 are as follows: taking first the urban, the metropolitan outstanding loans amounted to 43,191,998*l.*, and the extra-metropolitan outstanding loans to 154,745,713*l.*, making a total of 197,937,711*l.* for urban loans, which represents 88·4 per cent. of the total. Then the amount of outstanding loans between urban and rural, not divisible between the two, is 24,137,990*l.* or 10·7 per cent. of the total.

10,547. (*Mr. Wharton.*) When you say "urban and rural" do you mean in districts which are partly urban and partly rural, and which are clubbed together?—No. They are divided according to authorities, between urban and rural authorities. School boards outside London are responsible for more than a half, Poor Law authorities for less than one-sixth, and county councils for less than one-eighth.

10,548. (*Viscount Emlyn.*) I do not quite understand now exactly what you mean by "urban and rural" as regards these outstanding loans; you have one line for "urban" and one for "urban and rural" combined; what does "urban and rural" mean?—"Urban" means purely urban authorities, and "rural" means purely rural authorities, but "urban and rural" includes authorities such as Poor Law authorities which cannot be divided between the two.

*Mr. R. H. Rev.*

16 July '97

Urban ratepayers. Advantages derived from expenditure.

Loans raised by local authorities, urban and rural.

Rates in the £ in respect of agricultural land said to have increased.

Rates in the £ higher in urban than in rural districts. Sir Henry Fowler's figures.

*Mr. R. H. Rew.* 10,549. (*Mr. Dalton.*) And county councils?—And county councils which also cannot be divided between the two.

16 July '97 10,550. (*Mr. Elliott.*) This is the classification in the Local Taxation Returns, is it not?—Yes.

10,551. (*Viscount Emlyn.*) You have not given the figure yet for the "rural"?—The amount of outstanding loans for the rural authorities in England and Wales in 1893-4 was 2,082,669*l.*, being 0.9 per cent. of the total; the total, as I have already stated, being 224,158,370*l.*

Urban ratepayers. Advantages derived from expenditure.

10,552. Then there are certain advantages, of course, which the urban ratepayer receives and pays for which the rural ratepayer does not receive?—Those are the first two points which I wish to mention, first of all that the urban ratepayer gets advantages which the rural ratepayer does not get; and, secondly, that he pays a considerable excess of rates in respect of loans which have been incurred for remunerative objects, and objects for which he receives a benefit.

10,553. Does that to your mind fully account for the difference between the excess of rates in towns as compared with the country?—I do not say it does fully, but it goes some way towards accounting for the difference in the payment which the urban ratepayer has to make and the payment which the rural ratepayer has to make towards the rates.

Incidence of rates in urban and rural districts.

10,554. Have you considered at all the question of the incidence of the burden of rates in town and country?—That, of course, is a question which is rather a knotty one of political economy; but, if I may be allowed to say so, there are three possible hypotheses. One would be that all rates fall ultimately on the owner; another, that they all fall on the occupier; and another, that they fall partly on the one and partly on the other. It seems to me, if I may say so, that the whole question would be avoided if it might be argued for the moment as affecting the yeoman farmer who occupies and owns his farm, and comparing him with the urban ratepayer who owns the property which he occupies. It seems to me that if you prove a grievance to exist with regard to those two classes, whatever the position might be as to the ultimate incidence of the rates, you prove sufficient to prove the grievance.

10,555. Have you any cases of that kind, which you can tell us about, to lay before the Commission?—Yes, I have one or two cases which I should like to mention, which have been sent to me. One case has been sent to me by the Cheshire Chamber of Agriculture.

Valuation of property occupied and rates paid by certain farmers and also by others engaged in certain other trades and businesses compared. *Mr. Rew's* figures discussed.

10,556. Will you quote it?—I have received it from a farmer who is a member of that Chamber. He says: "I am rated at 49*l.* on a farm of 245 acres, mixed husbandry. My profits last year (1896) were less than 200*l.*, and I am sure many farmers about me did worse. Messrs. R——," he gives me the names, though I have not put them in full, "large corn millers with about 4,000*l.* worth of modern milling machinery, are rated at 537*l.* They have three 3-horse lorries always on the road, drawing flour, &c., made from foreign corn, besides odd horses and carts. I have not one-twentieth of the road work, and not one-fifth of the income from the farm. Then we have T—— and Co., ironfounders and water engineers, with a business of great magnitude and a turnover of not less than 60,000*l.* a year. Works, including valuable machinery of all sorts, assessed at 218*l.*" On the same point, practically, I have had statements sent to me by *Mr. W. J. Dutton* and *Mr. Emberton*, of the Cheshire Chamber, which they have asked me to lay before the Commission.

10,557. (*Chairman.*) Are we to understand that these are actual cases the names of which you can give to the Commission if we desire them?—Yes; in the case I have just read the names which I have indicated by initials I have here in full.

10,558. You were going on to another case, I think?—I was going on to some cases taken from the Nantwich Union. The first case is that of a farmer who occupies a farm of 218 acres, of a rateable value of 360*l.* He pays a rate in the £ of 2*s.* 4*d.*; the total amount he pays to the rates is 42*l.*, and his profit or income, including the cost of living, is 25*l.* The next case is that of a tithe owner, who is rated at 16*l.* on the tithe; he pays a rate in the £ of 2*s.* 4*d.*; the total amount of his rates is 2 guineas, and his profit is 18*l.*

10,559. (*Mr. Arthur O'Connor.*) He must be a very economical man if that income of 18*l.* includes his cost of living. The column is headed "Profit or Income, including cost of living"?—That does not refer to the tithe-owner; of course it means his income in respect of that tithe. It applies, I think, in all the other cases.

*Mr. R. H. Rew.* 16 July '97

10,560. (*Mr. Elliott.*) Did you not mean to say there that no deductions have been made in respect of the cost of living in arriving at the profit?—Yes. Of course these figures are given exactly as they were sent to me by the Cheshire Chamber, and that is the heading they have given.

10,561. (*Mr. Dalton.*) That heading really only refers to the first item, does it not?—Practically, that is what it chiefly refers to, no doubt. It is often argued against the farmer that the profit he returns does not include the cost of living, and this statement seems to be prepared rather to meet that.

10,562. (*Mr. Smith.*) Does it include his house rent?—No, I imagine not in this case.

10,563. (*Mr. Arthur O'Connor.*) But your answer to *Mr. Elliott* just now appeared to show that this 250*l.* represents his profit without deducting the cost of living; therefore the cost of living must be added to it?—No, I do not take it that way.

10,564. (*Chairman.*) I think you meant just the reverse?—Yes.

10,565. However, we need not occupy further time over this. Perhaps you would look at that heading and see whether you cannot make one which would be more satisfactory; it is clear that it is not of universal application as it stands?—I think there is no doubt about it, that it is as *Mr. Dalton* suggested. It was sent to me by the farmer, and there is no doubt he was referring mainly to his own particular case.

10,566. Will you go on?—The next instance is that of an urban tradesman, who occupies a shop, &c., with a rateable value of 45*l.*, the rate in the £ being 4*s.* 2*d.*, and the total amount paid to rates 9*l.* 7*s.* 6*d.*, while his profit or income is 40*l.* I should say that I was informed by those who sent me these figures—because I put the question to them—that in only one case are the profits estimated; in all the other cases they are statements made by those interested or represented.

10,567. I think I might say this, might I not, that, for practical purposes, in putting this table before the Commission as a matter of comparison, we might really eliminate the last column in it altogether?—The point that it was intended to show is that, whereas the farmer is paying 42*l.* in rates while his income is 250*l.*, the miller, for instance, is paying only 9*l.* 7*s.* 6*d.*, with an income of 400*l.*

10,568. I see; but that, of course, directly points to what probably is going to be your conclusion, that rating should go upon income and not in the way in which it does now?—It is intended, of course, to point out the grievance under the present system.

10,569. Do you not think that, short of attempting to lead up to that conclusion, the table is an instructive one, even without the last column?—If you do not agree with me, say so?—Would it not meet the purpose if the last words of the heading "including cost of living" were left out?

10,570. Of course, I must leave it to you to put the heading which you think most suitable for your purpose?—Perhaps the Commission would allow those words to be left out altogether, or they might be taken out of the heading and put as a footnote to the farmers' own figures. Really, however, what I should like the Commission to allow me to do is to refer back to those who supplied the figures, and to ascertain a little more accurately what the case is.

10,571. I have no objection to your doing that, and then we can, by correspondence or otherwise, settle how the final proof of your evidence is to be arranged to give effect to the exact fact?—Thank you. As I have said, I have the distinct statement in writing, that all these figures are obtained from actual facts.

10,572. Will you go on?—I think I had got as far as the rural miller who occupies a house, mill, &c., of 80*l.* rateable value, and pays a rate in the £ of 2*s.* 4*d.*, which is the same rate in the £ as that paid by the farmer, but only pays in rates 9*l.* 6*s.* 8*d.*, although his profit or income is 400*l.* The next case is that of the urban dealer who occupies a warehouse with a rateable value of 20*l.*, and pays a rate in the £ of 5*s.* 2*d.*, or a

*Mr. R. H. Rev.* total amount in rates of 5*l.* 3*s.* 4*d.*, his profit or income being 50*l.* The next case is a lawyer and doctor.

16 July '97 10,573. (*Mr. Smith.*) Am I to understand that one gentleman combines the two professions of lawyer and doctor?—That is clearly not the case.

10,574. (*Chairman.*) It looks as if this table required a good deal of correction. What is the object of mixing up both rural and urban ratepayers in one table?—I suppose these happen to be the cases which came within the knowledge of these persons. They live in the Nantwich union, and they know one or two cases in towns and of course they also know one or two cases in country districts.

10,575. (*Mr. Elliott.*) This statement takes no account of the Agricultural Rates Act of last session, does it?—No.

10,576. (*Chairman.*) Will you just go on; or is that all you wish to say on the table?—The next case is that of the rural shopkeeper, who occupies a house and shop which is rated at 14*l.*, with a rate of 2*s.* 4*d.* in the  $\pounds$ , the total amount of the rates being 1*l.* 12*s.* 8*d.*, and the profit or income 120*l.* The rural cottager is the next. He occupies a cottage and 5 acres, the rateable value being 16*l.*, the rate in the  $\pounds$  2*s.* 4*d.*, and the rate paid 1*l.* 17*s.* 4*d.*, he makes a profit, including his wages, of 50*l.* Then comes the commercial company, occupying an office, which has a rateable value of 20*l.*, which pays a rate in the  $\pounds$  of 4*s.* 2*d.*, or a total amount of 4*l.* 3*s.* 4*d.*, and makes a net profit of 500*l.*

10,577. What inference do you wish us to draw from the figures in that table?—We intend it to show the different burden of the rates upon the farmer as compared with the burden of those engaged in other trades or professions.

10,578. What is the inference you wish us to draw as between the farmer and the cottager, for example?—As regards the cottager, of course, he is no doubt assessed mainly on his house. His income is one-fifth that of the farmer, while his rateable value is 16*l.* as compared with 360*l.*, the rateable value of the farmer.

10,579. (*Mr. Arthur O'Connor.*) Does the 50*l.* include the cost of living for himself and his family?

(*Chairman.*) I was just going to ask whether you have put the farmer and the cottager on the same terms?—Yes.

10,580. Why do you take wages in the case of the cottager; that is what I do not quite understand?—That would be his profit or income.

10,581. I only want to elicit your view, I do not want to disagree with you. Do I understand that the 50*l.* includes all his wages besides the supposed wages which he derives through the profit on farming his 5 acres, or what is it intended to represent?—That would include the whole of his profits from the occupation of the cottage and the five acres; that is, no doubt, what it is intended to include.

10,582. You say wages included; but probably the five acres might not take up his whole time; suppose he worked for any number of days in the year at harvest, or somewhere; is the 50*l.* intended to include the wages that he gets in money besides, and, if so, why so?—I understand the figures include the whole of his profits and income, including wages.

10,583. Perhaps you had better verify that, as well as the other parts of the table?—I am afraid I have not put any question to my informants as to those particular figures.

10,584. (*Mr. Smith.*) May I ask that it should be also enquired where the gentleman who combines the professions of lawyer and doctor lives, because he apparently is only rated for his office?—Yes.

10,585. (*Chairman.*) We had better, for our confidential use, have the names in this case, in order that we may, if we see fit, verify it?—I will endeavour to obtain them.

10,586. The next heading of your memorandum has to deal with two properties which were sold in Crewe; what have you to say about them?—That is another case which was sent to me by Mr. Dutton, of the Cheshire Chamber, and I was asked to put it before the Commission. The first case is that of a farm of 191 acres, which was sold at Crewe in April last for 9,100*l.*; the gross estimated rental being 268*l.*, and the

rateable value 249*l.* At the same time, or about the same time, an hotel was sold for 9,000*l.*; its gross estimated rental being 130*l.*, and its rateable value 104*l.*

10,587. What inference do you want us to draw from that?—The inference that was obviously intended to be drawn from that is, that, whereas the two properties were of practically the same value, the one was only rated at 104*l.* while the other was rated at 249*l.*

10,588. Going back to the old test that the value of the thing is what the hypothetical tenant will give, is it your suggestion that the hotel is not properly valued for rating purposes, or what is the suggestion, where in your opinion is the fault, where does it lie?—It is evident in that case, that the hotel could not have been rated up to its value.

10,589. Why? Have you anything to show us that the rent paid for the hotel by the tenant was more than 130*l.*?—No, I have only these figures as they were sent to me.

10,590. If the rent paid for the hotel was only 130*l.*, whatever we may think of the prudence of the gentleman who paid 9,000*l.* for it, what would be your comment upon it?—It shows that in that case, at any rate, the person who occupied the property, which was apparently of the value of 9,000*l.*, in the one case had to pay more than double the rates that the other person had to pay.

10,591. I do not want to argue with you; but if the rental of the hotel was 130*l.* where is the grievance?—The grievance is, of course, that in that case the rental or rateable value does not represent the ability to pay of the person who occupied the property.

10,592. (*Mr. Arthur O'Connor.*) Might I ask if you mean that this is a case of free sale at arm's length by two persons who were presumably sane, and not insane?—I believe so; I believe they were sold at auction; at least, I understand so.

10,593. We are to understand that, though the farm is rented at 268*l.*, and the rateable value is 249*l.*, the purchaser thought it worth his while to pay 9,100*l.* for it?—Those are the figures of the sale.

10,594. (*Chairman.*) What have you to say about the next one?—These, as I say, are all cases which have been sent up to me, and I am asked to lay them before the Commission.

10,595. I know. It is all very well to lay the figures before us, but I want to know what is the inference you want us to draw from them; what is the object of putting them before us?—The general object which, of course, runs through the whole of them is to show that rates bear more hardly upon the farmer than they do upon those who are concerned in other businesses—in comparison, that is, with profits; it is going back to that.

10,596. You do not wish to connect the farm of 210 acres with a rateable value of 376*l.* with the others, do you?—No; that is another case.

10,597. What is your comment upon that; what are we to learn from that farm of 210 acres, which has a rateable value of 376*l.*?—The next instance which I am asked to lay before the Commission is that of this farm of 210 acres, with a rateable value of 376*l.* In the adjacent country town various cases were sent to me, and the names were given of ten hotels, for example, which are rated at, in the one case, 63*l.*, running down through various sums to 23*l.* 8*s.*, the ten hotels being rated altogether at 362*l.*, or less than the rateable value of that one farm.

10,598. Do you know what rent was paid for those hotels?—No, I cannot say what rent was paid.

10,599. Then what is the object of this illustration, because we start with the assumption that rates are to be based upon the amount which a hypothetical tenant will give. I do not quite follow what the grievance is here. I am anxious to find out what it is that you wish to put before us, but you are not making it quite plain to me; what is the inference that you wish me to draw from it?—The contention is that the basis is not a fair one; that to make the charges payable to rates on the basis of rent, or rateable value, which is practically the same thing, or substantially amounts to the same thing, is not a fair basis.

10,600. Why not?—Because it does not in the least represent the ability of the persons to pay. The

*Mr. R. H. Rev.*

16 July '97

Ability to pay.  
Rent not a fair test.

Mr. R. H.  
Rev.  
16 July '97

argument is, in the case of the farmer of 210 acres with the rateable value of 376*l.*, that his ability to pay would be represented by an income of, say, 120*l.* or 150*l.*, taking the basis of the income tax returns for example.

10,601. That is assuming, of course, that the rate falls upon the occupier?—It is assuming that the rate falls upon the occupier. I have already said that it seems to me—if I may be allowed to say so—that if one could treat these cases theoretically as representing the case of a yeoman farmer occupying his own farm, and also treating the case in the town of the urban ratepayer as that of a man who is occupying his own property, then I think you get something like a comparison as to how the grievance really falls, and you get out of the difficulties involved in the consideration of the question of the ultimate incidence of the rates. If it be assumed, for instance, that the man who occupies this farm occupies his own property, then, of course, it is clear that he is rated, and whatever his income might be he is the only person who can pay the rates in that case. If it were also assumed that these hotels or shops were occupied by their owners, then it is perfectly clear that those who occupy them pay the rates, and then it is seen that the relative payment of the two people in proportion to the income they derive from the property is enormously different.

10,602. Of course, in order to get a fair comparison, you would have to take for our purposes, as I suppose you would agree with me, the whole burden which is charged upon these two individuals by all the taxation, both for Imperial and for local purposes?—Yes, and I have already put figures before the Commission to show that land, for example, pays a larger proportion to Imperial taxation than other property.

10,603. That, of course, is a matter which, amongst others, we shall endeavour to investigate?—I have given the figures, which rest on the authority of Sir Alfred Milner.

10,604. I think you want to speak for figures which have been sent to you from the Liverpool and District Farmers' Club?—Those figures, I am bound to say, do not show very much except the conclusion which is drawn from them in the statement sent to me, which is that the total amount of the rate in the £ in the rural townships in that particular part of the country, West Derby Union, was in 1875, 2*s.* 9½*d.*, and in 1895 3*s.* 2½*d.*

10,605. In 1885, the intermediate year, I observe that it was less than either 1875 or 1895?—Yes, it was then 2*s.* 8½*d.*

10,606. I suppose you would probably agree with me that a good deal of that increase or decrease depends upon the ability of the administration?—Yes.

10,607. What is the next point you want to put before us?—One point which has been suggested, which I have to lay before the Commission, is that in rating a farm the assessment is to a greater or less extent not only upon the bare land, plus the landlord's capital spent in improvements, but also upon the tenant's capital, which is equivalent to his stock-in-trade. The working capital of a tradesman is mainly invested in his stock; as he accumulates more capital he increases his stock, which is, of course, not rateable. If the occupier of a farm sinks more capital in his business the effect is that the rateable value of his farm is eventually increased, and indirectly therefore he is rated on his stock-in-trade.

10,608. I should like to have that made quite clear. In what way does the occupier of a farm, as an occupier distinct from the owner, sink capital in his business in such a way as to increase the rateable value of the farm?—All the money which a farmer spends, for instance, in feeding stuffs, manures, and so forth, may, and probably does, if continued, go to increase the value of the farm.

10,609. Does it increase the rent. Nowadays, when we have very properly an Agricultural Holdings Act, those are the things which he gets an allowance for at the end of his tenure; does it increase the rent?—Of course, it may do so, or it may not.

10,610. I want to know if it does—you say it may; I am rather inclined to doubt it, and I should like you to make that clear for me?—I think, undoubtedly, it increases the rent eventually. Of course, I was asking the Commission to assume, in the first instance, that the man is occupying his own land; then, of course, it is clear that if he goes on spending, whether he spends

landlord's capital, or whether he spends tenant's capital, he is adding to the value of the property.

10,611. And, of course, it is equally clear that if you put on an extra story to your house you pay more rates for it?—Yes, certainly; but that, of course, is only an assumption, and if you assume in both cases that the owner is rated, then they might be equal; but they would not be equal in respect of the occupier, I think.

10,612. Do you also put it to me that the occupier pays the rate, and the whole of it?—No; the occupier in neither case pays the whole rate ultimately.

10,613. That is exactly what I expected you to say?—I was asking the Commission to avoid that question by taking the case of the two owners.

10,614. We cannot avoid it in practice unless we can pass a law that everyone is to occupy his own house and his own land; we have got to deal with it the other way, as well as to deal with the hypothetical case that you put?—Yes; but I do not think that the additions to a house are quite in the same category as the spending of a tenant's capital on a farm.

10,615. I take that from you as your contention, but you have not convinced me, I am bound to say, that the outlay of a tenant's capital does tend to increase his rent?—It may not increase his individual rent, but it may, in many cases, go to increase the value of the farm when he leaves. He may improve the farm—supposing the man had it on a lease, for instance.

10,616. (Mr. Arthur O'Connor.) I understand you to convey that if a tenant starves a farm, at the end of a lease it is not so lettable a property as if he kept the farm up to the end in good heart?—That is so.

10,617. (Chairman.) You have something to say about the assessment in the valuation of a farm to the effect that machinery is taken into account, I believe?—Yes, that is another point which is, perhaps, worth mentioning. I have been asked to submit to the Commission that the machinery which is employed upon the farm, is practically taken into account. For instance, if you have an arable tract of land—of course, the land cannot be arable without implying the use of ploughs, and it seems, therefore, that it has no rateable value—except in so far as the necessary implements for its cultivation are used upon it.

10,618. Do you put it to me that in valuing a farm for local rating purposes, ploughs and other instruments are really taken into account?—They are not separately taken into account, of course.

10,619. Are they taken into account at all; when a man values a farm, an agricultural property, do you mean to say that he counts the ploughs, or the harrows, or the rollers, or the mowing machines, and all the rest of it, and says that these things increase the value of the farm on which the man is to be rated?—No, I am not saying that, but I am saying that they must necessarily be taken into account when the farm is valued.

10,620. Are they, that is just the point; I am really surprised to hear you say so?—It is a point which, as I say, I am asked to put before the Commission.

10,621. I will take it that you are asked to put it before the Commission, but what I want to know is, do you agree with it yourself?—I think it is quite arguable, putting it at its lowest.

10,622. Do you put it before me as your opinion that in valuing farms the assessment committees do take into account the agricultural implements which the man is using?—No, but I venture to say that it is quite clear they do, in rating an arable farm, say at a pound an acre, practically include the necessary machinery for keeping it in cultivation.

10,623. I am very anxious to sympathise with you, but I cannot agree with you in that, I am bound to tell you?—For example, if you take the corresponding case of a manufacturer, for instance, in a factory or a mill, or anything of that sort, in that case, I think, a valuer in valuing does attempt to separate the different parts of the property upon which he puts rateable value.

10,624. We had a witness here the other day who said that the practice in different parts of the country varied, and that some valuers did take into account the fixed machinery, the threshing machines, and so on; but you are the first witness who has suggested to us

upon the  
farm is  
taken in  
account in  
the valua-  
tion.

Mr. R. H. that a man's ploughs and harrows and rollers are taken into account. I want to know whether it is really a point which you are asked, as you express it, to put before the Commission, or whether you put it before us as your opinion on behalf of the Central Chamber of Agriculture?—No, I cannot say that I am representing their views in putting that before you.

10,625. Then I gather from the evidence which you have given and from what you have said on this point in your memorandum, that, at any rate, farmers are of opinion the present system bears unjustly upon them?—Yes; and they also think that a reduction of rates on agricultural land would benefit them.

10,626. I suppose in that they are not singular from the occupier of any other class of property, are they?—No.

10,627. I can fully concur, if you ask me, either as a householder or as an owner of property, I should like to see the rates put down?—I may add, that they think their grievance has been aggravated since the passing of the Finance Act, at any rate the grievance as regards land.

10,628. It has been aggravated since the passing of the Finance Act?—And of the Parish Councils Act.

10,629. And I suppose it has been, to some extent, alleviated by the passing of the Act of last session, about which there was a good deal of controversy?—Undoubtedly.

10,630. Then, as you have given me one expression of opinion, perhaps you will tell me whether that Act is accepted by your clients as in satisfaction of all demands, or whether you still want something more?—I do not think that they consider that Act goes far enough to satisfy their claims. I might also, in mentioning the Finance Act, mention the Local Government Act of 1894, that is another Act which they consider aggravated their grievance.

10,631. Why?—By establishing the new parish councils with the new parochial rates.

10,632. What is the point in the next paragraph where you say that the rateable value in England and Wales has, according to Mr. Shaw-Lefevre's return, fallen by 15 per cent.; what do you want to emphasize there?—I was only leading up to the point that the total amount of rates paid by agricultural land would, of course, be less on the rateable value if the rates had remained stationary; but in the opinion of the farmers at any rate the tendency during that period has been to increase the rates, at any rate they quote the case of the county rates particularly as having tended to increase.

10,633. That only means, does it not, that if you pay 2s. in the pound on a rental of 50l. you pay as much as if you paid 1s. in the pound on a rental of 100l.—that is all that paragraph means, does it not?—It comes very much to that, of course, to a large extent; but that does not entirely account for the whole of it, because they think that the total expenditure on county government, for instance, has increased to an extent which would be more than the difference represented by the fall in rateable value, and they also think that parish councils, as I have said, have added to their rates, and they think, too, that the cost of highways has increased.

10,634. Would you reduce that into figures and show me how much in any case the parish council has added to your rates?—I am afraid I have not any returns to show exactly, but so far as there is a parish council rate at all it is an addition whether it be 1d., 2d. or 3d. in the £.

10,635. Have you any figure from any district of the country to show us over the two years what has been the effect up to the present time of the parish council rate, and what their average rate really is? I daresay we could get it from the Local Government Board, but I do want to know whether you are able to put before us any figures which justify the statement that you have made that parish councils have increased the rates?—No. The only statement that I wish to make is that the parochial rate is a new rate, and, therefore, whether small or great it is an addition. The only other point here would be that the ability of the occupiers and owners of agricultural land has been greatly decreasing. There has been a great reduction in the income from the cultivation of land—a reduction which has not been paralleled in any other industry. I would just give you figures showing the fall of prices.

10,636. I think those are matters of common notoriety and constitute a factor in your case which the Commission will take into account?—May I just give you the figures? From 1866-70 to 1891-5 the fall in the case of wheat has been 49 per cent.; in the case of barley 35 per cent.; and in the case of oats 29 per cent. while beef has decreased from 21½ to 35 per cent. for the lower qualities, and from 10½ to 12½ per cent. for the better qualities; mutton, the lower qualities, has decreased by 40 per cent., and wool, from 1876 to 1896, has decreased in price by about 40 to 50 per cent.

10,637. (Mr. Arthur O'Connor.) May I ask you where those figures were obtained?—These figures were obtained from the Agricultural Returns for 1896.

10,638. (Chairman.) From public documents?—Yes, certainly, a document issued by the Board of Agriculture.

10,639. Would you give us the reference, quoting the page and the column in order that we may see it?—I will add that in my proof.\*

10,640. Then we come to the next paragraph containing that which I have found in the memorandum of almost every witness who has come before us, namely, frank recognition that the subject we have got to inquire into is a very difficult and intricate one and that there is therefore an inclination to place the case before the Commission and to leave any proposals for reform to them. That is a touching proof of confidence in the Commission but I should like to have some practical suggestion from you upon the point, if, having thought it over, you are prepared to make any?—I am sure, speaking for farmers, they have every confidence that this Commission will do justice to their case.

10,641. Yes, but I want to know whether you have any practical suggestion to make to the Commission that we might propose to the Government and that the Government might propose to Parliament?—Perhaps it is hardly necessary to say again that farmers think that to find a really practical remedy for what they consider to be their grievance is essentially the point upon which the Commission, viewing the whole case, as a whole, is far more competent to come to a conclusion than anybody outside can be, but I will, of course, place before the Commission what the Central Chamber of Agriculture has resolved.

10,642. I should like you to come to that. I see you state it in your next paragraph, that the two principles generally accepted as just, if they can be generally applied, are ability to pay as the basis of assessment and payment according to benefit derived from expenditure. Now just take the first of those by itself to begin with. What practical means do you suggest to ascertain ability to pay?—Of course as I have said in my memorandum, that practically involves the payment of rates on the basis of an Income Tax. I see no other conclusion to draw from the suggestion that ability to pay should be gone back to. Of course the principle of ability to pay was that upon which the whole system was first founded.

10,643. You are facing the thing quite frankly and I do not want to take any advantage of you; but I suggest to you that the two things that you have put one after the other, namely, ability to pay as the basis of assessment and payment according to benefit derived from expenditure, are two not only opposite but contradictory principles, and I ask you how you reconcile them in a case which has been put by more than one member of the Commission in question: supposing a gentleman living in a district derives a great part of his income from American or Indian Railways, how are you going to deal with him?—The only practical suggestion on which the basis of the Income Tax could be applied to local rates would be that the Tax should be collected nationally by a department of the State.

10,644. That would satisfy, I daresay, the first of your two principles in a rough way, namely, ability to pay; but how far would it go in satisfying the second of them, namely, payment according to the benefit derived by his property from the outlay?—The suggestion, of course, only goes so far as regards those objects which are of practically equal importance to the nation as a whole.

10,645. Give me an instance of one?—The main tenance of the destitute poor.

\* [Agricultural Returns for Great Britain, 1896. C.—8502 pp XXXIV., XXXV., XXXVII. 8166.]

Mr. R. H.  
Rew.  
16 July '97

Ability to pay.  
Local rates to be levied as an income tax collected by the Government.  
Question of administration and control considered.  
Contribution to rates according to benefits received from their expenditure considered.

*Mr. R. H. Rew.* 10,646. I think I may say that assuming the maintenance of poor in America or India is a charge upon the property of those two countries, why is the man who draws his income from railways in America or India to pay according to that income for the maintenance of the poor in this country?—For the same reason that he pays towards the objects of expenditure which the Imperial taxation goes to meet.

10,647. Do you suggest that the maintenance of the poor is to be put on the same level as the Army and Navy?—Yes.

10,648. And to be administered imperially like the Army and Navy or locally?—It would have to be administered locally; but then that is a principle which I venture to think has been, to a certain extent, adopted already. Imperial funds have been placed in the hands more or less of local authorities for administration—under certain conditions, of course.

10,649. According to your suggestion it is to be entirely transferred to the Imperial fund by an income tax?—Taking that suggestion that the cost of the maintenance of the indoor poor should be a national charge.

10,650. You limit it to the indoor poor to begin with?—Yes.

10,651. I want you to face a difficulty which we should have to face if we were to adopt any such suggestion as that; the Imperial officers would then have to be charged, would they not, with the duty of seeing whether an inmate of a poor house was a proper subject for that treatment?—Of course I speak with all submission, but under the supervision of an imperial department it might be possible to delegate considerable powers to a locally elected body.

10,652. Still, the ultimate power must rest in the hands of either one or the other, must it not?—The power of checking or some power of supervision must, of course, rest in the hands of the National Department.

10,653. Do you wish to emphasise anything in these resolutions the text of which you put before us in your memorandum, but which I think we will not trouble you to read, because I will have them preserved in some form?—No. There is the point that the equalisation of death duties made it all the more important that the burden of local taxation should be equalised. That point is dealt with in one of the resolutions.

10,654. There is one which I am bound to say has some attractions for me, namely, that the rates should in future be divided between landlord and tenant; I observe that was carried by 18 votes to 11?—Yes.

10,655. Do you think that is a proposal which would be generally acceptable to your clients?—Yes, it is a proposal which has more than once been carried in meetings of the Council of the Central and Associated Chambers of Agriculture.

10,656. Have you ever seen any proposal for carrying it into effect, as regards England, in a detailed form?—No, I cannot say I have.

10,657. You were going on to one other point, I think, what was it?—That which is expressed in another of the resolutions, namely, that land which is devoted to agriculture should be assessed to local rates at one-fourth of its annual value. That is a point which has been strongly urged.

10,658. Why do you take one-fourth?—Largely because of the precedent which exists in the case of the sanitary rates. That, as I think, had a great deal to do with it.

10,659. Do you apply that to all agricultural land wherever situated?—Yes.

10,660. How do you define "agricultural land"?—As land devoted to the purposes of agriculture for farming.

10,661. No doubt, but what is agriculture—would you include market gardens and what is known as accommodation land?—Yes, I think it includes that.

10,662. You would include that?—Yes, I think market gardens must be included with agricultural land.

10,663. Is there any other point you wish to bring before us? Of course I am rather at the disadvantage

of not coming in at the beginning of your examination, though I have read your memorandum. Is there any point which you would like to say anything upon before the other commissioners put you questions?—The only other point in the resolutions which I should like to draw attention to would be that with reference to the Agricultural Rates Act. The Central Chamber very greatly objected to farm buildings being classed with houses and not with land; they considered that the buildings necessary for the occupation of a farm ought to be included with land, as they form practically an essential part of the land and cannot be properly divided from it. Then I have a memorandum on the history of local rates, so far as the Local Taxation Committee is concerned, although I do not know if it is of any interest to the Commission.

10,664. Of course we will not make it part of your evidence, but I shall certainly be very glad to see it, and I will undertake to read it?—I will hand it in. (*Handing in memorandum.*)

10,665. (*Mr. Smith.*) I think your evidence divides itself into two parts, first, that real property pays too much as contrasted with personalty?—Yes.

10,666. Secondly, that agriculture pays too much as compared with other real property?—Yes.

10,667. You quote Sir Alfred Milner. Would you refer to your paper and tell me this: Sir Alfred Milner says the annual value of lands is 49,918,740*l.*, and of other rateable property 160,640,835*l.*; does he include in that 49 millions, land let on ground rents on which buildings stand?—No, I think not.

10,668. Then it should rather be agricultural land, should it not?—This is described in his table as lands under Schedule A.

10,669. Then it would not show land that was included in the value of a house as site value?—No, it would not.

10,670. It would only include the vast quantity of building land at an agricultural valuation as unbuilt upon land, land worth, possibly, thousands of pounds an acre in the market, but by the will of the owner unoccupied except for agricultural purposes?—Yes, it would include it, of course, at the value put upon it for Income Tax purposes, whatever that might be.

10,671. The value for the time being?—Yes.

10,672. Similarly, in the comparison between the value of lands under Schedule A. and profits under Schedule D., of course you have shown there the great increase in the assessment under Schedule D., as opposed to the assessment under Schedule A.?—That is what the figures show.

10,673. The increase on land is entirely due to land becoming building land, is it not?—Certainly; of course it is due to the increase of urban land.

10,674. In your evidence you have shown that there has been a depreciation of purely agricultural land?—Pardon me; of course the first column is not land, it is land and houses together.

10,675. It is clearly not due to agriculture?—That is quite clear.

10,676. You have added something that Sir Alfred Milner omits, I think, namely, the Land Tax?—I beg your pardon, he did not omit it; he gave the two calculations, and I gave the two calculations.

10,677. You say in your memorandum that he excluded it, which is very much the same thing?—I beg your pardon, he did not exclude it at all from his table.

10,678. I think paragraph 6 says this: "Sir Alfred Milner calculated that Imperial taxation (excluding "Land Tax Redeemed") falls at the following rate in "the £: Lands, 16*l.* 18*s.*"?—I am sorry if that gives a wrong impression. He distinctly gives the two sets of figures, one including Land Tax Redeemed, and one excluding Land Tax Redeemed. I merely took it excluding the Land Tax, simply because I was anxious not to overstate the case. I took it at its lowest by excluding Land Tax Redeemed.

10,679. You show, of course, in paragraph 19 that there is a difference between 1868 and 1894 in the total amount of rates raised in England and Wales; you say it was 16,503,437*l.* in 1868, and that in 1894 it was 32,223,972*l.*?—Yes.

10,680. Should I not be right in assuming that almost the whole of that increase was due to town rating?—Yes, I think so, practically.

*Mr. R. H. Rew.*  
16 July '97

Agricultural Rates Act. Objection to agricultural buildings being separated from the land for purposes of valuation

An undue proportion said to be paid in rates in respect of real property compared with personal; and also in respect of agricultural land compared with other real property. Sir Alfred Milner's figures.

Resolutions passed by the Central Chamber of Agriculture.

Division of rates between landlord and tenant.

Agricultural land should be assessed to rates at one fourth of its annual value.

Mr. R. H. Rew. 10,681. You do not seriously put, before us that agricultural rates between those two dates have increased materially, do you?—No, that is not part of the contention.

6 July '97 10,682. Therefore that increase is purely due to urban rating?—Yes. I am dealing, of course, in that part of the evidence, entirely with the question of real property and personal property, not with land in particular.

Loans, increase of, due to borrowing by urban authorities. 10,683. I understand. Now, referring to paragraph 21, there you give the total amount of the outstanding loans to local authorities as being 92,820,100*l.* in 1875, and 224,158,370*l.* in 1894, and you have shown by a subsequent paragraph that that is almost entirely due to urban borrowing?—Yes.

10,684. And mostly, as you say, for probably productive expenditure?—Expenditure from which the ratepayers derive a benefit.

Hereditary burdens. Sir Henry Fowler's views. 10,685. You spoke of the hereditary burden theory, and you confined it, I think, quoting Sir Henry Fowler, to three rates practically, namely, the Poor Rate, the County Rate, and the Highway Rate?—Yes.

10,686. And you treated as an hereditary burden a rate that had been a rate in existence for 70 years?—No, I did not, but Sir Henry Fowler did.

10,687. You only quoted Sir Henry Fowler?—Yes.

Agricultural land, decrease in value of, and increase in value of buildings. 10,688. Similarly, on paragraph 23, I want to know whether you say that land which was worth 39,835,088*l.* in 1870, and only 33,654,550*l.* in 1894,\* is purely agricultural land?—Yes, substantially.

10,689. Buildings which had increased apparently from 55,157,300*l.* to 102,661,924*l.*, would include the land upon which they stood?—Yes.

10,690. So that, treating land as being of a certain quantity in the United Kingdom, it has enormously increased in value as a whole?—I do not know about its having enormously increased in value; of course that part of it which has been built upon in the towns has increased in value.

Agricultural land, decrease in value of, and increase in value of land in towns. 10,691. Do you not think its increase has far more than balanced the loss that there has been on agricultural land, which is 6 millions; do you not think that has been far more than made up by the increased value of land near to towns and in towns?—Yes, in towns, perhaps.

10,692. You have lost on agricultural land, according to your own figures, in 14 years about 6 millions, is that not so?—Yes.

10,693. Have you any figures to show, or do you dispute the fact, that the increase in the value of land that happens to be in towns or near towns has not far more than made up the loss on agricultural land, and that there has been, on the whole, a great increase?—I could not say.

10,694. You would not dispute the fact?—Of course, I am hardly in a position to dispute it.

10,695. Has it never occurred to you to test the fact?—No, I do not quite see how it is possible to test it. Perhaps I may be allowed to say that I do not agree that that fall in value of agricultural land, 6 millions, represents the whole fall in the value of agricultural land. That is the fall in rateable value, but rateable value does not represent entirely the fall in the value of the land.

10,696. We are dealing in both cases with rateable value, and therefore what would apply to one would apply to the other practically; if you take capital value, I should have to increase the value of the other item?—I am not speaking of that at all; I am speaking of how far rateable value represents the actual fall in the rent in the case of agricultural land; that fall is not sufficiently represented by the decrease in rateable value for two reasons; first of all, that in many cases the assessment committees do not follow rent in arriving at the rateable value, and in most cases where they do not do so the rateable value exceeds the rent.

10,697. Is it your experience that, as a rule, the assessment committees throughout the country over-value or under-value the land?—I do not know whether my opinion would be of very great value on that; but I should say there are a great many cases in which they over-value it at the present time; notably those cases that I have mentioned, which are very common in the Eastern Counties now, where they do not follow rent.

Mr. R. H. Rew. 10,698. I am very anxious to clear up this question about the School Board, because that has exercised my mind a good deal. You rather dispute Sir Henry Fowler's figures, and say his 2*s.* 3*d.* is not accurate, and you seek to make it 2*s.* 11*d.*—I do not say it is inaccurate for that year.

10,699. But you said it was an exceptional year?—I said in some cases the rate had risen since then.

10,700. He took the year 1891, and you said there was reason to believe that that was an exceptional year?—Yes.

10,701. You seek to bring his 2*s.* 3*d.* now to 2*s.* 11*d.* practically, is not that so?—I have already admitted that it cannot be put so high as that.

10,702. What you really have done with regard to the School Board is this: you have ascertained from some return that the average school board rate in the rural districts varied from 7*d.* to 8*d.*, was that not so?—The returns from which these figures are taken are the Local Taxation Returns.

10,703. You found that those were the averages of the school boards in parishes where school boards exist?—The average of England was 7*d.*, and the average of Wales was 8*d.* I have taken the figure between the two.

10,704. Where school boards exist, you have assumed that 8*d.* was the average, and you have applied that to all parishes whether they existed or not; is that what you have done?—Yes.

10,705. I only want to make it quite clear; therefore, that figure is fallacious?—It does not represent the average for the whole country.

10,706. You must know, as I know, that the vast mass of rural parishes have not got school boards?—Quite so. Perhaps I may be allowed to say that I was not concerned necessarily to show an increase in rural rates.

10,707. I thought you rather elaborated that with a view to show that Sir Henry Fowler's 2*s.* 3*d.* could not now be taken as accurate?—I still think it is not fair to take the figures of one year in either case as applying to all time or for a length of time.

10,708. You cannot tell us anything about the average of the urban rates except from some returns of Sir Henry Fowler's?—Quite so.

10,709. Therefore, you quote Sir Henry Fowler as regards the urban rate, but you dispute him as regards the agricultural rate; or, rather, you seek to increase the figure at the present time?—Yes, but I have not gone into the urban rates.

10,710. The ultimate conclusion was that you practically accepted the figure of 2*s.* 6*d.* as being about the rural rate?—Yes, I think that would fairly represent it at the present time, more than the other; and, if that is so, of course it shows an increase of 3*d.*

10,711. When you amend the table from the Nantwich Union, would you kindly say whether the farmer has included anything for his house rent as well as his cost of living in that 250*l.*?—I will ascertain that.

10,712. The other people must live somewhere, and must be rated accordingly. Do you happen to know anything of yourself of the facts about the hotel that was sold for 9,000*l.*?—No, I only give the figures as sent to me.

10,713. Do you know whether it was bought by a brewer?—I cannot say.

10,714. Perhaps you would ascertain that too. You know nothing, of course, of the area of the land upon which those 10 hotels and 10 shops stand?—No.

10,715. You have contrasted them with a farm of 210 acres?—Yes; but the land on which they stand would be, of course, almost infinitesimal compared with the farm.

10,716. So I thought. In the case of the West Derby Union, which you illustrate as showing rather an important increase in rating, that is to a large extent an urban union, is it not?—I believe it is.

10,717. Does it not extend over a large part of Liverpool?—I do not know how far it includes Liverpool proper, but I believe it does practically include part of Liverpool to a large extent. Of course these figures are given as the increase in rural townships.

10,718. I quite appreciate your point, that in urban districts people receive many benefits from the rates

Mr. R. H. Rew. 16 July '97

School board rates. Sir Henry Fowler's figures.

School board rates. Mr. Rew's figures.

Valuation of property occupied and rates paid, by certain farmers, and also by others engaged in certain trades and businesses compared. Mr. Rew's figures.

\* Mr. Shaw-Lefevre's return of Rateable Value of Lands in 1869-70 and 1894. House of Commons Paper, No. 204 of 1895.

*Mr. R. H. How.* which they pay; but you have never attempted to compare, have you, the purely rates of burden in town and country? You have told us, you know, about the poor, the highways, and the county rates, which would be equivalent, I suppose, to the borough rate; but you have never compared those rates in town and country to see whether the towns are paying on rates of burden more or less than the country, eliminating altogether rates of benefit?—I quite understand you. I am afraid I have not any figures to show that.

10,719. You have not thought it worth while to inquire into that?—I have no figures here on that point.

10,720. (*Mr. Dalton.*) I think you have stated that in the table in paragraph 23, which is taken from Mr. Shaw-Lefevre's return, "land" is practically agricultural land?—Yes.

10,721. I do not think that is quite the case; I have Mr. Shaw-Lefevre's return here. In the first instance the return was to include under "land" the whole of the tithe rentcharge, was it not?—Yes, that is so.

10,722. Then you would have to make a deduction first of all for the value of the tithes at the two dates to get at it?—Yes.

10,723. In the Order of the House of Commons for the Return it is quite correct to say that "land" was to include farm houses and buildings, and was to exclude land occupied as railways and canals and quarries; but there was no direction given that it was to exclude building land, and I presume it did not exclude building land?—No, it did not exclude building land—land of course that was not built upon.

10,724. Take London, for example, the rateable value of land there given at about 70,000*l.* I think; you would not suggest that there is 70,000*l.* worth a year of purely agricultural land in London?—No, I should think not.

10,725. But the building land has gone up in value in the interval between 1870 and 1894?—Yes.

10,726. Therefore the 15 per cent. would not represent the total fall in the value of the agricultural land?—No.

10,727. Some of the items under the head of land there have gone up, and if you take that into account you must allow a bigger fall in the value of agricultural land during the interval, must you not?—Yes. I mentioned also the point as regards the fact that the rateable value does not always follow the rent; but there is still another point, I think, which might be mentioned, and that is that a large amount of the fall in rent, for instance, has been by way of temporary abatements and temporary remissions, which do not show in the returns of rateable value.

10,728. I think you took exception to Sir Henry Fowler's return because he included the grants in aid of education, on the ground that if Parliament institutes a new liability for specific objects and throws it upon the rates it is not justifiable to claim that amount as a relief of the rates?—Yes, that is the ground on which the Local Taxation Committee object to that being treated in the same way as the other grants.

10,729. If you were to exclude the education grants on that ground, you would have to exclude a considerable number of other grants as well, would you not; for example, the disturnpiked roads that were thrown upon the rates by comparatively recent legislation?—But they were not exactly a new charge upon the rates in the same way, were they?

10,730. They were paid for out of the tolls until the roads were disturnpiked?—Yes.

10,731. Then industrial schools, too, were a new charge on the rates, and registration and technical education; it would be very difficult indeed to take these other grants, other than education and to strike out certain items in them on the ground that they are in respect of new purposes thrown upon the rates?—Yes, that is so, no doubt; but so far as that goes that, I think, only increases the force of the objection, that all the grants that have been made in aid of rates have not, altogether, gone actually in relief of rates in the strict sense of the term.

10,732. But it was in no way stated in Sir Henry Fowler's return that they had?—I am not, of course, putting it on the ground of an objection to the accuracy of Sir Henry Fowler's return.

10,733. I think you also took exception to the year 1891 being taken in his return, as the year to compare with the earlier ones; but, as a matter of fact, was that not the latest year possible at the date of his return?—Yes, entirely so.

10,734. You do not mean to suggest that it was unfairly selected?—Not for a moment, I do not mean that. What we do object to is that that particular figure of 2*s.* 3*d.* should be assumed for a long period afterwards as being the amount of the rural rates.

10,735. You used the term unfair, but you referred to the unfair inferences that may have been drawn from it since?—Quite so.

10,736. Not anything unfair in the report itself?—No, I did not suggest that there was anything unfair in the report itself.

10,737. A question has been raised on your figures as to including or excluding the redeemed Land Tax; have your Committee any opinion upon that point, whether, in determining what future charges should be thrown upon personalty or realty, any account should be taken of the Land Tax which is redeemed?—I think, on the whole, both the Committee and the Central Chamber would agree with the conclusions which were arrived at by the Royal Commission on Agriculture. Perhaps I might be allowed to quote from the Royal Commission on Agriculture on that point.

10,738. (*Chairman.*) No, refer to it please, we cannot have the evidence re-given, because it is in a published document already?—I am referring to the Second Report of the Royal Commission on Agriculture, C. 7981. and to paragraphs 21, 22, 23, and 24 particularly, to which I would venture to call the attention of the Commission.

10,739. (*Mr. Dalton.*) Have your Committee made any list of the rates of burden and the rates of benefit?—No, I am afraid I have no list to put before the Commission.

10,740. I think one of the recommendations of the Committee is that the rates should in future be divided between landlord and tenant; do you think that will in any way affect the ultimate incidence of the rates?—No, I do not think it very much affects the real burden of the rates at all. I might, perhaps, be allowed to say that it is not a recommendation of the Local Taxation Committee, but is a resolution which has been passed by the Central Chamber of Agriculture.

10,741. If it has no effect upon the ultimate incidence of the rates, what is the precise object of recommending that it should be made?—I think farmers have a sort of general idea that it would for the time being relieve them to a certain extent of the burden pressing upon them as compared with owners, and they also go, I think, a good deal upon the fact that it is the law in Scotland.

10,742. What do you think the effect would be on local administration, would it conduce to extravagance?—Of course, theoretically, it would do so, but I doubt rather whether the effect of the burden of half the rates on the persons who are concerned in local administration would not almost be as great as that of the whole; but still it is quite arguable that it would not be so, and that, therefore, it would conduce to extravagance.

10,743. Has the Local Taxation Committee any strong view upon the subject, one way or the other?—No.

10,744. (*Mr. Arthur O'Connor.*) In paragraph 4 of your memorandum, I see that Sir Alfred Milner is shown to have valued lands at some 50 millions; I understand you to say that "lands" there means agricultural lands?—Substantially it means agricultural land as assessed to the Income Tax; that was the basis of the figures upon which his calculations were made.

10,745. Turning to paragraph 23, I see that "land" is separated from "buildings," and that in 1870 land was rated at 39 millions, and in 1894, at 33 millions, a decrease of six millions; but comparing those figures with the figures in paragraph 4, you will see that there is a difference of 50 per cent. in the value of land?—50 per cent.?

10,746. Yes, there is a difference between 33 millions and 49 millions, which is a difference of 50 per cent.; can you account for that?—The figures of the rateable value would necessarily be lower than any which were based upon the Income Tax Returns.

10,747. (*Mr. Dalton.*) Besides, one set of figures is for England and Wales, and the other is for the whole

Mr. R. H.  
Rew.

of Great Britain and Ireland?—Yes; that, of course, would largely explain the difference.

16 July '97

10,748. (*Mr. Arthur O'Connor.*) Does that mean that Ireland and Scotland represents 16 millions?—The two figures are not the same, but still the addition of Ireland and Scotland would very largely account for the difference.

10,749. I am willing to appreciate your very interesting, and, if I may be allowed to say so, remarkably able memorandum, but that is one of the difficulties which has occurred to me—I do not see how to reconcile the figures?—I think if you take the fact that the figure in the one case represents the United Kingdom, and the figure in the other England and Wales, that will go far to account for it; but at the same time, I do not think that in any case figures based on the Income Tax Returns would be absolutely identical with figures based on rateable value, and rateable value would probably be lower.

10,750. On the point of principle, why should the rateable value be lower for local purposes than for Imperial purposes?—I am afraid I am not prepared to say off-hand why it should be; but the fact is that it is so on the whole.

10,751. Then, again, I see that this annual value of 49 or 50 millions, representing lands, is under Schedule A. P.—Yes.

10,752. Cast your eye to paragraph 5; there you will see Schedule A. is put down as 202 millions?—Yes, but then the Schedule A. in the one includes lands and houses; but lands, of course, are not all Schedule A., they are only part of Schedule A.

10,753. But now, as I understand, they do value in agricultural districts, at any rate, the land separately from the houses?—For the purposes of the Agricultural Rates Act that is so.

10,754. Whatever the purpose they do it?—Yes.

10,755. The thing, therefore, is practicable, it is possible?—To separate the land from the house—undoubtedly.

10,756. We may assume that as it has been done in one place it may be done in another?—Yes.

10,757. Can you see any difficulty in carrying the same system of distinction into urban districts?—Separating the land from the house?

10,758. Yes?—That involves a large number of considerations; I should hardly like to express an opinion.

Land and  
its pro-  
ducts.  
Who  
should bear  
the burden  
of rates.

10,759. In paragraph 5 again, under Schedule D. as a heading, you give a number of figures; what does Schedule D. represent?—It represents a lot of things, substantially it represents, one may say, trade profits; that is, I think, the main item in Schedule D.

10,760. Dealing in commodities, is that so?—Yes, with all the business of the country so to say, all the trade and manufacturing interests of the country practically. Substantially speaking, it represents the trade and manufacturing industry of the country.

10,761. Commodities of one kind or another?—Yes, all the manufacture of commodities, &c., and dealings in commodities, would come there, I suppose.

10,762. Where do those commodities come from?—They come from so many sources.

10,763. Ultimately?—Where do they come from ultimately?

10,764. Yes?—I am afraid I do not quite follow.

10,765. Coal is one, corn is another; where do they come from?—Of course they come out of the ground if that is the point.

10,766. Exactly; that is the point I want to bring out; all these things that are personal property ultimately come out of the land?—No, pardon me I do not think so.

10,767. Or out of the air or out of the sea?—Yes, of course that is so.

10,768. Which do they come out of—the sea?—No.

10,769. Do they come out of the air? or do they come out of the land?—The raw material, of course, in every case must come out of the land, but the raw material

does not in the least represent the whole of the value of the products of the trade of the country.

10,770. What do you call the raw material. Take such a commodity as iron, for instance. What is the raw material of iron?—Iron ore.

10,772. Where does it come from?—Out of the land. I say that raw material must, of necessity, come out of the land, but that does not in the least represent the whole of the trade under Schedule D.; raw material represents an infinitesimal part of the whole trade.

10,773. I suppose even hailstones are only condensed vapour which have arisen by evaporation from the land?—I am afraid I can hardly give answers on such points.

10,774. I suppose that all agricultural products and all other things that men can handle or make, or sell or buy, ultimately come out of the land?—Yes; the raw materials all do so, I suppose.

10,775. It is the great storehouse from which everybody has to draw such resources as he happens to have?—Yes; the raw material of course.

10,776. And those resources are produced and exchanged and utilised by the great mass of mankind?—Yes; after having been treated by a vast number of processes in most cases.

10,777. All of which are industrial processes?—Yes.

10,778. It has to be treated by human industry?—Yes.

10,779. The great mass of mankind; are they the owners of the land?—No.

10,780. Then the great mass of mankind are dependent for their raw material upon the land and the owners of the land?—Yes.

10,781. Ultimately all mankind has to depend on that land?—Yes.

10,782. In whose ownership is the land?—Land is owned by the landowners.

10,783. Are they a very large proportion of the community?—No; they are a comparatively small portion of the community if you take agricultural land.

10,784. As the community increases does the value of land in the hands of landowners increase or decrease?—It tends to increase, of course.

10,785. If population falls off and disappears the value of the land, I suppose, diminishes in proportion—it does anyhow?—It does, generally speaking.

10,786. In the City of London it has increased?—Yes.

10,787. When by reason of the increase of the population—of the industrial community as distinguished from the land-owning community—the value of the land has gone up immensely, who benefits—the landowners?—Yes; the owners of the land at the particular moment, of course, must benefit.

10,788. Do you assent to the proposition generally that he who reaps the benefit should bear the burden?—Yes, in the main.

10,789. Under those circumstances do you see any reason why those who own the land, which is the storehouse on which mankind have to depend, should bear the burdens?—Yes; I see considerable reason why they should not bear the whole of the burden, because they are by no means the only persons who benefit.

10,790. I am very glad to hear that—go on and develop that; show how you think it ought to be distributed according to the incidence of the benefit?—I think it goes almost without saying that the inhabitants of the country share in the benefits derived from the expenditure out of, say, Imperial taxation, and out of, as we think, a certain part of local taxation. The whole of the inhabitants of the country share more or less in the benefits derived from it. I do not think that you can say that any particular class of the community enjoys the sole benefit.

10,791. I suppose those who do not own the land have to make a render to those who do for permission to be on the face of the earth?—I beg your pardon.

10,792. Those who do not own the land have to be or somebody else's land?—Yes; that follows, I suppose.

10,793. And for their presence on that land they have to make a render of some kind to the owner?—Yes.

Mr. R. H.

Mr. R. H.  
New.  
16 July '97

10,794. They must live somewhere?—Yes.

10,795. We call that rent in this country?—Yes.

10,796. Is it not out of the rent so obtained that the owners of the land defray all that they do defray?—It must be so, assuming, of course, that they are owners of land and nothing else.

10,797. Therefore it is that part of the community which is not the landowning part which furnishes that part which is the landowning part with the means of defraying that portion which the landowning part does defray; is that not so?—Well, a certain part of them do, of course. If I understand you to say that every person in the country pays rent, I suppose that is in the long run substantially correct.

10,798. I will put it in this way. Is it not really the industrial community that ultimately has to furnish forth the means of meeting everything in the way of charge?—I am not quite sure that that is so.

10,799. If the industrial community does not supply all the means which ultimately are available for meeting all charges, what is the part that it does not supply?—I am afraid I am getting into rather abstruse problems of political economy. I am afraid my evidence is of no great value on these points.

10,800. Now let me go to paragraph 14 of your memorandum. I see you speak there of the successive grants which have been made by Parliament at different times, and you show apparently a total paid over to local authorities of more than six millions?—Yes.

10,801. This is in connection, of course, with the representation that the local authorities are heavily charged, have not the local authorities been relieved from time to time of certain charges as an offset against these things?—This figure, I think, represents the amount of relief which has been given to the local authorities.

10,802. Does it? Used not the local authorities to be charged with the maintenance of the prisons?—Yes, I beg your pardon, there are exceptions.

10,803. But you state nothing about that in your paper?—I do not think I have said it in my evidence; but, as a matter of fact, I have referred to it.

10,804. So we must not take your memorandum as a complete exposition of the situation?—I think, so far as it goes, I have endeavoured to deal fairly with the question. I do not mean to say it covers the whole question; that would be a very large order.

10,805. Have not the local authorities been relieved of the charge of prisons?—Yes.

10,806. But that is not in your memorandum?—No. Might I be allowed to say, that as a matter of fact, I did not in the least intend to deal unfairly with it, because I prepared a memorandum which does show, absolutely, what the history of the whole subject is, and in the memorandum which I have handed to the Chairman the point is mentioned. I have not excluded reference to it.

10,807. Now, with regard to the total rates raised in England and Wales, in 1868 it was over 16 millions, and in 1894 over 32 millions?—Yes.

10,808. Does not that 32 millions really include a considerable repayment on account of moneys borrowed since 1868?—Yes. I think I have referred to the fact that part of the burden on the rates—

10,809. I only want to get your answer; it is so?—Yes.

10,810. If I borrow 100l. at any percentage, am I in a position to say I am 100l. in debt, without mentioning the fact that I have got 100l. in my pocket?—But I have mentioned the fact of the debt.

10,811. The localities which have gone into debt have gone into debt because it suited them?—Undoubtedly.

10,812. Because it was to their advantage?—Purely. I should say so.

10,813. And they have got public money, in many cases on very easy terms, for their own purposes?—Certainly.

10,814. All this amount of indebtedness, then, may represent advantage rather than detriment?—Undoubtedly it represents advantage to those who are now enjoying the benefits from it.

10,815. And as far as charge goes all that ought to be considered in connection with this indebtedness is the interest which they have to pay, because the capital they received in the first instance?—Yes, the interest and the sinking fund.

10,816. Will you kindly look at the instance which you have given in paragraph 33, in which you contrast the rural with the urban industrial man. A gentleman is rated as a farmer at 494l. on a farm of 245 acres, mixed husbandry; his profits are less than 200l. We know nothing about his capacity as a farmer, but we will assume that he is an average one; and he says that some farmers are even worse off than himself?—It would not be extraordinary, of course, that a man rated at 494l. should only make a profit of 200l.; that is not an extraordinary case at all.

10,817. No. I do not think it is. Then he says that "Messrs. R——, large corn millers, with about 4,000l. worth of modern milling machinery, are rated at 537l." As you have already told us, the ground they occupy, as compared with the farmer's area, is very small?—Yes.

10,818. Let us pursue the inquiry a little further. "They have three 3-horse lorries always on the road, drawing flour, &c., made from foreign corn"—that, of course, is natural from a farmer—"besides odd horses and carts." How many men do Messrs. R—— employ?—I am afraid I cannot tell you.

10,819. A considerable number?—No doubt.

10,820. First of all they employ the men in the mill, then they employ the men who drive the carts, then they employ their stablemen and agents?—Yes.

10,821. All these people are at wages, are they not?—Yes.

10,822. And they live in houses?—Yes.

10,823. And those houses, directly or indirectly, are rated to local rates, are they not?—Of course in a good many cases they would be indirectly rated; that is to say, they would be compounded for.

10,824. Then do you not think it would have been fair for this farmer who complains of his rent and his rates to have reckoned how much employment this miller gave, and how much the parish received indirectly through the distribution of his wages for industry?—If he did that he would also have to take into account the number of men he himself employed.

10,825. Certainly, but are you going to compare the number of men which this farmer of 245 acres employs with the number of men the miller employs?—I have no means of making the comparison, but of course the farmer would probably with mixed husbandry employ several men, to say the least of it; I do not know at all how many men the other person would employ.

10,826. The other man must necessarily employ a considerable number of men?—Yes, probably.

10,827. And all the horses which wear out the local roads have to be stabled, and have to be fed and groomed?—Yes, but I imagine that all the stabling, for instance, is included in his rating.

10,828. It may be so, but the men who are employed in stabling have to live somewhere?—Yes.

10,829. Messrs. R——, who occupy a very small portion of the common fund of the community, to wit, the land, give a very considerable amount of employment, and the men whom they employ, having to live somewhere, and, having to furnish part of that render that we spoke of just now, are really contributing to the local resources indirectly, if not directly, what the farmer is not called upon in the same degree to contribute; is that not so?—They may, of course, be employing a large number of men, and those men may be contributing rather more to local rates; but if that is so, they are probably getting in respect of those men, or the connections of those men, more benefit out of the expenditure of the local rates.

10,830. Yes, but what I want to bring out is this: we shall not be able fully to appreciate the value of this particular paragraph in your memorandum unless we know the exact facts as to the number of men employed, the amount of wages distributed, and the amount of local rates collected, directly or indirectly, in connection with this industry of Messrs. R——'s?—That, of course, is for the Commission to consider; but, at the same time it is, in my opinion, a fair statement as it stands.

Mr. R. I.  
New.  
16 July '97

Valuation of property occupied and rates paid by certain farmers and also by others engaged in certain trades and businesses compared. Mr. Rew's figures.

Loans of local authorities. Benefits derived from expenditure.

Mr. R. H.  
Rev.  
16 July '97

10,831. I understand that the figures with regard to the Nantwich Union you are not in any way responsible for?—No, they are only figures which have been sent to me, which I believe to be correct, and I have reason to believe that they are correct.

10,832. I should have thought they were not yours, because they contrast so strangely with the solid work of the rest of your memorandum. Would you mind asking your informant how he arrives at these interesting details with respect to so many of his neighbours?—I have here his assurance, in writing, that he has chapter and verse for his statement.

10,833. That one makes 400*l.*, another 500*l.*, and that the cottager, including wages, makes 56*l.* a year?—Yes.

10,834. Now, with regard to the cottager, I presume, having five acres of land, he has one cow, possibly a pony, and some pigs?—That is purely hypothetical, of course?

10,835. It is not unreasonable to suppose that, in that neighbourhood—it is in Cheshire?—Yes.

10,836. It is very likely to be the case there?—Yes.

10,837. Are the pigs personal property or realty?—Personal property I should imagine.

10,838. If he makes profit out of his pigs, and they are personalty, how are we to deal with that in view of the competition between the landed interest and the non-landed interest?—What is your question?

10,839. From your point of view how would you deal with profits made out of pigs?—I should say profits made out of pigs ought to contribute in equal proportion to the profits made out of anything else towards local rates.

10,840. They are personal property, admittedly?—Yes.

10,841. Would you regard them as a profit, and if they are a profit and are taxed, would you regard it as a tax on agriculture or on personal property, on land or on personalty?—If they were taxed, do I understand you to say?

10,842. I assume that they are, because this poor unfortunate labourer, I see, pays 1*l.* 17*s.* 4*d.* in rates?—Yes.

10,843. Does that labourer pay his 1*l.* 17*s.* 4*d.* out of land, or does he pay it out of personalty?—He pays it in this particular instance out of the profits of the cultivation of the land, which, substantially, is the fund out of which all rates on land are paid.

10,844. Is it a charge on realty, or is it a charge on personal property?—The charge as it stands is a charge in respect of realty.

10,845. He does not own land, does he?—No.

10,846. But he has pigs?—Yes.

10,847. And he makes a profit out of pigs?—Yes.

10,848. You say the charge on that profit is a charge on realty?—I think it is very clear that in this case the charge is made in respect of the realty which he occupies; if he pays as an occupier he pays out of the profits of the occupation of that particular piece of realty.

10,849. But a pig is a movable chattel—not easily movable I admit?—I am afraid I am not an authority on pigs.

10,850. I notice in paragraph 36 you deal with the farm of 210 acres, with a rateable value of 376*l.*?—Yes.

10,851. Let us compare that for one moment with a farm mentioned above of 218 acres—a larger area—but apparently a lower value, namely, 360*l.* I notice that according to the declaration of the farmer himself in the Nantwich Union that with the larger farm, but with the lower rateable value, he makes a profit, including the cost of living, of 250*l.*, do you notice that?—Yes.

10,852. In this paragraph 36 with a farm of 210 acres and a rateable value of 376*l.*—it is a better farm clearly—you assume the income of the occupier to be not 250*l.* but only 130*l.*; now would you tell me why you take that figure of 130*l.*?—I only take that as the assumed income according to the income tax valuation.

10,853. Is it not altogether irreconcilable with the 250*l.* of the Nantwich Union farmer?—It does not follow that every farmer of 218 acres is making a profit of 250*l.* a year.

10,854. And it does not follow that every farmer of 210 acres is making only an income of 130*l.* a year?—No, I had to guess in this case, and if one has to guess one likes to found the guess upon something, and I have founded it in this case upon the basis of the income tax valuation.

10,855. It is a pure guess?—Absolutely. I do not say that this particular occupier of this particular farm is making that income at all; I had to make it out of my own head; I had no ground to go upon, and therefore, I took the Income Tax basis of Schedule B.

10,856. You give us a list of 10 hotels and 10 shops rated upon various sums from 63*l.* to 23*l.*?—Yes.

10,857. Then when you say it would be a moderate estimate to assume that each of these hotels or shops yielded a gross profit of 1,300*l.* a year, do you mean to say that you really believe that this hotel rated at 23*l.* a year may be assumed to make a gross profit of 1,300*l.*?—No, I beg your pardon. I made a great mistake if I gave you that idea; I did not in the least mean that; I meant that the average profit is probably 130*l.* in each of the ten cases, or 1,300*l.* on the whole.

10,858. You say it would be a moderate estimate to assume that each of these hotels and shops yielded an equal profit, or a gross profit in each case of 1,300*l.* a year?—I mean in the case of the hotels as a whole, or of the shops as a whole.

10,859. Each class you mean?—Yes.

10,860.—It is a mere typographical error. Now, with regard to paragraph 39, where you say: "Another point is that in the assessment of a farm the machinery is really taken into account as enhancing the value of the hereditament"; I suppose you mean that without the necessary appliances land would have no value, or very little?—Yes, that is the contention certainly.

10,861. I suppose that of the appliances necessary to make land of value labour is the chief?—Yes.

10,862. Would you, therefore, assume that in the valuation of a farm the labour employed upon it is directly or indirectly valued?—I do not know, I am sure; it might be argued in that way of course.

10,863. Let us take the very implements that you referred to; as mere iron they would sell for a penny a pound, perhaps?—Yes.

10,864. But that which gives the value to them is their adaptability and suitability to the purposes for which they are intended?—Yes.

10,865. Industry gives them that?—Yes.

10,866. That is labour, mental and physical?—Yes.

10,867. Do you mean to say that in assessing the value of the farms there is taken into consideration directly or indirectly the labour, mental and physical, not only of the shaping and fashioning of materials and of machinery, but also the labour of the agriculturist?—No, I do not say that at all. The contention, if I may say so, is simply this: taking a farm as a manufactory, so to say, of agricultural produce in comparison with a manufactory of any other commodity, I think it is fair to say that in regard to the manufactory of most commodities the system upon which it is valued is that a certain amount is put upon the building as a building, and a certain quantity of the machinery is taken into account—

10,868. (Chairman.) I thought you had given up that paragraph, and admitted that ploughs and implements are not taken into account as a matter of practice?—I was not for a moment saying that they were directly taken into account, but indirectly.

10,869. (Mr. Arthur O'Connor.) My point is this. For the utilisation and the valuation of a farm, to make it worth anything you must have applied to it not only implements, but also labour. Now, for the purpose of valuation, as a matter of fact, do you consider—and if you do you may be perfectly right—I only want to gather your opinion—that allowance is made for anything beyond the shaped bricks and buildings and the brute earth that form the farm; whether it ought to be, or whether it ought not, I am not concerned with?—I think that a farm is assessed as a farm.

10,870. That is your evidence?—As a farm at its value in consequence of the state of cultivation in which it stands.

10,871. That I understand to be the force and effect of your evidence, that, apart from the mere value of

Valuation of a farm. Suggested that the machinery employed upon the farm is taken into account in the valuation.

*Mr. R. H. Rew.*  
16 July '97

the brute earth and of the dead clay which is fashioned into bricks, there is something or other taken into consideration in the valuation of every farm?—It must be so, I think.

Division of rates between owners and occupiers.

10,872. In paragraph 45 I see that an association, whose proceedings you record in part, in May, 1896, passed a resolution to the effect that the rates should in future be divided between landlord and tenant, and that that was carried by 18 against 11?—Yes.

10,873. Could you tell me what the view of the 11 was; were they in favour of having all the rates thrown upon the owner, or upon the occupier?—I think I am justified in saying they were in favour of the maintenance of the present system, under which the rates are levied directly upon the occupier.

The witness withdrew.

Mr. A. G. BOSCAWEN, M.P., called and examined.

*Mr. A. G. Boscawen, M.P.*

10,877. (Chairman.) You appear here on behalf of the Church Committee in the House of Commons, I believe?—Yes.

10,878. I understand you have acted as secretary of a small sub-committee appointed by that Committee to collect evidence to put before this Commission?—Yes.

10,879. You have prepared for us this memorandum, which I hold in my hand, which, having regard to the source from which it comes, we shall print as the leading statement on the subject, which you appear to represent to the Commission.\* Therefore, I shall not take you over the whole of it in detail, but shall just ask you, so far as I am concerned, some points on which I want further explanation?—There are one or two points on which I wish to explain myself; I do not know whether I shall have an opportunity of doing that; they are very brief.

Agricultural Rates Act. Effect of the Act upon the clergy if rates increase.

10,880. We will, if you please, take those first?—With reference to paragraphs 2 and 3, I should like to say that, before this Commission was appointed, I had received a great many letters from the clergy on this matter, and especially since the passing of the Agricultural Rates Act. The grievance is very strongly expressed by a great many of the clergy. What they feel is this: Very often in a country parish the parson is the principal ratepayer; he occupies the parsonage-house, which is often a very large house, and out of proportion, really, to the living, and he finds himself about the only man in an absolutely rural parish not relieved. I should like to illustrate that by pointing out what is the case in Scotland. I am aware that you, my Lord, know about it a great deal better than I do, probably. In Scotland the manse are exempted from rating, whereas, in England, as I say, a clergyman occupying his house pays very heavy rates, and is the only important man in the parish very often who has not received relief.

