**THE ROYAL COMMISSION.**

---

GEORGE, R.I

GEORGE THE FIFTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India, to

Our Right Trusty and Well-beloved Counsellor Joseph Austen Chamberlain,

Our Right Trusty and Well-beloved Edmund Beckett, Baron Faber,

Our Right Trusty and Well-beloved Arthur, Baron Kilbracken, Knight Grand Cross of Our Most Honourable Order of the Bath, and

Our Trusty and Well-beloved —

Sir ROBERT CHALMERS, Knight Commander of Our Most Honourable Order of the Bath, Permanent Secretary to the Treasury,

Sir ERNEST CABLE, Knight, formerly President of the Bengal Chamber of Commerce,

Sir SHAPURJI BURJORJI BROACHA, Knight, formerly Sheriff of Bombay

Sir JAMES BEGBIE, Knight, Secretary and Treasurer of the Bank of Bombay

ROBERT WOODBURN GILLAN, Esquire, Companion of Our Most Exalted Order of the Star of India, Secretary to the Government of India in the Finance Department,

HENRY NEVILLE GLADSTONE, Esquire, and

JOHN MAYNARD KEYNES, Esquire, Fellow of King's College in Our University of Cambridge, and Lecturer in Economics,

Greeting!

Whereas We have deemed it expedient that a Commission should forthwith issue

To inquire into the location and management of the general balances of the Government of India, the sale in London of Council Bills and Transfers, the measures taken by the Indian Government and the Secretary of State for India in Council to maintain the exchange value of the rupee in pursuance of or supplementary to the recommendations of the Indian Currency Committee of 1898, more particularly with regard to the location, disposition, and employment of the Gold Standard and Paper Currency Reserves, and whether the existing practice in these matters is conducive to the interests of India, also to report as to the suitability of the financial organisation and procedure of the India Office, and to make recommendations

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorised and appointed, and do by these Presents authorise and appoint you, the said Joseph Austen Chamberlain (Chairman), Edmund Beckett, Baron Faber, Arthur, Baron Kilbracken, Sir Robert Chalmers, Sir Ernest Cable, Sir Shapurji Burjorji Broacha, Sir James Begbie, Robert Woodburn Gillan, Henry Neville Gladstone and John Maynard Keynes to be Our Commissioners for the purposes of the said enquiry

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power, at any place in Our said United Kingdom of Great Britain and Ireland, to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission, and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever

And We do by these Presents authorise and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do

And Our further will and pleasure is that you, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration

Given at Our Court of St James's, the seventeenth day of April,  
one thousand nine hundred and thirteen, in the third year of  
Our Reign

By His Majesty's Command,  
R McKENNA.

Indian Currency and Finance  
Royal Commission of Inquiry

## INTERIM REPORT.

---

TO THE KING'S MOST EXCELLENT MAJESTY

MAY IT PLEASE YOUR MAJESTY,

WE, the Commissioners appointed to inquire into the location and management of the general balances of the Government of India, the sale in London of Council Bills and Transfers, the measures taken by the Indian Government and the Secretary of State for India in Council to maintain the exchange value of the rupee in pursuance of or supplementary to the recommendations of the Indian Currency Committee of 1898, more particularly with regard to the location, disposition, and employment of the Gold Standard and Paper Currency Reserves, and whether the existing practice in these matters is conducive to the interests of India, also to report as to the suitability of the financial organisation and procedure of the India Office, and to make recommendations, availing ourselves of Your Majesty's permission to report our proceedings from time to time, desire to submit to Your Majesty the minutes of the evidence which we have taken up to this date on the subject of our Inquiry

All of which we most humbly submit for Your Majesty's most gracious consideration

AUSTEN CHAMBERLAIN (*Chairman*).

LIST OF WITNESSES EXAMINED.

Date	Name	Pages of Evidence
1 May 27th, 29th, June 5th, 6th	Mr LIONEL ABRAMAMS, C B, Assistant Under Secretary of State for India	1
2 June 12th - - -	Mr FRANCIS WELLES NEWMARCH, Financial Secretary at the India Office	79
3 June 13th - - -	Mr WALTER BADOCK, C S I, Accountant General at the India Office	99
4 June 13th - - -	Mr HORACE H SCOTT, Broker to the Secretary of State in Council	110
5 June 20th - - -	Sr DANIEL MACKINNON HAMILTON, nominated by the Bengal Chamber of Commerce Indian landowner	116
6 June 26th - - -	Mr J A TOOMEY, Manager of the National Bank of India, Limited	126
7 June 26th - - -	Mr T FRASER, Manager of the Chartered Bank of India, Australia and China Nominated as then representatives by the Exchange Banks doing business in India	
8 June 26th - - -	Mr O T BARROW, C S I, formerly Comptroller and Auditor General in India (1906-1910), retired Witness on behalf of the Government of India	144
9 June 27th - - -	Mr ALFRED CLAYTON COLE, Governor of the Bank of England 1911-1913	156
10 June 27th - - -	Mr HARRY MARSHALL ROSS, retired Calcutta Export Merchant, late Honorary Secretary Central Committee, Indian Currency Association Nominated by the Bengal Chamber of Commerce	168
11 July 3rd - - -	Sr ALEXANDER McROBERT, Indian Woollen Manufacturer, a former President of the Upper India Chamber of Commerce, and a former Member of the Legislative Council of the United Provinces Nominated by the United Provinces Government	182
12 July 3rd-4th - - -	Mr BHUPENDRA NATH MITRA, C I E, Assistant Secretary to the Government of India in the Finance Department Witness on behalf of the Government of India	193
13 July 10th - - -	Mr JAMES N GRAHAM, nominated by the Bombay Chamber of Commerce	217
14 July 10th, 11th, and 17th	The Hon MONTAGU DE P WEBB, C I E, Chairman of the Karachi Chamber of Commerce	220
15 July 17th-18th - - -	Mr WILLIAM BERNARD HUNTER, Secretary and Treasurer of the Bank of Madras, and Chairman of the Madras Chamber of Commerce	264
16 July 24th - - -	Mr CHARLES CAMPBELL McLEOD, nominated by the Bengal Chamber of Commerce and the East India Section of the London Chamber of Commerce	287
17 July 25th - - -	Mr MARSHALL F REID, C I E, Merchant, Member of the Legislative Council Bombay	296
18 July 31st - - -	Mr LE MARCHANT, a former Member of the Indian Council and a former Chairman of its Finance Committee A Member of the Indian Currency Committee of 1898	308
19 July 31st - - -	Mr L G DUNBAR, Secretary and Treasurer of the Bank of Bengal	319
20 August 1st - - -	Mr H F HOWARD, C I E, I C S, Collector of Customs, Calcutta Witness on behalf of the Government of India	328
21 August 6th - - -	Mr THOMAS SMITH, nominated by the Government of the United Provinces for his knowledge of the Currency and Banking problems of North India	341
22 August 6th - - -	Mr M R SUNDARA IYER, Secretary to the Economic Association, Madras Nominated by the Madras Government	353

**MINUTES OF EVIDENCE**  
TAKEN BEFORE THE  
**ROYAL COMMISSION**  
ON  
**INDIAN FINANCE AND CURRENCY.**

**FIRST DAY.**

At the India Office, Whitehall, S.W.

Tuesday, 27th May 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K.C.B.  
Sir ERNEST CABLE  
Sir SHAPURJI BURJORJI BROACHA

Sir JAMES BEGGIE  
Mr ROBERT WOODBURN GILLAN, C S I  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (*Secretary*)

Mr LIONEL ABRAHAMS, C B, called and examined

1 (*Chairman*) You are Assistant Under-Secretary of State for India?—Yes

2 Will you please tell me what your official experience has been?—I entered the India Office in 1893, and joined the Financial Department in 1894. In 1898 to 1899 I was the Assistant Secretary of the Herschell Committee, I mention that because that was when I became specially connected with the currency question. Then in 1902 I was made Financial Secretary, and held that post until 1911, in which period, of course, I had a great deal to do with these financial and currency questions. In 1911 I was moved to my present post, in which in a somewhat undefined way I lend a hand in dealing with financial questions, so that my financial experience goes from 1894 until now in various capacities.

3 I understand that you are prepared to give evidence as to the practice and policy in financial matters of the India Office?—Yes.

4. And especially under the first three heads of the Commission's Reference, that is to say, the location and management of the general balances of the Government of India, the sale of exchange bills and transfers, and the methods adopted since 1899 for the maintenance of the exchange value of the rupee, with particular reference to the gold standard and paper currency reserves?—I have handed in, and no doubt you have read, a note on the balances, which also deals with the sale of council bills and transfers, and then I have handed in one about the gold standard reserve. I was not proposing to deal with the paper currency reserve, because Mr Newmarch was going to hand a note on that subject. I have put in another of no very great importance about the proposals for the establishment of a gold mint in India. I dare say the Secretary has circulated that to you. It occurred to me also that if the Commission desired it I might perhaps go through the history of the proposals for a central bank. One's India Office experience rather helps one to see what are the conditions which would apparently have to be satisfied if such a bank was to be well-established. Of course, if the Commission

asked for anything of that sort I have no doubt that Lord Crewe would authorise me to put in something.

5 Thank you. I think we will begin, at any rate, with the questions concerning the general balances of the Government of India and the sale of council bills and transfers. I have before me copies of the two memoranda (*see* Appendices I and II) which you supplied dealing with those subjects, the first containing the explanatory memoranda, and the second containing copies of extracts, &c, from papers referred to in those memoranda and statements and tables illustrative of them. Those memoranda may be considered as part of your evidence?—Yes. I gave the Secretary some slight corrections of those memoranda which I dare say he has given to members.

6 They shall be embodied in it?—They are very trivial.

7 In Statement B (Appendix II, pp 74-5), you give figures showing the distribution between India and England of the total balances on March 31st in each year from 1893 to 1913, together with the estimated figures for March 31st, 1914, that is so, is it not?—Yes, that is so.

8 And in Statement A (Appendix II, pp 67-73), you supply figures showing the receipts and disbursements in India and England for each year from 1907-8 onwards under certain heads, and so you work up from the closing balance at the end of 1906-7 to the estimated closing balance at the end of 1913-4?—Yes, that is so.

9 Will you go through the various heads of receipts and disbursements so that the Commission may get a clear understanding of the composition of the balances? Take, first, the receipts. The first head is "Revenue." That, I think, is simple. The second is "Capital received from Railway Companies." Will you explain to us what that is?—Yes. The greater part of the Indian railway system is worked by guaranteed companies, companies which have the interest on their capital guaranteed by the Secretary of State; and as part of that system they pay in all their receipts to the Government, whether for capital or for revenue, and they draw from the Government all that they require, whether for capital expenditure or for working expenses. This item No. 2

27 May 1913]

Mr LIONEL ABRAHAMS, C.B.

[Continued]

upon which you have questioned me is one of the items which come into the Government account in consequence of that system, that is to say, the railway companies from time to time would make an issue, say, of guaranteed debenture stock or something of that sort, such as, I dare say, you have noticed has recently been made, and then they pay it in to the Secretary of State, and in a very similar way payments of that kind are made into Government treasuries in India. I mention the English transactions because they are more familiar to me, but they are all of the same kind.

10 That is capital raised for and held for the Indian railway companies until they require it?—What usually happens is a little different. An Indian railway company will go on year by year spending money which it has not raised. I mean the Secretary of State will advance it, and will get interest or a share of the profits in respect of his advances. Then every now and then he will say to a railway company, "I want you to pay me back two million pounds of my advances." You see, that would be the alternative to issuing a loan for two million pounds.

11 Then do I understand that at that point two million pounds of fresh capital is raised in the market for the company?—It is raised by the company.

12 And paid to the Indian Government?—Yes, to the Secretary of State.

13 Then the third head of receipts is, "Loans issued for the requirements of the current year"?—3 and 3a in a sense go together. The Secretary of State has continually to issue loans, not, as you will readily understand, to fill up deficits in his revenue accounts, but in order to meet the capital expenditure which he is continually incurring. Very occasionally he has to borrow in order to fill up a revenue deficit, but that is very exceptional indeed. These loans which are set down here are loans practically in all cases for capital purposes. You will notice that in preparing the statement I have divided the loans into 3 and 3a, because in some cases the Secretary of State, say in February or March of a particular year, borrows in advance for the requirements of the following year. He would be influenced by his expectation of the state of the market and so on.

14 I think that answers the question I was going to ask you as to what rule is followed in fixing the total amount to be raised by loan in any one year?—I think one would hardly say that it was a rule. I would rather put it in this way. At a suitable time each year, about the autumn or the winter, the Indian Government, like the British Government, begins to prepare its budget. Of course, the expected revenue receipts and revenue expenditure follow to a great extent on facts which are not within the control of the Government, except, of course, when taxation is to be altered, but it also has—and thus, perhaps, is a little unfamiliar to those who are only accustomed to British Government finance—to adopt a railway programme, that is, to decide that so much, say 10 millions, 12 millions, 13 millions, or whatever it may be, shall be devoted to capital expenditure on railways and so much to capital expenditure on irrigation works. Then one works out a budget, not merely a revenue budget, but what you may call a ways and means budget, in which you reckon that of this total capital expenditure so much can be met, say, from savings bank receipts, so much can be met from accumulated balances, and so on. Then, having made your calculations as best you can—and naturally in conditions of some uncertainty, because you do not know what next year is going to bring forth—you then say, or, rather, the Secretary of State then says, "In order to make both ends meet and to end up with a suitable closing balance we must borrow so much." It is a matter, as one may say, of general common sense to decide how to borrow it, except that I might mention this, which I think is important in some ways, that the general principle recognised is that the Government of India borrow as much as they can in India for the purpose of this capital expenditure, and then the balance, great or small, has to be found by the Secretary of State in England. I think as you go

on you will see that this fact that the Secretary of State is in a sense the residuary legatee in this matter is a very important fact.

15 I think I understand why, but I should prefer to ask you. Why do the Government of India make it a practice to borrow as much as they can in India?—In former years, I think, Secretaries of State held the view much more than they do now that there were two advantages. First of all, everyone is familiar with the general political advantage of a country holding its own debt, and not having too much external debt. Then, from the seventies to the nineties, the Indian Government authorities were afraid, and properly afraid, of doing anything that would add to the burden of the home remittances. You see, if you go on borrowing several millions a year in England it means that you have to remit so much more from India to England to pay the interest. The exchange question in the period I mentioned was a very serious question, and the India Office tried to reduce as much as possible the burden of those home remittances. Now the same principle of the Government of India borrowing as much as they can in India is still held to, but I should say for entirely different reasons, namely, that, as is a matter of notoriety, year by year it has in recent times been becoming more difficult to issue loans on favourable terms in England, and that, I think, is the main justification at present, although, of course, the old reasons have some validity, not so much as they had, I should say.

16 When you say that the Government of India would borrow as much as they could in India for those reasons, I presume that means at the same rate of interest, or substantially on the same terms?—Yes. One often has to use those phrases. I suppose that if they paid a very much higher rate of interest they could borrow a great deal more, but the governing consideration, I take it, in all these matters is that you ought not to borrow in such a way as violently and suddenly to depreciate the position of your stock.

17 To go back to the receipts again, the fourth item is "Unfunded debt." Have you anything to say about that?—All I have to say is that unless one is accustomed to Indian accounts one would not understand it. It simply means the savings bank receipts. It does not mean what you would mean in the Treasury, short-dated bills, or anything of that sort. It means savings bank balances, and a few deposits of funds which, as it were, bank with the Secretary of State.

18 Does it mean the total of those funds for the moment, or the receipts in the year under review?—The net receipts in the year.

19 Then "Miscellaneous remittances" is the next item?—There is No 5, "Deposits and advances."

20 Yes, will you tell us what the deposits and advances are?—I thought you would probably ask about that, and therefore I noted down some items which go to make it up. In the business of a government there are a great many payments and receipts which are neither properly revenue nor properly capital, and you have to have some miscellaneous sections of your accounts in which to deal with them. I have copied out from one particular year the various items which make up "Deposits and advances." Would you like me to read the chief ones?

21 Just read the principal items to give us a rough idea of what it means?—In India by far the biggest is the departmental and judicial deposits. There are large receipts and large payments. They fairly well balance one another, but the total on both sides is very large. Then the transactions, with which I think you will become more familiar later, between the Government Treasuries and the Paper Currency Department are brought to account in this particular section. Then there is a practice in India by which the Government makes advances on a large scale to native states, municipalities, cultivators and so on and all that comes in this section. Of course, on the one side you have the payments, and on the other side you have the repayments. Then, also, the Government acts as the banker of a great many district boards. It receives their money and pays out money to them, district boards are something like county councils, it is a rough analogy. That is the kind of item which is

-27 May 1918]

- Mr LIONEL ABRAHAMS, C B

[Continued

entered here, and perhaps for your purpose what I have said is enough, but I could, if you cared, submit a fuller statement

22 I think that is sufficient for our purpose. Then No 6 is "Miscellaneous Remittances." I only want a very short indication of what it is?—There are, for example, money order transactions which naturally come to a very large sum, both in India and international money orders. Then when we buy silver for the Government of India and send it out to India the cost is entered under "Remittances."

23 The last heading is "Council bills and transfers." I think we will leave that for the moment. Now on the expenditure side the item "Expenditure chargeable to revenues," I think, needs no explanation?—No

24 I observe that, roughly twenty millions has to be met in England. Is that a fairly normal sum?—I should say that it is gradually increasing. You see, in each year we should ordinarily issue a loan for several millions, and there is a gradual increase in interest charges on that account. Occasionally one effects an economy in some head of the administration, but it does not count very much against these large increases of interest. It may interest you to know that about 30 years hence there will be a very great decrease, because a great number of terminable annuities will come to an end.

25 In the meantime there is a tendency to a steady but not very large increase in any one year?—That is so.

26 Then as regards the remaining heads, have you anything to say about them—"Capital outlay," for instance?—No. You will notice, as you go through the statements, that the budget estimate of capital outlay is not worked up to as a rule, and that is a cause of a good many things upon which, I imagine, you will be questioning me. I now draw your attention to it merely. Then also you will notice that the figures about "Discharge of debt" in certain years are very heavy. Very large amounts of debt have been discharged, but I do not think there is anything noteworthy in the other items.

27, Is the sum allocated to the repayment of a debt a fixed charge?—No. There is a peculiar system with a rather long history attached to it. There is an arrangement under which ordinarily about half a million pounds taken from revenue are used, not to repay debt, because, of course, any borrowing government does not ordinarily do well to repay debt—that question has been discussed from the time of Mr Pitt to the present day—but there is an arrangement under which half a million pounds are used from revenue for the avoidance of debt, that is to say, spent on the railways instead of money being provided by the issue of loans. When we discharge debt it is usually because the debt is of a special nature which it is desirable to discharge. Except in small amounts, and under statutory provision, we should not pay off our permanent debt at all, but we have, from time to time, very large amounts of temporary debt, India bills, corresponding to Treasury bills, and so on, and the desirability of paying off those lest they mature at a very inconvenient moment is, of course, clear. That is the sort of debt that we have been paying off for some years, and which we have almost cleared out of existence.

28 If there is an unexpected surplus of revenue at the end of the year, it does not automatically go to the payment of debt as it does in this country?—No, that is a very important point, and I am glad you put the question to me at this early stage. I mentioned the discussions which began the 18th century and have gone on intermittently ever since, as to whether a government which borrows ought at the same time to pay off debt. The practice that we have followed, and I may say there can be little doubt that it is the right practice, is that except when you are dealing with special kinds of debt such as I have mentioned you should use your surplus primarily to reduce the amount of new debt which you incur, not to incur a larger amount of new debt and then use your surplus to pay off so much existing debt.

29 I think that examination of the accounts shows us how the balances are arrived at. Now we come to the question of their location. The first part of your memorandum shows the distribution of the balances between England and India on March 31, 1913, and Statement B gives the distribution for each year after 1907, I think?—Statement B in Appendix II, pp 74-5 gives it for a longer period, it begins earlier, if you will notice, in your copy it is 1893.

30 It is from 1893 onwards?—Yes.

31 I understand that the balances in India are divided between the district treasuries, branches of the Presidency banks, the head offices of those banks, and reserve treasuries?—Yes.

32 Will you tell me briefly what is the reason for this arrangement?—Yes. The particulars, I think, are given in the second collection of papers.

33 It is Statement C in Appendix II on page 76?

—Yes. I think perhaps the most natural order is to begin with the district treasuries and the branches of Presidency banks, which are in column 3. I should like to say here that I do not speak from first hand knowledge, and I dare say that Mr Gillan will be able to supplement a good deal of what I say if you ask him. The revenue in India is collected to a very great extent up country, and it comes in the first place to a district treasury, which would be under the management of a government officer. Then in that district treasury they would naturally keep such sums as would be required, or are estimated to be required, to meet the disbursements at that place, because India being a big undeveloped country, it is necessary in country districts to keep your money where you want it. I mean you could not rely on being able to get it from other places just at the right moment. That explains why some money is kept in district treasuries, and in some districts there are branches of the Presidency banks, in some there are not. I think that the practice of the Government of India is that wherever there is a branch of a Presidency bank it is used as a district treasury. I am sure that I am fairly right about that, but I may not be absolutely right, and Sir James Baghie and Mr Gillan can say whether it is so or not. Then the money which is not required to be kept in the districts would naturally go to the Presidency towns, to Calcutta, Madras, or Bombay, but I suppose a good deal would go to other towns of first-class commercial importance, because there the government payments would be very large. There is a very long and interesting history of the location of such government money as is held at Presidency towns. For some years all such money was put at the head offices of the various Presidency banks, but in 1874 you will have seen from what I put in my note that there was an incident, not the first one of its kind, which made a very great impression on the Government of India in those days. Certain money which the Government of India wished to withdraw from one of the Presidency banks was not placed at their disposal quite as easily as a government ordinarily would expect, or as a customer would ordinarily expect from his bankers. I may say that in 1898, when I was at the meetings of the Fowler Committee, I was quite astonished and impressed to see what a deep mark that incident had left on the mind of Lord Northbrook, who was then Viceroy. He gave evidence on the subject, and it was a thing that had evidently left a lifelong mark on his mind. In order to minimise the risk of a recurrence of that trouble about getting government money from the bank, the Government of India proposed, as you will see from the correspondence which I put in, to establish reserve treasuries at which certain sums would be held locked up. You will notice that the Secretary of State did not welcome that idea very much, he pointed out certain disadvantages, but apparently the Government of India, having very large powers in that matter, decided to take action without paying too much regard to the Secretary of State's views, and you will see in the papers which I have put in that in 1876 they set up a reserve treasury at Calcutta, and in later years—that is all given in the papers—they set up similar reserve treasuries in Madras and Bombay.

27 May 1913]

Mr LIONEL ABRAMSON, C B

[Continued.]

34 That was in consequence of the difficulty which they had in withdrawing at short notice then deposit in 1863 from the Bank of Bengal?—No, I have mentioned here that there was a difficulty of that sort in 1863, but the immediate cause of the setting up of these reserve treasuries was a similar incident connected with the Bank of Bombay in 1874. No doubt the recollection of 1863 had a great deal of influence on the action of 1876.

35 In 1874 the Bank of Bombay objected to the withdrawal of a sum of 350,000?—Yes.

36 Out of the total balance then to the credit of the Government of India of one million pounds?—Yes.

37 And the withdrawal was postponed in consequence of that protest?—Yes. I cannot say off-hand—I once knew, but I have forgotten—for how long it was postponed I have not noted it down in my memorandum, but one can easily find it if it is desired.

38 Has the Government any fixed agreement with the Presidency banks?—Yes. They are very long legal documents, and I thought it might do if I gave a summary of what was really important. Shall I read what I put in my memorandum (Appendix I, paragraph 8)? “The agreements provide that the banks are to transact general business for the Government at their head offices and certain branches, that they are to receive specified remuneration, that the Government is not bound to retain at the banks any particular sum, but that if its balance at the head office of any of the three banks falls on any day below a specified minimum it has to pay to the bank interest”—and then I quote the words from the agreement—“at the lowest rate chargeable on such day by the said bank to the public for loans recoverable on demand.” “The remuneration of the three banks and the minimum balances that they are to hold for the Government at their head office”—“or head offices” I should have said—“without charging interest are as follows.” The Bank of Bengal has a remuneration of 2,900 per annum, and the balance that it holds without charging interest is 233,000. You will, of course, realise that these rather odd figures are due to the fact that figures which are round sums in rupee currency become rather angular sums in British currency. Then the corresponding figures for the banks of Madras and Bombay are—Madras, remuneration 800, balance to be held without charging interest 120,000, and the Bank of Bombay, remuneration 800, and balance to be held without charging interest, 133,000, but then, as I mention in my note (Appendix I, paragraph 9), and perhaps I had better read that as it is important, “In actual practice the Government of India is much more liberal to the banks than is provided for in the agreements. They usually keep at the head offices of the three banks the following amounts—“Bank of Bengal, 467,000 to 533,000,” that is 70 to 80 lakhs of rupees, “Bank of Madras, a little over 133,000,” that is a little over 20 lakhs of rupees, and “Bank of Bombay, 267,000 to 333,000,” that is from 40 to 50 lakhs of rupees. Then, “On the notation of a loan and in special cases the amounts are increased,” but that is a matter of practice, and perhaps I am going a little beyond your question about the agreements pure and simple.

39 Do the banks pay interest to the Government of India if the balance rises above any figure?—No. On the other hand, to be fair to the banks, I ought to say that I think the Government of India is rather careful not to let the balance rise to an excessive figure. Then, of course, we come on later to this question of special loans granted on special application. When such loans as that are granted interest is paid.

40 I was talking merely of current balances for the moment?—Quite so.

41 Are there any other banks besides the Presidency banks and their branches with which they keep balances?—Not in India. You have heard in Parliament that we have deposited temporarily certain balances at banks in England, but in India I do not think I have ever heard of any government balance

being in any bank other than a Presidency bank. There may have been trifling instances, that Mr Gillan, of course, would know.

42 Do you use any other banks in India for transferring funds in India?—I do not think so. To the best of my belief the Government of India has no relation with any banks other than the Presidency banks, except, of course, that when an exchange bank presents a bill of exchange which the Secretary of State has sold, then it is the business of the Government of India to meet it, but subject to that I do not think the Government of India has any relations with any other banks.

43 I think it would be useful to the Commission if we could have a summary of the history of the relation of the Government of India with the Presidency banks?—I have noted down what I think are the most important facts. I would like to draw your attention to a book by Mr Brunyate\*, I do not know whether you have seen it. It was written under great pressure of time for official purposes, but I think practically all that is important in the history of the Presidency banks will be found very lucidly and fully set forth in this book, so that if you ever wish to go into it fully I think you could not do better than read Mr Brunyate's book. I might perhaps mention very briefly the few facts which seem to me of importance and which I happen to know on the subject. Shall I just mention a few?

44 Yes, if you please?—The Government of India first put balances with the Presidency banks in 1862. I think that is the first record of that being done. At that time they had rather a peculiar arrangement. They had certain shares, not a very large amount of shares, in the Bank of Bengal and similarly in the Bank of Bombay and the Bank of Madras and they had government directors, in the Bank of Bengal there were three government directors and six ordinary directors, and I think that was also the case in the Bank of Bombay, so that on the one hand they would have a great share in managing the bank, and also they were very important customers and depositors of the bank. I do not know whether I am giving you too much detail but I will try not to make it too extensive.

45 I want as brief a summary as you can make clear?—In 1862, when they began to deposit with the banks they had an arrangement which is set forth in Mr Brunyate's book at page 83, of which it seems to me the important point is that though all the money of the Government in the Presidency town was lodged with the bank, the bank could only handle as banking money 70 lakhs, a little over 400,000 at the present rates, all the rest of it was locked up by the bank, or if we preferred it, we could invest it in government securities. It is a somewhat peculiar arrangement, but still that is what the arrangement was. That arrangement went on only for quite a short time, until 1866, I think, and then the agreements were revised and practically—I will leave out some technicalities and some obscurities—what happened was that from 1866 to 1876 the Presidency bank handled all the government money which was in the Presidency town. The district treasuries, of course, held a certain amount of money, but the large sums that were in Calcutta went to the Bank of Bengal to be dealt with as they wished, and those in Bombay to the Bank of Bombay, and so on. After ten years of that great freedom the Presidency banks found that the great blow, as probably they regarded it, fell upon them of the establishment of these reserve treasuries which I mentioned, which took away a very appreciable sum of money from them, and naturally the policy of the reserve treasuries has been under discussion more or less from the day when they were established until the present day. The only other point I ought to mention is that in the year 1876, when a new Act regulating the Presidency banks was passed, one of its provisions was to abolish the three government directors whom I mentioned previously,

\* An account of the Presidency Banks, published by the Government Press, Calcutta, 1900.

27 May 1913 ]

Mr LIONEL ABBEY, C B

[Continued

and there were also a number of important restrictions introduced, but that does not arise out of your present question, you might possibly ask me about that later.

46 I will come back to it if we want it. Since the establishment of the reserve treasuries there has been substantially no change in the Government practice?—Quite so. There has, as a matter of fact, been a series of alterations of the Presidency Banks Act so as to give greater freedom to the Presidency banks, but I cannot recollect that the relations between the Government and the banks has been altered to any material extent, except, of course, that there has been a little more open recognition, I think, of the desirability of the Government lending money on interest to the Presidency banks at times of pressure.

47 I was coming to that. Would you tell us about that, please, how it arises, and, as briefly as you can, what is done?—I think you will notice at the beginning of Appendix II, pp 32-5—one does not like to go back too much to ancient history, but I think it is worth doing so in this case—there is a despatch dated 6th May 1875 from Lord Salisbury, who was then Secretary of State, in which he generally recognised that the Government of India had considerable powers of handling their balances in India as they wished—putting them with banks, or lending them. He recognised that he ought not to control that particular business very much, and the Government of India, I believe, from time to time, I cannot say how frequently, did grant loans on interest to Presidency banks, but our India Office records are very incomplete about that matter until a discussion took place which is summed up in a despatch to the Government of India dated 4th May 1899 which will be found in Appendix II, pp 62-4. You will see that the Government of India in 1899 submitted proposals for lending money temporarily and at interest to the Presidency banks, and the Secretary of State said that *prima facie* it was not his concern, that they could do as they wished, but then he put in the remark which I imagine had a great deal of influence on the Government of India, that ordinarily he thought that such loans should be at bank rate, not below bank rate, as the Government of India had wished. I have been told by people with whom I have discussed it that that is a very important matter, because loans would have been sought more eagerly by the Presidency banks if they had been granted below bank rate and there had been an opportunity of profit. I cannot say whether that is so or not, because in one rather important passage quoted in paragraph 15 of Appendix I you will notice on page 4 that the Bank of Bengal say "The suggestion which my directors would make is that when the bank rate rises to a height that indicates undue pressure the Presidency banks may be able to rely on procuring loans through the Comptroller-General either from the reserve treasury, or failing this, from the paper currency reserve, at the current rates for demand loans on government paper, rising and falling there-with." You will notice the phrase "at the current rates" not "below the current rates." Then the Bank of Bengal, feeling no doubt that this was a rather generous offer, made some remarks about the motives which led them to submit it. They say "In submitting this suggestion my directors desire me to state that it is made with the sole object of ensuring a steady supply of loanable capital at moderate rates. These loans will yield profit to the Government and benefit all who are interested in a steady money market, while the bank would undertake without profit to itself the risk and labour involved," so I do not know really whether it is a question of the rate of interest which has caused these loans to be taken so seldom in recent years or whether other conditions have stood in the way. That is a subject upon which I have no doubt the Commission will get evidence from people better qualified to speak than myself, but I think both views are sustainable.

48 Is it in your opinion desirable to encourage these loans?—Of course, that raises an enormously difficult question. I think that when the money market upon which trade depends is suffering from

extreme stringency which can be alleviated by the very simple process of unlocking a government treasury and lending some money on good security and with a certainty of repayment, it is, *prima facie*, a bad thing not to apply that medicine to the temporary complaint, but at the same time, of course, there are questions whether the banks are strong enough to justify a very large increase in the amount of government money placed with them—I do not attach very much importance to that—and then there is the much larger question how far a great money market like the Indian money market should rely on government resources as distinct from what you may sum up as its own resources. My own feeling is that it would be well that with discretion the Government should apply a dose of this remedy occasionally, but there is very much to be said on both sides.

49 That has been the view taken by the Secretary of State?—Yes, I think that generally the Secretary of State has not wished to be restrictive, though I wish to be quite fair, and I think that one might say that the effect of his *obiter dictum* about the rate of interest was possibly restrictive to a greater extent than he intended or would have desired.

50 Now, if we turn to the balances in London, should I be right in saying that the main consideration which guides you in regard to those balances is the amount of the charges which you have to meet in London?—Yes. Of course, the balances exist merely in order to meet the Secretary of State's requirements, and perhaps I might add that he often does have balances which are intended to meet, or will be used in due course to meet, future requirements and not immediate requirements. In the paper which I have put in I have endeavoured to explain and justify the policy and practice which led to that state of things, but, as you say, the object of the balances is that they may be spent in London on Indian purposes.

51 Where are the balances kept in London?—There is an arrangement that not less than half a million pounds shall be kept at the Bank of England. It is very curious that the written basis of that arrangement is not discoverable, though it has been recognised orally before commissions and select committees for very many years. Practically the rest of the balances are on loan, usually to approved borrowers against security.

52 If your balances become abnormally high do you ever go outside those two places of deposit?—Yes, as you know, we have deposited large amounts with joint stock banks. That was the case from 1909 to 1912, but in 1912 the balances sank to such a level that the broker who is our agent for lending to approved borrowers found that he could place all the money, and there was no occasion to continue the rather unusual practice of depositing with joint stock banks.

53 I suppose you keep a small balance at the India Office itself?—At the India Office I believe we start each morning with about 2,000l, and in addition to that what I said in reply to your question was not absolutely exhaustive, because there are certain sub-accountants, as they are called in Treasury language, who have some money. I think that the War Office, who are always spending money for us, have an imprest of 40,000l, or something of that sort, and there are certain small sums placed out with people who spend it on our behalf, but all that is very trivial.

54 That practically exhausts the location of the balances in London?—Yes.

55 As regards the amount of those balances you have put in some figures, I think it is Statement B in Appendix II (pp 74-5)?—Yes.

56 From those figures it would appear that the total balances have been very high in recent years?—Yes.

57 Will you give me, in general terms, the reasons for that?—Yes. If one wanted it in detail, it would be necessary to go through all those figures, or some of those figures in Statement A in Appendix II (pp 67-73), and compare the Budget estimate and the actual

27 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

transactions in each year from 1907-8, but that would, perhaps, take time. I think in general terms this would be a fair summary of the reason of the high balances. In the first place, the revenue receipts, or rather the excess of revenue over expenditure, that is to say, the revenue surplus, has been in the actuals far higher—higher, you may say, to an extraordinary degree—than the estimated surplus. I should mention here that that fact is sometimes overlooked, because when the Government of India has had a cash surplus of, say, six million pounds or so, it sometimes makes grants of very large sums to provincial governments, and then the declared surplus as shown in the financial statement is reduced by the amounts of such grants, but it is very important, if this is not too technical a point to mention, to notice that these reductions in the declared surpluses do not reduce the actual cash balance which is held. I do not know whether I have been obscure there, but it is very important to bear in mind the difference between the cash surplus and the declared surplus.

58 No, I do not follow. The Government of India, I understand, finds itself with an unexpected surplus which has swollen its balance?—Yes.

59 Having money available, it then takes the opportunity of making a grant which it wishes to make to some provincial government?—Yes, that is so.

60 But you say that the balance is not reduced by the making of the grant?—Yes.

61 Why?—That is so important that I venture to put it at this stage. It is no more reduced, if I may put it in this way, than a banker's balance is reduced if a customer A who banks with him pays a cheque to the account of customer B who banks with him. All that the banker has to do is a book-keeping transaction. Supposing the Government of India has received in cash six million pounds more than it has expected, and then it appears that, say, in the Province of Assam more money is wanted for school buildings which will take several years to complete, it makes a book-keeping entry to the effect that it has allocated so much of its extra money to the Province of Assam, and year by year, perhaps over a very long period, that money is actually drawn out by the Province and spent, but the reduction of the declared and official surplus takes place at once, while the cash reduction takes place very slowly and over a very long period of time, so that the figures of the official surplus or the declared surplus very often give you an extremely incomplete idea of the cash position.

62 A misleading idea, in fact. As I understand your meaning, it is that the Government of India has placed to the credit of the provincial government a certain portion of the balance standing to its own credit, it has given to the provincial government the right to draw that money when that government pleases?—That is so.

63 But it continues to show its own balance as if that money were its own, and not, as it has become, the money of the provincial government?—May I correct you on one point?

64 Please do?—You say it continues to show it in its own balance. It could not do otherwise. I mean the money is in its own balance. It has locked up partly, in district treasuries, and partly in head offices of Presidency banks, and so on, large sums of money against which it has certain liabilities, and in the case that you were discussing what it had done by making a provincial grant was to create an extra liability to be met out of its balances, but creating an extra liability to be met out of your balances does not, *ipso facto*, reduce your balances, and I do not think the Government of India could do otherwise than it actually does.

65 But ought you not to do one of two things, either to transfer that sum to a separate suspense account at once, or else in your balance sheet to show the obligation against the money which you hold?—We do that. I mean if you read those painfully voluminous documents which we publish every year, the Indian Financial Statement, and so on you will find all that information is given, but the point that I wish to mention is this, and I mention it because I

think that by bringing it out here it may lessen some misunderstanding. A person who is an expert in Indian financial practice and book-keeping would, of course, at once understand that a very large increase in the cash surplus was compatible with a very small increase in the declared surplus in any particular year, because the declared surplus would be, if I may put it very briefly, the cash surplus after allowing for the new liability which has been created.

66 (Sir Shapurji Broacha) The balance of the revenue has been accumulating in India in the hands of the Government of India until the next budget is out, and sums allocated to the provincial governments and other objects?—Yes.

67 Then how does that balance become transferred to England, I suppose by the over-sales of council drafts, because before the allocation is made a good deal of the balance is here?

68 (Chairman) I think I must interrupt, because I think we are getting on to rather a different point from what we were on. (To the witness) May I put my question to you differently? If I understand rightly what you have said now, it is that the amount of the actual unallocated surplus is reduced by these grants to provincial governments, which are in effect power to draw?—Yes.

69 But the actual cash is not reduced, because the power to draw is not immediately exercised?—I could not possibly better that. That is exactly the fact, and I drew your attention to it merely because anyone looking at the figures of the rather moderate surpluses which are declared by the Government of India might be astonished to find that there are such very big cash surpluses and cash balances. Now I think from what you have said it is clear that there is no mystery about that.

70 That is one reason, I understand you to say, for the large balances there have been in recent years?—It is one and the most important reason. May I, before going on from that, draw your attention to one statement, I think it is Statement E in Appendix II?

71 That is the statement headed "Net revenue and expenditure of the Government of India (excluding provincial adjustments)" on page 81?—Yes. You will see why I put in the title of that statement, "Excluding provincial adjustments", it is to bring out the fact that you were just mentioning. You will see in 1909-10 there was nothing very extraordinary, I mean that there was an excess of a million and a half in the surplus. Then you get to 1910-1, in which there was an excess of six million pounds odd—a little over six million pounds in the surplus, in 1911-2 you get 5,800,000, and in 1912-3 you get, roughly, seven and a half million pounds excess of the realised surplus over the budget surplus. In the next column you will notice that I have added up the excesses of the four years mentioned, and you will see that they have amounted to 20 million pounds sterling. When you have a divergence between the budget estimate and the actual results of that magnitude, I think you will see that it is a little difficult to keep your balance at any particular sum which you have set before yourself as the ideal sum for your balance. Before passing from the revenue account I should like to say that to a great extent the divergencies have been due to the position of opium. Do you care to go into any details of that sort?

72 No, if you will tell me very briefly this. Are those disturbances which are likely to recur or are they due to special circumstances?—In the future?

73 Are they likely to recur in the future?—No. I am afraid, as far as one can gather, that the opium trade between India and China is quite dead. Of course, that must not be taken as a statement of policy, but as far as I, as an outsider in the matter can judge—

74 As a financial estimate?—As a financial estimate, yes.

75 Then you attribute the high balances in these recent years in part to these unexpected surpluses, or largely to these unexpected surpluses?—Yes.

76 And the surpluses themselves largely to the peculiar circumstances connected with the opium trade in those years?—Yes. That is the first head of

27 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

my reply to your question. Then if you care to look through the figures, you will notice that in some years the whole expenditure on railways was very much less than had been provided for. Although I do not want to ask you to linger over details, I would just draw your attention to the year 1909-10, for example, in Statement A in Appendix II on page 69. You will notice that the railway and irrigation authorities underspent their grants in 1909-10 roughly by a million and a half, if you look under head 9. Then if you turn to the corresponding figure in 1910-1 over on the next page you will see something still more striking, you will see No 9 "Capital outlay on railways and irrigation works," and if you look at the last figures in the column you will see the total decrease of actuals as compared with budget loss to the remarkable figure of four million pounds. Those failures to spend the amount which is provided for capital expenditure add to the difficulty of keeping one's balance at exactly any figure that one had aimed at, more especially because the probability of their occurring is only known either to the Government of India in India or to the Secretary of State here quite a short time before the end of the year. From your Treasury experience I am sure you will understand that when a spending department fails to spend, it probably does not find out that it is going to fail to spend until quite late on in the financial year. That, I think, is the next most important cause after the revenue surpluses. Then there are certain, I think accidental, facts. During a certain period, which is included within the last five years, there were some windfalls mainly in this very large opium revenue, and it was decided, and I think very wisely decided, to hold them up in order that from them the Secretary of State might meet certain very heavy capital liabilities which he had to meet at specified times, but not immediately. I think perhaps it is worth while looking at despatch dated 23rd December 1910 from Secretary of State for India to Government of India, No 147, in Appendix II on pp 65-6. The Secretary of State there sets forth this very formidable list of maturing obligations which he had to meet, amounting in all, as you will see, to 13,942,500 in a short number of years, and then he explains that certain money which he has decided to set apart for the reduction of debt shall be applied towards meeting these particular obligations, but I think you will see there are good reasons for beginning the expenditure of that money in the year 1912-3 though the despatch was written in 1910. The holding up of that money for that period naturally made the balances rather high, I mean it was a contributory cause to an increase of balances.

77 Generally speaking, your evidence comes to this, that these balances were abnormally high in part owing to certain proposals for reducing debt—paying off debt—and mainly owing to accidental causes which could not have been foreseen?—I think that is so, yes—well, causes which I should say were not foreseen. Of course, it is very undesirable in a matter of this kind to distinguish between the Secretary of State and the Government of India. I mean in a sense they are one, but perhaps it would prevent or minimise misunderstanding if I explained that when the Secretary of State forms his budget for the year he relies entirely on the Government of India for an estimate of revenue. If the Government of India says "We estimate the opium revenue at so much," the Secretary of State does not question it. I think you will probably agree that he is wise in not questioning it, so that what I should say, and I think it is an accurate statement, is that these excesses of revenue were not foreseen by the highly responsible and capable officers of the Government of India who prepare the Budget. It is probable that they could not be foreseen. You know that in preparing a budget one's personality does play a very considerable part.

78 That is sufficient for my purpose at the moment. I understand from that that the balances were not raised to this amount of set purpose?—No.

79 But were brought to it by accidental causes which had not been foreseen?—Yes. I ought to say

that so far as money was kept in the balance from say, the end of 1910 to some time early in 1912 in order to be used then for paying off debt, to that extent it was voluntary and deliberate, and for reasons, and I think adequate reasons, which are set forth in this despatch of Lord Crewe's of December 1910, but except for that, as you say, the high balances were involuntary.

80 As regards the division of the balances between India and London, what determines the amount of the balance which is kept in India, I mean the proportion of the balance?—There, again, I think Mr. Gillan will agree with me, but of course he may wish to correct me. The Secretary of State, in making his budget, which involves, among other things, drawing money from India, says to the Government of India, "How much can you spare?" because, of course, you would never dream of drawing from India more than the Government of India could spare, but I fancy that of late years the Government of India have, and, as far as I can judge, very wisely, rather raised their estimate of requirements. I fancy that Sir James Westland, who was a very eminent Comptroller General, used to be very proud of being able to say, "I can work the business of the Government of India on eight crores of rupees, at any rate as a minimum," which comes to between five and six million pounds sterling. Nowadays I think the Government of India always say to the Secretary of State, "You must leave us a closing balance of twelve and a half millions or thereabouts," and the Secretary of State has always accepted that, it is the kind of thing he would never question. If one says, "What is it based on?" I can only say that I presume it is based on actual experience. In some of those papers you will notice a discussion of the sort of experience upon which an estimate of the balance required can be fairly based. In one of Sir James Westland's papers you will see that (pp 42-7).

81 Speaking generally, do I understand that you keep in India what the Government of India consider a reasonable minimum balance?—I do not know whether "a reasonable minimum" quite hits it off. I should say "a reasonable balance." I mean I would not think it is right, if I may use the expression, to cut the Government of India to the bone—to bring down their balances to such an extent that there would be a danger of inconvenience to them. I should say "a reasonable balance" rather than "a reasonable minimum balance."

82 But substantially you keep as much of the balance as you can in London?—No, we do not keep as much as we can in London. That really is a very important distinction. We bring to London as much as we can without inconvenience to the Government of India, not in order to keep it there, but in order to spend it there, and I think you will see that it is very important to distinguish between those two things. Supposing that in a certain year the Secretary of State decided that he could bring over two million pounds more than someone else thought that he might bring over, the effect of his doing that, if he conducted his affairs in the way in which Secretaries of State usually do, would not be that he would end the year with two million pounds more money, but probably that he would end the year having either borrowed two million pounds less for his new railways, or having paid off two million pounds of temporary debt, or something of that sort. I am very anxious, if I may say so, more especially in view of a good deal of misunderstanding that has arisen, to emphasise the difference between bringing over as much as the Government of India can spare and keeping in London as much as they can spare. I think I have made the difference clear.

83 I think I understand. Is this correct? That you keep what is considered by the Indian Government a reasonable balance in India?—Yes.

84 That you transfer everything over that figure to London, but that by the end of the year, subject to such contingencies as you have described to us a little earlier, you expect only to have a reasonable balance in London also?—That is so.

27 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

85 Having employed the other money transferred to London from India in the interval on behalf of India in place of fresh borrowing?—Yes

86 In paragraph 13 of Appendix I you speak of alternative possible methods of dealing with Government balances in India. The first you say would be to increase, either with or without interest, the amounts placed with the Presidency banks?—Yes

87 I gathered you are not in favour of that course?—I would not quite accept that, and before I speak about this may I say what I think will be clear to you, that although I come as a representative of the Secretary of State, what I say is not to be taken as an authoritative statement of his policy? Lord Crewe has very kindly allowed me a certain latitude in putting my own opinion, so long as I do it with discretion, on some points which are necessarily matters of opinion

88 We will take your opinion in this matter as the opinion of a person of great experience?—It is very kind of you. As regards lending to the Presidency banks, the important question is whether they are strong enough to be recipients of much larger sums of money than they now hold. I should like to say that I have no clear opinion upon that subject myself. I think it is a question of the most enormous difficulty to say at what stage it becomes unsafe for a very big customer or depositor with a bank to increase his deposit with that bank. I was anxious, though I do not profess to give exhaustive figures, just to give you some figures which might be helpful to you. I am departing, I may say, a little from the order in which that memorandum was written, but I think this oral order is a little more logical. If you look at these figures, which are given in paragraph 15 (2) of Appendix I, you will notice that the percentage of government deposits, both to cash and to capital reserve, are much higher—may I put it in this way—than you would expect the percentage of any one customer of a bank would be in this country. At least, I think most bankers would be rather surprised to find in this country that they owed a particular depositor say 30 or 56 per cent (to quote figures which I notice) of their total cash, but though I think those figures ought to be borne in mind, I do not say that they are conclusive. I feel really very much my incapacity to form a very definite opinion upon the subject. I would draw your attention in passing to the middle column, "Bank of Madras, 1911, March." If you will notice the figure there, the percentage of government deposits to cash is 121 per cent. I think that at that particular time it would not have been a good thing to lend more government money to the Bank of Madras, but I merely mention this as one of the subjects which would have to be considered and about which a conclusion would have to be reached before the Government placed large additional sums, especially without security, with the Presidency banks. Then if that question is settled, I mean if it is considered that large additional sums may be placed with the Presidency banks, then I was rather interested, and I have ventured to go beyond what has ever been said in the India Office upon the matter, in regard to what should be the source from which the money should be provided, and suggested that the source should be the paper currency reserve.

89 We will not open that question just now. I understand that you do not wish to express a decided opinion as to increasing deposits with the Presidency banks, either for yourself or for the Secretary of State?—No, I think it is eminently a question which wants very full consideration much fuller consideration than has been of recent times given to it in the India Office.

90 Has it been proposed to you from any responsible source?—I do not think so. Of course, we are very often in communication with the Government of India on this question, and we note their statements and their replies, and naturally we are very much influenced by their views upon such matters. I think I might draw your attention to what the Government of India said quite recently in this Memorandum on India Office balances, it is a paper which we presented to Parliament\*. We mention there that on Sep-

tember 18th, 1911, when the Financial Member of the Government of India was asked at a meeting of the council—the question did not directly raise the making of loans to the Presidency banks, but I think you will find that the answer did—whether the Government would lend to the money markets of India when their balances were high, he said "The Government of India leave considerable sums out of their Indian cash balances on deposit with the Presidency banks. They do not consider it advisable to make a practice of lending to the money markets in India in any other manner or to any larger extent." Of course, the Government of India is the most authoritative and responsible adviser for the Secretary of State in such matters.

91 That is a strong expression of opinion against it, you have had no strong expression of opinion in its favour?—Well, the newspapers are very full of it, and a good many individuals, to whose opinions I should attach much importance, have often said to me that we ought to do something in that way.

92 Perhaps we had better wait until we have one of those witnesses before us?—I wanted at some time to mention, because I think it will be useful to you, a further expression of opinion from the Government of India on a similar question.

93 Please do so now?—In a telegram, which is long, and with the greater part of which I will not bother you, the Government of India say to the Secretary of State, "In addition we would remark that, while we are ready when money is required owing to quite exceptional market stringency to make advances to Presidency banks, we have for five or six years past received no request for loans of this kind."

94 (Mr Keynes.) What is the date of that?—That is 22nd January 1913. Then dealing at the end of this telegram with a large number of questions which were discussed—I think, perhaps, at some time, I might read the whole of it, but I do not want to take up your time now.

95 (Chairman.) Can we have it before us?—It says "On the points put to us, we think that although improvements may be from time to time suggested by experience, the practice now obtaining is generally sound, and having regard to the absence of complaints over a long series of years that responsible opinion in this country is in agreement with us." That rather emphasises what I read from the memorandum, but it is a little more explicit, and I thought it was worth mentioning it.

96 I gather that you would not suggest lending to any other banks in India?—On that question again I have to plead that my information is rather incomplete. You will notice that in the information I gave you about minor banks the figures were all lumped together, 20 banks with a capital of so much, and deposits of so much. The reason I gave them to you in that not very good form was that the documents from India did not enable me to give it to you in greater detail. I dare say it may be worth inquiring from Indian witnesses whether among the other banks in India there may be some who would be suitable recipients of government deposits. I do not know. I would suggest that that is a point upon which Indian experience might be sought.

97 I think it has been suggested that you might lend money to firms and institutions other than banks. Do you wish to say anything about that proposal?—I would only like to say this, that I have often spoken about it with commercial men and others who have a great deal of knowledge of Indian conditions, and most of them have thought that it would not be a good thing for the Government to lend in India direct to commercial firms. They have mostly thought it would be better to put money with banks and then let the banks have the duty of exercising discrimination and have the responsibility, and that seems to me to be the common sense, but otherwise I have no special knowledge of the subject.

98 You spoke at an earlier point of your evidence of the possibility of establishing a central bank, and I think there were some papers which you offered to give

\* Cd. 8619

\* See Appendix II., page 66

27 May 1913 ]

Mr LIONEL ABRAMSON, C B

[Continued

to us in that connection?—Yes

99 Do you think that the establishment of a central bank would largely affect the questions of the balances kept in India?—That is a very difficult question, for this reason. Supposing you had a central bank with a capital consisting of an amount equal to the capital of the present Bank of Bengal plus the capital of the present Banks of Madras and Bombay, of course you would have no stronger body to deal with than you have in the three separate Presidency banks now. But if you had a central bank with a capital of the amount of the respective capitals of the three Presidency banks plus four or five million pounds more, then you would be in a better position to lend money to the banks, and these rather extraordinary percentages, to which I drew your attention, would come down to some lower level, I mean those percentages in paragraph 15 (2) of Appendix I. But the important fact in answering this question seems to me to be that whenever a question of increasing the capital of the Presidency banks has come up (and it has come up from time to time) the Presidency banks have received it, I was going to say tepidly, but I think, perhaps, I ought rather to say frigidly. I have some extracts here, but I do not think it is worth while troubling you with them—

100 I am not now asking about the opinion of the Presidency banks. We shall probably get that better from the representatives of those banks themselves. I was asking for your opinion, or for the opinion of the Secretary of State in Council, in whichever form you like to give it to me?—I think the right answer is, if a central bank had a much larger capital than the respective capitals of the three banks, it would obviously be a safer banking body with which to place large sums of government money, but that answer is almost a mere formal answer, I think, unless one adds that the willingness of the Presidency banks if amalgamated, to add to their capital is very doubtful.

101 In the meantime the Government of India does a great deal of banking business itself?—Do you mean in exchange business?

102 Exchange business, and, apparently, in coming to the aid of trade and the money market in times of stringency, and in a number of different ways?—I think if you asked Sir James Begbie he would say that actually the Government of India does extraordinarily little in coming to the aid of the money market in times of stringency. In the telegram, of which I read you an extract, the Government of India mention that it is many years since they were asked to grant a loan in times of stringency, and, in paragraph 10 of Appendix I, I give a list (I think it is complete, but I am not sure) of occasions upon which the Government of India have done what you say, and the lists ends rather remarkably with the year 1906.

103 But I understand, although the occasion has not arisen, the Government would be perfectly ready to do it if the occasion arose again?—Yes, quite so, but the occasions do arise infrequently.

104 The Government of India does a great deal of business which the Government of Great Britain would not touch?—Yes.

105 In putting that question I wish you to understand that it is a question, it is not a criticism at this stage. I am merely trying to get at your view of the facts?—Yes, what I wanted to say in reply to that is that it is perhaps not strictly accurate to describe what you have just mentioned as "banking business." If the owner of a large sum of money feels that he cannot employ it himself and puts it in a bank, in a way I see what you mean by describing it as "banking business," but perhaps that is not the exact description of it.

106 "Business usually done by bankers," would that meet your view?—No. Supposing that any of us were fortunate enough to have 5,000,000, at our disposal, and we paid it into a bank, which is what the Government of India does in these circumstances you describe, that is not banking business. As a matter of fact, it facilitates the operations of banking as carried out by bankers, but it is what I should call rather the customer's business than the banker's business to pay

the money into the bank.

107 As regards the India Office balances, you have already told me that you aim to keep them low at the end of each year, working them down at the end of each year to what you consider a reasonable figure?—Yes, which figure would vary to some extent with the year, but not very much.

108 And is regulated by the experience you have of the average needs?—Yes. One might put it a little more strongly. One knows really in March, what one will have to spend in April, at least one knows to a very great extent, and you will find when you come to Mr. Badcock's figures\* that actually in the first days of April we do have to spend enormous sums of money, so that that is the governing consideration in fixing this balance at the 31st of March.

109 How far do the gold standard and paper currency reserves affect the amount of the India Office balance?—I should say that they do not really affect it at all. Of course, certain sums pass through the India Office balances on their way to the gold standard reserve or the paper currency reserve, but it is a mere passing through. I do not know if you have this in your mind, that in the same way as we lend our India Office balance proper we usually have a million pounds on account of the gold standard reserve lent to approved borrowers, but, subject to that, I should say that those reserves which you mentioned are quite distinct from the India Office balance.

110 With regard to council bills and transfers, when did the practice of selling council bills and transfers begin?—I think it was 1862. I have not myself looked into the old papers, but I am assured that that was the case.

111 I understand that you do not propose to give details of these transactions, and that they will be given by Mr. Newmarch of the India Office?—Yes, of course it is difficult sometimes to distinguish between details and principles, but I do propose to give that sort of information on the subject which is contained in the prints that I have already submitted.

112 Perhaps you can tell us within what limits the Secretary of State is willing to sell bills?—Limits of price, I think you mean.

113 I mean both. I meant, in the first place, limits of amount. The general practice of the Secretary of State as regards the amount is to sell freely, that is to say, so long as the Government of India could meet the bills without inconvenience to themselves, the Secretary of State would sell to applicants, subject to this when the demand was large he would like to get a good price for them, and he would be specially anxious to do that because, unless he raises the price, and, possibly by so doing reduces the amount, at times of pressure, there is no probability or no great probability, of large amounts of gold going to India. I do not know whether you have followed the competition between gold going to India and the sales of council bills, it is a somewhat technical subject.

114 You must assume, please, that I do not come here equipped—that I have to get my knowledge here?—Perhaps I had better say a word about that. When, let us say, an exchange banker has to provide, or, as he always says, "lay down" a certain sum of money in India, there are various ways in which he can do it. One way is to buy a bill or telegraphic transfer from the Secretary of State. Then he pays the money to us, we telegraph out, or we send out the bill, and the representative of the purchaser receives from the Government of India such and such money in rupees. The alternative system, or the alternative open to the purchaser, is to take sovereigns, either from Australia, or from the Bank of England, or from Egypt, wherever he can get them, and to send them to the Government of India, and get rupees in exchange for them, and he gets them then at a fixed price. There are 15 rupees issued for each sovereign, which is 1s 4d per rupee. Of course one cannot speak definitely about costs, because costs are continually changing but it costs, I should say, one-eighth of a

\* See Appendix XV., page 355.

27 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

peny to send to India the part of a sovereign which is equivalent to a rupee. I mean a man who was sending out sovereigns would probably have to pay in gross (including interest) the equivalent of 1s 4½d per rupee, so that if the Secretary of State were always selling his bills very freely and in large quantities no one would ever send out sovereigns, or very few people would send out sovereigns for currency purposes, or for exchange purposes, and the Secretary of State has to try so to sell his bills as not to interfere with the flow of gold to India to a reasonable amount. I do not know whether I have made that clear?

115 I am not sure that I entirely follow what in practice that amounts to. I said: What are the rules with regard to the sale of these bills, to what extent is the Secretary of State willing to sell? Is the answer: To such an extent as does not prevent the reasonable flow of gold to India?—I say that is one of the conditions to which he has regard in fixing the actual amount of his sales from time to time. That is not the only condition, but that is one of considerable importance, which I mentioned here more especially, because some critics have imputed to the Secretary of State principles which he does not hold, and which he does not follow in this particular matter. But I should say then, if I have made clear the point about the competition between gold and bills, that the Secretary of State generally sells freely, so as to meet the demands of trade, subject to not interfering unduly with gold going to India, and causing no inconvenience to the Government of India, who have to pay these bills, and also—this comes to the other part of your question—subject to not selling at a lower price than 1s 3½d per rupee, and I ought to mention, to make it complete, that he has given an undertaking to sell, without limit, bills at the price of 1s 4½d per rupee.

116 Then the amount of his sales is regulated not by the amount of his own requirements, but by the amount of the trade requirements of India?—I think that is about 90 per cent true, if I may put it so. I mean when an estimate is drawn up of what will be sold in the course of the year, his own requirements are what are mainly considered in drawing up the estimate, and I think, to some extent, at some periods of the year, the attempt is made to make the actual transactions conform to the estimate, but I do not think it is a very vigorous attempt, and supposing one finds, as the year goes on, that the Government of India can meet bills freely, and that there is a very great trade demand for bills, and at the same time there is a sufficient amount of gold held by the Government of India, so that people cannot say that the internal circulation of gold is being starved, then the Secretary of State would sell freely, and would gradually come to be guided by the trade requirements, rather than by his own requirements for expenditure.

117 The governing factor would not, in that case, be the amount which he had to transfer from India to England?—No, as the year went on, he would gradually, towards the end of the year, which is the busy season of the year, be guided by the other considerations which have been mentioned.

118 Then do you think that that is business which might fairly be called banking business?—Yes. When you asked whether the Government of India did banking business, your question came at a moment when you were discussing what you may call the deposit side of banking business, and I think my answer was that I did not think that the Government of India did much of that kind of banking business, but that they do do exchange banking business, so that my answer to your present question is in the affirmative.

119 Would you see any advantage in transferring that business to a bank, or to a great central bank, if they were able to take it?—I hope later on, if you wish to hear me on the subject of a bank, to deal with that question more systematically, but perhaps I may say this at this stage, that although the Secretary of State has never considered the matter, and indeed when considering the question of a big central bank has always left the exchange question, I mean the question of transferring exchange business to such a bank, out of consideration, still I personally see some

advantages in letting business of this sort be done by a bank, subject—and I want to say this at the earliest possible moment, so as not to give rise to any misunderstanding—to a very large degree of government co-operation and control, which I think would be necessary before such business could be entrusted to a bank.

120 If it can be done, do I gather that you would think it desirable to do it?—On the whole I rather like the idea. Whether the Secretary of State would like it I cannot say, but I have made clear to what extent I am speaking of my own opinion.

121 (Lord Faber) There are a few questions which I should like to ask you. Some of them are no doubt due to my ignorance. You began by saying that India in the last two or three years had found it much more difficult to borrow, but I apprehend that that does not apply to India alone. That is general, all gilt edged stocks have fallen?—Certainly.

122 India's credit is as good relatively as it was?—I am the last person in the world to wish to answer that in the negative, but I am afraid you will find if you compare Indian stocks say with Colonial stocks or London County Council stocks, and so on (which I think you will agree is a fair comparison), that India has rather gone down. My recollection is—but this is a very rough observation—that at one time Indian stock stood about half-way between London County Council stock and Local Loans stock, all being 3 per cent.

123 I think you are right there. My impression is (and, of course, as a banker one comes across these things very frequently, and the reason of them), that by the treatment which was meted out to some of these railway debenture holders when they were paid off under the Madras Railway arrangement, for instance, and other big things of that sort, the shareholders thought they had been hardly dealt with, I do not say unjustly dealt with, but hardly dealt with, and that rather, perhaps, hurt Indian credit?—Of course you only put this in incidentally, but would you allow me to say that I do not think that is the real explanation. I should be very sorry to raise controversy, especially on things that are unessential but I do venture to think that such troubles as we have had with railway companies have been very amicably settled, that any grievances have been forgotten, and that after all these transactions to which you referred had taken place, India stock stood at the level which I mentioned, half way, say, between County Council stock and Local Loans stock, and since then, when no new railway controversies have arisen India stock has rather gone down, and I think that the explanations are really fairly obvious. One is that India has issued very large amounts, whereas the County Council has thought fit practically to stop its issues of stock, and the other is that, as is notorious, there is a certain amount of uneasiness, I mean people read about the sedition, and so on, and that is a point against India stock.

124 Then, in answer to our Chairman, you rather astonished me by saying that if there is a surplus in the budget of any year it is not used to pay off debt, but it is carried forward, I conclude. Do you not think that that is a bad principle? At home we always think that it is a safeguard, as I think Mr Austen Chamberlain will tell you, that a Chancellor of the Exchequer, if he budgets for too much, cannot take advantage of that surplus, and therefore a Chancellor of the Exchequer has no reason to budget for more than he wants, because he cannot use it himself. Now here you budget for too much, and it is apparently owing to that that you have these big balances?—Yes. As a matter of fact, no one regrets more than I when there are striking differences between budgets and actual results. I mean it is unfortunate that one cannot foresee the future, but, of course, the circumstances in India have been such that foresight was really extremely difficult, if not impossible, for some years past. But, as regards the disposal of this unexpected surplus which was the main object of your question, if in a certain year one wants six millions for capital expenditure—I take that as an illustrative

27 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

figure—supposing that at the beginning of that year you find that you have an unexpected balance of four millions from the previous year, I do think that you will agree, on turning over the matter, that there would be no great advantage in first of all spending that four millions on buying up and paying off four million pounds worth of India stock, and then perhaps a week afterwards—I put an extreme case—issuing six millions in India stock. The neater and more economical way seems to be to use your four million pounds for capital purposes, and to borrow two million pounds.

125 You mentioned Lord Northbrook's fears in 1874, I think it was, and you read to us certain strenuous agreements which were made with banks regarding the government deposits. I would ask you this question. In time of great stress do you think an agreement is worth anything at all if the cash is not there?—I might answer that question rather briefly, but it is more courteous to put the real facts, I think. The Government of India has, I think, never failed to keep with the Presidency banks the full amount which the Presidency banks may reasonably expect. What has happened from time to time is that the Presidency banks have wished to have extra amounts kept with them, or to have a high balance which existed at the moment allowed to continue for a long time, and then differences of opinion have arisen. You will notice in Lord Northbrook's instance that the Government of that time had with the Bank of Bombay one million pounds sterling, which was much more than the bank could expect, and in that instance the Government proposed to withdraw 350,000*l* leaving 650,000*l*, so that the demand for exceptional treatment was on the side of the bank, which wanted more than usual.

(Lord Faber) I am rather alluding to such an instrument as an agreement with a banker. I speak now as a banker, an agreement with a bank is of no use if the bank has not the money to pay back the deposit, the only thing which is of use is to give security, and without security the agreement is worth nothing.

126 (Chairman) May I interject to make the meaning clear? You were defending the Government of India against a possible charge of not fulfilling its obligations to the bank, but Lord Faber was asking as to whether the banks would be able to satisfy their engagements to the Government of India?—I see. Under existing circumstances and the existing agreements, the banks can fulfil their obligations. Since 1874 the only breeze which appears to have arisen was in 1888 or 1889, when an incident occurred, which is mentioned in the papers I have put in (*see* Appendix II, page 41). At present the banks can habitually fulfil their agreements and obligations to the Government.

127 (Lord Faber) The Chairman, I think, has well put my point. My point is. Is an agreement worth anything? Security is, but is an agreement without security?—I am not sure that you do not overestimate, or that I have not led you to overestimate, the importance of this agreement. *Prima facie* the object of this agreement is to settle the remuneration of the banks. It is not really to settle the relations of the banks as banks, and the Government as depositors. The agreement settles such rather trivial points as whether the banks, say, shall have 800*l* or 1,000*l* a year, and from that point of view I quite agree with you that the agreements are not very important.

128 Then I will ask you three direct questions. Are the deposits with the Indian banks secured?—Do you mean the Government deposits?

129 Yes, the Government deposits. Have they security? Let me give you an instance. If the London County Council have a big deposit with a London bank, the London County Council get security from the bank. The banks do not like it, but so it is. Do the Government of India get specific security?—No, they are merely general depositors with no specific security.

130 Are the London balances which are lent out here lent on security when they are lent to banks in London? I know they are generally lent on security, but when you have deposits at banks in London do you take specific security from those banks?—I think that there have been one or two banks—I mean joint stock clearing banks—which gave security. But generally

the answer to your question is that the deposits are not against security, they are general deposits.

131 You were asked about loans to provincial governments. Merely as a banking question, I quite think, with the Chairman, that when the Government is under agreement to find cash for, say, Assam, they should mention it in their balance sheet to show that these balances are held subject to an agreement to lend Assam, or whoever it may be, half a million of money, or something of that sort?—But may I say this?—perhaps I did not make myself clear. All this information which, as you very truly say, ought to be in the government accounts, is there already.

132 Thank you. I did not understand that?—If it were of any interest to you—it probably is not—I could show you in any annual statement where the exact amount is given.

133 That was not quite clear to my mind. Government balances were increased, you told us, because a certain amount of money was not spent on railways which had been budgeted for. Can you tell us, for my information, why that was not spent on railways?—I am sorry to say that that is a subject of continual discussion. We are always asking railway companies why they do not spend all their amount. As a rule they say—I do not think they really mean it—that it is because the Government does not tell them early enough in the year how much there is to be at their disposal to enable them to make arrangements in time. There is a natural tendency, and it is quite proper, to put the blame for everything on to the Government in the first instance, but then they very often go on to say that this year there is a coal strike, another year there is a railway strike, which hinders the transport of material, and so on, or another year that the manufacturers are so full of orders that all the orders get delayed, perhaps two weeks or three weeks, and you get in April, that is to say, next year what you ought to have got in March, this year. They are all the general explanations which I think would occur to anyone.

134 Not quite satisfactory from a business point of view, are they? I mean here in England we had a great coal strike last year, much bigger than they have ever had in India, and we still go on with our capital expenditure on railways?—Pardon me, these failures to spend up to the full amount occur to a great extent in England. If we want a locomotive, or rails, or bridge work, or anything of that sort, for an Indian railway, we buy it in England. When I spoke of the coal strike I meant the English coal strike.

135 I should have thought there was much more delay in India in this thing than there was in England, for instance. However, I will not press that. I have very few more questions. For my information again why is it more important to pay off bonds than bills? What is the difference between the two?—There is this difference. When you have a bond maturing, or, at any rate, the particular kind of bond to which I have referred, you really have to pay it off at its date. If you made efforts to renew this particular sort of bond, it would be a very curious thing indeed to do, but when you are dealing with India bills it is the most natural thing in the world, if it is not convenient to you to pay them off, to go on renewing them. The Treasury goes on renewing Treasury bills automatically until it happens to wish specifically to pay them off. Now, if I may, I will put in a word of explanation about these bonds. They are of two kinds. There were first of all a great number of debenture bonds that had been issued by various railway companies—the India Midland Railway for example, or the Madras Railway—and while the railway continued in existence, it was the most natural thing to renew the debenture bonds from time to time on terms agreed between the holders and the railway company, but when the railway company goes out of existence there is really no one who can renew the bonds, the railway company is dead, and the Secretary of State has taken over its obligations, and it is for him, when a particular obligation matures, to meet it and to pay it off. He cannot go on renewing as the company would have done. Then the other sort of

27 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

bonds that we have to deal with is what are called India bonds. We issued four million pounds, I think, half a million pounds to mature every year for eight years, but it is part of the terms of issue that the holder is the holder of a gradually decreasing security, and that is a great advantage to the holder. If having issued on those terms, we made terms for renewal with the holders of half a million pounds' worth that were due to be paid off in one year, that would be an odd thing to do, which you would not recommend.

136 I listen with great interest to what you say, but I should have thought that it did not matter two straws whether the Indian Government issued a bond or a bill, their security covers both, and they are both looked upon as A 1 securities in this country?—Yes, that is true, but it is a rather different point that I am making. Supposing that an India bill matured at a certain time, you would never think it odd that we should renew it if it were not convenient to us to pay it off.

137 Of course, you would be obliged to pay the bond off if the holder wanted it, I know that quite well?—Now let me put this point. Supposing, in respect of these India bonds of which I have been speaking, instead of paying off by lot at the right time, one went to the holder and said, "It is not convenient to us to pay what we have contracted to pay, cannot we make some private arrangement that 'we are not to pay?'" it would surely be an odd, and in the technical sense—I do not mean in the moral sense—a discreditable proceeding, discreditable in the sense that it would not be good for our credit.

138 I am afraid I have troubled you at great length, but this is my last question. Should the Government do what the Chairman has called, and I think rightly called, all this banking business such as exchange, large deposits on security and unsecured, gold standard reserve, and all this gold coinage, should not that be done by what we should call the Bank of England in England? Should Government officials be called upon to carry out what is absolutely and wholly a trade in itself which takes a lifetime to learn?—I should like, if I might, to answer your points one by one, because what applies to one branch of business does not always apply to the other. I think you mentioned exchange.

139 I did?—And the amount of balances.

140 Yes, on security and unsecured and then what is called the gold standard reserve and gold coinage?—May I very briefly answer them one by one, because they are very different businesses. As regards exchange, it is done I will not say automatically, but with so near an approach to automatism that I do not think there is very great advantage in the Government doing it. Although, as I say, I do not know whether the Secretary of State would agree with me or not, I do see certain advantages in transferring that business to a bank, if a bank can be established under suitable conditions. At some time I shall have an opportunity of mentioning why I think a great deal of Government control would be one of the conditions. As regards lending balances, here again, in my private judgment your remark has its greatest force and applicability in its relation to that particular branch of business. As you know, a Government official, like me for example, can never acquire even a moderate knowledge of that sort of subject, and it is not desirable that any Government official should give his mind to it. He has other and different things to do, but, of course, you know that we have the great advantage of very distinguished bankers inside the India Office who do supplement the deficiency of the Government official in that way.

141 Will you tell me whether you think that in India there is scope to lend these great balances on gilt-edged securities? Can large balances be lent in India, or would it be better to transfer them to England? If you can do it in India it would be better, but can you?—You raise many big questions. If you suggest the advantage of transferring balances largely from India to England because they can be better lent in England, then I say you must not overlook the possibility that the lending of balances in India might be very useful at certain periods for

Indian trade, and if the Government of India could help Indian trade in that way without any risk of impropriety it would be an excellent thing.

142 I merely say can they do that, because at present you do not appear to be able to get security even, which astonishes me?—If your question is directed to this, that any such lending of Government balances can be better done through a bank than through a Government official—I do not know whether I am right in understanding that that is your point.

143 No, I am more on whether it is possible either for a Government bank or a Government official to lend large balances on security in India?—I think that that must be judged by experience. I can certainly say that the Government does deposit with the Presidency banks, to the great advantage of both parties, I should say, sums which I should call large—at any rate, appreciable sums.

144 But it does not carry out my fundamental principle. I said "on security"?—No, I do not know how far the Presidency bank would be prepared to give security. I should say probably, since it has enjoyed the balances for so many years without security, it would not like to change at this moment.

145 Thank you, I am much obliged?—May I just remark, in answer to a point of Lord Faber's, which we rather overlooked, that I see great force, naturally, in all that he says about the Government not being a suitable body to do exchange business, lending balances, and so on, but I do not think that applies to the other two points he mentioned, namely, the gold standard reserve and gold coinage.

146 (Sir Robert Chalmers) Following up Lord Faber's question, if security were taken from the Presidency banks, that would be Indian securities of a rupee character?—The Presidency banks can, as a matter of fact, invest their funds in Consols and all sorts of things. I do not know if you are at all interested in the limitations of their business, and what they may do, and what they may not do. If you are I can tell you.

147 The point I want to be clear about is whether, if you get the security and hold it in considerable quantity, it would be possible to realise that security in an emergency?—No, in that Memorandum which the Secretary of State published,\* he mentioned that point. One of the difficulties of lending on security in India is that if you had rupee paper and had great quantities of it, it would probably be difficult to realise it in an emergency. On the other hand, you must not, if I may say so, exaggerate the importance of that point, because, if you do your lending well, the occasions on which you do have to fall back on your security, or what some people call your collateral, are very very infrequent indeed. I think that Mr Badock will tell you that in sixty years we have only had to do so about twice or three times in the India Office.

148 The object of the Government, either here or there, is not to create balances. The balances come to them, and they wish to keep the balances, as I understand from you, as low as they conveniently and reasonably can?—Yes.

149 That is so?—Ordinarily.

150 That applies to India and to London?—That is so subject to this that if you have in front of you a year with very large disbursements, you might like to open that year with a sum above your usual opening balance.

151 It is rather forced on you?—It is rather forced on you, yes.

152 But you do not create balances for their own sake?—Certainly not.

153 As a matter of economical working especially as you are a borrowing authority, borrowing on bills, your object is to keep your balances down?—Yes, it is to keep the balances to the amount required, neither more nor less.

154 Required for your own purposes?—For the purposes of India.

155 For Government purposes?—That is so yes.

\* Cd. 6619, page 6.

27 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

156 Therefore you do not like to have any balance generally available for lending out for the support of the market, that would be an incident?—Are you speaking now of the market in India?

157 Yes?—I do not think I would go quite so far as you. I think you have to realise this, that in India there are so many uncertainties, what with monsoons, which are apt to fail at the critical moment, that you do have to keep, and it is wise to keep, a rather liberal balance, a more liberal balance than you at the Treasury would keep, in view of the possibilities of bad times. Probably in five years out of six you would be able to lend something—I do not say on a great scale—if you so desired, and if you care for figures, which probably you do not wish to have, you will notice that in the reserve treasuries—they are what you might call the temporarily immobilised balances—there are appreciable sums, as a rule.

158 Of course, that would be the case in five years out of six?—Yes.

159 What about the sixth?—That, of course, is a very difficult point. If you were lending out of your Treasury balances, you might find in the sixth year, when everyone was very anxious to borrow from you, that you had a famine, and a frontier campaign, and difficulties of that sort, and that just at the moment when people wanted the money you could not let them have it, and I may say that that was one of my reasons for mentioning the paper currency reserve as a much more trustworthy source, if you are to lend at all, than the Treasury balances.

160 As to council bills and the removal of the duty of selling councils to a bank or banks, that would cost a little more?—Yes.

161 And so that would be popular with the recipients of the extra cost. What particular gain do you think would come from introducing banks into this business of selling councils?—The gains are not very substantial, but I think there are some. Just let me mention one or two. Of course, we in the India Office, as I dare say you realise, are not in any cowardly sense afraid of criticism. We often feel that we have to face adverse criticism in the discharge of our public duty, but *primo facie* if there are two methods of doing a piece of business, one of which may expose you to criticism, and if I may say so without disrespect, occasionally to partisan criticism—I mean party feeling even in Parliament is strong—and then there is another method of doing business which is likely to avoid that criticism, the second method has, so far as it goes, an advantage. If the Secretary of State sells five million pounds extra bills in the year there is always a possibility that he may be criticised. I do not say that it is very serious or that he would be much hurt by it. If the Bank of India, corresponding, say, to the Bank of Japan, sold five million extra bills in the same year, and in the same way, people would probably say “Of course, these masterly bankers know their own business, and there would be advantage in the avoidance of criticism. It is a point of perhaps much greater importance, that this selling of bills by the bank would go with the transfer of other Government business to a bank. I mean if it were a question of merely transferring to a bank the sale of council bills and nothing else, then the only advantage would be the one which I have mentioned, and on that account it would not be worth while doing it, but if you added to it the transfer to the bank of the lending of balances both in England and India and with certain other advantages, then the cumulative effect might be considerable.

162 It is rather a big question that I put to you next. What do you think is the relation of the Indian money market to the London money market? Is it subsidiary, or ancillary, or what?—It is extraordinarily difficult to tell. I should say, as far as I have been able to judge, that there is very little in the way of sending banking money from London to India in the same way that a rise or fall in the bank rate might cause a transfer of funds between London and

Paris, or London and Berlin possibly. I should say that except for their necessary connection as being countries which do trade with one another, the connection between them is extraordinarily slight, and much less than people expected 15 years ago when you and I had the privilege of listening to the discussions of the Fowler Committee. They then thought that there would be a continual flow of banking money, because a bank would say, “There is a good opportunity for getting a little more interest if we send our ‘funds to India.’” I do not think, as far as I can judge, that there is much of that.

163 Is “the Indian money market” a term which applies to traders with the West in the main? Does the Indian money market include the supply of funds for natives engaged in the ordinary operations of agriculture and trade, or is the latter domain really in the hands of entirely different people of a merchant character?—I should say, but of course Sir James Begbie knows a great deal better than I that his bank would probably have a vast number of Indian customers. I should expect, though I do not know, that probably most of them were engaged in trade.

164 Parsees?—No, the Parsees as you know, are a very tiny community. I should expect that the connection of the big Presidency banks with the natives of India was very widespread, and I would add that the Presidency banks lend on what you might almost call agricultural security. They had then powers enlarged so as to lend on estates which are under Government management, and so on. I think, so far as I follow the exact scope of your question, you regard what is generally called the Indian money market as having a much narrower scope than it actually has, but I say that subject to correction from people who get their knowledge on the spot.

165 So far as your observation and experience have gone, there is remarkably little connection to-day between the London money market and the Indian money market. Is that your opinion?—I am speaking of the special connection which I thought you had in mind, namely, the transfer of funds by bankers from one market to another in order to employ the funds more profitably. Of course, as you know, the sale of bills, not only council bills, but mercantile bills, is on an enormous scale, and in a sense each such sale is a bond of connection between the two money markets. But I do not think that is what you were referring to.

166 Do you think that in India there is a greater community than my question might have suggested between the financial interest of the ordinary agriculturist and the Anglo-Indian trader—that they all have reference to the same market, and that there is not a lower domain there where the Mahajan is dominant?—Now that you speak specially of agriculturists I should think that the agriculturist probably dealt with Indian financiers—

167 He would be outside what we have been previously calling the Indian money market?—Yes, I should think so.

168 Therefore it would come to this—that if you did, as you do not want to, accumulate large balances in India and lend them out to what is called the Indian money market, it would be a small section of the Indian interests and population which would be benefited?—I think that that, if I may say so, is almost—may I use the word—over-ingenious. May I just put what I think the answer would be from the point of view of a person who took the opposite view from you? He would say, It is quite true one lends to, one might almost say Sir Ernest Cable’s firm, and Sir Ernest Cable is one individual European, but then that firm may go half over the Province of Bengal buying jute, or whatever that firm happens to buy, bringing happiness and prosperity to thousands, hundreds of thousands, millions, of producers, so that by making the operations of the European firm easier, you have very closely and beneficially affected vast quantities of the poorer Indian agricultural population.

The witness withdrew

At the India Office, Whitehall, S.W.

## SECOND DAY.

Thursday, May 29, 1913.

## PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord FABEE  
 Lord KILBRACKEN, G C B  
 Sir ROBERT CHALMERS, K C B  
 Sir ERNEST CABLE  
 Sir SHAPURJI BURJORJI BROACHA

Sir JAMES BEGGIE  
 Mr ROBERT WOODBURN GILLAN, C S I  
 Mr HENRY NEVILLE GLADSTONE  
 Mr JOHN MAYNARD KEYNES  
 (Mr BASIL P BLACKETT (*Secretary*))

Mr LIONEL ABRAHAMS, C B, recalled and further examined

169 (*Sir Ernest Cable*) You must have noticed the criticism from time to time of the Secretary of State's action in selling your bills below 1s 4d?—Yes

170 You mentioned at the last meeting that this was sometimes done when it has been stated in letters to the Press it was unnecessary, perhaps you might like to make a statement on that point?—I do not think that it has been very much criticised, but I think that the considerations relating to it are these. When the Secretary of State has no great immediate necessity for selling bills, I mean when he has sold in the year up to his requirements for that part of the year, he need not and he does not sell below 1s 4d, and in the last two or three years it has been a very exceptional thing to sell below 1s 4d, but, of course, there are times when it is very desirable that he should get home from India the money that he requires for his expenditure here, and it would be undesirable to set up very restrictive rules which might prevent him from selling bills to the extent that he needed. So he allows himself, and I think he ought to allow himself some latitude, and the only serious question is, I think, whether you can define with any scientific precision what the latitude should be, so as not to leave it too much to the uncontrolled discretion of the Secretary of State. Really, I think you can define it with the utmost precision. The proper rule, I think, is that he should sell at such a price that it is more profitable to him to sell at that price than to take the possible alternative course of bringing gold home from India. If he bought sovereigns at the rate of 1s 4d for each rupee and then brought them home from India, paying about  $\frac{1}{4}$ d for the cost of freight and so on, he would get for each rupee about 1s 3 $\frac{1}{2}$ d net. What he actually does is never to sell cheaper than 1s 3 $\frac{1}{2}$ d, so he allows himself no undue latitude, and it cannot be said that in any sense he is depreciating the rupee by selling at that price when his general circumstances make it desirable that he should get money home.

171 Throughout your evidence at the last meeting you rather implied that the Secretaries of State could not have borrowed more money than they did during the last few years, and that it was only, I think, owing to heavy surpluses that the necessary funds were provided for the development of the country. Of course, it is obvious that you cannot continue to count on these windfalls?—Quite so.

172 And the question therefore, of raising more money by loan is becoming urgent?—Yes.

173 Have you considered the question of raising your interest to 4 per cent, because apparently it is impossible for you to raise more at present rates?—In a certain sense we have raised our rate of interest to more than 4 per cent. The latest issue that we made was an issue of Guaranteed Debenture Stock of the Madras and Southern Mahratta Railway which was to all intents and purposes a Government issue. The nominal rate of interest was 4 per cent,

and the issue price to the public was 99, so that we paid a trifle over 4 per cent there. If you wish me to say anything generally on that subject all I can say is this. The Secretary of State has for years been recognising that year by year he must pay a little more interest on the money that he borrows than he used to pay, and that it is to the advantage of India that he should not restrict his borrowing unduly in order to avoid this slight increase in the rate of interest. But what he has felt, and it is really the most difficult and important branch of Indian finance, is that he must not be too forward to borrow great sums so as to make the value of his stock go down with great rapidity or to make the rate of interest go up with too great rapidity—the two things come to the same, because if he did so, I am afraid he would make his stock so extraordinarily unpopular with people who have bought it at one price and found it has gone down 10, 20, or 30 points, that he would not really increase the supply of capital in India. If you go on following that path long enough and steadily enough, you may find yourself the object almost of a boycott.

174 The only thing is that the sterling price of Indian securities just returns about 4 per cent, or slightly under now, does it not?—Yes.

175 So present stocks would not be depreciated if you issued a new stock at 4 per cent?—Of course, you have banking authorities here. I should say, to take a rather big case, supposing we issued a 10 million loan on the 4 per cent basis, you would see in the news papers for several days, "India Stocks were very easy", and if one did it two or three years in succession, India stocks would be very easy indeed.

176 I only brought it to your attention because this is one of the great needs—to secure money for the development of India?—Yes, I cordially agree with you. The difficulties are very great, and we never overlook them in the India Office, and we are quite with you that it is one of the great needs of India to get money for development.

177 You were saying in your evidence at the last sitting that the Secretary of State in selling his bills was careful not to hinder the net absorption of gold by the people. Referring to paragraph 40 of Appendix I it seems to me that you have there estimated the probable consumption for the future almost entirely on the basis of the past. You have taken an average of the past. Do you think that is a correct way?—You must not, please, attach too much importance in the way of precision to those few lines at the end of my memorandum. What I wanted to bring out, and what the figures do bring out, is that there is a very large stock of gold in the Government Treasuries in India at the disposal of the public if they care to have it. I said that this sum of round about 20 millions is a 2 $\frac{1}{2}$  years' supply on the basis of the average for four years. Supposing that one disregards

29 May 1913 ]

Mr LIONEL ABRAHAM, C B

[Continued

that altogether, and says that on the basis of the demand in 1912-3 we had at the end of the year considerably over 1½ years' supply, that would be equally effective for the particular purpose for which I made the statement, and it would meet your criticism.

178 I suppose the India Office would agree that one must not run that too fine, you do not want to prevent gold from going to the people, do you?—You do not want to prevent that. The India Office has always been anxious that among other things it should facilitate the sending of gold to India so that the people who want it may get it. But I would say this—that other needs are greater and more important than the supply of gold for use as currency in India, I mean, supposing there were a conflict between that interest and the other interest of having money here to be spent on railway capital purposes, I should say that so far as there was a conflict the latter ought to prevail.

179 In paragraph 30 (2) of Appendix I you state that the restriction of the sale of Council Bills and the consequent export of gold would adversely affect the balance of trade, perhaps you will explain how that would happen?—What I specially had in mind was that, if great amounts of gold were taken out of the Bank of England and off the London money market with the effect of stiffening up rates here and creating a stringency—perhaps even more than a stringency—I do think that Indian trade would be injured in a number of ways. To take one very obvious method in which it might be injured. When the Indian exchange banks had their bills to discount in London, which you know is one of their ways of supplying funds for themselves, if they found they had to discount at 7 per cent. instead of 5 per cent., they would be less willing to discount and less eager to buy export bills in India and less eager to use their money in India for trade purposes generally, and there would be what I may call an application of the brake to the wheels of Indian trade generally. I think that what I say is in no way paradoxical, and I think most people would hold that that is the case.

180 It is so, of course, but it does make Indian trade rather dependent on the convenience of the London money market?—In a sense, but not in the invidious sense. I should say rather that Indian trade depends, among other things, on the convenience of the customers of the Indian merchant. You may regard Great Britain as one of the great customers of the Indian merchant, and if you do something which rather hinders the customer you rather hinder the seller as well.

181 I do not suppose our other Colonies take such an interest in matters of that sort, do they? You are guarding commerce here rather too much. There is one other thing I should like you to answer. In your evidence I rather gathered that you are against lending surplus funds to the Presidency banks in India, is that so?—I did not wish to give that impression. I always feel that there is so much to be said on both sides that I can be more helpful, at least, I hope I could be more helpful to the Commission by putting before them the facts and the considerations on both sides than by giving an opinion of my own. My own personal prepossession is in favour of the Government being rather liberal in this matter, and I feel very much, when you have, say, 20 crores locked up in the Government Treasuries in Bombay and Calcutta, and then in Bombay and Calcutta there is a bank rate prevailing of 8 per cent or 9 per cent, and a difficulty in getting accommodation even at that rate, that it is not quite easy to put in a perfectly satisfactory defence of the holding up of these large sums of money. On the other hand, I recognise the difficulties which the Government have always felt about largely increasing their deposits with the Presidency banks.

182 I think I understood you to say that you were preparing a statement for this Commission on the subject of State banks?—That is so.

183. In doing that, would you kindly mention what economies you expect the Government of India to make

in the way of their own establishment and so on when they hand this work over?—I will mention that. As a matter of fact, I do not think there will be any economy in that particular respect. I shall probably take the advantage myself of consulting Mr Gillan on the subject before I write my note, but I do not think there will be much in it.

184 (Mr Gladstone) Lord Faber, I think, made some reference to the Government accounts with the Presidency banks, and as to there being no security, it is a fact, is it not, that there are special restrictions and safeguards as to the working of the Presidency banks under special Acts?—Yes, and one might almost say rather onerous restrictions. I do not know whether any member of the Commission would like to go through that with me. I did not put it in my statement because I did not want to make it too long, but of course the Commission can have copies of the Presidency Banks Acts—we have numerous copies in the office; and if Mr Brunyate's memorandum\* is circulated also, then you will see what those restrictions are. I may say that among some papers which the Chairman said he would like to have are some papers regarding a discussion as to the removal of one particular set of restrictions—the restrictions on dealing in foreign exchanges.

185 (Chairman) Will you put in a paper to show us what the character of those restrictions is?—Yes.

186 And also Mr Brunyate's memorandum which you spoke of?—Yes, I assume you would like at least those two circulated, but I suppose you would scarcely want copies of the actual Acts, because there is so much that is mere machinery set forth in them.

187 It would be more convenient for the Commission if somebody under your directions would extract what is essential for us instead of giving us the whole of the Acts?—That shall be done.

188 (Mr Gladstone) Is it not the case that the banks in return for the Government accounts do much work for the Government in connection with the Treasuries and other things for nominal remuneration?—Yes, in fact I should put it this way—that the advantages which the Presidency banks get are partly, not entirely, to be regarded as remuneration for work done.

189 (Lord Faber) The figures that you were good enough to set out showed to me as a banker that the banks are well paid, in fact better paid than some of the banks in London?—May I just interpolate this? The view that has always been taken by the Presidency banks is that the advantages which they get are partly remuneration for the work they do, and partly—if I may go back to an ancient controversy—compensation for the withdrawal from them in the '60's of the right to have a note issue.

190 (Mr Gladstone) In a lesser degree, a much lesser degree, the Presidency banks act in India in relation to the Government of India as the Bank of England does to the Government here, for instance, they attend to the Public Debt?—Yes.

191 And they receive special remuneration for that?—Yes. As far as I can judge, I should think they are fairly well paid for managing the Public Debt. I do not know whether Sir James Begbie would agree, but there is a special section of their remuneration for that specific work.

192 (Sir James Begbie) That is not included in the figures you have given, I think?—No, because I did not think that had much bearing on the particular subject of my memorandum.

193 (Mr Gladstone) My question was really asked in order to draw attention to the status of the banks, which is something different to that of ordinary banks?—Certainly.

194. They are more on the status of the Bank of England than on that of any other bank?—Yes. They are the trusted and valuable agents of the Government for very important purposes. That is your main point, I think?

\* An account of the Presidency Banks, published by the Government Press, Calcutta, 1900.

† See Appendix XIII., page 335.

29 May 1913]

Mr LIONEL ABRARMS, C B

[Continued

195 Yes With regard to the State Bank I understand there have been two propositions, one is the amalgamation and strengthening of the three existing Presidency banks to be carried on very much on the same lines as at present, and another proposal that has been put forward is that the State Bank should have a London office, and I understand that the London office of that State Bank would do a great deal of the work that the India Office now does?—Perhaps I ought to guard myself in this way When the subject was discussed about 14 years ago the view then taken was that it would be possible perhaps merely to amalgamate the three banks and do nothing further, and it was to some extent on that basis that the discussion proceeded Speaking quite as an individual and not speaking for the Secretary of State I have been thinking over it a good deal of late, and the more I think over it the less I feel that any scheme which was a mere amalgamation of the three banks would be practical I fancy that when once the amalgamation came under discussion a further extension of the scheme would probably have to be considered, and would be held by many people to be an integral and necessary part of it It is only, I think, in that sense that you can say that there is a scheme for extending the original plan

196 You would recognise, for instance, that the exchange banks would be likely to object very strongly to the Government Bank being allowed to do exchange business, and therefore I assume there would be less opposition to the amalgamation and strengthening of the three Presidency banks on existing lines than there would be to the other proposal?—Yes I think it is fair to say that there are many ways in which a State Bank would do exchange business Of course the widest way and the way that the existing exchange banks would most object to would be if the State Bank bought export bills in order to get money in London, and then bought import bills in order to send money back again, and then really went in for exchange business in a very large way But it is equally possible for a State Bank, if constituted, to do very much what the Secretary of State now does, that is to say, merely to sell remittances on India, bills of exchange on India, to be met from their own funds and to sell them by competition in the same way as we sell Council Bills to the exchange banks now

197 With regard to the loans given out in London by the Secretary of State, I understand that in the first instance loans are made to approved names against security?—Yes

198 And that recently it was only when that power was exhausted that large deposits were put with the London joint stock banks without security?—Yes, as a temporary measure It was always understood as being temporary

199 Of course you are aware that in the City of London it is quite common for banks and private individuals to put very large sums, hundreds of thousands of pounds, on deposit with the joint stock banks without security?—Yes I think the instances to the contrary are very few Lord Faber, I think, quoted one on Tuesday I do not think there are many cases in which a bank would give security, I mean, it would say we have depositors for many millions of pounds and we cannot allow a particular depositor merely because he has a little more than other people to have a specially secured and preferential position That is their reasoned ground of opposition, I think

200 Very often there is a difference in the rate of interest if security is given?—Do you imply that security is often given?

201 No, I do not wish to do that?—I should say that generally security is not given

202 I quite agree Some reference has been made to the decline in Indian credit I have a few figures here from the Stock Exchange Official Intelligence which are very short, and which I think it is rather important to bring out I am sure you realise that whilst the fall in sterling 8½ per cent India Stock from the top of the wave in 1896 to the present date is 32 points roundly, or 26 per cent, the fall for the enfaced 3½ per cent rupee paper for the same period is only 2½ per cent?—I have not those exact figures, but of course I am familiar with and very

much interested in the fact that rupee paper has not fallen to anything like the extent as India sterling stock

203 Whilst the 3½ per cent sterling Indian Loan in 1896 returned on the highest price of the year 2 87, and at that time enfaced rupee paper returned 3 53, the figures now are Indian sterling 3½ per cent Loan 3 98 and enfaced rupee paper 3 73 So instead of its being at the present moment more expensive to borrow in India than in England, as it used to be, it is much cheaper on those figures to borrow in India?—Quite so

204 Of course, I recognise that India is looked upon as a limited market, but I would suggest that the market is less limited than it was, that the country has had prosperous years, that there is less hoarding now than there used to be, and that the natives generally are more inclined to invest in Government securities?—I think what you say is very valuable, and you will readily understand that it is a matter which is frequently discussed between the Secretary of State and the Government of India You will notice in one of our papers there is a sentence containing a good deal of very sound doctrine The Secretary of State said on one occasion to the Government of India, you must accept my views about what loans can be issued in England, and I am very much inclined to accept your views about what loans can be issued in India That doctrine has a good deal of application to the facts that you were just mentioning

205 With regard to the decline in Indian credit, may I point out that, taking the top of the wave again—1896—whilst Consols have fallen 38 points, or 34 per cent, and, as an instance of a gilt edged security, London and North Western Railway 3 per cent debentures have in the same period fallen 45 points, or 36 per cent, India 3½ per cent sterling stock has only fallen 22 points, or 26 per cent That does not seem to show that there is any decline in the credit of India other than what may be due to general market conditions?—

As I said to Lord Faber at the last meeting I am the last person in the world to controvert any optimistic proposition of that sort, but the sort of fact that I have been in the habit of noticing is this You remember I said to Lord Faber that India stock used to be about half way between Local Loans stock and County Council stock of the same denomination—they were all 3 per cent stocks in those days There was usually for some reason a difference of about 10 points between Local Loans and London County Council stock, and then India was 5 points below the one and 5 points above the other Now India has gone down I am sorry to say, to about the County Council level I took that comparison merely because those three stocks are more of the same sort, they are more, to put it technically, in the same market than perhaps some of those that you quote

206 I think I ought perhaps to say that I did leave out the County Council stock, where the fall has not been so great as it has been in railway debentures, but I do not see that you can take a better guide than the best gilt edged railway debentures, as they are not open to the same considerations which affect Consols?—I think as regards what is in your mind we are very much at one I gather that you wish to emphasise that we ought not to be too much afraid of borrowing, that we ought not to be too much depressed by the fall in our stocks, and that we ought not to check India's development for those reasons I am quite with you there

207 (Lord Kilbracken) The expression "declining credit" has been used of India, do you accept that expression?—No, I am very glad you intervened It is a phrase that people use, but I would much rather speak in plain simple language of the fall in the price of India stock I did not like to call attention to it, because there were other things

208 (Mr Gladstone) That is what I really wished to bring out On the question of loans from the Government of India to the Presidency banks, on which Sir Ernest Cable has put one or two questions you have informed us that the Presidency banks have

29 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

made no requests for loans during the last seven years, and you assume, and I agree with you, that this is because interest at Bank rate was demanded against loans on security by the Government?—That it would have been demanded?

209 Presumably I would submit that the Presidency banks do not care to borrow to lend again on the best gilt edged security without any margin to themselves?—I think that is a very fair point, if I may answer your question in that way. You have not forgotten that passage which I read from the Bank of Bengal's letter, where the Bank of Bengal said that they do not want any profit and merely wish to seek the convenience of the Indian money market (paragraph 15 (1) of Appendix I, page 4).

210 I had forgotten that at the moment, but still I can see that would not be business, and they are accustomed to lend as freely as they possibly can at bank rate almost to any extent against Government securities?—Yes.

211 If they asked a higher rate—I am speaking from positive experience as far as the Bank of Bengal is concerned—I think it would be very much remarked on, therefore they are practically limited to asking the bank rate on securities of that kind?—I dare say it is as you say, that if the Government had made a difference of 1 per cent in the rate on which they lent to the Presidency banks, the Presidency banks would have been much keener on taking loans.

212 Do you not think, if it is decided to grant such loans under special conditions, that 1 per cent below the bank rate might be granted in order to make the relief effective?—That sounds *prima facie* reasonable, but if we were discussing that in the India Office our first step would be to ascertain the opinion of the Government of India, and anything that I say is subject to what the Government of India would think on such a matter.

213 It is admitted that times of pressure for money constantly occur in India, and usually at the same period of the year, when exports are most active, and when it so happens that the Treasury balances are at their maximum. That is set forth, I think, on pages 40 and 52 of Appendix II?—I do not know whether the pressure comes most when the export trade is most active, or just before the time of its greatest activity.

214 It has been suggested that at such times of pressure, when Government resources admit, loans on interest against security might be made to the Presidency banks from the Paper Currency Reserve?—That was suggested in about 1899 or 1900, I think it was, by the Bank of Bengal, and it was supported by the Bank of Madras. I ventured to make some observations on it in my memorandum.

215 I gather that you personally would favour this course with the qualification, if the strength of the banks is held to be sufficient to justify such loans?—Yes. I should like to repeat here, if I do not repeat it too often that that does not come from the Secretary of State, but that it comes from me, and you must not regard it as authoritative. The obvious advantage, which, of course, you see, is that it is a much more stable and trustworthy fund from which loans can be given.

216 Might not any risk to Government be provided against by maintaining an effective margin, perhaps as much as 5 per cent. between the amount of the loans and the market value of the security?—Of course that guards you against loss, but it does not guard you against the risk of not getting back your money at the right moment, which is often just as important. To have your money tied up in securities which are sure to be worth their value three months hence, when you want your money to-morrow, is not always a satisfactory position.

217 On the question of the strength of the Presidency banks, I understand that the India Office lends freely when it suits them to exchange banks in London against security?—Yes.

218 Presumably, therefore, these banks in India, and all the more the Presidency banks, are strong enough to justify such loans against security?—I have mentioned in paragraph 17 (3) of Appendix I that Sir Guy Fleetwood Wilson had a discussion

with the exchange banks as to whether they would like to borrow money from the Government of India. They said—this was the impression made on his mind—that they were not keen on it. The explanation is in a sense fairly simple—that, if they can borrow in London from the Secretary of State at London rates, which might be, say, 3½ per cent, they would not be much attracted by the idea of borrowing the same amount of money in India at Indian rates, or 6 per cent. I do not know if that is the only explanation, but it seems to me a very plausible one.

219 My question was meant to show that the standing and the strength of the Presidency banks in India at the present moment is such as to justify loans against security on special occasions?—Yes. Of course you have to bear in mind that it is a question, not of loans, but of additional loans. If you have deposited two millions with a particular bank, and it is a very strong bank, then the question of depositing a third million is not quite the same as if it were a question of depositing the first million.

220 I quite follow that. I would like to ask you a few questions now on the Treasury balances in India. We have before us the Government of India's resolution of January 19, 1876, as to the management and economising of the Treasury balances (page 35, Appendix II), we also have Sir James Westland's memorandum of November 20, 1888, sent in the Government of India's letter to the Bombay Chamber of Commerce of January 12, 1889 (pp 42-7 of Appendix II). Are there any such later resolutions and reports to guide us as to the system and what is being done at the present time?—I refer to the detailed working of the treasuries?—For a couple of years I think the Comptroller-General—probably Mr Gillan was Comptroller-General at the time—issued a summary of the resource operations of the Government of India and the management of balances during the year, and some sort of information on that subject is given in the annual report of the Paper Currency Department. I do not think that you would have anything else in so general a form.

221 (Mr Gillan) That is only an annual report of course. There is a manual of the Comptroller-General's office which, as far as I know, contains the latest resumé of instructions on the points that Mr Gladstone is asking you about. I do not know whether that is available here or not?—I am not sure, but I will see.

222 (Mr Gladstone) What I should like, if possible, would be, not a mere resumé, but something to enable an expert like Sir James Begbie, for instance, to look into the actual daily working of the treasuries. I do not see how we are to form any independent opinion as to the balances in India unless we are made aware of the exact daily conditions, say, in one or two representative treasuries, large and small, and of the practice, but perhaps that is a question which ought to be asked of the Indian witnesses?—I think so.

223 I would like to ask whether you do not consider that the general conditions have greatly changed in India during the last 25 years?—They have enormously changed. For one thing you will notice that the proportion of private deposits to Government deposits in the Presidency banks has gone up very greatly. I would not say that makes all this doctrine of 1874 and 1876 obsolete, but at any rate it has taken away some of its applicability.

224 I think you referred to the balances which Sir James Westland named of 8 crores, and stated that the assumption was that nothing of that kind could be faced now with the increased revenues, and so on, and the responsibilities of the Government. With the enormous extensions of railways and telegraphs and wireless, could not greater economy be exercised by more direct central control of the treasuries and daily returns of receipt and expenditure by wire, much as traffic over a long length of railway is directed from one central point always by wire?—I should say that

\* Office Manual of the Comptroller-General, published by the office of the Superintendent of Government Printing Calcutta, 1900.

29 May, 1913]

Mr LIONEL ABRAHAMS, C B

[Continued.]

is a question whether the Comptroller-General from time to time does his work with the greatest amount of efficiency. Quite apart from the fact that a late Comptroller General is here, I have always thought that that kind of work, what they call in India resource work, that is, the work of putting Government money where it is wanted, is extremely well done so far as I can judge from such limited information on the subject as reaches the India Office.

225 I think you are aware that, apart from those who have special knowledge of India, our highest financial authorities are inclined to doubt whether these large balances in India are necessary?—If you are speaking of such balances as were held on March 31, 1913, in India, which were exceptionally high, owing to a number of causes with which you are familiar, then there is no doubt those balances were unnecessary.

226 I quite follow that the conditions were exceptional with regard to those, but I refer more to the ordinary balances which I understand are 12 or 14 crores, or something of that kind?—I should say that on March 31 in a normal year the balances in India would be about 18 crores.

227 The total Treasury balances?—The total Treasury balances, including the amounts held on behalf of the treasuries in the Presidency banks, would be between 18 and 19 crores on March 31. I would like to say, if I may, that it is very difficult for an eminent English financier to give a valuable opinion as to the exact amount that ought to be held in Indian Government treasuries at any time.

228 I entirely agree with that, and I do not know that they would go so far as to give opinions, they would not without studying the conditions. I only meant that at first sight they find it difficult to understand how it can be necessary under modern conditions to keep these enormous balances in India. I am really referring to the average balances, and I am not dealing so much with what you end up with on March 31?—You will notice that in Statement C in Appendix II on page 76, the figures are given for four quarterly dates in certain years. One can give that information month by month or for a larger number of years if you wish.

229 I am satisfied with that information, but I should like to see what I consider those large balances justified by a closer examination into, as I said, the weekly and daily working of representative treasuries?—I think you must fall back on the Indian witnesses for that.

230 You mentioned, I think, that the disposal of the Council bills might possibly be done under better conditions by a bank than by the Government?—Did I say under better conditions? As well, I ought to have said.

231 Then as well, for a reason which you explained is not this important branch absolutely bound up with the question of the Treasury balances in India, the Paper Currency Reserve, and the gold standard—it all forms part of the same problem?—I would answer that question in the affirmative, but as regards our inferences from it, I am not sure that we should agree. I gather that your inference is that it must remain a piece of Government business as distinct from a bank business. My inference would be that if you do hand over to a very large extent the Government balances in India to a bank, that same bank in its English branch would have to have something to do with the selling of remittances, merely because, as you say, the two branches of business are so closely allied.

232 Do you consider that any unofficial institution could deal as effectively with these very large questions as the Government?—No. I thought I was rather careful to say, when I committed myself to the view that I rather liked, in some aspects, the idea of a great State bank, that it would have to be very much under Government control, or at any rate working in such close co-operation with the Government that it would amount to Government control, and as far as I can tell, unless that condition were satisfied, the scheme would be impossible.

233 Might I ask as a last question, whether it is not your belief that the present system on the whole

satisfies the interests of the public best, and are not those trading with India generally of this opinion?—I might almost say that modesty forbids me to answer that in the affirmative. I think I might say that the public ought to be well satisfied, but if you would allow me, I should like to give you the result, very briefly, of the inquiry that we made on the subject. Some time ago the Secretary of State asked the Government of India, among other things, whether they had received representations in India against the present system of selling Council bills, and so on, especially representations in favour of restricting them, which you know is the chief measure which has been suggested. The Government of India said, with regard to the restriction of Council bills, it has always been urged by Mr Webb—whose name I expect is familiar to you—that they should be limited to the amount required to meet your home charges, and he made certain representations, which they rehearse. So far as we can trace, no other representations on this subject have been made within the period mentioned by the Secretary of State—that was 10 years. They say in the passage which I think I have already read, that they think, though improvements may from time to time be made, the practice, in their opinion, is generally sound. So I think you are right in saying, and I am grateful to you for bringing it out, that in spite of the strong remarks that one has occasionally seen in the newspapers, the present system is regarded with general satisfaction. I think that if you put those kind of questions to the representatives of the Chambers of Commerce in India, who will doubtless come here, you will get a similar answer.

