SPORT AND POLITICS UNDER AN EASTERN SKY.

Demy 8vo, 21s. net.

Athenæum.—"A useful contribution to our somewhat scanty sources of information about tracts of country invested at this moment with peculiar interest."

St James's Gazette.—"A very varied and fascinating story of travel in some of the most interesting quarters of Asia.....The picture of the capital of Seistan, where, within the last couple of years, a British Agent has been established, and of the covert conflict of Russian and British interests in this important strategic province are very interesting to the student of international politics, as well as for the sake of the entertaining narrative itself. Excellent, too, is the account of the big-game shooting in the Himalayan highlands."

Pall Mall Gazette.—"We hope Lord Ronaldshay's book will help sluggish thinkers at home to realise how deeply we are involved, and how little we can afford to relax our influence on the region that lies between the Afghan frontier and the Persian Gulf."

Civil and Military Gazette.—"A bright and amusing book of travel.....The style is chatty and unpretentious, and the volume will be welcome to those who are wearied of the rigmarole of political theses which constitutes the stock-in-trade of the present day magazine-article writer when he discourses upon the affairs of foreign countries. The photographs—the author's own—with which the book is illustrated are excellent throughout."

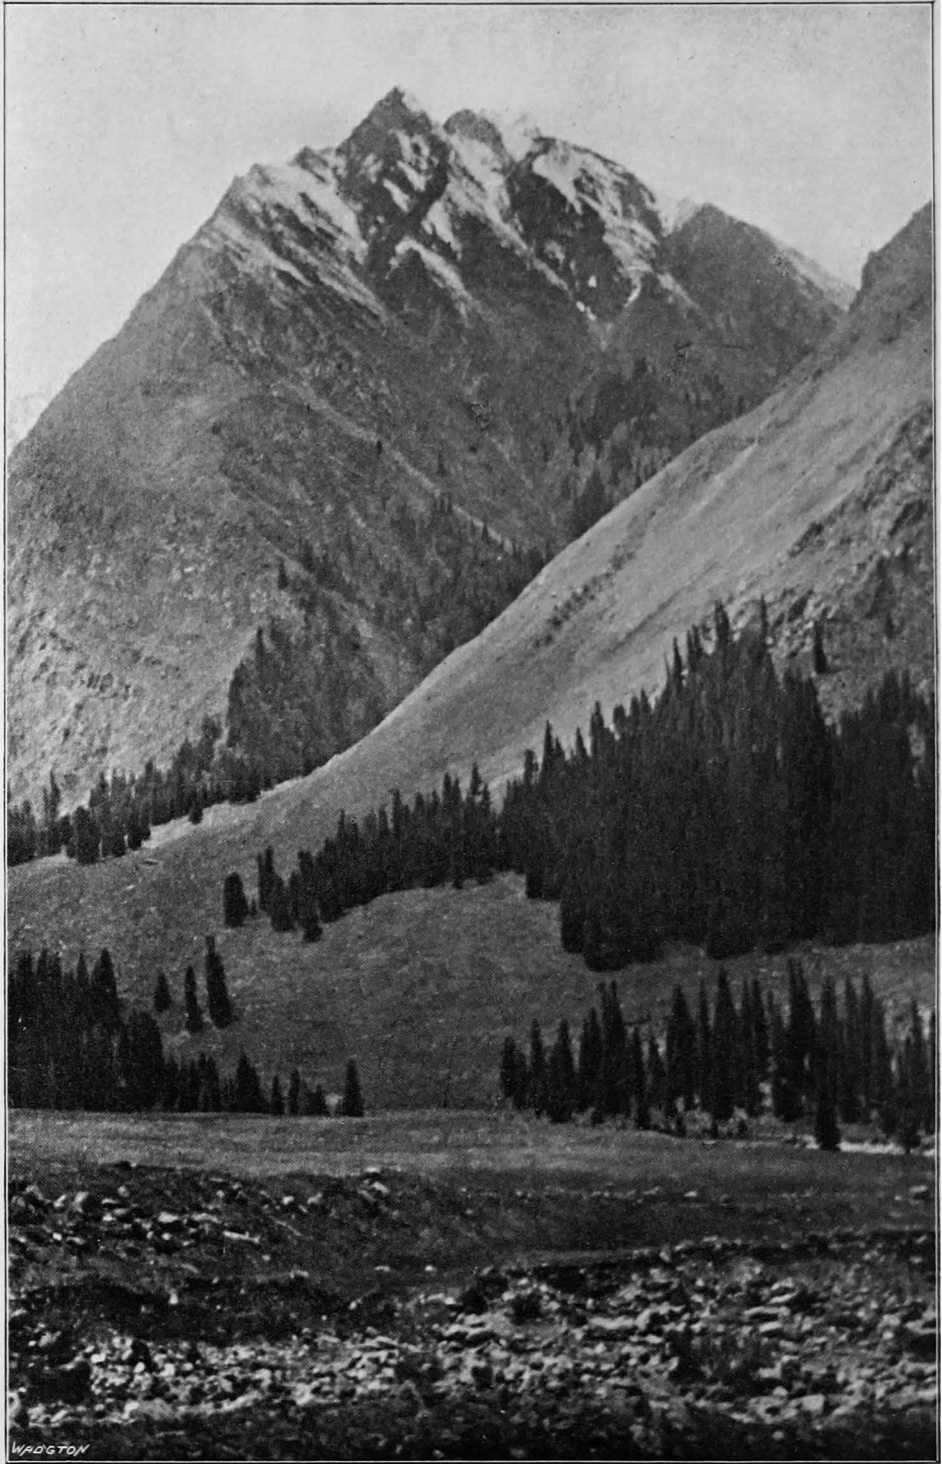

Times.—"Two themes there are which have justified the existence of many books of travel and seldom fail to wake a sympathetic echo in the mind of the Englishman. A passion for sport and a taste for politics are innate in him, and a book which reminds him of either fact or both does not generally make its appeal in vain. Lord Ronaldshay's book, as its title declares, avowedly makes this appeal; and by a gratifying simplicity of arrangement sport and politics are relegated to distinct halves of it, so that in perusing it neither the sportsman nor the politician need, unless he chooses, enter upon alien ground.....His story is an effective, if involuntary, testimony to his pluck and powers of endurance, which, on the whole, were very well rewarded. It will probably attract others besides sportsmen, for the wild regions above Kashmir and on the confines of Chinese Tibet always fascinate the reader, and Lord Ronaldshay's narrative, while making no pretensions to literary adornment, shows that he felt a delighted sympathy with the spirit of the vast solitudes through which he wandered, and—more essential still—that he really describes things as he saw them."

Westminster Gazette.—"Lord Ronaldshay's volume stands out from the average sportsman's record. First of all, there is a ring of enthusiasm for the lonely heights and the beauty of the wilderness throughout the whole book, which is very refreshing in its boyishness and candour. Next, the roads chosen, first on Asiatic hill-tops, and afterwards from Simla through Beluchistan and the Caspian by land to London, are almost entirely off what is now becoming the beaten track of the hunter of big game; and last, but not least, the author's dauntless and cheerful perseverance in exceptional hardships and trials of patience, lend a peculiar interest to every page."

Spectator.—"Lord Ronaldshay has achieved a rare success; he has written a good book of travels. The style is simple and well suited to the matter; the interest is not sacrificed to a pretence of fine writing; and the author has sufficient literary sense to produce the effect at which he aims, whether he writes as a sportsman or a politician."