10,881. Do I understand the point to be this—that the Rates Act of 1896 paid a proportion of the existing rates upon the agricultural land by providing that agricultural land was never to be rated beyond that proportion?—That is so.

10,882. If the rates increased the increase in the rates was to fall upon other classes of property?—That is so.

10,883. It is under that head and that provision that the grievance to which you particularly address yourself arises, is it not?—Yes. I have something to say upon that when I come to that later on, or I could state it now if you like.

Position of clerical tithe owner compared with occupier of land with reference to payment of rates. The former rated in respect of his gross receipts, the latter in respect of his rent.

10,884. I am leaving you to yourself to take your own order?—I was going to deal with it really on paragraph 21, when I go into the effect of the Rates Act. I have nothing to add about paragraphs 4, 5, or 6. On paragraph 7 I wish to correct the figures there; the actual number of circulars sent out was about 3,500.†

10,885. Really, I do not think that very much matters; we have had a great many of them sent to this office?—The answers received were about 1,100. In paragraph 9, I say that I wish to give evidence only dealing with the rating of the parson especially in his capacity as clerical tithe owner. I may say, in passing, thanks to the courtesy of Mr. Gepp, I saw Mr. Peterson's evidence and Mr. Gepp's, and I agree largely with their views on the general question. I agree that the tithe owner is rated on the gross, no reduction

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 346 to 348.

† For copy of circular see *ibid.*, p. 348.

10,874. What was it that these 11 men were in favour of as distinguished from the proposition that the rates should be divided between the landlord and the tenant?—In my view the minority in that case would be in favour of retaining the present system, that is of collecting the rates from the occupier.

10,875. By "divide" then, you do not mean incidence, but collection?—The division there means that half of the rates should be collected from the landlord direct, and half should be collected from the tenant.

10,876. It has relation to collection, and not to incidence?—As to the ultimate incidence, that is a different problem altogether; that is not a question of administration, and this is a question simply of administration.

being made as in the case of the occupier of land. The tithe owner, in fact, pays on his gross receipts, and the tenant only on his rent, that is on the portion of his gross receipts which he pays to his landlord. He is rated, in fact, on the rack-rent, but the tithe owner on his gross receipts. With reference to how that affects the tithe owner I should like to point out that it has been made much worse for him in recent years. There is a well-known case of Regina v. Joddrell in 1830, where the defendant, Joddrell, successfully made out a claim for a deduction for tenant's profits on the ground that the farmers were rated on their rack-rent, which did not include their profits as tenants. He was then declared to be rateable only for a proportion of the value of his tithes, namely, in the ratio that the whole annual value of the land in the parish, including the profits of the tenant, bore to the part paid to the landlord as rent. This was all changed by the Parochial Assessment Act, but when that was passing through the House of Lords an attempt was made by Archbishop Howley to protect the clergy. He proposed an amendment to exempt tithes from its operation.

10,886. (Mr. Arthur O'Connor.) What date was that?—It was in the year 1836. Unfortunately, the Archbishop withdrew his amendment on the advice of the Duke of Richmond, and accepted a proviso in lieu of it to the effect that the principles or proportion, according to which the different kinds of hereditaments should be rated should not be changed. I have here, which I can put in if you like, an account of the debate from the "Mirror of Parliament."

10,887. (Chairman.) I think you need not read that. I think it is really going too far back to give us evidence of what was said in Parliament in 1836. Can you give us a reference to the official debates?—I have not got the page, but I will send it.\* At all events a proviso was moved in lieu of the Archbishop's amendment to this effect: "Provided always, that nothing herein contained shall be supposed to alter or affect the principles or proportion according to which the different kinds of hereditaments may now, by law, be rateable." That proviso has been found to be perfectly ineffectual. In the Hackney case of Regina v. Capel—

10,888. I think I must suggest to you that we have the law very fully before us; it is really, rather as to the facts, all I wish to point out is that an attempt was made by Parliament to protect the clergy, and that the protection was found in the courts not to hold good, and that, therefore, the position of the clergy by a series of legal decisions has been made much worse than apparently it was the intention of Parliament that it should be.

10,889. Will you go on and make the additions to your paper right through before I ask you any questions?—I do not think there is anything till I come to paragraph 12, which I think is very important. The tithe rentcharge is entitled to the same deductions as land and buildings, but the deductions which are applicable to them are not applicable to tithe rentcharge.

10,890. You are repeating exactly what is in the print now, which it is not worth while to do?—I could put in illustrations of that if they are of any value. Of course, the deductions which are applicable, such as repairs in the case of land, are not applicable to tithe; on the other hand those deductions which would be

*Mr. R. H. Rew.*  
16 July '97

*Mr. A. G. Boscawen, M.P.*

Deductions applicable to case of land and buildings not applicable to case of tithe rentcharge, but deductions which would be applicable to tithe are not made.

Mr. A. G. Boscawen, M.P. applicable to tithe, for example, the payment to curates, and so on, not being specifically mentioned in the Act, no allowance is now made for them.

16 July '97

10,891. That again is exactly a repetition of what is in the paper; it is no addition to it?—I do not think I have anything more until I come to paragraph 16. On paragraph 16 I have a series of illustrations in letters written by the clergy complaining that they are rated upon their professional incomes. I can read them if you like; there are four instances.

Clergy said to be rated upon their professional incomes.

10,892. I think you had better wait until questions are put upon that point; the fact is undoubted that they are rated upon their professional income?—Yes. These letters merely show that that is the view taken by a large number of the clergy.\* On paragraph 19 I have got a large number of illustrations which I will hand in to the Chairman.\* I do not think I have anything to add on paragraph 20, but on paragraph 21 (iii) I have a good deal to say about the effect of the Rates Act, which I will state now if you wish, or later on in reply to questions.

Agricultural Rates Act. Effect of the Act upon the clergy.

10,893. I will take it in your own way; go on?—The Rates Act has prejudicially affected the clergy, and with the clergy all other ratepayers who are not relieved, in two ways. The Rates Act appears merely to relieve agricultural land at the expense of the taxpayers, but there are some rates in the case of which a deficiency arises from the partial exemption of agricultural land, and towards which no grant is made from the Treasury. The rates to which the Act now applies, that is to say, in respect of which there is a partial exemption of land are defined as follows:—“A rate made during the continuance of this Act, the proceeds of which are applicable to public local purposes, and which is leviable on the basis of an assessment in respect of the yearly value of property, and includes any sum, which, though obtained in the first instance by a precept, certificate, or other instrument, requiring payment from some authority or officer, is or can be ultimately raised out of a rate as before defined.” These include, among others: (1.) The general rate levied for the expenses of the vestries and district boards in the Metropolis under sections 158 and 161 of the Metropolis Management Act, 1855. (2.) That part of the poor rate which is levied for the expenses of overseers and for the expenses of parish councils and parish meetings.” But in the case of neither of those rates is any contribution made from the Treasury to make up a deficit, because section 2, which defines what is to be paid by the taxpayer out of the Treasury, says: “In respect of the deficiency which will arise from the provisions of this Act in the produce of rates made by the spending authorities in England as hereinafter defined there shall be paid,” &c. The spending authorities do not include either vestries or district boards in the Metropolis under sections 158 and 161 of the Metropolis Management Act, 1855, nor do they include parish meetings and parish councils. Therefore, I submit that agricultural land is let off in respect of those two rates, and nothing is paid to make up the deficiency, and, naturally, that deficiency falls upon other forms of rateable property. In addition to that, in the case of new rates, or additions to rates, inasmuch as the sum which was paid by the Treasury was a fixed sum, not to increase with the increase of rates, of course, any addition to the rates puts an extra burden upon other forms of rateable property. They have to pay not only that addition, which naturally they would have paid before, but they have to pay the addition which arises from the fact that land in future only pays on one-half. I have many letters which I shall be able to put in from the clergy complaining bitterly, that in consequence of the Rates Act they have to pay a great deal more in the way of rates than they had to pay before.\* In those two ways, I submit, the Rates Act has acted very prejudicially. Then I have some illustrations of paragraph 23 and paragraph 25.\* I have handed in a paper from Mr. Thynne,\* giving what he considered to be very bad cases from the Diocese of Salisbury, and I should like to add, as an illustration, of the remedy that I ask for, or of part of it at all events, that a Bill was brought into Parliament in 1876, by Mr. Selater-Booth, who was then at the head of the Local Government Board, which said that an allowance should be made for the purpose of rating the rentcharge in cases where a curate or curates is or are required by the Bishop of the diocese. Therefore, what

I ask for on that heading is merely what was put in a Bill brought in by the Government some years ago.

10,894. How far on did that Bill go?—I do not know how far it got. The Bill was brought in in two sessions, I think—1875 and 1876.

10,895. Are there any other additions you want to make to your memorandum?—No.

10,896. What I want to understand from you is What is your grievance? Is it that the tithe rentcharges are wrongly classed amongst property, which is declared to be rateable by the statute of Elizabeth, or is it that the whole system of rating is wrong?—I deal merely with the rating of the parson, and I would not confine it simply to the tithe rentcharge. I think that in the case of the tithe rentcharge, the present system of rating is probably wrong, but I do not wish to go into that at length. What I do say is that the parson is rated upon what is really a professional income; I do not care what he is rated on, whether it is tithe rentcharge, or glebe, or parsonage house, he really is rated on what is his professional income, because if he does not perform certain services he is bound to give up the benefice.

10,897. As far as his house is concerned, of course, assuming that the value put upon his house is right, he is only in the same condition as every other householder?—Certainly.

10,898. As far as the glebe is concerned, he is in the same position as every other owner of agricultural land?—Yes.

10,899. I think it is probably accurate to say that his tithe rentcharge which he puts into his pocket is his professional income; but the suggestion that I make to you is that it is part of the rent of the land, and if rent is to be in any measure the basis of local taxation, tithe rentcharge must be taken into account somehow?—Certainly.

10,900. If it is not taken into account in this way, how do you suggest it should be taken into account?—I think tithe rentcharge must be rated, but, just as the farmer is, with certain deductions, which in the case of the farmer represent his profit. As I have pointed out, the farmer only pays on his rack-rent; he does not pay on all the receipts of the farm, but only upon that portion of the receipts of the farm which he gives to the landlord in rent.

10,901. Would it not be this: that as a tithe rentcharge is rent, the farmer, if he was rated upon the whole of his rent, or upon any proportion of the whole of his rent, the tithe rentcharge would have to be added to it to get the measure of his rent, would it not?—I do not quite follow.

10,902. The tithe rentcharge is really undistinguishable from rent, is it not, from the farmer's point of view?—It is part of the rent of the land really or rather, it is more than rent; in theory it is that one-tenth of the produce of the land which goes to a different owner from the remaining nine-tenths.

10,903. Exactly; and going into the pockets of that owner the rates upon it are paid by the owner, and not by the occupier of the land?—Yes, they are paid by the owner, certainly, of the tithe rentcharge, but the owner of land does not always pay the rates; generally the occupier does.

10,904. Quite so; but if you are going to take the value of the land as the measure of the rates, must you not include the tithe rentcharge at its full value?—I do not think so. The definition of how a tithe rentcharge is to be rated is something to the effect of what it would let for; now, what it would let for would be something less than its full value, otherwise a man would not take it.

10,905. And that something less than its full value has been estimated to us by two or three different people; in one case at as much as 30 per cent. less than its nominal value, and in another case at 2½ per cent.; I suppose you would probably say that the truth lies somewhere between those two points?—I think you must draw a line between clerical tithe rentcharge and lay tithe rentcharge. If you let a lay tithe rentcharge, the deduction for the tenant's profit might be 1 or 2 per cent.; I mean it might be worth my while to take a lay tithe rentcharge and farm it for a profit of 1 or 2 per cent. I do not know, of course, whether it would. If I were to take, as I think Mr. Peterson put the case, a clerical tithe rentcharge, with all its obligations and burdens, and all the outgoings, then I should say 30 per cent. is a very low estimate, because you may have to pay curates.

Mr. A. G. Boscawen, M.P.

16 July '97

Clergy said to be rated upon their professional incomes. This contention discussed.

Deductions. Tithe rentcharge should be subject to certain deductions.

Tithe rentcharge. Application of the principle of what a hypothetical tenant would give.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 349 to 356.

*Mr. A. G. Boscawen, M.P.* 10,906. I may be wrong, but I understood the 30 per cent. to be loss upon the collection alone?—I only cursorily saw the evidence, so I could not say.

16 July '97

Deductions. Tithe rent-charge. Deductions claimed for repair of chancel, curates, daughter churches, and professional services. Similar deductions should be given in case of tithe rent-charge as in case of persons subject to income tax in respect of professional incomes.

10,907. I should like to have your view as to the way some of those deductions, which you put forward, should be allowed. I can understand the argument for deduction for rates and for liability to repair the chancel of the parish church, which I suppose is usually a sum for covering insurance, is it not?—Yes, that would be so.

10,908. What is the ground for taking off the professional services?—I think the ground is the one stated, in paragraph 17 of my memorandum by the Chancellor of the Exchequer :—“The incumbent of the parish, being rated on his tithe rentcharge, is the only man who is rated on his professional income. He is rated as the occupier of tithe rentcharge, but he occupies that because he has to render certain services, either by himself or by curates whom he has to employ, and if he ceased to render these services he will under the law very soon cease to occupy the rentcharge.”

10,909. Do you put that statement of the Chancellor of the Exchequer forward as an argument for relieving the man from his rate?—Certainly. Here is a man who occupies a tithe rentcharge; in order to continue to occupy it he has got to pay out a very large sum a year to curates or to daughter churches.

10,910. Now, curates are different from professional services, but we are on professional services?—Very well; then he has to render professional services, and I say he is in a totally different position from any other ratepayer; he only enjoys the occupation so long as he renders these services.

10,911. Is there any other of those special deductions in reference to which you would like to present to us an argument for subtracting them?—There is the case of the curates. I think if you would look to some of the instances I have put in with reference to that point you would see that very often, in some cases anyhow, a man, when he has paid for curates, has nothing left whatever. Now it does seem to me very hard that when a man is compelled to employ a curate on account of the size of the parish and the nature of the work he should not be allowed to deduct that.

10,912. Who is to judge of the necessity for employing the curate?—I should say the bishop, but I would not insist upon that. In Mr. Sclater-Booth's Bill it was to be the bishop, and I think the bishop is probably the best judge.

10,913. You would not allow the rating authority that was interested to have any say in the judgment, would you?—No, I think not; I think the bishop must decide whether a curate is necessary for the spiritual good of the parish, and not the rating authority.

10,914. Do you think the bishop's judgment would be accepted by the ratepayers as conceived in the general interest?—I should think so. The bishop could have no object in making a man employ a curate unless he thought the parish wanted one.

Deductions. Tithe rent-charge. None made for property tax or land tax.

10,915. (*Mr. Arthur O'Connor.*) According to paragraph 15, the owner of a tithe rentcharge is not allowed to make any deductions in respect of the landlords' property tax; do you mean that a clerical tithe owner has to pay property tax on tithe, and yet is not allowed to deduct it?—Yes, that is so; and the same with the land tax.

10,916. Has he to pay the land tax?—He has to pay the land tax on tithe, and he is not allowed to deduct it.

10,917. He is not allowed to deduct it for rating?—No.

10,918. In those two respects he is in a position totally different from everybody else?—So I conceive.

Clergy said to be rated upon their professional incomes.

10,919. Now with regard to professional services, I suppose that the tithe he receives, and the house he uses, and the glebe he enjoys, are all part of his annual consideration for the services he gives?—Certainly.

10,920. These are, therefore, in precisely the same position as the income of any ordinary professional man?—Exactly.

10,921. An ordinary professional man is allowed to deduct, supposing, we will say, a lawyer, the rent of his chambers, the wages of his clerk, and other incidental expenses necessary to carry on his business?—Yes, that is so.

10,922. Is the clergyman not allowed to make similar deductions?—He is not allowed to make any deductions.

*Mr. A. G. Boscawen, M.P.*

16 July '97

10,923. Then again, in a third respect, he is in a position much worse than other professional men?—Much worse. I should like to point out that, of course, the barrister is not rated on his profits at all.

10,924. Is he not; I wish he was not?—Of course he pays income tax, and he is rated, I suppose, on his chambers, but not on what you may call his professional income.

10,925. I see what you mean; you are perfectly right?—The position I put is that here is a man who is rated on his professional income, and I know of no other instance.

10,926. You are quite right, that makes it rather worse?—Yes.

10,927. Where he has necessarily to employ a deputy he is not allowed the deduction in respect of that necessary professional expenditure?—No, not one penny.

10,928. Another item is “Payments to Daughter Churches;” does that mean the churches where the incumbents are his sons-in-law, or what does it mean?—It means this: There are many cases where a parish has been divided because one church is not sufficient, and it has been done through the Ecclesiastical Commissioners, or under some Church Building Act.

Deductions. Tithe rent-charge. None made for payments to daughter churches or pensions to retired incumbents.

10,929. A chapel-of-ease?—Quite so; a certain amount of the stipend of the whole parish is set aside for the chapel-of-ease, and yet the incumbent of the whole parish is still paying rates upon the whole amount.

10,930. Another item is “Pensions to retired incumbents;” is the living charged with a portion of that?—Yes, by the Act of 1871, and the Amending Act of 1887, called the Benefices Resignation Act, if a clergyman applies for a commission on the ground of age, he may be retired, and in that case the Commissioners shall give him a pension out of the annual value of the benefice, not to exceed one-third of the annual value. Of course that is a deduction from his successor's income.

10,931. For which he is not allowed to take any credit in the rating?—That is so.

10,932. I do not quite understand what you told us in connection with your paragraph 21, namely, that the Rates Act of last year had the effect of actually increasing the rates falling upon the incumbent; would you explain that?—That is the case in two ways. In the first place, of course, it is clear where a new rate is raised, that inasmuch as the grant from the Treasury was a fixed sum based upon what the rates were when the Act passed, if the rates are increased or a new rate is raised the amount of the Treasury contribution is not increased.

Agricultural Rates Act. Effect upon the clergy if rates increase.

10,933. How does that affect the individual incumbent whom the Treasury contribution does not touch. Because, supposing the rates are increased 20l. a year, and supposing that, previously, agricultural land paid half the rates, and other forms of property half the rates—

10,934. (*Chairman.*) Take it in shillings and pence in the £, in that way you will illustrate it better?—It would be rather difficult to work it out.

10,935. Take a supposititious case in shillings and pence in the £, that will be very clear, I think?—We will suppose the rates go up 2d. in the £, other forms of property other than land naturally will have to pay their share of the extra 2d. in the £; indeed, they will have to pay more than their share, because they will have to pay on the deficiency caused by the fact that land only pays on half its value; this instance, I think, gives it,—the rateable value of the parish is 10,000l., this is a mere hypothetical case, of which 5,000l., that is half, is agricultural land; in 1896 a rate of 100l. had to be raised, 50l. came from agricultural land and 50l. from other forms of property, after the passing of the Act 25l. came from agricultural land, 25l. from the Treasury, and 50l. from other rateable property; the next year 120l. has to be raised, 25l. still comes from the Treasury, and the extra 20l. has to be raised locally, but instead of being raised equally on agricultural land, as before, and other property, land will only pay half its share of the increase, and other property will pay twice its share.

10,936. (*Mr. Arthur O'Connor.*) Are you not begging the question?—Then I will say twice the share which

Mr. A. G.  
Boscawen,  
M.P.

16 July '97

it would otherwise have paid; therefore the Treasury will pay 25*l.*, being a fixed contribution, land will pay 30*l.*, and other property 65*l.*; and that makes up the 120*l.*

10,937. I understand the case you are presenting, and I must say it does not impress me. Assume it is 9*d.* in the £ that is given to local rates, and that continues to be given, the increased incidence is between the agricultural land and the other land without relief either way?—No, because agricultural land only pays on half its valuation now—on half its assessment; and, therefore, the greater part of the increase goes on the other kinds of property. It is all based upon the fact, that the Treasury grant is fixed.

10,938. Fixed according to the rates of a certain year?—According to the rates the year before the Act passed. You asked me how the Bates Act prejudicially affected the clergy; this is one way, and there is another; the rates to which the half exemption of land applies are not precisely the same rates for which a grant is given out of the Treasury. There are certainly two rates which I have mentioned, which are the general rate levied for the expenses of vestries and district boards in the Metropolis, and that part of the poor rate which is levied for the expenses of overseers, and for the expenses of parish councils and parish meetings in respect of which land only pays half, but in respect of which no grant is given from the Treasury.

10,939. (Chairman.) Of course those are a very small amount?—Still they are felt.

10,940. I might say infinitesimal?—I do not know; from the letters I have received I think they are felt rather acutely in some places.

10,941. (Mr. Arthur O'Connor.) They are noticeable to those who have to pay them?—Quite so, especially in the case of men with small incomes.

10,942. With regard to the table\* which is inserted in your evidence, I see that at Chidwick the tithe value in 1896 was 182*l.*; do you know anything about the neighbourhood of Chidwick personally?—No, this paper is not mine; it is handed in by me, but it has been printed by Mr. Thynne.

10,943. Then take Salisbury St. Martin; there a worthy gentleman in the receipt of 113*l.*, with deductions, leaving a net income of 60*l.*, as set forth in this paper, pay curates' salaries amounting to 225*l.*?—Yes, that is so.

10,944. If his net income is 60*l.*, how does he pay curates' salaries amounting to 225*l.*?—He has to pay those out of his private means.

10,945. Where is his parish?—In the town of Salisbury.

10,946. Do you know anything about the pew rents, or the income he receives from the church itself?—No, I cannot say that I know anything about these figures. I merely hand them in. I may say that in the figures that I have examined and handed in, which include the parson's income from all sources, there are several cases in which, when curates are paid, nothing is left for the parson at all—there is, in fact, a minus quantity, yet he is rated on the full amount of the tithe rentcharge.

10,947. It seems to an ordinary mind rather a difficult proposition to take in, assimilate, and accept, that after paying curates' expenses, the incumbent has nothing, and yet on that nothing he lives from year to year and pays rates besides?—Yes. Of course he could not live if he had not private means, nor could he pay the rates.

10,948. Here the net income of the incumbent is 60*l.*, and he is able to pay salaries to the extent of 225*l.*; it does a certain amount of violence to the mind of a man who believes in the multiplication table, if this represents all the facts of the case?—This represents all the facts as regards what the man receives for his services, and what he pays out. If he is able to supplement from private resources he is a lucky man, but I do not think we have a right to take that into account.

10,949. Do you mean that the incumbent of St. Martin, Salisbury, defrays the difference out of his personal peculiar estate, and that he does not get

anything from his parish in the town of Salisbury?—I have no doubt he does. I cannot say that I speak for certain, because I did not investigate his case, but I could put in other cases which I have investigated where I know the clergyman is paying out of his private resources.

10,950. (Mr. Smith.) Is not the real difficulty of the clergyman's case this, that he is an owner as well as an occupier?—Yes, I suppose he is.

10,951. He is a freeholder, and a freeholder for life?—No, not for life; it is providing he renders certain services.

10,952. But still he is a freeholder—the churchyard is the parson's freehold, is it not?—Yes, but I do not think you can say for life; it is conditional.

10,953. As affected by that recent Act, do you mean?—No.

10,954. Would you deny that he had a freehold?—I say he has a freehold so long as he performs certain services.

10,955. I always thought an estate for life was the smallest estate of freehold; I was taught so when I learnt law?—I am afraid I am not a lawyer; at all events, the freehold may be taken from him under certain conditions.

10,956. Yes, it may be forfeited, but still he is an owner as well as an occupier?—Certainly.

10,957. When the Agricultural Rates Act was passed were you in Parliament?—Yes.

10,958. It was stated there that it was to be a relief to the occupier, was it not?—Yes, to the occupier as far as I remember, though it was disputed.

10,959. It was disputed, but it was generally held that as long as it was not made permanent it would probably be relief to the occupier?—Yes, I believe that was so.

10,960. If it were made permanent it would be undoubtedly a relief to the owner?—Yes.

10,961. Then was not the clergyman's difficulty the fact that he was both owner and occupier?—I think so and for some such ground he was excluded from it. Of course he did not understand the ground, and has been very bitter in consequence.

10,962. It would, to use a common expression, have rather given away the argument that it was relief to the occupier if they had relieved an owner?—Yes, I do not deny that.

10,963. I see that in paragraph 27 you say your Committee rely upon the principle that no body of men should be rated on their professional income?—Yes.

10,964. Do you happen to know that that is what almost every agricultural witness who has come before us, has recommended that they should be, in order to relieve local taxation?—I did not know that.

10,965. (Chairman.) But it was to apply to all?—If the principle is generally applied it would make a great deal of difference.

10,966. You put that point forward because as you say, the parson is the only man who is rated on his professional income?—Yes, he is the only man.

10,967. If everybody was rated on his professional income that point would fall?—Quite so. The parson then ought to take his chance with everybody else.

10,968. Just as you think he should now with his glebe or his house?—Quite so.

10,969. Is there anything else you would like to say?—I do not know whether you are going to print the illustrations I gave. I have not time to go into them at all.

10,970. I should like to reserve that because they have only been put on our table this morning, and I should not like to commit the Commission to printing them until I take their opinion, but we will communicate with you on the subject?—Thank you. I should like to put in these illustrations of the complaints of the parsons that they are rated on their professional incomes. I do that because it has been sometimes doubted whether that is the clergyman's complaint, but I have very strong evidence that that is so (*handing in letters*).\*

Adjourned

## TWENTY-EIGHTH DAY.

Wednesday, 21st July, 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Right Hon. C. B. STUART-WORTLEY, Q.C.,  
M.P.  
Sir E. W. HAMILTON, K.C.B.  
C. N. DALTON, Esq., C.B.

C. A. CRIPPS, Esq., Q.C., M.P.  
T. H. ELLIOTT, Esq., C.B.  
E. O. SMITH, Esq.  
JAMES STUART, Esq., M.P.

ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. ALFRED DE BOCK PORTER, C.B., called and examined.

*Mr. A. De Bock Porter, C.B.*  
21 July '97

10,971. (*Chairman.*) We know that you are Secretary to the Ecclesiastical Commissioners, and have come here with their knowledge to give evidence on the subject of the rating of tithe rent-charge?—Yes, that is so.

10,972. How long have you been Secretary?—Since 1888, and I have been the Financial Adviser to the Commissioners since 1880.

10,973. (*Mr. Stuart-Wortley.*) Although you are secretary to the Commission, you do not come here as in any way representing the views of the Commissioners as a Board?—No.

10,974. You have no instructions from them to express any particular views, and the views which you will express to-day will be your own personal views formed on the great experience you have had in managing the Commissioners' property?—That is so.

Valuation of tithe rent-charge. Practice of the Ecclesiastical Commission and of Union Assessment Committees.

10,975. With regard to the first subject which you propose to submit to this Commission, what have you to say on the rating of tithe rent-charges, and the practice of rating authorities?—The practice of the Commissioners with regard to the rating of tithe rent-charge has recently taken the form, in very many parishes, of our sending out by our receivers a statement to show the gross value of the rent-charge for the year in question, and the rates and deductions which we think should be made, the rates being the sums that became payable in the preceding year, and then a statement of the net rateable value for the current year. Perhaps I had better put in the form that is usually sent out.\* A good many Unions, I think, have adopted our form, for they are now sending printed forms to us, which are drawn up in very much the same way.

10,976. I suppose I may take it that the Ecclesiastical Commissioners are owners of the tithe in a very large number of parishes in England and Wales, are they not?—Roughly 300,000, a year in tithes distributed over every county in England and Wales.

Deductions. Tithe rent-charge.

10,977. To whom do you send out the form which you have just handed in?—That is sent out to the overseers. In very many country parishes they do not send us a form, but they leave us, as the tithe varies from year to year, to send in our own statement in that form of how much we assume the assessment should be for the year. I have some forms here which are sent by the Unions, but they are made up in very much the same way. The principal deduction, after the rates for the preceding year, are the costs of collection, and hitherto we have claimed a deduction for chancel repairs, but that has been somewhat upset by the decision in the case of the Dean and Chapter of St. Asaph v. the Overseers of Llanrhaidr. Some of the unions seem to be aware of that decision and some do not; I find that in some of the latest cases of

assessment they still sanction a deduction for chancel repairs.

10,978. (*Mr. Cripps.*) Do you consider that if that decision was explained to all the deduction could not be allowed now?—I assume it could not. I do not agree with that decision so far as the equity of the case is concerned.

10,979. (*Mr. Stuart-Wortley.*) As to the practice of rating authorities, is there a great variation, or what do you wish to tell the Commissioners upon that?—There is some variation, though as time goes on there is no doubt that the tithes become fully assessed, and they are very fully assessed at the present time. I remember in past years occasionally finding a tithe that was very inadequately assessed, but latterly the local authorities have been profiting by experience, and now I should say that the tithes are closely rated.

10,980. Pretty well up to the hilt?—Yes.

10,981. Have you any suggestions to make as regards alterations of the law regarding the practice of rating authorities?—Perhaps I had better put in this summary.\* I got out a summary of the latest year I could, 1894, to show what the Commissioners' experience was. I have taken five or six cases in every county in the Kingdom; I have taken 128 parishes in the North of England, and 138 parishes in the South of England. The aggregate commuted rent-charge for the year 1894 was 133,375*l.*, and the value for the year on the reduced average of 7*l.* 3*s.* 9*d.* was 98,947*l.* I find that the assessment to rates over the whole country on that tithe was 83,427*l.*; that of course being based upon the rates payable the year preceding. Then I have taken out the rates that were actually paid that year, and I find that the poor rate actually paid amounted to 10,236*l.*, and that there were other small rates amounting to 459*l.*, the total rates paid being 10,696*l.* At that time there was an allowance being made for chancel repairs, and I have put in the estimated allowance for chancel repairs, which was 1,330*l.*, together with 5 per cent. for collection, 4,947*l.* The five per cent. for collection covers the four per cent. which is actually paid and one per cent. which may be said roughly to be absorbed by losses and expenses incidental to the collection of cases where we have had to enforce payment. So that we should say that the assessment instead of being 83,427*l.* should have been (after deducting the actual and estimated payments) 81,973*l.*, a difference of 1,400*l.* which is not very much in an aggregate rent-charge of that amount.

10,982. That was the extent of the over-assessment?—Yes. That over-assessment really may be accounted for as follows:—The sum actually deducted for rates would be the amounts paid in the preceding year, whereas the statement shows the rates paid in the current year, which is theoretically more correct. The

21 July '97

Valuation of tithe rent-charge and land compared. Land not lightly assessed.

Valuation of tithe rent-charge. Parochial incumbents do not take sufficient pains to get their property properly valued.

rates being generally on the increase the deduction shown would be greater than that, actually allowed. Then there are the "Expenses of collection, &c.," which comprise costs of collection, legal expenses, losses and tenants' profits, and have been assumed to be 5 per cent. on the gross value in all cases: whereas a certain number of the rating authorities will allow a smaller percentage only; in some cases, the rating authorities only allow 2½ per cent., and they will make no allowance whatever for the tenant's profit, if one may use that term. Then the chancel repairs have been assumed to average 5*l.* in each case, whereas rating authorities would frequently allow a smaller deduction only. In determining the deduction to be allowed, some would take the average of the expenditure for several preceding years and others would allow the actual amount expended in the year immediately preceding. Moreover, some would exclude the large amounts occasionally spent in restoration.

10,983. Have you anything more to say on these tables which you have handed in?—I would say with regard to those tables that the average rates in the £ in the North of England were 2*s.* 3*d.* on the total assessment; in the South of England 2*s.* 9*d.*; and over the whole country 2*s.* 7*d.* Those rates, I think, compare very favourably with the estimates which have been made by the Local Government Board.

10,984. How do you divide the country for the purpose of speaking of north and south?—We draw an irregular line from the north of Cardigan to the south of Suffolk. Our agency is divided into two; Messrs. Smith and Gore taking charge of the northern counties, and Messrs. Clutton of the southern counties.

10,985. Shall we now pass to the subject of the tithe-owner's contention that land is lightly assessed while tithe is assessed in full?—Yes. Our office experience shows that the assessment of tithe is very closely made. As to land it is impossible to say from experience in the office because of course we are only in the position of landlords there, but instances have come under our notice and hearing that by degrees the rating of land has been very gradually increased and approximates very closely now to the actual rateable value instead of being very loosely done, as it was in earlier years.

10,986. Then you, on the whole, are not inclined to concur with the tithe-owners' contention that land is lightly assessed while tithe is assessed in full?—I think not; I think at the present time it is hardly so. It is gradually tightening on land, but it is really very tight on tithe because the amounts are so easily ascertainable.

10,987. (Mr. Cripps.) By the rate being "lightly assessed" is it meant that there are deductions made in the case of land which you do not get in the case of tithe?—I could find you many cases in the past where land has been very lightly treated indeed.

10,988. But at the present time?—At the present time, I think attention has been drawn so closely to rating questions that the rating has very materially increased in the last 10 years.

10,989. (Chairman.) Do you mean that as rates rise people look better after their neighbours' valuation?—They look after it much more closely.

10,990. (Mr. Dalton.) Do you think it is the case that parochial incumbents take the same pains that the Ecclesiastical Commissioners do to get their property entered at the right valuation?—No, I do not think they exercise the care they ought. You see very often the overseers and the people with whom they may be connected are rather close to them, and they cannot take that dry view which a great body like the Commission does.

10,991. Do you think an ordinary parochial incumbent gets the assessment of his tithe revised every year?—Not in all cases; in many I know it is done, but in some cases they do not do it.

10,992. (Mr. Stuart-Wortley.) What you have told us about the Commissioners' experience relates only to the Commissioners' experience as tithe-owners on their account?—Yes.

10,993. It is only incidentally that you get a knowledge of the experience of the clergy as tithe-owners?—One sees a great deal in the office of course, in the returns which are made by the incumbents from time to time of their incomes in which they show their assessments, their outgoings, and the deductions which have to be made. It is quite possible that deductions

may be claimed by an incumbent which the office would not recognise in estimating incomes for purposes of augmentation as they might be too much.

10,994. The Ecclesiastical Commissioners are in no sense collectors of tithes for the parochial clergy are they?—No.

10,995. What have you to say as to the propriety of subjecting the tithe-owner to increased taxation now that his tithe is unimprovable except according to the averages?—This is a subject on which of course the Commissioners have heard a very great deal from the incumbents when they complain to the Commissioners of the inadequacy of their remuneration at the present time and say that while the commuted amount of tithe is fixed, new rates having been imposed, especially in suburban districts, and the old rates having been increased, it is an injustice that the tithe-owner should be charged with payments the object and effect of which are to improve all properties other than his own.

10,996. Do you take that view?—I think that is a sound view. I do not think a tithe ought to have additional burdens laid on it because the tithe rent-charge does not profit from many of the additional burdens.

10,997. Can you make any concrete suggestions as to the reforms that might give effect to that view?—The position of the tithe-owner since the passing of the Act of last year is a somewhat inequitable one.

10,998. By the Act of last year I presume you mean the Agricultural Rates Act?—Yes.

10,999. You mean, I suppose, that the tithe-owner has to pay his rates in full, and therefore pays in full any increase that may be made on the rate, whereas the agricultural owner pays only half of that increase?—That is so; and the tithe-owner would have to pay an increased burden if the rates increased because he is assessed to the full, whereas the landowner only takes half of it, and the payment by the Government is crystallised.

11,000. With regard to the claim of the incumbent to exemption from taxation of a portion of his tithe in respect of personal services, what views have you to express to the Commission?—I do not quite see how personal services are to be a deduction, I do not see what is to be the exact measure of them; unless you are going to tax the portion that is paid away for curate's stipend for instance, I do not see how you are going to let out this share of the property from its liability.

11,001. Of course, the Ecclesiastical Commissioners are in a sense lay tithe-owners, and have no direct relation with this particular part of the subject, have they?—Only to this extent that if the Commissioners could have an abatement from the rating they would have a larger fund for distribution to necessitous benefices. The whole of the Commissioner's margin of income, if I may say so, is appropriated in augmentations; and to that extent, of course, they would be gainers, and the clergy would benefit.

11,002. Then as regards exemptions from taxation of a curate's salary, do you think it is a fair claim that the incumbent should be allowed to make that a deduction for the purpose of his assessment?—I cannot imagine any machinery that would apply to such a deduction in view of the varying circumstances of each individual case. The amount of the stipend and the circumstances under which it would be paid of course vary immensely. It may depend upon the age of the incumbent; it is not only a question of population or of relation to income.

11,003. But the curate's stipend is generally pretty well fixed and known, is it not?—It varies very much indeed.

11,004. It is never in doubt in the particular case, is it?—No; but supposing in one case a man said: "I claim a deduction from my tithe of 200*l.* a year, that being the sum I pay my curate," another might say "I pay 100*l.*," and he would only get that deducted. The caprice of the incumbent in fixing the salary of the curate would really materially affect those who are liable for rates.

11,005. Then with regard to the payments for charges to Queen Anne's Bounty, I mean the annual payments for interest on loans. Do you think those would be a fair deduction?—I do not see how those can be

Mr. A. De Bock Porter, C.B.

21 July '97

Tithe owners and increased taxation. Imposition of new rates an injustice.

Agricultural Rates Act, 1896. Position of tithe owner inequitable if rates increase.

Deductions. Tithe rent-charge. Personal services cannot well be deducted.

Deductions. Tithe rent-charge. Curate's salary cannot well be deducted.

Deductions. Tithe rent-charge. Queen Anne's Bounty. Interest on loans cannot well be deducted.

Mr. A  
De Bock  
Porter,  
C.B.

21 July '97

deducted, because we have nothing to do with the appropriation of the money; it is like a mortgage on an estate—it practically is a mortgage.

11,006. The claim of the incumbent to exemption in respect of these three matters, which we have just mentioned, is a claim in respect of matters which come within the official experience of clerical owners and not of lay owners of tithes, as the Ecclesiastical Commissioners are?—That is so, but we have very intimate knowledge of them. These claims are constantly being urged in correspondence with our office, so that one is very well acquainted with the claims of incumbents to relief in that direction.

Agricultural Rates Act, 1893. Desire of tithe owners for relief as in the case of agriculturists.

11,007. What have you to say as regards the claim of tithe-owners to relief from taxation in common with other owners of rateable property?—The landowner having had his turn, the tithe-owner now thinks that his time has come. He does not see that equitably he should pay his full amount of the rates while the landowner has relief. Of course I am assuming that the relief, although given to the tenant at the present time, will ultimately reach the landowner, and must reach him.

Deductions. Tithe rent-charge. Property tax could not well be deducted.

11,008. (Chairman.) When Mr. Boscawen was here he specified some special burdens which he thought the tithe rent-charge owner might be allowed to deduct, and he instanced specially the landlords' property tax, the land tax, and rates—the poor rate for example?—The poor rate is a deduction now.

11,009. Does he get that?—The rates are all deducted. The amount of the tithes is ascertained for the year, and the rate paid on the preceding year is deducted before the assessment is made.

11,010. But not the landlord's property tax?—Not the landlord's property tax.

11,011. Ought not that to be deducted too?—The property tax has always been kept out of every deduction that has to be made before rating. To deduct it would be a departure in principle.

Deductions. Tithe rent-charge. Land tax not deducted.

11,012. What do you say about the Land Tax?—I have always thought it rather hard that the incumbent could not deduct the land tax; but the landowner has not been allowed to deduct it.

11,013. There is one other matter which, I think, Mr. Stuart-Wortley's questions have not touched: Mr. Boscawen mentioned payments to what he called daughter churches, which, I suppose, are churches in ecclesiastical districts off the main parishes?—Those are appropriations of income, and I do not see in the rating of property, how you are to follow the disposition of the income afterwards. There might be a reason for deducting from the payment to the daughter church something in respect of the rates paid on that proportion of the tithe rentcharge which provided for it, but I do not see how exemption could be claimed, because a certain portion of the tithe is appropriated to the payment of a daughter cure.

Deductions. Tithe rent-charge. Daughter churches. Deduction could not well be allowed, but it is a hardship.

11,014. You would go this length, would you not, that it is a grievance to the tithe rentcharge owner if he has to make a payment to a daughter Church, that he should have to pay the rate on the whole thing?—Yes, that is a great hardship.

11,015. You do not dispute that the rating authority ought to get the rate, but you do go the length of saying that it is hard that it should come out of the principal tithe-owner's pocket?—Yes; the real difficulty has arisen upon the charge made upon the mother Church being a fixed sum, instead of a share of the income.

Deductions. Tithe rent-charge. Retired incumbents. Deduction could not well be allowed.

11,016. What do you say as to one other matter which Mr. Boscawen proposed should be a deduction, namely, pensions to retired incumbents?—I do not see how you are to go into the individual circumstances of an incumbent in discussing the rateable value of his property.

11,017. (Mr. Stuart-Wortley.) You do not agree then, that pensions to retired incumbents are fair deductions?—I do not see how they can be deducted.

11,018. Let us now deal with the allegations that the tithe-owner is not entitled to relief because an addition was made to his rentcharge by the Act of Commutation to provide for the payment of rates; I think you are aware of the allegations that are made on that head?—Yes, and I have had a statement taken from the returns which were made after the commutation of tithes to show the net amount of tithes or composition; the

amount that was paid for rates, and the aggregate of the two; the tithe rent-charge that was allotted, the amount of the rate in the £ paid at the time of the commutation, and the amount of the rate in the £ paid in 1894-95, the last-named being taken from the Local Government Board returns.\* Take, for instance, Bothal, in the County of Northumberland: The net composition which the parson was receiving at that time was 1,256*l.*; the rates, which were then paid by the tithepayer, were 101*l.* Those two together amounted to 1,357*l.*, and the tithe rentcharge that was actually allotted to him in the award was 1,357*l.* The only cases in which the amount of rates was added, were those in which the rates had previously been paid by the tithepayer. In this statement I have taken four parishes in Northumberland, four in each Riding of Yorkshire, six in Nottinghamshire; six in Suffolk; six in Gloucester; six in Bedfordshire; six in Sussex; six in Denbigh and Flint; and six in Glamorgan; and I have made a summary of them. From this summary it would appear that taking these cases the composition payable by the tithepayer at the time of the commutation, amounted in the aggregate to 24,512*l.*; the rates, which were paid also by the tithepayer, the parson having his income net, were 5,708*l.*; those two added together, made 30,220*l.*, and I find that the rentcharge that was allotted in the aggregate to all those was 30,751*l.*, so that the whole sum that was added was only about 500*l.* over that large number of tithe rentcharges.

11,019. (Mr. Dalton.) Have the rates since increased or decreased?—They have decreased. The average rate over the whole, taken at the time of the commutation, on that group of rentcharges, was 4*s.* 7*d.* in the £; whereas in 1894-95, according to the Local Government Board return, they were 2*s.* 4*d.*

11,020. (Mr. Cripps.) Of course you would only expect the amount of the rates to be added in those cases where the tithe-payers were paying them at the time of the commutation, because where the tithe-owner was paying them there would be no question of addition to the rate?—That would be so.

11,021. Therefore, you have taken, of course, the right test; as far as I understand your Table, an amount was added for the tithe-owner as regards a small proportion of it?—Yes, it was added because in those cases the tithe-owner was receiving his income net.

11,022. Of course you would not have added it in other cases; that would be the only case in which you would have added it?—That is so; but there is a general impression that something was added all round.

11,023. Where you have a net payment you have to add the rate?—Yes.

11,024. (Chairman.) As you are aware, Mr. Peterson, the Secretary and Solicitor to the Tithe Rentcharge Owners' Union, was here a few days ago and gave us some carefully prepared statements, and some evidence orally. In his statement he says:—"I should like now to refer to and correct a very common fallacy with regard to what took place at the time of the commutation \* \* \* I have seen it enunciated by persons holding high offices in ecclesiastical ranks and by cabinet ministers;" and the statement to which he refers is thus given in his own words:—"That at the time of the commutation a sum was added to the tithes to make up the tithe rentcharge, and thus to secure to the tithe-owner a tithe-value free of rates, that is to say, that tithe rentcharge equals tithes plus rates." What have you to say to that statement?—That is so, where the rates were paid by the tithe-payer; but if the tithe-owner at the time of the commutation was in the habit of receiving a gross composition payment, of course that gross composition payment was generally the measure of the tithe rentcharge. The local assistant commissioners had power to add certain sums within limits to the amount where they thought the composition had not been a fair one, but there was no addition for rates in that case.

11,025. Mr. Peterson goes on to say that the idea contained in the statement is "wholly fictitious" and that "it is based upon a misapprehension both of the ante commutation history of tithe rates and also of the process of the commutation itself"; what have you to say to that?—I can only say what I have said. Mr. Farquharson came to discuss this with me some years ago; it was a subject in which he was very much

Tithe Commutation Act. Allegation that addition was made to tithe rent-charge to provide for payment of rates. Addition only made in cases where tithe-payer was paying the rates by agreement. But rates decreased since then.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 363 to 364.

Mr. A. De Bock Porter, C.B.

21 July '97

interested, and his allegation was that this amount of rates was added in every case, whereas I have pointed out most distinctly that it was only in the case where the composition was net that anything was added for rates.

11,026. Mr. Peterson then went on to divide the procedure into three different cases, the first being where the tithe-owner collected the tithe in kind; in that case, he says, "deductions for the cost of marketing &c., were directed." What do you say to that—do you agree with it?—That was so.

11,027. The second of Mr. Peterson's three heads was: "Where the tithe-owner entered into a composition with the owner or occupier of the land and the latter paid a fixed annual sum in lieu of tithe, in this case the Commissioners were directed to take such sum as the clear annual value." What have you to say to that?—That was so.

11,028. Then it would amount to this, would it not: that, as Mr. Peterson said, in the above cases the tithe-owner did remain liable to pay the rates which he paid before?—Yes.

11,029. Then there remains the third case: "Where the tithe-owner entered into a composition with the owner or occupier of land for payment of a fixed annual sum, but to be free of all rates. These rates being paid by the landowner or the occupier the composition was so much less. In this case the Commissioners were directed to make such addition to the composition as would represent the rates paid." What have you to say to that?—That is so.

11,030. That would, Mr. Peterson says, merely replace what had been before subtracted and place the tithe-owner in the same position as in the above-mentioned cases?—That is so.

11,031. Then the allegation that a sum was added to the tithe to make up the tithe rentcharge would remain true only in the third of these cases?—An addition was never made to the value of the tithe in respect of rates, but only to the composition in the third case.

11,032. Was that the commonest case, do you think, or can you tell us which of the three cases was the commonest in practice?—I think the last.

11,033. So that while the idea is not so wholly erroneous, perhaps, as represented, there has been a course of events which have tended to make it seem more unfair than it really is?—Yes.

11,034. (Mr. Cripps.) Of course you have stated what I think everyone is familiar with who has dealt with this subject—that the rates were added in the case where the incumbent was receiving a net amount prior to the amount being fixed and where the rates were being paid by the tithe-payer?—Yes.

11,035. Up to the time of the Tithe Commutation Act was it not a common practice in the vast majority of cases for the rates to be paid in fact by the tithe-payer and not by the tithe-owner?—The tithe did not arise as a separate entity for rating.

11,036. I dare say you are aware that after the passing of the Tithe Commutation Act in several districts for some period of time the tithes were not rated?—It was so.

11,037. It was afterwards discovered, of course, that they ought to be rated?—Yes.

11,038. Are you also aware of this: that when that discovery—if I may so call it—that the tithe should be rated was made, the tithe-owners alleged that if they were rated on tithes the farmers ought to be rated on their farming profits?—No, I did not know of that.

11,039. Nor that for some time the Courts held that that was right?—No, I was not aware of that.

11,040. Nor that it was afterwards upset by a judgment—I think it was Lord Denman's—in the Court of Queen's Bench?—I have known one or two rent-charges escape rating altogether.

11,041. (Mr. Stuart-Wortley.) On the question of the results of commutation as bearing on the respective claims of the landowner and tithe-owner to relief from taxation, what do you wish to tell this Commission?—My own view is on the whole that the tithe commutation was a wonderfully equitable arrangement. Of course the tithe-owner surrendered a good deal, because a very large deduction was made by the farmer usually for marketing and threshing the produce of the land; that was represented to be as much as 40 per

cent. in some cases, and roughly, I think, the deduction for that was about 25 per cent. The incumbent thinks that that deduction was too large, that it was a great convenience to the farmer to be able to market the whole of the produce of the land, and that it would not cost him anything like the allowance which was made by the incumbent in accepting the modified commutation in lieu of it.

11,042. Is it your view that both landowner and tithe-owner have benefited from the results of commutation?—Very largely.

11,043. In what sense has the landowner benefited?—He some years back benefited largely, because he could go on and improve his land without feeling that the result of his improvement would be, to a certain extent, taken by the tithe-owner.

11,044. In what way has the tithe-owner benefited?—He has secured a fixed income apart from the vicissitudes of farming. For instance, at the present time in many cases, the tithe-owner is getting payment based upon the more valuable produce of land which was formerly arable, but which has now perhaps gone down to grass, and is producing scarcely anything, but he is receiving his income—subject, of course, to averages, but still a fixed income—based upon the old produce of that land.

11,045. And he has also escaped the irritation which used to exist between him and the tithe-payer?—Yes, which is, of course, of great value to an incumbent.

11,046. (Mr. Cripps.) There are one or two questions of principle I want to put to you. Of course tithe was estimated on the produce of the land?—Yes.

11,047. It was not estimated on rental; it was estimated on produce?—Yes.

11,048. Do you know any other case except tithe where a sum which is calculated on the produce of the land as apart from the rental of the land is rated at all?—I think not.

11,049. How would you justify—of course I am only dealing with your views—in one particular case, namely, that of tithe, rating a sum which is fixed in reference to the produce of land, though in all other cases you excluded that element?—I assume it goes back to the Statute of Elizabeth which specifically mentions it.

11,050. But then the Statute of Elizabeth would include all forms of property?—Yes.

11,051. Putting aside the Statute of Elizabeth, can you suggest any justification for rating the produce of land in the case of tithe, although you do not rate the produce of land in any other instance?—No, I do not think I can.

11,052. There is one other point I want to ask you; of course you know this case of the Dean and Chapter of St. Asaph v. the Overseers of Llanrhaidr?—Yes.

11,053. We may take it from that case that, as the law stands at the present time, the only deductions are the remuneration of the collector, the legal costs and out-of-pocket expenses, bad debts, irregularity in payments, and tenant's taxes. Allow me therefore to put this to you: suppose a tithe-owner not being able to get his tithe paid, went into possession of the land, and became a farmer for the purpose of raising sufficient produce in order to earn his tithe, do you think that in a case of that kind you could limit deductions to those deductions which were mentioned by the Court of Appeal?—Certainly not.

11,054. I mean if you are to look on the tithe as based on the produce of land, these deductions would be altogether inapplicable?—Quite.

11,055. I have been dealing with you as a tithe-owner in the ordinary sense, and now I want you to take a tithe-owner who is also an incumbent; it has been suggested that a tithe-owner who is also an incumbent receives the produce of the tithe somewhat in the nature of a professional income; you have heard that suggestion, of course?—Yes.

11,056. Do you think that that is a fair way of looking at it in the case of an incumbent?—Personally, I hardly think it is.

11,057. You do not think so?—No.

11,058. Supposing that is the fair way of looking at it—and I take your view that you do not think it is—then these deductions, such as pensions, curate's salary,

Mr. A. De Bock Porter, C.B.

21 July '97

Tithe estimated on produce, not on rental.

Deductions. Tithe rent charge. "Dean and Chapter of St. Asaph v. the Overseers of Llanrhaidr." If tithe owner entered into possession of land to earn his tithe from the produce, the deductions mentioned in this case would be inapplicable.

Tithe owner as incumbent cannot be said to receive tithe in nature of professional income. But if this view is correct, then deductions such as curates' salaries, &c., should be allowed. Also in case of glebe.

Mr. A. De Bock Porter, C.B.

21 July '97

Tithe Commutation Act an equitable arrangement and beneficial to both landowner and tithe owner.

Mr. A.  
De Bock  
Porter,  
C.B.

21 July '97

and so on, ought to be deducted, ought they not?—Certainly.

11,059. If we once assume that we are to look at it from that point of view, then these deductions would be right?—Yes, they would come as a matter of course.

11,060. (Mr. Dalton.) If the exemptions in respect of personal services, curates' salaries, and payments to Queen Anne's Bounty, were allowed in the case of tithes, is there any reason why they should not be allowed in the case of glebes and other endowments of the church?—I should think not.

11,061. An endowment in consols, and an endowment in glebe, would stand on exactly the same footing as an endowment consisting of tithe?—Yes.

11,062. Is most of the tithe of the ecclesiastical commissioners situate in rural districts?—It is mainly in rural districts, but a portion is in urban districts. Taking the 266 cases which form the basis of the summary I have laid before the Commission, I suppose only about 40 of those were in districts which would become liable to a payment towards the general district rate.\*

11,063. For the purposes of the general district rate the tithe is rated at one-fourth?—Yes.

11,064. I think you brought it out that the figures of the poor rate would come to about an average of 2s. 6d.?—Out of the 2s. 7d. which I had over the whole area, the poor rate represented 2s. 5½d., and all the other rates combined 1½d.

11,065. Then we may fairly make the deduction that in those parishes where these tithes are situate, such of them as are rural, the average rate in the £ is practically half-a-crown?—About half-a-crown.

11,066. Those are parishes taken from every part of the country?—Yes. I have here the schedules showing every rent-charge in every county; I have brought the details in case they might be wanted.

11,067. Do you think it would have been practicable to have brought tithe into the Agricultural Rates Act?—The only difficulty was the question whether the tenant was to be benefited or the owner.

11,068. Was there not also the question whether the tithe came from agricultural land or whether it came from houses and buildings? Would it not have been necessary to have divided the tithe in every parish, and to have ascertained what was charged on houses and buildings and what was charged on agricultural land?—It is a very small proportion that is derived from houses and buildings.

11,069. Still it would be necessary to have apportioned it, I suppose, in every parish; even where you have farm-houses you would have been obliged to put some of it on the farm house?—I hardly think that would have been an insurmountable difficulty.

11,070. It would have been an expensive business?—Yes.

11,071. And the expense might, of course, have been as much as the relief?—Yes, it might.

11,072. What was the effect of the commutation on land that subsequently became built upon? That land would have ceased to have any produce, would it not?—Yes.

11,073. And, therefore, when land was built upon prior to the commutation, tithe ceased to be payable in respect of it?—That was so, I believe.

11,074. But after the commutation, it stuck to land in those cases?—Yes, a very small proportion compared with the entire bulk.

11,075. Then, I think, you say the landowner has benefited by the commutation, do you consider that he has benefited in those districts where the tithe rent-charge now approaches the rent?—Hardly, perhaps in parts of Wiltshire and Hampshire, and in some parts of Essex.

11,076. (Mr. Smith.) Over how many parishes in England does your average of rates, that you have given us as varying from 2s. 3d. to 2s. 9d., extend?—Two hundred and sixty-six.\*

11,077. Taken all over England?—Taken in every county in the Kingdom.

11,078. It averages at 2s. 7d.?—That is taking the north and the south.

11,079. Of which 2s. 5½d. is poor rate—that means the consolidated rate, of course?—Yes, that we call the poor rate.

11,080. And 1½d. represents all the other charges?—Yes.

11,081. Do you think that is fairly typical of rural England?—I think it is. I endeavoured, in selecting cases, to take fair cases. I think on the whole it is fair; there was every endeavour to make it absolutely fair.

11,082. I was very anxious to get that fact, and I have not been able hitherto to get it from anyone. You were asked by Mr. Cripps whether the tithe was not really a charge upon the produce of the land; of course, since the commutation, it has no longer affected the produce of the land?—That is so.

11,083. It varies according to the prices of certain articles, wheat, barley, and oats, I think, but it is no longer affected by the produce of the land, in so far as the tithe-payer may grow barley or he may grow hops?—Quite so.

11,084. (Chairman.) I am very much interested in this table that you have put in, and I want to be quite clear that I understand what you put it forward as proving. If you look at column 4 you will see that the assessment of rates in the 128 parishes in the northern counties in 1894 was 36,645l.?—That is so.

11,085. And the net receipts for the same year were 33,180l.?—Perhaps, I should explain that the other outgoings which appear in column 13 are outgoings which are peculiarly attached to the Commissioners' tithe. Those outgoings would take into consideration all stipends to incumbents which have been charged on tithes by previous owners. Those outgoings amounting to 2,673l., for the most part consist of stipends, the rest of it being the land tax. Those are the two principal items. That is rather a disturbing element in looking at the tithe generally.

11,086. In that case, in order to compare the assessment for rates and the value, must I take your 12th column which shows for the northern counties 35,853l.?—That is so.

11,087. Would that column 12 represent what would be paid to the ecclesiastical tithe-owner if these parishes were not commissioners' parishes but parson's parishes?—Subject to a deduction for land tax.

11,088. Then do you assume that in the case of these parishes the assessment to rates was not greatly in excess of the value for the year 1894?—The assessment that had been determined for 1894 was not. It was rather higher than it should have been owing to causes I have already explained, but it was not so very much out. Taking the two districts together it makes a difference of 1,400l.; we should say it was 1,400l. too high.

11,089. I want to be quite sure whether there is not some latent fallacy in using this table which you have put forward as showing the measure of what happens to your parishes as a test to what is the measure of the grievance of the parson in his parish?—Apart from column 13 I think it is a very fair representation of the average tithe rentcharges.

11,090. (Mr. Dalton.) That table refers to the Ecclesiastical Commissioners' property?—Yes.

11,091. Surely the Ecclesiastical Commissioners look more strictly, and in a more business-like manner after those Assessments than you can expect a parochial incumbent to do?—Yes, but I understood his Lordship to say would these be fair rentcharges? The result perhaps would be varied by any carelessness on the part of the incumbent with reference to his Assessment, but it is within his power, of course, to bring out a similar result to this.

11,092. Apart from the question of carelessness I suppose the assessment committees would hesitate more at fighting a powerful body like the Ecclesiastical Commissioners than at fighting a single ratepayer?—That is so.

11,093. (Chairman.) No summary, however accurate, can possibly give a full statement of what may be individually a very hard case?—That is so.

11,094. Some have been put before us,—five noticeably from the Diocese of Salisbury.\* I will take one case, I omit the population, because that is not a factor which for the present purposes matters; the tithe

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, p. 356.

Mr. A. De Bock Porter, C.B.  
21 July '97

value in 1896 is given us as 167*l.* 11*s.* 0*d.* less rate on tithes and house 45*l.* 12*s.* 3*d.*—?—But the house ought not to be in it.

11,095. Please wait till I have finished. And less cost of collection 5*l.* 17*s.* 4*d.* those two items taken together show a deduction from the tithe value for rates and collection of 51*l.* 9*s.* 7*d.* out of the 167*l.* 11*s.* 0*d.* Now subject to anything you may have to say as to taking off the rate on the house would you like to make any comment on that individual case?—It is a very hard case. The tithe seems to be unduly rated unless the house is exceptionally good.

11,096. To judge of it in all these cases you would be obliged to have the separate figures for rating the tithe and for rating the house?—Certainly.

11,097. Do you know of any case in your own experience at the Ecclesiastical Commission which approaches those relative figures of the amount of the rates compared with the gross value?—Not where the proportion is so large as that. The largest case I have here is where the rate comes to 14·9 per cent.; that is a case in Wales.

11,098. Are there any exceptional circumstances to make it very high in that case?—No, these were average cases; one of them was an urban district, but it was a very small proportion and that made a slight addition. I see there is one case in Middlesex where the proportion is large, namely 16 per cent, but that, too, is a case of an urban charge.

11,099. I will give you one other instance, the case of Salisbury St. Martin. The tithe value in 1896 is stated to us as 113*l.*; the rates on tithe and house 46*l.* 19*s.* 8*d.*, and the cost of collection 5*l.* 13*s.* 1*d.*, together 52*l.* 12*s.* 9*d.* which taken off the 113*l.* leaves a net income of 60*l.* 7*s.* 3*d.*—That is an urban district. St. Martin's Salisbury is just out of Salisbury, and in all probability it bears its share of urban rate, and the house is brought in too.

Deductions. Tithe rent-charge. Chancel repairs should be allowed for.

11,100. I think I may take it from what you have said that you have no case on your list which compares relatively to the gross value of the tithe in the amount of rates with either of those?—No. May I say with reference to the chancel repairs that I think it is a gross injustice that the large expenditure which has to be made upon chancels is not allowed as a deduction now. Take the Commissioners' expenditure upon chancels which I suppose averages between 2,000*l.* and 3,000*l.* a year; that is roughly 1 per cent. upon the amount of the Commissioners' rentcharge; yet, if this decision is to stand no deduction whatever is to be made for expenditure upon chancel repairs although the obligation is one that it is impossible to avoid.

11,101. You would, I suppose, agree that it would be fair to ascertain the average one year with another probably by some system of insurance or in some way of that sort, in order to find out and give satisfaction to the rating authority, that an undue deduction was not being made?—Yes.

11,102. Subject to that you would urge that the expense of the repair of the chancel should be subtracted from the gross value before the tithe is assessed for rating?—Yes.

11,103. (Mr. Cripps.) Wherever the incumbent is rector, of course he would be directly liable?—Yes, and that is the case in a large number of instances. The Commissioners are responsible for an immense number of chancels because they are rectors in so many parishes and the chancel expenditure is large.

Tithe Statistics. Cases of tithe highly rated.

11,104. (Chairman.) I will take one other case where the individual figures are given rather better than in either of those cases that I put before you a moment ago. The Rev. Mr. Marion, of Edgefield, writes to Mr. Boscawen: "Tithe rentcharge 410*l.*, rated at 70*l.*"—that means he pays rates on the rateable value of 410*l.*—"house rated at 5*l.*; glebe 16 acres at 2*l.* 14*s.* 0*d.*" We may leave out the house and the glebe, but he goes on to say: "The Agricultural Rating Act will press hardly on me, for as we are building a new school and premises"—it is a board school—"expenses are sure to rise, and, as only a fixed sum is conceded, I, the chief ratepayer, will bear the burden. Roughly speaking, in 1897 I shall have to pay 20*l.* to every 100*l.* wanted by the overseer, that is, one-fifth of the parochial burdens." Do you follow the argument?—I do; but it is one of those cases that one would like to investigate oneself before expressing an opinion about. I have investigated so many cases in my official capacity and so frequently

found the statements wanting in accuracy that I should hesitate to express an opinion until I saw them in detail.

11,105. There are one or two cases on this paper which was handed to me by Mr. Boscawen, which I should like to ask you to investigate for the purpose of our inquiry. I recognise at once that it is not fair to ask you to express an opinion over the table unless you happen to have some knowledge of the case already. There is just one point that I want to make clear. The second argument in that case is this: that the Agricultural Rates Act of last year, by giving a fixed amount of relief on the value of agricultural land, yet providing that agricultural land shall only pay a fixed proportion of the rate, in the event of any increase of rate arising, that would add to the burden on such properties as tithe rentcharge?—Very materially. That is, I think, one of the grave injustices of the Act of last year, and, if the rates are to be increased and the land occupier is only to be assessed at one-half—ultimately, of course, it will be the land-owner—the tithe-owner will have to pay the increase.

11,106. You recognise also, do you not that without some such provision as that there would have been a considerable premium upon extravagance?—There would, undoubtedly.

11,107. (Mr. Smith.) In those cases which you have described to us—and, I think we quite understand where the rates were added to the commutation—were they not rated on a basis of about 4*s.* in the £?—The average of the old rates at that time comes out to about 5*s.* in the £.\*

11,108. Were they added on that basis?—On that basis.

11,109. Then a small addition to the 2*s.* 7*d.*, which is now the average, would not be very material?—No.

11,110. (Mr. Dalton.) If the rates go down in any parish I suppose the effect of the Agricultural Rates Act will be that these other properties will get the benefit?—That is a very remote contingency.

11,111. (Mr. Cripps.) Of course, as you state, it is the occupier who is rated and not the owner. I am not now talking about ultimate matters; whenever you give relief it seems to me in any such direction as the Agricultural Rates Act has given relief, if there is any increase of the rating in the future you will raise it really over a smaller amount so far as the ordinary assessment is concerned?—That is so.

11,112. I do not see how you can avoid that, can you? I am assuming that the agricultural land for the purposes of my argument was unfairly rated before, and, therefore, it is quite right to give it relief?—Yes, but then the tithe-owners would have to pay a bigger share in consequence of the action of Parliament in not bringing them in.

11,113. I do not want to go back and argue it; taking the assumption that agricultural land was unfairly rated before, and that there is too heavy a burden upon it the relief is quite right, because you are merely putting right an injustice that existed?—Yes, but you are making it a little more unjust upon the tithe-owner.

11,114. That is another question, whether the tithe-owner is fairly charged or not. Supposing you find any property in a district which has an unfair burden as regards rates, and you put that right as a matter of justice, to a certain extent you must increase the burden upon the other ratepayers in the district?—Yes.

11,115. But that is only putting an injustice right?—That is so.

11,116. (Mr. Dalton.) I suppose your argument that tithe does not get the benefit of the expenditure of the rates would simply apply to cases in which other properties get the benefit from rates and would not apply to rates of burden, such as the rate for the relief of the poor?—Tithe does not benefit exactly by that.

11,117. But the other properties do not either, do they?—No; in common with others of course it is so.

11,118. (Chairman.) Is there any point you would like to add?—May I mention one matter; it does not concern me in my official capacity, but it is one which I have some knowledge of in my private capacity. It has doubtless been brought before you. I refer to the hardships of the Act 18 & 19 Vict. c. 128 about the rating of cemeteries. A parochial cemetery in a parish is only rated at the value of the land when it was

Mr. A. De Bock Porter, C.B.  
21 July '97

Agricultural Rates Act, 1896. Increase of rates. Increased burden on tithe-owners.

Tithe Commutation Act. Cases where rate added. Amount of rates in the £ at that time.

Agricultural Rates Act, 1896. Increase of rates. Increased burden on tithe-owners.

Tithe-owners and increased taxation. Imposition of new rates an injustice.

Valuation of cemeteries. A parochial cemetery only valued on the basis of value of land before it was a cemetery.

\* Pt. II, of Appendix to Vol. I, of Minutes of Evidence, pp. 362 to 364.

Mr. A.  
De Bock  
Porter,  
C.B.

agricultural land, before it was taken for cemetery purposes, although the parochial authority to whom the cemetery belongs may now be making a large profit out of it.

21 July '97

11,119. You would agree with me, would you not, that also on the other side there comes in rather a peculiar state of matters that the annual revenue practically in large part consists of a re-sale of the corpus of the property?—To a certain extent that is true.

11,120. It is altogether true is it not, because supposing a cemetery is being filled up at such a rate that at the end of 50 years from the time in which it was made every lair is occupied, in the course of the annual returns with sound financial management you ought to have repaid the capital value as well as the annual revenue?—Yes; and if the price at which you re-sell is so large as to pay you not only the original sum that you paid for the land, and interest upon it, but also a very large profit in addition, it is hardly fair to the locality in which the cemetery is situated that it

should have no portion of that profit brought in for rating purposes.

11,121. Possibly, but you would agree with me, would you not, that you must take into account the consideration that I have put before you?—That must be taken into account, but there is a profit upon that.

11,122. (*Mr. Stuart-Wortley.*) I suppose the existence of a cemetery does not tend to increase the rateable value of the adjoining properties?—No; it not only reduces the capacity of the parish for rating purposes, but in the case which I have in point—the parish in which I live—the unfortunate residents are charged double fees for being interred in these very cemeteries.

11,123. (*Mr. Elliott.*) There is a Bill before Parliament to remedy that, is there not?—There is.

11,124. (*Mr. Stuart-Wortley.*) Have you anything else you wish to explain arising out of questions that were put to you by the Commissioners?—Until I have seen my evidence nothing occurs to me at the present time.

The witness withdrew.

Mr. ARTHUR F. JEFFREYS, M.P., called and examined.

Mr. A. F.  
Jeffreys,  
M.P.

11,125. (*Chairman.*) You are Member of Parliament for North Hants., an Alderman of the Hants County Council and member of the Assessment Committee, and a member of the Basingstoke District Council and Board of Guardians; and you have been formerly on the Assessment Committee of the Alton Union. You are chairman of the Bentworth Parish Council, overseer of Bradley parish, and member of the Council and of the Business Committee of the Central and Associated Chambers of Agriculture, of which you were chairman in 1895, and by that Council I understand you have been asked to give information to this Commission?—Yes, that is so.

11,126. Generally, you have paid attention to the subjects which are embraced in our reference all the time that you have been in Parliament?—Yes, I have.

11,127. I know from what you have said, that complaints as to the burden of local taxation are made by occupiers of land on account of the way in which the rates are levied upon agricultural land?—On the area on which they are levied.

11,128. Why on the area specially?—Because, instead of rating the farmer on his house and premises, they rate him on every acre of land he occupies, and the farmer naturally says that a great many of the rates which are raised do not affect his acres at all; they only affect the occupiers of houses.

11,129. That, of course, is a general statement which it might, perhaps, in detail be a little difficult to make out; but I will ask you a question on it in a moment. Do you put it forward that agricultural land is to be relieved altogether from rates?—I think it would be a very fair thing to relieve it altogether from certain rates; for instance, I do not see how the Police rate can possibly affect agricultural land.

11,130. Are the police never employed in protecting a farmer's crops, for example?—No, I do not think they are.

11,131. Not in the suburbs of a large town?—I never heard of it. Do you mean in preventing persons setting fire to a crop?

11,132. In preventing damage by people trespassing?—I do not think the police have any power to proceed against trespassers.

11,133. I am, perhaps, ignorant of your English practice; but supposing a growing crop is close up to the boundary of a populous place, do you not think that if wilful damage was done by some of the mischievous inhabitants of that place, the constables could not be set to watch and to protect the farmer's crop?—Then it would have to be done under special circumstances. I do not think the police have any more power to protect the farmers' crops, than they have to protect the landlord's game at the present time.

11,134. Game, of course, is a highly controversial subject into which I will not take you. I take it from you that it is your opinion that the police rate is one for which agricultural land shall not be assessed?—It should be entirely free from it because it derives no benefit from it.

11,135. Of course, you are speaking now as to what in the abstract would be fair, not as to what is the law at the present time?—No, what I think would be fair.

11,136. Is there any other rate that you would put in the same category?—Yes, the School Board rate, certainly. I think the School Board rate cannot possibly affect the acres; the school is merely for the children of the people who occupy the houses. Another rate which I think it is very unfair to put upon the land is the rate for the county lunatic asylums, and another rate which I think it is unfair to put upon the land is the rate for the main roads and bridges.

11,137. Surely roads and bridges are in some respect essential to the enjoyment of agricultural land?—Yes, they are for the good of agricultural land to a certain extent, but hitherto agricultural land in the rural districts has paid a very unfair share of the cost of keeping up the roads and bridges which are used freely by the whole population.

11,138. You would draw, perhaps, a distinction between roads which are district or local roads, and those which are without being arterial highways, main roads?—Yes, I would, certainly.