234 (Mr Keynes) You have given as one of the reasons for the high level to which the balances reach from time to time the difficulty of accurately budgeting in a country subject to such conditions as exist in India, and in paragraph 24 (1) of Appendix I you point out that in March, when the Budget is prepared, it is particularly difficult to know accurately what revenue can be expected. Has it ever been considered whether that could be partially remedied by removing the end of the financial year, say, to September, when the season which would be covered by the year being budgeted for could be more easily forecasted?—There are some questions which are always being considered at intervals of 10 years or so in India, and the question of altering the financial year you will find was considered in 1864, by the Select Committee of 1873, by Lord Welby's Royal Commission of 1895, and so on. I think it has been considered, not with reference to a September-August year, but with reference to a calendar year. If it were a calendar year, I think, from the purely Budget point of view, it would be a better year, because you would start your Budget in January and you would know pretty well where you were until, say, June or July, by which time, if the monsoon were going to give trouble, it would begin to do so. So that you would have six or seven months of certainty, or comparative certainty, and then five or six months of uncertainty, whereas at present you budget from April, and you have only three months of comparative certainty and nine months of comparative uncertainty. Therefore, from the purely Budget point of view I think a change would be advantageous. But—and I have often discussed it with colleagues of mine with great experience of India—it would throw out the administrative work of all sorts of departments in the Government of India and in the provincial governments so seriously that I think it is a change that is not likely to be made, in spite of the Budget advantage that it might possess.

235 I can quite understand that the change would be very troublesome, but you are saying in effect that if the change were once made it would be an advantage to the Budget, and your argument against it is the difficulty of making the change?—No, I am not saying that. I oppose it on stronger ground. Let me put it in a more definite way. Supposing that one had a January-to-December year, which would seem to be the natural alternative to an April to March year, then the Budget work would have to be prepared, and a good deal of other work would have to be done in government offices probably in November and December before the Budget came on. Now, many

29 May 1913]

Mr. LIONEL ABRAHAM, C.B.

[Continued]

colleagues of mine with Indian experience say that it is most important that high officers of one sort and another should be able to tour about India, or tour about their provinces, in the months of November and December because they are the best months in the year for that open air and itinerant work. Of course here I speak subject to correction from those with Indian experience, but I think that is a serious obstacle.

236 In the case of the September to - August year, what would your feeling be about that?—I had not thought over it and I do not really like to say without thinking. Perhaps if there is another opportunity you might ask me later.

237 But you would agree that from the point of view of accurate budgeting March is almost the worst month you could take?—Yes, I think you are right. The worst month you could take, I suppose, would be May, but roughly what you say is correct, I think.

238 I do not know whether this is to the point at all, but in paragraph 30 (4) of Appendix I you point out that the capital transactions in England are apt to occur immediately after the end of the financial year, and therefore the closing balances at the end of March give a misleading appearance because they omit to take account of the pending capital transactions?—That is so. Another thing they may do, which has caused much more misunderstanding, is that if one has raised a loan, say, a week before the end of March, then in a series of annual figures showing the balance on March 31 you see against that particular year a very high balance, and the reader does not realise that it is an accidentally high balance.

239 Therefore from the point of view of tidy account keeping, March is an inconvenient time of the year from the point of view of the India Office?—From some points of view it is, and also you might say that it is really in the middle of a critical period of the year when changes may take place in very large amounts in one week.

240 The next point I wish to ask is in connection with a question raised by Sir Robert Chalmers about the connection between the Indian and London money markets. You rather suggested in your reply, I think, that the connection was not close, and I suppose everybody would agree that there was no mathematical connection and that the rate of money in India was determined by many other things in addition to the London bank rate?—Yes.

241 Would you not say that when there is considerable pressure in India the extent to which remittances are sent there depends upon the London bank rate?—I think they are affected to some extent by the London bank rate, but the point which I am not sure whether Sir Robert Chalmers had in mind, and I am not sure whether you have in mind, is this— they are rather two points. In the first place, pressure may come in India through causes which are not likely to be relieved by the sale of Council bills. One so often thinks that the sale of Council bills is the natural way of relieving stringency in the Indian money market. So far as the stringency is due to great demands for the steadily progressive export trade, I have no doubt that the common view is correct, but the stringency may be due to this kind of thing, a firm buys jute, for example, on borrowed money from the Bank of Bengal, or cotton on money borrowed from the Bank of Bombay, and is not able to pay back the loans it has taken from the bank until it has sold its finished article. Supposing that either the manufacturer is holding out for high prices, or the purchaser in Japan or the Argentine is rather slow in coming forward, the period over which such loans extend, that is to say, the period until the actual sale for export is made, may be prolonged to an unusual extent. That causes a certain amount of stringency, and so long as it goes on it is very difficult to see how it can be relieved by the sale of Council bills, because no export bills are created against the export until the export is actually arranged for. I hope I have not been too technical, but I think that is one reason against assuming that when there is a stringency in India it is likely to be relieved soon from London.

Then there is another fact which perhaps you are not aware of. Of course you are aware that the exchange banks do, as far as I can tell, a certain amount of business in the way of importing capital for banking purposes, but they do not do very much, as I gather, of such business, and the Presidency banks are not allowed—they have been asking for many years to be allowed—to import capital to be used temporarily for banking purposes, the Secretary of State never having seen his way to grant that permission. No doubt you will be much interested in the papers on the subject that you will see. That restriction no doubt has a good deal to do with preventing banking money from being imported into India at the moment of stringency, and therefore it prevents this equalisation, or this approximation, that you might expect between the London and the Indian bank rates.

242 (Chairman) What do you mean by saying that the Presidency banks are not allowed to import capital into India for banking purposes?—Perhaps I might put it in this way, I will not take you through the clauses, because that would make it rather long. The Presidency banks came into existence in India, they raise their capital in India, they buy stocks, and so on, in India, and they may raise further moneys in certain ways, all in India. From time to time they have said to the Government of India "Supposing that we could take a certain portion of our securities and pledge them as security for loans, say from the Bank of England, or from some great English banking institution"—I will not go into the technicalities of it—"we should be able temporarily to increase the capital that we are able to lend to our customers in India." You will see from the papers\* that are going to be given to the Commission that the Secretary of State has always, for quite a number of reasons, objected to that change, so the Presidency banks are, as it were, closed up in India, and have no access to any country outside, except Ceylon, which is inconsiderable.

243 What the Secretary of State has objected to is the removal of the securities held by the bank from India to London, and their being pledged in London, is that so?—He has objected to the Presidency banks borrowing in London from a London lender.

244 (Sir Robert Chalmers) Is that only as regards the Bank of England? Is it not open to the Presidency banks to receive deposits in London?—No, in fact, I may say that the Presidency banks have never asked to be allowed to do that. That would really change their character very completely.

245 (Mr. Gladstone) Would not the answer be that the Presidency banks must not compete in exchange operations, and they are prohibited from doing so?—That is rather a gloss on my meaning.

246. (Sir James Bagot) They are not allowed to borrow in London independent of the exchange business?—I will tell you why I should not accept Mr Gladstone's gloss on what I said, if I may. You will find from the papers\* when they are submitted to you, that the Presidency banks have always said, and I am quite sure *bona fide*, that they do not wish to compete with the exchange banks in exchange business, they merely want to borrow in London in order to relieve the Indian money markets.

247 (Mr. Keynes) To come back to the point from which we began, it is the case, is it not, that the exchange banks lend a great deal of money in India on loans or advances, and do not engage all their funds in foreign bills?—No doubt when they have money in India they do that. I hope you will ask the representatives of the exchange banks whether it is their habit to send out money to India in order to be employed in that way.

248. My point rather is this, that the effective rate for money in London determines how much it is worth while for the exchange banks to expend on the purchase of Council bills; those Council bills put them in funds in India, and I should not suppose that they would make up their minds until the last moment whether it would be most profitable to use those funds that they get in India in buying more foreign bills which could

\* See Appendix XV., page 338

29 May 1913]

Mr. LIONEL ABRAHAMS, C B

[Continued

be discounted in London, or in making direct advances, and I should be surprised, therefore, if the rate at which business in bills could be done were very different from the rate at which advances would be made on a similar sort of security. I would like to know if you are intending to deal with that in your answer?—My view about the way that the exchange banks do their business is, I think, rather different from yours. I think primarily the exchange bank regards it as its business to buy bills as cheap as it can, and then in due course to collect the money or to discount the bill at as favourable rates as it can. I should say that the exchange banks generally regard the loaning part of their business as very subsidiary. I believe it becomes more and more important, but I think even now it is still a subsidiary branch of their business.

249 Is it your opinion that the rate for bills in India might differ appreciably more than it does in England from the rate for advances on similar security and for similar periods of time?—I am inclined to think that it might, but it is so purely a technical question of the actual working of the particular set of banks that I think it would be well to ask the representatives of the banks.

250 Mr Gladstone, I think, drew attention to the remarks that you made in paragraph 17(3) of Appendix I, with regard to lending to exchange banks in India, and he pointed out that a good deal was already lent to them in London. I should like to know about how much that has been in recent years?—I have a statement here in case it is interesting to the Commission, but, if you will allow me, I will not read much of it because you cannot take in a great number of figures when they are merely read out. The important point is this. There are five exchange banks which borrow from the Secretary of State. I have had taken out for me the amount of the outstanding loans to each bank shown in the last weekly statement for each month in 1912-3, then we have added up the total and divided that by 12, which gives in a rough way the average amount of India Office money held by the exchange banks. Those averages for 1912-3 are the Chartered Bank of India, Australia, and China, 450,000l., the Eastern Bank, 70,000l., the Hong Kong and Shanghai Banking Corporation, 180,000l., the Mercantile Bank of India, 220,000l., the National Bank of India, 470,000l. The total of those five is 1,390,000l. Of course, you can have the information in much more detail.

251 What was the highest total, apart from the average, in any week?—The highest of these figures that I have before me is 1,900,000l. at the end of December 1912, but in weeks which do not happen to be the last week of a month there may have been higher figures.

252 The average, you say, was about 1,400,000l.?—That is right.

253 So that they get very large sums?—Yes, very.

254 Large in proportion to their resources in London?—I would not say in proportion to their resources, as they have very great resources. Still, there are the sums, and whether one calls them large or small is a matter of judgment.

255 If these funds were lent to the exchange banks in terms of rupees instead of in terms of sterling would it be possible to get a higher rate of interest, do you expect?—I do not know. I should have thought, but I speak with great diffidence of an institution like the Hong Kong and Shanghai Banking Corporation, that if it did not borrow money from the India Office it would borrow money from someone else in London on as good terms, or nearly as good terms. You see, they are very strong banks, and in good credit.

256 You would not say that in regard to this particular kind of loan the India Office was in a predominant position?—I do not think so. Of course, you have Lord Faber here who knows much more about banking than I do. The Eastern Bank, as you know, is rather a new one, but I should say that if one of these old established exchange banks, which have connections, some of them, all over the British Empire and beyond, wanted to borrow half a million or a quarter of a million of money in London, and could

not go to the India Office, they would probably have no difficulty in getting it somewhere else.

257 At substantially similar rates?—I should think so. Of course, I would not dogmatise, but that is my impression.

258 If this sum is lent them now in London against rupee paper, it would not be a very revolutionary thing for the Government to lend it them in India against similar security?—It would not be a revolutionary thing, but then you must regard it, please, from some different points of view. Just let me take a case to show where your argument, if I may call it an argument, that the two things are much the same, would rather break down. Supposing that the Secretary of State had been accumulating some money towards the end of March in order to pay his 5th April dividends, and he had lent it to these banks with the understanding that on the 3rd or 4th of April he will get it back from them and be able to use the money to pay his dividends, from the point of view of the Secretary of State it would be a very serious matter if that money, instead of being repayable to him at the Bank of England, at 4 p.m. on a certain day in April, were in India and repayable to the Comptroller General.

259 I did not mean to controvert that, I was thinking of a different point?—I was not sure whether you had noticed that. It is a very important point. From the point of view from which you have raised it, that it would not be a revolutionary departure, I quite agree with you.

260 I meant only that if the Government of India had the money to lend in India, then to lend it in this particular way would be nothing very new?—There I quite agree with you.

261 In paragraph 15 of Appendix I you quote a number of opinions that have been expressed by the Government of India from time to time, you will not perhaps endorse them, but I want to ask you how far those opinions related to lending money from what I might call the normal balances of the Government, and how far to lending money from amounts temporarily with them in excess of their normal requirements?—I quite agree with you that a sharp distinction ought to have been drawn, but whether the writers were scientific enough to draw such a sharp distinction in their own minds I do not know. I agree with you that there is a distinction in principle between the two kinds of loans but there is this common to the objections to both—that, whether you are discussing a system of regularly lending a crore or two crores, or whether you are discussing a system of occasionally lending a large sum when you have very large sums, the argument that the Government may have to withdraw its money at unexpected times applies to some extent.

262 I was thinking partly of this argument—for the Government to lend would be a disturbance to the supply of money in India, but at present if the Government does not lend it means a disturbance?—Yes. Of course, the general argument which, as you very truly say, applies to normal times, would have much less applicability to a time like the present, when the amount locked up in the Government Treasuries is unusually large.

263 You would not wish therefore, to endorse these opinions if they were taken to apply to abnormally high balances?—Certainly not.

264 When you were talking last time about the transfer of funds from India to London generally, you said that you were always willing to do it when there was a demand for Council bills, and when the Government of India had funds in hand, because it facilitates your operations in various ways that it should be possible for you to issue your loans at a convenient moment, and so forth?—Yes.

265 You did not mention among those advantages the general strengthening of your sterling position, that is to say, in addition to your cash balances in London it might be regarded as an aid to the paper currency reserve and the gold standard reserve. Would you say that was the case?—You mean, I suppose, that if there were a sudden fall in exchange

29 May 1913]

MR. LIONEL ABRAHAMS, C B

[Continued

the larger our balances at the moment the better would be our position for meeting such a fall, is that it?

266 Yes?—It is perfectly true that, the larger our sterling reserve is, the better is our position for meeting a fall in exchange, but if you are asking me about the actual practice, I should not think that the Secretary of State would ever increase his resources with that object in his mind—I mean he would be guided actually by many other considerations than that. Although, as you say, if incidentally the result that you mention occurred it would be an advantage, still it would only be incidentally.

267 In the crisis of 1907–8 he started with medium balances and he used them to a considerable extent, so that the London balances sank at one time to a very low point, that was the case, was it not?—Yes.

268 In the succeeding year the balances went up to an unusually high level?—Yes.

269 I should like to know if it was at all in the minds of those who were directing affairs that this raising of the balances would be putting them in a stronger position if there was an early recurrence of the difficulties that they had in 1907–8?—I think I can say very definitely that that was not in the minds of the people concerned. I would like to add this, so as to make the answer quite complete. After the recovery in exchange subsequent to the crisis we sold our Council bills rather freely for the purpose of building up again in London our gold standard reserve, which had been depleted, and that building up was naturally effected very largely by remittances from India. It is quite possible that during the interval between when we got the money home and when we invested it in securities for the gold standard reserve the balances were rather high.

270 Apart from the investment of the gold standard reserve, it was the fact that the accumulation of balances in the years 1909 to 1912 did have the effect of making your sterling position very much stronger?—Now you are speaking of the whole period. It did make the sterling position stronger, but I can say, because that question has been sometimes raised, there has been no policy of building up an exceptionally strong sterling position with that object in view.

271 That is what I wanted to know?—If you have read, as no doubt you have, the India Office Memorandum on India Office balances which was given to Parliament, you will recollect that what I say now is practically the whole theme of that memorandum.\*

272 Now as to the general principle of the Reserve Treasury system. So far as I know, there is only one other country that has anything similar, namely, the United States, and it is always made a criticism there that it upsets the money market by taking funds off it, sometimes at a moment of inconvenience, would you say that the Indian system is open to a general charge of that kind?—Yes, with considerable mitigations. I do not think the Indian system does it on so large a scale, or anything like so large a scale. I happened to be looking at some American statistics, I do not know how the United States authorities get the figures, but still they publish them officially. They show what proportion of the total money in the whole of the United States is held in Government Treasuries, in banks, and so on. I notice that they give these figures for June 30th of each year, and in one year they held 16 31 per cent. of the total money of the United States †.

273 Does that include the amount held against the gold certificates?—It includes the gold certificates, but not the gold that they hold against them.

274 It is the Treasury balances, is it?—They call it "Coin and other money in Treasury as assets." So 16 per cent. of all the money in the United States is shown in this return in that particular year as having been locked up in Government Treasuries. The percentages vary, that is the maximum, and the lowest that they give is rather under 9 per cent.

275 The important figure is the fluctuation?—Yes, the lowest percentage is 8 6, and the highest, as I say,

16 31, that is, the amount is twice as great at one period as at another. I merely mention that as showing that the Indian system is not as bad as that, but no doubt within limits it is open to the same criticism that is notoriously brought against the American.

276 I suppose that in March of this year something like 8 or 9 per cent. of all the money in India must have been in the Government Treasuries, and a few months previously perhaps 3 or 4 per cent.?—I will not try to work out the figures in my head.

277 There was a very large fluctuation?—Yes, there was.

278 Would you say that the stringency in Bombay and elsewhere this spring may have been partially due to the working of the Reserve Treasury system in India?—I suppose that it was, but I would not say that, if I may so express it, with any great enthusiasm, because the stringency of this year, as you see from the chart I have produced, was not appreciably greater than the stringency that has existed in many years when there has not been so large an accumulation of money in the Government Treasuries.

279 I did not mean that it was the only possible cause of the stringency, but whether in this particular instance it may not have been the cause, while there may have been other causes in other years?—I suppose it is clear that if less money had been in the Government Treasuries it is probable that there would have been rather less stringency, except that there is always the very difficult question, how far is the money that is locked up in Government Treasuries what is called money market money, or how far is the locking of it up a cause of the demand for advances from money market resources. There are so many different kinds of money—you are familiar, I am sure, with that point.

280 Would the first three months of 1913 have been a suitable occasion for lending money from the Treasury balances in India if any sort of different machinery from what there actually was had been in existence for doing it?—I could not conceive a more suitable period. Supposing the policy is adopted, the most suitable time is the one at which there is most money available, and I do not think there has ever been quite so much money available in the Government Treasuries in India as in the period that you mention.

281 I should like to go back to almost my first question and bring this in connection with that. One of the reasons why there was so much money in the Government Treasuries was because there was rather a low amount of Council bills sold, is not that so?—That accounted for it to some extent. I do not think it was a very serious cause. In one of Mr. Newmarch's papers you will see a comparison of the Council bills sold in that year and in a previous year.\* I do not think the sales were exceptionally low.

282 Are those figures available for February and March?—In February 1913, there were sold telegraphic transfers for 357 lakhs and bills for 63 lakhs. That adds up to 420 lakhs. That is less than in the previous year when the two together added up to 487 lakhs. Similarly in the months preceding the sales had been lower, but they had not been noticeably low. Shall I give you the figures for January?

283 I would like to have them for January?—In January 1913, the sales were bills, 255 lakhs, and transfers, 318 lakhs, that is 573 in all, whereas in January 1912, the bills were for 85 lakhs and the transfers for 645 lakhs.

284 That is to say in 1912 they totalled up to 730 lakhs, and in 1913 to 573?—Yes.

285 As you say, the difference is not very great, and the figure 573 is not a very large figure. Have you got the figures for March?—For March this year the bills were for 55 lakhs and the transfers for 177 lakhs, and for March of the preceding year 76 and 290 lakhs respectively.

286 So in the previous year there were 366 as against 232 this year?—Yes.

287 So they were about 50 per cent. higher in the preceding year?—The only point I am making is that

\* Cd 6619

† Report of the Comptroller of the Currency, Washington, 1912, p. 51

29 May 1913]

Mr LIONEL ABRAMSON, C B

[Continued

they were not noticeably low. If you hold that the exceptional amounts in Government Treasuries in India were due to an exceptionally small sale of Council bills there I could not follow you.

288 As compared with the preceding year there was a difference of nearly 2,000,000*l.* in the first quarter of the year?—Yes.

289 Would you hold that the small demand for Council bills was due to the high effective rate for money in London?—I think, although I could not prove it, that the high rate in London does have some effect in diminishing the demand for Council bills. I think probably the exchange banks would operate generally with less freedom when they have to discount their sterling bills at rather onerous rates in London, but I do not think—and I am merely giving you my impression—that that is one of the most important of the causes. I think that what you may call general trade causes in India are much more important. In support of that I might mention, as shown in this chart, which I daresay you will be looking at later, at the end of 1912 and early in 1913 there was a 5 per cent bank rate in London, and in the previous year for the same sort of period a 4 per cent bank rate. The difference of 1 per cent would not account for any very great consequential differences.

290 That is the bank rate, and the bank rate differs in its effectiveness?—Yes.

291 That is the first point, and also that is the three months' bank rate in London, and it is not the three months' bank rate in India that you are talking of?—That is so. What I was answering at the moment rather was this—whether this small sale, this reduced sale of Council bills, was to be very largely attributed to a high Bank of England rate or rather, not to a high Bank of England rate—I do not wish to put it in that way—but to a high general money market rate in London. I should reply that I cannot say that the money market rate in London was a very important factor.

292 You think it was a factor, but not a very important one?—Yes.

293 (Mr Gillan.) I want to ask you first about the amount of our balances. The attacks that have been made on the Government from this point of view have chiefly been confined, have they not, to the home balances, that is, the balances held in the India Office?—Yes.

294 But the real point of importance is the aggregate balances?—Yes, that is a point which I may say the India Office has lost no opportunity of mentioning.

295 You say that the excess which has taken place in the aggregate balances has been due chiefly to two causes, first, to excess of actuals over estimates in the revenue account, and, secondly, to short spending on railways?—Yes.

296 Now about this short spending on capital account, it has been due chiefly, has it not, to non-compliance with home indents, or rather it has taken place in the English part of the expenditure?—It has varied a good deal. It does not entirely answer to what you say. Would you mind looking at statement A, page 70, where you will see the figures for 1910-1. In that particular year you will see it was mostly Indian, I do not know the explanation, but as you say, in other years it has very largely taken place in this country. In 1909-10, for example, the under spending was mainly in this country, and also in 1911-2.

297 I do not want to go unnecessarily into technical points, but there was one difficulty, was there not, about the amount of indents that the audit officer was allowed to certify?—Yes. What we have done, as of course you know, is to allow indents to be certified in advance up to a very considerable sum—I think it is now about four millions.

298 I merely want to make it plain that that particular point has been considered and dealt with?—It has.

299 In the year 1912-3 I think as a matter of fact there was not a lapse, or very little lapse?—Yes. That is partly due to the fact that an extra grant was made in the middle of the year. If you are bringing out that the Secretary of State and the Government

of India are doing from time to time what they can to prevent these lapses, then I am grateful to you for bringing that out, and, of course, my answer is in the affirmative—that they are doing what they can in that respect.

300 Another point in connection with the same capital expenditure. At present there really is only one year's programme for the railways?—Yes.

301 There used to be a three years' programme, did there not?—There were great ideas of a three years' programme, but I do not think they were ever more than ideas, but they had sometimes a delusive appearance of reality. Nowadays I think that very properly, since the Secretary of State cannot pledge himself for three years ahead, he does not even appear to do so. I think that is the extent of the change.

302 The point I wished to get at was that that does create a practical difficulty, does it not, considering that the railway programme is made up to December, and that they have to raise the expenditure on that programme in April?—Yes, and the difficulty is a great one. Not only, as you say, have various attempts been made to meet it, but I have no doubt that we shall go on making more attempts and getting nearer to a satisfactory system. That is what one may call one of the recurring questions of Indian administration.

303 Now about the revenue account and the estimates that have been made. I think you said that the excess in the opium revenue was not a matter of estimate, that is to say, the excess was definitely put aside as a matter of policy?—That is so. The excess, when it had occurred, was put aside as a matter of policy, and the disposal of it is shown very largely in that despatch of Lord Crewe's dated 23rd December 1910, that is given in Appendix II (pp 65-6).

304 The other head under which the excess chiefly occurred was what you call, I think, commercial?—That is so. If you look at Statement E in Appendix II page 81, you will get the particulars.

305 As a matter of fact, in the railways the revenue has changed, taking the last five years, by millions a year, one way and the other?—Yes, it has. It is extraordinarily difficult to estimate what the railways are going to earn.

306 It has sometimes dropped by millions, and it has sometimes risen by millions, as, for instance, in 1907-8 and 1908-9?—Yes, and when it rises it rises very high, and when it falls it falls with very serious effect. In 1908-9 the railways yielded between three million and four million pounds less than they were expected to yield.

307 That is a point I was coming to. In the last three or four years there have been huge surpluses, excess of actuals over estimates?—Yes.

308 But in 1908-9 there was a deficit of actuals as compared with estimates of three and three quarter millions, was there not?—I have not the actual figure before me, but I have no doubt you have got it right. It was about that.

309 What I want to bring out is that the estimates are not always necessarily wrong in one direction?—Of course not.

310 Which shows, as Mr Keynes has suggested in reference to the budget year, the extreme difficulty of budgeting at the present time?—Yes.

311 The fact is at present that the Finance Minister has to make a declaration before seeing his hand?—That is so.

312 And we at present cannot make a forecast of the coming year so much as an estimate of what is considered to be the normal?—It comes very largely to that.

313 That is what is always said in the financial statement?—Yes.

314 So that unless the year happens to be exactly a normal year your estimate is bound to be defeated—either to be in excess or in deficit?—That is so.

315 There is another point in connection with the same matter. The revenue estimates are a means to an end, are they not, in this way, that you use them to determine the scale of expenditure that is permissible?—Yes.

29 May 1913]

Mr. LIONEL ABRAHAMS, C.B.

[Continued]

316 That is what one is aiming at in making the Budget?—Yes, and when determining the amount of the loans, that is one of the things determined by the estimates.

317 Considering the fluctuations in the revenue, it is well, is it not, for the Government of India to be extremely cautious?—Yes, I think there are many administrative devices, which sometimes seem curious to anyone who is not familiar with these Indian difficulties, that are used in India, and are very admirably adapted for the purpose.

318 Will you say that in making the Indian Budget one has got to consider, not so much what we are likely to get, as what we can count on getting, and make sure of getting?—No, I do not think that you budget, as a rule, in such a pessimistic way as to reckon only on what you are quite sure of getting. I would rather say that you put down as your probable receipts, as you very well put it just now, what the receipts will be if the seasons and general conditions are normal, and that, of course, is a guess, and sometimes a hazardous guess.

319 In any case, with reference to a question that I think Sir Robert Chalmers put, the distribution of what we call the agreed surplus, that is, the surplus that we find we have at the end of the year, requires exactly the same sanction as proposals for the distribution of a surplus which we anticipate?—Yes. Formerly that was not so, but I think it is a great improvement that it is now as you say.

320 That is now the rule?—Yes.

321 One more point about balances. What I want to put to you is whether it does not really work as a sort of equalisation of the conditions of the finances of bad and good years, that is to say, if you have your revenue constantly varying it is impossible every few years to vary your taxation?—Quite so, I think you put it, if I may say so, extremely well, and I would, to bring out the full meaning of it, extend it a little. What one finds is that when one has a bad year then one has to borrow, to issue India bills, and so on, then after an interval a good year, or a series of good years, and then you pay off in the good times the debt that you incurred in order to meet the troubles of the bad times. Really you must expect this seesaw of good and bad years, of deficits and big surpluses, and except from the point of view of pedants and unpractical critics, I do not think there is much harm in these fluctuations.

322 You think it is permissible to keep something in hand in the good years?—As a rule, when you have a good year it has followed on a bad year, and you do not really keep it in hand, you use it in order to pay off some of the debts that your last bad season imposed upon you.

323 Practically that has been the effect of the last few surpluses, that you have paid off, you have got yourselves square and you have something practically, you might say, in hand for trouble when it comes?—Yes.

324 And you are in a stronger position because you have paid off all your floating loans?—Yes.

325 At the same time you have maintained, not an excessive, but a very steady railway programme for the last four or five years?—Yes. But for those surpluses, as Sir Ernest Cable was saying, it would have been an exceedingly difficult thing to maintain this railway programme, and to cut it down would have been very harmful to India.

326 About this change in the Budget date, is there any objection from the home point of view, that is to say, does it interfere seriously with other arrangements at home?—What sort of change were you thinking of?

327 Say to September or October?—You only have to think of Parliament. Supposing that Parliament is going to have an Indian Budget debate in July, you cannot then say what is going to be in the Budget that is to be introduced next September, so that you would have to recapitulate the Budget that was introduced last September. The House of Commons is very patient with regard to Indian affairs, but to listen to a long speech on a Budget which is nine months old, I think would overtax the patience

even of the House of Commons. As regards the India Office, of course, it does not matter, we can adapt ourselves.

328 (Chairman.) Perhaps the House of Commons would like to have the Indian Budget earlier in the year?—I was assuming that you would probably not have the Indian Budget earlier than, let us say, May, what with pressing home business, and so on, and even if in May you were discussing last September's Budget, you would feel that it was rather a wearisome business.

329 (Mr. Gillan.) But you would agree that if a change were possible it would be desirable?—Yes.

330 That the present date is a very unsatisfactory one from the point of view both of India and of England?—Yes. If a change could be made without disturbing the administrative arrangements for touring, and so on, I see great advantages in it.

331 Now, about council bills. The only thing I want to ask is that it was not quite clear to me from the evidence you gave us at the last meeting, whether you consider that the amount of council bills is really determined by the requirements of the Secretary of State or not, that is to say, how far you bring in the argument that they are required in the interests of trade?—Do you mean that the amount is actually fixed with reference to the demands of trade?

332 Yes?—I know I was a little hesitating in answering one of the questions. I think I put it thus way. That supposing in a certain year we begin with an enormous number of council bills to be sold in order to work up to our estimates, we should sell rather freely in the opening months of the year in order to make some progress with regard to carrying out our programme, but that when the year got on probably that sort of consideration would almost fade into insignificance as compared with the demands of trade. It is the demand of trade that is throughout the greater part of the year the governing consideration.

333 You do not mean that you actually bring home money that is not going to be required at home?—No.

334 But it may be in anticipation of requirements?—It is in anticipation. I am very glad that you have put that question, because, as I think I said in reply to the Chairman or to some other member of the Commission, the only purpose of bringing home money from India to the India Office is to spend it in the interests of India. The idea of bringing home money in order to have the pleasure of having a large fortune on show here I need scarcely say is quite out of harmony with India Office ways. Whenever we end up the year with a bigger balance than there is any need for at the moment we are usually sorry that we have not had the opportunity of spending the money, say, by paying off debt, or by avoiding the issue of new debt.

335 (Chairman.) Do you bring home money in excess of your actual and of your anticipated requirements on the ground that it is a convenience to trade that that money should be brought home, or do you limit your total purchases to what you either actually require, or think it wise to provide yourself with in anticipation of foreseen requirements?—I think I can answer that best in this way. We know that the requirements for expenditure on India's behalf in England are practically illimitable, we know, for example, that in every year we ought, if we could, to spend more money on a variety of purposes than we actually can spend owing to the restrictions which the state of the money market, and so on, place upon us. Therefore we are never in a position to ask if I bring home so much more money shall I know what to do with it? There are always objects in England for which money is required on behalf of India, and, indeed, urgently required.

336 (Sir Robert Chalmers.) For capital purposes?—Capital purposes are those for which there are the most unsatisfied demands.

337 (Sir Ernest Cable.) And for paying off debts?—For paying off debts, buying capital stores, and so on.

29 May 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

338 (Sir Robert Chalmers) You bring home money for the double purposes of revenue and capital accounts?—That is so

339 (Chairman) Am I right in understanding from that answer that you do not sell in excess of your requirements, actual or anticipated?—If by "anticipated" you mean definitely anticipated and set forth in any schedule, then I do not think your question puts the fact quite as it is. Supposing we were selling very largely now and you suddenly ask "What are the specific requirements that the proceeds of those sales are intended to meet?" I could not give you a specific definite schedule of the requirements which those proceeds are intended to meet. I should say they are partly the Budget disbursements of this present year, and then I should be a little indefinite in form but not really in substance. I should say, if at the end of the year we have some millions more than the closing balance for which we have budgeted, that only means that we shall be able to have either a bigger railway programme than otherwise, or that with the same sort of railway programme we would have to make smaller issues of debt, and so on.

340 May I put it differently? You would never bring home more than in your opinion you could usefully use at home?—Quite so

341 If trade required more, you would not consider it your business to provide it unless you saw your way to use it usefully at home?—Quite so. Of course, the circumstances in which we had money and could not usefully use it are very unlikely to arise but if they did arise we should not be so at the mercy of trade as to sacrifice other interests merely to please the trader. That, I fancy, is the gist of your question.

342 (Mr Gillan) I am very anxious to get this quite clear, because, as you know the charge that is always made against the Government generally is one of manipulation or management, whether it is of the currency or of the drawings on India or anything else?—Yes

343 With regard to this council bill question one point that has been made is that the Government draws in excess of its own requirements, and that it was explained that this was done for the benefit of trade, and objection was taken to that, that the money of India as it was put, was being used for trade purposes?—Yes

344 I want to know if we cannot get the Government case established merely on the ground of Government requirements, that is what I am anxious to find out from you. For instance, in paragraph 30 of Appendix I you give, I think, four grounds for the free sale of council bills?—Five, I think, actually

345 The first three of those relate to trade matters, and the fourth is the Government point of view?—That is so

346 Would it not be clearer if this fourth ground which you say is much the most important, were put forward definitely as the object of the policy of the Government, and the others as incidental advantages?—I quite agree with you. Let me be perfectly candid in this matter. You know that the whole Indian financial system is a very great and complicated and difficult system, and very often on extremely short notice one is asked to give Parliament a sort of justification of it in three lines—a very brief lucid, correct summary. I think occasionally it has happened and I do not think one need be ashamed of it that when giving a summary of that sort one has not always put every fact in its right perspective, I think occasionally one has overstated the importance of meeting trade, to use a phrase which is now familiar to you, and has rather left in the background all these more important considerations of meeting the Government requirements and of doing the best for India as a political community. Sometimes in an official publication the thing has been put in what is not ideally the right perspective. In such a matter the Secretary of State relies on officials. They have done their best, but, under great pressure of time, have not always expressed the facts with the most complete and scientific precision that can be reached after long study and labour. I think there have been some slight

defects in the method of presentation, that is what it comes to

347 Then in paragraph 38 of Appendix I you say "This and similar statements seem to rest on the assumption that the Secretary of State has adopted a policy of retaining in London a balance greatly in excess of the amounts needed to meet his requirements. This assumption is incorrect." You would not modify that statement?—That refers to a slightly different matter. I think that we are probably at one, but I am not sure. What I meant to say there was that the Secretary of State does not want to keep high balances, he merely wants to have enough money to meet his requirements.

348 You are referring to the policy there?—Yes

349 About loans in India. Mr Gladstone brought out that the balance that we aim at at the end of March is about 12,000,000l, 18 crores?—Yes

350 That balance is fixed at that amount, is it not, to allow of the withdrawals that we know will take place within the first six months of the financial year?—Yes

351 That is to say, we are working down to a minimum balance which is reached about November or December?—Yes. That is very important, and I ought to have mentioned it in replying to Mr Gladstone, but I forgot.

352 That is to say, we hold a certain balance on March 31st because we know from experience that there will be withdrawals of a certain amount which will work it down to what is considered an absolute working minimum about November or December?—Yes. Some of Sir James Westland's papers bring that out rather fully, as you know.

353 Suppose we take that absolute minimum working balance of, we will say, 12 crores, from that point the balance begins to go up again, does it not?—Yes

354 In January, February and March?—Yes

355 There is then an excess over and above the working balance?—Yes

356 Is there any objection to lending that temporary excess out in India?—No, I see no objection to lending anything that can be safely lent, provided—and this is very important, I think—that this is borne in mind. If you lend in some years you rather create an expectation that you will be lending in all years, and it is a very serious thing to create an expectation of that kind which you may have to disappoint. That is perhaps a platitude, but it is really a very important platitude to bear in mind. Then there is a further point which, of course, you have not overlooked, that in December you cannot lend much. If you have got in the habit of lending, people might expect to borrow your money in December, when you have not got it, rather than in March when you have got it.

357 I do not follow that, why should they not take it in January, February and March when there is a big demand?—But there is a big demand in December.

358 They cannot get it then, we will say, but suppose they can get it a later on?—I am merely putting this consideration, that if you get into the way of lending in January, February and March when you have money, it is a little difficult to give a completely satisfactory answer to someone in December who wants to borrow. I mean, that if you say you have not the money, the answer is, "Well, you ought to have." I am merely putting it as a more or less psychological difficulty that may be of some importance but I do not wish to put anything hostile, as I think I made clear.

359 Do you think this possibility of money getting upon the market would apply if the amount lent out were comparatively small?—No, of course the smaller the amount the less is the particular danger.

360 (Sir Robert Chalmers) Would you stick to the small amount?—No. One of the reasons why I was so anxious not to say anything very definite as regards my own opinion is that everyone of these questions that Mr Gillan is putting, and what you have just put, are very important questions requiring judgment. They cannot be answered in brief sentences, and the

29 May 1913]

Mr LIONEL ABRAMMS, C B

[Continued

whole decision is a very difficult one to arrive at I quite see the force of your question naturally

361 (*Mr Gillan*.) The only other point I wish to put to you is about loans from the Paper Currency Reserve I take it that the chief ground on which you make the proposal is that at present we have money to spare in the Paper Currency Reserve?—Not that at the present you have money to spare, because that equally applies to the Government Treasuries, but that you are more likely to have a suitable sum there than you are in the Treasuries. That is the one and only justification

362 But if there is a spare amount in the paper currency, would the better course not be to put it into a permanent investment, as has been done with spare money before?—That is what Sir Clinton Dawkins said when he discussed it in, I think, 1900. It seems to me that if you have some spare money it does not make very much difference to the taxpayer whether you lend it say for half a year at 7 per cent. or something like that, or whether you buy a security which gives you 3½ per cent. throughout the whole year. If you could really meet a genuine reasonable demand on the part of the public by lending it at 7 per cent. for half the year, or something of that kind, and could assist Indian trade, the balance of the argument is in favour of that, I should say

363 (*Mr Gladstone*.) With reference to a change of the budget year, I was wondering if a change to September or October would suit you as well with regard to the issue of sterling loans. Would you not come across the autumn and winter money market, which over here is usually less favourable than the summer money market, which you now make use of for the loan requirements of the present budget year?—We certainly could not depend on an autumn money market in that way, but I think it is quite possible that the Government of India and the Secretary of State between them, before the budget came out in September, would exchange their views as to what would be the probable size of the railway programme and the probable amount of loans. The Secretary of State would have to issue his loans before the budget. You see he is not like a Minister who has to go to Parliament or to an authoritative body in order to get permission to issue each particular loan

364 (*Sir James Bagbie*.) In reply to the Chairman on the subject of the Government deposits with the Presidency banks, you mentioned that they began in 1862?—As far as I could ascertain that was the beginning

365 At that time the Government were not only depositors, but also shareholders?—Yes

366 You mentioned to day also that deposits were given to the banks by way of compensation for giving up their note issues?—Perhaps I should be more careful if I said that the banks always claimed that that is the compensation, and I think generally, without committing myself, it has been thought that there was some reasonableness in the claim

367 But you would not admit, as an absolute fact, that it was a case of compensation?—I do not think, if I may say so, that there is very much between us on the point. Supposing that at any time one of the Presidency banks said that it had a definite claim to so and so, because otherwise it would not be compensated for the confiscation of its rights, I should not like to agree with that, but in a friendly and general way I think most people would agree that there was something to be said for giving the banks something when the note issue was taken away from them

368 The reason I asked the question is that it is constantly being said that Government leave considerable sums for the benefit of trade with the Presidency banks, and it is a question, to my mind, whether the Government are altogether entitled to say that. If they give the deposits by way of compensation for giving up the note issue, the assistance that the deposits give to trade is a consequence of the compensation, not the cause?—May I ask you, is there very much in that point? I do not mean is there much substance in it, but is there not a slightly unreal controversy as to whether the Government claim a little too much merit for themselves or not?

369 I do not wish to press the point, but I would like to have it cleared up, that is all?—I should say, and I think this is very much in accordance with your view, that it has generally been recognised that the claim to compensation, though in no way a legal claim, appeared a claim that it was reasonable to recognise

370 In paragraph 9 of Appendix I you say, "On the flotation of a loan, and in special cases, the amounts are increased." I do not quite know what you mean to impress upon us there. In the case of floating a loan, do the Government increase the balances with the banks in advance of the issue of the loan?—No

371 Then how?—The information that I gave was taken, I may almost say plagiarised, from that telegram from the Government of India, from which I read you some extracts before (see page 66, Appendix II). What I meant to convey was that when a loan is issued and the money paid into the Government account at the Presidency banks, I believe that it is the practice of the Government not to draw out that extra money with too great haste so as to take the money off the markets too rapidly

372 You are aware, of course, that the Government have claimed the right to do it, and have actually done it in previous years?—Yes, and, as I say, you get no protection in your agreements against it. I believe—of course I may be misinformed—that in a general way the Government, in a spirit of comity, does take this money from the banks, from the proceeds of the loans, somewhat gradually

373 That has been latterly the case, but it is not a thing that we can depend upon, the banks cannot depend upon the money being left with them at any time, can they?—No

374 Then you go on to say that "At times of great stringency in the money market the Government of India grant loans at interest to the Presidency banks." I do not know whether you know they also refuse to grant loans?—Have they done so recently?

375 Not recently—that is, not within the last six or seven years, so far as I know?—The part of the history with which I am familiar is that there is a despatch of the Secretary of State of 4th May 1899 in which he laid down that rule, or made that suggestion that the rate should be the bank rate (see Appendix II page 64, paragraph 10), and from that time I think it has been the practice to grant the loans when applied for. There may have been exceptions, but I do not know of them

376 There is no settled policy in the matter, so far as I know?—If at any time the Government had money and there was stringency in the money market, if you were willing to pay the bank rates, I think you would have no difficulty in getting a loan

377 I think that is not the case. We have had cases where we have been refused loans without any reason assigned, at another time we have been told that the Government declined to lend in the absence of a critical position?—Of course, there is some room for diversity in the practice of individual Governors General or Comptrollers-General. What I have endeavoured to do is to give you what I understand to be the declared policy of the Government and I assume that it is usually carried out with discretion

378 You say that of late years there have been no requests for loans from the banks and you assume that that has been due to the rate of interest demanded. That has not always been the case. As you say in the same paragraph (paragraph 10 of Appendix I), the banks have taken loans, so it is not always the case that the banks decline to take loans because of the rate?—I think the correspondent of the Secretary of State, who said the bank rate was the chief cause of the loans not being demanded, possibly overstated the matter, and I was rather careful, I am afraid, as I explained with some prolixity, to say that I did not pin myself to his view

379 Do you know anything of the conditions that have been laid down in previous years on which loans shall be granted by the Government?—When you say previous years, what period do you refer to?

29 May 1913]

Mr LIONEL ABRAHAM, C B

[Continued

380 At the time the loans were being taken, I am taking now between 1898 and 1906?—I think that the period was as a rule prescribed, and that the rate was variable from time to time. If the bank altered its own rate, then it altered the rate of interest paid to the Government. I think those are the only conditions, and that the correspondence between the banks and the Government of India was extremely brief.

381 I would like to mention that some very onerous conditions are attached to these loans. For instance, I find that the Comptroller General has intimated that the Government should help the market only when trade is seriously inconvenienced by a high bank rate. That was one of the conditions laid down in 1899. Then we have also been told that the minimum bank rate at which the question of loans would be considered was to be 7 per cent, that is to say, the Government would not give us loans when the bank rate was below 7 per cent?—I think that even if that does not sound reasonable there is a certain reasonableness in it. The principle followed has been—and I do not think the banks themselves have much dissented from it—that these loans should be somewhat in the nature of emergency loans, and the 7 per cent rate was no doubt taken as a sort of index of an emergency having arisen.

382 Of course, the banks are in this position, that they have to assent to the terms laid down by the lender, for the Government are in the position of the lender?—I could not quite agree to that statement, and I will tell you why. I have read through a vast amount of correspondence between the Presidency banks and the Government of India about loans and similar subjects, and I have always been struck by the extreme reasonableness with which the Presidency banks have put forward their views, I mean they have never put forward the extreme view that every penny that the Government has ought to be lent with them and placed at the disposal of trade. They have always gone about it in, I may say, a much more sensible manner, and have said, when there is a pressure in the money market of Calcutta or Bombay, it is really hard that the Government, if it has funds, should not lend them to us either with or without security. It is because they have approached it, and I think very properly approached it, in that spirit, that I do not think the adoption of a certain figure as indicating pressure is unreasonable.

383 I do not suggest that. My desire was to bring out the conditions on which the Government usually give these loans. Another condition was that the banks, when they took loans, were not expected to make any profit out of them—that has already been mentioned. That is to say, the banks were expected to lend at the same rate as that at which they were borrowing?—That remark originated with a Presidency bank, as I pointed out.

384 That has been brought out already. The Comptroller General at one time also intimated that if a Presidency bank declined to pass on money lent by Government, at the same rate as that paid to Government, he would suggest to Government that loans should be made direct, and he thought banks would like that as little as Government. So that the conditions under which the banks do obtain loans occasionally are very stringent?—Yes.

385 When you state in paragraph 10 of Appendix I that at times of great stringency the Government lend to the banks, that conveys an impression to my mind, certainly, which I do not think is altogether justified by circumstances?—Do you mean that the Government are more severe in their conditions than I have indicated?

386 That is the impression given to my mind?—I can only say that I base all that I say on the subject on the official correspondence that we have here which expresses the intention of the Secretary of State and the Government of India. I noticed with some interest that remark which you quoted from the Comptroller-General. It is quite possible—I do not think there is anything improper in my saying it—that that particular remark may have been somewhat indiscreet, I mean Comptroller-General are not perfect 24 hours a day and 365 days in the year.

387 I think you stated to the Chairman that regarding loans from the Treasury there was a question whether the market should rely on Government balances?—Yes.

388 The market in India rather looks at it, sometimes at any rate, in a different way, they think it is a question whether the Government are justified in withdrawing money to a very large extent from the market's resources?—As I said, I think to Mr Keynes it is very hard to say how far these Government balances come from market resources. If they represent land revenue paid in by agriculturists that is not money market money, and it is not a depletion of market resources.

389 I think that a great deal of that money is money market money for this reason, that in the cotton districts, for example, the soukars, the native bankers, lend money to agriculturists for the purpose of paying their revenue—they advance money against the growing crops—so that the soukars give to the agriculturist and get money from the banks, and therefore, it is really money market money that is being raised?—On that subject I defer to you. You know so much more about it than I can hope to.

390 You are aware that the bank rate of India is the rate fixed from time to time by the Presidency banks, and that the great bulk of Indian trade is, as I suppose you know, conducted at rates which are dependent upon or based on bank rates?—I should assume that, although as a matter of fact the divergence between, say the rate prevailing in a district and the quoted bank rate might be very great indeed.

391 Not very great nowadays since railways have developed so much?—There again I would not profess to know anything like so much as you know on that subject.

392 At any rate what I want to bring out is that it is a matter of very great importance to trade that the bank rate should not reach a high level?—That is so.

393 That of course you acknowledge in paragraph 14 of Appendix I, where you say the advantages are obvious?—Is it worth mentioning here that some authorities including bankers, have been very eloquent in the correspondence I have read as to the disadvantages of too low a bank rate, because they say it tempts people to hold up their produce unduly by making it cheap to hold out for high prices, and that it tempts people to speculate in securities, and has other similar ill effects.

394 When you say it is an advantage to have a low bank rate, and you refer to the obvious advantages of avoiding a high bank rate, do you mean that it would be an advantage to the Government, or to trade or both?—I meant primarily to trade, and in fact to India generally, but incidentally whatever is good for India is good for the Government. I was not thinking primarily of the Government, except as a sharer in India's prosperity.

395 Do you not think that if anything can be done to prevent these high rates periodically in India it would be a great advantage to the Government in the matter of floating loans in India?—Yes. As a matter of fact, I believe that up to a certain point it is very easy to float a loan at certain periods of the year in India, because as against a very high bank rate in December or March there are very low rates prevailing in the dead season. Still generally I agree with your remark.

396 If you can bring about a state of affairs when the rate of interest would not rise to a high level in the busy season, the market would be in a better state to assist the Government at times when they do take loans?—I quite agree with you there.

397 So it would be to the advantage of Government as well as of trade?—Certainly.

398 The season of high bank rate corresponds, I think with the Government revenue collecting season?—I think Mr Gillan has already brought that out?—Yes.

399 The Government begin to collect revenue in December and January and then the balances rise?—

29 May 1913]

MR. LIONEL ABRAMSON, C.B.

[Continued]

The Government revenue usually comes in after the turn of the year. Those two things synchronise fairly well but not exactly—the time of a high bank rate and the time of revenue collection.

400 The minimum is in November and December and goes steadily up in January, February, and March, taking the balances at the end of the month. I think you will find that the Treasury balances mount up year after year in January, February and March, and that is the time when the bank rate is usually highest?—The reason I stopped for a moment was that I noticed that in 1910 your bank rate did not rise to 7 per cent in Bombay until the end of March.

401 In that year there were very heavy sales of council bills, do you remember?—Yes. I merely say that though the two things generally coincide they do not coincide very exactly, but there is not very much in that point.

402 The usual process is that the revenue collected by the Government passes into the Treasury in hard cash—that is, in notes or in coin?—Quite so.

403 When paid into the treasuries in charge of the Presidency banks, the money thus collected in excess of the balances usually retained is removed to the reserve treasuries or to some other treasury where money may be wanted?—Yes.

404 The revenue money thus collected disappears from the market?—Yes.

405 That, we think, is a great factor affecting the rates of discount. You mentioned that you had been much impressed by the evidence of Lord Northbrook, I think it was before the Committee of 1898, regarding the establishment of the reserve treasuries in consequence of the difficulty experienced in the '70's in withdrawing money from the bank in Bombay?—Yes.

406 Having regard to the effect produced on the rates of discount by the reserve treasury system the remedy applied was an extreme one and most expensive to India, that is a view that I wish to put before you?—I have not compared the rates of discount so far back as the '70's, but of course if you say that there are considerable disadvantages in the reserve treasury system it is so obvious that one could not help agreeing with you.

407 In affecting the bank rate?—Presumably it affects the bank rate.

408 Most other countries have found ways and means of combining and organising their resources for the general benefit of the community. Do you think it is reasonable that Indian trade should continue to be penalised by high rates of discount during several months year after year because of the reserve treasury system?—No. As a matter of fact, referring to the preamble of your question, if you take what one may regard as the two most highly civilised nations, namely, England and the United States of America, I do not know which of them does less to help the trade in the manner you refer to. I merely say that in passing, as bearing on the historical fact I quite agree with you that, so far as the unforeseen consequences of the reserve treasury system can be obviated with safety both to trade and the Government, it is a good thing to obviate them.

409 (Chairman) With reference to what you said a moment ago, do you suggest that there is anything in England similar to the locking up of this money in the reserve treasuries in India?—No. I understand that as a rule the Treasury has very little money because the money comes in and goes out *pari passu*, so that the Treasury does not as a rule place much money of its own at the disposal of trade by leaving it with the Bank of England. I do not know how much the balances are.

410 You do not suggest that that is due to its keeping up any reserve?—No. I thought Sir James Begbie implied that most Governments placed considerable sums of Government money at the disposal of trade. The United States actually takes its money, as I understand, and locks it up in treasuries. The British Government, as a rule, I believe, so adjusts, or has adjusted for it by circumstances, its receipts and disbursements, that considering its importance it has

comparatively insignificant balances as a rule. I think you must not assume that England and the United States, which are two important nations, do what India fails to do.

411 (Mr. Keynes) Whenever the Treasury has money at the Bank of England, it is in effect put at the disposal of trade?—Yes.

412 (Sir James Begbie) The Government of England never take money away from the market to the disadvantage of the rate of discount?—No. They have no place to put their money except the Bank of England, I believe.

413 You referred to the very large Government balances which have been in excess of Government requirements, and you explained that they were due to exceptional causes which have almost passed away, but is it not the case that even with the loss of the opium revenue the total revenue will show a considerable increase over that of a few years ago?—It is very hard to forecast. You ought to remember that when the King went to Delhi he promised a great increase, or he made remarks which suggested the possibility of a great increase, of the expenditure on education and there will be on other things, such as sanitation. No doubt there will be heavy demands for expenditure, so that you cannot say whether in the next few years there will be considerable surpluses or not. I do not know that anyone could possibly speak with any confidence on that subject.

414 The point I wanted to make was that there is more revenue collected than in former years?—No doubt.

415 Is there not a possibility that as more revenue falls to be collected and the money finds its way into the treasuries, it will have a greater effect on the money market than formerly?—It depends, of course, on how much money is paid out.

416 On the revenue side there will be a tendency to affect the money market more?—On the whole I should say it was more affected by the balance that remains than by the gross revenue that is paid in.

417 (Sir Robert Chalmers) Is that true? Suppose you have double the revenue?—And the expenditure?

418 Yes, would that not have an increased effect on the money market? Is it not a commonplace and accepted by everybody that you are taking money off the market when you are taking it out of the pockets of the leges?—It depends, of course, partly on the amount you pay back and partly on the rapidity with which you pay it back. I can quite understand that if you take money by way of revenue collection early in the year, and then keep it for a long period before you spend it again, then, of course, you will have large balances for a time, and you will injure the money market.

419 (Sir James Begbie) During the recent period of very high balances—I am talking now of the last three or four years—was the question considered whether the excess balances could be retained in India for use in the money market, with the object of avoiding high rates of interest?—No. I cannot say that that question really was considered. In the first place I may mention—which I have no doubt is familiar to you—that on a question of that sort the Government of India would naturally be the advisers of the Secretary of State, and I cannot recollect that on any occasion they did tender any advice on the subject to him. Then again, as various other members of the Commission have brought out, large sales of bills which drew the balances to England have had very great advantages, so that if any change had been made which prevented these large sales or if any such change had been proposed there would have been a great deal to be said on both sides.

420 You gave reasons which appeared to be regarded as conclusive against increased deposits with the Presidency banks, these reasons are based on what happened in 1875?—Yes.

421 Is there a good analogy between the circumstances of 1875 and those of the last two or three years?—No. You say, "which appeared to be regarded as conclusive." I do not know if you meant that I regard them as conclusive. If so, I do not regard them

29 May 1913]

Mr LIONEL ABBRAHAMS, C.B.

[Continued

as conclusive. As I explained in answer to another member, I think Sir Ernest Cable, I was anxious to put the facts to show that the facts of 1874 were of some importance and weighed with the authorities from time to time, but I certainly would not set up the rather vulnerable proposition that we must necessarily be guided now by what has happened nearly 40 years ago.

422 The question of the earlier date of 1875 had reference I think, to the ordinary balances of the Government, since 1909 there have been very large excess balances beyond the needs of Government, have there not?—Yes.

423 My question with regard to whether the matter had been considered by the Government about lending these balances had reference to lending balances in India and arose from the fact that these were these large excess balances available which could have been used in India if the Government wished?—I imagine, but I do not know, that from time to time the Government of India have considered the question, but they have not approached the Secretary of State on it.

424 You also quote, in paragraph 15 of Appendix I, the reply given by Sir Guy Fleetwood Wilson to a question put in the Legislative Council stating that "the Government of India lent considerable sums out of their Indian cash balances on deposit with the Presidency banks. They do not consider it advisable to make a practice of lending to the money markets in India in any other manner or to any larger extent." The question I would like to ask is whether that reply was given without reference to the Secretary of State, if I may ask that question?—I am very glad you have asked that question, because I have seen that point raised, I think, in newspapers. There has been a suggestion made in what I might almost call an unfriendly spirit that Sir Guy Fleetwood Wilson was asked or instructed by the Secretary of State to make that reply. Now what happened was that at the time that these questions were put, either by Sir Charles Armstrong or by Sir Cecil Graham, by one of those two at any rate, notice was given and certain figures were asked for which could only be supplied by the India Office. According to my recollection the Government of India telegraphed for that information and for anything the Secretary of State might wish to say to them regarding this question. I think it was Sir Cecil Graham's question.

425 (Mr Gillan) Sir Cecil Graham asked one question and Sir Charles Armstrong asked another?—I am on the question put in September. The Secretary of State gave such information as could only be supplied by the India Office and he may have made some general remarks about the series of questions, but on this particular one he said nothing, he left that as a question within the Government of India's purview to be answered by them as they thought best.

426 (Sir James Begbie) Against this reply of Sir Guy Fleetwood Wilson you put in the note "that if during 1912-3 the Government of India had wished to place large deposits from their Treasury balances with the Presidency banks, they would not have been prevented by lack of means at that time." It is the general idea in India that the Government of India held all their available surplus at the disposal of the Secretary of State for his drawings, is that the case?—No. I remember that in some of those old papers Sir James Westland rather emphasised that point. Of course, the drawings of the Secretary of State are one of the great drains on the Government of India's balances, but there are times when as in this particular period that we are discussing, the Government of India have far more than is necessary to meet any reasonable amount of the Secretary of State's drawings. In any case there is another point I should like to mention which is perhaps a little intricate, but which is very important. Supposing that the Government of India had placed certain of their money with the Bank of Bombay on loan say, for three months, and then the Secretary of State wished to draw council bills or to sell telegraphic transfers up to a certain amount, the Government of India would say to him, "You cannot

"draw against this particular sum which we have placed with the Bank of Bombay", and the Secretary of State would recognise that he could not draw against that particular sum, it would all be taken into account in forming the estimate of what he could draw.

427 Then, I understand that in 1912-3 it was not the case that the Government of India did hold the whole of their balances at the disposal of the Secretary of State?—No, certainly not, but they no doubt were ready to meet his bills or his transfers when they were drawn.

428 You regard loans to the Presidency banks from the Government balances as an uncertain source, and you consider there is an objection to largely increased deposits being given to the banks from the Treasury balances, because they are uncertain, I would like to ask you if you hold the same opinion, and the same strong objection, no matter what the size of the Treasury balances may be—I rather think you have answered that question already to someone else?—Of course, if you do in one year a thing that you may not be able to do the next year, one person may say you are wise to do it when you can, because you confer a certain benefit at that time, and another person may say it is better not to do it at all, because you may raise, and have ultimately to disappoint, expectations. It is a matter really, if one may say so, almost of one's general judgment about things in general rather than a financial question.

429 Could not a point be mentioned or settled, and then if the Treasury balances exceeded that point loans might be given? Might not something of that kind be done?—Personally, as I hope I have made clear, I am in no way obdurate about these matters, in fact I see very great force in what you say. Still, it remains true that if the jute trade, or the cotton trade, in one year were largely dependent on the Government balances, which happened to be very big through some fortunate accident, and went on, say, for two or three years, and then the Government balances, through no fault of Government, fell down, the jute trade and the cotton trade might be very much hampered through the sudden withdrawal. I merely give you that for what it is worth, I do not say it is a conclusive argument in favour of or against any particular policy, but it is a point to be considered, and that it is all I wish to put about it.

430 You drew a distinction between loans to help trade and loans to earn interest, but India Office balances have been deposited with banks and lent to other banks and to discount companies, and these companies, as I understand, do help trade, there is not much point in the matter as between lending to the banks in order to assist trade, and lending in order to earn interest?—The difference between us there is very great indeed. If we were lending in India, we should be very anxious to consider the effect of the loans on the borrowers, I mean not to interfere with their general method of business and not to raise expectations from them which we could not fulfil. As regards the borrowers from India Office balances we regard them with the utmost callousness. We do not care for those borrowers at all. We lend our money to a bank, or to an approved borrower, and it is understood that he has got to deposit security, and that he has got to pay the money back at the right time, and to pay his interest, there is between us, if I may use an old expression merely the cash nexus. We want his interest, he wants our loan, and the relation is absolutely different from that between a more or less paternal Government in India and the trade of India.

431 Is there any reason why Government should not give loans in India for the sake of interest only?—No, certainly not. I have drawn your attention to the fact that all this danger of interference with trade, and disappointment if one cannot lend in the fifth year after one has lent in the four years, is rather serious in India, because the Government capital bulks so large in the comparatively small Indian money markets, whereas in England, if you lend one year and you do not lend another, it is so trivial that you do not by

29 May 1913 ]

Mr LIONEL ABRAHAM, C B

[Continued

withdrawing your loan money interfere with anyone to any appreciable extent. This is the distinction that I put

432 But you think you might in India?—Yes, I think you might. I think that if you wanted to do in India what we did some months ago—I think we called in seven or eight millions in the course of three months—those figures are not exact, but they are approximate—you would cause a great deal of turmoil.

433 (Chairman) I understand your view to be that if you lent in India, and had occasion suddenly to call in the money, you might create a crisis?—Yes.

434 But if you lent in England, and had occasion suddenly to call in the money, the likelihood of your producing a crisis is much less?—Yes.

435 In addition, you do not care if you do produce a crisis here, as it is not your business in the sense in which it would be your business if you produced a crisis in India?—Yes, and as an illustration of how much we can call in without disturbing the market, perhaps when you look at the papers which Mr Badock is submitting to you, in which you will see our balances from day to day in the year 1912-3, you will note that between 28 September 1912 and 6 January 1913\* we reduced our loans on the market by somewhere about eight millions. I do not know the exact figure, but you will see when you come to it what a remarkably large figure it is.

436 (Sir James Begbie) You suggest that loans might be given from the paper currency department reserves rather than from the Treasury balances, would loans from that source necessarily ease the market? Suppose, for example, Government were granting loans from that reserve and at the same time accumulating money in the Treasuries to a large extent, then one operation would cancel the other so far as the money market was concerned, would it not?—I should rather put it this way. At present, if the Government were accumulating large balances, it would be taking money off the market and doing nothing to counteract it. If at the same time they lent money from the paper currency reserves it would be counteracting the stringent effect of its taking money off the market by means of its Treasury balances. Then there is a subtle question—I hope you will not press me on it, because it requires a very fine brain to answer it—namely, what exactly is the relation in every sense between the Treasury balances and the paper currency reserve? You see in a sense the paper currency reserve is merely the solid backing of the paper Treasury balances.

437 (Mr Keynes) Is it not the case that the money in the reserve treasuries is almost wholly in notes?—I think entirely.

438 So that when there is a great deal of money in the reserve treasuries, that means there is more money in the paper currency reserves?—That is so.

439 So that when there are high Treasury balances that shows itself in its being easier to make loans from the paper currency reserves?—That is so.

440 Therefore the two things give alternative methods of effecting the same purpose, not rival ones, as suggested?—Yes. I was trying to put that point to Sir James Begbie, but at the same time to steer clear of a very elaborate discussion of it. I think that owing to Mr Keynes' kind help now the important part of it is clear, is it not?

441 (Sir James Begbie) Not to my mind, taking it from the money market point of view?—Just allow me to put it this way and I think one can make it clear. At a certain moment we have so much in our reserve treasuries let us say, and then owing to the collection of revenue, and what not, we get, say, an extra two crores in our reserve treasuries, which are two crores of notes. Presumably at the same time that those two crores of notes came into the reserve treasuries, two crores of rupees went into the paper currency reserve as against those notes. If we lent that two crores of rupees it is really just as good as if we lent our two crores of notes.

442 I will give you an example of what happened last year. The Secretary of State last year drew heavily on the Paper Currency Department—that was for the purchase of silver, I think, for coinage. The effect was the same as if a loan had been granted from the currency reserve, and the same as if the money had been lent to a bank and by the bank to the market, that is the money went out of the currency reserve and went into the hands of the public. At the same time the Government were accumulating pretty large balances in Treasuries. There was a case where you had the same effect as if the loan had been granted from the paper currency reserve, and at the same time you had Government balances going up, so that the one cancelled the other, so far as the money market was concerned?—I should like to look into that in detail and see how far you and I hold the same views as to the effect of it, but I might say this, that if the effect on the money market of the accumulation of the Treasury balances were cancelled under some future arrangement by loans from the paper currency reserves you would at least be better off to the extent of the cancelling.

443 The point I really wanted to make was that the accumulation of money in the Treasury was the greatest factor in forcing the bank rate to a higher level?—I should say that it would cease to be the greatest factor if the balances were accumulated in notes and a part of the reserve held against those notes were lent or deposited.

444 Then loans from the paper currency reserve raise a larger question respecting the suitability of such loans in a country like India, where metallic currency still forms the medium for the great bulk of monetary transactions. Already the reserve in India has been depleted by the removal of several millions sterling to London. A serious problem might arise if in addition the reserves were further depleted by the grant of loans which almost certainly would be taken in coin, you might give such loans from the currency reserve and the money might be taken in notes, but the notes would probably be presented for cash almost immediately?—Exactly.

445 So you would have the risk of loans further depleting the coin reserves of the Paper Currency Department?—I should say that that risk is an extremely remote one. If you look through the figures which Mr Newmarch gives on pp 248-9, Appendix VIII, you will see that the lowest amount to which the paper currency reserve fell within the present generation was rather less than 6 crores of rupees. When the amount has gone down as low as that there is a serious risk. Nowadays we have, as you know, a standard of something between 17½ and 24 crores, and if we granted loans from the paper currency reserves perhaps that would have to be raised a little. With any such standard as we have at present I think that the risk of running short of metallic currency, or even of one particular form of metallic currency, namely, rupees, can be disregarded, I am not in any way perturbed about that.

446 Of course, you recognise that the rupee reserves are replenished occasionally by fresh coinage?—Yes.

447 Do you take that into account also, that you might have to coin if you granted loans to a large extent from this reserve?—Supposing that what I may call our critics are right in thinking that sovereigns are as acceptable as rupees, then loans might be granted, either directly or indirectly, in sovereigns, but if the rupee is still, as I believe, the favourite currency of the people of India, then from time to time we should have to coin rather more rupees. But you cannot if I may so put it, have more money in the country unless you coin more money.

448 There is a risk, is there not, in the further depletion of the paper currency reserve, because you have got to remember that if the reserve in the Paper Currency Department does fall to a lower level, then the reserve of your paper issue will be affected—it may be a remote contingency now, but the risk is there?—I do not know that on this point there is very much trouble. The management of the stock of rupees to

\* Appendix XI, pp. 323-6.

29 May 1913 ]

Mr LIONEL ABRAHAMS, C B

[Continued

be held in the paper currency reserve, though it did give rise to some difficulty years ago, is really an exceedingly simple thing. You have to allow for certain risks, and it is quite easy, and I am sure that anyone with official experience would say so, to allow for those risks.

449 You give a statement in paragraph 15 (2) of Appendix I for the purpose of showing that the Government deposits with the Presidency banks might perhaps be regarded as a high proportion of the capital and reserve and of the cash held. I would like to say that the statement is drawn in an unusual form. I think it is recognised generally that the safety of depositors does not depend on these proportions. I would also like to mention several particulars about the Presidency banks generally for the purpose of showing that there is not the same anxiety, and should not be the same anxiety, about lending to Presidency banks, or depositing with them, which your memorandum rather seems to suggest. I would like to say that the Presidency banks publish weekly statements of their affairs, and that I think is a valuable safeguard for depositors. Then the banks are incorporated by statute which also regulates the business in which they may engage, and which excludes operations in foreign exchange. Then the byelaws drawn up by the directors require the sanction of the Governor-General in Council before they become effective. Another thing is that it is most difficult to get any alteration of the powers of the banks, or any extension of the powers, even to assist the enterprise of public bodies, as was shown when it was proposed to empower the banks to deal with the shares of assisted railways and the securities of district boards. The Government of India deemed it necessary to consult the Chambers of Commerce before they amended the Act as desired?—Perhaps I might say that on the main point I think there is complete unanimity of opinion between us, that is to say, I recognise—and I am sure everyone who has had to do with the India Office or the Government of India recognises—that the Presidency banks are very great and important institutions which render the most valuable service both to the Government and to India generally, and they are bodies of very great strength, who can always be relied upon to meet their engagements. But having taken that for granted, I did draw attention, for what it might be worth, to certain proportions which perhaps have a bearing on the question of the feasibility of large increases of Government deposits. If I gave the impression that it was in any disparaging spirit to the Presidency banks that I mentioned these facts I am extremely sorry, I had no such intention.

450 You also deal with the question of deposits or loans with other banks in India, and you refer to a discussion that took place in Calcutta between the representatives of certain exchange banks and the Finance Member of Council, when the impression given was that the banks concerned would not welcome an extension of the practice of placing Government money with the banks, at any rate if introduced on a large scale. I draw attention to that for the purpose of asking whether it is the case that loans have been given to the British exchange banks by the Secretary of State from the India Office balances—I think you have already said so?—Yes, I gave particulars to Mr Keynes.

451 The rates of interest at which these loans were given, I understand, were under the Bank of England rate?—I should think ordinarily they would be, because the Bank of England rate is what is properly called a discount rate—the rate for discounting bills. That is rather different from a rate for a loan for three weeks, or whatever it might be.

452 You also deal with loans to firms and institutions other than banks in India, but I think you mentioned that such loans have never been granted so far as you are aware?—Yes.

453 Do you think that loans given to other banks or private institutions would have the same useful effect as loans to Presidency banks?—I see the tendency of your mind, and I agree with you in substance, though perhaps not for the same reason. I think it is

much better, if the Government is going to lend, that it should lend to big banks like the Presidency banks. As regards the effect on the discount rate, I expect it is the case, as you say, that a given loan will be more effective if placed with a Presidency bank than with an individual firm.

454 It would have the effect of affecting the bank rate?—Yes, I should agree with you there. That is a point that had not occurred to me, but I think, if I may say so, it is a very sound point.

455 (Sir Robert Chalmers) Is it quite certain in your mind that the effect would be different?—It is not quite certain, but I should rather say that if you had to lend, say, 200,000! —

456 The money would get on to the market?—Just forgive me for a moment—you might lend it, say, to someone like Sir James Beggie, or you might lend it on the other side of the table to Sir Ernest Cable, the owner of a jute mill, I think probably you would have more effect on the money market if you lent it through the bank which would have the option of lending it to the owner of the jute mill than if you lent it to the owner of the jute mill direct.

457 Do you think the money is worth more in the one hand than in the other?—Just consider this. Supposing you lend the money in hard rupees, you know that on every single rupee the ingenious banker builds up a credit superstructure of several rupees, so if we lend, say, 20 lakhs to the Bank of Bombay they would lend against that in the form of banking money perhaps 40 lakhs.

458 What would the jute man do with his lakh if it were lent to him direct?—He would pay his employees, or pay the cultivators from whom he bought his raw material.

459 Would he not pay it into a bank as a deposit to draw against?—He might for a very short time.

460 (Sir Ernest Cable) It would be used very rapidly, of course?—He would draw it out again to pay for the raw material.

461 (Sir Robert Chalmers) Would he draw it out and use it more rapidly if it came to him direct from the Government than if he had got a credit at the bank?—I cannot say.

462 (Lord Faber) If it went through the bank, unless the bank put something on for interest to its customer, I do not see how it would do more for the money market than the jute man would have done?—I should have thought that if you have a choice between paying a certain sum in actual metallic money to a bank or to a manufacturer who, perhaps, will not take the trouble to bank it in the interval between his receiving it and spending it you would probably do more for the money market by giving it to the banker, who would build up his credit superstructure on it.

463 It is very arguable that the money is the same wherever you lend it, unless you add something on to it and charge for it?—If there is one proposition with which I should not agree it is that money is the same wherever you put it. Money seems to me to differ enormously according to where it is put.

464 (Sir James Beggie) With regard to the question of council bills, the origin and purpose of the council bill system was for the purpose of remitting money from India to England to meet the actual disbursements of Government, was it not?—Yes, that is right.

465 At the present time Government bills are used for a much wider purpose and a much larger purpose?—Yes, there has been an extension of the system. There has been no change in kind, but it has gradually spread over a larger area of transactions.

466 You use council bills now not only for remitting the money which Government itself requires in London but also against the Paper Currency Department, for example, or sometimes against the gold standard reserve?—We sometimes sell bills you mean, which the Government of India cannot meet from Treasury balances and which they can only meet from their paper currency reserve, that is so. A great many questions arise out of that.

467 In your memorandum (Appendix I.), so far as I can judge, there is no clear distinction drawn between

29 May 1913 ]

Mr LIONEL ABRAHAMS, C B

[Continued

the different purposes for which council bills are drawn?—I would say this, that from the one side they are drawn in order to enable the Secretary of State to meet the various kinds of expenditure which he has to meet in London, both revenue and capital, both immediate and future. That, I should say, is the main purpose, but incidentally the system is so worked as to give certain reasonable facilities and conveniences to trade.

468 In the memorandum presented to Parliament (Cd 6619) you gave a number of various reasons why council bills were sold in excess of the Secretary of State's immediate requirements, I think?—Yes.

469 You have four different reasons, I think?—Five.

470 Do you not think that these give the Secretary of State considerable range of options when bills are wanted?—If you mean that it leaves him a great liberty of action, yes, but not an unreasonable liberty. Of course, much depends on whether the way he does his business is made clear or is not generally recognised. I think it is a very great advantage that he should, as it were, put his cards on the table and say, "This is the way I do my business of selling council bills. I think the India Office have been very keen on making it clear."

471 In the case of council bills drawn against paper currency reserves is it recognised that there should be any special rate on such bills?—No. Of course, such bills would only be sold at a time of great pressure, and the rate would usually be well over 1s 4d, but it has not been decided, as was suggested, I think, by one or two Members of Parliament, that such bills should only be sold at 1s 4½d—at the maximum price, I think that is the suggestion you are referring to.

472 Yes, it has not been laid down as a fixed rule, has it?—No, it has not.

473 Do you not think that is a necessary measure?—I do not know that there is any great advantage in it. It is, if I may say so, a point of such minor importance that I do not think if good reason were shown the Secretary of State would be obstinate about it. I think the difficulty is that people have assumed that 1s 4½d is the real gold point, I mean the lowest point at which gold and council bills compete, and, therefore, there is a peculiar sanctity about it. As will be shown to you in other evidence, that is not the case. The gold point is really a fluctuating point. I cannot see anything very much one way or the other on the proposal that these particular sales shall be at this specified rate.

474 I do not propose to go into that matter further at the moment. As you say, we will probably have that later on. You have told us that since 1904 there has been, for instance, an undertaking to sell bills without limit of amount at 1s 4½d, was that undertaking given with reference to ordinary council bills, if I may use the term, against Treasury balances?—Yes.

475 Not against the currency reserve?—No. From the point of view of the public there is no difference. If a man or bank comes and buys a council bill he does not ask from what source the Government of India or the Secretary of State are going to meet the bill, to him it is a simple bill and nothing more.

476 In the case of the council bill sales against the gold standard reserve, I think the point has already been mentioned to-day that the Government were very anxious to get the reserves of rupees collected at that time transferred into sterling?—Yes, that was after the exchange crisis.

477 At what rate did the Government begin to sell at that time against this special reserve?—I do not think that that is a question one can answer exactly, for this reason. In the course of a year one sells bills, say, for 23 millions sterling, just to take an illustrative figure, and then at the end of the year, perhaps, the Secretary of State says "For my Treasury purposes I am satisfied with 18 millions of these proceeds, therefore I will appropriate the odd five millions to the gold standard reserve and invest that five millions. But one does not day by day or week by week as one sells a bill say, this is sold against the

gold standard reserve. The appropriation is done just as one makes up a balance sheet for a bank at the end of a period of half a year or a year, as it may be.

478 In this particular case sales against the gold standard reserve were bills sold under 1s 4d?—These bills to replenish the gold standard reserve were mainly sold in 1909-10, I think, and the average rate in 1909-10 was for the first six months of the year 1s 3 9/16d, and for the entire year 1s 4 0/16d. I think some of them were sold in 1910-1, but I am not sure of that for the moment, and the average rate was 1s 4 0/16d.

479 In the year before that were there any sales against this reserve?—Yes, at 1s 3 9/16d. I am not sure whether anything was sold to replenish the reserve in the earlier of those two years, but I shall be able to tell you by looking it up.

480 In the case of the gold standard reserve, that was a fund established for the purpose of supporting exchange, and of preventing exchange falling below a certain figure?—Yes.

481 That came into use in 1907-8?—Yes.

482 And a very large amount of rupees were collected in India in consequence of the sales of bills in India on London, the rate at which that was done being 1s 3 3/4d?—Yes.

483 That is the outward gold point, I understand; or what is supposed to be it?—Yes.

484 If that fund is used in that particular way to prevent exchange from falling, should it be used in the opposite way at anything below the gold import point?—I have heard that argument, and I must say, that to me it is extremely unconvincing, if you do not mind my saying so. You use this gold standard reserve in order to prevent the rate of exchange from falling below what you call the outward gold point, or the gold exporting point, and it serves its purpose. You find that fund is for the time being useless for further application because it is not in rupees. Then, the important thing is to get it home again, or at any rate to get it again in the sterling form in order that it may serve the same purpose a second time if the occasion arises. If you could do so, keeping the exchange within the gold points, if I may use a technical expression, you have obviously done a very great service in removing the risk of a future fall in exchange. If you are yourself to be prevented from doing that by some scruple against selling your bills at 1s 3 9/16d when you think you ought to sell them at 1s 4 0/16d then you are sacrificing the weightier matters that you ought to look after to a consideration that is of very little weight, if indeed of any weight.

485 Are you not breaking through your own arrangement about the gold standard? You fix the standard with the exchange at 1s 4d, if you use this special fund to import money below your gold standard is that not going against your gold standard policy?—I think I might answer that both practically and scientifically. Practically, I would say that if you had to manage the Indian exchange system, and currency system, I am quite certain that you would do exactly as we did, and I think if you ask yourself, Sir James, you will say that that is so too. Scientifically, I would say that when you have a par of exchange between two countries with an upper gold point and a lower gold point, the natural thing is to carry on your ordinary transactions in your ordinary way so long as your exchange is between that upper gold point and that lower gold point, and to stop your transactions when the rate falls somewhere between the par of exchange and the lower gold point has no justification. I am certain it has no practical justification, and I do not believe that anyone has ever put forward any theoretical justification for it.

486 At any rate, I understand that in managing the sale of these council bills the rate of exchange is not specially considered as regards whether the sales should be made at or over the 1s 4d point?—What I think I said in answer to Sir Ernest Cable is that one would ordinarily sell at or above 1s 4d, but the Secretary of State has that latitude that at times he sells between 1s 4d and 1s 3 3/4d.

29 May 1913]

Mr LIONEL ABRAMSON, C B

[Continued

487 And that is a latitude which he exercises not only in the case of Treasury drawings, but also in the case of drawings against the paper currency reserve and the gold standard reserve?—As regards the paper currency reserve, I do not think he would, for this reason, that, as I said to you, it is only when there is a great pressure for exchange on India that he sells against the paper currency reserve and then *as hypothesis* the rate would be higher than 1s 4d.

488 In paragraph 28 of Appendix I you quote from paragraph 70 of the Report of the Indian Currency Committee of 1898-9, but, I think, condensing the paragraph which you quote. You say, "It is eminently desirable that in order to assist towards the speedy establishment of an effective gold standard in India the Government of India should restrict the growth of their gold obligation." I rather think that the paragraph quoted contains a good deal more in it?—I assumed you would have it before you when you read this, but I have not left out, I hope any thing that is material to what I was putting. I have the report here.

489 I was going to say that it includes the idea that capital should be encouraged to flow freely into India for the further development of her great natural resources, whereas in this paragraph of your memorandum I understand you to recommend and to support the idea that the Secretary of State should encourage the flow of gold from India?—I do not think that that is a natural construction of anything that I have said.

490 You refer in paragraph 28 "to the general advantage of restricting as far as may be, the growth of a country's external debt and to the practical difficulties attending the issue of large annual loans in London on behalf of the Government of India," and you say, "the Secretary of State endeavours to obtain from funds provided in India as large a proportion as practicable of the money required for each year for expenditure in England on account of India." If you increase the amount of council bills, do you not encourage the flow of gold from India? You may not actually make the gold flow from India, but you prevent gold from coming in?—Yes.

491 You increase the gold obligations, do you not?—I do not think that we are in the same region of the subject. You are speaking about gold actually going to or from India, and on all that you say there I think I agree up to a point. But in this paragraph the Fowler Committee were discussing the importance of not increasing India's external debt, and the annual interest that she had to pay on her external debt, and when I was preparing this memorandum it occurred to me that some very important things might be conveniently linked on to that remark of the Fowler Committee. Where you are speaking of gold obligations with reference to the Fowler Committee, that is a question of loans, this particular part has nothing to do with the gold currency.

492 The idea of that paragraph, as I read it, was that the Fowler Committee recommended a gold standard, and the gold standard was to be associated with stability of exchange, and so on, and capital should be encouraged to flow freely into India. That is as I take it, the meaning of the paragraph, and when they said that they suggested the growth of gold obligations should be restricted, I understand they meant that loans out of India should not be encouraged more than necessary?—Quite so.

493 But in paragraph 28 of Appendix I you point out that the Secretary of State endeavours to obtain money from funds provided in India for the expenditure in England, and if you take the case of the last two or three years you will find that the amount of money which the taxpayers in India have had to pay for export to London has been very great indeed—much larger than in previous years?—Let me see that we are quite on the same ground. I will tell you, if I may, the connection between these two things. The Fowler Committee said keep your sterling loans as low as possible. That was a wise thing to say and the reasons given were good reasons in those days. I put in my memorandum that the advice is still good

advice, but I point out, and I am sure most people would agree, that the reasons why it is good are rather different from what they used to be. Then I say, if you are to carry out this good advice, which remains good, though for changed reasons, provide as much as possible of the money you are going to spend from resources raised in India. Surely that is a faithful following of the precepts of the Fowler Committee.

494 Take it this way. During 1910-1 and 1911-2 I understand the amount of council bills remitted from India to England was roughly 24 millions sterling—we will say 8 millions in excess of the ordinary amount?—You have the figures exactly.

495 That is to say, the taxpayers in India were paying 8 millions sterling in excess of what they usually have to pay, that represents, if you capitalise it, borrowing to the extent of about 200 millions sterling?—Really, I cannot follow you there, partly because the taxpayers are not paying a penny more. The scheme of taxation, you may take it from me, is not made with reference to the sale of council bills, or anything of that sort, it is made with reference to the desirability of having a moderate surplus of revenue over expenditure. That scheme of taxation has a result at certain times of giving the Government of India extremely large sums of money. That is perfectly simple and familiar, is it not? Then the time comes when we have to consider. We want to spend so many millions on railway materials in London, shall we get the money by bringing over our surplus money from India, in which case we shall not pay any interest, and we shall not be increasing our gold obligations, and we shall be obeying the Fowler Committee, or shall we take the alternative course, which I hope you do not recommend, of issuing a large loan in England while allowing our rupees, which we could use, to lie idle in India? I have explained that the Secretary of State always, and rightly, prefers, when he can, to avoid issuing the big loan in England, and, in preference to get money by remittances from India—of course, when he can do so, I mean, without sacrificing any Indian interest.

496 (Chairman) In other words, I understand that what the Secretary of State does is to pay for these railways out of revenue whenever he can instead of increasing his capital account?—Out of the surpluses which are the result of revenue transactions.

497 (Sir James Begbie) These surplus revenues have been very large lately?—Yes they have.

498 (Sir Robert Chalmers) But it has at times been the other way?—Yes, it has.

499 (Sir Shapurji Broacha) Is it not inconsistent to say that the Government will lend at the bank rate and yet that the Government will not lend because the money would not be forthcoming when wanted? I do not talk of 22 millions because I know that it is difficult to lend 22 millions in India. Still, it is not difficult to lend 4 millions or 5 millions or 6 millions?—When you say it is inconsistent, what exactly do you mean?

500 You do not assign any limit to the Government lending at the bank rate, do you?—At what stage do you mean that we do not assign a limit? I am not sure that I see exactly at what point we are inconsistent.

501 You pay brokerage for lending money and the Secretary of State deals through a broker, and is not a guarantor for the borrowers of the money. Do you think a bank which takes the responsibility of guaranteeing the loans would do without some brokerage or commission? Is that not inconsistent?—If I understand you, you think that if we lend to the Presidency banks we ought to lend at less than the bank rate?

502 Yes, as some commission for guaranteeing the loans for the public, because the Presidency banks deal with the public?—I see great force in that, if you will allow me to say so. That is about as far as I need go at the moment.

503 I think that despatch of 1874 on pp 30-31 of Appendix II is ancient history so far as the monetary conditions of India are concerned. The deposits since then have increased 800 to 1,000 per cent, since 1892

29 May 1913 ]

Mr. LIONEL ABRAHAMS, C B

[Continued

the circulation has quadrupled, and since 1909 the circulation has doubled. Is there not, therefore, certainly some distinction which the Secretary of State ought to consider between the India of 1874 and the India of 1913?—No one would hold that more strongly than I do. I was merely going to mention to you that in all these matters we are to some extent tied to the history. If you come to the history of why we do this, that, and the other, the history leads back ultimately to a very remote and useless period.

504 I am talking only of Indian balances, I am not talking of London balances. We know that the revenue does not come in freely until after December, and we know that between June and December money is going begging at 2 per cent. For the last three years I have been borrowing for six months money at 1½ and 2 per cent on Government paper in India between those months, and it is only when the money commences to go into the treasuries in payment of revenue and the money market is depleted that the price goes up. If you will kindly look at the figures in Appendix II, page 76, you will see that on March 31 you had balances in the treasuries in India amounting to 19½ millions, out of which you have put 3½ millions with the Presidency banks, that leaves in the hands of the Government something like 23 crores of rupees?—Yes.

505 Or 13 crores more than the minimum balance which Sir James Westland and others have required?—Yes, but do not quote him as the standard. Your case, if I may say so, is a strong one from your point of view, but I do not think you strengthen it by comparing it with Sir James Westland's standard, which is rather obsolete.

506 If of those 23 crores 9 crores had been lent to the Presidency banks, money would have gone down to 2 per cent, and yet India and Indian trade has been suffering very much now through want of money, because the money has gone into the vaults of the Treasury?—Perhaps I might say this, which would help possibly. The Secretary of State has been approached by various correspondents who point out to him—

507 Do you think that with all these advances in the Indian money market India is still to be considered to be in as beggarly a condition as in 1874, and therefore is not to be trusted with a little more money? Is all the wisdom on this side here?—It is not a question of trusting. The whole question is one, or very largely one, whether it would do a money market good or harm or more good or more harm to get money from a somewhat uncertain source.

508 There are now 14 millions in the Bank of England belonging to the Government, suppose that they were withdrawn, what would the other bankers say?—Are there? Is it the Government debt, or what?

509 It is just the same as if it were in the Presidency banks—nothing more or less. Do you know that the Indian Presidency banks are regulated by the same rules now as the Bank of England in the matter of lending, and that it must be wholly on authorised securities, trust securities?—I think they are more tied up than the Bank of England—much more.

510 Will you show me any other Government that takes into the Treasury all the balances of the public and allows the people to starve, because of an event which happened 40 years ago?—I can show you the American Government, however, I do not say that it is a good precedent.

511 Has the Secretary of State considered the advisability of lending more freely to India now that the circumstances have changed?—As I explained, it was considered in 1899 I think, or 1900, but since then his natural advisers in the matter, the Government of India, have not approached him on the subject.

512 I only want these points to be brought before the Commission for their consideration. In the matter of council bills I do not think the council bills impede the flow of gold. I see that you sold last year council bills to the extent of 25 millions, and you imported gold equal to 31 millions, 19 millions being in sovereigns and about 12 millions in bars. Surely that does not mean that this selling of council bills above

the allotted amount impeded the flow of gold? I think any country importing 31 millions of gold would have something great to boast about?—In a sense you are defending the India Office against its critics, but I think you are defending it almost too wholeheartedly.

513 Do you know that the import is not always from here? From Australia we can bring gold and also from Egypt cheaper than from London. I think in this respect, therefore, that the Secretary of State was right in selling council bills for his requirements?—I venture to agree with you on that point, I quite agree that you cannot work to a supposed gold point when it is a very shifting thing.

514 Taking these 22 millions that you have accumulated here, of which the balance now remaining is only 4 millions, if that money had been sent to India it would have had to be brought back to pay the anticipated demands of the Secretary of State here?—I have argued that in my memorandum (paragraph 50 of Appendix I, &c.)

515 Since you are against lending it in India, I do think this money should have fertilised in the shape of interest?—You may have noticed in my memorandum and the supplementary notes that I have dealt with that very fully (see Appendix I).

516 The advisers of the Secretary of State consulted the City money market in 1908, if I remember aright, as to how much they could borrow in England for Indian productive works, and whether they could borrow in advance, and the City advised that whenever the market is easy they should borrow for one, two, or three years together?—We consulted the City, that is to say, some very eminent financiers, about railway borrowing and so on,\* and we got a great deal of advice, very largely discordant, and much of it I can assure you has been belied by subsequent events. So you cannot base anything on those incidents.

517 Therefore, I think that after keeping enough for the legitimate needs of Indian trade, any surplus that then remains in hand, if it could be placed out without detriment, in England, it should have been done, India being a debtor country just as Japan is and Russia is, do you agree to that?—I do not like to lay down a very general doctrine about any matter of this sort. I hold to my own view that the Secretary of State ought, as far as possible, to bring home from India what he wants to spend on behalf of India in this country, and that he ought to do it sometimes in advance, because otherwise he may not be able to do it at all.

518 As you know, trade is provided for in India in two ways—the internal trade by the Presidency banks, and the external trade by the exchange banks, therefore ought not the exchange banks to be helped in bringing out money to India, as the Presidency banks are to be helped for carrying on the internal trade?—Yes.

519 I think the conditions obtaining in India do not obtain here. In India the Government have to keep a large balance for contingencies, while in England the Government may be indebted and have no balance at all, but that is because they have a larger market to depend upon?—That is so.

520 (Sir Robert Chalmers) That has nothing to do with the surplus balance?—No. I think Sir Shapurji was speaking there really with reference to the working balance.

521 You want a larger percentage in the form of a balance in India I gather?—Yes.

522 That balance would be needed?—Yes.

523 (Sir Shapurji Broacha.) Really the credit of the Government of India has not declined or depreciated at all, but I think English capital has become bolder within the last eight or ten years, and is seeking for a larger rate of interest?—The causes which have led to the fall in the price of Indian securities which, as Lord Kilbracken has said, is a better phrase than the decline of Indian credit, are very varied.

524 When you borrowed 5 millions at 95 for the railways, why was not that loan offered in India? It

\* See in this connection Cl. 4111 (Report of the Committee on Indian Railway Finance and Administration).

29 May 1913]

Mr LIONEL ABRAMSON, C B

[Continued]

would have gone off like anything at par?—I would rather not be understood to accept that.

525 Of course with the consent of the Secretary of State the Southern Mahratta or some other railway company offered their 4 per cent loan at 99 for a fixed period, not for a period that the Government might choose to observe?—Thus loan that you speak of was issued at 99, and the rate of interest was 4 per cent. You suggest that it might have been floated with much greater advantage in India. I can only assure you that the Secretary of State is very much alive to the importance of doing his borrowing in India, he is continually consulting the Government of India about it, and he must be to a great extent, as he is in fact, guided by their advice.

526 In this case I think he was badly advised. As you know, we have 4 per cents standing at 102 or 103, our Improvement Bonds for instance?—I have had the opportunity of discussing with your neighbour, Sir James Beggie, some of these points on a previous occasion and I very much doubt if I take him and you as two eminent Bombay financiers, whether he and you would come to the same practical conclusions on these points that you are now discussing.

527 Have you well considered the question of a State bank, is it not a large order?—I have considered it to some extent, and I hope, as I said, to write a note about it later on.\*

528 The Bank of England does the business efficiently of the British Isles, suppose the Bank of England had to do the business of the Bank of France for the French people, and the Bank of Germany for the German people, and to do the same service to Italy that the Bank of Italy does, and so on, taking the whole of Europe right up to Moscow, do you think that one State bank could be established to manage such a large extent of business? As you know, the population of India is just equal to the population of the whole of Europe, except perhaps half of Russia, and as you also know, there is less difference between English people and Italians than there is between the people of the north of India and the people of the south of India. Do you think that that large order could be established brand new without an evolutionary period?—I have always recognised that one of the great difficulties in the way of a State bank is that it would extend over so large an area, that is to say, the whole of India, and over an area which has hitherto for banking purposes been divided up into three distinct territories. You will see when you read these papers of 1900 and 1901, to which reference has been made once or twice, and which are being printed for you,† that the whole scheme of those years for an amalgamated and central bank broke down in consequence of what we called in our jargon provincial and local jealousies. I quite realise that, as you say, the same cause may wreck any future scheme. But I do not think one need begin with the assumption that the mere diversity of interest and the mere size of the area will necessarily be fatal to the scheme. That is all really that at this stage I can say on it.

529 Have you considered the location of such a bank, whether it should be at Calcutta or Delhi, say?—That is rather a matter of detail which is beyond my province. If I say Calcutta, I could not give any very full reason for it, but Calcutta is what would occur to me as a possible place.

529A (Lord Faber) All the State banks have a large number of branches?—Yes, but I think Sir Shapurji is thinking of the head office, at least, I imagine that is his point.

530 (Sir James Beggie) With reference to the opportunity of purchasing bills and telegraphic transfers on India as an alternative to consigning gold for the discharge of the trade balance due to India, that is stated to be a great convenience to trade, that is a phrase which occurs pretty frequently throughout these papers, and I would like to ask you what you understand by the trade. Do you refer to any section or do you refer to the trade of India as a whole?—That is a

very interesting question, because one never knows exactly how far influence extends. If one traces the influence from its source, it would first affect the people who buy our council bills, who are the exchange banks, and perhaps one or two big firms. No doubt it is well known to you that Messrs Ralli, who are very large merchants, buy our council bills. I think it would be a very controversial thing to say that they are the only people who benefit by our sales of council bills to them. I should say that really all the innumerable people with whom they are connected, either directly or indirectly, the big importers, the big exporters, the producers who are, as it were, low down on the distant horizon, must surely all benefit if a convenient and rapid method of making remittances is used instead of an inconvenient and slow and cumbersome method. I think that is the real answer to that question.

531 It is a section of the trade which gets the advantage of the sale of these council bills, is it not—the export trade?—That is the trade which first benefits, and certainly it is the export trade, including the big houses, the producers, and so on, which probably gets the greatest advantage.

532 The internal trade only comes in as a secondary matter?—I quite agree with you there. I think I said in answer to one Commissioner that though council bills are a remedy for some cases of stringency which are due to the activity of the export trade, there may often be troubles and tightness of money in the Indian money market due to other things for which the council bills afford no remedy. I think on that we are at one.

533 (Chairman) How are the approved borrowers chosen?—That is a subject which is rather Mr. Baddock's speciality, but I can tell you in general terms. At the present time any firm wishing to get on to our list would, in the first place, ordinarily approach the broker, Mr. Horace Scott, whom probably you will be examining. He would report the application to the Accountant-General of the India Office. Then information would be gathered, partly by the broker and partly by the chairman or members of the finance committee, as to the general trustworthiness of the firm, its capital, the class of its business, and so on. Then the recommendation would be made to the Secretary of State and the council that such and such a firm be admitted, further, it might be specified that the limits to be imposed on loans to be granted to that firm should be so-and-so. If that were approved—and there is no doubt it would be if it were supported by the finance committee—then the firm would be on our list of approved borrowers. Perhaps I ought to say, to make it complete, that formerly that sort of matter was much more in the hands of the chairman of the finance committee as an individual, but now the full procedure that I mentioned is gone through.

534 (Sir Shapurji Broacha) Returning to the 31 millions that I spoke about to you just now, did not the whole of that, except 4½ millions, go into circulation or into the hands of the people last year?—I think a great deal of it was gold bullion, which would not go into circulation. It would be merely used as bullion.

535 It has gone into the hands of the people?—A small amount has gone into Government treasures and that amount is given in the various statements.

536 (Chairman) It has gone into use but not into circulation, I understand?—The bullion has gone into use or disuse, and the coin has either gone into circulation or hoards, or is used for other purposes.

537 May I come back for one moment—and I hope it will only be for a moment—to the question of the sale of council bills and the amount of them which is sold? Shall I be correct in saying that the amount of council bills that is saleable depends upon the trade demand for them?—Quite so.

538 Should I be correct also in saying that the Secretary of State sells to the full extent of the trade demand?—Yes, subject to the limits of price which, as it were, govern and regulate the demand, I think that would be quite correct.

539 I think he does so, because even if he brings home money in excess of his immediate obligations it is money which in his opinion is not needed in India and which can be usefully employed for India in London?—Yes The only criticism I would make on that is that he does not form the opinion whether it is needed in India, he is guided in that naturally by his advisers, the Government of India

540 It is money which, in the opinion of the Indian Government, is not required there and which, in the opinion of the Secretary of State can be usefully employed for India's interest here?—Yes

541 Meaning by that, not her trade interest, but the interest of India as a whole as represented by the Government?—Yes

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M.P. (*Chairman*)

Lord FABER  
Lord KELBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CARLE  
Sir SHAPURJI BUDJORJI BROACHA.

Sir JAMES BEEBIE  
Mr ROBERT WOODBURN GILLAN, CSI  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (*Secretary*)

Mr LIONEL ABRAHAMS, C B, recalled and further examined

542 (*Chairman*). I propose to-day to turn to the question of the gold standard reserve. In the course of our reference we are directed to inquire into the steps taken with regard to the location, disposition, and employment of the gold standard and paper currency reserves, and whether the existing practice in these matters is conducive to the interests of India. You have handed in a memorandum entitled "The Gold Standard Reserve" with a supplementary note, and some correspondence and statements in illustration of what you have written?—Yes

543 We may take those, I think, as part of your evidence to be printed with our proceedings?—Yes (See Appendices III, IV, and V)

544 I think I am right in saying that when the reserve was being set up in 1900 the view of the Government of India was that the reserve to be established should consist entirely of gold?—Yes

545 And that that gold should be held in India?—Yes

546 But the Secretary of State decided that it should be held in London?—Yes, that is so

547 He further decided that it should consist in part, though not entirely, of sterling securities?—I think that at the time to which you refer the Secretary of State decided that it should be held in sterling securities wholly. That was the decision of 1900

548 Could you give me in outline the reasons for the Secretary of State differing from the recommendation of the Indian Government?—In the correspondence (see Appendix V) the decision is given somewhat briefly, but I think that if you read it, and especially do so in the light of subsequent events, you can see why the Secretary of State differed from the Government of India's view, and why he was right in rejecting that particular scheme which was put before him. You will notice on page 109 that in 1900 a long despatch dated 6th September, No 303, came home from the Government of India with two long notes by Sir Edward Law and one by Lord Curzon. Generally speaking, omitting certain matters which are not really material to your present question, the proposal regarding the gold standard reserve was that it should be held in gold, and that from time to time the gold from the gold standard reserve should be passed into another reserve, the paper currency reserve, and given to the public in exchange for rupees whenever the

public desired it. It is clear, and I think most people would admit it, that if that course had been followed the results might have been very serious—that is to say, the gold would presumably have been dissipated in good times, instead of being held as a reserve for bad times to meet a period of unfavourable trade, the gold would have been passed into the general circulation and would have been of little or no use when a crisis came requiring the use of a very large central stock of gold at very short notice. I imagine that the perception that this scheme would have frustrated the object for which the reserve was established, must have been the reason why the Secretary of State rejected the scheme. Of course, what I say does not refer to subsequent and different schemes for holding the reserve in gold in India, it refers to the particular scheme that was then before the Secretary of State

549 The Fowler Committee\* reported in paragraph 59 in the following words—"We regard it as the principal use of a gold reserve that it should be freely available for foreign remittances whenever the exchange falls below specie point," do you accept that view?—No, not entirely. I think that that is the most valuable use of a gold reserve, but the practice which has been followed has been to use gold for another purpose, namely, to feed the internal circulation. I think that the Fowler Committee themselves meant that gold held by the Government of India should be used for two distinct, and you may say, conflicting purposes—partly to be dissipated, if I may use that word, in good times so as to provide the population of India with a gold currency, and partly to be hoarded up in a central reserve for bad times so as to be available for meeting a fall in exchange.

550 (*Sir Robert Chalmers*). Do you think that those considerations in that form were before the Fowler Committee? Did they look quite as far ahead as that?—I am not sure whether they put the two facts together and saw their mutual relation.

551 Their primary purpose was to provide for maintaining the exchange?—By means of a central reserve of gold.

552 That is a question?—That was a purpose they had in mind, and they also had, I think, a different

\* C 9390.

5 June 1913]

Mr LIONEL ABRAMSON, C B

[Continued.

purpose—of establishing somehow or other a gold currency in India

553 Do you think they went so far as that at that time?—I do think so, because there are various passages in their report—not the passage which the Chairman read—which say that India ought to have the normal accompaniment of a gold standard, namely, a gold currency

554 (Chairman) Will you direct my attention to any paragraph in that report which indicates that the gold reserve should be used, in your words—and I think I am quoting your words—to feed the internal gold circulation of India in times of good trade?—I do not think that they used the words that the gold reserve should be so used, but I think I should be able to find you passages in which they said that a gold currency was desirable

555 I am quite certain that you would find that, and to that point we will come later, but do you think that that is synonymous with saying that the gold reserve is to be used for the purposes of supplying the gold currency?—I do not think it is synonymous with saying that, and perhaps I am putting a gloss on what they said in the light of the knowledge we have since acquired, which knowledge shows that the way in which the internal circulation of gold can be kept up is by passing gold out of various reserves held by the Government. That is how it has habitually been done. I think that there was, if it is not too pedantic a phrase to use, a certain latent contradiction in the minds of perhaps some members of the Fowler Committee. I do not think that they perceived entirely how the two objects of keeping a central reserve for one purpose and encouraging the active circulation of gold for another purpose were to some extent in conflict

556 In the course of their recommendations they said, "We are in favour of making the British sovereign a legal tender and a current coin in India. We also consider that, at the same time, the Indian mints should be thrown open to the unrestricted coinage of gold on terms and conditions such as govern the three Australian branches of the Royal Mint."\* Has either of these things been done?—Yes. Gold was made a legal standard at the rate of one sovereign for 15 rupees in 1899, almost immediately after the presentation of the report of the Fowler Committee. As regards the opening of the Mint you have, no doubt, the Parliamentary Paper† containing the correspondence and a note‡ that I have submitted mainly for the object of plotting the Commission through that rather long correspondence

557 Was it not to those means that the Fowler Committee looked for the supply of gold for currency purposes in India?—I do not know whether they failed to perceive—they may have done—that, under the regulations that were in force at the time that they reported, the gold would come into Government treasuries or Government reserves, and would then naturally go out into the general circulation. I think it is better to assume that they did perceive that that draining out of gold into the internal circulation was an inevitable consequence of the arrangements that were in force when they wrote their report. It is extremely difficult, as you will understand, to disentangle what they thought as to how the scheme that they put forward would be actually worked out, and how far they foresaw the way in which events actually did tend in subsequent years

558 In your opinion, then, is it a necessary consequence of the policy recommended by that Committee that the gold standard reserve should be available for both purposes—both for foreign remittances and for the feeding of the home circulation?—No, I do not say that. The second passage which you read referred, I think, not specifically to the Gold Standard Reserve, but to gold reserves generally. I should imagine what the Fowler Committee had in their mind was that the Gold Standard Reserve should be the one which was to be hoarded up by the Government as a Central Reserve for times of difficulty, but that other gold reserves should be used as the

paper currency reserve has actually been used for the other purposes mentioned

559 To hold part of the Reserve in securities was, I take it, a departure from the strict recommendation of the Fowler Committee?—I should not accept that view, if I may venture to differ. The matter has given rise to so much controversy that I should like to put forward my own view somewhat in detail. If you read not only the Report of the Fowler Committee but the many other papers that are before you regarding the Gold Standard Reserve, you will see that continually gold is used in two quite different senses—it is unfortunate that it should be used ambiguously, but there is no doubt that it is so used. One meaning, of course, is metallic gold, the other is sterling assets—including securities. Before I go on to say what I think the Fowler Committee meant, I would like to draw attention to one or two passages where gold is obviously used in the wider sense. In paragraph 70 of the Fowler Report\* they say that the Government of India should "restrict the growth of their gold obligations", it is quite clear that they did not mean obligations which were payable in metallic gold. What they meant was obligations incurred in the way you are familiar with, by issuing stock and taking cheques in payment for it, the interest on which is paid merely by dividend warrants in the paying of which not a single sovereign changes hands. That is one passage I would refer to as showing the wider use of the term gold, as meaning sterling assets including securities. Then I notice as illustrating the general usage in this matter, a letter from the Government of India which is printed in the correspondence I have handed in (No. 89, 1st April 1909, Appendix V, page 168). In paragraph 4 the Government of India submit a calculation of the sterling assets that they lost during the exchange crisis of 1907-8. The letter says "During the period from November 1907, when exchange first fell substantially below 1s 4d, until the end of January last we lost 15 millions of our gold," and then they give it under three heads—Gold Standard Reserve, Currency Gold in England, and Government Gold held in India. The two latter items call for no comment, as they were actually metallic gold. In regard to the first item, Gold Standard Reserve, the loss of gold there was really through the selling of certain securities and the using of the proceeds in order to pay certain bills. I know that in the whole of these transactions, which involved the payment, the Government of India say, of rather less than 7 millions but really of more than 8 millions, not a single sovereign changed hands. It was entirely what I should call a sterling transaction, but not a gold transaction. I draw your attention to that merely to illustrate that according to general usage gold has a double meaning—first metallic gold, and second sterling assets, including securities, cheques and so on. That is the only reason why I mention this point, but it is an important one. If you accept these two meanings of gold then the question is, did the Fowler Committee intend the narrower meaning of metallic gold to be put on their statement? One would naturally turn either to any record of their meaning or to anything that could be gathered from the opinions expressed by members of the Committee subsequently. As regards any record of their meaning I think you will find that there is nothing on the subject in their Report or in their evidence, because the Committee was considering quite different questions—whether the Mints should be reopened and whether the rate of exchange should be 1s 3d or 1s 4d, and this question of the formation of a Gold Standard Reserve was at that time an extremely unimportant one, and they gave very little time to it. My recollection, since I had some little share in drafting the Report, is that the instructions that were given in order that the Report might be drafted were that these profits of coinage were to be held in a sterling form and not in a rupee form, so that in case of a fall in exchange they could be realised in sterling and used in London. I may say that some time ago I asked Sir Robert

[Continued

Chalmers, who was the Secretary of the Committee and whom I helped in that matter, and his recollection confirmed mine. That I think is all that can be said about what the Committee as a whole did, but I should like to draw your attention to certain things said and done by individual members of the Fowler Committee since the Committee itself was dissolved. In 1900 the decision was taken by the Secretary of State to hold this Reserve in securities, not in metallic gold. At that time his finance committee, on whose advice he largely acted, included Mr Le Marchant, who was one member of the Fowler Committee, and Sir Charles Crosthwaite, who was another member. It is really inconceivable that if they had meant metallic gold in 1899 they should in 1900 have forgotten that, and have submitted to the Secretary of State a despatch in which, when he adopted it, he said to the Government of India the Reserve was obviously one which should be held in securities. That gives the opinions of two very leading members of the Fowler Committee, and I can give you the opinion of a third member who is of great eminence in these matters—Sir David Barbour, who recently published a book called the Standard of Value,\* which I dare say you have seen, dealing very largely with the history of Indian currency. Although I have not brought with me a passage to quote, you can see if you read that book that over and over again he refers with approval to what has been done in the matter of the Gold Standard Reserve as carrying out properly the recommendations of the Fowler Committee. I have given the opinions of those three members. As regards the others, I have not had any opportunity of acquainting myself with their views on this question, which has been raised comparatively recently.