F.R.G.S.

AUTHOR OF 'SPORT AND POLITICS UNDER AN EASTERN SKY'

"It is in Asia once again that will be decided the destinies of the world. In Asia will be founded and will increase great empires, and whoever succeeds in making his voice heeded in the Far East will be able also to speak in dominating accents to Europe."—PRINCE HENRI D'ORLEANS:

P R E F A C E.

THE object and scope of the present volume are set forth at sufficient length in the opening chapter, and no further explanation on this score is required from me here. With regard to arrangement, it has been my endeavour to place before the public an account of some of the less accessible countries of Asia and of the problems to which their existence and present position give rise, which may appeal equally to the general reader and to the student of Eastern questions. With this object in view I have caused to be inserted a number of illustrations, reproductions in every case of photographs taken by myself, in the hope that they may prove of assistance to the reader in forming a mental picture of the countries and peoples that I describe. The countries through which I passed being many and various, I have divided the volume into sections, each one of which may be read without reference to the others. In Section I. will be found a synopsis of the chapters that follow; in Sections II.-VI. a description of a journey the length of an ancient continent; and in

the concluding section some account of the political situation in the East with which this country is confronted at the present time. Sections II.-VI. may be said to consist in the main of a narrative of travel, and, since my wanderings led me at one time through an unrivalled sporting country, I have not hesitated to include among them a section upon sport; but though devoted largely to a description of travel, some political questions—the Baghdad railway problem to wit—are discussed in them, something of history is recalled, and such information as my inquiries in various directions elicited is adduced for the benefit of all who take a close interest in the peoples and politics of Asia. It has been said of travellers—not altogether without reason perhaps—that they forget much that they have seen, and remember much that they have not! If I plead guilty to the former charge, I may, I hope, in my own case conscientiously take exception to the latter, since it has been my practice, whenever seeing anything of interest or learning anything of importance from reliable sources, to take instant note of it upon the spot.

It is, perhaps, hardly necessary for me to add that I am indebted to many for much willing help and sympathetic interest shown to me by my own countrymen and by foreigners alike, whether official or otherwise, whenever my wanderings have brought me in contact with them in the remote corners of the East. In this connection it is also my pleasant duty to acknowledge my indebtedness to the proprietors of 'The Times' for the ready assent which they gave

to my request to be permitted to make use in the present volume of articles from my pen which have already appeared in their columns.

In conclusion, may I express the hope that there may be found in the following pages sufficient of interest to evoke from the reading public the same indulgent reception for this, my second and more ambitious volume, that they so readily accorded to my first.