11,139. I should like you to make a little more distinct the suggestion which you put forward, that the farmer is rated upon his whole capital and means, and that, therefore, he is put at a disadvantage compared with others?—I mean in this way, that if you take a farm, first of all you are assessed at a certain amount upon the house, and the buildings, and the land; the farmer puts his whole capital in the land, because when he goes into the farm, he has to pay for the tillages and the seeds to the former tenant, so that practically his whole capital is invested in the land, and the land is assessed accordingly because of those tillages. If land were uncultivated it would not be assessed at anything like what it is when it is under cultivation; but from the fact of it being under cultivation, and of the farmer's capital being invested in it, it is assessed at a certain amount. Therefore I say that man is being assessed on his whole property.

11,140. Do you put it to me that the whole of a rate which has been in existence prior to the contract which the farmer is working under at the moment, is paid by the farmer in contradistinction to payment by the landlord?—No, I did not mean to say that. That is, of course, a different question altogether.

11,141. Is it not germane to the last answer that you gave, that the farmer is really the bearer of the rate?—Yes, the farmer pays the rates.

11,142. We all admit, of course, that he is the hand that pays it, but I rather, in consequence of the last answer you gave, wanted to draw from you your view, if you wish to express one, as to where the incidence of the rate really falls, and I purposely indicated the difference between a rate which was new after the date of the contract, and a rate which was in existence at the time the farmer made his bargain?—I should say that the farmer did pay a share of that, as I indicated before, because his share of the actual money in the

Mr. A. F.  
Jeffreys,  
M.P.

Agricultural land. School boards, county lunatic asylums, main roads, bridges. Occupiers of agricultural land should be relieved from paying rates in respect of.

Agricultural land, rating in respect of, alleged to be inequitable.

Incidence of rates as between lessor and lessee of agricultural land.

Valuation of, and rating in respect of, agricultural land. Farmers should only be rated in respect of their houses and premises.

Agricultural land. Police. Occupiers of agricultural land should be relieved from paying rates in respect of.

*M. A. F. Jeffreys, M.P.*

21 July '97

land is the amount he puts in for tillages and seeds, and therefore on that alone he pays the entire rates. There are certain other rates which he pays upon the land which, to a certain extent, fall upon the landlord, because the landlord is always there. Land is always, to a certain extent, a valuable property, but it would be very much less valuable if it were not cultivated. When it is in a state of cultivation, then I say the rates fall upon the farmer himself directly.

Agricultural land. Rates. Farmers frequently do not take rates into consideration when bargaining for a farm.

11,143. Some gentlemen representing the agricultural interest have put it in the broadest possible way that a farmer when he goes to make a bargain for his land, does not take into account the rates he will have to pay at all, he thinks of the rent and he does not think of the rates. What have you to say to that contention?—I do not think he does. Of course, as the Commission knows, farmers are not very good business men, and I am afraid they do not take the rates into consideration when they hire a farm.

11,144. Do you think that they do not do so now, or do you discern any increased regard to that consideration?—Do you mean within the last year?

11,145. I mean within the last few years?—I think lately they have begun to think more about it, because they have been much poorer and the rates have pressed much more heavily upon them; but in former years I am quite sure that a farmer never considered the rates he had to pay when taking a farm.

11,146. However, you will agree with me that it is a material consideration as between one district and another?—Very much so. I know two neighbouring unions, in one area the rate is just double what it is in the other—and the land is adjoining.

11,147. Clearly if the land was of comparable value, or of equal value, the man in the one union could afford to give more rent than the man in the other?—That is quite true. Now that this rating question has come before them more prominently, no doubt they would like to get into a union where the rates are lower.

Contribution to rates by different classes. Amounts. Agriculturists said to pay most in proportion to income.

11,148. I am rather interested by the three instances you give of the blacksmith who has his cottage and smithy with a presumed income of 100*l.* and pays 1*l.* 11*s.* 6*d.* in rates; of the farmer with as you say, the same income of 100*l.* a year off a 200 acre farm, who pays eight guineas in rates, and of the baker who pays rates on his house and shop of a gross amount of 2*l.* 16*s.*?—That is in a parish I know.

11,149. Have I given the summary of your figures correctly?—Yes.

11,150. You put this question to us, as I understand: Why should the farmer who is probably poorer than the blacksmith, and much poorer than the baker, pay for his rates eight guineas, as compared with the blacksmith's 1*l.* 11*s.* 6*d.*, and the baker's 2*l.* 16*s.*? Do you suggest that local rating should be placed in any form upon income?—No, I do not. I think there is great difficulty in that, but I say that to a certain extent it is placed upon the farmer's income at the present time, and that is just what I want to get taken off.

11,151. I was passing from that, and I do not desire to express an opinion upon it. I was taking the concrete case which you yourself gave, and assuming your argument, desired to ask you in what direction you were inclined to look for a remedy?—My remedy would be to relieve the farmer. I do not think it is possible to put any rates upon either the blacksmith's or the baker's income.

Agricultural land. Occupiers should contribute to rates at one fourth.

11,152. I take you on that; it takes us one step further on, of course. Assume that the farmer has to pay upon an equivalent amount to the other two and he will pay, roughly speaking, two guineas, which is an intermediate figure between the two; who is to make up the deficiency?—I maintain that the agricultural land ought to be rated at a quarter instead of a half as it is at present. That would make up a certain amount of the deficiency.

11,153. Is it your scheme that that is to come from the Imperial Exchequer?—Yes, the reduction to the quarter as the half comes now.

11,154. That will not exhaust the whole difference, will it?—No, it will not.

11,155. What is to be done as regards the rest?—I say I hope there will be a better system of assessing the land. I think the land ought to be freed, as I have said, from certain rates. I have indicated the school rate, and the lunatic asylum rate, and the police rate

and the roads and bridges rate. I think land itself ought to be freed from those entirely. That will give a substantial amount of relief.

11,156. And *pro rata*, of course, the other local properties would have to pay at a higher rate?—A very slight increase, I think, if those contributions from the State were given that I mention.

11,157. What do you propose to do with those rates; do you propose to make them entirely a matter of Imperial concern?—Yes, I do; the lunatics, I am sure, ought to be.

11,158. And Imperially administered?—Yes, if necessary.

11,159. It would be a corollary, would it not?—I do not know. I think that there might be some trouble in putting the police, for instance, upon the State, but if the State demanded it; if the State said: the only condition on which we will pay for the police is that we are to have the control of it; then I am sure that we in the counties would be quite willing that they should have the control of it.

11,160. Do you speak in that way for the agricultural community, or for your county as a whole?—For the county as a whole, I think.

11,161. Has that ever been the subject of resolution or of discussion in any local body?—It certainly has of discussion, and I have never yet heard in our county anybody who has opposed it, of course, on the condition that we get the money grant.

11,162. (*Mr. Cripps.*) You get half now, do you not?—We do not get half now. We were supposed to get half at one time, but, the fact is, that the cost of the police increases so much more on account of the requirements of these people, who live in houses, not because of the land, but because of the occupiers of houses, and so we do not get half.

*Mr. A. F. Jeffreys, M.P.*

21 July '97

Agricultural land. Occupiers should be free from paying rates in respect of certain purposes. Question of local control and administration.

11,163. (*Chairman.*) The position of the matter is this: you get a fixed grant each year in accordance with what was a half in one of the past years?—Yes.

11,164. And, as in certain districts, policemen are increased in numbers, so the whole cost of them has increased, but the increased burden falls upon the local body, with the subtraction of the fixed subsidy from the Imperial Exchequer?—Yes.

11,165. (*Mr. Stuart-Wortley.*) It never was more than half the pay and clothing, was it?—No.

11,166. Therefore it would cover nothing for build-ings?—That would be so.

11,167. (*Chairman.*) You mentioned that you were a member of an assessment committee. Having lived a large part of your life in the country do you think that the assessment committees do their work fairly as between one class of property and another, and one holder of property and another?—I think they do the work as fairly as they can, but I should like to say that the assessment committees often have no particular knowledge of the subject. You know how an assessment committee is formed; people are pitchforked into it, not because they know much about the business, but because they happen to be members of the board of guardians.

Police, increased cost of.

Assessment Committees. Constitution of. Have no particular knowledge of rating matters.

11,168. And the present system in various ways tends rather to put a premium upon each man getting down the assessment of his own particular parish?—I think that is true.

11,169. Of course, I need hardly ask you, you think that is a bad system?—I think it is thoroughly bad. I think what we want more than anything else is uniformity of assessment.

Valuation. Present system a bad one. Uniformity desirable.

11,170. And perhaps the authority having authority over a somewhat larger area than it has at the present time?—No, I am not so particular about that. I think the areas of the unions are large enough, but I think that the assessment committees ought to have some direction from an assessor.

Area of union sufficiently large for purposes of valuation. Inland Revenue officer should assist Assessment Committees to secure uniformity.

11,171. Would you like to see the Inland Revenue surveyor placed along with them?—I think so; possibly not to vote, but, at any rate, to direct them. I happen to have been on two boards of guardians, and I know how very differently the assessment is conducted in the one union as compared with the other, and yet these two unions are adjacent.

11,172. Two distinct lines of thought have been exhibited before the Commission upon this matter,

Mr. A. F. Jeffreys, M.P.

21 July '97

Areas for valuation purposes. Present areas satisfactory, but uniformity in valuation desirable, and one basis for Imperial and local purposes.

both presuming that a larger area than the parish is desirable for assessment purposes; one of the lines of thought being that it should be by the union, the other that there should be a division into urban and rural districts, that is, roughly, borough and county, and that they should be respectively the authority within their districts. Would you wish to make any comment on either of these proposals?—No. I do not think there is such a necessity for restricting or enlarging the areas. I think the areas, so far as I know, do very well at present. The only thing that I submit, as I do very strongly, is, that there should be uniformity of the mode of assessment in all these different unions. The parishes are taken now, as you know, for the sake of convenience generally; the people know the land in the parish, and when they are informed that a certain farm is rated differently from another farm in the same parish, they take it that it ought to be enquired into if there is a great disparity in the assessment.

11,173. In fact, you cordially support this resolution which you tell us was unanimously passed at the Central Chamber of Agriculture, on the 1st June "that in the opinion of this Council it is desirable that "one basis of assessment should be adopted for all "purposes, local and Imperial"?—I do very strongly.

11,174. You think there is a strong feeling throughout the country that the time has come for the introduction of some such system?—Very strong indeed, in fact, I have never heard of a difference of opinion about it.

11,175. You make this statement, which I do not contradict: "Wealthy men living in rural districts, and "not occupying land pay only the rates upon their "unfurnished houses, and, if they rent furnished "houses, they only pay the rates indirectly through "their rent." Taking that as a basis for some inference, what is the inference which you wish to draw from it?—The inference I wish to draw is this, that the whole burden of the rates falls upon real property, and, to a great extent, upon this agricultural land, which, as I say, derives no benefit or very little benefit from the rates. Then I say that those gentlemen who live in hired houses, and pay no rates, ought to contribute something towards the rates, indirectly, no doubt, but it would be contributing to them if we got a grant from the Imperial Exchequer to which those gentlemen contribute very largely on account of their incomes. I should never wish to ask the gentlemen who live in the hired houses to be rated on their personal property, or anything of that kind, but, I do say, give us a greater State contribution to reduce our rates, and then you indirectly will pay something to the rates through your income tax and other taxes.

11,176. In other words, your plea is for an increase of the contributions to local rates, which are now given in one form or another from the Imperial Exchequer?—Yes.

11,177. Do you apply that to urban as well as to rural expenditure?—No, because in the urban districts, of course, they get all those benefits for which they are rated. There are some figures which I give on the first page of my memorandum which will show that instead of half their rates going to the poor rate as ours do, a very large proportion of their rates goes for what is called the general district rate, which includes lighting and other matters.

11,178. In other words you point out a division between one rate and another, having regard to the object to which it is devoted?—Certainly. I say in the urban districts, the occupiers of houses get the full benefit of their rate.

11,179. Can you suggest to me any test which being applied to a rate whether in the country or in an urban district would show that it was a rate which was a fair rate for the present class of real property which is rated, or was one towards which you think there should be a larger Imperial contribution?—I have given those rates which I say the land ought to be released from, such as police, the lunatics, the roads and bridges, and I should add the National elementary schools.

11,180. I was rather going to suggest the other way that you should give me a list of rates which you think are fair charges upon the property now rateable in agricultural villages?—Of course, I think, the poor rate is. I see a great difficulty in relieving land of the

poor rate because of the difficulty of administering it in an economical way unless we pay a share of it ourselves. Half our rates, as you know, go to the poor rate. I do not know whether you noticed a return which was presented the other day by the Local Government Board? That return shows that out of the 23,400,000*l.* which are raised by rates in England and Wales, the relief of the poor takes over 10,200,000*l.*, so that nearly half goes to the poor relief.

11,181. (Mr. Cripps.) Is that in the rural districts?—I suppose it is for all local authorities, but here is the return (*handing in same*).

11,182. (Chairman.) Is there any point in your memorandum which I have missed, but which you would like to emphasise?—The only thing I should like to emphasise a little is what I alluded to just now, the difference between our rural rates and the urban rates. In our rural rates, as I say, a great many of the things for which we are rated we do not get the full benefit of; and in addition to that the rates are comparatively low; on the other hand, in the urban districts the rates are apparently high—double what ours are sometimes.

11,183. That only leads me to this, which I think most of us will admit, that the gross rate in any district is not a sufficient criterion for judgment on this point, without splitting it up and finding what objects that rate is devoted to?—Yes, but sometimes it is contended that our rates are very low because they are only supposed to be 2*s.* 6*d.* in the *£*, whereas urban rates are very high because they are supposed to be 5*s.*

11,184. You may take it from me that we shall not omit to give consideration to that point?—To the benefit which the urban districts derive from their rates?

11,185. Quite so. You have given a list of about a dozen towns showing the rates levied and collected in them in 1895-6; can you tell me the process which you went through in selecting those?—I did not make up the figures myself but I got a paper which was made up by the borough treasurer of Preston which includes the figures for a great many more towns than that. I took some of those as specimens.

11,186. (Mr. Smith.) You said that urban districts get the full benefit of their rates, I think?—Yes.

11,187. Will you tell me how urban districts are interested in lunatics to a greater extent than rural districts?—It is quite true they are not; but then I premised my observation by saying, I think, that lunatics ought to be provided for by the State.

11,188. You also said we got the full benefit of all our rates; would you apply the same principle to the elementary schools in urban districts?—Yes, I would, I would give some relief to all the schools both in rural and in urban districts.

11,189. And in addition you ask that another quarter of the poor rate should be taken off the agricultural land?—Yes, I do, because there is a very good precedent for that in the urban districts; the land only pays a quarter of the sanitary rate.

11,190. But you are asking that it should come off the poor rate which you admit you have to bear because you administer it?—That is quite true. I say that it ought to come off the poor rate in the rural districts, because the poor ought to be a charge chiefly upon the occupiers of houses.

11,191. Did you ever hear of a parish in Buckinghamshire where the farmers met twice a year, once to decide the rate of wages and next to decide the poor relief?—I think I have; it is Cholesbury. It belonged to my family; part of it belongs to my uncle now, who is lord of the manor.

11,192. I did not know that, I assure you. Does not that rather point to the fact that there may be such a thing as relief in aid of wages?—Yes, and that is why I was so careful in saying to the Chairman that I would not ask to have the poor relief granted to us from the Imperial exchequer. I think we ought to raise that ourselves and administer it.

11,193. Still you ask for it to be reduced one quarter?—Yes, I do; and I do that for the sake of fairness; I think that the land ought to contribute its fair share but, only a proportional share.

11,194. You ask to have the whole administration of the rate to which you only contribute one quarter.

\* Local Taxation Returns 1895-6, Part I., p. V.

Mr. A. F. Jeffreys, M.P.

21 July '97

Expenditure on purposes for which rates are raised in towns benefits property more than in rural districts.

Agricultural land, occupiers of, bear an undue burden of rates.

Imperial contributions, increase of, desirable.

Expenditure on purposes for which rates are raised in towns benefits property more than in rural districts.

Poor law expenditure must be administered locally

Agricultural wages, their relation to the poor relief.

Mr. A. F. Jeffrey, M.P.

21 July '97

Agricultural land, occupiers should contribute rates at one fourth.

Agricultural land. Occupiers should be relieved of rates raised for certain

purposes of national character. Question of control and administration. Rateable and non-rateable property. Respective contributions to the Imperial Exchequer.

(Mr. Cripps.) I understand you to say that it is all to be contributed locally, but as between one property locally and another, the land should only contribute at the rate of one-fourth. (Mr. Smith.) And I think the deficiency was to be made up out of the Imperial funds?—There would be a certain amount of deficiency to be made up.

11,195. Would it not practically come to this, that the Imperial funds would have to contribute three-fourths and you only one-fourth?—Of course, the land would only have to contribute a share, but on the other hand, all the houses and other rateable property in the parish would be contributing in full.

11,196. But in rural districts it is from the landed occupier, is it not, that you mainly get your guardians of the poor?—Not always; there is generally a clergyman or two on the assessment committee.

11,197. It is a man connected with the land; it is not the casual householder as a rule who is elected a guardian, is it?—Not as a rule; he might be, of course, as under the late Act the property qualification was abolished, and now a guardian need not even be a ratepayer.

11,198. (Mr. Elliott.) I gather that the first proposition which you would put before us, is that certain charges which are now borne locally and administered locally, should be transferred to the Exchequer?—Yes.

11,199. You do so on the ground that those charges are essentially national in character, and not purely local?—Yes, I do.

11,200. And you would further say that the fact that local administration has hitherto been found convenient ought not to stand in the way of that transfer?—No; I say that the machinery of local administration might still be made use of if necessary.

11,201. But you would be quite willing in consideration of that transfer that the supreme control should rest with the central authority?—Yes, certainly.

11,202. In order that any possibility of extravagant local administration at the expense of the Exchequer might be avoided?—Yes, certainly.

11,203. Now, with regard to the Imperial revenue to which you propose that these charges should be transferred; do you think that rateable property has any grievance, or any substantial grievance, as against non-rateable property, as regards the extent to which each contributes to the Imperial Exchequer?—Of course, real property contributes very largely to the Imperial Exchequer. Real property, I believe, is one of the largest contributors to the Imperial Exchequer.

11,204. You consider that rateable property, and especially rateable property which is agricultural, contributes its full quota to the Imperial Exchequer?—Quite so.

11,205. You have no desire that agricultural property should escape payment of the quota that it pays to the Imperial Exchequer?—No.

11,206. But you do say that the proportions in which it contributes to the Imperial Exchequer are much more equitable than the proportions in which it contributes to local expenditure?—Certainly.

11,207. And that is the reason why you think it would be more equitable that the charges should be borne on the Imperial Exchequer?—That is one reason. Another reason is that these various rates, the Police, Lunatic Asylums, and the other matters I have mentioned, are clearly questions for the benefit of the whole nation, and not merely for the benefit of the individuals living in the locality.

11,208. I gather that you have carefully considered this proposal from what I may call its administrative side?—Yes, certainly.

11,209. And that you with your extensive knowledge of local administration in regard to these matters, see no substantial difficulty in the way of their transfer to the Imperial administration, or at any rate to Imperial control?—None whatever. I think the police will be just as well managed under the Imperial control as under the Joint Committee. The Joint Committee was a committee which was established as a popular control, but it is a matter of fact, as far as our own county is concerned, and as far as our neighbouring counties are concerned, that the police are really managed by the Chief Constable.

11,210. Can you point to any precedent for the transfer to the Imperial revenue and to the Imperial control of any important service previously administered locally, and paid for out of local revenues?—The prisons.

11,211. What has been the result in the case of the prisons?—The prisons, I believe, are exceedingly well administered now. Of course, they have visiting justices who go and visit them exactly in the same way as they might go and visit lunatic asylums; in fact, the justices are obliged to go and visit all private lunatic asylums at the present time, although we do not have anything to do with the payment for them.

11,212. Would you say, generally, that by the transfer of the prisons from local to Imperial administration, with the corresponding transfer of the burden, the interests both of efficiency and economy have been served?—I think so, certainly.

11,213. You say that from your actual knowledge of prison administration?—Yes, I have said that, and when the Quarter Sessions had the administration of our county lunatic asylums, I was one of the visiting justices.

11,214. You anticipate a similar advantage would be gained alike from the point of view of efficiency and economy in the event of the transfer of these other charges which you have said are of a national character?—Yes, and if I may go back to the lunatic asylums, I think they will be very much better administered by the State.

11,215. And more economically?—Yes, much more so; I do not mean to say we are very extravagant now, but I think they would be more economically managed then.

11,216. Passing on to other services such as the Poor Law, I gather that your opinion there is that the object to be aimed at, namely, the more equitable distribution of the burden, must be obtained in some other way?—Yes.

11,217. And you suggest that that other way should be by a further extension of the grading system?—Yes, that is so. It has been adopted in Scotland, for instance, I believe.

11,218. Do you think that if one quarter of the value of agricultural land were taken as a basis of its contribution to such a service as the Poor Law, you would get substantial justice?—I think it would be a step in the right direction; I think even then land would pay a very full share of those burdens; but, of course, that would be a great relief.

11,219. Some relief was given by the Agricultural Rates Act of last session?—Yes, but I think that relief was very much diminished; I think the relief would have been very much greater if the farm buildings had been assessed with the land as they ought to have been.

11,220. You think that even under the Agricultural Rates Act of last session, Parliament took an excessive measure of the ability of agricultural property to contribute to local taxation as compared with other rateable property in the parish?—Yes, I think we did.

11,221. And that even under that Act rateable property has a substantial grievance as against personality?—I think so; I think they pay just double too much now.

11,222. (Mr. Cripps.) I want to ask you first of all upon what you call uniformity in assessment; as you say, I think every one has admitted the desirability of that, if you can arrive at it, and that there is no question about that; but if you had uniformity of assessment, you would have to have the same assessment for Imperial, county, and local purposes, would you not?—I think very likely you would, and I see no reason why you should not.

11,223. I am strongly in favour of it, and therefore I will not ask you a question upon it. That being so, I take the position of the county first of all; would it not be better that the county basis should be settled by the county, and then that that same basis should be adopted by the unions? Your suggestion would be that what the unions do must be adopted by the county if we are to be uniform?—Yes.

11,224. I want to suggest to you that it would be a better system to have the basis settled by the county in connection with the Imperial assessor, and then to have it adopted by the unions?—Of course the reason

Mr. A. F. Jeffrey, M.P.

21 July '97

Poor law expenditure must be administered locally, but occupiers of agricultural land should contribute to poor rates at one fourth.

Agricultural Rates Act, 1896. Buildings should not have been separated from the land. Too much is still contributed by occupiers of land.

Valuation, uniformity of, desirable for all purposes.

Valuation by county or union authorities. Which system would be best, discussed.

Mr. A. F. Jeffreys, M.P.

21 July '97

against that has been that the people living in the localities—the assessment committees of the unions—know more of the relative value of the land.

11,225. But then now-a-days, taking the county council, which would be the rating authority upon the supposition I make, you would get on it representatives from all parts of the county?—You would, but I am Vice-Chairman of our Assessment Committee of the County Council, and I must confess that I do not think we go very carefully into those matters.

11,226. I have also been on that committee, and I admit that at the present time I think you are right; but supposing you are to have a uniform assessment for all purposes in a county, that is to say, that the county basis is to be the same as the local basis, the question then is, whether you would allow that basis to be fixed by the county or whether you would allow it to be fixed by the unions, and then to be binding on the county?—I think it would be more easily done by the unions, because they have got a more intimate knowledge of the various lands.

11,227. Is there any other reason in your view, why the county would not be a good authority, except your opinion that they have not so much local knowledge?—One thing is that the appeal would be so much easier to the unions than to the county. It is a very difficult thing to appeal against a county assessment, and it is a very expensive thing, whereas people frequently appeal against an assessment by the unions; they only have to go to their county town, and they can do it themselves, without any expense at all.

11,228. I have assumed for the purposes of my questions that you adjusted the county assessment so as to be as convenient for appeals as the union assessments; putting out of sight the administrative question is there any other reason in your view, except the local reason, why the county should not be preferred to the union?—No. I think not.

11,229. The question is assuming uniformity?—Yes, I should have the same. The only question is whether the county should take the assessments of the unions, or the unions should take the assessments of the county.

11,230. That is the only point in my mind, and I suggest to you that it would be better probably that the unions should take it from the county than that the county should take it from the unions?—One strong reason, I think, against that is that it will throw a great deal more work upon the committee of the county council.

11,231. At the present time, but of course the county basis is quite independent of the union, and if you were to have one uniform system, the question is, whether the union basis is to be adopted by the county or the county basis by the union?—Yes, that is it.

11,232. About the other matters that you dealt with, the rating of land, for instance, you put in your memorandum, a table which shows that, as regards certain towns, a large proportion of the amount raised in rates is really expended for the direct benefit of the people who pay those rates?—Yes.

11,233. It does not matter which of these towns we take, take Ashton-under-Lyne if you like, which is the first one; the total rate there is *5s. 1½d.*, and the poor rate and the cemetery rate is *1s. 4½d.*; as regards all rates other than the poor rate, including the cemetery rate, do you class them as rates from which the ratepayer gets a direct benefit?—Yes, certainly I do. I say the watch, the police, the school board, the free library, the baths and the general district and the lighting rates are all rates which benefit materially the people who live in the houses, and which they would be very sorry to be without.

11,234. Without going back to it again, I only want to bring out your view; there are a number of rates applied to the rural district, which you give further on in your memorandum, which, in your view, substantially at any rate do not confer any benefit upon the mere occupier of land?—Very little indeed.

11,235. So far as those rates are concerned, which, in your view confer no benefit upon the occupier of land, you think the occupier of land ought not to have to pay?—I think he ought to be excused from them.

11,236. There are other rates, such as the poor rate, which, in your view, have to be raised locally?—Yes, because of the difficulty of the administration.

11,237. When you come to the poor rate, if you were assessing or raising that rate as between land and other property, you would only take the land at a quarter, I understand?—Yes.

11,238. Adopting there, of course, the well-known principle of the sanitary rates in urban localities?—Yes.

11,239. Or what in Scotland is known as the principle of classification?—Yes.

11,240. The question is not a question of the incidence of rating?—Not at all.

11,241. It is a question of how you are to distribute it between ratepayers?—Yes.

11,242. Just let me ask you on two questions of principle: in your view, at the present time, the occupier of a farm is rated on his industry?—To a certain extent.

11,243. Just take the illustration which you gave, and which is a very good one, of the blacksmith, the baker, and farmer in your own parish; of course, it is obvious that the blacksmith and the baker are only rated on the premises they occupy?—That is all.

11,244. Absolutely independent of whether they are prosperous or unprosperous or how they are doing in any way as regards their business?—Quite.

11,245. But when you come to the farmer you say that he is really rated on what you would call, I suppose, the raw material of his industry?—To a great extent.

11,246. Just as you might claim to rate, we will say, the blacksmith on his iron, or the baker on his flour, the farmer, in your view, is rated upon his raw material, namely, the land?—Yes, that is my view.

11,247. You draw that distinction to show, that, in your view that is not a fair principle?—It is very unfair, I think.

11,248. And is affecting an industry which, in your opinion, is not too prosperous?—Which is very depressed in Hampshire.

11,249. I only want to arrive at your view; have I expressed rightly what your view is on that point?—Yes; also, as I say, I do not wish to rate the baker and the blacksmith any higher upon their personal property; I wish to relieve the farmer.

11,250. In your view you would merely be remedying the injustice which has been placed upon the farmer in the past?—Certainly.

11,251. As regards making up the amount in the future it might be a question of Imperial subvention or of raising the money in other ways?—Yes.

11,252. What you are pointing to is an injustice which you think ought to be remedied?—Yes, that is so.

11,253. Another question that was asked you upon which I should like also to ask you a question was: as between landlord and tenant, who paid the rate?—I say that with all existing tenancies at the present time the occupier pays the rate; if the rate is either raised or depressed, he has to pay it in any case. Of course, in future tenancies that might be remedied in some way; there might be some re-arrangement, but my main contention is that rates come out of the land.

11,254. Out of the industry?—Out of the industry of the land, which is being killed by all these rates and taxes to a great extent.

11,255. I want to put this question to you, knowing your experience in these matters. Supposing you are entering into a contract, we will say, between a farmer and a landlord, sometimes the conditions are such that the farmer can almost make his own terms?—Generally.

11,256. At other times the conditions are such, or have been such, that the landlord can make his terms?—Yes, but not for many years now.

11,257. Do not the conditions of the two contracting parties very much influence the question whether the rates come out of the pocket of the one or the other, apart from any general principle?—You mean in regard to the farmer making his own terms?

11,258. Yes?—Certainly he can make allowance for the rates, or he can include the rates; he can do anything he likes in taking a farm now.

Mr. A. F. Jeffreys, M.P.

21 July '97

Contribution to rates by different classes. Different basis of assessment as between agriculturists and other classes. Agriculturists said to be rated in respect of their raw material.

Incidence of rates of rates between lessor and lessee of agricultural land discussed.

Expenditure on purposes for which rates are raised in towns benefits property more than in rural districts.

Agricultural land. Occupiers should be relieved of rates raised for certain purposes.

Poor Law expenditure must be administered locally, but occupiers of agricultural land should contribute to poor rates at one fourth.

Mr. A. F. Jeffreys, M.P.

21 July '97

Mr. A. F. Jeffreys, M.P.

21 July '97

Imperial contributions a desirable system, but amount should be increased to pay for certain purposes.

Agricultural Rates Act, 1896. Further relief should be given.

Death duties and land tax. Relief desirable.

Hereditary burdens. Theory discussed.

11,259. It is not so much, as I understand your view, dependent on any general principle, as on the relationship between the contracting parties, what terms they can make?—Yes.

11,260. You have told us that, in your view, anything like a rating of income tax in a local sense, that is a rating of personalty locally is impossible?—Quite, I think.

11,261. And you have also told us your view of Imperial subventions; supposing you cannot rate personalty locally, which I think most people would agree in, would it, in your view, be a fair system to allocate some portion of the income tax, 2d. or 3d., whatever is necessary, and then to distribute that in localities for local purposes?—No, I would sooner have the subventions. I think there would be very great opposition to taking any part of the income tax.

11,262. Then you prefer the present system?—I think so.

11,263. Only, of course, in an increased amount?—Yes; and I do think as a matter of fairness these roads, for instance, and bridges, lunatics, and police all being for the benefit of the nation, should be a national charge and should not fall upon one industry.

11,264. As you have mentioned lunatic asylums I will just ask you one question upon them. I do not know whether it has come within your experience that the administration of lunatic asylums locally by counties has thrown a very large burden upon the counties in some places?—It has in some counties, but it has not in my own county, which happens to be a large county with a large rateable assessment; therefore, I do not mean to say the charge is so very heavy there.

11,265. (Mr. Stuart.) You want to really increase the operation of the Agricultural Rates Act?—Yes.

11,266. By adding another quarter?—Yes.

11,267. That is to say, by adding half the contribution which is now given?—Yes.

11,268. What is the amount of the contribution that is now given, roughly?—1,500,000l.

11,269. And half of that would be —?—About 750,000l.

11,270. Would that put the agricultural industry on its legs?—No, I never for a moment meant to say that; I only meant it as an act of justice.

11,271. I asked you the question because you said that the agricultural industry was being killed by the rates and taxes?—Yes, that is quite true, because there are not only the rates, but there are the taxes, and, of course, there is the tithe. I ought to have said: "charges upon the land."

11,272. Would part of your system, or scheme, or proposal, be to relieve the agricultural industry of taxes as well as rates?—I do not know whether I ought to go into that now, because I thought this was really a Commission to deal with the rates.

11,273. When you say that taxes, as well as rates, kill the agricultural industry, I should like to ask you what relief you would propose to give it in the matter of taxes?—There is one great tax which I think bears very hardly upon the land, and that is one we put on not so very long ago in the shape of the death duties. I should like to see that relieved. Then, I do not think we went nearly far enough with regard to the land tax in the remission we made last year, which has been very unsatisfactory indeed in many cases. I know cases myself in which the land tax has been taken down from 1s. 3d. in the £ to 1s., and yet the tax being levied under Schedule A., instead of on the rateable value, has produced more at 1s. than it used to do at 1s. 3d., which I think is a very unfair thing.

11,274. (Mr. Elliott.) But the Exchequer has not received any more, has it?—It has received quite as much.

11,275. But no more?—Rather more in some cases. I think the Exchequer was deceived about it, because we made an allowance in the Budget for 100,000l. to meet the deficiency, but I understand the deficiency only amounts to 80,000l.

11,276. (Mr. Stuart.) The agricultural industry has borne these burdens that you speak of for a long time, has it not?—Yes, that is true.

11,277. And the land has been bought and sold subject to these existing burdens?—That is quite true. The only reason that the land now is suffering so very much from these burdens—of course, I am only referring to the poor land—is that so little benefit is derived from land in the way of rent or money that it cannot afford to pay the taxes which formerly were comparatively light.

11,278. Do you mean that the relief of the rates ought to be given to that land which has decreased in value, and not generally to agricultural land?—That is a very difficult question. If you want to give relief to the poor land, you would naturally give the relief only to the poor land; on the other hand, if you want to do it as an act of justice you would extend the benefit to all agricultural land.

11,279. The injustice has crept in, as I understand you, from the misfortune of the decrease of agricultural profits?—No, I do not think it has crept in. I think more attention has been paid to it on account of that; in former days, when both landlords and farmers were well off, they did not pay attention to all these matters which were comparatively small.

11,280. Take an estate in Italy where the land tax is a large amount; that estate passes at a much cheaper rate from one person to another because of the largeness of that land tax, does it not?—Yes.

11,281. Has not a very large portion of the agricultural land of England passed at a cheaper rate into the hands of its present owners on account of the existing burdens known to be upon it?—That is true to a certain extent, but this depression has come so very suddenly; if it had come gradually, then I think it would have settled itself to a great extent, but this depression has come within the last 10 or 12 years, and, therefore, I do not think this buying and selling has quite operated yet to adjust it.

11,282. You mentioned tithe as one of the burdens that went to kill the agricultural industry; how would you propose to deal with that?—I should like to deal with that by a scheme of redemption. I do not want to confiscate the tithe in any way, but I should like to redeem it.

11,283. (Sir Edward Hamilton.) I think you said, in answer to a question Mr. Cripps put to you, that you hold that rates are paid by the farmer and not by the landlord?—By all farmers who are at present in occupation.

11,284. Are you talking of farmers holding under yearly tenancies, or under leases, because surely a lease makes a very great difference?—Yes, it does; under leases, of course, they pay the whole of any increase.

11,285. In the case of yearly tenancies you would not say that the farmer did not take that sufficiently into account in making his yearly bargain with his landlord, would you?—Do you mean in re-letting?

11,286. Yes?—It is possible they may do so now, but, of course, the usual way on many estates where there are no leases is, that the farmers go on from year to year exactly as if they had a lease. I know many estates on which there are no leases at all, but the farmers go on in the same occupation from year to year.

11,287. (Chairman.) In fact, a man very often has a tenure in which he has less chance of being disturbed if he has no lease, because at the end of a term you begin to think it over?—Yes.

11,288. (Sir Edward Hamilton.) But you will admit that it made a considerable difference as to whether a tenant held under a yearly agreement or under some lease for a term of years?—Of course, the tenant who has not got a lease could make his own terms, but I do not think, as a matter of fact, they do. I also ought to say, perhaps, that my knowledge is chiefly of poor land, I am sorry to say, and there this relief affects farmers, especially as we insisted upon taking the buildings out; if we had left the farm buildings in there might have been some relief. As it is, in future tenancies I do not think this matter will be considered at all.

11,289. Do you think, therefore, that the farmer will have the best of it in making his bargain?—No, I do not think it will make much difference. Rates, as you know, fluctuate in a parish; sometimes they are

Tithe. Redemption scheme desirable.

Agricultural land. Rates. How far farmers take rates into consideration.

*Mr. A. F. Jeffreys, M.P.*  
21 July '97  
2s. sometimes they are 2s. 6d., sometimes 3s.; but under this rating Act on the poor land the assessment has been so low, that consequently the relief is very small indeed.

11,290. I suppose you have had some experience of the working of the Agricultural Rates Act in your own district?—Quite so; I made it out myself in one parish.

11,291. Do you consider, so far as you are able to judge at present, that it is operating equitably in the sense of relieving where relief is most required?—No; what I say is, that unfortunately on the poor land where the assessment is low—I know land, for instance, where the assessment is only 5s. an acre, and the rates per acre, therefore, are very low indeed—the relief that we get is very small. I think the farmers are very thankful for it, but they look upon it as an act of justice, and not as an act of relief. I have no knowledge of land that lets now at 3*l.* or 4*l.* an acre in Leicestershire and those grass counties.

11,292. But you can conceive of a better form of relief than the Agricultural Rates Act of last year, owing to that inherent difficulty of giving relief where it is most wanted?—It is very difficult for me to suggest any better form, because then there would be

a very great difficulty in saying what is good land and what is bad land, and where to draw the line.

11,293. (*Mr. Cripps.*) What you are pointing out as regards the inequality between poor land and good is very much mixed up, is it not, with the exclusion of the farm buildings?—Yes, that is quite true. Perhaps I ought to have said to Sir Edward Hamilton that what I should like to see altered in the Act is the putting of the farm buildings in with the land. In one of the assessment unions in which I live—in Basingstoke—we always assessed the house and buildings and land under one heading, but now we have to split them up into three, and we do not get any relief under the Act on the houses and buildings, which are valuable things, but we only get relief under the Act on our land, which is, I am sorry to say, almost valueless in many cases.

11,294. (*Sir Edward Hamilton.*) Would you draw a distinction between houses and buildings?—Yes. I would rate the houses like any other occupation, but I would certainly put in the farm buildings with the land. It stands to reason that the buildings are absolutely useless without the land, and that the land is absolutely useless without the buildings; the whole is one compact holding.

The witness withdrew.

Adjourned till Tuesday next at 12 o'clock.

## TWENTY-NINTH DAY.

Tuesday, 27th July 1897.

At 16, Victoria Street, S.W.

PRESENT:

THE RIGHT HON. THE LORD BALFOUR OF BURLEIGH, *Chairman.*

The Viscount EMLYN,  
H. E. CLARE, Esq.,  
T. H. ELLIOTT, Esq., C.B.

ARTHUR O'CONNOR, Esq., M.P.  
The Right Hon. J. L. WHARTON, M.P.  
ARTHUR WILSON FOX, Esq., *Secretary.*

Mr. PHILIP RANDOLL SMITH, called and examined.

*Mr. P. R. Smith.*  
27 July '97  
11,295. (*Viscount Emllyn.*) You are the rating agent of the Great Western Railway Company, are you not?—I am.

11,296. Have you been in that position for some years?—Yes. I was assistant rating agent from 1872 until 1879, and in 1879 I was appointed rating agent.

11,297. Since that time you have had considerable experience, in rating questions, have you not?—Yes. I have had the charge of the rating of the whole of the Company's lines of railways and stations since that time, now amounting to 2,600 miles or thereabouts in length.

11,298. Having studied the question carefully, do you consider that at present all properties are rated on a fair proportion?—I do not, from the simple fact, that in assessing railways we are assessed on our gross receipts, less certain deductions, so that all the profits we make are covered by the gross receipts, whereas many other properties are simply assessed for bricks and mortar and the land occupied, irrespective of what may be earned on the premises. Therefore that works an injustice and an unfairness to us, and destroys the equality of proportion which in my mind should exist.

11,299. Can you mention any other businesses which are rated in a different way from railways?—I would mention banks, manufactories, shops, and such properties, which are simply valued on a calculation of the value of the land, plus the bricks and mortar, with what advantages the different neighbourhoods may confer.

11,300. But bearing in mind that what you wish to assess is what a property will let at, can you suggest

any other way of carrying out the rating of railways from what is at present adopted?—Of course there does exist a great difficulty in answering the requirement of the old Act of Elizabeth in the case of properties which were not thought of for so many centuries subsequent to the passing of that Act. I take it that the parochial principle must be maintained. The only other method would be taking them on the same basis as the other properties I have referred to, which, I am bound to admit, would not be suitable in my opinion. It is rather in raising other properties to a basis than in altering the facts for the railway, that I look to for improvement.

11,301. Can you tell us the present burden of the rates paid by railways generally, and can you exemplify that by any knowledge you have yourself as to the Great Western Railway Company?—I can do so by a table which I have submitted. Schedule I, which is appended to my memorandum,\* sets out in a statement the amount of rates paid by railway companies in England and Wales for the year 1894 (as shown in the Board of Trade Railway Return, together with the total amount of rates received by local authorities for the year 1893-4, (as shown in the 25th Annual Report of the Local Government Board for 1895-6, page *clvii.*) The amount of rates received by local authorities was 32,223,972*l.*, and the amount paid by the railways of England and Wales was 2,509,183*l.*, being equal to 7.786 per cent., or about  $\frac{1}{13}$ th of the whole payment in the country.

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 365 to 371.

Valuation of railways. Assessed on gross receipts less certain deductions.

*Mr. P. R. Smith.*

27 July '97

Valuation of railways. Difficulty in suggesting any other system of rating than the present one, but valuation of certain other properties should be raised.

Rates, amounts paid by railway companies.

Mr. P. R. Smith.

27 July '97

Rates.  
Amounts paid by the Great Western Railway Company in certain years compared with receipts.

Rateable values of certain parishes and the rateable values of the Great Western Railway Company included therein.

Rateable values per acre of land in certain parishes and of the lands occupied by the Great Western Railway Company's line of railway.

Rates.  
Great Western Railway Company.  
Increase of burden.

Exemptions, partial, should be allowed to railway companies in respect of rates expended on certain purposes.

11,302. You have got some other schedules that you wish to hand in besides Schedule I., have you not?—Yes. Schedule II. is a statement showing the amount of parochial rates paid by the Great Western Railway for the years 1882 to 1896, together with the percentages thereof on the Company's gross receipts. I think it would be sufficient if I mentioned the first in the list. In 1882, our payments amounted to 2.478 per cent., calculated on the gross receipts, and in 1896 they amounted to 3.492 per cent., having practically gone up 1 per cent.

11,303. What moral do you draw from that?—That the increasing burdens which are put upon railways point rather to a necessary revision of the mode upon which railways are assessed, or at all events, upon which rates are charged to railways.

11,304. Then you have got further schedules, I think?—Yes. Schedule III., which is a statement showing, for selected parishes, the total rateable values, and the company's rateable values included therein. For this purpose I selected 69 parishes; the total assessment of those parishes for the poor's rate purposes is 434,375*l.*, of which the assessment of the Great Western Railway Company is 203,891*l.*, showing that practically for those 69 parishes we pay one-half of the rates. As I say they are selected parishes, and, happily, they do not represent the state of things which exists throughout the whole of our parishes, or that would take all our money and more too. There has been a feeling that railways do not pay a very large proportion of the parochial rating; I have mentioned the figures set out in Schedule I. which show that we pay  $\frac{1}{3}$ th of the whole rates of the country; in Schedule II. I have shown the increasing burdens which we pay; and in Schedule III. I have further shown our proportionate assessment in 69 parishes, which, I think, brings home very forcibly the fact that our assessments and the rates chargeable thereon have for many years past been an ever increasing figure.

11,305. You have one more schedule bearing on this point that you also wish to put in, I understand?—I have another Schedule IV., which shows the rateable values per acre of land in certain parishes, and also of the lands occupied by the Great Western Railway Company's line of railway. You will see for the parish of Basildon—and population, of course, has something to do with this—that there is a total assessment of that parish of 10,193*l.*, the acreage being 3,083, and the population 675; dividing the acreage into the assessable value, that gives 3*l.* 6*s.* per acre; but the Great Western Railway Company have an assessment out of that 10,000*l.* of practically 7,000*l.* and their assessment is at the rate of 28*l.* per acre, as compared with 3*l.* 6*s.* per acre which is paid by the whole of the rest of the parish. Then follow on several other parishes taken in the same way; they have been selected from different parts of the country. Basildon is not far from Reading. Then I have taken Bradninch, which is near Exeter; then I have taken Powderham, which is westward of Exeter; then Bemerton, which is on the Wilts and Somerset section; then Newcastle Lower, which is on South Wales section; then St. Helen's, Abingdon, which is a branch line near Oxford. At St. Helen's we see that, dividing the acreage into the assessment, it gives 18*s.* 6*d.* per acre, whereas for this branch line of ours in that same place we are paying at the rate of 63*l.* per acre.

11,306. With regard to any improvement in the position of the large railways, such as the Great Western Railway Company, I gather that you wish to put before us that these figures show that though there has been an improvement, yet that has been more than met by the percentage of rates paid by the Company on their gross receipts?—That is so.

11,307. You have had before you, I have no doubt, the system of differential rating as it at present exists, have you not?—I have.

11,308. Is there anything you would like to say to the Commission upon that point?—Schedule V. has rather a strong bearing upon that. I contend very much that to meet the growing burden of the increasing poundages upon railways—which is, of course, quite separate from their assessment and from the valuation of the railway itself—the differential rating should be increased and its area extended to many other rates besides the district rates under the Public Health Act, 1875, and the Lighting Act. I have

appended to my memorandum, Schedule V., which shows the working of the present law, and the necessity for the increase I suggest. I think the Commission will recognise at once from it that we should have such allowances as I am now about to refer to. In the parish of Didcot, where the rateable value of the whole parish is 8,856*l.*, the company's value is 7,103*l.* I daresay the position of Didcot Station is so well-known that I need hardly say a word about it; it is the junction between our Oxford system and the main line. In Didcot there is a projected drainage scheme for the accommodation of a very limited number of houses, which, if carried into effect, will also necessitate a water scheme. The drainage scheme alone has been calculated to cost 6,700*l.* This scheme has been pending for some years, it has been seriously objected to; but from the nature of the land it will doubtless have to be carried into effect, as the Local Government Board have decided that a scheme is necessary; and although the matter has been considered by more than one engineer it has not been found possible to propound anything more economical. I think I may say this case shows strongly the unsuitability of dealing with schemes for sewerage country districts on town principles, instead of forcing owners to sewer their own property. The Great Western Company have effectively provided for their own drainage by dealing with the sewage on their own land, of which at this place they have a considerable quantity. The only drainage we have to deal with there comes from our station accommodation, the lavatories, and such like. Didcot being a place where our fast trains do not stop, it is only used by a limited number of people, and our drainage has been made quite sufficient and ample for them; and yet you see we should be called upon to pay in the proportion of 7,103*l.* to 8,856*l.* towards this 6,700*l.*

11,309. (Mr. Elliott.) Do many of your employes live at Didcot?—We have not a very large number of employes living at Didcot; of course we have some, but the houses lie away from Didcot Station. Really, what has caused the trouble there is the purchase of land through which, under certain arrangements, drains were made by the parish many years ago, and the principal trouble they suffer from there is scapauds, which used to be carried off by a ditch or drain through this land, but when the land was sold to a new purchaser he declined to allow this, and closed the ditch through his lands, and that has caused all the trouble.

11,310. (Viscount Evelyn.) Bearing on the same point I see you have another Schedule V. B. ?—Yes, I have a schedule with regard to Stoke Poges which joins the London and Reading line. The parish of Stoke Poges contains a portion of the Great Western main line immediately west of Slough, and also at the corner of the Windsor branch. In this parish a lighting district has recently been formed for a portion of the parish, a portion only, I will ask you to note. The total assessable value of the lighting district is 2,634*l.*; the Great Western assessment comprised therein is 2,077*l.*, of which 1,641*l.* is chargeable at one-third making the Company's assessment value 983*l.*; that is giving us the benefit of the one-third to which we are entitled under the Lighting Act. The very great hardship which we suffer from is this: Stoke Poges is a large parish running north and south, the Great Western Company's property passes its extreme western point, and beyond the Great Western property there is a small area of rough land not in use, nor likely to be in use for building purposes. For every necessary purpose the boundary of the district should have been taken at the Great Western Railway Company's northern boundary, which would have afforded a very ample and fixed line of boundary; instead of which, for the purpose of taking in our larger assessment, the boundary is extended to the southern corner of the parish, which takes in the whole of our property, and also this very small area of rough land, which is not built upon, nor likely to be built upon; in fact, I may say it has no approach road to it, or no good approach road to it. I mention that case because it is a case of particular hardship, and it answers my purpose from a twofold point of view. It shows the impropriety of such arbitrary power as that of forming a district being vested in a parish council. If they were making their district to cover the whole of the parish I could understand their bringing up a lot of difficulties, and saying it is difficult to divide the rating area for different purposes; but here, for their own purposes, they do make a division, and yet they make so unfair a division as to

Parish councils, powers of. Attitude towards railway companies. Companies have no representation on parish councils nor locus standi at public meetings, though they are large rate-payers. This is a disadvantage to the railway companies, and sometimes to the parishes.

include this large property manifestly, simply for the purpose of getting rates upon it. The Local Government Board, in the very many inquiries that I have attended, have laid it down that where, for sanitary or other purposes connected with their Department, a parish is divided, the boundary must be a well-defined boundary, but that it shall not be extended or curtailed either to include or to exclude a particular property for the sake of the rates payable upon it, but rather that the divided area should be an area which is going to benefit by the outlay. It has been thought otherwise by these gentlemen of the parish council, upon which we have no representation—it is worse now than it used to be in that respect; we did use to go and talk to them, and point out the unfairness of these things, but now we are not allowed to do so.

11,311. Do I understand that you are advised that you have no remedy with regard to this?—It was a very gross case, and I submitted it to our solicitors, who have advised me that we have no remedy whatever.

11,312. Is there no appeal whatever against a decision of the parish council?—There is no appeal whatever. The parish council give their decision as on a matter of fact, and we have no appeal whatever.

11,313. Under what authority was this district formed?—That was formed under the authority of the Lighting Act primarily—the Act of William the Fourth; and the parish council act in this matter under the powers of the Parish Councils Act, 1894.

11,314. (Mr. Elliott.) Is no consent on the part of the Local Government Board required?—No consent whatever is required.

11,315. No consent of any authority except the parish council?—No consent whatever.

11,316. (Viscount Emlyn.) Have you said all as to that that you wish to say, having given us these two particular cases of Didcot and Stoke Poges?—I have given you those because they are simply typical cases of many that occur to us. I thought, being very recent ones, they would have more point from that very fact, and that they would put the thing more pointedly before the Commission.

11,317. Take the Didcot case first; what remedy do you suggest could be applied to an evil of that sort?—The remedy which we adopted ourselves. We were in this parish, and we had a certain small amount of drainage from our lavatories which did go into the public ditch. Without any notice to us that a meeting was to be held, the parish held a meeting with a presiding officer from the Local Government Board, and under some circumstances one of our gangers, a man without authority, a man in receipt perhaps of 22s. or 23s. a week, attended this meeting and raised no objections to all these schemes. The first I heard of it was that a scheme was adopted, and was going to be carried into effect. I heard that late one afternoon. I rushed off to the Local Government Board, and begged the inspecting officer to defer his report, that I might have an opportunity, on behalf of the Company, who had to pay all the money, to look into the thing, because they raised at that time great complaint against our sewage, which went into a certain ditch. I communicated with our engineers, and we got out a very small scheme, which was submitted to our board, and they at once said, on our spare land—and we have a lot of spare land there—we will put in some arrangement amply sufficient to deal with all this for a few hundred pounds. That was done, and that for the moment stopped their scheme. We have had no complaint with regard to our drainage, and everything is satisfactory. Now that they have lost the use of a certain ditch into which the soapuds to which I referred just now used to go, the whole scheme is brought up again through the Wallingford Board of Guardians, who are the sanitary authority for the district. These gentlemen at Wallingford of course are not landowners in the place. There are certain cottages which must be dealt with, but through the whole of the country in face of our great difficulties—and not only our difficulties, but I can speak of the farming difficulties as well, the difficulties of the agriculturists—these most expensive schemes are being brought forward; and where these drainage schemes are dealt with in so many places water schemes are necessitated as well. We had one a little lower down our line at West Lockinge, where the area proposed to be drained, belonging to Lord Wantage, was at the nearest point 2½ miles from

our line of railway. Schemes were propounded down there, and as a matter of courtesy they were sent up to me. I went through them very carefully with our engineers, and afterwards with the agent of Lord Wantage, who came to see me, and I wrote them a very strong letter upon the point, because it appeared to me that the whole of the properties 2½ miles from our line should have been dealt with by the resident owners, and certainly I could not see why that at a distance of 2½ miles from this place where the nuisance arose with regard to the residential properties we should have to pay a large amount of this cost, having no benefit or interest whatever—not only ourselves, but the agriculturists, because our line there runs through a distinctly agricultural country.

11,318. With regard to this drainage scheme at Didcot, would not that have to be approved by the Local Government Board?—That would have to be approved by the Local Government Board.

11,319. And any opponents of the scheme would then be heard by the Local Government Board?—They would be heard by the Local Government Board.

11,320. Then the case, as far as that is concerned, is not on all fours with the case of the Stoke Poges lighting?—It is not, in that sense, but in one way it is unfortunately like it, because my experience of going before the gentlemen representing the Local Government Board is this: They say the sanitary authority from time to time at different places have had certain nuisances brought before them which have been confirmed by evidence—the evidence of the medical officer for the district, the evidence of the sanitary inspector for the district, and what not; here is an improper state of things existing, and the Local Government Board, without considering the matter of the cost—not being guided by the matter of cost, at all events—say we must have a scheme; here is a scheme put before you by the local authority, and if you cannot propound some more satisfactory scheme this will have to be adopted. We are in that position.

11,321. Having pointed out these typical cases of the heavy rating of a railway, would you tell the Commission now what voice, if any, the railway companies now have in dealing with such a question as the drainage scheme at Didcot or with such a question as the lighting scheme at Stoke Poges?—In regard to both of those matters we have no voice whatever. Of course, the moment when a voice is so useful in dealing with these matters is at their early inception; now formerly where the parish meetings were held to consider such subjects before they got to the Local Government Board, we had power under the Poor Law Amendment Act of Victoria to attend; all corporations could be represented by a properly appointed officer at the parish meetings, and we used to attend these parish meetings and point out the very hurtful effects to the district generally of such great schemes being adopted, and used to endeavour to enunciate some alternative scheme which would not entail such serious consequences.

11,322. Has that right of attending parish meetings been interfered with by the Act of 1894?—That right is entirely taken away by the Act of 1894.

11,323. The power of attending at parish meetings is not only taken away but that applies also to other meetings besides parish meetings, does it not?—It applies to all sorts of meetings.

11,324. Will you tell us the extent to which it goes?—We cannot attend any meeting at all. As a case in point, I should like to show you this notice to attend a meeting which I received, the meeting was to have been held yesterday at Curry Rivell in Somersetshire.

11,325. This is a notice to attend a parish meeting at the parish of Curry Rivell?—Yes, it is sent out to all the ratepayers in the parish, but with a special notice to such as myself, representing corporations, but we cannot go because we are not parochial electors. That is a case where we might have gone and might have propounded an alternative scheme.

11,326. Are the words you are referring to these—“Such persons only will be entitled to attend as are registered as parochial electors in the parish”?—That is it.

11,327. The disqualification, that which prevents your Company being present through the agent, is that they are not parochial electors?—That is so.

Mr. P. R. Smith.

27 July '97

*Mr. P. R. Smith.* 11,328. (*Mr. Elliott.*) You pay rates, but you are not electors?—We are not electors, we do not sleep in the parish.

27 July '97

11,329. (*Viscount Emlyn.*) From your point of view, was the power of being present at meetings of that kind of any value?—It was of great value. I used to attend, or my assistant used to attend, every meeting that we heard of, and I will venture to say that it was an advantage to others besides ourselves. Of course, representing a great corporation like the Great Western Railway Company, when I went into these things, generally I am bound to say, although it was entirely a gratuitous service, I think our attendance was of great value to the parishes; I think not only in our interest, but in the interest of the parishes themselves, we could tell them a great deal that it was useful for them to know, and that with the gratuitous advice from our engineers we could often suggest something being done which stopped expensive schemes which the farmers would have had to contribute to as well as ourselves.

11,330. As you have told us, although your Company might pay a very large proportion of the rates in a district, they would have no right to attend; but is it not the fact also that some persons who do not pay their rates have a right to attend and vote?—I have not looked into that, and I do not know; it can be only a parochial elector.

11,331. I was following your memorandum, in which you refer to a labourer whose rates were paid by his landlord?—He is a parochial elector because he lives and sleeps in the place.

11,332. Still the point remains that he does not pay rates?—No, he does not pay his rates.

11,333. But he is entitled to be present and to vote?—He pays 1s. 6d. a week to his landlord, and his landlord pays his rates out of that 1s. 6d. That man attends and votes at a parish meeting, whereas I may be assessed, as I know in one particular case that came before me a little while ago, at very nearly 30,000l. in one parish, and although I wished to attend, as there were big schemes on hand—and there are big schemes on hand at the present moment—I cannot go.

Agricultural Rates Act, 1896, may in some respects prejudicially affect other interests to some extent.

11,334. With regard to the Agricultural Rates Act 1896, do the provisions of that Act at all affect the railway companies?—They affect not only the railway companies, but all other ratepayers whom they are not designed to benefit, in this way, the expenses of the spending authorities only are to be made good; now there are certain expenses not incurred by the spending authorities, which will have to be made good out of the remission of 50 per cent. on the agricultural values with the other properties combined.

11,335. Will you tell us exactly what you are referring to?—It is in respect of the expenses incurred by parish councils, parish meetings, overseers, and Metropolitan vestries, who are not spending authorities within the meaning of the Act. Therefore whatever expenses are incurred by those authorities have to be charged over the one 50 per cent. of the agricultural values in common with the values of the properties occupied by other ratepayers in the parish. I do not say it is a very heavy charge, but there is an addition arising from that.

Deductions in case of railway companies vary greatly in different districts. A statutory scale desirable.

11,336. You have something you wish to say to us, have you not, with respect to the scale of deductions allowed to railways?—Yes, in dealing with our valuations, as a rule, it is over the scale of deductions that the principal amount of contention arises; there are other questions, of course, as to the working expenses, but as a rule, the statutory deductions are the prominent source of trouble and expense and appeals, there is no doubt about that.

11,337. Are you in favour yourself, of any form of statutory deductions or settled deductions?—I think it would be of very great advantage that there should be a statutory scale of deductions, not a fixed scale, because it must be to an extent a sliding scale adapted to the several properties. You could not very well draw a hard and fast line with regard to all items of deduction; with regard to certain items of deduction you could, but it would be then subject to a sort of automatic sliding scale.

11,338. Is there much variation in the deductions now allowed in the different districts?—There is a very great difference. As a rule, it would be difficult to put the difference into figures, because we do not get

decisions given in detail, and we never know what item has been struck out or decreased, we merely get a lump settlement given for the rateable value after considering all deductions as a rule.

11,339. Has there been any percentage which you could say has been more useful than another given as an allowance?—Times have varied with regard to that. As time has gone on, the assessment of railways has become such a very fine art and has been worked out to such a very fine point, that whereas in the olden times 20 per cent. was very commonly accepted as a fair allowance on the total amount of tenants' capital, of late years that has been very much contended against and 17½ per cent. as a generally accepted figure has been more often allowed, although the Railway Commission have allowed 20 per cent. But there is no uniformity with regard to it.

11,340. Do you think 17½ per cent. is a sufficient allowance upon the tenants' capital?—I do not. I think that nothing less than 20 per cent. is a sufficient allowance when you consider the magnitude of the risks which a tenant taking a railway has to encounter. I say a railway, because that is the property that I am particularly addressing my thoughts to. The 10 per cent. is not objected to as a rule; the 5 per cent. is not objected to, and then we come to the risks for which 2½ per cent. is allowed. I should like to say a word with regard to the risks. We have gone on the 10 per cent. and the 5 per cent. without much comment, but in regard to the 2½ per cent. for the risks, the risks allowed for in that 2½ per cent. must not be confounded with the risks arising from what I should call an accident to our stock, because the valuers very acutely and properly tell us, "You charge repairs for that, and that is covered by your repairs," and that is so. The risks which that 2½ per cent. is intended very much to cover according to my view—and I should like to say with regard to this that I am speaking very much on my own behalf, as I have not discussed this with the Railway Association or with the other members representing the Association here to-day—I should like to protect myself, and say that this 2½ per cent. to my mind is a 2½ per cent. to cover risks of alterations in the character of the stock. For instance, we had a certain system of lamping—old oil-lamps—but that went out; we tried several different kinds of oil-lamps, not that our oil-lamps were worn out, but we discarded them for what was considered better for the public, for something that gave a better light; we had a different kind of oil lamp and that went on for a long time; then there came a talk of electric lighting in the carriages and all sorts of different appliances of that sort; then there were continuous brakes which we had some time ago. All those are risks, arising not from the destroying of your stock by accident or things of that kind, but from improved appliances which come before the public, and which railways are in their own defence bound to adopt—one railway company adopts them, because, perhaps, they are ready to adopt something, and then their neighbours are forced to adopt them to keep level and for competitive purposes—all these risks come in that 2½ per cent.

11,341. You put all those things, do you, under the category of risks?—They come purely under that category of risks. Then with regard to strikes, which have now reached a very accomplished and definite stage in the economy of the country, it is a most difficult thing for any tenant to allow for them. No tenant will take a property, looking forward to making money—and it is always to make money that a tenant does take property—if he has no allowance for encountering the risk of strikes. He cannot do like a manufacturer does, that is, put a strike clause into his tenancy agreement; the hypothetical tenant cannot have a strike clause; other people suffering from strikes put in a strike clause to protect themselves, but we cannot do that, and we cannot get a special allowance. The Oldham case, which I refer to in my memorandum, decided that, and therefore we must have some other allowance for it.

11,342. You might just tell us what the Oldham case is? Do not go into it at any length further than you want to: but give us the actual reference to it?—The Oldham case was a case in which a mill was stopped working for want of coal during the coal strike, and the occupiers of the mill were charged with the rate three days after the strike commenced. In due course they applied to the assessment committee to grant them an allowance off their rate, or an allowance off

com-  
mittees.

their assessment, as would be done in the case of a fire happening on the premises, or something of that sort; in fact, that they should have a temporary allowance to meet the temporary difficulty. The assessment committee declined, and said they had no power to do anything of the sort. The matter went to the sessions, to the Queen's Bench, and ultimately to the Court of Appeal, and there it was decided that the assessment committee was right, and that they had no power to make any allowance in respect to these special circumstances. Therefore, I say that a tenant taking a property is forced to consider that at the time of taking his property, and to consider it as a trade contingency; and I think this allowance on his capital is the convenient and the only place where he could claim such allowance.

11,343. Is the case you are referring to Hoyle v. Oldham (1894, "Times" Law Reports)?—That is so.

11,344. With regard to the work done by assessment committees, have you any suggestions to make to the Commission as to how that might be improved?—By the presence of the surveyor of taxes for the district.

11,345. Do you think that would be of value?—I think it would be of the very greatest value for the simple reason—and this is a practical proof of it—that the very information upon which I am from time to time enabled to show the inequalities and the improprieties of assessments on properties, other than the railways, I got from the Surveyor of Taxes' Returns—from Schedule A—which I see under difficulty; sometimes they refuse me; they say: "We do not want to show you these."

11,346. Have you any right to see those Returns?—We always contend that we have a right to see Schedule A, and that right has been referred to. I have had a surveyor of taxes subpoenaed before now at quarter sessions to show what other people's ratings were and there we got signed returns. I had one very notable case in Plymouth where we cited the ratings of between 200 and 300 properties, and showed the poor's rate values together with the Schedule A Returns, which, I admit, are not quite conclusive in all cases where the owners are in occupation, but which afford a most valuable basis for comparison; and the end of that was that the Recorder, Mr. Bompas, was bound to quash the rate, because, he said justice could not be done unless the rate was quashed. That was entirely on information obtained from Schedule A.

11,347. (Mr. Arthur O'Connor.) Did the surveyor there plead privilege when subpoenaed?—He pleaded privilege, but, however, he ultimately appeared.

11,348. Was his plea admitted?—I believe he had some instructions from London.

11,349. (Viscount Emlyn.) Eventually he did produce the figures?—He did appear, and we saw the Schedule A figures. Then there was a question raised as to the signatures to the Income Tax Returns which had been signed, and we were called upon to prove the signatures of all the people; Sir Edward Clarke brought that point against us, but, however, after the thing had been gone through he was overruled by Mr. Bompas, and the evidence was accepted and the rate was quashed.

11,350. Was the question actually settled as to whether the surveyor of taxes was bound to appear or whether he was not bound to appear?—It was not. He objected to me verbally, but under some circumstances he did appear; he was subpoenaed and he did appear.

11,351. Not voluntarily?—Certainly not.

11,352. The point we want to get is, was he obliged to appear and compelled to appear?—I do not know precisely what took place, but my impression is that he telegraphed to London for instructions what he was to do.

11,353. (Mr. Arthur O'Connor.) The question of the claim of privilege was not settled legally?—That is so; it was not settled. I refer to this as showing the great advantage of seeing Schedule A, because if this surveyor of taxes had been on the assessment committee at the time these assessments were made all the inequalities which I had to point out would have been swept away.

11,354. (Viscount Emlyn.) One of your objections is that these inequalities now exist because you do not have with the assessment committee the surveyor of taxes?—That is so.

11,355. I think you wish to put in certain other schedules besides those you have already shown to us?—Yes, on that particular point.

11,356. Will you tell us what they are?—There is Schedule VI, which is a statement showing for the county of Somerset certain union totals (gross poor rate), as compared with Schedule A total for the same unions as in force for the year 1894. There are eight unions which I quote, and the gross poor's rate value of them is 1,565,249*l.*, and their gross value in Schedule A is 1,686,775*l.*

11,357. On that Schedule VI, do I understand that you mean that the gross poor value ought to have been at the same level as Schedule A?—Practically.

11,358. You think that should be so?—I think so.

11,359. These figures in Schedule VI would only, of course, refer to the union assessments?—These refer to the union assessments.

11,360. As far as the county assessment went—the county rate basis—that would vary again, would it not?—Excuse me, these values are the county rate assessments.

11,361. I thought you said they were the union assessments?—They are the county rate assessments that I am giving you, that is, the gross poor rate for county purposes, because I took them from the county return.

11,362. They are not based, are they, upon the county rate basis?—These are the actual county rate figures that I am giving you. The Somerset County Council called upon the unions to furnish them with statements of their gross and rateable values, and compared them with the Schedule A values, and ultimately arrived at the figures shown in my schedule, which amounted to 1,565,249*l.*

11,363. Was that a modification of the original figures issued by the unions?—That was a considerable increase on the union figures, but it was still 130,000*l.* below Schedule A.

11,364. (Mr. Elliott.) Do you know why they did not take Schedule A?—I could not tell you.

11,365. (Mr. Arthur O'Connor.) They appear to have split the difference?—I have the actual returns showing how it is made up for all the parishes, but I do not know how they arrive at the figure which appears here.

11,366. (Mr. Elliott.) Are you quite satisfied that the properties included in each are absolutely the same?—Yes, because they are the union totals. I have taken Axbridge, Bedminster, Bridgwater, Chard, Dulverton, Wellington, Wells, and Yeovil unions, and I have the gross poor and the Schedule A figures for each union, and they are shown in detail in my Schedule VI.

11,367. (Viscount Emlyn.) But if there is an inequality as to what the gross value ought to have been, and what it is in this schedule that you have handed in, that would not be remedied by getting Schedule A from the surveyor of taxes, because you got that schedule for the purposes of these figures?—The surveyor of taxes is not party to this gross poor value which the county rate committee adopted; I rather want to take it to that point, that the surveyor of taxes was right in his figures for Schedule A, namely, 1,686,775*l.*, but that the county rate committee were wrong in their taking the 1,565,249*l.*

11,368. But when they adopted those figures they had, had they not, at that time, the information given them by the surveyor of taxes from Schedule A?—They had not all the information which the surveyor of taxes had because he had the actual certified returns of all the different occupiers for all these parishes, making up in detail all these totals.

11,369. Would those details not be before the county council?—They would not have the details, the county council would only look at the totals. I have no knowledge of a county council going below the parish as a unit, excepting it was in the case of a railway company. I have known them do it there, but I have never known them touch other properties.

11,370. Then passing on to Schedule VII, what have you to say as to that?—With regard to Schedule VII, there I have taken something a little more in detail. That is a statement showing the comparison of 110 ratings in the Uxbridge Union as between Schedule A values and the gross poor's rate values for the year

Mr. P. R.  
Smith

poor rate  
in the  
Uxbridge  
Union

**Mr. P. R. Smith.**  
 27 July '97  
 1895—not the county council values in this case, but the gross poor's rate values. Those 110 ratings give a gross poor's rate of 7,016*l.*, and a Schedule A value of 9,589*l.*

11,371. Those were gross poor's rate values of unions alone?—Yes.

11,372. Not of the county?—Not of the county. You see, there is a very large divergence there. Of course, whilst I have every regard for very many of the union assessment committees that one goes before, there are cases where one is not quite satisfied; because the property I represent always is a property which is open to common attack, and I may meet, from the chairman of an assessment committee, with this remark: "Oh, it is an unpleasant thing to hold your neighbour's nose to the grindstone and to put his assessment up." That shows a very strong feeling, and not, perhaps, an unnatural one amongst people who are living as neighbours together. That is a thing which would be very much met by the presence of the surveyor of taxes. He makes a scapegoat for the assessment committee; in fact, he is a whipping boy for them. They say: "Oh, we did not want to put your assessment up, but it is the surveyor of taxes, he will have it." We get, in that way, the benefit of all local knowledge, which is of immense moment, and we get the whipping boy, in the person of the surveyor of taxes, to bear the blame.

Surveyor of taxes should sit upon assessment committees.

Rates could not be levied upon gross values.

11,373. It has been suggested sometimes that the rates should be charged upon gross values, what do you say as to that?—It carries its own refutation with it. It could not be because a railway property is entitled to certain deductions of, perhaps, 30, 35, or 40 per cent., and land is entitled to 2½ per cent., 3 per cent. or 5 per cent. at the outside. That runs through all kinds of property but it varies. That is one great complaint I had at Plymouth on which I upset their ratings—that they allowed 30 per cent. even on a parish refuse heap to keep it in repair.

11,374. Do you think it necessary that these gross and rateable values should both appear in the valuation list?—Undoubtedly.

11,375. Would the same remark apply to the rate books?—Not of necessity. If it is felt to be a trouble to have the gross value in the rate book, I see no object in having it there, but we do want it in the valuation list, which is the first document.

Machinery, rating in respect of. Principles laid down by the courts.

11,376. Have you had your attention turned to the rating of machinery?—I have.

11,377. Have you anything you would like to state to the Commission as to that?—Yes, I should very much like indeed to refer to that. I would begin by saying that there I am only anxious for equality, because, in all our works the whole of our machinery is rated. We have buildings constructed for the purpose—railway works—where we repair machinery primarily, and perhaps, in spare time, construct certain machinery. Those are rated, and we have been advised by the very highest authorities that they must be rated, and we have submitted to it. But the same thing does not obtain in many cases with regard to other machinery.

11,378. Is there any difference in law as between the buildings of railway companies and other buildings?—There is no difference at all. Whatever enhances the value of the building must increase its rateable value. I do not say for a moment that machinery is rateable of itself, and by itself, and for itself, but as used in connection with a building it should be taken, certainly, as enhancing the value of that building.

Machinery, rating in respect of. The law wants carrying into effect.