560 In the despatch from the Secretary of State to the Government of India, dated 13th December 1900, in Appendix V, page 126, it is arranged that the profit on the coinage of silver should be at once remitted to London and held in London by the Secretary of State, can you tell me why the India Office rejected the suggestion of the Government of India that the gold should be held in India?—I think that in answering the previous question I summarised what I understood to be the effect of Sir Edward Law's scheme, and showed that I thought it would have frustrated the object with which this gold standard reserve was created and was to be held. I assume that that was what was in the mind of the Secretary of State when he rejected that scheme.

561 I think you have said that it was an objection, so to speak, personal to that scheme?—Yes.

562 Rather than to possibly holding gold in India under different circumstances?—Yes.

563 The system of remitting gold to England and investing it entirely in Consols was pursued from 1901 to 1903, was it not?—Yes, but of course it was not remitting gold, if I may correct you there. That, by the way, if you do not mind my saying so, is a very good illustration of how gold is used in a wider sense than that of metallic gold. These remittances, I think, were in some cases effected by the transmission of actual sovereigns but the more usual course is, and has been, to bring the money home by the sale of bills. The investment in Consols, I think was the only form of investment until 1903. In Statement C, which you will find at the end of Appendix III, pp 99-102, you will see that in 1901-2 Consols were bought, in 1902-3 there was a further purchase of Consols, and also in 1903-4, but that in 1903-4 a departure of some importance was made when National War Loan stock, which, as you remember, was a terminable stock, was bought instead of permanent securities.

564 At whose instigation was that change made?—My recollection is that the general change of policy, that is to say, the decision to put more money into terminable securities and less into permanent securities was made in a private and unofficial way by Sir Edward Law. He used often to write to me on these subjects, and he made the suggestion, and I put it before the Secretary of State. I cannot tell you the exact date of his letter, but it was about that time, I think

565 Do you happen to know whether Sir Edward Law had changed his opinion on the question of holding gold since those days? I have seen it stated that he did?—My knowledge is largely based on this. When Sir Edward Law was financial member his financial secretary was Mr Finlay, whose name I dare say you know. Mr Finlay was telling me some time ago that Sir Edward Law was quite content with the idea of holding money in securities, and he did not think there was any disadvantage in the putting aside of his original proposal to hold it in gold. That is merely information which I got in conversation, so it is not in the strict sense of the word official, but I think you may take it that it is correct.

566 To the best of your belief that was his opinion up to the end?—I believe so. I often discussed these matters with him because I knew him very well.

567 One of your tables, I think, shows the way in which you invested the gold standard reserve?—Yes, Statement C of Appendix III (pp 99-102).

568 Will you tell me briefly what were the proportions between the different constituent parts?—It is a little difficult to condense these statements, which go over many years, but I think I can best answer your question by saying that until 1906 the whole of the gold standard reserve was normally held in sterling securities in London. You will see in Statement A of Appendix III (page 97) that there were temporary holdings of gold in India, but that gold was held in India pending remittance to London. In 1906 the policy of holding a portion in silver was adopted, and finally of holding it in coined rupees. There is a long history attached to that which no doubt you will go into later.

569 The policy was adopted in 1906, you say, of holding part of it in rupees?—Yes, first in silver, half-coined rupees, and then in coined rupees.

570 And that portion of the reserve was held in India?—Yes. The next change, I think, was when it was decided in 1909 to hold about a million in what is called in Statement A of Appendix III cash at short notice, that is to say, money lent for a few weeks at a time on securities so as to be able to be called in very rapidly. The final change that has been made is that in 1912 the Secretary of State decided, for reasons which are given in the papers before you, to accumulate a certain amount in gold in London, and that accumulation is going on now. We have reached about 1½ millions, and the present intention is to allow it to rise to five millions. I have not given you the nature of the securities, I do not think at this moment you ask for that information.

571 No, that is sufficient for the present. In paragraph 3 of the letter from the Government of India of the 26th April 1906 (see Appendix V, page 137) it is stated, "The depletion of our balances in India also embarrassed the Secretary of State in England, as, for example, when we had to press you to transfer gold from Treasury to currency, though advised that the withdrawal of gold from the reserves of the Bank of England would be inopportune." That appears to be a suggestion that the interests of India at that moment had to be sacrificed to the interests of the London money market, have you anything to say about that?—I am very grateful to you for asking that question, and since it is a matter on which much has been said, perhaps you would allow me to answer it in detail. What happened on that occasion is set forth in a series of telegrams which you will find in Appendix V (pp 136-7) of which I should like to give you a summary—they are very brief. On the 15th December 1905 the Government of India telegraphed to the Secretary of State, asking him to transfer half a million sterling to his currency chest that is the operation which is commonly known as earmarking gold. The Secretary of State said that what was necessary could be done by transferring the equivalent amount of silver which he had bought for the Government of India, and was about to ship to them, but he said, if you require more than this half-million of silver I will transfer forthwith half a million in gold as well. The Government of India pressed that gold also should be transferred in accordance with

\* Published by Macmillan &amp; Co., 1912

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

the Secretary of State's offer. They made their final request after some little consideration on the 19th December, and said that they were sure that the transfer of gold was necessary. On the same day on which the Secretary of State received that request he telegraphed out, "To-morrow I will set aside half a million of gold as you wish." Then on the 20th December he telegraphed out that he had done so. So that there was in no sense—and this is why I was glad that you asked the question—a setting aside of the convenience or wishes of the Government of India in the matter. As soon as the Government of India said that they could not conveniently do without this transfer of gold, the Secretary of State transferred it. Subsequently, in the course of the same busy season, he set aside nearly four millions of gold, so that what was required to meet the wishes of the Government of India was amply done.

572 Can you tell me whether in the first instance—I am not quite clear, listening to what you have said, whether you have already answered this—the Secretary of State did in fact object on the ground that the transference of gold from the reserves of the Bank of England would be inopportune at the moment?—In the course of the correspondence which I briefly summarised there appear these two sentences which I suppose I had better read, because they throw light on one another: "I am willing to make the transfer, as requested in your telegram of yesterday, at once if this is the only possible course. But as it is undesirable just now to withdraw gold from the Bank of England reserves, it would be better to postpone, or if possible to avoid, such transfer." That was the reason why for a short time he hesitated, but when he found that the interests of India as understood by the Government of India, required that the transfer should be made, then without any further hesitation he made it.

573 And even the expression of that hesitation was accompanied by an assurance that he would do it if the Government of India pressed him to do it?—Quite so, and he gave his reason merely because the Secretary of State always wishes to be very candid with the Government of India, and to let them know what is in his mind.

574 If you look at the same letter (26th April 1906, Appendix V, page 137), paragraph 9, you will see the Indian Government states "Our currency system is unavoidably artificial, and the profits arising therefrom should be primarily utilised, not in breeding interest, but in protecting it against the risks to which an artificial system is liable." Would you admit that that is a fair criticism of what had then taken place?—I do not think that that professed to be a criticism of what I was just describing. That is a statement which is made in support of the proposition that a part of the gold standard reserve should be held in rupees so as to avoid the risk of the Government of India being caught short of rupees. It is only to that point that that remark is directed.

575 But it perhaps has a wider application than it was given in that particular paragraph. If it is sound at all, does it not apply beyond the special purpose for which the Indian Government were then using it?—Certainly I do not think, if I may say so, that it applies to that particular transaction of the transfer of gold on which you were questioning me. I think that it is rather a wider and more forcible statement than personally I should make if I were asked to describe the Indian currency system, because I think, and these papers I hope will convince you, that the Indian currency system is as far as possible managed on automatic lines; that is to say, it is managed as little as possible and left to itself so far as may be. There is a certain artificiality in the sense that from time to time the Government has to take certain action, but to describe it as an artificial system in the sense that it is very much more artificial than, say, the English currency system, is, I think, not very completely justified. There is artificiality, of course, in the English system—great artificiality.

576 Does not the force of the criticism lie in the suggestion that this gold standard reserve should be

maintained in bullion?—It can be used as supporting that view, but it was originally used as supporting the view that it should be maintained in silver bullion. I do not think that the force of the argument depends—and perhaps I misunderstood you here—on the artificiality of the system. As the Government of India wrote it, they implied that there was a connection between the artificiality of the system and the maintenance of the reserve in silver bullion, where I had difficulty in following it was in seeing that particular connection.

577 Is it your view that it is not necessary to maintain any large proportion of the gold standard reserve in gold?—I would qualify that. I do not think that it is necessary to maintain a large proportion in gold provided that the portion that is in other forms is in forms in which it can be easily realised. If one had the choice between gold and securities of which the realisation might be difficult in times of stress, then I should say let it all be in gold.

578 In fact, if I rightly understood you, you would confine the holdings of the reserve either to gold or to short dated securities?—I should like to see it in that form. If there were any use in a reserve of 20 millions with 2 millions in Consols, I think it would be quite safe to have that kind of proportion, but I think it would not be safe in present circumstances to have a very large proportion of reserve in Consols. When I say Consols I mean similar securities such as Local Loans stock, Irish stock and so on.

579 That is to say, the highest class of securities with no fixed date of redemption?—That is so, or with no near date of redemption.

580 There is a question arising out of the correspondence of 1906 as to a temporary loan from the gold standard reserve. It seems to be rather an intricate transaction. Can you make clear to me what took place and what were the reasons for it?—I do not think that the transaction itself is very intricate. From time to time the Government of India has to make payments, mostly to meet Council bills or transfers sold by the Secretary of State beyond the amount that they hold in their Treasury balances, or that they can conveniently spare from their Treasury balances. In such times the usual resource is that the Secretary of State earmarks gold here, that is to say, transfers it to the paper currency reserve, thus liberating so much money from the paper currency reserve in India. That is the second method of meeting bills, payments from the Treasury balances being the first. There are times when even the second method cannot be conveniently used, because the London money market might be disturbed to an extent which would affect Indian interests. I mean, if the Secretary of State were issuing a loan or renewing debentures at that time he might say, It is a very serious thing to spoil my loan market by earmarking two millions or three millions of gold. In those circumstances he would ask the Government of India to make their payments to meet his bills, or for any other purpose, from the Indian branch of the gold standard reserve, taking the money as a loan. That is the practice which was followed for some years. The better course, I think, is that when the Government of India take money from the Indian branch of the gold standard reserve the Secretary of State should temporarily add a corresponding sum to the English branch so as not to deplete the reserve in any way. You will see in the correspondence in Appendix V that after seven years' pleadings with the Government of India the Secretary of State has induced them to accept that view. So that loans pure and simple ought not to take place in future, what ought to happen is that there is so much added to the London branch when the Indian branch is depleted.

581 Am I right in thinking that the effect of the old system was, in the first place to enable the Government of India to issue rupees to the public to the amount of the loan over and above the amount they would otherwise have been able to issue?—Yes, and that also is the effect of the new system. It adds an element of elasticity to the circulation in India.

5 June 1913]

Mr LIONEL ABRAMMS, C B

[Continued.]

582 The results are not affected by the change of procedure?—No

583 In a telegram dated the 14th February 1907 in Appendix V (page 151) the Secretary of State explains that his balances are earning  $4\frac{1}{2}$  per cent, would the India Office consider it a good reason for not repaying a loan in these days, if such a loan were made, that the sum lent was earning a high interest?—I think I can say with confidence that they would not consider it now a good reason, but I should like to say this, that at the period to which this telegram of 14th February 1907 refers the loan was actually repaid and gold was set aside. The Secretary of State's indication of his intention or his hankering after postponement of the repayment was not carried into effect.

584 In 1907 a report was submitted from a Committee on Indian Railway Finance,\* and as a result of that report a million or more, I think, of the money belonging to the gold standard reserve was applied to the purposes of railway extension, am I right in that statement of fact?—Certainly, except that it was actually used not for railway extension but for the purchase of rolling stock, but that is an immaterial point.

585 What were the reasons for adopting that course?—At that time the need for expenditure on rolling stock was very urgent. There was complete unanimity between the Secretary of State, the Government of India, and the mercantile community in India that a million pounds' worth of rolling stock ought to be got as soon as possible. It was not considered that it could be bought from the balances of the Secretary of State, and it was also not considered practicable to raise the money by means of a loan. India stock could not be issued because an issue had recently been made, and the objections to issuing India bills were held to be very strong. The general opinion at that time was that the exchange was in a very strong position, that the resources available for its support were quite adequate for their purpose—all of which is set forth in the Interim Report of this Committee submitted in June 1907 (see Appendix V, pp 156-7)—and that it would be on balance very much to the advantage of India to reduce the rate at which the gold standard reserve was being accumulated and to use this million of money for the purchase of rolling stock. I may say that I was a member of the Committee which made that recommendation, and we considered it, as you will understand, with very great care. We pointed out, as you will see here, how strong were the resources that were available for the support of exchange, they amounted to more than 23 millions and they were steadily growing. We came to the conclusion that there was enough to relieve us from any apprehension of a fall in exchange.

586 The Secretary of State, I think, went rather beyond your recommendation at the moment, and decided to do this not merely as a single exceptional transaction, but regularly to use half the profits on coinage for railway expansion?—Yes.

587 It would appear from the papers that you have submitted that the opinion of the Government of India was adverse to that course?—Yes, on the whole the Government of India were adverse, but their opposition has, I think, often been exaggerated. I should like to draw your attention to a letter in Appendix V from the Government of India of the 8th August 1907 (page 160). I wish to draw your attention to two points. The first is in paragraph 3 of that despatch, in which they say, "We accept your decision, although some of us entertain doubts as to its expediency." It was not a unanimous Government of India that was opposed to the action taken by the Secretary of State. The other point to which I should like to draw attention is that, as shown in paragraph 2 of that despatch, the Government of India by a coincidence were, at the time that this Committee reported, considering and indeed accepting the advisability of limiting the growth of the gold standard reserve. They had actually, as you will remember, in the previous year diverted a considerable sum from the gold resources on the

sterling resources so as to build up the Indian branch, and then they were proposing that the sterling investments should continue only until they reached 20 millions, and that after that figure had been reached the investment of the profits on new coinage should come to an end, and that then the profits, being diverted from the gold standard reserve proper, should be used for railways. So that the minds of the Secretary of State and his Council and of the Government of India were moving in the same direction.

588 So that you would say there was no difference of principle between them, the point on which they differed being the exact time at which the operation should begin?—Yes. Of course they would have said, and it is fair to them to mention it, that the difference of detail was to them a very important one.

589 The transaction bears a certain resemblance to one we sometimes see in this country, where the Chancellor of the Exchequer, being in need of some sum for immediate objects, finds admirable reasons for reducing the Sinking Fund?—Quite so, and I think it ought to be criticised on much the same ground. Everyone is familiar with the phrase that is so often thrown at the Chancellor of the Exchequer, that he has raided the Sinking Fund. It is implied without further consideration, that he has done an improper act, whereas I think those who follow imperial finance more carefully know that sometimes it may be an unwise thing, and sometimes it may be a very wise thing, to raid the Sinking Fund in a particular year.

590 Would you agree in regard to this Indian transaction that the onus of proof very definitely lies with those who wished to divert?—Yes. The justification that our Committee put forward in support of its much smaller proposal was, first, the admitted urgency of the additional rolling stock, then the difficulty of providing it by other means, and, thirdly, the position of safety that had been reached in respect of the safeguarding of the exchange.

591 Do you think that your Committee or the Secretary of State would have come to exactly the same conclusions if they could have foreseen the stringency of the crisis which took place, I think, about six months later?—I think they would have. It is very difficult to dogmatise, and you will not expect me to dogmatise in answer to such a question but what actually happened six months later was that there was an extraordinarily severe reversal of the usual favourable balance of trade, and that, without any difficulty worth mentioning, the tendency to a fall in exchange which arose from that reversal was met, and amply met, and exchange was, to all intents and purposes, maintained. It is true that, owing to the fluctuations of circumstances, the exchange did fall below the gold exporting point for some days, so that to that extent exchange, in the strictest sense of the word, was not maintained, but I think it would generally be held that the business of maintaining the exchange was successfully performed, and that the Secretary of State was by no means at the end of his resources for that purpose.

592 I was led to ask you that question because I noticed that in the Secretary of State's telegram of the 2nd July 1907, which is given in Appendix V (pp 158-9) he states, "The danger, which you allege, of a fall in the rate of exchange, I regard as illusory, having regard to the present conditions of trade."—I noticed that telegram, and I looked up the records relating to it. The telegram might easily be understood as meaning that the Secretary of State committed himself to the view that there was no danger of the occurrence of unfavourable trade conditions such as in the absence of special support would lead to a fall in exchange. If he had said that, his remark would have been very risky and indeed rather ridiculous. I find on looking at the papers that what he intended to convey was this—that the existing supports for exchange were adequate, and that the danger that they would be inadequate if one million pounds were spent on the railways was illusory. That view which the Secretary of State meant to convey was justified by the events of the crisis which occurred six months later.

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

593 When was the decision to use half the profits on coinage for railway purposes withdrawn?—It had undergone a process of gradual modification

594 It has finally ceased now, has it not?—It has ceased until the 25 millions shall be accumulated in the London branch of the gold standard reserve

595 What was the date on which it was decided to withdraw no more until that figure of 25 millions should have been reached?—That was a recent decision of 1912 You will find it in a despatch of the Secretary of State dated the 28th June 1912 in Appendix V It is the last sentence of paragraph 5 on page 202

596 Up to that date about what amount had been withdrawn?—About 1,100,000l The only withdrawal that took place was the one in 1907, which occurred immediately on the report of that committee

597 You have given us in a paper which you have circulated, an account of the financial crisis of 1907-8 (see Appendix III), I do not want to ask you to go over in evidence all that you have written, but I will just ask whether there is anything you would like to say supplementary to what you have written either as regards the history of the crisis or the measures adopted to meet it?—I think it is given so fully in my statements and in the correspondence in Appendix V that there is very little that I need say I do not know if at this point I should draw attention—I should like to do so at some stage—to the exceptional severity of the crisis I think that is a point which has been almost universally overlooked, except in the India Office, and I attach myself the very greatest importance to its being properly understood In a small paper of mine, headed Supplementary Statements to Accompany Memorandum on Gold Standard Reserve (see Appendix IV), I give certain particulars (in Statement, page 107) regarding the balance of trade in calendar years I did so in financial years because that is a conventional way of setting forth these figures, but it is a very misleading way, because very often you have a financial year the first half of which is very good and the second half of which is very bad, but the badness of the second half is obscured by the goodness of the first half So that, in order to get to the real nature of the crisis in 1907-8, in Statement 3 I have amplified some figures, which are already in the correspondence, for a smaller number of years, taking the period from the Autumn of 1907 to the Autumn of 1908, which was really the period over which this crisis extended and comparing the balance of trade for that period with the balance for the corresponding period of each year from 1892-3 to 1911-2 I would draw your attention to this, that although in these years, as indicated by the asterisk in the last column of the table, there were many famines, there was no year except 1907-8 in which there was not a very considerable favourable balance of trade If you eliminate 1907-8 you find that the worst year was 1896-7 when there was a favourable balance of nearly 13 millions, and that the other years show much larger favourable balances In this solitary year, 1907-8, you have an unfavourable balance of 1 190 000l which is to some extent, due to the fact that silver was very cheap at that time, and India imported very large quantities of cheap silver I think that that really is one very important fact relating to the history of that period which is not brought out in the correspondence or in my continuous memorandum, so I should like to draw your attention to it

598 Will you state the inference you draw from it?—I draw one inference only, as shown in various passages in the memorandum, that when one is calculating how large the gold standard reserve ought to be in order to provide reasonable security for maintaining exchange at any future period of adverse trade one can, on the basis of these figures take 1907-8 as being as bad a period as it is necessary to provide for

599 Was 1907-8 a famine year?—It was to some extent but it was not as bad a famine year as many of the others which I have marked with asterisks I daresay you remember that at the end of 1907 there occurred what was called the American crisis when a panic fell on many depositors in America and they took

then money in gold—real metallic gold this time—and hoarded it

600 There was not any war in India in that year?—No, it was a time of peace It was a time of famine, not very bad or extensive famine, but above all things—and this was the important fact—it was a time of the most profound industrial depression all over the world, and it was also a time when the Bank of England rate was very high

601 Suppose that that general state of affairs were to coincide at some future time with a really severe famine in India or even with such a year as we have seen in India occasionally in the past, when there have been both bad famine and war, would you still say that 1907-8 is the measure of the utmost that you have to guard against?—Of course no one would say that there could not possibly be a worse year, but in these matters I think it is generally agreed that provision ought to be made for what, on the basis of experience and of any corrections of experience that prudence suggests, may be considered to be the utmost limit of danger I ought to mention to you that in these years which are shown in my table there have been years in which there have been simultaneously famine and war I do not mean war on a very great scale, but very important frontier campaigns I think you will find if you look at Statement 2 of Appendix IV on page 107 that famine and the second Afghan war were synchronised, I think in 1878 the Afghan war had begun, and that was certainly a famine year

602 And it was a bad year, of course, as shown by your figures?—Yes

603 I merely put to you that no doubt the American crisis and its results were extremely severe, but that the local Indian crisis was not as severe as many that had been known in that country What I was suggesting was that to take the standard of that year, the standard fixed as what was necessary for that year, as the standard for all years, might be insufficient if a grave famine in India coincided with a similar world crisis?—As a general proposition, of course I could not possibly dispute that, but I would dispute that if, as business men do, one allows for such difficulties as are likely to occur and makes a fairly liberal calculation of the extent to which past experience suggests difficulties then one has gone as far as prudence suggests, more especially because, supposing that there was an under-calculation of real difficulties but that one had 25 millions as one's gold standard reserve intact at the beginning of a particular exchange crisis, no one doubts that the using up of that very large sum of money, together with the gold in the paper currency reserve, would very seriously stem the crisis, and that a great deal would have been done by way of contracting the currency and by other methods to reduce the residuum of the crisis still to be faced, and at a time like that one would no doubt be able to borrow, if it were necessary, to make more funds available Since this kind of calamity might happen perhaps once in 50 years, or once in 100 years, it is important not to immobilise a large sum of money for so long a period in order to meet so improbable a contingency

604 At the same time, if you profess to create a reserve you would agree would you not, that it is very desirable that it should be sufficient for the worst contingency that you may reasonably allow for having to meet?—Yes that is a formula to which I should willingly subscribe, and I should supplement it by saying that these figures in Statement 3 on page 108 are an excellent guide as to what is the extent of that contingency

605 Speaking generally of the correspondence between the Secretary of State and the Government of India, am I right in thinking that in the earlier years the Secretary of State overruled the Government of India perhaps in the most important points on which the two differed but that in the last two years or so the correspondence discloses a compromise in which the Secretary of State has given way, to some extent, on such questions as holding a portion of the reserve in London in a more liquid form and the Government of India has waived its wish to have more of

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

the reserve located in India itself?—Yes, I think there has been an approach towards unanimity in the matter.

606 To go to another question, I want to ask you a little about the coinage of rupees, how is it determined when rupees are to be coined, and to what extent?—That, of course, is set forth at great length in the correspondence, but it has not been summarised in any memorandum. Perhaps I might build up my remarks round a certain nucleus, namely, the memorandum which was sent out by the India Office in 1910 (See Enclosure to Despatch to the Government of India No 25, of 18th February 1910, in Appendix V, pp 188-94).

607 I do not so much want the whole history of what has taken place as the result?—The result, as you will see from that memorandum, is that we have now adopted this standard—that at the beginning of the busy season which we take to be the 1st October, we ought to have in the paper currency reserve and in the Indian branch of the gold standard reserve combined 24 crores of rupees, that is to say, the equivalent of 16 millions sterling, and that that should be allowed to decline gradually to 17½ crores of rupees by the 31st March, which is the conventional end of the busy season—of course, it is not a very exact date, but it serves usefully, and that in order to prevent the stock falling below 17½ crores by the 31st March, new coinage ought to be undertaken during the busy season to the extent that is necessary, and then if the year ends with 17½ crores, that is to say, if that is the amount on the 31st March, coinage ought to be gradually undertaken during the summer to the extent that seems likely to be necessary to fill up the reserves again to the higher figure, the 24 crores. There is always some uncertainty, because in the summer sometimes rupees flow out from the reserves into the general circulation and sometimes they flow back again.

608 Are the variations in the public demand very great from year to year?—They are enormous. I have some figures here that I got out for another purpose, and I think they are very surprising. I do not think you need the figures year by year, but I will just take the two extreme figures. In 1907 the public demand for rupees, that is to say, the absorption of rupees, was 8,120,000 in the calendar year, and in the year 1908 there flowed back from circulation into the reserves, 12,300,000. The difference between those two extreme years was a difference between, as we put it in our statements, + 8,000,000 and - 12,300,000, that is to say, a difference of over 20 million sterling. That you will easily understand is a very important fact in all the management of the Indian currency, that we are liable to these vast fluctuations in demand.

609 By what considerations are the Government influenced in the purchase of silver for rupee coinage?—Only such considerations as flow from that empirical rule that I mentioned to you. We try to have our 24 crores at the beginning of the busy season to prevent our stock from falling below 17½ crores at the end of it, and then if it does fall as low as 17½ crores, to build it up again to 24 crores by the beginning of the next busy season. I ought to have mentioned to you that this is a very recent rule, and, if I may say so as a member of the India Office, it has been very useful because it prevents purchases being made either too sparingly or too abundantly, and both extremes have been reached in the past.

610 It has led, on the other hand, has it not, to purchases of silver not being made at all for some time?—It has.

611 And then to very large purchases being made in a very brief time?—It has not led to larger purchases being made in a brief time than was customary under the old system. Both under the existing rule and under the previous system large purchases were made in a very short time.

612 It must necessarily be the case, must it not, if you wait to purchase until your needs are very great that the market will have knowledge of those needs, and that there would be a natural legitimate tendency on the part of the market to use that knowledge against you?—We try not to let ourselves

be caught very short of rupees. Our minimum of 17½ crores is a very ample minimum, and supposing that at some time we had to let this stock go down to 15 or even 12 crores, the system would still be workable.

613 Have you ever considered whether it would be possible to buy steadily in small quantities instead of waiting until you had a large demand?—Yes, we have often considered that, and I think the answer to it in its briefest form is in those figures which I gave you—the figures of very large fluctuations. I have the figures for various years showing the amount of rupees held. In the year 1909 the largest amount held at one time was about 49 crores of rupees, and the lowest was about 89 crores of rupees. Both of those figures were very much above the estimated maximum of our requirements. Supposing that when we have held those very large sums we had bought silver, say, at the rate of two millions a year or at any figure that had been fixed as the steady annual purchase, that would have been open to two objections, first, it would have been in itself rather foolish to buy more of an article of which you already had far more than you needed, and then there is a much more serious objection. Supposing one had spent two millions on buying this unnecessary silver, and then just after that there had been a deficient monsoon or an American crisis and the exchange had tended to fall, it would have been most unfortunate that two millions of sterling resources, which in happier circumstances could have been used to meet the fall in exchange, should have been rendered useless for that purpose by being locked up in silver in India, because in such circumstances the money would have been locked up and one could not have turned it into the sterling resources and got it back and used it to support the exchange.

614 The Committee of 1898 recommended among other things that the Indian Mints should be thrown open to the unrestricted coinage of gold, will you tell us what has been done in respect of that recommendation?—The full information, as no doubt you are aware, is given in a paper which was presented to Parliament in 1913,\* and I have tried to summarise it in a memorandum headed Note on Proposals for the Coinage of Gold in India (see Appendix VI, page 213). I think I could very briefly give you the main facts. From 1899 to 1902 we were in continual correspondence with the Treasury and with the Government of India, with a view to having a branch of the Royal Mint established in India. There were a good many technical difficulties, but they were not very serious and they were all got over in course of time. I think that possibly a Mint would have been established in 1902, only the Government of India wrote to the Secretary of State a very important letter withdrawing the proposal.

615 Which letter is that?—You will find it on page 56 of the Parliamentary Paper,\* and it is dated 25 December 1902. They refer to certain criticisms, and then they go on "We have now ascertained that the chief mining companies have made arrangements with which they are at present satisfied for the regular sale of their gold in London, and we are doubtful whether any terms that we could offer with a due regard to our own interests would induce them at an early date to alter those arrangements and to bring their gold to the Mint in Bombay. In the absence therefore of an assurance that a steady and permanent supply of gold of local production would be available for coinage in this country we prefer to drop the scheme for the present, leaving its revival to the existence or the revival of conditions which cannot at present be foreseen." In view of that, the Secretary of State had no alternative. He had to drop the proposal, and it remained in abeyance until it was raised in the first place in a debate in the Legislative Council in India in 1911. There was a further discussion in same Council in 1913, and as the outcome of that the Government of India revived the proposal in a letter which is printed on pages 57-63 of the Parliamentary Paper.\* They proposed that a Mint should be set up in Bombay on a very small scale, and they do not seem to have very much considered the question of

\* H C. 495 of 1913.

5 June 1913]

Mr. LIONEL ABRAMSON, C.B.

[Continued]

the arrangements that were necessary under the British Coinage Act of 1870, that is to say, to bring an Indian branch mint into proper relation with the British Government and the Master of the Mint in this country. We found when we wrote to the Treasury that the very modest, inexpensive scheme of the Government of India was not really practicable. Their idea was to set aside a portion of the Bombay Mint, a room probably, to have a refinery and to coin sovereigns, and to let the staff of the Bombay Mint do the work when they were not coining rupees, but the Treasury insisted that whatever mint was used for the coinage of sovereigns must be under the control of the Treasury.

618 (Sir Robert Chalmers) That was under the provisions of the Coinage Act of 1870, was it not?—I think that is so. I fancy the Treasury could have agreed to a scheme under which each officer of the Bombay Mint would have had two masters, namely, the Government of India for rupee purposes and the Imperial Government for sovereign purposes, but the Treasury, for reasons which I quite appreciate, did not accept that view.

617 (Chairman) Would the Treasury objections apply equally if an Indian mint were to coin a special gold piece, not sovereigns?—No, the Treasury would then have no jurisdiction. It was for that, among other reasons, that the Secretary of State suggested as a way out of the difficulty that a special Indian gold piece might be coined instead of the sovereign.

618 Suppose a gold piece were coined for India or sovereigns were freely coined there, can you give me any indication to what extent, in your opinion, these gold coins would be likely to remain in circulation?—It is very difficult to say how far the sovereigns now in India, which amount to an enormous total, are in circulation, and how far they are used for other purposes or have been melted, but there are some figures on the subject, and I dare say many of them are familiar to you. There is one table in paragraph 8 of Appendix VI on page 214 which gives some information which I do not think has ever before been published in the form in which I have given it. I should like to draw your attention, first of all, to the amount of sovereigns issued to the public. You will see that the amounts have been very large in recent years, in 1912-3, for instance, they went up to 21,815,000. The figures, which have not been published, are these receipts from the general public, namely, the second line in the table, nearly 7,000,000 in 1911-2 and more than 11,000,000 in 1902-3. That shows that there is a very considerable flow of sovereigns both out of the treasuries and reserves into the possession of the public and also in the other direction. These figures, therefore, indicate a very considerable use of sovereigns as currency. But it is quite possible that the large amount that comes into the Government treasuries and reserves from the public may indicate that many of the sovereigns which go out to be used for currency have very short lives—I mean the Government might pay out a sovereign one day, and then the same sovereign might come back again the next day. I do not say that that is so, that is merely one of the illustrations of the difficulty of arriving at any conclusion on such a matter.

619 I should now like to ask you whether you would agree with the opinion expressed by the Fowler Committee that India should aim at the possession of what they call the normal accompaniment of a gold standard, namely, a gold currency?—My own opinion—I do not say that any weight should be attached to it—is that on the whole it is a good thing that India should have a gold currency. I think it is far less important than that she should have a great central stock of gold to be used for the support of exchange, I think that is her greatest need in respect of gold, but her second need, I think, is that the people should have gold if they want gold. It is a curious fact that many people who have to use money in the course of their business have an extraordinary affection for the use of gold money, and I think that people in India, like people elsewhere, if they want gold money and can pay for it in produce or can acquire it honestly should have

the opportunity of acquiring it. Indeed it is inevitable, you cannot prevent people from having gold if they want it.

620 Is there any indication, in your opinion, that they have difficulty in getting it now if they want it?—I should think there is very little difficulty when one considers the vast amounts that have been paid out into circulation in India, and the very large amount, as mentioned in one of my papers, that is still held on offer for anyone who wishes to have it. I should think it ought to be quite easy for anyone in India who desires gold to get it. Sometimes friends of mine who have been in India grumble and say beyond a certain amount they find it a little difficult to get gold, but then I fancy that they must be referring either to very large amounts or else to periods when from one reason or another the Government stock has sunk rather below the normal level.

621 If they were referring to very large amounts, that would be an experience which they might easily have under certain conditions in Europe, would it not?—Quite so. I remember one friend of mine told me that the ruler of a native state in the West of India with whom he was well acquainted sent down to Bombay to change many lakhs of rupees—a lakh of rupees is roughly 7,000—into sovereigns, and the messenger whom he sent could only bring back sovereigns on that day for half the amount, and he had to wait for the other half. When you are dealing with several lakhs of rupees it is not a very strange thing that you do have to wait for a little time.

622 We have had referred to us similar questions in regard to the paper currency reserve. I understand that one of your colleagues in the office is going to give us evidence on that point?—Yes, Mr. Newmarch has submitted a memorandum\* which contains, I think, very full information. If there is any point on the subject on which you would like to question me, of course I would answer to the best of my ability, I have been familiar with it for a good many years.

623 I think I need not trouble you under the circumstances at present, but possibly other members of the Commission may wish to ask you some questions. Practically the system which is established in India is what is known as a gold exchange system is it not?—It is more than that, I should say. I think the ideal gold exchange system would be a system under which there were central stocks of gold under the management either of the Government or of a very responsible central bank with little or no gold in circulation. The Indian system departs from that in that it tends to encourage, and has, I think, effectively encouraged, a certain circulation of gold, though, as I explained, I cannot say to what amount. It is on its way towards becoming a combination, I should say, of a gold exchange system and a gold currency system.

624 In so far as it is a gold exchange system it economises the use of gold, does it not?—Yes, it does to a considerable extent.

625 Might it not be thought that it is in the interests of India to economise the use of gold?—I do not know that it is of so much importance to India, at any rate it is not of more importance to India than to the rest of the world that the use of gold should be economised. The view has been held that gold ought to be used freely because there is too much of it. I think that India must arrange her currency system in accordance with the wishes and convenience of the people concerned without thinking too much of the wide reaching economic effects.

626 I think you are probably right in saying that the Indian public must have what the Indian public needs. I was rather asking you whether the Indian Government had an interest as distinct from Indian individuals, that is to say, whether India as a whole had an interest either in encouraging the use of gold or in discouraging it?—I think that the Indian Government as representing simply the interests of the Indian people, have an interest in conserving the central stock of gold or of sterling assets, so

\* See Appendix VIII, page 239.

5 June 1913]

Mr LIONEL ABRAHAM, C B

[Continued

that it may be strong enough to meet emergencies. Subject to that, I do not think there is any reason, from the point of view of the Indian Government, why gold should not be freely used by the people of India.

627 It has been suggested in a criticism which I have seen of the present Indian arrangements that the keeping of gold in London tends to make it rather a reserve for the London money market than for India, that is to say, that London discounts the presence of this gold, that the London position is the weaker in consequence, and that that injuriously affects India?—I do not think there is any substance in that. Of course the influence which would at any time be exerted on the Indian stock of gold held in England would be the influence of the Bank of England and of the joint stock banks, and I am quite sure that they would never count on the use of Indian gold in an emergency or desire in any way that their wishes should be consulted. They know that the Secretary of State has to be adamant in his resolution to think only of Indian interests in these matters, and that he is adamant.

628 I go now to the allocation of the reserves. I gather from Appendix III that in your opinion London is clearly the right place to hold, at any rate, the major portion of the gold standard reserve?—Yes.

629 The objection to it is perhaps rather a political one, namely, that Indian opinion largely feels that that is some disadvantage to India?—What view is held by Indian opinion as a whole I cannot say. There was a proposal made in the Indian Legislature Council that a considerable portion should be held in India, and it certainly was supported by many members, but whether Indian opinion generally, that is, the opinion of the great Indian public, concerns itself with this matter, I cannot say. In the Indian newspapers I find very little on the subject except when particular writers who are interested in the matter are writing very freely.

630 One of your reasons for objecting to having more of it held in India is the difficulty of earning interest on it?—Yes, that is one reason.

631 Am I right in thinking that though that is a strong reason with you it is not your principal reason?—The main consideration, I think, is that the reserve, wherever it is held, should serve the purpose which it is intended to serve. I think holding the reserve in London does tend to ensure that the sterling portion of it shall be used for the purpose of supporting exchange.

632 Then your argument is that when needed for the purpose of supporting exchange it is needed in London?—It is needed in London.

633 Therefore it had better be kept where it is needed?—Yes.

634 And that has the incidental advantage of enabling you to earn interest on it to a larger extent than would be the case in India?—In India you could scarcely earn interest at all. If it were held in India it would have to be held in gold, I think.

635 I think you have already said that you would like to reduce the holdings of Consols and such like securities which are not repayable at a fixed date?—Yes, I mentioned in a marginal note to paragraph 6 of Appendix III (page 88) that after 31st March, which is the date to which the statements go, we sold Consols for half a million and bought short-dated securities in their place.

636 Now if you have very large holdings of short-dated securities would you always be certain that you could realise them?—I think so.

637 The presumption being that the moment at which you want the money is the moment of what I may call international money stringency?—It might be or it might not be.

638 Assuming the case that it was, assume a crisis like 1907?—In 1907 we had to take from the gold standard reserve, roughly, nine millions, not only had we no difficulty in getting that nine millions, which mostly came from realising securities, but we had arranged to sell more securities. We had to cancel, or we did cancel, whether wisely or not, the sale that we had arranged, so that we were in no way held up by the difficulty of realisation. Since then—and that is a good

basis of comparison, because there was a very bad crisis at that time—the whole reserve has come into a much more realisable form, and if we had to present our six months' treasury bills I do not think anyone can doubt that if they were then due they would be paid, or if they were some months short of being due that the Bank of England would discount them for us at a proper rate. Our next line of defence would be exchequer bonds, which would have perhaps two years to run. I do not think there is any reasonable doubt that we should be able to realise our exchequer bonds. Then there are other bills which have been issued by Colonial Governments, and I cannot conceive that we should find difficulty in realising them.

639 Do you consider that you ought to hold any fixed proportion of the gold standard reserve in gold itself?—I think the real argument for holding a certain amount in gold is an argument which is set forth in one of these papers that, unfortunately from our point of view, perhaps fortunately from the national point of view, the supply of short dated securities is very likely to decrease. It is the policy of the Treasury, and it has been for many years, since the end of the Boer War, to reduce the amount of Treasury bills in existence, and it is quite possible that 10 years hence there may be no Treasury bills. I think the real reason for holding any gold is that we may be unable to find short-dated securities sufficient for the purposes of the reserve.

640 As long as you can find short dated securities you personally do not think it of importance to hold any part of the reserve in gold?—No.

641 Of course, if you hold very large sums in Treasury short dated securities the moment at which you would wish to realise them would be the moment when it would be most inconvenient to the Treasury to pay off those bills instead of renewing them?—Fortunately for us the Treasury has no option in the matter. If we present our bills and say we want our money, then it is for the Treasury to issue corresponding amounts to the public in order to find the money to pay us.

642 The Treasury would be obliged to pay you, would it?—Yes.

643 But the effect on the money market might be very considerable?—Yes.

644 The Treasury might have to borrow such amounts at very considerably enhanced rates?—As far as we were concerned, we should get our money back at par.

645 I agree that India, of course, would get her money back, but what I was coming to was that the result of her suddenly demanding this large sum of money at a time when it was very inconvenient to find gold would have no direct effect on the repayment, which would be certain, but might have an indirect adverse effect upon her trade?—It might.

646 It might help to produce a stringency which might be very injurious?—Yes. May I however mention a point which is really of great interest in its backward illustration of a question which you put to me at the beginning? You spoke of gold having to be found at a particular moment, and of the stringency that might be caused thereby. I do not know whether you, like the Fowler Committee, use gold in the wider or in the narrower sense, but if you use it in the narrower sense then the point which you raise suggests this observation to me—that no need for actual gold arises when India has to realise her Treasury bills and meet a fall in exchange. All that India has to do is to make the payments in what is commonly called bank money, and that fact, very curiously, critics of our Indian system have frequently overlooked, it is a fact of the first importance.

647 As the volume of Indian trade increases must not the gold standard reserve increase in some proportion to it?—It ought to go on increasing, and whenever the Secretary of State has thought of the matter he always had some scheme for enabling such an increase to be effected. One method is to add all the interest on the investments, if any of it is still held in investments, another thing that can be done, and which is always proposed or generally proposed, is that at the time when the whole profits on coupons cease to

5 June 1913]

MR LIONEL ABRAMSON, C B

[Continued]

be added to the reserve, a proportion of them, say a half, should go on being added, so that there would be a continual growth of the total of the reserve.

648 In considering these different alternatives has anything like a principle been evolved which should govern the amount to be aimed at?—No, I think that the facts are so uncertain that it would be impossible to arrive at a principle. Of course you know that particular figures have been adopted—the 25 millions, for example.

649 Yes, that is adopted on a general survey of the situation, but there is no principle that would lead to the expansion of that sum in any definite proportion to the development of Indian trade, is there?—No, it is very uncertain. If a great part of it were held in securities one sees how much would year by year be added by way of interest, but how much would be added as representing, say, half of the profits on coinage one does not know, because in many years there would be heavy coinage, and in other years there would be no coinage at all.

650 As regards the Indian branch of the reserve, I have read your statements in Appendix III on this subject (pp 94-6). Am I right in thinking that in effect it is really a sort of additional paper currency reserve?—I think roughly it may be so described. Of course every analogy fails at some point, but it serves very much the purpose that would be served by an addition to the paper currency reserve.

651 Might it not be desirable to increase the paper currency reserve instead of keeping the Indian branch of the gold standard reserve?—That would not quite serve the same purpose unless other alterations were made in the rules regarding the paper currency department. I should like to explain that particular difficulty, if I may, as it is a little intricate. If you have rupees in the paper currency reserve you can only take them out either when you cancel the notes or when you substitute sovereigns in the reserve. There are only, if I may put it metaphorically, two keys which fit that particular lock and enable you to get your rupees. This holding of the rupees in the Indian branch of the gold standard reserve is guarded by a lock that can be opened much more easily. One can simply take a loan and repay it when convenient, or one can take the money out and against it merely invest in securities in England. It is very often easier to get at those rupees, I mean quite legitimately and properly, than at those of the paper currency reserve.

652 It is an extension of the uses of the gold standard reserve beyond anything contemplated by the Fowler Committee, is it not?—Yes, it is quite a new departure. I need scarcely do more than say, in passing, that the Fowler Committee dealt very fully with the problems which had arisen when it was appointed, but, naturally, they could not deal with problems which had not then arisen.

653 It is the diversion of a portion of the gold standard reserve from its primary functions?—Yes, it is.

654 You find a necessity, and as you have the gold standard reserve you apply that to meet it?—Yes, and that was done. I may say here it is one of the subjects on which there has been extraordinary unanimity between successive Secretaries of State and successive governments of India.

655 Has there been no difference of opinion between the Government in India and the Government at home?—On very small points there has been, but in substance they have both agreed that this rupee branch of the gold standard reserve should be maintained. As regards the exact method of using it, there have been some differences which I think have been unduly magnified, and in any case they have ceased now.

656 (Lord Kitchener) Will you be so good as to tell me this—I ought to know it, but I am not quite sure. Can gold be demanded for rupees at the rate of 1s 4d, or is that standard kept up by the favour of the Government?—It cannot be demanded. The Fowler Committee considered that among other questions, and rejected the proposal for complete legal convertibility. The practice is that when the Government has gold in

India, as it usually has, it gives it out freely at a particular rate, 15 rupees to the £, and in addition to that, when the state of exchange is unfavourable, it sells sterling exchange on London for rupees. In those two ways it provides what is an approach to convertibility, but not absolute convertibility.

657 Should I be wrong if I said, under those circumstances, that if gold cannot be demanded at the rate fixed by the Indian Government—that is, at 1s 4d—that means that the currency in India ultimately has a silver basis?—I do not think so. It would be on a silver basis if the owner of the silver had the right to bring it to the Mint to be coined, and in that case, of course, the circulating value of the coin would be equivalent to its intrinsic value. Now there is no such right, and the circulating value of the rupee differs very greatly from its intrinsic value. I believe there is only one important country now on a silver standard, namely, China. Before 1893 India was on a genuine silver standard like China.

658 You rather surprised me by not appearing to think there would be very much difference between holding sterling securities and metallic gold, am I wrong in saying that you do hold that opinion?—There are differences, and obvious differences. In what connection did I say that?

659 Suppose to day, instead of holding metallic gold in India you hold a part of your reserves, say, 10 millions, in sterling securities, and it became necessary for you, in order to support the relative value of the rupee at 1s 4d in India, to sell your 10 millions of sterling securities in London and get gold for them, do you think you could do that in London to day without an enormous disturbance of every market in the world?—First of all, it depends on what securities one holds.

660 I will give you the best security in the world—Treasury bonds?—When you say gold, what do you mean?

661 Raw gold, metallic gold?—There is no need to have metallic gold for our purposes. I mentioned that to the chairman, and he did not press me to pursue the point, but if I may be allowed I would like to explain it, because it is a point of the very first importance.

662 If you please, it would be very interesting?—May I explain to you what are the circumstances in which we have to use our gold standard reserve? Ordinarily, as you know, India has a favourable balance of trade, and there is no difficulty for any person in India who has ordered goods to be imported on his account to get sterling exchange in order to pay the vendor, but occasionally, perhaps once in 10 years, or once in 20 years, India has an unfavourable balance of trade, and then it is quite difficult for the Indian importer to pay the vendor from whom he has got his Manchester goods, or whatever it may be. It is then, when the holder of rupees is looking about for sterling in order to pay his debts to his creditor in Manchester, that a fall in exchange occurs. I hope I have made that clear.

663 I see that with the foreign trade of India, but I will put it in this way. Suppose in days to come the holders of rupees in India desired for some reason or other, which I need not enter into, to turn their rupees into gold at the rate of 1s 4d, could they say to the Government of India you must find us the gold?—We have never accepted that position.

664 How are you going to keep the exchange up if you are going to say, when gold is asked for against your silver at 1s 4d, you will not give it?—The rate of exchange is, as you know, a rate of international exchange, and when one speaks of the French exchange, the German exchange, and so on, one means the ratio between the currencies of two particular countries. I think you accept without further question my explanation of how it is in the case of the external trade.

665 I do quite?—I do not think that there is any country in the world that has ever undertaken the further obligation which you suggest, namely that it should give silver to anyone who brings gold, and gold to anyone who brings silver. This might interest you. A scheme for doing that, and setting up what is known

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

as a bimetallic shop—selling silver for gold, and gold for silver—has appeared once in a very interesting economic work, *The Theory of Bimetallism*,\* by Sir David Barbour, who is an old friend of many members of this office. He suggested that as a sort of type of what perfect bimetallicism would be, but, according to my recollection, even he, enthusiastic bimetallicist as he was, never contemplated that any one country should ever set up a bimetallic shop on that basis, because it would break the greatest and most wealthy country in the world.

666 My suggestion is that you are on a gold basis in India, really. You have practically put yourself on a gold basis in India, I should have thought, by saying that you will pay 1s 4d for a rupee. Does that not put you on a gold basis practically? I know that you cannot run gold and silver at a fixed exchange together, but let me put it as plainly as I can—do you want to pay for the rupee at 1s 4d in gold, or do you not?—Do you mean to enter into a legal obligation to do so?

667 I do?—Then my answer to that is very simple—that we do not wish, and no one of the authoritative bodies that have looked into the Indian currency has ever proposed, that such a legal obligation should be undertaken, and also, if you do not mind my repeating it, it would be unique in the history of the world.

668 (*Su Robert Chalmers*) Can you get Napplesons for 5 franc pieces in France?—If you pay for them I imagine you can.

669 But not by law?—Not by law at a fixed rate.

670 Or can you turn the silver dollar in the United States into gold at your own option by right?—I believe not.

671 Can you get a sovereign by law for 20s?—No.

672 Do you know of any circumstances by which you can perform that operation by law?—No.

673 (*Lord Faber*) In all those countries the silver is merely token money, but it is more than that apparently in India?—May I put this to you? You are quite right in saying the English shilling is a token shilling, and the rupee is in a sense a token, that is to say, it is what economists call over-valued. It differs from other tokens merely in being very much more widely used. It serves as a good token if it satisfies two conditions, first, that its international value be maintained—and that I think you know we provide for adequately, and second, that the person in India who uses it should not use it very unwillingly, because he much prefers another form of money. We are working up to satisfying that condition, and I think that it is to a great extent satisfied now. I do not say that it is completely satisfied, but so far as it is not that is the one defect that I should admit in our system or rather in the stage of development that our system has reached.

674 With regard to the hoarding of gold in India, there is one very curious feature that we bankers have come across, for the last two years there are certain sovereigns of a certain date that have commanded a very large premium, 1 or 2 per cent in England for transmission to India, because the Indian princes like certain dates of sovereigns, Victorian sovereigns, and they are willing to pay the 1 or 2 per cent premium in India for those. I suppose those would be hoarded, would they not?—I suppose many of them would be. The caprices of people in regard to coin is very familiar in all countries, and I think especially in India. It used to be said, and I have no doubt it is the case now, that the old sovereign which had a spade on one side, or rather a shield of the shape of a spade, was always very popular—I do not know why, perhaps it looks agricultural, but it is a familiar fact.

675 With regard to Indian gold that you might have at home in the Bank of England, I apprehend that your gold when it is put there, is earmarked for Indian purposes alone?—Yes.

676 It would not be published therefore in the gold reserves which come out?—When we earmark gold the Bank of England publish the fact in the same

way that they publish the fact that so much gold has gone to the Argentine.

677 Now with regard to the gold standard again, may I put this to you if the Indian Government makes certain sums of money by purchasing silver bullion and turning it into rupees, may it not lose much of it by purchasing the necessary gold to satisfy the holders of the rupees?—I do not see how it can lose. At what stage?

678 There again I am getting on to the rather controversial ground of convertibility. I should have thought that if you made money, in the first instance by buying bullion and selling rupees, you might, if there were a large run, turning your rupees into sovereigns again, be faced with a loss. If you make money with one hand cannot you lose it with the other?—I think I know what you mean, and I think you will agree that this is a slightly more correct way of putting what is in your mind. You make that profit obviously in rupees, it may be that when you want to convert those rupees into sterling money in some way or other people will not buy their of you at 1s 4d. In that case you will not sell them at a loss. I think you were assuming that at that stage, if one could not sell them at 1s 4d one would sell them at 1s 3d. What would actually happen would be that one would hold them in suspense, and if things went very bad at that moment, and continued bad, it might be a considerable time before you would really have your profit in the form of sterling—it would be held in suspense in useless rupees temporarily, I think that is the danger that you were really thinking of.

679 If for the moment it is undesirable for you to realise your rupees, should not all money made by the currency be kept for the currency alone? You could not surely use any of it, even for such a benevolent purpose as the helping of railways. Would you tell me if, in your opinion, it would be wise to keep, say, 20 millions of gold in India and 10 millions in London, and that everything else that you make out of the currency should go into sterling securities, not to be sold necessarily, the interest on those sterling securities going to the good of India?—I should not like that at all for a number of reasons. I should not like the 20 millions to be held in India in gold, partly because it would earn no interest—you may think that a good reason or a bad reason, but still it is my reason, such as it is, and partly because to send it out to India when its real purpose would be only to be sent back again would seem to me to be a very wasteful proceeding indeed. That is as regards your 20 millions sterling in India. As regards the 10 millions sterling in England—

680 In gold?—Yes, I think that is more than there is any occasion to keep in gold, because if one can get the right sort of securities, Treasury bills, and so on, which in time of need one would have to sell for bankers' money, and not for gold, it is on the whole more advantageous to keep a smaller sum in gold in England. As regards your further point, if you agree, as I am sure you will agree on further consideration, though perhaps not at present, that at some time you will have reached the highest reasonable limit that any one can think necessary for the accumulation of this fund, then it would be wasteful to go on accumulating the fund beyond the real necessity when you can use the money for other purposes and for purposes for which it is very urgently required.

681 As we are all I think, pretty well agreed that the first thing we must consider is the safety of exchange, does it matter whether you lose—I am speaking generally now—even so much as a million a year in interest so long as you make sure of the exchange being kept firm? You would lose a million a year, I allow, on the 20 millions on the one hand, and the 10 millions, on the other, and my commercial mind does not like that as a rule, but still, for the sake of safety, I should be willing to keep the whole in gold. What do you think of it?—I feel confident that if one handles the reserve properly, and invests such portion of it as one does invest,

\* Published by Cassell & Co, 1885.

5 June 1913]

MR. LIONEL ABRAHAMS, C.B.

[Continued]

in suitable securities, the money required would be forthcoming when it is wanted. Even if I had no experience to go on, I should think that on a *priori* grounds, I think it the more strongly because I may say I personally have been through the experience of this crisis of 1907-8, the very exceptional severity of which you cannot doubt after the figures that I have put before you.

682 I think in that period which you were good enough to tell us about there was only one bad monsoon year, suppose we had three bad monsoons one after the other, where would you have been then?—I refer you again to the history of the last 40 years that is given in the various supplementary tables,\* and say that in the same way as no business man, however prudent, conducts his business on the assumption that in one year there will be a war between France and Germany, in the next year a war between America and Japan, and in the third year a war between Great Britain and some other power, so one ought not—it would be an excess of prudence, and indeed nervousness—to carry on the affairs of a Government on the assumption that this series of calamities is to be provided against.

683 I think you said that in one year of very bad trade, 1907-8, you wanted 13 millions?—More than that, I think the proper figure is round about 18 millions. That, if you please, is two years, as it extended over the autumn of one year and the greater part of the next year.

684 (Sir Robert Chalmers) The rupee is taken at 1s 4d in exchange?—Yes.

685 In that very simple way it differs from a shilling, which is only worth 12d in exchange?—Yes.

686 Except that the 12d bit is a limited tender in England, is there any essential difference between that and a 1s 4d bit, if you had such a coin?—No, except that, in practice as you know, the Government has undertaken the support of the rupee in times of difficulty, and by so doing has created an expectation that it would do so in future times of difficulty. Except for that there is no difference.

687 There are analogies with the rupee in other parts of the world where you have unlimited tender, such as the West Indies and West Africa, for instance?—Yes.

688 Would you agree that the fact of this unlimited tender would be the most distinctive difference between the rupee and the shilling?—Yes.

689 In regard to the gold standard reserve, I understood you to agree that its primary purpose was to maintain the exchange with London?—Yes.

690 The need of providing the natives of India and other persons with sovereigns was a secondary one?—Quite so.

691 The object of the gold standard reserve was to build up a protection for the parity of exchange at 1s 4d?—Yes.

692 I think you said there was a great deal of unanimity between all Secretaries of State and successive Governments of India as regards the sum, I think it is four millions sterling, that is used from the gold standard reserve, or has been used, for the purchase of silver, and is kept in a silver form in India?—Yes.

693 It may be useful to the Government of India to get it so, but it surely is wholly diverse from the purposes of the gold standard reserve to use your sovereigns to buy silver and keep your silver in India? I do not enter into the reasons, but it is so, is it not?—I do not know what importance you attach to it, but if one is to maintain the parity of the rupee and the sovereign, one has to prevent the rupee from going down, and one also has to prevent the rupee from going up. Some authorities held in 1893, when the Mints were closed, that it would be a good thing to let the rupee rise up to 1s 6d, and that, though it was an arguable proposition, was never accepted. If you have this extra stock of rupees in the gold standard reserve it is an extra safeguard against the rupee going above 1s 4d, which is a point of no inconsiderable importance.

\* See *op. cit.*, Appendix IV, page 107.

694 Would you agree that there is a certain amount of anomalous appearance in, using gold to purchase silver as a means of maintaining a gold standard?—If you say, as a means of maintaining a gold standard and imply by that preventing the rupee from going down, I should quite agree with you, but I may say that I am quite serious in mentioning that to prevent the rupee from going up beyond this 1s 4d is a matter of some importance.

695 I will pass now to the other reserve you have got, the paper currency reserve. Does the paper currency consist of notes which are issued, and which are payable in silver rupees by law?—No, that is the view which is often mentioned by critics or students of the Indian system, but it is not absolutely correct. The note is payable in legal tender money of the Government of India, and the Government of India has therefore the option of paying either in rupees or in sovereigns, whichever it pleases. It would be a very arbitrary thing for the Government of India, among a rupee using population, to insist on paying sovereigns, so that the real fact and what you stated in your question come very close together, but what you stated was not absolutely correct.

696 I am obliged to you for your answer—the position being in fact very closely analogous to that which exists in France as regards the payment of a Bank of France note?—Yes.

697 They could pay in gold or in five franc pieces at their option?—Yes.

698 How did you come to the plan of having first an English branch, a London branch, of the paper currency reserve?—It originated in some correspondence between the India Office and the Government of India, which I think you will see in papers that Mr. Newmarch is submitting (see Note III to Appendix VIII, pp 284-8). The objects aimed at—and that I imagine is all your question is intended to get from me—were two. One object was that when silver has to be bought because the rupees in the paper currency reserve are very low, it is an advantage to be able to take out gold from the portion of the paper currency reserve held in London, and buy silver with that, it is a most expeditious and convenient way of doing it. Then, secondly, there are occasions when it is desirable to use that gold for the purpose of supporting exchange.

699 By transfer?—Yes, you know the nature of the transfer, do you not?

700 Yes. There are statutes that govern the paper currency reserve, are there not?—There is a consolidated statute.

701 As regards the gold standard reserve there are no statutes?—No.

702 That is at the immediate discretion, subject to publicity, of the Government of India and the Secretary of State in Council?—Yes.

703 Have you thought at all about taking steps to give legislative sanction to the arrangements under which the gold standard reserve is dealt with?—No.

704 I want to ask your opinion now, if I may, on a question of a somewhat hypothetical character. You have got a gold standard reserve which holds silver in India?—Yes.

705 And you have got a paper currency reserve which has got gold in London?—Yes.

706 Would it be possible, in your judgment, to bring together those two things, the paper currency reserve and the gold standard reserve, under commissioners obeying statutes, very much as the Issue Department with us in England?—Yes.

707 In fact to have Commissioners dealing with the issue of notes in India and with the maintenance of the gold standard exchange?—No doubt it would be a practicable thing to do, but before any Act constituting such Commissioners could be advantageously passed, or even introduced, it would be desirable to have considerable unanimity as to what the system should be. As you realise, the work that we have done during the last 15 years in building up this system has been pioneer work, and from time to time there have been different views taken, possibly even mistakes have been made. It is much easier to legislate for a paper

5 June 1913]

Mr LEONARD ABRAHAMS, C B

[Continued

currency and to put that into the hands of Commissioners, because it is worked on very simple lines, than to legislate in that way for a gold standard reserve, the nature and application and location of which are to some extent matters of controversy.

708 Apart from controversy, you would be prepared to agree that very cogent arguments are necessary to deny the claim for the statutory organisation of the gold standard reserve at the point we have now reached?—It is partly a question of the habits of people's minds. When one is dealing with, say the Crown Colonies such as Singapore and West Africa, one's thoughts immediately turn to a statute which is to regulate the behaviour of Currency Commissioners or other similar bodies perhaps with rather different names. In India it has not been the practice to any great extent to create bodies of that kind with strict legislative definition of their functions, and to the Indian official, and to the Indian public, the absence of such a statutorily constituted body to deal with the gold standard reserve does not, as a rule, appear striking, I should say.

709 To the public might it not seem an added guarantee?—It might. It is really a question of public opinion. The Karachi Chamber of Commerce, as you know, thinks that the management of the gold standard reserve should be defined by statute, that is in the papers that have been circulated. I think it is the only body that has made such a proposal.

710 As regards the holding of gold in India, are you quite clear that as a matter of mere economics it would be wrong to hold your stock of gold, whatever may be its amount, away from the spot at which it could be required?—You say as a matter of economics—yes.

711 Would there be any other argument in your opinion on the other side, except one of what we may call a national sense?—No, absolutely no argument at all except that.

712 In your opinion?—In my opinion.

713 (Sir Ernest Cable.) A good deal has been said this morning about the silver held in India and the gold standard reserve, but I notice that in Appendix III you mention that the arrangements were perfected which would avoid hasty coinage in future. I think it was one of the objects of that reserve to avoid hasty coinage?—That was one object.

714 I understand also from Appendix III that the arrangements were effected by which any hasty coinage will be avoided, is there any longer any reason on that account, at all events, for holding silver in the gold standard reserve in India?—I do not think that that reason is now a good one for holding the Indian branch, but in Appendix III I have given a wholly different reason, which I think is a good one, that is to say, it provides in a way which otherwise might not be easy to provide, for the expansion of the currency at particular times.

715 When you coined this silver and kept it in the gold standard reserve there was some profit on the coinage, did you credit the gold standard reserve with the profit?—It is rather the other way round. When certain silver was being coined, and I think coined mainly to put into the paper currency reserve, there was a profit on it, a profit which naturally accrued, in the first instance, in the form of so many extra rupees, and these extra rupees were kept in the Indian branch of the gold standard reserve, and formed the Indian branch. You pay a certain sum which is equivalent, say, to 100 rupees in order to buy silver, and then you get silver out of which you coin, say, 130 or 160 rupees, and the odd 30, or the odd 60, is the profit.

716 And that is now credited in the reserve?—

Yes.

717 I do not think the reasons for the location of the gold standard reserve were quite brought out this morning. Do you not think, even at the cost of losing some interest, that if it did buttress public confidence, so to speak, it would be advisable to keep a large sum in cash in India?—I think that the only thing to be said in favour of that is that a certain number of people might like it and feel their national sentiment gratified. Since it would involve a very considerable expenditure

one way or another, even if it were merely the expenditure required in order to take the money out and then in times of need bring it home again, I think that I should be rather slow in meeting that sentiment unless its existence were much more clearly demonstrated than it now is.

718 In paragraph 9D of Appendix III (pp 89-90) you gave as one of the reasons for not holding the gold standard reserve in India, that the gold would not be exported but would pass into use in India for circulation and other purposes, and on this ground you hold that the gold has failed to fulfil its original object, namely, the maintenance of the par value of the rupee, but is it not the fact that by the issue of gold on the one hand, and on the other the corresponding withdrawal of the rupee, the gold value of the rupee would be raised?—That is a view which I have often heard, but with which I do not agree, assuming that you mean immediately raised. The mere fact that the number of rupees in circulation is reduced, and the number of sovereigns in circulation or available for circulation is increased, does not seem to me to affect materially the exchange value of the rupee. As I was explaining to Lord Faber, and I think he quite accepted the explanation, the exchange value of the rupee in the international sense, depends on the balance of international trade and international indebtedness and an alteration of the mere quantum of rupees in circulation does not, I think, affect it. I quite admit that if that alteration in the quantum of rupees affects prices in India and affects the amount of export trade and so on—

719 It would cause a fall in prices?—That then it does tend to steady exchange. But such a fall in prices as you suggest, would probably occur rather slowly, whereas an exchange difficulty should be set right with the least possible delay.

720 I think Lord Faber suggested certain figures to which the gold standard reserve should be raised, of course, it is impossible to fix any limit to that, and in fact I do not think he attempted to do so, and the only way to do it would be to hold frequent conferences with chambers of commerce and so to get their views as to the amount that should from time to time be held in the gold standard reserve, what would you say to that?—I am always in favour—and I may say that I have been in every branch of my work at the India Office—of frequent consultation orally as well as by letter with the qualified representatives of the commercial community. If from time to time there were a discussion between the India Office and the leading members of the commercial community at Calcutta or Bombay, I think it would be to the advantage of all parties concerned—it would help to solve that particular question that you mentioned, and would probably remove misunderstandings.

721 Sir Robert Chalmers asked you about the amalgamation of the two reserves, I think he dealt with the question more from the point of view of administration, but I should like to ask whether there would not be a practical advantage from the business point of view in amalgamating the two reserves?—I think in some ways it would be a convenient thing to amalgamate them, but there are some considerations on the other side. You know, no one better, how very sensitive and conservative Indian public opinion is in these matters. To mix up a paper currency reserve which serves one purpose, and a gold standard reserve which serves another purpose, might shake Indian public opinion. Then there is also a practical danger in the way of amalgamation, which perhaps you have thought of, but I might mention it. As I was saying before, the paper currency gold is meant to flow out in good times and the gold standard reserve gold or securities to be held as a reserve until bad times come. If you amalgamate those two reserves, which have gold that has to be used for quite different purposes, you may fail to notice the difference of the two purposes, and you may treat the whole of them as though held for the same object. I do not say that that is an insuperable difficulty, but at any rate it is a danger which has to be borne in mind.

5 June 1913]

Mr LIONEL ABRAMSON, C B

[Continued

722 Do you consider that the increase in the quantity of gold in circulation in India would provide a reserve against a falling exchange, and therefore it might be desirable to encourage the circulation of gold?—There is a certain advantage in it I myself rather hold the view which has been put forward by many eminent writers that what you may call the waistcoat pocket money of the population is not of much use for steadying foreign exchanges, and that if one is in the habit of carrying 5l in one's purse one goes on carrying 5l in one's purse whatever the international situation, and that sort of money does not come out at a time of crisis or of a falling foreign exchange. But, of course, that is a doctrine that has to be pushed only up to a certain limit, occasionally that circulating money is of some use.

723 (*Sir Robert Chalmers*) That was the view taken by Lord Goschen when he was Chancellor of the Exchequer, was it not, nearly 25 years ago, at Leeds?—Yes. It is one of the few doctrines under discussion now on which one has an expression of opinion from one whom I may call my late colleague Mr John Stuart Mill. He was very strong on the comparative ineffectiveness for steadying foreign exchanges of the gold that is in actual circulation, the passage\* has often been quoted.

724 (*Sir Ernest Cable*) It has been stated by some people that gold is becoming scarcer and that the Indian absorption of gold is regarded with alarm in some quarters, is it not the fact that the production of gold during the last 10 years has increased at a faster rate than the trade of the world?—I cannot say that it has increased faster than the trade of the world, but I know that the increase in gold production has been very great indeed. The fact of prices going up is probably an indication that gold production has increased faster than trade.

725 You have stated in your memorandum that if you were asked to give evidence as to how the silver purchases were regulated you would explain the improved system. Will you kindly give us that information?—In answer to the Chairman I referred to the memorandum of 1910, and I really think that all that is of considerable importance is to be found in that memorandum (*see Enclosure to Despatch to the Government of India, No 25, of 18th February 1910, Appendix V pp 188-94*). Of course, you have to read it with the letter from the Government of India, in which, subject to some slight reservations, they accepted the principles of the memorandum (*See No 48, dated 29th February 1912, page 195*).

726 To take you back for one moment to your evidence of the other day, you stated that the Mahratta Railway loan was not going well, do you not think that a 4 per cent. Government railway bond with the interest secured on the Government railway revenue, and paid within a fixed period, would be a most popular security and would procure for the Government all the funds they need for railways?—If one were considering merely one year's operations, I have no doubt that an issue of terminable bonds would be very proper, but, as I think I have mentioned, or as I intended to mention if it were put to me, if you have an illimitable series of years in each of which you have to borrow money, and then you create a series of terminable obligations, when the time comes at which the first batch mature you are apt to find yourself in great difficulties. I merely put that as indicating that what you propose can only be applied successfully if applied with very great moderation, and probably you yourself would agree to that qualification.

727 (*Mr Keynes*) There are one or two points of detail that I would like to have a word or two about first. About the term short dated securities, would you include any security with less than five or six years to run?—Yes, but, of course, if all one's securities had so long to run as that I should not regard the whole of them as a good assortment of short dated securities.

\* Principles of Political Economy, Book III, Chapter XXII, § 3 and nn (p 187 of Vol II of *Macmillan's Edition of 1878*).

728 I think the Chairman asked the question whether they were always realisable, would you hold that for instance New South Wales stock maturing in 1918 is as easily realisable as Consols which have no date of redemption?—It depends on the quantities. Supposing you wanted to realise many millions, you might find a difficulty, but within a moderate limit of amount I should think that it would be very realisable assuming, of course, that the repayment is obligatory and not at the option of the borrowing Government.

729 Would you not say that the buying of short dated securities is an insurance against the depreciation which is due to a long period change in the rate of interest—but that is not the same thing quite, as easy realisation. Would you not say that the advantage of New South Wales stock repayable at par in 1918 over Consols is that you have insured against the rate of interest falling in the intervening period?—Yes.

730 But that is not the same thing as having something which you are quite sure is marketable at a given moment?—Quite so. There are two quite different considerations. It is quite possible to secure oneself against depreciation without attaining easy realisability. An extreme instance would be if one lent money on mortgage on private estate. That might be very unrealisable, although you had the security against depreciation. I quite recognise the difference. Our main object in seeking short-dated securities has been to attain realisability. It has not been so much though the two are connected to some extent, to avoid depreciation. Whether we in every single investment have been absolutely wise is another question.

731 In the last five years your policy has shown a great reaction against the purchase of Consols?—Yes.

732 Would you argue then that you have done that because you think Consols are less realisable than they used to be and not because Consols have become unpopular through having fallen in value steadily?—I am not sure that you put the distinction quite as I understood it. The advantage of short dated securities is, first, that you can realise them readily, and secondly, that you can realise them without loss. In one case it is speediness of realisability, in the second case the freedom against loss. The speediness of realisability is what I think has weighed more with the India Office, that is certainly what has weighed more with me personally.

733 And you think on that score there has been good reason for reacting against Consols?—I think so. Of course I am influenced very much by what I hear from financiers of my acquaintance, bankers and so on. In 1908, when we had to do a great deal of realising, as you will see from the figures, we did not find any considerable difficulty, but in subsequent years we have been impressed by the fear that we might possibly find difficulty.

734 I wanted to get the point clear as to whether you had reacted against Consols, because of their long fall in value or because you thought they were less realisable than they used to be, that second reason is the one which has weighed most?—Yes.

735 (*Chairman*) You distinguish two advantages in short-dated securities?—Yes.

736 One is that they are more immediately realisable, and the other is that they are immediately realisable without loss?—Yes.

737 Is there anything you could hold which you can with more certainty realise immediately than Consols? You observe that on this occasion, I do not say without loss, but is there any security you could have which is more marketable than Consols?—No doubt that is the most marketable of all the permanent securities. I should say that Treasury bills at a time of difficulty are much more marketable than Consols.

738 If you wanted to realise 10 millions to day would it be easier to realise 10 millions in Consols supposing you had them, and subject to a possible slight loss, or 10 millions in short-dated securities?—I should say—but of course I speak with some diffidence—that it would be easier on a day like this, which as you know is not a very happy day financially.—

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

739 That is why I choose it—?—I should say that it would be easier to realise, if one went to the right people, bankers and so on, 10 millions of short-dated securities of the same standing. Of course I am not comparing Colonial Government securities with Imperial Government Consols, but comparing the Treasury's Treasury bills with the Treasury's Consols.

740 At the moment there are not many Treasury bills out?—The number has decreased.

741 If you wanted to realise a large quantity of short-dated securities you would have to sacrifice your interest at least, would you not?—Yes, you may have to sacrifice the interest that has accrued.

742 And you might have to sacrifice possibly something more?—Yes.

743 So there is that to be set against any loss in price which you would incur if you sold Consols?—Supposing one had to sell 10 millions of Consols to day I should expect that the loss would largely consist in a sort of insurance by the purchaser against the risk of a further fall. He would buy hoping naturally that they would go up hereafter, but with the knowledge that they might conceivably go down, and probably in the price of so large an amount he would cover himself very liberally against the risk of the Consols going down.

744 If you were selling Consols you would be dealing in a larger market than if you were selling short-dated securities?—That is quite true, and when you are dealing with hundreds of millions that would be a point in favour of Consols for us, but when you are dealing in such a sum as 25 millions, then I think the money market as distinct from the investment market, is big enough to enable us to do what we want to do.

745 (*Sir James Begbie*) On the question of the sale of securities has the experience not been that you have had to sell comparatively small amounts in one week, in 1908, for example you never had to sell more than a million at a time, had you?—I think that the biggest individual transaction that we arranged was when we sold two millions to the National Debt Commissioners, that is my recollection. But I quite agree with you that if you were selling week by week a million a week would probably be as much as one would like to sell.

746 (*Mr Keynes*) I may assume, therefore, that the reason why you have the miscellaneous selection that I see in this list, of three kinds of New Zealand debentures, two of Queensland, three of New South Wales and so on, is because you think they are more easily realisable than Consols or at any rate mainly for that reason?—Yes, but of course you have to have regard to the comparatively small amounts of them.

747 In the course of your evidence in answer to the Chairman, you drew our attention to the exceptional severity of the crisis in 1907, and as a part proof of that you handed in Statement 3, Appendix IV (page 108), showing how very much more the trade balance dropped in that year than in any previous year of famine. I notice that in that table the chief explanation of that is to be found in the high level of imports, would you agree to that?—It is a common experience that when our exchange gets into difficulties and when one looks for an explanation to a reduction of exports, which is where one would look for an explanation, one finds it very incompletely there, but one finds, as a rule, a surprising increase in imports. You ask me whether I agree to it in that one particular case, and of course I do because the figures speak for themselves. I was going merely to draw your attention to the fact that in other periods of notoriously difficult exchange the same thing is to be noticed.

748 In this actual year, 1907-8 the imports were at a considerably higher figure than in any of the preceding years, or than in the two years following. I suppose the explanation of that would be that it followed on exceptionally prosperous years, and that they were really purchases that had been entered into previous to the famine?—No doubt, and that no doubt would apply to the imports of merchandise, and to some extent also to the imports of silver which follow the same course.

D 19067

749 Would you hold that that was a very exceptional circumstance? On a future occasion might it not happen that the crisis, when it came, would come immediately after two very good years?—It might, there is no special reason why it should, but if it did no doubt there would be still, as you say, imports coming in as the objects on which cultivators were spending their extra earnings, and that would tend to aggravate the exchange difficulty. I quite agree with the general line of your remarks.

750 Would you agree to this further development of the idea, that in 1907-8 the Indian public had got more into the habit of buying foreign goods than they were on the occasion of the previous famine, and that that tendency continues?—No doubt.

751 Therefore, this buying of foreign imports in advance is likely to be a factor more important in the future than it has been in the past, in the 90's that is to say, from which you argued?—Yes. That, I think, is a good ground for criticising and modifying the inferences to be drawn from the figures of the 20 years that I have given. I have nothing to say in opposition to that line of criticism.

752 Further, in using the experience of 1907-8 I suppose you would agree that allowance ought to be made for the increased scale of the whole foreign trade since that time?—Yes, certainly.

753 That if the imports and exports have increased 20 per cent, or whatever it is, you ought to add on to your experience of 1907-8 a corresponding percentage?—You ought to add on something.

754 Would you agree that in 1907-8 the complete absence of any banking trouble in India rather altered things?—Do you mean that the exchange difficulty would have been greater if Indian banks had begun to go wrong?

755 Yes?—I am not at all sure. I have often thought about it, it depends what kind of bank one has in mind. I daresay you have noticed that if the exchange banks got into difficulties and their customers in India drew out the very large deposits that are due by the exchange banks to their customers, the exchange banks would, somehow or other, have to send out money to India in order to satisfy their customers, and that in a very calamitous way would tend to set the exchange position right from the Secretary of State's point of view. I think you follow what I mean, and that I need not expand it in detail.

756 I only wish to get your opinion on the matter. I should like now to ask a series of questions directed towards the relation between the gold standard reserve and the other reserves. I take it that the stability of the rupee is supported not only by the gold standard reserve, but also by the gold of the paper currency reserve, and any other sterling resources which the Government happens to have?—Yes, certainly.

757 The gold standard reserve is built up from the fruits of the economy of using token silver coins?—That is so.

758 And the presence of the gold of the paper currency reserve is due to the fruits of the economic using of the paper currency?—Yes.

759 Then the two reserves are distinguished in origin?—Is that quite right? When we are wise enough to coin a 10d. rupee and put it into circulation at 16d., that is wise economy, and the profit, as you truly say, goes into the gold standard reserve, and your description is quite right. But when a man brings you two sovereigns and you issue 10-rupee notes to him instead of issuing to him in exchange 30 individual rupees, I am not sure whether there is any close analogy between the building up of the profit and the economy, is there?

760 I should say that the analogy was almost perfect, but perhaps we are at cross purposes?—One is an obvious economy, and I quite agree with the way you describe it. The other seems to me to be merely an exchange between a full-value sovereign and 15 rupees, in which the results of economy are embodied. I do not wish to interrupt the questions, because if I do not follow what you said on this particular point, I do not suggest that there is any serious difference between us.

D

5 June 1913]

Mr LIONEL ABRAMSON, C.B.

[Continued.]

761. The only point I wish to make is that the two reserves are distinguished in origin?—That is so.

762. How do you distinguish their uses—I am speaking now of the gold branch of the paper currency reserve and the gold branch of the gold standard reserve?—Are you asking me to repeat what I mentioned in answer to the Chairman and Sir Ernest Cable, that the gold of the paper currency reserve, so far as it is held in India—

763. I was thinking of the chest in London?—To all intents and purposes there is no difference between the use, except so far as you may say that the gold in the paper currency reserve in London could be used to pay for silver, but that one may put aside. You are asking, no doubt, with reference to the use of that particular gold to support exchange, in that respect there is no difference.

764. In paragraph 7 of Appendix III (pp 88-9) you suggest that 5 millions sterling is a suitable amount to hold in gold in the gold standard reserve, is this amount contingent on the amount earmarked in the Paper Currency Chest?—When I wrote that I was assuming that there would be gold held in the paper currency in London.

765. Were you making any assumption as to how much?—No. We have for some years held sums varying between 5 millions and 7 millions, occasionally they have gone up a little, I had in my mind about 5 millions.

766. Your view then is that you ought to hold about 5 millions in the gold standard reserve if you are holding from 5 to 7 millions in the paper currency?—I would not crystallise it too much. Supposing that at a particular time one had very little in the paper currency, I do not think that I should hold that one ought to increase the amount in the gold standard reserve, but still I should not seriously dissent from what you said.

767. My point was how much gold you want to have in London altogether to whatever reserve it is credited, and I wanted to get at your notion as to what the proper figure for the total gold in London was, it does not seem to me that the particular way of crediting it is of such fundamental importance?—It is very indeterminate. One wants to have, I think, at least 5 millions, preferably more, which you can use almost at a moment's notice, which at any rate you have so much under your control that at the beginning of an exchange crisis you can offer to sell, say a million of bills, of the kind that was sold in 1908, per week for several weeks, and feel that you are provided with the means to meet them.

768. You will want to hold some gold, and I was wondering whether you had settled at all in your own mind what the amount should be in present circumstances?—No. I do not think that one can give anything more than one's own estimate of how much would make one feel quite comfortable with this responsibility of meeting an exchange crisis on one. I should say that if one were as low as 5 millions, one would not feel that one was ill provided for, that if one had 10 millions one would feel that that was rather better but not a wasteful amount, and that if one had more than 10 millions I should feel at any rate that it was rather wasteful. I do not think I could put it more definitely than that.

769. Are you of opinion that the amount in the gold standard reserve, which ought to be lent at short notice in London, is in any way contingent on the amount that is lent in this way from the general balances?—Only in this way, that if we were lending from our general balances as much as our approved borrowers would take it would be difficult to lend from the gold standard reserve as well, and certainly one ought not to be lending so much that approved borrowers of less than the very highest standing were accepted in order to find a clientele.

770. You would argue in this way that as long as it was your normal practice to have 5 millions or 6 millions lent at short notice from the general balances, then that 1 million lent in that way was enough from the gold standard reserve, and if your normal practice changed so that you only lent, perhaps, 2 millions from the

general balances, then you ought to have more in the gold standard reserve lent in that form?—That, if I may, put it in an almost primitive way, is not quite the way my mind works in these matters. I think what is behind your question is this, that the smaller your general balances at any given moment the larger your special reserves ought to be, if you are to be well equipped for meeting a sudden fall in exchange.

771. Particularly, that the smaller your general balances, the larger your special reserves ought to be, in the most liquid shape?—I think that the reason that I am not able to answer you quite as directly as I should like is, that in preparing for an exchange crisis, or in considering how one will prepare for it, one has in mind that one will rely on certain special reserves, and one leaves the general balances out of consideration, thinking they will just be enough to pay the ordinary current expenses, and that they will be of no help for the exchange crisis. I repeat that if at a time when our balances had risen as they have recently to a very unusual height, 18 or 19 millions, an exchange crisis had then come, those high balances would have been very helpful to us.

772. I can understand your taking the view that the general total of the reserves ought not to be influenced by your temporary balances, but would you also hold that the form in which you ought to keep your permanent reserves is uninfluenced by the amount of temporary balances that you have?—Yes, because according to my view, and if I may so put it, our system rather stands or falls with its correctness, the various reserves that one holds can be realised when we want them. It is true that we cannot realise 4 millions of Consols advantageously in a week, but we have built up a system so that, if we saw the need for realising all our reserves, by the time we wanted our 4 millions of Consols we could have realised them, and our gold and our short-dated securities and so on would last us during the period required for the realisation of the Consols. I hope I have made it clear that that is why I do not attach, if you do not mind my putting it in that way, very much importance to the consideration that you were last mentioning.

773. You would not feel at all that as long as it is the policy to hold 5 millions or more in the general balances at short notice, there is no need of holding a million as well in the gold standard reserve at very short notice?—No, because I feel that the general balance is hypothecated for quite different purposes. Also, just let me mention this to remove a possible misapprehension as regards fact one speaks about our 5 millions or 6 millions as a standard for the general balance, that is to say, for the closing general balance on 31st March in each year, but that is a very fluctuating sum. As I mentioned previously, in the course of a few days we might be paying away 3 millions or 4 millions, and those occasions when we have very heavy payments recur at least four times a year, when the quarterly dividends have to be paid.

774. You have suggested 25 millions as the proper limit of the gold standard reserve (see paragraph 19 of Appendix III, page 83), is the suitability of this particular sum in any way contingent upon the amount of sterling resources held otherwise?—I had in my mind that we should probably have 5 millions of gold in the paper currency reserve in England. That was the only special resource that I assumed. I assumed that our general balance would not be exceptionally high or exceptionally low, because it would serve the primary purposes that it is meant to serve.

775. Your view is then that about 30 millions is the proper limit for all your sterling resources which are connected with the support of exchange?—Yes. I should call that a liberal limit.

776. In calculating the proper amount of the gold standard reserve, are you considering merely the obligation under which the Government of India lies to support exchange and to be prepared to change into sterling all rupees and notes presented, or are you considering other possibilities as well?—Would you indicate the other possibilities that you have in mind?

777. Are you considering the possibility that the Government of India would have to assist the Indian

5 June 1913]

Mr. LIONEL ARRAHAMS, C.B.

[Continued.]

money market at a time of severe crisis, or merely that they should change into sterling such notes and rupees as the Indian money market should tender to them?—I have always assumed that if in a time of severe crisis the Government of India had to assist the Indian money market, it would assist it in India, and that the need for granting such assistance would not make any demand on the sterling resources which we have been considering.

778 If the Indian money market were helped in India that would increase the amount of funds available in the hands of Indian bankers for tendering for sterling bills, would it not?—May I answer you in this way, that you are regarding, if I understand you rightly, the amount of the drain that may come on our sterling resources as a certain function of the currency which Indian bankers and the Indian public could tender for the purchase of bills on London; but I regard it as a function not of a certain quantum of currency but of a certain balance of foreign trade, and all my arguments and calculations are based on that.

779 I am glad that point has been brought out. I myself should not say that it depended necessarily upon either of those, but it depends upon one or other of them according to the policy adopted, therefore I ask you which policy is adopted? Let me put it in this way if the existing volume of the currency is the test then it seems to me that implies a policy of only giving sterling for rupees and notes; if the balance of trade is taken as the test then some other standard is applied. Would you agree with that?—I have always taken the balance of trade as the proper measure of the possible liabilities that would have to be met in a period of exchange crisis, and I have disregarded the quantum of currency altogether.

780 With reference to a question which Sir Ernest Cable asked, do you think that when a certain point is reached in the accumulation of the gold standard reserve it is the profits on the further rupee coinage which ought to be diverted, or rather the interest on the former accumulations that should be diverted?—I do not think it matters very much, but I do not see how anyone could answer that with any definiteness. My feeling, as was brought out, I think, by the Chairman and other questioners, is that if you have worked up to a certain sum as being a suitable reserve at a given time you must let it go on increasing by moderate increments year by year, or decade by decade, so as to provide for the natural growth of trade, and whether it is better to let it grow by the accretion of interest or by the accretion of profits is a question to which I could scarcely give any useful answer.

781 I put a more precise question than that. When you say after 25 millions has been reached further sums should not be credited to the gold standard reserve, do you mean that the interest of those 25 millions should not be credited, or that when further rupees are coined the profit on those rupees should not be credited?—I think I fully understood your question, and I am sorry if I did not make my answer clear. My answer was intended to be this: you must go on, or it is desirable to go on increasing your fund year by year, whether you increase it by adding the interest and diverting the profits or whether you increase it by adding the profits and diverting the interest is a matter on which I do not feel that I, or indeed anyone else, could give an opinion of any great value.

782 I had not understood that the 25 millions you suggested was a figure which is only valid, as it were, for the moment?—In this as in many other things one is always in a state of flux. If 25 millions is valid now, then 25½ millions will be valid next year, and 25¼ millions the year after—I am taking, perhaps, rather large increases. As the business of India increases so ought your reserve to increase by an amount or in a ratio which it would be affectation to pretend to define with any exactness.

783 I understood you to say that when the gold standard reserve had reached 25 millions no more ought to be accumulated. I understand now that what you are saying is that if the gold standard

reserve were 25 millions now then no further accumulations ought to be made, is that right?—What I meant to say was this. Until we have 25 millions let us have the full profit and the full interest, when we have reached 25 millions then do not let us say the fund has reached its maximum, but let us provide for accretions on a smaller scale than hitherto, let us either add the interest but not the profit, or the profit but not the interest, or some proportion of the profit. I wish to be rather indefinite. I only wish to put forward the view that some accretion, but not so much as now, should take place when the 25 millions is reached.

784 I wish only to elicit the precise nature of the indefiniteness, if I may put it in that way. Turning to the Indian branch of the gold standard reserve, is it not rather confusing to the public that the gold standard reserve should hold silver?—Yes, I think it is, more especially because the true explanation, or at least my view of the true explanation, has never been put before the public. What has been put before the public is rather the view that this Indian branch is a bulwark against hasty coinage, which does not very much commend itself to my mind. I think that what I regard as the true view is quite comprehensible, but I should agree that though comprehensible it is perhaps not easily comprehensible.

785 Would you mind explaining what the reasons are against the lock-keeping transaction by which 4 millions of gold would be transferred from the paper currency reserve to the gold standard reserve, and 4 millions of silver transferred from the gold standard reserve to the paper currency reserve, why should that not be done?—The difficulty is simply this: We may assume that the rest of the Paper Currency Act is going to stand as it is, because what I am going to say depends upon that assumption. If you wish at any moment to take out your 4 millions of rupees from the paper currency reserve you have to do one of two things, as I put it in answer to the Chairman, you have to apply one of two keys to the lock—you either cancel notes or you earmark gold. There are times when you would like to get at the rupees, but it is inconvenient to use either of these methods, and then, instead of these rupees being left in the paper currency reserve and in the gold standard reserve, you have a third and much easier method of getting at them, namely, you can either take a loan, which I do not think a good scheme, or you can make an investment in securities in England as against the rupees that you have taken out from the Indian branch.

786 That is to say, more latitude is allowed as to the manner in which the resources of the gold standard reserve can be held?—Yes.

787 So that if you have to make a sudden change, there are more ways in which you can do it?—That is so.

788 But apart from that there would be no advantage in holding any silver in the gold standard reserve, would there?—No, that to my mind is the only advantage.

789 Therefore, if the latitude which is allowed with regard to the gold standard reserve were allowed in the case of the paper currency reserve, you would then clear out the silver from the gold standard reserve altogether?—I am not sure that the Government of India would agree, but I am giving my opinion. My answer is yes, but I do not wish to commit anyone but myself to that answer.

790 So that the explanation of a practice which is rather confusing to the public is that it is simply a detail of the machinery?—Yes.

791 And has no real fundamental significance?—I do not think so. Of course, the general public who are accustomed to the Bank of England method of keeping a note reserve, which seems to me as unscientific a method as could be devised, would regard it as a very serious departure from orthodoxy that the greater latitude should be allowed in respect of the management of the Indian paper currency reserve. I do not think that there is anything in that view, but still it is widely held, or it would be widely held, if any change were proposed.

5 June 1913]

M<sup>r</sup> LIONEL ABBAHAMS, C B

[Continued

792 In paragraph 4 of Appendix III, page 88, you mention that 1s 3 $\frac{1}{2}$ d was the price at which sterling bills on London were sold in Calcutta, why was this particular price adopted?—We were told at the time that if bills were offered at that price bankers would take them in preference to taking gold, as it was just a shade more favourable to them than taking sovereigns. Whether that was a good reason or not I do not know. As one goes over it one sees that it is not particularly conclusive, but one wants to have the price that is nearest to the effective gold exporting price, and I think that 1s 3 $\frac{1}{2}$ d does answer to that.

793 I do not want to press you about this next question, but it is very important for Indian business men and bankers to know beforehand the maximum fluctuation of exchange, would they, in your opinion, be justified in assuming that that would be the price at which sterling bills would be sold on a future occasion?—Without being indiscreet one may say that when a Government has once conducted an operation of this kind on so great a scale, it is exceedingly difficult for it not to do it again when a similar occasion arises. The presumption is, I suppose, that it would do it in the same way as near as may be.

794 Would you agree that to sell bills in Calcutta at that rate, namely, 1s 3 $\frac{1}{2}$ d, corresponds to a state of exchange similar to that in which bills on Calcutta would sell in London at 1s 3 $\frac{1}{2}$ d or thereabouts?—Whether the difference is so much as the sixteenth which you assume I do not know, but there would be a difference in that direction, though I cannot say whether it is of that magnitude.

795 So, if that policy is pursued, the maximum fluctuation in the price of bills in London on India would be between 1s 3 $\frac{1}{2}$ d and 1s 4 $\frac{1}{2}$ d?—Yes, taking your figures as correct. It may be subject to some slight correction.

796 Would it be dangerous from the point of view of the reserves to make that maximum range of fluctuation rather smaller?—No. I think from the point of view of the reserves there will be no great danger in slightly reducing it. Of course, one does want to have a maximum and a minimum. That is better than having a fixed rate.

797 Certainly, and I am asking about the amount of the range of fluctuation, assuming there must be some fluctuation?—As regards the amount, I do not think that there will be much danger. I am not very captivated by the idea of reducing what is not a very serious difference, because these maxima and minima only become operative in emergencies, it is not as though they governed the ordinary rise and fall in exchange in ordinary times. I should not like to express an opinion in favour of the reduction without thinking over it further.

798 But you are rather inclined to think that the present range of fluctuation errs on the side of excess rather than the other way, are you not?—I do not think that it is far away from the right amount, but if it does err I should say it does err a little on the side of excess. I would go that distance with you.

799 In answer to a question put to you earlier to-day as to whether the Government of India had an interest in economising gold, you replied, I think, that they had no interest when their central reserve was adequate, or something to that effect—they had an interest as long as they were building up a reserve, but not afterwards?—Yes.

800 Is not the diversion of the gold standard reserve and of the rupee securities of the paper currency reserve to railways a consequence of economising gold, and also a general advantage?—I think the answer to that is in the affirmative, but for the moment I am puzzled to see the connection between it and my former answer. May I put it in my own words to see if I have your meaning correctly? It would be advantageous to the Government of India when they had their full reserves built up to the proper amount to encourage the use of rupees, because in that way money would become available for railways which would not become available if gold were used instead of rupees.

801 That is my point?—The answer is clearly in the affirmative. I am sorry to have taken up your time by repeating it, but for the moment it was not quite clear to me.

802 Therefore the Government of India still has an interest in economising gold even after their reserves have been built up?—Yes, but it is not a point on which I should be very much inclined to insist, and may I explain to you why? So far as this is to be effective it implies that the Government of India would rather persuade a man who wants a sovereign to take 15 rupees, because out of that exchange there would be something that would be available to be spent on railways, namely, the profit on the 15 rupees. That is all sound and good, and I cannot deny it, but it does rather run counter to my old-fashioned notion that the first business of a Government when dealing with currency is as far as possible, without conflict with higher interests, to give the currency that the population requires. Of course you may say that to give a sovereign instead of 15 rupees does involve a conflict with higher interests.

803 (Sir Shapurji Broacha) I think the Secretary of State, with the concurrence of the Government of India, appointed a committee in 1898, which is now known as the Fowler Committee?—Yes.

804 Their conclusions and recommendations were accepted in their entirety?—Yes.

805 By both?—Yes.

806 The Secretary of State has said about the conclusions of that committee, "His Majesty's Government have given to this report the careful consideration which its great importance deserves. They are impressed by the array of arguments and facts embodied in it, and they have come to the conclusion that it is advisable to accept generally and to act upon the principles which it recognises." Has not that the force of a law or statute to be followed for the future guidance of the Government of India and the Secretary of State?—It has very great authority, but from time to time points which were not before the Fowler Committee come up, and the committee's recommendations must therefore be supplemented, and occasionally the need might arise for modifying them.

807 I do not think the Secretary of State or the Government of India had made up their minds about maintaining the exchange at 1s 4d before the report of this committee, they had no previous basis to go upon, and according to my idea they had stumbled and erred before?—I am sorry to say I do not quite agree with you. Before the Fowler Committee there was a committee consisting of many very eminent men, the Herschell Committee, which really laid the foundation of our currency system.

808 How long are the conclusions of such a strong committee to last for the guidance of the Secretary of State and the Government of India? Are they to be broken in every respect before the ink is dry?—Certainly not. I hope that committee was not so treated.

809 That report was presented to the Secretary of State on the 7th July 1898, and before a year had expired large and absolutely new things were brought out, for instance, the putting of the rupee paper and gold of the currency reserve into sterling securities, and all this was done without taking advantage of the guidance, for even a few years, of the recommendations of the committee?—I think you are referring to Sir Edward Law's proposals of 1900, are you not?

810 Yes (see paragraph 23 of Enclosure I to Government of India's letter, No 302, of 6th September 1900, Appendix V, page 119), much of that was acted upon, though Lord Curzon was afraid that order was very large and he could not follow it?—May I explain to you that when profits on coinage accrued and they had to be dealt with in some way, it was necessary for the Government of India to propose some scheme for dealing with them?

811 Can we anticipate that the fate of this Commission will be the same before the year is out?—No. Just let me put this to you, because I am really anxious that you should not misunderstand the facts. Supposing

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued.]

that this Commission recommended in general terms a State bank—I have no idea whether it will do so or not, but it is conceivable that it should do so—and laid down certain principles, then we should set to work and try to carry out those proposals comprehensively, and it is absolutely certain that half-a-dozen questions, or even 50 questions, would arise which had to be settled, for the settlement of which it would be useless to look to, say, the three paragraphs that this Commission in its report had devoted to the subject

812 I think the strongest recommendation of the Fowler Committee is to be found in paragraph 60 of their report,\* to the effect that the profit on the silver coinage should be kept in gold—?—May I interrupt you and say that according to my view, which I have tried to justify in detail, that did not mean metallic gold?

813 I think it meant solid gold. You sell the silver in the rupee for 42d and you buy that silver for 28d, so you put 14d of profit on the silver into the gold reserve?—Yes

814 Since 1902 the currency consists of one third in gold and as to two-thirds in the intrinsic value of the rupee?—Yes.

815 Are you not breaking the currency statute by using that gold for other purposes? If you put it into securities without passing a law enabling you to do that, do you not violate the currency law?—No. You ought to remember that it was never proposed that this one third of the value of the new coinage should go into circulation as currency, it was proposed that it should be held outside the currency as a reserve

816 As Lord Faber says, the rupee is not protected by the intrinsic value of the silver, it is preserved in its actual entire value by that one third gold and two-thirds silver. Was it not, therefore, a violation to use that gold for other purposes than for the currency reserve before a year expired after the report of the Fowler Committee?—When you say it was so used before a year expired, are you referring to the investments?

817 Yes, you cannot make currency investments without putting it into a law. Have you passed a law to that effect?—This is a question, I understand, of the procedure that ought to be gone through before effect is given by a specific scheme to any of the recommendations of the Fowler Committee. If you were arguing or suggesting that statutory provision is required in each case I have not very much to say against it. I think on the whole it has worked very well under the practice of leaving the executive discretion to the Secretary of State and to the Government of India, but I can see a good deal to be said for the view that statutory regulation is better. I do strongly demur to the statement that there was any departure from the recommendations of the Fowler Committee

818 There was a substantial departure within a year. Is the opinion of public bodies in India worth anything to the Secretary of State or to the Government of India?—Yes. You must realise that the Secretary of State attaches very great importance to the opinion of public bodies, and you will not forget this, that for many years after this action had been taken and was very well known the public bodies in India were very happy, and they uttered no word of remonstrance

819 Do you remember that between the closing of the Mint in 1893 and the appointment of the Fowler Committee in 1898, the Government of India were under great aggravations to put the exchange at 1s 4d?—Yes

820 The measures they took, to my mind, militated against exchanges at 1s 4d, it was not the wit of the Government of India nor of the Secretary of State that established the parity at 1s 4d, but it was established by a series of circumstances over which they had no control, and they found themselves astonished that it was established without anybody else's interference. Can you tell me what experience or reason the Secretary of State and the Government of India had to depart within a year from the recom-

mendations of the Fowler Committee?—My answer to that is that for the reasons\* which I gave to the Chairman I do not admit that there was any departure

821 Within a year you commenced changing and chopping and putting it into securities?—No. I maintain—whether rightly or wrongly the Commission must judge—that the overwhelming balance of evidence is that what was done in this matter was in accordance with the recommendations of the Fowler Committee

822 You had no experience of gold coming in to such an extent as to bring the parity of exchange to 1s 4d until 1900 and 1901, and so soon as you got gold, instead of following the recommendations of the Fowler Committee for two, three, or four years, just to judge what steps you should take, you took the gold as in Alnaschar's dream, and went about putting it anywhere you liked without thinking of any future failure of flow coming along as it did in 1907-8?—Might I just interrupt to say that when the trouble came in 1907-8 the resources that we had put aside with the interest that had accrued, which was very considerable, were available to meet the trouble

823 I think the first man to suggest it was Sir Edward Law, at least from your correspondence it appears like that. I suppose you do not know, but I know for certain, because I had it from him, that he recanted very much and went to the India Office and said he was sorry for having recommended that course and hoped that the India Office would see the utility of changing then course, otherwise there might be disaster. Have you any knowledge of that change of view on Sir Edward Law's part?—No. It is a difficult question because Sir Edward Law made a certain recommendation which was not accepted by the Secretary of State, and the Secretary of State introduced a different scheme. If there was a change of view presumably it would be that Sir Edward Law finally came to see that the Secretary of State's amendment was an improvement on the original proposition

824 Lord Curzon, you will remember, did not agree to Sir Edward Law's amendment, for he says in his Minute of 8th July 1900, "I hazard these doubts not because I presume to set up my financial authority against that of the hon member, but for two reasons, firstly, I am not convinced that they are necessary for the success of his own scheme, secondly, I have a natural suspicion of anything that may tend, in the present early stage of our currency policy, to cause alarm" (paragraph 4 (5) to Enclosure II of Government of India's letter, No 302, of 6th September 1900, Appendix V, page 123) ?—May I interrupt you there for a moment? These remarks of Lord Curzon's relate to two proposals by Sir Edward Law which were never carried into effect—proposals regarding the paper currency reserve

825 Then may I ask you to look at the despatch of the Secretary of State in Appendix V (page 154), No 62, dated 28th April 1907, in which he says, "Before dealing in detail with your objections to the course actually pursued, I wish to remind you of the circumstances in which it was decided to adopt it in December last. The London money market was at that time suffering from severe stringency, and it was a matter of direct and immediate importance to India that this should not be increased, since guaranteed debenture bonds amounting to 1,735,100l. were to fall due between 31st December 1906 and 18th February 1907, of which it was very desirable that 1,374,600l should be renewed. Were you not making a mistake when you said that you were able to realise your securities in 1908? The greatest stringency was in December 1906. Supposing that a crisis had come on, what would have been the fate of these securities, would the Secretary of State have dared to sell eight millions securities at that time?—Just let me remind you that the end of 1907 and early in 1908—

826 I am talking of 1906-7 ?—I know, but I want to bring this in connection with it. When the sale of securities actually took place, a much worse financial crisis had occurred than is mentioned in the passage which you have just quoted. You must have regard to the relative proportion of

\* C. 9341, page 18

\* *Qu. 559 supra.*

5 June 1913]

Mr LIONEL ABBEY, C B

[Continued

things. In this despatch which you are referring to, the Secretary of State says, "Between the two methods of liberating certain money in India, neither of which was open to any very great objection, I chose a particular method because it was less liable to cause a difficulty in the renewal of certain debentures." You must not build on that foundation the statement that if we had wished to sell securities for a very serious emergency at that time we could not have done it. We were merely exercising in this passage a little common sense, I take it.

827 Are not political considerations and market considerations taken into account when these large transactions are entered into by the Government?—Yes

828 The Secretary of State was afraid that if this amount of a million and a quarter was to fall due it would hinder him in his financial arrangements if he took away a million or so of money from the Bank of England at that time?—Of course he was. When one has a number of operations to carry out for the benefit of India they are materially helped by an easy money market.

829 Let me tell you my personal experience. In the months of March and June 1908, the rate of discount had fallen to 2 per cent and Consols had gone up to 88, which was not the case in 1906, so when the Secretary of State and you boast of having been able to realise those large blocks of securities, I think you did not consider what position you were in in 1906 and 1908. He was afraid in December 1906, to put the proceeds of the Council Bills in the Gold Standard Reserve, although the Government of India held the Treasury Bills to be drawn upon, and the Government of India wired to the Secretary of State that they were breaking the law in being asked to do what they were asked to do?—That is a statement of the position that I should not accept. May I just add a remark? If your argument is that Consols in very large quantities would not be easily realisable in a difficult money market, I agree with you.

830 Will you look at the telegraphic correspondence, beginning with telegram to Viceroy dated 18th December 1906, page 149, in Appendix V? The Secretary of State did an unlawful thing, did he not, in buying four millions of silver to avoid his difficulty and sending it out to India, for which the Government of India had no need?—That I must really demur to. In Enclosure No 1 to the last despatch, No 76, dated 23rd May 1913, pp 207-8, you will see that there was no purchase of silver made in excess of the real requirements.

831 The Government of India said that they were forced to accept four millions sent to them for which they had no need, and which weakened the gold balances that would have been very useful for the next year?—I wish you to note that one part of the Government of India's statement seems to the Secretary of State to be so incomplete as to be almost misleading. The last word on that subject is in a document which has been recently added to the collection in Appendix V and which perhaps you have not got. It is a despatch from the Secretary of State to the Government of India, No 76, dated 23rd May 1913. The importance of that is that it does call attention to certain considerable omissions in that statement to which you have just referred.

832 I ask your attention to paragraph 5 of the letter from the Government of India, No 48, dated 29th February 1912, page 197, in Appendix V, you will see it said, "The Secretary of State, however, finally refused to earmark the necessary quantity of gold for the reason, among others, that he was obtaining 4½ per cent interest on his balances, and to enable to repay our forced loan from the Gold Standard Reserve he bought 4,000,000 worth of silver in March 1907. Our silver requirements for the year had been carefully calculated by us before that."—Without going into that statement in detail I say that it is a very incomplete statement that the Government of India made, and that it cannot be properly understood unless you read with it this despatch of the Secretary of State dated 23rd May 1913 and its enclosures.

833 What I am bringing to your notice is what the Chairman has already brought to your notice—certain circumstances of a difficult market, and to show how difficult the market at one time was?—Will you take it from me that I quite agree with you that at certain times the markets in London for the sale of securities are extremely difficult. I gather that that is the point that you wish to make, and I naturally quite accept it.

834 Again taking the Silver Reserve of the Gold Standard, has it ever been used up till now?—Yes

835 It was used wrongly, as is shown by the reference to the four millions I have just quoted, and it has never been used under necessity?—It has been used on several occasions. As you will see from the statements I have given, rupees have at times been taken from it and at other times put back into it.

836 I suppose that was done once?—More than once.

837 The Secretary of State asked to borrow from the silver of the Gold Standard Reserve, and it has never been repaid?—No—pardon me. Loans have been taken from it more than once, and I think it has been a great convenience to take money from it temporarily and to repay it at different times. If you care to have those particulars look at Statement A, Appendix III, page 97, and you will see three footnotes referring to three several loans at different periods.

838 After that chopping and changing we come to the crisis of 1907-8, and during that crisis at one time it seemed both to the Secretary of State and to the Government of India that the exchange might break down?—It seemed, you mean, to the mercantile public?

839 No, when the Government of India proposed to give 10,000l a day —?—Pardon me, let me put the true facts. We never had any doubts that the exchange would be maintained. I think that the Government of India at that time thought that it could be maintained with less support than proved to be actually required. That is the only significance of your incident of the 10,000l.

840 Before this crisis came the mercantile public of India were alarmed and suspicious, and questions were asked in the Legislative Council whether there was sufficient gold to maintain the exchange. Sir Edward Baker replied that there was sufficient for all possible contingencies. Then came the crisis, and the first result was that only 10,000l of gold was asked for by a man from the Accountant-General of Bombay, and the Accountant-General said, "Why do you ask for it?" And he wired to Sir Edward Baker, and Sir Edward Baker said, "Gold is not for export, it is only for internal purposes." That was the first move, was it not, that the Government of India took for safeguarding the exchange?—I should not in any way wish to criticise what the Government of India did. I think that in this hoarding up of their gold they did not show the best possible judgment, and that the Secretary of State took that view as indicated by the telegrams that you have in Appendix V. But that has little bearing on the question whether we did ultimately maintain exchange when this crisis occurred.

841 I do not think the Secretary of State said that?—I do not know whether you have seen this rather interesting telegram. The Secretary of State telegraphed out—"Please inform me if it is the case, as reported here that you have informed the exchange banks that you will not give gold for export while you continue to give it for internal purposes," and the Government of India gave a kind of explanation. I would draw your attention to the telegrams dated 21st and 27th November 1907 on page 164 of Appendix V.

842 I want you to look at the Secretary of State's telegram of 28th November 1907 in Appendix V in response to the Government of India in which he said it is a temporary measure to which he does not bind himself, which alarmed the whole Indian public. That was after receiving the advice of the Indian Government to sell or buy 250,000l a week. My object in bringing this to your attention is that fortunately at that time the Secretary of State was in a good position, otherwise, if he had been afraid to sell securities,

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

what would have become of the Indian public and the exchange? Will you look at the telegram in Appendix V dated 6th December 1907, (page 166), from the Secretary of State to the Finance Department, "Banks should be told that this communication is made because you recognise advantage of letting them know your views and intentions, but that it does not convey a definite pledge, and that Government reserves discretion to act as it thinks best in any future case on consideration of all circumstances then existing." So it was not an absolute promise?—Let me put it to you that in 1906, 1907, and 1908, the Secretary of State and his Council and his advisers were all the same persons, and the policy that you see in these different years is the same policy all through.

843 The Secretary of State at last acted very boldly and saved the situation, and made a precedent for future guidance, I admit that. But our discussion is about the strength of the Gold Standard Reserve. You had at that time 23 millions in gold, you say 25 millions is quite sufficient, and yet the Secretary of State was not quite satisfied?—What you say is quite true. At the time that that telegram which you have just read was written, we were on the point of embarking on a course which was really unique, I think, in the financial history of the world, we were a little cautious in the language that we used so as not necessarily to make it a binding precedent for all future generations. Anyone else who was doing so huge and important a piece of business at very short notice would equally, I think, if prudent, have used those qualifying words. To all intents and purposes, as you very kindly said, we did the bold thing, and we did it on a very large scale, so that the history of that period does not indicate that we were hampered by insufficiency of means.

844 The Secretary of State has not guaranteed exchange at 1s. 4d., I think?—No.

845 If the Secretary of State does not guarantee exchange at 1s. 4d. should India not take her own course in making the exchange as permanent as possible, and sacrificing everything to that because the breaking of the exchange means the ruin of India?—As a matter of fact, although one does not want exchange to go down, supposing that the exchange did go down by a few 32nds for a short time, neither the Indian Empire would come to an end nor would Indian merchants be very seriously injured. I do not wish to minimise the importance of maintaining exchange, but I do submit that you should not exaggerate it, you should not speak as though India would be ruined supposing that the exchange were 1s. 3½d. instead of 1s. 3¼d.

846 Do you accept this, that the only currency and the right currency, whether standard or not, should be that by which you can transfer your wealth from one country to the other with only the loss of exchange and the cost of insurance and commission?—We have been trying all these years to build up the Indian currency system so that it may be as you have described.

847 You remember that exchange went down from 1s. 4d. after the closing of the Mint to 1s. 2?—It was to a little over 1s.

848 Do you know what that meant—reducing our wealth to one half?—Not to one half.

849 By about 25 per cent—16 to 12?—The value of the rupee went down.

850 If I had my fortune to transmit to this country, if I had taken my money out at 1s. 4d., I should have had to bring it back at 12d., and what had I done to suffer that loss, and yet Lord Morley speaks of things being fairly right, we do not want 'fairly,' we want it absolute. We want to put the exchange on a basis which the power of the Secretary of State or anybody else could not shake. After the crisis the Government of India have taken the lesson to heart, and that is indicated in the despatch of the Government of India, No. 89, dated 1st April 1904, page 168, in Appendix V. It is just a despatch with which every chamber of commerce and commercial community in India would agree, but that despatch is flouted

by the Secretary of State, and when they asked for 25 millions liquid gold the Secretary of State allows one million, and that not in gold, but to be lent on securities. If you do not agree with that statement how would you say the Government of India's recommendation was treated by the Secretary of State?—It was considered with great care and a reasoned reply, and I venture to think a convincing reply, was given to the arguments put forward in it. What was said in this despatch that the Secretary of State sent on 2nd July 1906 (see Appendix V, page 175), has to some extent been modified since, but I do not think there is a word or a sentence in that which, the present Secretary of State would not agree with. Also, I notice, you mention that the remarks of the Government of India were flouted, I do not think you will find a single sentence there which was not highly courteous and appreciative in its method of expression.

851 Yes, very courteous, but if I ask as an equal co partner for 25 millions sterling I am treated as, less than a clerk if you only allow one million in all, and that not in the way I wanted it. Is that very courteous? Of course, the language can be as courteous as possible, but was that right?—It is very difficult for me to argue these points, and I do not want to, take up the time of the Commission in giving my alternative summary of this despatch from the Secretary of State which you rather describe as giving one million when 25 millions were asked for. But I do want to make it clear that I do not accept your summary as being an adequate statement of the contents of this despatch of the 2nd July 1909.

852 Are the Government of India representative of the opinion of India?—Yes. If, however, you are putting this point, that in these matters the Secretary of State is called upon unhesitatingly and without qualification to do anything that the Government of India may put to him, then I say that that is not the constitution of India, and I also say that if he had acted on that principle all through, many serious mistakes would have been committed. I also draw your attention to the fact that at different times the Government of India have held different views on particular matters, and if your view were accepted one year the Secretary of State must do so and so because the Government of India wish it, and another year he must do the opposite because the new Government of India does not wish it, that is not the way in which the Empire can be carried on.

853 Does that mean that London and the London financial world is too much represented on the Secretary of State's Council?—I think if I wished, and I say this in the friendliest spirit, I might take exception to that question as being on a matter which is very much outside my sphere, but since you have raised it, it gives me the opportunity of saying that for many years I have had to do with the Finance Committee of this office and with the London financiers who take a certain part in the deliberations of the Finance Committee, and if you mean to convey that there is any difference between the interests which those men attempt to serve and the interests which the Government of India attempt to serve, then you are mistaken. We are all working to the best of our ability to serve the same interests.

854 All the arguments in the correspondence in Appendix V that you have put in are all "probably" and "fairly," but in a matter of the exchange, where it is the life and death of the country, should not the security be absolute?

855 (Sir Robert Chalmers) Is not that the whole object of the policy?—The whole object of our policy is to give security of exchange, and at the same time I should add this, not to sacrifice other interests, which are at least as vital to that particular one.

856 (Sir Shapurji Broacha) If, for all that, India is willing to lose interest, if her Chambers of Commerce are willing to lose interest, and if they want liquid gold, what does the million and half of ultimate profit matter—they do not want it?—That is really important. The effectiveness of a Gold Standard Reserve depends primarily on its amount. If by a certain course of action you convert a reserve of 16,200,000 into a reserve of

5 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

18,500,000l, you have to the extent of that 2,300,000l given greater security to exchange. That I think is obvious and elementary, and that is what the Secretary of State has done by this policy of earning interest. It may be right or it may be wrong for a variety of reasons, but it has undoubtedly added to the security of the exchange value of the rupee.

857 If this country were to go on at the same rate of expenditure on the Army and Navy as before the Boer war they would have largely reduced the national debt by this time, or paid it off, is it not that they are spending the vast amount they are for an absolute security and not for a comparative security, and is not this subject that we are dealing with a matter of the same kind and even of greater importance to India?—I do not think we can get very far in this discussion, but I can sum up, I think, the difference between us, and then perhaps we might leave it to the Commission. You would say, as I understand you, that 16,200,000l in gold gives you more security than 18,500,000l in securities, because you would say that although the amount is less the certainty of having that when you want it is more. I should say, and I hope I am right, that 18,500,000l of securities is better than that, because the advantage of the amount is something clear and tangible and the realiability is sufficient for any reasonable need. But whether we are right or wrong, I do not think, if I may put it, that we shall get much further than that, you have put very clearly the difference between us, and I think we might now leave it.

858 No, I am going further. If this were done in the interests of the London market would not the London market be better off by allowing India to accumulate gold here?—There is one thing to which—and you will not mind my saying so, will you?—I always take exception, and I think it is my duty to do so. Whenever it is suggested that the affairs of the India Office and of the Indian Empire are conducted in the interests of the London market, I always venture in respectful language to take exception to it, because it is not only contrary to the fact but it conveys a very harmful impression.

The witness withdrew

At the India Office, Whitehall, S.W.

FOURTH DAY.

Friday, June 6, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (Chairman)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURJI BURJOEJI BROACHA

Sir JAMES BRIDIE  
Mr ROBERT WOODBURN GILLAN, CSI  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (Secretary)

Mr LIONEL ABRAHAMS, C B, recalled and further examined

863 (Sir Shapurji Broacha) Will you refer to paragraph 7 of the letter from the Government of India to the Secretary of State, No 89, dated 1st April 1909, page 170, in Appendix V? It is there said, "The point is one on which informed public opinion in India is singularly unanimous. We are frequently asked why we strain after interest on the reserve, which is the basis of our currency system, and, consequently, one of the chief pillars of the credit of India, and it is pointed out that other countries are careful to retain the ultimate foundation of their credit in bullion

859 Let us take this gold reserve in another way. Supposing England were engaged in a great war and all the securities had gone down, I do not know whether you will admit or not that if England were engaged in a great war, within a fortnight the Bank of England would have to stop payment of gold?—I have often thought, I may say, of the problems arising out of that. The question what would happen in the event of a suspension of specie payments is a subject that is very familiar to me.

860 How then, shall we sell either short dated securities or long dated securities? Is it not a fact that two millions more of gold in the Bank of England now would have a greater effect on the rate of interest than 50 millions and more of securities? I am dealing with liquid gold and gold in securities, and I am talking of nothing else?—I understand fully up to now the arguments in favour of having metallic gold, but I think you are developing a new argument which I do not follow.

861 If India were allowed to accumulate gold—and India is the only country that could accumulate gold—would it not be the saving of the Empire at the time the Bank of England had no gold left?—My own view is that it is not the business of India to save the Empire. The business of India is to look after its own affairs.

862 Supposing we have 50 millions, then I do not think the Bank of England would be under the necessity of going to France to borrow three millions?—I have the greatest respect for the Bank of England, but it is not our business, unless it happens to coincide with our interests—

(Sir Shapurji Broacha) We are considering our interests, you know. I am a broker of over 49 years' experience, and I could not get an advance on a lakh of rupee paper at one time. We are always spending millions in preparing for war, but those millions are for one day only, and what we are now preparing for is that one day in India when the Secretary of State will not pay our losses, that is certain.

"Moreover we conceive that the position of the Government of India in the markets of the world would be much stronger as the possessor of a large store of liquid gold than as the possessor of a corresponding capital in consols or similar securities. In the former case, the Indian Government might in an emergency be powerful to help the market, in the latter there would always be the potential danger of their wishing to renege at an inconvenient season. That being an opinion expressed in 1909, the Government of India hold the same opinion still, do they not?"

6 June 1913]

Mr. LIONEL ABRAHAMS, C.B.

[Continued]

They hold the same opinion as regards the advisability of having a large part of the reserve in gold. Whether they hold all the opinions that are expressed in the passages you have read, I do not know, it is quite possible that the reply of the Secretary of State to this despatch has converted them on some points.

864 (*Lord Faber*) By "gold," in the reply you have just given, do you mean metallic gold?—Yes, I may say that I always mean metallic gold when I say "gold."

865 (*Sir Shapurji Broacha*) Do they hold the same opinion about not diverting any of the profits on coinage to public works?—Their opinion has always been in that matter, since 1907, that at a certain time the profits on coinage ought to be used for public works. In 1907, as you will see from the correspondence in Appendix V, they thought that that could be done when the reserve exceeded 20 millions, now the scheme is to do it when the reserve exceeds 25 millions.

866 I am asking whether there has been a change of opinion during the four years since 1909, I am not talking of 1907?—At the present time the Secretary of State and the Government of India are unanimous in holding that, on the whole, the best course is to let the reserve accumulate to 25 millions before any portion of the coinage profits goes to public works.

867 Then the Government of India have not changed their opinion within the last four years?—No. There is just one point to add in order to make that answer quite correct—I am not sure whether 25 millions was the figure that they mentioned in 1909.

868 Lord Faber asked you whether you would not exhaust all the gold if all the rupees in India were tendered. So long as we have a gold standard the Currency Office is not bound to pay gold against rupees, is it?—That is so.

869 Therefore they have to take the rupees to the exchange banks for foreign buyers?—Do you mean that a holder of rupees has to buy gold?

870 If he wants gold he must go to the banks that finance the export trade?—If I follow you rightly, you are on the question whether, if every holder of rupees who wanted gold tried to get it from the Government, the Government would be able to satisfy all demands is that it?

871 No, the Government has the power to refuse?—Actually the practice of the Government has always been to give gold freely from the Paper Currency Reserve in exchange for rupees, and I interrupted you because I do not wish you to give the impression that the Government holds in reserve a power of economising its gold when occasions for giving it out arise. The Government has not really held that power in reserve.

872 There are more often rupees in India than gold?—Certainly.

873 If all the rupees were presented there is not enough gold to give in return?—Quite so.

874 Against that we are on a gold standard, but have not a gold currency?—Yes.

875 If there was a gold currency, then it is possible that the currency for issue would fail if all the silver were tendered?—Do you mean that if there was a scheme under which the Government undertook to give gold for rupees without limit, then that scheme might break down through a deficiency of the supply of gold? Of course I agree with that—it is obviously correct, but I do wish to repeat what I said in answer to Sir Robert Chalmers, that no one, so far as I know, in the whole history of the world has ever set up a scheme under which such an obligation would be undertaken by the Government.

876 There is no fear of that happening so long as we are on a gold standard and not on a gold currency?—I think that we are at one. I will not dwell on a point of language, but I think that what you mean commands my humble concurrence.

877 (*Sir James Begg*) The gold standard reserve is peculiar, is it not, to the Indian currency system?—Not quite. I think you will find that some of the eastern colonies, certainly the Straits Settlements, have a gold standard reserve, in a small way I think the Philippines have one. In addition I know,

because I was a member of the Committee that helped to establish it, that in a very humble way West Africa has a similar reserve.

878 I was speaking more of the old gold standard countries in the world, none of them have it, have they?—No, in fact the gold standard countries in the older sense of the word scarcely have such a reserve, except so far as the reserve of the Bank of England is in a sense a gold standard reserve.

879 That is different to the gold standard reserve in India, which is accumulated from the profits on the coinage?—Yes, as regards its origin it is entirely different. I meant as regards the purpose that it serves, that is to say, maintaining a stable exchange with other countries, there are points of resemblance.

880 Do you think the Committee of 1898 anticipated there would be a coinage of rupees on the scale that has taken place when they recommended a special reserve of this sort?—I do not think that one can answer that question, and I may put to you the difficulties. On the one hand it is quite clear that they did contemplate coinage in the future, because they provided what should be done with the profits of such coinage, but as far as I can gather, they probably thought there would be less rupee coinage than has actually taken place, because they expected the gold would go into the currency rather more freely. I give that merely as an opinion, and I can quite understand that others who were present at the meetings of the Committee, or who read the report, may take a different view.

881 As a matter of principle, do you think it advisable to have a token coinage on such a vast scale as in the case of India?—No. I think that if the proportion of the token coinage to the gold currency gradually falls it would be a good thing. But I should like to say—and this is equally important to my mind—that I think it would be a very evil thing that the Government should take steps to divert the feelings of India with regard to the currency metal that they prefer into any other direction than what they would naturally take.

882 But you would not object to them encouraging the use of gold?—I do not like to be too much of an optimist, but I think at the present time they do exactly the right thing. They practically allow anyone to choose the metal that he prefers, subject only to this, that at certain times they cannot give gold when, owing to adverse circumstances, the stock in the Reserve runs down. Except on those special occasions they allow everyone a free choice, and I think that is the right policy.

883 I think you said yesterday you would not undertake the legal obligation to pay gold for rupees?—That is so.

884 There is no such obligation?—No.

885 Is that not a reason for encouraging the use of gold coins, and also restricting as far as possible the issue of fresh rupees?—No doubt you have read through these various papers. The policy that has been pursued consistently has been not to coin rupees beyond the amount that is necessary, when I say "pursued" I mean what has been recognised as the ideal policy. In the early years of this system, in 1900, as you know, that was carried to a very unfortunate extent. You have read the history of how the Currency Office at Calcutta had to close before the right time because there were not enough rupees. Since then there has been one occasion when it may fairly be held that there was an excessive coinage of rupees, in 1907, and in order to prevent anything of the kind recurring, a better scheme, and a more economical scheme of coinage has been laid down and is now followed.

886 Do you refer to the Secretary of State's despatch of 18th February 1910, No. 25, in Appendix V (page 185)?—Yes.

887 Am I correct in understanding that the profits on silver coinage are usually coined into rupees?—I think that is meritable really. You buy so much silver and you coin it into rupees, then you find that a certain portion of it represents the equivalent at 1s. 4d. per rupee of the amount spent on purchasing the

6 June 1913]

Mr LIONEL ABRABAMS, C B

[Continued]

silver, and then there is so much left over, and that is the profit

888 And that is coined into rupees?—Yes  
889 If you coin the profits into rupees do you get any profit on that coinage?—No Let me put an extremely simple case You buy 100l worth of silver, if you are making no profit that silver would coin simply into 1,500 rupees—but you find actually that it coins, say, into 2,500 rupees—I am giving an illustrative figure merely That extra 1,000 rupees is the profit, and having been once realised it does not yield a further profit at compound interest, as it were That is a profit that has once been realised Then the only question which arises is in what form are you going to keep it

890 It seems to me that if you coin the profits into rupees in this way you are not collecting all the profits on the coinage which you ought to get Let me give you an illustration supposing a million sterling, we will say, passes into India in sovereigns and is presented at the Currency Department you pay out in exchange for those sovereigns a crore and a half of rupees, so that all that you have to do in order to replace the rupees is to buy enough silver to coin a crore and a half, is that not so?—Yes

891 The difference between the cost of the silver to produce that number of rupees and the gold received is the profit?—There are two ways in which one can regard it, and I do not think there is any thing really between us I began with the assumption that you spend a given sum, say, 1,000,000l, on buying silver, out of which you get, first of all, the crore and a half, which represents the million, and then, say, another 75 lakhs, or whatever it may be, and then I said the 75 lakhs is the profit I think that you differed from me in this way, that supposing all one wants to get is 150 lakhs net, then your way of putting it would be to spend not 1,000,000l on buying silver, but 700,000l and then you would get you 150 lakhs, out of which, say, 300,000l worth, 45 lakhs—of course I am making up the figures as I go along—would represent the profit Although they look a little different at first, in essentials our two methods, I think, are the same, except that they deal with different quantities

892 My point is that when you coin that difference between the cost of the silver and the crore and a half of rupees, the reserve does not get all the profits that it ought to get?—According to what seems to me the simplest way of looking at it, the coinage itself is a purely mechanical operation When you have completed your coinage and coined the right number of rupees, then you make up your accounts and see that so much represents the cost price of the silver that was used, and so much extra you hold in rupees, and that represents profit

893 Take it another way round In the case of a million sterling going into India do you use the whole of that million to buy silver with?—No, I think, if I may say so, that that is where a little difficulty arises in the way of our completely understanding one another You do not say I have had a million sterling tendered to me and I will use that in order to buy silver What the Government says is Our stock of rupees has gone down to a certain level which is not a safe level, because it does not provide us with enough rupees to make sure of the convertibility of our currency notes Therefore, from time to time the Government increases its stock of rupees by the purchase of silver But whether it buys silver at any time and how much it buys, does not depend on such operations as you have mentioned as, for example, the tender of a million sovereigns in exchange for rupees, that is some time previously to the coinage

894 Will you kindly take my point of view and tell me this If you do use the whole of the million sterling to buy silver, you coin that silver into 2½ crores of rupees, roughly?—Yes

895 Then you get the same profit on the whole operation, do you not?—I should say—and I think that this is the only method by which one can consider it without a possibility of error, that you take your 250 lakhs, consider how much of it represents

the equivalent of cost price, and how much is surplusage, and that surplusage is the profit

896 And that profit goes into the reserve to be held against the total amount coined by that sum, so that the reserve gets, we will say, 300,000l profit, which you hold against the coinage of the 2½ crores?—No, I do not think you are right there Taking the figures that you have taken, 100 lakhs out of the 250 go into the reserve You mentioned the figure of 300,000l, I do not know if you meant it The amount that goes into the reserve is the equivalent, on the illustrative figures that you took, of nearly 700,000l, perhaps that is where we have been at cross purposes

897 I do not think so The cost of the silver to replace the million sterling in silver rupees is about 700,000l so that you get the difference between 700,000l and 1,000,000l to go to the reserve, which is 300,000l?—That is on the supposition that you spend 700,000l only

898 Yes, so that the reserve then holds 300,000l, not against the crore and a half, but against 2½ crores of rupees?—I still think that we are at cross-purposes through taking different figures When you speak of that 2½ crores of rupees it all follows on the assumption that the 1,000,000l has been spent to buy silver I gave an alternative assumption at one stage that 700,000l had been spent, but if you assume that the million has been spent and that it produces 2½ crores of rupees, then the result is that 150 lakhs, the crore and a half, is treated as the equivalent of the gold or sterling money that was spent, and then the remaining 100 lakhs is the profit, and of course, as you know, that at the usual rate of conversion comes to nearly 700,000l I think, if I may so put it, because I am sure one does not want to dwell too long on an intricate point, I may say that our gold standard reserve gets every rupee that can possibly go into it with one exception which I will mention to you, if you care to have it—I do not know if you are interested

899 I only want the general principle?—The only thing in which, perhaps, we have not treated that reserve as generously as we might is that when bills on London were sold by the Government of India, the Government of India only put in 15 rupees for each £ that the Secretary of State disbursed, whereas they ought to have put in on some views 15 rupees and a fraction because of bills having been sold at 1s 3½d Apart from that, the reserve gets every anna that can possibly be given to it

900 Do you not think it is a disadvantage of a system of coining profits into rupees that the currency is unnecessarily diluted with token coins?—No As regards the preamble of your question, I do not see how you can avoid, as you say, coining profits into rupees You cannot coin a single rupee without making a profit on it It is incidental to the whole system that if you coin one rupee a year, about five annas would have to go into the gold standard reserve That I merely say in passing On the question of diluting the coinage unduly, I venture to disagree with you rather strongly In principle we are at one, that is to say, we recognise that it would be a most serious danger if a coinage of rupees took place beyond what is necessary I think every reasonable precaution is now taken to keep down the coinage to what is absolutely required If at any time anyone suggested to the Secretary of State a further precaution against over-coinage, and it was a reasonable suggestion, I am sure he would welcome it, as our object has been all through to limit the rupee coinage as much as necessary

901 In paragraph 7 of Appendix III you suggest on page 89 that “it will be an excess of caution to hold in gold in England more than 5 millions, more especially if, as I hope will be the case, the present practice of holding a portion of the paper currency reserve in gold in England is continued” Your idea is, I think, to use the gold for the support of exchange?—Yes

902 You are, of course, aware that the reserves of the paper currency are governed in India by statute?—Yes

6 June 1913]

Mr. LIONEL ABRAHAMS, C.B.

[Continued]

903 Is there any statute providing that the reserve is to be used for any other purpose than to redeem notes?—I cannot point to a particular section of the statute which provides that it should be used for any other purpose, but the whole scheme of the statute is one which allows gold to be held, and to be held in England, obviously with the intention that at certain times the Government of India may substitute rupees in India for gold in England, so as to give the reserve a utility beyond its primary purpose of redeeming notes. I should like to add there, on a point of principle, that when one is dealing with such huge sums as are in the paper currency reserve, sums which amount, if you include securities, at the present time to over 40 millions sterling, it would be a great mistake to take the narrowest possible view and to say that you shall not use this great sum for any of the purposes that it can serve in addition to that of securing the convertibility of the notes. If one did take that narrower view one would, I think, be departing from the practice of most or many of the most financially progressive nations. I believe that Japan and the German Government, and other Governments whose practice deserves a great respect and consideration, do somewhat enlarge the use that is made of the paper currency reserve.

904 Does the Indian statute, that is, the Paper Currency Act, bind the Secretary of State, who holds the London portion of the reserve? Is he subject to the provisions of that statute at all, is he obliged to carry them out?—That is rather an interesting constitutional point. I do not think there is very much substance in it, and I will tell you why. The Secretary of State in theory might act as though the statute did not exist—that is your first point, which I agree to, but if he did so, and if the gold disappeared from the paper currency reserve, then it would be obligatory on the Government of India, who are bound by the statute, to make good the reserve in some other form. The Government of India have to hold so much,  $x$  rupees minus any amount the Secretary of State holds, and if that minus comes to be nought, then the Government of India have to hold the full  $x$ .

905 As a matter of fact the London portion is not subject to any statute, is it?—I agree with that, but, at the same time, I am anxious not to let it appear to be a more important fact than it is.

906 Is it not possible that the fact that it is declared to be held in England in support of exchange may be misunderstood in India?—Would you say in what way it would be misunderstood?

907 For example, you say that you hold the reserve here to support exchange, in India it is held for the redemption of the note, and people might begin to talk and say, Here is so much gold held outside of India for a different purpose to what it is held in India. Might that not affect the credit of the note issue?—I think actually the time has come when—it will no doubt be done when this Commission issues its report—a rather fuller statement is desirable for the instruction of the public in India as to the way these various reserves are managed. I imagine, if I may say so without presumption, that one of the advantages of the Report of this Royal Commission is that it will probably contain the desired information, and contain it as coming from the best possible source. Until that is issued I agree that there may be some misunderstanding.

908 In paragraph 8 of Appendix III, page 89, one of the reasons you give for the opinion that there is, *prima facie*, an overwhelming balance of advantage in holding in London the main part of the reserve is that payments of trade balances due by India to other countries have to be made in London, so far as this reserve is concerned, remitters would have no option, would they, but to settle through London?—No. Of course they have the advantage of buying a bill on London, and then they have the usual method of buying from London a bill on Berlin or Hamburg, or whatever they wanted.

909 Quite so, but there is no option to the people in India to settle the trade balance with any other

countries than through London?—I think that is correct.

910 If the reserve was held in India, and gold was issued in place of bills on London, the remitters would not be obliged to settle the trade balance with other countries through London, would they?—Do you think that is so? Supposing a remitter was anxious to send 50,000 sovereigns from India on the assumption, which you are evidently taking, that he would get the sovereigns in India from the gold standard reserve, I should say the probability is that he would send his sovereigns by the P & O, and would have them either transhipped to the ultimate foreign destination, or would buy in London with the sovereigns a bill payable at the city where the debt has to be paid. I think that is the ordinary course of business having regard to the fact that London is the financial centre of the world.

911 Still, you might have gold going from India to Austria or to France?—Yes, you might have a very slight advantage in that way. I do not wish to be obstinate, but I do not think that there is very much substance in that advantage.

912 It is a great advantage, is it not, to have a currency system that works automatically?—Yes, as far as any currency system can work automatically, and I may say that the Indian is as automatic really as any currency system.

913 You say it is?—Yes, I think it is. Certainly the object of all the changes that have been made in the development of the Indian currency system has been to make it as automatic as possible.

914 Take the case of 1908-9, when you had a very large accumulation of rupees in the gold standard of India, these rupees were drawn upon in London by means of council bills, were they not?—Yes.

915 I think you began to draw council bills at a very low rate of exchange?—You know the limit, 1s  $3\frac{3}{4}$ d is the lowest.

916 I am talking about bills drawn in London on India?—Yes, and I say 1s  $3\frac{3}{4}$ d is the lowest rate at which the Secretary of State ever sells his bills on India. I think I mentioned that at an earlier stage.

917 In this case you began to draw under 1s 4d but you cannot give us the exact figures?—That is quite right.

918 Do you consider that that was more automatic than if gold had been allowed to go into India?—I do not think that there is any difference as regards the automatic working of the system. Certainly I do not think that the rate makes a difference. Supposing that the gold had gone to India and rupees had been issued in exchange, that would, in a certain sense, have been an artificial transaction, the Government undertaking to give rupees from a certain stock that it has in exchange for another form of legal tender money. Up to a point that is artificial, but which is no more artificial than the things that have to happen, say, in a full gold standard country. Then you suggest, as I understand, that the fact that the bill was sold, say, at 1s  $3\frac{3}{4}$ d instead of 1s  $4\frac{1}{4}$ d per rupee adds a new element of artificiality, that I do not follow.

919 In the case of gold, gold would not go to India, I take it, unless at cost price, which would be something over par?—Of course you can never tell. When gold is on its way from Australia to London it sometimes is diverted to India at a very low price to the owner.

920 That makes it artificial, does it not?—What I was putting to you is that what is from some points of view regarded as a most natural arrangement is in itself artificial up to a point. I am assuming that gold belonging, say, to the National Bank of India, which is on its way from Australia to London, is, owing to circumstances, delivered at Bombay and exchanged for rupees. The point I am putting, and it is a very simple point, is that that is about as much or as little an artificial transaction as the selling of bills by the Secretary of State to liberate rupees.

921 Still, do you not think that the sale of council bills at a low rate competes with gold?—It does to some extent, but then you must remember that the primary object, though not the sole object, of selling council bills is to enable the Secretary of State to

6 June 1913]

Mr LIONEL ABRAMSON, C B

[Continued

bring home from India his revenue requirements for the year. At a certain period of each year he is dominated by that, and it is then quite properly not his object to stimulate gold to go to India at the possible expense of his having a shortage in his drawings. Of course you, being so familiar with Indian finance, know the conditions are very different, say, in April, May, or June, from what they are in December or January.

922 I quite agree. In the case of the Secretary of State drawing to lay down funds for his own treasury what you say is quite correct, but the case before us is the case where the Secretary of State drew bills in London against the gold standard reserve in India, and he began to do so at very low rates of exchange. The point I wish to bring out is whether in doing so he did not prevent gold from going to India and was thus competing with gold, because, if so, then it was not automatic?—I am going first, if you will allow me, to draw your attention to some matters of fact. You speak in very general terms about drawing bills against the gold standard reserve at a low rate of exchange.

923 He began to do it, but he did not continue it?—That is so. I was rather anxious to put in this. The greater part of the bills drawn to restore the gold standard reserve in London after that crisis were drawn in the year 1909-10, when the average rate of exchange, according to these figures\* of Mr Newmarch which I have before me, was 1s 4 0/10d, but a certain amount, the early bills to which you refer were certainly drawn in 1908-9, when the rate of exchange was 1s 3 9/10d.

924 That was the average rate?—Yes.  
925 So there must have been sales below that rate?—Yes. I will not do the arithmetic in my head, but the average rate is obviously something between 1s 3 1/2d, which is the lowest price, and the highest price, whatever it was. In both halves of 1908-9 the average rate was much the same, in the first half it was 1s 3 9/10d, and in the other half of the year 1s 3 9/10d.

926 Do you not think that those sales of council bills at those rates not only caused a loss of premium on the bills sold, but also a loss in the rate at which bills were sold to effect the ordinary remittances?—I am not quite sure that I followed the first half of your question. I think the first half of your question was to this effect—that by selling a little under 1s 4d the Secretary of State did worse than if he had received gold in India for the gold standard reserve.

927 That is not my point. He was anxious to get the gold for the standard reserve, but instead of allowing the gold to go into India he began to sell at those low rates, and therefore he lost the premium on the sales which he might have obtained by waiting, is that not so?—Yes, on the other hand, either he or other interests in India would have incurred a loss if he had reduced the sales, and then the gold standard reserve had been replenished first of all by the transmission of gold to India at a considerable cost, as you know, for freight and so on, with the ultimate result that when it has to be used in order to strengthen the exchange the gold would again have to be shipped from India to London, or to Berlin, or to Trieste, at a further wasteful expense of money. If one is considering the economy or otherwise of any of these transactions which involve the sale of council bills or the shipment of gold, one has to consider the effects in a very wide circle, because one effect leads up to another effect.

928 Still taking 1909-10, when council bills for about nine millions were sold against the gold standard reserve, do you not think that the fact that such a large amount of council bills were sold prevented a greater premium being obtained on the ordinary bills against the Treasury balances?—It may have had a very slight effect, but the great cause which keeps down the price in a year of heavy demand like 1909-10 is what I may summarise as cheap gold going from Australia. I need not enlarge upon that, I think you are familiar with the fact that gold goes from Australia very cheaply at times. If it is worth delaying you—

929 I do not think we need go into it further?—I was only anxious to mention how much gold actually did go to India in competition with council bills in 1909-10. It does bear somewhat considerably, I think, on your suggestion that the large sale of council bills was the cause of the premium not being as high as it might have been.

930 You have told us that the use of council bills for effecting remittances to India saves the loss (in the shape of payments for freight and insurance and loss of premium on council bills) which would be incurred if the remittances were made by shipments of gold, that statement, I suppose, applies to council bills drawn on the gold standard reserve?—Yes.

931 Is it not the case that the present system, as a whole, in the absence of a gold currency really increases the freight and insurance charges on the movements of specie in connection with the currency? When you save the cost of remitting the gold from India by drawing council bills the cost of remitting silver to take the place of gold is incurred, is it not?—That I would most strongly contest, because it rests on the assumption that if the Government acted rather differently from the way in which it does act, the people in India would use less silver. That, I think, is opposed to all the probabilities and all the known facts.

932 I think you misunderstand me, that is not my point, my point is that the present system really incurs a greater expense in the way of freight and insurance than a gold currency would?—But the greater expense, I understand, arises from the fact that silver has to go to India.

933 Yes?—Supposing we had a gold currency, one has to consider whether less silver would be used in India, and in order to consider it one has to put a very definite meaning on the words, "If one had a gold currency." Actually I should say that we have a gold currency at present, only the people of India, for a number of reasons, do not use it very freely. There is no one in India who has 15 rupees, who, if he desires a sovereign cannot get it.

934 That is not quite what I am trying to get at?—I am anxious, if I may, to dwell on this point the people who discuss this question often put the query, why does not the Government give India a gold currency? I am anxious to say that in my humble judgment, that is, I will not say, a meaningless question, but I think it comes very near to being a meaningless question because the Legislature has declared gold to be a legal tender. The Government gives all the encouragement that it can to put into circulation such gold as it possesses, and therefore up to the requirements of the people of India there is a gold currency, and the obstacle to gold being more used as currency is not that the Government of India fails to encourage it, but that the people of India prefer other forms.

935 When council bills are drawn on account of the gold standard reserve, and they are drawn at a premium, does the premium go to that reserve, or how?—It does not. I mentioned to you before that that is one thing of which the gold standard reserve, if it had a voice, might complain. The practice is as I explained to you the other day, not to draw a specific bill against the gold standard reserve, but to appropriate to the gold standard reserve so much, which will probably be in round hundreds of thousands of pounds, from the total proceeds of council bills. Then the Government of India take out of the gold standard reserve rupees equal to 15 times the amount of sovereigns. If anyone urged that they ought to take not 15 times but a rather different amount, then I have nothing to say against it, but I do not think it is an important matter.

936 The importance, I think, is in the fact that you put it down here as a reason for the location of the reserve in London that freight and insurance charges are saved?—I would remind you that if you save the premium you have saved it, whether it goes to the gold standard reserve so as to be held up in that reserve, or whether it goes to the general taxpayer so as to reduce the burdens on him. It is always a good

\* See Appendix VII page 232

6 June 1913]

Mr LIONEL ABRAMSON, C B

[Continued]

thing to save it, into whichever pocket the taxpayer puts it

937 Am I to understand that the profit of the premium goes to the general taxpayer where there is a premium?—I believe so. Mr Gillan will perhaps say whether that is his recollection, but my recollection is that all these adjustments as between England and India with respect to a gold standard reserve are effected at the rate of 1s 4d and not at 1s 4d plus or minus a fraction.

938 (Mr Gillan.) It goes into the profit on exchange?—That is my recollection, that it goes into profit on exchange, which is a head of the general revenue

939 (Sir James Begbie.) Taking it the other way about, if the bills are drawn in India on London at a discount, how would that work out?—It sounds very greedy to say so, but there is a profit either way. When bills are drawn by the Government of India, instead of taking from the public 15 rupees for each sovereign that is to be given out they take 15 1 rupees, or whatever the fraction is, and then I am afraid the Government of India put that 0 1 rupee under the head Mr Gillan was just mentioning, and use it for the advantage of the general taxpayer. I imagine that both the Secretary of State and the Government of India attach no very great importance to that, and if anyone thought it ought to be dealt with differently I do not think any obstacle would be raised. I remember, I may say, that years ago, when I was Financial Secretary here, I thought of raising the question, and my only reason for not doing it was that I was busy with much more important things, and I thought we might leave the Government of India un criticised in that matter.

940 The reason frequently given for selling council bills is that it is in the interests of India to prevent the withdrawals of gold from London?—That is a reason, but a minor reason.

941 Is it not a serious disadvantage to India to be in the position which occurred in 1908, namely, to be obliged to borrow and at the same time to sell securities belonging to the gold standard reserve on a very large scale?—Of course there is a disadvantage in that, but if one were considering the matter fully, one would compare it with the advantages that this system possesses and also with the disadvantages that would arise from any other alternative system. So far as your remark goes, I agree with it that to have to sell securities when you are borrowing is a bad thing.

942 An objection which you have indicated in paragraph 9 (C) of Appendix III (page 89) to the reserve being held in India is that when the gold came to be shipped to London a delay of about three weeks would occur?—That is so.

943 In 1908, when the reserves were largely drawn upon, were the drawings in the form of bills?—They were in the form of bills.

944 And only bills?—Yes. The question whether transfers would not be a better form is, I might say, a very reasonable question, and it is worth mentioning here. I think that this sale of bills in 1908 was the first of its kind. Although the India Office, I think, has some reason to be pleased with the general results of what was done it is not so foolish as to think that it reached perfection at once, and no doubt on any future occasion some things might be done differently and better.

945 At any rate the difference in time between bills and shipments of gold would be about a week only?—That is all.

946 Do you think if the reserve were held in India there would be risk of the gold being used otherwise than to support exchange?—I think that there is a risk, but whether it is a great risk I do not know, and you probably are in a much better position to form an opinion. It seems to me that if the Government issued very large sums in sovereigns on the understanding that they were to be shipped, it would be very difficult for it to set up a kind of detective agency to make sure that the shipments did take place.

947 You do not think the difficulty would be insuperable, do you?—That is a practical question on which your opinion is worth much more than mine.

948 When was the practice of issuing gold to the public in exchange for rupees instituted?—I think it was done as soon as the Government of India began to have gold in 1900, in fact I dare say you remember there was some criticism based on the view that Sir Clifton Dawkins was over anxious to issue gold and rather forced gold on the public. I think a little less vigour was displayed after 1900, but in essentials the practice has continued from when the Government of India first received gold.

949 Have any regulations been laid down for carrying it into operation?—I think there are orders in the most general terms to officers in charge of currency centres that they are habitually to give gold to the public in exchange for rupees when the public desires. Then, on one occasion at least, as you know, in 1907 or 1908 the operation of these orders was partly suspended under a scheme which the Secretary of State thought over cautious. Subject to that suspension in 1907, I think the whole thing is governed by a very few sentences.

950 It is a rather important point when the rupee reserves are very high, is it not? Would you issue gold to the public when your reserves were laden with rupees?—I think that if the conditions of trade were good and there was no immediate prospect of a fall in exchange, the right policy would probably be to issue gold to the public freely, even when there is not much gold left, because when you are speaking of the reserves being very full of rupees you imply that there is not much gold in them at such a time. Even at such a time my feeling would be in favour of letting the gold go freely unless there were special reasons for holding it up.

951 I thought that you rather complained about the way the gold went out in India in 1907-8?—No, I do not complain. My view—I do not know if other people hold it—is that we have two gold reserves which serve two different purposes. I am very anxious that the difference between those two purposes should be recognised, and that the gold standard reserve should not be used for the same purpose as the paper currency reserve of gold, that is to say, that it should not be dissipated in good times. Subject to that, it seems to me a reasonable thing that the gold from the paper currency reserve should go out as it did in 1907-8 only in my memorandum I have said that the sudden efflux of gold was probably not a support of exchange. I merely made that remark as I wished the fact to be noticed.

952 You say you can give reasons, if necessary, to show that if sovereigns are to be issued at a time of an unfavourable trade balance for the purpose of preventing exchange from falling below the gold export point, the rate at which they ought to be issued must be at the established rate of 15 to 1?—Yes.

953 It would be very useful if we could have those reasons submitted?—They are exceedingly simple. You may assume that there is a certain fixed cost of sending home gold from India to England—you can call that ½d per rupee, but of course one knows that it is rather doubtful. If a bank applied to the Government of India for gold and got it at 1s 4d, and then sent the gold home the effective rate of exchange from the point of view of that bank would be 1s 4d minus ½d, that is to say 1s 3½d, and so long as you kept the exchange at that rate or above it, you would have maintained the exchange. Supposing that instead of doing that the Government of India issued its gold, say, at the price of 1s 3½d,—one can take that figure—and then the bank had to send the gold home and still pay this ½d for expenses, then, from the point of view of the bank, the effective rate of exchange would be 1s 3½d minus ½d, that is to say, 1s 3d. By instituting this different rate of 1s 3½d the Government of India would simply have failed to support exchange, they would have put exchange down on the figures that I have given you to 1s 3d, and the only way they can keep it within the gold points is in the way that I have mentioned. I hope that that is clear to you.

6 June 1913]

Mr. LIONEL ARBAHAMS, C.B.

[Continued

954 Quite. Does not that same argument hold good the reverse way about? When you issue rupees in India, if you issue rupees in India below the equivalent of 1s 4d, then you destroy the standard, do you not?—No. My view, which I tried to develop very briefly in answer to a question of Sir Ernest Cable, is that you keep up your standard when you keep the exchange within what they call the gold points. What I was putting to you was that if you let the exchange fall below the exporting gold point, then you have failed to maintain exchange. I hold with equal firmness that if you keep it within the gold exporting point, then you have not failed to maintain exchange. I think I may say that economists generally, who deal with this sort of subject hold the same view as far as I know.

955 Regarding the amount in reserve you said that the statistics of 1907-8 illustrate the effects of as severe a period of adversity as it is reasonable to expect?—I think so. I know that is a very large proposition, but I put it forward with very fair confidence.

956 Have you taken into account the great advance made since that year in the import trade?—I quite agree with you that if 25 millions, which is the figure that has been mentioned, was suitable in 1908, and only just enough, then the gold standard reserve ought gradually to increase, and in any scheme which I have put forward provision has been made for such a gradual increase.

957 Yes, but you put considerable emphasis on the statistics of 1907-8?—I merely wish to use them, not as showing the final amount that the gold standard reserve ought to be allowed to reach, but as a basis for reasoned discussion on the subject, because I feel very much that there has been a vast amount of discussion on the subject on the basis of mere guesswork.

958 I would like to ask you also if you have taken into account the fact that people in India are now being attracted by investments in Europe?—Do you mean that there would be exports of capital for that particular purpose?

959 Yes?—I must confess that that is a point which has not occurred to me. In any case, I would maintain that you should take the standard of 1907-8 as your basis, then you can make such additions as changes, either in the import trade or in the habits of investors, and so on, necessitate.

960 Do you recognise that with the growing wealth of India and the vast additions to the currency which have taken place in recent years, the tendency of interest and discount rates has been in a downward direction?—Yes.

961 And that if that prosperity continues, the rates of interest must inevitably cheapen still further?—Yes.

962 With the possible result that a strong demand may arise for further investments in England and elsewhere?—I recognise that you do not put that in any controversial way.

963 Certainly not?—Therefore I need not be so guarded in my answer. I am not sure at the moment that a great demand for sterling investments is likely to occur at a period of bad exchange.

964 It might precede it?—Yes.

965 Or it might follow it?—Yes. I should have thought, generally, that investments would go on, subject to conditions which would not be very much affected by a period of bad trade, or of unfavourable exchange, except that bad trade would, so far as it had any effect, rather check foreign investments by Indian holders.

966 Such investments, if made, would act on the exchange, would they not?—Yes.

967 Have you considered this point—that the high prices of commodities exported have had an important effect on the favourable balance of trade?—No doubt.

968 And through that balance on the additions to the currency?—That is so.

969 May it not be that the great additions to the currency necessary to the conduct of trade in consequence of high prices may be found to be superfluous when a cycle of low prices is experienced?—Yes. I think it is very desirable that India should be able to

contract its currency when prices fall, or when, for any other reason, the currency becomes redundant. I think you will remember that certainly from 1898, and I think from an earlier period, the principle has always been recognised that the great advantage of our currency system that we have set up is that it does enable such a contraction of the currency to be effected.

970 You have based your estimates with regard to the reserve on the events of 1907-8, is it altogether safe to rely on those estimates in view of all these different developments that I have mentioned to you?—No. As I have said to you already, I should take the experience of that period as a very valuable foundation, and then work out, so far as one can, what allowance has to be made for changed conditions, but I would not, as so many writers on the subject in India have done, disregard the one solid and valuable piece of experience that we do possess.

971 But you look forward to a time when the profits on coinage or a portion of them will be available for capital expenditure on railways?—A portion of them I should say.

972 Would there not be a danger of coinage being then undertaken for the sake of the profits that would be available for such expenditure without regard to the purely currency position?—No, I do not think so. I think the Government of India are so conscious of their enormous responsibilities in respect of the currency, that they would never be so foolish as to coin beyond what seemed to be required, because if they did so sooner or later they would have to pay the retribution, and might have to pay it in a very unpleasant form.

973 I understood you to say yesterday that, when you remarked that you would be able to show how the purchase of silver is regulated, you had in view the arrangements laid down by the Secretary of State in his despatch of 18th February 1910, Appendix V, page 185?—Yes.

974 So far as I understand the position, there is nothing provided there as to the method by which the desired stock of rupees on a given date is to be obtained. Is it the case that when silver coinage has to be undertaken it is carried out either by buying silver with gold taken from the paper currency reserve or by selling council bills?—There are various ways of paying for silver. The simplest way is to pay from the India Office balances, whatever they may happen to be. That was adopted, as I dare say you know, in 1912 when we began with very large balances. We bought seven million pounds' worth of silver, and we very naturally used a part of our large balances to pay for the silver. We then sent it to India where it was placed for the most part in the paper currency reserve, and notes were issued to the Government of India against it. That was really a transfer of balances from England to India. That, I should say, is the normal method of paying for silver. When the Secretary of State's balances are not so high, there are other methods that might be adopted. One, which I thought very clumsy, which was adopted years ago, was to have boxes of sovereigns sent home from India to England. Another method which now takes its place is to withdraw from the paper currency chest in India the amount required to pay for silver against replenishments of the paper currency reserve in other forms. Those, I think, you may take to be the two methods—either payment from general balances or from the paper currency reserve.

975 When you take gold from the paper currency reserve to buy silver in order to coin rupees, that is not an addition to the total currency, is it?—No.

976 You simply substitute the silver for the gold that you take out?—That is quite right.

977 Therefore there is no addition to the currency?—That is so.

978 But when you utilise council bills to get money to buy silver and you buy silver with the money and coin it, that is an addition to the total currency, is it not?—It is an addition in the first place to the balances held by the Government of India.

979 In London?—No, in India. Just let me go through this, I did it before, but it is very important,

6 June 1913]

Mr LIONEL ABRAMSON, C.B.

[Continued]

The Secretary of State has so much money in London which he has drawn from India, then he spends a certain sum of it and sends out silver to the Government of India, which they coin and put into the paper currency reserve. Then against it the Head Commissioner of Paper Currency issues notes to the Government of India so that the gross circulation of notes is for the time increased, but the extra notes are held by the Government, and it is a matter of experience whether those notes or the rupees against them go into circulation, or whether they are held up in the Government reserve. So far as they are held up, as they may be and as they were on the 31st March 1913, in the Government reserves, they certainly do not affect the active circulation.

980 I am afraid I do not follow that. We are talking about council bills being drawn in London for the purpose of buying silver for coinage purposes. Last year, for example, you drew council bills against the paper currency reserve, I understand, for the purpose of getting money to buy silver with?—I am always anxious not to overstate differences of detail, and not to delay you over such matters, but perhaps I was wrong in not questioning the opening words of your question. One did not sell council bills in order to produce so much money and to buy silver with the money so produced. The Secretary of State sells council bills so many per week according to trade requirements and according to his own estimated requirements, and so on, but he conducts what one may call general sales, not sales for specific objects. So that it is more correct to say, as I put it, that if the silver for the extra rupees is not bought with gold taken from the paper currency reserve, then it is bought from the Secretary of State's general balances. I put it that way, which is, if I may say so, the most correct way. You put it slightly differently as though council bills were sold to produce the money. I thought the difference between us was so small that it was not worth correcting, but perhaps it is more important than I realised.

981 (Mr Keynes) Will you put it this way—that when more silver is coined against council bills, the Government of India's capacity to cash council bills is increased, and when they take advantage of that capacity then the circulation of rupees is increased?—Yes, that is perfectly correct, but whether it entirely answers Sir James Begbie's question I do not know. I preferred, because I thought it helped Sir James more, to put it in this way—in a negative form. Supposing at a certain time the Secretary of State has increased the gross circulation of currency notes by sending out silver in the way I describe, and if then there is no demand for the money represented by the additional notes held by the Government of India, then what has been increased is not the active circulation, but only what you may call the stagnant part of the circulation.

982 (Sir James Begbie) The total currency, whether in reserves or in actual circulation, has been increased?—Yes. I am anxious to insist on this, that when there is no actual public demand for the extra rupees or the notes issued against them, then it is the stagnant part of the circulation, that is to say, the amount in the reserve treasuries and so on, that is increased, so there is no danger of what is popularly called inflation.

983 But the total currency is increased, whether in reserves or in actual circulation?—Yes, it is.

984 Take the case of last year, I allude to the time before the decision was come to to buy silver. Immediately before that time very large amounts of gold were held in India?—Yes.

985 The currency reserves were overflowing with gold coins?—Yes.

986 And the silver reserves had fallen?—Yes.

987 Then came this decision to add to the coinage, why was the decision made to add to the coinage instead of substituting silver for part of the gold held?—Where could you have got the silver from?

988 You could have used the gold you had to buy the silver?—I can assure you that that is not so. At the time of active demand for currency, what happens

to the unfortunate Government of India is that the bankers rush into the currency offices and other offices with enormous amounts in sovereigns and say "In accordance with the notifications issued on the recommendation of the Herschell Committee we demand that for every sovereign you shall give us 15 rupees." The Government of India—and I have heard that other Governments with similar currency systems have the same trouble—is very hard pressed sometimes to provide enough rupees for the public, in response to its insistent demand for rupees against gold. If at a time like that you say, Why did not the Government give out its gold and get in rupees from the public, the answer is that the public wants exactly the opposite thing done, the public clamours for rupees and forces gold on the Government.

989 As I understand the position, at the early part of last year the rupee reserves had fallen to what you considered a low point, and it was necessary to replenish the silver portion?—Yes. May I just interpolate that it had fallen to a low point as far as I recollect, because the public had forced gold on the Government and taken rupees instead?

990 If gold had come in in such quantities and depleted the silver reserves, should not the gold which came in have been used to buy silver?—I see no advantage in that. The chief effect of what was done was that the Secretary of State's balances were reduced, and the Government of India's balances were increased, which I think was a good thing, because, other things being equal, I am sure you would agree that it is better to increase the Government of India's balances at the expense of those held in this country. Except for that, and for a certain saving through not transmitting the sovereigns which, under your scheme, would have been transmitted, I do not think that there is any material difference between the method that was actually adopted and what you suggest.

991 The difference, I think, is that in the case I suggest there would have been no addition to the total currency, but in the way that the operation was carried out, by the sale of council bills, there was an actual addition to the total currency?—I will assume that the stagnant part of the currency—you will forgive me for insisting on that—

992 I do not wish to stop you in any way, but I recognise that the reserves and the actual circulation are one so far as the total currency is concerned?—If your method (if I may call it your method, just for brevity) had been carried out, the difference would have been, first, that India would have had less gold in her reserves, which would have been, I think a net disadvantage, secondly, that the Secretary of State would have had a very much larger balance at the end of the year than he actually did have, and that, I think, many people would consider also to be a disadvantage.

993 Is that so? I thought that council bills were drawn, to a certain extent any way, for the purpose of providing money to buy silver with. Is it the case that the silver purchases came out of the Secretary of State's balances?—The silver was paid for out of the general balances. I am very anxious to insist on that, because I am not sure whether I made it quite clear that there is no specific drawing of bills for a particular object.

994 Were not the council bills sold against the paper currency reserve last year?—I have not my first memorandum (Appendix I) here, but I may say that what happens is that occasionally out of the total proceeds of council bills so much is set aside into the paper currency reserve merely to replenish the balances of the Government of India. I do not know if you know that system. Shall I explain to you what happens? Supposing that in a certain year the Government of India, out of its Treasury balances, can meet 20 millions of bills and transfers, and does so, then, if in the last month of the year there is a trade demand, the Secretary of State, wisely or unwisely—in my opinion wisely—meets it and sells perhaps another three million pounds worth of telegraphic transfers and bills. The Government of India, on the hypothesis I have taken, have not the means in their Treasury of meeting

6 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

those bills, so the Secretary of State would transfer the proceeds of the bills into what we call, in our official language, his paper currency chest in London. Against that, the Head Commissioner of Paper Currency would issue to the Government of India 4½ crores of notes, and these notes would be used to meet these bills, at any rate they would strengthen the general resources of the Government of India so as to enable them to meet these bills. That is what we mean when we speak of drawing against the paper currency reserve, and I am afraid we have misled you by causing you to think that certain specific bills are drawn against the paper currency reserve.

995 In the statement issued by the Government it is put down that seven millions odd was drawn against the paper currency reserve?—That is a brief phrase which is capable of being misunderstood. What it is really intended to convey is that of the total bills that were sold the proceeds of a certain amount of them were used in order to enable the transfer of sovereigns to the paper currency chest to be made in London.

996 I think that the statements I have seen did not provide for any credits to the paper currency chest in London?—Perhaps I might ask Mr Gillan. I do not understand that the transaction can be other than what I have described.

997 (Mr Gillan) It must have been paid into the currency reserve in London?—(Witness) Sir James Begbie thinks it is not so. I think that probably what has happened has been that some brief and technical phrase has been used which has given rise to misunderstanding. I would like to make complete the information I was endeavouring to give to you, Sir James. Sometimes, when bills have been sold, the proceeds are used to buy securities, like an investment for the paper currency reserve.

998 (Sir James Begbie) I think it was stated to be for coinage?—I think what was intended to be conveyed is what both Mr Gillan and I understand, and I cannot conceive any other meaning or any other operation.

999 When council bills are drawn, there is nothing to distinguish bills drawn against the Treasury balances from bills drawn against the paper currency reserve, is there?—No.

1000 Would that not be desirable, in your opinion?—I do not know. I do not think there would be any necessary advantage in it from the point of view of the purchaser of the bill. What he wants is a bill, pure and simple, and what the Secretary of State and the Government of India want to do, is from time to time to appropriate the proceeds of bills and say, so much shall be added to the general Treasury balances, and so much shall be added to the paper currency reserve so as to ease the Government of India. May I just illustrate it? It is rather important as you have raised it. I want to illustrate the convenience of making these appropriations in round sums. I read out yesterday, in answer to a question of the Chairman, a summary of some telegraphic correspondence relating to an incident where it was suggested that the interests of India had been subordinated to the interests of the London money market.\* If you remember, the correspondence ran somewhat in this way. The Government of India say, "Please transfer half a million to-morrow or a few days hence to the paper currency reserve." The Secretary of State says, "I will if it is necessary," and finally the thing is done. That kind of transaction, making the transfers or appropriation in round sums of half a million or a million, is incomparably more convenient to the Secretary of State and to the Government of India than selling these bills one by one specially appropriated to particular funds, or specially payable from particular funds. A further difficulty in the way of your proposal is that a Bombay bill is, as you know, payable at the Bank of Bombay, and all that one can instruct the Bank of Bombay to do, I think, is to meet the bill from the general balances of the Government which are lodged at that bank.

1001 Am I to understand that when you require to buy silver for coinage purposes, it is not material whether you use the gold you have or whether you

draw council bills or take it out of the general balances?—I do not think there is any question of principle involved. I think that *primò facie* when the Secretary of State has large balances, and has no immediate use for them, it is better for him to use them, or some of them, to pay for any silver that may be required.

1002 Coming now to the Indian branch of the reserve, you say that for special reasons the normal amount of six crores has often been departed from, do you propose to submit particulars of the instances of departure and the reasons for it?—I have already given, though perhaps it has not been noticed, the instances of departure and practically in all important cases I have given the reason. If you will look at Appendix III, page 97, statement A, column 7, you will see that at the end of 1906, after the silver branch had been built up to 2,300,000*l.*, it suddenly dropped in the next quarter to 69,000*l.* Then if you look at column 5 of the same table you will see the explanation of that, namely, that the whole of that money and some money besides, had been taken by the Government of India as a temporary loan at 3½ per cent interest. The same thing happened, but one need not go through it in detail, in 1908, as you will see from a footnote, and it also happened in December 1909, as you will see from another footnote. I think that is the essential part of the history, that these loans were taken and repaid except that I ought to add that the repayment during 1910, 1911, and 1912 was delayed. You will see at the foot of column 7 that the normal amount of four millions was not restored until the quarter ending 31st March 1913.

1003 Do you regard the balances held in 1910, 1911, and part of 1912 as temporary withdrawals?—I think that is the way to regard them. I never like to maintain that the Secretary of State has been more consistent than he has been. Occasionally he has wavered (and he has not been the only waverer in that matter) as to the complete desirability of maintaining the Indian branch of the gold standard reserve. I do not know whether he is now completely convinced that it ought to be kept up at six crores—I think that he is, but I do not know that he would endorse the argument in favour of it that I put forward. This diminution in 1910, 1911, and 1912, I think, ought to be regarded as evidence of his period of uncertainty.

1004 Were there any special reasons for the departure from the normal amount for such a long time?—I have mentioned what one may summarise as the psychological reason, and a further reason is that there were so many rupees in the paper currency reserve that the need for increasing the stock in the gold standard reserve was *pro tanto* rather less. But perhaps the answer to what I think is your real question is that there is no evidence of deep and subtle policy in this temporary diminution. I think that is what you really wanted to know.

1005 In several places throughout these papers you lay stress on the risk of injury to Indian interests by the sale of bills in London against the paper currency reserve in India necessitating the *exporting* of gold at a time when the Secretary of State was borrowing in London, or at a time when the London market was strident, or at a time when stringency already exists and an increase of it is likely to react on trade generally, including Indian trade. This seems to be a most important point, and it appears to me to call for a detailed elucidation. Would it be convenient to give particulars of specific instances in the last four years where the influence mentioned controlled the sales of council bills?—I do not think one could give a specific instance. Generally speaking, the Secretary of State sells his bills as you know, subject to not interfering with the flow of gold to India. Then I mention in various passages of my memorandum that if he completely changed his policy and greatly reduced his sales of council bills and greatly increased thereby the flow of gold to India, probably there would be a stringency in the London money market which would affect Indian trade. But it is not difficult if not impossible, to give specific instances of what would happen in the event of a different policy being adopted.

\* See Appendix V, pp 146-7

6 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

1006 That is not quite what I was suggesting. I would like, if possible, if we could have had figures before us, to substantiate the idea that these things were done in the interests of India and to prevent any harm being done to India?—You say these things were done. What I did was to describe the practice that is followed in the belief that India would be harmed if a different practice were followed. I am quite prepared to defend the view that that belief is well founded, but when you ask for specific instances you are asking for specific instances of the effect of a policy which has been rejected. I am very anxious to meet you in every respect, but that is my difficulty at the moment.

1007 You do not think then that you can more clearly show to us that all these things of which you tell us have been done because you considered it was in the interests of India?—Of course, that almost comes to the question of one's personal attitude towards the business that is entrusted to one. I will not speak about myself, because it would be egotistical, but I am quite sure, to speak of the members of the Council of India, who have a considerable part in this business, that their object is to seek the interests of India in these matters, and having known them all intimately for many years, I think it is a very great misfortune that some writers on our affairs have put forward the other view. I am not sorry that you put these questions, because the other view has been put forward with such extraordinary vigour which can be seen through a very thin disguise. In paragraph 37 of Appendix I you may have noticed there was a writer in "The Times" who said that the Joint Stock Banks' representatives habitually subordinated the interests of India to the interests of their banks, but that no suggestion was made against their personal integrity. I daresay you noticed that rather striking passage. Of course, you could not help noticing that if Joint Stock bankers who are paid handsome salaries to look after the interests of India, used their position in order to subordinate Indian interests to Joint Stock Bank interests, that conduct would not be consistent with personal integrity. I can only say that I have repeatedly discussed those kind of questions about council bills and so on with practically everyone who has had to deal with the financial affairs of the India Office, and my impression, indeed my firm conviction, is that the interests of India, as they have been understood by the persons concerned, using their best intelligence, have been the predominant consideration.

1008 (*Mr Gullan*) I wanted first to ask you a question or two about the coinage of silver to which Sir James Begbie has referred. I think we have got already what you wish to say, but I want to bring it to a point. The currency system of India is very frequently regarded as a manipulated or managed currency system, is it not?—Yes.

1009 And it is inferred, or I suppose it might be inferred, that the Government actually determine the amount of coinage?—That is implied in the criticisms.

1010 It would be more correct to say, would it not, that what the Government have to do is to estimate the requirements of currency?—Yes.

1011 Suppose that at any time they ran short, what would happen?—What would happen would be that they would find a difficulty in converting their currency notes. I think that would be the first result.

1012 They would have to refuse to meet demands for rupees?—Yes.

1013 Which would be a very serious matter?—Yes.

1014 On the other hand what would happen if they over-estimated and over-coined?—Then what would happen would be that superfluous rupees would be in their various reserves, but, as I was putting to Sir James Begbie in a slightly different connection, not in actual circulation. You cannot force rupees into circulation.

1015 That was my point precisely. The Government of India have no means of forcing rupees into circulation if they are not desired by the public?—Quite so.

1016 You mentioned in your replies to Sir James

Begbie just now that the question is very often put, "Why does not the Government give India a gold currency?" I want to bring that out more particularly in connection with the Fowler Report. Sir Shapurji was asking you yesterday about their recommendations with regard to the constitution of the reserve, and whether it should be in gold or in gold securities, and what I want to bring out now is a recommendation with regard to the constitution of the currency—I think we can get at that. You suggested, did you not, that there is often an indefiniteness as to what is meant by a gold currency?—Yes.

1017 I want to bring that point out and I think I can do it in this way. Supposing we begin with England, putting aside the subsidiary coinage which is not to the purpose, there is in the English system a definite obligation to meet any form of currency, whether it is notes or cheques, in gold?—Yes. It is a definite but curiously limited obligation in a sense, as the Bank of England only undertake to pay their notes at one or two centres, so that if you are at Bourne-mouth or Ramsgate and have a £5 note, you may find some little trouble in cashing it.

1018 But, subject to that limitation, what I have said is accurate?—Subject to that, but it is a considerable limitation.

1019 If you go to other countries mentioned, to the Philippines, West Africa, and so on, the limitation of the duty to give gold goes very much further, does it not, for instance, in France you have got a very large silver coinage which is an unlimited legal tender?—Quite so. The French currency system, I think, is, to all intents and purposes, the same as the Indian currency system, and they are both known by the well known designation of the lumping standard.

1020 (*Mr Keynes*) That phrase is never used of India, is it?—But surely it is applicable in exactly the same way.

1021 (*Mr Gullan*) It is not exactly the same thing. What I wanted to bring out is that you may take France, Germany, and the United States and you will find a very distinct limitation in all of them of this obligation to give gold?—That is so.

1022 So if India is half-way in the matter of currency between gold and silver it does not in any sense occupy a very special position?—Certainly not.

1023 It is in the position of the great majority of countries?—It is certainly in the position of many important countries.

1024 You do not say the great majority?—One would have to go through Denmark, Norway, and Sweden.

1025 Very well, we will leave it at that. It is really a question of England having an absolute standard?—Quite so.

1026 Now I want to refer you to the Fowler Committee. They say, in paragraph 54 of their Report, "Looking forward as we do to the effective establishment in India of a gold standard and currency based on the principles of the free inflow and outflow of gold, we recommend these measures for adoption," and they go on to say in the next paragraph, "Under an effective gold standard rupees would be token coins, subsidiary to the sovereign."

But existing conditions in India do not warrant the imposition of a limit on the amount for which they could constitute a legal tender, indeed for some time to come no such limitation can be contemplated." Then in paragraph 59 they say that a system which had been found sufficient in France and the United States was sufficient for India?—That is so.

1027 Would you agree that critics of the Government policy who appeal to the Fowler Committee and say they recommended a gold currency therefore let us have a gold currency now have either to show that conditions have changed since that report was written or to explain what exactly they mean by a gold currency?—Yes and how far what exists now in the way of a gold currency fails to conform to the ideas that can be traced in the Fowler Committee's Report as to what a gold currency meant.

\* C 8390, page 16.

6 June 1913]

Mr LIONEL ABRAMSON, C B

[Continued]

1028 They said at the time in paragraph 55 "Existing conditions in India do not warrant the imposition of a limit" ?—That is so

1029 Therefore, it has to be shown that the conditions as they now exist do?—When you are speaking of a gold currency you are speaking, I think, of an obligation undertaken by or imposed on the Government to give gold in exchange for rupees

1030 I want to ask you whether you do not consider that that is a condition essential to a gold currency in any full sense of the term?—You and I are, I think, at one as regards substance, but I think we should express ourselves differently I should say that a gold currency means the absence of any discouragement and the presence of a certain amount of encouragement to the use of gold for the purpose of effecting exchanges, that that exists in India and that therefore India now has, so far as it desires it, a gold currency You put it rather that a gold currency means the undertaking of an obligation by the Government to give gold in exchange for other forms of currency I think one might also say that if that is what a gold currency means, the United Kingdom does not possess it and will not possess it until it undertakes to give a sovereign in exchange for twenty shillings, which it does not now undertake to do

1031 I am not differing from you in any sense Supposing someone comes to us and says, You have not got a gold currency at present, it is for them to show what further action they require us to take, is it not?—Quite so

1032 Is there any action which suggests itself to you apart from this undertaking of a definite obligation to give gold on all occasions?—No, I cannot conceive that any action other than that really undesirable action is possible, and it is for that reason that I rather insist on the point, I hope not tediously, that India has a gold currency at the present time, so far as it wants a gold currency I am only anxious to say that that is my position and that I do not take the position which might be taken, namely, that India does not want a gold currency or that India ought to have it but has not got it I say that the nearest brief proposition that you can lay down consistently with the truth is that she has got it Shall I be interrupting you if I put in one figure which very greatly interests me and which bears on this subject? I noted down—and I think it may surprise some members of the Commission—that the absorption of sovereigns by the public in the 14 years from 1899–1900 to 1912–3 was 64,815,000*l.*, while the absorption of rupees during the same period was 66,750,000*l.* The reason I want to put that comparison in and at this point in your examination is to confirm what I say, that when India requires fresh currency now, judging by this period of 14 years, she requires practically half of it in gold and half of it in silver

1033 (*Mr Keynes*) Is the table from which you are taking these figures printed amongst the memoranda that we have?—The absorption of gold is shown in the statement attached to Appendix VI on page 216, the absorption of rupees is not—I have added in manuscript in my copy these figures

1034 You do not suggest that that is a measure of the amount of gold in circulation, do you?—No I am sorry to interrupt Mr Gillan in order to answer Mr Keynes's question. That of course is one of the difficulties You pour gold into the circulation, and then India may or may not use it as a circulating medium I think it is important, in considering how far the Government has done what it can to encourage gold, to note that in the last 14 years it has put in circulation, whatever may become of it, practically as much in gold as in rupees

1035 (*Mr Gillan*) Is your view with regard to the internal currency simply that the only duty of the Government is to see that people get the kind of currency that they want?—Yes

1036 And that it is not necessary for the maintenance of the parity of exchange that it should be a gold circulation?—Quite so

1037 That is a very important mistake which is sometimes made, as you recognised?—It is very important indeed

1038 Now about the external currency, the currency that is required in the adjustment of foreign trade We had some evidence yesterday about what happened in the crisis of 1907–8, is it correct to say that when the Government started this currency policy they were thinking mostly of their own requirements, that is to say, of the amounts that they have to discharge at home?—When you say "when they started this currency policy" are you thinking now of 1893?

1039 Up to 1907, say?—Do you mean when they established the present currency system?

1040 I do?—Then my answer is Quite so

1041 Did not that point of view rather colour the action of the Government when they first faced this crisis of 1907?—Their action was coloured partly by what you say and partly by the influence, which has always been a very powerful influence, of the Report of the Fowler Committee The Fowler Committee spoke in very generous terms of Mr Lindsay, who was the advocate of the policy that was followed in 1907–8, they spoke very generously of him as a contributor to the subject, but they very faintly praised his scheme of the Government undertaking to sell exchange on London at a time of adverse trade, and they spoke with equally faint interest or praise I think, of a similar scheme that was put forward by Mr Henry Raphael So that in 1907–8 when we did sell some sterling exchange we were not only departing from the previous ideas of the Government, as you mentioned, but also from the ideas that bulked very large in the Fowler Report—it was a new departure

1042 It came into force by stress of circumstances, the Government recognising that they must maintain exchange, not only in their own interest but in the interest of the trade of the country generally, would you say that?—I would put it a little more generously and say that the Government had the wisdom to perceive that it was a wise course to take But I think it comes to the same thing

1043 Sir Shapurji said yesterday with regard to this point, that the Government had never undertaken any absolute obligation to meet a future crisis in the same way?—That is so

1044 If our reserves were exhausted, if we failed to meet a crisis, then the exchange might drop, not as you said yesterday by  $\frac{1}{4}$  or  $\frac{1}{2}$  below 1*s* 4*d.*, but we will say to 1*s* or any point short of the bullion value of the rupee?—What you say opens a very large question The particular points I want to mention are first of all as regards the possibility of a fall in exchange and the point to which exchange might fall, and secondly as regards undertaking a general obligation in much wider terms than have ever been used I think that both in the utterances of those who speak with authority on this subject and in actual fact one could find much support to the view that even if we had a very bad trade year the fall in exchange would not be nearly so serious as you suggest In the remarks which Lord Courtney made before the Fowler Committee, which were very interesting remarks, and came from a man who was very eminent in these matters, the general outcome was that the 1*s* 4*d* exchange was founded on the rock, and even if you had no gold standard reserve or any special supports it would not be seriously disturbed I think that is over optimistic myself

1045 We are speaking of a crisis, you understand, not of the ordinary fluctuations of trade?—I know But supposing you had a crisis such as occurred at this time, 1907–8, with no extraneous support for exchange such as the gold standard reserve, then it is a matter of speculation how low exchange would go My own view is that it would probably not go down as low as the figure you mention That is rather an incidental remark and I wanted to make it, but if I may I will go on to my other remark now I recognise—I am not sure whether the Secretary of State in Council and the Government of India would do so equally—that a currency system like ours tends to evolve in the direction of the undertaking by the Government of more obligations than the Government of India has under-

6 June 1913]

Mr LIONEL ABRAHAM, C B

[Continued]

taken so far. Of course the ideal climax to a system like ours would be that the Government should undertake whenever exchange fell below a certain point to sell exchange on London at a fixed price, and I can see great advantages in it. Provided it is done at the right time but not immediately, I mean, provided one waits until one has a big enough reserve to enable it to be done, I do not think there will be any great danger in it. I think one might look forward to it as some thing to be done as the crown and consummation of the system.

1046 I have only one or two questions that I wish to put about the paper currency reserve, which I believe is a subject that will be dealt with more particularly by Mr Newmarch?—Yes

1047 What I wanted to get from you is the place of the paper currency reserve in the general scheme of Indian currency. The idea of the paper currency reserve in India is to a certain extent that 14 crores, I think, are issued against securities, and after that stage every note must be covered by gold or silver coin?—Yes

1048 There is no provision in the system for any sort of elasticity?—No

1049 None at all?—Except that you may regard this as providing elasticity—that the circulation of notes can be suddenly increased in India by an addition of gold in England to the Secretary of State's portion of the paper currency reserve. There is, therefore, a little elasticity.

1050 At the same time the requirements in India for an elastic currency are very marked?—Very

1051 That is owing to the seasonal variation?—Yes

1052 Do you think it would be worth while considering some alternative system of the paper currency reserve in India?—If you will not unduly shock commercial opinion in India I think it would be an enormous improvement if arrangements were made by which additional notes could be issued at suitable times especially in the busy season, either uncovered altogether, or what I should prefer because it would look better against security that can suitably be held for a very short time. Supposing there were first class bills which became due to be paid off three or four months after the date on which they were received, then by putting such securities into the paper currency reserve and issuing notes against them, there would be a possibility of elasticity without any risk worth considering, in fact, humanly speaking, without any risk at all, and I think trade and other interests would benefit by it. You will notice that in my Note on the Gold Standard Reserve I mention that, I think it was in paragraph 26 of Appendix III, page 95, but I am afraid I yielded to a tendency to conservatism against which I usually try to fight.

1053 I do not want to develop that further at present, I only wanted to get your general view upon it. About the reserves it is true, is it not, we must look on them generally in the aggregate?—There is a great deal to be said for that, but you can go a little too far in that direction for reasons which I was mentioning yesterday, I think, and which you doubtless remember.

1054 I do not want to go into it too much. The point I was leading up to is this: you have got in paragraph 4 of letter from India No 89, dated 1st April 1909 which you will find in Appendix V, page 169, a statement of the reserves amounting altogether apparently at the beginning of the crisis of 1907 to about 24½ millions, and I wish to ask you what are the annual figures at the present time? You have got about 20 millions in the gold standard reserve, have you not?—I will give you the figures as best I can, and then I am sure you will allow me to correct them in the proof. For the gold standard reserve you will find the correct figure in Statement B of Appendix III, page 98. It is not quite so high as you mention, it is 18½ millions. The currency gold in England is a little more than 6 millions, and the Government gold held in India would be at the present moment a little under 18 millions.

1055 I thought it was a little more, but I did not quite know. What have we altogether?—Allowing for errors of memory that would be about 42½ millions.

1056 Then to that extent we are in a stronger position to meet any future crisis than we were in 1907?—Enormously.

1057 I do not know whether, with reference to these figures, you would like to add anything to what you have already said about the amount to be held in the gold standard reserve or with regard to these investments in securities?—There is one obvious remark—I am not sure that it would be agreed to by everyone, but I think it is worth making—that the best system if practicable of measuring the amount required for the gold standard reserve is that one should make it contingent to some extent on the other sterling resources to which you have just drawn attention. There are advantages in considering it in isolation. But on the whole, I think, if there is not too great a sacrifice of simplicity, it is better to have as one's working rule that the gold sterling assets in the paper currency department, plus the corresponding assets of the gold standard reserve, should be of a certain amount allowing for variations between the various items making up the total. That is the chief remark I should like to make. The other is of no very great importance, but it supplements what you were saying. You not only showed that with regard to the amounts we are in a much stronger position than we were, but I should like to add that as regards the form in which our invested portion is held there is an advantage, a very great one, if you compare the investments before 1907 with the investments now held, and of course there is more gold in the gold standard reserve, and there is some money that is held practically at call.

1058 We are familiar with the criticisms to which you referred, I think, that Indian interests are very often subordinated to the interests of Lombard Street, but it is the fact, is it not, that to a very large extent those interests are the same?—Yes

1059 That is an argument on which stress has frequently been laid—that India cannot do anything to disturb the London money market without injuring itself?—I am always anxious not to insist on that too much. I feel that occasionally the interests of the London money market and the interests of India do not coincide. I would rather say that it is the duty of the India Office to see that Indian interests are considered as against London interests, when there is not an absolute coincidence—I prefer that—rather than to put up the comfortable proposition that there is a providential coincidence of interests on all occasions.

1060 There very often is a coincidence?—Yes

1061 Or rather the interests of India very frequently depend in a very marked degree on the state of the London money market?—Yes

1062 For instance, at present we are faced with the difficulty of raising money for our railways?—I am entirely in agreement with you, but I was anxious that one should not appear to overstate it if I may say so.

1063 It is a criticism, is it not, that all this gold is taken out to India and is locked up there in the Government coffers?—Yes

1064 The Fowler Committee in the same paragraph that I have referred to speak about securing not only the free inflow but the free outflow of gold from India?—Yes

1065 It is objected that while more gold goes into India than is really required or used, it does not come out?—I have seen that objection.

1066 I want to know what you think about that objection?—I think that there is very little substance in it. If we sold our council bills in a very different way from that in which we do sell them I have no doubt that a great deal of gold would go to India and would remain there for a time, and then would come back as indeed was the custom some years ago, that is to say, if you look at the history of our Treasury transactions between 1899 and about 1905 you will see there was a continual inflow and outflow of gold—all very wasteful and doing no good to anyone.

6 June 1913]

Mr LIONEL ABBEY, C B

[Continued]

1067 When you say continual do you mean continuous, would it not be seasonal?—It would be seasonal. When I said continual I meant that every year, or perhaps two or three times a year, there would be large shipments home from India of gold which had been travelling into India week by week at a certain period of the year. Now, what we do or what we try to do, and I think fairly successfully, is to see that India has, as a rule, as much gold as the people require. When there is an opportunity of selling bills as a substitute for the import of unnecessary gold, we try to sell such bills so that the money may be held by the Secretary of State in London for the purposes of India.

1068 In any case this gold which is now held by the Government in India would in all probability come out on the occurrence of the next scarcity?—Did you say that which is held by the Government?

1069 Yes?—I suppose so.

1070 I do not know that you can expect it to come out of India so long as the exchange is in favour of India?—I thought you meant come out of the reserves into general circulation.

1071 Either that or out of the country?—Of course that is one of the odd problems about gold in India. You noticed what I mentioned in paragraph 9 D (b) of Appendix III (page 90), that in that last great crisis the Government lost out of its reserves 4 millions of sovereigns, of which 94 per cent apparently remained in India and only 6 per cent was exported. It is quite possible that in the next crisis the Government gold may merely disappear into hoards or into internal circulation in India and may not be sent home to England, I do not know that anyone has any right to complain of that.

1072 The Government can send home gold themselves?—If the Government adopted that change of policy it would be a very striking departure from what they adopted in 1907.

1073 Do you think anyone could expect the gold to come out of India in the present conditions, as long as exchange is in favour of India?—No.

1074 (Lord Kilbucken) Is it not sometimes assumed or implied that there is a necessary and natural connection between the profit made by the Government of India on the coinage of rupees and the amount at which the gold standard reserve figures?—Yes. For the moment, of course, the gold standard reserve consists of the accumulated profit, but I understand your point to be that if after certain amounts have been reached for the gold standard reserve further rupees were coined, it would not be necessary to add the additional profit because we might have reached a point of safety.

1075 You do not think that the number of rupees coined ought to be the measure of the amount kept in the gold standard reserve, do you?—No, I certainly do not.

1076 I understand you to say that it is possible that the profit on the coinage of rupees may supply more than is wanted to form an adequate reserve?—Yes. I think that is the view very generally held by anyone who has examined the figures.

1077 At certain times have the profits on the coinage of silver been diverted to the paper currency reserve and to the supply of rolling stock?—Not to the paper currency reserve but to the Indian branch of the gold standard reserve.

1078 At any rate it has been diverted to other purposes?—Yes.

1079 Do you consider that at the time that was done there was nevertheless an adequate amount left in the gold standard reserve?—Yes, and fortunately it does not depend on my opinion—events proved it. I held that opinion when it was about to be done, and I was fortunate enough to find that when it had been done events confirmed my opinion.

1080 I believe I am right in saying that the report of such a Committee as the one presided over by Sir Henry Fowler has no authority or binding effect whatsoever upon this Office or upon the Government of India, except in so far as it may be accepted and acted on by the Secretary of State in Council?—Quite so.

1081 If that is so, I suppose it follows that the Secretary of State acting on behalf of the Government may accept the recommendations of a Committee and yet may be perfectly justified in changing his policy and taking a different course after further experience?—Yes, it is his duty.

1082 (Sir Shapurji Bomanji) Supposing you took out one million sterling from the paper currency reserve here for the support of exchange, the Government of India would put a crore and a half in the currency reserve in India against that, would it not?—Yes.

1083 So the proportion is never broken and therefore the statute is never broken?—Quite so.

1084 So the reply to Sir James Begbie's question about the Secretary of State breaking the statute is that the statute is never broken, for whatever the amount which you take out from the currency reserve for the support of exchange so many rupees are put into the Indian Treasury into the currency?—I am much obliged to you for bringing out the point, but I do not think Sir James Begbie raised any doubts about it.

1085 When the Secretary of State bought bills at 1s 3½d the Secretary of State made a profit on buying at a lower rate than he sold. It is something like selling a sovereign for francs, is it not, when you get 25 1½ francs?—Yes.

1086 There you are paying a much higher price than the gold contained in the 25 1½ francs, because the commission on exchange and the transport charges are included?—I see your point. When the operation of restoring the reserve was going on the Secretary of State was making an exchange profit as compared with the rate at which the bills on London had been sold.

1087 That is it, it is just like selling rupees on Calcutta at 1½th discount as the Government charges?—It is in fact an ordinary business operation.

1088 That is not breaking a law and it is not selling at a lower rate than the market rate?—No.

1089 (Mr Keynes) Yesterday you gave about 30 millions as the proper figure for the sterling reserves to reach?—The sterling reserves to be held in London.

1090 In your opinion has the time yet come for the Government to enter into a definite undertaking to maintain exchange within certain prescribed limits of fluctuation?—I should say in my opinion, and I am very anxious not to commit anyone beyond that, the time is approaching but it has not yet come. I think if I were an autocrat in these matters I should wait until the reserves have got nearer to the amount that is considered suitable. Supposing my figure of 30 millions were to find acceptance I do not say one need wait until the 30 millions have been reached, but it would be well to wait until one is nearer 30 millions than we are now.

1091 Anyhow, when the 30 millions have been reached, then you think there would be no objection to the Secretary of State entering into an undertaking to maintain exchange within certain limits?—As I say it is very important that I should speak only for myself, but speaking for myself I think that that should be done. I may say that I am, as it were, deeply committed in the matter, because the Colonial Secretary was good enough to ask me to join the West Africa Currency Committee, which in a way dealt with important questions and on which we recommended, and I think the Government is carrying out, a similar policy for West Africa, that is to say, the obligation to sell exchange on London is unlimited.

1092 You mentioned a few minutes ago that the Government have now got 18 millions in India in gold. But if they were to export 5 or 7 millions of that to London they would then already have the 30 millions in London?—That is so.

1093 So if they were to take that step they would then be in a position to enter into the undertaking immediately?—That is so. I had not thought of it for the moment because it struck me there would be some dismay in some circles in India if that export on a large scale were to take place. But I can see advantages in it, I mean, if my view were endorsed.

6 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

by the Secretary of State, it would certainly put the Indian currency system on a very firm foundation, it would greatly improve it

1094 Do you think it is arguable, therefore, that it might be a good policy to bring home from India 5 to 8 millions of gold for that use?—If it were intended to use it for this particular purpose, to take this very great forward step in our currency system, I certainly think that is arguable

1095 One further point connected with that, though of much less importance. If, when the next crisis comes, the Government has still that 18 millions in India in gold, would it be a wise policy for the Government to export part of their gold to London themselves?—The Government ought, if it has a very large sum at the beginning of the crisis, which is, perhaps, not very probable, because crises come in a very slow and insidious way—if it has a very large sum at the beginning of the next crisis, it ought either to export it itself or, I think, to take special steps to secure that a considerable portion of it at least is used for export. On the last occasion, the crisis of 1908, I am afraid that the Government of India temporarily reversed—they probably did not realise they were doing it—for the time, the policy that the Fowler Committee had recommended. The Fowler Committee said the chief use of a gold reserve—I think the Chairman quoted it yesterday—is to be exported at certain times, and the Government of India took the view that the chief use of a gold reserve was to keep up the internal circulation of gold, and that its use for export ought to be restricted in order to secure that the internal circulation was kept up. I think that that policy ought not to be repeated, but that the exact measures for reversing it and the exact extent to which each measure should be taken would want considering

1096 (Chairman) I understand that the primary and main object of the gold standard reserve is to maintain the exchange?—Yes, to prevent exchange from falling

1097 And that, in your opinion, the recommendations of the Fowler Committee, when relating to the gold standard reserve, have been in all substantial particulars carried forward?—Yes. Of course the recommendations were very sketchy and incomplete owing to the circumstances which then existed

1098 In particular to hold the main portion of the reserve in London in readily realisable securities does, in your opinion, fulfil the functions of the Fowler Committee, though they spoke of holding the reserve in gold?—Yes

1099 Your view is that those securities are as good as gold for your purpose?—Yes, and that the Fowler Committee, when they adopted that paragraph in their report, meant "gold" to be used in the wider sense \*

1100 (Sir Robert Chalmers) Not silver, in fact?—Quite so

1101 (Chairman) It comes to this, that these securities are readily convertible into gold at any moment?—Yes

1102 And that is why they are as good as actual metallic gold?—Yes, they are readily convertible—I am sorry always to put in this point—into sterling money. I made the remark for this reason someone has said—I do not know if it was a member of the Commission—that if you want to sell your Consols or your Treasury bills and take the proceeds in sovereigns and take them away it would be a very difficult operation to carry out at this moment. I quite agree with that remark. But of course if one had to use the gold standard reserve, one would not need to take the money in sovereigns

1103 When you get to the bottom of this transaction, does it not in fact rest upon somebody else keeping actual gold if you do not keep it yourself?—Certainly I do not wish to overstate the difference between taking the proceeds of one's securities in banker's money and in gold respectively, but also I wish to mention that there is a difference

1104 Do you agree that it is only safe for you to hold a large proportion of the gold standard reserve in securities instead of in gold itself on the assump-

tion that somebody else is holding large stocks of gold so that gold will be readily available if it is required?—Yes, or that sterling banker's money will be available

1105 What exactly do you mean by sterling banker's money?—I hope I do not insist too much on the difference, but it does seem to me important. When a large payment has to be made from India to this country or to Europe generally (because Sir James was pointing out that such payments may have to be made to Germany or France in liquidation of an adverse balance of trade), the Government of India would offer to sell exchange on London to those people who have to make the payments and would realise its securities and would pay, say to the National Bank of India or to the Hong Kong and Shanghai Bank, to one a cheque for 100,000l, to another a cheque for 300,000l, and that money would go ultimately to pay the Manchester cotton spinner who had exported goods to India, and to satisfy whose requirements the whole of these operations were being carried out. It is important to remember that the Manchester cotton spinner does not want so many hundred thousand golden sovereigns. What he wants is to see at his bank, perhaps at the Bank of England itself, a figure with a suitable number of noughts after it standing to his credit

1106 That is to say, as long as there is credit you hold that you do not need gold?—You say "credit", I hope I am not obstinate, but I think that "bankers' money" is the expression, because when one mentions credit it implies that there is some borrowing involved, that someone is lending someone something. Having a big amount to your credit in your bank does not involve credit

1107 (Mr Keynes) Are you not lending to your bank?—Yes, in that sense there is credit, but I was anxious to avoid certain of the connotations of the word "credit" which are not really relevant

1108 (Chairman) I want now to go to the question of the coinage of gold in India. You have handed in a short note upon the subject which we may include with your evidence, I think?—Yes (see Appendix VI, page 212)

1109 We have also had circulated to us a return moved for by Mr Touche in the House of Commons and presented to that House, dated the 31st January 1913 (495)?—Yes

1110 The views of the Government of India are, I think, set forth in their despatch No 59, dated 16th May 1912, which appears on page 57 of Mr Touche's Return?—Yes

1111 At the present time both gold and silver are, I take it, established as legal currency in India?—Yes, and without limit of amounts

1112 How would you describe the Indian system? We have touched upon that on two or three occasions, but I would like to hear your description of what the Indian system now is?—We had a few words about it earlier in the day, and I applied to it the well-known phrase of the humping standard, because I thought that that phrase properly applies to any currency system in which two metals are full legal tender, when I say full legal tender, I mean legal tender without limit of amount, without the two being convertible one into the other by statute. Whether I have applied the right designation to it or not, that is the position in India, sovereigns and rupees as you see, are full legal tender, and the public has a right definitely secured, though not a legally established right, to get rupees in exchange for sovereigns at a certain fixed rate, but there has been no undertaking to give sovereigns in exchange for rupees. The system is supported, as you know, by the action taken by the Government in the past and the expectation as to the Government's future action when support is needed

1113 Is the result of the working of the system, as you have described it, that a parity of exchange is preserved with gold-using countries, but that a similar parity of metals is not preserved in the internal economy of the country?—Between India and gold-using countries a parity is maintained, and there is ordinarily a very close parity between rupees and sovereigns actually in India. The rupee cannot go

\* C 9390, paragraph 60, page 18.

6 June 1913]

Mr LIONEL ABRARAME, C B

[Continued

appreciably above one-fifteenth of a sovereign, because anyone who presents sovereigns can get 15 rupees for each of them. I do not think that it is possible whilst international exchange with gold-standard countries is maintained that the rupee should go materially below one-fifteenth of a sovereign, but there is no special machinery by which the holder of the rupee can get sovereigns, except when it is convenient to the Government to let him have them, that is to say, in effect, he can get them when the Government has them, but the Government does not undertake to get a stock of them in order to supply his demands.

1114 Now I ask you to look at that despatch, to which I have alluded, of the Government of India, No 59, on page 57 of Mr Touche's Return (H C 495 of 1913). In paragraph 3 the Government of India say, "It is, we think, an indisputable fact that the establishment of a gold currency was regarded as the logical and natural sequence of the closing of the mints to silver, and as the necessary accompaniment of the establishment of a gold standard." Do you agree with that statement of fact, in the first place?—Yes. I think that the ideas prevailing in the minds of those who recommended the establishment of the present system include the use of gold as currency.

1115 Do you yourself think that it is a logical and natural sequence of the closing of the mints that there should be a gold currency established?—No. I think it is convenient, India being placed as it is and the tastes of the people of India for the use of gold being what they are, that gold should circulate as actual currency, but, as you know, there are some countries which have a well-established gold standard which do not use gold for currency purposes. I noticed that one important Canadian bank manager developed that very fully before a recent Canadian Committee. It was familiar to me, because the late Sir Edward Clouston put it very strongly before the Fowler Committee in 1898. Canada, as everyone knows, is a gold standard country, and it has a well-established gold standard but the use of gold as currency there is extremely infrequent, at least so I am assured, but I have never been there.

1116 I think you are referring to some evidence given by Sir Edmund Walker, the President of the Canadian Bank of Commerce before the Banking and Commerce Committee of the Canadian House of Commons?—Yes.

1117 I have that evidence before me.\* He was asked, "Do you think the public will not receive gold from the banks?" And he replied, "Oh, no, I do not say that, but it is not the kind of circulation that people want, and it is a very wasteful kind of circulation." (Q) It obtains in all great countries in the world?—(A) It does not obtain in all great countries in the world, only in Great Britain. (Q) And in Germany and in France?—(A) Not to any great extent. Do you agree with that?—I cannot speak with any precision about the practice in France and Germany. It is a matter of common knowledge that in Italy, which has now a well-established gold standard, the use of gold is extremely infrequent and the habitual currency is notes.

1118 I gather that one reason put forward by the Indian Government for desiring the coinage of gold is the belief that it will increase the amount of gold in India?—No, I think they guard themselves against that. I think they say that it would not bring more gold to India. I think perhaps what was in their mind was this—that they thought it would increase the amount of coined gold in India by inducing the owners of bullion and ornaments to bring them to the gold mint and have them coined into sovereigns.

1119 Do they not go a little further than that, and suggest that the amount of gold in India will be increased, because there will be more gold in circulation and in the hands of the people?—I am inclined to think that they do not put that point.

1120 Do you think that their inference is only that

\* Not printed (pp 43-6 of Report of Examination of Sir Edmund Walker, Kt., CVO, before the Banking and Commerce Committee of the Canadian House of Commons re Bill No 96 (Banks and Banking) April 16-17, No 40, 41-1, Ottawa Government Printing Bureau, 1913)

gold now hoarded will take the form of coin?—Yes. May I refer to the Secretary of State's despatch, No 139, dated 18th October 1912 (page 65 of H C 495 of 1913), which summarises the views of the Government of India? It says at the end of paragraph 1, "You hold the opinion, which seems clearly correct, that it would not be likely to increase the importation of gold into India." The passage on which the Secretary of State's summary is founded is evidently paragraph 14 of the letter from the Government of India.

1121 That is the paragraph in which they say "Neither, in proposing to open a gold mint, is it our intention to induce thereby an increased flow of gold to India."?—Yes, and you see that paragraph ends with the words, "but the aggregate inflow of gold will, so far as we can see, remain unaffected."

1122 On the other hand, they are of opinion that the opening of a gold mint and the extension of gold circulation would aid in supporting exchange?—That is so.

1123 Do you share that opinion?—I do not think that it would give any material help. I think I was mentioning yesterday that I hold the view which Lord Goschen and Mill and many distinguished economists have held, that the gold which is actually in circulation is of very little use in maintaining the exchange between the country in which it is circulating and other countries.

1124 What are the advantages which you would expect to accrue, if any, to India from the opening of a gold mint there?—I think that there are very few advantages indeed. Of course you are not asking me about the advantages of the circulation of the sovereign, because that is a different matter, seeing that it is well recognised that it can circulate whether there is a mint or whether there is not. I think the advantages of a gold mint are very slight indeed, seeing that sovereigns can be imported, and are freely imported, to a very great extent. One advantage to which I do not attach very much importance is that it would be possible to coin a gold coin other than the sovereign. There have been recommendations, or rather representations, to which some weight is to be attached, that such a coin would be popular and would serve purposes that a sovereign does not serve. Sir Vithaldas Thackersey in 1911 made a speech,\* which I daresay will be brought to your notice, in which he said that a smaller coin, and an Indian coin, might be more popular. That I think is one possible advantage, more especially since his view has been supported in various quarters. I remember Mr Webb, who is a well-known writer on this subject, wrote to the Secretary of State urging that there should be a specific Indian gold coin. I imagine that he was voicing the opinion of a certain number of persons in India with whom he came in contact. I think if I could remember them, there have been others who have represented that the 10 rupee piece would be fairly popular. I believe that the Government of India thought that there would be some demand for it, so that one advantage would be the introduction of a more convenient form of coin.

1125 Is that an advantage which is dependent on the establishment of an Indian mint?—Would it not be possible to have an arrangement with the mint here that they should coin whatever gold coin India required?—Yes, that would be possible. I think the advantage I was just mentioning merges very much into the one that I was about to mention. It has been said to me by friends of mine who have some experience of Indian feeling, that certain sections of Indian feeling, perhaps a very large section, would be much gratified by the opening of a mint for the coinage of gold in India. Personally, I find it a little difficult to understand what personal gratification it would bring to any Indian to know that his country had a gold mint as well as a rupee mint, but I must take the fact as it is given to me, that some gratification, it is alleged, would be caused by the opening of such a mint.

1126 So that in your opinion the advantage would be really rather the satisfaction of sentiment than any concrete gain?—Yes.

\* See H C 157 of 1911, page 306

6 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

1127 In paragraph 22 of that same despatch, No. 59, on page 61 of H C 495 of 1913, the Government of India, whilst disclaiming any idea that the coinage of gold in India will be a panacea for all Indian currency ills, add "Indeed we do not imagine that its influence will be greatly felt at first, but such a measure will mark a step along the path which has been authoritatively accepted as the line on which our currency policy must develop, and in time it will be of great assistance in maintaining the stability of our currency system." Can you develop that idea for me a little?—I think what the Government of India would say is that when there were many more sovereigns than at present and fewer rupees making up the total circulation in India, the danger of a fall in exchange would be less than it now is. I cannot say that the argument appears to me to be extremely convincing, because I think it overlooks the fact that the reason why the Indian exchange tends to fall under present conditions is mainly that India is a debtor country, and that from time to time, if trade goes against her, she finds a difficulty in paying her debts abroad. If she had a gold currency she might have to export her currency if the holders of it were willing to let it be exported, but if she did that there would still be the fall in exchange that there is at present. The idea that you prevent a fall in exchange by exporting your currency seems to me to have very little foundation.

1128 The great advantage of the proposal in the mind of the Indian Government is that it would increase the number of gold coins in circulation?—Yes

1129 And also increase the proportion of gold in India as compared with silver?—Yes, but the reasons for holding that opinion are not very clear or strong

1130 Apparently it is not anticipated that it will cause gold to flow into India?—No

1131 But that it will bring gold out of hoards, or out of the bullion condition into the coined condition?—Yes

1132 You have spoken on more than one occasion about the issues of gold to the public in India. In paragraph 37 (b) of Appendix III (page 90), speaking of the course of events of 1907-8, you say "It will be seen," from the tables that you print, "that the sovereigns held in Government treasuries and reserves in India decreased between September 1907 and December 1908 by 4,394,000*l.* of which 215,000*l.* represented light coin sent by the Government of India to the Secretary of State, and the remainder (4,179,000*l.*) issues to the public in India." The export on private account which you are dealing with in that paper during that period was only about 250,000*l.* Have you any theory as to what became of the rest of those sovereigns?—I imagine that they went the way of many other sovereigns, and of the gold in other forms than sovereigns that is continually being imported into India. No doubt a certain number of them may have remained in circulation, but I think that hoarding and melting were probably the destination of the majority

1133 If they were hoarded as sovereigns, it is of course possible that the expectation of the Government of India might be realised, that in times of need they would be tempted out again?—I think that the expectation of the Government of India was that they would be tempted out again, and then they would in some way serve to support the exchange value of the rupee. It is the second part of the expectation which seems to me to be a little doubtful.

1134 But if they had been melted down there would have been no advantage in having them coined, and they might just as well have gone in straight as bullion?—That is so.

1135 Is it possible to frame any reasonable expectation of what would happen if you minted more sovereigns or more gold coins in India? Is it possible to frame any sort of hypothesis as to the proportion which would be melted down?—No. I should say that if gold in India was brought to be coined into sovereigns, the presumption is that it would remain in the form of sovereigns. If a man wanted gold he would not go through the process first of all of sending the bullion to be coined, and then of melting

the coin so as to put it back into bullion. I should say that the danger is, if I may hazard a conjecture, that since the owners of bullion in India who hold it in that form do so because they prefer it in that form, they would continue to do so even if there were a mint for the coinage of gold in Bombay, and that the mint would probably do very little business

1136 Of course the same man would not at approximately the same time be bringing bullion to the mint to be coined and then melting down coin into bullion?—No

1137 But the coin that was minted from the bullion brought to the mint by one man might be melted down by another man into whose hands it shortly passed?—Yes, that is possible, and then there would be waste

1138 And there would not be that increase of coins in circulation which the Indian Government hope to see?—No, clearly not

1139 In itself do you think it is an advantage to increase the number of gold coins in circulation, provided that there are already sufficient to meet the natural desires of the public?—The difficulty of answering that question is that if there are as many as the public desire, then you cannot increase the number. If there is a public demand for sovereigns which is not fully satisfied, I think then it is an excellent thing to do what can be done to satisfy the demand

1140 I understand your governing principle is that it is the business of the Government to provide what the public desire?—Yes

1141 If they want gold coin let them have gold coin, and if they want silver let them have silver?—Yes

1142 Have you any reason to doubt that that is what happens now?—No. It is to be noticed that the public demand for sovereigns does increase very rapidly year by year, and a time might come when the demand is larger than could be satisfied from the stock at the disposal of the Government. Then it is just possible—I merely put this because I wish to be fair to every side in this controversy—that the existence of a gold mint in Bombay might enable the holder of bullion to get sovereigns by the coming of his bullion, which otherwise he might find it difficult to get.

1143 In this despatch (page 57 in H C 495 of 1913) the Government of India propose to make their gold coin a sovereign. I think I am right in saying that included in the papers are a letter from the Treasury to the India Office explaining the difficulties of that proposal, and a letter from the Secretary of State in which he seems to think it likely that the Government of India will not approve of either alternative presented by the Treasury, and in which he observes, "If both are dismissed it will remain to consider whether it is desirable to produce at one of the Indian mints a separate Indian gold coin of the denomination of, say, Rs 10." Is there any answer to that despatch which we ought to have?—The important communication from the Government of India is a telegram, dated 20th January 1913, in which they say, "As you anticipated," referring to the despatch of the Secretary of State, which you have just quoted, "we do not favour either of the alternatives offered by the Treasury. We therefore, except your offer to sanction the issue of a separate Indian gold coin of the denomination of Rs 10. We will submit our proposals as to details of the coinage in due course." Then they discuss the dates on which it would be desirable to make an announcement, and that perhaps I need not read. I ought to mention, so as to avoid misunderstanding, that that telegram was sent before it had been decided to appoint this Royal Commission. On the 24th January, 1913, the Secretary of State suggested that, before any final decision was taken, the usual procedure for eliciting public opinion in India should be followed. Again he returned to that point in a subsequent telegram, and the discussion to which those suggestions gave rise ended with a statement from the Government of India as follows, dated 10th April, 1913.—"In your telegram of 14th February we were informed that the

6 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

" Royal Commission would inquire *inter alia* into " Indian currency administration. The possibility of " a decision being arrived at on the question of gold " coinage independently of a Commission was there " fore never anticipated by us. It is assumed generally " by the public in India that the question will be left " for the Commission to decide, and we are of opinion, " after full consideration, that this is the only possible " course now. Ample opportunities for ascertaining " the opinion of representatives of the commercial " public in India will no doubt be given to the " Commission." That telegram came as the reply to the " Secretary of State's inquiry as to what detailed " steps should be taken to elicit public opinion in " India, and you will see that in effect the Government " of India said, We will do nothing at present, we will " wait until the Royal Commission has considered the " matter.

1144 The present arrangements have secured a " stable exchange between India and other countries?— " Yes, between India and gold using countries.

1145 In that respect we have all the advantages of " a gold standard?—Yes.

1146 Those advantages have been secured without " the existence of an extensive gold currency in India?— " Yes.

1147 Some people would say, and apparently Sir " Edmund Walker, to whose evidence you alluded, would " say that the most admirable system you could have was " one in which your gold was in reserve and protected " your exchange, and was not in circulation?—Yes.

1148 And would consider that so far from its being " desirable to encourage the use of gold in circulation, it " was a very uneconomic and wasteful thing to do?— " Yes.

1149 Is that, on the whole, your view, subject " always to your governing principle, that after all " it is not a matter for Government to decide, and that " the public must have what they want?—Really, the " reiteration of that principle answers the question. I " see no disadvantage to India in the use of gold, and I " see no advantage to India except its convenience. I " understand that with the people who do not readily take " to the use of notes, as is the case with the inhabitants " of some parts of India, but not the majority of India " fortunately, the gold coin is a great convenience. Of " course I agree with the view held, I think, by most " persons who consider currency questions, that the ideal " form of currency is a note currency, but one cannot " expect India to be much ahead of England in such a " matter, and in England, as you know, notes are a very " unimportant part of the currency.

1150 (Sir Robert Chalmers) The chief part of the " currency being the cheque?—That is so.

1151 (Chairman) Of course, a cheque is very " similar to a note in some respects?—Yes.

1152 (Lord Faber) In an answer given by you to " the Chairman, you expressed the opinion, I think, that " the export of gold coin or bullion would not stop a fall " in exchange, is that your considered opinion?—It " would not prevent a fall in exchange, because it would " be brought about by a fall in exchange. So long as a " country was losing its gold by export, its exchange " would be *ex hypothesi* at or below the gold exporting " point.

1153 Would not the fact of exporting bullion, and, " therefore, not using exchange at all, tend to a jumping " up of the exchange again?—It would tend to restore " the exchange, but it would not tend, I think, to prevent " the exchange from falling to the gold exporting point. " The reason that I mentioned it is this. Everyone " knows that in India we have methods—for instance, " the sale of these bills of which you have heard so much "—for preventing exchange from falling below a certain " point, that is to say, the point at which we sell the " bills and, from what one reads in newspapers and " elsewhere, one gathers that the opinion is held that if " gold were very largely circulating in India, there would " be a more effective method of achieving the same " object, and that the exchange would necessarily be " stopped in its fall at a higher point. I wish to " mention—and that is why I made my remark—that I " do not think that those opinions are well founded.

1154 (Sir Robert Chalmers) Respecting the hypo- " thesis that there would be an Indian mint coming gold, " and gold of an Indian denomination, did you contem- " plate seigniorage, what would be your view on that " subject?—I have no very strong view about it at all. " When the sovereign was proposed, you know, it was " proposed to have no coinage charge. If you have time " to read the whole correspondence you will see that " there was a discussion with the law officers as to " whether it was possible to have in an Indian branch " mint an arrangement similar to that at the Royal " Mint, and differing from that which prevails in Aus- " tralia. After much consideration it was decided that " the Royal Mint arrangement, under which there is no " charge, was possible even in a branch mint, though " there is at present no branch mint which does not " make a charge. When the question came of a " 10 rupee gold piece instead of a sovereign, the point " regarding the charge was a new one, and Lord Crewe, " in his despatch, asked the Government of India to let " him have their views as to whether there should be a " seigniorage or not.

1155 Have you got their views?—No, we have " not got their views. I feel with regard to this, as " with regard to many other of the questions which " arise about coinage, that points which are of very " small importance are considered in some quarters to " be very important. I do not see that there is very " much importance in the question whether there should " or should not be a small seigniorage on the coinage " of a 10 rupee gold piece.

1156 It would have this effect, surely, in the " domain of ordinary finance that a seigniorage would " represent a charge covering the cost of turning bullion " into the form of coin, and therefore any operations in " the way of setting up a gold mint in India for coining " gold coins would tend to be self-supporting instead " of being an entire loss to the taxpayer?—From that " point of view the importance is clear, but I think that " the critics to whom I refer had souls above considera- " tions of loss to the taxpayer.

1157 It is generally understood, is it not, that the " cost of minting, and so forth, may be taken at about " 1½d an oz?—I think so. That corresponds to the " Australian charge fairly well.

1158 If you have got a seigniorage charge, by " export of the coins so minted you lose what you have " paid for?—Yes.

1159 And so far there would be a tendency to keep " the gold coins on which seigniorage had been charged " in the country?—Yes.

1160 Seigniorage is generally charged in all " countries, is it not?—This country, I believe, is " generous owing to the influence of the Treasury, " but other countries, I think, usually charge a " seigniorage.

1161 The general body of precedent would be in " favour of a seigniorage charge?—Yes.

1162 And that was imposed by this country under " the Coinage Act of 1870 for the branch mints in " Australia?—It was not imposed—it was allowed, and " then the permissive power was exercised.

1163 Take again the hypothesis of the Indian " gold coin, it would be of the greatest importance, " would it not, that the fineness of those Indian coins " should be the same as the sovereign, 111ths, so that " they could exchange by weight?—I should think so. " Of course there are differences of fineness between " Indian and English token coins, but then the same " considerations do not apply.

1164 If you have no sovereign coined in India the " ordinary method of settling international balances " would be by bullion, would it not?—No. You ask, if " you have no sovereign coined in India?

1165 Is not bullion the normal international " medium of exchange, is not coin only a substitute for " that?—It is a very usual substitute, and a very con- " venient one, but the normal method, I should say, as " between India and the rest of the world, is by the use " of this machinery that the Government has set up, in " fact by the use of what, in the widest terms, one " would call credit instruments.

6 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued]

1166 Do you think there is any popular demand in India for a special gold coin of its own, do you think there is any national sentiment in that direction?—Even those who are on the spot in India are certainly liable to make mistakes on the subject, as I should like to illustrate in a moment, so that I, not being there, cannot give an opinion. There is a very curious illustration of the difficulty of gauging Indian sentiment in this matter. In this White Paper which was published at Mr Touche's request (H C 495 of 1913), the Government of India were very emphatic. The Secretary of State asked whether Indian opinion ought not to be ascertained. In a telegram of 18th May 1912, on page 63, the Government of India said "We have not obtained opinions of the bodies you have mentioned. Matter has been twice subject of debate in Imperial Legislative Council, and during past year has been discussed vigorously in Press, and by commercial interests in India and England, therefore do not think it is necessary to collect further opinions." Then in the same spirit they say, on page 62, paragraph 25, "Our proposal for a gold coinage has behind it the overwhelming support of Indian public opinion, the leaders of which are ready and anxious to extend the everyday use of the common coin of the Empire, and are unable to understand why India should be denied the same minting facilities as have been given to Australia and Canada." In view of all that, the Secretary of State was surprised to some extent when about two days after the publication of this book he received a telegram from the Calcutta Chamber of Commerce mentioning their pain at not having been consulted, and I think they traversed there the statement that there was behind this proposal the overwhelming support of Indian opinion, and in a meeting of the Calcutta Chamber of Commerce some views controverting this statement of the Government of India were expressed with some freedom.

1167 If there was not a national feeling, if I may so call it, in favour of a distinctive coin of Indian manufacture, would you say that on merely economic grounds there was any justification for the spending of any money on the coming of gold in India?—No. I would certainly say that in the absence of this sentiment that there is no justification for spending what would probably be about 16,000l a year at least.