11,379. Are there any alterations in the law which you consider necessary with a view to giving effect to what you suggest?—I do not think, myself, any alterations in the law are necessary. I think it merely wants the law to be carried into effect; it is not carried into effect now in certain parts of England for certain reasons, and those reasons are local reasons as a rule. I have not very much knowledge of the Lancashire and Yorkshire assessments, but I have heard it stated that in Lancashire and Yorkshire machinery is not very generally considered as enhancing the value of the buildings which contain it. I have heard it stated that it is the case that the assessment committees are largely composed of manufacturers, who do not understand the law: I should have drawn rather another inference—that they were not rated because those gentlemen on the assessment committees

would have been rating themselves, or the properties which they occupy.

11,380. But if the machinery is not properly rated in various buildings, I assume you would have the right to appeal against the rate, would you not?—We should have the right to appeal against the rate, which is a very cumbersome and troublesome thing; but we should not be allowed inside the property to see what machinery they have. We cannot inspect the machinery. We had a great difficulty in the Chard Union. That is a case which has led to a great deal of controversy. It was a case which I started myself, although I believe it has been stated that it was started by the farmers in the district. That is quite a mistake. The Great Western Railway Company were assessed in the Chard Union at what we felt to be a very improper sum. We appealed to the Court of Quarter Sessions, and ultimately our case got before Mr. Justice Field in the Queen's Bench. He immediately decided against them. Three years after that the Chard Union Assessment Committee raised the same question almost in the same form again, and I said I could not at all agree to what they proposed; they ultimately amended their valuation, but then I said: "I cannot agree to any increase at all unless the other properties in Chard are suitably valued." Then it was that Messrs. Castle, who had been engaged to value our property, were told to select certain simple cases, and to go through those properties containing machinery in the Chard Union, with the result that they were raised from sums varying from 150*l.* to 170*l.* a year up to sums ranging to 800*l.* or 900*l.* a year rateable value. That contention was supported by the Chard Assessment Committee; it was supported almost entirely by the Taunton Sessions, before whom the matter came: it went from Taunton Sessions to the Queen's Bench and the Court of Appeal. It would have gone to the House of Lords, but it was generally considered, I suppose—at least, I always thought so—that they preferred the chance of waiting for a Bill to remove machinery altogether from rating rather than to take the decision of the last appeal, namely, the House of Lords. That has been the history of the Chard case. The machinery which was rated by the Assessment Committee, by the Sessions, by the Queen's Bench, and by the Court of Appeal at Chard is just as rateable in Lancashire and in Yorkshire as there. We are all under one common law. Whatever enhances the value of the building should be considered in its assessment. Statements have been made that a lot of machinery did not pass with the buildings. Now in the Tync Boiler case (I have a report of it in a book here), the valuers acting in the matter, Messrs. Hedley thought it would support their case if they showed the actual practice of the trade by reference to the advertisements as they appeared in the current papers of the day, and in this book you will find, at the end of it, a great many pages of advertisements of buildings containing machinery, setting out the machinery which was, in the ordinary course of trade, being let with those buildings. Therefore, that being so, they were adjuncts to those buildings which enhanced their value, and should be considered in the rating.

**Mr. P. R. Smith.**  
 27 July '97  
 Machinery rating in respect of. The appeals in the Chard Union, Somerset-shire.

11,381. That all practically resolves itself into a matter of practice?—Yes.

11,382. And not a matter showing the necessity for an alteration of the existing law?—Certainly not: only there is such a very strong feeling that the law is being held in abeyance in certain districts, whilst this machinery-rating Bill is hanging up, and in that way very gross injustice is being done to large interests.

Machinery, rating in respect of. Law wants carrying into effect.

11,383. You are acquainted, are you not, with the present system of paying professional valuers?—I am.

11,384. Would you tell us what it is?—Yes. The times are not quite as good now for the valuers as they used to be within my recollection. I remember when they used to get 5 per cent. on their estimated value—not on what was sustained. Now these things are fixed down, and they get a much lower percentage very often on the sustained value, or on the value they can increase an existing assessment by—that is by how much they can add on.

Professional valuers. System of remuneration by results is very unsatisfactory.

11,385. But in most cases they are paid by a percentage, are they not?—By a percentage on results.

11,386. Do you think that is a satisfactory system?—I think it a very unsatisfactory system. There is a large valuer in London, who is a very old friend of mine, who was discussing it with me one day, and he said: "Smith, it is enough to tempt a bishop;" and looking at it from one point of view it may be, perhaps;

Mr. P. R.  
Smith.

37 July '97

at all events, it makes every person occupying a property feel uncomfortable when the interest of the valuer is in the direction of an increase.

11,287. You would prefer that they should be paid some fixed fee?—Some fixed sum. In one or two bills which were proposed some few years ago dealing with rating law, clauses were inserted to the effect that valuers should be paid a lump sum, and that it should not be dependent on results.

11,388. (Mr. Elliott.) Are you referring now to the payment of valuers by local authorities?—Yes.

11,389. And not by private individuals?—No.

11,390. By public bodies?—Yes. As a matter of rule, and within my knowledge as having to do from time to time with employing valuers, I may say that appellants never pay a valuer on a percentage scale. It would be quite as convenient for the assessment committee, I take it, to pay a fixed sum as it is for an appellant to do so.

11,391. (Viscount Emllyn.) When you are before assessing authorities, has it been your practice to allow them to have access to the company's books?—Certainly, I invariably offer it.

11,392. Have they a right to it?—We have been advised to that effect. I know we had an opinion from Sir Richard Webster very many years ago, in his earlier days, and also from Mr. Cripps (the father of Mr. C. A. Cripps), and several others. They said there was, in their opinion, a distinct liability upon the company to submit their books, and that it was always advisable to do so, but they guarded themselves by saying: "We do not think a railway company or any other company are called upon to set their clerks to work preparing statements, at great expense, simply for the information of a parish. Show them your books, and let them take what information they want, but we do not think the companies can fairly be called upon to spend a lot of money in that direction themselves."

11,393. What has been your experience with regard to offering your books to a parish, what has been the result?—As a matter of fact they never accept the offer, and for the very reasons which I have stated further on in paragraph 14 of my memorandum, that the work involved is so very voluminous. It is such an enormous thing altogether, and it requires such very competent people to take out the work as a rule, that unless they can manage to get hold of a discharged clerk from the Clearing House, or some clerk from a railway company who has been used to doing the work, no ordinary clerk can deal with it. I had rather a curious case some years ago in the West of England. I had prepared, at an expense of 400*l.* or 500*l.* against my department, a return showing some earnings in a certain parish. I went before the assessment committee, the valuer who was engaged said: "Well, I cannot accept your returns. I think the company must be earning more money in this place." I said: "Well, I have had these figures taken out at very great expense by our audit office, they are not taken out by my own clerks, and the audit office has merely one object, and that is to prepare me a correct return; their clerks do not care one atom what the assessment works out to, they know nothing about it, it is their duty to prepare a correct return, and if they do not do so they would get into very great trouble." But they said: "Yes, we do not believe it, and we are not satisfied." I was ordered out of the room; that is a case which invariably happens—one is ordered out of the room. When I came back the chairman said—he was a man of the highest character, and I knew him well—"We daresay you think you have told us the truth, Mr. Smith, in fact, personally we are sure you have, but we think there must be some error after what our surveyor says, and we have arranged with him that he should take your books if you will give him permission to do so." I said, "Certainly, he shall have every convenience to examine the books." I said further: "I have not heard what has taken place in my absence, will you kindly tell me what you are going to pay him for doing this work?" They said: "Well, we do not think you are quite entitled to ask us that." I said: "We shall have to contribute to it, and I will tell you why I was asking for it—not to carp or quibble at your employing a man, but to know as to the possibilities of his doing work which would depend upon what you are going to pay him." They said: "We are going to pay him 70*l.*" "Very well," I

said, "with our experienced clerks, and with all the advantages at my command, it has cost me 450*l.*, and you are going to pay this gentleman 70*l.* for something which will be as valueless as if it had never been done."

11,394. Did they carry out the inquiry?—They carried out the inquiry. I looked at the work as the clerks were doing it. The district they had to deal with was, we will say, from A to B; their clerk, being an inexperienced person, took out a lot of traffic that was going from there to there.

11,395. Do you mean at an intermediate point between A and B?—The point in dispute was between A and B, and he took out a lot of traffic between B and C, and allocated it to the particular parish, although it never went near there. They had treated me in such a manner that I was not disposed to inform this man of the egregious blunder he was making, so I let him go on. He finished his work, and I went before the assessment committee. They said: "Now we have got a very different result, which shows us the necessity and the advantage of what we have done." I said: "Will you tell me what you have done?" They said: "We have got a proper report." I said: "May I call for all these books to be put upon the table?" They had not got them, and they said the books would fill a Pickford's van. I said: "I shall be happy to pay for the Pickford's van; we will have them up, if you please." They were brought, and they went into a very small compass eventually. I immediately pointed out to the committee the egregious blunder that had been made. I pointed out another blunder. We were in the habit of carrying a large quantity of butter from Ireland to London, and we used to charge the value of the butter and the steamboat charge as what we call a "paid-on," to be added to our railway fare to make up the total amount which the consignee had to pay. I do not know whether you follow me in that.

11,396. (Mr. Arthur O'Connor.) Do you mean terminals?—No, not terminals; it was really the value of the butter. We will suppose that the value of a ton of butter was 50*l.*: that the steamboat charge for bringing it to Bristol was 1*l.*, we will say,—that would be 51*l.*,—and that the railway charge from Bristol, we will say, would be another 1*l.*—that would make 52*l.*—that is, we added the cost of the butter and the cost of the steamboat journey to our railway charge, and so made 52*l.* for the London merchant to pay. Of course the only interest we had was the 1*l.* for the railway carriage from Bristol to London, if you follow me in that. Yet when these gentlemen were taking out the figures to check my Return they took out one month's traffic, multiplied it by twelve, and they took the 52*l.* as our earnings between Bristol and London.

11,397. (Viscount Emllyn.) They included the value of the article that was carried?—Yes, they did, and they not only did that, but inasmuch as they were working on estimates and took out actual figures for one month only, they multiplied that month by 12 to give them the value for a year. In this illustration I am speaking now of 50*l.* but it came to thousands of pounds.

11,398. What was the moral of that?—The moral of that was that this 70*l.* which they had paid was absolutely thrown away; the fallacy which had been raised with regard to my figures being wrong was swept away also, and then they accepted my figure and came to a settlement.

11,399. (Mr. Arthur O'Connor.) Was that valuer paid a lump sum, not a percentage?—He was paid by percentage.

11,400. I thought you said he was paid a lump sum of 70*l.*?—For doing that work and checking my books, but then that was a second payment for making the examination.

11,401. (Viscount Emllyn.) It was merely for that work of examining the books that he got the 70*l.*?—That 70*l.* was simply for examining the books.

11,402. In other respects was he paid the usual percentage?—Yes. On the other hand I must say in fairness that I have known gentlemen come to my office to examine books on behalf of the parish who have done their work most effectually, I mean to say they have done it well. They would not go through the whole thing, of course. I do not say they are all like that gentleman who was paid the 70*l.*, but you are open to such things as that and when we spend a lot of money and do a vast amount of work that is very

Mr. P. R.  
Smith.

27 July '97

Railway companies books. Assessment Committees do not accept offers to inspect books as the work would be too great an undertaking and would require specially trained knowledge.

Mr. P. R. Smith.

27 July '97

Areas for purposes of railway valuation. Union and not county areas desirable. Reasons for this view.

often the return we have. I never object to show the books.

11,403. To go through railway books with any effect you must have skilled persons; that is what it comes to?—Undoubtedly.

11,404. You have had it suggested, sometimes, I suppose, that it would be desirable to substitute county for union valuations; do you agree with that view?—I say it would be a matter of utter impossibility; so far as railways are concerned we simply could not do it.

11,405. Will you, shortly, tell us why?—I will, shortly, tell you why, if I may. Having a practical knowledge of the mode in which returns of parochial earnings are arrived at, I may say the amount of clerical work involved in preparing a rating return of earnings in the 32 counties through which the Great Western passes can hardly be appreciated by any one unacquainted with the course that has to be adopted. For the information of the Commission, I, therefore, venture to explain it. The Great Western Railway Company own about 900 stations, and each station sends to the audit office monthly, at least, three returns of passengers, goods, minerals, cattle and parcels traffic; these monthly returns for a year amount in number to about 32,400, of very many pages each. From those monthly returns, or abstracts, it would be necessary to extract item by item the almost countless sums, varying from 1d. upwards, which go to make up the receipts of about 9½ millions in order to ascertain the Company's earnings parochially. The different stations between which all these items were earned would have to be shown, the total receipts for the year as between each pair of stations put together, and cast up, the total distances over which the money was earned ascertained, then the money divided by rule of three sums to show the earnings per chain. The whole of the voluminous railway clearing-house returns of passenger, goods, and parcels receipts would have to be gone over in a similar manner and divided in the same way as the Great Western Company's own traffic. Then—and you gentlemen will appreciate this point because you will remember what I told you the man did when dividing the traffic between A and B—he put in traffic between B and C—then very experienced clerks would be required to allocate to each parish the actual earnings in respect of the traffic carried through it, then to cast up these earnings per chain, and to calculate the earnings in the parish according to the number of chains it contained. The value per chain would vary between each pair of stations, or stations and junctions.

11,406. Is not this going a little further than dealing with the county as compared with the union assessment? You are taking us back to the whole abstracts of the Great Western Railway, are you not?—The question which came to me was, what would be the effect of county valuations?

11,407. That is, substituting county valuations for union valuations?—Yes. I take it that if county valuations were ordered they would be more or less done with at one time, and that we should have to do all at once.

11,408. (Mr. Elliott.) What do you mean by a county valuation?—The valuation of the whole of a given railway within a county. We have such a diversity of lines. We go through 32 counties. If, say, at a given time an Act was passed that there were to be county valuations which would begin on a certain day, all this would have to be done to meet that requirement of the Act.

11,409. I gather that these observations of yours do not apply to the proposal that instead of having a valuation list for each union there should be a valuation list for the whole of the county, and that the valuation lists for the unions should be aggregated for one county?—Yes, only that the process at the moment is very different—in this way: the valuation of a union is ordered by the union assessment committee, with the sanction of the board of guardians, but the valuation of the county, which is now possible, is ordered by the county rate assessment committee. One great difficulty we have there is this: To the union assessment committee the individual ratepayer is the unit; to the county assessment committee the parish is the unit, and therefore if I want to object to a county valuation, say, for the Great Western Railway for their property, they will not hear me unless in a given parish, say Parish A., I am not only prepared to go into the Great

Western Railway Company's merits, but into the merits of every other assessment in that parish to show what the total for the parish should be. I do not know whether I make myself clear. Looking forward to any aggregation of assessments at a given time—say there were to be county valuations carried on—then I am pointing out the work we should have to do in the way of extracting our traffic to meet the requirements of the counties to show what the earnings were per mile over the several pieces of line passing through the respective counties.

11,410. (Viscount Emlyn.) Will you finish what you were saying just now?—Yes, if I may be allowed.

11,411. (Mr. Clare.) You are assuming that the existing system of county rating is to be accepted?—Yes; I want to point out the utter inapplicability and unfairness—

11,412. Of the existing system?—Of all systems under which the county is allowed to set up and to decide the value of a parish without allowing any ratepayer to go before them and to point out the injustice which may be done by this body.

11,413. That is under the existing system?—Yes. I was asked, I think, what the effect of the county valuations would be; that is why I am giving this at the moment; if I have exceeded the limits of the answer I am, of course, glad to be stopped.

11,414. (Viscount Emlyn.) No, I think we shall be glad to hear what you want to say about it?—It must also be remembered that a parish often contains main lines, and a converging branch or branches, perhaps one or two stations or junctions, all causing variations in the receipts per chain to be allocated to the parish. I may add that a recent return I prepared of parish earnings in one union cost my department in clerical work £20l., in addition to which I had 14 clerks working, in the locality affected, at the signalman's books, for three weeks extracting the train miles. The expense of that, you see, is enormous. The unions require information, they pay valuers large sums of money, and it always has appeared to me that these are gentlemen who ought to do all this work, but then they never do, and one does not press, because I feel really their practical inability to do it—it is too great a burden to put upon them. It may be said (and by an inexperienced person very naturally) that all this has to be done now.

11,415. Is it your objection that it would have to be done all at once?—It would have to be done all at once.

11,416. Instead of being done in detail?—Perhaps a good deal of it not done at all for reasons which I will explain. It may be said (and by an inexperienced person very naturally) that all this has to be done now. To an extent it is true: but it is done in detail, and the whole work is not rushed in at one moment—at set intervals of three or five years. It now often occurs when a valuer is engaged in a union and a rate per mile agreed, that the adjoining unions, hearing what has been done, accept a similar rate per mile, varied according to local circumstances; in this way they save the heavy expense of a valuer, and at the same time they get a valuation which is satisfactory to them and also to the railway. If county valuations be adopted, all such amicable arrangements would be done away with, and heavy expenses incurred, because it must be remembered in all these cases, after we have gone to very many hundreds of pounds' expense in taking out our figures, and preparing our cases and getting witnesses together, we, being usually the largest ratepayers in the parish, whatever the result may be, have to contribute largely to the costs. If we get our costs against the parish primarily, we have to help pay those costs. Often and often it does occur that, if it is not too large an increase, we submit to it and face an injustice, and rather than be put in such a predicament as that. I think our reasons must be very plain.

11,417. In going before the assessment committee you have stated just now that you always offer to show your books. Do objectors before assessment committees have to show their books?—Not in our presence. One very often applies for them though. What I say is this, when I go before an assessment committee I am, at all times, prepared to exchange my figures. If I am dealing with the overseers—men who have not a practical and technical knowledge—perhaps they are rather over-weighted in meeting me, and I may not with so much fairness ask them to give me the exact details on which they arrived at their valuation; but when I am meeting a competent professional valuer,

Mr. P. R. Smith.

27 July '97

Appeals against valuations. Production of books by objectors.

Mr. P. R.  
Smith.

27 July '97

who is paid a sufficient fee for his services, I think that we should be allowed to compare our figures in the hope of arriving at a settlement, and seeing where the differences are between us, or, at all events, after I have stated my figures before the committee, he also should state his figures before the committee in my presence.

11,418. In the event of any objector not showing his figures he might suffer for it, might he not?—He would certainly suffer for it at sessions, because if it was proved that he went before the committee in a perfunctory sort of manner, and said, simply: "I object, and I will not pay, and I do not think fit at the moment to give my details"—if that were brought forward, even supposing he won his case at the sessions, he would be sure to get the costs given against him, and he would have to pay for it.

11,419. That acts as an inducement for them to say what their figures are?—These are the words Justice Field used in the Fletton case. He said: "An objector cannot gain his costs if he does not state his case sufficiently, properly, and fully before the assessment committee, he will get thrown, with costs, at the sessions."

Compounding.  
Large allowances made.

11,420. Have you had much experience at compounding?—I have not. Of course one hears a great deal about it in different places where you are looking up the valuation of other properties, and it really makes one's mouth water to see the large allowances which they get sometimes; I have heard of allowances up to 50 per cent. Up to 30 per cent.—by 15, and 15 for paying when empty—one would not very much object to it; but after that I do think it gets very expensive.

11,421. You have no personal knowledge, I suppose, of how the compounding has worked?—No, I have not.

Country houses often inadequately valued.

11,422. I think you have something that you wish to say to us with regard to the assessing of country houses as compared with country stations?—Of course we find all over the country very nice and very large properties assessed on very small figures. I know there are difficulties connected with the assessment of country houses, but it does come before one, in looking up valuation lists, that they are very inadequately rated on many occasions, and that is also a thing that a surveyor of taxes on the assessment committee would help to put right.

Surveyor of taxes should sit on assessment committees.

11,423. Do you think his presence on the assessment committee would be a check upon what they did in that direction?—I think it would.

Government property. Contributions by Government in respect of, inadequate. Government property should be subject to valuation in the same way as other properties.

11,424. With regard to Government property, have you any experience of the rating of Government property?—I have to an extent; when I say experience of its rating, I mean I have had great experience of its not being rated at all. I have no experience of its being rated, but I have experience of the Government giving certain contributions.

11,425. What is your opinion of those contributions?—They are as a rule utterly inadequate.

11,426. Do you see any reason why Government property should not be rated in the same way as any other property?—Take our own places, Devonport, Plymouth, and Weymouth —

11,427. In each of those places there is a very large amount of Government property, is there not?—A very large amount. I should like to refer, if I may, to something which I cut out of the "Western Morning News" only yesterday, with regard to the valuation at Devonport, where we in common with other ratepayers have just been subject to the tender mercies of a valuation, and very large values have been put upon our property. This is what was said in regard to it; this is in the "Western Morning News" of Saturday last:—"The rating committee" of Devonport "reported they had received the new valuation list from Edward Ryde and Sons, showing the total rateable value without the Government properties to be 156,588*l*. "The Treasury has promised that the Government properties should be revalued, but up to the present they had been unable to give the valuers an opportunity of doing so. The committee recommended that the valuation list be delivered by the clerk to the overseers, and that a cheque for 587*l*. payable to Ryde and Sons be drawn on account of their fees. "They also suggested that the Treasury be communicated with, as suggested by Ryde and Sons, as to their paying increased rates until their properties had been revalued in the same proportion as the other properties in the borough had been increased."

The report was adopted. On that very point, two years ago, I wrote to the Plymouth assessment committee, and pointed out how we were suffering from the omission in getting a suitable allowance from Government. That letter was read, and the only notice taken in the paper was that the chairman of the guardians said he had received a very selfish letter from Mr. Smith, on behalf of the Great Western Railway, which he proposed should be put in the waste-paper basket. I did not see that it was at all a selfish letter.

11,428. I presume any assistance you would get from the Government by increasing their contributions would affect all persons rated?—Yes, it would. In certain towns, where the Government have these large properties, those towns have to pay for the whole of the country.

11,429. In your view, these Government properties should be rated the same as all other properties?—Certainly.

11,430. With regard to rating areas, do you suggest any improvement or alteration in the existing rating areas?—I do not, for the simple reason that I do not think we could get anything better than the amount of local knowledge possessed by the present assessment committees, if they have the benefit, as I said before, of the whipping boy in the person of the surveyor of taxes, with his certified returns from the several occupiers.

11,431. With regard to the appeal, are you satisfied with the present court of appeal?—I am not at all satisfied with the appeal. I say the appeal court should be one which is above and beyond suspicion. Wherever we go into a county, I do not say a word against the gentlemen comprising the bench, but there is always a suspicion of prejudice and favouritism. When the Railway Commission was first started, it was assumed that all our rating cases were to go there, but we could only go there by consent of the respondents; and it was very soon found that after about two cases had gone to the Railway Commission, and they had been thoroughly thrashed out and dealt with in the most impartial manner, that it was not good enough for these specialist and expert rating surveyors; they thought they could get more at the county sessions. Therefore, as we could only go by consent, we have never been able to get before the Railway Commission since. I think that that, or some such authority, is what we should like to have the power to go before.

11,432. You say you want a stronger court of appeal than you have now?—Certainly.

11,433. Would you put shortly the suggestions that you make?—To recapitulate, I venture to suggest that the union should continue to be the rating area; that the union assessment committee continue to be the rating authority, with the addition of the surveyor of taxes for the district; that rating appeals from the decision of the assessment committee should be heard by a legal authority, or that railway appeals should be heard by the Railway Commission.

11,434. Would you yourself think it necessary that railway appeals should be heard by the Railway Commission, or would you be satisfied with some strong tribunal other than the Railway Commission?—I should be satisfied with some strong tribunal other than the Railway Commission.

11,435. Which would then be able to hear not only railway appeals, but all appeals?—Yes, all appeals. I merely mention the Railway Commission because I have seen it suggested—I think at the time that they were constituted—that rating should come within their ken; that is why I simply mentioned them. We want a strong outside authority; there is no doubt about that.

11,436. What have you to say with regard to statutory deductions?—That they should be extended from the Public Health Act of 1875 and the Lighting Act, to the school board rate, the library rate, the fire-engine rate, the county police rate, the borough rates, the borough water rate, the general expenses of rural sanitary authorities, and county highway rates. I should like to point out, with regard to borough rates, and with regard to certain county rates, that the repairs of roads by urban authorities up to this time have been charged in the general district rate, to which we are liable to one-fourth only. Under recent legislation county councils have had power to take over these urban district roads, and in all cases where that has

Mr. P. R.  
Smith.

27 July '97

Areas for valuation purposes. Poor law unions the best areas.

Appeals. An appeal court for questions connected with rating desirable. Either the Railway Commission or some legal tribunal.

Exemptions (partial) under the Public Health Act and the Lighting Act should be extended to certain other rates. Railways get no benefit from the expenditure of rates upon certain purposes.

Mr. P. R. Smith. been done the agricultural interest and the railway interest have to pay in full on those rates, simply because they have been transferred from one authority to another.

27 July '97

11,437. The services being exactly the same?—Yes, these properties deriving no benefit whatever from them. The services are the same, and the change simply arises from the transfer of the work from one authority to another. We have now to pay in full to the county councils, whereas before we paid on one-fourth only. That, I think, on the face of it, is a great injustice to the railways and to the land, and to all those interests which are entitled to differential rating. Then we come to the county police rate. We get no benefit from the county police rate in watching our lines of railway in the county, nor from the expenditure of the fire-engine rate. We get no benefit from the county fire engine rate as in so many of these parishes where they have the county fire-engine rate, there is nothing but the line.

11,438. That would not apply, I suppose, where you have got stations?—Of course, we have our own appliances at all stations, but there may be something in that; I am speaking as against the line of railway all through. It does not affect the stations. I wish to guard myself particularly against that, because it would be unjust and unfair. Where we have stations I say they are buildings, and following out general feeling on the subject a station is a building, and a building is a house, and we must be on a par with our neighbours in that respect.

11,439. As regards these deductions you are speaking of now and proposing now, you do not propose to apply them to station buildings but simply to lines of railway?—Simply to lines of railway and to agricultural land. Those slight alterations in the existing law with statutory deductions, or for railways, a scale of deductions fixed for each company by the Railway Commissioners, would in my opinion without making great changes, afford an amount of relief and general satisfaction to the ratepayers without involving the risk attending the making of new authorities and of dislocating existing arrangements.

Land-tax.  
Powers of  
the Local  
Commissioners of  
land-tax.

11,440. Is there anything you would like to add before the other Commissioners ask you questions?—I should like to say one thing if I might, which is not included in my memorandum, with regard to our awkward position at the moment under the new land-tax arrangements. They have always been rather unsatisfactory, but until the Finance Act of 1896 they have not been quite so bad. The jurisdiction of the Local Commissioners of land-tax has been very much widened, and their powers are almost undefined. The great trouble is this; their decisions are final, and they have more power than has the Court of Appeal. You can take a decision of the Court of Appeal to the House of Lords, but these local gentlemen can give you their decision and accompanying the decision they very often remind you "Our decision is final, and you have no appeal from it." That is a very startling thing, I have just had a case crop up on a branch line of ours, on the Woodstock Railway. The Woodstock Railway was a scheme of the late Duke of Marlborough, and certainly is not a profitable or a very useful property, but, however, there it is; it is assessed at a very nominal sum, but really more than it is worth, and that nominal sum was 72*l.* No charge for land-tax ought ever to have been made upon this property, but in March of this year to my great astonishment I received a demand based on an assessment of 960*l.* at 5½*d.* in the £ for land-tax. We naturally objected to that, and my assistant went before them. The parish is called the parish of Shipton-on-Cherwell, and if I might be allowed to read you a very short statement on the subject which gives the facts, I think it will take up less time. The length of the Woodstock branch in this parish is 1 mile and 71 chains. The poor-rate assessment is 72*l.* rateable and 75*l.* gross. This figure for the gross is no doubt wrong, and the company could not successfully contend that the gross valuation of the property should be less than 400*l.* or thereabouts, that is adding enough on to the present rateable value to keep the tenement in repair to command a certain rent. This portion of the line has this year for the first time been assessed to land-tax, and the annual value was fixed by the Commissioners as 937*l.* at 5½*d.* in the £, amounting to 21*l.* 9*s.* 5*d.* If I redeem this land-tax I should have to pay 30 times 21*l.* 9*s.* 5*d.* which is really more than the whole thing is worth or very nearly so. In reply to inquiries as to the meaning of this figure—

11,441. This that you are taking us through, is it a complaint against the injustice of the action of the Commissioners?—They are within their powers. I want to point out the unfairness of their having such powers as now belong to them.

11,442. Without the power of appeal?—We have no remedy.

11,443. (Mr. Clare.) Your remedy was to redeem the land tax before you developed the property, otherwise you have to pay upon the full value?—It was. I do not object to pay upon the full value, for the full value of this property is 72*l.*, plus the repairs which would make 450*l.* On that I am prepared to agree, but the Commissioners say they will not consider that. We pressed them to know how they arrived at this value. They used to have to take the common basis of the gross value, which was often a great hardship, but still we knew where we were. These gentlemen say: No, we do not mind telling you that we have assessed this Woodstock railway at a certain figure because we find another branch of the Great Western line, the Witney Branch, is assessed at a certain sum, and we think you ought to be so charged. What is the result? We are about to move the courts above by mandamus to try to get this settled. These people do not show any basis for it, because the whole of the rest of the property throughout the parish is assessed at gross values. Parliament says all should be assessed according to the fair value on an equal poundage receipt. They used to act upon this course, but, unfortunately, the Chancellor of the Exchequer, in making a speech in the House of Commons this year on February 11 said that the Land Tax Commissioners were not bound to take into consideration the Income Tax Assessment or the rateable value or any other particular valuation as the basis of distribution. That has landed us in this difficulty that these gentlemen took 937*l.* without any explainable basis whatever, that they ultimately put it at 490*l.*, and leave us without a remedy unless we go to the expense of hundreds of pounds in applying to the superior courts in London to proceed by mandamus to make them alter it.

11,444. In your view there ought to be some appeal of an ordinary kind from the decisions of these Commissioners?—Certainly.

11,445. (Mr. Arthur O'Connor.) They did not ask you to pay arrears?—They are not entitled to. They thought they would take it out of us in one year.

11,446. (Mr. Elliott.) I gather from the evidence you have given as representing the railway companies, that at the present moment you consider that you contribute unduly to local taxation as compared with banks, manufactories, shops, and I think you mentioned large country houses?—Yes. I should not like to say we contribute very unduly, because we have to do the best we can in looking after ourselves, and in that way we protect ourselves, but the appliances and modes which we have of protecting ourselves are certainly very difficult. They are very expensive and cumbersome. There is the question of profit always in our case of course; that is we state our profits, and then we have to exhaust that figure; as it were we put all our money on the table and then we have to take away as much as we can show a reason for, and I think that always puts one in a very difficult position.

Mr. P. R. Smith.

27 July '97

Railway companies pay rates on their lines for purposes from which they receive no benefit. Their valuations are also increased to a greater extent than those of other properties.

11,447. I rather gather from the suggestions you have made in the concluding part of your evidence that you think the railway companies should pay less?—Yes. I think we should be protected in every possible way, and that other people should pay enough. You see our property is constantly passing through the examination of these professional valuers, but other people's property is not, and the main result of that must be, I think, that we are constantly being put, I do not say beyond our full legal value, because if we were, that to an extent would be my fault as far as I can prevent it, but we are constantly being put up to a very high and full value, whereas other properties are not.

11,448. Of course, we here are considering this question, not only in connection with the law as it stands, but from the point of view of possible amendments of the law. What I want to get from you quite clearly is this: Do you, as representing railway companies, consider that at the present moment you are unduly burdened, and that you have a grievance as regards the amount which you contribute to local taxation?—I certainly say we have a grievance, not so much with

Mr. P. R. Smith.

27 July '97

regard to the assessment at the moment, but I say we have a grievance against the pressure of these differential rates from which we receive no benefit.

11,449. In other words, you consider that you pay too much, having regard to the benefits that you receive?—Certainly.

11,450. Now let us leave out any question of the rates which may be said to confer a benefit upon the person by whom they are paid; take such a rate as the poor rate, or the police rate, or the education rate; do you consider that railway companies at the present moment pay too much to those rates which we are in the habit of calling rates of burden?—I think I have complained of the education rate as one that I thought we did not get benefit from to the full extent of the amount paid.

11,451. Take the first of the other properties that you mentioned; take the case of a bank; do you think that, comparing a railway company with a bank, a railway company pays too little?—Will you allow me to define? In speaking of the railway company I am speaking of the line of railway, and I am not speaking so far as the assessments on our buildings are concerned; I wish particularly to draw the line there.

11,452. I want to get a little more clearly from you what is the grievance which you now present to the Commission as seeking for remedy; is it that the contribution by the railway company to such rates as those which I have mentioned, whether in respect of its stations or in respect of its lines, is too much at the present time or not?—I feel the amount we have to pay is very oppressive indeed.

11,453. You think you have a claim for relief as regards the amount you contribute to those rates?—I do think so to the extent I have indicated, particularly with regard to our not receiving benefit in any way from the amounts we pay for our lines of railway more than agricultural land would. We are quite in the same boat with the agriculturist there—as against our position as owners of stations or of buildings, which I say are more of the nature of house property, and should pay.

11,454. I should like to refer to the figure which you give in Schedule II., from which it appears that the rates paid by the Great Western Railway Company amount to practically 3½ per cent. of the gross receipts; that would amount, would it not, speaking very roughly, to about 7 per cent. of the net receipts?—Yes, you may put it very roughly like that.

11,455. It would be somewhat under 7 per cent.?—We are working now at over 55 per cent.

11,456. Speaking very generally, do you consider that that contribution of 7 per cent. of the net receipts, in other words of the profits of your company, to the purposes for which local taxation is levied, is an excessive contribution or not?—I have not quite applied my mind to that point, but I should say, for so much of that as represents payment on lines of railway as separate from our station properties, it would be excessive; I think it is very excessive for that, but for the stations I should not say so.

11,457. Supposing that I could show you that the agriculturists in the district which your Company serves pay very much more than 7 per cent. on their net receipts to the purposes for which local taxation is levied, which would you say would have the grievance, the agriculturists or the railway company?—I say the agriculturists should have the same extension of these differential ratings that I claim. Of course, if the agriculturist pays more than 7 per cent.—I do not know what he does pay—but, whatever the figure may be, if he pays on land as separate from his buildings more than seven per cent., it naturally presents itself that that is a hardship.

11,458. Do you think that the net receipts, in other words the profits, constitute a fair and reasonable measure of the ability of the ratepayer to pay to such a rate, say, as the poor rate?—It is not, of course, the basis which is acceptable to one's mind at all, because there you are charging a rate on profits—that is, more on the ability to pay—rather than for the hereditament occupied, as I understand it.

11,459. Arising out of that, I was very much impressed by a phrase which you used, which appears to sum up the present position of the rating system; you

stated that the rates are now contributed by the ratepayer according to the value of the bricks and the mortar and the land which may be occupied?—Yes.

11,460. Do you consider that the value of the bricks and the mortar and the land which may be occupied is a satisfactory measure of the contribution which each ratepayer should pay—that, of course, is the law as it stands; but do you consider that that is a satisfactory provision of the law?—As far as it goes, and if everyone can be put on an equality in proportion; but if you employ the bricks and the mortar and the land as the basis in one case, I can see it would work great unfairness in the case of properties where you take their gross receipts as your basis.

11,461. For the purposes of some industries you want more bricks and mortar and land than you want for the purposes of others, do you not?—Certainly.

11,462. Supposing, by the occupation of more bricks and mortar and land in one case, you only get the same amount of profit do you think there should be a greater contribution to the rates?—No, it should be such a contribution as would ensure equality of proportions as between the several interests. It may be a difficult nut to crack but that is what we want to arrive at, I think.

11,463. You would suggest that the present basis of the bricks and the mortar and the land is not altogether satisfactory?—It is not altogether satisfactory.

11,464. You have given us some very interesting evidence in favour of the view that assessments should be made not according to the county but according to the union; I want you to direct your mind to the county of Somerset, in regard to which you have given us some figures in Schedule VI. I gather from that table that there are eight unions in the county of Somerset?—I have not taken them all; I have selected eight because I had returns from eight, but there are more than eight.

11,465. At any rate there is a number exceeding eight poor law unions in that county?—Yes.

11,466. Consequently, there is a corresponding number of assessment committees?—Certainly.

11,467. Your suggestion rather was, was it not, that it was easier for the railway company to deal with these individual unions, than with a powerful assessment committee representing the whole of the county?—Yes.

11,468. Is there not something to be said from the other side of the question. Is not the railway company, especially such a railway company as yours, an extremely powerful body, and do you not think that with the trained advice you have you are sometimes able to deal very efficiently with the smaller union, and perhaps you might find a more formidable antagonist in the shape of the county?—As I pointed out with regard to the county, the county rate committee, as at present constituted and working as they do under their existing legislation, have given an objecting ratepayer no chance whatever, the process, as I said, being that the unit for the county is the parish, whereas for the union the different parishioners are the several units. If I am assessed too much, say, in the first parish in the table, in the parish of Axbridge, the county assessment committee fix the value of the parish of Axbridge at 20,000£., and out of that the railway company is assessed at 2,000£., we will say; or I may know that there are, say, ten parishes, in each of which we are assessed at 200£.; I get one of those parishes with 200£. worth of our property, and supposing there are 20 or 30 farms and all sorts of property in that parish, I have no power to go before the county rate committee to explain the injustice that I am suffering from without, at the same time I submit to them the whole of the facts of each individual property in the parish, to show that their total is wrong. Before the assessment committee for the union it is sufficient for me to go and say that my property in parish A is assessed at too much money.

11,469. That is according to the law as it stands, is it not?—Yes, it is.

11,470. What do you say to the suggestion that the assessment committee of the county should do exactly the same work as the eight or ten assessment committees now do, and that the individual ratepayer should have precisely the same powers of appeal to the county assessment committee as he has at present to the union assessment committees?—I think the great want you

Mr. P. R. Smith.

27 July '97

Rates now contributed by ratepayers according to value of bricks and mortar and land, which is an unsatisfactory system.

Areas for purposes of railway valuation. Union not county areas desirable. Reasons for this view.

Rates paid by Great Western Railway Company amount to 3½ per cent. of the gross receipts. This is an excessive contribution in respect of railway lines, and would also be so in case of agricultural land.

Areas for purposes of valuation. Union not county areas desirable.

*Mr. P. R. Smith.*  
27 July '97

would have there would be local knowledge. I think one or two members attending a central committee from a district would have their influence measured by their voting power, and the power of two from a union we will say, would be very small, and their local knowledge, if they had any, would be very difficult to be heard, or to make itself felt.

11,471. Is that the only objection you see?—I see one great objection certainly with regard to that.

11,472. Would you not say that the larger the area from which the assessment committee is gathered the smaller is the effect of local and personal influences?—I should not quite like to say that; that is not my opinion. I think the means by which we are going to get over the local influence is the surveyor of taxes. I do not see that any other element put into the committee is going to do for us what the assessor of taxes can do, because, as I said before, his back is a broad one, and what neighbours do not like to do for one another they can lay upon the surveyor of taxes.

11,473. Would you not say, generally, that the larger and the more important the local authority the less likely personal and local influences would be to prevail?—I cannot see that; I do not see why it should be.

11,474. Has that not been your experience?—That has not been my experience.

11,475. I will take the parish council that you mentioned; do you not think that if it had rested, not with the parish council, but with the district council, or with the county council, to consider this question of the lighting, and the area over which the lighting rate should be levied, there would have been less disposition to do you injustice?—That is not my experience (and I have had some experience), and I will tell you what my experience has been. I have before now attended meetings under the County Council Act, where there have been questions of adding areas to certain existing areas, and I have found quite as much feeling and desire to add the whole area, including an extended boundary, of our property, instead of taking the near boundary, exercised by these gentlemen from the county councils, as I have from the parish councils.

11,476. You find that, whether the local authority be large or small, there is still the same disposition to shoot at a railway company?—Yes, they want all the money they can get.

11,477. Let me take you, then, to this suggestion that you have made as regards Government property. Do you not think there would be the same disposition on the part of local authorities to shoot at the Government in the same way that they shoot at you?—Possibly, and therefore I say that some tribunal should be arranged by which it should be done, but up to this time, you see, the Government have very carefully avoided putting themselves in that position. Three or four years ago, Mr. Vincent, who acts for the Government, came to see me, and said: "What do you think it would cost us to start a Government department?" I hoped they were going to do it, I had been stirring the matter up all I could, but I have never heard any more about it since. They should have a department to deal with this, and they should let their property be valued as currs is valued, and that would satisfy everybody. They should go to the expense of a department, if it is necessary. Let it be fairly done, and satisfy the whole country.

11,478. Have you any objection to the Government keeping their valuation under their own control?—I should always object to that, and I think there would be the very greatest suspicion whilst the present system was followed. If they get their assessment under their control, it would simply amount to their giving a contribution, as they now give, of what they like, outside of appeal and outside of objection—"We shall give you 1,500%," and if you do not like it you will get no more."

11,479. On the other hand do you not feel that supposing Government property were valued by a local tribunal, even with the assent of the surveyor of taxes, something like the same result would be obtained as that of which you complain in the case of railway companies?—I daresay there would be improper valuations made, but one would be quite content if the Government gave comprehensive instructions to an official to value their property, and that his valuation when made should be to an extent open to inspection

or criticism. I should have every faith that the Government would do what was right. But they have never gone so far as that, I can understand it may be objectionable to have all sorts of people coming into certain Government properties.

11,480. (*Mr. Arthur O'Connor.*) I suppose you consider the presence of a railway in or near a place adds to the general value of the property in that place?—Yes, undoubtedly.

11,481. Similarly the works at Devonport carried on by the Government probably add to the value as they add to the population of the town?—I look at it from one point of view, they occupy the most valuable sites, take a railway—

11,482. Would you mind addressing yourself to the exact point I put before you?—I beg your pardon.

11,483. Do you think that the employment given by the Government in Devonport increases the general value of the property of the neighbourhood, the value of land and of other property?—No, I do not see why it does, certainly not to the extent of the valuable land that it occupies.

11,484. I am not concerned with the extent, do you think the presence of a large place like Devonport Dockyard, and the works adjacent to and connected with it, and the necessity of providing habitation for the men employed there adds or does not add to the value of the property in the town generally?—I think it would very much depend upon the district.

11,485. In that particular place in Devonport?—I do not think it does, because Devonport is very much prejudiced for all residential building on account of the enormous number of small houses which are necessary to accommodate the dockyard officials.

11,486. Then you would say that not only the Government works at Devonport are inadequately rated?—They are not rated at all, if I might venture to say so.

11,487. That is certainly inadequately?—Yes.

11,488. But that they actually detract from the value of property generally in the neighbourhood?—Yes, you very much press me upon that point, I should not wish to bring it forward, but I think it will be evident that in a beautiful seaside district, such as Devonport is, naturally the building of a large number of small houses does not increase, but rather deteriorates the value for certain other purposes.

11,489. I only wanted to see how far you go in that direction?—That is how I feel about it.

11,490. You say that machinery is sometimes rated fully and sometimes inadequately rated?—Yes, I think I guarded myself by saying rather in my opinion an enhanced value should be added to the building, and not that the machinery should be directly rated itself, which is against the decisions that have been given.

11,491. That is to say, any machinery which is necessary for the utilisation of a building should be taken into consideration in rating it?—I would rather say machinery used in connection with a building as it is going.

11,492. If, without certain machinery, buildings or works would be useless, you would consider that that machinery ought to be included in the estimate, or taken into account?—If the buildings were useless without the machinery, did you say?

11,493. Yes?—Of course we can only take the thing as it stands. We find the buildings with machinery in them, and they have to be rated upon the enhanced value from what they contain. What the condition of things would be if the machinery was not in the building I do not know; it may be used for some other purpose.

11,494. At any rate, you do not disapprove of the rating of machinery in itself?—Certainly not. I mean to say we want an equality of rating. We cannot for a moment say that our sheds and shops are not properly constructed for doing the work we carry on in them; but if a man, on the other hand, has taken over a shed which was built for a grain shed, and he thinks proper to carry on a business, and put looms or other machinery into that building, I say that, if they would pass with the building, if it could be proved, as a trade custom, that such machinery would pass with the building, it should be considered as enhancing its rateable value in

*Mr. P. R. Smith.*  
27 July '97

Government property contributes inadequately to local taxation. This property sometimes decreases the value of surrounding property.

Machinery should be assessed to local rates.

Mr. P. R. Smith. the same way as the contents of our sheds are supposed to enhance the value of our buildings.

27 July '97 11,495. What would you consider your railway lines would be without your engines?—We must have engines to pull, unless we let it out to the public, and merely provide a road and let them act as carriers by providing their own stock.

11,496. Your railway lines would not be of much use without your engines and your trains?—I should think not.

11,497. Why should you not rate that machinery?—It would be such a new departure that it is difficult to contemplate.

11,498. Yes, but we are here because the existing system is not supposed to be satisfactory?—Yes, that is so.

11,499. We must not be afraid of looking at things or else we shall not be of much use?—That is so. You rate now parochially what is in a parish; our engines are in every parish; they are in a thousand parishes. You must do away with the parochial system altogether before you can begin a thing of that sort. No implements or stock or chattels are assessed: it has been found impossible to do so. I mean to say it opens a common question, not only for engines, but for every cart and cab in use in the street, and all other kinds of chattels and property which came before us.

11,500. I am very glad; that is what I want to bring out?—I thought it was.

11,501. When you proceed to tax chattels you are confronted with all sorts of difficulties and anomalies?—No doubt.

11,502. Now let us look at the other side. Railways, at any rate, are monopolists in regard to the occupation of certain lands; they have compulsory power of purchase and exclusive use. have they not, of certain lands?—So have other people who purchase them, a monopoly of lands.

11,503. We are not talking about other people; I am talking about railways for the moment. Is it, or is it not, the fact that railway companies have the exclusive occupation of certain land under Acts of Parliament?—Yes, subject to certain users for which they have liabilities.

11,504. Such as lands would always be subject to more or less?—Yes.

11,505. I suppose you do not object to being rated in respect of the land which you so occupy?—No.

11,506. Railways themselves, as you have told us, often help to enhance the value of adjoining land?—Yes.

11,507. And land generally is improved in value by the multiplication of the population and the multiplication of the means of locomotion?—Yes, as a general proposition that is so.

11,508. Now, disregarding altogether the existing system, which we know is full of anomalies, do you see any objection in reason and common sense to a simple system of rating the land according to its actual value as land, disregarding all chattel property?—I think I must ask you to define your question a little more. When you speak of the value of land, what do you mean? Do you mean the value of land as improved by existing circumstances, or the value of land as shown by taking three, or four, or five hundred yards on either side of a property, to arrive at an average value, as was done sometimes in the old canal ratings? I do not quite follow you in the answer you wish me to give you.

11,509. I suppose that it would be possible, in any particular district of the country, to ascertain what was the value of land per acre?—One of the schedules that I have put in, Schedule IV.—taking the parish of Basildon for instance—shows the total assessment and the acreage, and the assessment divided by the acreage gives 3*l.* 6*s.* per acre as the general average of the parish; but for the Great Western Company, on the land they take, they have to pay at the rate of 28*4*l.** an acre as compared with that 3*l.* 6*s.* I do not know whether that enables me to answer you.

11,510. Supposing you take any particular acre in any part of the country, is it possible, or impossible, to ascertain what the value of that acre is as land? You have to buy land sometimes under compulsory powers?—We do occasionally; and it is very difficult to arrive at its value, because the seller is of opinion that it is

so much more valuable than we think it is. He finds fifty advantages that we cannot conceive.

11,511. But it is not past the wit of man to arrive at some means of deciding?—Values have been arrived at, but if I knew with what object you were asking the question I could give you an answer, perhaps without giving you so much trouble. I wish to give you a very full and sufficient answer, but there are so many difficulties surrounding the question of what is the value of a given piece of land, and whilst I am anxious to give you the information you want I do not want to mislead you in any way.

11,512. You will not mislead me. If you have to acquire an acre of land, whether by agreement or under your compulsory powers how do you arrive at the certain sum of money which you have to pay the former owner?—Then you see we take that land under compulsory powers, the owner knows we must have it, we are bound to have that particular acre of land, because we must go there, but then, am I to import into my estimated value of that acre of land the value of our necessity plus the value of so many wheelbarrows full of mold? That is my difficulty in answering your question—how far must I take in the surrounding circumstances, and the would-be purchaser.

11,513. At any rate, under arbitration or whatever means a definite sum is ascertained at last?—In that way possibly, but the arbitrator does not tell us how he arrives at it.

11,514. No, but it is arrived at?—A sum is arrived at which—pardon me saying one word—very often I think both parties are very dissatisfied with.

11,515. As it is ascertained in that particular acre, I suppose it can be similarly ascertained with regard to every acre in the country?—Yes, perhaps so, considering all the varying circumstances, of course. All acres would not be subject to the compulsory powers of the would-be purchaser; they might be subject to varying influences. There might be water near or water might be distant; it might be at the top of a hill where there was a heavy draught and which required two horses to take a load instead of one. I can conceive of a thousand and one difficulties arising when you are trying to arrive at the value of an acre of land, so that each acre would be practically different in value.

11,516. That is to say in different places, and according to circumstances, the value of land may vary, and the difficulty of ascertaining its precise value will vary also?—Certainly.

11,517. But making all due allowance for all that, I suppose it is possible to value land as land, acre per acre throughout the country?—Yes. Of course we know it is done every day.

11,518. Very well, the answer is "Yes." Let us suppose we have arrived at that stage, can you see any objection from the point of view of principle, or common sense or justice, why the rating should not be based upon the value of land apart from the mere productions of human industry?—In answering that question am I answering the question as to the unimproved value of the land?

11,519. Let me put it to you from your railway point of view; would you think it fair that you should be assessed on the land which you occupy and on that only, taking its value in common with the land adjacent and dealing with it merely as land, that the railway company should be rated merely upon the land which they occupy as land, and should not be rated upon their works or improvements, their permanent way, their buildings, or anything else?—No, I do not say that. In taking the land by itself would you say the land as occupied by a bank, for instance, without any regard to their profits much or little? The bank at the present time is valued as land and bricks and mortar.

11,520. I am asking you to eliminate the bricks and the mortar from your consideration. What I suggest to you is that the proper and rational and reasonable and just basis of all rating is the value of the land which is occupied by the person rated, and that his industry, and the works of his industry, and the result of his enterprise and intelligence, should be out of the rating altogether?—Then you take the virgin land?

11,521. If you like to phrase it so, yes?—I mean to say it is the unimproved value?

11,522. Yes?—The prairie value of the land?

Mr. P. R. Smith.

27 July '97

Valuation of land, means of ascertaining. How far the value of the land alone should be the basis for assessment to local rates.

Mr. P. R. Smith.

27 July '97

Assessment committees have different ideas of the value of properties.

Areas for purposes of valuation. Union, not county, areas desirable.

Valuation of railways. English, Scottish, and Irish systems discussed.

Railway companies complain more of the system of valuation than of the result.

Rates paid by Great Western Railway Company are increasing.

11,523. Yes?—Of course, that is rather a novel suggestion.

11,524. Would you have any objection to it from the railway point of view?—I should very much like to consider it, because it would be no good endeavour to formulate something which could not possibly work. I do not know how the parishes with heavy liabilities which must be met, loans and what not, would stand in a case of that sort.

11,525. (Chairman.) Would it not be better to say you would like time to consider the suggestion?—Perhaps it would be, without going into reasons. You might take virgin land in Paddington, for instance.

11,526. (Mr. Arthur O'Connor.) With regard to the valuation of Government property, I suppose you would no more trust the Government where it was judge in its own case than you would trust an individual, would you?—I do not know; if the Government of the day was acting under an instruction of Parliament I should feel so much more confidence in what they did than in what the boy in the street would do, for he would be simply playing off his own bat.

11,527. You would be content, then, to accept the Government valuation for rating its own property?—That is rather going wide of the other question.

11,528. With regard to the appeals, you object to quarter sessions, as I understand, where the interests concerned are not merely the competing interests of individuals, both of whom live within the area, but one is a local interest and the other is an external interest, like a railway which has property elsewhere?—Yes, of course there is that feeling, but primarily and above all is what must be, and is often too manifest, namely, that the assessment of railways and very many other special properties is really so difficult that unless a man has given a large portion of time to the legal bearing and to the matters of fact, it is difficult for him to arrive at a satisfactory solution on an appeal question. Therefore, I think it should go to a special authority.

11,529. You consider that quarter sessions are simply incapable of dealing with the matter?—I should not like to use so strong a word as that.

11,530. You consider that quarter sessions are not qualified to deal with that matter?—All quarter sessions are not qualified, in my opinion.

11,531. But if there were some superior tribunal established, composed of better-informed and better-equipped men, you would be better satisfied, would you not?—I think that follows.

11,532. What would be the requirements of that tribunal?—Some such authority as one would have in the Railway Commission, where there is a legal element, a railway element, and a business element, as far as I understand the constitution of the Railway Commission.

11,533. What do you say to the suggestion of one central valuation department for the whole country?—For trying appeals, do you mean?

11,534. No, for valuing the whole country?—If it could be arrived at I have no doubt it would be an advantage.

11,535. It is arrived at in Ireland because that is the system which exists now?—I do not know whether it is with satisfaction; subject to that, if it can be done satisfactorily, no doubt it would be an advantage.

11,536. Supposing there was a valuation department of the Government here in London, with officers whose duty it was to assess impartially in every union in the country by the aid of such local information and knowledge as they can gather for that purpose from time to time?—Of course one would have no suspicion as to the absolute desire of fairness on the part of such a Government office as that.

11,537. Would it not satisfy the railways?—I daresay it would. One would perfectly feel that if they made any mistakes it would be inadvertently.

11,538. Do you know the system of valuing railways in Scotland?—Yes.

11,539. Does that appear to you satisfactory?—Yes, to an extent, I must say, because I believe in practice it does not give great satisfaction in Scotland itself.

11,540. To the railways, or to the other parties?—I believe, generally, neither party being quite satisfied; I have heard so. I do not know how far it is the fact, and I daresay there are gentlemen here who know a

great deal more about Scotch rating than I do; I know little about it.

11,541. (Mr. Wharton.) With regard to the present system of rating in different areas, do you find great variety in the ideas of the different assessment committees with regard to the value of the land?—With regard to the value of our property occupying land?

11,542. With regard to the rateable value of the property they have to value. Do you find different assessment committees have very various ideas as to the value of the property that they have to assess?—Yes, very.

11,543. Would it not be an improvement in the direction of fairness and uniformity if you had larger areas than the present small areas which now value property?—I cannot see that that would make any difference.

11,544. If at present, owing to the small areas, you have a greater variety, if you had those areas enlarged, would you not have greater uniformity?—I do not know at all. If you have one or two men from each assessment committee they will go there imbued with their own views, and I suppose they will try to talk the others over.

11,545. At present are you aware of the system in Lancashire, where they have uniformity of assessment for the whole county, which works well?—I did not know there was any separate rating law for Lancashire as distinct from the whole of England, and I did not know there was a varying practice in Lancashire.

11,546. You are not aware of the system, so I need not ask you any more about it. I will only now ask you about the three systems in England, Scotland, and Ireland, with regard to the rating of railways; which do you think is the best? Of course you are aware of the English system, which is that each area rates the railway according to its idea of fairness; in Scotland the value of the whole railway is ascertained, then it is divided up according to lineal mileage; and in Ireland the whole value of the railway is ascertained, and then it is divided up according to the train mileage in the district. What have you to say with regard to those three systems?—I say that the two latter, the Scotch and the Irish, are quite inconsistent with our parochial basis in England.

11,547. Quite so; but as a matter of fairness, what do you say?—Simply in the matter of valuing a railway on its accounts, it is a matter of an hour's work to arrive at one side of the account, but when you come to allocate that to the varying parochial interests then you get into difficulties.

11,548. Take the system in Scotland; there you take the lineal mileage of the railway in the parish and you divide the value —?—I know the system perfectly.

11,549. That is the Scotch system; in the Irish system you take the train mileage?—Both may be very incorrect in result.

11,550. Are they more or are they less satisfactory in your judgment than the English system?—I should think they were less satisfactory, I can conceive this; I can conceive a town with a large debt; when you come to lineal division instead of keeping the security on which they raised their debt, their security would be swept away into small places where there is no such debt, and there would be no security left. How is that money to be met; how is that expense to be met? The same thing applies to the train mileage.

11,551. (Mr. Clare.) I understand that the general point of your evidence is to the effect, that the railway companies have more to complain about as regards the system of arriving at the rateable value, than as to the total result?—Yes.

11,552. That if some uniform system of arriving at the assessable value, which could be easily followed, can be devised by this Commission, in your opinion it would be a satisfactory thing to the railway companies?—Yes.

11,553. You give us in Schedule II. the total rates paid by the Great Western Company, and following that schedule, it appears that the rates keep increasing every year?—Yes.

11,554. Does not the capital of the Company also increase year by year?—Certainly; but then you see in this table which I have given the figures, are based upon a percentage of the gross receipts, and whereas the gross receipts percentage in 1882 was 2·478, the

Smith.

27 July '97

gross receipts percentage now is 3.492. It is not as if I was charging the present rates on the old receipts.

11,555. Can you tell me what percentage on your capital expenditure the rates paid by the Company amount to?—No, I could not tell you.

11,556. Can you tell me what the capital expenditure of the Company and the assessable value amount to?—I do not quite follow you.

11,557. What is the total assessment of the Great Western Company on the whole of their undertaking?—That I really could not tell you; it is a figure I never have to use, and I have never taken out such a figure.

11,558. Have you never taken it out at all?—No, never; I do not have to use such a figure at all.

11,559. Supposing the total assessable value of the whole undertaking of the Great Western Railway Company amounted to 3 per cent. upon their capital—just for the sake of illustration—and assuming that very much the same figure is worked out with regard to other railway companies, would it not be rather a simple method of assessing to put a certain percentage on their capital value as representing their rateable value?—Their capital value is a very broad question, and one to which I have not addressed my mind, because the difficulties involved in that arise from amalgamations and all sorts of conditions outside. The expenditure of bygone years may have been wise or unwise, and it is making the present value depend upon the want of wisdom possibly of our ancestors, which is not the way in which to find to-day's value. That would be my objection to going on capital values in that way.

11,560. I see you recognise the importance of not reducing the railway assessment so as to interfere with the security on which different local authorities may have borrowed money?—Certainly, that is very important.

11,561. How do you propose consistently with that principal, to give the railway companies the three-fourths exemption with regard to the several rates you enumerated which they now have with regard to the sanitary rate?—That difference would be comparatively but small, and I do not think it would affect a large question.

11,562. It is altogether a small matter?—I would not say a small matter, but it is not so large a matter as a

The witness withdrew.

Mr. WILLIAM PERCY PAYNE, called and examined.

Mr. W. P.  
Payne.

11,569. (Chairman.) You are a Professional Associate of the Surveyors' Institution, Chairman of the Railway Rating Surveyors' Association, and you have been Rating Surveyor to the Midland Railway for more than 25 years?—Yes.

11,570. We have had the advantage of reading this memorandum\* which you have been good enough to prepare for us, and you, on the other hand, have had the advantage of hearing what Mr. Smith has said in the course of his examination. I should like to put this general question to you first: you, of course, have read Mr. Smith's memorandum?—No, I have not seen it. I have not seen any paper but my own.

11,571. I am sorry for that, because our object has been all the time to endeavour to get the railway case consolidated, except where special circumstances supervene, and we have expressed that in more than one letter, and if you have not done that I am sorry for it. In that case I will put this question to you. You have heard all Mr. Smith's examination-in-chief?—Yes.

11,572. So far as his examination-in-chief is concerned, do you concur with the answers which Mr. Smith gave?—To a certain extent, but there are points I should like to touch upon.

11,573. I will give you an opportunity of saying on what points you differ, or on what points you wish to add anything. Do I understand that so far, speaking generally, without going to verbal accuracy, you agree with the tenor of Mr. Smith's evidence?—Yes, with a difference in some of the details.

11,574. Would you kindly state to me, taking your memorandum as the basis, on which of the points you desire to qualify anything which Mr. Smith has said?

general departure from the parochial system, or anything of that sort would be. It is simply a rectification, I look upon it more in that light.

11,563. You think, I think you said, that the companies ought to have given back to them the right to have representation at parish meetings?—Certainly.

11,564. Do you think that a railway company ought to be able to nominate a member of the parish council?—I never went so far as that, I merely pleaded that we ought to have what we used to have, a right of representation at parish meetings.

11,565. That is to say that you may nominate some person who shall be in the position of a voter?—That is so, our Board had power to nominate under the Poor Law Amendment Act, some officer to act as representing their parochial interests, he had to be appointed under seal. I was that person so far as the Great Western Railway was concerned, and I used to go about where necessary and attend parish meetings, and vote, and with what little knowledge I have, endeavoured to influence people in what I supposed at the time to be the right direction.

11,566. I think you said that the present system of arriving at the rateable value was very unsatisfactory, that the method in which the assessment committees conduct their business is objectionable, and that the appeal to Quarter Sessions is not to a tribunal in which you have the greatest confidence?—I have no recollection of saying what you attribute to me in the first part of your question, that the assessment committees arrived at their decisions improperly or unfairly.

11,567. Not improperly, but I think you suggest that the valuer who advises the assessment committee has the opportunity of private conferences with them without you, representing the railway company, being present?—Quite so.

11,568. (Chairman.) I should like to say before you go that I am sorry I was not in at first; I intended to be here to-day, but a meeting of the Cabinet was summoned for 11.30, and I could not come earlier than I did. I do not think I have any question to ask you because I think you have been fully taken through the points on which you come to speak, but I should just like to ask whether you have any other point you would like to add or to explain before you leave?—Nothing occurs to me.

Of course, it is quite obvious that three great railway companies, the Great Western, the Midland, and the North-Western (which Mr. Howard is to represent) must have an immense amount in common as between them and the rating authorities?—Yes.

11,575. Then you will not expect us to take you laboriously through three different memoranda largely bearing the same contents?—No.

11,576. Having heard Mr. Smith's examination-in-chief, kindly tell me any points which you would like to comment upon. I think it is a great misfortune you did not see his memorandum?—It is rather difficult to carry in my mind all that Mr. Smith said, because I have not taken notes with regard to all the points.

11,577. I cannot understand why you did not compare beforehand, for we begged the Railway Association most earnestly six months ago to make preparations for it. You cannot expect us to sit here hearing the same thing over and over again, you know?—It is not my fault.

11,578. I am obliged to put it on record as a reason for not taking you through the whole of your memorandum in the way in which it is presented to me?—May I then say, as shortly as I possibly can, that I consider the present system of valuing railways is one of the best systems that exists. I do not agree with the Scotch system, because I think that is a most inequitable one as between one parish and another, that is to say, that having found the total rateable value of the whole of the line, the division of that rateable value between the different parishes throughout the system is an inequitable one as between one parish and another, and I think that condemns it. With regard to the Irish system, I think that also to be an inequitable one,

Mr. P. R.  
Smith.

27 July '97

Railway companies should have some representation at parish meetings.

Assessment committees. Their procedure not always satisfactory.

Mr. W. P.  
Payne.

Valuation of railways. English, Scottish, and Irish systems discussed.

Exemptions, partial, should be allowed to railway companies in respect of rates expended on certain purposes.

Mr. W. P.  
Payne.

27 July '97

because the allocation of the total rateable value of the whole system is divided according to the train miles. The difference in the earning power of the different trains throughout the system is very large. Whereas you would have a train near London earning 6s., 8s., or 10s. per train mile, on a branch line in the country a train would only earn something like 1s. 6d. or 2s.; and if you attribute the same rateable value to every train, you would be taking from the parish near London and putting part of the rateable value attributable to that parish upon some parish far away in the country upon some branch line. That is why I consider the Irish system inequitable.

11,579. Leaving the Scottish and the Irish systems for a moment, do I understand you to put before us that the English system is so perfect that you can suggest no alteration or improvement upon it at all?—I do not say that it is perfect, or else I do not think I should be here to-day.

11,580. We have got the existing system before us pretty thoroughly; I should like to know what criticism you have to make upon it?—It is rather difficult in a few words to go into it.

11,581. I will give you reasonable time; we will take your criticisms in detail, or your suggestions one after the other?—Then, if you please, I will try and follow my memorandum to some extent. I consider that the present system, as it were, is an inequitable one because it taxes profits, a system which does not exist with regard to any class of property except railways, waterworks, and gasworks. I find from some statistics I have taken out with regard to the Midland system that whereas we pay upon a rateable value per acre of from 23l. to 345l., the adjoining land is only assessed at from 9s. 6d. to 8l. 8s. per acre. I have details of all those parishes with me which I will hand in. (*Handing in Tables*).

11,582. You are handing them in for examination; I do not think we can undertake to print them, that must be a matter for consideration?—I hand them in to you so that you may look at them, if you so desire. Testing the inequity in another way, I have taken out the proportion of the rateable value of the Midland Railway in 183 parishes, and the proportion of the Company's acreage to the whole parish. I find that with regard to that we pay, taking in the first instance the parish of Matlock, 16 per cent. of the whole of the rates in the parish, whereas we occupy only 0.67 per cent. of the total acreage. That goes on till we get to the highest proportions, and those are in two rural parishes, one of which is Souldrop in Bedfordshire, where we pay 83 per cent. of the whole of the rates in the parish, and occupy 4 per cent. of the acreage of the whole of the parish; and the other is Wympington, which is in Northamptonshire, where we pay 83 per cent., and occupy 2½ per cent. of the acreage of the whole of the parish.

11,583. If you are going to lean upon that case at all, the second one that you mentioned, you must make it much more distinct. There must be some special reason for that, now what is the reason?—None whatever, except that both of them are agricultural parishes, and that the railway pays, as I say, 83 per cent. of the whole of the rates of the parish, there is nothing exceptional in it. It is a plain line of railway, in both cases, without station or anything of the kind.

11,584. I should like to see the whole figures of the parish?—I can show you this statement which I should like to hand in, which gives the details of all the parishes, from Matlock, with its 16 per cent., upwards. [*Handing in statement.*]

11,585. Have you any other criticisms upon the present system?—As to the amount allowed for tenant's capital, that varies in different parts of the country, and according to the caprice of the persons who are employed to make the valuation. I should like, with regard to the tenant's capital, to have that fixed, as far as it possibly could be, by some impartial tribunal.

11,586. That is a suggestion; I rather wanted a criticism, have you exhausted the criticisms that you have to make?—There is the question also of the valuers in the different parishes, and the way in which they are paid. The railway companies object very much to the system upon which these gentlemen are paid, that is upon a percentage of the rateable value which they find.

11,587. You think it makes it too much a matter of personal interest on the part of the valuer, to get a higher valuation?—Certainly.

11,588. What suggestions do you wish to make to us, you made one a moment ago?—With regard to that, I would suggest that valuers—they are necessary gentlemen—be paid by a lump sum which would cover every duty they have to perform.

11,589. Have you any other suggestion for reform?—Of course, with regard to the valuers, a great many of them, where they are paid upon a percentage, are paid an extra fee for contesting a valuation at quarter-sessions, and it very often happens that the fee which they are paid for making the valuations, and for which they go before the assessment committee, is infinitesimal in comparison with the amount they pile up for fighting a case. I know of a case where a valuer was paid something like 120l. for a valuation, which was contested at the quarter-sessions, and he took something like 800l. extra for fighting it. That sort of thing, I think, should not be continued, because it offers a premium to a man to fight, and puts the companies to large expense.

11,590. Is there any other matter you want to suggest to us as an amendment of the law?—There is one with regard to the statutable deductions, that is to say, the difference between the gross and the rateable. A railway company is only allowed a sum for repairs and renewals, equal to what it can prove. With regard to other classes of property they have an arbitrary deduction, which differs in different parishes, of something like, on house property, 16½ per cent., that is from my own experience, because I have had occasion to go into it. That is a great deal too much. If a man occupying a house were only allowed exactly as much as he could prove, that 16½ per cent. would be, from my experience, whittled down to 10 or 12½ per cent.

11,591. Have you any other suggestion that you wish to make to us?—With regard to the assessment committee, my 25 years' experience of assessment committees tells me that for several reasons they are totally unqualified to act in the position of judges in the matter of the assessment of railways. I should myself think that they should have some Government official or some assessor to sit with them.

11,592. I think Mr. Smith also said that?—Mr. Smith said the surveyor of taxes, but I go further than Mr. Smith. I say that the surveyor of taxes will be very well for governing the assessment of properties other than railways, and putting them up to the property tax assessment; but with regard to the properties of railway companies I would have some gentleman who was competent to deal with the matter, who would bring an unbiassed mind to bear upon the question. I do not want to frame an indictment against assessment committees, but my experience tells me that they very often, a great many of them, look upon a railway company, or a water company, or a gas company as their natural prey, and they endeavour to get as much from a public company as they possibly can. With regard to the proceedings before an assessment committee railway companies have a very great grievance I consider. The assessment committee employ a valuer, and he at the hearing sits in the room, the representative of the railway company goes before the assessment committee and states all his facts and figures, and he is then turned out of the room while the valuer privately confers with the assessment committee, and it is upon the statements made by this valuer behind the back of the railway company's representative that the assessment committee forms its decision. I have had a great many tussles with assessment committees in my time with regard to this matter, and I have told them how unfair and un-English it is to proceed in that way. I consider that the proceedings before an assessment committee should be an open court so far as the appellant and respondent are concerned, but there is only one instance I know of in England where that sort of thing is done, and that is at Poplar.

11,593. What I should like to get from you is what we have really to consider, namely, what is the system which you would like to see brought into force? You have criticised the existing system, and have made some suggestions for its amendment, what I understand from the tenour of your evidence is that you want to see a complete change?—I do want to see a complete change as far as that goes, but I do not think a complete change would be possible considering that we have gone on for so many years under the present

Mr. W. P.  
Payne.

27 July '97

Deductions allowed on house property are excessive.

Assessment committees not qualified to value railways.

Assessment committees, their procedure not always satisfactory.

Valuation of railways. Present system a tax on profits, which is undesirable.

Valuation per acre of land occupied by Midland Railway Company, and of land adjoining occupied by other persons in certain parishes.

Deductions for tenant's capital should be a fixed sum.

Professional valuers, system of remuneration by results unsatisfactory.

Mr. W. P.  
Payne.  
27 July '97

system. If the present system is to obtain I should like to have the alterations made which I have suggested. I should like, as I said before, the amount of tenant's capital to be found by some independent tribunal, and also the amount to be allowed to the tenant upon that tenant's capital.

Railway companies should be able to appoint an ex-officio member on assessment committees and parish councils.

11,594. Is there any other point upon which you wish to speak?—There is the question of representation.

11,595. We had that from Mr. Smith?—What I would suggest with regard to the representation would be that an officer to be appointed by the railway company should be *ex officio* a member of each assessment committee and of each parish council.

11,596. Do you mean of every assessment committee and of every parish council?—So that he might have the opportunity if he chose of attending those meetings.