1168 (Sir Ernest Cable) When the Fowler Committee recommended the institution of a mint in India, do you happen to know whether there were many sovereigns going out to India at that time?—There were very few. I think you will find somewhere in the Committee's report that they mention that when they wrote three million sovereigns I think, had gone to India. I am not sure if I have the exact figure, but at any rate it was a trivial amount compared with what has since gone.

1169 So it might be a legitimate inference from that that if they had anticipated the large sums in sovereigns that have gone out recently they might have reconsidered that recommendation?—You point has been anticipated by the Treasury. You will notice in this correspondence that was published, the Treasury said that the object which the Fowler Committee had before them seemed to have been achieved by other means which they did not anticipate.

1170 It has just come out in evidence that Canada is a case where the mint is not really wanted?—I believe opinions differ, but there are authorities who hold that it is not wanted, and that it might well be abolished.

1171 The case of Australia seems to be different for its three mints have been largely used, have they not?—I believe only a comparatively small proportion of the gold which is produced in Australia is coined, but I am not quite sure. You will have seen in some of the statements that I gave that two of the mints in Australia coin about two million sovereigns a year, and the other one about four millions.

1172 Is that entirely from local production?—Australia coins about nine million sovereigns a year, and I rather fancy that its gold production is more than that.

1173 But it is got entirely from local production?—Yes.

1174 It follows from that, does it not, that if the Mysore gold mines did not want a mint in India, that would be a powerful argument against it. Do you happen to know their views about a mint in India?—I think I read out yesterday what was stated in 1902 as to their feeling and their practice (paragraph 3 (v) of Appendix VI, page 213), and I have no reason to think that they have in any way altered. I should think generally it would be more convenient to the Mysore mine owners, when they have the unrefined gold ready, to send it to England than to dispose of it there.

1175 They would be not likely to use the mint perhaps even if it was put up?—They might or might not. It cannot make very much difference to them because they have to send the greater part of their production home, naturally, because it belongs to their shareholders. So that if they had their gold coined they would buy exchange on London, I presume, out of what was left after paying their wages bill, therefore I do not think it would matter much to them.

1176 (Sir Robert Chalmers) If there was a seigniorage it would deter them?—Yes, if there was a seigniorage on their 10-rupee piece, I suppose it would.

1177 (Mr Keynes) Are half sovereigns legal tender in India?—I think they are. I daresay you have the Coinage Act. I think that the words of it are "sovereigns and half sovereigns coined at any mint or branch mint."

1178 Is there any evidence of half sovereigns being popular?—I do not think so. I remember to have seen—I forget whether it was in an official paper or in an unofficial one—some statement which rather impressed me that they were not popular, but I am sorry to say that I cannot at the moment recollect who was the authority. I thought at the time it was a good authority, that is all I can say.

1179 The fact, therefore, that an Indian gold coin of 10 rupees would be rather smaller in face value than a sovereign, is perhaps not much reason for thinking it would be popular, or do you think it is?—No, I do not think it is much of a reason.

1180 If there was a demand for a smaller gold coin half sovereigns might have been used?—Yes.

1181 With regard to the terms of mintage, there is no seigniorage at the Royal Mint, but sovereigns are not given on demand in return for bullion, are they?—No, there is a seigniorage in time, but not in money.

1182 And the mint rather discriminates against private persons in the matter of quick delivery?—That I did not know.

1183 It is the case, anyhow, that the ordinary seller of bullion finds it worth while to sell gold to the Bank of England at 1½d an ounce less than the par value?—That is a well known difference.

1184 So that there is in effect a discount of 1½d an ounce in England normally?—Yes.

1185 Which corresponds to the seigniorage which is charged in Australia?—No.

1186 In amount?—It may be in amount.

1187 I mean simply that the price of sovereigns in terms of bullion is less than the par value by 1½d an ounce, both in Australia and in England?—I think you are assuming that there is immediate coinage in Australia. If it be the fact, and I cannot say, that besides actually imposing a charge of so much an ounce in Australia they keep the owner of bullion waiting for 60 days, or whatever it may be, then the ratio between bullion and sovereigns would be different in Australia from what it is here.

1188 It might be more than that?—Yes.

1189 If the mints in India were to charge no seigniorage, and were to grant quick delivery, they would be giving more favourable terms than can usually be obtained in England?—Yes.

1190 So that if that were the case it might be worth while for those who wished to remit gold to India to send out bullion and get it coined there, because they could get it coined more cheaply than in England?—Yes.

6 June 1913]

Mr LIONEL ABRAHAMS, C.B.

[Continued

1191 They might even do that if the sovereigns were ultimately intended for some other destination in the East than India?—They might. Of course the saving on account of the effective payment made in England which they would avoid by sending their bullion to India would be so small that I should scarcely think they would take so much trouble, if the destination of their sovereigns was some place outside India.

1192 If the Indian authorities were to offer rather better terms than are usually obtainable in England, that would make a great difference to the likelihood of gold being brought to them?—Quite so.

1193 Do you think it is desirable that they should get better terms than are given in England?—It had not struck me that the matter was one of great importance, and also I should say that they would not get materially better terms.

1194 I was not asking about the fact, I was asking whether you thought it would be a good thing that they should. You say it is not of any significance?—I do not think it is of any significance either in itself or on account of the difference in the terms that it is likely would take place.

1195 If there was a difference of 1*l* an ounce, do you not think that would make an appreciable difference to the amount of gold bullion sent to India for coinage?—I do not think so. I may be wrong, but I do not see that there is any great importance in it, either practically or theoretically.

1196 I understand that you take the view that the Government of India ought to take a purely passive part in the supply of currency, supplying gold and silver according as the public want it?—Approximately that is my view, I might use a slightly different adjective.

1197 Is it possible for the Government to take a purely passive view? Is it not necessarily within their discretion and power as to whether it is easy to get gold in remote parts of the country? I am thinking of such circumstances as that of the Government giving facilities outside the law for the encashment of notes when it is not inconvenient to the Government. In these circumstances it is within the power of the Government to give facilities for the encashment of notes into gold or only into rupees?—Yes.

1198 So it can make gold more or less easily obtainable?—In a sense you are putting to me the questions that I might have put to you. You began by using the word "passive," which I did not think exactly the right word, but I did not like to contest it. Now you are proving, I think, quite conclusively that it is not exactly the right word, but that the Government necessarily takes some slight share in turning the disposition of the people into one channel or another.

1199 Yes?—There I agree with you, and that was at the root of my demurring to your particular adjective—I think that we are at one.

1200 Similarly they can make notes more or less convenient, they can be at pains to make the notes popular or not?—Quite so.

1201 Within these limits, do you think that the Government would be wise to encourage the greater use of gold?—I think they ought to proceed with as much passiveness as is compatible with intelligence. Of course I, being in a very humble way an academic student of economics, like a note circulation better than a gold circulation, which is probably the case with you, but if people in India rather prefer gold, or if people in the Punjab, as you know is the case, rather prefer gold to notes, I think the Government ought not to be at any great pains to put difficulties in the way of their getting gold. I think that the Government might be at some pains to make it easy for them to get notes, or even to explain to them the advantage of notes, but it is rather by way of pushing one form of currency than by putting obstacles in the way of getting another form of currency that the Government should exercise such discretion as it does exercise.

1202 I believe it is the practice of the Government, is it not, to sell remittances at a small premium for remote parts of the country?—I do not

know if it is to remote parts, I think it is rather to big trade centres up country.

1203 Do you think it would be a good thing if the Government made such remittances freely available in terms of gold?—I like the idea of the Government saying, Money is money, if you have remittance due to you we will meet you convenience as far as possible, but we will not make separate bargains regarding gold money or note money or rupee money. That, I think, is the right position for the Government which has a currency such as India has.

1204 I do not clearly follow your position. You say that the Government would be right to popularise a note issue by making notes very convenient and by explaining their advantages, but you think it would not be right for the Government to take similar steps with regard to gold?—I say it would not be right for the Government to place obstacles in the way of the circulation of gold.

1205 That is another point. Do you think it would be unwise of them to attempt actively to popularise gold in the way in which it would be right for them actively to popularise notes?—I should like to minimise that distinction. I think really that I agree with you.

1206 I have expressed no opinion?—I think I agree with the opinion that I seem to read in your mind, but my agreement, I think, largely comes from the fact that in respect of gold I fancy there is a considerable demand for it from some parts of India, and that demand is so strong that it needs no encouragement, and that in other parts of India there is an indisposition to take it and it would be waste of trouble to try to produce a disposition to take it. I think, in fact, if I may summarise it, that the note habit is a much more teachable habit than the gold habit. It is much more, I think, a matter that can be altered by education.

1207 (*Chairman*) If you were the Indian Government you would, I understand, desire to meet the wishes of the people as far as it is conveniently possible?—Yes.

1208 Would you prefer that they should ask you for notes, or that they should ask you for gold?—That they should ask me for notes, certainly.

1209 (*Mr Keynes*) I pass on now to a different point. If 20 million sovereigns in addition to those which are used at present were to get into circulation in India in place of notes or rupees, that would be at the expense either of the gold standard reserve or of the paper currency reserve?—Yes. That is a very brief statement, and I think that it might conceivably be misunderstood, but I think I agree with you as you put it.

1210 Do you think that the effect of this change, that is to say, of 20 million more sovereigns being put in circulation and a somewhat smaller gold standard reserve or paper currency reserve would be to make the Indian currency system more or less stable than it now is?—My own view—I know it is a very controverted question—is that an addition to the gold currency at the expense of the gold standard reserve would make the exchange less stable.

1211 So that would be a strong reason against wishing the people of India to take gold rather than notes or rupees?—It would be a strong reason if the difference in stability were considerable. I do not think that now or in the immediate future, or, indeed, in the future at all, there is much instability in the Indian currency system, and especially in its foreign exchanges, so that I do not regard the matter which you are discussing as one of very great importance. I should so regard it if you had been discussing it when the gold standard reserve was 10 millions or 15 millions less than it now is.

1212 I put it in this way, therefore, that when your reserves are adequate to meet all emergencies you can then spend all your resources on having a gold currency if you like without injuring stability?—We have come back to that. I think, practically, I said that almost in those words at a much earlier period of my examination. I forget in answer to whom, but I think I did say it.

6 June 1913]

Mr LIONEL ABBRAHAMS, C.B.

[Continued]

1213 I put the point for this reason, the main argument usually urged against a gold currency as distinct from a gold standard is that it is uneconomical, and you would accept that, I imagine, and so would most of the advocates of a gold currency?—Yes

1214 But the advocates of a gold currency go on to say It may be more expensive, but it gives you something which is more stable, and is worth the extra expense?—Yes

1215 I understand that your opinion is, that, so far from making the position more stable, it will make it a little less stable, but if you had already got good reserves that would not be a matter of very much moment?—You have summarised my view with complete accuracy

1216 Therefore it would be an uneconomic thing to do, and would not assist stability?—Yes, but it would not matter very much

1217 It would not matter very much if stability was insured in other ways?—Yes, that is so

1218 (Sir Shapurji Broacha) There is a great sentiment for establishing a mint in India?—So it is alleged.

1219 And the Government are willing to give in to that sentiment so far as the Government of India are concerned, according to the correspondence?—Pardon me, if you are setting up a difference of opinion between the Secretary of State and the Government of India, that I do not think exists

1220 They are both the same, and I did not mean to imply that there was any difference at all on that point. Supposing they are willing to meet that sentiment and to have a mint established, what gold will go into that mint? Here 8/ 17s 10½d is the value of 1 oz of gold, is it not?—Yes

1221 8/ 17s 10½d is equal to 934½ pence or annas?—Yes

1222 If you take an ounce of gold in a solid bar to India, that ounce of gold will cost you 1 per cent for freight?—I take that from you; I do not know

1223 That would be about 9½d per ounce?—Yes

1224 Suppose that gold is sent to the mint, it will cost an additional 10 days' interest, just as it costs here?—Yes

1225 That will be equal to about 11d or 12d on the ounce of gold?—Yes

1226 That will only give you 923d when the sovereign gives the owner 934½d. Therefore, taking it from an economic point of view, is it not a waste of money to establish a mint? Will you take gold bars from this country, send them to the mint and only receive 923d per ounce, when if you take the ounce of gold into India in sovereigns you would get 934½d? No merchant or banker would do that, would he?—I should like to follow your calculations

1227 Taking the ounce in sovereigns as producing 8/ 17s 10½d that ounce will cost you 1 per cent to take it to India?—That is where I am not sure that I follow you

1228 (Chairman) Assuming Sir Shapurji's figures to be correct, do you agree with his conclusion?—No. My difficulty is that Sir Shapurji seems to allow for the cost of freight on the gold but not on the sovereigns

1229 (Sir Shapurji Broacha) You may take it from me that it will cost you 1 per cent to take an ounce of gold out there, and that will be equal to 9½d on 934½d, to which you will have to add 10 days' interest while it is at the mint. As a commercial transaction who will take that ounce of gold in bars to be coined in India and receive 923½d instead of 934½d, which he would get if he took gold which was already coined into sovereigns?—I see a difficulty there, but I do not wish to dwell much upon it.

1230 Nobody would do it as a matter of sentiment and suffer that loss, would he?—If you are going to charge your bullion with this 1 per cent for freight and insurance you ought to charge your sovereign equally

1231 The price of the sovereign in India is 15 rupees?—But ought you not to assume, to make it all square, that the bullion is in India too? Why assume that the bullion is imported into India for this purpose and bears the charge of 1 per cent?

1232 If I buy bullion and send that bullion to the mint to be coined, that bullion will cost me 15 rupees 2½ annas before I receive it in the shape of the sovereign, who would pay 15 rupees 2½ annas for a sovereign when he can buy a sovereign for 15 rupees?—Now, if I may say so, I think you have put it on the right basis, because you have eliminated the differences

1233 If it would cost 15 rupees 2½ annas to turn bullion into a sovereign, while I can buy a sovereign outside at 15 rupees, commercially no one in India would send any bullion to the mint, therefore from which country will bullion come to India for coinage?—I agree with what is evidently in your mind. I do not think bullion would go to India for coinage, and I am bound to say that the Government of India has held that view

1234 Last year 81 millions of gold went to India, 19 millions in sovereigns and 12 millions in gold bars. Those gold bars would not have gone to be coined because those gold bars would have cost about 13d, gold bars being dearer even than bullion; therefore none of that 12 millions would have gone for coinage?—I agree. The view that bullion would be converted into sovereigns to any large extent has never commended itself to me

1235 So whatever bullion comes to be coined will be either from Indian gold mines, or because some gold is brought out from the hoards?—Yes

1236 I am told that the mines in India have sold ahead to London the gold bullion, as you can see from the Governor General's letter in 1902, on page 56 of H C 495 of 1913, when the projected mint was given up\* I am not against a gold mint in India, but I say the machinery will have to be scrapped in five years. Do you know that sovereigns would be even cheaper coming from Egypt and from Australia in comparison with gold bullion coming from London?—Yes, that of course is a familiar fact to us

1237 Of course a gold mint may be erected in India for the satisfaction of sentiment, but I do not see where the gold is coming from?—That is my difficulty—how much business will the gold mint do

1238 It may be said that India prefers gold in 10-rupee pieces, but is there any data for that?—No

1239 But there are plenty of data for a sovereign?—Yes

1240 The sovereign has been coming into India merely since the mints were closed but since the British Government has been established, and they have been bought as cheaper gold?—Yes

1241 So sovereigns are more familiar than 10 rupee pieces. According to what you have placed before us out of the 19 million sovereigns which went into India last year 15 millions went into circulation, that is, into the people's pockets?—Yes

1242 If four fifths of the sovereigns that you take there are taken by the people how can you compare it in popularity with this other coin; there are no data to go upon, are there?—No, there is absolutely nothing to go upon, as you say, except prediction

1243 Then comes the difficulty which the Chairman has pointed out to you about sending out gold for the trade balance. If you send out 10-rupee pieces in gold they will be taken at the cost of bullion, and not at what they would cost to coin, so there will be another loss there?—Yes

1244 If I take five sovereigns to the Continent I have to suffer the loss in exchange?—Yes

1245. Then in addition to that the 10 rupee piece will be a different coin to any in the whole Empire. So if Mr Webb sends us a message that the Karachi chamber requires the 15 rupee sovereign and not the 10 rupees gold coin, which is the latest message, is it in any way desirable to have the 10-rupee gold coin? Nobody knows about the sentiment in favour of it, because it has never been used, only two or three people on the Legislative Council have said that it would be popular. How could they make it popular

\* The relevant part of this letter is quoted in paragraph 3 (v) of Appendix VI, to this Report, page 213.

6 June 1913]

Mr LIONEL ABRAHAMS, C B

[Continued

when the sovereign has been popular to my knowledge—and I am a holder of 49 years' standing—and is preferred to any other coin?—The 10 rupee piece will be much cheaper to coin

1246 How do you make that out?—That is an important point. If we had a 10 rupee piece we should just tell certain operatives in the Bombay Mint to go and coin it when they were not coming anything else, whereas if we had a branch mint for the coinage of sovereigns, as you will have seen from the Parliamentary Paper (H C 495 of 1913), we should have to have a separate mint with a separate deputy mint master and an assayer and a deputy assayer and a chemist, and quite a large number of officials who would be doing very likely no work all the year round but would be drawing their salaries all the year round

1247 I think the gold coins will cost you something?—Still, it is one thing to let the present mint master and deputy mint master and so on be responsible for a little additional work in the mint, it is quite another thing to let them go on doing their present work and to appoint this very large, expensive, and highly skilled additional staff to look after the gold mint in which it is possible that they would be doing practically nothing. In any case there would be a double set of salaries and working expenses to be paid

1248 I think it is said that it would save 10,000l, but I think ultimately it will cost 15,000l according to the Mint reports of Australia. It will cost something to make the 10 rupee piece. India may save about 8,000l or 10,000l a year, but I do not think it will be very much, to compensate for the extra trouble in exchange?—There would be a considerable saving in the coinage of the 10 rupee piece

1249 I think, taking a country like India, you should put in figures what would be the saving. I say a saving of 10,000l is nothing. You said that when the crisis came there were 4½ millions of gold in India of which a quarter million went for trade purposes and a quarter million for light sovereigns, and the remaining four millions disappeared, so that only a lakh, or about 7,000l, was left in the currency for about two years, was it not?—I am not quite sure that I follow you last remark

1250 For two or three years, when the currency balances came out, there were 1½ millions in the London currency reserve and one lakh of gold in India?—If you mean gold equivalent to a lakh of rupees, I think you are wrong there. I am pretty sure that the holding of gold did not go down to so small a figure as you have mentioned, though I know it did go down very low

1251 (Mr Gillan) It was something quite unappreciable, was it not?—Yes, but it was not so small as Sir Shapurji makes out. On 31st March 1908 there were four crores in gold, on 31st March 1909 there were only 3½ lakhs, and in 1910 there were 9 crores 3 lakhs

1252 (Sir Shapurji Broacha) That 4½ millions did not help the trade balance in India?—Not appreciably and directly

1253 Except the quarter million which you allowed the banks to take from you for a time, and there was nothing left?—You must not overstate it

1254 What you say is that a large demand for gold in India is better for the support of the balance of trade or for exchange. My experience of India is that so soon as the exchange goes down they sweep away all the gold that you can give them from the Currency Department?—And keep it in hoards, do you mean?

1255 They keep it, Gresham's Law would come into operation at once?—Yes

1256 I think permission has been given to erect a mint in South Africa, which is the home of gold?—I do not think there is a mint in South Africa, but Sir Robert Chalmers would probably know

(Sir Robert Chalmers) There is no mint there yet, there used to be a mint in Pretoria in other days

1257 (Sir Shapurji Broacha) You know that South Africa is the home of gold at present?—That

18 80

1258 If it were advantageous to them to mint sovereigns and sell them they would have had their mint at once, and it is certain that this Government would not deny them?—That is so

1259 Is it not rather that India is asking too much, and asking for something that will bring her no gain? I know the sentiment is very great, and I myself have no objection to a mint, but I say it is really uneconomic?—As far as I can judge there is in India a feeling that unless India has a mint she will have been hampered

(Sir Shapurji Broacha) I think that feeling is confined to a few men who are articulate

1260 (Sir James Begg) What measures have been taken to carry out the recommendation of the Committee of 1898 that the sovereign should be made a current coin in India?—You are familiar, of course, with the legislative enactment under which the sovereign is legal tender, and with the measures that the Government take to give sovereigns freely at currency offices and elsewhere in exchange for rupees. I should say that that exhausts everything that is of importance. I have no doubt that often when the Government has a payment to make it does make it in sovereigns in the hope that the sovereigns will remain in circulation

1261 But so far as you know, there have been no special efforts made to encourage the use of gold?—It is really difficult to say what efforts should be made. I think I mentioned in reply to the Chairman, that for a short time in 1900 attempts were made to give people sovereigns when they would have preferred rupees. That statement had been made, and I believe it is not very far wrong. It was found to be a mistake and ineffective, because, naturally, the sovereigns came back. The present policy, which Mr Keynes calls passive, is, I think, the only practical one

1262 Sovereigns imported into India are, as a rule tendered to the Government in order that rupees or notes may be issued in exchange, is it not the case that rupees are full legal tender?—Yes

1263 And the public have been accustomed to rupees for very many years?—Yes

1264 That accounts, does it not, for the fact that the sovereigns when imported are presented for exchange either into rupees or notes?—Yes. I merely mentioned it as showing that at the present stage of India's development and the taste for gold, the natural destination of sovereigns imported into India is in the first place to go into the paper currency reserve, but I realise, of course, that it goes out again afterwards

1265 If some of them are sent up into the districts in the interior of India it is very difficult, is it not, to get them exchanged? The only place, I think, where they can be exchanged at par is at the Government treasury, and very often that is some distance off, as there is only one Government treasury in a large district?—I gather from the reports of the Paper Currency Department that the difficulty of getting a sovereign exchanged without paying for the exchange is very slight, and that in that respect a sovereign is more convenient to a holder in a country district than a note, because you usually do have to pay a trifle to get a note changed, but you do not have to pay a trifle to get a sovereign changed

1266 That remark was made, I think, with regard to special districts, was it not?—I dare say. I read it a short time ago, and I thought then it was of general application

1267 Do you not think a sovereign is a high unit for a gold coin in India?—Yes, and I should say that is one of the reasons why there is not so much substance as might appear in the doctrine that India ought to become much more than it is a sovereign using country. I think there has always been that natural limitation to the use of the sovereign in India that is implied in what you have said

1268 Do you not think the fact that sovereigns have been absorbed so largely in recent years shows that gold coinage is suitable for India?—Yes, certainly. It shows that people in India are glad to have gold in India at their disposal

1269 Might not a gold coin of smaller denomination than a sovereign be reasonably expected to extend

6 June 1913]

[Continued

the use of gold amongst a more numerous class of people?—One can never tell. In a matter of this sort what one would like to know is the answer to the question that is always asked. Is there a desire for a 10 rupee piece or other such gold piece in India? Is there a popular widespread desire? But then no one knows the answer to that question, at least I think not.

1270 I think you made the remark to-day that the gold in circulation is of very little use in supporting exchange, but for that purpose it is to be preferred, is it not, to token silver coins?—Yes. If token silver coins are not backed by either a central Government reserve or a banking reserve, they are of no use whatever for the support of exchange, except of course as bullion.

1271 (Sir Robert Chalmers) Do you really maintain that sovereigns in waistcoat pockets really are a support to exchange?—No. Sir James was putting to me the question whether I had demed that they were a support to exchange, and I think we have got to this point, that in my view they are a very slight support to exchange, but they are not so useless for the purpose as overvalued tokens.

1272 The experience of 1907 would appear to show, would it not, that given a fall in exchange you would lose gold rather than derive any support from it for exchange?—Yes. That experience, so far as the export figures go, would appear to show that about 6 per cent. of the gold that we lose does serve to support exchange.

1273 Only 6 per cent?—Yes, but the other gold possessed by the Government might have afforded indirect support. I do not want to go into that unless the members of the Commission may desire me to do so, but I think Sir James understands, just as you understand, that my general position in the matter is to minimise the importance of the gold in actual circulation for the support of exchange. I think you understood, Sir James, that I was minimising it?

1274 (Sir James Begbie) Yes, but I understood also that you rather favoured the extension of the silver coinage?—No. Perhaps you would explain in what connection?

1275 In this connection, the great trouble in Indian exchange arises from the fact that there is such an enormous volume of token coins in circulation?—That is a view which has often been put forward, but which I find the greatest difficulty in accepting. I think the connection between the volume of token coinage and the stability of exchange is very remote, as indeed is shown by the fact that now at this moment the token coinage is of greater volume than ever before, and I think one might almost say that exchange is more stable than it ever has been. According to my view, as I tried to put it in answer to another member, the stability of the exchange depends on trade conditions, and the trade conditions may be affected, I admit, but are slowly and indirectly affected, if at all, by changes in the volume of currency.

1276 (Sir Robert Chalmers) Do you mean external conditions?—I should apply it both to external and to internal conditions, but I venture to say that it has more application to external conditions.

1277 (Sir James Begbie) Of course I quite understand that at the present time the quantity of popular silver coinage in circulation does not affect the question of exchange, but in a time of unfavourable trade balances, when the balance of trade goes against India, the question of the quantity of silver coins becomes a serious matter?—I do not wish to set up a special doctrine of my own but I do maintain that the importance of the mere magnitude of the token currency for the purposes that you mention is habitually exaggerated even by many authorities for whom generally I have the highest respect.

1278 The question of the half sovereign has been mentioned to-day, that in India is valued at 7½ rupees, as you know, I think?—Yes.

1279 Do you think that that is a suitable value as a unit for a gold coin?—Do you refer to the fact that it is a broken sum?

1280 Yes?—I cannot tell, you know much better than I do.

1281 It is very little used, as a matter of fact?—It may be that the fact that it is for a fractional multiple of the unit may be one of the causes of its not being used, I do not know about it.

1282 The fact is that it is a very awkward unit of value, and therefore it is not so much used?—I take that from you.

1283 Another point mentioned to-day was the question of sovereigns coming in from Australia or Egypt, of course these would come in much cheaper than from England?—Yes.

1284 But the quantity obtainable in Australia and Egypt is limited?—Yes. It varies enormously year by year, sometimes Australia has many million sovereigns to part with, and sometimes very few.

1285 (Mr Gillan) I think there was a discussion at one time, was there not, about the advisability of importing half-sovereigns?—Yes, there was what we call in the India Office a demi-official discussion, I think, between Sir James Meston and myself. At that time I think Sir James Meston was rather in favour of importing the half sovereign, I was against it.

1286 I did not know exactly what form the discussion had taken, but on the whole the conclusion was, was it not, that there were reasons against large imports of half-sovereigns on the ground that there were many light weight half sovereigns, and that they would lose more by use in India and so on?—There were those considerations. Then there was a further rather general consideration that on the whole the Government had better not enlarge its functions by becoming an importer of gold coins and that it was better that gold coins should be imported by other people. Then there was another consideration which may sound unpractical, but really I think it is very practical. It was suggested at first that it would be worth trying the experiment to see what became of half a million or a million half sovereigns if they were imported into India. I felt very strongly when I took part in this demi-official discussion that it was no good trying the experiment unless you could judge the results. If at the beginning of a year you put a certain number of half-sovereigns into India, there is no reasonable chance of your being able to find out at the end of the year what had become of them. It is a subject on which inquiry of any value could scarcely be made. Finally, I may mention this, in case you are interested in it. We got some of the exchange banks which import British gold coins to undertake to import some half-sovereigns as well as sovereigns—hitherto they had imported boxes of sovereigns. I think they have imported half sovereigns, but I have read somewhere, I forget where, they are not popular.

1287 I take it that the imports of half-sovereigns into India in any case have been exceedingly small?—Yes, but they probably have been growing.

1288 Have you any figures to show how many half-sovereigns have been available in India, supposing the people wanted them?—No. The trade figures show the British gold coins, sovereigns and half sovereigns, mixed up.

1289 I only asked that because an inference was based on it regarding the popularity of the half-sovereign, and I did not know to what extent they actually are available?—I cannot say.

1290 About the attitude to be taken by Government with respect to different forms of currency, I think it was perhaps suggested that there was some difference in respect of gold and gold currency notes?—That is so.

1291 The position is, is it not, that these currency notes are encashable only at about half a dozen centres in England?—At eight, I think.

1292 At other centres they are naturally liable at any time to go to a discount?—Yes.

1293 And any action that Government could take would be in the direction of making them encashable at more places?—Yes.

1294 Would that not be somewhat in the nature of removing an obstacle in the use of currency notes?—Yes.

6 June 1913]

Mr LIONEL ABRAHAM, C B

[Continued

1295 Rather than directly encouraging them, so to speak?—If Mr Keynes were arguing it with you, he would say that it is equally possible either to give or to withhold facilities for the changing of sovereigns into rupees

1296 May I put it in that way—that this would be removing an obstacle and putting the note on an equality in the matter of discount with the sovereign?—No It would be giving the note an advantage The sovereign is encashable—that is to say, you can get rupees for sovereigns at about three places in India What the Government does is, I think, to push the note a little more than it pushes the sovereign, it gives the legal right to encashment of the note at about eight places, but the legal right to encashment of the sovereign into rupees is given at a smaller number of places

1297 As a matter of fact, the sovereign is encashable into rupees anywhere, is it not?—Not by the action of the Government

1298 No, but it carries its value with it?—Quite so

1299 With regard to the gold mint, the subject was dealt with at considerable length, was it not, in the last financial statement of the Government of India?—Yes

1300 And the reasons why the Government of India recommended it were given there by Sir Guy Fleetwood Wilson?—Yes

1301 That is the last expression of opinion of the Government of India on the subject?—Yes

1302 (Chairman) Will you hand in that financial statement of the Indian Government, so that we may have their latest expression of opinion?—I will hand in a copy of what Sir Guy Fleetwood Wilson said \*

1303 (Mr Gillan) I take it that your general position is that in the matter of gold it is better to increase our reserves than the gold circulation?—Yes, but I would not want the increase in the gold circulation to be stopped until the reserve had reached the particular sum

1304 No, but that is your general tendency?—Yes

1305 In this despatch No 59, which the Government of India sent home on the gold mint, it is stated in paragraph 23 (see page 62 of H C 495 of 1913) that they look forward to the effect of the establishment of the mint being "to swell the volume of sovereigns in the hands of the people and increase their active circulation Of the advantages of such an increase in the circulation we have already spoken It diminishes the pressure on the Government of India for the coinage of silver It keeps down the heavy responsibility that rests on them for the convertibility of the rupee, and thus simplifies the problems of exchange" That, I take it, you do not agree is an objection to establishing the mint?—I do not think it has very much force in it. I will not say there is no force in it, but I am not very much impressed by the argument, I think

1306 As regards the sentiment which has been expressed in favour of the gold mint, it is perhaps rather illusive, but I want to know exactly what you think of it Suppose it is put in this way, that India is a very big country, that it has already very large financial interests and commercial interests, that in India both gold and silver are established as legal tender coins, that you may at any time have a flow of gold from coinage to bullion, but at present there is no facility for the counter flow of gold from bullion into coin, and that considering the largeness of Indian interests, some facilities of that kind should be established on the spot Putting it on those general lines, what would you say to that sentiment, as you call it, or feeling?—I can understand that that line of argument which you have developed would appear convincing to some I do not think that the correctness of your argument has much to do with the existence or non existence of the sentiment, which, being a sentiment, would have little to do with any reasoning process Taking the argument which you

are developing as a mere reasoning, I should say that whether it is conclusive or not depends on one's view as to the facts I think all the facts seem to indicate that the people who have gold bullion in India have it because they want it in that form as is suggested in paragraph 2 of Lord Crewe's despatch of the 18th October 1912\* I see nothing to support the view that if they had the opportunity of getting it coined they would have it coined in any large quantity If a sentiment such as has been alleged really exists and is widely spread, I do not think it rests on that logical foundation It probably rests on the feeling that it is a fine thing for the inhabitants of a particular country to handle the coin which was minted at the mint of that particular country, You remember probably that the issue of coins is one of the attributes of sovereignty, and possibly an Indian would feel proud that his country should do the issuing of coins in the most noble of metals I should think that that, which in me personally would not call forth much sentiment, probably is at the bottom of the sentiment rather than the good reasons which you have given

1307 Suppose you put it on more purely political ground, suppose a sentiment of this kind among what Sir Shapurji has called the articulate Indian public, and that they feel that if any one of the self governing Colonies, we will say, had asked for a mint it would have been given it as a matter of course, and that something is refused to India which would have been given in the other case, do you think that is a sentiment which, we will say, ought to be humoured?

—Yes, I think that one has to recognise a sentiment of that sort But then I look ahead, and think what will be the position of the sentimentalist, if I may use that word in the non disparaging sense, if the mint is opened and costs, say, several thousands a year, and in the first year it costs, say, 15,000 sovereigns and in the second year 10,000 sovereigns and so on until a sovereign and more is spent on coining a sovereign, and if after some years of that the mint, as Sir Shapurji says, is scrapped because it is so ridiculous to have an expensive mint which does no business, I think you will probably be, I was going to say, outrageous in injuring and wounding the sentiment of the classes that are spoken of, more than they would be wounded by the refusal of the mint now

1308 Now about the amount of gold that is likely to come to the mint Take what happens in a bad time of scarcity with an unfavourable exchange, it is the sovereign which is valued at a premium, is it not?—Yes

1309 It is worth perhaps 15 rupees 2 annas, or 15 rupees 4 annas?—Yes

1310 There is no likelihood of a sovereign then coming out, or of anyone bringing gold to the mint to be coined?—That is so

1311 So it is not in those unfavourable seasons that we can expect any coming to be done?—That is very true

1312 Take the contrary case in which you have got a strong exchange and when there is a very strong demand for currency, at that time the chief demand is not for gold—for sovereigns—but for silver currency, is it not?—Yes, that is so

1313 At that time it costs more than 15 rupees to land a sovereign in Bombay?—Yes

1314 That is shown, is it not, by the fact that the exchange banks do, in point of fact, import a great number of sovereigns from abroad?—Yes

1315 At the same time you have got a large quantity of bullion in the country?—Yes

1316 Is it not at least conceivable that when the demand is for currency some of the bullion would come out of the boards held in the country and be presented at the mint?—Yes Now we have got away temporarily from the question of sentiment and have got back to the question of the convenience of the Government and of the commercial public May I say, without appearing as though I were trying to be in any

\* Not printed See pp 16 and 17 of "East India—Financial Statement and Budget, 1913-4" (H C 130 of 1913)

way epigrammatic, that what you have put is that the opening of a gold mint would probably have the effect not of giving India sovereigns when she might be calling for them, but of giving her sovereigns just at the moment when she is extremely likely to be embarrassed by having too many of them, because the time you are speaking of is a time of a great inflow of sovereigns imported by the exchange banks, and India is rather embarrassed, and the Government is rather embarrassed, by having to receive too many sovereigns and give out in exchange for them too many rupees.

1317 That is not precisely my point. There is a great demand for sovereigns in order to unlock the silver mints and get out the rupees, and the business is run upon a very fine margin. These exchange banks are always looking about for a place where they can get these means of unlocking the mints most cheaply, and it might happen that the cheapest method to them would be, instead of importing sovereigns, to get the bullion which is in the country and have it minted?—It might be, but I see no special reason for supposing it would be. There are very great advantages which they enjoy at certain periods of the year in the Australian exchanges which compensate them for the cost of sending sovereigns from Australia to India and which are nearly equal to the cost of freight and insurance. I should have thought that it is very doubtful whether they would find it advantageous to an appreciable extent to get their gold currency in that way.

1318 Are we quite justified in prejudging that question?—No, but if that were to a great extent the business foundation of a scheme for setting up a gold mint at an appreciable annual cost, it would be a rather slight foundation. I will not go further than that, but I think up to that point I can properly go.

1319 (*Mr Keynes*) Is this your position, that on the kind of occasion which Mr Gillan is thinking of,

the people would not be wanting to buy sovereigns, but they would be wanting rather to sell their gold?—At first I dealt with Mr Gillan's question on that point, but now I see that what he is putting to me is this: the exchange bank would have two sources of supply—Australia and the possessor of gold bullion in India—and he is asking whether I think that the cheaper source of supply would not be the latter. My answer is that it might be, but there is much uncertainty about it.

1320 That is the same point, is it not, it would be meeting the convenience of the people in India who wanted to sell gold?—Yes.

1321 (*Mr Gillan*) It is the case, supposing a special Indian coin were adopted, that the cost of running this gold mint would be very small?—Yes, that is so.

1322 I do not know if you have got in your mind any other disadvantage against the gold mint than those we have been discussing?—No. I think the only things against it are, first, that if it were for sovereigns it would be comparatively costly, and secondly, that it might by its failure to attract a large amount of gold for coinage, wound that very sentiment that it is intended to please.

1323 Putting aside that sentiment, the suggestion of this new coin, if it were adopted, would enable the bullion in India to be coined at a small expense?—Yes, certainly.

1324 (*Sir Robert Chalmers*) Would it not be cheaper to have bullion tendered without its going through the mint?—It was the practice formerly that the Government of India received bullion, but they rescinded the notification under which they received it, and I think they were fairly well justified in doing so, because it was rather a nuisance for Government to have to receive gold bullion in exchange for rupees, and not to have any means of dealing with bullion except either selling it or sending it home.

The witness withdrew.

At the India Office, Whitehall, S.W.

FIFTH DAY.

Thursday, June 12, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURJI BURJORJI BROACHA

Sir JAMES BEGRIE  
Mr ROBERT WOODBURN GILLAN, G S I  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P. BLACKETT (*Secretary*)

Mr F W NEWMARCH called and examined.

1325 (*Chairman*) You are Financial Secretary to the India Office, I think?—I am.

1326 How long have you held that position?—I have held that position since 1911, before that I was Assistant Financial Secretary since 1902, and before that I was in the Military Department. I have been in the Finance Department since July 1902, with the exception of a very short interval when I was Secretary in the Public Works Department.

1327 I understand that you are prepared to give evidence on two subjects with which we are concerned, namely, on the question of the sale of Council bills and telegraphic transfers, and on that of the paper currency reserve?—Yes.

1328 Do you propose to offer evidence on any other points?—I have no desire to offer evidence on the other

subjects within your reference. I think you will have very full evidence on those from other witnesses.

1329 You have prepared have you not, memoranda on those two subjects, which we have before us?—Yes.

1330 Those I propose to take as part of your evidence and to print with our proceedings. (*See Appendices VII and VIII*) Taking first the paper relating to Council bills and transfers, the sale of these dates back I see to the time of the East India Company?—Yes.

1331 Is the practice of selling bills and transfers in excess of the actual immediate needs of the India Office, equally old?—I can find an instance in the year 1863-4. In that year the actual drawings exceeded the Budget estimate of them, and also of the

12 June 1913 ]

Mr F W NEWMARCH

[Continued

home charges, by more than 3½ millions, or more than 65 per cent. Commenting on this in the Financial Statement of the Government of India, Sir Charles Trevelyan, Finance Member, said, "The sale of the Secretary of State's bills has given great relief to trade by obviating the necessity for the remittance of an equal amount of bullion from England." There are not very many years about that period in which the drawings largely exceeded the Budget estimate. In the period 1872-3 to 1898-9, sales were very much affected by the decline in exchange, and the Secretary of State had many times a difficulty in drawing, or was unable to draw, the whole amount for which he had budgeted. But in the two years 1881-2 and 1883-4, the estimates were exceeded. In the first year the home charges were 14,825,600*l.*, the Budget estimate of the drawings 17,200,000*l.*, and the actual drawings, 18,412,429*l.* In 1883-4 the home charges were 13,911,800*l.*, the Budget estimate of drawings 16,300,000*l.*, and the actual drawings 17,599,805*l.* There were not many other years about that time in which the drawings exceeded the estimate, because the great fall in exchange rendered it impossible. Then we come to the year 1898-9, when I find a Minute by Sir James Westland, who was then Finance Member to the Government of India, which was laid before the Fowler Committee, and perhaps I might read you a passage from it. He said, "The distribution of Council bills over the twelve months remains entirely in the hands of the Secretary of State, we in India give him from time to time our recommendations, and especially advice as to the amount we can make available for his drawings, but as the primary object of the Council bills is to place him in funds for the expenditure which he has to undertake, we leave it to him to consider when drawings may be eased off for want of commercial demand, or increased to meet commercial demand. At the same time we are quite aware that the policy of the Secretary of State in the matter is the same as our own, that is, to draw during the 12 months as much as we can meet." Since that time we find frequent references to the same point. Perhaps I might quote you one passage if you will allow me, from the Financial Statement for 1906-7: "The drawings of the Secretary of State have largely increased during the past three years, the average sales from 1903-4 to 1905-6 having been 26,620,000*l.* against an average of 17,620,000*l.* during the previous five years. This increase does not correspond to any equivalent expansion of the Secretary of State's requirements on revenue account (which constitute the home charges proper) though there has been some growth of the latter also. It is due primarily to the great demand for remittance to finance the export trade of India which has developed very largely of late."

The policy of Government has been to sell Council drafts freely so as to supply the demand to the fullest extent up to the limit of our capacity to meet them." One can find many passages like that embodying the same policy.

1332 You would agree, I suppose, that it is unusual for any Government to do business of that kind?—I suppose it is unusual. The practice has existed for over 50 years. I think what we are doing is very similar to what, in the same direction, an English company doing business in India does, it has to draw its profits home, and it just deals with exchange to the extent that it seeks for the best opportunity and the best rate it can get in the year for drawing its funds home.

1333 In the passage which you have just read, the writer, I think, spoke of drawing in excess of the current demands of the Secretary of State for revenue?—Yes.

1334 The distinction between his demands for revenue purposes, that is, for the current expenditure of the year, and for capital purposes, is important?—Certainly.

1335 Does he draw in excess of his demands for both current expenditures and capital purposes?—I think so, certainly. I think one might put it this way

—that when any country has any surplus of revenue over expenditure, such a surplus is properly applicable either to the reduction of debt or the reduction of borrowing. India is a regular borrower, and she must borrow every year for public works. It can only be a question in India's case, not of actually reducing debt, but of reducing borrowing. The borrowing has to be done mainly in this country, and therefore the surplus revenues which are available, must, I think, be remitted to this country for that purpose.

1336 My question to you was whether he sold in excess of his requirements, both on revenue account and on capital account?—He may in any one particular year. I think the recognised principle is really this—that there is a certain standard balance with which the Government of India think that they ought to close the year, which is put at about 12 millions or 12½ millions, and if they see their way to finishing the year with a larger balance, then it is considered right that those balances should be drawn home to this country if the state of exchange permits of their being drawn home profitably, although they may not be required in that particular financial year for either revenue or capital purposes. It is so much ready in advance, and if the exchange is favourable, we can get it home one year in anticipation of the needs of the next year, then we have so much less to draw in the next year, and the less danger of a drop in exchange by overselling.

1337 The governing factor being really that the Indian Government is a continual borrower in London?—Yes, we have to borrow in London, and we have to incur the major part of our capital expenditure, that is to say, on railways, rolling stock, and all that kind of thing, in England. If India could produce its own rolling stock, its steel rails and so on, as I hope it will do some day, to a much larger extent, then the balances would not need to be remitted home, but they could be used in India for capital expenditure there.

1338 Wherever you can, you do deal in India now in preference to borrowing on this side, do you not?—India borrows on a small scale, for instance, she seldom borrows more than three crores in a year, but she is able to borrow those three crores on much more favourable terms than we could borrow here.

1339 Why then does she not borrow more there?—I think that is a question for consideration, and I may say it is one which the Secretary of State has brought to the attention of the Government of India recently. At the same time I think the Indian market is narrow, and that it would not admit of the borrowings in India being very largely increased.

1340 Just give me the reason for that last observation of yours—that it would not admit of the borrowings in India being largely increased. Is that because the charges for which you borrow have to be met on this side, or because, in your opinion the amount of money that would be lent in India is inconsiderable?—I meant that the amount of money available for investment is limited. I think India can meet a three crore loan, that is to say, two millions, very easily, and possibly a four crore loan might be raised easily, but if you tried to raise the borrowings in India to any very large scale, you would damage the rate at which the borrowing could be done.

1341 When selling Council bills and transfers how do you determine the minimum rate for any given week?—There is one absolute minimum, which is 1s 3¼*d.*, that is considered to be the gold point, and the Secretary of State rigorously stops at that point and does not sell his bills below that. When you come to any minimum short of that, I should say it is a matter of discretion, and it is determined by the conditions of the time, whether the Secretary of State's demand for money from India is a very urgent one or not a very urgent one, and also I think some consideration has to be given to the dearness or cheapness of money in India, for instance, if the bank rates in India are very high I think that is rather a reason for selling more freely, even if the rate of exchange is not very good than we would otherwise do.

1342 When you have sold the amount which you have offered for sale on a particular Wednesday, what is your reason for selling intermediate bills in the

12 June 1913 ]

Mr F W NEWMARCH

[Continued

course of the week following?—We charge a somewhat higher price for them. We offer to sell intermediates at  $\frac{1}{2}d$  higher than the rate at which we sold the bills on the Wednesday, or, at any rate, at which we sold part of the bills on the Wednesday, so that we get a little extra profit in that way. I think from the point of view of the public these intermediates are a very great convenience, because a great deal may happen between one Wednesday and another. A sudden demand may spring up in India for money, and a great amount of money can be remitted to India by telegraphic transfers, say, between one Wednesday and another. That is a very valuable convenience, especially when our rate is at its maximum. Then there is the other consideration, that if they apply for an intermediate, or a special, as we call it, they are sure of getting the whole amount they apply for, so long as the Secretary of State has not sold up to the limit up to which he means to sell intermediates—for he has a limit, although that is not definitely announced.

1343 He does not bind himself then to sell an indefinite amount?—No, except when the rate gets to its maximum, and then he sells without limit. In this way I say it is a convenience, because the buyer of a bill can be sure of getting a certain amount instead of getting, perhaps, only half of what he applied for, or a tenth, or something like that.

1344 Does that not have a tendency to keep down the tenders on the regular Wednesdays?—No, I think not, because we always charge, as I say,  $\frac{1}{2}d$  more for these intermediates than we have done on the previous Wednesday.

1345 Supposing a man knew that if he did not get the bills on Wednesday he would not have another chance till the following Wednesday, would that not induce him to put in a higher tender than he puts in now when he knows that he can always get the full amount he wants within  $\frac{1}{2}d$  of the rate at which they were allotted on the particular Wednesday?—It is a good price for the certainty, I think, and it is a great convenience to the market. I do not think it affects the demand on the following Wednesday.

1346 I understand that all the sales are approved by the Finance Committee and by the Council?—They are after being done.

1347 Is that a purely formal proceeding?—Of course, as regards what has been done on Wednesday it must be a formal sanction, but the presentation of those figures affords an opportunity for members of the Finance Committee, and afterwards members of the Council, who have not had a part in this, to offer their views and to make suggestions if they think fit as to future sales.

1348 In some circumstances I see that you sell bills or transfers against gold in transit from either Australia or Egypt?—Yes.

1349 I do not quite understand why that is done, although it is mentioned in your memorandum (paragraph 11 of Appendix VII, page 218), perhaps you would explain it to me a little more clearly?—This practice was begun in December 1905. Before that time it had been the practice of the Secretary of State to hold a certain amount of gold—I think it was the fixed practice at that time to hold five millions of gold—in this country, which might be used for the purchase of silver, and it might be depleted in that way. Supposing we depleted that stock it might be useful to bring home more gold, it is a cheaper method, if we want to replenish our stocks of gold here, to buy gold in transit rather than to ship it from India, because we save the cost of insurance and freight. They cost us nothing if we buy it in transit, because we give to the seller of the gold a transfer on India of the equivalent at 1s 4d, so we practically buy the gold at par. He gets just the same number of rupees for his transfer—it may be a transfer, say, of 15 lakhs—as he would for 100,000 sovereigns, and we bring the gold to this country free of charge practically. It all rests upon the assumption that we want to bring gold here. But there is a still more advantageous method by which we can increase the amount of gold or replenish the amount of gold we hold here if necessary, that is, by earmarking gold

against sales of transfers in the ordinary way, for instance, transfers at 1s 4 $\frac{1}{2}$ d. When the occasion arises that it is not convenient for the Government of India to meet our bills or transfers from their Treasury, we practically effect a transfer of currency money from India to this country instead of a transfer of Treasury money, and we then practically buy the gold at 1s 4 $\frac{1}{2}$ d probably instead of at only 1s 4d.

1350 You earmark the gold part of the paper currency?—Yes.

1351 And you lodge the gold with the Bank of England?—Yes.

1352 And issue additional notes in India against it?—Yes.

1353 As you have explained, the Secretary of State does draw money in excess of his immediate needs?—Yes.

1354 And in anticipation of future requirements?—Yes.

1355 What have you to say as to the effect of that upon Indian trade and commerce, does it reduce the amount of capital available in India?—I think not, because every sale of a bill or transfer releases so much money which is locked up in the treasuries of the Government of India, and puts it on the market. It has the same effect on the market, I think, as a shipment of sovereigns, except that the sovereigns go on the market direct, whereas the money represented by the Secretary of State's sale of a bill or transfer is paid out of the Indian treasuries.

1356 I understand you to say that the reason why the Secretary of State does not stop selling bills as soon as his own immediate needs are satisfied is, because of the uncertainties of exchange in the first place, that he is glad when opportunities offer to guard himself against a future fall?—Yes.

1357 And, in the second place, because it is found convenient and helpful to Indian trade that he should sell the same?—Yes.

1358 Are there any other reasons for that course which he pursues?—I think the real underlying ground for the whole system is what I have referred to before, that if India holds surplus balances as the result of very prosperous years, such as India has had recently, the proper disposal of those surplus balances is for the avoidance or reduction of debt, and the natural thing is to bring them home here. I might instance the case of the present year. The balances of the Government of India have risen to a very high level—they were over 19½ millions at the beginning of the current year—and our balances were over eight millions. According to the Budget, those balances will be reduced by over 11 millions in the course of the present year—the balances in India will be reduced to about 12½ millions, and our balances will be reduced to four millions. Those 11 millions will go towards the reduction of borrowing.

1359 Take those 8 millions, how long have they been here waiting for what I may call their permanent employment—I do not mean to suggest that they have necessarily been entirely idle?—As I say, we started this present year with balances of a little over eight millions, and we budgeted to reduce them to four millions, so those four extra millions have been lying here.

1360 Is there any reason why they should not have lain in India until they were required?—Only, I think, that reason of the question of exchange—that our policy must be to make hay while the sun shines.

1361 In fact, the apprehension that if you do not move them to this side when you can, you may not be able to move them to this side when you need them?—Quite so, and that they may when they are here serve as a resource against a fall in exchange. In fact, I think the same argument applies as to holding the paper currency reserves and the gold standard reserve funds here, they all serve the same purpose in meeting an exchange crisis.

1362 A large part of those balances is lent out here in London?—Yes.

1363 It is not unnatural that when rates are high in India that should give rise to criticism in that country, is it?—No, I can understand that.

12 June 1913]

Mr F W NEWMARCH

[Continued

1364 Do you think anything can be done in India's interest to meet that criticism?—I have very little first hand information, but I understand that the balances in India might be lent out to the advantage of trade to a moderate extent, and during a very short period of the year. But then one finds opinions absolutely opposed to that, as, for instance, Mr James Anan Bryce said in the House of Commons a few months ago that the idea of lending money in India was an absurdity.

1365 On what grounds?—Perhaps I might quote what he said for what it may be worth. "The idea of employing the Government balances in India is an absurdity. If they did use them there the value of money, which is at present on the average rather higher than the value in London, would fall below the level of the market money here, supposing the balances continued as they are at present. I noticed a case this morning of the violent fluctuations which take place in the money markets in India. The rate of the Bengal bank was at 8 per cent, and to day it is at 7 per cent, and money is really not lendable in India at over 5 per cent. The reason of that is the failure of the autumn rains in the Punjab, with the result that the supplies of wheat have been very small and exports from Karachi have in consequence ceased."\* I do not profess to offer that as my own opinion. I think the more general opinion is that the balances in India could be lent during a portion of the year, though only to a moderate extent.

1366 (Mr Gillan) What is the date when Mr Bryce made that statement?—13th February 1913.

1367 (Chairman) In paragraph 21 of Appendix VII, pp 220-1, you deal with the sale by the Secretary of State of bills in excess of his requirements, and I think you point out that he not only sells in excess of his own requirements, but that he has sometimes sold bills in excess of the power of the Government of India to meet them out of their ordinary resources?—Yes.

1368 The justification, as I understand, for this is the convenience of trade?—Yes.

1369 You quote what happened in 1900 as a proof of the desire of the commercial community that this practice should continue. In paragraph 24 of Appendix VII (page 221) you quote from a communication from the Associated Exchange Banks of Bombay a protest which I observe was directed against the sudden withdrawal of facilities. They telegraphed to the Government of India on 16th January 1900, that "Acute financial stringency prevails, caused by sudden withdrawal without previous notice of facility granted 21st January 1898. Banks respectfully protest against the sudden withdrawal and beg immediate steps be taken to relieve critical situation and avert panic." What the banks appear to have protested most against was the sudden withdrawal without notice?—Yes.

1370 Do you think their opposition would have been equally strong if proper notice could have been given?—I do not think the opposition would have been equally strong, and I do not think the inconvenience would have been so great, but I think it would have been felt seriously all the same. The demands for remittance to India spring up very suddenly, and I am convinced that no other means of remittance would have enabled the banks to meet such sudden demands as easily and with so little disturbance to trade as the means afforded by the free sales of the Secretary of State's telegraphic transfers. The banks would have to meet the anticipated demands for money on a large scale by shipments of sovereigns and these would have to be arranged fully three weeks in advance of the anticipated demand, but forecasts so far ahead are very uncertain. The Bank of England would very likely put its rate up in self protection, and then there would be stringency of the money market both here and in India. I would in confirmation of that ask the Commission to be so kind as to look at Table V and the diagram attached to it in Appendix VII, page 237. You will see that there is a

line which goes up into a peak something like the Matterhorn. You will also see that for the four weeks ending December 1911, sales of only about 42½ lakhs satisfied the requirements of the market, but three weeks later just under 150 lakhs were sold in one week, and in the following week 230 lakhs, more than 1½ millions, mostly at maximum rates. Now, had it been the declared intention of the Secretary of State to limit his sales in December, January, February, and March 1912 to, say, 40 lakhs a week, no doubt the banks would have prepared themselves to some extent by shipments of sovereigns in December and onwards for anticipated demands in January and February, but I do not think they would have been prepared to meet the extraordinary demand that arose or would have met it with anything approaching the ease and convenience afforded by the Secretary of State's sales of telegraphic transfers. We must remember that these free sales at a high premium are a source of profit to the Exchequer, while heavy shipments of sovereigns to India might possibly result in sovereigns having to be shipped back on Government account for the purchase of silver, at the expense of freight and insurance.

1371 The Government of India and the Secretary of State take a heavy and an unusual responsibility upon themselves, do they not, in the task which they have assumed?—Perhaps that is so. I think it is in the interests of India that they should consider the interests of trade as much as possible, as it affects revenue so largely, and the general prosperity.

1372 Does any other Government play a similar part in regulating the exchange of the country for which it is responsible?—No, I suppose not.

1373 You would not say that the circumstances of India are profoundly different from those of other countries, would you?—I think our whole position is unique, but I venture to think that this system of selling freely to meet the demands of trade works satisfactorily.

1374 In paragraph 22 of Appendix VII, page 221, you have explained in a note on the Act of 1898 the arrangements that were made for authorising the Government of India to issue notes against the gold held as part of the paper currency reserve in London to which you have already referred, would it be fair to say that that is really a way of introducing elasticity into the paper currency system, its effect being much the same as if you were to make a fiduciary issue of notes?—I admit it was somewhat similar to an increase of the fiduciary portion of the currency reserve, and in that respect its effect was similar to the arrangement under the notification issued by the Government of India some five years earlier, by which they agreed to issue notes against gold. That was before gold was made legal tender. When gold became legal tender I think both those arrangements ceased to have a quasi-fiduciary character. I think that this arrangement under the Act of 1898 was not directly intended to enlarge the currency reserve, but that it was intended to enable the Government of India to meet the Secretary of State's drawings at a time when there was a tremendous demand for them and at a time when the Treasury balances were not strong enough to enable them to meet them from the Treasury. That was the real object of the Act in the first instance.

1375 Have you ever considered the possibility or desirability or otherwise of handing over the paper currency to a central bank?—One has heard of that question, of course, a good many times and I was proposing to give you some information about it in connection with the paper currency reserve.

1376 Very well, I will not pursue that now. You say in paragraph 25 of Appendix VII (pp 221-2) that it is as important to keep exchange from falling above the gold point as to prevent it from falling below the gold point, I think Mr Abrahams told us the same thing. Supposing the Secretary of State were to cease to sell bills without limit, would there be any danger of a rise above the gold point being more than purely temporary?—No, I think not, because no doubt shipments of gold would soon relieve that. The protest to the Government of India to which I refer in that paragraph had

reference to a temporary forcing up of the exchange to 1s 4½d

1377 You have spoken in your note of the objection to an excessive accumulation of gold in the paper currency reserve, and you have spoken also of the possible necessity and expense of shipping gold home to relieve such accumulation, what is the objection to the accumulation of gold?—In the passages to which you refer I, perhaps, rather transferred into the present ideas that have been held in the past. The view as to the proper amount of gold to be held in India has been constantly changing. At first, I think five millions was regarded as a sufficient amount to hold, and an amount at which, when it was passed, the Government of India should begin to think about coming silver. Then the limit was raised to seven millions, and then it was advanced beyond that. I think the idea of the present time is practically expressed in a passage of a despatch from the Government of India in which they said "Subject to the provision of sufficient rupees and reserves of silver, we would allow our stock of gold to grow indefinitely with the expansion of the note circulation, until such time as it may be deemed expedient to make a further addition to the invested portion of the reserve." So I think our present view is this: We regard a certain quantity of silver as necessary, and then the amount of the invested portion of the reserve is fixed for the time being by an Act of the Government of India, at present it is 14 crores, but an Act can be passed at any time enlarging that amount. We have got 14 crores fixed at present as the invested portion, and then we have a formula as to what shall be the proper amount of silver, and then, provided that sufficiency of silver is maintained, I think the present view is to regard without any apprehension any increase in the gold portion of the reserve, in fact the gold portion of the reserve is the really elastic portion, as it expands with the demands of trade, and has grown enormously in the last two or three years.

1378 I think in your note you rather assume, do you not, that gold in India is not as valuable for maintaining exchange as gold in London?—Yes.

1379 Will you tell me why?—I would put it in this way. When an exchange crisis occurs, in other words, when the balance of trade is unfavourable to India, the Secretary of State may have to suspend his sales of bills, and may also have to meet bills on London, as in 1907-8. The stronger his sterling resources in the shape of gold standard reserve assets, Treasury balances, and paper currency reserve combined, the longer he will be able to withstand the double strain of stopping his drawings from India and meeting drawings upon London. Gold held in the paper currency reserve in London is a certain source of strength in such a crisis. It can be readily transferred to Treasury balances on the Government of India making a corresponding transfer of rupees or sovereigns from the Treasury to paper currency reserve in India. Gold held in the reserve in India can, of course, be used for the support of exchange if the Government of India lay hands upon it and ship it home (with the expense of shipment), but if they allow it to go out of the reserve in exchange for notes or rupees it does not, at any rate according to the experience of 1907-9, serve to support exchange, because it is not shipped abroad on any considerable scale, but is taken out for hoarding or internal circulation.

1380 Have you any information as to what became of the large sums that were issued in India during that crisis, which did not go to support exchange and which were not exported, have you any information, that is, as to the proportion which really went into circulation, and the proportion which was hoarded or melted down?—I am afraid I cannot show—and this applies not only to that period but to any year—how much goes into hoards, and how much goes into circulation. We have evidence that the amount in circulation is increasing, but no one can express in anything like exact figures how much goes into hoards and how much goes into circulation.

1381 I gather, from what you said a moment ago, that you set great store by the amount of the gold resources of the Secretary of State in London?—Yes.

1382 In speaking of the gold resources in that way, do you mean actual gold or do you include securities?—It would include all—everything that he holds here, including balances.

1383 What you have said as to the importance of his holding gold does not lead you to think that it must be bullion or coin and not securities?—Not necessarily, except that the portion which is held as part of the paper currency reserve must, I think, be gold.

1384 Do you think that the holding of considerable portions of the gold standard reserve in securities is as effective for the support of exchange as if it were held in gold?—We should not so readily sell securities held as part of the gold standard reserve as we would part with gold. We should part with gold first. We can take the gold out of the paper currency reserve here very readily through the Bank of England, which would transfer a corresponding credit to the Secretary of State's balances, and then to make up the currency reserve, to keep it intact, the Government of India would similarly transfer a corresponding sum from their Treasury balances into the paper currency reserve, in that way keeping the note reserve intact.

1385 But then you are really using the paper currency reserve to buttress the gold standard reserve?—For a very similar purpose, yes, that is, for the support of exchange.

1386 Is that necessary?—I think it may be very valuable. I think possibly what we would draw upon first would be the gold standard reserve, but then the paper currency reserve would be a further reserve.

1387 On the other hand, if you have more gold in the gold standard reserve you might not need to draw upon the paper currency reserve at all?—If there were more gold or more securities in the gold standard reserve that would be so.

1388 Is it indifferent whether it is gold or securities? I understood that you contemplated using the gold in the paper currency reserve, just because you might not be ready or it might not be easy to realise immediately the securities?—Or there might be a loss on realising them.

1389 Therefore, to render you quite independent of the gold in the paper currency reserve, it would be necessary, in your opinion, to have, at any rate, a larger amount of gold than you now have in the gold standard reserve?—That is one way of putting it.

1390 I do not want to force an opinion on you if it is not yours, and one which you do not really hold, you say that is one way of putting it?—I would rather put it in this way—that the first reserve, the central reserve, for the support of exchange, is the gold standard reserve, and that the greater part of that is best held for use in this country for the support of exchange. The gold held in the paper currency reserve may serve as a subsidiary reserve to that, perhaps not to be drawn upon until we have already exhausted the other, but still it is a reserve. In the same way I would say that, supposing the Secretary of State has taken advantage in one year of a good exchange to draw balances over from India, so far as he can, without unduly depleting the balances of the Government of India, those balances held here serve the same purpose, because they relieve him up to a certain point from the necessity of selling bills on India when the exchange is bad.

1391 I was induced to put my question because I thought that some of the criticism which has been directed against what has passed arose from a certain confusion as to the uses of those two reserves and the way in which they were employed to play into one another's hands, if I may so express myself. Do you think there would be any advantage, from that point of view, in trying to keep them more independent and distinct?—I think we do keep them quite independent, and we would regard the gold standard reserve as the one immediately to be drawn upon, but I think the other serves as a useful subsidiary.

1392 In paragraph 28 of Appendix VII in dealing with these sales you say in subsection 4 (page 223) that one of the considerations which governs the decisions of the Secretary of State is that he should "allow a

12 June 1913]

Mr F W NEWMARCH

[Continued

"sufficient amount of sovereigns to flow into India to supply the demands of the public" I think the working of the arrangement has been criticised on the ground that that has not been the result?—Of course the amount of gold that flows into India is regulated by the amount of the Secretary of State's drawings, and when, as in recent years, the surplus balances in the hands of the Government of India are very large, according to the policy I have stated we do draw those balances home, and that very largely swells the amount of the Secretary of State's drawings, and to that extent limits the amount of gold that goes into India. Nevertheless, in the last few years gold has gone into India on a very large scale indeed.

1393 Do you think there is any difficulty in India in getting gold when it is wanted?—I think not. There have been as much as 20 millions in the paper currency reserve lately, at the present time it is somewhat less, but it is, I think, something between 17 millions and 18 millions, and anyone on presenting a note or rupees can get gold in exchange.

1394 Do the people who need gold often have to pay a premium for it?—Certainly not, if they go to a currency office.

1395 In paragraph 30, Appendix VII, page 223, you say that it is a misapprehension of the India Office policy to describe it as adopted in the interests of the City of London and not in those of India. Is it not possible that a system which drew less from India might, at the same time, relieve the stringency of the Indian money markets, and might be advantageous to India even if it was disadvantageous to the London money market?—I hardly think so. Our sales of bills on India release these funds from the Indian Treasuries and supply the markets.

1396 So that in fact in your opinion there is as much capital available in India as there would be if neither transaction took place?—Yes. I think that there is as much money available under the system of selling bills freely as if we sold less freely and gold went into India.

1397 You hold, I think clearly, that the fixing of the exchange rate of the rupee at 1s 4d has been beneficial to India?—I do, certainly.

1398 Have you any information as to the effect which fixing the rupee rate has had on Indian trade with silver-using countries?—I have got out some figures, which I could give to the Commission if they would like to have them, showing comparisons of the trade between India and China, and also between India and Persia (which is more or less a silver-using country) before and since the fixing of the rupee. I have also got comparative figures of the imports of China and India to this country before and after.

1399 Will you circulate those figures for our information?—Certainly (See Appendix IX, pp 289-93).

1400 Can you tell me now what the general result of them is?—I should say that the general result is that while India's trade has expanded enormously since the fixing of the rupee, the expansion as between India and China has been somewhat less than as between India and other countries, but not, I think, very materially.

1401 Would you say that the effect of fixing the rupee has been advantageous elsewhere, but slightly disadvantageous there?—It has been less advantageous, I should say. India's trade has not expanded so largely with the silver-using countries or in competition with the silver-using countries, as elsewhere.

1402 (Lord Faber) I understood you to say that India can take up a loan yearly for about two millions sterling pretty readily?—Yes.

1403 Do you not think that India is increasing in wealth and in knowledge of investments every year, and that she could invest much more in rupee stocks now than two millions a year?—I think the indications are in that direction. We find that India not only takes up the rupee loan at a good price, but at a considerably better price than we can get for our 3½ per cent loan here, whereas until quite lately the price was worse, and not only that, but India is

gradually taking home some part of the rupee debt which is held here.

1404 I gathered from you, did I not, that the rupee loans are the firmest loans in the Indian market?—Yes.

1405 Now with regard to the gold standard and paper currency reserves, do you think it possible that those might be amalgamated?—No, I do not see the possibility of that.

1406 One, I understand from you, is required in India, and the other is required in London?—I think the gold standard reserve is required here, but then the paper currency reserve, you see, serves the one different purpose of a security against notes. I do not quite see how you could blend the two.

1407 You think it would be difficult, I understand, to lend out large sums on loan in India, is that because you think that gilt edged securities would not be available as against those loans in India?—I think that is one reason, certainly.

1408 Is not the effect of fixing the value of the rupee to do away to a great extent with a large gambling element that used to enter into the Indian trade before?—I cannot say that I have any definite knowledge on that point, but I suppose it would be so.

1409 (Sir Ernest Cable) I should like to ask you the question in a somewhat different form to that in which Lord Faber has put it. You said the Government of India could float loans up to about three crores per annum?—Yes.

1410 That is, at 3½ per cent?—Yes.

1411 And you estimated that they might possibly float another crore?—Yes.

1412 Could you give us an estimate how much they could float if these loans were at 4 per cent?—I am afraid I could not.

1413 It would be very much larger, would it not?—I suppose it would be larger, but I should say that the amount of money available and forthcoming would probably not increase in proportion to the extra charge which such a rate of interest would impose.

1414 You have said a good deal to day about the Secretary of State having sold bills in excess of his requirements, you mean of his actual disbursements?—Yes.

1415 Can you say if he has sold any such excess at anything below 1s 4d, and, if so, is that justifiable?—I think that it is justifiable under certain circumstances. For instance if you will look at Table III of Appendix VII (page 233) in regard to the year 1909-10 you will see that the amount sold in the first half of that year was 10 millions sterling, which was sold at 1s 3 9/16d. I think the justification for that was that it was just after the great crisis of 1907-8 and 1908-9, when so large a portion of the gold standard reserve had had practically to be transferred to India. In order to support exchange the Government of India had sold bills on London to the extent of 8,058,000, and when the crisis was over it was thought very necessary that that gold standard reserve money should be transferred back to this country. For that reason the Secretary of State sold bills very freely that year, although at a low rate of exchange. It did not have any permanent detrimental effect on exchange, I think, because before the end of the year exchange reached quite a high point, but I think it was important to sell freely even at an unprofitable rate in order to get the gold standard reserve funds back to this country.

1416 That was an extraordinary occasion, of course?—Yes. Then as regards other times, I think the circumstances of the time must decide the question upon each occasion.

1417 I see from Table IV of Appendix VII (pp 234-6) the average annual excess of exports and imports for the last five years has been between 40 and 50 millions?—Yes.

1418 While the net import of gold bullion and sovereigns was 24 millions last year. It appears that gold is being absorbed at an increasing pace, is it not likely, therefore, that the value of gold to India may become so great as seriously to hinder the sale of the council drafts needed to meet the Secretary of State's actual expenses, quite apart from his excess drawings

12 June 1913]

Mr F W NEWMARCH

[Continued

about which so much has been said?—I cannot think that the imports of gold into India could be governed by anything else but the balance of trade. So long as sovereigns can be shipped to India to compete with the Secretary of State's bills, they will go there, but they will not go in except as competing with his bills.

1419 (Chairman) I did not quite gather the latter part of your answer?—I mean the extent that they will go there will be determined by the extent to which they will compete in point of cheapness with the Secretary of State's bills and transfers.

1420 (Sir Ernest Cable) Do you think the people would not pay slightly higher for hoarding purposes to get gold?—I think the people, as it is now, can get sovereigns if they want to hoard them. They have not to import them at any cost, but merely to take them out from the paper currency reserve against notes.

1421 What is your opinion about encouraging the use of gold in India?—I should wish everything to be done that would encourage the circulation of gold in India, but I do not see how Government can either encourage it or discourage it except by allowing gold to go in in the ordinary course of trade.

1422 Do you think that removing the tax on silver would stimulate the hoarding of silver instead of gold?—Do you mean the hoarding of rupees or bullion?

1423 I mean bullion?—I think it perhaps would, because it would make the import of bullion cheaper, but at the same time I am bound to say that the imposition of the increased duty on silver a few years ago does not seem to have materially checked the import of silver into India.

1424 The bulk of the currency notes in circulation are 10 rupee notes and 5 rupee notes, do you not think it is unlikely that those notes will be presented in large quantities, being of such small denominations and spread over a large country, in other words, do you not think there is very little likelihood of a run on the paper currency reserve?—Yes.

1425 In view of that answer, do you think it will be a good thing for some part of the note issue to be against the general assets of the Government, that is, entirely fiduciary, such, for instance, as the German Reichsbank note issue is?—I hardly see the necessity for a change in that direction. If I understand the Reichsbank system, it is rather necessitated by a difficulty Germany finds in getting gold. The experience of the last few years seems to show that India can get a great sufficiency of gold, and that the currency reserve expands in times of good trade automatically by the influx of gold. If you look at the tables of the paper currency reserve, you will see to what a great extent that has happened in the last two or three years. The total note circulation has expanded to a very large extent, and although that has been entirely due to imported gold, it has gone from just under 55 crores at the end of 1911 to practically 69 crores at the end of 1912, and that although in the same period the silver has decreased.

1426 (Chairman) What table are you looking at?—Table 1 in Note I, to Appendix VIII (pp 248-9). You will find there how the currency reserve has expanded in the last three years. The total circulation has expanded from, say, 55 crores to 69 crores, and the amount of silver in the currency reserve has fallen in the same period by 10 crores, while it is the amount of gold that has risen so very much and expanded the total circulation. I think that shows a great expansiveness in the currency.

1427 (Sir Ernest Cable) The point I wanted to bring out was this—that perhaps the paper currency reserve was over-protected, while, of course, the gold standard reserve is admittedly under-protected. I was trying to see whether we cannot sell some of the securities which are now in the paper currency reserve and apply that to the gold standard reserve, thus making both funds adequate to their responsibilities, and I was suggesting that, instead of the amalgamation scheme which Lord Faber suggested and which you say is impracticable?—I do not see how your suggestion is practicable. The intention of the gold standard reserve was that it should just grow from the profits

on coinage and the proceeds of the investments made from those profits and nothing more.

1428 (Mr Gladstone) I think you agreed with the Chairman—and I suppose with all of us—that the practice followed by the Secretary of State in regard to the disposal of Council bills and other things, is not followed in any other country?—I believe that is so.

1429 Do you think that similar conditions prevail in any other country in the world?—No, I suppose not.

1430 The only similar case—I think it is in no way comparable, really—would be, I suppose, Holland with its large colonial possessions, but that would be a mere nothing compared with India and this country?—It is on a much smaller scale.

1431 In regard to the table\* which you prepared showing the trade figures since the adoption of the gold standard, it seems to show that the expansion with China, a silver-using country, has not been so large as with other countries. Do you attach much importance to that?—Might not that be due to special causes, for instance, to opium and the rather extraordinary political disturbances in China that have been prevalent?—I have no doubt the disturbances in China had a great deal to do with it. I do not know about the opium so much, because the value of the exports of opium must have kept up very well until almost the end of last year, although the quantity exported has been gradually reduced. I should not attach very great importance to any declining trade with China or any want of expansion in it.

1432 With regard to loans in London and the possibility of making loans in India, you would not consider, would you, that the facilities for lending in India are at all comparable to what they are in London?—No.

1433 London, of course, is the banking centre of the world, but India practically merely finances its own people and its own trade?—Yes.

1434 (Mr Keynes) In Appendix A, II, to Appendix VII (pp 230-1) you quote the terms which are offered for the purchase of gold in transit from Egypt, has anyone ever taken advantage of those terms?—Yes.

1435 In large quantities?—Yes, in considerable quantities.

1436 Recently?—Our offer has not been open recently. I think the last time we withdrew our offer was somewhere about 1910, and it has not since been renewed. Before that happened there were considerable purchases of gold in transit from Egypt.

1437 The document I am quoting from is dated August 1910, and it is stated that it is in force 'until further notice.' It has been withdrawn, has it?—Our offer was withdrawn in August 1910, and it has not since been reopened.

1438 That was in the same month in which it was offered. Is it your impression that it was withdrawn almost immediately?—I think it was. The note I have here is that it was renewed in March 1910, and withdrawn in August 1910.

1439 The substantial point is that there is at present no offer for purchasing gold in transit from Egypt?—No.

1440 What were the reasons for the withdrawal of this order?—I think that it has not been thought necessary further to increase the stock of gold that is held in London now. We had last year about seven millions here, and we now have about six millions in the paper currency reserve.

1441 The order was deliberately withdrawn with the object of making more gold flow to India?—It was adopted with the object of drawing gold to London without the expense of shipping it from India.

1442 It was withdrawn with the object of making more gold flow to India?—You may put it that way, or not drawing more gold to London.

1443 (Sir Shapurji Bracha) You overdrew to the extent of 18 to 22 millions in the years 1910, 1911 and 1912, I suppose during those years there were a good many windfalls from opium, the railways, and other quarters?—Yes. I would like to give you some figures

\* See Appendix IX, page 289.

12 June 1913]

Mr F W NEWMARCH.

[Continued

on that point In the three years, 1910-1, 1911-2, and 1912-3, the net receipts from railways exceeded the Budget estimates by 6,800,000*l*, and those from opium by 6,400,000*l*, so that there were excess receipts above the Budget estimates in those three years of over 13 millions under those two heads

1444 You could use that money here against any borrowing?—Yes

1445 And against paying off what you had borrowed and what was due?—Yes

1446 Suppose that in the course of years the revenue and expenditure adjust themselves and become evenly balanced, and yet you have to sell Council bills on trade account, how will you adjust matters then? I suppose you could take something from the silver reserve and from the other reserves, but still you could not have used that balance here?—I think I might venture to say this—supposing the conditions you mention, in which there is no surplus of revenue over expenditure, that would indicate trade conditions in which there would not be such a demand for the Secretary of State's drawings The demand for his drawings depends upon the activity of trade, and if there were no surplus, there probably would not be such active demands

1447 Suppose you had budgeted for an active demand and a very prosperous trade, it might turn out to be a little more perhaps than you anticipated, but not to the extent of 18 to 20 millions?—The Secretary of State would restrict his drawings to what the Government of India were able to remit

1448 Are you not bound to supply trade to an unlimited extent at the gold point?—The Secretary of State undertakes to sell bills without limit at 1*s* 4½*d* and transfers without limit at 1*s* 4¾*d*, and to do that he draws upon the currency reserve, that is to say, he would transfer gold from India to England under the Gold Note Act, in other words, he would earmark the gold to the currency reserve here against his drawings

1449 On either side you do not go beyond 1*s* 3¾*d* either in buying or selling?—We do not sell under 1*s* 3¾*d*.

1450 And that is the kind of cost that there would always be as between one country and another, whether it were the United States, or India, or France, that adjustment must always come?—Yes

1451 The Secretary of State does not bind himself to maintain the exchange at the par of 1*s* 4*d*, does he?—He has an understood obligation to maintain exchange at 1*s* 4*d*

1452 But he is not under an obligation?—That is rather a difficult question to answer I should say that at present he recognises the obligation to maintain exchange at 1*s* 4*d* to the best of his power

1453 If the Secretary of State thinks his power of maintaining the par of exchange is sufficient, why is he afraid to guarantee, is he not confident of his own remedies?—I think he is

1454 Then, where is the harm in guaranteeing?—It is rather a difficult thing to express a guarantee absolutely on that point

1455 I suppose there are two parties to a bargain, here one is not very confident and does not guarantee, and the other wants a guarantee, why should not the first one give the guarantee?—I think that is rather a difficult question for me to answer I would not like to commit the Secretary of State on such a matter

1456 You must remember that in India the par of exchange has been absolutely necessary at any period in the history of her finance, and if that is not guaranteed will not India be injured?—I would say to that that I think the present system does command confidence in its stability

1457 It almost does, but does it do it absolutely? If it could be done absolutely, why does the Secretary of State not guarantee?—I do not see how it could be done absolutely I think that the resources for maintaining the stability of exchange are growing from year to year, as gold goes more largely into circulation and as the volume of the gold standard reserve increases I think we should be more ready to meet a great crisis than we were in 1907-8—as time goes on, still more so

1458 All that is right, but we want the absolute guarantee, otherwise we say, do what we ask you to do, and that is accumulate gold in a liquid form The Secretary of State refuses to do that beyond a certain amount If he does that, he must have confidence in his judgment, and if he has confidence in his judgment, why should not the Secretary of State guarantee the par of exchange for all time?—I think that he endeavours to do that as far as he has power I think the view taken is that a holding of sterling securities, particularly short-dated securities, serves the same purpose as the holding of gold

1459 Is it not his intention, of course, not expressed but implied, to economise the use of gold in India as much as possible?—I think the Secretary of State has no desire to economise the use of gold in India Subject to his being able to draw from India what it is right to draw to meet the home charges and to avoid debt, he allows gold to go into India as freely as the balance of trade will allow it to go Subject to the restriction I have mentioned, there is no desire on the part of the Secretary of State to discourage the free influx of gold into India

1460 I believe that, but there is a part of the correspondence that we have before us from which it appears that sometimes the Secretary of State is very nervous about disturbing the gold market in London The Secretary of State must know that there is an impression in India that that is his idea, and when India wants all the surplus profit in gold, there is that idea lurking in their minds?—I can only repeat that the view which has been taken here is that the surplus profits from coinage are as useful to support exchange if held in realisable gold securities as if held in gold, but as you know, he has decided now to accumulate gold here in the gold standard reserve until the amount reaches five millions As regards his otherwise discouraging the flow of gold into India, I could only point to the figures of the last two years as showing you to how very large an extent gold has gone into India

1461 You say India could easily take up a loan of about two millions?—That, I say, is the present standard, but, as I said in reply to another member of the Commission, I think India could meet a larger loan than that probably

1462 Do you know that loans were issued for five crores as early as 1879?—Yes

1463 I think there is a difference of 9 per cent to day between the 3½ Per Cent Sterling Loan and the 3½ Per Cent Rupee Loan?—I know there is a large difference

1464 So I think it would be safe to say that loans could be raised in India to the extent of five crores?—I think that is very likely

1465 (Sir James Begbie) In your note you talk about the method of drawing funds from India to meet the home charges, have these home charges of recent years included special disbursements in connection with the currency?—I should not include those exactly in the home charges There have been several remittances on account of currency, but I should rather treat those as opposed to home charges Our usual definition of home charges is charges upon revenue, and we treat revenue charges as distinct from capital expenditure, and also currency remittances

1466 You do not include the purchase of silver, do you, that is paid for from the balances in London, is it?—That is sometimes paid from the home balances in the first instance, last year, for instance our purchases were made from the balances

1467 And you do not include that as part of the home charges?—It is a matter of language whether we treat it as exactly part of the home charges or not I should say it was outside the home charges in the usual sense of the term Of course it has to be met, and it adds to the amount of drawings which we can budget for The amount of silver bought swells the balances of the Government of India by the amount of notes that are issued against it, and that renders the Government of India *pro tanto* able to meet so many more millions of drawings by the Secretary of State

12 June 1913]

Mr F W NEWMARCH

[Continued.]

1468 At any rate, those payments on account of silver, for example, do not come out of the ordinary revenues of India?—No

1469 In former years there was considerable anxiety about laying down funds in London by means of Council bills was there not?—Yes

1470 In recent years there has been no such anxiety, with the exception of 1907 and 1908?—No

1471 Would it be possible to separate the sales of bills to meet the ordinary home charges from sales connected with the currency?—I think they are separated, and that you will find them shown separately in the accounts of the Government of India

1472 In the case of sales of bills there is only one amount shown—amount of bills sold?—I think when there is a remittance on account of currency you will find that is shown separately in the accounts, for instance two or three years ago, when the invested portion of the reserve was increased by two crores, from 12 crores to 14 crores, there was a sum of 1,838,000 remitted home, and that I think you will find shown in the accounts separately from the ordinary drawings of the Secretary of State

1473 That is in the accounts, but it is not presented. At the time the sales are made there is nothing to indicate whether you are selling against currency or against the Treasury, is there?—No

1474 That is a point I would like to ask you—whether it would be possible to separate the sale of Council bills drawn against the Treasury from those drawn against the currency reserve?—I do not think we could do that at the time we are doing it. We could not allocate them exactly. When we sell, say 60 lakhs in one week, it would not be convenient to draw 40 lakhs of those on account of the Treasury, and say 20 lakhs represent part of the sales towards bringing home two crores of the currency reserve.

1475 Do you mean that it would be a disadvantage from a bookkeeping point of view?—There would be no great advantage in it, I do not think it would be very convenient to attempt to do it

1476 (*Chairman*.) When such a transaction takes place, do you always decide how the proceeds of particular bills are going to be applied before you sell the bills?—We allocate a particular quantity of the sales at the end of the year to a particular purpose, that is to say, when we arrive at the end of the year and we have drawn more than we budgeted to draw, a part has been represented by, say, two crores remitted home for investment on account of the paper currency reserve, and we show that separately, but we could not allocate it to the sales of a particular month

1477 (*Str James Begbie*.) It is left until the close of the year to do that?—Until it is shown in the accounts

1478 You say in paragraph 14 of Appendix VII, pp 218-9, "the present system of regulating the amount of the drawings for each year" is so and so, can it be said that the amount of the drawings in recent years has been regulated by the system you describe?—Yes

1479 There have been very wide differences between the estimates and working results, have there not?—Quite so.

1480 You do not work to the estimates?—We keep to the estimates very largely, as you know, but if it is found later in the year that the balances of the Government of India will be so much larger than they anticipated, then they will be able to remit a large additional amount.

1481 On the question of regulating the sales of bills throughout the year, I understand you think it might be possible for the Secretary of State to restrict his drawings during the first half of the financial year to an almost insignificant amount, and to meet almost the whole of his requirements during the second half when he might sell his drafts at a higher rate than they would command in the dull season. Do you refer to the bills drawn to meet ordinary Treasury expenditure?—I am there talking of what might be taking place in a year of favourable seasons and trade. It might be possible, if those favourable con-

ditions could be foreseen, to do so, but then it is a large assumption, and one cannot foresee, we do not know until the monsoon is established what we may be able to draw

1482 The statistics you give us show that, except in a very unfavourable year like 1907-8, you could reasonably expect to make the greater part of the remittances at a better rate of exchange?—Yes, that is so

1483 Do they also show that, with the same exception, you could rely on the money being obtained in London?—Do you mean that the demand would be sufficient?

1484 Yes?—I suppose it would be in a good season

1485 In the last 10 years these statistics, I think, seem to show that, with the exception of one year?—In most years, yes, but as I have explained in this note, there is a great uncertainty about the monsoon, and it is safer not to rely upon being able to draw the whole of our drawings, or almost the whole of our amount, in the latter part of the year, when exchange may be expected to be higher. It is safer to draw some in the early months of the year, even when exchange is somewhat lower. It may be also necessary for our Treasury purposes, because we have large outgoings week by week, and very particularly large ones when the payment of the interest on the loans falls due. We hardly could work without drawing a considerable amount in the first six months of the financial year

1486 Do you view with some anxiety the monsoon failing, as you might not be able to sell bills?—That is one consideration. The other is, as I say, that we must obtain some funds from India, even in what we may call the lean half of the year, to keep up our Treasury balances. These drawings on the Secretary of State's bills are practically our only source of revenue

1487 At the beginning of the year your resources now are very much larger than they used to be years ago, are they not?—Not so much this year, I think. We began this year with a balance of a little over eight millions, I think

1488 I was thinking of the general positions as regards the gold standard reserve, in the case of an unfavourable year you would be in a much stronger position now than ever before, would you not?—Quite so, but we do not want to fall back upon the resources of the gold standard reserve if we can help it

1489 You refer to instances when the Government of India find themselves in a position, towards the end of the financial year, to remit home funds far in excess of what was expected when the estimates were framed, and you state that you consider such excess funds properly applicable towards the reduction of the Secretary of State's borrowing operations for capital expenditure?—That is so

1490 Do you think it is necessary that these excess funds should be drawn upon by the Secretary of State during the financial year in which they arise, and before the total is realised?—I should say that it was advantageous to draw them when the exchange was strong enough to enable us to do so, otherwise we might pile up unduly the amount that we have to draw in the following year. For instance, our budgeted drawings for this year are something over 21 millions, which is a larger amount than we have budgeted for before, I think, supposing we had drawn less last year, we should have to draw so much more this year, and we should be all the more in danger of not being able to get a good rate for our drawings.

1491 Do you still entertain the same anxiety as formerly regarding the ability of the market to take up the bills?—I think we cannot be without some degree of anxiety. As you say, in recent years the exchange has gone very well, and we have had no difficulty about drawing all that we wanted at a good rate, but we can never be free from apprehension. At the present time the exchange has fallen to 1s. 3½d., and until we are quite sure of a good monsoon, we cannot tell that we may not have a bad Autumn for our drawings, as in 1907-8. Therefore, I think we are right in drawing a

12 June 1913 ]

M. F. W. NEWMARCH

[Continued

considerable amount, as much as we can at a reasonable rate of exchange, even in the early months.

1492 Should not the disposal of your excess funds be the subject of discussion in the Viceroy's Legislative Council before they are drawn upon?—I think that can be done.

1493 So far it has not been done?—I think it has been raised in the Viceroy's Council, has it not?

1494 In paragraph 20 of Appendix VII, page 220, you refer to the events of May to September last year, when over seven millions in sovereigns were imported for the purpose of showing that if Council Drafts were held up to secure the rate of 1s 4½d, the Secretary of State might miss his market. Would it be possible for the Secretary of State to obtain information in London as to whether sovereigns were available in Australia for shipment to India, and to what extent, and also the rate at which they could be laid down in India?—I think it is a very varying rate.

1495 Yes, but you could keep yourselves posted, could you not?—I do not know how far we could ascertain, or how far it can be foreseen.

1496 You cannot foresee it, but you can keep yourselves posted from day to day as to what is the gold point of exchange from Australia, can you not?—Yes, we can.

1497 Is that done?—I cannot say that that is carefully watched.

1498 The same remark applies to the shipment of gold from London. You mention a case where sovereigns might be shipped in competition with council bills at 1s 4½d. It is a matter of the gold point is it not?—I suppose so.

1499 And the gold point is not entirely a fixed point, but varies from time to time?—Quite so.

1500 So that if you wanted to work close up to the gold point, you could do it if you wished by keeping yourselves informed of the actual gold point from time to time?—I think in practice we do keep in touch with the gold point, that is to say, we discover when gold is going from Australia or from Egypt, and at what rate we must sell in order to compete with it.

1501 In the case of those bills sold to bring home the gold standard reserve money, you did not work up to the gold point upon that occasion, did you?—Certainly not, because I think the importance of bringing home that large amount which had been transferred to India, and of getting our gold reserve back to this country, was considered to outweigh the importance of only selling at 1s 4d, or at any other particular point.

1502 You do not think, then, that such sales interfere with the gold standard?—I do not think that they do, so long as they do not cause exchange to drop below the gold point. As I have said already, I think before the end of the year exchange had quite recovered, and was quite at par, or above par.

1503 But for the time being, while you were working under par, that was working against the gold standard policy, was it not?—I hardly think so, because we were pursuing the object of getting the gold standard reserve funds to this country where they would be useful to meet another really serious decline in exchange.

1504 In paragraph 21 of Appendix VII, page 220, you refer to instances when the demand for the Secretary of State's drafts far exceed the amount he can draw from the Indian Treasuries without reducing their balances below a safe limit and you go on to deal with the sales of bills drawn for other purposes than for meeting the home requirements of the Government, as the principal reason to assist trade?—I think that bills sold when the Government of India cannot actually meet them from their Treasuries, must be said to be bills sold for the convenience of trade.

1505 But you would not say that it is the principal reason?—I would say that that is the only reason for going on selling when we have drawn up to the extent of the maximum that the Government of India can meet from their Treasuries, when we go beyond that, it is drawn for the convenience of trade alone, I should say.

1506 Another reason for the excess drawings is that the accumulation of sovereigns in the paper

currency reserve in India causes inconvenience?—Yes, it serves the purpose of meeting that.

1507 Is that due to the fact that sovereigns do not pass into circulation in sufficient quantity to absorb arrivals?—I suppose that is so.

1508 If sovereigns went into circulation, there would be no accumulations in the reserves?—That is so, but, as I said a little while ago, I think that the accumulation of gold in the reserves in India is not regarded with apprehension in the way that it was some years ago. We are content now to allow gold to accumulate as much as it can in the course of trade, so long as we retain a sufficient amount of silver in the reserves.

1509 But you sell bills for the purpose of preventing gold going out to India if you think you have got enough there already?—We have done at times.

1510 You say the Secretary of State's telegraphic transfers afford the means which no other mode of remittance does of relieving in a very short space of time a money stringency which otherwise might become serious and even disastrous to Indian trade?—Yes.

1511 Does that not express only one side of the position?—It expresses this side, that our sales of bills or transfers do release funds from the balances of the Government of India which otherwise would be held up.

1512 If they ease the money market by releasing funds, can it not also be said that in holding up the money, Government causes a stringency?—Government holds up the money automatically in the collection of revenue.

1513 And that has an effect on the market?—Yes, it is money taken off the market, clearly.

1514 With regard to the sale of bills relieving the money stringency, money stringency may be relieved in two ways—by increasing the supply of money or by reducing the demand for it?—Yes.

1515 Is it not the latter method which operates in the case of council bills sales?—I hardly follow that.

1516 It is done through council bills?—Yes.

1517 The people who buy council bills are exporting firms and exchange banks?—Yes.

1518 They lay down money in India for the purpose of buying bills or buying produce?—Yes.

1519 In a stringent money market the holders of produce are obliged to sell, I mean, that it is the tendency of a tight money market to compel the producer to sell his goods?—Yes.

1520 The people who buy the goods are the exporting firms?—Yes.

1521 And the exchange banks buy the exporters' bills?—Yes.

1522 So that a stringent money market compels the holders of goods to sell, and so to reduce the demand for money?—Yes.

1523 Council bills come in and pay for the goods that are sold, therefore you reduce the demand for money?—I am afraid you are beyond me there.

1524 What I wanted to be at is this, that the council bills, when they have gone out to India, have an effect in time of relieving the stringency of the money market when it exists, but that is done through the fact that the people who are borrowing from the banks are obliged to sell their goods?—That is where I am afraid I cannot quite follow you.

1525 In paragraph 30 of Appendix VII, page 223, you enumerate several advantages in selling drafts to meet the convenience of trade. The first is that it serves "to avert or relieve extreme stringency in the money markets of India, which would be detrimental to the commercial prosperity of the country." Is the council bill system really entitled to all the credit you give it? Is it not because the balance of indebtedness is due to India that remittances are wanted for India?—Yes, that would be so.

1526 If Government did not sell bills, specie would be remitted to pay for the balance, would it not?—Yes.

1527 So that Council bills are not really a necessity?—They are not a necessity, because the alterna-

12 June 1913]

Mr F W NEWMARCH

[Continued

tive would be the shipment of gold; but I suppose that the Council bills afford a more convenient mode of remittance—especially when the demand for remittance is very urgent and pressing—than the shipment of gold.

1528 The second advantage which you mention is that "it serves to check excessive accumulations of gold in the Paper Currency Reserve in India which might otherwise have to be lightened by expensive methods." This trouble, of course, arises from the fact that there is no effective gold currency in India?—It arises from the fact, I think, that you must have a certain supply of silver, and some of that gold must be converted, or may have to be converted, from time to time into silver.

1529 But there would be no objection to holding gold in the reserve of the Paper Currency Department if it moved freely into circulation, would there?—No.

1530 The third advantage which you state is that "it serves sometimes to avert extreme stringency in the London money market which would be created if the Secretary of State, by refusing to sell drafts for the convenience of trade, forced large quantities of sovereigns to be taken from London for India," and so on. Is it an advantage to have the Secretary of State placed in the position you describe of either being obliged to sell bills or being left open to the charge of forcing large quantities of sovereigns to be taken from London to India?—I do not think that that charge quite applies.

1531 The transactions which bring about such a situation are not transactions of the Secretary of State, are they?—I am not sure that I quite follow your argument there.

1532 You are here talking about the Secretary of State, by refusing to sell drafts for the convenience of trade, forcing large quantities of sovereigns to be taken to India, and I am asking whether it is any advantage to put the Secretary of State in a position when that can be said about him?—It may be under certain conditions an advantage to India that he should be able to avert an extreme stringency in the London money market which would react upon India.

1533 But does that not put the Secretary of State in the position that if he does not sell, people will say he is forcing gold into India?—I think it is part of the system. He cannot help the situation, in fact.

1534 (*Lord Kitchener*) The fact is, it puts a certain responsibility upon him, does it not?—It does.

1535 Which he exercises, as he does, for the good of India?—Yes.

1536 It is part of the system, and he is willing to be responsible?—Yes.

1537 (*Sir James Bagnall*) You do not support by any examples the doctrine that free sales of Council drafts for the purpose of averting serious disturbance of the London money market may at times be fully justified, and indeed urgently required in the interests of India?—As a frequent borrower on the London market?

1538 Is it not a doctrine which may be interpreted differently by different people, or even by the same person at different times?—I think that is a question to which I cannot help saying yes.

1539 You talk about averting a serious disturbance of the London money market, when you come to exercise your discretion in that way, how is the stringency in the money market measured, is it a question of the height of the Bank of England rate?—That would be a good criterion of it, I suppose.

1540 In the last three or four years you have had very large sales of Council bills—unusually large sales—and at times the bank rate has not been high?—That is so.

1541 How has the stringency effect come into operation then?—I think we may in such cases treat our large sales without reference to stringency in the London money market. They have not been made with any view to averting stringency, but they have been made for the revenue purposes of the Secretary of State, or his Ways and Means purposes simply.

1542 Do you think that Council bills are always an advantage to the London market?—I should say that they were an advantage at times, not to the London money market in particular, but to persons engaged in trade with India.

1543 We are dealing here with the London money market, do you think it is an advantage to the London money market that bills should be sold?—I think so, in so far as they may prevent a large efflux of gold from the London money market, which might bring about a very high bank rate.

1544 Is it not possible that the sale of Council bills may at times operate detrimentally to the London market?—I daresay.

1545 Take the case of the purchase of silver for coinage last year. Is it not the case that the need for silver coinage arose because the stock of rupees in the currency reserve in India was below the point you thought it ought to be at?—Yes.

1546 There was too much gold and too little silver really?—I would not say there was too much gold, but the stock of silver was falling unduly low.

1547 Then the decision was come to to buy silver for coinage, and that purchase was made, I understand, by means of money provided from Council bill sales?—Yes.

1548 These Council bills were sold to lay down money for this purpose, and were paid for in India from the paper currency reserve?—It practically comes to that. They were paid for out of the balances of the Government of India, and those balances were strengthened by the notes which they were able to issue against the new silver.

1549 The silver, when coined, replaced the money in the currency reserve which had been issued in the payment of the Council bills?—Yes.

1550 That silver was an addition to the total currency, was it not?—Yes.

1551 But at the time the decision was arrived at to coin fresh rupees, what was needed was a substitution of rupees for gold in the reserve, was it not?—We might do it either way. We might have taken gold from the currency reserve in London to pay for the silver, in which case, of course, there would have been no expansion of the note circulation, or we might do as we did, buy the silver immediately from balances which led to the circulation being increased by the amount of new silver.

1552 As a matter of fact you did sell Council bills?—Yes.

1553 If a portion of the gold held in the reserve had been used to pay for the silver, there would not have been an addition to the total currency, would there?—No.

1554 By the use of sales of bills to pay for the silver, the London money market had to find the money to pay for that?—In a way, yes.

1555 The amount was over seven millions, was it not?—Yes.

1556 Would it not have been a greater advantage to the London money market to have received the gold to pay for the silver purchases?—Yes.

1557 So that it was no advantage in that case to the London money market to sell the bills?—It was no advantage to the London money market, but I think there was no occasion to consider the London money market in this case.

1558 During the time you were buying silver last year, were the India Office balances lent in the market also being reduced?—Yes they were reduced by the amount that we paid for the silver.

1559 During the same period there was about 7½ millions of gold added to the currency reserve in India?—Gradually, yes, that was in addition to the seven millions of silver.

1560 So in that case it cannot be said that the sales of bills operated in the direction of averting disturbance in the London money market?—I do not know, is not "disturbance" rather too strong?

1561 I do not wish to use too strong language. As a matter of fact, do you not think all these different operations caused some pressure in the London money

12 June 1913]

Mr F. W. NEWMARCH

[Continued

market?—I hardly think so. It was spread over a long period.

1562 That is so far as the London money market is concerned. Is it not possible that the Indian public may have some ground for complaint that the currency was being overweighted by that operation, it being an addition to the currency when it was not necessary?—It is a question, I suppose, whether it was necessary.

1563 Is it not possible that the Indian public might have cause of complaint?—That might be so. I think the difference between buying that silver by using up gold and not immediately expanding the note circulation, and buying it from Treasury balances and so expanding the note circulation, might have only a temporary effect, that is to say, in the one case we would take the seven millions straight out from the gold of the reserve here in London, and in the other case, by doing as we did, our increased sales of Council bills to pay for this silver must reduce the amount of gold that would otherwise go into India, and, therefore, *pro tanto*, obviate a further expansion of the note circulation. Taken in connection with the influx of gold, the immediate effect was to increase the currency reserve very greatly, but I do not think the ultimate effect would be to increase it so much.

1564 That accounts for the very large accumulation of cash in the Government of India's treasuries?—Yes, that is so, in other words, if we had not sold bills in payment of all this silver we should have sold part of those bills in drawing home the Treasury balances.

1565 When you sell Council bills to avert stringency in the London money market, the great advantage to the London money market is when you sell against Treasury balances in India, is it not?—I do not think so, but perhaps I do not quite follow you.

1566 In the case of silver, for example, you draw bills to buy silver, and you spend that money at once?—Yes.

1567 In the case of bills drawn against the Treasury, you may keep your money for a long time?—Yes.

1568 So it is only when you are drawing bills against the Treasury that you give any advantage to the London money market?—That is so, I suppose.

1569 In recent years there have been very high balances caused by these big sales, have there not?—Yes, more directly by these big sales, and those big sales have been caused by the very large Indian surpluses.

1570 Of course the money is provided for by the Indian taxpayer?—By the Indian taxpayer, yes, but not by extra taxation.

1571 You have referred, in paragraph 32 of Appendix VII, page 224, to the transfer, by means of Council bill sales, of about two millions from the gold standard reserve in India to London in about 1910 and 1911, can you explain why that amount was drawn to London?—The way that arises is that besides drawing back the proceeds of the sales of bills upon India, we drew to this side some portion of the six crores that have been held in silver.

1572 Can you explain why that was done?—I could not explain at this moment why that was done, but I will look it up, if you like.\*

1573 I should like to know, if it is convenient to you?—The amount held in India was reduced by that process from six crores to 290 lakhs.

1574 The transfer was a departure, was it not from the intention, as explained when the Indian branch of the reserve was formed?—It was for the time being, yes.

1575 It also meant an addition to the currency in India at that time?—That is so.

1576 Although there was no addition necessary then?—Yes.

1577 You have explained that last year there was a remittance of 1,200,000*l* for profits of coinage from India to England, can you explain why the profits were coined into rupees?—Part of the profits

\* It was done in order to relieve the balances of the Government of India from being unduly depleted by meeting the Secretary of State's drawings.—F. W. N.

were coined into rupees to restore that six crore reserve which had been held in India before those 310 lakhs were remitted home. It was the desire of the Government of India and the Secretary of State that that six crore reserve should be restored, so as soon as we began coining rupees last year the profits were transferred to that silver portion until it was brought up to six crores. After that, the amount was converted into gold, and, as I say, it was this balance of 1,200,000*l* which was remitted home.

1578 That did not exhaust the whole of the profits, did it?—Those two items together I think account for the whole of the profits. The 310 lakhs, which were added to the 290 lakhs already held in India, brought up the amount again to six crores, and then there was the 1,200,000*l* which was transferred home.

1579 You have explained why the three crores were coined into rupees, but what about the balance, why was that coined into rupees?—Because the normal procedure is to hold all the profits of coinage, with the exception of those six crores that are held in silver in gold or gold securities.

1580 Why should it be coined into rupees?—The rupees were coined, but then against those rupees gold was set aside and remitted home.

1581 We have not got the point why you coin the profit into rupees. Why is it necessary to coin the profit into rupees?—What else would you do with it? The seven millions worth of silver produces 15½ crores of rupees, of that, 105 lakhs or thereabouts represent the equivalent of 15 rupees to the *li* on the seven millions of silver coined. The remainder is strictly profits, but it is by custom converted into rupees, and there is no other way in which you can hold it very well.

1582 We have had the suggestion made that if you draw the seven millions from India, that means that you have to replenish in India 10½ crores, and what you ought to do, is it not, is to buy enough silver to coin 10½ crores, and then the difference between the cost of silver that you buy and the seven millions is the profit, and is in sterling already?—I think it may be said that the actual amount required was the 15½ crores, only that is produced partly in the shape of a direct addition to the note circulation and partly in the shape of profits. Of those profits, part goes to replacing the silver portion, or the Indian portion of the Gold Standard Reserve of six crores, and the balance comes indirectly into the Paper Currency Reserve—it is coined rupees, and against it gold is set aside and the value remitted to this country, where it is held in gold.

1583 When you coin the profits into rupees, you give the profits to the Gold Standard Reserve?—Yes, we credit the Gold Standard Reserve with the value of those rupees.

1584 You put the rupees into the reserve and take the gold out?—Yes.

1585 Then you get no profits upon the coinage of those rupees, because it is a substitution of rupees for gold?—I think not. I think we increase the Gold Standard Reserve by the value of those extra rupees. We pass the additional rupees into the balances, but the Government of India remit home the equivalent amount, and that is placed to the Gold Standard Reserve here.

1586 (Chairman) In gold?—Yes in gold.

1587 (Sir James Bryce) You refer in one or two places, for instance, in paragraphs 31 and 32 of Appendix VII (pp 223-4), to the elasticity in the paper currency system, that elasticity is not automatic, is it?—I think it is automatic as far as the gold proportion is concerned, because when trade is good gold flows automatically into India, and goes into the currency reserve and increases the note issue, so to that extent the currency is elastic. The only part of the note issue of the currency that can be called absolutely inelastic is the silver portion.

1588 You say that people can get gold for notes in India, can you say how many places there are in India where those exchanges can be made?—I could not say off-hand at this moment how many places there are, but I can give you that figure if you like.

12 June 1913]

Mr. F. W. NEWMARCH

[Continued

1589 (Mr. Gillan) What you say in Appendix VII, paras 21 and 22 (pp 220-1), about the practice followed in the sale of Council bills might be read, I think, as showing that the system is rather an artificial one?—Yes

1590 At any rate that it is founded to a very great extent on the interests of trade, I think that was shown by some questions put to you by the Chairman?—Yes

1591 In your evidence given this morning I think you spoke about the regulation of the amount of gold going into India?—Perhaps I should not say "regulation." There is no deliberate intention to regulate it, but of course the effect of the Secretary of State's sales is, not intentionally but necessarily, to decrease the amount of gold that goes into India.

1592 May I put it to you in this way, that if any of his drawings are not in pursuance of Government requirements, then to that extent he is keeping gold out of India undoubtedly?—He may be.

1593 He is, is he not?—He may be doing one or two things—he may be keeping gold out of India, and he may at the same time be putting gold into the currency reserve here, as, for instance, when he earmarks gold.

1594 Let us consider the Treasury balances first. If he is drawing in excess of his own requirements he is to that extent keeping gold out of India?—Yes.

1595 On the other hand, if his drawings are in pursuance of his own interests or of Government interests, then, even if he is keeping gold out of India, his action is not open to criticism?—May I remark upon the phrase "his requirements"?

1596 I will come to that later, if you will allow me, that is the position, as I am putting it to you, is it not?—Yes.

1597 Granted that his drawings are in pursuance of his requirements, then you have the two currents which the critics and the Government would desire to have, namely, (1) gold going out to India, and (2) gold coming here, that is so, is it not?—There are two different sets of critics.

1598 I am assuming that the drawings of the Secretary of State are in pursuance of his requirements, either he desires to draw bills or to bring gold home, and to that extent it would not be an interference with the flow of gold to India which is open to any criticism. I am asking your opinion, do you agree?—I see what you mean—yes.

1599 Could you say that the Secretary of State, as a matter of fact, brings home a single rupee that he does not intend to use?—No.

1600 I think Mr. Abrahams has shown in his memorandum that there may be periods during which the Secretary of State has held very high balances, but that, going up to the end of the present budget year, the budget closes with a minimum balance?—The Indian balance, do you mean?

1601 And the home balance?—Yes.

1602 So, assuming that estimate of the current budget to be correct, all the money that has been brought home will, by the end of this year, actually have been used?—Yes. We budgeted for balances of about 12½ millions in India and a little over four millions here, and those can both be considered minimum balances.

1603 Will you say that the drawings have, as a matter of fact, been justified in every case by Government interests quite apart from trade interests?—I would not say always quite apart from trade interests, as I think the point at which the Secretary of State sells in the interests of trade only and without regard to Treasury considerations at all only comes in when he sells as under the Gold Note Act against currency and when the Government of India have not—

1604 Excuse me, I am at the moment on Treasury balances?—Very well, so far as we draw on Treasury balances I do not think we do it in the interests of trade only, we do it in our own interests.

1605 That is the point I am putting to you, that, during the last three or four years the drawings in every case have been justified by Government interests apart from trade interests, although I am not saying

that trade interests were not concerned or that they did not benefit?—I should say that they have been justified.

1606 You make a distinction apparently in the case of the currency drawings?—Yes.

1607 But there, also, is it not the case that the Secretary of State draws money home because it is his policy to hold a certain amount of the currency gold at home?—Yes.

1608 But for that policy he would not draw through currency, would he?—I think he would. I think in 1898, when this plan of drawing through currency was first started, the object was at that time to convenience trade by selling bills and transfers at the maximum price, at a time when the Government of India were not able to meet them from their treasures.

1609 That is to say, it was a part of the policy to hold some of the currency gold at home, was it not?—I think not. I think that was a superadded idea of a later time. If you remember, the intention of the Gold Note Act of 1898 was that the Secretary of State should hold gold for a time until he should choose to send it back to India or pass it into his balances against a corresponding transfer from Treasury to currency reserve in India.

1610 As a matter of fact, in the last few years has the amount of currency gold held at home been in any case excessive?—No, I think not.

1611 If it had been done in the interests of trade, would there not have been the consequence that the Secretary of State would have held more gold in the currency at home than he wished to hold for his own purposes?—Yes, it might be so.

1612 That is what I am putting to you. Do you consider that the currency gold held at home has been excessive, as a matter of fact, from the point of view of the Secretary of State's own requirements?—Certainly not.

1613 I wish to ask you now about the effect of Council bills on the money market of India. I think you said in answer to the Chairman that the drawing of Council bills does not reduce the amount of currency available in India?—Yes.

1614 But you also stated, later on, that you were not at the time considering the question of loans being given by the Government in India?—That is so.

1615 The two things are very much interconnected, are they not?—Yes, they are.

1616 I am not sure that in the answer you gave the Chairman you were not assuming that nothing would take the place of the Council bills. If there were not a system of Council bills, then the funds in payment of the balance of trade would have to be taken into the country in some other way?—Yes.

1617 At the same time the amount of the balance held by the Government of India would be so much the larger?—Yes.

1618 And that larger balance they might lend out in the Indian market?—Yes.

1619 So that the two systems do not come to the same thing?—No.

1620 You would actually have more money available in India if you did not draw on the Government of India by means of your Council bills?—Certainly there would be more money in India, but unless the Government of India departed from their present practice and lent out that money, there would not be more in the market, would there?

1621 That is precisely why I put it to you that, putting aside that question of lending, if you combined the two things, you would have more money?—Yes, if the Government of India lent also, there would be more money.

1622 Considering this exchange business that is done by the Government of India, the holding of a big balance at home in England, the lending of their balance, the holding of a very large balance in India, and the remittance business that they do in the internal trade of the country, you would agree, would you not, that the Government at present do, as a matter of fact, run a very big banking business?—Yes, I suppose we may put it so.

12 June 1913]

Mr F W NEWMARCH

[Continued

1623 And there would be reasons for considering any scheme that got that banking business on commercial lines, that is to say, apart from the Government part of it?—Yes

1624 (*Sr Shapurji Broacha*) When the rupee coins are depleted in the currency, and the Secretary of State in consultation with the Government of India decides that they require more rupees in the currency department they make up their minds to coin a certain number of crores of rupees, 10, or whatever it may be?—Yes

1625 Suppose they make up their minds to coin 4½ crores of rupees to meet the necessities of the currency department, then they would buy two millions of silver to make that 4½ crores of coins, which would consist of 3 crores for the currency department and 1½ crores for the gold reserve?—Yes, approximately

1626 So 3 crores go into the currency for circulation and 1½ crores are sent in the shape of gold here to act as the Gold Standard Reserve?—Yes

1627 Therefore, when the Government of India coined this year 15½ crores or 16 crores, that was required for the purposes of currency according to your calculations?—Yes

1628 You bought seven millions of silver and you put 10½ crores into the currency department, and 5½ crores you have got back in gold here?—No, not 5½, 810 lakhs went into the silver branch in India in the shape of rupees held in the Gold Standard Reserve, not in the Paper Currency Reserve

1629 The profit of that was brought into the Gold Standard Reserve?—Yes, the whole profits go into the Gold Standard Reserve

1630 So of course you do not coin more rupees than you require?—No

1631 Of which for book keeping two thirds goes on account of currency and one third is transferred in gold to London?—Yes, approximately. The exact fraction of the profit depends upon the price of silver, of course

1632 But the Gold Standard Reserve gets its share of gold?—Yes

1633 And whatever the requirements are for the currency you coin so many rupees?—That is the intention

1634 But you cannot divide it up except according to your requirements?—That is so

1635 (*Chairman*) I want to call your attention to the second section of paragraph 11, Appendix VII (page 218). Mr Keynes was asking you about the paper which you put in which is headed "Conditions on which the Secretary of State for India in Council is willing until further notice to purchase sovereigns in transit from Australia or Egypt." You refer to that, I think, in this paragraph 11, where you say that it shows "the conditions under which sovereigns sometimes are purchased". I understand from your evidence that that is scarcely quite correct?—It has been true in the past. What I said was that the offer to purchase in transit had been withdrawn in the year 1910 and had not been renewed since then

1636 Were these conditions only in force for a few months in that particular year?—The offer was originally made in December 1905, then it was withdrawn for a time and renewed. It was withdrawn in June 1906, it was renewed in January 1907 and again withdrawn in March 1907, and it was once more renewed and again withdrawn in 1910. Since then it has not been renewed

1637 In your paper do you give the conditions in the form in which they were last issued?—In the form as revised in August 1910 in which they would be issued if they were issued now

1638 We want you to turn now to the note on the Paper Currency Reserve (see Appendix VIII). Would you tell me what was the reason for the transfer to the Government of the monopoly of note issuing in 1861?—As I have stated in my note, the Presidency banks had been issuing notes for over 20 years before the introduction of the Paper Currency Act of 1861, but those notes had not been legal tender, the total issues had been limited to five crores of rupees, but the actual

circulation appears to have been considerably less and it was confined almost entirely to the three Presidency towns, I think paper money was almost unknown in the greater part of India. I have got here a copy of the speech of the Finance Member of the Government of India in introducing the Bill for the establishment of the Paper Currency Reserve. That sets forth in great detail the advantages of a paper money generally and also the advantages of managing that by Government

1639 Will you give me the name of the Finance Minister?—That was Mr James Wilson, who went out as Finance Member of the Governor-General's Council in the autumn of 1859. He had previously discussed the matter with Sir Charles Wood, the Secretary of State, and he went out and set himself at once to the task of introducing an effective paper currency

1640 (*Sr Robert Chalmers*) He had been Financial Secretary to the Treasury, I believe?—Yes. If you will allow me I will hand in a copy of Mr Wilson's speech (see Appendix X, page 294)

1641 (*Mr Keynes*) Is it not the case that Mr James Wilson died almost immediately?—Yes

1642 And that the actual Bill brought in was considerably different from what he proposed?—Yes

1643 So that he is only responsible for the original drafting of the Government measure?—Yes

1644 And not in any way for the actual terms of the Act?—That is so. Perhaps I might say in brief terms what were the arguments that Mr Wilson adduced in favour of a Government paper currency. He said that in order that a paper currency should fulfil all the purposes of coin it was necessary that it should be legal tender everywhere except at the place of its issue, and the securities for payment of the notes must be absolute and undoubted. If a bank were charged with the issue of notes, it would have to be required not only to deposit securities which would ensure the ultimate payment of the notes, but also a proper reserve of bullion to secure their prompt and immediate payment. He did not think it would be practicable for any bank such as could be established in India to comply with these requirements, consistently with its duty towards the great body of its creditors. The system was only practicable in the case of the Bank of England, owing to its very large capital and the absolute separation between its banking and issuing departments. The Government of India he said, proposed to take the issue department of the Bank of England as their model. Not only would such an issue department possess a security greater perhaps than that of any bank issue in the world, but there would be a large direct profit to the State from the interest derived from the fiduciary portion of the reserve and an indirect advantage in the improvement of the Government credit from the purchase of securities for the paper currency reserve. I should mention that Mr Wilson's Bill did not become law without considerable modifications, the principal being that the lowest denomination of note was fixed at 10 rupees instead of five and that the fiduciary portion of the reserve was limited by the Act, as passed, to four crores of rupees instead of two thirds of the note circulation as proposed by Mr Wilson

1645 (*Chairman*) What is the present proportion of the fiduciary issue?—The present proportion of the fiduciary issue is about 20 per cent of the whole of the note circulation

1646 The actual amount of the fiduciary issue has been steadily increased from time to time, has it not?—Yes, it was originally limited to 4 crores, then it was raised to 6 crores in 1872, to 8 crores in 1890, to 10 crores in 1896, to 12 crores in 1905, and to 14 crores in 1911. The 12 crores were to include 2 crores of securities of the United Kingdom or securities issued by the Secretary of State for India in Council, and the 14 crores, 4 crores of such securities. That is the position at the present time

1647 There has been, as you say, a steady increase in the total amount of fiduciary issue, has the proportion grown or does it remain about the same?—The proportion is decidedly low, it is lower than it has

12 June 1913]

Mr F W NEWMARCH

[Continued

been, I should say, at any time, it is about 20 per cent.

1648 It has been as high, I think, as 40 per cent?—In 1874 it was as much as 61 per cent, but the whole amount of the note issue was much smaller then, now it is larger.

1649 What is the table to which you are referring at the moment?—It is Table I of Note I to Appendix VIII (pp 248-9).

1650 (Sir Robert Chalmers) Could you tell us the class of securities in which Mr Wilson proposed the fiduciary issue should be invested?—I think his proposal was that they should be securities of the Government of India, as they were, as a matter of fact, at first.

1651 (Chairman) I understand that the non-fiduciary portion of the reserve was held in silver up till 1898?—Not entirely, there was a period during which a portion of it was held in gold.

1652 Before 1898?—Yes. The Paper Currency Act of 1861 provided for the issue, under notification of the Government of India, of notes against gold coin or gold bullion. A notification of that kind was issued under the Act on the 23rd November 1864, directing that Government currency notes should until further notice be issued at currency offices and agencies of issue, in exchange for sovereigns and half-sovereigns calculated at the rate of 10 and 5 rupees—10 rupees for the sovereign—to an extent not exceeding one fourth of the total amount of issues represented by coin or by coin and bullion in each circle. At the same time another notification was issued to the effect that until further notice sovereigns and half sovereigns would be received at Indian treasuries in payment of sums due to the Government as the equivalent of 10 and 5 rupees respectively and that sovereigns and half sovereigns would also be paid at the same rates to any persons willing to receive them in payment of claims against Government. If you will look at Table I of Note I to Appendix VIII (pp 248-9), you will see that as a consequence of the first of these notifications gold was held in the Currency Reserve on a small scale in 1864-5 and a few subsequent years, but apparently ceased to come in after 1870-1, the fall in the price of silver rendering the notification a dead letter. I have here copies of these notifications.

1653 In the early stages the whole of the reserve was held in India, was it not?—Yes.

1654 But in 1898 a portion of it was held in London?—Yes.

1655 Originally as a temporary measure?—Yes.

1656 What was the reason for that?—The reason was the excessive demand for the Secretary of State's bills which the Government of India were not able to meet from their Treasury balances, at any rate, not able to meet conveniently from their Treasury balances. The object of this Act (Act II of 1898) was to enable them to meet the drawings for the convenience of trade from the Paper Currency Reserve, the Secretary of State setting aside gold to the Paper Currency Reserve in London to the same extent that the Government of India took out money from the Paper Currency Reserve in India to meet his drawings. That was the beginning of the holding of gold in London.

1657 Should I be right in saying that to that extent the Paper Currency Reserve was used to supplement the deficiencies of the Gold Standard Reserve?—Hardly, I think, but to supplement the deficiencies of the Indian treasuries.

1658 The inability of the Indian Treasury to meet the demands of trade?—Yes.

1659 Was the step required by the necessities of the Secretary of State, or was it wholly caused by his desire to meet the demands of trade?—The arrangement was made in communication with the Government of India. I think that the Government of India were quite as urgent in desiring this legislation as the Secretary of State was.

1660 At that time gold was not legal tender, I think?—No, it was not legal tender until the following year—1899.

1661 Practically the effect was the same as an increase of the fiduciary issue of notes?—It was

similar to that, so was the notification of 1893 under which gold notes could be issued against gold in India.

1662 (Sir Robert Chalmers) Was the difference more than this, that gold was not in 1898 actually legal tender, but was merely received?—That is so. It was received at the value of 15 rupees to the £, but it was not legal tender until 1899.

1663 That had been the case since about 1893?—Yes.

1664 (Chairman) Then this measure of 1898, which was at first adopted as a temporary provision, was extended by the Act of 1900, and subsequently made permanent by the Act of 1902?—Yes.

1665 On what grounds?—Here I might perhaps read to you an extract from the speech of the Finance Member of the Governor-General's Council in introducing the Bill in 1900.

1666 Will you give us the name of the Finance Member again?—That was Sir Edward Law. He said "The silver from which the rupees are to be coined naturally has to be bought, and under the provisions of the present Act the Secretary of State has been obliged to use his Treasury balances—the resources outside the Paper Currency Reserve—for the purchase of that silver, and this has caused considerable difficulty. Being unable to touch the funds in the Paper Currency Reserve we were obliged to find fresh money for our purchases and the result was that we were looking up money in two different places at one and the same time for one and the same purpose. We were holding gold which, owing to the requirements of the Currency Reserve, we could not touch, and we were holding silver to be coined into rupees to be put, when coined into the Currency Reserve in place of that gold. The proposals now made will enable us to consider silver bought for coinage as forming part of the Currency Reserve and will enable the Secretary of State to use the gold in the Currency Reserve for the purchase of silver. At the exact moment when the gold in the Currency Reserve is converted into silver the silver bullion, which is in equally safe keeping, takes its place as part of the Currency Reserve. This arrangement will be a great convenience and save us the necessity of finding money for the purchase of silver." The provision in the Act of 1900 is "The silver bullion so purchased shall, until rupees are added to the Currency Reserve under clause C of this subsection, take the place of the gold so expended as security for the currency notes issued."

1667 The next step in the history of the reserve, I think, is the Act of 1905?—Yes. What I was reading from was the speech on the introduction of the Act of 1900, which was not the one that made the system permanent, but the one which extended it for a time and also provided for the purchase of silver from the gold held in the reserve. Then there was an Act of 1902 which made the previous Act permanent.

1668 Was it brought forward for the same reason?—For the same reason. Also at that time the advantage had come to be realised of holding gold in this country as a support of exchange in a time of crisis. That was adduced then as one of the arguments for making this system permanent.

1669 The primary object of the Gold Standard Reserve is to support exchange?—Yes.

1670 To that extent I was right, was I not in saying that this use of the Currency Reserve is to supplement a deficiency in the Gold Standard Reserve?—Yes, to supplement it.

1671 If the Gold Standard Reserve were greater, would there be any good, from the point of view of exchange in using the Paper Currency Reserve in this way?—No. If one could regard the Gold Standard Reserve as absolutely sufficient—we hope it may be some day—then the need for holding part of the Paper Currency Reserve in London would to some extent disappear, but that convenience would always remain of having gold here which we could convert at once into silver without keeping money lying idle for any time.

[Continued

1672 The reasons which were given by Sir Edward Law?—Yes

1673 The Act of 1905, I think, enlarged the list of securities that could be held on account of the Paper Currency Reserve, was that not so?—Yes

1674 Will you tell me briefly what new class of securities it introduced?—Sterling securities, that is to say, either British Government securities or the sterling securities of the Secretary of State in Council—sterling loans

1675 What was the reason for doing that?—It was thought that in a currency crisis in India, when there was a run upon the currency, probably rupee securities would be much more affected than sterling securities. That was the reason set forth in the Financial Statement of the Government, and I have got a copy of a quotation on that point if you would like to have it (see paragraph 7 of letter from the Government of India dated 18th August 1904, Note II to Appendix VIII, page 255)

1676 I need not trouble you to put it in if you would give me the reason?—That, in fact, is what the reason was

1677 Then in 1911 a further Act was passed, which limited the amount of British Government securities that could be held, was that not so?—Yes. It rather raised the limit. The limit under the Act of 1905 to the amount of sterling securities had been 2 crores out of a total of 12 crores, and this Act raised the limit to 4 crores out of a total of 14 crores

1678 What principle governed those several limits, by what rules or by what instructions were they fixed?—What governed the relationship of the whole of the fiduciary portion to the whole of the note issue, I think, was a general idea of a proportion—two-fifths of the active circulation, or something of that kind. As regards the limit to the sterling portion of the invested part of the reserve, I think the idea was that while the Government regarded it as desirable to hold a portion of the fiduciary reserve in sterling securities, they had no intention of going in that direction beyond a moderate limit, and there was no intention of buying sterling securities in displacement of any part of the rupee holding. They did not want to transfer the whole invested portion, or anything like the whole, from rupee securities into sterling securities

1679 How is it settled how much gold shall be held in India and in London respectively on account of the paper currency reserve?—I think that that has only been settled from time to time, without any established proportion between the two. As I was saying this morning, I think the tendency lately has been rather to look with much more favour upon a large holding of gold than formerly, and that now the position is this—that if we hold a sufficient supply of silver according to the formula adopted a few years ago, that is to say, if we have 24 crores in all, 18 crores being in the currency reserve and six crores in the gold standard reserve, at the beginning of the busy season, and if we have not less than 17½ crores in the two combined at the end of the busy season, of which at least 15 crores would be in the currency reserve—subject to that, and to having 14 crores, as at present it is, invested, the amount of notes issued against gold may increase automatically to any extent that gold flows into the country in the course of trade

1680 The gold which is held in London in the paper currency reserve is, I understand, earmarked at the Bank of England, is that so?—Yes

1681 What is the precise process by which that is effected?—We write a letter to the Bank of England asking them to set aside a certain sum amounting to so many hundred thousands of sovereigns to a deposit account of the Secretary of State called the gold deposit account of the paper currency reserve. That is against the Secretary of State's cash balances, of course. Then we at once inform the Government of India that that has been done, so that simultaneously they will issue notes against that sum so set aside

1682 Does the bank make any charge for that?—Not for the actual process of earmarking, but they make a small charge of ¼d per cent per year for holding the gold. That is all they charge.

1683 Have they always made a charge?—Yes. I think at first when the amount held was smaller they charged ½d, then when the amount was increased to about five millions and it was arranged that the usual holding should be as large an amount as five millions, they reduced their charge to ¼d, which has been in force ever since

1684 What do you regard that charge as being payment for? Is it for the cost of storage room, or what?—Storage room, and, I suppose, safe custody

1685 I think I have seen it suggested that the presence of this earmarked gold in London is really taken into account by the City and by people who are responsible for the London gold reserves generally, and that the earmarked gold is regarded as a possible source of relief in a crisis here, what do you say to that?—I think that is rather an alarmist impression. I suppose the suggestion is that, if the Bank of England reserves of gold were very short, the Secretary of State might conceivably agree to release gold held by him at the Bank of England against an equivalent credit to his cash balances. The result would be equivalent to a remittance of Treasury balances from India to England against a corresponding transfer of currency reserve from England to India. The Government of India would have to transfer from their Treasury balances to their currency reserve a sum exactly equivalent to the sum transferred in the converse direction here. I do not think there is any reason to fear that any such transfer would be made between the Treasury and the currency reserve unless it could be justified in the eyes of the Indian public as being in the interests of India.

1686 Then reference has been made to a reserve of ingots?—The ingot reserve was a reserve that was held for a certain time in India in the shape of silver ingots which had gone through certain stages of preparation for coinage but were not coined. This reserve was held in a shape in which it was convertible into rupees at about five days' notice, and it was held as part of the currency reserve, consequently notes were issued against it, at the rate of 15 rupees to each 1½ worth of silver. I confess I do not quite appreciate the value of this form of reserve, and it was superseded in 1906 by a reserve of coined silver, namely, 600 lakhs of rupees, being held outside the paper currency reserve, that is, in the gold standard reserve

1687 Then there is no ingot reserve to day?—There is no ingot reserve now

1688 In paragraph 33 of Appendix VIII you quote from the financial despatch to the Secretary of State, which says "From first to last our only practical difficulty has been the timely provision of rupees, and notwithstanding various improvements of method that difficulty still remains, and as recent experience has again shown, it constitutes a real danger" (page 245)?—That expressed the Government of India's view of their difficulties

1689 How did that arise?—I think it was in this way. The Government allowed themselves to get very dangerously short of rupees in 1900. As you know, the policy was, after the closing of the Indian mints, to refrain from any new coinage until the silver reserves had run down quite low, and that was persisted in until 1900. Then the supplies were found to be seriously short, and coinage had to be undertaken in a hurry and to a large extent. At several other times between 1900 and 1906, when that passage was written, although the stock of rupees in the currency reserve was not excessively low, the drain on it was sufficiently severe to create nervousness and apprehension in commercial circles as to the sufficiency of the stocks. Perhaps I might say that the difficulties of the Government of India were as much on account of the apprehension of their reserves falling too low as upon finding those reserves practically and actually too low

1690 Has there ever been any actual difficulty in supplying the demand?—I think in 1900 there actually was

1691 But not since that time?—Not since that time. Sometimes the drain of rupees out of the currency reserve has been so rapid that it has led

19 June 1913 ]

Mr F W NEWMARCH

[Continued

to apprehensions that there might not be enough rupees

1692 The demands on the currency reserve are very uncertain, are they not?—They are very unequal, that is to say, in a season of very active trade there is a very large outflow of rupees during the active months of the year, and a partial return during the dull season, on the other hand, in a season of bad trade like 1908-9 there is nothing but a return of rupees from circulation the whole time, so that you get a very great and excessive accumulation, as I have set forth in my note, of rupees

1693 Owing to the large restriction in the currency brought about by natural causes?—Yes

1694 It has been suggested that the opening of a central bank for India and the transfer to it of the management of the paper currency would be an improvement, have you anything to say as to that suggestion?—It is a very large question, and I feel great diffidence in expressing an opinion upon it. It seems to me that some of the arguments that were urged by Mr Wilson in favour of a currency managed by the State perhaps still hold good, such as the view that you would not get in India a bank with a very large capital capable of earning a profit and large enough to be entrusted with this very large and growing currency. The amount of currency note circulation in India has now got up to 69 crores, which represents 46 millions in sterling, if this goes on it will very soon be as large as the whole note issue in this country. It is a very large circulation indeed.

1695 Supposing it were possible to create a central bank of sufficient strength to bear that responsibility, would you see any advantage in its being transferred to such a bank?—I think that rather raises the question whether the present system is defective, and what are the defects in the present system. Perhaps the Commission will hear more evidence on that point.

1696 I was putting my question to you rather as an administrator. Do you think that the Secretary of State would be glad to be relieved of a portion of the responsibility which now falls upon him in these matters?—I am not sure, I hardly think that he would. I have seen a central bank advocated rather as a means of restricting the flow of gold into India, and that is a point of view that I cannot understand exactly, because though I can understand that extended banking facilities would economise the use of gold in India perhaps, I do not see how that could check the influx of gold into India which was required by the balance of trade.

1697 From what you have said it is clear that the use of notes has been very much extended in India in recent years?—Yes, very much.

1698 The extension has been almost in geometric ratio?—It has.

1699 That is all to the good?—I suppose that is all to the good. I think it has been very largely due to the universalisation of some of the denominations of notes, making them encashable outside their own circle.

1700 Are they now encashable over the whole of India?—They are with one or two exceptions. There are one or two notes that have not been universalised yet.

1701 Now I want to ask you some questions with reference to something you said this morning. You have just told me that you consider it an advantage to have a large note circulation?—Yes, I do.

1702 This morning you said in reply to Sir Shapurji that the Government of India and the Secretary of State had no desire to discourage the free influx of gold into India?—That is so.

1703 In answer to Sir Ernest Cable you went a little further, and I think you said that you would wish everything to be done to encourage gold to go into circulation?—Into circulation, yes.

1704 Why? You have a paper currency and you have a silver token currency, and you say it is very desirable that the paper currency should be increased as much as possible, then why do you want to increase the gold currency?—Because in India I go on the

idea that so far as gold might displace rupees in circulation, the exchange would be on a sounder basis.

1705 That would only be the case if the gold which was in circulation was available for the support of exchange in a time of crisis?—That is so.

1706 Does your experience lead you to think that it is so available?—Certainly the experience of 1907-8 and 1908-9 does not show that it was used to any large extent for that purpose, but one cannot help hoping that if it became more widely in circulation it would serve that purpose.

1707 A great deal of gold was issued in that time probably through the Treasuries?—A good deal was issued, but the Government of India found themselves obliged to restrict the issues, as the drain upon their gold reduced it to such a very small quantity that they were not able at one time to meet all the demands upon it.

1708 I think we have had it in evidence that over 4½ millions was actually issued?—That is so.

1709 And that not more than a quarter of a million was exported?—I think that is so.

1710 Would it not appear from those circumstances that the gold which is issued in a time of crisis does not support exchange?—Yes. That was rather the experience of 1907-8.

1711 There is always a certain tendency to hoard the precious metals in India, is there not?—Yes, there seems to be.

1712 Does the history of that crisis and of the dealings in gold at that time, support the idea that in a moment of crisis the tendency to hoard is even greater than usual?—I do not know, I am not sure that the evidence shows that.

1713 At any rate, it does show that as far as it can be traced very little advantage was derived at that time for the support of exchange from the gold in circulation?—Yes.

1714 And that the gold which had gone into circulation had either remained in circulation in India or was hoarded?—Yes.

1715 But was not used to support exchange?—That is so.

1716 Do you still think that it is of real importance to increase the gold circulation in the hope of supporting exchange?—I cannot help thinking that the more gold supersedes silver in circulation, the smaller is the necessity for coming silver and the whole circulation gets more nearly on a gold basis. Then any coming of silver, one must remember, depletes our resources of gold which we hold for the support of exchange, that is to say, if we buy silver to be coined into rupees by directly taking out gold from the currency reserve here, that directly weakens our gold resources, on the other hand, if we pay for the silver by the sale of Council Bills, that has, I think, the same effect, only in a more gradual way, because the larger our drawings to pay for that silver, the less gold will go into India for some time.

1717 Of course at a moment of crisis like that, the currency would be restricted, naturally?—I do not think that the currency was so very much restricted at that period, because silver came back very largely from circulation into the reserve.

1718 The amount of silver in circulation would be less at a moment of crisis than it had been in the last prosperous year before?—Yes, the amount in circulation would be.

1719 Therefore, the Secretary of State would not be buying silver at that moment?—No.

1720 Did not the answer you gave me just now depend upon the assumption that the Secretary of State would be buying silver at that time?—I did not mean that he would be buying in a crisis like that. I meant that the greater the extent to which the sovereign supersedes the rupee in circulation the smaller will be the general need for the coinage of rupees, and the less will be the permanent perennial need for coming more rupees.

1721 On the other hand, the more the sovereign goes into circulation and displaces the rupee, the less

[ 12 June 1913 ]

Mr F W NEWMARCH

[ *Continued* ]

gold you will have immediately available in your paper currency reserve?—Yes, that would be so

1722 Would not any advantage that you get from the greater amount of gold in circulation be counter balanced by the disadvantage of having less gold immediately available in your reserve?—It looks as if it would be so

1723 Is not gold in your paper currency reserve of greater use to you, at any rate, for the maintenance of exchange in a time of crisis than gold in circulation?—I must admit that that seems to be so

1724 Thinking the matter over, do you still hold that it is to the interests of the Indian Government to induce people to put gold into circulation?—I would not like to say it was to their interest to induce people to put gold into circulation exactly

1725 I quite understand, you would desire to give them whatever they want?—To give them every facility, as, in fact the Government does now

1726 Do you think on reflection that it is better for the Government of India and for Indian interests if they take gold out, or if they take silver?—I must say I am not quite convinced that a large quantity of sovereigns in circulation would not be a good thing if the balance of trade is sufficient to maintain a large stock in the currency reserve as well

1727 (*Lord Faber*) Pursuing the argument of the Chairman at this moment as to what I would call the different kinds of money, I suppose you will agree with me in thinking that there are practically four kinds of money in use now—(1) silver, (2) gold, (3) notes, (4) best of all, cheques?—Yes

1728 Do you agree with me in thinking that the worst of these is silver, because it is so very bulky, and that if you have to pay everything in silver it is not convenient for trade, and therefore gold is better than silver because it is much less bulky?—That is so

1729 Notes, again, are better than gold, because notes are handier and it saves the wear and tear of the gold, and you can cover the notes?—Yes

1730 Then again there is the cheque, which is better than everything else, and is the system we have at home practically?—Yes

1731 So that really one of the arguments in favour of gold as against silver is that it is much more easily handled?—Yes

1732 I suppose the very fact of earmarking gold and advertising it as being ear-marked places it outside the market at home, and the market knows it?—Certainly

1733 (*Sir Robert Chalmers*) What profits do you make on an average from the note issue of the Government of India?—Do you mean from the invested reserve?

1734 What profit is there on the issue taken as a whole, net?—The receipts consist almost entirely of the interest on the investments. The invested amount is 14 crores, that is to say, 9½ millions sterling. I cannot say exactly at what prices all those securities have been bought, so anything we say would have to be a rough estimate. In the year 1911–2 the receipts amounted to 306,902*l.*, the charges to 155,536*l.*, and the net profit to 151,266*l.*

1735 Anyhow a substantial profit is made from the note issue which is in the hands of the Government?—Yes

1736 Were the issue handed over by the Government to a bank, with that presumably would go the profit in whole or in part?—Yes

1737 Do you see any particular reason for handing over that profit?—Personally I must say I do not

1738 Now about the securities, in the main they are rupee securities in India, are they not?—Yes

1739 Supposing, which Heaven forbid, there were a run and people wanted actual legal tender coin in lieu of their notes, do you conceive that it would be possible to realise to any large extent in India the Indian rupee securities held against the note issue?—I am afraid any very large realisation on the Indian market would depress the price very seriously

1740 Conceivably you could imagine the case where you might not be able to realise them at all?—

That is an argument so far as it goes in favour of holding the larger part in sterling securities

1741 That question leads to the general question of realisability in the great hour of need, and that question leads to this—that you want as regards India or any other country to have your securities in the greatest international market?—Yes

1742 You take that view, do you?—That is the conclusion, I think

1743 Historically, you may not be very familiar with this, or you may, but I suppose Mr Wilson put the fiduciary issue into Indian Government securities on the analogy, with which he was very familiar, of the Bank Acts of 1844 and 1845?—Yes, and also, I think, the argument weighed with him very much that the purchase of Indian securities from time to time would improve the credit of the Government of India in the Indian markets

1744 Would you go so far as to take the view that the issue of notes means a profit, and that there is in theory no more reason why a bank should issue notes to profit than it should issue token coins at a profit?—I am hardly prepared for that question

1745 (*Sir Ernest Cable*) Did I understand you to say in answer to Lord Faber that you considered gold more suitable for the needs of the people of India?—No. Lord Faber's point was that gold is more portable and less bulky than silver, and that one must admit. If you ask whether silver is on other grounds more suitable for India, of course there is this to be said—that the Indian people want a small denomination of coin. One great difficulty in the way of the sovereign going widely into circulation is that it is so large a coin and of such high value. They want a smaller unit

1746 I was only trying to bring out the point that the great bulk of the transactions in India are very small?—That is so

1747 Even down to, we will say, 4*d.*, which would maintain a family for one day?—Yes

1748 Therefore silver is more suitable for the internal needs?—It is more suitable in that way, and so would be notes of small denomination, particularly the 5 rupee note

1749 So there is no particular need to encourage the use of gold in India for the benefit of the people?—From that point of view, no

1750 Of course the institution of a gold mint in India would be bound to encourage the use of gold if it was successful?—Yes. I do not, however, think that a gold mint would greatly increase the supply of sovereigns in India

1751 (*Mr Keynes*) Recent legislation, by making notes up to 100 rupees universal legal tender, has almost entirely abolished the necessity for the old circle system of issue, has it not?—I should hardly think that

1752 What purposes does it now serve?—I do not see exactly how you could dispense with the circles of issue. You have not got absolute universalisation of all the notes, as a matter of fact

1753 Now that they are universal legal tender up to 100 rupees, it would make very little difference to universalise them completely?—Yes

1754 What purpose does the circle system still serve?—Is it not an advantage? I should have thought it was an advantage to have a comparatively large number of different offices from which a note could be issued

1755 Certainly, I was not meaning to limit the number of offices, I was suggesting that you should abolish the division of the offices into different circles—that you should make of India one circle, but that you should retain the existing number of offices, would there be any objection to that?—I am hardly prepared to offer an opinion on that

1756 No objection occurs to you at the moment, does it?—No

1757 The demand for currency in India is very seasonal, is it not?—Yes

1758 In other countries a seasonal demand is met by increased cheque currency or note currency against temporary security, is it not?—Yes

12 June 1913]

Mr F W NEWMARCH

[Continued

1759 For instance, in Germany or in France bills are discounted by the State banks and notes issued against them, are they not?—I understand that is so

1760 But in India nothing of the sort exists, so that there is complete inelasticity?—Yes

1761 Would you be of opinion that this was partly responsible for the high bank rate at certain times of the year?—I am not sure that that is so, because, as I have said before, the note issue does really expand with great elasticity in times of active trade as a consequence of the influx of gold

1762 When more notes are issued, the Government only changes one form of currency into another, does it not?—Yes

1763 But it does not increase the total volume of currency?—Surely the volume of currency is increased by imports when the sovereigns come in, or are imported from abroad

1764 No doubt the import of sovereigns increases the currency, but the changing them into notes does not increase it, and the issue of notes against sovereigns does not increase the volume of currency?—I should have thought it would, myself

1765 I do not think we are in disagreement, I am merely saying that the volume of currency cannot be increased except in so far as people bring fresh currency into the country?—That is so

1766 Whereas in France or in Germany there is another way of increasing currency, namely, by issuing more notes against temporary security?—Yes

1767 I am asking whether the absence of that provision in the Indian system may be partly responsible for the high rate of discount at the busy season?—It may be so

1768 If notes could temporarily be issued in the busy season against some temporary security, the volume of currency would be increased and seasonal stringency might be diminished?—That is so

1769 (Sir Robert Chalmers) Subject always to the use of cheques?—Yes

1770 (Mr Keynes) You are assuming the possibility of the increase of cheques is not very great in India?—Yes

1771 (Chairman) As to the part which cheques play in the Indian currency, are they an important factor?—They are not a very important factor, I fancy but other people can much better tell you about that than I can

1772 (Mr Keynes) Outside the Presidency towns, I should be right in saying, should I not, that there is no means at present of increasing the currency except by importing it from abroad?—Yes, by the natural influx of gold, or by the artificial import of silver

1773 Would you be in favour of some change in legislation by which the note issue could be used to supply the necessary elasticity after the French or German model?—As I say, it is not a question on which I feel able to offer any very definite opinion. I think you will always have great fluctuations in the Indian bank rate—an 8 per cent rate in the winter and a 3 per cent rate in the summer seems to be a regular seasonal thing

1774 At present?—Yes, at present, formerly the rates used to be very much higher

1775 I meant by "at present" under the existing system?—Under a similar system formerly the rates were very much higher. Under the present system of the free influx of gold, and the free expansion of the note circulation, the fluctuations in the bank rates are very much smaller than they used to be

1776 I might get, perhaps, at the same point in another way. The fundamental principle which underlies the paper currency reserve was adopted at the time when the Bank of England note system was orthodox, and where there was little or no experience of any other system. Is not that so?—Yes

1777 While the Indian system has since lapsed, if I may say so, into something rather different, and though some modifications have been deliberately introduced from time to time, the general principle underlying the note issue has never, in the past 60 years, been fundamentally reconsidered?—No, I suppose not.

1778 There is now a great deal of experience drawn from various European countries of note issues regulated on quite different principles?—Yes

1779 If the principle of the note issue in India were rather radically altered in the light of European experience, might not that much needed element of elasticity be acquired in some degree?—I suppose that might be so

1780 These possibilities have not been considered, but, *prima facie*, there are advantages which might conceivably be attained by some such modification?—I think that is so

1781 You would acquiesce in that view?—Yes

1782 (Sir Robert Chalmers) You cannot use your credit more than once, that, perhaps, is a general proposition you might agree to?—Yes

1783 If you use it in the form of notes, you cannot use it in the form of cheques?—I suppose that is so

1784 (Sir Shapurji Broacha) At present the note circulation is 68 or 69 crores?—Yes

1785 The reserve against that is composed of 14 crores of securities, 16 crores of rupees and about 38 crores of sovereigns?—That is so

1786 At present there is no restriction to give gold against ether notes or rupees, is there?—There is no restriction

1787 Of the 38 crores of gold, you have 9 crores in England?—About that

1788 And they are ear marked?—Yes

1789 If they want those 9 crores back in India, is there any reason in it?—I see no reason why India should want those 9 crores. India has quite an abundant stock in the currency reserve on which they can draw freely

1790 There can be no reason for asking for the 9 crores, unless there is a want of confidence in the Government of England?—Yes

1791 They could not make any use of it so long as it is ear-marked, whether it is in India or here?—No, it would serve no other purpose than as security for those notes

1792 I suppose the whole debt of India, including railways, is about 500 millions?—I dare say you are right

1793 Of which only 30 millions is held in India?—More, I think. The total Government debt including railway debt is about 274½ millions, of which nearly 88 millions are held in India

1794 India is a debtor country. Do you know that Russia has 60 millions in gold here and in France because of her foreign debt?—I dare say

1795 And so has Japan lodged her gold here because of her foreign debt?—Yes

1796 I suppose England holds all except about 80 millions of the 500 millions of the debt of India, and Indians hold not more than 30 millions, so I think it is right that a good portion of the gold should remain in England. The only reason that could be advanced for asking to keep the gold in India would be a sort of want of confidence—nothing else?—Yes

1797 I see in to day's "Times" \* that you have put some gold standard reserve money into securities during the last month?—Yes, there has been a change of investments

1798 I thought we had an assurance from the Secretary of State that he was going to put 5 millions into liquid gold?—He is doing so

1799 So he has not commenced going back?—Not at all. Any change in the investments that has been made in the last month or two has been merely an exchange from one investment into another, and no part of that stock of gold which is in process of accumulation at the Bank of England has been taken out. It is the intention of the Secretary of State to go on increasing that from the profits of coinage and from the interest on securities held, until it reaches 5 millions

1800 Can you tell me any possible advantage India would derive by forcing gold upon them so long as a rupee is 16 annas?—I do not see any object in forcing gold upon the people

\* Thursday, June 12th, 1913.

12 June 1913]

Mr F W NEWMARCH

[Continued

1801 Then why did the staff of the Secretary of State and the staff of the Government of India say we should like to see the gold better circulated?—I think there is a difference between those two points of view—liking it to be better circulated, and pressing it upon the people. I think there is no desire to press it upon the people.

1802 I think at present it is not within the bounds of possibility, but suppose a gold currency were made in India, that would mean that you were to give gold against all demands?—Yes, it would.

1803 I think you know that there is a tremendous quantity of rupees in India which have been coined in the present century?—Yes.

1804 Do you think if people were to tender them against gold, the gold would suffice?—No.

1805 People say, "Let us have a gold currency," but a gold currency means that the Gresham Law would come into being, that is to say, that the cheaper metal would drive away the dearer metal, because you know gold is better, and it is better liked every year in India?—Yes.

1806 But we have not a store of gold at present to make a gold currency?—That is so, we have not.

1807 (Sir James Begbie) You gave us particulars of the coinage of silver last year, and in section 1 of paragraph 29 of Appendix VIII (page 243) you say there was a coinage to the extent of about 1 575 lakhs of rupees carried out last year, could you give us the quantity and average cost of the silver, and how the rupees were coined or disposed of and found their way into the reserves?—Yes, I could. If you would like a statement laid before the Commission I will put it in\*.

1808 (Mr Gillan) In paragraph 6 of Appendix VIII (page 240) you say the invested portion of the reserve is now 14 crores of rupees, of which 10 crores are represented by securities of the Government of India, and 4 crores by securities of the "British Government." In dealing with the proportion of sterling and rupee securities the Government of India in their letter of 18th August 1904, I think gave certain reasons for increasing the sterling investment which appear in Note II to Appendix VIII (pp 255-74)?—Yes.

1809 They said that in the event of a serious financial or political crisis occurring in India the rupee securities would inevitably be depreciated and difficult to sell, "while it is probable that sterling securities would not be so seriously affected owing to the greater capacity and solidity of the London market." They also said "the position of sterling securities would carry the further advantages that the proceeds would be receivable in London, i.e., in the market in which if more rupees were required we should have to buy silver, and in which also if gold were required for strengthening exchange it would make itself felt." Do you agree with those reasons?—I think there is great force in them.

1810 Do you think this proportion, of 10 and 4, which at present obtains is a good proportion, or would you be inclined to increase the sterling investments?—I would say the sterling portion was large enough at present. After all, it is very much a question for the Indian authorities, I think, to consider, but my own personal opinion would be that a further increase might be made to the rupee portion.

1811 The total investment is 14 crores, how is that determined—how is the limit fixed?—The initiative is generally taken by the Government of India. They write home to the Secretary of State after consultation with the Presidency banks, and they compare the ratio borne by the invested portion of the reserve to the average total circulation gross and net of the three previous years, or the two previous years, with the ratio borne by the one to the other at the date when the last increase of the invested portion of the reserve was made. And then they usually suggest an increase to bring the invested amount up to something like the same proportion of the whole that it bore when last the change was made.

\* This statement was not eventually asked for.

1812 In paragraph 46 of Appendix VIII, page 247 you say, "a further increase of the invested portion of the reserve will no doubt soon become practicable," going on the principle that has been followed in the proportion of investments to the total circulation, it would be possible, would it not, to make an investment now—immediately?—Yes, I should say so.

1813 A considerable investment?—The present proportion of the investment is very low indeed, it is only about 20 per cent.

1814 That would be immediately practicable?—I should say so.

1815 Would you prefer that that should be invested in some permanent form such as is the case at present, or should it be maintained in order to be available for lending out in India?—I should think the preferable course would be, that it should be invested either in rupee securities or else in sterling short dated securities in this country. I think that the Secretary of State would not be likely again to adopt the practice that was adopted some time ago of investing in Consols or permanent securities, but he would prefer short-dated securities, if the securities were sterling ones. I think there is great deal to be said in favour of adding to the rupee investments.

1816 From what you said to me previously, I understand that you do not think it is desirable to increase further at present the sterling investments?—No. My private opinion rather would be in favour of adding to the rupee investment.

1817 I think Sir Robert Chalmers put it to you that there was a certain danger in adding to the rupee securities, and you agreed with him?—Yes, but one cannot overlook a consideration which I put in this way. Having regard to the large number of notes always held by the Government, I think the danger of a run on the reserve of such dimensions as to exhaust first the metallic reserve, then the sterling securities, and then to trench on the rupee securities is so remote that the danger of adding to the rupee-invested portion is not very serious.

1818 What is the particular advantage in your view of adding to the rupee security instead of to the sterling security?—My impression is that it would be more popular with the Indian people and that it would rather improve the market for rupee securities.

1819 The Chairman asked you what happened to the gold that was taken out of the country in 1907-8. There are figures in the Comptroller-General's Report for 1910-1, which include the receipts in sovereigns of Post Offices and Railways (page 13). I do not know if you have got that Report?—No, I have not that by me here.

1820 Those figures show that up to 1908-9, there was a matter of a couple of millions received in the Post Offices and railways jointly, and that it amounted to about 300,000 in 1909-10. What conclusion would you draw from that, taking these receipts as an indication of the amount of gold that was in circulation and in use as currency?—I suppose the indication rather would be that gold went into hoards.

1821 You said in answer to the Chairman that small notes up to 100 rupees are now encashable all over India?—That is so.

1822 That means really that they are encashable at eight centres?—Yes.

1823 The legal obligation to give coin for notes obtaining only in those eight places?—Yes.

1824 There is a liability, is there not, for the notes to go to a discount at any other place?—I was not aware of that.

1825 Since there is not a legal obligation to pay cash for them in any other place, that is what one would expect is it not?—I suppose it is, but I have not thought of that.

1826 Would it not be a favourable thing for the note circulation if the facilities for encashment were increased and if there were a large number of centres where cash and notes were freely exchanged?—Yes, I suppose it would.

1827 Then there is the point which Mr Keynes put to you about the elasticity of the note system,

12 June 1913]

Mr F W NEWMARCH.

[Continued]

the Indian system at present is entirely wanting in elasticity, is it not?—Perhaps it is going rather far to say it is entirely wanting in elasticity if it expands so readily with the influx of gold, but I see Mr Keynes' point

1828 You agreed, I think, with the Chairman that the increase which has taken place in the note circulation of recent years has been a good thing?—Certainly

1829 Considering these two points that I have put to you about the places of encashment and the introduction of some method of elasticity, does it not appear to you that a further increase in the gold circulation would probably be more easily obtained by means of a bank than by means of a Government department?—It is rather a question of the method to be adopted than of the particular agency employed to do it

1830 I was asking you your opinion, which do you consider to be the most efficient agent for the purpose in view?—Personally, I do not quite see,

assuming that the policy were decided upon, that the one agency would be more favourable than the other

1831 Sir Robert Chalmers asked you a question about the profits that were made out of the paper currency and about handing over those profits to a bank or banks, the question of revising the agreements with the presidency banks is at present under consideration, is it not?—I believe it is

1832 It is the case, is it not, that we leave with the Presidency banks at present balances very much larger than we are compelled under agreement to leave with them?—Yes

1833 And that those balances are left free of interest?—Yes

1834 So that the whole question is one of remuneration?—Yes

1835 In connection with that this matter of the profits on the notes might be considered at the same time?—Yes

1836 It is a part of the same general system or arrangement?—Yes

The witness withdrew

At the India Office, Whitehall, S.W.

SIXTH DAY.

Friday, June 13, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, MP (*Chairman*)

Lord FABER  
 Sir ROBERT CHALMERS, KCB  
 Sir ERNEST CABLE  
 Sir SHAPURJI BUBHOEJI BROACHA  
 Sir JAMES BEGGIE

Mr ROBERT WOODRUM GILLAN, C.S.I.  
 Mr HENRY NEVILLE GLADSTONE  
 Mr JOHN MAYNARD KEYNES  
 Mr BASIL P BLACKETT (*Secretary*).

Mr WALTER BADOCK, C.S.I., called and examined

1837 (*Chairman*) You are Accountant-General at the India Office, I understand?—That is so

1838 You have handed in to the Commission two memoranda, one under the head of The Placing of Cash Balances on Loan or Deposit, and the other regarding the authority required for payments made at the India Office and the system of control exercised in respect of them I propose to include those in our published evidence?—That will be my wish (see Appendices XI and XII)

1839 Turning to the memorandum on The Placing of Cash Balances, Appendix XI, on pages 315-6 you give the list of borrowers approved by the Secretary of State in Council on 31st March 1913, will you tell me how that list was made up?—The list of applications of approved borrowers is not made up by solicitation on the part of this office. We never ask anyone to join it, but applications can be made by any firm of suitable standing and resources. These applications are ordinarily made to the broker, the broker would make such inquiries as he thought suitable and add any opinion of his own, and would forward the application to me. I should then transmit it to the Chairman of the Finance Committee, who would also make any inquiries that he thought desirable and bring his own knowledge to bear on the matter. Then he would make a recommendation, which would be sent to me with any recommendation that he might think it suitable to attach. I should then prepare a minute which would go to the Under Secretary of State, and would be laid before the Finance Committee and before the Secretary of State.

1840 When you say Under Secretary, I presume you mean the Permanent Under Secretary?—Yes. It is the usual routine of the office that papers for Committees of Council are sent to the Permanent Under Secretary first. In recent cases an application has gone to the Under Secretary first, then to the Finance Committee, and then after approval by them has been approved by the Secretary of State in Council

1841 On whom do you consider that the actual responsibility, the practical responsibility, for the selection or rejection of a name rests, under those circumstances?—I do not like to discriminate between the actual and practical, but, of course, very great responsibility rests upon the expert advisers to the Secretary of State. The decision is the decision of the Secretary of State in Council

1842 Is the submission of a name to the Secretary of State in Council more than a form, if it has been approved by the other authorities you have mentioned?—I should not like to say that was the case, because it is open to any member of the Council who has any personal knowledge to make any comment he chooses to make, and to take any action he may think fit in support of his opinion.

1843 It would, I presume, naturally be unlikely that criticism would be heard at that stage?—I should say it was unlikely. I might add, perhaps, that there are two, and there have been for many years two, City members on the Council, so that it is not solely the decision of one City member in as far as it is a decision at all.

13 June 1913]

Mr. WALTER BADOCK, C.S.I.

[Continued]

1844 Is the Chairman of the Finance Committee always a City member?—As far as my recollection goes it has been so, I think I can certainly say for 30 years it has been so.

1845 He is appointed by the Secretary of State, is he?—The present chairman has been I am not quite sure what the practice as regards that matter has been. I happen to know how Sir Felix Schuster was appointed, but that perhaps I think you had better ask of the Permanent Under Secretary.

1846 Do you happen to know for how long the appointment is made?—No, I do not.

1847 (Sir Robert Chalmers) Are you speaking in answer to the Chairman about the appointment of this commercial member as Chairman of the Finance Committee?—I understood the Chairman to put that question to me.

1848 You would be able to say what is the term of appointment to be a member of the Council?—Yes, that under the present Act is seven years.

1849 (Chairman) Are the members of the Finance Committee necessarily members of the Council?—Yes, it is a committee of the Council. I might explain perhaps that in recent years, since we have had large investments to make of the Gold Standard Reserve and the Paper Currency Reserve, and financial transactions on a larger scale than hitherto, it has been necessary sometimes to delegate the powers of the Secretary of State to an individual, because the offers are offered and they have to be accepted or rejected at once, and transactions must be considered on their merits and decided immediately, being financial matters. For that purpose I know the Finance Committee and the Secretary of State delegate their powers to the Chairman or to the Chairman and one or two others, and the Chairman, I know, has recently been nominated for that purpose, but what took place before Sir Felix Schuster's time I cannot say.

1850 I presume that any transactions of that kind authorised by him would be reported at the earliest meeting?—Undoubtedly.

1851 When was the present practice instituted, under which applications come before the Finance Committee and the Secretary of State as well as before the Chairman?—As you know, this system was inherited from the East India Company. It was treated for many years in rather a confidential way, as, naturally, in regard to the information which a City member might have about firms and so on, it would not be convenient always to put all he knew on paper. He was especially qualified to deal with these matters, and until about 1912 the Chairman used provisionally to admit firms to the approved list, and loans were made to them and that was approved by the Finance Committee. Every detail of every loan has always been put before the Finance Committee weekly, and the appearance of a new name would at once be noticed and, if it was approved by the Committee, sanction to the admission of the name was implied of course. In 1906 the full borrowing list was submitted to the Finance Committee quarterly, and new admissions were recorded or any changes in it from the previous quarter, and it was formally approved. Not until December 1912 was the approval of the Secretary of State in Council given to the full borrowing list. The present procedure, as I have said, is to put every transaction before the Finance Committee.

1852 Have you any special reasons for the change?—Yes.

1853 Was it due to the magnitude of the then operations?—It was done really because it was desired to indicate that the decisions taken and the approval given were not those of a committee or an individual but those of the Secretary of State in Council, it was desired to make that more clear.

1854 I understand from paragraph 3 of Appendix XI that loans are only made in sums of 50,000*l.* or in multiples of 50,000*l.*?—Yes. That was inherited from the East India Company. I have looked back into their affairs, and I find that they practically never lent less than 50,000*l.* and multiples of 50,000*l.*, there were one or two cases where they lent 25,000*l.*, but I cannot trace

any loan of a smaller amount. We find it very desirable to maintain that limit, because, in the first place, it ensures that firms who can produce the requisite amount of security are firms of a certain standing who would not be likely to be in difficulties in any ordinary movement of the money market. Of course in our loans the very first consideration, more important than any question of interest, is the question of the availability of the principal and the security. In the second place, the 50,000*l.* minimum is held because it keeps away the applications of small firms who might be willing to pay a high rate of interest and to whom it would not be quite safe to lend.

1855 I think you do suggest in your memorandum that occasionally a little money remains for a short time unlent?—Yes.

1856 Of course it does not amount to 50,000*l.*?—That is so. We consider the points that I put before you, namely, the security and the availability of the money, to be more important than investing the balance right up to the hilt. If we took small sums to one firm, and lent, say 25,000*l.*, so as to get nearer to our minimum balance, we could not very well use the argument that we only lend in blocks of 50,000*l.* when we receive applications from firms that it would be undesirable, perhaps, to put on the list.

1857 The only question that occurs to me is whether, when you have an approved borrower of 50,000*l.*, you might in such a case place an additional 25,000*l.* with him instead of saying that you would place another 50,000*l.*?—It might be so, but then we could not say, as we do say now, that we only lend in blocks of 50,000*l.* and multiples of 50,000*l.*

1858 You explain in paragraph 4 of Appendix XI how you arrive at the period for which you can afford to lend money, is the period of six weeks the absolute maximum period for any loan?—There is no maximum laid down by the Secretary of State in Council. It has simply been a practice which has been adhered to throughout, except in the special time when we had very large balances, when the excess over anything that could possibly be required in the immediate future was put on deposit at the banks, otherwise the six weeks' maximum has been maintained throughout. It has this advantage first, that of course we can, in emergency, call the whole balance in very rapidly, and secondly, if we hear rumours about any firm we are able to call the money in much more rapidly than we otherwise could, and possibly save ourselves from loss.

1859 It would naturally happen, I suppose, that in fact sums remain for a very much longer period with a single borrower, being renewed and renewed?—Undoubtedly, but only when he will pay the highest rate of the day. We unhesitatingly recall if the holder of a loan will not pay the rate which others will pay.

1860 You give us a list in paragraph 5 of Appendix XI of the present securities which the broker is authorised to accept for those loans, and I see in the correspondence on page 313 of the Appendix that that list has recently been extended?—That is so.

1861 Is that list based on any general principle?—Yes, practically it rests on the provisions of the Government of India Act, 1858. That Act laid down the full financial procedure of the Secretary of State. I have a copy here, and perhaps you might like to look at it while I am explaining its effect. If you will look at section 45 you will see that the Act raises in the books of the Governor and Company of the Bank of England an account called the Stock Account of the Secretary of State in Council of India. The history of that is that at the time this Act was passed these loaning operations were going on as now, and the East India Company was the holder of very similar securities to what we are holding now, namely, Consols and Government Annuities. It was directed by this Act that all such securities should be transferred to the Stock Account at the Bank of England and all such securities were so transferred. The Act provides, in section 48, that bearer securities shall be held at the Bank of England, and another section

13 June 1913]

Mr WALTER BADOCK, C.S.I.

[Continued]

provides that all cash payments and receipts shall be at the Bank of England. These sections 43 to 48 practically determine the financial procedure of the Secretary of State.

1862 But they do not determine the class of stocks, do they?—Only in this way. The Bank of England cannot transfer any stocks into the stock account of the Secretary of State unless those stocks are transferable at the bank. That practically excludes those which are inscribed at other banks. That has been throughout the restriction which has been placed upon the loans of the Secretary of State, that we take the securities which are transferable, or can be transferred, into the stock account of the Secretary of State in Council of India at the Bank of England. That limits us a great deal with regard to registered securities. The terms of section 48, which deals with bearer securities, are much wider and enable us to include colonial bonds, it would also enable us to include other bearer securities if it was considered desirable. I might point out, too, that part of our system, as I have explained in paragraph 10 of Appendix XI (page 311), is that as a protection, I instruct the cashier of the Bank of England not to pay the broker until either the bearer securities have been deposited on the securities have been transferred to the stock account of the Secretary of State at the Bank of England. The cashiers, who act under a power of attorney from the Secretary of State, can only know this if it takes place at the bank, or they can only know it immediately, they can only have direct knowledge of it then. As a matter of fact, I know the cashier, before he pays it, sends for the transfer book from the bank, and sees for himself that another department has made the transfer.

1863 I am not competent to interpret this statute, but looking at the sections to which you refer me, I see that section 45 has a marginal note "Stock account to be opened at the bank," and section 46 has this marginal note, which I think gives a clearer summary of its provisions, "Stocks standing in the name of the company transferred."—That has since been repealed, because it was done.

1864 I do not quite see that that section contains any restriction of the kind that you have mentioned?—There is no restriction, but, on the other hand, there is no authority. All our procedure is laid down by the Act as to where we shall keep all our accounts, and it has been considered that that is probably the intention of Parliament. This Act was passed long ago, before the present market conditions existed, but it has always been held that we should adhere to that procedure, and we have adhered to it from the date of the Act.

1865 You act, as you think, in the spirit of this Act?—In the spirit of it, yes.

1866 Though not absolutely bound by its terms?—That is so. There is no prohibition and there are no statutory powers in this respect, but there is for everything else that we do, and therefore it all hangs together.

1867 Looking at the list of authorised securities given in paragraph 5 of Appendix XI, at first sight it is not a very wide one, and the selection seems to me a little arbitrary, what do you say to that?—Of course it is arbitrary, because we consider it has always been governed by the conditions that we have been speaking about. The list has been added to from time to time, as securities of a suitable character, that come within the terms of the Act, have been created.

1868 What would you say if it were proposed to you to accept the English Trustee Stocks List?—First of all, as far as I can find out, we have never had any application to take any of these securities. The broker tells me that they are not the class of securities that are held by borrowers at all, and we have never, except just for one year or two, when we had those very exceptionally large balances, had any difficulty in lending on the very first-class securities that we have on our list. We have not until this year considered that there is any necessity to extend that list.

O 19067

1869 So you would say that the list has been sufficient for your purposes, and that it has not resulted either in any difficulty in finding lenders or in any undue reduction of the rate of interest?—Yes.

1870 I see that the first securities which you mention in paragraph 5 of Appendix XI (page 310), namely, India Debentures, India Bonds, and Guaranteed Debentures of the several Railway Companies, are taken at their par value, while Treasury Bills, Exchequer Bills, Exchequer Bonds, India Sterling Bills, Metropolitan Water Board Bills, and London County Bills are accepted at their market value, what is the justification for that distinction?—That distinction was deliberately adopted because we found that it facilitated the placing of our own bonds, debentures, and guaranteed debentures. Many of the firms hold these securities very largely, because they know that they can readily bring them to us and borrow on them at their par value. There was a time when we borrowed very largely indeed through the Guaranteed Debentures of Indian Railway Companies.

1871 As a matter of security you would not say that they are better securities than Treasury bills, would you?—For our purpose they really are, because if they are left on our hands we can hold them and draw the interest, and when they mature we pay ourselves. If it is a guaranteed debenture of an Indian railway company, we call upon the company to raise debentures to pay us off, if they are our own debentures we discharge our own debts when they mature. So there can be no indirect loss. There would be the inconvenience of holding for a time, but there would be no loss of principal.

1872 *Mutatis mutandis*, does not the same apply to Exchequer Bills and Exchequer Bonds?—No.

1873 You cannot pay yourselves?—No, we cannot pay ourselves, that is the point.

1874 (*Sir Robert Chalmers*) It is a bookkeeping point really, is it not?—It is, but if we cannot realise the money readily we can hold them for a time.

1875 (*Lord Faber*) You would not say that a guaranteed bond of an Indian railway is any better security than a Treasury bill, would you?—No.

1876 *Sir Robert Chalmers* says it is a mere bookkeeping entry, therefore?—Yes, it is.

1877 I should say the security was not as good?—If you had to go into the market to sell at once, of course the Treasury bill would fetch more than the Indian railway debenture, there is no doubt about that.

1878 (*Chairman*) Perhaps the real reason is the one given by you first of all—that it encourages the market to take these securities which you are desirous of placing?—No doubt that is the main reason. It is not merely placing, but renewing, because we have these railway debentures falling due every month. We find we can get them renewed readily by these people because they can borrow on them from us, and from others.

1879 I understand from paragraph 6 of Appendix XI (page 310) that the responsibility for getting the best rate of interest rests with the broker?—Yes.

1880 It rests entirely with him at present, does it?—It rests entirely with him for the time. Of course, any rate he gets is criticised and looked at every week, and any opinion that the committee might have to express on the matter would be communicated to him, but the responsibility certainly rests with him.

1881 By whom is the broker appointed?—That is a thing which only happens very occasionally, and I should not like to say that there is any established procedure in the matter, but I remember the appointment of the last broker very well. The appointment was made by a letter from Lord Kilbracken to the broker after a full consideration of other applications. Lord Kilbracken wrote in the name of the Secretary of State in Council conveying the approval of the Secretary of State in Council.

1882 For how long is the appointment?—The appointment was made for two years originally, and during that period the broker was directed to arrange for a partnership with a firm of stockbrokers to be approved by the Secretary of State. As a matter of

G 3

13 June 1913]

Mr. WALTER BADOCK, C.S.I.

[Continued]

fact, he entered into partnership within 12 months with Messrs Nivison & Co., and a further letter was then written to him confirming the appointment. The appointment is during pleasure, and can be terminated either by notice from him or by notice from the Secretary of State.

1883 I understand that the broker is paid for his work by percentage on the amount of interest earned during each financial year?—It is a percentage on the interest on each transaction, that comes to the same thing.

1884 What is the present percentage?—The present percentage is 2½ per cent until 5,000l has been reached, and thereafter 1½ per cent.

1885 When was that fixed?—That was fixed in July 1911.

1886 The 2½ per cent on the interest?—Yes.

1887 In Statement No 2 of Appendix XI (page 318) you give us a table which shows the total amount of the broker's commission in each of the last 20 years, I observe that the figures in some years have been extremely high, for instance, they have been three times over 10,000l and once very nearly 15,000l—to be exact, 14,723l?—Yes. I would like to explain that up to 1888 we used to pay a percentage on the amount lent, but then it was decided that it would be much better to pay a percentage on the amount of interest earned. Mr. Bertram Currie, who was then Chairman, was asked what the proper percentage was, and he wrote "The usual charge in such cases is 10 per cent of the interest, but the amount lent on behalf of the Secretary of State is so considerable that a lower scale will probably suffice." A scale of 5 per cent was accordingly fixed, and this was the scale until the death of the late broker in 1903. The old broker's fees for the last three years was 7,000l, 7,600l, and 8,900l. These figures give the measure of the value of the appointment at the time the present broker was appointed. If you look at Mr. Scott's remuneration you will see that for the first five years of his appointment, that is from 1905-6 to 1909-10, the average works out to the present broker at 8,700l a year. That is practically the same figure that his predecessor received during the last three years of his appointment. When it rose in 1910-1 to 16,000l, and it seemed likely that large balances would still continue for some time, the matter was gone into, and Lord Inchcape asked me to interview the broker with him, and a reduced rate was recommended to the Secretary of State in Council. Lord Inchcape gave me permission if you will allow me, to read a brief note that he wrote on the matter. He is a great authority on such questions, and I should think that his opinion would carry more weight perhaps with the Commission than anything I could say. It is not long, and if I might read it, it will put the whole case to you very clearly. This note I might mention, was intended to be used by Lord Inchcape (then Sir James Mackay) in Council, but it was not used, and he gave it to me to be used at any time it was desired. "The Council may be inclined to regard it as somewhat hard to propose to reduce Mr. Scott's earnings by as much as one half, but arrangements of this kind must necessarily in the nature of things be reconsidered from time to time, and the commission earned by Mr. Scott being now so much in excess of what the business was worth when he got the appointment, it is, I submit, not unreasonable to propose an arrangement which will effect a considerable saving to the revenues of India."

1888 What is the date of this letter?—This is dated the 20th June 1911, and the renewed arrangement took effect on the 1st July. It goes on "So far as can be estimated the earnings of Mr. Scott under the suggested scheme will give him an income during the next year of something like 8,000l, the amount which he earned annually for the first three years of his appointment. It is true that his work will be practically double what it was, and that from this amount has to be deducted the rent of his premises and the cost of his staff, but putting these at 2,000l a year he will net annually 6,000l. On the other hand it may be said that this is a large income, but incomes in

"the City are larger than those at this end of the town, and from the City point of view it would not be regarded as excessive, considering the great responsibilities attaching to the work and the enormous value of the securities constantly passing through Mr. Scott's hands. Having been in daily and, I may say, hourly contact with Mr. Scott in arranging the placing of our balances and the raising of our loans for many years, I can speak with some knowledge of the assiduity which he displays in his work. He has to be at the call of the Chairman of the Finance Committee and the Accountant-General every business day and all day, and he never absents himself without leave previously obtained. It might further be said that a salaried man would do the work more cheaply, but I am doubtful if he would do it as well as a man paid by results. On our loans of 20 millions, if we lost even an eighth per cent in interest, that would cost us 25,000l a year, and there is no doubt that we benefit immensely by having a man to do our business who is a partner in a high-class financial house such as Nivison's and in constant touch with the market. I don't know if Mr. Scott will accept the reduced terms proposed, but if we can get him to do so and leave him at the same time valuing the appointment, as I hope we may, if the proposal in the departmental note is adopted by Council, I think the arrangement will be a distinctly favourable one for the revenues of India, and at the same time not ungenerous to a man who has served us well." That letter gives the whole argument of the minute.

1889 (Lord Faber) It is very well put?—Yes, it is.

1890 (Chairman) I agree with Lord Faber that it is very well put, but I confess it leaves me with the impression that the remuneration is very high, in other words, that it is such as would more than attract the men of very high standing and position that you must necessarily obtain for the post, and that it is more than sufficient to reward them for the work which they have to do. I gather from a reference in the minute of Lord Inchcape which you read, that he at any rate had considered the possibility of arranging for a fixed payment?—Yes, it had often been thought of.

1891 I made some inquiries as to the arrangements made by the Treasury with the Government broker, and I find that he receives a fixed payment?—That is not for loaning that is for buying and selling stocks. We have a similar arrangement with Mr. Scott but it is for quite a different thing. I might explain that when I prepared the minute for the Committee dealing with Mr. Scott's remuneration which Lord Inchcape summed up here, the transactions to which you were referring were placed before them, and we were well aware what the Supreme Court was doing and what the Comptroller General of the National Debt was doing. Mr. Scott now has a maximum of 1,500l a year for purchases and sales of stocks. We have a scale which operates according to the transactions, which is on the paper which you have before you, you will find it at the foot. The payments under that scale are not to exceed 1,500l a year. The cases that you put to me are not parallel as the class of business is not the same.

1892 But would not a similar arrangement be applicable to it?—It is possible no doubt, to get a broker at a fixed salary but to get a first class man in that position, with the very great responsibility that our broker has you would have to pay a very high salary, considering the vast volume of business that he does and the responsibility. He must have offices close to the Bank of England because we have hundreds of thousands of pounds of securities every day passing to and from his office to the Bank and the transmission of these things in the City from a distance is risky, and, of course it is an impediment to business too. He has expensive offices and he has a staff, of course, constantly employed.

1893 I think Lord Inchcape calculated that after allowing 2,000l a year for the offices and staff there would remain an average of 6,000l a year?—That

13 June 1913]

M. WALTER BADOCK, C S I

[Continued

would depend entirely on our balances. It will not be anything like that if what we budget for is realised. If we start the coming financial year with a balance of about 4 millions, as we budget to do, the broker will not have anything like the remuneration that we are paying him now, in fact, it would not in many cases very much exceed his office expenses. If you look at the early years you will find there were many years when it did not, and the tendency is, and the wish is, to revert to the smaller balances if it is possible. Up to 1800 the maximum figure was 3,000<sup>l</sup> altogether.

1894 That, of course, is one of the things which impresses one about the arrangement. If you take the 10 earlier years, the average is very much smaller than it is in the last 10 years, so no doubt the business has grown?—It has, immensely.

1895 Apparently the India Council itself came to the conclusion that the commission ought not to grow simply in proportion to the business?—Yes. Of course, we have to deal with an officer who would only accept an appointment of a certain value, and who would in every way satisfy the Government. It is a valuable post, undoubtedly.

1896 I understand you to say that in your opinion, having regard to the responsibility and the amount of his work, the average payments are not now unduly high?—I think they are not unduly high, particularly if you compare them with the scale which I suppose other brokers know of, which is paid in the City for similar business.

1897 Do you attach much importance to the reason for continuing to pay by commission given by Lord Inchope, that you could hardly expect to get the best service of a man unless his remuneration was dependent—I think that is what it comes to—on the success of his exertions?—We deliberately abandoned the old plan of paying a percentage on amounts.

1898 In order to stimulate him to greater activity?—I think, generally speaking, it is a consideration which tends to ensure the best terms for India.

1899 It is not one which is ever applied to civil servants?—No, but then we are not dealing with civil servants, and one must look at it from the City point of view. I may say that I know the views of Mr Le Marchant, the preceding Chairman, were very similar, namely, that in the City we must pay for a first-class man prices which, to civil servants, look very large.

1900 The figures in Statement No 2, on page 313 of Appendix XI, I think from what you have said, do not show the total remuneration of the broker?—No. His total remuneration is shown in a statement which I think has been sent to you.

1901 Is that the paper headed "Supplementary Statement III" on page 330 of Appendix XI?—Yes, that shows you his total remuneration. Might I supplement my last answer with regard to the scale paid to the broker? Of course, the whole of it is not personal to him, that is understood. We do not know the arrangement he has made with the firm to which he belongs, that is not his personal share.

1902 It is remuneration to the firm?—It goes to the firm, and the broker's relation to the firm in that matter we do not know.

1903 In order to make your procedure quite clear, I want to ask about the auditor. Is it any part of the auditor's business to check the rate of interest received?—Not the rate of interest received, because he like myself, is a whole-time officer in the West End, and he would not be an expert. But the auditor would watch the balances and see that he invested them.

1904 The auditor would do that, would he?—Yes.

1905 In certain years you placed portions of your cash balances on deposit with some of the banks?—Yes.

1906 Who made the decision as to the banks to be chosen? Was the selection made in the same way as for the borrowers' list?—Practically. The Chairman of the Finance Committee, in consultation with other members of the Finance Committee, in the first place selected the banks, and they were shortly afterwards approved by the Secretary of State in Council.

1907 In that case, was it made known to the City that there was this money to be placed, and did you await applications from the banks?—No. No announcement was made.

1908 The Finance Committee, with the approval of the Secretary of State, selected certain banks and then negotiated the terms with them?—Yes.

1909 That, I think, was only intended as a temporary expedient?—A purely temporary expedient.

1910 And at the present time no money is on deposit with the banks?—That is so. We should never need to do anything of that kind unless our balance exceeded 11 millions.

1911 And that is a point beyond which you do not expect your balances to rise?—It is the point at which we stand at the present moment, but the amount will be largely reduced in about a fortnight's time when the dividends are paid on the India stocks.

1912 I see in paragraph 15 of Appendix XI you mention two cases where apparently the approved borrowers were unable to pay on the due date, these were the only two cases in which you have had any difficulty, I believe?—They are the only two cases in which we have had any difficulty at all. Every loan has been paid without any difficulty directly the money has been asked for. But there were two cases in 1906 and 1907 in which firms were unable to meet their engagements.

1913 Did their failure to meet their engagements suggest any further precautions?—No. I raised the question again with the Finance Committee as to advancing at par value Indian railway debentures, because both those loans were in Indian railway debentures, and it was decided not to make any change. In one case I may mention that we made a considerable profit. We took the securities over and sold them and made a profit and handed over the balance to the estate. In the other case there was a small loss on the principal, but we held the bonds for a few months, sold them, and they carried a rate of interest while we held them which was higher than we were receiving in the market, and so we recouped our loss on the principal by the extra interest.

1914 You have arrangements with the Bank of England, I think, unwritten but old-standing arrangements, that your balances on each day should not fall below 500,000<sup>l</sup>?—That is so.

1915 That is indirect remuneration to the Bank, I think, and you so describe it?—Yes.

1916 But you pay the Bank a direct remuneration for some of its services also?—Yes.

1917 Can you tell me what that remuneration amounts to?—I think there has been put in to-day a statement which gives you full information (see Supplementary Statement II to Appendix XI, page 329).

1918 I do not think I need ask you any question on your other memorandum (Appendix XII), on the authority required for payments made at the India Office, except this that I see from the statement at the end of paragraph 8 that the arrangements with the Bank of England for the issue of loans were made in December 1904, but you do not say for what period they were made?—They were not made for any fixed period. The question can be raised by the Bank or ourselves at any time, but they agree with the rate that is being paid by the Treasury. If the Treasury alter their rate for similar transactions, I suppose we should do it without question.

1919 (Lord Faber) I gather from you that you think the securities on which you lend are admirable and of a high class?—Yes.

1920 Do you not think it would be better, however, to add to that list of securities some first class stocks which are registered not at the Bank of England, but at the big joint stock banks like the London and Westminster and that sort of bank, you have not got those in your list?—Yes, I do.

1921 Do you think your list is enough? In my trade as a banker we all lend on these things, and we make no difference at all. We find there is no difficulty in getting the security registered. It appears to me, looking very carefully through Appendix XI, that on one or two occasions you have not been able to find

13 June 1913]

Mr. WALTER BADOCK, C.S.I.

[Continued]

quite sufficient securities of this class alone?—It very rarely happens, but because we could not find securities on the list as it then stood we admitted bearer colonial securities, and we have had no difficulties since.

1922 You rather astonished me in one remark that you made. I agree with you in thinking that you are wise to lend only in blocks of 50,000l., it saves much book keeping and it is easy, but then you go on and say that a man is safer if you can lend him 50,000l. than if you can only lend him 25,000l., because he is bigger, are you still of that opinion?—I did not mean to convey that impression. I only meant that those who would deal in such large sums could produce such large amounts of securities. We satisfy ourselves before we admit them to the list that they have large capital resources. We have had applications, as a matter of fact, from very small people who offer very high rates of interest.

1923 Am I right in thinking that the Government lend at par on Indian railway debentures, although those debentures might be below par and might have some years to run?—Yes.

1924 Is that completely wise, do you think? You are letting a man borrow on security which is not full security. Instead of lending on a margin of 5 per cent., when he borrows you are letting him have more than the security, you will get paid eventually, but meanwhile he ought to be paying market terms?—That policy has been considered again and again, and deliberately adopted because, as I have said, there is a very large amount of Indian railway debt of that kind, temporary debt, which has to be renewed from time to time, and fresh issues are occasionally made. We know that people take these things and use them to borrow from us and other people.

1925 May I say this, that the borrower, if he knows his business, and if he has any Indian railway debentures, will always borrow on them before he borrows on anything else, because he could borrow more on them than they are worth?—I should have thought so, but it is not so as a matter of fact. We found when we admitted the colonial securities that some of them came and took out our debentures and put colonial securities in instead.

1926 Now, coming to the very difficult question of the payment to the Government broker, I suppose you would be of the opinion that a broker, being only human, works rather better for a percentage than he would for a fixed salary?—I should think so. I do not say how far that would actuate him, but we all of us, I think, are stimulated by feeling that we get something out of the work we do and in proportion to the work we do.

1927 Taking your figures as correct, the broker now gets 3,000l. a year, and I think he has to pay 2,000l. for clerks and for offices, unless he is in his firm's offices? Is it his firm's offices?—Yes, but he has separate rooms for our business.

1928 Does he pay 2,000l. for those rooms?—I do not know. He employs two highly paid clerks at least to do our business, men drawing considerable salaries, one, I know, has been with him or with his firm for nearly 40 years. As a matter of fact, the broker will be before you presently and I dare say he will tell you what his office expenses are. It had better come from him than from me.

1929 It is difficult to decide a question of salary. I can only say that on the whole it appears to me to be large when I bear in mind that Cabinet Ministers, the largest railway general managers, and the largest bank managers, whose whole time is given to the work, and every moment of their time, do not get as much—many of them at any rate. I can speak from my own personal knowledge to that. This is a difficult thing, and I do not want to dogmatise on it. I do not say it is wrong?—I put the matter fully before the Council, and the matter was very carefully considered, especially by Lord Incheape. I know it had previously been considered by previous chairmen of the Finance Committee, and they decided that the present scale was not an extravagant scale. You must remember that, while we have had big balances, we must look at the average.

1930 I lay great stress on what you said about the Indian Budget. As we know from studying your figures, India has much larger balances than usual owing to certain circumstances, such as its being unable to buy its railway material, and therefore the broker has had to do a great deal more in the last few years than he would have had on a general average?—Besides, we have had, as you know, large opium balances here which have been held over until temporary debt matured. All those things help the broker.

1931 I do not think you are quite aware that it is very easy indeed to check the rate that the broker gets from day to day, you can check it absolutely to a fraction by the quotations in the daily papers?—I may say that one of the best protections we have against the broker accepting a wrong rate of interest is the fact that the daily papers publish the business we do, the period for which we lend, and what we get every day. If we go wrong everybody knows it.

1932 I may say again, as a banker, that you do not get the top price for your money?—See the conditions under which we lend. We are lending public money and we are not a dividend paying concern.

1933 You get excellent securities?—Yes, we do. A further point is that we lend for the date that we fix and that the borrower does not fix, we lend for the date on which we want the money, and we do not consider the borrower in that matter.

1934 (Sir Robert Chalmers.) Following your argument in favour of lending to outside brokers not less than 50,000l., that same argument does not apply to multiples quite, does it?—No, not exactly. What we want to be able to say is that we only lend in blocks of 50,000l.

1935 So long as you say that is your minimum, your main principle, is that not enough for you?—It might be enough, but it has not been the practice. You must remember that I have to receive some money, and that I could not even then lend right down to the 500,000l., because I have liabilities coming in quite unexpectedly. Contractors expect to be paid immediately, and demands are made at very short notice, so I always keep a larger balance than 500,000l.

1936 It might be the case that one of the people to whom you wanted to lend might want to borrow 70,000l. and not 100,000l.?—We have never been asked to do that.

1937 Of course, because they know your practice?—They know our practice.

1938 As to the loans made to the banks in recent years, do you get any security from the banks?—None. I am told that the clearing banks—and they were all clearing banks—will not give securities under those circumstances.

1939 At the time, you were lending money to these outside borrowers, and they did give security of the special and valuable character that you have already mentioned?—That is so.

1940 You did not ask the joint stock banks to give security for the similar loans that you made to them?—No. I think the explanation given was this, that the joint stock banks object always to giving security, because it makes us preferential creditors, therefore they decline to do it, as they will not put us in a special position.

1941 I quite follow that, but take the case of one of the joint stock banks going to the Bank of England to borrow money, they would give security for their loan from the Bank of England, would they not?—That is a matter which does not come within my personal knowledge.

1942 Are you aware that in some cases some public bodies have required security?—I know one public body has required some security.

1943 I am anxious to elicit your opinion. Would the requirements of such special securities from these banks mean a reduction of the rate payable, do you think so or not?—I do not think it would, but I am not in a position to say.

1944 Is it not the case that these loans to the joint stock banks and so forth were wholly exceptional?—Yes.

13 June 1913]

MR. WALTER BADOCK, C.S.I.

[Continued]

1945 And are not likely to recur?—Yes

1946 Coming back to the particular case of the exceptional circumstances in which loans were made by the India Office to banks, to what extent were members of the Secretary of State's Council interested in any banks to which loans were made?—Do you mean that you want to know how many members of the Council were so interested?

1947 Yes, the number?—There were two that I know of and only two, that is to say, two actual members. There was also one ex member.

1948 I meant the number of actual members at the time the loans were made?—Two at the time.

1949 Was there any question raised, so far as you know, as to the policy of making loans to banks with which members of the Secretary of State's Council were connected as directors?—I know the question was raised, and the possibility of parliamentary criticism on lending to banks represented on our Council was fully considered. I called attention to it in a Council Minute dated December 1911. The Secretary of State, however, approved the action and thought that under the circumstances it was the most suitable thing to do. Absolute security, as far as we could attain it without the deposit of securities of any other kind, was the thing we aimed at. Our own members of Council knew the banks with which they were connected, they knew exactly what they would do with the money, and that special steps would be taken to secure its availability on the day we might want it. We might have lent to other banks who might have been equally sound, but we should not have known, as we know in the case of these banks, exactly what was done with the money.

1950 The possibility of hostile criticism was recognised in advance?—And it was fully considered.

1951 As to the composition of the Finance Committee, that, I think, is exclusively, is it not, like the composition of every other committee, at the discretion of the Secretary of State?—Yes.

1952 Is there anything that differentiates the Finance Committee from any other committee as regards the principles on which it is formed?—Yes. We have always had the City representation on the Finance Committee, in that sense it is special. It is usual, I think—though of course these matters are not really in my department, they belong to a higher authority than myself—just as there is a military member generally to represent military finance.

1953 That I quite understand, but I was not speaking as to the personnel composing the Committee. Committees are appointed by the Secretary of State for finance purposes, military purposes, and so forth, and there is nothing as regards the mode of composition or of appointment which differentiates the functions of the Secretary of State in connection with the Finance Committee from his functions in connection with any other committee, is there?—Nothing that I know of at all.

1954 And the Chairman of the Finance Committee, as of any other committee, is, as a rule, I understand, appointed in an informal way—designated, may I say—by the Secretary of State, and holds office at the pleasure of the Secretary of State?—Of that again I am not quite sure. These matters are decided in Council, so I probably am not a suitable witness to put the question to. I can only speak of what I know in the particular case of the Finance Committee.

1955 I understand that by law no business can be placed before any committee or before the Council except by the Secretary of State, or the Under-Secretary acting on his behalf, and no member of the Council can legally take part in the business of any committee unless requested to do so by or on behalf of the Secretary of State, is that correct?—That I understand to be the case. That is why the minutes of all the departments go to the Under-Secretary, who, in the name of the Secretary of State, writes "Direct to be sent to" this committee or that committee or to more than one committee.

1956 (Mr Gladstone) I think the Chairman referred to the list of borrowers against security which you give in Appendix XI, pp. 315-6, as being a somewhat arbitrary list, is this not partly due

to the fact, perhaps, that it is not generally known, or was not generally known, that firms and other suitable people could get on the list by application?—We do not advertise it in any way. We never ask people to join.

1957 I, for instance, am in the City, and I did not know how the list was composed, now I do. I think if it were desired to widen the list—it probably will be known now—you will have further applications from people who will be suitable?—An announcement was made in Parliament that applications will be considered, as they always have been.

1958 With regard to making advances at par on India Debentures, India Bonds, and the Guaranteed Debentures of Indian Railways, I do not quite appreciate the difference between Debentures and Guaranteed Debentures?—Guaranteed Debentures are the debentures of a railway company. The India Debentures are debentures of the Government of India.

1959 Do you think it is quite sound to advance on their par value? Would it not be better to put these securities into the list for market value, even if the cover was reduced somewhat from 5 per cent? I do not quite see why advances should be made on securities above their market value. If that practice were abused, bankers could buy these securities below par value and then obtain the full par value from you and have a permanent margin?—There is, as a rule, very little difference, because these bonds are renewed from time to time on terms that practically bring them to par every time they are renewed.

1960 It would only be a matter of  $\frac{1}{2}$  per cent then?—Say of 2s 6d, or something of that kind. There has been very little in it.

1961 (Lord Faber) They have been a good deal under par just lately but that, I suppose, is exceptional?—Yes. That will be readjusted when the time for renewal comes.

1962 (Mr Gladstone) Then with regard to the list of borrowers, it being your practice to demand a margin of 5 per cent on market values, you are practically secured except against fraud on these loans?—Yes.

1963 A 5 per cent margin on securities of this character is a very large margin?—It is.

1964 With regard to the rate that you obtain, some reference has been made to the top price. You have referred to the rates of interest which are published in the newspapers, and have stated that that makes it possible for you to check the broker, are you satisfied that he does get you a very good rate?—That is not, of course, my check. Personally, I can have very little knowledge of the prices of the market at the time, except what I may read in the newspapers, but the City members of the Finance Committee are in close touch with the hourly movements of money, they check it, and we have, as I say, the additional security which publicity gives as to what we do.

1965 My own experience is that you do get a very close rate?—I think we do.

1966 I had an instance only two months ago, where I lent 150,000l. The National Discount Company took it, telling me that a similar amount had been called in by the Secretary of State that morning. I got from them something like the same rate,  $4\frac{1}{2}$  or  $4\frac{1}{4}$ . That gave me the impression that the India Office did their business uncommonly well?—I think my observation would entirely confirm your view, that the broker does everything a man can do to get the best rate he can.

1967 No doubt you could look up this actual transaction if desired. We have not had before us a list of the joint stock banks with whom deposits were made?—The names have been published in answer to a question in Parliament. Of course there is no objection to giving them.

1968 (Chairman) I think we ought to have them?—The names are the National Provincial Bank of England, the London County and Westminster, the Union of London and Smiths Bank, the London City and Midland Bank, Glyn, Mills, Currie & Co., the London Joint Stock Bank, and Messrs. Barclay & Co. Other banks have applied, and they have been

13 June 1913]

Mr. WALTER BADOCK, C.S.I.

[Continued]

told that if the practice were resumed their names would be considered.

1969 (*Lord Faber*) You have got quite first-rate banks on your list?—I think so.

1970 (*Chairman*) Other banks you say have applied since—since when?—Since the parliamentary questions were asked.

1971 That is, since it became known that you had been lending in this way?—Yes.

1972 (*Mr. Gladstone*) Did you consider the financial position and general standing of those banks was so high and undoubted that really it was almost superfluous to ask for security?—I could not judge of that, but our two City members, who were bankers, thought they would not give security.

1973 Do you not think they were probably influenced by the fact that if you did ask for security the rate of interest would undoubtedly be lower? Is it not the regular practice to make a difference in the rate in the case of high class institutions whether security is given or not?—It is quite possible, but that is a practice that I cannot say that I am aware of myself from any personal knowledge.

1974 With reference to Mr. Scott, do I understand that he gives his whole time to the business of the India Office?—Practically, that is to say, we have the first call on him at any time. At any business hour of the day either a member of the Council or myself can obtain his services at once for anything that is wanted.

1975 In deciding that it was preferable to utilise the services of a broker of the highest possible standing in the City, I suppose the opinion was that he would have better opportunities of getting the best rates than a salaried man who might not have the same opportunities of gauging the market?—I think one reason was that we wanted the broker to be associated with a firm which contained partners with large financial knowledge as well, and in his absence one of them has to do his business. If you take a firm like Messrs. Nivison, I do not consider that they are overpaid by the office for the work that they do.

1976 In other words, you consider that the income of each individual partner in Nivison's is considerably more than 8,000l a year, quite apart from India Office business?—I have no means of judging that, but I should think it is very possible.

1977 The business conducted by Mr. Scott, that is, the daily transactions against securities, and the moving of them from one firm to another, and from the Bank backwards and forwards, is a very laborious and responsible business, is it not?—Undoubtedly. It would be a very serious matter if anything went wrong with any of them.

1978 On the estimate of 2,000l for expenses, which Lord Incheape mentioned, does that not strike you as rather low? Knowing the rents, for instance, which have to be paid for offices near the Bank of England on the ordinary scale, I confess I should be astonished to hear that an office could be run near the Bank of England to transact this business for the India Office on 2,000l a year?—I think I know the salaries that are paid, and that allows me to judge how much is left for rent. Considering the very important position of the premises and so on, I certainly think that 2,000l a year is not an excessive estimate of the cost of the office. It is immediately opposite the Bank, on the other side of the road.

1979 I see in Appendix XII you make a reference to the purchase of stores (pp. 331-2). Without going into details, I would ask whether in the interests of Indian finance it might not be desirable to purchase stores, railway material, and other things far more freely in India than is now the practice even although the material may come from Europe? Payment, of course, would then be made in India, the quality of all goods would be checked there, presumably and of course it would be popular in India, the idea of traders in India being that a great deal more business of that kind should be done there?—I know this matter has been very fully considered for many years, but it has not taken place in my department, and I do not think I could make any statement that would be of much

use to the Commission. It is a matter for the Director General of Stores.

1980 (*Mr. Keynes*) What are India Debentures, which are the first stock referred to by you?—We have no India Debentures outstanding at the present time, but we had some a few years ago. They were simply debentures running for seven years. It was found convenient to raise money in that way instead of raising it by India Stocks, or by shorter term securities such as India Bills or India Bonds.

1981 May I understand that the securities placed in the first class in paragraph 5 of Appendix XI (page 310) have two advantages, namely, that they are received at their par value, and that they are also free from the liability to the provision of cover?—Yes, those three classes of Indian securities stand in the position you state.

1982 They have got both advantages?—Yes, we advance at par and there is no cover.

1983 With regard to the remuneration of the broker, it is in proportion, as I understand, to the interest that he earns, and therefore it depends not only on the volume of business, but also on the rate which prevails for money in a given year?—Yes.

1984 I notice that for a large part of 1912-3 the rate of interest shown in Supplementary Statement I to Appendix XI (page 328) was much in excess of what it had been in some previous years, because the prevailing rate of money was higher in that year. The figures for 1912-3 are perhaps 50 per cent higher than the figures for 1911. Therefore the broker would be getting a remuneration 50 per cent higher through no virtue of his own, but because the rate of money all over the market was higher in that year than in the preceding year?—That is so.

1985 It would be a purely casual remuneration which had no reference to the volume of business or to the trouble or skill which was involved?—That is so, but you must set against that high rate the 1.79 rate which you get at the top of the table. It is an average rate.

1986 I was leading up rather to the point that, if you wish to pay the broker by commission in order to make sure that he will use all his skill, the results of his skill are shown rather in the excess that he gets over a certain amount than in the absolute amount, that is to say, if he is skilful he may get 4½ per cent instead of 4¼?—Yes, if he is skilful and persistent.

1987 Do you measure his skill by the amount he gets in relation to the average Bank Rate in a given year, or something of that sort, rather than by the absolute total he gets?—We do not consider the Bank Rate has any reference at all to this. The Bank Rate is very often ineffective, and generally applies to rather a different class of transactions from those. It really, as far as we can see, has very little reference indeed to the particular rate that we get.

1988 (*Lord Faber*) This is what bankers call day to day money which is quite a different thing?—Yes, it is.

1989 (*Mr. Keynes*) Would you agree that the amount extra which he can get by his skill is quite swallowed up by the fluctuations due to variations in the general rate for money?—Both of the reasons you have given operate, but it would be difficult to say precisely how far the broker's skill, or the movement of the market, affected a particular transaction. His skill consists in getting the highest rate under the existing market conditions. I am afraid I could not express an opinion as to how far a particular rate was dependent upon the broker's skill.

1990 Suppose that in a given year, or in a given month, he is earning for you 3½ per cent, and by his skill he gets an eighth per cent more than if he had been less skilful, the proportion of his income which is affected by his additional skill is about one thirtieth?—Yes, but that might make, over a large sum, a very considerable difference. As Lord Incheape pointed out, at the time we had 20 millions out an eighth per cent on our interest would have meant 25,000l.

1991 (*Lord Faber*) I should say both his skill and the money market have to do with it?—They have to

18 June 1913]

Mr. WALTER BADOCK, C.S.I.

[Continued]

do with it, but I cannot say how much belongs to each.

1992 (*Mr. Keynes*) If he is getting a net income of 6,000 a year, one-thirtieth of that is 200l, which is something trifling to him?—Yes.

1993 So the amount of difference to his income that his skill makes is very small?—No. Knowing the very great pains he takes every day to ascertain the rate, and to get the best rate, I should say that we owe a great deal to his skill and persistence.

1994 I am not disputing that the India Office does not gain large sums by his skill, nor am I denying the exercise of it, all I am saying is that his skill makes very little difference to his own income?—It is not very large, but of course he has a financial interest, and where people have a financial interest they will work. I do not think, generally speaking, it is wise to rely on a man doing his best simply because of principle, if you can give him an incentive in the way of inducement, even if it is small, it helps.

1995 I wish only to suggest that the amount of incentive which has been given him in this way is scarcely sufficient to justify a system which might be open to objection on other grounds?—I am inclined, looking at it generally, to think that the wisest plan (and it is the City plan generally, I think) is to pay by what you might call piece work, that is to say, to make the remuneration depend, where possible, upon results.

1996 I understand that, apart from deposits in banks, you never lend for more than six weeks, and generally for less?—There is nothing to prevent my lending for more, six weeks is not laid down as a maximum, but that has always been the practice, and it is well understood, but there is no minute on the subject. When we decided to lend for longer periods on deposit no minute was required, that is, no fresh minute from the Secretary of State, on that point I think I explained to the Chairman that our reason for the six weeks is that it is very undesirable to let our balances go out of our control for a long period. We can never tell what may happen in another part of the world which may make it necessary to make them available, and we can never tell what may happen to any particular firm which may make it desirable to call the money in at no distant date.

1997 (*Chas. man*) Shall we put it in this way, that you are playing for safety?—The entire game is for safety, if I may put it in that way.

1998 (*Mr. Keynes*) If the reason for lending for short periods is put on the ground of safety, are you not sufficiently secured, in the case where, for example, Consols is the security, if you take a margin of five per cent?—No, because in practice we find there are difficulties in the way of realising our security immediately. The two cases where we had to realise them were where we found ourselves grouped with other creditors, and the Secretary of State had to consider what other creditors were doing, and to some extent act with them. As a practical matter what happened was this. Some of the creditors refused to take over their securities and give a release and some agreed to do so, the Secretary of State declined to do so, because it was thought that the defaulter had other means and there might be something more than the security available. Eventually all the creditors accepted their securities, and then the Secretary of State accepted his, although at the moment they could not be realised to produce exactly the sum. This took some little time. As a practical matter the money was not available immediately. So it would generally happen that unless we were forced to do it, we should not take an isolated line, but we should act in concert with other creditors of the firm. That is what happened in those two cases.

1999 In both of those cases the securities were of the exceptional class in which no margin was taken?—Yes, those cases were so. The probability is that there would be some formalities, as there were the last time. We should have to arrange with the representatives of the broker that we should take them over, and there would be an exchange of documents which would give effect to these arrangements.

2000 If you took a margin and it more than covered your loan no difficulty could possibly arise, as you would immediately accept your security if it more than covered your loan?—We should do so if we were obliged to do so, no doubt, but, in the only two cases I have come in contact with, the Secretary of State thought it was better not to take an isolated course, but to act in agreement with other creditors.

2001 (*Lord Faber*) When you lend on security you lend on collateral security, and if the man fails, you first of all get a dividend and then you come back on the security?—Will you please look at the form of agreement?

2002 You ought to do that?—The first security we have consists of the securities deposited, but the estate makes good any deficit, if there is one. It is expressly laid down in the agreement.

2003 I am surprised at it. My point is that generally when you make a man a loan you take the security as collateral, and then if there is a dividend you get that?—If you will kindly look at the form of agreement in my Memorandum on the Placing of Cash Balances, pp 314-5, you will see exactly how we stand. That says, "We hereby authorise you to sell immediately all the securities accepted in respect of this advance, and to repay the advance with all interest then due, so far as the proceeds of sale will allow, and we hereby undertake to repay any deficiency which the proceeds of sale may fail to discharge." So our first security arises out of the securities deposited, and in the second place we have a claim against the estate of the defaulter.

2004 You can easily have it worded in another way by which you come first of all on the estate and then on the security, that is done by bankers every day of the week?—This was drawn up by our legal adviser. I do not know whether he is aware of that practice, but it is a useful thing to know.

2005 (*Mr. Keynes*) The point I am trying to bring out is merely this, that with the exception of the first class, India debentures, India bonds, and guaranteed debentures, you have taken absolute security?—Yes.

2006 But in these three cases you have not taken absolute security, and you have twice been in difficulties?—Yes, that is so. They were not serious difficulties in any way, not even inconvenience.

2007 Some slight difficulty—may I put it like that?—No, I do not think practically there was any inconvenience, there would have been if we had wanted the money very badly, but it did not really matter at the time. I should not like you to think that the finances of the Secretary of State were in any real difficulty at all.

2008 I am pursuing my original point, that in those cases where you are perfectly secured there is no reason for taking into account the consideration of safety when you are thinking of the period for which you should lend, it is only if you are not perfectly secured that that is a relevant consideration?—There is a larger consideration, that we may want to realise our whole balance, owing to foreign complications and those sort of things.

2009 I was not taking that point now?—There remains that point, even if you say we are fully covered by the securities deposited with cover. I was trying to make it clear that it is a little difficult for the Secretary of State to realise immediately even where he is supplied with cover. He would probably be asked to fall into line with other creditors, and so on.

2010 I do not understand why that should be so where there is a 5 per cent margin?—It possibly may not be legally necessary to do so, but I may say that people would look a great deal to see what the Secretary of State was doing and if he took any course that seemed harsh to a creditor or anything of that kind, he might be supposed to be giving a lead. As a matter of fact, the Secretary of State would sooner stand and see what other creditors were doing, unless it was absolutely necessary to realise for the security of the India Office.

2011 I do not feel that I have quite got an answer to the point that I was trying to raise, but

13 June 1913]

Mr. WALTER BADOCK, C.S.I.

[Continued]

I will not pursue that question further. There was a possible implication in one of your answers to Sir Robert Chalmers which I should like to clear up. Are we to understand that the banks represented on the Secretary of State's Council had a certain advantage when deposits were being made, in that you were in a better position to know exactly how they would treat your deposit?—No, those banks were not in a better position, and I will not say that it placed them in a better position because those who were responsible for our money were represented on the banks and knew exactly what the banks were going to do with it. The chairman, who had to decide how these large sums of money could be placed with the greatest safety, naturally would feel with regard to the money that was to some extent under his direction that he would know what was going to be done with it, and that it was safe in that sense.

2012 Did the fact that you had authorities of these banks on your Council make it more probable that the Secretary of State would choose then banks than that he would choose different banks?—There was some advantage in doing so, but that is all I should wish to say. It was known that special provision would be made, and it was known what class of business the banks were doing. With regard to some other banks, I do not suppose anyone at the Council would know with the same degree of certainty exactly what was done with the money.

2013 (*Sir Shapurji Broacha*) There was at one time a great outcry, often repeated, that you lent at 2½ per cent and borrowed at 3½ per cent. To a banker that seems all right, because it is better to keep money employed than for the money to lie idle. Still, as you had those large sums to lend, could you not have foreseen that a certain amount would fall due, say, on the 5th June, and when lending that money in April, say, only lend it up to the 5th June? That would have avoided the outcry of the man in the street who does not understand these things?—What do you mean by money falling due?

2014 Say that you lend to day a million of money for two months, and yet on the 30th June some money is falling due for payment, could you not manage it so that you would only lend so much for two months or six weeks, so as to be ready with the cash when this payment was due?—Perhaps the simplest way would be to explain exactly on what principles I do place this money. I take six weeks as the maximum for lending, and I should look to that six weeks and make the best estimate I could of all the special payments that have to be provided for, including payments of interest, the maturities of debentures and so on. I should also calculate the amount that would have to be paid in pay, pension, retired pay, and all that kind of thing. I should make ample provision, in fact, for all special liabilities first of all, then I should take the rest and distribute it pretty evenly over the days, that is to say, every business day I should put a certain amount upon that day after I had provided for special liabilities. Of course there is more on many days than I want, and then if it is not wanted it is renewed, but I do provide for all special liabilities that I can foresee, and distribute the rest evenly over the period.

2015 I do not criticise your lending at all, but I say that by timing the payments you might prevent the man in the street crying out about it?—I do not quite appreciate your point.

2016 You are lending to day a million for six weeks, and the Secretary of State has to pay a quarter of a million at the end of the month, could you not lend three quarters of a million for the six weeks and a quarter of a million until the end of the month when the Secretary of State has to pay that money, so that the difference between the rate of lending and borrowing would not be noticed, it would only require a little care?—I think the criticism about borrowing arose from the fact that we renewed India sterling bills for a certain period—that is what called attention to it—and we were not gaining as much interest

as we were paying at the time. That was the cause of the criticism.

2017 You might have lent up to date, and then again borrow at the rate you lend, on the same day?—I am afraid I do not quite understand your point, or its relation to the criticism to which the office has been subjected.

2018 If you had a million to lend for six weeks, and of that million you required to pay a quarter of a million on the 30th June, could you not have lent three quarters of a million for six weeks and a quarter of a million only up to the 30th June, the date the Secretary of State has to pay that money?—Do you mean that after providing for absolute requirements could I not lend the surplus money up to the extreme limit?

2019 (*Mr. Keynes*) May I put it like this—that up to the six weeks you do consider very carefully the commitments that you have in view?—Yes.

2020 But that beyond six weeks you do not?—I should not like to say I do not, but not in lending.

2021 Not in loaning is what I mean?—Then I do not.

2022 So you are not open to Sir Shapurji's criticism up to the six weeks?—No.

2023 But if he applies it to purposes beyond the six weeks, then your defence, if you have one, is a different one?—Does Sir Shapurji mean that after providing for all the liabilities that I can foresee I should let the surplus go for a longer period?

2024 (*Sir Shapurji Broacha*) That is what I say?—Of course it might be done, but it has not been done, and the reasons have been, as I say, that we have been a little bit careful. We are the largest lenders of public money, and I think it is a good sound principle not to part with your money for a longer period than is necessary, because emergencies do arise and we can get our full balances within six weeks at the outside. As I said, there is a further advantage, that it enables us in a particular case to call in money at no distant date, whereas if we lent it for some months we might see difficulties coming, and yet be powerless to take measures against them.

2025 It has been stated in evidence that the Bank of England requires half a million to be always kept in its hands, and that you should give notice the day before when you require money, so that you cannot lend the same day that you receive the money?—Generally I can, but in Appendix XI, page 319, I state that where we have heavy payments to make the Bank expect us to make provision the previous night, and that is in accordance with what they do with the Treasury.

2026 And that makes you lose one day's interest?—Yes.

2027 It would not matter to the Bank of England to allow you to overdraft for a few hours, as before the Bank closes it would be paid up, it would not be a loss to the Bank of England, but it is a loss of one day's interest to you?—We are quite alive to that, and we have tried very hard to get it remedied. The reply has been that if the concession is given to us it will have to be given to His Majesty's Treasury, and the Bank will not move in the matter.

2028 I think the Bank has a large sum from the India Office, still that is another matter?—We have often tried to get the Bank to strike our balance at 4 o'clock in the day, but they will not, and I have to write off the amount necessary to meet a big liability at 10 o'clock in the morning, and therefore I have to provide the balance the previous evening.

2029 You approved borrowers are confined to a certain number, and you cannot lend beyond those approved borrowers?—That is so.

2030 It often happens that one of the approved borrowers on a given day does not want to borrow at the same rate as another approved borrower borrows, but it would not pay you to keep the money idle, so you may have to take from one man an eighth less, or a sixteenth, and so on, during the day?—As a matter of fact we get almost universally the same rate from all our borrowers for the day. The broker has to find the best rate which can be obtained and he gets that

13 June 1913]

Mr WALTER BADOCK, C S I

[Continued

from all the borrowers. If any borrower will not pay that rate—and that frequently happens, if he says no that is not the rate, or it is not a fair rate—then the money is taken from him and given to someone who will pay that rate.

2031 If you have a million to lend these 62 people, and only 40 or 50 of them will take half or three-quarters of the million on a certain day at 2½, or something like that, then you are met with the question whether you should not lend the remaining portion of the million at some concession rather than keep it idle over the day?—Sometimes the broker has held money over, thinking it would pay the office to lend it from the next day, because he could get a better rate than, perhaps, on the previous day. That the broker would consult me about.

2032 Discrepancies in the rate do occur, and you will find it sometimes three-sixteenths in the morning and three eighths in the evening, so you cannot lend all your money on the same day at the same rate?—Perhaps not if the amount is very large.

2033 (*Mr Gillan*) You say in paragraph 14 of Appendix XI (page 312) that the broker is usually not able to lend to the approved borrowers on security a larger sum than from 10 millions to 11 millions, what is the limiting factor?—The limiting factor is that it is usual in the case of smaller firms to impose a limit, and there is also an implied limit with the large firms. Then we find in practice that some 15 or 16 people on the list rarely take our money, and when we have lent to all those on the list up to their limit, and have also lent large sums to other firms who are not specifically limited, we find that the total amounts to about 11 millions.

2034 I was thinking more particularly of the memorandum of Mr Abrahams where he spoke of the supply of the securities required being limited?—That element has come into the matter very recently. We have bought large railway systems of India, and we have taken over the debentures which they have raised, and they have become India debt, and we have been obliged, as they matured, to pay them off. Whereas about eight or nine years ago we had 18 millions in the form of bearer debentures, we have now only about 12 millions, so the market has become more limited, and we have recently taken Colonial Treasury bills and bonds partly owing to that difficulty.

2035 So it is partly a limit of the amount and partly a limit in the class of securities that can be deposited?—Yes. I cannot say how far now it is due to limits of securities, because there is a very large number of Colonial bonds on the market.

2036 (*Chairman*) When that difficulty arose to which you have just referred, did you take any steps to increase the number of approved borrowers?—No.

2037 Did you wait for them to come to you?—Yes.

2038 It did not occur to the authorities of this office that it might be well to instruct the broker to see whether there were not other houses of equal standing who might be glad to come upon the list if the existence of the list was brought to their knowledge?—That was not done. I think there was perhaps some difficulty in taking that step, because if we approached any firm we should be obliged to accept them, we could not invite them unless we were fully satisfied ourselves that they were a suitable firm.

2039 You would have to make your inquiries beforehand?—Yes, and not after. It was not done, because the difficulty was considered to be a temporary one.

2040 One other question with regard to the position of the broker. I have here a letter explaining the terms made by another public department with their brokers, in which they say their brokers are paid an annual salary, which covers all the work done, including commission. I, of course, accept from you what you have said that their work is not as extensive as the work of the broker of the India Office?—I know the department to which you refer, I think. They do not loan out, it is a different class of work.

2041 The work is not co-extensive with the work you do?—It is not the same in character. The work that the broker does for them is in the purchase

and sale of stock. Our broker's commission is for loans, as the main work he does for us is loaning our money, which is a different thing. I suggest that the things are not comparable.

2042 I understood you to say that, as far as he is selling stocks or purchasing stocks for them, he is paid by a fixed salary?—No, he is paid by a maximum salary, the maximum being the sum which you have in the paper before you. He is really paid very much less in average years.

2043 The letter which I have in my hand, speaking of the salary which is paid to their brokers, says "Naturally the fact that they"—that is, then brokers—"are known as the Government brokers brings them a lot of private business." Is not the position of broker to the India Office worth something more than the salary in the same way?—I should think it probably was, but the broker has told me many times that he never has asked any firm with which we deal to place business in his way in consequence of it, and he is not conscious that they do.

2044 I did not mean to suggest that he was trying to use it in that way?—Nobody expected at all that people doing business and borrowing money from us would necessarily go to Mr Scott with other business because he was our broker. I dare say it is an advantage to him, as it gives him a position in the market.

2045 You would perhaps agree that it was probable that the position of broker to the India Office would have a certain prestige attached to it?—Yes, that is so.

2046 Which might be a valuable consideration if a man was considering whether the terms of remuneration offered were sufficient to tempt him to take the office?—I certainly agree with you.

2047 (*Lord Faber*) You were good enough to give us some figures about the Bank of England, and the condition of the account with the Bank of England. That seems to me rather an important question, and I have looked at the figures. You have prepared one paper entitled "Statement of Payments to the Bank of England and the Bank of Ireland for remuneration in respect of under-mentioned services" (Supplementary Statement II to Appendix XI, page 329). Looking back at the last six years to the total payments made to the Bank of England, I find these figures—61,439l., 60,842l., 65,166l., 73,767l., 64,539l., and 66,574l. That is the amount of the payments which the India Office actually made to the Bank for services performed?—Yes.

2048 Then I learn from the explanatory note B to Statement No 3 on page 319 in Appendix XI that you are under agreement as well to do a very important thing, namely, to keep a balance of 500,000l. at the Bank of England without interest?—Yes. Assuming that our minimum balance is 550,000l., which in practice it is, we estimate that to be worth at 2 per cent. 11,000l. a year, at 2½ per cent. 13,750l. a year, and at 3 per cent. 16,500l. a year.

2049 When I come to look at the balances actually at the Bank of England, the figures of which you are good enough to furnish us with for 1912-3, I find that the balance has very often been a great deal more than 500,000l.?—That is so.

2050 In the last two years, which perhaps it is not quite fair to take, the balance was on one occasion 1,200,000l. and on another 2,295,000l.?—Which paper are you referring to?