11,597. Do I clearly understand you. I want to know what you really mean? Take a parish council first; they are elected by electors on a register under an Act of Parliament; I can understand the suggestion that corporations like railway companies should have a right to vote. Do I understand you seriously to propose that in every parish a railway company should have a representative on the parish council?—If they chose, yes I do.

11,598. I take your suggestion; is that all?—I know it is, to use an expression, a very large order; but I consider that railway companies should have an equal right of seeing what is being done.

11,599. Then supposing there are three railway companies in a parish, they are each to have a representative?—Yes.

Surveyor of taxes should sit on assessment committees.

11,600. Is there any other point on which you would like to speak?—I agree with Mr. Smith that the surveyor of taxes should sit with the assessment committee with regard to the adjustment of those properties which are let. Then I think there should be a valuation list for all purposes—for poor, county, Imperial, &c.

Deductions. Railway companies. Fixed deductions for structural value of buildings desirable.

11,601. I think we will not go into that, because we have had that very suggestion made very fully by many other witnesses?—Then I think the percentage to be applied to the structural value of all buildings should be fixed. You had that, I believe, when Mr. Munro, the Assessor of Railways and Canals in Scotland, was before you. In Scotland it is 5 per cent., and the opinion is that 5 per cent. is too much. I quite agree that 3 per cent. would be quite sufficient. If that could be fixed that would remove a bone of contention.

11,602. Is there any matter special to the Midland Company on which you would like to speak?—No, I do not think there is anything peculiar to the Midland Railway that does not apply to other railway companies.

Valuation of railways. Present system a tax on profits which is undesirable.

11,603. (Mr. Clave.) Do you agree that in principle railway companies like other companies that act under statutory authority are properly assessable according to their profits?—No, I do not agree with it at all, but I say that the system having been established it would be very difficult to upset it, but if it were possible to upset it, I think that such a system as this might be adopted, that the value of the land should be taken, with the value of the rails and sleepers added to it, not the embankments or the tunnels, or anything of that kind.

Exemptions, partial. Railway companies in respect of their lines should have exemption of three-fourths extended to every rate except poor rate.

11,604. Do you agree with Mr. Smith that railway companies ought to have the three-fourths exemption extended to every rate?—To every rate but the poor rate, practically, yes.

11,605. Do you find there is any variation in the amount of deductions allowed in different localities?—I find that with some general district rates upon which the three-fourths is allowed they include charges for things which are not included in other places. There is not a uniform system.

11,606. Why should not the railway companies pay upon the whole, on all the rates instead of having these three-fourths deductions?—Because the line of railway itself does not get any benefit at all from the education rate or the highway rate, or the borough rate, or any of those rates.

11,607. Then why should you pay upon one-fourth?—Because we ought to have that advantage, because we do not get, as it were, our pennyworth out of it.

11,608. Why should you pay on a fourth if you get no advantage at all?—If you ask me my view, I do not know that we should pay even one-fourth.

Mr. W. P.  
Payne.  
27 July '97

11,609. Then, really, railway companies ought not to be rated at all in your opinion as regards their lines?—No, I do not go so far as to say that. I would be governed entirely by the principle that you apply to properties *ejusdem generis* with a line of railway.

11,610. You agree with Mr. Smith, do you not, that the present system of arriving at rateable value, and the present system of settling it by means of appeal to quarter-sessions is unsatisfactory?—Yes, quite unsatisfactory.

Appeals. Present system unsatisfactory.

11,611. (Mr. Arthur O'Connor.) I understand that you had not seen Mr. Smith's memorandum and therefore, you were scarcely prepared to do justice to your own way of looking at things by reference merely to the hearing of his evidence?—That is so. I understood that I was to be called this morning as the first witness.

11,612. However, you do not run upon his lines?—No. It is rather difficult to follow every point of a two-hours examination.

11,613. I will take you very quickly through your memorandum. The first paragraph refers to the system of rating a railway on the theory of a hypothetical tenant, I put it in my own words and you need not adopt them if you do not think they are apt and just; the theory of the hypothetical tenant as applied to a railway is simply absurd?—Yes, I have heard him called not the hypothetical tenant but a hypothetical bugbear.

Valuation of railways. Present system not satisfactory.

11,614. The idea is not really applicable to a railway?—I should say not.

11,615. Therefore all the details with regard to the deductions are things that are inapt in the case of a railway?—Yes, I should say so.

11,616. Then with regard to the present system, generally, you are not prepared to suggest a complete alteration, though you admit, I suppose, that the present system is not perfect—it may be, I suppose, as a whole anything but that—not the best laws that the Athenians could have, but the best the Athenians will bear; is that it?—Yes, I suppose so.

11,617. We have to have regard, unfortunately, to established prejudices and ideas. Now, with regard to valuers and their valuations, I understand your suggestion is that sometimes the interest of the valuers jumps with the amount of their valuation?—Nearly always, in 99 cases out of 100.

Professional valuers. System of remuneration by results unsatisfactory.

11,618. And sometimes it may be that their personal pecuniary interest is not always in accord with their duty but may conflict with their duty?—Yes, it may.

11,619. And therefore the system of remuneration is vicious in principle?—Very vicious.

11,620. Now with regard to the train mileage valuation, I suppose that if you have a system of merely train mileage valuation you may be attributing to a certain section of the railway a value which is very much higher than its real value, and to a similar length section elsewhere a value very much less than its real value, having regard to the other circumstances?—That would be so if you adopt the train mileage system.

Valuation of railways. Train mileage valuation discussed.

11,621. I suppose that a section of 20 miles running through common land and a section of 20 miles running through the City of London and its suburbs would give very different results as regards valuation?—Certainly.

11,622. But a system of train mileage would attribute much the same result to the two different sections?—Yes, it would; perhaps not in such a great degree as in the other way but still there would be a great discrepancy.

11,623. Still it is conceivable?—It is.

11,624. And that is an illustration which is admissible?—Certainly.

11,625. We find that in consequence of the system which is adopted in certain parts of the country where the valuation, as at Wymington, is 10,700*l.*, and the rateable value for the Railway is 8,900*l.*, that is to say the Railway is put down at 83 per cent. of the full value of the entire township?—Yes.

Total valuation of property of railway company compared with that of all other properties in the same area.

11,626. Whereas, in fact, it occupies only 2.50 per cent., or one-fortieth of the whole area?—Yes.

Mr. W.  
Payne.  
27 July '97

11,627. A railway occupying one-fortieth of the area is taxed 83 per cent. of the whole?—Yes, and pays 83 per cent. upon every rate which is levied in that township.

11,628. What is the rest of the land in the township of Wymington?—It is agricultural.

11,629. Is any portion of it common land?—No, I do not think there is any common land. I have not walked the parish over, but I know it pretty well. It is agricultural land.

11,630. It is almost incredible—arable land?—Arable.

11,631. Yet one-fortieth part of the area is paying 83 per cent.?—That is so; you can take it from me. I have handed in the Return of the Parish Officer, it is not my return.

11,632. With regard to the area and the gross estimated rental value, no doubt, but what I want to ascertain is, what is the character of the rest of the parish, because if it is purely common land, like a great deal of the land of North Hampshire, for instance, in the neighbourhood of Selborne, where there is a great deal of common it is intelligible, but if it is arable land in the possession of agriculturists, you do not want any further thought—the thing is indefensible?—It is so; it is agricultural land—I mean to say land which is tilled and upon which cattle feed, and that sort of thing.

11,633. Within that township of Wymington what works have you?—Simply a main line of railway.

11,634. Simply the running way?—Simply the running way; no buildings, there are some signal-boxes, however.

11,635. That, is of course, appurtenant to the running way?—That is all.

11,636. Who was it decided upon this valuation?—One of these gentlemen—one of these valuers. He was called in by the union to re-value.

11,637. Do you know how he is paid? Perhaps you do not know, therefore you would not like to say?—I do not know, I have no doubt he was paid a percentage upon the value put on.

11,638. But you cannot say for a certainty?—No, but I feel pretty well certain of it.

11,639. Now with regard to representation of railway companies upon Assessment Committees, I suppose, from what you have already said, you object to taxation without representation?—Certainly it is most un-British and unfair.

11,640. And unconstitutional?—Unconstitutional. We have no representation whatever now, no chance of voting, no chance of knowing anything.

11,641. I have endeavoured to go through your memorandum; I have not been able to do it sufficiently quickly, and possibly I may not be doing justice to it, but would you indicate any points upon which you desire to dwell specially that I have omitted, or that have not yet been touched upon?—I am afraid I have lost my notes.

11,642. I suppose you admit that the railway companies are monopolists with regard to a certain extent of land?—Yes.

11,643. Would you have any objection to be classed as ratepayers among the other occupiers of land in respect to land which you occupy?—No; I think we ought to be. We ought to have the same advantages as other ratepayers have, although we are non-resident.

11,644. Now, assuming that every portion of land, acre for acre, or area for area, was assessed and valued upon some system which was reasonably just and equitable, would the railway companies have any objection to being assessed upon the land which they occupy, apart, I mean, altogether, from their capital sunk in it, or their improvements, or their buildings, or anything else, but merely as occupiers and exclusive occupiers of land?—At the same rate as adjoining land, do you mean?

11,645. Yes?—Certainly.

11,646. They would have objections, do you mean?—No, certainly not; they would agree to it, of course.

11,647. Can you see any objection in principle to a system of rating or assessment which has regard only

to the occupation of land or of the surface of the earth on which all mankind are?—Without reference to what is upon it?

11,648. Yes?—I am afraid not.

11,649. You cannot see any objection, do you mean?—No. I cannot see my way to looking at it in that way.

11,650. Tell me why; what objection is there?—Of course a piece of land with a house upon it is obviously more valuable than a piece of land without anything on it.

11,651. As land, or by reason of what man has done to it?—By reason of what man has done to it.

11,652. Then you are taxing the efforts of man, not land?—That is just what we complain of with regard to the assessment of a railway.

11,653. Then we are at one, only I am afraid you do not see it. I do not want to lead you, but I am putting this suggestion before you, that, apart altogether from the productions of human industry or the result of human effort, mere occupation of land by the human race gives it value, and land should be rated, or might be rated according to its value, apart from all improvements?—Yes.

11,654. As a railway authority, you do not object to that?—No.

11,655. You see no objection in principle to the rating of occupiers of land according to the value of the land, as land which they occupy?—Yes. It would be a great revolution, of course.

11,656. That is not the question?—No. I quite admit that.

11,657. The present system is admittedly bad, or you and I would not be here. Can you suggest any objection in principle to the system of valuation which should be based on land as occupied, apart from improvements?—It is a very difficult question, and I have never addressed myself to the theory.

11,658. Is there any other point? I am afraid, from the point of view from which I have interrogated you, that all the paragraphs in your memorandum are mere matters of detail?—I should like to say this, which I have not touched upon before, that I think that notices of meetings of assessment committees should be inserted in the local papers, so that we who are non-resident might have some chance of knowing when they meet; and also I should like an alteration in the law (the Union Assessment Committee Act, 27 and 28 Victoria, cap. 39, section 5), which says that notice shall be given of an alteration of an assessment to a railway company only where they have no office in the parish. Now I think it is only fair that they should in all cases have a notice of an alteration of the assessment, because they may have, as we have, little roadside stations in a parish, where, of course, the station-master may not take any interest in the matter; and then, if the assessment is put up, it is confirmed before we know where we are. I think that non-resident ratepayers, be they railway companies, or gas, or water companies, should have notice, as they do in London, of every alteration of assessment.

11,659. That is because the headquarters are in London?—No; that is according to the Valuation (Metropolis) Act. Every one has a notice in the Metropolis; but in the country it is only where they have no office in the parish that notice is sent to headquarters, and I think that that might easily be altered, and that in every case we should have notice of alterations of assessment.

11,660. Is not your station an address for service within the meaning of the Acts?—They take it so, of course, but then it is only a comparatively ignorant official who is in charge of these small stations.

11,661. Under the Act it is so, and notice at your station within a parish would be notification to your Company?—No.

11,662. Is that so?—All summonses and that sort of thing are only to be served at the head office.

11,663. For the parish purposes?—Yes. For parish purposes they are always sent to the headquarters of the Company.

11,664. (*Viscount Emlyn.*) Is there anything else you want to say?—No.

Mr. W. P.  
Payne.  
27 July '97

Notices served by assessment committees on railway companies, suggested alteration in procedure.

Railway companies should have representation on assessment committees.

Valuation of land. How far the value of the land alone should be the basis for assessment to local rates.

Mr. SAMUEL MOWBRAY HOWARD, called and examined.

Mr. S. M.  
Howard.  
27 July '97

11,665. (*Viscount Emllyn.*) You are the Rating Agent of the London and North-Western Railway Company, are you not?—Yes.

11,666. You have held that office, have you not, for the last nine years?—That is so.

11,667. During that time your attention, of course, has been called to all these questions we have to discuss with regard to rating?—Very largely indeed over the immense system of the London and North-Western Railway Company.

11,668. I do not want to take you in too much detail over the points we have already discussed to-day; you, of course, have heard the evidence that has been given to-day?—Yes, I have.

11,669. And your evidence, naturally, would have covered a great deal of the same ground that has already been touched upon?—Yes.

Valuation  
of railways.  
Present  
system a  
tax on pro-  
fits which  
is undesir-  
able.

11,670. Would you tell the Commission any particular points that you would like to lay before us with regard to your own views on the different subjects we have to consider, without going too much into detail over the same ground we have already been over to-day. I mean, unless, of course, there is anything you wish to correct, or to express your own opinions upon as differing from others?—With regard to the system of arriving at the assessment of a railway generally, I think it is altogether wrong, as fully explained by Mr. Smith and Mr. Payne, that profit enters too largely into the consideration. First of all, we put down our gross receipts, and deduct only limited working expenses, in many cases the smallest expenses that the parish valuer can justify, or can, with any conscience, I was going to say, put before his clients. Then again, in dealing with the allowance for tenants' capital, the object, as I have explained in my memorandum,\* of the parish surveyor is to minimise the amount of capital that we use in the conduct of our business; although, at the present time we are laying out additional sums in the improvement of our stock, yet they consider that the old allowance of 25 or 30 years ago, which was then recognised generally as 100 per cent. of the gross earnings, should now obtain.

London  
and North  
Western  
Railway  
Company  
have im-  
proved  
their stock  
in greater  
ratio than  
the gross  
receipts  
have in-  
creased.

11,671. (*Mr. Arthur O'Connor.*) One hundred per cent. of the gross earnings?—Yes.

11,672. What does that mean?—Twenty-five or 30 years ago it was generally understood and accepted, that for every £ of gross receipts, a railway company wanted 11. of stock in value; that is to say, for every 100l. you must have 100l. worth of engines, carriages, waggons, and so on, to earn that gross receipt of 100l.

11,673. (*Viscount Emllyn.*) Is not this the case: that in order to earn 100l. in gross receipts, you would have to expend 100l. in rolling stock and other things?—That is so, but that is the old suggestion. During the last 25 or 30 years we have so improved our stock—improved it in greater ratio than the gross receipts have increased—that the value of the stock to 100l. of the gross receipts is now about 120l. or 130l.

11,674. (*Mr. Arthur O'Connor.*) You mean to say, not that you have improved your stock, but that you have augmented it?—We have improved it, principally. For instance, in the place of the four-wheeled carriages we have now got eight and twelve-wheeled carriages, and the accommodation in those carriages, that is, the earning power of those carriages, is no greater to-day than it was 25 years ago; our customers were more closely packed in those days than they are to-day. I think that that additional allowance should be properly dealt with by the Union assessors, but their effort is constantly in the direction of keeping alive the old idea of 100l. of stock to 100l. of earnings as the maximum allowance.

11,675. And that no longer corresponds with the fact?—It does not in any way.

11,676. (*Viscount Emllyn.*) You would put it as high as 120l. or 130l. for each 100l. of gross earnings?—I would. That applies to the North-Western Company. Assuming, for the moment, that the North-Western Company were to act as the Midland Company have done, and to take over the waggons of the coal-owners, then the gross capital would be further augmented.

11,677. Your practice in the London and North-Western is not to take over the coal waggons, is it?—It is not.

Mr. S. M.  
Howard.  
27 July '97

11,678. But the Midland Company have taken them over, and they are part of their own stock?—That is so.

11,679. (*Mr. Arthur O'Connor.*) So that the practice of the railway companies varies?—It does. I think the Midland and the North-Eastern are the only two large companies owning the coal waggons; on the other lines they belong to the private traders.

11,680. (*Viscount Emllyn.*) That would show to anyone that you cannot deal with an absolute and hard-and-fast figure for the tenants' capital, and apply it to all companies?—Certainly not.

11,681. (*Mr. Arthur O'Connor.*) The terms do not mean the same thing?—They do not; you must take into consideration the facts as they apply to each company. The next item for consideration for the parish valuation is the allowance to be made to the tenant on this large sum of money which he invests in his occupation. In old times 25 per cent. was allowed.

Valuation  
of railways.  
Deduction  
of 17½ per  
cent. for  
tenant's  
capital not  
sufficient.  
At least  
20 per cent.  
should be  
given.  
Reasons  
for this  
view.

11,682. (*Viscount Emllyn.*) That is a deduction made upon the tenants' capital?—That is so. The 25 per cent. allowance is mentioned in several of the old cases which came before the Court of Queen's Bench, the Grand Junction case, about 1850, for instance, and other cases; and the 25 per cent. appears to have been accepted as a fair and reasonable thing. When they got to the position of having exhausted all the cases that could be dealt with by the 25 per cent. allowance, the valuers went from 25 to 20 per cent. Having valued all railway properties, and exhausted that basis, they have gone down to 17½ per cent.: and, indeed, to-day certain valuers are putting before the courts the suggestion that, in consequence of the cheapness of money, 10 per cent. is a sufficient allowance to any tenant.

11,683. Will you tell us what your views are as to the adequacy of the 17½ per cent.?—I think 20 per cent. at the least is the fair and reasonable allowance to be made to a railway company.

11,684. Have you any figures that you can put before us to bear out that statement?—The division of that 20 per cent. I would suggest should be made up in this way—10 per cent. for tenants' profit, which is only a reasonable allowance; 5 per cent. interest on the money invested in the concern; and a further 5 per cent. for risks and casualties, and the many considerations which ought to have weight in dealing with the undertaking of a railway carrier. It is stated in the case of a railway company, on the other side, that as they can borrow money at 2½ or 3 per cent., no greater allowance than that should be made to them, but the object of a valuation list is to make an equal assessment, and if you apply 3 per cent. or 2½ per cent. to the case of a railway company, you go to the credit of the ratepayer at once; you find that a railway company has a good credit, and that they can borrow the money at that rate; but if you deal with the next-door occupier, a cottager, or an agriculturist, who has to pay 5 per cent. for his money, then the allowance is willingly made. I do not think such a distinction should be made in dealing with the rateable value of any property.

11,685. With regard to the deduction that is to be made, do you think that it is desirable that it should be fixed by statute, or by some authority all round, bearing in mind, of course, the different position of each company, or would you like it to be left as it is now to be decided by the present authorities?—I think that the allowance to be made to the tenant on his capital might be fixed by statute, but the amount of capital necessary for the conduct of any railway business must be left to the particular circumstances of each company.

Valuation  
of railways.  
Statutory  
deduction  
for tenant's  
capital  
desirable.

11,686. As far as your own Company is concerned have you any figures that you would like to put in showing us the increase that has taken place in the amount paid by your company to the local rates?—I have a statement which has lately been prepared which shows the very large payments we make and the percentage which those payments bear to the gross receipts.

Increase in  
amount of  
rates paid  
by London  
and North  
Western  
Railway  
Company.  
Statistics.

11,687. Will you put that paper in, calling attention to anything you would deduce from it?—Yes (*handing in statement*). The object of the paper is to show the very large increase which has taken place in the payments during the last 10 years, and if we go back for a further period of 10 years the increase is quite as

\* Pt. II. of Appendix to Vol. I. of Minutes of Evidence, pp. 376 to 381.

Mr. S. M.  
Howard.  
27 July '97

striking as this. In 1857 we paid 274,000*l.* for local rates, in 1896 that amount jumped up to 368,424*l.*, or from 2.728 per cent. to 3.101 per cent. of the gross earnings, or from 5.666 per cent. to 6.933 per cent. of the net earnings. I think that is on all fours with the large increases which have been spoken to by the previous witnesses.

11,688. You have another paper that you want to hand in, I think?—There is another paper which I should like to hand in, which shows the rateable value of the Company's property in 148 parishes, compared with the total rateable value of each parish, also the area of land occupied for railway purposes in each of those parishes compared with the total acreage of each parish. (*Handing in statement.*)

11,689. Is there any particular thing with regard to this you would like to call our attention to?—It shows, as has been done by the other witnesses, the very large proportion of rates which we pay, and the very small area of land which we occupy in the parishes. For instance the first group consists of five parishes, and the North-Western Company's assessment equals 21,637*l.* out of 25,897*l.* or 83.6 per cent. on the average of the five. The total area of the Company's property in the five parishes—this being taken from a Parliamentary Blue Book published in 1887, which gives the latest information as to the extent of the parishes throughout the Kingdom—is 150 acres, and the total area of the five parishes is 4,395 acres, showing that only 3.4 per cent. of the total area is occupied by the Company, whereas they are paying 83.6 per cent. of the rates in those parishes.

11,690. Do you concur in the view that you ought under those circumstances, being large ratepayers, to have some opportunity of being present at parish meetings and other meetings?—I do.

11,691. Have you found it yourself in your own experience of any value to be able to be present as you were before the passing of the Act of 1896, did you find that of much practical value?—I have found it of very great value indeed. I can give you one very striking instance of it which has lately occurred. In the parish of Linslade in Buckinghamshire they proposed, through the parish council, and actually accepted tenders and plans for a water and sewerage scheme to cost 12,000*l.*; the North-Western Company's interest in that parish is over 11,000*l.* out of 21,000*l.* We showed them that the proposal was altogether extravagant and unnecessary for such a place. They heard me as a matter of grace simply; they told me I had no business at their meeting, and so on, but they had committed themselves to this expensive scheme. I then went to the district council and pointed out to them what the parish council had done; they allowed the Company to be represented at their next meeting by engineers, myself, and other people.

11,692. (*Mr. Arthur O'Connor.*) Who were "they" who did?—The Leighton Buzzard Rural District Council. The plans had to go from the parish council to the district council.

11,693. By "they" you meant the district council?—Yes. The district council saw at once that the scheme was altogether out of reason, and they abandoned it, and adopted a much smaller scheme put forward by another engineer, with the result that they are to-day carrying out a scheme which will cost between 6,000*l.* and 7,000*l.*, instead of double the amount. It was only the action of the railway company, and they appeared there simply as a matter of grace, that prevented the saddling of that parish with a very heavy debt indeed.

11,694. (*Viscount Emlyn.*) You do not suggest that you should get voting power proportionate to the amount of rates you pay, but merely that you should have, as a ratepayer, a right to be present?—That is so; simply that right, and the right to vote as a single individual. Then, with regard to the adoption of the Watching and Lighting Act, I have many instances I could bring before the Commission where the outside boundary of the railway has been adopted as the boundary of the lighting district simply for the purpose of getting the railway company's money to pay for the scheme. We have no voice in the matter, and we have no appeal; if that is carried by the majority it becomes law, and it often is carried, even by our own workmen, against us. We have no voice in it.

11,695. There again you claim, I suppose, that you should have a voice, and that you should also have an appeal, do you not?—That is so.

11,696. (*Mr. Arthur O'Connor.*) I do not quite understand that. What is carried by your own workmen?—In some rural parishes we may have a number of our own workmen living in the place. They live in cottages, and they think, as members of the parish council, that the Lighting and Watching Act will be of great advantage to the parish, and they have openly stated on more than one occasion that it will not add to their rent: "There is no fear of the landlord increasing the rent to pay for this privilege and luxury; the railway company have property in the parish, and we will take their outside boundary as the boundary of the district, and they will then pay, perhaps, three-fourths of the cost of this lighting."

11,697. You get their labour for wages?—We get their labour, and we pay them wages for it.

11,698. You get their labour for wages, and you charge them rent as landlords?—That is as it may be.

11,699. Is that so as a fact?—It is not so always. In some cases it is so, but in many cases they live in the houses of other landlords, and pay rents to other individuals altogether.

11,700. (*Viscount Emlyn.*) I suppose some men live in your houses, and others find houses and lodging for themselves?—Yes.

11,701. Have you thought out how far the reductions you are allowed for certain rates are satisfactory, or whether those deductions ought, in your mind, to be spread to any other rates than they are applied to now?—I quite agree with the previous witnesses in that respect, that the allowances should not be confined as they are at present to the general district rates and the sanitary rates. I think they should apply to the borough rates, the highway rates, the county rates, the general expenses of the rural district council, the school board rates, the burial rates, and the public libraries rates. Those are the principal rates which, as it seems to me, do not confer the least benefit upon railway property, particularly in parishes which are purely of a rural character, and in which we have no station. I ask for the abatement of three-fourths on the line of railway simply, not on the station buildings.

11,702. There have been suggestions made with regard to the rating of railways as a whole; have you considered that subject?—I have considered it, but I see very grave difficulty indeed in following the suggestion. Take, for instance, the proposed re-valuation of a county; we have the greatest difficulty to-day in making up the valuation of even a union. Take the one parish of St. John, Hampstead, which we recently tried at quarter-sessions. The cost of getting out the traffic was upwards of 900*l.* in that one parish alone, and the time it took was three months.

11,703. (*Mr. Arthur O'Connor.*) And even then the result was speculative, more or less?—It was, quite.

11,704. (*Viscount Emlyn.*) You think there are very strong objections, then, to making any endeavour to rate railways as a whole?—I think it is impossible. The greatest difficulty is in regard to the allocation of the total amount which you find. Many of the large towns, and populous villages have, on the strength of the large amount of railway companies' rates, borrowed money and contracted debts in many directions. To make a valuation of even a county, and to apportion that according to train mileage would be to entirely dislocate the existing state of things. The parishes which have incurred the debts would no longer be able to meet their obligations.

11,705. Have you had any experience of the Scottish system yourself?—Yes. I have had a little experience of it, and of late years I have enquired more or less into it.

11,706. You are pretty familiar with what its procedure is?—I am; and I think it is altogether incapable of being applied to England.

11,707. Will you tell us why?—The principal objection is the method of apportionment. That could not obtain in England at all. Then, again, assume for a moment that the North-Western Company were to take over the North London Railway; the North London at the present time is paying a rateable value of something like 3,000*l.* or 4,000*l.* a mile: if that rateable value were to come in as an integral part of the North-Western system—

11,708. Assuming it to be divided on the same basis as the Scotch system?—Assuming it to be so divided,

Mr. S. M.  
Howard.  
27 July '97

Exemptions, partial, should be allowed to railway companies in respect of their lines for rates expended on certain purposes.

Areas for purposes of railway valuation. Union, not county, areas desirable. Reasons for this view.

Valuation of railways. Scottish system would not be applicable in England.

Mr. S. M.  
Howard.

7 July '97

that rateable value would be lost to London; a portion of it would go to the far ends of Anglesey or South Wales, or somewhere else where, perhaps, the liabilities of the parish are next to nothing.

11,709. You think your friends about North London would not like it?—I am quite sure the parishes would not. The effect would be that, owing to the large addition to the rateable value in the rural districts in South Wales, Anglesey, and other places, they would be tempted to increase their debts, and so increase the amount in the £, and the effect of the abstraction of the rateable value from the parishes in the London district would be to increase abnormally the amount in the £ of the rates to meet their present liabilities.

Valuation per mile of London and North Western Railway. Highest and lowest valuation per mile.

11,710. You could give us, I think, could you not, the highest and lowest assessments per mile of the London and North-Western which will bear on that point?—We have several places where the total rateable value is 7,000£. per mile. I may say that the area of land for that 7,000£. is something like 8 or 10 acres. In one case the actual occupation will not be one acre, on account of the railway being on a viaduct; it is simply the piers of the viaduct which rest on the land.

11,711. (Mr. Arthur O'Connor.) Do you not count the arches?—The arches are let off, and separately assessed to the tenants.

11,712. By whom—by the railway?—By the railway, but there is a separate assessment, and the land under the arch is separately assessed at its value.

11,713. (Viscount Emllyn.) And the arch itself is separately assessed?—Yes.

11,714. You have given us the highest amount per mile; can you give us what is the lowest on the London and North-Western?—The lowest is from 25£. to 30£.; we have one or two isolated pieces.

11,715. That, in your view, would be a great objection to any attempt at allocating the rateable value of the line over the whole of this system?—I go so far as to say, from my experience, that it would be impossible, with any degree of equity, to do it.

Valuation of rail-ways.

Irish system would not be applicable in England.

11,716. Are you acquainted also with the Irish system of rating railways?—Yes, I have a railway to attend to in Ireland.

11,717. Can you tell us how you think that system works, and whether you think it would be applicable to England, or not?—It would not. The objection is simply one of degree if you apply the Irish system to England. You would take a train mile, as Mr. Payne put it, I think, earning 10s. in the neighbourhood of London and equalise that with the train mile earning 1s. or 1s. 6d. in an outlying district. I would like to show that Parliament has already recognised as just and reasonable the partial exemption of the three-fourths which I have spoken to. We have tried to get it in many cases which have come before the Houses of Parliament during the last 10 or 15 years, and although we have been opposed by the local authorities over and over again, the allowance has been granted.

Surveyor of taxes should sit on assessment committees and then those tribunals would be satisfactory.

11,718. Are you satisfied with the present appeal that there is from the assessment committees?—First of all, with regard to the assessment committees, I would say that, with the presence of the surveyor of taxes, the objections which we have at the present time with regard to the rating of houses and other properties than railways, would be largely reduced. The surveyor of taxes should be present at the meeting of the assessment committee. I would also suggest as an amendment that ratepayers have access to the accounts of the surveyor of taxes, that is to say, that Schedule A should be open to all ratepayers. The only objection at the present time is that the form in which these accounts are made up, is that they include Schedules A B C D and E, and the fear of the surveyor of taxes, and also of the commissioners of taxes is that anyone inspecting Schedule A will also trouble himself with regard to his neighbour's income shown in Schedule D.

11,719. All you suggest is that they should have access to Schedule A?—That is all we want, and a very proper and reasonable proposal it is, seeing that Parliament already gives us the power to object to other ratepayers' assessments.

11,720. With that modification you would be satisfied to go on with your assessment committees, plus, of course, the assistance of the surveyor of taxes?—That is so.

11,721. Then to come to the next step: what is your view as to the present court of appeal?—The court of appeal, that is to say, the quarter-sessions is altogether unsatisfactory, and I cannot do better than give you the expression of the quarter-sessions themselves as to their own ability to deal with these matters. I have here a report of one of the last cases we fought at very great length at quarter-sessions; it was before the Northamptonshire Adjoined Quarter Sessions, and it is reported in the Northampton "Daily Chronicle" of Wednesday, March 18th, 1896. The Chairman, in giving the judgment of the Court upon this "intricate matter," said, "he might be allowed to express his regret that the Legislature had not constituted some permanent tribunal for the settlement of these cases."

11,722. (Mr. Arthur O'Connor.) Do you give us this as a competent or incompetent court?—This court is a most competent court.

11,723. Then why did not they give a decision?—They took four days to deal with the case, and heard both sides at full length; they did give their decision, but before giving the figures they expressed this opinion upon the matter generally.

11,724. (Viscount Emllyn.) Generally speaking, you do not, as I understand it, think the court of quarter-session is a satisfactory tribunal as an appeal court?—It is not as an appeal court.

11,725. What do you propose to set up in its place; have you anything in your mind?—I should propose a court constituted somewhat after the manner of the Railway Commissioners; I do not say absolutely the Railway Commissioners for the name at once prejudices them in the eyes of the parish officials, but if we had an impartial tribunal constituted as that court is, it would answer our purposes, and we should get a fair and impartial hearing.

11,726. Are there any other points you would like to bring before us besides those we have asked you about?—I should like to emphasise the effect of the Agricultural Rates Act on railways and on agricultural land. The contribution by the Government is made only in respect of certain spending bodies, but the Act of Parliament says that every rate shall be charged on only one-half the amount in the £ on agricultural land; the payments to be made by the authorities other than the spending bodies named in the Act of Parliament have to be made up entirely by the railway companies and the occupiers of hereditaments other than land.

Agricultural Rates Act. Effect on properties other than agricultural land.

11,727. (Mr. Arthur O'Connor.) You mean as to one-half?—That is as to the whole of the expenses of authorities other than the spending bodies named in the Act; the whole of those payments have to be made up by railways and hereditaments other than agricultural land.

11,728. (Viscount Emllyn.) Agricultural land not paying more than 50 per cent. of the whole of the original amount?—Of the whole of the amount paid by the Government. In many cases before the passing of that Act the expenses of the overseers were equal to 1d. in the £; now they have gone up in many cases to 4d. in the £, and there is no benefit at all conferred by that additional expenditure or additional payment made by the railway companies. Then there is the notice in the Act of 1864 which Mr. Payne spoke of; I have got a note here to speak to that. The Act says that in the case of every railway and canal company not having an office or place of business in the parish notice shall be sent to the head office of any alteration in the assessment of that railway or canal company. Now, where we have a small station the station-master has too much to do to attend to assessment business; the assessment committee have this re-valuation before them and they approve it, and the first we hear of the increase in our assessment is on the receipt of the demand note. As the appeal to the Quarter Sessions, that is, after dealing with the assessment committees is to the next practicable sessions, we have no time to have justice done to our case by the Assessment Committee. We want in every case where an alteration is made in the assessment of a railway company that notice should be served upon the company.

Notices served on railway companies by assessment committees. Suggested alteration in procedure.

11,729. Are there any other points which you would like to bring before us?—I do not think there is anything further.

Mr. S. M.  
Howard.

27 July '97

Appeals. Quarter Sessions unsatisfactory tribunals. A specially constituted appeal court desirable.

Mr. S. M. Howard.

27 July '97

Agricultural Rates Act. Effect on properties other than agricultural land.

Exemptions, partial. Further extension in favour of railway companies. Effect on other properties. How far certain rates hereditary burdens.

11,730. (Mr. Clare.) You complain of the effect of the Agricultural Rates Act upon railway companies, I think?—Yes.

11,731. Showing that the effect of transferring a portion of the liability from the occupiers of agricultural land to the rest of the ratepayers in the parish has been naturally to increase your rates?—That is so.

11,732. And now you propose to further increase the rates of all the other people in the parish, except the railway companies, by transferring to their shoulders the amount which if you get the three-fourths with regard to all the rates the railway companies would be relieved of?—To that extent. I base the application on the fact that we do not derive any benefit from these charges, and I would also point out that in the case of an urban district the salaries of the establishment and all expenses are thrown on to the general district rate, when a railway company is charged one-fourth only, but if that urban district becomes a borough they have the power, simply by the transfer of the authority, to charge many of these expenses on to the borough rate, and the borough rate is payable in full by railways and all the other ratepayers.

11,733. Do you think it is practically possible to so arrange the taxation of the country that every man shall pay exactly in proportion to the benefit he receives?—It may not be possible to do it with any degree of strict accuracy. I think that the benefits which accrue from expenditure should be paid for by those who receive such benefits.

11,734. Can you suggest any more easy method of apportioning it than to say that the community which exists in a particular rating area shall contribute proportionately to the common expenditure?—Yes, I think so. I think it is very unfair to base it on that ground, and treat it in a general way in that respect. For instance, if part of a parish which lies a mile or two away from the railway requires drainage, or requires additional police supervision, that is not due in any way to the railway company, and the increased expenditure will not carry any benefit at all to the railway company.

11,735. You have referred to certain of the rates, the borough rate, the highway rate, the county rate, and others, for which a railway company have no three-fourths exemption?—Yes.

11,736. Those rates, the borough rate, the highway rate, and the county rate are collected with the poor rate?—That is so in rural districts.

11,737. The poor rate existed long before railway companies went with compulsory powers to divert agricultural land into railways?—Yes.

11,738. So you went there with the knowledge that the poor rate existed?—Yes, but in those days the highway rate was a separate charge, and it was not included with the poor rate; it was separately assessed as it is to-day in some places.

11,739. At any rate the railway companies started their works with the knowledge that they had no three-fourths exemption with regard to those rates?—They did originally, it is true; the Liverpool and Manchester line, for instance, was constructed before these exemptions were granted.

11,740. There were no exemptions granted to railway companies by general legislation before 1848?—1848 was the first time.

11,741. That was when the railway companies were strong enough in Parliament to get the three-fourths exemption in sanitary rates?—I do not think that was the cause, it became such a crying evil by 1848 that Parliament could not resist it.

11,742. Pardon me. General sanitary rates did not exist in 1848?—There were sanitary rates in existence.

11,743. Only under private acts?—That is so. When Parliament saw fit to make sanitary rates general all over the Kingdom, then they saw the expediency and the equity of giving this partial exemption.

11,744. Parliament gave way to the pressure and power of the Railway Companies, and gave them the three-fourths exemption when on all other rates in the country they were paying in full?—From my experience, —and I can only speak from experience—railway representation in Parliament, as far as matters

connected with railways are concerned, has been extremely small.

11,745. (Mr. Arthur O'Connor.) You spoke of a certain court of quarter-sessions declaring, apparently, its own incompetence and regretting that there was not something stronger and higher than itself, in Northampton was it not?—It was the Northamptonshire Court of Quarter Sessions.

11,746. You, yourself, say it was a competent court?—As quarter-sessions go it was one of the most competent I have been before.

11,747. Now with regard to the notice to the head office and the notice in the districts where you have a small station, does not the station-master get as much notice as any other inhabitants?—No.

11,748. Why not?—I am afraid, that, as the only notice of the intentions of the assessment committee—

11,749. Is on the church doors?—Is a notice on the church doors—

11,750. Does the station master never go to church?—I am afraid they do not go as often as other people, for they have Sunday duty to perform.

11,751. Surely it is to be assumed that one person living in a house, in a certain area, gets as much notice by a paper on the church door as anybody else?—The probability is that the station-master takes no interest in it at all, for this reason—

11,752. That it does not come out of his pocket?—Yes. He lives on the station premises, and he has no interest in it at all; and then it is a technical and difficult matter.

11,753. With regard to the deductions of three-fourths—that is the figure you mentioned, was it not?—Yes.

11,754. Will you tell me why it was not two-thirds?—I can only say that it was in the wisdom of Parliament that three-fourths was granted.

11,755. Can you tell me why it was not five-sixths?—I cannot.

11,756. Can you tell me any magic in three-fourths?—No.

11,757. Can you tell me any principle in it?—Except this, that they thought that the railway companies should pay something.

11,758. Will you tell me any principle which fixed three-fourths rather than two-thirds, or five-sixths?—No principle at all.

11,759. Absolutely none?—None at all; in fact, the only principle would be to charge them nothing at all for certain of these rates; where the benefit is absolutely nil, they should pay nothing, and there are cases where it is so.

11,760. Would you see any objection to the railway company paying rates upon the land which it is allowed to occupy exclusively for its own purposes?—Not the least objection.

11,761. Do you see any objection in equity or in principle upon rating generally being based upon the exclusive occupation of the surface of the earth?—Yes, I see this objection to it: where a man puts up a house on the surface of the earth, and that house has to be drained, and expensive works have to be carried out for the purpose of meeting that man's convenience, then I think that the value of the house should be added to the value of the land.

11,762. Is not the value of the land, as land, improved by the very drainage operations which you speak of?—Not to any appreciable extent, when you deal with it as land.

11,763. Is not a well-drained, well-built area, more valuable than the middle of a common?—Certainly it is.

11,764. By reason of what?—By reason, perhaps, of the surroundings simply.

11,765. Do you mean the surrounding common?—No, the surroundings of the well-built and well-drained land.

11,766. Not in itself?—Not in itself.

11,767. You think that in a well-built city, a well-drained city, and well-lighted city, is more valuable, not by reason of that which is within the area of the city itself, as by reason of that which lies round about

Mr. S. M. Howard.

27 July '97

Appeals. Quarter Sessions not satisfactory tribunals.

Notices served on railway companies by assessment committees. Suggested alteration in procedure.

Exemptions, total. In some cases railway companies should be totally exempt from payment of certain rates.

Valuation of land. How far the value of the land alone should be the basis for assessment to local rates.

*Mr. S. M.  
Howard.*  
27 July '97

it?—I mean by its surroundings, that which is in the middle of the city and surrounds the particular property with which you are dealing.

11,768. But that is the city; whether you take the city as a whole, or a certain square of the chess-board, is it not true that the building and the presence of men, and drainage, and lighting, and everything else, add to the value of the site?—Yes, certainly.

11,769. And it is not the surroundings; it is not the frame of the chess-board, but it is the chess-board itself within the city area that is of value?—That is so; but comparing a well-drained piece of land with a house

upon it with a common, then I say that the land upon which the house stands gets its increased value from the fact that it is in a position where building is required.

11,770. Where men are present?—Yes.

11,771. I suppose there would be no buildings without men?—I expect not.

11,772. And there are no men without buildings?—Not as a rule.

11,773. (*Viscount Emlyn.*) Is there anything else you wish to say?—No, I do not think there is.

*Mr. S. M.  
Howard.*  
27 July '97

The witness withdrew.

Adjourned.

## I.—GENERAL INDEX TO EVIDENCE.

THE FIGURES REFER TO THE NUMBERED QUESTIONS IN THE MINUTES OF EVIDENCE.

## ABILITY TO PAY, TAXATION UPON PRINCIPLE OF:

- Definition of ability to pay (Mr. Peterson), 8220-3.  
 Doctrine discussed (Mr. Humphreys-Davies), 4399-404; (Capt. E. G. Pretyman, M.P.), 9603; 9604.  
 Doctrine cannot be applied to local rating (Mr. Peterson), 8305.  
 Application of principle (Mr. Dodds, Scotland), 497-500; (Mr. Dawe), 1372-82. How far imported into Public Health Act, 1875 (Mr. Dawe), 1424-8; and into Act of Elizabeth (Sir H. B. Poland), 2402-5.  
 The Legislature intended that individuals should be taxed for local purposes according to their ability to pay (Mr. Rew), 10,460-3.  
 Local taxes should be paid by persons in respect of all kinds of property according to their ability to pay (Mr. Peterson), 8211-9.  
 Rent not a fair test (Mr. Rew), 10,599-603.  
 Rent of a house apart from land in agricultural parish is a rough criterion representing a tenth of income. But the clergy and farmers pay more than this proportion (Mr. C. S. Read), 10,331-3.  
 Rent rather than profits should be the measure of the ability to pay of a business undertaking (Mr. Morse), 4911-8.  
 Income is the best measure of, (Mr. Little), 8133-7.  
 Suggested that local rates be levied as an income tax collected by the Government. Question of administration and control considered. Contribution to rates according to benefits received from their expenditure considered (Mr. Rew), 10,640-52.  
 Contributions to Imperial as well as local taxation must be considered (Mr. Peterson), 8207-10.  
 Contributions should be made according to ability to pay by all persons, except those whose incomes are derived from labour, for expenditure on purposes of a national character. Amounts expended out of local taxation on purposes said to be of a national character (Capt. E. G. Pretyman, M.P.), 9677-90.  
 Agriculturists ability to pay has decreased. Fall in prices of agricultural produce (Mr. Rew), 10,635-9.  
 Maidstone rate-books for year 1680, extracts from (Mr. Peterson), 8380-5.

## ACCOMMODATION LAND:

- Suggested definition of (Mr. Eve), 7771-4; 7822-31.  
 Should have been excluded from operation of Agricultural Rates Act, 1896 (Mr. Eve), 7712-7; 7729-52; 7771-4.

## ACTS OF PARLIAMENT:

- (See also under each particular Act.)  
 Local Acts often inconvenient (Mr. Humphreys-Davies), 4226.

## AGRICULTURAL DEPRESSION:

- Decrease in value of produce (Mr. C. S. Read), 10,444; (Mr. Rew), 10,635-9.  
 In North Yorkshire (Mr. Rowlandson), 9988, 9989.

## AGRICULTURAL LABOURERS:

- Suffolk. Cottages assessed above actual rental in certain unions (Capt. E. G. Pretyman, M.P.), 9576-81; 9776-83.  
 Relation of wages to poor relief (Mr. A. F. Jeffreys, M.P.), 11,191-3.  
 Suffolk. Wages raised on account of Agricultural Rates Act, 1896 (Capt. E. G. Pretyman, M.P.), 9694; 9695.  
 Mitford and Launditch Union of Norfolk. Wages have remained stationary (Mr. Hubbard), 3238-40.

## AGRICULTURAL LAND (INCLUDING HOUSES AND BUILDINGS ATTACHED THERETO):

Index to Evidence.

## (a.) Valuation.

- Deductions allowed (Mr. Horn), 6851-64.  
 Suggested that the machinery employed upon a farm is taken into account (Mr. Rew), 10,617-24; 10,861-71. Also tenant's capital, 10,607-16.  
 Tenant's profits not an element considered (Mr. Barton, Ireland), 3607; 3608.  
 In certain unions is not assessed at less than a fixed amount. Practice not warranted (Mr. Cobbold), 5226-9.  
 Glanford Brigg Union. Farm buildings valued separately from the land (Mr. Hett), 4610-2.  
 Valuation of land and buildings made separately and entered separately on rolls. Method adopted to arrive at their valuation (Mr. Barton, Ireland), 3558-66.  
 Land in hand. Valuation of (Mr. Hett), 4551-3; (Mr. C. S. Read), 10,322-4.  
 Mortgaged land. Interest inserted in Schedule A. (Mr. Hett), 4579-84.  
 Permanent basis of valuation for a certain period desirable (Mr. Cobbold), 5268; 5269. For three or five years, 5241-6.  
 Aston Union, how valued in. Valuations about equal to amount of rent actually received by the landlord (Mr. North), 4533-9.  
 Essex. Valuation of land above rental value (Mr. Pell), 7915-20. Valuation of certain land in hand above rental value, 7909; 7910. Action of Union Assessment Committees and Quarter Sessions. Suggestion as to alteration of the tribunal of appeal, 7940-9. Land assessed in Dunmow Union at less than annual value (Rev. E. F. Gepp), 8542; 8543; 8566-76.  
 Valuation of land above rental value (Mr. Pell), 7974-82; 8024. In Cambridgeshire, 7939. In Depwade Union (Norfolk), (Mr. Holmes), 3080-8. In Dewsbury Union (Yorks, W.R.), (Mr. Peace), 4697-708.  
 Farm houses rated low (Mr. Holmes), 2897-9.  
 Agricultural land should be assessed upon the income derived from it (Capt. E. G. Pretyman, M.P.), 9769-73.  
 Farmers. Ability to pay. Rental of a house apart from land in agricultural parish is a rough criterion, representing a tenth of income. But the farmer pays more than this proportion (Mr. C. S. Read), 10,331-3.  
 Actual rent should be the basis (Mr. Cobbold), 5270; (Mr. Hulton), 5821; 5822; (Mr. C. S. Read), 10,322-4.  
 Rent not necessarily the lettable value (Mr. Cleaver), 3936; 3937.  
 Inequality in the assessment of tithe rentcharge and of agricultural land (Rev. C. Theobald), 5550. Land valued lower than tithe rentcharge. Reasons for this, and illustrations (Rev. E. F. Gepp), 8514-7. Gross estimated rental and rateable value of land as compared with tithe rentcharge, 8523.

## (b.) Partial exemption of land.

- Under Public Health Act, 1875.—For general district rate agricultural land assessed at one-fourth (Mr. Botton), 173-5; (Mr. Dawe), 1131; 1132; 1134. This exemption is reasonable, 1225; 1246; 1312; 1313. Revision of amounts allowed suggested (Mr. R. E. Fox), 1474-6. Reasons for, 1532-41. Whether benefits received from general district rate are

AGRICULTURAL LAND, &c.—*cont.*

- substantial ones, 1542-7. Amounts allowed in various districts (Mr. Dodds, Scotland), 533-6.
- Under Agricultural Rates Act, 1896. (*See separate heading "AGRICULTURAL RATES ACT, 1896."*)
- (c.) *Rates paid, complaints as to burdens borne, and suggestions for further relief.*
- Rates and taxes paid (Mr. Robinson, Ireland), 1075; 1076; (Mr. Little), 8160-2.
- Share of local taxation borne (Mr. Holmes), 2794-8.
- Agricultural land, rates in the £ (Mr. Rew), 10,512-35. Said to have increased, 10,536-9. Sir Henry Fowler's figures discussed, 10,512-35.
- Proportion of contribution to rates for certain purposes in different districts (Mr. Rotton), 210.
- Rates on land subject to tithe and free of tithe (Rev. D. J. Davies), 5676-9.
- Farms in Hand. Orwell Park and Bacton estates. Particulars of rates paid (Capt. E. G. Pretymann, M.P.), 9572-5. Profits derived from and expenditure upon estate. Proportion of rates paid to profits, 9825-39.
- Norfolk, rates paid in 1875, 1885, and 1895 (Mr. Holmes), 3089-100; increase of, 2815-31.
- Glanford Brigg Union. Amount of rates on land (Mr. Hett), 4642-54.
- Cambridgeshire. Rates paid on a farm in (Mr. Little), 8056; 8057.
- Owners and occupiers alleged to be unduly burdened (Mr. Hubbard), 3200-8; 3229-32; (Mr. Little), 8044-6; (Mr. C. S. Read), 10,415-21; (Mr. A. F. Jeffreys, M.P.), 11,175; 11,219-21.
- Rating in respect of agricultural land alleged to be inequitable (Mr. A. F. Jeffreys, M.P.), 11,139.
- Burden of rates paid in respect of agricultural land is too great. Hypothetical illustrations of rates paid by different classes of persons (Mr. Clarke), 7407-16; 7522-37. Payment of Imperial taxes by these classes not taken into consideration, 7375-99. Nor the effect of the Agricultural Rates Act, 1896, 7559-65.
- An undue proportion said to be paid in rates in respect of agricultural land as compared with other real property. Sir Alfred Milner's figures (Mr. Rew), 10,451-5; 10,665-78.
- Burdens upon agricultural land. Tithe and land tax. Tithe is a rent (Mr. Clarke), 7400-6.
- Orwell Park and Bacton estates. Statistical tables to prove owner and occupier rated too heavily in respect of agricultural land (Capt. E. G. Pretymann, M.P.), 9520-4.
- Further relief than that afforded by the Agricultural Rates Act, 1896, should be given to agriculturists (Mr. Rowlandson) 10,034-6; (Mr. Rew), 10,629-31; (Mr. A. F. Jeffreys, M.P.), 11,265-72.
- Suggestion that land should be assessed at one-fourth (Mr. Little), 8087; 8088; (Mr. Rew), 10,657-62; (Mr. A. F. Jeffreys, M.P.), 11,152-4; 11,194-7.
- Poor rates. Occupiers of agricultural land should be assessed at one-fourth only (Mr. A. J. Jeffreys, M.P.), 11,216-8; 11,236-42.
- Buildings separated from the land for purposes of valuation, objections to (Mr. Dodgson), 7631; 7641-5; (Mr. C. S. Read), 10,415-21; (Mr. Rew), 10,663; 10,664.
- Buildings should be included with the land, but farmhouse separately valued for rating purposes (Mr. A. F. Jeffreys, M.P.), 11,211; 11,294.
- There should be equality with respect to the rating of houses and land, and an increase of Government grants (Mr. Hett), 4655; 4656.
- Agricultural land contributes too much towards local rates in proportion to the income derived from it (Mr. Little), 8101-19; 8139-44.
- Agricultural land should not be assessed to local rates (Mr. Rowlandson), 9955; 9956; 10,083; 10,037-9. Farmers should only be rated in respect of their houses and premises (Mr. A. F. Jeffreys, M.P.), 11,127-9.
- Land from which no profit is derived should pay no rates in respect of purposes of a national character. But if the land is valueless for purposes of profit it should be valueless for rental purposes (Capt. E. G. Pretymann, M.P.), 9621-9.
- Occupiers should be free from paying rates in respect of certain purposes (Mr. A. F. Jeffreys, M.P.),

AGRICULTURAL LAND, &c.—*cont.*

- 11,233-5. Question of local control and administration, 11,155-61.
- Agricultural land contributes too much in rates towards expenditure on purposes of a national character (Mr. Little), 8047-55; 8058-63; and should be relieved of rates raised for those purposes. Question of control and administration. Respective contributions of rateable and non-rateable property to the Imperial Exchequer (Mr. A. F. Jeffreys, M.P.), 11,198-215.
- School board rates are a considerable burden upon farmers in some parishes (Mr. Rowlandson), 9957-60. They contribute too much towards this rate (Mr. Eve), 7708-11; 7760; 7761. And should be relieved from payment in respect thereof (Mr. A. F. Jeffreys, M.P.) 11,136-8.
- Special sanitary rates prove burdensome to owners and occupiers of land (Mr. Clarke), 7446-54; 7538-50.
- Highways. Owners and occupiers of agricultural land contribute too much towards local rates in respect of expenditure upon (Mr. Eve), 7708-11; 7760; 7761.
- Maintenance of poor. Agriculturists contribute too much in respect of expenditure upon (Mr. Little), 8047-55.
- Police. Occupiers of agricultural land should be relieved from paying rates in respect of (Mr. A. F. Jeffreys, M.P.), 11,129-35.
- County lunatic asylums, main roads, bridges. Occupiers of agricultural land should be relieved from paying rates in respect of (Mr. A. F. Jeffreys, M.P.), 11,136-8.

(d.) *Decrease in value.*

- Fall in value (Mr. Rew), 10,720-7. Rateable value decreased in proportion to letting value (Mr. Hett), 4545-50; (Mr. Rew), 10,744-58.
- Fall in value of agricultural property not represented by value as appearing in lists (Mr. Holmes), 2962; 2963.
- In many cases rent received represents only interest on expenditure on improvements (Capt. E. G. Pretymann, M.P.), 9757-68; 9774, 9775.
- Decrease in value of land and increase in value of buildings (Mr. Rew), 10,688-90.
- Decrease in value of land and increase in value of land in towns (Mr. Rew), 10,691-7.
- Value of land and buildings, proportion (Mr. Holmes), 3101; 3102.
- Value of land and buildings in different localities, reasons for difference in (Mr. Jeeves), 1795-833.
- Glanford Brigg Union. Value of land in (Mr. Hett), 4620-31.
- Sanford Union. Value of land in (Mr. Cobbold), 5204; 5205. Value now below that appearing in valuation list of 1895; 5257-61.
- Suffolk. Fall in value (Mr. Cobbold), 5241-6.
- West Dean. Rental value comparatively small (Mr. Elsom), 7262; 7263.

(e.) *Profits from farming.*

- Farms in hand. Difficulty of getting tenants (Capt. E. G. Pretymann, M.P.), 9565-7. Results of farming land in hand belonging to Guy's Hospital (Mr. Pell), 7983-96.
- Light land, how farmed (Capt. E. G. Pretymann, M.P.), 9566-8.
- Norfolk, rent of farm in (Mr. Hubbard), 3183-7. Profits from farming greatly reduced, 3233-7.

## AGRICULTURAL RATES ACT, 1896 (59 &amp; 60 Vict. c. 16.):

(a.) *Criticisms and effect of Act.*

- Suggested reason for its introduction (Mr. Eve), 7775-80.
- Has no application where Public Health Act, 1875, applies (Mr. Dawe), 1243-5.
- Relief obtained under Act (Mr. Rotton), 172; (Mr. Calthrop), 3173; (Mr. Hubbard), 3183-93; 3217-28; 3241-4.
- Relief obtained under the Act has gone to the farmers and labourers and not to the landowners

AGRICULTURAL RATES ACT, 1896—*cont.*

(Capt. E. G. Pretymán, M.P.), 9691-3. Agricultural labourers wages raised in Suffolk on account of Act, 9694; 9695.

Benefits derived from accrue to tenants and not to the landlords (Mr. Eve), 7878-84; (Mr. Rowlandson), 10,046-9.

To what extent an indirect benefit to landowners (Capt. E. G. Pretymán, M.P.), 9695-7.

Permanency of Act desirable (Mr. Holmes), 3103-5; (Mr. Clarke), 7556-8; (Mr. Rowlandson), 10,034-6; reasons (Mr. Eve), 7768-70. Should be continued until contribution is made to local rates in respect of personality (Mr. C. S. Read), 10,408-14.

Criticisms (Rev. D. J. Davies), 5680-90; 5698-711.

Value of Act to agriculturists (Mr. Pell), 7997; 7998; 8000-8. It has proved beneficial (Mr. Clarke), 7455; 7456; (Mr. Eve), 7874-7; and exemptions are reasonable (Mr. Dawe), 1225; 1246; 1312; 1313.

Difficulty of giving relief where most wanted, but farmers thankful for the Act (Mr. A. F. Jeffreys, M.P.), 11,290-2.

Agriculturists have benefited by the Act. A greater measure of relief should have been given (Mr. Rew), 10,629-31; and buildings should not have been separated. Even now rates levied in respect of agricultural land are more than is just (Mr. C. S. Read), 10,415-21; (Mr. A. F. Jeffreys, M.P.), 11,291-21.

Act has removed the injustice imposed on owners and occupiers of land in respect of their contribution to poor law expenditure (Mr. Eve), 7762-7.

Extension of principle of Act advocated (Mr. Hett), 4588-91.

Separate valuation of houses, buildings, and land is desirable (Mr. Pell), 7939.

Does not observe the principle of taking actual value of occupation as basis for valuation (Mr. Eve), 7794-802.

Lancashire. Assessable value of administrative county since passing of Act (Mr. Hulton), 5892-907.

Norfolk. Effect of operation of Act (Mr. Holmes), 3059-73.

Basis of distribution of Government grants, objections to (Mr. Holmes), 2839; 2840; 3037; 3038; (Mr. Calthrop), 3145-8; 3174; 3175.

Amounts received from local taxation account vary in different counties, and also in boroughs. Inequalities further increased by Act (Mr. Gomme), 8699-706.

Effect of Act on Exchequer contributions (Mr. Hulton), 5952-61.

Land best able to bear burden gets the most relief (Capt. E. G. Pretymán, M.P.), 9860-2.

Accommodation land should have been excluded from operation of Act (Mr. Eve), 7712-7; 7729-52; 7771-4. Also market gardens, 7712-7; 7729-52.

The principle of the Act objected to. Classification of certain properties for the purpose of rating. Distinction of principle underlying Public Health Act and Agricultural Rates Act (Capt. E. G. Pretymán, M.P.), 9847-59.

Effect on properties other than agricultural land (Mr. S. M. Howard), 11,726; 11,727; 11,729-31. In certain respects Act may prejudicially affect other interests to some extent (Mr. P. R. Smith), 11,334; 11,335.

(b.) *Amounts received in certain cases.*

London. Amount received under Act (Mr. Gomme), 8811.

Norfolk gets a large grant under (Mr. Holmes), 3039-44. Amount received by Depwade Union, 3118-23.

Glanford Brigg Union. Amounts received (Mr. Hett), 4587.

Orwell Park and Bacton estates. Farms in hand. Relief obtained with respect to rates (Capt. F. G. Pretymán, M.P.), 9562-4.

(c.) *Position of Tithe-owners under Act.*

Positions of agriculturists and tithe-owners compared (Rev. C. Theobald), 5525-37; 5618-33.

Act does not give relief to owners of tithe or tithe rentcharge (Rev. C. Theobald), 5545; 5546.

Question whether tithe could be included in scope of Act (Mr. De Bock Porter), 11,067-71.

AGRICULTURAL RATES ACT, 1896—*cont.*

Reasons for omission of tithe rentcharge from the Act (Mr. Peterson), 8461-72. Clergy said to be owners and occupiers (Mr. A. G. Boscawen, M.P.), 10,950-2. Inclusion of tithe rentcharge in the scope of Act would give substantial justice and satisfy tithe-owners (Mr. Peterson), 8461-72; (Rev. E. F. Gepp), 8528.

Tithe-owners claim for similar relief to that given to agriculturists by the Act (Rev. C. Theobald), 5558-64; (Mr. De Bock Porter), 11,007.

If relief given had extended to tithe-owners, it should not have been given in respect of tithe charged on property other than agricultural land (Rev. C. Theobald), 5581-90.

Effect of Act on clerical tithe-owners (Rev. D. J. Davies), 5661-75; (Mr. A. G. Boscawen, M.P.), 10,893-5. And effect if rates increase, 10,890-4; 10,932-41; (Mr. De Bock Porter), 10,997-9; 11,105; 11,106; 11,111-5.

## AGRICULTURAL RATES, CONGESTED DISTRICTS, AND BURGH LAND TAX RELIEF (SCOTLAND) ACT, 1896 (59 &amp; 60 Vict. c. 37).

Amounts allowed in various districts (Mr. Dodds, Scotland), 533-6.

Classification system, effect on (Mr. Dodds, Scotland), 384-6.

No separation between valuation of agricultural land and buildings (Mr. Dodds, Scotland), 387-90.

AGRICULTURE, CENTRAL CHAMBER OF (*see* "CENTRAL CHAMBER OF AGRICULTURE").

## AGRICULTURISTS:

(a.) *Present Position of.*

Small and large farms, advantages of small farms (Capt. E. G. Pretymán, M.P.), 9793-8.

Capital expenditure and commercial enterprise benefit the agricultural interest (Capt. E. G. Pretymán, M.P.), 9819-24.

Agriculturists consider that their position has been injuriously affected by the passing of the Finance Act, 1894, and the Local Government Act, 1894 (Mr. Rew), 10,625-8.

Orwell Park and Bacton estates. Increased expenditure on buildings, &c., in recent years necessary to secure tenants (Capt. E. G. Pretymán, M.P.), 9921-3.

Orwell Park and Bacton estates. Farming accounts (Capt. E. G. Pretymán, M.P.), 9611-20. Particulars of losses or profits on certain farms, 9799-815.

Suffolk. Custom for incoming and outgoing tenants (Capt. E. G. Pretymán, M.P.), 9784-92.

(b.) *Relative Position of Owners and Occupiers.*

Ownership of land and payment of rates (Capt. E. G. Pretymán, M.P.), 9700-12.

Incidence of rates as between lessor and lessee (Mr. A. F. Jeffreys, M.P.), 11,140-2; 11,253-60.

Rates paid partly by landlord and partly by tenant. Suggested that landlord could not bear the additional burden (Capt. E. G. Pretymán, M.P.), 9586-9.

Increase or decrease of rates never affects the question of rent. How far agriculturists take rates into account when taking a farm (Mr. A. F. Jeffreys, M.P.), 11,283-9. They ask for no adjustment of rent if rates increase (Mr. Little), 8101-19; 8168-73; (Mr. C. S. Read), 10,342-5; 10,358-60.

Farmers used to take farms without considering rates, but they consider them now (Mr. Eve), 7867-73; 7892; 7893.

Farmers frequently do not take rates into consideration when bargaining for a farm (Mr. A. F. Jeffreys, M.P.), 11,143-7.

Position and interests of landowners, farmers, and labourers (Capt. E. G. Pretymán, M.P.), 9599; 9698; 9699.

Profit made by tenant farmer and landlord farming through bailiff (Capt. E. G. Pretymán, M.P.), 9568. Their positions compared, 9924-30.

AGRICULTURISTS—*cont.*(c.) *Position as compared with other Industries, &c.*

Position of agriculturists as compared with that of manufacturers (Mr. C. H. Fox), 4462-71.

Rates paid by agriculturists and by business men in towns compared (Mr. Rowlandson), 9942-54; 10,014-29. Contribution to local taxation should be based upon income, 9942-54. Benefits received from local expenditure by agriculturists are less than those received by townsmen, 10,030-2.

Position of agriculturists and owners and occupiers of other rateable property with regard to benefits received from expenditure of rates (Mr. Little), 8064-77.

Burden of rates borne by agriculturists as compared with the burden borne by those engaged in other industries (Capt. E. G. Pretyman, M.P.), 9840-6.

Contribution to rates by different classes (Mr. A. F. Jeffreys, M.P.), 11,148-51; 11,243-52. Amounts. Agriculturists said to pay most in proportion to income, 11,148-51. Different bases of assessment as between agriculturists and other classes. Agriculturists said to be rated in respect of their raw material, 11,243-52.

Position of clerical tithe-owner and owner of land with reference to rating compared (Rev. C. Theobald), 5548; 5549; (Rev. D. J. Davies), 5654-7.

ALTON UNION (HANTS): Tithes, rating in respect of. System adopted (Rev. C. Theobald), 5547.

## APPEALS AGAINST VALUATION IN ENGLAND:

(a.) *Appeals to Quarter Sessions or High Court.*

Time for (Sir H. B. Poland), 2231; 2232.

Cost of, is great (Mr. C. G. Smith), 9395. Cost to small parishes (Mr. Dawe), 1276.

Present system unsatisfactory (Mr. Payne), 11,610. Objections to quarter sessions as a tribunal (Mr. Morse), 4778-502; (Mr. S. M. Howard), 11,745. Procedure at quarter sessions. Objection to appellants having to open their case (Mr. Jones), 9111-3; 9275-8.

By ratepayer against rate made according to precept issued upon existing valuation list. If successful, parish must still contribute same amount (Mr. Dawe), 1205.

Production of books by objectors (Mr. P. R. Smith), 11,417-9.

Quarter sessions should have power to raise as well as to reduce assessments (Mr. Eve), 7702, 7703.

Owners have no power of appeal unless paying rates (Mr. Rotton), 211; 212. No objection to owners having power of appeal (Mr. Dawe), 1309-11; (Mr. Cobbold), 5271-5. Not desirable that owners should be given right of appeal (Mr. Eve), 7786-8.

Overseers should have right of appeal against decision of Union Assessment Committees in the country as they have in London (Mr. Eve), 7832-46.

Machinery, rating in respect of. Appeals against the principle have frequently been made to quarter sessions (Mr. Humphreys-Davies), 4142; 4143. But appeals to High Court have been few, because of the difficulty of getting a case with the real issue stated, 4144; 4145.

Whitworth & Co.'s appeal with reference to the rating in respect of their movable and fixed machinery (Mr. Humphreys-Davies), 4156-61.

Portable cranes, rating in respect of. Appeal against successfully maintained by dock company (Mr. Humphreys-Davies), 4177; 4178.

Railway companies (Mr. Rotton) 297-300.

Electric lighting companies (Mr. Morse), 4721; 4722.

Gas companies. Appeals to quarter sessions are unsatisfactory (Mr. Jones), 9183-7.

Metropolis. Surveyor of taxes has right of appeal (Mr. Humphreys-Davies), 4433-7.

Lancashire. Only one appeal against decisions of County Rate Committee since 1872 (Mr. Hulton), 5773-9.

Burnley Union. Only one appeal in 15 years (Mr. Horn), 6865; 6866.

Chelmsford Union. No appeals for 20 years (Mr. Duffield), 5416-8.

APPEALS AGAINST VALUATION IN ENGLAND—*cont.*(b.) *Suggested Alterations of Tribunals for Appeals.*

Suggestions as to alterations (Mr. D. Howard), 4503, 4504; (Mr. Pell), 7940-9.

A specially constituted appeal court to hear rating appeals instead of quarter sessions desirable (Mr. Morse), 4893-7; (Mr. Eve), 7727, 7728; (Mr. P. R. Smith), 11,528-32; (Mr. S. M. Howard), 11,721-5. The Railway Commission, or some legal tribunal suggested (Mr. Morse), 4742-5; 4803; 4804; (Mr. P. R. Smith), 11,431-5.

An appeal court composed of committee of county council better than quarter sessions (Mr. C. S. Read), 10,395-7.

## APPEALS AGAINST VALUATION IN IRELAND:

Right of appeal against annual revision of valuation (Mr. Barton, Ireland), 3351-3.

## APPEALS AGAINST VALUATION IN SCOTLAND:

Cost of (Mr. Dodds, Scotland), 400-3.

By owners and occupiers (Mr. Dodds, Scotland), 353-5. Procedure on appeal by owners, 537-9.

Court of Session, appeals to, are few (Mr. Dodds, Scotland), 400-3.

A change in tribunals for appeals desirable. Difference in tribunals for appeals from local assessors and railway assessor (Mr. Munro, Scotland), 3673-8; 3706-12.

## APPORTIONMENT OF RATES BETWEEN VARIOUS INTERESTS IN A PROPERTY:

Power of occupier to deduct from rent (Mr. Rotton), 145-9.

## AREAS FOR PURPOSES OF ADMINISTRATION:

Large boroughs are the best areas for municipal as well as Poor Law administration (Mr. Dawe), 1155; 1156.

## AREAS FOR PURPOSES OF VALUATION AND RATING (ENGLAND):

(a.) *Which Area most desirable for Purposes of Valuation?*

Parish the unit for assessment (Sir H. B. Poland), 2222; 2223. Advantages and disadvantages of, 2443-50.

Union the area of valuation for Poor Law purposes (Mr. Jeeves), 1588. Objection to enlarging area (Mr. Humphreys-Davies), 4207-10; (Mr. A. F. Jeffreys, M.P.), 11,170-2.

Poor law unions the best areas (Mr. Jeeves), 1589; (Mr. Peace), 4709; (Mr. Duffield), 5474; (Mr. P. R. Smith), 11,430. And not county areas (Mr. Horn), 6941-4; (Mr. P. R. Smith), 11,470-2; 11,543-5.

Union is the best area and appeal court composed of committee of county council better than quarter sessions (Mr. C. S. Read), 10,395-7.

Present areas satisfactory, but uniformity in valuation desirable, and one basis for Imperial and local purposes (Mr. A. F. Jeffreys, M.P.), 11,172-4.

Cases where union or borough would be best (Mr. Vulliamy), 7125.

County preferable to union for valuation purposes (Mr. Crompton), 4974; 4975. Representation of union and borough authorities (Mr. Holmes), 2760-6.

Urban and rural areas—proposed reforms (Mr. Dawe), 1141; 1142.

(b.) *Unions in more than one County.*

Poor law unions in England and Wales extending to more than one county, with population (Mr. Vulliamy), 7125.

Union in more than one administrative county, disadvantages (Mr. Cobbold), 5209-11. No disadvantages (Mr. Cleaver), 3963-6; 4049-56.

County boundaries. Alteration of, whether possible and whether desirable (Mr. Cobbold), 5212-7.

**AREAS FOR PURPOSES OF VALUATION AND RATING (ENGLAND)—cont.**

County or union boundaries, alteration of, practical difficulties (Mr. Cobbold), 5231-6.  
Dissimilarity of rate in £ for various purposes in different parishes (Mr. Cobbold), 5370-8.

**(c.) Borough Areas in relation to Union and Parochial Areas.**

Rating areas in certain municipalities (Mr. Rotton), 223.

Consolidation of parishes in boroughs (Mr. Jeeves), 1610-4. In St. Helens, 1677-9. In Bolton (Mr. Swainson), 6308; 6309. Has been beneficial in Dover (Mr. Knocker), 6201-4.

Large boroughs should comprise one union and one parish where possible to obtain uniformity in rating systems (Mr. Jeeves), 1750-3. Suggestion that if borough was created a union it should take over duties of boards of guardians and of valuation and collection (Mr. Knocker), 6245-51.

Representation of corporation on Assessment Committee. Representation of urban and rural interests secured by (Mr. Jeeves), 1590-2. Representation of joint interests of unions and uniformity secured by, 1691-3.