2051 Statement No 3, on pp 320-7 of Appendix XI. If you look at those balances you will see that they run very high, and they are exceedingly valuable, of course, to any bank?—You will notice if you look at column 4, that whenever there is a high balance, provision is made for a big payment next day in column 2.

2052 I dare say that may be so with the very high ones, but if you run your eye down the daily list you will find it is often about 600,000l. and 700,000l.?—Yes, it is.

2053 During the last two years I think I should be under the mark if I said that on an average that balance had been worth 3 per cent. all the time, and sometimes a good deal more. It comes to this, that

13 June 1913]

Mr WALTER BADOCK, C S I

[Continued

you not only pay them 66,000l but you have paid them 20,000l a year, I should think, in one way or another, for interest, that is, you have paid 86,000l a year to the Bank of England. That seems a great deal, does it not?—Yes. I have called attention to that time after time, and our Finance Committee and the Secretary of State have made many representations to the Bank of England when we have had opportunities. Of course, we make agreements with them for certain terms, and we have done our utmost to get the rates reduced. Personally, I must say I think we pay very heavily.

2054 (Mr Keynes) Now that that question has been raised, I see that the minimum charge for the management of the rupee debt is 8,000l?—Yes.

2055 What is the amount of the rupee debt now on the books of the Bank of England, I think it does not much exceed 7 millions, does it?—Yes, I think I am right in saying it is 12 millions.

2056 (Mr Gladstone) But it has been very much lowered?—Yes, it has fallen very much, it has fallen from about 18 millions to 12 millions.

2057 (Mr Keynes) Therefore the remuneration is now at the rate of more than 1,000l per million?—I have here some papers about it. That matter was very fully gone into with the Bank and the terms for the rupee debt were raised in consequence of their representations. They represented that they were actually loosing heavily on the scale we were paying before, owing to the staff they had to maintain and the separate office. They said a minimum must be fixed or the business would be unremunerative.

2058 Why do they have to have a separate office for the rupee debt as distinct from the other debt?—They say they must have a separate staff for it.

2059 I suppose that practice grew up when the amount of the rupee debt held in this country was very much greater than it is now?—No doubt. This is what the Bank said in a memorandum† forwarded to the India Office.

2060 What date is that?—1905. This was when the last agreement with the Bank was entered into. They commence their statement with regard to the rate of remuneration then existing by saying, "The charge for the management of these securities"—that is rupee securities—"was fixed in 1898 at a figure which has proved to be wholly unremunerative to the Bank. A separate office has to be maintained for the transaction of the work, which requires

The witness withdrew.

Mr HORACE H SCOTT called and examined.

2069 (Chairman) You are the Secretary of State's broker?—I am.

2070 How long have you held the position?—I was appointed in January, 1904.

2071 I understand from Mr Baddock that when you were appointed it was made a condition by the Secretary of State that you should join a firm to be approved by him?—That is so.

2072 I understand that you arrange all loans on behalf of the Secretary of State?—Yes.

2073 You also carry out all purchases or sales of securities on his behalf?—That is so.

2074 Do you do any other work for the office, or does that cover your business?—I attend to give advice as to the renewal of Indian railway debentures, and am always at the call of the Chairman of the Finance Committee and the Accountant General.

2075 We have had before us the list of securities on which the India Office lends, may I, in the first place ask whether you think the distinction can be justified which is drawn between, on the one hand, India debentures, India bonds, and guaranteed debentures in the several Indian railways, which the Secretary of State takes as security at their par value, and, on the other hand, Treasury bills, Exchequer bills, and Exchequer bonds, which are taken at their market value?—The borrower just has to make up the rebate

"extreme case and is attended with considerable risk"—and then there is a long story which I need not read. The Commission will remember that we are not exactly in the position of free agents in our relations with the Bank of England. The Government of India Act of 1858 has tied us absolutely to them, and it provides that they shall be remunerated not on any scale fixed by Parliament but on a scale to be agreed upon, but seeing that we have no option but to go to the Bank, our negotiators, of course, are in a position of considerable difficulty.

2061 You would agree, would you not, that a system which costs 1,000l per million for the management of the rupee debt seems, *prima facie*, an extravagant one?—It would appear to you and to me so, but, of course, we cannot go to the Bank of England Accounts and go into that. One must accept it that that is their view, and that they have good reasons for the view they express.

2062 (Sir Robert Chalmers) In your relations with the Bank of England you are, to a great extent, conditioned by the arrangement made by the Treasury with the Bank of England, and you always would have that in view?—Yes, we have always had that in view.

2063 The arrangements with the Treasury are statutory under an Act of 1892, with which, I presume you are acquainted?—Yes, that is so.

2064 That Act prescribes definite rates 32s for every million of debt up to 500 millions, and thereafter at the rate of 100l for every million, and so forth?—Yes.

2065 That is an agreement and is a statutory agreement?—Yes.

2066 Section 4 (2) of the Act of 1892 goes on to say that those terms shall be in force until 1912 and these after until Parliament otherwise directs?—Quite so.

2067 So you cannot move very vigorously until Parliament has otherwise directed in respect of the Imperial Treasury?—Quite so. Might I say that the Chancellor of the Exchequer's attention was called to the possible termination of the present terms, and in a reply he gave in the House of Commons he said he was considering them, but it was not his immediate intention to take any action.

2068 All that is very present to the minds of the authorities of the India Office?—Yes. All those terms were fully before the Bank and the representatives of this office when the matter was discussed at the Bank.

on such things as Treasury bills and Exchequer bonds some of which run into 1930. I think it is to the advantage of India to take their own securities at par value—I mean not to depreciate their own securities.

2076 Regarding the India Office merely as lenders for the moment, there is no reason in the nature of the security why they should take those above their market value, is there?—No, not in the nature of the security, but by doing so they are able to issue or to renew debentures on more favourable terms than if they asked for a margin on such things.

2077 On the other hand, we have got it in evidence that on only two occasions, I think, has there been any difficulty with borrowers?—That is so—only two.

2078 And on both those occasions the difficulty arose in regard to this class of security against which loans had been made up to their par value?—That is so.

2079 Do you not think that, on the whole there would be something to be said at least for not lending above their market value?—No, I think it would be advisable to leave things as they are. Some years ago, when money was very easy, debentures were issued on a 3 per cent basis, but now although they are nearer maturity, they are not worth par, I suppose they are about 94.

2080 In cases now it would pay a would be borrower to go out into the market and buy these securities because he could get from you immediately actually more money than he had paid?—Yes, that

† Not printed.

13 June 1913]

Mr HORACE H SCOTT

[Continued

has been so. You mean that a man with 99,000l might get something worth 100,000l immediately?

2081 Yes?—Still, you gain by being able to issue them and renew them on more favourable terms on this account.

2082 So you would say, would you not, that having to balance the interests of the Indian Government as a lender against the interests of the Indian Government as a borrower, you think the interests of the Indian Government as a borrower ought to prevail in this case?—I do.

2083 As regards the list of securities as a whole, is it ample for your purposes, or have you ever had any difficulty in lending as much money as you wished to lend on the securities included in this list?—Only when we have had a very large amount out. In normal times I mean, when the amount out has been considerably less, there has been no difficulty whatever.

2084 You could enlarge your list without taking any less good security, could you not?—The list has been enlarged within the last two or three months, and that has helped very considerably.

2085 I think I gathered from Mr Badock that the India Office confine you to securities which are registered at the Bank of England?—Yes.

2086 Or bearer securities, which would, of course, be deposited with the Bank of England?—Yes.

2087 As far as I can gather, there is no statutory provision which renders that necessary, though it is a practice which the India Office has pursued ever since they took over the management of these affairs?—That is so.

2088 Do you think there is any advantage in that distinction?—In the case of registered stocks I think there might be difficulties if it were not so. For example, take a stock that has gone into the name of the Secretary of State, the chief cashier's office at the Bank of England do not accept what is called a stock receipt as evidence until they have seen the transfer book, which is brought from the transfer office and exhibited at the chief cashier's office to show that the stock has actually been transferred into the name of the Secretary of State. If stocks were transferable at other banks, the book could not, of course, be brought from that transfer office and exhibited at the chief cashier's office to show that the stock had been registered in the name of the Secretary of State.

2089 You do not think it would be sufficient to take a letter from the Joint Stock Bank to the Bank of England stating that that had been done? You were suggesting that the Joint Stock Bank would have to carry its transfer book to the Bank of England. Would it have to carry its register to the Bank of England?—That is the practice at the Bank of England, and this would be a matter for the Bank of England to decide.

2090 Is it necessary?—They do not accept the ordinary stock receipt as evidence without seeing the transfer book. There would be that difficulty. Then there is a difficulty to my mind of the stock being transferred out of the Secretary of State's name. The cashiers of the Bank of England are now attorney to the Secretary of State, I have not asked the question, and I do not know whether they would go about the city to different banks making these transfers out of the Secretary of State's name.

2091 You are limited, of course, in two ways, you are limited by the class of securities on which you lend and you are limited also by the number of firms you have on your list?—Yes.

2092 I rather gathered that no efforts have been made to extend the number of firms?—I never go out and solicit firms to come on the borrowing list. They know the ropes, and if a new firm wants to come on they write to me a letter, which I have asked them to do and which I forward to the India Office.

2093 Do you think it was generally known before the recent discussions that this practice prevailed?—Yes.

2094 I ask because one of our members who is in the City was not aware of it?—Did he not know that the *modus operandi* was to approach me?

2095 (Mr Gladstone) I did not know how the list was arrived at, or who was on it, or anything about it?—Anyone who wishes to go on the list comes and sees me, I ask him to put it in writing, and I forward the letter to the India Office.

2096 (Chairman) Have you in consequence of the publicity given by the discussion in Parliament had any withdrawals?—One.

2097 Have any fresh names been proposed to you?—No, I do not think so.

2098 I think I must tell you that incidentally we have had under our consideration the remuneration you receive as broker. I put it to Mr Badock, and perhaps I ought to put the same question to you. I asked him whether he was aware that certain other Government departments paid their broker by a fixed sum, or a commission with a fixed maximum. Perhaps you are aware of that?—I do not know how they pay. I do not think they pay by a fixed sum.

2099 I ought to make it clear. The cases I am referring to are for sales and purchases of securities and not for lending money?—That is so in those cases.

2100 I understand the arrangement with you as regards the sale and purchase of securities is of a very similar character, and that there is a limit to the amount of the commission in your case?—I believe—I do not think I am disclosing anything—they get a fixed sum whether they do any work or whether they do not. I should not like to be certain about it.

2101 In your case you get a commission at a certain rate up to a maximum of 1,500l, £.—That is so.

2102 But in regard to the loans you are paid on the interest earned?—That is so.

2103 Owing to the growth of the business your remuneration received in that way has very much increased?—Yes.

2104 And has reached very high figures in some years?—Yes, but the work has increased.

2105 I do not ask you to say anything about this unless you wish, but I think it only fair to you to say that I suggested to Mr Badock in the course of his evidence that the arrangement needed revision?—In 1911, or do you mean now?

2106 I thought the average of recent years had been very high?—I might also add that the work has been very great and the responsibility very great. The work has grown enormously.

2107 I asked Mr Badock if it had ever been considered here whether an arrangement might not be made that the broker should work on salary, and whether that might not be an economical arrangement for the India Office?—It depends upon the salary fixed.

2108 (Lord Faber) I understood from you that you think it helps India to lend on railway debentures, taking those railway debentures at par?—Yes.

2109 Did you also say there were some Indian debentures running as far on as 1930?—Those are Exchequer bonds.

2110 What is an Exchequer bond due in 1930 worth to day?—I think about 96.

2111 And you lend 100 on that?—No, I would not lend 100 on that, they have to give me about 104,000l for 100,000l.

2112 I suppose that the cashiers of the Bank of England do for the India Office, and very rightly do, things with regard to the transfer of stocks that they would not do for anyone else?—I am afraid I am not in a position to answer that. I do not know whether they are attorney to other people so I could not say.

2113 I should have thought that as regards these other big banks who have so many stocks inscribed in their books now, it might be that they would make an arrangement to help the Secretary of State to get over that difficulty, of which you justly speak, of his getting in and out of stocks, because that would open certain good stocks which at present are not open?—It might. What stocks have you in mind?

2114 I have not any particular stock in mind, but there are many that we bankers see?—Quite so. If you are touching upon Colonial stocks I think you should

13 June 1913 ]

Mr HOBACE H SCOTT

[Continued

have all or none, because otherwise there might be jealousy between one colony and another

2115 (Sir Robert Chalmers) When you send forward an application in writing for a new firm to come on to the list of approved borrowers, may I take it that you add to their application a recommendation with information as to your own inquiries concerning the standing of that firm?—I give such information as I can obtain, such as who the persons are, who their bankers are, and, in confidence, they tell me what their capital is

2116 As a rule, it would not be merely the sending on of an application, but there would be a recommendation on your part?—They may ask me whether I know anything why these people should not be put on, but I do not recommend

2117 You do not conjoin with the application a recommendation unless you are asked?—I may say, "I think that they might well be added to the list"

2118 The minimum amount that can be lent by you under the India Office regulations which govern you, is 50,000?—Yes

2119 If anyone wants more he has to take another 50,000?—That is so, it runs in multiples of 50,000

2120 Let us assume for the purpose of the question that the minimum of the first 50,000 is right, is it necessary to have multiples of 50,000 thereafter?—Having regard to the length of time, four weeks or five weeks, as the case may be, that we lend for, and having regard also to the fact that the firms are of high standing, I do not think there is any advantage in lending 75,000. Is that what you mean?

2121 That is my exact point. Might it not be the case that a firm wanted 75,000 and not 100,000?—It is very seldom that the point has ever been put to me

2122 Do you think there is nothing in it?—I do not really. It might be the case

2123 Your answer, I gather, had reference to the point of view of the borrower?—Yes

2124 From the point of view of the lender, the India Office, might it not just happen that they had 25,000 here and 25,000 there, and it might be convenient to them to divide it in that way after the first 50,000?—It might be, I do not say that sometimes it would not

2125 It never obtruded itself upon you from either the borrower or the lender?—No. They generally speak of 50's and 100's

2126 Does this business take up your whole time?—Entirely. I am there every day and all day, except Saturdays and Stock Exchange holidays

2127 As it takes up your whole time, your relation to the firm is not helpful in the business of the firm outside this particular business?—I scarcely have any other time whatever, the whole day is practically taken up with it

2128 And you cannot find time for any other work which the prestige that the Chairman referred to might bring?—I sometimes see a few clients in the office, and identify people at the bank, and write a few letters, but practically my time is entirely devoted to India

2129 Was that always so with you since, I think you said, 1904?—No, not always, but the work has enormously increased

2130 In which years—in the last three or four—take 1906?—I should think from about 1907 or 1906

2131 In 1905 you had a certain amount of leisure?—There were loans due every day as far as I can remember

2132 There must always be work, but there was not perhaps absorbing work, was that the position?—The work was lighter, we will put it, perhaps in those years than in the last four or five

2133 Do you advise as to the rates of issue of new loans?—As to the price of issue

2134 Have you to do with the issue of loans?—Yes, I attend at all meetings of the Bank of England with others when the price is discussed

2135 Your work is not then exclusively restricted to the lending out of surplus balances?—No. The new issue of stock would only occur once in a year

2136 But you do come in for that?—Yes

2137 With this pressure of work which you indicate, can you keep fully in touch with the market?—Fully

2138 Your work of itself is sufficient?—That is how I gauge my rate, by keeping in touch with the market

2139 For Indian purposes you do not keep in touch by non-India office work but by the actual work that you do for the India Office?—That is so

2140 (Mr Gladstone) Touching the question of your remuneration, do you care to give the Commission any information as to the estimated cost of your office and your establishment there in connection with the loan business? That has been referred to already, and you might like to say something?—I should say it was 1,700 or 1,800 a year—something between that. I could not say for certain

2141 Do you know the charge made by the Bank of England to private customers for lending money against Stock Exchange securities?—I do not think I do for certain, but it is generally believed that the charge is  $\frac{1}{2}$  per cent per annum, being  $\frac{1}{4}$  per cent for the bank and  $\frac{1}{4}$  per cent for the brokers

2142 Touching the list of securities, is not the system that has prevailed at the Bank of England about transfers generally considered antiquated and inconvenient by the general public?—Are you referring to the ordinary public—everybody?

2143 Yes?—I do not know, but I do not think so. I think it is an exceedingly convenient way of making a transfer. They have recently brought in transfer by deed of Consols

2144 (Mr Keynes) You have explained to us the practice on which the chief cashier at the Bank of England insists in order to satisfy himself that the transfer of stocks is in order, in your opinion is this elaborate practice of his a wise and necessary precaution?—I should have thought the evidence of a stock receipt was quite sufficient if signed by the transferor and also witnessed by one of their own bank clerks

2145 If he did not insist on this elaborate procedure, then there would be no particular objection to placing on your list securities inscribed at other banks?—I do not know. As far as that goes, there is the objection when the stock is transferred out of the Secretary of State's name

2146 Do you think these other banks could not easily give evidence which would satisfy any reasonable person of the fact of the transfer?—I think it would raise difficulties

2147 If these technical difficulties could be overcome, would it assist you in obtaining a good rate of interest to have your field enlarged by being able to accept additional securities?—I do not say that the rate would be improved, but I should certainly be able to employ some of the cash balances by the addition, we will say, of some colonial inscribed stocks

2148 Would it facilitate your business if, apart from technical difficulties, you were allowed to lend on such security?—I think it would a little

2149 I understood from Mr Badock that you do not receive authority from the India Office to lend for longer periods than six weeks?—No, it is four or five

2150 It is not often as long as six?—That is so

2151 And it is more often four or five?—That is so

2152 If they authorised you to lend for somewhat longer periods, would that appreciably affect the rate of interest you could earn?—It depends upon the period covered

2153 If in the course of a year there were occasions on which you could lend for a longer period, you could earn more, could you not?—I do not think so. It entirely depends upon the months that are covered. I think, on the average, this system is as good as any

2154 Do you mean that a person who is prepared to lend up to 10 weeks cannot get more over a number of years than a person who is only prepared to lend up to four or five weeks?—It would be very difficult to say. At the present moment, for example, over the 30th June, the end of the half year, money is very

18 June 1913 ]

Mr HORACE H SCOTT

[Continued

much wanted and I can get 4 per cent, and I am getting it for the first few days in July, although money for a week is  $3\frac{1}{2}$  and discount for three months is about  $4\frac{1}{2}$  or  $4\frac{3}{4}$ . But then when my loan falls due, perhaps on the 7th or 8th July, it is a speculation as to what money is going to be for the next month.

2155 I can understand that sometimes it pays you to lend for short periods and sometimes for long periods, but I should have thought that, if you had the power to lend either for short or for long periods according to which was the more profitable, that you would earn more than if you were tied down to one period?—I would have two options, do you mean, and instead of being tied down to four or five weeks I might have nine weeks or I might have 10 weeks?

2156 Yes?—I am afraid I have never looked at it in that light at all, or thought about it.

2157 You have not any opinion on the matter that you are prepared to give at the present moment?—That is so. It is quite a speculation as to what money is going to be in 10 weeks.

2158 I understand that you make all loans on a given day at the same rate to all borrowers?—That is so.

2159 At whatever time of the day you arrange it?—I get through, if I can, by perhaps 1 o'clock.

2160 What is your method? I do not know if you go to visit the borrowers?—I do go to borrowers.

2161 When you go to the first borrower, you will not have the information in your possession as to the rate at which you will be able to lend all that you can lend that day, will you?—I have found out all I can before I go to the first one.

2162 When do you go to the first borrower?—About half-past 10.

2163 By then you have settled the rate at which you are going to lend all the money that day?—Yes, I have made up in my own mind what is the right rate to ask and to accept for that month by ascertaining what daily money is, what weekly money is, what the bill rate is for about the period of my loan, whether the banks are buying bills like that, and so on.

2164 Having a figure in your mind you go round to certain approved borrowers, who might find that they could take a certain amount at that rate?—Yes.

2165 But by the end of the day you might find that you had slightly over-estimated the rate and you could not place all you had at that rate?—That has occurred, but it has only occurred quite recently. I have never, in my nine years, had anything over until the last few months.

2166 (Sir Robert Chalmers) That would be, how ever, because you were asking a good bargain for your principals?—That is so.

2167 (Mr Keynes) If you very seldom err in the direction of asking too much, would that not suggest that you must often err in the direction of asking too little?—No. I have found on some very few occasions that I have gone to a man and by great pressure I have got a certain rate from him, then I go all round the market and I find that I cannot get that particular rate anywhere else. So I have found that I squeezed him or pressed him too hard, and I go back to him and say, look here, I find the real rate is so-and-so, and I have put you down at so-and-so.

2168 That was the point I wished to reach. If you ask a higher rate at the beginning of the day than you can get later, so that some of your loans must be contracted at a lower rate, then you make them all uniform and go back to those at the higher rate and give them the lower rate?—Say I have got seven or eight people to go to, and I have done four of them at a certain rate, then I will make those other four give me my rate or else I offer my money elsewhere until I get that rate.

2169 Can you always get that rate in the end?—I have got it, with one or two exceptions.

2170 May I ask this for information. Is it the practice of other big lenders in the market to do all their business on a given day at the same rate?—I cannot answer for other people, but I should say so.

2171 (Sir Robert Chalmers) Always assuming that there was no catastrophe that had happened in the afternoon?—Quite so.

(Lord Faber) As regards that, our practice as a large country bank when we have money to lend is this. We send telegrams to three or four of the large discount houses in the morning to ask what they would lend bills at, there is generally a difference between them, but as a rule perhaps three of them are all the same and the fourth would be different, not necessarily the same one always, but one of them would differ.

(Witness) If I find I have got my rate from four people and I have got three other people left, I squeeze them up, and if they do not come in to the rate I take the money away and offer it elsewhere.

2172 (Mr Gladstone) You could give instances of that, could you not? There was a case, I think, of a loan that you made with the National Discount Company, they would not give you your rate of  $4\frac{1}{2}$  and you called the money in?—I constantly do that.

2173 I happened to go to see them that day, and I gave them the money and they found they had made a mistake?—They did.

2174 I should think you could verify the date, the rate there was  $4\frac{1}{2}$  or  $4\frac{3}{4}$ ?—I am constantly, very constantly indeed, employed in that way. It takes up a great deal of my time. When a firm, or firms, will not give me my rate, I have got to insist that money at the rate I want, and that takes up the majority of my time. The work may look a little on paper, but I assure you that a very great deal of my work is not seen on paper. I may have to go to eight or ten or a dozen, or perhaps even twenty firms, in order to lend my money, or to renew it when I am paid off by somebody who will not give the rate.

2175 (Mr Keynes) There is one question I should like to ask you with regard to your remuneration. At present, as I understand, your remuneration is proportioned to the interest earned?—That is so.

2176 So that in years of dear money it is a good deal higher than in years of cheap money?—Yes.

2177 And does not entirely depend upon the volume of business passing?—That is so.

2178 Would you think an arrangement, by which you were paid according to the volume of business you did, rather than according to the rate of interest earned, to be a fair one?—How would you gauge what was the work done? As I have just explained, a tremendous lot of work is invisible.

2179 I should gauge the work done by the amount of loans which you put through, apart from the rate?—The interest, after all, whether it is 4 or  $4\frac{1}{2}$ , what does it amount to?

2180 I am putting simply this point. When a suggestion of a fixed salary was put, you quite rightly suggested that it made no allowance for wide fluctuations in the amount of trouble, the present system takes account of the trouble, but it also takes account of something which is not concerned with you at all, namely, the rate of money, so that your income fluctuates through something which is not in the least under your control, and which does not affect the amount of trouble that you have. Is that system satisfactory to you?—It is more difficult to lend money in easy times than it is when money is wanted, although the remuneration would be smaller the work would be harder.

2181 In that case you get less remuneration when the work is hard?—It is very difficult to lend when nobody wants to borrow, and the remuneration is smaller.

2182 Is that system satisfactory?—It is rather. The system has been turned round several times. I believe in my father's time—he was also the India Office broker—I do not know what it was in my grandfather's time, in 1842—he had a scale, and if the rate was under  $1\frac{1}{2}$  per cent, he got  $\frac{1}{2}$  per cent, over  $1\frac{1}{2}$  per cent, and under 3 per cent, he got  $\frac{1}{3}$  per cent, and over 3 per cent, he got  $\frac{1}{4}$  per cent. In 1888 the scale was altered to make it a round 5 per cent, on the interest. That worked out almost the same. That

18 June 1913]

Mr HOBACE H SCOTT

[Continued

continued till 1911, when it was altered to its present form—not on my suggestion

2183 (*Chairman*) And not to your advantage?—Not to my advantage, nothing like it

2184 The alteration was a reduction?—It was very much reduced, it is equal to a 60 per cent reduction, if you look at it, I mean the work for 10 millions of loans out is the same as it would be for four millions

2185 (*Lord Faber*) The largeness of the loans just lately has saved you, has it not?—Yes If my present scale went back to the years when my predecessor held the appointment, say 14 years ago, when he earned 3,800l a year, on my scale it would be 1,600l, when you work off the expenses there is not much left for the broker

2186 (*Sir Shapurji Broacha*) Are you always able to lend at one rate?—I always settle upon one rate

2187 Suppose you have two millions to lend and you have given one million at 3 per cent, and there are no takers at 3 per cent that day for the other million, and that you cannot lend it except at 2½ or 2¼, what will you do? Will you go to the first men and reduce the rate to them to 2½ in order to equalise?—I do not think that question has ever arisen that I have got such a huge sum of money to lend on one day I have never had such a case as that

2188 In business discounting, in the morning you discount at ¾ and in the evening you may discount at 3¼?—That is just possible

2189 The rates are always fluctuating, and you say, in order to equalise them, you go back to those you lent at a higher rate and reduce the rate to them?—I should not wait till the afternoon to do my work, that would be, in my opinion, speculating with my order I have got to do my work and not look to other men

2190 When a broker goes to a firm it takes him about an hour, or it may take only half an hour, but in the meantime the rates have gone back, and the other borrowers may say, "The market is lower to-day owing to some circumstances, political or otherwise, and so you have a difficulty in getting the same rate" I suppose, according to what you say, you will then go back to the first borrowers and reduce the rate to them?—That is only if I find one solitary exception, or possibly two, out of perhaps eight or ten houses with whom I have got money If I find that I can get the rate from the majority of people, then I hold out until I do get it I should never go back except in one solitary case or possibly two cases

2191 I lend money, and I know that I take different rates not only in the same day but in the same hour?—I think it is to the interest of India to stick to one rate

2192 I know what a farce it is to go to 10 or 20 people, because by the time you have got to the twentieth the rates have declined, of course they may have appreciated also Then in case they have appreciated, would you go back to the first borrowers and say they must give you the appreciated rate?—No I think if the rate was on the verge of appreciating I should have no difficulty in lending, and I should not have to go to so many people It very rarely occurs that I have to go back to one or possibly two when I have got 10 or 12 on my list and say, I find that the rate is so and so Of course, if I did not go back to him A would very soon find out what rate I have accepted from B, and then he would say, "You did not treat me fairly"

2193 If I go to the National Bank and discount bills at 2½ per cent and then I cannot get more than 2¼, would the broker who was already notified of the transaction at the first bank reduce it because the other loans could not be done at the same rate?—I have only reduced it where I have got the higher rate under great pressure, and the man has given it, perhaps not knowing what the rate has been

2194 (*Sir Robert Chalmers*) You are dealing with a limited number of permanent customers?—Yes

2195 To that extent, do you understand your position to be somewhat different to that indicated by Sir Shapurji in his recent questions?—I am confined to a certain circle

2196 And it is your interest not to snatch an exceptional profit from one of them to-day?—Quite so If A finds out that I have charged B 3¼ when I have charged him 3½, he might accuse me, and I think rightly so, of favouritism, and I do not think that would be in the interests of the India Office

2197 You are dealing in a world market as regards lending?—Yes

2198 Which would not necessarily apply to every market, perhaps those that Sir Shapurji had in mind?—That is so

2199 (*Sir Shapurji Broacha*) You have got 62 names on your list, but they are not all of the same status, are they, for instance, you would not consider a broker's firm to be of the same standing as the National Bank?—The small man's security is as good as the big man's

2200 (*Chairman*) The difference would be in the amount you lend?—Quite so

2201 Did you have anything to do with the deposits that were made to the banks?—I negotiated them with the various banks

2202 Did you select the banks?—No

2203 But you negotiated the terms with them?—I negotiated with these different banks and then reported to the Chairman what I could obtain, and I received my orders

2204 Was a list of the banks given to you to which you should go?—That is so

2205 Or were you authorised to go to any bank that you thought of sufficient standing?—No The banks were selected, and I was instructed what banks to go to

2206 (*Mr Keynes*) Was it left to you how much you would lend to each bank, or only the terms on which you should lend it?—Only the terms

2207 The amounts were not left to you?—No

2208 (*Mr Gladstone*) Do I understand that in those cases a particular bank was selected, or did you go round the approved banks in the same way as you did with the approved borrowers?—I went to the approved banks

2209 The name of a particular bank was not given to you and then you were told to get the best rate you could from them?—No I would go first to a particular bank and report the rate that I could obtain from them

2210 (*Lord Faber*) You only went to the banks that you had instructions to go to from the India Office?—That is so

2211 You did not choose the banks, but you went to the banks that were named to you?—Yes

2212 (*Sir Robert Chalmers*) You had an approved list of banks, as you had an approved list of ordinary borrowers, given to you?—Yes

2213 (*Mr Gladstone*) And you were not asked to go to one particular bank?—Only to ascertain the best rate

2214 (*Chairman*) It is possible that your answer to an earlier question may be open to misconception You were not instructed to go to one particular bank, but you were given a list of banks is that so?—First, I had an order for a deposit—will you offer it to so and so, and if the rate is not agreeable then will you offer it to so-and-so and so and so? I think that was the procedure

2215 There was a list of banks approved, as I understand, for this purpose?—Yes

2216 Assume that there was a deposit to be made, you were informed of the amount of that deposit?—Yes

2217 How was the rate of interest settled that was to be obtained on it?—I negotiated with these different banks, and I found out from them what was the best possible rate they would give, and reported it

2218 Therefore if you were told, for instance that the Secretary of State wished to place 200,000l on deposit, you would have gone to all the banks on your approved list and inquired of them what rate they would give you for it?—I went and saw the Chairman of the Finance Committee and discussed the thing with him, and he would instruct me as to the banks and the rate that I might accept

13 June 1913]

Mr HORACE H SCOTT

[Continued.]

2219 He instructed you to go to a particular bank ?  
—Yes, to ascertain the rate

2220 And offer it to that particular bank ?—  
Quite so

2221 At a particular rate ?—First of all, to  
ascertain what that particular bank would give

2222 And if the rate was satisfactory, then the  
deposit was offered to that particular bank ?—Yes

2223 (*Lord Faber*) That bank being one out of  
the list ?—One out of seven

2224 (*Chairman*) The routine was not that you  
should necessarily inquire of at least three or four  
banks on the list, what their rates were when you had  
a particular sum to lend ?—I always found out what  
the discount rate was

2225 (*Lord Faber*) Supposing you had 10,000*l* to  
lend by order of your superior officer, did you then go  
to the whole seven selected banks and try what each of  
them would give you ?—Not always

2226 How would you decide which out of the seven  
to go to ?—I did not always try each one of the seven

2227 How did you make up your mind that 1, 2, 3,  
4, 5, and 6 would not give you a worse rate than 7, to  
whom you did not go ?—I would not go to the whole  
of the seven. Perhaps three or four banks on one  
particular day might say "I cannot give you more  
than such and such a rate"

2228 (*Chairman*) Did you ever make a deposit  
with one bank without having inquired of the other  
banks what they would give ?—I may have, when it  
first originated.

2229 If you did so, were you acting on your own  
discretion or acting on instructions ?—I had my  
instructions as to what rate I might accept

2230 Did your instructions also say, within the  
limit of the list, of which bank you were to accept that  
rate ?—I would have instructions that if I could not  
get the rate from A, I should offer it to B, then I  
would go back, and so forth. If I could not get it  
from B I would go to C

2231 (*Lord Faber*) In fact, you did not get the  
best rate, to your knowledge, out of the whole seven  
banks, you had instructions to get, we will say,  
3 per cent from one bank, and you went to that  
bank and took 3 per cent ?—I always obtained the  
best rate that could be got

2232 Without knowing whether the other six  
banks would give you more than 3 per cent ?—I did  
not go to all seven on one day, but very often the  
deposit was split amongst four or five banks, and that  
was a check upon the rate

2233 You did not put them in competition with  
one another on that particular job, if I may put it in  
that way ?—I always checked the rate before fixing  
it up

2234 (*Mr Gladstone*) In this case, two of the  
members of the Finance Committee were bankers ?  
—Yes

2235 And the Chairman of the Finance Com-  
mittee, under whose general authority you acted, I  
suppose with the Accountant-General, is also a  
banker ?—Yes

2236 What the Commission desire to know is  
whether when these amounts of money were put on  
deposit the best rate was obtained, and whether you  
were confined or ordered to give the deposits to a  
particular bank, or were bound in each case to ascertain,  
and did ascertain, the best rate from all the banks on  
the approved list. You might not have gone to them  
every day, but the rates would be known ?—Quite so

2237 You did not place those deposits with par-  
ticular banks in accordance with the orders of the  
Chairman of the Finance Committee, although as  
Chairman of the Finance Committee of course he  
had the responsibility of instructing you to make  
the deposits ?—Yes

2238 (*Chairman*) Did he leave you full discretion  
to make the deposit with any bank on the list, or did  
he indicate to you that you were to go to a particular  
bank on the list and offer that particular deposit ?—I  
had to go to a particular bank and find out what that  
particular bank would give, I would go back again

and report, and if it was not accepted I would have to  
offer it to somebody else and see what they would do

2239 Did the Chairman settle with you what you  
both thought was a fair rate ?—Yes

2240 The best rate you could obtain ?—Yes

2241 Did he then instruct you to offer the deposit  
to bank A at that rate, without inquiry as to whether  
bank B or bank C or bank D would pay you a better  
rate ?—As a rule there were three or four banks due  
for renewal of the deposit on a particular day, or if  
there were fresh deposits, say of half a million, it  
would be divided up, perhaps 200,000*l* here, 100,000*l*  
there, and 200,000*l* there, and would be offered in that  
way. By that means one got to know what was the  
best rate and whatever the best rate was that bank  
had it and the other bank did not have it. So I  
screwed them up to the best rate available

2242 In each case you formed your own judgment  
about what the rate should be, and if you secured the  
rate which you had decided to ask, you gave the  
deposit at once, is that it ?—I found out by competi-  
tion, putting one against another, what was the best  
rate obtainable, and then got my instructions from my  
superior

2243 You had in a particular case, we will say,  
three deposits falling due from banks A, B, and C ?—  
Yes

2244 Did you go to those banks and say, "What  
rate will you give me for a renewal of the deposit ?"—  
Yes

2245 If you had fresh money, you were instructed  
to go to another bank ?—Yes

2246 And ask them what rate they would give ?—  
Yes

2247 If one of the banks offered you less than you  
obtained from the others, what happened ?—I with-  
drew the deposit and offered it somewhere else

2248 And you got the higher rate elsewhere ?—  
Yes

2249 That is not clear from your early evidence, I  
think ?—I thought Lord Faber asked did I go to all  
seven banks ?

2250 (*Lord Faber*) Yes, so I ask still ?—I cannot  
say I went to all seven, but I might go to the majority  
of them \*

2251 (*Chairman*) You went, in your opinion, to a  
sufficient number really to test what was the best rate  
that you could get ?—The deposits were very often  
paid off by one because they would not give the rate I  
was asking, and then the money was redeposited with  
somebody else

2252 In no case, therefore—I think I had better  
put the question quite bluntly to you—did the Chair-  
man of the Finance Committee, who had to arrange  
these matters with you, and who was himself a banker,  
commit you to deal at a particular rate with his bank,  
unless you had tested that rate by making application  
to other banks ?—I always tested the rate if I had a  
deposit with that particular bank

2253 (*Mr Keynes*) Did you receive instructions  
from the Chairman of the Finance Committee as to  
which bank should have the first offer at the current  
rate of the day ?—I had instructions as to what banks  
to go to, and I went, perhaps, to the one which was  
first on the list

2254 I understand that if a bank did not give you  
a satisfactory rate you went elsewhere ?—Yes

2255 But in selecting the bank you first went to  
and gave the first offer to, did you act on the instruc-

\* I In further reference to Lord Faber's question as to  
why I did not always go to all the seven banks, I should like  
to explain that it was the policy to keep the amounts of the  
deposits with the banks as even as possible, so that if through  
deposits being called in three or four of the banks had less  
than the others, I would naturally go first to these banks and  
not necessarily to all the others provided the best rate was  
obtained from them

† When I had a deposit to make I saw the Chairman of  
the Finance Committee, and after discussion he stated that, if  
his bank was going to take any of it, the best rate he could  
give was such and such, but if I could do better elsewhere I was to do so,  
which of course I always attempted to do

The same remark applies to renewals of deposits.  
*Horace H Scott.*

13 June 1913]

Mr HORACE H SCOTT

[Continued

tions of the Chairman?—My instructions from the Chairman were as to what rate I might accept

2256 Did you also have instructions as to which bank you should offer the loan on those terms?—I went to that bank first and then there may have been three or four that I went to afterwards

2257 Were those three or four named to you by him, or did you select them yourself?—The Chairman generally named them

2258 (Chairman) Do you not think it would have been better, when you had money to lend on deposit in this way, to have seen all the banks and said, "I have so much money to lend, what is the best rate you will give me?"—But then the deposits varied so much, sometimes there were 200,000l to put on deposit, sometimes 400,000l, sometimes 300,000l and I do not think it would have been advisable to tell all the banks how much money the Council had to put on deposit at one time

2259 Is that any objection to the course that I suggested?—These were exceptional deposits, and you would not offer a bank those amounts I think they went in amounts of about 100,000l apiece

2260 I do not mean that you would necessarily offer the whole amount to one bank, but that you would fix in your own mind the limit which you would entrust to any one particular bank at a given moment, and then, having that money to lend, you should have asked all of the banks whether they could take the amount that you were prepared to lend, or that you thought it safe to lend each one of them, and if they were prepared to take it, what rate they would give to you? Then you would have been certain that you would have got always the best rate that any of the seven banks could have given, would you not?—Yes

2261 I do not understand that the practice, as you have explained it, gave any guarantee that one of the other banks on the list might not on any particular occasion have given you a better rate of interest if they had had the offer. Do you think there was any guarantee of that?—I only went to such banks as I was instructed, in order that the amounts might be kept as even as possible provided that the best rate was obtained

2262 (Mr Gladstone) I suppose your action would have been affected to some extent by the amount of

the deposits which you knew were already out?—Exactly

2263 If, for instance, two or three of the banks had half a million or a million or more already?—That would be so

2264 You would not have gone to them, because they might have had enough money?—Quite so

2265 That might have limited your action on a particular day?—That very often was so. Perhaps I did not explain it clearly. Perhaps one bank had got a certain amount and another bank had not got quite so much

2266 (Chairman) If in any particular bank they had got the full amount that you thought it desirable to lend to them, you might treat them as not being available for the moment?—That was so

2267 Did you always ascertain what was the best rate you could get from any of the banks on the list to whom you were prepared to lend more money?—I think so, certainly

2268 Therefore on each occasion you would have got a quotation from every bank except those which had already got so much money that you did not want to put more with them?—I think that was so

2269 (Lord Faber) Then you did not receive instructions from the Chairman to go to certain banks?—I always received instructions from the Chairman. There were only four banks on, up to a certain period, and after that the number was increased to seven

2270 (Sir Robert Chalmers) Which were the first four?—The National Provincial, the Westminster, the Union of London, and the City

2271 That was in what years?—In 1909 to 1911, I think

2272 The others came on later?—The others came on later

2273 (Sir Shapurji Broacha) I suppose your Chairman is in the position of knowing the finest rate having so many people visiting him?—I should say so. He would know the bill rate probably better than I do

2274 (Mr Gladstone) Might I ask whether the fact of the Chairman being a banker himself, and knowing the market so well, would not be an advantage to the India Office?—I should think so, certainly

The witness withdrew

At the India Office, Whitehall, S W

### SEVENTH DAY.

Friday, June 20, 1913.

#### PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (Chairman)

LORD FABER  
LORD KILBRACKEN, G C B  
SIR ERNEST CABLE  
SIR SHAPURJI BURJORJI BROACHA

SIR JAMES BEGGIE  
MR HENRY NEVILLE GLADSTONE  
MR JOHN MAYNARD KEYNES  
MR BASIL P BLACKETT (Secretary)

SIR DANIEL MACKINNON HAMILTON called and examined

2275 (Chairman) I understand that you are here to-day as a representative of the Bengal Chamber of Commerce?—Yes, the Chamber have asked me to express my views, but my views do not necessarily commit them in any way

2276 You have submitted a memorandum to us, and I propose, as we have done with the other witnesses, to print that in your evidence (see Appendix XVI, page 518) Does what you have just said as to the

views of the Bengal Chamber, refer to the whole of your memorandum?—Yes

2277 Would you tell the Commission very shortly what has been your experience in matters relating to Indian finance and currency?—Only the ordinary business experience of 25 years in India

2278 We have had it in evidence that the large cash balances held in India and London of recent years were due to exceptional causes, I rather gather from

20 June 1913]

Sir DANIEL MACKINNON HAMILTON

[Continued]

your memorandum that you would agree to that statement?—Yes

2279 And that you do not criticise the Government for the large amounts to which these balances have risen in recent years?—No, I believe that the balances might be larger

2280 I also gather from your memorandum that you are heartily in favour of the practice of selling Council bills and transfers in order to bring the balances to London?—Yes

2281 And also of the practice of lending the London balances out in the City?—Provided they cannot utilise them to better advantage in India

2282 Do you think that they might have been used to better advantage in India?—Yes

2283 I will return to that answer later I gather also that you think the Government has perhaps paid too much attention to capital expenditure on railways with a view to assisting the export trade, and has thought too little about the internal development of India?—There is so much money in hand that they can develop both railways and irrigation, which is so much needed for the internal trade of the country I do not think that they need starve the irrigation work

2284 In paragraph 10 of Appendix XVI (page 519) you speak of the "gamble in rain," so christened by "Sir Guy Fleetwood Wilson" I think he used that phrase in reference to the Indian budget, was that not so?—He applied it to the Indian financial system really

2285 What do you think he meant by it?—It means this, that the Indian Government never wants to borrow more than it can possibly help, whereas I say, by not borrowing, for every sovereign not borrowed it loses 20s worth of produce to India

2286 Does not the phrase mean that the realisation of the budget estimates depends upon the rain?—Yes

2287 That if there is a particularly good season there will be a surplus?—Yes

2288 And if there is a particularly bad one there will be a deficit?—Yes, but the deficit can be made up by borrowing

2289 I want, first of all, to get at the exact meaning of the expression "gamble in rain"?—Government make such a fetish of what they call the avoidance of debt

2290 In fact, I suppose, in preparing their financial statement Government budget in the expectation of a normal year, having to make their estimates at a time when the climatic conditions on which the character of the year depends cannot be foreseen?—What the Government look to is, Square your own accounts, that is all they look to, and they do not consider that they are losing the produce

2291 Is this your criticism—that they pay too much attention to balancing revenue and expenditure, and that they should be comparatively regardless of the amount of their revenue, but budget for large expenditure, relying on borrowing if the revenue fails?—What it amounts to is this, they lose a sovereign's worth of produce for every sovereign they do not borrow

2292 Is it your criticism that they ought to carry out a steady programme of development works irrespective of budget receipts?—Yes, irrespective of the rainfall, budget receipts, and anything else

2293 But you do not suggest that they can eliminate the consideration of the rainfall from their estimates of revenue, do you?—That is my contention

2294 You think they can?—Yes

2295 I was using the word "revenue" as meaning the produce of their taxes?—I will explain what I mean, if I may, by means of this diagram,\* which is illustrated with photographs, and show you how they may do it These are photographs of a property of mine in Bengal The surplus crop of the year is represented by this heap of rice, that has to find its way to Europe, and those are the bags going to Europe On the rice reaching Europe, it is turned

into gold coin, the gold coin passes in turn through the council chamber into the Treasury balances, the latter are already chock full, so it passes on, and it eventually creates a water tank for an irrigation canal That is what happens when Government gets the gold When Government does not get the sovereigns by means of the council chamber, the gold escapes the Government comes round this other way, and lands for circulation in India, or goes into the hoards of the people—it does not matter which, it becomes dead there, as you can see When a bad year comes round, the export trade is wiped out, and there is no gold flowing towards Europe at all To keep this irrigation work going the Government comes into the market and borrows European capital, which flows from the Treasury and so keeps the irrigation canals going In that way the irrigation canals and the railway programme are going on all the time, whether the rainfall is good or bad In the following year the export trade begins again, but instead of the sovereigns then flowing into the Government chest, they flow towards Europe and repay the European capitalist, he is paid off By one of these two means the irrigation canal or the railway is kept going all the time, and therefore you can keep your programme going, whether there is a rainfall or not

2296 (Sir Ernest Cable) You mean that you would make up a deficit by borrowing?—Yes, and the borrowing is paid for by the next good year In that way India gets the canals for nothing

2297 (Chairman) I think I understand your meaning to be that the development programme of India ought to be secured by borrowing freely whenever necessity arises, and ought not to be in any way checked by a deficiency of revenue in a particular year?—Exactly, and your borrowing can be paid off next year from your surplus

2298 What therefore you mean by that gamble in rain is that at present if the rains are good the revenues increase and there is a surplus?—Yes

2299 And also there is a considerable development of work?—Yes

2300 But if the rains fail then there there is no surplus, there may even be a deficit, and the work stops?—Yes, and India suffers from restricted development All that can be avoided by this system which I have explained

2301 Now will you explain to me this sentence in that same paragraph 10 of Appendix XVI "Some years ago Government, with a strong hand, suppressed "rain gambling in Calcutta"?"—Sir Ernest Cable knows what I mean

2302 But I do not, so perhaps you will explain it to me?—Certainly In the hot weather we get showers perhaps every three or four weeks, and as the rains approach, the probability is that those showers will become more frequent There was a gamble whether the rain would fall on a particular day or not There was a little tank with a spout fixed up on the top of a house in the Burra Bazaar of Calcutta, which is the big native market place, and if the rain fell sufficiently for this spout to run, it was considered to have rained, and the man lost or won his bet accordingly This gambling became such an evil in Calcutta that the Government stepped in and killed it

2303 That was pure betting as to whether it would rain on a particular day or not?—Exactly

2304 Do you think that that has any parallel to the financial procedure of the Government?—I am using Sir Guy Fleetwood Wilson's own phrase, he calls it a gamble in rain, and I want to kill that

2305 In order to kill it it seems to me that you gave it a bad name and thought that would hang it?—I hope it will

2306 With regard to the Paper Currency Reserve, is it your view that the invested portion of the reserve is very small in proportion to the total circulation, and that the amount in gold is too large?—The amount of gold is far too large Supposing they keep in hand a sufficient supply of silver to pay off to-morrow every 10-rupee note out at present, they would still have 13 millions sterling in their pockets lying idle, which could be freed to-morrow for development purposes,

\* Not printed

20 June 1913]

Sir DANIEL MACKINNON HAMILTON

[Continued

and yet still, as I say, leave enough silver for every 10-rupee note that is out

2307 In making that calculation I understand you hold that the gold should not be taken at its gold value as at present, but at its rupee value?—Yes, because the Indian people cannot claim gold. Silver is the legal tender of the country, and all they can claim is silver, and therefore all that gold is simply lying dead and useless

2308 You would treat that gold as the equivalent of the number of rupees which could be coined with the silver which it could purchase?—Exactly. With that 12 millions of gold you can coin about 20 crores of rupees

2309 I gather you hold the view that with the gold so set free you should proceed with the development of railways or with other capital expenditure?—Yes, and for this reason. If you spend those 12 millions sterling in locomotives or railway wagons or anything else you like in England here, in that case you return that gold to Europe, you immediately relieve the money markets of the world, and in addition to that you increase employment in Europe here. If you order 12 millions' worth of rolling stock you can see what a tremendous boom in trade that would create

2310 You said the first effect would be to relieve the money markets of the world?—Yes, it will place 12 million sovereigns in the Bank of England to begin with

2311 I take it, therefore, you would regard the condition of the London money market as of the first importance to India?—It is immaterial whether it is in England or in India, so long as the Empire has got the gold. The Empire still keeps this gold and does not part with it, the gold comes to England and remains in the Bank of England. At the same time you create employment by ordering 12 millions' worth of railway material in England. You can see what a tremendous relief that would be to unemployment

2312 I want to get your view exactly, if I can. One of the criticisms directed against the Secretary of State has been that he has thought too much of the London market, I gather from what you have said to me just now that you think the condition of the London money market is of great importance to India, and that anything which relieves stringency here directly serves Indian interests, am I right?—Yes, that is so, in this way—that the money set free develops India. It helps both, it helps India and it helps you

2313 I think you hold that the Government of India ought to encourage the use of a paper currency by the people of India as far as possible?—Yes, it ought to encourage the use of a paper currency, but then it is not purely a paper currency, you have got the silver reserve against it, and so it is backed up by silver to the extent required

2314 For metal currency purposes?—It is practically a silver currency, because the paper is backed by the silver

2315 But for actual use in circulation, would you encourage the use of a paper currency?—Whatever the people want, let them have it. If they want paper, give them paper, they can cash that into silver whenever they want to do so

2316 Does that apply equally to gold? If they want gold would you say, give them gold?—No, do not give them gold. For every sovereign of gold you give to the people, India loses a sovereign's worth of produce, and you get nothing in exchange

2317 That is the key to your memorandum?—Exactly

2318 In your opinion, gold in India lies idle, whether in currency or in hoards?—In any case India loses one sovereign's worth of produce, and that is not the end of it. If you invest that sovereign in irrigation works, say, at an ordinary 5 per cent return—as a matter of fact, irrigation works give a 10 per cent return, and railways give 4 per cent or 5 per cent—but taking an average of 5 per cent, that means that that sovereign in 14 years has doubled and become two sovereigns, because money doubles in 14 years at 5 per cent. But that is the smallest part

of the loss. If that sovereign is sunk in irrigation works, it creates 100 per cent for India in food—I have got the Government figures here to show that every £ spent on irrigation creates a £'s worth of food. So in the 14 years you gain 14 sovereigns in food, plus the 2£ in the way of capital, therefore, for every sovereign lost to India, that is, which has been put into circulation or put into hoards, India loses 16 golden sovereigns. That seems a bold statement to make

2319 If I understand you rightly, what you say comes to this, that if India takes payment in gold she takes payment in something which is only of use for the purpose of exchange?—Exactly so

2320 Which, if not so used, is wasted?—That is so

2321 But if India takes payment in goods, in railways, or in irrigation works, it then gets an actively productive force?—That is my meaning exactly

2322 It not only gets the value of the gold which it might have had?—But it gets 16 sovereigns over and above in 14 years

2323 Through the development which has taken place?—Exactly. In 14 years that sovereign gains 16 sovereigns, so for every sovereign India loses she loses 16£ of produce

2324 Lord Faber suggests that the payment of labour has got to come out of those sovereigns?—That does not matter. The people are fed all these years

2325 (Lord Faber) By the Government?—Perhaps you have read Ruskin's "Unto This Last". He makes the statement there that the whole of wealth is life. That is an economic fact. Credit is no use until you turn it into cash, cash is no use until you turn it into food, and food is no use until you turn it into flesh and blood

2326 (Chairman) The general effect of this evidence is that in your opinion it is of the highest importance that the Government should use all the funds it can for the purposes of development?—Just so. But it does not require to use all that it has got, or anything like it. It has got 60 millions of gold in its pocket now, and does not require to use a fourth of that

2327 I think you admit, however, that there must be a silver reserve for the paper currency?—Exactly, and I am not touching that, it has got that in either case

2328 And you admit also that Government must have a gold reserve for the exchange?—It must have the Gold Standard Reserve

2329 At what figure do you think the Paper Currency Reserve ought to stand?—You need not take a single sovereign or piece of silver out of your currency reserve. You can do what I say without touching your reserves in any way under this system which I have explained to you

2330 I understood from your memorandum that you propose to take money out of the Paper Currency Reserve?—But the Treasury fills up again in the next good year. The money flows into the Treasury then, but in the bad year the flow into the Treasury stops and you draw from the London money market. Then the good year comes along again and you repay the London money market, in that way paying off your debt. In the meantime you have got your railway for nothing

2331 I cannot follow the process by which anybody gets a railway for nothing?—You do get it I assure you, and you get not only one but you get as many as you want. You have 12 millions in hand now, have you not?

2332 What reserve are you talking of?—The surplus currency reserve. You have got 12 millions in hand there now, have you not?

2333 (Sir Ernest Cable) Do you mean in addition to what is required to cash every rupee note?—Yes, is that so or not so?

2334 (Chairman) That is what we are wondering about?—Perhaps some of the official gentlemen will confirm my figure

2335 How do you get at that figure?—That is the difference between the actual value and the paper value. In the Government accounts the sovereign is valued at

20 June 1913]

SIR DANIEL MACKINNON HAMILTON

[Continued

15 rupees, whereas with the sovereign you can buy 22 rupees

2336 Then the 12 millions of which you are talking is the difference between the gold written at 15 rupees to the sovereign, and the gold written at, say, 22 rupees to the sovereign?—Exactly

2337 (*Mr Keynes*) You are not proposing both to turn the gold into silver and also to invest it, are you?—Yes

2338 You really are proposing to do both?—Yes, I am going to do both. I am getting double power

2339 With the same gold?—With the same gold

2340 But after you have invested the gold you no longer possess it?—I have shown you how it comes back again. You keep your Treasury intact. I would like the gentlemen all round the table to understand this before going any farther. (*Referring to diagram*)\* These are photographs of my place at Sunderbund

2341 Is this to explain how you bring in the reserves?—This is to explain how you never tap your reserves at all. This photograph shows actual India at work, and that shows India's surplus stock, you see it piled up in that little heap

2342 (*Sir Ernest Cable*) That is the profit?—Yes. Here is my Indian merchant coming round to buy it. They clean it, you see, before they take it away. There is a man there with a fan in his hand, that is how they clean it

2343 (*Mr Keynes*) What is the next step?—They bag it, and I have shown here the bag going to Europe, and there the European market. Then gold comes back in payment for the produce. The gold coins pass through the Council Chamber and right through the Treasury reserves, which are chock-a-block now, and then go to create an irrigation tank, or a canal, or a railway

2344 That is to say, these sovereigns are spent?—Yes

2345 So now the Government has no sovereigns at all?—It has got the same stock it had before

2346 But it has spent them?—No, they are there. This is the reserve as it stands now

(*Sir Ernest Cable*) But that is not the old gold

2347 (*Mr Keynes*) And the new gold that has come has now been spent?—The produce is turned into gold in Europe, the reserve as it is now is chock full of gold, the sovereign therefore passes through, leaving that gold as it is, and is turned into an irrigation canal

2348 It has passed into the irrigation canal?—The gold has

2349. By being spent?—Yes

2350 So the Government has so longer the gold?—It has the gold, and I want to show you how it gets it back again

2351 By a further stage does it get it back again?—The next year is a bad year, and the export trade is stopped. In that year the Government borrows in Europe and the gold comes back from Europe. It passes through the reserve and still leaves that intact, then it comes out and keeps the irrigation works going and also your railway

2352 (*Sir James Begbie*) In a bad year does the Government borrow in London, or where?—They do not borrow, but I say they ought to borrow

2353 (*Sir Ernest Cable*) This diagram of yours illustrates the ideal, does it?—This is what might be. What actually happens when Government stands out in the market and does not borrow, is that the gold escapes them. If the Government raise the exchange to 1s 4½d, the banks will not buy the gold.

2354 (*Mr Keynes*) They build the irrigation canal out of the money they eventually borrow in London?—Yes, and I show you how they repay it. The next year the gold comes back, escapes the Government, and, landing in India, passes into the currency, or into hoards, it does not matter which, but it does nothing that a paper note would not do.

2355. When the Government spends the gold which

it has got in its reserves, that also flows into the same source, does it?—No

2356 Where does it go then?—In labour

2357 Into the pockets of the persons who make the tank?—Yes, it has created a tank

2358 Just as it goes into the pockets of certain other persons in other circumstances?—Yes. When the export trade stops there is no gold going round at all, but the export trade begins again when the good year comes and the gold flow begins again with it. If the gold escapes the Government it lands in India, and in the bad year the Government draws from Europe, but not in the next good year, which fills up the European chest again, and as it pays off Europe keeps your tanks going

2359 (*Sir Ernest Cable*) This is new to me at the moment, I must say I cannot resist the feeling that you are using the money twice over?—And you are using it twice over, that is what I want to do

2360 Can we all go on using money twice over?—It is this way. You have 12 millions in hand now, say you build a railway with it, and when you build your railway suppose you sell it, with the gold you get you build another railway and sell it, when you sell that railway the gold comes back, and when it does come back you build another railway and sell that, and so on indefinitely

2361 (*Mr Keynes*) To whom do you sell the railway?—To anybody who wants to buy it

2362 What do they give you in return? I can understand the process by which you build a railway with gold and then sell that railway for gold?—You get the gold, the price of the railway

2363 Is it simply a system by which the Government builds railways and then sells them to private persons?—Yes, in that way that 12 millions will make railways indefinitely

2364 Only so long as the private persons can be found to buy the railways?—Exactly; but if private persons do not want them India keeps them herself

2365 In that case she can only build one?—No, she goes on indefinitely

2366 But unless private persons buy that railway she has no money to build a second railway?—I cannot follow

2367 (*Chairman*) Will you look at paragraph 6 of Appendix XVI, page 518? You say there, under the head of Treasury Balances, "The Treasury balances remaining in India should be freely lent out in India to first-class banks?—Yes, that is so

2368 Your opinion is that the Treasury balances are kept at a higher figure than is required by the needs of the Indian Government?—I understand that that is so. I understand very often that large sums are in hand, but they will not lend them out unless they get the full bank rate; for instance, if the bank rate at Calcutta is 7 per cent, the Government will not lend to the banks unless it gets 7 per cent

2369 I think that in paragraph 7 of supplementary note A to Appendix XVI (page 529) you suggest, assuming the bank rate in India to be 7 per cent or 8 per cent, that the Government should lend these balances at 1 per cent below the English bank rate?—Yes

2370 Would that not be conferring a very special favour on a very small class of the community?—I do not think so, because this is money that would be lent to the trades, and the whole country would benefit

2371 But they will not have sufficient money to lend to every possible borrower?—It depends on the amount of the reserve

2372 Can you conceive of any reserve that would enable them to lend to every possible borrower?—I understand that the reserves are generally big enough to lend to the banks

2373. Then the banks to whom it was lent would be receiving very favourable treatment?—They would borrow at 4 per cent, and re-lend at 5 per cent, which would mean 1 per cent.

2374. They would re-lend to certain people at 5 per cent?—They would re-lend to the trade—to whoever wanted it. In that way trade benefits and the country develops.

\* Not printed

20 June 1913]

SIR DANIEL MACKINNON HAMILTON

[Continued]

2375 What I put to you is that they would not have enough to lend at that special rate to all the people who came to them?—Of course, if they have not got the money they cannot lend it, but they can have the money, as I explained, by this system of mine

2376 In that case they would have to pick out certain clients who should have money at 5 per cent, while to other clients offering the same security they would be charging 7 per cent or 8 per cent, is that not so? Perhaps I do not make myself quite clear?—I do not quite follow

2377 The assumption is that the Indian rate is 7 per cent or 8 per cent, that the Government then lends, we will say, a million of money to certain banks at 4 per cent on the condition that those banks shall lend it out again at not more than 5 per cent?—Yes

2378 To the extent of that million, the banks will lend on good security at 5 per cent?—Yes

2379 But the moment that million is exhausted they will have to charge 7 per cent or 8 per cent on the same security?—Not necessarily, if they have got 59 millions more

2380 The moment the money placed at their disposal is exhausted, they will have to charge the higher rate to any other client?—No, give them another million, as trade requires. The Government have 59 millions now in their pocket, give trade another million on short notice

2381 Is it your view that the resources of the treasuries are inexhaustible?—Yes, inexhaustible

2382 What do you mean when you say in paragraph 6 of Appendix XVI (pp 518-9), "Personally I should like to see more taken from the people in the same way, for, if the Government does not take it, the people's creditors will." Do the words "in the same way" refer to taxation?—Yes. The Government and the people are one, and whatever the Government take they give back in another form. If they take it in the form of a railway, they give it back in military services, or in sanitation, or in medical services, or in anything of that sort, it always goes back again

2383 You think, in fact, the Indian Government will spend the people's money more wisely than they will spend it themselves?—Undoubtedly so

2384 In paragraph 7, headed "The Gold Standard and Paper Currency Reserves," you say that the Gold Standard Reserve ought to be held in London?—That is my view

2385 Because it is in London that it will be wanted?—Yes

2386 You see "no objection to investing the greater portion of the Gold Standard Reserve in easily realisable gold securities, not putting too much into one basket"?—That is so, but I go beyond that, and I say you can invest the whole, if you want to do it. You do not want to do it in fact, but if you do want to do it, you can invest every sovereign and you can keep the sovereign in your pocket. That seems rather curious

2387 That is a point I wanted to put to you. In your opinion it is not necessary to keep any part of the gold reserve in bullion, is it?—It is coming in all the time. You pay it out at one end of the chest, and it is coming in at the other end

2388 But you do think it necessary to keep a sufficient amount of Paper Currency Reserve in bullion so as to be able to redeem the notes which might be presented?—Yes, and that you have now

2389 Together, I think you say, "with a safe margin for emergencies"?—Yes

2390 You go on to say "using it to supplement the Treasury balances as required by trade", is "it" the margin which you keep for emergencies?—It is that, or as much more as you like. It is really as much as trade requires. You have 59 millions in your pockets now, and you can give trade one, two, or three millions

2391 Would you mind looking at paragraph 8 of Appendix XVI (page 519)? There you say, "With regard to the currency reserves, as much silver coin as is likely to be required to encash currency notes presented to Government for payment, should be kept in India, with a safe margin for emergencies, using it

"to supplement the Treasury balances." What is "it" there, is it the whole of the money so kept, or is it only the margin which you reserve for emergencies?—You can use both, say, the whole, as a matter of fact, it goes out at one end and comes in at the other end

2392 And in paragraph 16 on page 521 you suggest that some form of Government bond might be created, to be kept in the Paper Currency Reserve as part of its investments, I understand?—Yes

2393 To represent the money spent out of reserve on capital expenditure?—Yes

2394 Do you think that in case of a sudden demand for rupees there would be time and opportunity to convert such bonds into metal?—Yes. As I have been trying to explain, the chest never need be emptied by a single sovereign, by the Government surpluses, or by borrowing you can keep the Treasury always full. What you borrow from the public this year you repay next year out of your surpluses

2395 But suppose they had not a surplus next year?—Then just wait till the year after

2396 They would borrow again?—Yes

2397 In fact, their expenditure ought not to be conditioned by their income?—No. A surplus is bound to come sooner or later, otherwise India would have burst years ago

2398 You would borrow boldly?—Borrow boldly

2399 To whatever extent might be required?—I would borrow boldly at one end of the Treasury, and as your good years come round you repay what you have borrowed

2400 In fact, as I understand, you would start with the consideration of what it was desirable to do if you had limitless money?—Yes

2401 And then you would do it?—Yes, go through with it, thick and thin. You can do that and still keep your reserve Treasuries, both your Gold Standard Reserve and your Paper Currency Reserve, chock full. Is that so or is it not so?

2402 I think I am here to examine you, not to be examined?—I mean to say that, if I am wrong, I want to know where the fallacy is

2403 I understand your view is that gold in circulation—I am not now speaking of gold that is hoarded—is wasteful?—It is all the same whether it is hoarded or whether it is used as currency

2404 Is it as wasteful in circulation as if it was hoarded?—It is, in this respect. For fertilising purposes, gold of course is useful, but paper, or the silver currency which India has, fulfils exactly the same purpose. The Government collects this sovereign through Council bills here in London and pays out 15 rupees at the other end, those 15 rupees will fulfil exactly the same purpose as if the gold coin were kept in circulation for fertilising purposes

2405 Therefore, the paper or the silver has all the advantages of gold in India but gold has advantages for use outside India, is that your view?—Just so, you use the sovereign here to develop India

2406 I would like to ask you incidentally whether you have formed any opinion of the extent to which the gold which has gone into circulation in India, has been hoarded, or is being hoarded?—I saw some figures the other day to the effect that in the last 10 years the Government had paid out from the Treasuries 47 million sovereigns

2407 What I wanted to get at was whether your experience led you to form any view as to the proportion of that sum which remained in circulation?—In India I never see a single sovereign. I can get them at the bank if I want to, and I change my spare rupees into gold to come home with—I can always change them at the bank—but you never see gold in circulation in India, at least I never see it

2408 (Sir Ernest Cable) In Bombay and the Punjab sovereigns circulate?—Yes they circulate in the Punjab, but I am speaking of Bengal

2409 (Chairman) Should I correctly represent the idea which you have been trying to convey to the Commission if I said that you regarded gold in India only as a cheque which could be drawn upon Europe?—Exactly

20 June 1913 ]

SIR DANIEL MACKINNON HAMILTON

[Continued

2410 And which would be useless until it was drawn and honoured?—Exactly, until it is drawn India never receives the equivalent in produce. Since 1835 India has imported about 300 million sovereigns which are still lying uncashed.

2411 I think your view is that the Secretary of State ought to sell his Council bills, not only freely as he does, but at such rates as would prevent gold ever going to India?—He should sell at 1s 4d to the rupee, that will secure him every sovereign.

2412 Your view being that he should intercept all gold that might be drawn to India?—Yes.

2413 He should frame his rates so as to prevent gold being shipped?—Exactly.

2414 I think you said to me just now that you saw no necessity for keeping any bullion in the Gold Standard Reserve, if I am wrong, please say so?—My view is that, when you are drawing out from your Gold Standard Reserve, it is coming in at the other end, so that your Gold Standard Reserve remains untouched.

2415 What is the object of the Gold Standard Reserve, in your view?—To ensure the value of the rupee.

2416 To maintain the par of exchange?—Yes.

2417 Do you not think for that purpose it is necessary to have an immediately available sum in reserve in gold?—Yes, and you have 60 millions in reserve now.

2418 Not in the Gold Standard Reserve?—But you have altogether.

2419 You are taking the Paper Currency and the Gold Standard Reserves together?—Yes. You have 20 millions in the Gold Standard Reserve, I think.

2420 The Paper Currency Reserve has a different purpose to serve?—Exactly, but that does not matter. It is a matter of accounting, really.

2421 Are you not setting up a reserve to redeem your notes, and then counting that reserve as available to maintain exchange? If it is wanted for the one purpose it will not be available for the other, will it?—Yes.

2422 Can it at the same time be available for both?—Yes, by borrowing. You draw from one end of the chest, and borrow and fill up the chest at the other end.

2423 At the moment when you would naturally call upon the Gold Standard Reserve to maintain the exchange, what do you think the effect of large borrowing would be?—You need not make your borrowings large, you can borrow every day, if you like.

2424 Suppose you borrow every day, what do you think the effect on the exchanges will be?—Do you mean the effect on the Indian exchanges?

2425 Yes. Suppose the exchange is falling, and at that moment the Indian Government is borrowing freely and has no gold reserve?—The exchange cannot fall below 1s 4d.

2426 Why?—Because the Government has got the gold to ensure that.

2427 I thought you said the Government need not have any gold, but that it could borrow instead?—It borrows but then it fills up the borrowing in the good years.

2428 If the Gold Standard Reserve were used as you would wish, it would be largely utilised for reproductive works in India?—Yes.

2429 If a crisis came, and it was needed for the maintenance of exchange, am I right in supposing that you assume that it would be possible for the Government immediately to borrow on the reproductive works so created?—Yes. You have 12 million sovereigns in hand just now, which is more than India wants for reproductive purposes, you have that in the difference in the exchange alone, and India does not want it at the present moment. In addition to that, you have got 48 millions in hand available to maintain exchange.

2430 The 12 millions are the difference between the gold value of the Currency Reserve and the rupee value?—Yes, and India does not want all of that just now.

2431 Therefore your first proposal will be to diminish the Currency Reserve by lending 12 millions?—I mean to say, lend as much as is required. We do not want 12 millions, two or three millions will be enough just now.

2432 By whatever amount you do require for your immediate development programme then?—Yes.

2433 Suppose that were done and we had exhausted that reserve in the course of time, then we should come to the Gold Standard Reserve?—Yes.

2434 I understood from Appendix XVI that you thought a large portion of that also might be spent on reproductive works?—Yes.

2435 Is that because you think it can never be wanted for the maintenance of exchange, or is it because you think that even in that form it will be available for the maintenance of exchange if wanted?—Yes, because I should pay it out at one end of the box, and it comes into the other by borrowing, so the box is always chock full.

2436 Is your argument based upon this, that the power of India to borrow for reproductive purposes is unlimited?—It is unlimited so long as she increases her productive works. The more she increases her productive works, the greater her credit is, and the more she can borrow as wanted.

2437 But the power to borrow is irrespective of the condition of trade at the moment, or of the state of the London money market at the moment?—She would only borrow when her trade was bad and when she had no surplus in her pocket from a good year.

2438 (*Mr. Keynes*) Do I understand that you want to spend money out of the Gold Standard Reserve for building railways?—That is possible. I do not want to do so.

2439 You want to spend out of it for reproductive purposes, and then you would replenish it by borrowing?—Yes.

2440 Why should you not borrow right off and leave the Gold Standard Reserve alone?—We do not want to borrow. We have got 12 millions of gold in our pockets now, and all we want is three or four millions of that, so why should we borrow?

2441 (*Chavman*) Now may I return to another subject, the question of the gold currency? In paragraph 22 of Appendix XVI (page 523), after quoting the opinion of the Fowler Committee in the preceding paragraph, you say events have falsified the view that the hoarding of gold would not be materially increased, do I gather that you opinion that the hoarding of gold has been materially increased is based on your personal experience in Bengal?—No, I am basing it on the Government figures.

2442 Those figures show the amount of gold which has gone into circulation, but are there any figures which show the amount of gold which remains in circulation?—There is nothing to show that—absolutely nothing. I understand that the Government figures show that India has imported more gold and less silver than before.

2443 You are not, I think, favourable to the establishment of a mint in India?—As I say, I am totally against gold coinage for India anywhere, either here or anywhere else, and therefore I could not favour a mint.

2444 That, I think, is a little more than you have said hitherto. I understand your view that a gold coinage is a wasteful use of gold is not confined to such conditions as now remain in India, but is general?—It is general, because every sovereign in circulation means that India has parted with some of her produce and has got nothing back.

2445 With regard to the loaning of money to the banks, the Government, I think, already have considerable balances with the Presidency banks?—I suppose they have, I do not know what they have really.

2446 Do you fix any limits in your mind as to the amount which they should lend to the banks under such circumstances as you have foreshadowed?—With the enormous gold reserve they have, they might as well give to trade all it wants. Even then there would be plenty left.

20 June 1913]

SIR DANIEL MACKINNON HAMILTON

[Continued

2447 Would you ask for any security from the banks?—Not from banks like the Presidency banks. If necessary they might be asked to secure it, but I do not think it is wanted. From the exchange banks like the Chartered, the Hong Kong, or the National Bank of India, or from the Presidency Bank of Bengal, you would not want much security, but let them give security, certainly.

2448 Some criticism has been raised on the action of the Secretary of State in London in lending money without security to the first class banks here, but you do not think there is any force in that, apparently?—If it is at short call, you can get it back whenever you want it. I do not think there is much in that. If you want security, take it, certainly.

2449 Suppose the Government, for purposes of trade, had lent large sums to the Presidency banks, then suppose they wanted the money back, do you think that the last state of the Indian market might not be worse than the first? Trade would have been helped and encouraged by the large sums lent by the Government, but by the Government suddenly coming in and recalling all those sums, might that not produce a very serious financial crisis?—I do not see why Government should come in when they have got 50 millions of gold behind them. There is no occasion for them to come in.

2450 Then really you do not see any reason why these balances should only be lent on short loans?—Lend them on short loans and call them in when they are wanted.

2451 There is no object in lending it as call money, unless you can call it in?—Certainly not, but there is no reason why you should call it in with 50 millions of gold at your back.

2452 Do you think it would be unsafe to lend it otherwise than as call money, or for short periods?—As a matter of business, one likes to have money on call if it should be wanted, but I cannot imagine how it should be wanted with 50 millions behind you.

2453 It is an excess of precaution, and is not really required for safety?—Certainly.

2454 I was going to ask you why you prefer that loans should be made from the balances, rather than from the Paper Currency Reserve?—That is immaterial.

2455 I think what you said to day was that you would lend from either or both?—It is a matter for the Government of India, really. My idea was that the Treasury would be the department in touch with the public, and you should just have one department in touch with the public, with the reserves placed at the disposal of the Treasury if they wanted so much.

2456 The object of all this is to keep the available loanable capital in India, is that so?—Yes.

2457 Has it occurred to you that something of the same kind might be done by the extension of the powers of the Presidency banks, if, for instance, they were given power to borrow temporarily in London when there was a keen demand for money in India?—I do not see why they should come to London to borrow if the Government has so much gold behind them.

2458 You say the Indian Government is closer at hand and ought to do the business?—Undoubtedly.

2459 Now I turn to the question of the State bank. Are you in favour of the creation of an Indian State bank?—Not necessarily. I do not see that a State bank is necessary. What I want to do is to finance the internal trade, whether that is done by a State bank or by the Presidency banks does not matter. If it can be done by the Presidency banks, and I think it can be, let it be done by them. Apart from that, I do not see why a State bank is wanted.

2460 In paragraph 34 of Appendix XVI (page 52b) you deal with the financial organisation of the India Office. You say there very clearly that there is "absolutely no reason for thinking that the Finance Committee of the India Office have ever deliberately made the interest of India subservient to the interests of the London banks and financial houses," but you think it would look better, "in the fierce light which beats upon the throne, if London bankers did not

"have the ruling voice in the management of India's finances and cash balances"?—Yes.

2461 Then you make a suggestion as to the composition of the committee, which should include one London banker, I think?—Yes, in order to get the benefit of his experience—that is all.

2462 You are of opinion that the Secretary of State must have expert advice on matters of that kind?—Undoubtedly.

2463 And that he could not rely entirely upon such advice as he could expect to receive from civil servants?—I do not think he ought to. It is so large a subject that he should get all the experience he can from London bankers and Indian bankers—indeed, from all round.

2464 In fact, your object in framing this suggestion has been to secure as representative a body as you could of all interests concerned?—Yes.

2465 Without giving a predominant position to any of them?—Still retaining for the Indian representatives the power of lending balance in India. I suggest there should be one London banker on the committee, and all the other men should be interested in India, not in London. That would secure that India's balances are used for the benefit of India. If London preponderates on the committee, it would look—I do not say it does—as if London might get the preference.

2466 You have seen, I think, a copy of the letter addressed to the Commission by the Bengal Chamber of Commerce?—Yes.

2467 Have you any observations you desire to make on that letter?—The only observation I make is that I strongly object to the coming of a single sovereign, even for sentimental reasons. A sentimental sovereign means the loss of a sovereign's worth of produce to India.

2468 (*Sir Ernest Cable*) The Chairman asked you a question with regard to Sir Guy Fleetwood Wilson's expression of a gamble in rain, and I should like to ask the question in a slightly modified form, so as to get your views. Do you not think that the very uncertainty of rain, which is inevitable however great India's development may be, makes it imperative to keep large liquid reserves so as to maintain exchange, instead of dissipating those reserves in the manner you suggest?—I do not dissipate them, I show you they are kept intact.

2469 They are first spent, of course?—They are spent, it is true, but the chest is always kept full.

2470 Do you consider that your method is consistent with an absolutely stable and good currency?—You keep the currency reserves intact, either in gold or in silver, and therefore you do not interfere with their stability in any way.

2471 In the crisis of 1907-8 the Government paid out 17 millions and practically exhausted their stock of gold, I think?—Yes.

2472 Do you think it is wise and prudent to invest those resources? You have been suggesting investing those resources in railways, I gather?—Exactly. You can do that, and yet you can keep your box intact. That is what I am afraid the Commission have not quite grasped yet.

2473 I gather, then, to put your whole policy as you have developed it to day in a very general manner, that your idea is to run the whole country from a commercial point of view, using the profits in development and spending them on capital account, so to speak?—Exactly, and unless you do that India is losing her produce. Since 1835 India has parted with 300 millions sterling of produce for nothing. There are 300 million sovereigns or gold cheques lying in India to day which have never been cashed.

2474 Those are profits, of course connected with taxation?—No, those sovereigns are the profits on the balance of trade, those are the net imports of gold into India.

2475 You do not suggest that your policy involves a fixed taxation, which might or might not be excessive, do you?—It will relieve taxation because it

20 June 1913 ]

SIR DANIEL MACKINNON HAMILTON

[Continued

develops the country. It increases the produce of the country, and therefore it relieves taxation.

2476 With regard to your remarks on Gresham's law, I would like to clear this up. You say in paragraph 22 of Appendix XVI (page 523) that gold will be driven out of sight, but how do you reconcile that with the fact that some gold is still in circulation, that the amount is increasing yearly, and also that the Government have large gold balances which the people can have if they want?—What has gone past the Government Treasury is out of sight.

2477 What has gone into the country, do you mean?—What has gone into the country is out of sight, but the Government can bring those sovereigns in sight by playing on this exchange. If the Government sells its Council bills at 1s. 4d. it will secure every sovereign.

2478 Do you think that Gresham's law is in active operation now in India internally?—It seems to be.

2479 Surely every sovereign would have disappeared long ago if it was in full operation?—Every sovereign has practically disappeared, I mean to say, it is lost to India. There are 300 million sovereigns practically out of sight now.

2480 You have handed us in a very interesting memorandum from Mr. Fremantle on agricultural banks (supplementary note B to Appendix XVI, pp. 530-6). He takes a very sanguine view that there is plenty of capital for developing agriculture in India, you do not agree with that, I gather?—What I say is that you want to organise that capital. That is why I want banking organisation for the agricultural population in order to organise that capital.

2481 What he said was that it was available from the agriculturists, and I gather that he did not look to the banks in any way for help, if I read his memorandum correctly?—A lot of those little capitalists are agriculturists, as a matter of fact. On my own property in Sunderbund there is a moneylender who was an agriculturist. He was the man who ran the place.

2482 I suppose you would call him a banker for the purpose of this inquiry?—He is a banker.

2483 You suggest that a central bank or a State bank should devote some part of its funds towards financing agriculture?—Yes, just to give the thing a start. If it is started, then funds, I understand, will not be required from the Government. When Lord Curzon passed the Co-operative Credit Societies Act in India Sir Denzil Ibbetson, who was the man in charge, said that for every rupee put in by the people the Government would put in one rupee. The Government has never been called upon for that rupee. It merely wants a bit of a start from the Government, but once the thing is started and the people see how the thing is working they will put the money in and the Government will not require to put in a halfpenny. A little assistance is wanted at the start.

2484 I am inclined to agree there, and that perhaps it would be more the province of Government to help agriculture than a State bank?—All I want Government to do is to provide more of those organisers of co-operative credit. There is only one man in Bengal, Mr. Gourlay, to preach this co-operative gospel to about 50 or 60 millions of people.

2485 I am afraid this is rather outside our terms of reference. I was only going to make one suggestion with regard to getting money and facilities for agricultural purposes. Have you considered the question of the savings banks, which have agents in every little village, because every post office has a savings bank? Could not the savings bank deposits be utilised in that way?—I think, as a matter of fact, under the Act the societies have the power to put their money in there.

2486 (Mr. Keynes) I understand you are of opinion that the Government ought to discourage the circulation of gold by all reasonable means?—Yes.

2487 And you base that view mainly on the circumstance that the use of a cheaper medium of exchange sets free resources for other purposes?—Yes.

2488 Could you say at all how widely those views are shared by other business men in Calcutta?—I do

not think business men have realised what it means. Business men have not realised that all those 300 million sovereigns lying in India are uncashed cheques.

2489 You think this view of yours is not widely shared by other business men, then?—It will be when they realise what it means, but they have not realised it yet.

2490 At present it is not widely shared?—Because they do not understand it. If those 300 million sovereigns which are lying in India to-day were bodily lifted by the Government and brought to Europe, they would buy 300 millions' worth of European goods to which India is entitled. That sum has never been cashed yet, therefore India has lost 300 millions sterling worth of produce since 1835, and has got nothing in exchange.

2491 (Chairman) Does the same apply to the gold in my purse?—No.

2492 Why not?—Because this is the balance of trade due to India which has been received in gold. Europe has paid for it by a gold cheque.

2493 (Mr. Keynes) In paragraph 6 of Appendix XVI (page 518) you suggest that the Treasury balances should be lent to first class banks, from an answer which you have given to-day I understand you to include in the term "first-class" Presidency banks and exchange banks?—Yes.

2494 Any others?—I should not like to recommend any others. There are one or two banks such as the Allahabad Bank.

2495 (Sir Ernest Cable) And the Alliance banks?—Yes, they are local banks, and they are perfectly sound.

2496 (Mr. Keynes) Would you include them under the term "first class"?—Certainly.

2497 If it was thought right to ask security from these banks, could they give good security in large quantity, do you think?—If they could not give it, do not give them the money.

2498 I am not asking you that question. If it was thought right to ask for security, could they give it?—I daresay they could raise it, as they are very strong financially.

2499 What sort of security do you think the Government could accept?—They could accept securities like Calcutta Port Bonds, the Bombay Port Trust, or Government paper, or things of that kind.

2500 If the banks were asked for paper of that kind, what sort of amount do you think the Government could lend against the security? Could the banks of India provide five millions worth of that kind of security?—They can provide 20 millions, and still have 40 millions in their pocket.

2501 My question is: If the Government were to offer to lend five millions of Treasury balances against such sort of security as you have named, namely, Port Trust loans, and so on, would the banks provide security up to that amount of five millions?—I do not know, but whatever they want to borrow, if they are not able to give security for it, then do not let them have it.

2502 You do not think that they could give very much security?—I do not say that. I do not know what their resources are, and therefore I should not like to say that.

2503 You have no clear opinion on the point, and feel doubtful?—I have not their accounts before me, and I cannot say until I see their accounts.

2504 (Sir Shapurji Broacha) What do you mean by saying that there are 60 millions in hand at the present moment? There are 27 millions in the currency, 18½ millions in the Gold Standard Reserve, and two millions in paper, that makes 47½ millions, how do you get the difference between 47½ millions and 60 millions?—The whole reserve, I suppose, is turned into gold now.

2505 It only makes 47½ millions at present?—Of gold, or gold securities?

2506 Taking gold and gold securities?—In addition to that, you have got your silver.

2507 You say that you can convert the 27 millions of gold in currency into 40 crores of rupees, and have a

20 June 1913 ]

SIR DANIEL MACKINNON HAMILTON

[Continued

balance of 12 millions which could be employed in the Public Works Department?—As far as may be necessary, but the Department would not want it all, as a matter of fact, they would only want a share of it.

2508 You would destroy the whole fabric of the gold standard, because there are only 18½ millions of securities?—As I have been trying to explain as you pay it out it comes in again.

2509 If you borrow in a year of famine, you do not get anything at all. In a partial famine in one year the Government had to give out 15½ millions of gold, supposing it had been not a partial famine but an extraordinary famine, there would have been nothing left?—But you can go on borrowing in the good years, and you need not wait till the famine years come round. You should begin making those irrigation canals in the good years.

2510 A 15 millions loan, even in the London market, would be a very big thing?—We do not want 15 millions. I understand that two millions or three millions, would be enough for the railways.

2511 I am not talking of the railways. I am talking of people wanting to remit money from the other side here, that would have to be done from the Gold Standard Reserve, and that would not be sufficient to cash all the demands, if you carried out your scheme?—I have been trying to explain how it can be made sufficient. You can go on borrowing every day if you like, in the market. Do not wait till the bad year comes round, because if you do that you may be landed.

2512 Do you mean go on borrowing and keep it in the reserve at interest?—Borrow as you did for your canals in India, and go on borrowing. If you have a surplus in hand, of course you will not want to borrow, but there should be a continuous chain going round.

2513 Whatever they have borrowed they have already spent, and there is nothing left of that, say that they have borrowed and spent about 10 millions or more, do you mean that they should borrow another 12 millions in the same year, if it is a good year, and put it aside?—Whatever you put out at one end of the box comes in at the other, day by day. This year, for instance, the Government has a surplus of seven millions sterling, and they do not require to borrow a halfpenny. You get that seven millions in your surplus, and you put it into your canal.

2514 Say that the Government loses six millions or seven millions in revenue, and they have to pay in assisting the ryot besides, and say that India exports 30 millions or 40 millions less of produce than in good years, then there are tremendous losses in other ways for which the Government have to provide by borrowing. In a famine year, when we require the assistance of the Gold Standard Reserve, India loses in the shape of lessened export trade about 30 millions or 40 millions because she has not produced enough to export, and the Government have to assist the ryots to get their food, then the railways earn very little, and the Government in that year, besides having to provide for the par of exchange, are therefore at a heavy loss. That cripples them for borrowing for other purposes than to meet the immediate necessity, so you cannot bring your theory into play in that year?—I do not quite understand why. I would like to finish this particular question you have raised, as I am afraid I have rather failed to make myself clear. Supposing this is the Treasury, and money is being paid out in making an irrigation canal—

2515 You must remember that the 27 millions is already exhausted and there is nothing left?—But it is in the box just now. You pay out this money, and you dig a canal as you pay it out. It is a good year just now, and, therefore, money comes in at the other end as it goes out at this end.

2516 I do not understand it. You say these are very good years, and you have used up the 27 millions of gold by turning it into rupees and spending the balance on public works. But when we have done that, and when we have enriched ourselves with great public works, famine comes in and the reserves are already without that 27 millions sterling?—No, because

me, we start now to day, when we have 27 millions in our pocket.

2517 (Chairman) I think the point Sir Shapurji is trying to put is that when a bad year comes, instead of having 27 millions in your pocket you will have the 27 millions in the canal, the canal may be a most valuable work, but it does not give you money for the immediate emergency?—Yes, it does, and I just want to explain why. The box is full just now, you start digging this canal, it is a good year and you have plenty of money in your pocket, that sovereign goes into the canal, but you have a good year and then this sovereign comes into the box.

2518 (Mr. Keynes) Where from?—From the surplus—the seven millions of taxation.

2519 That mounts up to the 27 millions, does it?—This year the Government has a surplus of seven millions, so you have got that seven millions to start with. You pay out one sovereign from this seven millions, and you put one sovereign in in respect of it. Now, is the reserve intact or not?

2520 (Chairman) As long as you only draw out the same as you are putting in it remains intact?—Now we are coming to it. That sovereign has gone, but another one is in the box. The next year is a bad year, and you go to the money market and draw from that. You give the money market your paper, or whatever it is and then another sovereign goes in, so you have had two sovereigns taken out and two sovereigns put in.

2521 (Lord Faber) Say that you have two bad years, the money market then will button up its pocket and will not lend you anything?—Every country in the world is borrowing on the London market, so why cannot India?

2522 (Chairman) The assumption on which your argument rests is that, no matter how prolonged the bad times, India can always borrow as much money as she wants?—Exactly, and she had done it up to the present day. If she had not been able to do it up to to day she would have been bankrupt.

2523 Does not that carry you to this, that there is no necessity for a reserve at all? Why pass the sovereign into the reserve? Why make a pretence of keeping it in a box when, in fact, in the bad time you are going to rely upon borrowing to meet your needs? Why should you pass it through the reserve at all? Why should it not remain in the Treasury and go direct from the Treasury to the canal?—In that case, Government is not building the canal, and that is what I want to point out.

2524 Is there in your view, any necessity for a reserve at all except that reserve provided by the Government's power to borrow?—Power to borrow, combined with the surpluses, that is all the Government wants.

2525 (Sir Ernest Cable) Using the surplus in a good year and borrowing in a bad year?—Yes. Does the Commission understand that the reserves remain intact? Might I finish my illustration?

(Chairman) I think I understand your illustration, because you have given it us once or twice. If I rightly understand your illustration, the reserve becomes valueless.

2526-7 (Sir Ernest Cable) And there is no need for the reserve?—There is no need to increase it more than is necessary. You should keep sufficient in hand always to ensure cashing your currency notes, but beyond that you can go on indefinitely building railways.

2528 (Chairman) That only means that you are to have credit at your bankers equal to the amount of the cheques you draw?—Yes and your credit is improving all the time because you are increasing your irrigation canals. In that way you improve your credit and you can borrow cheaper in the London market than any nation in the world.

2529 (Sir Shapurji Broacha) Do you mean that the Secretary of State must sell under the gold par?—He must buy all the sovereigns at 15 rupees to the £.

2530 Supposing the Secretary of State has 20 millions of surplus as it is called, though it is really a part of the Indian revenue and is not a surplus and he

20 June 1913 ]

SIR DANIEL MACKINNON HAMILTON

[Continued

has to send that money back to India for the Government to expend?—It is coming back again, as I am trying to explain. The chest always remains the same as it is now.

2531 I am not talking of the chest now. Whatever the Secretary of State holds he holds from the revenue of India, he might be able to keep 10 millions here for one year, but what about the second year? Should he accumulate all the revenues of India here, or should he send it back in some shape to spend it there?—He can both save it and spend it.

2532 There are those who like to have gold and who do not calculate the exchange rate when they are importing gold into India, last year they imported 12 millions of bar gold when it was not a question of the exchange rate. There are those who would give almost anything over or under par to get gold there?—If the Government offer 1s 4d, they will keep every sovereign here, if they wish it.

2533 They take gold there in bars, and the 12 millions I have mentioned were taken there quite independent of the Government, and quite independent of the exchange rate, how can you prevent that?—You cannot prevent it, but in that case you pay 22 rupees for your sovereign instead of 15.

2534 No, I pay 15 in India. How can you prevent me taking gold out, independent of the exchange rate?—What happens is that India has lost her produce and she cannot get any gold. The gold, to begin with, is in the hands of the exchange banks, the balance of trade is not in the hands of private individuals because the exchange banks collect that gold here.

2535 The export will be financed in the way the people want, they send exports here, and they ask for gold, and they will get it without the aid or interference of the Secretary of State?—The whole balance of the export trade is financed by the exchange banks.

2536 That is quite true, and the exchange banks help them to bring in gold bars?—We can stop it by asking less than 1s 4d.

2537 In India the export trade is financed in two other ways, first, by sending out gold as merchandise, and secondly, by sending out silver as merchandise, and dispensing the rupees there to pay for the export from that side?—When a man exports goods from India, what does he do? How does he get his money back?—From the exchange banks, is it not?

2538 Perhaps, but the exchange banks do not take all his sovereigns?—I want to show how the circle goes round. The total export trade of India, I understand, is financed by the exchange banks. Goods are sent out of this country, the banks pay the exporters here, they get a draft, say, from the Secretary of State, and they recover the money there. That money has got to come back to England, and it comes back in this way. They pay the exporter there the sovereign they collect on the other side, and that sovereign comes back to England. In that way the exchange banks collect the whole gold balance of trade, but if the whole gold balance of trade is financed by the exchange banks, they want to get this gold balance back to India so as to send home more produce. They have two ways of getting it back. They can buy Council bills of the Secretary of State, and if he asks too much for them—if he asks 1s 4½d or 1s 4¾d—the banks will say, no, it will not pay us, we shall ship the gold out by steamer. If he asks 1s 4¼d for his drafts the banks will say, no, if I send my gold out to India I can get all the rupees I want at the rate of 15 to the sovereign, therefore why should I pay you 1s 4¼d? If the Secretary of State refuses to give his rupees for 1s 4d, that gold passes the Government and finds its way out to India, as Sir Shapurji suggests, and then that amount of produce is lost to India. But it does not pay the exchange banks to ship gold out to India if they can get a rupee for 1s 4d, because by buying from the Government Council bills and telegraphic transfers they can get the money at once on the other side, whereas if they buy gold here and ship it out they lose three weeks interest. In that way the Government can force the exchange banks to part with that gold by working the exchange, and when

they get the whole of the export trade into their hands in that way they simply prevent India losing her balance of trade, as she otherwise does.

2539 Are rupees hoarded now?—I cannot say.

2540 You are certain that gold is hoarded?—I am undoubtedly certain of it.

2541 Do you know that since 1900 about 150 crores of rupees have been coined?—Yes.

2542 That there are only about 17 crores visible and the other has gone into circulation, it must have done, because it could not have been hoarded?—There must have been a certain amount of sovereigns hoarded since 1835, because 300 million sovereigns have gone into India and have never come out of India. I am in India every year, and I never see a sovereign. Where are those 300 million sovereigns?

2543 If they use in circulation about 135 crores of silver coin then they are not much good for hoarding, the people would rather hoard the gold itself, would they not?—Exactly.

2544 Taking the figures given in one year for the railways, for savings banks, and the Post Office, I find there was a circulation of about three crores of sovereigns, that shows that there is a circulation of gold?—Has that gold come back to the treasuries again?

2545 You say that that circulation ought not to be very much encouraged?—I say for every sovereign in circulation India has sent away a sovereign's worth of produce and has got nothing back. That is what it means, and there is no getting away from it. If those 300 millions of sovereigns were brought to Europe to day they would purchase 300 million sovereigns worth of goods, that has not been done, and therefore, India has lost those goods. There is no getting away from that.

2546 (Sir James Begbie) You think Council bills and transfers should be sold freely for the convenience of trade?—Yes.

2547 You may remember that Council bills were started for the purpose of remitting home the home charges?—Yes.

2548 Do you approve of the sales of Council bills in excess of the amount required to pay the home charges in order to meet the convenience of trade?—Yes, I want to send every sovereign both for the home charges and above the home charges, because I believe that for every sovereign not so secured, India loses a sovereign's worth of produce.

2549 Do you understand that the money from which the home charges are paid is money raised by taxation in India?—By revenue and taxation.

2550 Are you in favour of Council bills being sold against the Treasuries in India in excess of the amount that is wanted to meet the home charges?—Yes, I would sell everything the banks like to take.

2551 Even if the taxpayer has to find the money?—I do not quite follow.

2552 How far would you go with your drawings against revenue?—To the extent of the entire balance of trade. If the Government does not secure that sovereign, the taxpayer loses it. That is what I maintain.

2553 One other question about a matter which has been mentioned already, namely, the hoarding of gold. You have alluded to an immense quantity of gold that is hoarded, is it not the case that banking deposits have greatly increased, also investments in securities of the Government and of municipal authorities and private concerns?—Yes.

2554 So there are cases where hoarding is not taking place?—Undoubtedly.

2555 (Chairman.) There is one recommendation or suggestion in your memorandum which I think none of us has asked you about, and perhaps I ought to ask a question on it. It is in paragraph 5 of supplementary note A to Appendix XVI. (page 529) You suggest there that the Government and the Secretary of State should find the average silver purchases for a period of years, good and bad, and every year coin the average or a little more. That you recommend in order to "kill" the gamble connected with the existing spasmodic

20 June 1913]

SIR DANIEL MACKINNON HAMILTON

[Continued

"method of purchase and protect Government from being cornered"?—Yes

2556 Has your attention been drawn to the very large variations between one year and another in the demand for rupees?—Yes I understand that for the last four or five years the Government have not had to coin any silver until lately

2557 We have it in evidence—I have not got the question before me, but I think my memory is right—that in one year the people of India took out eight millions sterling in additional rupees, and the next year they returned 12 millions into the Treasury owing to the bad trade, or, as the witness put it to us there was a difference between plus 8 and minus 12, how would you strike an average with such big fluctuations as that?—We know that the silver purchases for 10 years have been 60 millions, taking good and bad years that 60 millions has been sufficient to meet the demand against currency notes presented to the Government

2558 But the demand has not been at all regular during those 60 years?—No, it has not

2559 Now that we know what the total demand was, if we divide it by the number of years, and the Government purchase that amount each year, might they not be left short in one of the busy years?—They will have less to purchase in that case than they have

The witness withdrew

now Suppose they buy, say, six millions every year annually for, say, eight years that is 48 millions they have in hand, so that if a tremendous demand springs up, they have less to buy in the silver market than they otherwise would have

2560 If in the early years it has averaged more, then they have so much money lying idle?—That is so, but in that case they lend it as required, and utilise it in that way for financing trade

2561 That is to say, they coin the rupees at once, whether wanted or not?—As required

I should like to make clearer to the Commission how I prove that the one sovereign produces 16 in 14 years I have here a lecture delivered before the Society of Arts by Sir John Benton, K C I E, on Irrigation Works in India He gave figures showing the capital outlay, and he says if we spend 20l on canals, he would lend 24l every year on food crops If Government secure this sovereign, this gold balance of trade, that means that by creating a canal, in 14 years it gets back 14 millions sterling worth of produce, because for every sovereign it gets back 14 golden sovereigns plus the two sovereigns representing the capital cost and interest, so that for that one sovereign spent you get back 16 sovereigns in 14 years, and therefore, for every sovereign which escapes the Government, that is lost

At the India Office, Whitehall, S.W.

### EIGHTH DAY.

Thursday, June 26, 1913.

#### PRESENT

The RIGHT HON AUSTEN CHAMBERLAIN, M P (Chairman)

Lord FABER  
Lord KILBRACKEN, G O B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURJI BURJORJI BROACHA

Sir JAMES BEGGIE  
Mr ROBERT WOODBURN GILLAN, CSI  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (Secretary)

Mr J A TOOMEY and Mr T FRASER called and examined

2562 (Chairman) I think, Mr Toomey, you come here to day with Mr Fraser as representing the exchange banks doing business in India?—(Mr Toomey) That is so

2563 Will you tell me the names of the banks which you represent?—The Chartered Bank of India, the Hong Kong and Shanghai Bank, the Mercantile Bank of India, the Eastern Bank, and the National Bank of India (Mr Fraser) The foreign banks also, the Deutsche-Asiatische, the Russo Asiatic, the Yokohama Specie Bank, the Comptoir National, in fact the only bank that did not intimate that they wished us to represent them is the Delhi and London Bank

2564 Do you represent the International Banking Corporation?—Yes

2565 I understand from the memorandum (see Appendix XVII, page 536) you have been good enough to send us that you have no criticisms to offer as to the location and management of the balances of the Government of India?—(Mr Toomey) No

2566 And none as to the sale of Council bills and transfers?—What we say on that point is that we would deprecate any change being made in the sale of Council bills The present system is admirably adapted to the requirements of trade, the amount put up weekly for tender being well regulated by probable requirements, while additional amounts can be obtained at a

small premium We consider that the sale of Council bills is well handled, the system adopted being the outcome of many years' experience

2567 In your memorandum you advocate the lending out of the surplus balances of India during the busy season, I see?—Yes, we do

2568 And, to that extent, you criticise the present use of the balances?—There is an agitation that the Government of India should lend these surplus balances, and we see no reason why the balances should not be so lent, say, to the Presidency banks, at a somewhat lower rate than the bank rate for the time being At the same time we do not think there would be a very large amount of money required in that way

2569 You do not suggest, I presume, that the balances of the Government of India should be increased for that purpose?—No, certainly not

2570 Only that when there is a surplus balance it should be used in that way?—Yes, if there are surplus balances

2571 Do you think that the balances kept at the Treasuries in India have been higher than they need to be?—No, I think not

2572 Up to the present, then, these surpluses of which you speak could hardly have existed? Perhaps I did not make myself quite clear, I meant, were the balances higher than it was necessary for the Govern-

26 June 1913]

Mr J. A. TOOMEY and Mr T. FRASER

[Continued]

ment to keep in the treasuries to meet the calls which might come upon them, and would there have been in recent times any capital which they could safely loan out?—Yes, I think they could have lent out money in India to the market.

2573 On short loans?—That is so, for two or three months, against Government paper, port trust bonds, and securities of that type. As I say, I do not think that these loans will be required to any large extent.

2574 Would you suggest Government lending for as long as three months?—Three months would carry them over the busy season.

2575 You are aware, of course, that that is longer than it has been their practice to lend on the London money market?—Yes, they lend here for four or five weeks.

2576 That is in order that they may be certain of getting it at any moment of pressure here?—I think in the case of India the money might be lent for two or three months.

2577 Suppose that that practice were adopted, and suppose that they had lent out considerable sums in India, do you think any difficulty would be caused when, on any occasion, they were unable to lend?—No, because the market has been getting on well enough without these Government loans.

2578 You do not think there is any danger of the market coming to rely upon this power to get loans from Government, and then being caught short sometimes when the Government cannot lend?—I think not, if the Government were to announce their inability to make these advances some little time before.

2579 I think you said just now that these loans should be made slightly below the bank rate?—Yes, somewhat below.

2580 Would you attach any conditions to them if so made, that is to say, any conditions as to the rates at which the money should be lent again by the banks?—No. I take it money would be lent to the Presidency banks at something like 1 per cent under the bank rate, and that would leave the Presidency banks free to lend money at the bank rate to their customers.

2581 Would not the customers who thus indirectly get the Government money be financed on more favourable terms than those who had to rely upon the ordinary resources of the bank?—I think not, because as a general rule people can now borrow on those securities at the bank rate.

2582 From what you have said as regards the sale of Council bills and transfers, I gather that you do not think the Secretary of State is injudiciously keeping gold out of India?—No, I think quite enough gold goes to India.

2583 Do you think that he sends any more than ought to go?—No, I think not. It is only the surplus after the sale of Council bills that goes to India in the way of gold.

2584 Now going to the Gold Standard Reserve, have you any criticisms to make upon that?—Yes. We consider that the whole amount should be kept in this country in gold and gold securities, and that the latter, as far as may be practicable, should consist of short term maturities. We further consider that a much larger proportion of the reserve should be retained in actual gold than has been the custom in the past. All profits on the coinage of rupees should be credited to the reserve, as we are strongly of opinion that the time has not yet arrived when it is safe to place a limit on the amount of the reserve. We do not approve of any portion of the reserve being held in silver.

2585 Do you suggest any figure for the amount of gold that should actually be held?—No, but we think that it ought to be a good deal larger than at present.

2586 I understand you to say you hold nothing here except either actual gold coin and bullion or short-dated securities?—We say that a larger proportion than at present should be held in actual gold, and the rest, as far as possible, in the shape of short-term securities.

2587 It has been suggested to us that the crisis of 1907-8 afforded the best test available, or a very good test, for judging of the amount of gold which is actually needed, do you share that view?—Yes, it did, but, of course it was only a partial famine or breakdown. It was a small breakdown.

2588 There was a very severe financial crisis in America and elsewhere?—Yes.

2589 But there was only a small famine in India?—Yes.

2590 You would think, therefore, that it was not safe to take that as a measure of the liabilities that might come upon you?—No, nothing like it. With a severe famine a much larger amount of gold would be taken out.

2591 I think it has been stated that the object was to get five millions of the reserve in gold, you would think that quite an insufficient sum, I gather?—Yes.

2592 But you would not like to name any figure?—I do not think we need place a limit just now.

2593 Would you wish, whatever your figure was, that it should bear some sort of proportion to the trade of India, and rise as the total trade of India rises?—I say it ought to be proportioned to the total amount of the reserve, that is, that it should bear a proportion to the amount of the reserve.

2594 Should both the reserve as a whole and the gold portion of it bear some proportion to the trade of India? Suppose we were able to fix on a figure which we thought safe under the present circumstances, would you say that as the trade of India expands it would be necessary that that figure should rise in proportion?—Yes, it should be enlarged.

2595 You object to holding any portion of the gold reserve in silver?—Yes.

2596 And I think you said you object to the holding of any portion of the gold reserve in India?—Yes, it should be held in London.

2597 It is in the Indian branch that the silver is held at the present time?—Yes.

2598 Will you tell me why you object to holding any portion of it in India, and why you object to having any portion of it in silver?—We think it best to hold the reserve in London, because this would be the market where the money would be actually required in an emergency.

2599 Your objection to holding any part of it in silver is due to what cause?—It is a Gold Standard Reserve, and we say it ought to be in gold. (*Mr Fraser*) We consider that silver could not under any possible circumstances support a gold standard in a crisis.

2600 Have you any criticisms to offer as regards the Paper Currency Reserve?—(*Mr Toomey*) We hold that a proportion should be kept in this country in gold, and so could be made immediately available for purchases of silver, or released in case of need against the deposit of rupees in India. When gold is available in India, the currency note department should, in normal times, be prepared to pay out readily sovereigns against notes or rupees.

2601 That has been the case, has it not?—Yes.

2602 Have you anything to say as to the proposal which has been made for the opening of a gold mint in India?—We say that in our opinion existing conditions in India do not call for the establishment of a mint for the free coinage of gold, seeing that the country obtains all the sovereigns it requires free of minting charges. If, however, it should at any future date be deemed advisable to open such a mint, we advocate the coinage thereof of the sovereign. Our branch managers have written something on this point, and I do not know whether I should tell you what they say.

2603 We should be very glad to hear it?—The Calcutta manager of the National Bank of India says that a gold coinage is not really wanted in India, but "if gold is to be coined here then it must be the sovereign, with which people are already more or less familiar, any other coin would, I think, merely be looked upon as a curiosity. Government's well-backed note issue is, I think, the thing to cultivate as much as possible, being the most economical

26 June 1913 ]

Mr J A TOOMEY and Mr T FRASER

[Continued

"form of currency" The Bombay manager says, "Personally, I do not think that a gold coinage will benefit India, and the clamour for it is confined to Bombay and Karachi. The present currency system is working well, and I do not think that people generally want it changed." The manager at Karachi writes, "We see no necessity for an open mint in Bombay for the coinage of sovereigns. A gold market in India for the coinage of sovereigns would make a firmer discount rate at home, which would not be to India's advantage. Sovereigns had not been tried in India when the Fowler Committee sat and recommended a mint in India for the coinage of gold."

2604 Do you yourself share the view, which I think one of the managers you quoted expressed, that the best currency is a well-backed paper note issue?—Yes, because it is a much more economical form of currency.

2605 Do you yourself think that sovereigns could be freely obtained now in India when wanted?—Yes, they can. That is proved by the large amount held by the Government of India. The people of the country know pretty well that they can get sovereigns if they require them, but they do not require them.

2606 They can get them at a few points only, I suppose?—I think that is so.

2607 Does the fact that these people do not take these sovereigns, although they could get them in the Government Treasuries, suggest to you that the sovereign is an inconvenient coin for them?—No, it is not at all inconvenient. It seems to me that the people have enough sovereigns in the country already for their present requirements.

2608 I put the question to you, because it has been represented to us that India is a country where most of the transactions are very small, and that the sovereign is too big a unit for their gold coin?—I think not. Sovereigns are taken pretty freely in certain up-country districts. The trouble which the National Bank of India sometimes has is not being able to get rupees for sovereigns. If I may follow that out for a moment, at Delhi the manager wrote the other day saying that he could have done some sterling business only his cash balance consisted mostly of sovereigns, and his customers who proposed this sterling business wanted payment in rupees, not sovereigns. Our manager asked the Comptroller-General for silver in exchange for those sovereigns but he was not able to get it.

2609 Why was that?—I suppose the Comptroller-General had not got a sufficient supply of silver.

2610 But no reason was given or at least communicated to you?—That is so. (Mr Fraser) I might remark that we have had a similar experience at Delhi and Amritsar.

2611 Is it a frequent experience at those two places?—Our transactions at those points are not very large, but we have had that experience that we have had sovereigns for which it has been difficult to obtain rupees.

2612 At those two points only?—Those are the only two points up-country in which we are represented (Mr Toomey) It would apply to up-country stations more or less. It does not apply to the Presidency towns.

2613 Some time ago the Indian Government was pressing on the Secretary of State the establishment of a mint, but abandoned the proposal on finding that the Indian mines had made contracts for the sale of their gold to Europe, do you know whether that state of things still prevails?—I have no information on that point. I cannot tell whether with an open mint the local production would go to the Bombay mint or not.