Deductions; uniformity in amounts, secured by the creation of a joint assessment committee (Mr. Jeeves), 1602-9.

Tunbridge Wells. Allowances different in two unions in (Mr. W. J. Cripps), 2009; 2010; 2033-6.

Plymouth Borough and Union co-extensive. Advantages of (Mr. J. H. Ellis), 1944-8.

Dover. Boundary of union and borough should be coterminous (Mr. Knocker), 6215-20. Administrative difficulties connected with alteration of boundaries of union, 6233-44.

West Derby Union, parishes in (Mr. Cleavor), 3983-90.

Burnley Union, rating areas in (Mr. Horn), 6842.

**(d.) Boroughs in two Administrative Counties.**

Burnley is in two administrative counties. No inconvenience (Mr. Horn), 6885-7.

**(e.) Inequalities in Rating in different Areas; Causes and suggested Alterations.**

Area containing several parishes cannot get an equal rate equitably levied (Mr. W. C. Cripps), 2050; 2051.

Overlapping to be avoided (Mr. Dawe), 1154.

Union or corporate boundary instead of parish (Mr. Dawe), 1235; 1236.

Rating areas should be identical with areas for valuation purposes (Mr. Dawe), 1341-3.

Union areas, no interference with necessary, in carrying out suggested reforms (Mr. R. E. Fox), 1495; 1496.

Local Government Board, inquiries by. Objections likely to be raised by local bodies to alterations of boundaries (Mr. W. C. Cripps), 2017-21.

Question of the area with which a local authority shares its taxation (Mr. Gomme), 8819-23.

**AREAS FOR THE PURPOSES OF VALUATION AND RATING (IRELAND):**

County and borough areas (Mr. Robinson, Ireland), 598; 599.

Electoral divisions the unit for Poor Law purposes (Mr. Robinson, Ireland), 600-2; 1098; 1099. So constituted in 1838, 1109-12. Union preferable, 1067-74.

Electoral divisions and unions, description of areas and boundaries (Mr. Robinson, Ireland), 673-86.

Electoral divisions as compared with parishes, size of (Mr. Robinson, Ireland), 931-5.

Possibility of obtaining amounts and particulars of rates from all rateable areas (Mr. Robinson, Ireland), 773-80; 878-91.

**AREAS FOR THE PURPOSES OF VALUATION AND RATING (SCOTLAND):**

Counties, burghs, parishes. Boundaries (Mr. Dodds, Scotland), 331-5.

Burghs, royal and police (Mr. Dodds, Scotland), 340-3.

County, royal burgh, and police burgh correspond generally to county, municipality, and urban district in England (Mr. Dodds, Scotland), 456-9.

**ARREARS OF RATES:**

Blackburn. Comparatively few (Mr. R. E. Fox), 1444-7. Special summary powers of distraint under local Act 1448-64. Procedure in carrying out; time allowed and notices given, 1568-80. Possible objections to these powers, 1502-9.

Pontypridd Union. Arrears are considerable (Mr. E. H. Davies), 7037-43.

West Dean. Poor rates. Arrears are considerable. Excusals (Mr. Elsom), 7249; 7250; 7279-86; 7354-9.

**ART GALLERIES**, rating of (Sir H. B. Poland), 2312; 2313.

**ASSESSABLE VALUE:**

Difference between rateable value and assessable value (Mr. Hulton), 5908; 5909.

Rateable and assessable value of certain counties (Mr. Hulton), 5962-70.

**ASSESSMENT ROLL** (Mr. Dodds, Scotland), 370-4. (See also under "VALUATION ROLL.")

**ASSESSOR (GOVERNMENT)**

Appointment of, desirable; should be advised by Union Assessment Committee (Mr. Holmes), 2847-52. Reasons for this view, 2802-10. Would tend to economy, 2853-6. Difficulties in connection with scheme, 2939-47.

**ASSESSOR OF RAILWAYS AND CANALS (SCOTLAND):**

(See also under "ASSESSMENT OF SPECIAL CLASSES OF PROPERTY.")

Memorandum prepared by (Mr. Munro, Scotland), 3611; 3612.

Subjects valued by (Mr. Dodds, Scotland), 348.

Work of, has increased owing to recent Acts of Parliament sub-dividing districts for special purposes (Mr. Munro, Scotland), 3723-5.

Value of property valued by. Cost of valuation, and by whom paid (Mr. Munro, Scotland), 3715-22.

Locus standi of, in courts of law (Mr. Munro, Scotland), 3661-7.

Appeals from Assessor and local assessors. Difference in tribunals. A change desirable (Mr. Munro, Scotland), 3706-12.

North British Railway Company v. Assessor of Railways (Mr. C. H. Fox), 4456; 4457.

**ASSESSORS (LOCAL) IN SCOTLAND:**

May be surveyor of taxes, or may be specially appointed by the county or town council (Mr. Dodds, Scotland), 338; 339; 568; 569.

Appeals from Assessor of Railways and Canals and local assessors. Difference in tribunals. A change desirable (Mr. Munro, Scotland), 3706-12.

**ASSOCIATION OF MUNICIPAL CORPORATIONS:**

Constitution of (Mr. Dawe), 1115-7.

Irish municipalities not represented by (Mr. Dawe), 1348; 1349.

Returns prepared by (Mr. Jeeves), 1659-62. Method of calculation, 1866-73; 1915-25. Rates raised in certain boroughs, 1764-75.

**AUDITOR (GOVERNMENT).**

Reason for advocating Government audit of municipal accounts, and objections to such a course (Mr. Humphreys-Davies), 4277-305.

Bolton. Audit of poor rate accounts (Mr. Swainson), 6310-2.

**BANKING COMPANIES**, rated in respect of their buildings (Mr. C. C. Smith), 9407.

**BARROW-IN-FURNESS**. Consolidation and collection of rates. Method (Mr. Swainson), 6275-81.

**BENEFITS DERIVED FROM EXPENDITURE BY LOCAL AUTHORITIES:**

Expenditure which benefits owners of property (Mr. Rotton), 115-9.

Benefits received by ratepayers should be taken into consideration (Mr. Humphreys-Davies), 4394-8.

Contributions to rates according to, considered (Mr. Rew), 10,640-52.

Position of agriculturists and owners and occupiers of other rateable property with regard to benefits received from expenditure of rates (Mr. Little), 8064-77. Are less to agriculturists than those received by townsmen (Mr. Rowlandson), 10,030-2. Companies and manufacturers do not get same benefit from expenditure of certain rates as householders do (Mr. Morse), 4716-20.

**BENEFITS DERIVED FROM EXPENDITURE OF RATES—cont.**

Local expenditure which benefits property. Direct and indirect. Classification. Statistics. Payment of local taxation in respect of property (Mr. Gomme), 8861-4. Comments upon suggested classification of cost of indoor and outdoor poor, roads, 8970-87. Parks, commons, open spaces, outdoor poor, innatics, 8988-91.

Urban ratepayers, advantages derived from expenditure (Mr. Rew), 10,544; 10,552; 10,553.

Expenditure on purposes for which rates are raised in towns benefits property more than in rural districts (Mr. A. F. Jeffreys, M.P.), 11,177-9; 11,182-90; 11,232.

Property receives the benefit of expenditure which falls upon indirect taxation and Government grants and should be charged with a proportion of these in addition to the rates charged directly (Mr. Gomme), 8875.

**BIRMINGHAM.** Corporation charges the same for gas and water inside and outside the city (Mr. Crompton), 5057-9.

**BISHOPWEARMOUTH CASE** (3 Q.B.D. 299). Tenants' machinery. Present system of rating in certain districts not adopted before this case. (Mr. Humphreys-Davies), 4311-4.

**BLACKBURN:**

Examination of Town Clerk (Mr. R. E. Fox), 1429-583.

Arrears of rates. Comparatively few (Mr. R. E. Fox), 1444-7. Special summary powers of distraint under local Act, 1448-64. Procedure, time allowed, and notices given, 1568-80. Possible objections to these powers, 1502-9.

Compounding. System adopted (Mr. R. E. Fox), 1523-31; and amounts of compositions, 1581-3. Increase to uniform limit desirable, 1465-70.

Discounts, system of allowing (Mr. R. E. Fox), 1437-43; 1510-3; 1523-31; amounts of, 1581-3. Five per cent. allowed under a local Act if rates paid within specified time, 1433-6.

**BOARD SCHOOLS:**

Annual value, how determined; contractor's rent (Sir H. B. Poland), 2108; 2351-5.

**BOLTON:**

Consolidation of parishes (Mr. Swainson), 6308; 6309.

Consolidation and collection of rates. Method (Mr. Swainson), 6275-81.

Appointment of assistant overseers by corporation, but the guardians appoint the collector for poor rate (Mr. Swainson), 6300-7.

System of collection of rates, &c., satisfactory. Suggested improvements (Mr. Swainson), 6315-8.

Compounding. A 10% limit under special Act (Mr. Swainson), 6314.

Audit of poor rate accounts. Government auditor (Mr. Swainson), 6310-2.

**BOLTON IMPROVEMENT ACT, 1877** (40 & 41 VICT. c. 188). Consolidation and collection of rates (Mr. Swainson), 6284-6.

**BOLTON TRAMWAYS AND IMPROVEMENT BILL,\* 1897:**

Proposed that corporation should collect poor rate for the guardians, which is an unprecedented proposal (Mr. Swainson), 6366-70.

No provision made with regard to the audit of the rate (Mr. Swainson), 6383-5.

Withdrawal of certain clauses. The Oxford clauses (Mr. Swainson), 6287-90. Power sought by corporation to collect all rates, 6296-9.

How far practicable for borough council of a corporation to nominate overseers and a certain portion of Assessment Committee (Mr. Humphreys-Davies), 4353-5.

**BOOTLE.** Apportionment of the amount paid out of the Local Taxation (England) Account between the county of Lancaster and the county boroughs therein (Mr. Cooper), 10,222-5.

**BOROUGH RATES.** Power of town councils to make valuation for borough rate, not often exercised (Mr. Dawe), 1123-5.

**BOROUGHES:**

(a.) *One Authority for Valuation, Collection, &c., and one Rate desirable.*

One valuation and one rate-collecting authority for whole borough desirable (Mr. Swainson), 6386; 6387.

Corporation should be the valuation authority, or else corporation should be represented on Union Assessment Committee in proportion to rateable value of borough. Representation of urban and rural interests (Mr. Knocker), 6225-34.

Suggestion that the corporation should be the rating and collecting authority for borough (Mr. Knocker), 6221-4.

One collecting authority for a municipality desirable (Mr. Horn), 6936; 6937. For local and Imperial rates and taxes (Mr. Bellwood), 6779-94.

Uniform poor rate in borough made by one authority desirable (Mr. Knocker), 6201-4.

Position of county boroughs should County Rate Basis Committee be made valuation body of county (Mr. Cobbold), 5309-15.

(b.) *Representation upon Union Assessment Committees.*

Municipalities should be represented upon Union Assessment Committees, but should not be the assessing authority (Mr. Horn), 6929.

Representation of town council on Union Assessment Committee where the borough has the same boundaries as the union (Mr. Horn), 6945; 6946.

If corporation not the valuation authority in boroughs, it should be represented on Union Assessment Committee in proportion to rateable value. Representation of urban and rural interests (Mr. Knocker), 6225-34.

Representation of corporation on Union Assessment Committee. Representation of urban and rural interests secured by (Mr. Jeeves), 1590-2. Representation of joint interests of unions and uniformity secured by, 1691-3.

Deductions; uniformity in amounts, secured by the creation of a joint assessment committee (Mr. Jeeves), 1602-9.

Representation of borough interest on Union Assessment Committee and board of guardians (Mr. Knocker), 6158-60. Not adequate compared with representation of rural portion of union. Dissatisfaction with regard to this (Mr. Knocker), 6178-96.

Dover. Representation of urban parishes on board of guardians. No complaints made to Local Government Board (Mr. Knocker), 6235-7.

Tunbridge Wells. Allowances different in two unions in (Mr. W. C. Cripps), 2009; 2010; 2033-6.

(c.) *Police.*

Boroughs can increase number and pay of their police and half cost falls on county rates, but counties cannot do so without leave of Home Office (Mr. Merrifield), 6153.

(d.) *Accounts.*

Audit of accounts of municipal corporations (Mr. Swainson), 6282; 6283.

(e.) *Apportionment of the Amount paid out of the Exchequer Contribution Account between the Counties and County Boroughs.*

See under "LOCAL TAXATION (ENGLAND) ACCOUNT" and "LOCAL TAXATION (CUSTOMS AND EXCISE) DUTIES."

**BORROWING POWERS OF RATING AUTHORITIES** (Mr. Dodds, Scotland), 404-17.

**BOUNDARY COMMISSION IN 1887**, local objections to alterations of boundaries (Mr. W. C. Cripps), 2037-44.

**BREWERIES:**

System of valuation (Mr. Livesey), 9377-86.

**BRICKFIELDS**, rating of (Sir H. B. Poland), 2438.

\* This Bill received the Royal Assent on July 15th, 1897 (60 & 61 Vict. c. 134).

**BRIDGES:**

Occupiers of agricultural land should be relieved from paying rates in respect of (Mr. A. F. Jaffreys, M.P.), 11,136-8.

Lancashire. Special rate for hundred bridges (Mr. Hulton), 5752; 5753.

County bridges charged upon separate rates in West Sussex, and upon hundreds in East Sussex (Mr. Merrifield), 6079.

**BUILDING LAND:**

If vacant is rated in burghs at a fourth of its agricultural value (Mr. Dodds, Scotland), 464-71.

Difficulty of determining what is "building land" (Sir H. B. Poland), 2281-9.

**"BUILDINGS" IN IRELAND:**

Total rateable value of (Mr. Barton, Ireland), 3548-51.

**BURGH RATES IN SCOTLAND:**

Put upon gross value with certain exceptions (Mr. Dodds, Scotland), 359-62; 554-9.

Most leviable from occupier in point of amount, but in point of number more leviable half and half (Mr. Dodds, Scotland), 368; 369.

Liability of owner to pay rates in respect of unoccupied property (Mr. Dodds, Scotland), 434-7.

Upon whom levied (Mr. Dodds, Scotland), 441-9.

Collected direct from owner (Mr. Dodds, Scotland), 460; 461.

**BURNLEY UNION:**

Particulars of areas, rateable value, &c. (Mr. Horn), 6842. In two administrative counties. No inconvenience, 6885-7.

Union Assessment Committee. Manufacturers, shopkeepers, and companies well represented. Case in London compared\* (Mr. Horn), 6964-72.

Moveable machinery not rated (Mr. Horn), 6960-3.

Levying and collection of rates. Procedure (Mr. Horn), 6867; 6868.

No compounding in borough of Burnley, and collection is rather better than in borough of Nelson, where there is (Mr. Horn), 6869-75. Compounding is not an advantage, 6875-8.

Overseers are required to send in supplemental valuation lists at least twice a year and four times a year if they like (Mr. Horn), 6843-7.

Only one appeal in 15 years (Mr. Horn), 6865; 6866.

**CALEDONIAN CANAL**, valuation of (Mr. Munro, Scotland), 3687-9.

**CALEDONIAN RAILWAY:**

Value per mile fluctuated very much during last 20 years. Reason for this (Mr. Munro, Scotland), 3635; 3636.

Net revenue increased and the rateable value has decreased, comparing 1876-7 with 1897-8. Value of hereditament has not followed the fortunes of the undertaking (Mr. Munro, Scotland), 3876-89.

Decrease in value of lines attributable to a great extent to increase in number and additions to railway stations (Mr. Munro, Scotland), 3624-31.

**CAMBRIDGESHIRE:**

Agricultural land assessed above rental value (Mr. Pell), 7939.

Rates paid on a farm in (Mr. Little), 8056; 8057.

**CANALS, ASSESSOR OF.** (See "ASSESSOR OF RAILWAYS AND CANALS.")

**CANALS, VALUATION OF:**

Public Assessor; advantages and difficulties of such a system (Sir H. B. Poland), 2247-50.

Independent assessor as in Scotland desirable (Mr. H. E. Jones), 9119-26; 9287; 9238.

Exemptions (partial). For general district rate canals rated at one-fourth under Public Health Act, 1875 (Mr. Rotton), 173-5; (Mr. Dawe) 1131; 1132; 1134. Exemptions in respect of certain portions should be abolished, 1331-6. Partial exemptions contained in old Canal Acts (Sir H. B. Poland), 2187; 2188.

System of valuation in Scotland (Mr. Munro, Scotland), 3845.

**CANALS, VALUATION OF—cont.**

Caledonian and Crinan Canals (Mr. Munro, Scotland), 3687-9.

Forth and Clyde Canal (Mr. Munro, Scotland), 3690.

In Ireland (Mr. Barton, Ireland), 3349.

**CANNOCK CHASE.** Valuation of coal mines, system adopted (Mr. T. Batcliffe Ellis), 2576.

**CAPITAL VALUE:**

Definition of (Mr. H. E. Jones), 9211-5.

As the basis for rating, capital value would be more satisfactory than taking the rent a hypothetical tenant would give (Mr. H. E. Jones), 9283-6.

**CARDIFF UNION:**

Assessment of Union Assessment Committee and county rate basis nearly correspond (Mr. Harris), 6418; 6419.

**CEMETERIES, VALUATION OF:**

A parochial cemetery only valued on the basis of value of land before it was a cemetery (Mr. De Bock Porter), 11,118-24.

**CENTRAL CHAMBER OF AGRICULTURE:**

Objects of (Mr. Rew), 10,448.

Resolutions passed by (Mr. Rew), 10,653-6; 10,740-3; 10,872-6.

**CHARD UNION (SOMERSETSHIRE):** (See also under GIFFORD, FOX & Co.)

Machinery, rating in respect of. The appeals (Mr. P. R. Smith), 11,380.

**CHARGES ON PROPERTY:**

Non-rateability of mortgagees, ground landlords, and other persons in respect of (Mr. Rotton), 139; 140.

No statutory deduction by owners in respect of (Mr. Dodds, Scotland), 515-8; (Mr. Robinson, Ireland), 1023-5.

Mortgage on property not an element in letting value (Sir H. B. Poland), 2472.

Should not be deducted from valuation of hereditaments (Mr. Kett), 4616-9.

**CHEMICAL WORKS:**

Method of valuation very unsatisfactory. The plant is usually tenants' fixtures, and deteriorates very rapidly (Mr. D. Howard), 4487-99.

West Ham. The works are not offensive or destructive to vegetation (Mr. D. Howard), 4508-12.

**CHORLTON UNION (LANCASHIRE):**

Two systems of assessment in force owing to local Acts (Mr. Humphreys-Davies), 4152-5.

Appeal by Whitworth & Co. with reference to the rating of their movable and fixed machinery (Mr. Humphreys-Davies), 4156-61.

**CHURCH. PROPERTY OF, IN LAND AND TITHES:**

Whether a profitable security (Rev. C. A. Stevens), 8641-4.

**CITY OF LONDON:***(a.) Population.*

Decreasing night population. Reasons (Mr. Goldney), 10,062-8. To some extent due to increased facilities of transit, but the porters, &c., who could live in warehouses have not gone to the suburbs, 10,149-52.

Increasing day population (Mr. Goldney), 10,062-8. How ascertained, 10,140-2.

*(b.) Value of Land.*

Has increased (Mr. Goldney), 10,091-110; 10,124-33.

*(c.) Rates.*

Rates in £ paid in certain parishes (Mr. Adamson), 5186-90.

Rates said to have decreased (Mr. Gomme), 8802; 8803.

No special county rate (Mr. Gomme), 8754-79.

\* For case in London see 4174-6.

CITY OF LONDON—*cont.*(d.) *Board of Guardians.*

Class of ratepayers in city who elect the guardians are chiefly business men (Mr. Adamson), 5191-8.

(e.) *Inhabited House Duty.*

Question of importance (Mr. Goldney), 10,051; 10,052.

Incidence of the tax (Mr. Goldney), 10,089; 10,090.

Decrease of (Mr. Goldney), 10,069.

What constitutes "inhabiting"? Hardships falling on large businesses in the city (Mr. Goldney), 10,058; 10,059.

Value of residential property for assessment purposes has fallen (Mr. Goldney), 10,148.

People will not pay the tax on business premises, and they let the residential parts stand empty (Mr. Goldney), 10,081-4.

Property occupied for business purposes and property occupied as a residence, though in the same occupation, should be distinguished (Mr. Goldney), 10,070-4; 10,078-80. And the tax levied only in respect of the parts of the premises inhabited, 10,087; 10,088; 10,143-7.

Case of barmaids not able to sleep on the premises (Mr. Goldney), 10,075.

City police who are married cannot live in warehouses (Mr. Goldney), 10,076; 10,077.

City desire to make use of premises at present unoccupied owing to operation of Inhabited House Duty (Mr. Goldney), 10,171-6.

Transference in aid of local rates would be an advantage if wishes of Corporation could be carried into effect (Mr. Goldney), 10,085; 10,086; 10,177.

## CLASSIFICATION OF RATES :

(a.) *Imperial and local matters. (See also "LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON.")*

Imperial and local matters. Distinguishing rates in respect of (Mr. Jeeves), 1641-4; (Mr. Dodgson), 7663-82. Local taxation raised for both purposes should be partly borne by taxpayers (Mr. Jeeves), 1709-14.

Purposes of expenditure which should be paid by local taxation and Imperial taxation classified. Suggested method of raising such taxation (Mr. Clarke), 7425-41. Classification with object of relieving the persons who derive incomes from agricultural land from the burdens of rates, 7565-73. Mr. Pell's suggestions alluded to, 7581-6.

Imperial and local taxation should be reclassified, and each locality bear its own local burdens (Mr. Gomme), 9075-7.

(b.) *Rules of Benefit and Rates of Burden.*

Method of classifying (Mr. Rotton), 69-71.

Classification according to objects on which expended (Mr. Rotton), 57-62; (Mr. Jeeves), 1650-4; (Sir H. B. Poland), 2505-14; (Mr. Holmes), 2982-4.

Illustration of each class (Mr. Rotton), 72.

Difficulty of distinguishing in certain cases, 73-5.

How far distinguishable (Mr. Jeeves), 1776-82.

Difficulty of determining who derive benefits from expenditure (Mr. Rotton), 63-8.

Incidence of local taxation. Upon whom should taxation fall (Mr. Goldney), 10,134-9.

Rates of burden or necessity, and rates of benefit or luxury. Return (Mr. Swainson), 6319-25. Character of circular sent to certain towns with reference to, 6326-53. Classification in return discussed, 6354-63.

## CLASSIFICATION, SYSTEM OF :

Applicable only to occupiers (Mr. Dodds, Scotland), 375-81. And only to parish rates, 474; 475.

Parishes adopting the system, kind of (Mr. Dodds, Scotland), 545-53. Number of, diminishing, 382; 383. Reasons for diminution in number, 507; 508.

Agricultural Rates Act, 1836; effect of (Mr. Dodds, Scotland), 384-6.

Rate in £ imposed upon owner and occupier likely to vary (Mr. Dodds, Scotland), 394; 395.

Position of members of parish council if interested in certain properties (Mr. Dodds, Scotland), 476-9.

CLASSIFICATION, SYSTEM OF—*cont.*

Taken into consideration on sale or purchase of property (Mr. Dodds, Scotland), 490; 491.

A continuation of rating according to means and substance (Mr. Dodds, Scotland), 501-6; 591; 592.

Control by a central authority desirable (Mr. Dodds, Scotland), 509; 510.

Objections to (Mr. Dodds, Scotland), 511-4.

Is a fair one, but complicated (Mr. Little), 8154.

Classification of certain properties for purpose of rating (Capt. E. G. Pretyman, M.P.), 9847-59.

(See also under "GRADING, SYSTEM OF.")

## CLERGY :

Position of parsons and vicars. Whether inhabitants or occupiers (Rev. C. A. Stevens), 8609; 8621.

Reduction of clerical incomes and increase of burden of rates (Rev. C. Theobald), 5551-7; 5634-42.

Gross and net income of certain clergy (Mr. A. G. Boscawen, M.P.), 10,942-9.

Ability to pay. Rental of a house apart from land in agricultural parish is a rough criterion, representing a tenth of income. But clergy pay more than this proportion (Mr. C. S. Read), 10,331-3.

Said to be rated upon their professional incomes (Rev. D. J. Davies), 5651-3; 5715-9; (Mr. A. G. Boscawen, M.P.), 10,892; 10,896-9; 10,919-27.

And to be the only class so rated, 10,963-70.

Said to be owners and occupiers, and therefore excluded from operation of Agricultural Rates Act, 1896 (Mr. A. G. Boscawen, M.P.), 10,950-62.

## COAL MINES. (See under "MINES.")

## COLLECTION OF RATES. (See under "LEVYING AND COLLECTION OF RATES.")

## COMMERCIAL GAS COMPANY :

Rates paid by, represent 15 per cent. on gross receipts for gas and meter rents, and rateable value 50 per cent. of the profits (Mr. Jones), 9168-76.

## COMMISSIONER OF VALUATION, IRELAND :

Memorandum prepared by, scope and contents of (Mr. Barton, Ireland), 3274; 3275.

Complaints made to (Mr. Barton, Ireland), 3325-9.

Works in harmony with the local authorities (Mr. Barton, Ireland), 3354.

Communicates with Inland Revenue officers with reference to valuation of certain properties (Mr. Barton, Ireland), 3355.

## COMMISSIONERS UNDER LOCAL GOVERNMENT ACT, 1838. See LOCAL GOVERNMENT ACT COMMISSION.

## COMPANIES :

Difficulties in connexion with rating of certain classes of trading companies (Sir H. B. Poland), 2136-8.

Do not get same benefit from expenditure of certain rates as householders (Mr. Morse), 4716-20.

Assessment on profits a grievance (Mr. Morse) 4723; 4724.

Accounts, period for making up. Quinquennial valuation. Different practices allowed by the courts (Mr. Jones), 9145.

Companies whose accounts are published should be valued upon gross income (Mr. Crompton), 5011-35.

Now rated on basis of hypothetical tenant. Suggested basis to be half the net profits taken from income tax returns for each year (Mr. C. C. Smith), 9396-406; 9408-15; 9449-61; 9477-82.

Valuation of certain companies. Mr. Wilkins' scheme described. Combination of structural values and profits made (Mr. Wilkins), 9489-93.

Should be classified for the purpose of valuation (Mr. Morse), 4846-56.

Have no power to vote at election of guardians (Mr. Dawe), 1413-8; (Mr. Humphreys-Davies), 4191-6. Should have some representation upon Union Assessment Committee, 4179-81.

Have no power to vote at election of rating authorities (Mr. Crompton), 5038-40.

Railway, gas, and water companies, as trading concerns, have no direct representation on local bodies (Mr. Humphreys-Davies), 4323-38.

## COMPANIES—cont.

- Have no power to vote at municipal elections (Mr. Adamson), 5069. Effect of this, 5128-33.
- Have no power to vote at parliamentary elections (Mr. Orompton), 5038-40. Objections (Mr. Adamson), 5069.

## COMPOUNDING:

(a.) *Desirability of, or objections to, system, and suggestions for its improvement.*

- Advantages of system (Mr. Dawe), 1163-8; 1216-8; 1326-8; (Mr. Jeeves), 1620; 1621; 1686-8; (Sir H. B. Poland), 2417-21.
- Causes inequalities in contributions from parishes within a union to common fund (Mr. Dawe), 1204.
- Recommendations as to compounding (Mr. Dawe), 1231; 1232; (Mr. W. C. Cripps), 2022. Should be allowed upon the valuation instead of a discount off the rate (Mr. Dawe), 1275. Local authorities should have option to adopt (Mr. R. E. Fox), 1471; 1472; 1514; 1515; (Mr. Jeeves), 1689; 1690; (Mr. Horn), 6938-40.
- Distinctions under Poor Rate Assessment Act, 1869, and Public Health Act, 1875; (Mr. Dawe), 1133. Provisions in latter Act better than in former (Mr. C. C. Smith), 9422-34.
- Law as to, perfectly clear (Sir H. B. Poland), 2213.
- How far influenced by rise or fall in rates (Mr. Cleaver), 4022.
- West Derby Union. Compounding exists to a large extent. Not desirable that it should exist to this extent (Mr. Cleaver), 4086-91. To what extent it is desirable and undesirable, 3998-4016.
- Burnley Union, compounding no advantage in (Mr. Horn), 6875-8.
- Burnley and Nelson. Collection is rather better in Burnley, where there is no compounding, than in Nelson, where there is (Mr. Horn), 6869-75.

(b.) *Amounts allowed.*

- Present allowances give owner too great a benefit (Mr. Cleaver), 4076; 4077; (Mr. Horn), 6959; (Mr. Vulliamy), 7174-81; (Mr. P. R. Smith), 11,420; 11,421.
- Amounts allowed are too great in certain places (Mr. Humphreys-Davies), 4315-8.
- Allowances with regard to poor rate and sanitary rate (Mr. Norton), 6543-60.
- Each locality should exercise discretion as to allowance when owner pays the rate whether the premises are occupied or not (Mr. Cooper), 10,226-9.
- West Derby Union. Amounts allowed (Mr. Cleaver), 3943-6. Objection to owners getting additional 15 per cent. if they run the risk of paying for empties 3947-50.
- Nelson. Amounts allowed are too high (Mr. Horn), 6926; 6927.
- Blackburn. Amounts of compositions (Mr. R. E. Fox), 1581-3.

(c.) *Limit of Composition.*

- Should depend upon rent paid by working classes in different localities (Mr. Dawe), 1329; 1330.
- Uniform limit desirable (Mr. Jeeves), 1689; 1690. Limit should be 10l. for all rates (Mr. Cooper), 10,226-9.
- Limit under Poor Rate Assessment and Collection Act, 1869, should be raised to 10l. (Mr. E. H. Davies), 7059-63a. This is desired in Wales, 7016-28.
- Hull. Increase to uniform limit desirable (Mr. Dawe), 1345-7.
- Blackburn. Increase to uniform limit desirable (Mr. R. E. Fox), 1465-70.
- Liverpool. Limit of composition is 15l. (Mr. Cleaver), 3995-7.
- Bolton. A 10l. limit under special Act (Mr. Swainson), 6314.

(d.) *Uniform system for all Rates desirable.*

- Inequalities in system — want of uniformity (Mr. Dawe), 1157-62.
- Equalisation of system for municipal, public health, and poor law purposes desirable (Mr. Jeeves), 1754.
- Uniform system desirable with regard to general district rate and poor rate (Mr. Vulliamy), 7130-6.

## COMPOUNDING—cont.

- Association of Municipal Corporations consider the Poor Rate Assessment and Collection Act, 1869, should apply to all kinds of rates levied within one borough boundary (Mr. R. E. Fox), 1472; 1473.
- St. Helens. Uniform allowances in case of corporation rates as well as poor rates (Mr. Jeeves), 1618; 1619.

(e.) *Interest of Occupiers paying no Rates in Administration of Local Affairs.*

- How far do occupiers take the same view as owners with regard to expenditure (Mr. Jeeves), 1755-63. And how far a movement in rates affects rents, and how far are occupiers paying no rates interested in the administration of local affairs, 1622-8; (Mr. Cleaver), 4017-21.
- Burnley Union. No advantage in compounding. Economy on behalf of spending authorities promoted if occupiers pay rates and know cost of local government (Mr. Horn), 6875-8.

(f.) *Local systems of compounding.*

- Liverpool has a local Act with reference to municipal rates (Mr. Norton), 6543-60. Owner obliged to pay whether property occupied or not, and gets 50 per cent. for collection, 6426-8. System is satisfactory, 6431-4.
- St. Helens. Local Act in force (Mr. Jeeves), 1618; 1619; 1683-5.
- Blackburn. System adopted in (Mr. R. E. Fox), 1523-31; 1581-3.
- Pontypridd Union. Effect of present law, and system adopted by overseers (Mr. E. H. Davies), 7016-28.

## COMPOUND PROPERTY OWNER:

- Has no representation or vote for representation on local body (Mr. Humphreys-Davies), 4319-25.

## CONSOLIDATED FUND, grants paid out of (Mr. Rotton), 284-9.

## CONSOLIDATION OF RATES:

- There should only be one rate (Mr. Vulliamy), 7128; 7129; (Mr. C. C. Smith), 9420; 9421; collected by overseers (Mr. Horn), 6880. Audit by district auditor desirable, 6928.
- One local rate for all local purposes desirable, to be levied as a union and not a parish rate (Mr. Vulliamy), 7201.
- One rate and one demand note showing purposes for which rates are raised, presented on behalf of the different authorities in the union desirable (Mr. Cleaver), 4038-40; (Mr. North), 4527; 4528.
- Desirable to have only one assessing, one rating, and one collecting authority in each union (Mr. Peace), 4679-87.
- One collector and one demand note in a parish would entail paying a collector instead of collection by unpaid overseers (Mr. Hett), 4564-73.
- Desirable to have in boroughs one basis of valuation for local and Imperial purposes instead of four, one rate levied, one demand note, and one collector (Mr. Cleaver), 3955; 3956.
- Bolton Improvement Act, 1877 (Mr. Swainson), 6275-81; 6284-6.
- Barrow-in-Furness (Mr. Swainson), 6275-81.
- Huddersfield (Mr. Swainson), 6275-81.
- Explanation of large number of rates for separate purposes (Mr. Dodds, Scotland), 560-4.

## CONSTABULARY CHARGES (Mr. Robinson, Ireland), 873-7; 985; 986.

## CONSUMABLE PROPERTY:

- The question of capital and income considered (Mr. Morse), 4805-12.
- Assessment in respect of (Mr. Morse), 4840-5.

## COPYHOLD LANDS, assessment of sporting rights (Mr. Rotton), 197; 198.

## COUNTRY HOUSES often inadequately valued (Mr. P. R. Smith), 11,422.

COUNTY ASSESSMENT COMMITTEE. *See under "VALUATION, UNIFORMITY IN, AND SUGGESTED AUTHORITIES" (sub-section d.).*COUNTY BOROUGHS. (*See "BOROUGHES," "LOCAL TAXATION (ENGLAND) ACCOUNT," and "LOCAL TAXATION (CUSTOMS AND EXCISE) DUTIES."*)

Index  
to Evidence.

### COUNTY CESS :

- Comparison of English and Irish systems (Mr. Robinson, Ireland), 637-40. Grand jury system in Ireland (Mr. Jeeves), 1855-61.
- Liability for payment of (Mr. Robinson, Ireland), 663-9. Property is liable as against persons for poor rate, 670-2; 1040; 1041.
- Payment of, under Act of 1870 (Mr. Robinson, Ireland), 936-40.
- Valuation for, and by whom levied (Mr. Robinson, Ireland), 596; 597.
- Charges—returns of (Mr. Robinson, Ireland), 736-52.
- Contracting out of Land Act of 1870 by landowners (Mr. Robinson, Ireland), 822-4.
- Expenditure, details of (Mr. Robinson, Ireland), 913.

### COUNTY COUNCILS. (See also under the names of the various counties.)

- Financial arrangements and method of keeping county accounts (Mr. Hulton), 5729-31.
- Government grants have not made councils extravagant (Mr. Hulton), 5919-21.
- Tendency to increase local expenditure. Increased expenditure for main roads, and in consequence of new responsibilities and duties imposed upon them, as well as increased expenditure in respect of old duties. How far present constitution of local bodies responsible for this. Position of Norfolk (Mr. C. S. Read), 10,300-21; 10,383-6; (Mr. Rew), 10,632-4.
- Kent. Council and borough interests. No friction now. Rural representatives greatly outnumber urban (Mr. Knocker), 6166-77.
- Apportionment of the amount paid out of the Exchequer Contribution Account between the counties and county boroughs. (See under "LOCAL TAXATION (ENGLAND) ACCOUNT," and "LOCAL TAXATION (CUSTOMS AND EXCISE) DUTIES.")

### COUNTY COUNCILS ASSOCIATION :

- Memorandum of (Mr. Hulton), 5726-8.
- Statistics supplied by (Mr. Hulton), 5867-72. Rateable and assessable value of certain counties, 5962-70.

### COUNTY RATE BASIS AND COMMITTEE :

#### (a) Basis.

- Compilation of list: powers of county council (Mr. Rotton), 178-82.
- Settlement of basis, and officers employed (Mr. Rotton), 37.
- Committee endeavour to ascertain whether individual properties are fairly assessed (Mr. Merrifield), 6098-101.
- Basis (Mr. Rotton), 33-6; (Mr. Hubbard), 3209-11. Gross annual value taken and uniform deductions made (Mr. Jeeves), 1702-8.
- In regard to Government grants (Mr. Cobbold), 5299-308.
- Periodical revision by County Rate Committee (Mr. Jeeves), 1702-8; (Mr. W. C. Cripps), 2074; 2075.
- Lancashire. Scale of deductions adopted in revision of valuation (Mr. Hulton), 5771; 5772. Only one appeal against decision of Committee since 1872, 5773-9.
- No joint committee in Sussex, as in Lancashire, between county and county boroughs. Difficulty in carrying out such a scheme. A compromise effected (Mr. Merrifield), 6069-71.
- Rateable value and assessable value of certain counties compared (Mr. Hulton), 5962-70.
- Scotland. Gross value rated with certain exceptions (Mr. Dodds, Scotland), 357; 358.

#### (b.) County Rate Basis Committee and Union Assessments.

- Comparison between county rate basis and union basis (Mr. Hubbard), 3209-11; (Mr. Cobbold), 5250-6; 5292-8. Inequalities in results of valuation, 5292-8.
- Relation of inter-parochial valuation for county and union purposes (Mr. Rotton), 38.
- Reasons for avoiding revision of union valuation list (Mr. Rotton), 191; 192. Incentive for a low union valuation (Mr. Duffield), 5419-22.

### COUNTY RATE BASIS AND COMMITTEE—cont.

- County Rate Committee do not always accept valuation of Union Assessment Committee (Mr. E. H. Davies), 6999-7004.
- Lancashire. Comparison between county rate basis and the valuation of the several unions (Mr. Hulton), 5780-4. In some rural unions the two assessments vary very much, 5765-7.
- Northamptonshire. Attitude of County Rate Committee towards Union Assessment Committees in the county and their valuations (Mr. Pell), 7929-36.
- Sussex. County Rate Committee disregard valuations of Union Assessment Committees (Mr. Merrifield), 6075; 6076. County rate basis is on basis of income tax valuation and is higher than poor rate valuation, 6104-11.

#### (c.) Uniformity in Valuation. Suggestions as to retention of present County Rate Basis Committee, or creation of a new County Assessment Committee.

- Valuation of all properties in a geographical county could be finally settled by one authority (Mr. Hulton), 5918. Such authority being a County Assessment Committee having the assistance of the Inland Revenue and the surveyor of taxes, 6000-6, 6027-9.
- Uniform valuation throughout the country secured by County Assessment Committee and a special Commission to supervise these Committees and prescribe regulations (Mr. Hulton), 6010-2.
- Suggested constitution of County Assessment Committee (Mr. Merrifield), 6112-21. Surveyor of taxes should assist Committee (Mr. Hulton), 5768-70; (Mr. Merrifield), 6078.
- Advantages of retaining Union Assessment Committees, but they should be strengthened, and the valuation lists approved by the County Assessment Committee (Mr. Merrifield), 6122-8.
- County Assessment Committee is desirable, but there should be an appeal to an independent authority (Mr. Merrifield), 6062-8; 6072-4. And Union Assessment Committees should be retained, 6062-8.
- Mr. Hulton's and Mr. Merrifield's proposals compared (Mr. Merrifield), 6081-7.
- Valuation by one Authority for county and also for union purposes desirable. Suggested means of obtaining this result—abolition of Union Assessment Committees (Mr. Dawe), 1293. Case of counties and boroughs considered, 1277-89.
- County councils should be the valuation authorities for all purposes in counties, and also in metropolis (Mr. Jeeves), 1699-701; (Mr. Watkins), 6637-40. Position of county boroughs under such a scheme (Mr. Cobbold), 5309-15.
- County rate basis made by County Rate Basis Committee with assistance from unions desirable (Mr. Cobbold), 5218-25.
- County councils and corporations as rating authorities suggested (Mr. Dawe), 1350-5; 1422; 1423.
- Valuation of hereditaments varies in different unions. Incentive for a low union valuation (Mr. Rotton), 191; 192; (Mr. Duffield), 5419-22. Suggested County Committee, 5419-22; 5473.
- County Rate Committee would still be required if only one valuation (Mr. Jeeves), 1694-8.
- Retention of Union Assessment Committees, and also of general County Committee desirable (Mr. W. C. Cripps), 2071-3.

### COUNTY RATE JOINT COMMITTEE IN LANCASHIRE :

- A joint committee created under Local Government Act, 1888, 51 & 52 Vict. c. 41. s. 33 (2). Procedure. System has proved a satisfactory one to county and borough members (Mr. Hulton), 5757-63.
- System and procedure adopted (Mr. Hulton), 5823-32.
- Committee deals, if necessary, with individual properties in a parish (Mr. Hulton), 5915-7.
- Committee has made the Union Assessment Committee keep up the rateable value, and obliged them to make re-valuations of railways, mines, and mills (Mr. Hulton), 5764.

### COUNTY RATES. (See also "VALUATION (METROPOLIS) ACT.")

- Union contributions. Results of want of uniformity in systems of deductions (Mr. E. H. Davies), 6994-8.

COUNTY RATES—*cont.*

- Boroughs can increase number and pay of their police, and half cost falls on county rates. County cannot do so without leave of Home Office (Mr. Merrifield), 6133.
- Lancashire. Rates for special and general purposes. Mode of levying payment for deficits (Mr. Hulton), 5755; 5756. Rise or fall in recent years, 5873-83.
- Gloucestershire. High, but management economical (Mr. Elsom), 7337; 7338.
- Division between owner and occupier (Mr. Dodds, Scotland), 363-6.
- Collected direct from owner (Mr. Dodds, Scotland), 460; 461.
- Liability of owner to pay rates in respect of unoccupied property (Mr. Dodds, Scotland), 418; 419.
- Road debts incurred before 1889 paid by owner (Mr. Dodds, Scotland), 367.
- County rates, valuation authority is grand jury (Mr. Robinson, Ireland), 596; 597.
- Comparison of English and Irish systems (Mr. Robinson, Ireland), 637-40.
- COURT OF SESSION, appeals to, are few (Mr. Dodds, Scotland), 355; 400-3.

## CRIMINAL PROSECUTIONS:

Position of London in relation to rest of country as regards Government grants towards cost of criminal prosecutions (Mr. Gomme), 8944-50.

CURATES' STIPEND. *See under "TITHES AND TITHES RENTCHARGE" (sub-section h.).*

## DARLINGTON UNION:

Position of certain country parishes said to be unfair with regard to their contributions to rates (Mr. Rowlandson), 9968-72.

DEAN, EAST AND WEST. (*See under "EAST DEAN" and "WEST DEAN."*)

## DEATH DUTIES:

Relief desirable (Mr. A. F. Jeffreys, M.P.), 11,273-5.

## DEDUCTIONS FOR REPAIRS, INSURANCE, &amp;c., TO ARRIVE AT RATEABLE VALUE (ENGLAND):

(a.) *Variation in Amounts allowed.*

- Variation in amounts allowed in different unions (Mr. Jeeves), 1593-8; (Mr. E. H. Davies), 6987-90.
- No statutory scale outside Metropolis (Sir H. B. Poland), 2225.
- Results of want of uniformity on union contributions to county rates (Mr. E. H. Davies), 6994-8.
- Interest of unions to allow large deductions (Mr. Rotton), 195; 196.
- Essex. Certain Union Assessment Committees do not deduct tithe from gross rental (Mr. Pell), 7911-4.
- Inequalities in Tunbridge and Ticehurst Unions, (Mr. W. C. Cripps), 2009; 2010, 2033-6.

(b.) *Amounts allowed in certain Districts.*

- Lancashire. Scale of deductions adopted by County Rate Committee in revision of valuation (Mr. Hulton), 5771; 5772.
- Liverpool. Poor rate valuation. Amounts allowed (Mr. Cleaver), 3970-80; (Mr. Norton), 6441-6.
- West Derby Union. Scale laid down in rules provided for guidance of overseers (Mr. Cleaver), 3970-80.
- Burnley Union. Amounts allowed on various classes of property (Mr. Horn), 6848-50. Case of land and buildings, 6851-64.
- Aston Union. Amounts allowed on various classes of property (Mr. North), 4520-2.
- Glanford Brigg Union. Amounts allowed and system adopted (Mr. Hett), 4557-60.
- Pontypridd Union. Amounts allowed in cases of small hereditaments (Mr. E. H. Davies), 6991-3.

(c.) *Suggestion that certain Deductions are excessive.*

Allowances on house property are excessive (Mr. Payne), 11,580

DEDUCTIONS FOR REPAIRS, INSURANCE, &c.—*cont.*(d.) *Uniformity and Statutory Scale of Deductions desirable outside Metropolis.*

- Uniform deductions for the same classes of property desirable (Mr. Cleaver), 3991-4; 4037; (Mr. Cobbold), 5276-88; (Mr. Norton), 6447; 6448; 6469; 6470.
- Uniform system in each county desirable (Mr. E. H. Davies), 6994-8; 7055-8. Results of want of uniformity on union contributions to county rates, 6994-8.
- Uniform scale throughout a county desirable for Union valuation lists (Mr. Cobbold), 5218-25; 5230.
- Uniformity in unions in a county could be obtained if a representative of County Rate Committee sat on Union Assessment Committee (Mr. E. H. Davies), 7005-9.
- To obtain uniformity chairman of Union Assessment Committee should act *ex officio* with the overseers (Mr. E. H. Davies), 7029-36.
- Uniformity in amounts as between two unions forming parts of a borough, secured by the creation of a joint assessment committee (Mr. Jeeves), 1602-9.
- Statutory allowances exist in London only (Mr. Rotton), 39, 40.
- Statutory scale of deductions throughout the country desirable (Mr. Jeeves), 1599-601; (Mr. Hett), 4561; 4562; (Mr. Peace), 4710; (Mr. Merrifield), 6088; 6089; (Mr. Horn), 6918-25.
- Proposed statutory scale, if gross value be not made rateable value (Mr. Horn), 6973-82.
- Uniform deductions made on periodical revision by county rating committee (Mr. Jeeves), 1702-8.

(e.) *Valuation (Metropolis) Act.—Schedule of Deductions.*

Statutory maximum scale in Metropolis (Mr. Rotton), 39; 40; (Sir H. B. Poland), 2224. But not always allowed, 2226; 2227. Advantages of scale, 2228; 2229.

Schedule limiting deductions from gross value is unfair (Mr. Humphreys-Davies), 4215-7.

(f.) *Valuation of special classes of property. (See also under "TITHES RENTCHARGE," "MINES (COAL)," and "RAILWAYS.")*

Amounts of deductions for interest on capital, profits and contingencies in respect of business undertakings (Mr. Morse), 4919-27.

Deductions for wasting capital should be made. Meaning of a "tenant from year to year" (Mr. Morse), 4936-45.

Scale of deductions in respect of profits on different classes of business desirable (Mr. Morse), 4946-8.

## DEDUCTIONS FOR REPAIRS, INSURANCE, &amp;c. TO ARRIVE AT RATEABLE VALUE (SCOTLAND):

Provision contained in Poor Law (Scotland) Act, 1845 (Mr. Dodds, Scotland), 370-4.

## DEDUCTIONS MADE IN VALUATION OF NEW HOUSES IN IRELAND:

System adopted in order to arrive at the basis upon which houses were valued by Sir R. Griffith (Mr. Barton, Ireland), 3333-9. Not a satisfactory one, but the best course to adopt under present circumstances, 3377-85. Percentage deductions made, 3537-40.

## DEMAND NOTES:

West Derby Union, number of demand notes in (Mr. Cleaver), 3951-4.

Separate ones for owner and occupier (Mr. Dodds, Scotland), 485-9. Form of, 588-90.

Dumfries. Parish and county rates levied upon one note by one collector (Mr. Dodds, Scotland), 396-9.

## DEPWADE UNION (NORFOLK):

Rateable value of land in excess of actual rent (Mr. Holmes), 3080-8.

Amount received by union in respect of Agricultural Rates Act, 1896 (Mr. Holmes), 3118-23.

## DIFFERENTIAL SYSTEM OF RATING:

Glasgow (Mr. Dodds, Scotland), 519; 520.

An attempt to rate according to ability (Mr. Dodds, Scotland), 521-6.

**DIFFERENTIATION IN RATES IN METROPOLIS.** (See under "METROPOLIS.")

**DIRECT LOCAL TAXATION IN METROPOLIS**  
(See under "METROPOLIS.")

**DISCOUNTS ALLOWED IN BLACKBURN:**

System of (Mr. R. E. Fox), 1437-43; 1510-3; 1523-31.  
Amounts of (Mr. R. E. Fox), 1581-3. Five per cent.  
allowed under a local Act if rates paid within  
specified time, 1433-6.

**DISEASES OF ANIMALS:**

Cost of their extermination to local taxation (Mr. C.  
S. Read), 10,441-3.

**DISEASES OF ANIMALS ACT, 1894** (57 & 58 Vict.  
c. 57).

Unfavourable operation as regards Government  
grants to London (Mr. Gomme), 8728.

**DIVISION OF RATES BETWEEN OWNER AND  
OCCUPIER:**

(a.) *England and Wales.*

Resolution passed by Central Chamber of Agriculture  
(Mr. Rew), 10,654-6; 10,740-3; 10,872-6.

Suggested division (Mr. Rowlandson), 9973;  
9974. Present incidence of rates, 9995-10,013.

Would be inexpedient. Reasons for this view (Mr.  
Eve), 7789; 7790.

Question of representation by owners (Mr. Little),  
8159.

Would not now be fair, as owners have so small a  
representation on local bodies and so little control  
over the expenditure (Mr. C. S. Read), 10,356;  
10,357.

Hull. Most rates levied on occupier (Mr. Dawe),  
1194-8.

(b.) *Scotland.*

County rates (Mr. Dodds, Scotland), 363-7.

Burghs, rates in (Mr. Dodds, Scotland), 368; 369.

Poor rate (Mr. Dodds, Scotland), 450-4.

Advantages of Scottish system of levying half and  
half (Mr. Dodds, Scotland), 427-33.

Taken into consideration on sale or purchase of  
property (Mr. Dodds, Scotland), 490, 491.

Purposes for which rate levied considered by legis-  
lature; question of convenience in raising rate also  
an element (Mr. Dodds, Scotland), 527-9. But no  
general principle specified, 587.

Statutory enactments (Mr. Dodds, Scotland), 530.

Which borne by owners and which by occupiers;  
reasons for (Mr. Dodds, Scotland), 531; 532.

(c.) *Ireland.*

Valuation over 4l.—payment of rates by occupier  
subject to deduction of moiety from lessor (Mr.  
Robinson, Ireland), 699-703. Reasons for division  
where valuation is over 4l., 1032-9.

Lessors' and lessees' shares of rates in event of reduc-  
tion of rent below valuation of land (Mr. Robinson,  
Ireland), 693-8; (Mr. Barton, Ireland), 3321-4.

Lessee or occupier pays more than half of actual  
amount (Mr. Robinson, Ireland), 903-5.

Immediate lessor entitled to deduct from owner  
(Mr. Robinson, Ireland), 906-12.

**DOCKS, RATING IN RESPECT OF:**

(a.) *Partial exemption.*

Abolition of, in respect of certain portions of docks  
desirable (Mr. Dawe), 1169-80; 1183; 1184; 1331-6;  
1399-412. Reasons, 1225; 1250-7.

(b.) *Assessment.*

Difficulty for corporation to apportion rate deter-  
mined by overseers between the wharves and land  
covered by water (Mr. Dawe), 1135; 1136.

Difficulty of applying parochial earnings system (Sir  
H. B. Poland), 2259-62.

System of employing professional valuer should be  
extended (Mr. Cleaver), 4082-5.

Independent assessor as in Scotland desirable (Mr.  
Jones), 9119-26; 9287; 9288.

**DOVER:**

Power of Council to appoint overseers and assistant  
overseers. Action of Local Government Board  
(Mr. Knocker), 6205-10; 6252-4.

Consolidation of parishes has been beneficial (Mr.  
Knocker), 6201-4.

Boundary of union and borough should be conter-  
minous (Mr. Knocker), 6215-20.

Alteration of boundaries of union. Administrativ  
difficulties (Mr. Knocker), 6238-44.

Representation of urban parishes on board of guar-  
dians. No complaints made to Local Government  
Board (Mr. Knocker), 6235-7.

Rates in the £ (Mr. Knocker), 6197-200.

Collection of poor and general district rates. Dif-  
ference in cost (Mr. Knocker), 6255-7. Reasons,  
6211-4.

Effect of Local Government Board Act, 1888 (Mr.  
Knocker), 6161; 6162.

Public undertakings and buildings (Mr. Knocker),  
6163-5.

**DUNMOW UNION:**

Land assessed at less than annual value (Rev. E. F.  
Gepp), 8542; 8543; 8566-76.

Tithe rentcharge. Deductions. System adopted.  
More rates paid proportionally in respect of tithes  
than of land, since fall in value of land (Rev. E. F.  
Gepp), 8553; 8602.

**EAST DEAN:**

Depressed condition of (Mr. Elsom), 7272; 7273.

Contribution of Crown to rates added to rateable  
value of township (Mr. Elsom), 7274-87.

**EDUCATION, COST OF:**

Proportion of expenditure borne by rates and propor-  
tion borne by Government grants. Comparison  
between London, county boroughs, and counties  
(Mr. Gomme), 8712-8.

Grants to school boards according to education  
results. London's share (Mr. Gomme), 8961-3.

Grants to voluntary schools, London's share (Mr.  
Gomme), 8964-9.

Suggested that expenditure on education should be  
paid by Exchequer (Mr. Norton), 6475-85; 6569-  
79; (Mr. Watkins), 6628; (Mr. Bellwood), 6735-7;  
(Mr. Gomme), 8996. But such expenditure should  
be in form of subventions (Mr. Norton), 6586.

Effect of this on particular classes (Mr. Watkins),  
6704-6. Question of control discussed, 6599-622;

6641-68; (Mr. King), 6802-37; (Mr. Gomme),  
9088-101. Discussion as to what classes should  
bear this expenditure, and what administrative  
changes should take place (Mr. Watkins), 6641-68;

(Mr. King), 6802-37.  
Suggested that charges for, should be defrayed by  
Exchequer, and that other rates should be thrown  
on county (Mr. Elsom), 7309-17.

West Dean. School board expenditure has been  
heavy with regard to building. The Elementary  
Education Act, 1897, will be a benefit (Mr. Elsom),  
7257-61.

**EDUCATION (NATIONAL), IN IRELAND,** sources  
of revenue (Mr. Robinson, Ireland), 981-4.

**ELECTIONS (PARLIAMENTARY AND LOCAL):**

Companies have no power to vote at election of  
guardians (Mr. Dawe), 1413-8; (Mr. Humphreys-  
Davies), 4191-6. They should have some repre-  
sentation upon Union Assessment Committee,  
4179-81.

Companies have no power to vote at election of  
rating authorities (Mr. Crompton), 5038-40.

Railway, gas, and water companies, as trading con-  
cerns, have no direct representation on local bodies  
(Mr. Humphreys-Davies), 4326-38.

Companies have no power to vote at municipal elec-  
tions (Mr. Adamson), 5069. Effect of this, 5128-  
33.

Companies have no power to vote at parliamentary  
elections (Mr. Crompton), 5038-40. Objections  
(Mr. Adamson), 5069.

Class of ratepayers in City of London who elect the  
guardians are chiefly business men (Mr. Adamson),  
5190-8.

**ELECTRIC LIGHT COMPANIES, VALUATION OF:**

- Present method of assessing (Mr. Munro, Scotland), 3713; 3714; (Mr. Morse), 4725.
- Uncertainty in present principles (Mr. Crompton), 4976-80.
- Valuation in different parts of the country varies notwithstanding publication of accounts (Mr. Crompton), 4981-7.
- Valuation in different parts of the country varies greatly owing to want of a defined principle (Mr. Crompton), 5041-4.
- Valuing according to structural value in respect of a generating station of an electric lighting company situated in a district where the earnings are not made (Mr. Morse), 4748-51.
- Machinery belonging to. Rating in respect of (Mr. Morse), 4885; 4886.
- Case of a company rated at a sum almost identical with net profits (Mr. Morse), 4889-92.
- Valuation of works belonging to public companies and undertakings of local bodies (Mr. Crompton), 5001-10; 5048-55.
- Suggested method of valuation (Mr. Morse), 4726.
- Valuation should be based upon gross income (Mr. Crompton), 4988-5000; 5011-35.
- Independent assessor, as in Scotland, desirable (Mr. Jones), 9287; 9288.
- Appeals by companies (Mr. Morse), 4721; 4722.

**ELEMENTARY EDUCATION ACT, 1870 (33 & 34 Vict. c. 75):**

- Tendency of new rates to increase in amount (Mr. O. S. Read), 10,294.

**ELEMENTARY EDUCATION ACT, 1897 (60 Vict. c. 16):**

- Act will be a benefit to West Dean where school board expenditure has been heavy (Mr. Elsom), 7257-61.

**EPSOM AND EWELL GAS COMPANY:**

- Large increase in valuation necessitating increased charge for gas. Gross rent taken as net rateable value (Mr. Jones), 9141-4.

**EQUALISATION OF RATES IN METROPOLIS.**  
(See under "METROPOLIS.")**ESSEX:**

- Valuation of agricultural land in (Rev. E. F. Gepp), 8542; 8543; 8566-76.
- Agricultural land assessed above rental value (Mr. Pell), 7915-20. Action of Union Assessment Committees and Quarter Sessions. Suggestion as to alteration of the tribunal of appeal, 7940-9.
- Certain Union Assessment Committees do not deduct tithe from gross rental (Mr. Pell), 7911-4.
- Certain land in hand is valued above the rent (Mr. Pell), 7909; 7910.

**EXCHEQUER CONTRIBUTIONS.** (See under "IMPERIAL CONTRIBUTIONS" and "LOCAL TAXATION (ENGLAND) ACCOUNT.")**EXCUSALS ON GROUND OF POVERTY.** West Dean. Small freeholders who are mortgaged (Mr. Elsom), 7250; 7254-6; 7265-71; 7287-95.**EXEMPTIONS (PARTIAL):**

- (See also under "AGRICULTURAL RATES ACT, 1896," "METROPOLIS. DIRECT LOCAL TAXATION" (sub-section d.), and "PUBLIC HEALTH ACTS.")
- Under Public Health Act, 1848 (Sir H. B. Poland), 2410-6.
- Under Public Health Act, 1875. For general district rate, railways, canals, and agricultural land, &c., are rated at one-fourth (Mr. Rotton), 173-5; (Mr. Dawe), 1131; 1132; 1134.
- Principle upon which allowed (Mr. Dawe), 1181; 1182.
- A reasonable provision (Sir H. B. Poland), 2189-92.
- In respect of agricultural land (Mr. Dawe), 1312; 1313. Should be extended to certain portions of waterworks and gas works (Mr. R. E. Fox), 1497-501. Also to coal mines; reasons for this view (Mr. T. Ratchiffe Ellis), 2555-63. And also to ungoten seams of coal, 2665; 2666.
- Revisions of amounts allowed for railways and agricultural land suggested (Mr. R. E. Fox), 1474-6. Reasons for, 1532-41.
- In some cases railway companies should be totally exempt from payment of certain rates (Mr. S. M. Howard), 11,753-9.

**EXEMPTIONS (PARTIAL)—cont.**

- Railway companies in respect of their lines should have exemption of three-fourths extended to every rate except poor rate (Mr. Payne), 11,604-9.
- Exemptions under the Public Health Act and the Lighting Act should be extended to certain other rates. Railways get no benefit from the expenditure of rates upon certain purposes (Mr. P. B. Smith), 11,436-9.
- Objections to (Sir H. B. Poland), 2174-86. Abolition of, in respect of certain portions of railways and docks desirable (Mr. Dawe), 1169-80; 1183; 1184; 1331-6; 1399-412; (Mr. Jeeves), 1862-5. Reasons, (Mr. Dawe), 1225; 1250-7; (Mr. Jeeves), 1629-38. Discount on whole rate preferable (Mr. J. H. Ellis), 1982-6.
- Reduction or increase in number (Sir H. B. Poland), 2314-8.
- Should be abolished (Mr. Humphreys-Davies), 4211; 4212.
- Distinction between principles underlying Public Health Act and Agricultural Rates Act (Capt. E. G. Protyman, M.P.), 9847-59.
- Agricultural land. Rated at one-fourth (Mr. Rotton), 173-5; (Mr. Dawe) 1131; 1132; 1134. Exemptions under Public Health Act, 1875, and Agricultural Rates Act, 1896, are reasonable (Mr. Dawe), 1225; 1246; 1312; 1313. Revision of amounts allowed suggested (Mr. R. E. Fox), 1474-6. Reasons for, 1532-41. Whether benefits received from general district rate are substantial ones, 1542-7. Amounts allowed in various districts (Mr. Dodds, Scotland), 533-6.
- Proportion of contribution in respect of land to rates for certain purposes in different districts (Mr. Rotton), 210.
- Cause injustice to persons rated in respect of other properties under existing system of issuing precepts (Mr. Dawe), 1319-25.
- Allowed in respect of certain properties where profits are taken into consideration (Mr. R. E. Fox), 1477-83.
- Certain properties rated at sums at which rated when acquired (Sir H. B. Poland), 2169-73.
- Contained in old Canal Acts (Sir H. B. Poland), 2187; 2188.
- Relief of owners of tithe or tithe rentcharge under Public Health Act, 1875, but not under Agricultural Rates Act, 1896 (Rev. C. Theobald), 5545, 5546.
- Rates in respect of certain properties in Scotland paid upon one-fourth instead of upon the whole as in England (Mr. Dodds, Scotland), 492-6.
- More common in Ireland than in England (Mr. Barton, Ireland), 3545-7.

**EXEMPTIONS (TOTAL):**

(See also under "GOVERNMENT PROPERTY" and "PERSONAL PROPERTY.")

- Property belonging to local authorities (Mr. Rotton), 218-20.
- Undertakings of local authorities under Improvement Acts (Mr. Crompton), 5036; 5037.
- Certain institutions and societies exempted under 6 & 7 Vict. c. 36 (Sir H. B. Poland), 2157-60.
- Stock in trade exempted under Poor Rate Exemption Act, 1840 (Mr. Rotton), 130.
- Certain persons in respect to certain properties (Mr. Rotton), 105-11.
- In some cases railway companies should be totally exempt from payment of certain rates (Mr. S. M. Howard), 11,753-9.
- Contribution in respect of non-rateable property to Imperial purposes (Mr. Little), 8181-5. The "hereditary burden" theory objected to, 8193-6.
- Should be abolished (Mr. Humphreys-Davies), 4211; 4212.
- Undesirable except in cases of churches, chapels, and schools, &c. (Sir H. B. Poland), 2161-6; 2307; 2308.
- Not fair to general body of ratepayers (Sir H. B. Poland), 2504.
- Properties exempted (Mr. Robinson, Ireland), 1618-22. Complaints, 1016; 1017.
- More common in Ireland than in England (Mr. Barton, Ireland), 3545-7.

**EXTRA-PAROCHIAL PLACES,** rating of (Sir H. B. Poland), 2167.**FARMERS.** (See under "AGRICULTURISTS.")

Index  
to Evidence.

**FEU DUTIES** not rated as such (Mr. Dodds, Scotland), 570-2; 580-6.

**FINANCE ACT, 1894.** (57 & 58 Vict. c. 30.)

Agriculturists consider that their position has been injuriously affected by the Act (Mr. Rew), 10,625-8.

**FISHERIES**, valuation of (Mr. Barton, Ireland), 3349.

**FIXTURES (TENANTS'), RATING IN RESPECT OF:**

Probable effect of payment of rates by landlord on (Mr. Morse), 4898-10.

**FOREIGN COMPETITION IN TRADE:**

Taxation of manufacturers abroad (Mr. C. H. Fox), 4458. A woollen manufactory could be carried on better in Austro-Hungary than in England, 4478-82.

**FORTH AND CLYDE CANAL.** Valuation of (Mr. Munro, Scotland), 3690.

**FORTIFICATIONS**, rating of (Sir H. B. Poland), 2148-51.

**FOWLER, SIR HENRY:**

Return by. Figures discussed (Mr. Rew), 10,512-35; 10,540-3; 10,728-36.

Views on the theory of hereditary burdens (Mr. Rew), 10,494-8; 10,685-7.

School board rates (Mr. Rew), 10,698-701.

**FREEHOLD PREMISES, VALUATION OF:**

Basis must depend on an estimate (Mr. Adamson), 5153-6.

Tests to be applied (Mr. Adamson), 5079-86.

**GAS COMPANIES.** (See also under "COMPANIES.")

(a.) *Valuation.*

Existing system uncertain and unsatisfactory (Mr. Livesey), 9305. Instances given (Mr. C. C. Smith), 9391-4.

Existing system uncertain and expensive, but the results are not complained of (Mr. C. C. Smith), 9419.

Reg. v. Lee (L.R., 1 Q.B.D. 241), Judgement in (Mr. Humphreys-Davies), 4184. New circumstances, such as introduction of sliding scale, &c., have arisen since this case (Mr. Jones), 9110.

Unequal valuations. How far consumers pay the rates (Mr. Livesey), 9330.

Unsatisfactory method of valuing upon receipts upon the mains by some valuers (Mr. Jones), 9114.

Parochial earnings system, results of application of (Sir H. B. Poland), 2270-6.

Epsom and Ewell Gas Company. Gross rent taken as net rateable value (Mr. Jones), 9141-4.

Commercial Gas Company. Rateable value represents 50 per cent. of the profits (Mr. Jones), 9163-76.

Net rateable value. Proper method of ascertaining (Mr. Jones), 9115-8.

Gas pipes do not get three-fourths exemptions (Mr. Jones), 9223; 9224.

Residual products (Mr. Livesey), 9330.

Cannot be ascertained by reference to rent paid (Mr. Jones), 9225-7.

Said to be rated in respect of trade profits (Mr. Jones), 9177; 9178.

Question of the equity of taking trade profits into account discussed (Mr. Jones), 9204-10; 9217-22. Should not be taken into account, 9228-74.

Valued on basis of what a hypothetical tenant would give (Mr. Livesey), 9342-53. Effect is that rateable value is half the divisible profits, 9354-61.

Basis of hypothetical tenant should be abolished (Mr. Livesey), 9309-11.

Statutory monopolies, privileges, and obligations. Difficulty of ascertaining what a hypothetical tenant would pay for such undertakings (Mr. Jones), 9188-203.

Monopoly enjoyed by gas companies. How far an element to be taken into consideration (Mr. Jones), 9292-9.

Statistics referring to valuation of 50 gas companies (Mr. C. C. Smith), 9416-8; 9435-43.

May be valued by Assessor of Railways and Canals in Scotland (Mr. Munro, Scotland), 3713; 3714.

System of valuation in Ireland is same as in England (Mr. Barton, Ireland), 3349.

Generally easy to value (Mr. Barton, Ireland), 3398.

**GAS COMPANIES—cont.**

(b.) *Suggested alterations in Method of Valuation.*

Uniform and simple method desirable. Quarter sessions. Appeals are unsatisfactory (Mr. Jones), 9183-7.

Quinquennial valuation in Metropolis. Profits of quinquennial year taken which conduces to appeals. Desirable to have the average of five years (Mr. Livesey), 9329; 9330.

Exemptions (partial) should be extended to certain portions of (Mr. R. E. Fox), 1497-501; (Sir H. B. Poland), 2314-8.

Should be in respect of value of land, buildings, and plant (Mr. Jones), 9290; 9291.

Suggested valuation on basis of capital value (Mr. Jones), 9216.

Suggested valuation on basis of capital value of structure and site, not including goodwill. Percentage to be taken on capital cost having regard to the success of the business. Trade profits should not be the basis, though they would have to be considered (Mr. Jones), 9146-57.

Suggested basis. Capital represented by the fixed plant and value of land occupied. Method of valuing structures and sites (Mr. Jones), 9129-40.

Mr. Wilkins' scheme described. Combination of structural value and profits made (Mr. Wilkins), 9489-93.

Basis of gas sold or profits discussed (Mr. Livesey), 9370-6.

Basis of gas sold as suggested by Mr. Livesey not approved of (Mr. C. C. Smith), 9444-8; 9475; 9476.

Trade profits should not be the basis, otherwise the profits arising from by-products would be assessed (Mr. Jones), 9127; 9128.

Corporation gas works. Result of application of suggested basis of taking half net profits as basis (Mr. C. C. Smith), 9483-5.

What is a fair average profit on structural value (Mr. Jones), 9160-6.

Rateable value to be based on the price of gas suggested (Mr. Livesey), 9306-8; 9326-8; 9342-53.

Mains and pipes. Suggested method of valuation (Mr. Jones), 9158; 9159.

Independent assessor, as in Scotland, desirable (Mr. Jones), 9119-26; 9167; 9287; 9288; (Mr. Livesey), 9309-11.

(c.) *Rates Paid.*

Proportion that rates paid bear to net profits considered too high compared with other undertakings (Mr. Livesey), 9362-9.

Gas companies pay in respect of rates a much larger percentage on their capital outlay than owners of small residential properties, and a much larger proportion comparing the incomes derived from these properties (Mr. Jones), 9179-82.

Rate per 1,000 ft. of gas supplied by certain companies (Mr. Jones), 9289.

Commercial Gas Company. Rates paid represent 15 per cent. on gross receipts for gas and meter rents, and rateable value represents 50 per cent. of the profits (Mr. Jones), 9168-76.

(d.) *Representation on Local Authorities.*

Gas companies, as trading concerns, have no direct representation on local bodies (Mr. Humphreys-Davies), 4326-38.

(e.) *Charges for Gas supplied.*

Consumers of gas would pay in an increased price of gas excessive rates put upon gas companies. Position of gas companies in this respect compared with that of railways and other undertakings (Mr. Livesey), 9312-25.

Sliding scale. Effect of, to make gas consumers and shareholders partners (Mr. Livesey), 9329.

Interest of companies to be rated lightly to produce gas as cheaply as possible (Mr. Livesey), 9331-3.

Incidence of rates as between shareholders and consumers of gas (Mr. Livesey), 9334-41.

Birmingham Corporation charges the same inside as outside the city (Mr. Crompton), 5057-9.

Large increase in valuation in case of the Epsom and Ewell Gas Company necessitating increased charge for gas. Gross rent taken as net rateable value (Mr. Jones), 9141-4.

**GENERAL DISTRICT RATE:**

Railways, canals, and agricultural land, &c., rated at one-fourth (Mr. Rotton), 173-5; (Mr. Dawe), 1181; 1132; 1134.

Area to which it extends (Mr. Rotton), 176.

Cost of collection as compared with poor rate (Mr. Knocker), 6255-7. Reasons for difference, 6211-4.

**GIFFORD, FOX, AND CO., v. THE CHARD GUARDIANS (63 L.T., 249):**

Judgment in the case and rating in respect of machinery before and after (Mr. C. H. Fox), 4441-7.

Since Lord Esher's judgment manufacturers are afraid of further extension of assessing machinery (Mr. C. H. Fox), 4451.

**GLANFORD BRIGG UNION:**

Description of (Mr. Hett), 4541-4.

Value of land and buildings in (Mr. Hett), 4620-31.

Railways, mileage of (Mr. Hett), 4607-9.

**GLASGOW, differential system of rating (Mr. Dodds, Scotland), 519-26.****GLASS HOUSES:**

Should be the subject of valuation for rating purposes like farm buildings (Mr. Eve), 7718-22.

**GLEBE LAND:**

Valued as other agricultural land (Mr. Peterson), 8486-8; (Rev. E. F. Gepp), 8534-41.

Rents received by incumbent cannot be said to be in the nature of professional income. But if this view is correct, then deductions such as curates' salaries, &c., should be allowed (Mr. De Bock Porter), 11,055-63.

**GLOUCESTERSHIRE:**

County rate high, but management is economical (Mr. Elsom), 7337; 7338.

**GOMME, MR. G. L. Papers put in by (Mr. Gomme), 8659-63.****GOVERNMENT GRANTS. (See under "IMPERIAL CONTRIBUTIONS" and "LOCAL TAXATION (ENGLAND) ACCOUNT.")****GOVERNMENT PROPERTY:**

Not mentioned in Act of Elizabeth (Sir H. B. Poland), 2280.

Property occupied by the Crown, and property occupied by public bodies for Government purposes not liable to be assessed to local rates (Mr. Rotton), 218-20; (Sir H. B. Poland), 2083-5; 2439-42; no grievance in practice (Mr. Dawe), 1185.

Objections to its exemption (Sir H. B. Poland), 2140; 2263-8; 2451; no practical reasons for exemption; rateability of municipal property, 2145-7.

Voluntary contributions in respect of property occupied for the public service. Treasury minute, 1874. Government valuer (Sir H. B. Poland), 2141; 2142.

Should be assessed to rates (Mr. Horn), 6930-5.

Provision for, including in valuation list of parish for purposes of common fund of union contributions in respect of (Sir H. B. Poland), 2144.

East and West Dean. Contribution of Crown to rates added to rateable value of townships (Mr. Elsom), 7274-8.

Plymouth. Government establishments and headquarters an additional source of expense for which compensation to local expenditure should be made from Imperial sources (Mr. J. H. Ellis), 1955-65.

**GOVERNMENT PROPERTY, VALUATION OF:**

By local assessors, whether advisable (Sir H. B. Poland), 2452-9.

Government appoints its own valuer for valuation of Government property (Sir H. B. Poland), 2141; 2142. Whether this system satisfactory (Mr. P. R. Smith), 11,526; 11,527.

Profit not a test (Sir H. B. Poland), 2460.

Government property contributes inadequately to local taxation (Mr. P. R. Smith), 11,424-9. This property sometimes decreases the value of surrounding property, 11,480-9.

Government property should be subject to valuation in the same way as other properties (Mr. P. R. Smith), 11,424-9; 11,477-9.

Fortifications, rating of (Sir H. B. Poland), 2148-51.

Police stations and courts, rating of (Sir H. B. Poland), 2154-6; 2439-42.

**GOVERNMENT PROPERTY, VALUATION OF—cont.**

System in England and Scotland identical (Sir H. B. Poland), 2152; 2153.

System of rating in England and Ireland (Sir H. B. Poland), 2142-4.

**GRADING, SYSTEM OF:**

(See also under "CLASSIFICATION, SYSTEM OF.")

Desirability of (Mr. Holmes), 2997-3001.

Relative liability of owners and occupiers of land and other property under Lighting and Watching Act, 1833 (Mr. Rotton), 161-71.

Relief obtained under Agricultural Rates Act, 1796 (Mr. Rotton), 172.

**GRAND JURY CESS. (See under "COUNTY CESS.")****GRANTS (GOVERNMENT): (See under "IMPERIAL CONTRIBUTIONS" and "LOCAL TAXATION (ENGLAND) ACCOUNT.")****GRAVEL PITS, rating of (Sir H. B. Poland), 2438.****GREAT WESTERN RAILWAY COMPANY:**

Rateable values of certain parishes and the rateable values of the company included therein (Mr. P. R. Smith), 11,304.

Rateable values per acre of land in certain parishes, and of the lands occupied by the company's line of railway (Mr. P. R. Smith), 11,305.

Increase of burden of rates (Mr. P. R. Smith), 11,306; 11,307.

Amount of rates paid by company in certain years compared with receipts (Mr. P. R. Smith), 11,302; 11,303.

Rates paid by company are increasing (Mr. P. R. Smith), 11,553-8.

Rates paid by company amount to 3½ per cent. of the gross receipts; is an excessive contribution in respect of railway lines, and would also be so in respect of agricultural land (Mr. P. R. Smith), 11,454-8.

**GREENOCK. Rating on means and substance for purposes of poor rate finally abandoned in 1880 (Mr. Dodds, Scotland), 540-4.****GRIEVANCES as between different classes of persons in respect of rating (Mr. Jeeves), 1741-4.****GROSS ESTIMATED RENTAL:**

Statutory definition of (Sir H. B. Poland), 2096; 2097.

Actual rent taken if possible, though evidence admitted to show what the property is actually worth (Mr. Dawe), 1356-62.

Distinction between rateable value and gross estimated rental (Mr. Eve), 7885-90.

Chelmsford Union, how obtained in (Mr. Duffield), 5408.

**GROSS VALUE:**

In Metropolis, statutory definition of (Sir H. B. Poland), 2098.

Metropolis Valuation Act, intended to make language of Parochial Assessment Act clearer (Sir H. B. Poland), 2099-102.

**GROUND LANDLORDS:**

Suggestion that they should pay part of local rates (Mr. Munro, Scotland), 3869-75.

**GROUND RENT CHARGE: As compared with tithe rentcharge (Rev. D. J. Davies), 5712-4.****GROUND RENTS:**

Deduction from (Mr. Robinson, Ireland), 1026-31.

**GUARDIANS, BOARDS OF:**

Representation of borough interest upon. Not adequate compared with representation of rural portion of unions. Dissatisfaction with regard to this (Mr. Knocker), 6178-96.

Audit of accounts by auditors of Local Government Board (Mr. Swainson), 6282; 6283. Present and past systems, 6371-82.

**GUY'S HOSPITAL:**

Land in hand. Results of farming (Mr. Pell), 7983-96.

**HACKNEY CASES (Tithe Rent Charge):** (Rev. E. F. Gepp), 8577, 8578.

**HEREDITAMENTS (RATEABLE):**

Under 42 Eliz. c. 2. s. 1. (Mr. Humphreys-Davies), 4146; 4147.

Definition of (Sir H. B. Poland), 2086-8.

List of (Mr. Rotton), 41.

Valuation of, is based upon the value of their use for present purposes in present condition (Sir H. B. Poland), 2281-9; 2341-3; 2473-84.

**HEREDITARY BURDENS IN RESPECT OF REAL PROPERTY:**

Theory discussed (Mr. A. F. Jeffreys, M.P.), 11,276-81. And objected to (Mr. Little), 8193-6.

Proposition in Sir Henry Fowler's report referred to, and the hereditary burden theory discussed (Mr. Rew), 10,494-8; 10,685-7.

How far certain rates are hereditary burdens (Mr. S. M. Howard), 11,732-44.

**HIGHWAY RATE:** Collection of. Advantages if collected for same period as poor rate (Mr. Cobbold), 5355-8.

**HOUSES OR PREMISES (PORTIONS OF) SEPARATELY OCCUPIED:**

Rateability in respect of (Sir H. B. Poland), 2088.

**HOUSES (UNOCCUPIED).** (*See under "UNOCCUPIED PROPERTY."*)

**HOWELL AND COMPANY:**

Rents paid by (Mr. Adamson), 5157; 5158.

Rateable value of shops almost equal to rental (Mr. Adamson), 5199.

Value of leasehold (Mr. Adamson), 5141-6. Alleged to be over-assessed, 5163-75. Increase of rates paid on leasehold premises, 5064-8; 5070-8.

Valuation of leasehold and freehold premises is too high (Mr. Adamson), 5093-112.

**HUDDERSFIELD:** Consolidation and collection of rates. Method (Mr. Swainson), 6275-81.

**HULL.** (*See under "KINGSTON-UPON-HULL."*)

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION (ENGLAND):**

(a.) *System a desirable one.*

Importance of (Mr. Jeeves), 1929-31.

How far equitable and desirable (Mr. Humphreys-Davies), 4419-29.

A satisfactory mode of contribution (Capt. E. G. Pretzman, M.P.), 9605; 9606; (Mr. C. S. Read), 10,422-5; (Mr. A. F. Jeffreys, M.P.), 11,261-4.

Increase of contributions desirable (Mr. Hett), 4655; 4656; (Capt. E. G. Pretzman, M.P.), 9605; 9606; (Mr. A. F. Jeffreys, M.P.), 11,176.

Increase of contributions. Question of local control and extravagance discussed (Mr. Peterson), 8473-5.

More aid from Imperial sources required by local taxation (Mr. Jeeves), 1639; 1640; (Mr. Holmes), 3002-6. Proceeds of taxes required, not power to impose taxes (Mr. Jeeves), 1893-900.

Increase of contributions to pay for certain purposes (Mr. A. F. Jeffreys, M.P.), 11,261-4.

Increase of contributions towards maintenance of poor (Mr. Duffield), 5459-63.

Contributions should be increased in respect of indoor paupers and pauper lunatics (Mr. Little), 8149-53.

Equality with respect to assessment of houses and land desirable (Mr. Hett), 4655; 4656.

Contributions should be extended to houses (Mr. Hett), 4632-41.

Contributions have contributed materially to reduction of burdens upon ratepayers (Mr. C. S. Read), 10,298; 10,299.

Contributions have not led to extravagance on outdoor relief, but Local Government Act of 1894 has tended to produce such a result (Mr. Holmes), 3019-26.

Contributions do not tend to produce extravagant administration (Mr. C. S. Read), 10,393; 10,394. Have not made county councils extravagant (Mr. Hulton), 5919; 5920.

Alteration of system. Mr. Gomme's suggestion. Effect on London and rest of country (Mr. Gomme), 8997-9007.

(b.) *System an undesirable one.*

Extravagance, how far conducive to (Mr. Holmes), 2844-6. As regards Lunatic Grant (Mr. Hubbard),

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION (ENGLAND)—cont.**

3245-60. As regards Union Officers Grant (Mr. Holmes), 3010-8; (Mr. Hubbard), 3245-60. Have not led to extravagance on outdoor relief, but Local Government Act of 1894 has tended to produce such a result (Mr. Holmes), 3019-26.

Tend to extravagant administration (Mr. Humphreys-Davies), 4236.

Norfolk. Contributions are conducive to extravagance, (Mr. Holmes), 2906; 2907. Reasons for this view, 2948-52.

(c.) *Amounts and Distribution of Contributions.*

System of payment (Mr. Dodgson), 7683-92.

Counties distribute certain amounts from contributions to parishes and unions (Mr. Gomme), 8941-3.

Basis of distribution (Mr. Holmes), 2833-8; (Mr. Calthrop), 3160-9. Objections to, 3133-6; 3174; 3175. And to basis of distribution of residue between counties and county boroughs, 3149-56.

Poor rate. Grants in aid of, distributed on basis of population (Mr. Dawe), 1299-301. Scheme for a fixed grant according to ability of localities to pay, 1187-93; 1233; 1234; 1302-5. Objections to such a scheme, 1383-98.

County rate basis in relation to contributions (Mr. Cobbold), 5299-308.

Expenditure should not be the basis of distribution (Mr. Gomme), 8882-96. If distribution based on expenditure, contributions tend to produce extravagance (Mr. Merrifield), 6150-2.

How far population should be the basis of distribution (Mr. Gomme), 8921-9, 9015-31.

Amounts levied in a local area should be appropriated by that area. But the same method would not be fair to apply to all kinds of grants (Mr. Gomme), 8916-20. Inhabited house duty and land tax, which are really local taxes, should be handed over to localities instead of equivalent sums being paid by the Government on the present basis, 8930-6; 9084-7.

Amounts received by county boroughs said to compare unfavourably with that received by counties. Statistical tables (1893-4) in support of this view (Mr. Gomme), 8606-8.

Amounts received vary in different counties and also in boroughs. Inequalities further increased by Agricultural Rates Act, 1896. (Mr. Halton), 5952-61; (Mr. Gomme), 8699-706.

Amounts applied to relief of local taxation (Mr. Rew), 10,800-7.

Proportion of local expenditure defrayed out of Imperial contributions and out of rates. Comparison between London, county boroughs, and counties (Mr. Gomme), 8719-22.

Glanford Brigg Union. Amounts received (Mr. Hett), 4585; 4586; 4632-41.

Norfolk. Allocation of contributions (Mr. Holmes), 3055-8.

(d.) *Application of Contributions to certain Purposes.*

Purposes for which contributions given and amounts (Mr. Rew), 10,464-73. Grants made to defray cost of new burdens should not be considered as grants made in relief of local taxation generally, 10,464-73; 10,728-66.

Suggested that Exchequer should defray the expenditure on purposes of education (Mr. Norton), 6475-85; 6569-79; (Mr. Watkins), 6628; (Mr. Bellwood), 6735-7. But such expenditure should be in the form of subventions (Mr. Norton), 6586. Effect of this on particular classes (Mr. Watkins), 6704-6. Question of control discussed, 6599-622; 6641-68; (Mr. King), 6802-37. Discussion as to what classes should bear this expenditure and what administrative changes should take place (Mr. Watkins), 6641-68; (Mr. King), 6802-37.

Contributions to voluntary schools. London's share (Mr. Gomme), 8964-9.

Contributions to school boards according to education results. London's share (Mr. Gomme), 8961-3.

Salaries of union officers, how far paid out of contributions (Mr. Holmes), 3110-7.

Maintenance of poor, highways, &c. should be defrayed out of the general income of the country, through Imperial contributions (Rev. C. A. Stevens), 8610-3. According to the ability of the inhabitants, 8614-20. Question of administration, 8610-20.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION (ENGLAND)—cont.**

Metropolitan grant of four-ninths of cost of police, and county grant of half the cost of pay and clothing compared (Mr. Gomme), 8957-60.

Contributions should not pay for services which benefit property, nor should property pay locally for services which are for Imperial purposes (Mr. Gomme), 8992-5.

*Imperial Contributions in relation to the Incidence of Taxation.*

Revenue from definite sources assigned to local authorities by the Treasury (Mr. Rotton), 277-83.

Effect of contributions on incidence of local taxation as between owner and occupier (Mr. Little), 8166; 8157.

Contributions are made from a fund derived from taxation in respect of both real and personal property. Contributions of lands, other rateable property, and non-rateable property. Excise and customs not taken into consideration. Sir Alfred Milner's figures (Mr. Rew), 10,474-88.

Imperial contributions are a method of taxing personalty for local purposes (Mr. Rotton), 263-8.

To what extent a contribution in respect of personal property (Mr. Duffield), 5426-40; (Capt. E. G. Pretymann, M.P.), 9871-5.

Would not be satisfactory to increase contributions paid out of estate duty towards purposes of local taxation (Capt. E. G. Pretymann, M.P.), 9876-81.

Contributions should be taken out of a fund to which real property does not contribute (Mr. Little), 8078-80; 8145-8; 8163-6.

**IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION (IRELAND). Imperial contributions given, not Local Taxation Licences (Mr. Robinson, Ireland), 1042-6.****IMPERIAL SERVICES, EXPENDITURE UPON.** (See under "LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON.")**IMPROVEMENTS (PUBLIC):**

Destruction of property for, liability to make up deficiency in amount of old rates until works completed (Sir H. B. Poland), 2233-5.

**INCIDENCE OF IMPERIAL TAXATION:**

Respective contributions by rateable and non-rateable property (Mr. A. F. Jeffreys, M.P.), 11,198-215.

Contributions to Imperial taxation in respect of different classes of property. Sir Alfred Milner's figures (Mr. Rew), 10,459.

Imperial taxation in respect of land, payment of by landlord and tenant (Mr. Barton, Ireland), 3367-70.

**INCIDENCE OF LOCAL TAXATION:***(a.) As between Persons engaged in various Industries.*

An equitable basis for assessment and for the incidence of taxation desirable (Mr. Dodgson), 7592-4.

Whether all classes of the community contribute to local taxation (Mr. Bellwood), 6763-78.

Present system of valuation is inequitable when applied to different classes of persons (Mr. Clarke), 7368-74; 7556-8.

Burden of rates borne by different classes of community contrasted (Mr. Holmes), 2985-92. Possible re-adjustment of burden, 2993-6.

Amount of rates paid by different classes of persons. Hypothetical illustrations given to show that the burden of rates paid in respect of land is too great (Mr. Clarke), 7407-16; 7522-37. Payment of Imperial taxes by these classes not taken into account, 7375-99. No effect of Agricultural Rates Act, 1896, 7559-65.

An undue proportion said to be paid in rates in respect of agricultural land compared with other real property. Sir Alfred Milner's figures (Mr. Rew), 10,451-5; 10,665-78.

Contribution to rates by different classes (Mr. A. F. Jeffreys, M.P.), 11,148-51; 11,243-52. Amounts. Agriculturists said to pay most in proportion to income (Mr. Little), 8101-19; 8139-44; (Mr. A. F. Jeffreys, M.P.), 11,148-51. Different bases of assessment as between agriculturists and other classes. Agriculturists said to be rated in respect of their raw material, 11,243-52.

Persons deriving income from agricultural property are unduly burdened by rates compared with those

**INCIDENCE OF LOCAL TAXATION—cont.**

deriving incomes from other sources (Mr. Clarke), 7551-5; 7574-80. Purposes of expenditure which should be paid for by local and Imperial taxation with the object of relieving the persons who derive incomes from agricultural land from the burden of rates, 7566-73.

Burden of rates borne by agriculturists compared with the burden borne by those engaged in other industries (Capt. E. G. Pretymann, M.P.), 9840-6.

Valuation of property occupied by, and rates paid by, certain farmers and also by others engaged in certain other trades and businesses compared. Mr. Rew's figures discussed (Mr. Rew), 10,556-98, 10,711-9, 10,816-60.

Local taxation presses most heavily upon small shopkeepers whose rentals are up to 40l. a year (Mr. Cleaver), 4078. Rental of 60l. a year usually paid by a man with an income of 600l. a year, 4113-5.

Increase of burden of rates and reduction of clerical incomes (Rev. C. Theobald), 5551-7, 5634-42.

Small property owners, position of (Mr. Norton), 6491-8.

*(b.) As between Owners and Occupiers.*

Present incidence (Mr. Jeeves), 1834-45; (Mr. Norton), 6527-42; 6587-90; (Mr. Little), 8101-32; (Mr. Rowlandson), 9995-10,013. The case of tenants belonging to different classes (Mr. Watkins), 6707-22.

All persons interested in property pay a contribution to local rates. Evidence in support of this view (Mr. Eve), 7791-3.

Owners interest in rates (Mr. Duffield), 5464-70.

Upon whom should taxation fall (Mr. Morse), 4762-6; 4771-7; (Mr. Goldney), 10,111-23. Rates of benefit and rates of burden, 10,134-9.

Rates partly paid by landlord and partly by tenant. Suggested that landlord could not bear the additional burden (Capt. E. G. Pretymann, M.P.), 9586-9.

Payment of rates by landlord. Probable effect of, (Mr. Morse), 4898-910.

Election of rating authorities should payment of rates be transferred to landlord (Mr. Morse), 4898-910.

Effect of Imperial contributions on incidence of local taxation (Mr. Little), 8166; 8167.

How far lessees of houses in towns take rates into account when taking a house (Mr. C. S. Read), 10,346-8.

Coal mines, how far incidence taken into account by lessees of (Mr. T. Ratcliffe Ellis), 2738; 2739.

Tithe rentcharge. Whether payment of rates in respect of, by occupier desirable (Mr. Cobbold), 5316-44. Is not desirable (Mr. Duffield), 5471; 5472. Advantages of payment by owner (Mr. Cobbold), 5393-5.

Position of mortgagees as regards local taxation (Mr. Little), 8155-7.

Liverpool. Owner pays half sewer and water rates (Mr. Norton), 6428-30.

*(c.) As between Real and Personal Property.*

(See also under "PERSONAL PROPERTY" and "REAL PROPERTY.")

Burdens borne in respect of real and personal property contrasted (Mr. Clarke), 7457-505.

Owners and occupiers of real property, and particularly of agricultural land alleged to be unduly burdened (Mr. Calthrop), 3137-9; (Mr. Little), 8044-6. Sir Alfred Milner's figures (Mr. Rew), 10,451-5; 10,665-78.

Contribution direct and indirect to rates in respect of real and personal property (Mr. Peterson), 8306-43.

How far do these classes of property contribute to local and Imperial taxation (Mr. C. S. Read), 10,334-41.

Imperial contributions. Contributions in respect of real and personal property (Mr. Clarke), 7587; 7588.

Contributions in respect of different classes of real and personal property to rates desirable (Mr. Norton), 6471-3. How far equitable. Position of different classes compared (Mr. Vulliamy), 7227-39. Probable effect in Liverpool (Mr. Bellwood), 6728-32.

Rates expended upon purposes which do not specially benefit real property should be paid in respect of both real and personal property (Mr. Peterson), 8203-6.

INCIDENCE OF LOCAL TAXATION—*cont.*

Contribution to local rates in respect of real and personal property. Suggested that part of income tax, except that derived from Schedule A., should be devoted to local purposes and distributed on basis of population (Mr. Vulliamy), 7137-58.

Injustice has been caused to owners of real property by the increase of taxation imposed upon them, and not upon other people (Mr. Humphreys-Davies), 4200-2.

Real property subject to hereditary burdens, or which has been bought and sold subject to burdens, should not be relieved of them (Mr. Humphreys-Davies), 4198; 4199. To what extent can this view be supported, 4405-18.

Question of Redeemed Land Tax in relation to any future charges thrown upon personalty and realty (Mr. Rew), 10,737-9.

Non-rateable property said to increase to a greater extent than rateable (Mr. Rew), 10,456-8.

Personal and real property. History of rating in respect of. Reasons for rating in respect of real property. Ability to pay, doctrine of, discussed (Capt. E. G. Pretyman, M.P.), 9603-4. Tax upon income for purposes of a national character suggested, 9603-4; 9640-60; 9741-56; 9863-70. But expenditure upon purposes of a local character should be raised by assessing persons within the locality on their property within it, 9741-56. Whether such a proposal would be practicable or popular discussed, 9863-70. Question of administration, 9640-60.

(d.) *As between Persons deriving Income from Personal Exertion and Investments respectively.*

Rating in respect of income derived from personal exertion and from investments. Should any distinction be made? (Mr. Vulliamy), 7164-73; (Mr. Peterson), 8476-85.

(e.) *As between different districts.*

In urban and rural districts (Mr. Clarke), 7517-21; (Mr. Little), 8174-80; (Mr. Rew), 10,554; 10,555. Rates and purposes of expenditure compared (Mr. C. S. Read), 10,361-74. Rates in £ higher in urban than in rural districts. Sir Henry Fowler's figures (Mr. Rew), 10,540-3.

Rates in Scotland vary very considerably (Mr. Dodds, Scotland), 420-3.

## INCOME TAX :

(a.) *Assessment to.*

Assessments made for certain purposes not to be made public (Mr. Botton), 193; 194.

Schedule A., basis of payment under (Mr. Barton, Ireland), 3319.

Mortgaged land. Interest inserted in Schedule A. (Mr. Hett), 4579-84.

(b.) *Union Assessment Committees and Income Tax Assessments.*

Schedule A. found to be a useful guide for Union Assessment Committees (Mr. C. S. Read), 10,434-40.

Schedule A. Desirable that Union Assessment Committees should have access to assessment to (Mr. Duffield), 5409; 5410.

Lancashire. Local assessments, as a rule, have been lower than income tax assessments (Mr. Hulton), 5971-83.

Somersetshire. Valuations for county rates and for Schedule A. in certain Poor Law Unions (Mr. P. R. Smith), 11,355-69.

(c.) *Taxation under Schedule B.*

When paid by tenants (Mr. Barton, Ireland), 3320.

Amounts to a small total in Ireland (Mr. Barton, Ireland), 3371; 3372.

## INCOME TAX IN AID OF LOCAL EXPENDITURE :

Suggested addition to income tax for local purposes (Mr. Norton), 6499-508; (Mr. Peterson), 8476-85; (Mr. Rowlandson), 9978; 9979; (Mr. C. S. Read), 10,375-80. Income derived from personal exertion. Should any distinction be made (Mr. Vulliamy), 7164-73; (Mr. Peterson), 8476-85.

A more practical suggestion than an increase of death duties (Capt. E. G. Pretyman, M.P.), 9882-5. Contribution to local taxation should be based upon income (Mr. Rowlandson), 9942-54. Rates paid by agriculturists and by business men in towns compared (Mr. Rowlandson), 9942-54; 10,014-29.

INCOME TAX IN AID OF LOCAL EXPENDITURE—*cont.*

Maintenance of poor. Contributions from income tax towards, desirable. But questions of control and representation difficult (Mr. Duffield), 5447-58.

Suggested that part of income tax, except that derived from Schedule A., should be devoted to local purposes and distributed on basis of population (Mr. Vulliamy), 7157-58.

Income and not rental value should be the basis for assessment in respect of rates (Mr. Dodgson), 7595-616. And also taxes, 7646-57. Difficulty of carrying out such a proposal, 7617-30. Suggested scheme for defraying all local rates by means of a national charge. Questions of local benefits received and local control discussed, 7595-616; 7658-62.

Local rates to be levied as an income tax collected by the Government. Question of administration and control considered. Contribution to rates according to benefits received from their expenditure considered (Mr. Rew), 10,640-52.

Owner of foreign investments should contribute towards local taxation raised for purposes of a national character (Capt. E. G. Pretyman, M.P.), 9741-56.

For purposes of a national character suggested (Capt. E. G. Pretyman, M.P.), 9603; 9694, 9640-60; 9863-70. Whether such a proposal would be practical or popular discussed, 9863-70. Question of administration, 9640-60.

## INCREASE OF LOCAL TAXATION :

Chiefly due to increase of urban rates (Mr. Rew), 10,679-82.

Tendency of new rates to increase in amount (Mr. C. S. Read), 10,294; 10,349; 10,350.

Sir Massey Lopes' resolution in House of Commons in 1872 (Mr. C. S. Read), 10,295-7.

Local expenditure borne by locality. How far enjoyed by general public and how far is expenditure borne in proportion to benefits received (Mr. Calthrop), 3176.

County councils. Tendency to increase local expenditure. Increased expenditure for main roads, and in consequence of new responsibilities and duties imposed upon them, as well as increased expenditure in respect of old duties. How far present constitution of local bodies responsible for this (Mr. C. S. Read), 10,300-21; (Mr. Rew), 10,632-4.

Parish councils. Increased expenditure. Constitution of rating authority. How far composed of non-ratepayers (Mr. C. S. Read), 10,383-6; (Mr. Rew), 10,632-4.

How far objected to by community (Mr. Jeeves), 1647-9.

Greater objection taken to a rise in taxes than to a rise in rates (Mr. Watkins), 6692-703.

Increase of local taxation compared with increase of Imperial taxation between 1868 and 1894 (Mr. Rew), 10,489-91.

Association of Municipal Corporations, return prepared by, in relation to increases in certain boroughs (Mr. Jeeves), 1764-75.

Lancashire. (Mr. Hulton), 5884; 5885. How far poor rate has increased (Mr. Jeeves), 1673-6.

West Derby Union. Increase of rates has caused people to leave the district and has also lowered rents (Mr. Cleaver), 4072-5; 4092-112. Amounts saved in rates by those who leave district and live further from Liverpool, 4092-112.

John Howell & Co., Limited. Increase on leasehold premises (Mr. Adamson), 5064-8; 5070-8.

Norfolk. (See under "NORFOLK.") Ireland (Mr. Barton, Ireland), 3480-4.

## INDEPENDENT VALUATION AUTHORITY :

Desirable (Mr. Morse), 4879-84; (Mr. Crompton), 5045-7; (Mr. Adamson), 5113-23; 5162.

Independent body appointed by county council and power of appeal from, desirable (Mr. Crompton), 4967-73.

## INDIRECT TAXATION IN METROPOLIS :

Licences and duties collected by London County Council and Metropolitan Police (Mr. Gomme), 8734-9.

Area of collection not always coincident with area of administration (Mr. Gomme), 8740.

**INEQUALITIES IN RATING:**

Disparity in different districts (Mr. Robinson, Ireland), 855-72; 926-30. Complaints against present system of rating for Poor Law purposes in electoral divisions, 1008-10.

Area containing several parishes cannot get an equal rate equitably levied. Uniform system for arriving at valuation list necessary (Mr. W. C. Cripps), 2050; 2051.

In the various parishes of a union as regards their contributions to the common fund (Mr. Dawe), 1199-208.

Produced by valuation of property by overseers in each parish (Mr. Cobbold), 5289-91.

Compounding a cause of this inequality (Mr. Dawe), 1204.

In urban area comprising several parishes subject to a common rate (Mr. R. E. Fox), 1492; (Mr. Jeeves), 1737-40.

Deductions, variation in amounts allowed in different unions (Mr. Jeeves), 1593-8.

Agricultural land and tithe rentcharge (Rev. C. Theobald), 5550.

County rate and union bases. Inequalities in results of valuation (Mr. Cobbold), 5292-8.

Hull. Amalgamation of parishes to equalise (Mr. Dawe), 1206-14; 1228-30; 1258-63. Reasons for inequalities, 1264-74.

Tunbridge Wells. Allowances different in two unions in (Mr. W. C. Cripps), 2009; 2010; 2033-6.

**INFECTIOUS DISEASES.** Cost of precautions to Hull for preventing introduction from abroad should be borne by the State (Mr. Dawe), 1186.

**INHABITANTS EXEMPTION ACT.** (*See under POOR RATE ACT.*)

**INHABITED HOUSE DUTY.** (*See also under "CITY OF LONDON."*)

Is a survival of the window tax (Mr. Goldney), 10,057.

Levied on gross value (Mr. Goldney), 10,052-5 10,157-70.

What constitutes "inhabiting." Hardships falling on large businesses in the City of London and other towns (Mr. Goldney), 10,053; 10,059.

Hereditament cannot be divided (Mr. Goldney), 10,056.

Prevents clerks and their families from living in the warehouses and offices (Mr. Goldney), 10,070.

Case of a large firm making arrangements to avoid payment (Mr. Goldney), 10,060; 10,061.

Unused residential portions of warehouses. How far possible to make a separate access (Mr. Goldney), 10,153; 10,154.

Is really a local tax, and should be handed over to localities instead of equivalent sums being paid by the Government on the present basis. (*See also LAND TAX*), (Mr. Gomme), 8930-6; 9084-7.

Suggested transference of proceeds by Imperial authority to local authorities in aid of local expenditure (Mr. Dawe), 1306-8; (Mr. R. E. Fox), 1484-91; (Mr. Jeeves), 1715-9; 1932-4; (Mr. Gomme), 8838-45. How far desirable (Mr. Little), 8186-92. Difficulties in connection with carrying out of scheme (Mr. R. E. Fox), 1548-67.

Transference in aid of local rates would be an advantage from a country point of view (Mr. Goldney), 10,085; 10,086.

Tax should be abolished (Mr. Watkins), 6623-7.

**INLAND REVENUE OFFICERS:**

Communicate with Commissioner of Valuation (Ireland); with reference to valuation of certain properties (Mr. Barton, Ireland), 3355.

**INSTITUTIONS AND SOCIETIES,** certain, are exempted under 6 & 7 Vict. c. 36 (Sir H. B. Poland), 2157-60.

**INSURANCE,** meaning of, in Parochial Assessment Act, 1836 (Mr. T. Ratcliffe Ellis), 2667-74.

**IPSWICH:**

Borough and union are conterminous (Mr. Vulliamy), 7206-14.

Rates in £. Borough and union (Mr. Vulliamy), 7215-26.

**IRISH LOCAL GOVERNMENT BOARD,** statement prepared by, scope and contents of (Mr. Robinson, Ireland), 594; 595; 705-25.

*Index to Evidence.*

**JUDICIAL RENTS IN IRELAND:**

Are above valuation except in Ulster. Reasons for this (Mr. Barton, Ireland), 3520-8.

Are not comparable with rental value of land in England (Mr. Barton, Ireland), 3529-36.

**KENT:**

County council and borough interest. No friction now. Rural representatives greatly outnumber urban (Mr. Knocker), 6166-77.

**KINGSTON-UPON-HULL:**

Examination of Town Clerk (Mr. Dawe), 1113-428.

Rates and rating authorities; making and collection of rates, want of uniformity (Mr. Dawe), 1137-40.

Inequalities in rating as between parishes, reasons for (Mr. Dawe), 1264-74. Amalgamation of parishes to equalise, 1228-30; 1258-63. Steps taken to remove, 1206-14.

No valuation list for whole union (Mr. Dawe), 1226; 1227.

Compounding, increase to uniform limit desirable (Mr. Dawe), 1345-7.

Infectious diseases. Cost of precautions for preventing introduction from abroad should be borne by the State (Mr. Dawe), 1186.

**LANCASHIRE:***(a.) Assessments in County.*

County Rate Joint Committee (*see under this heading*).

Assessable value of administrative county since Agricultural Rates Act, 1896 (Mr. Hulton), 5892-907.

In some rural unions local assessments vary very much from county rate assessments (Mr. Hulton), 5765-7.

Valuation for county rate and of the several unions. Difference in (Mr. Hulton), 5780-4.

County Rate Committee has made Union Assessment Committees keep up the rateable value and obliged them to make revaluations of railways, mines, and mills (Mr. Hulton), 5764.

Local assessments, as a rule, have been lower than income tax assessments. Reasons for this (Mr. Hulton), 5971-83.

County Rate Committee deal, if necessary, with individual properties in a parish (Mr. Hulton), 5915-7.

County Rate Committee. Scale of deductions adopted in revision of valuation (Mr. Hulton), 5771; 5772.

County Rate Committee. Only one appeal against decision of, since 1872 (Mr. Hulton), 5773-9.

Machinery, rating in respect of. Fixed machinery only rated (Mr. Humphreys-Davies), 4151.

*(b.) Rates in County.*

General county account. Main purposes of expenditure from (Mr. Hulton), 5732-9.

Special county account. Main purposes of expenditure from (Mr. Hulton), 5740; 5741.

County council accounts. Special purposes of expenditure (Mr. Hulton), 5754.

Rates for special and general purposes. Rise or fall in recent years (Mr. Hulton), 5878-83.

Increase of local taxation (Mr. Hulton), 5884; 5885.

Total rate in £ (Mr. Cleaver), 4063-5.

Special rate for hundred bridges (Mr. Hulton), 5752; 5753.

Main roads a charge upon the hundred. Effect of this (Mr. Hulton), 5924-42.

*(c.) Exchequer Contribution Account.*

Local Government Act Commission gave satisfaction to county boroughs and to the county (Mr. Hulton), 5891; 5921-3.

Contributions not sufficient if half the expense of main roads be charged (Mr. Hulton), 5813-6.

Contributions not sufficient, and no balance remains (Mr. Hulton), 5833-66; 5873-7. Amount of rates to be raised has not been reduced since this was instituted (Mr. Hulton), 5833-66.

LANCASHIRE—*cont.*Index  
to Evidence.(d.) *Police.*

Net cost of police (Mr. Hulton), 5742-5.  
Effect of Police Pension Fund upon Superannuation Fund (Mr. Hulton), 5807; 5808.

## LAND :

Ownership of (Mr. Jeeves), 1846-52.  
Occupiers or inhabitants of land, growth of practice of rating; legal decisions (Mr. Rotton), 131-4.  
Definition of "land" as adopted for return by Mr. G. Shaw Lefevre (Mr. Rew), 10,720-7.  
To what extent land should be assessed to rates (Mr. Peterson), 8344-79.  
Valuation, means of ascertaining. How far the value of the land alone should be the basis for assessment to local rates (Mr. P. R. Smith), 11,502-25; (Mr. Payne), 11,642-57; (Mr. S. M. Howard), 11,760-72.  
Value. Reasons for difference in different localities (Mr. Jeeves), 1795-833. Enhanced by a profitable trade (Sir H. B. Poland), 2431; 2432.  
West Dean. Freehold value of land (Mr. Elsom), 7339-47.  
Increase of rent in England and Wales between 1836 and 1876. Landowners obtained a large sum representing the benefit which would have accrued to the Church under the old right of participation. Sir James Caird's views (Mr. Peterson), 8386-406.  
If principle of remitting taxation on poor land exists the principle of raising it on land which has increased in value should also exist (Mr. Eve), 7803-6.  
Land and its products. Who should bear the burden of rates. (Mr. Rew), 10,759-89.  
Land in towns, increase in value of (Mr. Rew), 10,691-7.  
Unoccupied. Rating of, undesirable (Sir H. B. Poland), 2320-2. Reasons, 2193-5. Property must be rated on basis of value of its use for present purpose in present condition, 2473-84.

## LAND (IRELAND), GRIFFITH'S VALUATION OF :

Description of (Mr. Robinson, Ireland), 612-5.  
Principles observed, 781-98; 892-4; (Mr. Barton, Ireland), 3279-81. Procedure adopted (Mr. Robinson, Ireland), 892-4; (Mr. Barton, Ireland), 3279-81; 3297-300. Land and buildings assessed together (Mr. Robinson, Ireland), 1077-9.  
Steps taken to arrive at the valuation explained (Mr. Barton, Ireland), 3506-13.  
Cost of (Mr. Robinson, Ireland), 946-9.  
Definitions of "annual value" (Mr. Robinson, Ireland), 895-902. Of "land," 962-5.  
System of arriving at full annual value not now satisfactory (Mr. Barton, Ireland), 3373-6.  
Below rack-rent in 1852 (Mr. Robinson, Ireland), 989-96.  
Was 15 to 20 per cent. below rack-rent, but it varied in different parts according to the circumstances which existed in the different localities at the time (Mr. Barton, Ireland), 3311-8.  
Based on prices of certain articles of agricultural produce. Method of applying this principle (Mr. Barton, Ireland), 3294-6. Since making the valuation growing of wheat has practically ceased, 3447-51.  
Changes in quantities of commodities grown, and in their prices (Mr. Robinson, Ireland), 799-806.  
Prices of commodities in 1852 and 1896, 950-6.  
Prices of agricultural produce in 1894 slightly higher than at time of Griffith's valuation (Mr. Barton, Ireland), 3301-5.  
No revision in valuation since first made (Mr. Robinson, Ireland), 616-9; 630. Reasons, 980.  
Difference between actual valuation and actual letting value (Mr. Robinson, Ireland), 957-61.  
Reduction of rent below (Mr. Robinson, Ireland), 631-3; 807-15. Lessors' and lessees' shares of rates, 693-8; (Mr. Barton, Ireland), 3321-4. Occupier pays more than half of actual amount of rates (Mr. Robinson, Ireland), 903-5.  
All rates paid on (Mr. Robinson, Ireland), 629.  
Objections to (Mr. Robinson, Ireland), 631-6. Suggested improvements in present system, 1080-4. Actual letting value not a sufficient basis for assessment purposes, 1085-9.  
Ulster tenant right, principles adopted by the valuers in respect of (Mr. Barton, Ireland), 3293.

LAND (IRELAND), GRIFFITH'S VALUATION OF—*cont.*

Valuation included interest on the value of tenant right which at that time only existed in Ulster, 3408-11; 3514-9.  
Ulster, position in, not now different from the rest of Ireland (Mr. Barton, Ireland), 3446.

## LAND (IRELAND)—LAND COMMISSION :

Rents fixed by, should, with the interest on the sum paid for tenant right, form the basis of any new valuation of land (Mr. Barton, Ireland), 3306-10.

## LAND (IRELAND)—LAND LEGISLATION :

Market value of rental not decreased by reduction of rent to a particular tenant (Capt. E. G. Pretyman, M.P.), 9893-8.

## LAND (IRELAND), VALUATION AND RATING IN RESPECT OF :

Valuation is based upon rental value to a solvent tenant, which would include interest on sum paid for tenant right, if any (Mr. Barton, Ireland), 3356-61; 3404-7; 3494-503.  
Valuation is made without regard to the distribution of the different interests in it, or to the relative value (Mr. Barton, Ireland), 3415-34.  
Improvements on farms. When taken into account (Mr. Robinson, Ireland), 976-9.  
Landlord's and tenant's interests in land considered (Mr. Barton, Ireland), 3452-61; 3571-4.  
Total rateable value of lands (Mr. Barton, Ireland), 3548-51.  
Judicial rents in Ireland are not comparable with rental value of land in England (Mr. Barton, Ireland), 3529-36.  
Complaints as to share of burdens paid in respect of poor land (Mr. Robinson, Ireland), 1016; 1017.  
Valuation over 4%. Payment of rates by occupier subject to deduction of moiety from lessor (Mr. Robinson, Ireland), 699-703. Reason for, 1032-9.

## LANDLORD AND TENANT (IRELAND), ACT, 1870 (33 &amp; 34 Vict. c. 46).

County cess, contracting out of, by landowners (Mr. Robinson, Ireland), 822-4.

## LAND TAX :

Suggested that proceeds should be applied to local purposes (Mr. Gomme), 8838-45; (Mr. C. S. Read) 10,355; 10,398-404. How far desirable (Mr. Little) 8186-92.  
Is really a local tax, and should be handed over to localities instead of equivalent sums being paid by the Government on the present basis. (*See also* INHABITED HOUSE DUTY.) (Mr. Gomme), 8930-6.  
Decrease in rateable value of tithe rentcharge and increase in land tax (Rev. D. J. Davies), 5658-60.  
Increase of, in a certain parish (Rev. D. J. Davies), 5691-7.  
Relief desirable (Mr. A. F. Jeffreys, M.P.), 11,273-5.  
Powers of the local commissioners of land tax (Mr. P. R. Smith), 11,440-5.  
Sir Alfred Milner's figures relating to redeemed land tax (Mr. Rew), 10,737-9.

LASHAM, RECTOR OF, Evidence of (Rev. C. Theobald), 5520-642. (*See Index to Minutes of Evidence given by each Witness, p. 493.*)

## LAW OF RATING :

Explanation of Acts, 43 Eliz. c. 2 (Sir H. B. Poland), 2079; 2081. 37 & 38 Vict. c. 54, 2080.  
Should be consolidated (Mr. Dawe), 1296-8.  
Law with reference to assessment satisfactory as regards owners and occupiers of real property (Mr. Humphreys-Davies), 4123-6.  
Law as to valuation satisfactory, except in respect of machinery (Mr. Humphreys-Davies), 4388-93.  
Bills to amend the law relating to hereditaments containing machinery. Object is to get a definition of what machinery should be rated (Mr. Humphreys-Davies), 4230; 4231. First Bill introduced in 1887, 4162. History of the Bills; their provisions and objects, 4165; 4166. Strongest opponents are the small property owners, 4168-73.

## LAW OF SETTLEMENT (Mr. Robinson, Ireland), 1100-8.

**LEASEHOLD PREMISES:**

Valuation of. Tests to be applied (Mr. Adamson), 5079-86. Payment of premiums, 5124-7.  
John Howell and Co., Limited. Value of (Mr. Adamson), 5141-6. Alleged to be over-assessed, 5163-75. Increase of rates paid by, 5064-8; 5070-8.

**LEE GAS CASE (L.R. 1 Q. B.D. 241).** (*See under "Reg. v. Lee."*)

**LEFEVRE, MR. G. SHAW, RETURN BY:**

Meaning of "land." Fall in value of agricultural land (Mr. Rew), 10,720-7.  
Rateable value of lands, buildings, railways, and other rateable property in England and Wales in 1870 and 1894, as shown in return (Mr. Rew), 10,499-511.

**LEIGH UNION (LANCS.),** system adopted in valuation of coal mines. Plant rated (Mr. T. Batcliffe Ellis), 2541; 2542.

**LEVYING AND COLLECTION OF RATES***(a.) Existing Methods.*

Poor rates (Mr. Rotton), 228; 229. Collection in municipality comprising different parishes, 230-4.  
Dual levying and collection of municipal and sanitary rates (Mr. Dawe), 1126-30.  
Disadvantages of present system (Mr. Dawe), 1314; 1315. Not uniform where several parishes exist in a municipal borough (Mr. R. E. Fox), 1492.  
Joint collection by different local bodies in certain localities (Mr. Dodds, Scotland), 565-7.  
Method of levying and collection in a union (Mr. Cleaver), 3942.  
West Derby Union and City of Liverpool (Mr. Cleaver), 4023-6. Poor Law authorities collect poor rate, city rate, school board rate, and library rate, and charge municipality commission (Mr. Norton), 6449-51.  
Bolton. System in, is satisfactory. Suggested improvements (Mr. Swainson), 6315-8.  
Burnley. Procedure in (Mr. Horn), 6867; 6868.  
Barrow-in-Furness, Bolton, and Huddersfield, methods in (Mr. Swainson), 6275-81.  
Dewsbury Union. Procedure and system adopted (Mr. Peace), 4674-8.  
Hull, want of uniformity in (Mr. Dawe), 1137-40.  
Aston Union, method in (Mr. North), 4523-6.  
Dumfries. County and parish rates levied upon one demand note by one collector (Mr. Dodds, Scotland), 396-9.

*(b.) Suggestion that one Authority is desirable.*

One authority in each area over which a rate is laid desirable (Mr. Rotton), 242; 243; (Mr. Dawe), 1316-8; (Mr. R. E. Fox), 1493; 1494; (Mr. Knocker), 6263-6. Results in economy (Mr. W. C. Cripps), 2052; (Mr. Norton), 6486-90. Advantages of, (Mr. W. C. Cripps), 2056-62.  
In unions. One collector and one demand note would entail paying a collector instead of collection by unpaid overseers (Mr. Hett), 4564-73.  
One demand note presented on behalf of the different authorities in the union desirable (Mr. North), 4527; 4528.  
One valuation and one rate collecting Authority for whole borough desirable (Mr. Swainson), 6386; 6387.  
One Authority desirable (Mr. Watkins), 6631-6; (Mr. Bellwood), 6738-41; (Mr. Horn), 6936; 6937. For both local and Imperial rates and taxes in a municipality (Mr. Bellwood), 6779-94.  
Liverpool. One body for purposes of collection desirable. This could be accomplished notwithstanding the city is in three unions (Mr. Norton), 6452-68.

*(c.) Suggestions as to particular Authority desirable, &c.*

Desirable to have overseers constituted the authority for all purposes (Mr. Horn), 6879; 6880.  
Poor Rates. Appointment and mode of payment of collectors (Mr. E. H. Davies), 7037-43.  
Union Assessment Committee representing the chief spending authorities should be the sole local Authority for making all assessments and collecting all rates. Assessment Committee should take the

**LEVYING AND COLLECTION OF RATES—cont.**

duties of overseers and should raise fixed rates in the £ (Mr. Harris), 6395-417.  
One Authority appointed by council of borough, and consolidation of parishes therein desirable (Mr. Jeeves), 1610-4.  
Suggestion that Corporation should be the rating and collecting Authority for borough (Mr. Knocker), 6221-4.  
Inclusion of poor rate in Corporation's demand for borough and district rates and one receipt given desirable (Mr. Swainson), 6314.  
Bolton Improvement Act, 1877 (Mr. Swainson), 6284-6.  
Bolton Tramway and Improvement Bill, 1897\* proposed that Corporation should collect poor rate for guardians which is an unprecedented proposal (Mr. Swainson), 6296-9; 6366-70.  
Simplification of system of collection and economy (Mr. W. C. Cripps), 2023-32.  
Poor and highway rates. Advantage if collected for similar period (Mr. Cobbold), 5355-8.

*(d.) Cost.*

Cost of (Mr. W. C. Cripps), 2045-9. On tithes (Sir H. B. Poland), 2496; 2497.

**LIBRARIES (FREE),** rating of (Sir H. B. Poland), 2312; 2313.

**LICENCES, LOCAL TAXATION.** (*See under "LOCAL TAXATION (ENGLAND) ACCOUNT."*)

**LICENSED HOUSES, RATING IN RESPECT OF:** System of valuation (Mr. Holmes), 2814; (Mr. Barton, Ireland), 3541; 3542.

How far is the value of the licence an element in the valuation (Mr. Humphreys-Davies), 4356-73.

Value of licences not taken into account (Mr. Barton, Ireland), 3596.

Tied house system. Actual rent does not represent annual value of premises (Mr. Peace), 4711-3.

Increase in the assessed value of (Mr. Barton, Ireland), 3491-3.

**LIGHTING AND WATCHING ACT, 1833,** (3 & 4 Will. IV., c. 90), relative liability of owners and occupiers of land and other property (Mr. Rotton), 161-71.

Rating in respect of tithe rentcharge under. Extension of the principle of the Act desirable (Rev. C. Theobald), 5600-12.

**LIMITATION OF RATES** (Mr. Dodds, Scotland), 404-17; 480-4.

**LIMIT OF RATING FOR LOCAL PURPOSES:**

Limit reached (Mr. Jeeves), 1645; 1646; 1723-6; 1853; 1854. Therefore land and houses from which rates are derived should have relief, 1645, 1646.

Maximum limit in boroughs (Mr. Jeeves), 1783-5.

**LIVERPOOL:**

Three classes of assessment with regard to property (Mr. Norton), 6435-9.

One body for purposes of valuation and collection desirable. This could be accomplished notwithstanding the city is in three unions (Mr. Norton), 6452-68.

Collection of rates by corporation and by West Derby Union (Mr. Cleaver), 4023-6. Poor Law authorities collect poor rate, city rate, school board rate, and library rate, and charge municipality commission (Mr. Norton), 6449-51.

Assessments with regard to poor rate. Seven sets of assessors and seven areas (Mr. Norton), 6440.

Deductions for poor rate valuation. Uniformity (Mr. Norton), 6441-6.

Local Act with reference to compounding. Municipal rates. Owner obliged to pay whether property occupied or not, and gets 50 per cent. for collection (Mr. Norton), 6426-8; 6543-60. System satisfactory, 6431-4.

Limit of composition is 15% (Mr. Cleaver), 3995-7.

Owner pays half sewer and water rates (Mr. Norton), 6428-30.

Total rate in the £ (Mr. Cleaver), 4063-5.

Extension of Liverpool has caused burden of rates to be felt in West Derby Union (Mr. Cleaver), 4066-71.

LIVERPOOL—*cont.*

West Derby Union. Amount saved in rates by those who leave the district and live further from Liverpool (Mr. Cleaver), 4092-112.  
Rates should be paid in respect of real and personal property. Probable effect (Mr. Bellwood), 6728-32.

## LIVERPOOL LAND AND HOUSE OWNERS' ASSOCIATION. Particulars of (Mr. Norton), 6424, 6425, 6509-26.

## LOANS RAISED BY LOCAL AUTHORITIES:

Urban and rural (Mr. Rew), 10,545-51.  
Increase of, due to borrowing by urban authorities (Mr. Rew), 10,683; 10,684.  
Increase of, between 1875 and 1894, and decrease of National Debt (Mr. Rew), 10,492-4.  
Benefits derived from expenditure (Mr. Rew), 10,808-15.  
St. Helens. Charges in respect of, for remunerative and unremunerative expenditure. How treated in accounts (Mr. Jeeves), 1882-92.  
Scotland. Amount in (Mr. Dodds, Scotland), 424-6.

## LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON:

How far local taxation contributes to subjects of national concern (Mr. Holmes), 2841-3.  
Local taxation. New sources of revenue (Mr. Little), 8158. Instance given (Capt. E. G. Pretyman, M.P.), 9906-9.  
Imperial and local taxation should be re-classified, and each locality bear its own local burdens (Mr. Gomme), 9075-7. And all taxes collected locally including Inhabited House Duty should be applied to local purposes, 9084-7.  
Benefits derived by the community (Mr. Rew), 10,790-9.

Imperial contributions should not be made for services which benefit property, nor should property pay locally for services which are for Imperial purposes (Mr. Gomme), 8992-5.

Personal property should be assessed to local rates for purposes of a national character just as much as agricultural land (Capt. E. G. Pretyman, M.P.), 9600-2.

Contributions should be made according to ability to pay by all persons, except those whose incomes are derived from labour, for expenditure on purposes of a national character. Amounts expended out of local taxation on purposes said to be of a national character (Capt. E. G. Pretyman, M.P.), 9677-90.

Owner of foreign investments should contribute towards local taxation raised for purposes of a national character. But expenditure on purposes of a local character should be met by assessing persons within the locality on their property within it (Capt. E. G. Pretyman, M.P.), 9741-56.

Tax upon income for purposes of a national character suggested (Capt. E. G. Pretyman, M.P.), 9603; 9604; 9640-60; 9863-70. Whether such a proposal would be practical or popular discussed, 9863-70. Question of administration, 9640-60.

All rates, except education, the charges for which should be defrayed by the Imperial Exchequer, should be thrown on the county (Mr. Elsom), 7309-17.

Local rates expended on purposes of a national character should receive relief from Imperial sources (Mr. Pell), 7969-73.

Imperial contribution in respect of certain local expenditure. Question of local control and administration (Mr. Peterson), 8224-33.

Expenditure on Poor Law and education should be met from Imperial Exchequer (Mr. Norton), 6475-85; 6569-79; (Mr. Watkins), 6628; (Mr. Bellwood), 6735-7. Also police. Question of control discussed (Mr. Watkins), 6599-622; 6641-68; (Mr. King), 6802-37. Expenditure on education should be in the form of subventions (Mr. Norton), 6586. Effect of this on particular classes (Mr. Watkins), 6704-6. Discussion as to what classes should bear this expenditure, and what administrative changes should take place, 6641-68; (Mr. King), 6802-37.

Expenditure on education should be met from Imperial Exchequer (Mr. Elsom), 7309-17. Also maintenance of poor and certain other expenses included in the sums raised by poor rates. Reasons for this view (Mr. Clarke), 7418-24.

Suggestion that funds for support of in-door paupers should be raised from a large area such as the

LOCAL AND IMPERIAL SERVICES, EXPENDITURE UPON—*cont.*

county, with a contribution from Imperial sources (Mr. Pell), 8027-9.

Pauper lunatics should be paid for out of Imperial funds (Mr. Pell), 8030-7.

Most of Poor Law purposes and education should be paid for out of Imperial sources (Mr. Gomme), 8996. Question of administration discussed, 9088-101.

Government should bear the cost of certain expenditure now paid locally, such as expenditure on lunatics, &c. Also half cost of in-door poor, but not out-door, and perhaps whole cost of police. Question of administration discussed (Mr. C. S. Read), 10,351-4; 10,381; 10,382; 10,389-92; 10,426-33.

Maintenance of poor and highways should be paid for out of the general income of the country by Imperial contributions, according to the ability of the inhabitants. Question of administration (Rev. C. A. Stevens), 8610-20.

Main roads. Should they be paid for by the Government (Mr. C. S. Read), 10,387; 10,388.

Nationalisation of poor rate not at all desirable on administrative grounds (Mr. Pell), 8009-11. Nor of charges for district roads, sanitation, or school boards, 8012-4.

## LOCAL GOVERNMENT:

Indifference of ratepayers (Mr. Watkins), 6660-85.

Economy on behalf of spending authorities promoted if occupiers pay rates and know cost of local government (Mr. Horn), 6876-8.

## LOCAL GOVERNMENT ACT, 1888 (51 &amp; 52 Vict. c. 41):

County rate joint committee in Lancashire created under section 33 (2). Procedure. System has proved a satisfactory one to county and borough members (Mr. Hulton), 5757-63.

Committee of authorities to settle basis of contributions between county and county borough (Mr. Dawe), 1344.

Dover. Effect of Act (Mr. Knocker), 6161; 6162.

## LOCAL GOVERNMENT ACT, 1894 (56 &amp; 57 Vict. c. 73):

Powers of Local Government Board to transfer to urban authorities on application the powers and duties of overseers and assistant overseers. Policy of the Local Government Board (Mr. Rotton), 235-41; (Mr. Dawe), 1338-40; (Mr. R. E. Fox), 1516-22; (Mr. W. C. Cripps), 2053-5; (Mr. Humphreys-Davies), 4386; 4387. Advantages of, at St. Helens (Mr. Jeeves) 1680-2. Application as regards overseers refused in case of Bolton (Mr. Swainson), 6300-7; 6364; 6365. Application as regards assistant overseers refused in case of Tunbridge Wells (Mr. W. C. Cripps), 2063-70. Case of Dover. Power of council to appoint overseers and assistant overseers. Action of Local Government Board (Mr. Knocker), 6205-10; 6252-4.

Power given to parish councils to appoint overseers (Mr. Humphreys-Davies), 4386; 4387.

Agriculturists consider that their position has been injuriously affected by the Act (Mr. Rew), 10,625-8. Has tended to produce extravagance on out-door relief (Mr. Holmes), 3019-26.

## LOCAL GOVERNMENT ACT COMMISSION:

Instructions to the Commissioners (Mr. Cooper), 10,181-94. Alleged that rateable value was adopted as the basis of apportionment of grants, 10,195-200; 10,205-8; 10,235-40. Contention that apportionment was made partly on basis of rateable value and partly on basis of population, 10,272-4.

Principle on which the award was made. Distribution of local taxation account as between county boroughs and the county (Mr. Hulton), 5910-4.

Apportionment of amounts paid out of Local Taxation (England) Account between counties and county boroughs (Mr. Cooper), 10,181-204; 10,220; 10,221; 10,235-40; 10,272-89. Alleged loss sustained by Walsall, 10,222-5. No appeal made against award, 10,257-71. The case of Bootle and Wigan, 10,222-5.

Figures showing results of awards of the Commissioners (Mr. Cooper), 10,220; 10,221; 10,275-89.

Lancashire. Commission gave satisfaction to county boroughs and to the county (Mr. Hulton), 5891; 5921-3.

**LOCAL GOVERNMENT BOARD (ENGLAND):**

Memorandum prepared by, scope and contents of (Mr. Rotton), 3-7.

Inquiries as to boundaries and areas. Objections likely to be raised by local bodies to alteration of boundaries (Mr. W. C. Cripps), 2017-21.

Power to transfer to urban authorities on application the powers and duties of overseers and assistant overseers under Local Government Act, 1894. Policy of Local Government Board (Mr. Rotton), 235-41; (Mr. Dawe), 1338-40; (Mr. R. E. Fox), 1516-22; (Mr. W. C. Cripps), 2053-5; (Mr. Humphreys-Davies), 4386; 4387. Advantages of, at St. Helens (Mr. Jeeves), 1680-2. Application as regards overseers refused at Bolton (Mr. Swainson), 6300-7; 6364; 6365. Application as regards assistant overseers refused in case of Tunbridge Wells (Mr. W. C. Cripps), 2063-70. Case of Dover. Power of Council to appoint overseers and assistant overseers. Action of Local Government Board (Mr. Knocker), 6205-10; 6252-4.

**LOCAL GOVERNMENT BOARD (IRELAND)**

statement prepared by, scope and contents of (Mr. Robinson, Ireland), 594; 595; 705-25.

**LOCAL TAXATION COMMITTEE:**

Objects of (Mr. Rew), 10,449; 10,450.

Their view on the subject of rating (Mr. Pell), 8015-23; (Capt. E. G. Pretyman, M.P.), 9607; 9610.

**LOCAL TAXATION (CUSTOMS AND EXCISE) ACT, 1896 (53 & 54 VICT. c. 60).***Apportionment of Residue of Duties between Counties and County Boroughs under Section 1 of Act.*

Alleged that the Commissioners adopted rateable value as the basis of distribution (Mr. Cooper), 10,205-8; 10,235-40. Statistics showing distribution in certain counties and county boroughs, 10,205-8.

Suggested that distribution should be in proportion to population, or in proportion to amount contributed by each county and county borough to the Local Taxation Licence Duties and Customs and Excise duties, and not in proportion to rateable value (Mr. Cooper), 10,209-19; 10,241-56. Difference in rateable value per head of population in certain county boroughs, 10,209-19.

**LOCAL TAXATION (ENGLAND) ACCOUNT.** (*See also under "IMPERIAL CONTRIBUTIONS" and "LOCAL TAXATION (CUSTOMS AND EXCISE) ACT"*).*(a.) Extent of Relief given by Local Government Act, 1888.*

Relief obtained by ratepayers (Mr. Merrifield), 6080. In 1888, when revenues were first handed over, there was a balance for general county purposes, but there is none now owing to increased expenses (Mr. Hulton), 5984-97; (Mr. Merrifield), 6142-9.

Lancashire. Effect of Account in. No balance remains. Amount of rates to be raised has not been reduced since this was instituted (Mr. Hulton), 5833-66; 5873-7.

Lancashire. Account not sufficient if half the expense of main roads be charged (Mr. Hulton), 5813-6.

St. Helens. Sums received from Local Taxation Account, how applied (Mr. Jeeves), 1874-8. Are not conducive to extravagance, 1879-81.

*(b.) Apportionment of Amounts between Counties and County Boroughs under Local Government Act, 1888.*

Figures showing results of awards of the Commissioners under Act (Mr. Cooper), 10,220; 10,221; 10,275-89.

List of counties and county boroughs receiving more and also less than the amount they contribute to the Local Taxation Licence Duties (Mr. Cooper), 10,201-4.

Principle on which the awards of the Commissioners under Act were made (Mr. Hulton), 5910-4.

Alleged that the Commissioners adopted rateable value as the basis of the apportionment of the residue of the Local Taxation Licence Duties and the Probate Duty Grants (Mr. Cooper), 10,195-200; 10,235-40. Contention that apportionment was

**LOCAL TAXATION (ENGLAND) ACCOUNT—cont.**

made partly on basis of rateable value and partly on basis of population, 10,272-4.

Alleged loss sustained by Walsall (Mr. Cooper), 10,222-5. No appeal made against award, 10,257-71. The cases of Bootle and Wigan, 10,222-5.

Suggested that distribution of residue after the deduction of the discontinued grants should be in proportion to population, or in proportion to amount contributed by each county and county borough to the Local Taxation Licence Duties and Customs and Excise Duties, and not in proportion to rateable value (Mr. Cooper), 10,209-19; 10,241-56. Difference in rateable value per head of population in certain county boroughs, 10,209-19.

Walsall, position of, if residue apportioned upon basis of population (Mr. Cooper), 10,230-4.

Allotment of licences based on amounts collected in counties a satisfactory basis (Mr. Gomme), 8729-33.

Contended that it was the intention of Parliament and of the Act that each county and county borough should take the licence duties raised within their respective areas, subject to an adjustment by agreement or by the Commissioners appointed under the Act. Instructions to the Commissioners (Mr. Cooper), 10,181-94.

Accounts of county councils and their procedure in connexion with the Local Taxation Account. No difficulties as between county and county boroughs (Mr. Hulton), 5791-806.

*(c.) Collection of Licences.*

No advantage for local bodies to have power to collect or to vary in amount (Mr. Jeeves), 1727-36. Certain sums now received from Local Taxation Account should be collected by local body (Mr. J. H. Ellis), 1975-8.

**LOCAL TAXATION LICENCES.** (*See under "LOCAL TAXATION (ENGLAND) ACCOUNT."*)**LOCAL TAXATION RETURNS (ENGLAND):**

As compared with those for Ireland (Mr. Robinson, Ireland), 726-35; 816-21.

Details given (Mr. Robinson, Ireland), 1063-6.

**LOCAL TAXATION RETURNS (IRELAND):**

As compared with those for England (Mr. Robinson, Ireland), 726-35; 816-21.

For 1895 (Mr. Robinson, Ireland), 825-9.

Mr. Lough's return. Details on which based (Mr. Robinson, Ireland), 1090-7. Local taxation per head increased (1823-1893), 830-54; but not due to an increase in charges for pauperism, 914-20.

Possibility of obtaining amounts and particulars of rates from rateable areas (Mr. Robinson, Ireland), 773-80; 878-91.

**LONDON.** (*See under "CITY OF LONDON" and "METROPOLIS."*)**LONDON AND NORTH-WESTERN RAILWAY COMPANY:**

Have improved their stock in greater ratio than the gross receipts have increased (Mr. S. M. Howard), 11,671-80.

Increase in amount of rates paid by company. Statistics (Mr. S. M. Howard), 11,686; 11,687.

Rateable value in certain parishes compared with total rateable value of each parish (Mr. S. M. Howard), 11,688; 11,689.

Highest and lowest valuations per mile (Mr. S. M. Howard), 11,710-5.

**LONDON FARMERS' CLUB,** constitution of (Mr. Little), 8041-3.**LOPES, SIR MASSEY:**

Resolution carried in House of Commons in 1872 (Mr. C. S. Read), 10,295-7.

**LUNATICS (MAINTENANCE OF):**

Imperial contributions (Mr. Robinson, Ireland), 987; 988. How far conducive to extravagance (Mr. Hubbard), 3245-60.

Increased cost (Mr. Holmes), 3030-6.

Occupiers of agricultural land should be relieved from paying rates in respect of county lunatic asylums (Mr. A. F. Jeffreys, M.P.), 11,136-8.

Expenditure on, should be defrayed out of Imperial sources. Question of administration discussed (Mr. Gomme), 9088-101.

MACHINERY AND PLANT, RATING IN  
RESPECT OF :(a) *Desirability of.*

Principle said to be equitable (Mr. Eve), 7723-6; 7781-5.

Machinery should be assessed to local rates (Mr. P. R. Smith), 11,490-501.

(b) *Objections to.*

Opposition of Poor Law Conferences to (Mr. Humphrey-Davies), 4187-90.

Heavy tax upon the manufacturer (Mr. Humphreys-Davies), 4140; 4141. Case of manufacturer moving abroad in consequence (Mr. Morse), 4887; 4888.

Manufacturers should not contribute more largely to rates than householders occupying premises of a similar size. Their machinery should not be taken into consideration (Mr. Morse), 4813-23.

Rating in respect of machinery and plant not desirable (Mr. Morse), 4767-70.

(c) *Existing state of the law.*

Law and basis of assessment satisfactory except in respect of machinery (Mr. Humphreys-Davies), 4388-93.

Present system and method is uncertain and undefined, and imposes a great burden on the manufacturers (Mr. D. Howard), 4485; 4486.

Personal property to some extent rated (Sir H. B. Poland), 2211; 2212.

Action of corporations (Mr. Humphreys-Davies), 4265-9.

Appeals to Quarter Sessions against principle have frequently been made (Mr. Humphreys-Davies), 4142; 4143.

Appeals to High Court have been few because of the difficulty of getting a case with the real issue stated (Mr. Humphreys-Davies), 4144; 4145.

The law wants carrying into effect (Mr. P. R. Smith), 11,379; 11,381; 11,382.

Difficulties of valuation (Sir H. B. Poland), 2326-34.

Which trades most affected by rating in respect of machinery (Mr. Humphreys-Davies), 4430-2.

Mills fitted with machinery. How far machinery taken into consideration in valuation (Mr. Humphreys-Davies), 4374-85.

Machinery belonging to electric lighting companies (Mr. Morse), 4885; 4886.

Suggested that the machinery employed upon a farm is taken into account in the valuation (Mr. Rew), 10,617-24; 10,861-71.

(d) *Effect of certain Appeals.*

Principles laid down by the Courts (Mr. P. R. Smith), 11,376-8.

Tyne boiler case, principle laid down in (Sir H. B. Poland), 2209; 2210. Principle has been extended to other sorts of machinery, whether fixed or movable in certain unions (Mr. Humphreys-Davies), 4131-9.

Tyne boiler case, how far practice of rating in respect of machinery has been extended since this case (Mr. Humphreys-Davies), 4232-5.

Tyne boiler case. Decision uncertain and difficult to appreciate (Mr. Humphreys-Davies), 4213; 4214.

Fixed and movable machinery. Judgement in the Tyne boiler case (55 L.J.); and the Lee gas case (L.R., 1 Q. B.D. 241) (Mr. Humphreys-Davies), 4184.

Present system in certain districts of rating tenants' machinery not adopted before the Bishopwearmouth and the Tyne boiler cases (Mr. Humphreys-Davies), 4311-4.

The appeals in the Chard Union, Somersetshire. (Mr. P. R. Smith), 11,380.

Gifford, Fox, & Co. v. the Chard Guardians. Before and after the judgement in this case. Result and effect of judgement (Mr. C. H. Fox), 4441-7.

Gifford, Fox, & Co. v. the Chard Guardians. Manufacturers are afraid of a further extension, since Lord Esher's judgement in this case (Mr. C. H. Fox), 4451.

Whitworth & Co.'s appeal with reference to the rating in respect of their movable and fixed machinery (Mr. Humphreys-Davies), 4156-61.

Appeal successfully maintained by dock company against rating of portable cranes (Mr. Humphreys-Davies), 4177; 4178.

MACHINERY AND PLANT, RATING IN RESPECT OF—*cont.*

North British Railway Company v. the Assessor of Railways. Lord Fraser's judgement. The principle laid down in the judgement is satisfactory to manufacturers (Mr. C. H. Fox), 4456; 4457.

(e) *What is desired.*

Uniform system desirable (Mr. Humphreys-Davies), 4339-42.

Manufacturers desire a clear definition of the class of machinery rateable (Mr. C. H. Fox), 4448; 4460; 4461. They complain of the possibility of their being rated in respect of movable machinery particularly in semi-rural districts, 4460; 4461.

Fixed machinery which is part of the hereditament should be rated (Mr. Humphreys-Davies), 4167.

Movable machinery, rating in respect of, is increasing. A definite principle is wanted (Mr. Crompton), 5056.

Tenant should not be rated in respect of machinery which is a chattel (Mr. Humphreys-Davies), 4227-9.

Tenant's machinery should not be subject to rating (Mr. Humphreys-Davies), 4240-2; (Mr. Morse), 4879-84.

(f) *Bills introduced into Parliament.*

Bills to amend the law relating to hereditaments containing machinery. Object is to get a definition of what machinery should be rated (Mr. Humphreys-Davies), 4230; 4231. First Bill introduced in 1887, 4162. History of the Bills; their provisions and objects, 4165; 4166. Strongest opponents are the small property owners, 4168-73.

(g) *Practice in certain districts.*

Machinery not rated in many unions (Mr. Humphreys-Davies), 4130.

In what districts rating in respect of machinery is attempted (Mr. Humphreys-Davies), 4149; 4150.

Principle has been adopted more in agricultural than in manufacturing districts (Mr. Humphreys-Davies), 4163; 4164.

Principle more frequent in rural and semi-rural districts than in urban districts. Localities affected by the adoption of the system (Mr. Humphreys-Davies), 4252-64. Attempts have been made in some unions to rate persons in respect of a class of machinery which is personal property (Mr. Humphreys-Davies), 4127-9.

Sunderland is adopting principle (Mr. Humphreys-Davies), 4182; 4183. No action yet taken by the machinery users there, 4185; 4186.

Lancashire. Only fixed machinery rated (Mr. Humphreys-Davies), 4151.

West Derby Union. Rating of machinery fixed to freehold (Mr. Cleaver), 4057-62.

Burnley Union. Movable machinery is not rated (Mr. Horn), 6960-3.

Woolen industry in West of England would be crippled if the Union Assessment Committees had not come to a compromise pending the fate of the Bill before the House of Commons (Mr. C. H. Fox), 4453-5.

Tiverton Union (Devonshire). A compromise effected with Union Assessment Committee pending the fate of the Bill before the House of Commons dealing with the subject generally (Mr. C. H. Fox), 4449; 4450.

Scotland (Mr. Humphreys-Davies), 4251.

## MANUFACTURERS. (See also under "FOREIGN COMPETITION.")

Burdened to a great extent by the present system and method of rating in respect of machinery which is uncertain and undefined (Mr. D. Howard), 4485; 4486.

Rating in respect of machinery is a heavy tax upon manufacturers (Mr. Humphreys-Davies), 4140; 4141.

Are afraid of further extension of assessing machinery since Lord Esher's judgement in case of Gifford, Fox and Co. v. Chard Guardians (Mr. C. H. Fox), 4451.

Woolen manufacturers in West of England. Number greatly decreased (Mr. C. H. Fox), 4452.

Case of manufacturer moving abroad in consequence of rating in respect of machinery (Mr. Morse), 4887; 4888.

**MANUFACTURERS—cont.**

- Should not contribute more largely to rates than householders occupying premises of a similar size. Their machinery should not be taken into consideration (Mr. Morse), 4813-23.
- Desire that tenants' machinery should not be taken into consideration, and that there should be an independent rating authority (Mr. Morse), 4879-84.
- Do not get same benefit from expenditure of certain rates as householders do (Mr. Morse), 4716-20.
- Position of manufacturers as compared with that of agriculturists (Mr. C. H. Fox), 4462-71.
- In West Ham manufacturers pay rates in respect of the requirements of many workmen living there, but who are employed in London (Mr. D. Howard), 4505-7.
- Classification of manufacturers desirable for rating purposes (Mr. Morse), 4872-8.
- Machinery, rating in respect of. Lord Fraser's judgement in case of North British Railway Co. v. Assessor of Railways. The principle laid down in the judgement is satisfactory to manufacturers (Mr. C. H. Fox), 4456; 4457.
- Desire a clear definition of the class of machinery rateable (Mr. C. H. Fox), 4448; 4460; 4461. They complain of the possibility of their being assessed in respect of movable machinery, particularly in semi-rural districts, 4460; 4461.
- Not satisfied with constitution of Union Assessment Committees (Mr. Morse), 4836-9.
- Rates levied on gross value instead of net prejudicial to manufacturers. The case of Oldham (Mr. Humphreys-Davies), 4343-50.
- Rates paid by manufacturers in the country less than in the towns, but in the towns there are greater facilities for carrying on their business (Mr. C. H. Fox), 4472-7.

**MANUFACTURING TOWNS.** High rates detrimental to industry (Mr. Jeeves), 1663-8; 1926-8.

**MARKET GARDENS.** Should have been excluded from operation of Agricultural Rates Act, 1896 (Mr. Eve), 7712-7; 7729-52.

**METROPOLIS. ADMINISTRATIVE AND NON-ADMINISTRATIVE PARISHES IN:**  
Distinction between (Mr. Gomme), 8741-6.

**METROPOLIS. DIRECT LOCAL TAXATION:***(a.) Union Assessment Committees.*

- Constitution of. All classes are fairly represented, and all interests fairly dealt with (Mr. Cutter), 7108-13.
- Suggested alteration in Valuation (Metropolis) Act with reference to appointment of Committee in certain cases (Mr. Cutter), 7094-101.
- Overseers have right of appeal against decisions of Union Assessment Committees (Mr. Eve), 7832-46.
- Surveyor of taxes has right of sitting with Committee (Mr. Dawe), 1241; 1242; and right of appeal (Mr. Botton), 91; (Mr. Humphreys-Davies), 4433-7.
- County Council, position of, with regard to (Mr. Rotton), 92, 93.

*(b.) Valuation.*

- Valuation (Metropolis) Act. Advantages of (Sir H. B. Poland), 2290-302; (Mr. Morse), 4928-30; (Mr. Adamson), 5148-50; (Mr. Cutter), 7086; 7087.
- Extension desirable (Mr. Pell), 7896-9. Definitions of gross value and rateable value (Sir H. B. Poland), 2098.
- Different assessing authorities and assessments. Uniformity desirable (Mr. Watkins), 6629; 6630. County council should be assessing authority, 6637-40.
- Occupiers have to make returns compulsorily (Mr. Botton), 23-32; (Sir H. B. Poland), 2290-302; (Mr. Cutter), 7074-7.
- Deductions, statutory maximum scale exists (Sir H. B. Poland), 2224. But not always allowed, 2226; 2227. Advantages of scale, 2228; 2229.
- Deductions. Statutory scale works equitably. Consultation of rating authorities before the quinquennial valuation (Mr. Cutter), 7078-82.
- Schedule in Valuation Act limiting deductions from gross value is unfair (Mr. Humphreys-Davies), 4215-7.

**METROPOLIS. DIRECT LOCAL TAXATION—cont.**

- Valuation high owing to action of surveyor of taxes (Mr. Gomme), 9078; 9079.
- Site values not separately valued. Effect of this (Mr. Gomme), 8797-801; 8808.
- Professional valuer appointed for valuing railways, gasworks, &c. (Mr. Cutter), 7102; 7103.
- Quinquennial valuation (Mr. Rotton), 22; 187; 188; (Mr. Cutter), 7088-93. Some objections to (Sir H. B. Poland), 2216-8.
- Ratepayers should be able to object to assessment at any time within the quinquennial period (Mr. Humphreys-Davies), 4222.

*(c.) Valuation Lists.*

- Officers responsible for (Mr. Rotton), 21.
- Provisional and supplemental lists. How made up (Mr. Cutter), 7088-93.
- Conclusive for local and Imperial purposes (Mr. Rotton), 82; (Sir H. B. Poland), 2219-21; (Mr. Goldney), 10,155; 10,156.

*(d.) Exemptions from Rating.*

- List of local Acts (Mr. Gomme), 8790-3.
- How dealt with in parish demand notes, also county rate. Suggested alteration (Mr. Gomme), 8794; 8795.
- Cause inequalities (Mr. Gomme), 8754-79. Position of parishes in regard to, 8804-7.
- Should be thrown on the county rate and become a county charge, and borne by London as a whole (Mr. Gomme), 8780-9; 8808.

*(e.) Amount and Consolidation of Rates.*

- Map showing degree of rating and rate in the £ in every parish (Mr. Gomme), 8741-6; 8754-79.
- Growth of local taxation in recent years (Mr. Gomme), 8857-60; 8865-74.
- One rate for district rate and poor rate should be made, though purposes should be ear-marked (Mr. Cutter), 7115-9.

*(f.) Relief of Poor.*

- Differentiation in rates in respect of. How far due to difference in administration (Mr. Gomme), 8824-30.
- Expenditure higher than in most places in England. Administration (Mr. Gomme), 8831; 8832.
- Position of London as regards Imperial contributions for relief of poor (Mr. Gomme), 8944-50.

*(g.) Differentiation in Rates.*

- How far altered by equalization of rates. Principal causes of. Special county rate not levied in City; Asylums Board charge not levied upon certain places; common poor fund not levied on Penge. Also exemptions from rating cause inequalities (Mr. Gomme), 8754-79; 8808. Also amounts payable for loans in different parishes, 8796; 8808. Site values and special services, 8808.
- Differentiation that is due to non-preventable causes (Mr. Gomme), 8804-7. Poor and rich districts compared, 8809; 8810.
- Rates in respect of Poor Law. How far differentiation due to difference in administration (Mr. Gomme), 8824-30.

*(h.) Equalisation of Rates.*

- Suggested alteration in system (Mr. Gomme), 8747-51. Effect on differentiation in rates (Mr. Gomme), 8754-79.
- Distribution of amounts on basis of population (Mr. Gomme), 9015-31.

*(i.) Loan Charges.*

- Cause a differentiation in rates (Mr. Gomme), 8796; 8808.

*(j.) Private Rating Authorities.*

- Taxation in hands of; voluntary schools; certain markets, and water rates (Mr. Gomme), 8752; 8753.
- Question of the areas with which London shares its taxation in respect of water supply. London said to be disadvantageously affected (Mr. Gomme), 8819-23.
- Water companies' charges excluded from Mr. Gomme's tables (Mr. Gomme), 9048-64.

**METROPOLIS—EDUCATION, COSTS OF:**

- Imperial contributions. Statistics (Mr. Gomme), 8707-11.  
 Proportion of expenditure borne by rates and proportion borne by Government grants. Comparison between London, county boroughs, and counties (Mr. Gomme), 8712-8.  
 Grants to school boards according to education results. London's share (Mr. Gomme), 8961-3.  
 Grants to voluntary schools. London's share (Mr. Gomme), 8964-9.

**METROPOLIS—IMPERIAL CONTRIBUTIONS IN AID OF LOCAL TAXATION:**

- Position of London. Statistical tables (Mr. Gomme), 8685-95.  
 Apportionment of contributions. Mr. Gomme's objections and proposals. London's share of Estate Duty, Beer and Spirit Duties. Also what its share would be of Land Tax and Inhabited House Duty (Mr. Gomme), 9065-74.  
 Alteration of system. Mr. Gomme's suggestion. Effect of, on London and rest of country (Mr. Gomme), 8997; 9007.  
 Allotment of licences based on amounts collected in counties. A satisfactory basis though relatively small proportion received by London (Mr. Gomme), 8729-33.  
 Amount received by London and the county boroughs said to compare unfavourably with that received by counties. Statistical tables (1893-4) in support of this view (Mr. Gomme), 8696-8.  
 Alleged inequitable distribution. Reasons for this. The year chosen for fixing the basis of apportionment by discontinued grants not fair to London (Mr. Gomme), 8723. City police paid for from City estates and London lost portion of Government grant, 8724; 8725; 8951-6. Also grant to London for main roads very small; and for medical officers and sanitary inspectors nothing, 8724; 8725.  
 Apportionment of contributions. London said to be worse off in proportion to rateable value and local taxation than counties and county boroughs, and the position gets worse (Mr. Gomme), 8727; 8728. But the purposes of expenditure in different localities must be taken into consideration, 9032-47. What is the best basis or standard, 8909-15.  
 Proportion of local expenditure defrayed by Imperial contributions and out of rates (Mr. Gomme), 8876-81; 8897-908. Comparison between London, county boroughs, and counties, 8719-22. Criticism of Mr. Gomme's figures. Question of the inclusion of police courts and royal parks, 8897-908.  
 Apportionment of contributions. London said to be at a disadvantage because it receives less of its total expenditure than other places. Expenditure should not be the test (Mr. Gomme), 8882-96.  
 Apportionment of contributions. Unfavourable operation of Diseases of Animals Act, 1894 (Mr. Gomme), 8728.  
 Local taxation, local expenditure, licences, and inhabited house duty. Comparison between London and rest of England and Wales (Mr. Gomme), 8812-8.  
 London's share from local taxation licences, estate duty and customs, police pensions, education (school boards), Diseases of Animals Act, Agricultural Rates Act, 1896 (Mr. Gomme), 8811.  
 Contributions for poor relief; criminal prosecutions; main roads, police (Mr. Gomme), 8944-50.  
 Education statistics (Mr. Gomme), 8707-11. Proportion of expenditure on education borne by rates and proportion borne by Government grants. Comparison between London, county boroughs, and counties, 8712-8.  
 Police pension grant on satisfactory basis, but not other grants (Mr. Gomme), 8726.  
 Metropolitan grant of four-ninths of cost of police, and county grant of half cost of pay and clothing compared (Mr. Gomme), 8957-60.  
 Sum paid to Fire Brigade. Contribution in lieu of rates (Mr. Gomme), 9102-5.  
 Relationship of Imperial to local taxation. Estate Duty varies in amount. A settled income for purposes of local taxation desirable (Mr. Gomme), 8833-7.

**METROPOLIS—INDIRECT TAXATION:**

- Licences and duties collected by London County Council and Metropolitan Police (Mr. Gomme), 87349.

Area of collection not always coincident with area of administration (Mr. Gomme), 8740.

**METROPOLIS—INHABITED HOUSE DUTY:**

- Amount raised. Comparison between London and rest of England and Wales (Mr. Gomme), 8812-8; 8824.  
 Suggested that proceeds should be applied to local purposes (Mr. Gomme), 8838-45. London's share in this case, 9065-74.

**METROPOLIS. LAND TAX:**

- Suggested that proceeds should be applied to local purposes (Mr. Gomme), 8838-45. London's share in this case, 9065-74.

**METROPOLIS—LOCAL AND IMPERIAL SERVICES, RECEIPTS FOR PURPOSES OF AND EXPENDITURE UPON:**

- Amount of local taxation. Proportion to England and Wales (Mr. Gomme), 8664-7.  
 Receipts which lessen expenditure, and receipts which reduce taxation distinguished (Mr. Gomme), 8678-81.  
 Expenditure met by three classes of taxation. Amount of each class (Mr. Gomme), 8682-4.  
 Local taxation and local expenditure. Comparison between London and rest of England and Wales (Mr. Gomme), 8812-8.  
 Expenditure of the local authorities. Amount (Mr. Gomme), 8668-9.  
 Principal heads of expenditure. Receipts in aid (Mr. Gomme), 8670-7.  
 Certain local services paid for out of Imperial taxation. Police courts (Mr. Gomme), 8838-45.  
 Certain Imperial services paid for out of local taxation. Metropolitan police said to perform some services of an Imperial character (Mr. Gomme), 8846-56.

**METROPOLIS.—PARKS, COST OF, IN RELATION TO DISTRIBUTION OF IMPERIAL CONTRIBUTIONS:**

- How far the benefits which London receives from the parks should be considered when reckoning what the rest of the country has had out of the Exchequer (Mr. Gomme), 9008-14.  
 Large towns like Liverpool, Manchester, and Birmingham have to buy parks, whereas London does not (Mr. Gomme), 9080-3.

**METROPOLIS.—POLICE:**

- Question of the areas with which London shares its taxation in respect of police. London said to be disadvantageously affected (Mr. Gomme), 8819-23.  
 Position of London as regards Imperial contributions towards cost of police (Mr. Gomme), 8944-50.  
 City police paid for out of City estates, and London lost portion of Imperial contribution, 8724; 8725; 8951-6.  
 Imperial contributions. Metropolitan grant of four-ninths of cost, and county grant of half cost of pay and clothing compared (Mr. Gomme), 8957-60.  
 Police courts paid for out of Imperial taxation (Mr. Gomme), 8838-45.  
 Metropolitan police said to perform some services of an Imperial character (Mr. Gomme), 8846-56.

**METROPOLITAN COMMON POOR FUND:**

- Contributions to and apportionment of Fund (Mr. Cutter), 7085.  
 Advantages of Fund (Mr. Pell), 8027-9.

**MIDLAND RAILWAY COMPANY:**

- Valuation per acre of land occupied by company, and of land adjoining occupied by other persons in certain parishes (Mr. Payne), 11,582-4.  
 Total valuation of property of company compared with that of all other properties in the same area (Mr. Payne), 11,625-38.

**MILLS:**

- Mills fitted with machinery or supplied with water power. How far taken into consideration in valuation (Mr. Humphreys-Davies), 4374-85.  
 Oldham Improvement Act, 1880 is unjust to mill-owners (Mr. Humphreys-Davies), 4218-21.  
 Lancashire. County Rate Committee has obliged Union Assessment Committees to make re-valuation of mills (Mr. Hulton), 5764.

**MILNER, SIR ALFRED:**

- Figures prepared by (Mr. Rew), 10,451-5; 10,459; 10,474-88; 10,665-78; 10,737-9.

"MINERS' FREE RIGHTS" in West Dean (Mr. Elsom), 7339-47.

**MINES (COAL):**

- Rating in respect of (Mr. Rotton), 51-3; (Sir H. B. Poland), 2438. Mentioned in Act of Elizabeth (Mr. T. Ratcliffe Ellis), 2522.
- Exemptions (partial). Coal mines should be included in hereditaments subject to, under Public Health Act, 1875. Reasons for this view (Mr. T. Ratcliffe Ellis), 2555-63. Ungotten seams of coal should be partially exempted, 2665; 2666.
- Incidence of rates, how far taken into account by lessee (Mr. T. Ratcliffe Ellis), 2738; 2739.
- Royalties and rent. Systems of payment of (Mr. T. Ratcliffe Ellis), 2545-8.
- Ungotten seams of coal should be partially exempted under Public Health Act, 1875 (Mr. T. Ratcliffe Ellis), 2665; 2666. Legal owner of, 2675-709.
- Influence of collieries on population, industries, expenses of local government, and value of property (Mr. T. Ratcliffe Ellis), 2624-9. Increase in value of property, 2715-8.
- Comparison of the position of coal mines with other industries and properties with regard to profits, capital invested, &c. (Mr. T. Ratcliffe Ellis), 2651-9.
- West Dean. Coal mining industry in (Mr. Elsom), 7296-9.

**MINES (COAL) VALUATION OF:**

- Basis of assessment or valuation (Mr. Rotton), 54-6; 199-201; (Mr. Dodds, Scotland), 391-3.
- How entered on list (Mr. T. Ratcliffe Ellis), 2526.
- Assessment committee should have power to obtain information from lessor and lessee (Mr. T. Ratcliffe Ellis), 2574-6.
- Systems of, different (Mr. T. Ratcliffe Ellis), 2726-9. Greatly vary in different unions, 2569.
- System adopted by experts (Mr. T. Ratcliffe Ellis), 2606.
- Letting value should be best test, but true letting value difficult to ascertain before mines have been worked (Mr. T. Ratcliffe Ellis), 2543; 2544.
- Basis for ascertaining annual value; obtainable royalty; royalty value should include plant (Mr. T. Ratcliffe Ellis), 2570; 2571.
- Actual royalty paid not necessarily the actual basis for assessment purposes (Mr. T. Ratcliffe Ellis), 2572; 2573.
- Profits of collieries in relation to rateable value (Mr. T. Ratcliffe Ellis), 2647-50; 2664.
- Plant usually rated. How far equitable (Mr. T. Ratcliffe Ellis), 2607-11. Not equitable, 2660-3; 2710-4. How far depreciation should be allowed for, 2612-23.
- Deductions. Systems of making greatly vary (Mr. T. Ratcliffe Ellis), 2596-9. Statutory provision, 2600-2.
- Deductions for charges necessary to carrying on working desirable (Mr. T. Ratcliffe Ellis), 2719-25.
- Mines placed in favourable and unfavourable circumstances. Value to lessor. Royalty and rent (Mr. T. Ratcliffe Ellis), 2577-95.
- Average annual assessable value not altered if proposed change in law adopted. Contribution per ton in certain counties (Mr. T. Ratcliffe Ellis), 2630-46.
- Statutory provision to obtain uniformity desirable. Proposal of Mine Owners' Association (Mr. T. Ratcliffe Ellis), 2730-7.
- Cannock Chase district. System adopted (Mr. T. Ratcliffe Ellis), 2576.
- Leigh Union. System adopted; plant rated (Mr. T. Ratcliffe Ellis), 2541; 2542.
- Ormskirk Union. System adopted (Mr. T. Ratcliffe Ellis), 2564-8.
- Wigan district. System adopted; plant not rated. Information, how obtained from owners (Mr. T. Ratcliffe Ellis), 2527-40. An exceptional system, 2603-5.
- Scotland. System adopted (Mr. T. Ratcliffe Ellis), 2549-54.
- Lancashire County Rate Committee has obliged Union Assessment Committee to make re-valuation (Mr. Hulton), 5764.

**MINES (COAL) WORKINGS UNDER THE SEA BELOW LOW WATER MARK:**

- Non-rateability of mines in respect of (Mr. Anderson), 5476-83.
- Should be placed on same footing as workings above low water mark (Mr. Anderson), 5484-92.

**MINES (COAL), WORKINGS UNDER THE SEA, &c.—cont.**

- Should be assessed in the parish where coal is brought to bank (Mr. Anderson), 5493-7.
- Liability of parish for share of maintenance of widows and orphans in case of accidents (Mr. Anderson), 5498-504.
- Owners of get benefit of local government, and should contribute to local rates in respect of the coal (Mr. Anderson), 5505-12.
- Royalties paid in respect of coal belong to the Crown (Mr. Anderson), 5513-9.

**MINES (OTHER THAN COAL), VALUATION OF:**

- Rateability under 37 & 38 Vict. c. 54 (Mr. T. Ratcliffe Ellis), 2523-5.
- Royalty the actual value including plant (Mr. T. Ratcliffe Ellis), 2576.

**MINING ASSOCIATION OF GREAT BRITAIN, memorandum authorised by (Mr. T. Ratcliffe Ellis), 2519-21.****MONOPOLIES, COMPANIES POSSESSING:**

- Valuation of (Mr. C. C. Smith), 9462-74; (Mr. Wilkins), 9503-8.
- Gas companies. Enjoyment of monopolies by. How far an element to be taken into consideration for purposes of valuation (Mr. Jones), 9188-203; 9292-9.

**MORTGAGEES:**

- Position as regards local taxation (Mr. Little), 8155-7.
- Contribution to local taxation discussed (Capt. E. G. Pretyman, M.P.), 9886-92. Effect of, discussed, 9901-5.
- Should contribute towards local taxation (Mr. C. S. Read), 10,405-7.

**MUNICIPAL PROPERTY AND UNDERTAKINGS:**

- Exemption from rating under Improvement Acts (Mr. Crompton), 5036; 5037.
- Rateability of, but not of Government property (Sir H. B. Poland), 2145-7, 2439-42. Profit not a test of valuation, 2460.
- Rateability or non-rateability of. Position of parishes in which situate (Sir H. B. Poland), 2337-40.
- Valuation of corporation works restricted by Act of Parliament from making a profit (Mr. C. C. Smith), 9477-82.
- Profits from, as an aid to rates (Mr. Jeeves), 1720-2; 1786-94. Income tax paid on, 1901-8.
- Waterworks belonging to municipality prohibited from making a profit (Sir H. B. Poland), 2369-77. Community gets the benefit, 2461; 2462.
- Municipal property in Dover (Mr. Knocker), 6163-5.

**MUSEUMS, RATING IN RESPECT OF (Sir H. B. Poland), 2312; 2313.****NATIONAL DEBT. Decrease of, between 1875 and 1894 (Mr. Rew), 10,492-4.****NELSON, BOROUGH OF. Compounding (Mr. Horn), 6926; 6927. Collection not so good as in Burley, where there is no compounding, 6869-75.****NET ANNUAL VALUE:**

- Statutory definition of (Sir H. B. Poland), 2091-7.
- Parochial Assessments Act, 1836, declaratory of the old law (Sir H. B. Poland), 2089; 2090.
- Metropolis Valuation Act intended to make language of Parochial Assessments Act clearer (Sir H. B. Poland), 2099-102.

**NON-COUNTY BOROUGHES. (See "BOROUGHES.")****NORFOLK:**

- Rates. Expenditure of (Mr. Holmes), 2744-51.
- Amounts of burdens borne by ratepayers, 2875-96.
- Purposes for which levied, 2978-81. Rural districts as compared with boroughs, 3074-9.
- Grants (Government). How allocated (Mr. Holmes), 3055-8. Conducive to extravagance, 2906; 2907.
- Reasons for this view, 2948-52. Norfolk gets a large grant under Agricultural Rates Act, 1896, 3039-44.
- Valuation. Want of uniformity (Mr. Holmes), 2811. Different bases of valuation, 2812; 2813. Rent not always taken as basis, 2961-9.

NORFOLK—*cont.*

- Buildings, rateable value of. Proportion to total (Mr. Holmes), 2900-3. Increase of, in certain districts, 2904; 2905.
- Farming. Rent of a farm in Norfolk (Mr. Hubbard), 3183-7. Profits from, greatly reduced, 3283-7.
- Depwade Union. Rateable value of land in, is in excess of actual rent (Mr. Holmes), 3680-8.

## NORFOLK. INCREASE OF RATES IN:

- On a farm, in 1896 compared with 1886. Cause (Mr. Hubbard), 3180-2.
- Agricultural land (Mr. Holmes), 2815-31. Rates paid in 1875, 1885, and 1895, 3089-100. Expenditure increased while value of agricultural property and profits derived from agriculture decreased, 2953-61.
- Relief of poor. Increase due to migration of best labourers (Mr. Holmes), 3027-9. Increase of outdoor relief, 2908-14; (Mr. Hubbard), 3212-6. Reasons for, 3194-7.
- Roads, increased expenditure on (Mr. Holmes), 2865-8. Reasons for, 2799; 2800.
- Extent and explanation of (Mr. Holmes), 2767-85; 2790-3; 2915-38. Partly due to new obligations, 3007-9.
- How far present constitution of local bodies responsible for (Mr. C. S. Read), 10,300-21.
- Expenditure increased, ability to pay decreased (Mr. Holmes), 2974-7.
- Possibility of getting a return of rates paid on some estate for last 20 years (Mr. Holmes), 2786-9. Home farm not a good illustration (Mr. Calthrop), 3130-2.

## NORFOLK CHAMBER OF AGRICULTURE, RETURNS OBTAINED BY:

- Rates raised in various districts (Mr. Holmes), 2970-3; 3045-54. (Mr. Calthrop), 3170-2. (Mr. Hubbard), 3261-72.
- Effect of operation of Agricultural Rates Act, 1896 (Mr. Holmes), 3059-73.
- "Lands." Explanation of term as used in returns (Mr. Holmes), 3124-7.

## NORTHAMPTONSHIRE. County Rate Committee. Attitude towards Union Assessment Committees in the county and their valuations (Mr. Pell), 7929-36.

## NORTH BRITISH RAILWAY COMPANY v. THE ASSESSOR OF RAILWAYS (25 S.L.R. 4):

- Lord Fraser's judgement. The principle laid down in the judgement is satisfactory to manufacturers (Mr. C. H. Fox), 4456; 4457.

## OCCUPIERS, definition of (Mr. Dodds, Scotland), 580-6.

## OLDHAM. Rates levied on gross value instead of net prejudicial to manufacturers in Oldham (Mr. Humphreys-Davies), 4343-50.

## OLDHAM IMPROVEMENT ACT, 1880 (43 &amp; 44 VICT. c. 147). Is unjust to mill-owners (Mr. Humphreys-Davies), 4218-21.

## ORMSKIRK UNION (LANCS.). Valuation of coal mines, system adopted (Mr. T. Ratcliffe Ellis), 2564-8.

## ORWELL PARK AND BACTON ESTATE:

- Particulars of (Capt. E. G. Pretzman, M.P.), 9525-33.
- Game on estate (Capt. E. G. Pretzman, M.P.), 9735-40.
- Farming accounts (Capt. E. G. Pretzman, M.P.), 9611-20.
- Particulars of losses or profits on certain farms (Capt. E. G. Pretzman, M.P.), 9799-815.
- Cost of labour (Capt. E. G. Pretzman, M.P.), 9552-5.
- Fall in amount of tithes (Capt. E. G. Pretzman, M.P.), 9816-8.
- Expenditure on buildings and cottages. Conditions of letting cottages (Capt. E. G. Pretzman, M.P.), 9569-71.
- Expenditure on buildings and improvements (Capt. E. G. Pretzman, M.P.), 9630-9.

ORWELL PARK AND BACTON ESTATE—*cont.*

- Expenditure has benefited the property (Capt. E. G. Pretzman, M.P.), 9910-3.
- Increased expenditure on buildings, &c. in recent years necessary to secure tenants (Capt. E. G. Pretzman, M.P.), 9921-3.
- Rental (Capt. E. G. Pretzman, M.P.), 9592-4. Outgoings have exceeded receipts during the last seven years. Comparison of the rent roll in the seventies and the nineties, 9556-64.
- Arrears of rent. Practically none, as the owner will not allow them to accrue (Capt. E. G. Pretzman, M.P.), 9595; 9713-8.
- Statistical tables to prove owner and occupier rated too heavily in respect of agricultural land (Capt. E. G. Pretzman, M.P.), 9520-4.
- Farms in hand (Capt. E. G. Pretzman, M.P.), 9565-7. Results of farming. Land left in bad condition. Expense of improving it, 9537-51.
- Profits derived from and expenditure upon farms in hand. Proportion of rates paid to profits (Capt. E. G. Pretzman, M.P.), 9825-39.
- Rates paid in respect of farms in hand. Particulars of (Capt. E. G. Pretzman, M.P.), 9572-5.
- Relief obtained under Agricultural Rates Act, 1896, with respect to farms in hand on Orwell Park and Bacton Estates (Capt. E. G. Pretzman, M.P.), 9582-4.

## OVERSEERS, AND ASSISTANT OVERSEERS:

- Position and appointment of (Mr. Rotton), 183-6.
- Qualification of, in urban and rural districts (Sir H. B. Poland), 2381-5.
- Local knowledge of overseers very valuable; they should assist paid valuers (Mr. Cleaver), 3957; 3958; 3967; 3968.
- Valuation of property by overseers in each parish produces inequalities (Mr. Cobbold), 5289-91.
- To obtain uniformity of deductions, chairman of Union Assessment Committee should act *ex officio* with the overseers (Mr. E. H. Davies), 7029-36.
- West Derby Union. Rules provided for guidance of overseers in 1872 and 1892 to secure uniform application of definite principles in valuing (Mr. Cleaver), 3927-35. Scale of deductions laid down therein, 3970-80.
- Samford Union. Overseers carry out instructions as to valuation satisfactorily (Mr. Cobbold), 5237-40.
- Power of Local Government Board to transfer to urban Authorities, on application, the powers and duties of, under Local Government Act, 1894. Policy of Local Government Board (Mr. Rotton), 235-41; (Mr. Dawe), 1338-40; (Mr. R. E. Fox), 1516-22; (Mr. W. C. Cripps), 2053-5; (Mr. Humphreys-Davies), 4386; 4387. Advantages of, at St. Helens (Mr. Jeeves), 1680-2. Application as regards overseers refused in the case of Bolton (Mr. Swainson), 6300-7; 6364; 6365. Application as regards assistant overseers refused in case of Tunbridge Wells (Mr. W. C. Cripps), 2063-70.
- Case of Dover. Power of Council to appoint overseers and assistant overseers. Action of Local Government Board (Mr. Knocker), 6205-10; 6252-4.
- Borough council of corporation might nominate overseers. How far practicable. Bill of Borough of Bolton\* (Mr. Humphreys-Davies), 4353-5.
- Power given to parish councils to appoint overseers under the Local Government Act, 1894 (Mr. Humphreys-Davies), 4386; 4387.

## OWNERS, definition of (Mr. Dodds, Scotland), 580-6.

## OWNERSHIP VOTE:

- For local purposes (Mr. Dodds, Scotland), 462; 463.
- Same for Burgh register as for Parliamentary register, but with certain additions (Mr. Dodds, Scotland), 472; 473.

## OXFORD CORPORATION ACT, 1890 (53 &amp; 54 Vict. c. 223):

- Oxford clauses (ss. 115 and 116) (Mr. Swainson), 6287-90.
- Assessment of city. Satisfactory system (Mr. Swainson), 6291-5.

\* This Bill received the Royal Assent on 6th July 1897 (60 & 61 Vict. c. 134.)

## PARISH COUNCILS:

- Increased expenditure of (Mr. C. S. Read), 10,383-6; (Mr. Rew), 10,632-4. Constitution of rating authorities. How far composed of non-ratepayers (Mr. C. S. Read), 10,383-6.
- Powers of. Attitude towards railway companies (Mr. P. R. Smith), 11,310-33.
- Railway companies should be represented (Mr. P. R. Smith), 11,563-5; and have the right to vote (Mr. S. M. Howard), 11,690-700.
- Railway Companies should be able to appoint an *ex officio* member (Mr. Payne), 11,594-9.

## PARISHES IN METROPOLIS (ADMINISTRATIVE AND NON-ADMINISTRATIVE):

- Distinction between (Mr. Gomme), 8741-6.

## PARISHES (RURAL) ADJOINING TOWNS:

- Benefits received. Radius within which such benefits accrue is limited to  $2\frac{1}{2}$  miles (Mr. Rowlandson), 9961-7; 9990-4.

## PARKS (PUBLIC), rating of (Sir H. B. Poland), 2309-11.

## PAROCHIAL ASSESSMENTS ACT, 1836 (6 &amp; 7 Will. 4. c. 96):

- Method prescribed for ascertaining value (Mr. Rotton), 128; 129.
- Declaratory of old law as regards net annual value (Sir H. B. Poland), 2089; 2090.
- Insurance, meaning of, in Act (Mr. T. Ratcliffe Ellis), 2667-74.
- Personal property, Act in relation to rating of (Sir H. B. Poland), 2203.
- Railways and certain public bodies. Difficulty of applying principles of Act to rating of (Sir H. B. Poland), 2268; 2269.
- Act is unsatisfactory (Rev. C. A. Stevens), 8656; 8657.

## PAROCHIAL RATES:

- Valuation roll, assessment roll, deductions (Mr. Dodds, Scotland), 370-4.
- Collected direct from owner (Mr. Dodds, Scotland), 460; 461.
- Comparatively small (Mr. Holmes), 2332.

## PENGE:

- Metropolitan Common Poor Fund not levied (Mr. Gomme), 8754-79.

## PERSONAL PROPERTY:

- Exemption of, under Poor Rate Exemption Act, 1840 (Mr. Rotton), 102-5; 130; 256-62; (Sir H. B. Poland), 2203; 2393-6.
- Rating in respect of personal property not localised has never been legal (Sir H. B. Poland), 2277-9.
- Parochial Assessment Act, 1836. The Queen v. Lumsdaine; difficulties arising from this decision. Passing of 3 & 4 Vict. c. 89, exempting personal property (Sir H. B. Poland), 2203.
- Persons owning personal property should contribute in respect of it to local rates (Mr. Calthrop), 3157-9; (Mr. Norton), 6471-3; 6561-3; (Mr. Rowlandson), 10,040-5. Suggested method of carrying this out (Mr. Norton), 6474.
- Should be assessed to local rates for purposes of a national character just as much as agricultural land (Capt. E. G. Pretyman, M.P.), 9600-2.
- Suggested income tax on (Mr. Little), 8081-3. For expenditure on purposes of a national character now borne by local rates, 8089-97. Difficulty of localisation (Mr. Bellwood), 6742-62.
- Agricultural Rates Act, 1896, should be continued until contribution is made to local rates in respect of personalty (Mr. C. S. Read), 10,408-14.
- Should contribute to maintenance of poor (Mr. Duffield), 5423-5.
- Contributions should be made to local rates in respect of, in a larger proportion than is now done, through the Imperial contributions (Mr. Clarke), 7364-7.
- Difficulties of rating, and objections to (Sir H. B. Poland), 2202; 2335; 2336; (Mr. Calthrop), 3140-4; (Mr. Bellwood), 6733; 6734. Still objectionable, although larger area than parish be taken for rating (Sir H. B. Poland), 2206-8. Rating of, an impossibility, 2323-5; 2406-9; (Mr. Humphreys-Davies), 4197.
- Rating directly in respect of, not feasible or desirable. Contributions from the Exchequer to local taxation.

## PERSONAL PROPERTY—cont.

- How far equitable or desirable (Mr. Humphreys-Davies), 4419-29.
- Contributions to Imperial taxation (Mr. Clarke), 7506-16.
- Grants from Treasury a method of taxing personalty for local purposes (Mr. Rotton), 263-8; (Mr. Duffield), 5426-40.
- To what extent Imperial contributions are a contribution in respect of (Capt. E. G. Pretyman, M.P.), 9871-5.
- Attempts have been made in some unions to rate persons in respect of a class of machinery which is personal property (Mr. Humphreys-Davies), 4127-9.
- Rated to some extent by rating of machinery (Sir H. B. Poland), 2211; 2212.
- Abolition of rating on means and substance in Scotland (Sir H. B. Poland), 2204; 2205.

## PERSONAL SERVICES. (See "TITHES RENTCHARGE (DEDUCTIONS).")

## PIERS EXTENDING BEYOND LOW-WATER MARK:

- Non-rateability of (Sir H. B. Poland), 2167; 2168.

## PIPES (UNDERGROUND):

- Should be included among the hereditaments subject to partial exemption under the Public Health Act, 1875 (Mr. Wilkins), 9509-15.

## PLYMOUTH:

- Examination of town clerk (Mr. J. H. Ellis), 1940-2001.
- Borough and union co-extensive, advantages of (Mr. J. H. Ellis), 1944-8.
- Has one assessing and one collecting authority (Mr. J. H. Ellis), 1953; 1954; 2000; 2001.
- Government establishments and headquarters an additional source of expense for which compensation to local expenditure should be made from Imperial sources (Mr. J. H. Ellis), 1955-65.
- Government expenditure an advantage (Mr. J. H. Ellis), 1990; 1991.
- Government property included in rateable value (Mr. J. H. Ellis), 1987-9.
- No compounding, but guardians assess landlords of certain tenements under old private Act (Mr. J. H. Ellis), 1949-52.
- Rateable value low compared with population (Mr. J. H. Ellis), 1966-8.

## POLICE BURGHS:

- Explanation of (Mr. Dodds, Scotland), 340-3.
- Provost is chief magistrate (Mr. Dodds, Scotland), 344.
- Correspond generally to urban districts in England. (Mr. Dodds, Scotland), 456-9.

## POLICE, COST OF:

- Increased cost of (Mr. A. F. Jeffreys, M.P.), 11,162-6.
- Boroughs can increase number and pay of their police, and half cost falls on county rates. Counties cannot do so without leave of Home Office (Mr. Merrifield), 6153.
- System of dividing some counties into police districts (Mr. Hulton), 5743-51.
- Question of the area with which a local authority shares its taxation for police purposes (Mr. Gomme), 8819-23.
- Suggested that cost should be paid by Exchequer. Question of control discussed (Mr. Watkins), 6599-622, 6641-68. Effect of this on particular classes, 6704-6. Discussion as to what classes should bear this expenditure, and what administrative changes should take place, 6641-68.
- Imperial contributions. Metropolitan grant of four-ninths of cost, and county grant of half cost of pay and clothing compared (Mr. Gomme), 8944-56, 8957-60.
- Occupiers of agricultural land should be relieved from paying rates in respect of police (Mr. A. F. Jeffreys, M.P.), 11,129-35.
- Net cost in Lancashire (Mr. Hulton), 5742-5.

## POLICE PENSION FUND:

- London's share (Mr. Gomme), 8811.
- Lancashire Effect of pension fund upon superannuation fund (Mr. Hulton), 5807, 5808.

**POLICE RATE (BURGH)**, from whom levied (Mr. Dodds, Scotland), 438-40.

**POLICE STATIONS AND COURTS**, rating of (Sir H. B. Poland), 2154-6; 2439-42.

**PONTYPRIDD UNION:**

- Deductions in (Mr. E. H. Davies), 6991-3.
- Compounding. Effect of present law, and system adopted by overseers (Mr. E. H. Davies), 7016-28.
- Professional valuer appointed for valuing collieries, railways, &c. (Mr. E. H. Davies), 7044-54.
- Arrears of rates are considerable (Mr. E. H. Davies), 7037-43.

**POOR LAW CONFERENCES:**

Their opposition to rating in respect of machinery (Mr. Humphreys-Davies), 4187-90.

**POOR LAW (SCOTLAND) ACT, 1845** (8 & 9 Vict. c. 83). Provision as to deductions for repairs, insurance, &c., to arrive at rateable value (Mr. Dodds, Scotland), 370-4.

**POOR RATE ACT, 1840** (3 & 4 Vict. c. 89):

- Personal property, exemption of (Mr. Rotton), 102-5; 130; 256-62; (Sir H. B. Poland), 2203; 2393-6.
- Stock in trade, exemption of (Mr. Rotton), 130.
- Is unsatisfactory (Rev. C. A. Stevens), 8657.

**POOR RATE ASSESSMENT AND COLLECTION ACT, 1869** (32 & 33 Vict. c. 41). Compounding under (Mr. Dawe), 1133. Association of Municipal Corporations consider Act should apply to all kinds of rates levied within one borough boundary (Mr. B. E. Fox), 1472; 1473.

Limit of composition under Act should be raised to 10% (Mr. E. H. Davies), 7016-28, 7059-63a.

Provisions as to compounding not so good as in Public Health Act, 1875 (Mr. C. C. Smith), 9422-34.

**POOR RATE (ENGLAND):**

- Title misleading (Mr. Jeeves), 1912-4.
- Raised for purposes both connected and unconnected with the relief of the poor (Mr. Humphreys-Davies), 4203-6.
- Rates included under poor rate (Mr. Jeeves) 1909-11.
- Uniform rate in borough made by one Authority desirable (Mr. Knocker), 6201-4.
- Inclusion of, in corporation's demand for borough and district rates, and one receipt given desirable (Mr. Swainson), 6314.
- Collection of (Mr. Rotton), 228; 229. In municipality comprising different parishes, 230-4.
- Advantages if collected for same period as highway rate (Mr. Cobbold), 5355-8.
- Cost of collection as compared with general district rate (Mr. Knocker), 6255-7. Reason for difference 6211-4.
- Bolton Tramway and Improvement Bill, 1897,\* proposed that corporation should collect the rate for the guardians which is an unprecedented proposal (Mr. Swainson) 6366-70.
- Imposed on occupiers of land, not on the land (Sir H. B. Poland), 2082.
- Occupiers of agricultural land should contribute to poor rate at one-fourth (Mr. A. F. Jeffreys, M.P.), 11,216-8, 11,236-42.
- Districts with a mining population have a high poor rate (Mr. Elsom), 7263; 7264.
- How far intended to be in the nature of a local income tax (Sir H. B. Poland), 2391; 2392.
- Lancashire. How far an increase (Mr. Jeeves), 1673-6.
- Norfolk. Increase in, due to migration of best labourers (Mr. Holmes), 3027-9.
- Ipswich, rates in £ (Mr. Vulliamy), 7215-26.

**POOR RATE (IRELAND):**

- Electoral divisions the unit for Poor Law purposes (Mr. Robinson, Ireland), 600-2; 1098; 1099. So constituted in 1838; 1109-12. Union preferable, 1067-74.
- Inequalities in amounts in electoral divisions; complaints against present system of rating (Mr. Robinson, Ireland), 1068-10.
- Liability for payment of (Mr. Robinson, Ireland), 687-92. Persons are liable as against property for county cess, 670-2; 1040; 1041.
- Amounts paid by different classes—farmers and tradesmen (Mr. Robinson, Ireland), 1011-5.
- Rates included under poor rate (Mr. Robinson, Ireland), 704. Possibility of distinguishing between charges for relief of poor and other Poor Law charges (Mr. Robinson, Ireland), 921-5.

**POOR RATE (SCOTLAND):**

- Raised on net value (Mr. Dodds, Scotland), 554-9.
- Levied half on owner and half on occupier (Mr. Dodds, Scotland), 450-4. Power under Poor Law Act of levying in whole from occupier who has power of recovery from owner, 455.
- Rating on means and substance for purposes of, finally abandoned at Greenock in 1880 (Mr. Dodds, Scotland), 540-4.

**POOR RATE, VALUATION FOR:**

- (See also under "VALUATION.")
- Basis of all rating (Mr. Jeeves), 1587.
- Difference in valuation for Imperial and poor rate purposes outside metropolis (Mr. Hulton), 5785-90.
- Liverpool. Seven sets of assessors and seven areas (Mr. Norton), 6440. Uniformity as regards deductions, 6441-6.
- Sussex. County rate basis is higher than poor rate valuation (Mr. Merrifield), 6104-11.

**POOR RELIEF ACT, 1601:**

- Origin and basis of present system of rating (Sir H. B. Poland), 2388-90.
- Taxation of inhabitants (Mr. Rotton), 120; 121.
- Intentions of the Act (Mr. Rotton), 122-7. Relief of poor; ability to pay and not benefits derived to be considered (Sir H. B. Poland), 2402-5.
- Explanation of (Sir H. B. Poland), 2079; 2081.
- Crown property not mentioned (Sir H. B. Poland), 2280.
- Coal mines mentioned (Mr. T. Ratcliffe Ellis), 2522.
- Rates in aid (Mr. Rotton), 135-8.

**POOR RELIEF (EXPENDITURE UPON):**

- Relation to agricultural wages (Mr. A. F. Jeffreys, M.P.), 11,191-3.
- Position of London in relation to rest of country as regards Imperial contributions for relief of poor (Mr. Gomme), 8944-50.
- Personal property should contribute to maintenance of poor (Mr. Duffield), 5423-5.
- Contributions in aid of, distributed on basis of population (Mr. Dawe), 1299-301; (Mr. Holmes), 2833-8.
- Increase of Imperial contributions desirable (Mr. Duffield), 5459-63.
- Contributions from income tax payers desirable, but questions of control and representation difficult (Mr. Duffield), 5447-58.
- Considerable part should be a national charge (Mr. Gomme), 8996. Question of administration, 8937-40; 9088-101.
- Suggested that it should be met by Exchequer (Mr. Norton), 6475-85; 6569-79; (Mr. Watkins), 6628; (Mr. Bellwood), 6735-7. Question of control discussed (Mr. Watkins), 6599-622; 6641-68; (Mr. King), 6802-37. Effect of this on particular classes (Mr. Watkins), 6704-6. Discussion as to what classes should bear this expenditure and what administrative changes should take place, 6641-68; (Mr. King), 6802-37.
- Should be met by Imperial Exchequer. Reasons given for this suggestion (Mr. Clarke), 7418-24.
- Should be contributed to by government, and controlled by it to a considerable extent, but not entirely (Mr. Jeeves), 1655-8; 1669-72.
- Scheme for a fixed Imperial contribution in aid of, according to ability of localities to pay (Mr. Dawe), 1187-93; 1233; 1234; 1302-5. Objections to, 1333-98.

\* This Bill received the Royal Assent on July 15th, 1897 (60 & 61 Vict. c. 134).

**POOR RELIEF (EXPENDITURE UPON)—cont.**

Suggestion that funds for support of indoor paupers should be raised from a large area such as the county, with a contribution from Imperial sources. Advantages of Metropolitan Common Poor Fund (Mr. Pell) 8027-9.

Indoor maintenance should be assisted by Imperial contributions (Mr. Little), 8098-100.

Imperial contributions should be increased in respect of maintenance of indoor poor and pauper lunatics (Mr. Little), 8149-53.

Pauper lunatics should be paid for out of Imperial funds (Mr. Pell), 8030-7.

Suggested that Poor Law should be administered by a Government Department (Mr. Norton), 6580-5.

Poor Law must be administered locally (Mr. A. F. Jeffreys, M.P.), 11,180; 11,181. But occupiers of agricultural land should contribute to poor rates at one-fourth, 11,216-8; 11,236-42.

Agriculturists contribute too much in respect of this expenditure, which is a burden of a national character (Mr. Little), 8047-55.

**PROBATE DUTY GRANT:**

Basis of distribution (Mr. Merrifield), 6138-41.

Proposed distribution should not be upon the basis of certain circumstances existing in 1888, but on basis of rateable value (Mr. Hulton), 6013-26; 6030-7; 6057-9, if assessment in geographical counties uniform, 6013-26.

Would not be satisfactory to increase contributions paid out of estate duties towards purposes of local taxation (Capt. E. G. Pretyman, M.P.), 9876-81.

**PROFESSIONAL INCOMES. Clergymen rated upon (Rev. D. J. Davies), 5651-3; 5715-19.****PROFITS, SYSTEM OF ASCERTAINING RATEABLE VALUE HAVING REFERENCE TO:**

Objections to (Mr. Morae), 4746; 4747. Companies should be classified for the purpose of valuation, 4846-56.

Companies, a grievance to (Mr. Morse), 4723; 4724. Ability of a business undertaking to pay should be measured rather by rent than by profits (Mr. Morse), 4911-8; 4952-63.

Scale of deductions in respect of profits on different classes of business desirable (Mr. Morse), 4946-8.

Is desirable (Capt. E. G. Pretyman, M.P.), 9918-20.

Suggested method (Mr. Morse), 4752-8.

A percentage of the profits should be taken according to the class of property rated (Mr. Morse), 4863-71.

**PROPERTY BELOW LOW-WATER MARK, non-rateability of (Sir H. B. Poland), 2167; 2168.****PUBLIC HEALTH ACT, 1848 (11 & 12 Vict. c. 63.), partial exemptions under (Sir H. B. Poland), 2410-6.****PUBLIC HEALTH ACT, 1875 (38 & 39 Vict. c. 55.):**

Distinction between principles underlying Public Health Act and Agricultural Rates Act (Capt. E. G. Pretyman, M.P.), 9847-59.

Compounding under (Mr. Dawe), 1133.

Provisions as to compounding better than in Poor Rate Assessment and Collection Act, 1869 (Mr. C. C. Smith), 9422-34.

Underground pipes should be included among hereditaments subject to partial exemption (Mr. Wilkins), 9509-15.

Rating in respect of tithe rentcharge under (Rev. C. Theobald), 5545; 5546. Extension of the principle of the Act desirable, 5600-12.

General and special expenses in rural districts; position of owners and occupiers of land (Mr. Rotton), 177.

In relation to doctrine of ability to pay (Mr. Dawe), 1424-8.

**PUBLIC HOUSE PROPERTY. (See under "LICENSED HOUSES.")****QUARTER SESSIONS. APPEAL TO. (See under "APPEAL.")****QUINQUENNIAL VALUATION. (See under "METROPOLIS. DIRECT LOCAL TAXATION," sub-section b.)**

**BACK RENT**, definition of, and how determined (Mr. Robinson, Ireland), 997-1007.

**RAILWAY ASSESSOR.** (See under "ASSESSOR OF RAILWAYS AND CANALS.")

**RAILWAY COMMISSION** suggested as a suitable tribunal for appeals instead of quarter sessions (Sir H. B. Poland), 2251-8; (Mr. Morse), 4742-5; 4803; 4804; (Mr. P. R. Smith), 11,431-5.

**RAILWAYS (ENGLISH).****(a.) Valuation, Authorities for Appeals, &c.**

Method and principle of (Mr. Rotton), 290-6; 312-4; (Sir H. B. Poland), 2117-9; 2433-7; (Mr. Pell), 7950-66.

Assessed on gross receipts less certain deductions (Mr. Rotton), 315-21; (Mr. P. R. Smith), 11,298; 11,299.

Present system not satisfactory (Mr. Payne), 11,613-6.

Present system a tax on profits which is undesirable (Mr. Payne), 11,581; 11,603; (Mr. S. M. Howard), 11,670.

Valuation by overseers is not satisfactory (Mr. Pell), 7902. Scottish system desirable, 7904-7; 7950-66. Production of books of railway companies desirable for purposes of valuation. Basis of valuation, 7950-66.

Union Assessment Committees not qualified to value railways (Mr. Payne), 11,591.

Parochial earnings principle and mileage principle (Sir H. B. Poland), 2128-30. Disadvantages of parochial rating system, 2131-5; 2237-46.

Train mileage valuation discussed (Sir H. B. Poland), 2128-30; (Mr. Payne), 11,620-4.

Whether capital value should be basis of valuation discussed (Mr. P. R. Smith), 11,559.

Companies complain more of the system of valuation than of the result (Mr. P. R. Smith), 11,551; 11,552.

Difficulties of valuation (Mr. Rotton), 301-3. Disadvantages of present system (Sir H. B. Poland), 2120-7.

Difficulty in suggesting any other system of rating than the present one, but valuation of certain other properties should be raised (Mr. P. R. Smith), 11,300.

Parochial Assessment Act, difficulties of applying the principles of (Sir H. B. Poland), 2268; 2269.

System of employing professional valuer should be extended (Mr. Cleaver), 4082-5.

Independent assessor, as in Scotland, desirable (Mr. Jones), 9119-26; 9287; 9288. Advantages and difficulties of such a system (Sir H. B. Poland), 2247-50.

Areas for purposes of railway valuation. Union and not county areas desirable. Reasons for this view (Mr. P. R. Smith), 11,404-16; 11,464-9; (Mr. S. M. Howard), 11,702-4.

Special tribunal to ascertain certain particulars (Sir H. B. Poland), 2303-6.

Lancashire County Rate Committee has obliged Union Assessment Committees to make re-valuation of railways (Mr. Hulton), 5764.

Assessment committees do not accept offers to inspect companies' books as the work would be too great an undertaking and would require specially trained knowledge (Mr. P. R. Smith), 11,391-403.

The companies pay rates on their lines for purposes for which they receive no benefit. Their valuations are also increased to a greater extent than those of other properties (Mr. P. R. Smith), 11,446-53.

Notices served on companies by union assessment committees. Suggested alteration in procedure (Mr. Payne), 11,658-63; (Mr. S. M. Howard), 11,728; 11,747-52.

Appeals by companies (Mr. Rotton), 297-300; (Mr. Pell), 7908.

Valuation raised by certain unions. Appeals (Mr. Pell), 7908.

Proportion of net receipts to rateable value. Comparison with Scotland (Mr. Munro, Scotland), 3679-81.

Total valuation of property of company compared with that of all other properties in the same area (Mr. Payne), 11,625-38; (Mr. S. M. Howard), 11,688; 11,689.

RAILWAYS (ENGLISH)—*cont.*(b.) *Deductions.*

Railways rated on receipts subject to deductions (Mr. Rotton), 315-21. Amount of deductions from gross receipts compared with power of borrowing money (Sir H. B. Poland), 2373-80.

Vary greatly in different districts. A statutory scale desirable (Mr. P. R. Smith), 11,336-8.

Tenants' capital. 17½ per cent. not considered a sufficient allowance for risks (Mr. P. R. Smith), 11,339-43. At least 20 per cent. should be given. Reasons for this view (Mr. S. M. Howard), 11,681-4. Statutory deductions desirable (Mr. Payne), 11,585; (Mr. S. M. Howard), 11,685.

Structural value of buildings. Fixed deductions desirable (Mr. Payne), 11,601.

(c.) *Exemptions.*

For general district rate railways rated at one-fourth under Public Health Act, 1875 (Mr. Rotton), 173-5; (Mr. Dawe), 1131; 1132; 1134.

In some parishes little or no benefit derived from local expenditure (Mr. Dawe), 1337; (Mr. P. R. Smith), 11,446-53.

Revision suggested (Mr. E. E. Fox), 1474-6. Reasons for, 1532-41. Abolition of, in respect of certain portions of railways desirable (Mr. Dawe), 1169-80; 1183; 1184; 1331-6; 1399-412; (Mr. Jeeves), 1862-5. Reasons for (Mr. Dawe), 1225; 1250-7; (Mr. Jeeves), 1629-38.

Further extension of partial exemptions in favour of railway companies. Effect on other properties. How far certain rates hereditary burdens (Mr. S. M. Howard), 11,732-44.

Partial exemptions should be allowed to railway companies in respect of their lines for rates expended on certain purposes (Mr. P. R. Smith), 11,308-10; 11,560-2; (Mr. S. M. Howard), 11,701.

Three-fourths exemption should be extended to every rate except poor rate (Mr. Payne), 11,604-9.

In some cases railway companies should be totally exempt from payment of certain rates (Mr. S. M. Howard), 11,753-9.

(d.) *Rates paid by Companies.*

Amounts paid by railway companies (Mr. P. R. Smith), 11,301.

Relative proportion of profits to amount paid in rates (Mr. Jeeves), 1745-9.

Destruction of property for purposes of railways; liability to make up deficiency in amount of old rates until works completed (Sir H. B. Poland), 2233-5.

(e.) *Representation of Companies upon Local Authorities.*

Railway companies as trading concerns have no direct representation on local bodies (Mr. Humphreys-Davies), 4926-38.

Companies. No power to vote at election of guardians (Mr. Dawe), 1413-8.

Union Assessment Committees, companies not represented upon (Mr. Rotton), 304-11. They should have representation upon them (Mr. Payne), 11,639; 11,640.

Companies should be able to appoint an *ex officio* member of union assessment committees and parish councils (Mr. Payne), 11,594-9.

Companies should have representation at parish and other meetings and the right to vote (Mr. P. R. Smith), 11,563-5; (Mr. S. M. Howard), 11,690-11,700.

Parish councils, powers of. Attitude towards railway companies who have no representation or *locus standi* at public meetings, though they are large ratepayers. This is a disadvantage to the railway companies, and sometimes to the parishes (Mr. P. R. Smith), 11,310-33.

(f.) *Comparison with Scottish and Irish Systems of Rating.*

English system is the best (Mr. Humphreys-Davies), 4243-50.

Comparison with Scottish method (Sir H. B. Poland), 2236; (Mr. Barton, Ireland), 3386-97; 3486-90; (Mr. Hulton), 5886-90; (Mr. Pell), 7904-7; 7950-66; (Mr. P. R. Smith), 11,546-50; (Mr. Payne), 11,578-80.

RAILWAYS (ENGLISH)—*cont.*

Scottish system would not be applicable in England (Mr. S. M. Howard), 11,705-9.

Comparison with Irish method (Mr. Barton, Ireland), 3386-97; 3486-90; (Mr. Hulton), 5886-90; (Mr. P. R. Smith), 11,546-50; (Mr. Payne), 11,578-80.

Irish system would not be applicable in England (Mr. S. Howard), 11,716; 11,717.

## RAILWAYS (IRISH):

System of valuation (Mr. Barton, Ireland), 3340-5; 3386-97; (Mr. Humphreys-Davies), 4243-50.

System of valuation as regards stations, sidings, buildings, &c. (Mr. Barton, Ireland), 3582-6.

Train mileage principle has generally given satisfaction (Mr. Barton, Ireland), 3587-95.

In present system of train mileage no distinction made in class or amount of goods carried by individual trains (Mr. Barton, Ireland), 3609; 3610.

Proportion of value of stations to value of train mileage, whether increasing or decreasing (Mr. Barton, Ireland), 3346-8.

Total rateable value of (Mr. Barton, Ireland), 3548-51.

Rates on railways (Mr. Robinson, Ireland), 753-72.

System of valuation compared with those in England and Scotland (Mr. Barton, Ireland), 3386-97; 3486-90; (Mr. Hulton), 5886-90; (Mr. P. R. Smith), 11,546-50; (Mr. Payne), 11,578-80.

## RAILWAYS (SCOTTISH)—LINES, VALUATION OF:

(a.) *System of Valuation. Single, Double, and Quadruple Lines.*

How allocated to the different rating areas. If running line is a quadruple one a double allowance is given, but a double line treated as a single one. Objection to this system, and suggested reform (Mr. Munro, Scotland), 3615-23.

Single and double lines. Method of valuation is identical, but double lines should be treated as of twice the length of single ones (Mr. Munro, Scotland), 3742-6.

Quadruple lines, method of valuation (Mr. Munro, Scotland), 3741.

Scottish system of valuing running lines a fair one (Mr. Munro, Scotland), 3758-60.

Valuation should be based on lettable value to a hypothetical tenant (Mr. Munro, Scotland), 3831-42.

Decrease in value of lines per mile attributable to a certain extent to increase in value of plant (Mr. Munro, Scotland), 3634.

(b.) *Deductions generally.*

Amount of deductions made for working expenses and tenants' allowances (Mr. Munro, Scotland), 3613; 3614.

Deductions not likely to increase so as to greatly reduce the valuation (Mr. Munro, Scotland), 3642; 3643.

Revision of amounts allowed desirable (Mr. Munro, Scotland), 3672.

Deductions should be fixed and varied by a legal tribunal (Mr. Munro, Scotland), 3738-40.

(c.) *Deductions for Working Stock and Plant.*

Deduction of 25 per cent. for working stock and plant, how made up (Mr. Munro, Scotland), 3637-9.

Standing stock. Reduction of 25 per cent. from prime cost (Mr. Munro, Scotland), 3784-97.

Plant, value has increased and character improved (Mr. Munro, Scotland), 3825-30.

Depreciation of working stock and plant. Deduction of 5 per cent. given in addition to allowance for repairs and renewals which are done out of revenue (Mr. Munro, Scotland), 3654-7. How far depreciation met by renewals, 3808-10. Lord Kinnear's observations, 3659; 3660.

Tenant's profits. Deduction of 12 per cent. is a large one, but the assessor is bound by a legal decision (Mr. Munro, Scotland), 3644-53. How far a fair deduction, 3798-807; 3890-903.

How far deduction of 5 per cent. for interest is fair (Mr. Munro, Scotland), 3811-4; 3890-903.

**RAILWAYS (SCOTTISH)—LINES, VALUATION OF—cont.**

Deduction of 5 per cent. for interest is a high one (Mr. Munro, Scotland), 3640; 3641; 3658.  
 Change in value of money has made it desirable to have some alteration (Mr. Munro, Scotland), 3727-37; 3776; 3777.  
 Accidents and incidents. Deduction of 3 per cent. is a high one (Mr. Munro, Scotland), 3668-71. How far fair, 3815-21.

**(d.) Deduction for Interest on Floating Capital.**

Deduction of 5 per cent. for interest not excessive (Mr. Munro, Scotland), 3904-13.

**(e.) Abatements in respect of Traders' Wagons.**

Allowances to traders in respect of their supplying their own wagons (Mr. Munro, Scotland), 3850-3.  
 Nothing material to be gained by ascertaining proper abatements in respect of traders' wagons (Mr. Munro, Scotland), 3685; 3686.

**RAILWAYS (SCOTTISH).—SIDINGS, VALUATION OF.** Should be treated as running lines instead of being treated as stations. This would diminish the valuation in the large towns, as the question of the value of the land would be eliminated (Mr. Munro, Scotland), 3747-57.

**RAILWAYS (SCOTTISH).—STATIONS, VALUATION OF.**

How allocated to the different rating areas (Mr. Munro, Scotland), 3615-33.  
 Towns get too large a share of valuation owing to increase in value of stations (Mr. Munro, Scotland), 3822-4. Suggested scale of apportionment as between town and country, 3761-6. Lines and stations should both be treated on basis of profits earned, 3822-4; 3643; 3844.  
 A proportion should be attributed to the lines (Mr. Munro, Scotland), 3854-60.  
 Should depend on the success of the enterprise (Mr. Munro, Scotland), 3780-3.  
 Valuation of stations is fixed, whereas valuation of running lines depends upon the success of the enterprise. Scheme suggested to make stations share the trading fortunes of the enterprise (Mr. Munro, Scotland), 3767-75.  
 Statutory allowance of 5 per cent. given to stations is too high (Mr. Munro, Scotland), 3632; 3633.  
 Stations not too large for necessities of traffic (Mr. Munro, Scotland), 3778; 3779.

**RAILWAYS (SCOTTISH), VALUATION.—COMPARISON WITH ENGLISH AND IRISH SYSTEMS, LEGAL PROCEEDINGS, &c.**

System compared with those in England and Ireland (Sir H. B. Poland), 2236; (Mr. Barton, Ireland), 3386-97; 3486-90; (Mr. Hulton), 5886-90; (Mr. P. E. Smith), 11,546-50; (Mr. Payne), 11,578-80. Which is the best system (Mr. Humphreys-Davies), 4243-50.  
 Scottish railways partly situated in England. Method of valuation adopted (Mr. Munro, Scotland), 3682-4.  
 Legal proceedings. *Locus standi* of Assessor of Railways in courts of law (Mr. Munro, Scotland), 3661-7.  
 Proportion of net receipts to rateable value. Comparison with England (Mr. Munro, Scotland), 3679-81.

**RATEABLE VALUE:**

Definition of (Mr. Adamson), 5063.  
 Distinction between gross value and rateable value (Mr. Eve), 7885-90.  
 Distinction between rateable value and assessable value (Mr. Hulton), 5908; 5909.  
 Metropolis, statutory definition of rateable value (Sir H. B. Poland), 2098. Valuation (Metropolis), Act intended to make language of Parochial Assessment Act clearer, 2099-102.  
 John Howell & Co., Limited, shops belonging to. Rateable value almost equal to rental (Mr. Adamson), 5199.

**RATEABLE VALUE PER HEAD OF POPULATION:**

Difference in certain county boroughs (Mr. Cooper), 10,209-19.

**RATES. INCREASE OR DECREASE OF:**

Increase or decrease of the burden of certain rates (Mr. Little), 8084-6.  
 Rural districts. Whether aggregate amount has increased (Mr. Little), 8197.  
 Increase of rates chiefly due to increase of urban rates (Mr. Rew), 10,679-82.  
 New sources from which to defray local expenditure (Mr. J. H. Ellis), 1979-81.

**RATES IN £ IN CERTAIN DISTRICTS:**

Lancashire and Liverpool. Total rates in £ (Mr. Cleaver), 4063-5.  
 Dover. Rates in £ (Mr. Knocker), 6197-200.

**RATES OF BENEFIT.** } (See under "CLASSIFICATION OF RATES.")**RATES OF BURDEN.** }**RATES, OLD AND NEW:**

New rates since 1869 (Mr. Rotton), 76-81; 112-4.  
 Old and new, increase in (Mr. Holmes), 2790-3.

**RATING ACT, 1874** (37 & 38 Vict. c. 54) (Sir H. B. Poland), 2080.

**RATING AUTHORITIES:**

Constitution of. How far composed of non-ratepayers (Mr. C. S. Bead), 10,383-6. How far responsible for increase of rates, 10,300-21.

Suggestion that corporation should be the rating and collecting authority for borough (Mr. Knocker), 6221-4.

Objections to an authority consisting of representatives of boards of guardians, county council, town councils, and surveyors of taxes (Mr. Dawe), 1290-2.

In unions comprising urban and rural districts where the urban districts are, and where they are not, wholly comprised in the union, and where more unions than one are wholly comprised in a borough; in rural unions; and in urban unions in cases whose areas are, and in cases whose areas are not, continuous with those of urban districts or boroughs; and purposes for which rates raised (Mr. Vulliamy), 7125.

**RATING AUTHORITIES (IRELAND):**

For counties, baronies, boroughs (Mr. Robinson, Ireland), 603.  
 Under special Acts (Mr. Robinson, Ireland), 604; 605.

**RATING AUTHORITIES (PRIVATE) IN METROPOLIS:**

Taxation in hands of. Voluntary schools; certain markets; and water rates (Mr. Gomme), 8752; 8753.

**RATING ON MEANS AND SUBSTANCE:**

Classification system, a continuance of (Mr. Dodds, Scotland), 501-6; 591; 592.  
 Abolition of system in Scotland (Sir H. B. Poland), 2204; 2205. For purposes of poor rate was finally abandoned at Greenock in 1880 (Mr. Dodds, Scotland), 540-4.

**REAL PROPERTY:**

Owners and occupiers bear the burden of local rates (Mr. Peterson), 8200-2.

Owners and occupiers. Law with reference to rating of is satisfactory (Mr. Humphreys-Davies), 4123-6.

Reasons for rating in respect of (Capt. E. G. Preyman, M.P.), 9603; 9604.

Injustice has been caused to owners of, by the increase of taxation imposed upon them, and not upon other people (Mr. Humphreys-Davies), 4200-2.

Share of local taxation borne by (Mr. Holmes), 2794-8.

Contributions in respect of different classes of real and personal property to rates desirable (Mr. Norton), 6471-3.

Subject to hereditary burdens, or which has been bought and sold subject to burdens, should not be relieved of them (Mr. Humphreys-Davies), 4195; 4199. To what extent can this view be supported, 4405-18.

Hereditary burdens. Proposition in Sir H. Fowler's report referred to, and the hereditary burden theory discussed (Mr. Rew), 10,494-8; 10,885-7.

Property receives the benefit of expenditure which falls upon indirect taxation and Imperial contributions, and should be charged with a proportion of these in addition to the rates charged directly (Mr. Gomme), 8875.

Index  
to Evidence.

Index  
to Evidence.

**REBUILDING OF PREMISES :**

Increase in valuation of premises rebuilt (Mr. Admson), 5159-61.

**REG. v. LEE (L.R., 1 Q.B.D., 241).**

Judgement in (Mr. Humphreys-Davies), 4184.  
New circumstances such as introduction of sliding scale, &c., have arisen since this case (Mr. Jones), 9110.

**RENT :**

Rates are taken into account by householders and farmers when taking property (Mr. Eve), 7892; 7893.

Suggested definition of (Mr. Eve), 7814-21.

Increase of rent in England and Wales (Mr. Jeeves), 1836-76. Landowners obtained a large sum representing the benefit which would have accrued to the Church under the old right of participation. Sir James Caird's views (Mr. Peterson), 8386-406; 8504; 8505. Decrease of rent since 1876, 8504; 8505.

Adjustment of rent in case of high or low rates (Mr. Eve), 7860-6.

Arrears of, on Orwell Park and Bacton Estates practically none, as the owner will not allow them to accrue (Capt. E. G. Pretyman, M.P.), 9595; 9713-8.

**REPRESENTATION UPON LOCAL AUTHORITIES :**

Valuation and spending authorities. Members upon, who contribute little or nothing to rates. Objection to this system (Mr. Holmes), 2869-74.

The people who raise the rates and expend them are not always the people who pay them (Mr. Humphreys-Davies), 4174-6.

Compound property owner has no representation or vote for representation on local body (Mr. Humphreys-Davies), 4319-25.

Railway, gas, and water companies as trading concerns have no direct representation on local bodies (Mr. Humphreys-Davies), 4326-38.

**RE-VALUATION :**

Periodical re-valuation desirable (Mr. Jeeves), 1616; 1617; (Mr. Hett), 4699-606; (Mr. Pell), 7900; 7901.

Annual or triennial re-valuations desirable (Mr. Peacs), 4668-71.

Triennial re-valuations desirable (Mr. Horn), 6898-910.

Triennial or quinquennial re-valuations sufficient with power of revision and addition (Mr. Merrifield), 6077.

Quinquennial re-valuation sufficient with power of revision and addition (Mr. Hulton), 6007-9; 6038-45.

Quinquennial or septennial re-valuations desirable (Mr. North), 4516-8.

Re-valuation should be made every 10 years in country and every five years in cities (Mr. Eve), 7697; 7698.

Re-valuation entails a great expense (Mr. Hett), 4554-6.

Re-assessment more frequent in mining or manufacturing counties than in agricultural ones (Mr. Rotton), 202; 203.

Railways, mines, and mills in Lancashire. County Rate Committee has obliged Union Assessment Committees to make re-valuation (Mr. Hulton), 5764.

Aston Union. Periods at which re-valuation made (Mr. North), 4529-32.

Chelmsford Union. Re-valuation practically takes place every five years (Mr. Duffield), 5406; 5407.

**RE-VALUATION (IRELAND) :**

Re-valuation would raise the present valuation (Mr. Barton, Ireland), 3442-4. Reason for this, 3435-42.

Land should be periodically re-valued (Mr. Barton, Ireland), 3473; 3474.

Re-valuation of agricultural land and buildings and of town-houses, how often desirable (Mr. Barton, Ireland), 3575-8.

Land, valuation of, if now made should be based upon the rents fixed by Land Commission and the interest on the sum paid for tenant right (Mr. Barton, Ireland), 3306-10.

**RE-VALUATION (IRELAND), COST OF. (Mr. Barton, Ireland), 3475-9.**

ROAD DEBTS incurred before 1889 paid by owner (Mr. Dodds, Scotland), 367.

**ROADS (MAIN) :**

Improvement of, and expenditure on; how far cost of improvements should be borne by localities, and how far is expenditure borne in proportion to benefits received (Mr. Calthrop), 3106-9.