2614 I think in the last financial statement of Sir Guy Fleetwood Wilson, he stated as one of the arguments for the opening of a gold mint that there was a great deal of gold bullion in India which people might at a given time want to coin, and he suggested that it was not economical and it was not right that they should have to send that bullion all the way from India to England to get it coined and then reimport it. What do you say to that?—If you have an open

mint in Bombay I do not see any likelihood of that gold bullion being sent in to the mint.

2615 You do not think it would come out of the hoards?—No. India is steadily taking gold in the form of bars, and that is likely to continue. The people would not part with their gold except under the direst necessity.

2616 Do you think they are now hoarding gold in large amounts?—They always have done so, and the hoarding is probably on the increase, owing to the people being more prosperous.

2617 Would it be the case that the making of the rupee a token as a consequence of closing the mints, causes the people to hoard gold now, where previously they might have hoarded silver?—All I can say is that they are taking gold more freely than they did before, but still the rupee is the coin of the country.

2618 The result in any case is that a great deal of gold has gone into India and remains there either in the form of bullion or of sovereigns?—Practically it always remains there.

2619 Is that gold of much use in maintaining exchange in a crisis, in your opinion?—Not the gold held in hoards.

2620 Does the gold that has gone into circulation come out for the purpose of maintaining exchange, or does it maintain exchange in a crisis?—I think in a crisis the people would retain their gold and probably scramble for more.

2621 I will turn now, if I may, to the question of the enlargement of the powers of the Presidency banks, I think you object to that proposal?—Yes. The question of the enlargement of the powers of the Presidency banks so as to permit them to deal in sterling exchange is one which has been brought forward from time to time during the last 50 years and has been steadily vetoed by the Government of India and successive Secretaries of State. The last time that this question was raised was in 1904 when it was proposed (1) that the Presidency banks should be allowed when the bank rate in India is 6 per cent or higher, to borrow in London for the purpose of remitting funds to India, and (2) that the banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the money borrowed to or from India. The Government of India with the approval of the Secretary of State, declined to grant the powers sought by the Presidency banks, and the reasons for this decision were fully explained by the then Finance Minister, in his speech reported in the "Gazette of India" of 16th February 1907, of which we have sent you a copy.\* The exchange banks at that time felt it incumbent on them to oppose strongly the proposals of the Presidency banks and we should do so again on the same grounds, namely, that while we do not deprecate ordinary competition by competitors on the same level as ourselves we strongly object to State aided competition. The Presidency banks enjoy the prestige of being the Government bankers with immense sums of public money free of charge, whilst we are handicapped by having to pay interest on the whole of our deposits. The exchange banks have financed the external trade of India for over 50 years without any charge of inefficiency or unreasonable charges, and with the large resources at their command they are fully competent to deal with all the exchange business of the country. We maintain that the legitimate function of the Presidency banks is to finance the internal trade of the country, for which they enjoy special privileges in having large amounts of money without charge. If, however, these banks require further funds for their business it is open to them to raise additional capital in the same way as many of the exchange banks have done. It is contended in some quarters that the Government of India should lend some of its surplus balances for the benefit of trade during the busy seasons and we see no reason why this should not be done in the same way as the Secretary of State lends money in this city on first-class securities. Our view is that the money should be lent to the Presidency banks for

\* See Appendix XVII page 148

26 June 1913]

Mr J. A. TOOMEY and Mr T. FRASER

[Continued]

short periods on Government paper, Port Trust bonds, and the like, the money being lent at somewhat less than the ruling bank rate. We attach the same objections as those we have just enumerated to the establishment of a State bank. Banking in India is already well represented in all its branches by the Presidency banks, exchange banks, and the numerous local banks. No State bank would, in our opinion, cater for the requirements of the many millions of cultivators who are at present dependent for finance on moneylenders. Their needs could best be supplied by encouraging and developing the system of co-operative credit which under the sympathetic support of the Government has made great progress during the last few years. The Presidency banks fulfil the functions of a State bank in their respective spheres, they have their capital and resources available for the benefit of their own particular province, and to absorb these into a central institution would, in our view, militate against efficiency. The Presidency banks as they exist are in reality three "State banks," and with their head offices in Calcutta, Bombay, and Madras are better equipped for studying the wants of their respective provinces than one central bank could possibly be, and we are unable to see how such a bank could foster the development of trade as well as it is being done by the existing machinery. Further, a State bank with the control of Government money, the paper currency, and access to the London market would virtually mean the establishment, so far as exchange is concerned, of a banking monopoly, which we feel is neither desirable nor advisable in the best interests of India and its trade. We consider that the existing currency department, with the assistance of hundreds of Government treasuries and sub-treasuries penetrating into remote districts to which it would not pay a bank to go, is much better fitted to manage and develop the paper currency than a State bank would be. The remarkable growth of the currency note issue, particularly in recent years, testifies in some measure to the efficiency of the existing system, and it is scarcely likely that a State bank could foster the extension of the note issue so well as these Government treasuries. I should like to add this note. To my mind the mere amalgamation of the Presidency banks with a central authority would present insuperable difficulties. No doubt the idea in such a scheme would be the retention of the present boards, but these would only have the shadow not the substance of power, and the central authority could not accurately gauge and satisfy the requirements of trade in all quarters nearly so well as under the existing system, and I apprehend that unfavourable comparisons and complaints would follow as to certain interests being favoured at the expense of others. When the idea of a State bank was mooted in 1899 the secretary and treasurer of one of the Presidency banks wrote to Government as follows: "My directors regret that they are unable to concur in the opinion expressed by His Excellency the Viceroy that a consolidation and a concentration of banking facilities are required in the interests of the business accommodation and credit of the country. So far as they are aware, there is no demand in India on the part of the mercantile and trading community for such concentration. If the banking facilities in the country were found to be inadequate, an increase in banking capital would be necessary and would speedily be called for, but a mere amalgamation of the existing banks would not provide an increase of capital or of banking facilities. It would rather tend to curtail credit in many cases." The Bengal Government wrote to the Government of India in March 1900 as follows: "In the first place, it is doubtful whether India is not too large for a single central State bank, the directors, if drawn from or located in the three Presidency towns, would be too far apart from each other. Secondly, the interests of the various Presidencies are not always identical and are sometimes at variance with each other. Thirdly, it is against the public interest to create and foster a huge monopoly. A single bank with large resources and commanding the Govern-

ment deposits would have great power over the other banks. Fourthly, banks deal chiefly in credit, and credit is always a matter of local knowledge and experience." The Government of India wrote to the Secretary of State in June 1901, in reply to certain inquiries: "(Question V) Is it likely that the possible conflict of interests between a bank of this description and other existing institutions might tend to discourage private enterprise, and to prevent the development of the facilities which the public now enjoys?" The answer was: "We think it is evident that if a central bank were obliged to hold more capital than it could profitably employ throughout the year in ordinary business, such a bank would be obliged to enter into prejudicial competition with private banks, and further, the existence of such surplus capital in India might check the outward flow of capital from private sources when occasion presented itself for its profitable employment." If these were the views 12 or 14 years ago, they have stronger force in the present day when the demands of trade and the volume of business are so much larger. When, however, it is suggested to establish a State bank, not only absorbing the three Presidency banks, but also to hand over to it the management of the currency of the country, the scheme becomes one of too vast a character, in my opinion, to be in any way practicable. The management of the currency in such a country as India is very properly in the hands of a large Government department having the control of hundreds of treasuries and sub-treasuries scattered throughout the Empire. It has taken many years to build up this department into its present state, and to expect a newly-made bank to take over the work where the Government leaves off would only invite difficulty and trouble. No State bank, however ably managed and however anxious its officials might be to meet requirements could, in addition to its primary work of attending to the wants of trade throughout the Empire, perform such a work satisfactorily, and there might be a state of chaos, resulting possibly in a run on banks in the not improbable event of a supply of currency running short in various quarters. In this respect I refer not so much to Presidency towns as to places in the interior. When it is also suggested that a State bank should, on the top of all these responsibilities, open an office in London and transact exchange business with India, the proposal is vaster than the ordinary banking mind can conceive as being in any way feasible. The trouble would be to find the genius who could carry the scheme into effect. The Presidency banks have enough to do already in attending to the wants of their respective spheres. The exchange banks have been financing the foreign trade of the country, in some cases for 50 years and more, and no complaints are heard as to any inefficiency or shortcomings on their part. They fill a most important place in the conduct of India's trade, and their record entitles them to every consideration on the part of the Government when dealing with any contemplated changes. The exchange banks do not fear competition by competitors on their own level, but it is easy to see that they could not compete successfully against a State bank with immense sums of public money at its disposal free of charge. Such an institution would have a most unfair advantage over the existing banks. It would create a monopoly in exchange banking, and by its being able to work on terms which the present banks could not touch, have the power to cripple them without having the power to take their place. It would be a distinct disadvantage to merchants in all parts of India that such a monopoly should be created, and that any weakening of the exchange banks should result. (Mr Fraser) Might I remark that that is a personal note by Mr Toomey which I have read and endorse.

2622 With which you agree?—Yes, with which I agree.

2623 Your primary objection to the extension of the powers either of the Presidency banks amalgamated or of a new State bank is that it subsidises competition?—(Mr Toomey) That is so, and we consider it would be unworkable.

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued

2624 You think further that it would be unworkable?—The country is geographically too large

2625 I understand that observation, from the point of view of meeting the wants of clients and of meeting all the local conditions in so vast an area?—You must have an intimate knowledge of your customers and of trade generally.

2626 That applies to banking facilities for internal use?—If a State bank were to open in London it would necessitate intimate knowledge of the London market too

2627 In other respects, would the work which the State bank would have to do be vaster than that which has now to be done by the Government of India and the Secretary of State?—Do you refer to the sale of Council bills and the rest of it?

2628 At the present time the Government of India have to make up their minds what currency the country requires?—All that is a very small matter compared with the work which a State bank would have to do

2629 The management of the currency would not in itself become heavier because it was transferred to a State bank, would it?—No, it would be the same, unless, of course, there was an extension of the currency note issue

2630 I am rather interested to find a gentleman coming from the business world who really feels that Government can do some things better than a great business concern?—We say that the currency department is exceedingly well managed, that it has taken a long time to work it up to its present position, and that no bank could work it as well. It would take a bank many years to get into the present position that the Government are in as regards that

2631 I think, from what Mr Fraser said just now, that every now and then the currency department fails either to provide sufficient currency or to provide it in the place where it is wanted?—(Mr Fraser) Yes (Mr Toomey) To some extent, but we are not making any grievance of that just now

2632 At the present time who really manages Indian exchange?—The exchange banks

2633 Not the Secretary of State?—No, he only supplies our requirements for outward remittances

2634 But he fixes the rate of course?—You can not say that he fixes the rates for Council bills. He accepts the market rate between 1s 3½d and 1s 4½d

2635 Do you say his influence is confined to keeping it within those limits?—Yes

2636 (Mr Keynes) He varies the amount of bills he offers, has that no influence on the rate?—Do you mean the weekly amount?

2637 Yes?—Just now he is offering 20 lakhs a week

2638 (Sir Robert Chalmers) Suppose he offers 100?—Just now there would be no takers

2639 (Chairman) But would that not affect the rates?—Of course he cannot sell below 1s 3½d

2640 (Mr Keynes) At the present moment exchange is very low, but suppose early in the year when it was 1s 4½d he had put up from 100 lakhs to 150 lakhs, would not that have affected the rate at that time?—The rate certainly would have been affected temporarily, unless there was a great extension of exports just at that particular time

2641 So that the rate partly depends upon the policy he is pursuing with regard to the amount he offers week by week?—Yes, but he as a rule offers the amount which the market is likely to take

2642 Subject to what the Secretary of State thinks the suitable rate for the time of the year?—He sells them at the market rate

2643 (Chairman) Does not the demand at any given time depend in part on what the rate is? If the rate is low the demand would be greater than if the rate is high, would it not?—No, that is not so. At this time of the year export business is dull, and consequently exchange falls. For instance, last Wednesday there were only 20 lakhs put up, the market did not want much, the rate was 1s 3½d, and there were very few takers, because India is well supplied with cash at the moment and there is no demand

2644 (Lord Faber) And India is not exporting at the moment?—Exports are not very active just now. We always see the highest rates of exchange in the busy season, naturally, that is, from January to April

2645 (Mr Keynes) If the Secretary of State had issued no bills last week and no bills this week, and said he was not going to sell bills for the next two months below 1s 4d, would that affect exchange?—It might or it might not. It depends on the demand for remittance from India

2646 It might possibly affect exchange though?—Possibly, but India could really get along without Council bills for a month or two, could she not? (Mr Fraser) I think so. I think if the Secretary of State were to fix the rate at 1s 4d just now, and say he would not sell below 1s 4d, the people who wanted to remit money to India would simply wait till the last moment, and if they could not get anything better than 1s 4d they would take his 1s 4d, but they would not go to him except as a last resort. (Mr Toomey) He could not very well establish 1s 4d as the minimum

2647 If he were to announce that policy, would the rate which the exchange banks charge to their customers be altered?—(Mr Fraser) We would sell in India below 1s 4d as long as we could, and when we found we could not sell any more then we would come for his 1s 4d. (Mr Toomey) It does not follow that because the Secretary of State would not sell below 1s 4d exchange would be maintained at 1s 4d for a month or two

2648 (Chairman) I want to draw your attention, with reference to something you have said, to an expression of the views of the Government of India I have before me a letter from the Government of India to the Secretary of State, No 56, dated 22nd February 1900\*. He was then being sent by the Government of India a memorial from the exchange banks on this very question, and in that memorial, as quoted in paragraph 3 of the letter, it is stated by the exchange banks very much what you have said to day, that "for the last 40 years they have 'practically ' financed the whole export and import trade of the ' country,' while the Presidency banks have devoted ' themselves entirely to financing the internal com ' merce." I desire to call your attention to the comments on that of the Government of India. They say, "We cannot for a moment admit the correctness " of this assertion. Though the Presidency banks " have hitherto been prohibited from engaging in " exchange operations their resources (and through " them the resources of the Government also) have " been freely placed at the disposal of all sections of " the commercial community, including the exchange " banks themselves who now imply that they have " financed the whole foreign trade with their own " capital exclusively." Then they proceed to say, " On this point we may let the memorialists speak for " themselves. In December last the associated " exchange banks deputed two representatives (who " are among the signatories of this memorial) to meet " our honourable colleagues in charge of the Finance " Department and to urge upon the Government that " any loans made by the Government should be made " equally to the exchange and to the Presidency banks " When it was intimated that the Government would " be unlikely to depart from their past practice of " giving all loans through the Presidency banks, the " deputation asked that the Presidency banks should " not be permitted to pass on the Government money " except to the exchange banks, or at any rate that " the exchange banks should have the first call on it " to the exclusion of local banks and merchants, " European and native. A few weeks later the " Government were suddenly and urgently pressed " by the managers of two of the exchange banks to " advance Rs 30 lakhs to the Bank of Bombay"—this " was written in 1900. " It was represented that unless " the money was forthcoming, there was danger of a " serious commercial crisis, and of an important " failure. The exchange banks, it was explained,

\* See Appendix XV, page 407

26 June 1913]

MR. J. A. TOOMEY and Mr. T. FRASER,

[Continued]

would not provide money for their customers, though money could be obtained in a few hours under Act II of 1898, because they objected to buying telegraphic transfers at the rate at which your Lordship was then selling. Sooner than have recourse to this means of obtaining funds they frankly preferred to let the crisis come. Happily the crisis was averted, mainly, we believe, by the action of one of the "Presidency banks." You observe that in that paragraph the Government of India challenges *ab initio* your claim that the exchange banks have successfully and completely financed the external trade of India?—No other body of people have financed the foreign trade of India. Might I look at the first point?

2649 Certainly (*handing letter to Mr. Toomey*)?—(*After reading*) Neither my friend nor I knew anything at all about this. The paragraph says, "the associated exchange banks deputed two representatives (who are among the signatories of this memorial) to meet our honourable colleague in charge of the Finance Department, and to urge upon the Government that any loans made by the Government should be made equally to the exchange and to the Presidency banks." We knew nothing about that in London and we should not uphold it.

2650 Sir Shapurji suggests to me that the London offices did repudiate that?—I knew nothing about it (*Mr. Fraser*) I was on leave at the time, and I knew nothing about it.

2651 (*Mr. Gladstone*) You were in India in 1900, were you not?—Not at that time, I did not go out till May 1900. (*Mr. Toomey*) I was not in India then. We certainly knew nothing about it, and we certainly would not endorse it.

2652 (*Chairman*) Now look at the last sentence of the paragraph, "The exchange banks, it was explained, would not provide money for their customers, though money could be obtained in a few hours under Act II of 1898, because they objected to buying telegraphic transfers at the rate at which your Lordship was then selling"?—Before that it says, "When it was intimated that the Government would be unlikely to depart from their past practice of giving loans through the Presidency banks, the deputation asked that the Presidency banks should not be permitted to pass on the Government money except to the exchange banks, or at any rate that the exchange banks should have the first call on it." We know nothing about that, and we do not endorse it.

2653 Will you just look again at the last sentence?—I cannot imagine what the deputation consisted of. Certainly, the whole thing would have been repudiated by the London offices of the banks. do you not think so? (*Mr. Fraser*) Yes.

2654 I pass away from that. Are the exchange banks widely represented throughout India?—(*Mr. Toomey*) They are fairly well represented. We have a good many branches up country.

2655 In those branches you are competing with the Presidency banks, are you not?—We have some branches where the Presidency banks are not represented.

2656. But in many cases you would be in competition with the Presidency banks?—To some extent. (*Mr. Fraser*) As far as the Chartered Bank is concerned, we are only represented in two up country branches. Our main object in going to Delhi and Amritsar, the only two points at which we are represented, was to foster our Manchester connection, which is part of our exchange business, and our sales of bar gold, which also we consider part of our exchange business. Both Delhi and Amritsar are good markets for gold. (*Mr. Toomey*) That is practically what we are there for too—financing Manchester business chiefly.

2657 Then you do not consider that you seriously compete with the Presidency banks for the internal business?—No. (*Mr. Fraser*) As far as the Chartered Bank is concerned, we do not compete.

2658. I was asking you to speak generally if you could?—(*Mr. Toomey*) Neither of us compete.

2659 (*Sir James Begg*) When you say the present system of selling Council drafts is admirably adapted

to the requirements of trade, you refer, I presume, to foreign trade?—Yes, to Indian foreign trade.

2660 Would you agree that the export trade forms part of the internal trade before the merchandise which is exported passes into the hands of the exporters?—It is internal trade until it becomes export trade.

2661 And the other way about in the case of imports—the merchandise imported becomes part of the internal trade after it is taken over from the importers?—It becomes internal trade then.

2662 So that the internal trade includes the foreign trade?—They are interwoven.

2663 Is it not included?—They are interwoven with one another.

2664 You expressed satisfaction generally with the system of Council bills sales, I think?—Quite so.

2665 But that was from the point of view of buyers of bills?—We always have to pay full rates for them.

2666 When you expressed this satisfaction it was not from the Government point of view, but it was from the point of view of trade and your own trade?—We do not see any system that could be worked better. We say that the system is admirably adapted to the requirements of trade, that the sales of bills are well handled and in fact that they could not be better sold. We always have to pay the full price for Council bills. They are put up for competition every week and naturally they fetch the highest prices.

2667 It does not matter to the buyers of bills whether the sales of bills are made against the Treasury balances in India, or against the Gold Standard Reserve, or against silver purchases, does it?—It does not matter really to us what accounts are debited with the amounts of these Council bills.

2668 You hold, I understand, that a proportion of the gold belonging to the Paper Currency Reserve should be kept in England?—Yes.

2669 Have you formed any opinion as to the extent of the proportion that should be held here?—No, we would not like to place any limit on it.

2670 Do you consider that there is any danger of the withdrawal of a portion of the reserves to England affecting the credit of the note issue in India?—Do you mean a further withdrawal from India?

2671 No, any withdrawal of the gold reserves from the paper currency department?—No, we think that a certain amount should be held here, and then, in the event of an adverse season, the money here would be available to meet the drafts issued by the Government of India.

2672 The reserve is intended for the redemption of the note issue, is it not?—In an adverse season the notes would be paid in to the Government of India, and they would pay out gold here against the notes tendered in India.

2673. What I wanted to know was whether you think there is any danger of the credit of the note issue being affected by the fact that a part of the reserves was held here?—I do not think so. (*Mr. Fraser*) It might be so if the amount held here was excessive. Care would have to be taken to see that the amount of gold held here was never unduly out of proportion to the total note circulation.

2674. But you would not say what proportion?—I would hardly care to say at present. I should think that the amount held at present is not too much—it is something like nine crores, I think.

2675 Then you say that when gold is available in India the currency note department should in normal times be prepared to pay out sovereigns readily against notes?—(*Mr. Toomey*) Yes, but there should not be any obligation.

2676 I am not quite sure what you wish us to understand by the expression "in normal times"?—I think if the Government can afford to give us sovereigns against notes they should do so, but should not accept any obligation to give sovereigns in exchange for silver or notes. In adverse times, of course, the gold would be required for the support of exchange, and the Government might then see the necessity of withdrawing the issue of gold to the people in the country.

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued

2677 Take the present time for example, would you say that gold should be issued at the present time with exchange below par?—Yes, I see no reason why gold should not be given in exchange for notes or rupees. The Government are well able to do so, having a very large amount of gold at their disposal.

2678 With regard to the remarks you made about the Presidency banks, you told us that the Government of India with the approval of the Secretary of State declined to grant the power sought by the Presidency banks. I do not know whether that puts the correct interpretation on the fact. Is it not the case that the Government of India proposed that the power sought by the Presidency banks should be given and the Secretary of State vetoed it?—I accept that.

2679 With regard to what you say about a State bank, it is a little difficult to discuss the matter, because we have got before us no definite proposals for a State bank if there is to be one, but is it necessary to assume that it would be a banking monopoly?—I do not see that it could be otherwise. The State bank would have the advantage of all the Government money at their disposal, they would pay nothing for that money, and so we would be very considerably handicapped.

2680 You say it would virtually mean the establishment so far as the exchange banks are concerned of a banking monopoly?—That is, if they got exchange business, they would drive us off the field entirely.

2681 If they did exchange bank business freely without any restriction?—Or at all.

2682 Supposing the State bank was authorised to remit the amount required to meet the home charges only?—Do you mean that instead of selling Council bills here they should buy bills in India?

2683 Yes?—What bills would they buy?

2684 Bills on London?—What bills?

2685 Merchants' bills, I suppose?—Then they would drive us off the field.

2686 Would they, if they were restricted in amount?—If they bought any sterling bills at all they would be able to quote lower rates than we could.

2687 But only to that extent?—It would ruin the exchange business so far as we are concerned.

2688 You say you think a State bank would not foster the extension of the note issue so well as the Government treasuries, is it not the case that banks are usually understood to be able to foster a note issue better than any Government department?—I should not think that would be the case in India. I do not think the State bank could handle the note issue at all.

2689 If you gave a State bank an interest in the extension of the note issue, would they not be likely to foster it then?—I do not think they would be capable of managing the paper currency department. It would take the State bank years and years to get into the position that the currency department are in now. As I have said, there would probably be a breakdown in the currency arrangements which might be very serious indeed.

2690 (*Sir Shapurji Broacha*) You have both been managers for a very long time in India, I think?—I have been a bank manager for over 30 years.

2691 And so has Mr Fraser?—(*Mr Fraser*) 17 years.

2692 You have passed most of your time in India in one Presidency or the other?—(*Mr Toomey*) I have (*Mr Fraser*) I have been in Bombay and Calcutta.

2693 And you are in daily connection now with India through your branches?—(*Mr Toomey*) Yes. We are constantly getting telegrams home and sending them out.

2694 I suppose you get three or four telegrams a day and very long ones too, of the state of the market and so on?—Yes. We are thoroughly acquainted with every move in India in exchanges.

2695 So that, so far as practice and length of experience are concerned, you can give an opinion on Indian finance which will be as good as, if not better than, most people's?—I suppose our opinion is as good as the opinion of other people.

2696 And, of course, the opinion you give will be with a view to enhance the prosperity of India?—We are desirous that the prosperity of India should increase (*Mr Fraser*) What we feel is that our interests are intimately bound up with the prosperity of India. If India is prosperous, the banks are prosperous, naturally.

2697 I think you export a good deal of gold as merchandise?—(*Mr Toomey*) Yes, we are regular shippers of bar gold to India.

2698 Amounting, would you say, to half a million or three quarters of a million a month—I am speaking of the whole of the exchange banks among themselves?—I will give you the figures. Last year, 1912, the shipment of bar gold and other uncoined gold amounted to 3,466,000l., in 1911 it amounted to 3,943,000l., and in 1910 the figure was 3,360,000l.

2699 Supposing there were a mint, that gold would not go into the mint, would it?—No.

2700 Do you know of any gold exported from a foreign country which would go into the mint?—No.

2701 You would not send gold on your own account to be minted there?—No.

2702 The sovereign would be the cheapest form of gold you could send?—Yes.

2703 Therefore, I suppose, you would say that it would be a waste of money to open a mint for gold in Bombay?—Yes, we say that India can get sovereigns now cheaper than if she had a mint. She gets the sovereigns laid down in India free of cost, that is to say she only pays 1s 4d for them, whereas we, the banks and other people, pay the freight and charges.

2704 Bar gold goes to India at about 1½ per cent above the sovereign, taking the sovereign at 15 rupees, because it has to pay the bank's profit and the other charges for exchange purposes?—Yes.

2705 Again, that gold is divided into several chops, and some bank's chops fetch a higher price, as much as a sixteenth higher than others?—Slightly higher at any rate.

2706 Is it your experience that India has sold gold and exported gold sometimes in famine years?—It has done that, but very seldom (*Mr Fraser*) In Bombay, as I think you know, Sir Shapurji, as well as I do, in the famine of 1894 and 1895 when exchange fell very low, India sold rather a large amount of gold which came out of hoards. Whether that was due to famine conditions or to the very low value of the rupee I have never quite made up my mind, but the exchange banks did at that time export large quantities of gold from India.

2707 To England?—Yes.

2708 That came out through the necessities of the people, and partly perhaps because gold had gone up to something like 12 or 15 per cent corresponding to the fall of silver?—That is so, it was probably a combination of those two causes.

2709 Would you say, therefore, that famine times are the only times when Indian gold would go into the mint?—(*Mr Toomey*) Yes, that is the only time (*Mr Fraser*) Under existing conditions any shroff in Bombay, who holds a lot of gold ornaments which he may have collected in various up-country centres, can take those ornaments to the mint and they will melt them and give him the gold in the shape of a gold bar which he can take away and immediately sell to any exchange bank. Therefore, the mint to that extent is open to gold at the present moment.

2710 When the Secretary of State sells at 1s 3½d that is not breaking the par of exchange, is it?—(*Mr Toomey*) No, that is keeping the par.

2711 Supposing there were 30 millions in the Gold Standard Reserve, how much of that would you like to keep in liquid gold?—We would not like to name a figure. There ought to be a fair proportion of that in liquid gold.

2712 What would you call a fair proportion—two thirds?—If you must have a figure, I should say certainly 10 millions (*Mr Fraser*) I prefer 15 millions myself.

2713 In the crisis of 1907-8, when I called on you to ask your views, do you remember that at that time you asked me to bring to the notice of the Secretary of State that he should guarantee exchange

26 June 1913 ]

Mr J A TOOMEY and Mr T FRASER

[Continued

at 1s 4d, as, under pressure, you were then bringing all available funds from India to here?—It is hardly correct to say we were bringing all available funds. What happened was that merchants used to remit and we could not get exports to balance therefore not being philanthropists we had to fall back upon somebody.

2714 The point is that you would not have got so much funds as you actually got if you had not that guarantee?—We would not have been asked for that same amount.

2715 Your idea was, let us get the funds over here, and we can meet the loss of 1/4th afterwards—I take it that that is what was in your mind at that time?—(Mr Toomey) There was a certain hesitation on the part of the Government in giving us drafts on London and that forced exchange below 1s 8 1/2d.

2716 That brought about the panicky feeling. Why should you not have, for instance, all the Gold Standard Reserve in liquid gold?—It would be too expensive.

2717 Do you calculate always the expense of a thing when there is a necessity for it?—I think we must always calculate the expense.

2718 Will not 30 millions or 40 millions of liquid gold give an actual security when short-dated securities would not?—We say it would be a waste of interest.

2719 Is that your only argument?—It would be an absolute waste of interest.

2720 Are you not wasting much more money in other directions which you could do without if you got this absolute security?—It would be throwing money away to keep it all in gold.

2721 If we had the same Army and Navy that we had before the Boer War, or at the time of the Boer War, we might have paid off the National Debt by now?—We might not be here at all.

2722 But the nation did not consider interest in that matter, it wanted absolute security?—It would be an absolute waste of good money to keep all that in liquid gold.

2723 Do you think in a time when war, panic and crisis all come jointly, the 20 millions of short dated securities which you hold would give much confidence? Would there not be the fear that they might be cashed, and that instead of giving cash to the market you would take away some cash from the market?—We can hardly prepare for every eventuality that may possibly occur.

2724 Supposing the taxpayers do not want interest, what would you say to that? Would it be philanthropy, or that they had no sense, or what?—I do not think India should throw away that money.

2725 I will put it in another way, we know that there is very little gold against the vast commerce of this country—in fact, the two are not commensurate?—That is so, the fact is there is not enough gold to go round.

2726 Other countries are losing interest—France, Russia, and the United States are losing interest. Have they less sense than our bankers and our Government about the security or the safety that gold gives?—No. No doubt they have got immense hoards of gold, but it is doubtful whether it is necessary for India to keep all her gold actually liquid.

2727 Do you admit that India has more power to absorb gold than most commercial countries?—Her capacity for absorbing gold is very remarkable.

2728 Is not India's interest combined with the interest of this country?—Certainly.

2729 Supposing India is allowed to collect gold in the Gold Standard Reserve, would there not be a further security to the Empire in a time of crisis?—I am not disputing the fact that it would be better to have the whole of the Gold Standard Reserve in actual gold, but at the same time I do not advocate that because, as I say there would be a loss of interest.

2730 That is the only way you take it?—That is the only way I take it.

2731 Of course liquid gold would be better?—It is naturally better.

2732 The Bank of Germany has been taking away all the gold that comes from South Africa, and they

have taken away about three millions in the last few weeks, why should not India, if she is willing to pay for it and do without this interest for her own safety?—If she wants to do it, let her do it, I do not want to interfere with her.

2733 Do you not think that about two millions more in cash in the Bank of England now would give a little filip to the rates of interest in the market?—Do you mean two millions of money belonging to India?

2734 No, but suppose the Bank of England had two or three millions more gold from South Africa?—Certainly that would be a relief and an assistance to this market.

2735 Money is getting dearer every day, and there is a great cry for it, is there not? Are you not afraid of that?—It is much better to have stronger banking reserves in London, I admit.

2736 If England were engaged in a war, would it be a greater help to you if the Government of India had 20 millions in securities than if the Government of India had 20 millions in liquid gold? Would you not rather start with the liquid gold, so that the Secretary of State would be free from the necessity of letting the exchange go as it liked?—I can only say it would be a very fine thing if India could keep all that Gold Standard Reserve in gold.

2737 Would it not be better than securities?—(Mr Fraser) One might almost say that to some extent you would be penalising India for the benefit of the Empire. Of course, if India wishes that, let her do it.

2738 India has petitioned, India has said to the Secretary of State in Council by those through whom she can speak that the people of India want gold?—(Mr Toomey) That they want the whole of the Gold Standard Reserve to be in actual gold? That is not the widespread voice of India, surely?

2739 Do you not know that the Indian Government asked for a very large sum in liquid gold after their experience of the crisis?—All the same, I do not think there is any widespread wish to keep the whole of the Gold Standard Reserve in actual gold. If there is that desire we should raise no objection to it, if India can afford to throw away the interest.

2740 There was about 20 millions that the Secretary of State lent in this country, you said just now, could he have lent that money in India?—Nothing like it.

2741 Then of course if it had been sent to India it would have been lying waste there, and it would have created an actual monetary difficulty in the market here, because the withdrawing of 20 millions is not a small affair?—What would they have done with the 20 millions in India?

2742 Nothing, I suppose?—Except lock it up.

2743 It would have been locked up and wasted for the time being, whereas it would not only have earned interest over here, but it would have kept the money market here comparatively easy?—Yes.

2744 Is it not the case that all the world likes to keep this market as easy as they possibly can afford to do, because their interests are very much dependent on the bank rate of interest and the London money market rate of interest?—Yes, I follow that.

2745 Suppose the London money market is easy, is it not the fact that there would be more buyers of produce in other countries owing to the cheapness of money, and would not India be benefited to that extent?—Indian trade will not increase merely because the Bank of England rate is rather lower.

2746 If the money market is cheap, and if the bank rate is lower, is it not the case that there are more buyers of luxuries and more buyers of produce from India than when the bank rate, say, is 7 per cent, when there is a difficulty to discount your bills, and when there would be a direct loss to India because she could not sell her produce at better rates?—With a high Bank of England rate the merchant in India has to make various calculations as to the rate at which bills can be discounted, and so forth, which may reduce the price slightly of local produce, but beyond that there would be no contraction of trade.

2747 Would there not follow a contraction of trade if the money is kept here and if the money here

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued

is dear? You would not be very prodigal of sending money to India then, and that would create an export difficulty to a certain extent, would it not?—The trade of India, whatever it is, must go on whether the Bank rate is low or whether the Bank rate is high

2743 That is right, I agree that it must go on. But take wheat, for instance, if it is only worth four rupees, do you think the same export would continue as when wheat was worth five rupees, do you think it would be bought to the same extent when it can only be financed with very great difficulty as it would when it could be easily financed?—I cannot conceive of any great difference

2749 It is no benefit, is it, to make an artificial stringency here by taking away money to India which is of no use there?—Certainly it is no use taking money away from us and putting it down at Bombay where it is not wanted. The lower the bank rate here the better it is for the Indian merchant, because then he is able to sell his bills at a better rate than he would otherwise

2750 You said just now that the export and import trade is interwoven, therefore you know how the Government of India can give facilities by lending money during the export season as they do here?—Yes. There is no reason why the Government should not lend its surplus balances in India

2751 In a time when there is more money here and less in India, and therefore in a time when the Government of India could not lend for the benefit of India, do you think the Secretary of State might transfer some funds there?—There is no reason why he should not, if the Government happens to be hard up in India. At the same time there is a very limited field for lending money in India. (Mr Fraser) Outside the Presidency banks there could be no large borrowers with the security that would be required by the Government of India

2752 Would the proper course be to lend through the Presidency banks?—We would concur in that view

2753 At a lower rate of interest?—They must make a profit for the risk

2754 That interest should be automatically lower than the bank rate as long as the money is used through the Presidency banks?—(Mr Toomey) Quite so

2755 Does it make any difference to India if we keep a portion of the gold here and a portion of the gold there?—No, I think not

2756 There is sufficient there in case of necessity?—Quite so

2757 Would you say that the safest place for the Gold Standard Reserve is England?—Yes

2758 Because you could make no use of it in India except for the purposes of exchange at certain times?—Quite so. It should be kept where it is likely to be wanted, which is London

2759 Are you in favour of the Secretary of State guaranteeing the exchange at 1s 4d and not allowing it to go below the parity of 1s 3½d?—If you mean that the Secretary of State should intimate that he will protect exchange under all circumstances, yes

2760 Do you think there is a redundancy of silver currency in India now?—I do not think so. As I have pointed out, sometimes there is a scarcity of rupees. I have some tables here which may be of interest to the Commission. We instructed our branches some time ago to get an exact account of their receipts and disbursements of currency notes, silver, and gold, and I have the information summarised here. The manager of our Calcutta branch reports that his receipts included 90 per cent of currency notes, 9½ per cent of rupees, and only ½ per cent of gold. Those are his receipts for four weeks

2761 (Sir James Begbie) What were the dates of those?—10th May, 17th May, 24th May, and 31st May, they were four weekly statements

2762 This year?—Yes

2763 Is this a branch of your National Bank?—Yes

Bombay reported\* —

Currency notes	- - -	99½ per cent
Rupees	- - -	7½ "
Gold	- - -	1½ "

Madras —

Currency notes	- - -	95½ "
Rupees	- - -	3½ "
Gold	- - -	½ "

Karachi —

Currency notes	- - -	97½ "
Rupees	- - -	1½ "
Gold	- - -	1½ "

Delhi —

Currency notes	- - -	27 "
Rupees	- - -	36½ "
Gold	- - -	36½ "

Lahore —

Currency notes	- - -	85½ "
Rupees	- - -	8½ "
Gold	- - -	6½ "

Cawnpore —

Currency notes	- - -	29½ "
Rupees	- - -	38½ "
Gold	- - -	32½ "

Amritsar —

Currency notes	- - -	61½ "
Rupees	- - -	20½ "
Gold	- - -	17½ "

The next branch on my list is Cochin, and it is a remarkable fact that in Cochin gold is very freely taken —

Currency notes were only	- - -	4 per cent
Rupees	- - -	15 "
Gold	- - -	83 "

Then at Tutacorn, which is quite near to Cochin, you have this extraordinary difference, that the notes represent 73½ per cent, the rupees 25½ per cent, and the gold 1 per cent

2764 (Sir Shapurji Broacha) They are almost neighbours in regard to their geographical position, are they not?—Yes

2765 (Chairman) Can you give any explanation of the wide discrepancy between those two neighbouring places?—It is impossible to say

2766 There is nothing in the nature of the trade that would explain it?—No, I think it is more in the nature of the native. I have the receipts for three other branches here, they are—

Chittagong —		
Currency notes	- - -	6½ per cent
Rupees	- - -	93½ "
Gold	- - -	½ "

Rangoon —

Currency notes	- - -	91½ "
Rupees	- - -	8½ "
Gold	- - -	½ "

Mandalay —

Currency notes	- - -	46½ "
Rupees	- - -	53½ "
Gold	- - -	nil "

One thing that comes out rather strongly in this table is the small amount of gold wanted in the Presidency towns and the large percentage wanted at up-country places

2767 (Mr Keynes) Are those actual amounts or only percentages?—They are percentages that I have been giving you

2768 (Mr Gladstone) Could you give the average percentage of the whole?—The average of the percentages of the whole of the 13 branches I have given you is, currency notes 62 per cent, rupees 24 per cent, and gold 14 per cent

2769 (Sir Robert Chalmers) We should like to get the figures in their proper perspective. As they stand now, one branch may be speaking of a million pounds and another of a hundred thousand pounds. If you would imagine that the actual figures from each branch were separate items in one central account, and if you would kindly add up all the gold amounts in one total, all the rupees in another, and all the notes in a third,

\* See also Appendix XVIII, pp 541-2

26 June 1913.]

Mr J A TOOMEY and Mr T FRASER

[Continued]

and ascertain the percentages of those three totals, we should be able then to get percentages which would be adjusted and properly weighted?—I will do that.\*

2770 (*Sir Shapurji Broacha*) Now in regard to a State bank, the Presidencies are very jealous of the credit of their merchants, and the people in Calcutta might not do justice to the requirements of the Bombay people, but unless they had the power of committing Bombay there could be no central government?—That is so.

2771 The percentages you have given us show that although gold is free now, it is not used much in comparison with rupees?—That is so in the Presidency towns and large places.

2772 As you know, all the trade in India is done in cash, and I think they are short of rupee coinage, although they prefer rupees?—Very often they are short of rupees.

2773 At present, I think there is only half a rupee per head in the Currency Department?—That may be so.

2774 That is very little for the people of India. Do you know that in France, even in the Currency Department, there is something like nine rupees a head in silver, let alone gold, and that in Germany it is something like three rupees a head, so that half a rupee per head in the Currency Department in India is very little?—Of course, India is a very much poorer country, or rather the bulk of the population are very poor.

2775 The poorer the country the fewer instruments of credit they have, and therefore they require more cash to circulate among them, as all their transactions are much more on a cash basis?—Yes, that is so.

2776 (*Mr Keynes*) From the figures you have read to us I got the general impression that where notes were not much used both rupees and gold were used more than elsewhere, do you think that sovereigns in the Punjab mainly compete with rupees as a form of currency or with notes?—With rupees (*Mr Fraser*) I agree with that.

2777 In those figures you gave us it was the case, was it not, that where the gold was used in a high percentage, the notes were used in a low percentage?—(*Mr Toomey*) In some places where there is a currency office, notes are freely taken, they are not so freely taken where there is no currency office.

2778 Would you say that they use gold in the Punjab a good deal because they have not got into the habit of using notes, or is it for a different reason?—In some places they have never used notes to any extent, and they are taking sovereigns now in place of rupees.

2779 In other parts of the country, as they give up rupees, they take notes instead of rupees?—Yes, there has been a great expansion of the note issue, and one reason for that expansion is the making of the 10-rupee note universal.

2780 Would you prefer that the rupees should be replaced by notes as they have been in Bengal, or by sovereigns as they are being in the Punjab?—(*Mr Fraser*) I should not say that notes have replaced rupees in Bengal. The whole of the vast jute trade in Bengal is practically financed in rupees, and there is very little object in sending notes to Bengal because they do not want them. Then the rice crop in Burma is almost entirely financed by hard cash.

2781 I was not speaking of that, but I noticed that in the figures Mr Toomey gave, Calcutta had a very high percentage of notes?—That refers to Calcutta as a town, and not to the district.

2782 Is that a more desirable tendency than the tendency in the Punjab, or a less desirable one?—I should prefer to see people taking notes to gold or silver, do you not agree? (*Mr Toomey*) Yes.

2783 Sir Shapurji asked you how much liquid gold you thought there ought to be in the Gold Standard Reserve, and you, Mr Toomey, I think, gave 10 millions as the sort of figure you had in your mind, and Mr Fraser thought about 15 millions?—That is so.

2784 Are those figures contingent in any way on the amount earmarked in the Paper Currency Chest?—That figure was given on the present figures of the Gold Standard Reserve.

2785 Was it on the assumption that there were about six millions in the Paper Currency Chest?—Are you talking about the Paper Currency Reserve along with the Gold Standard Reserve just now?

2786 I am asking you whether you made any assumption as to the amount held in London in the Paper Currency Chest when you gave 10 millions as the right figure for the Gold Standard Reserve?—No. We took the Gold Standard Reserve as a separate thing, and said that there ought to be 10 millions out of the present holding in the Gold Standard Reserve.

2787 You think that figure is entirely independent of the amount of gold held elsewhere?—Yes, we do not take other figures into account.

2788 Even if the Secretary of State held 10 millions in liquid gold in the Paper Currency Chest, would you still think that he ought to hold 10 millions in the Gold Standard Reserve?—What we say is that the Gold Standard Reserve amounts to about 22 millions sterling, and out of that there ought to be at least 10 millions sterling held in actual gold, Mr Fraser says 15 millions.

2789 But why?—Because we want to see the Gold Standard Reserve absolutely strong.

2790 I suppose your object would be in order that the Secretary of State should have liquid resources that he could put his hand on, or would you have any other reason? If he has other liquid resources, would not the amount wanted in this particular reserve be less?—(*Mr Fraser*) The point in connection with the gold in the Paper Currency Reserve is this—that it is not earmarked, and that it would have a tendency, as it has at the present moment, to dribble quietly away.

2791 I am speaking of the gold in the Paper Currency Chest in London?—If you lay down a rule that you are going to have a certain amount of gold in the Paper Currency Chest in London, you could, of course, take that into consideration in gauging the amount you would have in your Gold Standard Reserve, and to that extent you could bring the two together.

2792 When you gave 15 millions as the right figure for the Gold Standard Reserve, were you assuming that about the present amount, namely, six millions, would be held in London in the Paper Currency Chest?—Yes.

2793 If that was increased, then you would not want so much in the Gold Standard Reserve?—(*Mr Toomey*) The amount in the Paper Currency Reserve in London is a fluctuating quantity (*Mr Fraser*) It is merely the first line of defence in the matter of exchange as it stands at present, but it is only the first line of defence really as long as it remains in London, because whenever it is in India it has a tendency to dribble away, and it is usually not there when it is wanted.

2794 If the policy was followed of having a good deal of gold in that reserve in London, would that influence your opinion of the amount that ought to be held in liquid form or in the most liquid form in the Gold Standard Reserve?—To some extent, yes. You can never have a large amount here because, as Sir James Begbie brought out, if you have an excess amount of gold here against your note issue in India, then you run the danger that you cannot redeem your notes, because you have your reserve in London, while your liability is in India. Therefore, the amount at which you can place your gold in London against your notes must always be limited in my opinion.

2795 But it might be somewhat larger than it is now?—It might be, but that is a point which would have to be gone into very carefully, and I should think the Government of India's Currency Note Department would be very well able to form an accurate opinion as to how much could be done with safety.

2796 If it were found to be safe to have a certain amount of gold in London, would you say then that that amount ought to be taken into account in fixing the amount of gold in the Gold Standard

\* See Appendix XVIII, pp. 541-2

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued

Reserve?—You should certainly make allowances for it. As soon as it began to disappear, then it would be about time to begin selling your securities, I should think.

2797 In the course of your evidence you have suggested that the Government of India should lend money in India to the Presidency banks?—(Mr Toomey) Yes.

2798 In 1900, when there was a suggestion of that, the exchange banks put in a claim to have a certain share of that money?—They did.

2799 But you do not endorse that?—(Mr Fraser) We do not endorse it. (Mr Toomey) We say the money should be lent to the Presidency banks only. If we want money we should apply to the Presidency banks, and they could make then 1 per cent or whatever it was out of it. (Mr Fraser) We have no grievance against the Presidency banks as lenders, we have always found them reasonable. I speak from my own experience. (Mr Toomey) I say the same thing.

2800 I only wanted to get that point plain, that you did mean us to infer from your answer that the exchange banks were making no claim to have money lent to them in India direct?—No, they make no such claim. (Mr Fraser) I might say that the manager of one of the foreign banks in London, in writing a personal note to myself on our evidence as detailed in our memorandum, said that he thought the Secretary of State's approved list might be enlarged so as to bring some of the foreign banks into it, provided the foreign banks could put down the security asked for. I merely thought it right to mention that.

2801 That was referring to the approved list for loans in London?—For loans in London only.

2802 (Lord Faber) You have told us, I think, that it is not always easy to change gold into rupees?—(Mr Toomey) I gave you one instance of that at Delhi.

2803 Can you always do the converse—change rupees into gold?—There is no obligation on the part of the Government of India to give gold out in exchange for rupees. At present the people of the country can tender rupees and get gold, but I do not think it would be advisable for the Government of India to enter into any obligation of that character, you would get on to a gold currency at once.

2804 With regard to exchange, am I right in thinking that if the balance of trade is in favour of India then England must pay that balance by buying Government bills or by exporting gold?—Practically.

2805 Is the balance of trade generally in favour of India as against the world?—Yes.

2806 India has a credit account?—It is generally in favour of India, except at such times as when we have a famine.

2807 Like England India is a creditor country and not a debtor country?—It is a creditor country.

2808 You will agree with me, I think, under those circumstances in thinking that India will not want as much gold, being a creditor country, as it would if it was a debtor country, because the ultimate balance of foreign trade has to be settled in gold?—That is so. If India was not so successful she would take less in the form of remittances.

2809 (Mr Keynes) I come now to the question of the proposal for a State bank. You stated in your evidence that the establishment of such a bank would result in a banking monopoly. Do you mean by that that the exchange banks would be almost driven out of existence?—They would.

2810 Would your objections be met to any appreciable extent if the State bank were precluded from accepting deposits in London—outside India?—(Mr Fraser) That would not help. (Mr Toomey) No, that would not help the situation at all. (Mr Fraser) I do not think the central bank would ever come here for deposits. Our deposits in London are not such an all important item in our business, and I do not think they would come here and compete.

2811 Am I to understand then that the exchange banks do not regard it as an important part of their business to attract funds in London and use them in India for financing trade?—(Mr Toomey) We take

deposits in London, and we certainly look upon that as an important factor in our business.

2812 That part of your business would be left untouched?—Yes, but it is not such a very large item. (Mr Fraser) The question, of course, is a central bank with power to borrow in London. The assumption is that they would either offer the same rate as we do or a better rate, and the chances are that they would offer a better rate than the exchange banks in all probability, having regard to the fact that they have the backing of the Government.

2813 If the State bank were precluded from attracting deposits outside India would that remove your objection?—(Mr Toomey) No, not at all. (Mr Fraser) Certainly not.

2814 Your reason for this answer is that that part of your business, namely, attracting funds in London for financing Indian trade, is not an important part of your business, is that it?—(Mr Toomey) We say that if the State bank had a London office and did exchange business we would be driven off the field.

2815 I understand you to say that, and I am trying to get at your reasons for saying it. I have pointed out one part of your business which would be unaffected, and I understand your answer to be that that is not an important part?—The London deposits are not so very important.

2816 (Chairman) In speaking of London deposits, do you mean English money or United Kingdom money?—Yes.

2817 (Mr Keynes) You would, therefore, lay no stress upon the claim which has sometimes been made by the exchange banks that they play a most important part in financing Indian trade by attracting funds in London for that purpose?—We do not make a point of that.

2818 Suppose that the State bank were limited in its dealings in exchange to remitting about the amount the Secretary of State required, say, 25 millions a year, would that modify your objections?—It would not modify our objections in the slightest degree. If they were allowed to operate in exchange at all, the results to the exchange banks' business would be very serious.

2819 If they remitted merely the balance of trade, that would only be a fraction of the total trade—shall we say one-fifth?—If they were quoting rates of exchange, they would be able to quote much better rates than exchange banks could.

2820 Why should they wish to do so? They would probably wish to remit money to England at a favourable rate to themselves as they could?—If they were to enter the exchange market it would be practically all up with our business.

2821 I do not understand why you assume that they would force the rate of exchange down?—They would have to quote better rates than the exchange banks, and we would have to sit out.

2822 Would they affect you more than the establishment of a new exchange bank, which attracted, say, one-fifth of the business?—We do not object to other banks starting, if they have got to start on the same footing as ourselves.

2823 Would you be wiped out by a bank which was restricted to doing no more than one-fifth of the business?—One-fifth of what business?

2824 One-fifth of the remittance business?—If a new bank were to start in the same way as we have had to start, they could only quote about the same rates as we do, and they could not cut under our rates, but a State bank could do business with no profit at all. (Mr Fraser) We have a very good illustration of that in the Reichsbank in Germany. When the Reichsbank wants to influence exchange it is not a matter of profit or loss, they operate, and the other banks stand still and look on.

2825 That is, when they wish to attract gold?—It would be the same thing with a State bank in India. When the Secretary of State wanted remittances from the Government of India, the State Bank would go on remitting to him, and we should not be able to enter the market and buy because it would not be a question of profit with the State bank.

26 June 1913 ]

Mr J. A. TOOMEY and Mr T. FRASER

[Continued

2826 At present the Secretary of State stands out for as good a rate as he can get, does he not?—We do not admit that. He takes the market rate.

2827 He does not undercut the market rate, he does not run the market?—Certainly not.

2828 Why should a State bank act very differently and have a very different effect on the market, from the Secretary of State, supposing it were remitting to the same amount?—The central bank would have to operate in India, and they would have to undercut and reduce rates until, we argue, there would be no profit left in exchange and we would have to go out, because there would be nothing left for us. You can only work an exchange business to make a small profit—the profit is small, and it is the turnover that makes the money. If that profit disappears, and you have not got anything to work for, you would naturally go.

2829 The State bank would have to offer a rate which would enable it to get 25 millions' worth of bill in the course of the year?—Yes.

2830 For getting those bills it would want as high a rate as it could get?—(Mr Toomey) They would not bother about any particular profit. (Mr Fraser) They are working with funds that cost them nothing to start with.

2831 Your view is that the State bank would not work for a profit and so would run your business?—Would run our business by undercutting.

2832 I think I understand your opinion now. The arguments against the State bank given in your memorandum do not touch, I think, all the points which might be raised in favour of a State bank by an advocate of such an institution, and I want to put to you one or two of the other arguments which might be used in favour of a State bank, and ask you what your feeling would be in regard to those arguments. The first point is in regard to Government balances. This year, during the earlier part of the year, the Government had in its reserve treasuries something like seven millions apart from large sums in other treasuries, it has been held that while it might lend a small part of that to the Presidency banks it could not lend to private institutions any very large part of the seven millions?—(Mr Toomey) They would not be called upon to lend any very large sums, the securities do not exist.

2833 The point is that they could only lend to private institutions on security?—Quite so.

2834 The private institutions could not offer much security of a suitable amount, and therefore there is a strict limit to the amount that they could lend to the private institutions?—Yes.

2835 If there were a State bank those difficulties would be somewhat removed, and instead of having the independent Treasury system, they could then pass not the whole but a very much larger part of their balances into the hands of the bank?—(Mr Fraser) To be lent on what—on general business?

2836 To be lent on general business?—Without restriction?

2837 I do not say without restriction?—I should be sorry to think that the Government of India's balances would be lent out without very drastic restriction.

2838 I am putting this point, that in nearly all the countries of the world the Government has a banker?—That is so.

2839 That is to say, there is a State banker with which it leaves nearly all its money, in India that is not possible because there is no State bank?—We of course argue that geographically the country is not suited to a State bank, and it never can have one.

2840 (Sir Robert Chalmers.) In the Presidency banks may it not be said to have State banks already?—(Mr Toomey) We say that India has got practically three State banks already.

2841 (Mr Keynes.) But being private institutions, they cannot receive more than a small amount of Government money. Do you think it would be possible to place an advantage in a State bank that more Government money could be placed with it?—Do you mean it would be a greater advantage if the Government

placed larger sums with the existing Presidency banks?

2842 It would be an advantage if they could, but they cannot, because these Presidency banks are private institutions?—(Mr Fraser) We suggest that one way of getting over the difficulty is to lend the Government funds beyond the agreed-upon amounts to the Presidency banks against security.

2843 But, on the other hand, I gather from you that the amount of such security forthcoming is small?—The Presidency banks can always put down, I should think, as much as they want in that respect.

2844 Do you think, therefore, that large sums could be lent against security to the Presidency banks?—I should think the position of the Presidency banks is such that they could always borrow on security all they could reasonably require.

2845 Five millions?—I should not like to say what the actual figure was, but I should not think India is ever likely to want five millions. We do not admit that there is a need for further banking facilities in India. As a matter of fact, for a large portion of the year we cannot use our money there, at the present moment the Bank of Bengal rate is 4 per cent and we cannot get 2 per cent in Calcutta for call money, or even 1½ per cent there.

2846 Do you think it would be an advantage if in the busy season more money was available in India?—I think it would be, but then it would not be such a very large amount that would be required. I should think that two or three crores more on the Indian money market would mean the difference between poverty and the other thing. The very suggestion that you were going to lend two or three crores would bring out the Shroff's money and other money, and that would relieve the stringency.

2847 Do you think that if two or three crores of rupees were lent the high bank rate in the busy season would disappear?—I should think so. (Mr Toomey) Two or three crores will go a long way towards making the market easy.

2848 Your estimate seems optimistic?—(Mr Fraser) We speak from practical experience. We cannot employ our money now in India at a profit, it is simply lying idle. You will understand that, when you consider that the mills in Bombay can get money all the year round, and have got it, for 4½ per cent per annum.

2849 Would they not be prepared to do that here for the whole year round?—No, the Manchester mills cannot get it on the same security.

2850 I was not, however, speaking of all the year, I was speaking of three months, the busy season?—Money at that time runs up and a very large number of merchants make special terms, so the rate is not regulated by the bank rate.

2851 Am I to understand that a sum of two millions sterling lent during the busy season would be sufficient to prevent the Indian bank rate from rising to any high level?—It is difficult to state definitely that it would, but I should think, judging by the experience of the past, that two to three crores of rupees would make a great deal of difference. The past season has been an exceptional one, and there has been a lock-up of money in Bombay in opium, and a very large lock-up. (Mr Toomey) And in cotton too. (Mr Fraser) And in cotton, because cotton did not go forward owing to difficulties on the Continent. These two factors have very largely contributed to the present position. There is also a considerable amount looked up at the moment in yarn. Therefore, although there has been rather a high rate this year, which was more stringent in Bombay than in Calcutta, there is no reason to suppose that is going to occur next season. The tendency before that was for money in India to come down steadily in value, and I think Sir Shapurji will confirm my view that money will tend to become cheaper year by year in India.

2852 (Chalmers.) But it runs up to 7 per cent or 8 per cent in the busy season?—(Mr Toomey) It has not been above 8 per cent for the last five years.

2853 When you say three crores would make a considerable difference—I do not want to make you

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued

2853 speak with more confidence than you feel—do you mean it would probably keep the rate from going above 6 per cent?—(Mr Fraser) I should hardly like to say that, but I think it would mean all the difference between stringency and the other thing I think a 6 per cent rate in India is not at all burdensome to anybody

2854 (Mr Keynes) Do I gather you would feel there would be no advantage in a State bank if it had the effect of lowering the rate of interest in India below 6 per cent in the busy season?—(Mr Toomey) I think there are very few complaints in India as to a bank rate of 7 or 8 per cent. At that time the merchants are all making money and they do not complain of these rates

2855 Would you say a 7 or 8 per cent bank rate would help you?—It does not hurt anybody

2856 It does not hurt anybody?—Not for the two or three months (Mr Fraser) If you make money very cheap the native hangs on to his produce and speculates on his produce, and I do not think the merchant or exporter would thank you very much for that

2857 The arguments which I suggest to prove that the existence of a State bank might have the effect of lowering the bank rate do not impress you very much because you do not regard it as an object to reduce the bank rate?—(Mr Toomey) We do not like to see money too tight, of course, but we do not look upon a bank rate of 7 per cent as out of the way in the busy season (Mr Fraser) One would not object if the bank rate never went over 6

2858 I go now to a point connected with this, but rather different. In the past there have often been banking crises in India, but not within the last ten years, I think?—(Mr Toomey) Was there any banking crisis ten years ago?

2859 There has not been a crisis for at least ten years or more?—Not for a good many years

2860 Within the last ten years there has been an extraordinary growth of deposit banking in India?—Yes, and the resources of the exchange banks have steadily grown

2861 The figures published in the official statistics are that the Indian deposits of the exchange banks in 1901 were 7,900,000l and in 1910 16,200,000l?—There has been a steady growth of deposits

2862 Their cash resources in that same period increased from 2,200,000l to 2,900,000l?—Those figures do not explain everything

2863 I should be much obliged if you would amplify them?—We always have a lot of money on the way out in the shape of Council bills (Mr Fraser) And sovereigns too (Mr Toomey) Sovereigns from Australia, London, and so forth (Mr Fraser) I might say that in the figures we recently gave to the Government of India, speaking for the bank I represent, we did not include three quarters of a million sovereigns arriving within a week of the figures being published, which we, to a certain extent, of course, regard as cash. These are largely imported against our purchases of exchange, and we probably, in anticipation, have used up some of our local cash resources to meet our exchange commitments, and then the sovereigns come in and fill up the cash

2864 Do you mean that on the particular day on which you made up your books you had less resources in India than you have usually?—(Mr Toomey) No (Mr Fraser) At that particular moment we might have almost included these sovereigns as cash

2865 I can understand that you have money coming in, but I suppose you also have money going out in the immediate future? If your books were made up a fortnight later, would they have shown a better result?—Not having the facts before me, I should not like to make a definite statement

(Mr Gillan) Are these figures you are quoting, Mr Keynes, the figures of a particular day or averages?

2866 (Mr Keynes) They are figures I have taken from the statistics of British India, and no statement is made as to the date?—I believe the dates given are 31st December in each year

2867 I do not want to press this point, all I want to call attention to is that the Indian deposits have very greatly increased?—(Mr Toomey) Yes, they have

2868 There is an important class of joint stock banks that have grown up in India, and their deposits have increased even more than those of the exchange banks?—(Mr Fraser) They have increased enormously

2869 Those banks keep very small cash reserves against their deposits?—(Mr Toomey) Very

2870 So that apart from the Presidency banks the deposits in India are perhaps three times what they were ten years ago?—That may be I accept those figures

2871 With no corresponding increase of cash?—(Mr Fraser) I should not like to make a definite statement on that point, not having any figures before me. I admit the enormous growth of these Swadeshi banks, as we call them, and the enormous growth in their deposits. It has been openly stated in some quarters, but I have not verified the facts, that their cash balances are not adequate

2872 What is the relation of these banks to the Presidency banks, do they have sums on deposit with the Presidency banks to any important extent?—(Mr Toomey) I should think not (Mr Fraser) I should think not too

2873 Do they include in their cash sums left with the Presidency banks, or is it all free cash?—I should think the cash at the Presidency banks is taken as cash

2874 Is that an important part?—I could not say

2875 In the case of the exchange banks do they keep any appreciable sum with the Presidency banks?—Yes

2876 Do they include that in their cash?—Yes

2877 The position is, therefore, that to a quite important extent the Presidency banks act as bankers' banks?—That is so

2878 And there is not much free banking money in India outside the Presidency banks?—Not in the busy season

2879 I want to put to you whether you think that the Presidency banks, taking account of this great growth of deposit banking, are really in a strong enough position to act as bankers' banks?—Assuming they get the facilities from the Government that have been suggested, I think so

2880 But under existing conditions?—If you can imagine a banking crisis when everyone was pulling on the Presidency banks, I should say they probably would not be able to meet the requirements of everybody

2881 How do you feel in regard to these figures, in 1910 the total deposits, excluding public deposits, in India were about 55 millions?—What does that include?

2882 That includes the exchange banks, the private deposits with the Presidency banks, and those Indian joint stock banks which have more than five lakhs of paid-up capital and reserve, the deposits were about 55 millions, and the cash in the Presidency banks was 7½ millions?—(Mr Toomey) That is quite an ordinary average working balance

2883 Supposing there were to be a banking crisis in India everybody would go to the Presidency banks for money?—(Mr Fraser) The exchange banks would probably call upon London, I should think, and take Council telegraphic transfers

2884 I wanted to get out that point. The exchange banks would rather rely in the next banking crisis on being able to remit large sums from London?—I do not say we would rely upon it, but if the necessity were forced upon us—(Mr Toomey) We should have to ship sovereigns or take Councils

2885 Suppose you had to ship sovereigns and to do this to a large amount, because your total deposits in India must be now something like 20 millions, do you think you would find it easy to rediscount your bills and to raise money in London?—(Mr Fraser) We could always discount at a rate

2886 If you wanted to take the money out in actual gold, not at an ordinary time but at a moment

26 June 1913 ]

Mr J A. TOOMEY and Mr T FRASER

[Continued

of crisis, do you think it would be easy for you to do that?—(Mr Toomey) I see no difficulty about it (Mr Fraser) You must also assume that in those conditions the Secretary of State has no balances on the other side, and will not sell Council bills

2887 I am taking this alternative first, that you had to send out sovereigns, do you think the exchange bankers would have no difficulty in raising in actual gold a very large sum in sovereigns in London at a time of crisis?—I should think not. If you assume they could not do it, then of course you stop the export of gold. If you are assuming that we cannot get sovereigns, you mean that we are no longer a free market for gold

2888 I assume they could get gold if they had free resources, and you think there would no difficulty in their obtaining free resources?—We are all constituents of the Bank of England, we know the bills the Bank of England takes, and the Bank of England always discounts bills for its customers. There is no reason to suppose they would not stand by us if we wanted accommodation

2889 The other alternative would be that you should buy large sums in telegraphic transfers from the Secretary of State?—That is what we should naturally do assuming he had money on the other side, which he probably would have, because if he could not draw on his Treasury balances he would probably draw on his Currency balances in an emergency

2890 Then you are rather relying upon him to use his Currency balances to relieve India's banking in a crisis?—We are not relying on that, but we are assuming that in these conditions he would have those means of meeting those drafts

2891 Would you feel in a stronger position if the whole business were more centralised—if the Secretary of State's balances and the bankers' balances, instead of being kept in various places and by various authorities, were all kept in a State bank which would be under a certain responsibility to look after a situation of this kind?—(Mr Toomey) I do not think a State bank would look after the situation any better than we can under existing circumstances (Mr Fraser) I should think the Presidency banks worked in conjunction with the Government would be quite as powerful and as good an influence as any State bank

2892 Do you assume that they would have to work in conjunction with the Government?—They always have, and they always would, I think, in the event of a crisis, work in conjunction with the Government. Assuming such a crisis as you are picturing, which has never exactly come about, but assuming such a one ever did—we have not seen it, but of course we admit it might come—the danger is that India is going rather fast in the matter of banking, and new banks are springing up every day. I have only taken out 14 of what you might call the leading Swadeshi banks—the figures are not all for the same date—and they show a capital of 2 crores 41 lakhs paid up, and deposits of 24 crores

2893 The main point I am putting to you is this—that when the last banking crisis came in India, deposit banking was in its infancy there?—(Mr Toomey) There were very few local banks then. (Mr Fraser) That is so—very few

2894 There has been an enormous increase in their number, particularly in the last 10 years?—(Mr Toomey) Yes.

2895 More particularly in the last five years, and the increase is still going on?—(Mr Fraser) Yes.

2896 So you have no experience as to what would happen if there was a banking crisis in a country where large deposits are now being made and which has not forgotten the habit of hoarding?—I should think that if a banking crisis such as that developed there would be a very serious run on some of the banks. The chances are probably that the old-established banks which have stood the storm and have got a reputation would not be run upon. I cannot say that I remember a run upon our own institution

2897 You have a rapid growth of deposit banking, and a good deal of it in banks which have never stood a severe strain?—That is admitted, I think

2898 And which have also no very high proportion of cash reserves?—I should think that some of what you might call the local banks do keep adequate reserves, but there are probably many of them that do not. I would not like to speak about that with absolute certainty. Such banks as the Alliance Bank of Simla, for example, and the Allahabad Bank have always stood very well, and been conducted, I think, on prudent lines, but there are others possibly that have not been

2899 Further, there is no central banking reserve of any sort, such as the State banks of Europe have?—That is so, unless you accept the Presidency banks as occupying that position

2900 And also there is no sort of mechanism whatever for any sort of emergency currency or for any expansion of the note issue?—(Mr Toomey) Only the Gold Note Act

2901 It can only be expanded against rupees or notes?—(Mr Fraser) Against rupees or the deposit of gold. We can put down gold here and get notes issued in India, or rupees

2902 All the Government can do is to exchange one form of currency for another. They cannot increase the amount of currency?—Except by fresh coinage

2903 So that all the usual precautions which are taken by European countries that have deposit banking against a crisis are incompletely existent in India?—You mean in regard to such precautions as expanding the currency in the event of a crisis?

2904 And having a central reserve?—As regards expanding the currency in India, the people want cash, not notes

2905 I am not saying that ought not to be given, but I mean that as that possibility does not at present exist, it is all the more important that the other sorts of precautions should be taken?—The other precaution being to centralise your reserves?

2906 Yes, and having some important authority which looks at the situation as a whole?—We would leave that to the Presidency banks working in conjunction with the Government

2907 You do not think that a State institution, which was in the habit of working in conjunction with the Government, and did not have to fit up some patch work arrangement in a moment of crisis, would be in a better position to deal with a situation of that sort than a State bank?—Has your State bank solely to deal with the crisis when it arises, or is it to have other functions?

2908 It would have other functions, but it would be practically in touch with the Government?—If we had a State bank which we could fall back upon in the event of a crisis, of course we should rather welcome it. But if we are to have a State bank which is going to take over the paper currency and to have a monopoly of Council bills and of all other Government business free of charge we should naturally oppose it.

2909 Might I put it like this, that while you feel a State-aided body with vast powers of that sort might be open to certain objections, still it is true that the banking position in India would be strengthened by such an institution at a time of crisis?—Granted that the bank exists for that purpose and that purpose only, of course it would relieve the strain

2910 Allowing that for other purposes the bank were detrimental, if that were amongst its purposes would it be a good thing?—That is assuming an unpracticable position

2911 I am not saying there are not any disadvantages?—After all, if you did have a central institution, we all learn by experience, and you do not want banks to fall back too much upon any central institution. Each bank, properly speaking, should so conduct its business that so far as it possibly can be it is independent of these outside aids.

2912 But you would not maintain that that was the case in India at present, would you?—As I understand, the banks keep a great part of their free money with the Presidency banks and keep no reserves of

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued

their own to any large amount?—I should not like to say what a number of those up country banks do, because they are established at many points where the Presidency banks do not exist, so probably they do keep considerable balances. It is difficult to speak without actual knowledge, and I can only say that in the Presidency towns I think these banks keep their cash with the Presidency banks.

2913 I should like to know, if you can tell us, a little more about the relations of the exchange banks at present with the Presidency banks. I understand that you keep balances with them much in the way in which English joint stock banks keep balances with the Bank of England, is that so?—Much the same.

2914 Do you also borrow from them to any important extent?—In bygone days we did (Mr Toomey) But not now (Mr Fraser) Not much, anyhow.

2915 Not now?—Very little (Mr Toomey) Occasionally, possibly (Mr Fraser) I think in recent years the exchange banks have not been big borrowers from the Presidency banks.

2916 Apart from the question of competition in exchange, would your relations with a State bank be very different from your present relations with the Presidency banks?—Our present relations with the Presidency banks are most friendly. I should think with a State bank they would probably be the reverse.

2917 Is that a sentiment of yours, or have you definite arguments with which to support it?—I do not see how it could be very well otherwise, when we feel that the advent of a bank with all the privileges that have been suggested would naturally mean almost our extinction.

2918 I put aside for the moment the question of competition in exchange, apart from that, why should your relation to a State bank be unfriendly?—You are leaving out the question of exchange entirely?

2919 Yes?—Then they are there simply to benefit us, and exist to help us when we are in trouble.

2920 They are there to consolidate the existing system?—Then we could hardly regard them as enemies. Under those conditions we would not, I should think, feel they were enemies exactly.

2921 So that the central point of your opposition to the proposal for a State bank arises out of the possibility that they might deal in exchange?—That is one reason. Another reason is that we do not think the country on the whole would in any way benefit by a State bank. We cannot see that India as a country is suited for it. We have already given our reasons (Mr Toomey) We look upon a State bank in India as quite impracticable (Mr Fraser) We consider the existing machinery as it exists in the Presidency banks is ample for the country's needs.

2922 Do you think that for the Government to have a banker and for there to be a central institution is no advantage whatever, quite apart from other disadvantages?—(Mr Toomey) I do not see how it would benefit to do.

2923 Assuming a lower bank rate, is not that a benefit to trade?—I do not think people in India are looking out for lower bank rates (Mr Fraser) You can have such a thing as too low a bank rate, especially in India. When you have a very low bank rate it always encourages speculation, and it would very probably bring about a state of affairs which you would rather wish to avoid.

2924 I will not ask you any further questions with regard to the State bank, but there is one further question I should like to put, which is somewhat connected with this. In a country like India, where there are certain dangers in banking owing to the habits of the people, the possibility of speculation and so forth, it is often important to have as much publicity as possible in the various banks. Would the exchange banks feel any objection to publishing accounts in which their Indian deposits were distinguished from their outside Indian deposits, and in which their Indian cash was distinguished from their outside Indian cash, provided all the banks had to do it?—(Mr Toomey) We should have to consult the other Indian exchange banks before we could very well

answer that question (Mr Fraser) Naturally, no one bank would care to do it unless there was unanimity.

2925 I can quite understand that, but if all the banks did it, would your opinion be favourable?—(Mr Toomey) We should have no objection (Mr Fraser) The bank I represent certainly would not object.

2926 You would agree with me that it is important having regard to the whole banking position in India, that there should be accurate knowledge as to what the deposits in India are?—(Mr Toomey) We would have no objection to show them in a balance sheet if it were the general practice.

2927 I understand that you cannot pledge other banks, but so far as you are concerned yourselves, you do not see any objection to it?—(Mr Fraser) Not if the custom were general (Mr Toomey) If other banks do it, we should raise no objection whatever.

2928 There is one other small point. Mr Fraser's bank, I think, distinguishes between fixed deposits and deposits on current account?—(Mr Fraser) Yes, we do.

2929 Not all banks follow that practice, would there be any objection, do you think, to that practice being generally adopted?—(Mr Toomey) I see none from my point of view.

2930 Your bank does not actually do it?—No (Mr Fraser) The Hong Kong and Shanghai Bank does it too (Mr Toomey) We have no objection to doing so.

2931 You do not see any objection therefore against the banks having to show both how much they have in India on fixed deposit and how much on current account?—I do not see any objection to it myself (Mr Fraser) If it is general, but you would not apply it to the exchange banks alone?

2932 No?—It would be applicable to the exchange banks, to the local banks, and in fact every bank would be put on the same footing?

2933 Yes?—I see no objection under those conditions.

2934 Would you have any objection to the publication of balance sheets from time to time which were average balance sheets, that is to say, which avoided all possibility of window dressing?—We could not do it with the exchange banks. Our business is so involved that we could not possibly give you a weekly or a fortnightly balance, or a monthly balance. It takes us probably a couple of weeks at the end of each half year, or more than that, to prepare our balance sheets. It is a complicated business. Then our branches are scattered all over the East, and so we could not possibly give, as the Presidency banks do, the weekly balances.

2935 My suggestion was meant to refer not to your whole business, but only to the Indian part of it. Would it be possible to publish average balance sheets? I do not mean that you should publish them weekly, but that your six-monthly balance sheets should be average balance sheets for the six months and not balance sheets for a particular day?—I should think that could be done. There is always a danger of too much legislation in banking, which we all deprecate. One does not want to be too much under the Government.

2936 I should like to raise once again a point Sir Shapurji put to you. He asked you whether you would welcome a guarantee by the Secretary of State that he would support exchange and you, Mr Toomey, said "Yes," but you said it, if I may say so, without any enthusiasm, am I right in thinking that you do not attach any great importance to it?—(Mr Toomey) He is practically bound to support exchange within the limits of the gold points—1s 3<sup>1</sup>/<sub>2</sub>d and 1s 4<sup>1</sup>/<sub>2</sub>d.

2937 Then you do not feel it would be a very significant thing for him to make an explicit declaration?—I do not think it would make very much difference to the world at large.

2938 You regard him as being already bound?—Yes, practically bound.

2939 So that a formal statement by him would not influence you very much?—No (Mr Fraser) It certainly would not do any harm, but I do not see how

26 June 1913]

Mr J. A. TOOMEY and Mr T. FRASER

[Continued]

the Government of India can possibly let the exchange fall without rinning the country and everybody in it.

2940 (*Sir Robert Chalmers*) Is there any instance of any Government making a declaration of that kind?—I do not think there is any on record. The Government acted very weakly in our opinion in 1907-8, when they very nearly ruined the country by not promptly using their reserves. It was the result of a meeting of the exchange banks. I think, in London with the Indian Council that brought about the immediate use of the reserve.

2941 (*Mr Keynes*) You think there is no risk of a repetition of that, and that that risk would be avoided by a definite declaration?—(*Mr Toomey*) I think the Government of India now know exactly where they are, and, in the event of exchange falling, they would promptly give out gold or a draft on London, because they know what they had to do in 1907-8.

2942 From the Secretary of State's point of view you regard him as so much bound already that he would not be adding to his obligations by making an explicit statement?—No.

2943 (*Mr Gladstone*) I think you said money should be lent in India to the Presidency banks, in which case the amount of gilt-edged securities available is limited?—(*Mr Fraser*) Yes.

2944 Would not the exchange banks be willing to increase their holdings of gilt-edged securities, and so increase the total the Government might lend to relieve any exceptional stringency of the money market?—(*Mr Toomey*) Of course that could be done, but we rather feel that the Presidency banks, as a sort of bankers' banks, in a sense, would be better qualified to deal with that. Then of course if the Government deals on a basis of an approved list such as you have in London, you at once bring into existence the necessity for employing brokers, and I do not think the Government offices in India are equipped for that sort of thing, whereas if they deal direct with the Presidency banks they know exactly where they stand and the terms on which the money is lent. Otherwise, you might have to bring in exactly the same machinery as is necessary in London for the India Council.

2945 Hardly, because I am only proposing to approach the exchange banks, and they are so limited in number that it would only mean four or five?—The amount that the banks would gain in the matter of interest would be, in my opinion, so small that I think, broadly speaking, we would prefer to leave things as they are at present.

2946 You have expressed the opinion, I think, that an advance of three crores might be enough to diminish any sudden stringency, but that might not be enough—it might require five crores?—It might, that was only a figure.

2947 If the exchange banks between them hold securities to that extent, it would make the relieving of the market pretty certain?—Yes, assuming the exchange banks have these securities, and can always take them to the Presidency banks and get the accommodation they want, which they could if the Government feed the Presidency banks.

2948 As to the question of hoarding, I think Mr Toomey said the hoarding is on the increase, owing to the greater prosperity of the country, is there not nowadays more disposition to invest in high-class securities at interest, and will not that diminish the custom of hoarding?—(*Mr Fraser*) I think the people of India are undoubtedly slowly and gradually investing more in securities than they used to do, as you can see from the mere fact that securities in Bombay, taking Government paper or Port trust bonds, all stand several points higher in India than they stand in London, which shows that there is a market, a large portion of which is undoubtedly native.

2949 Would you think that investments of this nature are likely to go on?—I think myself that these investments are as a rule made by people who are well educated and can form a judgment of their own, whereas the hoarding that goes on in India in my opinion is largely done by the masses, what you might call the agricultural portion of the people. It is done in small bits, but it is the aggregate that tota up when

you deal with a vast population. If you can by any means educate them up to the point at which they will see the folly of this, then I think the trouble will disappear to a large extent.

2950 (*Chairman*) Do these small people hoard gold?—Probably they start with a rupee, and the chances are when they have got 15 rupees they exchange them for a sovereign, very frequently (*Mr Toomey*) Now the workers in the jute mills and other similar occupations will have their little bits of ornaments in gold, whereas formerly they had their ornaments in silver (*Mr Fraser*) I may mention that one of our agents recently told me that in the Amritsar Fair some of the well to do agriculturists who were present at the fair had strings of sovereigns round their necks, and that that was quite a common thing to see, whereas in bygone days they were content with strings of rupees.

2951 Nowadays they would be penalised if they hoarded any rupees, would they not?—If they realised the difference, which I suppose most of them do, but I fancy some of the very poorest type really do not quite understand it.

2952 (*Mr Gladstone*) Would you favour a larger proportion of the Government railway loans being issued in India, owing to this increase in the demand for investments?—Speaking personally, I should say yes. I think if the Government did more in the way of encouraging private enterprise to build railways in India than they have in the past, they could get more money, especially if they went in for a system of a guaranteed minimum and a share of the profits beyond a certain amount being given partly to the Government and partly to the railways, in other words, more encouragement should be given to private enterprise.

2953 They have given more encouragement of late years, but owing to the rates of interest those inducements are hardly sufficient now?—I think a good deal more might be done in India than is done now.

2954 Do you think a 4 per cent guaranteed railway bond would go down well in India?—That might seriously enter into competition with the 3½ per cent rupee paper if it has got the direct guarantee of the Government of India. It is on record, I believe, that the exchange banks, in conjunction with some of the Presidency Banks, offered an Indian railway company last year three crores of rupees for railway purposes on very reasonable terms—much better terms than have since been accepted by another company—but that offer was not accepted.

2955 One question as to the up-country treasuries. Have you considered whether the very large number that have been established are necessary?—Personally, I cannot speak on that point, as I have had no up-country experience (*Mr Toomey*) I have not had any either.

2956 (*Sir Ernest Cable*) I think you told the Chairman this morning about the Gold Standard Reserve, that you would prefer not to mention any limit?—Yes.

2957 You cannot assist the Commission, I suppose, by suggesting a logical principle on which we could arrive at some figure?—I do not think the time has arrived yet. I think the fund should be a good deal larger than it is at present before you fix the amount to be held in liquid gold.

2958 I should like to get an answer to this question from you, because it has been mentioned in the Press and elsewhere, I believe. It is said that the Secretary of State need never sell his bills below 1s 4d, that he has only got to sit tight and he will obtain 1s 4d whenever he likes, what is your view about that?—I think that would not be desirable at all. If he held out for 1s 4d, in the slack time of the year he might have to wait for a considerable time, whereas under the present system he reduces the amount when exchange is dull, and he can always feel the market. (*Mr Fraser*) He judges the market right through. (*Mr Toomey*) He reduces the weekly amount right through until he can find a market. By keeping the amount at 20 lakhs and so on, he can

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued]

feel the pulse and eventually sell more as exchange goes up

2959 You had a discussion with Sir Shapurji a little while ago about the London and Indian money markets, do you suggest that the Indian money market is at all dependent upon the London money market?—In what way do you mean?

2960 Do the rates of discount vary one with the other?—No, not exactly

2961 They are independent?—They are independent of each other (Mr Fraser) They are mutually bound up as far as buying rates are concerned (Mr Toomey) But not as regards money It does not follow because the Bank of England rate may be high that the Indian rate will be high

2962 (Mr Gladstone) There would be a greater difference between a demand rate, of course, than between a four months' or six months' rate?—Yes

2963 (Sir Ernest Cable) You said this morning that it would be a desirable thing to increase the elasticity of the note currency in India, do you think that it is a desirable thing to get out as many notes as possible?—The idea would be to encourage the note issue (Mr Fraser) Do you mean to increase the circulation and to get the people to take notes where they now take gold or silver?

2964 Yes?—We think that everything that can possibly be done to popularise the note issue is a step in the right direction, because the moment the people accept notes as currency, as they do in all highly civilised and developed countries, then their troubles disappear, and you get the condition of a note circulation and a note currency well backed

2965 Do you think that the Government is as efficient in that respect as a central bank would be?—(Mr Toomey) More efficient

2966 Why would you suggest that? Why is it more efficient?—They are doing everything they possibly can to extend the note issue, and they have had a vast experience in running the department. What has added largely to the increase in the note issue of recent years has been the universalising of the smaller notes

2967 Would you say that the currency note in India is over protected?—No, I would not (Mr Fraser) Do you mean that there is too much cash and too little investment?

2968 Yes?—No I think that the position is carefully reviewed from time to time by the Government of India. They always consult, I think, the various authorities, the Chambers of Commerce, and the Presidency banks, before they increase the amount of the investments, and I think the amount at present is reasonable, it is 14 crores

2969 I was going to suggest that a central bank might develop the use of currency notes perhaps by re discounting hundis, that is, native bills, which the Government cannot do?—(Mr Toomey) It would be rather a risky thing to do for a State bank to discount hundis (Mr Fraser) It is a highly specialised business

2970 You said this morning, in respect of your up-country branches, you do not come into competition with the Presidency banks?—(Mr Toomey) Not to any extent

2971 Would you say—it is a point which is bound to arise—the same with regard to your operations in the Presidency towns?—We may do the same class of business as the Presidency banks, but there is room for all in these Presidency towns

2972 I know that argument, and, of course, that would be the argument that would be used against you with regard to the exchange market probably. That is just the point I wanted to know, whether you are competing or not?—We have a local business as well as our exchange business, we have to run one with the other

2973 You cannot suggest any means by which those hoards of gold and silver, which Mr Fraser has just been talking about, in the ryot class should be brought out?—No, there is no way we can suggest

2974 No sort of inducement would appeal to the agriculturist, I suppose?—No (Mr Fraser), We

have touched very briefly on the question of co operative credit, on which neither of us, I think, can speak with very much authority, except that the system, as we know it theoretically, rather appeals to us I think in course of time, if the Government of India pushed that, they might by that means get the native to bring out his money. It seems to be the only thing so far that has had any really beneficial results

2975 Knowing the native as we do, it is quite possible that, having a hoard in his village, he may still be borrowing at 40 per cent or 50 per cent from his bunna?—(Mr Toomey) He can afford to keep these hoards, and will not part with them

2976 (Sir Robert Chalmers) If I remember rightly, you said, as one would expect, that the interests of the exchange banks were bound up with the general interests of India?—Quite so

2977 And that the prosperity of India meant generally the prosperity of the exchange banks?—Yes, it means prosperity to us

2978 You are looking at this question generally therefore, on the basis of the prosperity of India?—Quite so

2979 I think a criticism has been advanced in some quarters as to the action of the Secretary of State in keeping his Gold Standard Reserve in this country, it has been urged, I think, that the Reserve is kept in this country in the interests not of India but of the London money market?—I have seen that advanced

2980 What do you say on that?—I say that London is the only market where the Gold Standard Reserve should be kept

2981 In the interests of—?—In the interests of India

2982 Because—?—Because if it ever has to be drawn upon the money will be required here

2983 It is here where it is wanted?—Yes, and it could be of no use in India

2984 It is kept here, therefore, in the interests of India?—Yes

2985 Do you attach any importance to the criticism that the money is kept here in the interests of the London money market?—No, I think that is entirely wrong

2986 Coming now to a detail, Sir Shapurji rather pressed you as to having 100 per cent of the Gold Standard Reserve in gold, as bankers you are not without experience as to what you would do with money, it is not your practice to keep 100 per cent in gold, is it?—No

2987 What do you do in practice? Do you not have in your front line, cash, then money at call, then short dated securities, and then investments?—Yes

2988 Do you think that would be the sort of line on which your experience would suggest that the Government of India should deal with it?—Quite so

2989 It is a mere question of expediency and of feeling the pulse of trade as to the proportion you would keep in gold?—Quite so

2990 You would not dream of keeping 100 per cent in gold?—I would not dream of keeping it all in gold, I think that would be too wasteful and extravagant

2991 (Mr Gillan) I am not quite clear on this question of making loans in India what your attitude is. You have said in your memorandum (page 537 paragraph 12) that you would favour Government lending money out of the balances in India, but at the same time I think you said, in answer to the Chairman, that the amounts which have been given were enough in recent years, and that one does not hear much complaint of a 7 per cent or 8 per cent rate?—Yes We know there has been a certain amount of agitation in India as to the Secretary of State lending money here, and not lending it in India, and though we see no reason why the Indian Government should not lend its surplus balances for the benefit of trade, we do not think any very large amount of money would be required. We suggest that the money should only be lent to the Presidency banks, and that any people wanting money on Government paper, Port trust bonds, and the like, should then go to the Presidency banks

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued

2992 What I was not clear about was the importance you attach to this measure?—I do not attach very much importance to it

2993 About those very interesting currency figures\* which you gave us, you got an average, as I understand, which is to be weighted, but at present it looks something like 62 per cent in notes, 24 per cent in silver, and 14 per cent in gold?—That is so

2994 One should not be misled by percentages which are taken only from headquarter centres?—But these are large branches and small branches mixed up together

2995 You would not say that, as a matter of fact, taking the total circulation of currency in India, anything like two-thirds of it was in notes, would you?—No, I should not

2996 Mr Fraser, for instance, said the whole of the jute trade is financed with actual rupees, and practically the whole of the rice trade in Burma is financed with actual rupees?—Mostly in rupees (Mr Fraser) That is so far as the actual buying in the districts is concerned.

2997 That is what I meant You do not mean to imply that these statistics which you have got from your centres in any way reflect the composition of the total currency of India?—(Mr Toomey) No (Mr Fraser) They are certainly not meant to do so

2998 About what you said with reference to the gold mint, there is only one point I wish to put to you What one is trying to get is currency, is it not, and that in the main is silver currency, namely, rupees?—(Mr Toomey) Yes, the main currency of India is silver

2999 If you have got a time of bad harvests and so on, the currency for the time being is redundant?—Yes

3000 But suppose you have a prosperous season and there is a great demand for currency, then your exchange banks are bringing money into India from wherever you can get it, by Councils, or sovereigns from Australia?—In a prosperous time, yes

3001 From wherever it happens that that method of bringing money is cheapest?—Yes

3002 Might it not happen that the cheapest method of getting gold in order to get rupees was coming the bullion in India itself?—No We could not get at that, that would be no use to us We should have to remit out

3003 If you had a mint in Bombay?—?—We have a mint in Bombay

3004 If you take gold to the mint and get it coined into sovereigns, you could then take those gold coins to the Currency Office and get rupees?—(Mr Fraser) I do not follow that Are you assuming that we would import gold bullion, or that we would get the gold bullion that is hoarded by the people? Do you assume that the banks would import gold bullion and tender it to the mint?

3005 Possibly?—(Mr Toomey) And are you speaking of an adverse season?

3006 No, I am speaking of a good season?—(Mr Fraser) Why should we take gold bullion to the mint? If we did so, there would be a great delay If you take gold bullion to the mint here, you may have to wait a week, a fortnight, or a month, it might be six months possibly

3007 Then that might not on occasion be the cheaper method?—I should think as a rule it would not be the cheaper method, I should think as a rule it would not pay

3008 But it might occasionally?—It would be very exceptional, for instance, if by any chance, owing to the rates being favourable in Africa and various other conditions being favourable, you might possibly be able to divert South African mining gold to Bombay Many years ago when I was in Calcutta, I diverted a large lot of gold from Japan to Bombay, because in those days the Government took gold yen, but they have since found that it did not pay them, and they will only take sovereigns and half-sovereigns now

\* See question 2763, *ib. supra*, and Appendix XVIII, pp. 541-2

(Mr Toomey) In the ordinary way the only gold which the Indian mint could look forward to getting is the local gold produced in the country

3009 At the mines?—Yes

3010 What about the other bullion that is in the country, could you not get some of that?—No, the people would retain their gold and they would not send it to the mint. They can afford to keep their little bits of gold

3011 Is there not a lot always passing through the hands of these dealers in bullion and so on?—No We sell a large amount of bar gold in the course of the year, as we ship it every week These bars are hoarded, and they would remain hoarded The people would not take those bars to the mint There would be nothing to be gained by it They buy this bar gold, they do not want sovereigns, and they retain the bar gold

3012 What are all these dealers in bullion doing with it?—They will cut a 10 oz bar into half a dozen pieces, and they will sell that gold to the small people in these little pieces Those pieces are made into ornaments That gold would not go to the Indian mint

3013 Then it is not your opinion that in a favourable season there would be any amount of gold coming out that would be available for coinage in India?—No (Mr Fraser) Our experience is the reverse—that in a favourable season gold disappears, because the people are prosperous and are able to hoard more

3014 (Sir Robert Chalmers) Famine might bring it out?—It might, it has in the past

3015 (Mr Gillan) About the reserve, you say in your memorandum that you are not in favour of the retention of the silver branch, I just want to put in two reasons that were given us by Mr Abrahams for the retention of that branch He said for one thing it operates as an extra reserve against the necessity of coinage?—(Mr Toomey) I can understand that, in fact, it is an emergency reserve

3016 It is an emergency reserve, he said Secondly, he said, it is a useful method of obtaining transfers between England and India in the case in which the Treasury balances are insufficient, because, he said, the next method of making transfers in that case would naturally be the Currency Reserve, but that would have the effect of earmarking gold in England, and it might so happen that the market conditions were against that sort of operation I want to know what you think of those two reasons?—One is that it is acting as an emergency reserve?

3017 Yes?—You might have a certain amount of silver as an emergency reserve, but we say it ought not to be kept in the Gold Standard Reserve The Gold Standard Reserve should be in gold or gold securities If you want a reserve keep it somewhere, but do not keep it there. (Mr Fraser) It simply means that having these six crores in the Gold Standard Reserve in coined rupees, you have so much less in the currency reserve, and we argue that the proper place for the rupee is the Currency Notes Department and not the Gold Standard Reserve.

3018 How could you, as a matter of fact, decrease the possibility of holding gold in the currency reserve?—It does not matter much from that point of view When you are estimating your requirements, I assume the Government of India takes into account that they have so many rupees in this extra fund What is the object, then, of having them in that fund?—They might just as well be in the Paper Currency Department.

3019 Would not the amount of gold in the currency reserve be proportionately decreased if you had to hold six crores more of rupees in the currency reserve?—Not exactly, but take the two together At the present moment there are 17 crores in the currency reserve and six in the Gold Standard Reserve Do you want the six or do you not, if you do not want them, then 17 crores is enough.

3020 The arrangement is that we should start the busy season with 18 crores in the currency reserve and six crores extra in the Gold Standard Reserve?—Then start the season with 24 crores, and there is an end of it.

26 June 1913]

Mr J A TOOMEY and Mr T FRASER

[Continued]

3021 In the currency reserve?—Yes  
 3022 Is the amount of gold that you can hold in the currency reserve not reduced—that is what I am asking?—(Mr Toomey) You would have to reduce it (Mr Fraser) If you consider you require as much as 24 crores of rupees to start the busy season with

3023 You do not actually gain anything in gold, taking the two reserves together, do you?—(Mr Toomey) No (Mr Fraser) The gold in the Paper Currency Reserve is not earmarked, and, as I have said before, it has a tendency to slip away when it is wanted, but gold in the Gold Standard Reserve cannot slip away—it is there

3024 That I quite understand, and I have only one more point about that. The idea when the arrangements were last made about this Indian branch was that we should start the busy season with this distribution of the actual reserve, and that six crores of rupees in the Gold Standard Reserve during the busy season should be allowed to run out and be replaced by gold taken from the currency reserve, so that nominally by the end of the busy season those six crores might be converted into gold?—It would be a favourable opportunity to transfer it then to the Gold Standard Reserve

3025 What I put to you is that the presence of silver in the Gold Standard Reserve under that arrangement was confined to the busy season, and the probability is that by the time the slack season arrives, which is the time that you require gold, you have the gold there?—(Mr Toomey) But that six crores would stand in the Gold Standard Reserve for years

3026 I was speaking of an arrangement that was made recently with regard to this, I do not know whether that arrangement would in any way modify your objection to the system?—(Mr Fraser) I think not, because we feel that the Gold Standard Reserve should be in gold, and so held that it cannot possibly disappear as it would or might in India

3027 About the extent of the reserve, there is only one question I wish to ask. I think you said, Mr Toomey that the famine in 1907-8 was a small one?—(Mr Toomey) Yes

3028 On what grounds did you say that?—I should say rather that the requirements in connection with exchange homewards were comparatively small

3029 How do you judge of that?—Do you not speak of the famine of 1907-8 as comparatively small?

3030 I do not think that was the view that was taken by the Government of India, and that is why I am more particularly asking you about it. There was a complete failure of the rains in India and the area of the famine was very extensive, I think it covered the Punjab, the United Provinces, and the Central Provinces?—I made no point of it

3031 It is rather important, because this period has been given to us by Mr Abrahams as a crucial example of what we may require?—Of what our requirements might be in the way of gold?

3032 Yes, and that we should be guided by the experience of that season?—I think the Indian Government lost about eight millions in that period in the way of gold

3033 (Sir James Begbie) Out of the Gold Standard Reserve?—(Mr Fraser) They lost a great deal more in the way of actual gold in the country

3034 (Mr Keynes) 17 or 18 millions altogether?—(Mr Toomey) You cannot tell possibly how much would be required under similar circumstances in the future

3035 (Mr Gillan) How far do you say that is a good example for our guidance?—It depends upon the severity of the famine. One cannot tell what the Indian Government would lose in the way of gold, it is impossible to tell. If there was a famine in the second year, it might be the Indian Government would lose a very considerable amount of gold, but how much no one could tell

3036 (Sir Shapurji Broacha) You cannot buy gold in India except to export, can you? When we think it is cheap enough to buy, we buy it, but we only buy it to export, do we?—We do what we like with it

3037 You have very little money to buy gold with except for export?—There is no doubt if we did buy gold in India it would be for export

3038 And you would not be exporting it if you sent it to the mint, and if it always went at 1s 3½d, it certainly would not pay?—It certainly would not pay to buy gold and send to the Mint

The witnesses withdrew

Mr O T BARROW, C S I, called and examined

3039 (Chairman) You come before us as a representative of the Government of India, I think?—Yes

3040 Would you kindly tell me what your position is?—I am now retired, but I was for some time Accountant-General of Bombay, I was Comptroller-General for about four years, and I acted for a short time as Secretary in the Finance Department

3041 In recent years, the Indian total balances have reached very high figures. I believe?—That is so

3042 What has been the reason for that?—It has chiefly been due to the excess of net revenue over the estimates, but there was also a very large loan, I believe, taken in 1909-10 in advance of requirements—that is as I understand things—and the effect on the Indian estimates was rather intensified by estimating for a high balance at home

3043 To that extent the high balance was intentional?—It was to the extent of the home balance. I take it that the home balance was estimated above the normal, the home balance being about four millions, I think they estimated for over eight millions in 1911-2 and over six millions in 1912-3

3044 For what purpose did they do that?—The explanation is given in the memorandum on Indian balances (Cd 6619)

3045 And you do not wish to add anything to what is there said?—There are one or two points in it which I do not understand, but I am really not in a position to criticize it

3046 As regards the balances in India, do you think that they might be used with greater advantage to Indian trade?—Do you mean utilising them by loans?

3047 Yes?—I do not think it is very practicable to use the Treasury balances in that way, at least it is quite practicable to do it to a small extent, but to any very large extent it would be dangerous. You cannot always count upon them for one thing, and for another thing you cannot always make them available soon enough. Our balances are raised by the revenue collection, and the heavy receipts begin to come in as an ordinary rule in January. So you could not make your balances always immediately available. They are collected in a large number of sub-treasuries and places in the outlying provinces. It would be very difficult therefore to make all the balances available before the end of January anyhow. If the trade demand was very heavy and the bank rate rose very high in December and the early part of January, as it sometimes does, you would find it difficult to meet any large demand for a loan. After that, in February and March in normal years you could do so, but the point is that a year might not be normal and you might find yourself in difficulties. I think that is one of the main reasons against it, because trade would be depending upon an uncertain element. Otherwise I cannot see any objection to it, leaving out of question, I mean to say, such considerations as, for instance, its possible effect on Council bills. Leaving all that out of consideration, I think you could lend

28 June 1913 ]

Mr O T BARROW, C S I

[Continued]

a portion of your Treasury balances, but I do not think that it ought to be done, because I do not think trade ought to get to rely upon it.

3048 What is the possible effect on Council bills to which you refer?—Some people think it would have no effect at all, and I myself doubt whether it would have any serious effect as regards the amount of Council bills to be brought out, but I can see that it might as regards the rate at which they were sold, because it is possible that if you gave a loan it might pay somebody to take advances on loan instead of bringing out transfers at a time of high rates, and therefore you might possibly get a lower rate for your Council bills later on.

3049 You might get a lower demand?—Not a lower net demand on the whole year, but a lower demand at a time of high rates. At present a great many remittances are made by means of telegraphic transfers, and ordinarily in the busy season the rate for telegraphic transfers is very high, I think about 1s 4½d. If you postponed taking Council bills until the demand was less and meanwhile took an advance, I can see that it might affect the rates at which Council bills were sold.

3050 Instead of getting an average rate as at present, high at one period of the year and low at another period, you would reduce your rate, you think, to the level of the times of low pressure?—I do not go so far as that, but I think it might have an effect in getting a less high rate. I know it is a difficult thing to say exactly what effect it would have, but I think that you might, by postponing the urgency of the demand, interfere to some extent with the rates you obtain. It seems to me that if you could postpone taking Council bills at the time of high rates until the Secretary of State was more or less obliged to sell, you would be able to get them for a lower figure. I may be wrong about that.

3051 Do you think that the Government of India could afford to keep lower balances than they have been doing of late in India?—No, I should not think so, on the contrary, it has been rather Government's policy to keep higher balances than heretofore. We found in the old days that we had great difficulties. We used to try to work to a minimum balance of about 8 crores or 8½ crores, and it was found to be difficult. We had to be making constant remittances, and altogether it was a troublesome business. It was agreed to increase gradually that minimum balance, and I think the figure now is something like 11 crores—I am not sure whether 11 crores or 12 crores is our minimum balance now at the time of greatest pressure at the end of November.

3052 On the whole you definitely prefer that the Government should not make loans from its balances?—I should prefer that it should not make loans from its Treasury balances.

3053 Would you make loans from any other sources?—There are two other sources. There is the Gold Standard Reserve, Indian branch, and there is the Paper Currency Reserve. The Gold Standard Reserve, Indian branch, might possibly be thought to offer a source for advances if your currency silver was so high, or the balance of silver in currency was so high, that there was no prospect of having to use the silver part of the Gold Standard Reserve during the busy season. It would be possible to advance from the Gold Standard Reserve, but it would not be advisable, because the very reason for which the Gold Standard Reserve is kept in India is to give the Secretary of State an alternative method of drawing Council bills, and if you once reduce the silver in the Gold Standard Reserve you deprive him of that advantage.

3054 Then you would eliminate the method of lending from the Treasury balances, and you would eliminate the proposal to lend from the Gold Standard Reserve?—Yes, I would, entirely.

3055 What do you say about lending from the Paper Currency Reserve?—I think with proper arrangements that is quite possible. Of course it is not practicable at present, in fact the law would not permit it as it stands at present, and also the way in which things are worked now would make it rather

difficult. At present our investment is a fixed figure laid down by the Act, and whenever we alter that fixed figure we have to alter the Act, and before we do so we consult the business and banking community. That I hold to be a fundamental mistake, I do not think it necessary, and I think we can substitute another plan for it which would enable us to make part of the paper currency balances available for the use of trade.

3056 Will you develop what is in your mind?—My idea is that we should take power once for all to invest a certain percentage of the circulation. You might invest, say, 40 per cent of the average gross circulation, or you might take it any way you like, either gross or net. Of course if you calculate upon the active circulation, you can afford to take a higher percentage than if you calculate upon the gross, but calculating it upon the gross circulation you may take, say, power to invest 40 per cent of the gross circulation, though you need not work up to that figure. You could then make provision in the Act that part of your investment should take the form of advances on temporary security. You could then keep sufficient in hand to advance. By that method of allowing us to invest up to a certain figure, we could always, even at the present moment, do it and still leave room for gold and silver. At present the objection to investing a large percentage of the currency reserve is that it would not leave enough room for gold and silver—at any rate, it would not have done so a few years ago.

3057 Leave enough room where?—You would have to leave a sufficient amount of silver to meet the wants of trade. At present that is actually fixed at 18 crores at the beginning of the busy season. Then you want a certain amount of gold for the public demand in India. We would also like to have a place in which we could put gold in London when we want to sell Councils otherwise than from the Treasury balances. We ordinarily sell Councils against our Treasury balances until we have reached the limit up to which we can afford to pay in India. If you want to sell more, there are only two methods of doing it—either by placing gold in the currency reserve in England or drawing against the Gold Standard Reserve branch in India, which is a very small thing, only six crores. So you will have to have room in your currency reserve for the gold and silver that is likely to be there. If you invest, say, 60 per cent of the gross circulation, which would be 36 crores, taking 60 crores as the present total circulation, you would only have 24 crores left, which would not be enough. If you invest 40 per cent of the present circulation of 60 crores, that would be 24 crores, leaving 36 for gold and silver, that is to say, 18 for silver and 18 for gold, but 12 millions sterling is rather a small amount of gold. If Government has power to vary its investments within the limit of 40 per cent, Government could certainly be trusted to see to it that there is enough room left for gold, and, as the circulation increased, there would be more and more room for gold and silver. That would be, roughly, my idea. Also it would be open to the Government to keep two crores of this amount, or whatever amount was considered necessary—three, if you like—in hand, for immediate advances.

3058 When you are speaking of investments, you are speaking, I take it, both of permanent investments and of temporary advances?—Quite so.

3059 To the extent to which you could afford permanently to invest, you would be losing interest, would you not, by reserving a portion of the money for temporary advances?—Yes, that is true.

3060 Because the temporary advances would only be taken during a small portion of the year?—That is so.

3061 To whom would you make these temporary advances?—That I could hardly say. Of course when you are dealing with the currency reserve, one is dealing with rather a ticklish thing. The whole purpose of the reserve is to ensure the encashability of notes. I should personally be opposed to advancing it to anybody except the Presidency banks.

26 June 1913]

M. O. T. BARROW, C.S.I.

[Continued]

3062 What sort of security would you require from them?—I would hardly like to say I suppose that the security which we could take from them would be principally Government Stock It would have to be laid down what would be accepted

3063 Port bonds?—It might be even those

3064 (*Sir Robert Chalmers*) Are they guaranteed by Government?—Bombay Port bonds are not, nor are the Calcutta Port bonds, but the Bombay Improvement Trust bonds are

3065 A Port bond then would be a non Government security?—Yes I could hardly express an opinion as to what would be exactly the safe thing to take, but I presume that those could be taken

3066 (*Chairman*) Would you propose any other alterations in regard to the Paper Currency Reserve besides this general extension of the power to invest of which you have spoken?—With regard to the reserve, no I think the present arrangement by which a small portion in gold is kept at home is a good one As regards the Currency Act I think perhaps there might be further alterations At present we only pay notes at certain centres, that is to say, at the Currency offices, it is possible that you might extend the number of places at which they are encashable, and that might be an advantage Also you might perhaps increase the value of the notes you pay, for instance, we used only to pay on 10 rupee notes, but now we have gone up to 50-rupee and 100-rupee notes, I think If you increase the number of places at which you pay them, which I think would be a benefit—I think the number might be extended very gradually—that would mean keeping a larger coin reserve

3067 If you wanted to extend the number of places at which notes could be encashed, who would act as the agents for the Government of India in those places?—It would be done at certain main centres of the Government treasuries

3068 You were not contemplating using the banks then?—No, except so far as they are the custodians of the Government treasuries at those places

3069 The use of notes has been very much on the increase, has it not?—Yes, very much, and that has principally been the case since we extended their convertibility

3070 So that possibly if you could still further extend their convertibility, you might still further extend their use and popularity?—Yes, I think so

3071 You think that is a desirable thing to do?—Undoubtedly

3072 You do not belong to the school which thinks that it is desirable to get as much gold into circulation as possible?—No, I do not, I think it is more important to circulate paper

3073 You regard gold as a wasteful form of circulation?—That is so

3074 Do you attach much importance to the amount of gold in circulation as an aid to the Gold Standard Reserve for the maintenance of exchange in the case of a crisis?—No, I do not, not to the gold in circulation

3075 Do you think that the gold in hoards would give much support to exchange in a crisis?—I should not think so

3076 As regards the location of the Paper Currency Reserve, are you satisfied with its present distribution?—Yes

3077 Are you satisfied with its composition?—Yes, except that there is the general question of how far you can prevent the gold in the Paper Currency Reserve accumulating, and whether its accumulation is a bad thing or not At present we have no means, and I do not think we ever will have any means, of stopping this accumulation Even if the plan, which I was outlining, of investing a percentage instead of a fixed figure, were adopted, that would not prevent the accumulation of gold It would still go on, and it must go on, apparently There is a tendency in some years for the gold that comes into the country to stick in the Paper Currency Reserve and not go out During the last few years a large portion which has come in has stuck in the Paper Currency Reserve, and, of course, the lowness of our investment is

the reason why the amount is bigger than it otherwise would be It is, I think, desirable to try to check the absorption of gold I know some people think not, but I am inclined to think that, on the whole, it is desirable to check the excessive importation of gold into India Still, that accumulation of gold, if it is an evil, seems to be an evil which we cannot prevent, whatever we do with the Paper Currency Reserve, because it is no use coining silver before it is necessary

3078 I think a good deal of silver is kept in the Gold Standard Reserve whilst gold is accumulating in the Paper Currency Reserve, would it not seem natural that an exchange should be made, and that the gold should be put into the Gold Standard Reserve and the silver be received in exchange by the Paper Currency Reserve?—Yes, it would if it were not necessary to keep the silver in the Gold Standard Reserve for another reason The reason is that we want to have an alternative method for the Secretary of State to draw against I do not see how that reason can be got over at present, eventually, I think, it can be got over, but not at present

3079 I do not quite follow that?—It all depends upon the policy we follow as regards Council bills If we are going to continue the policy, as I imagine will be done, of drawing Council bills beyond the amount of our own home charges, then as soon as the Treasury balances in India cannot suffice to buy Council bills, you must draw against the Paper Currency Reserve—there is no other way It is sometimes inconvenient to do so, because you do not want to take gold off the London market When that occurs, the only means of drawing you have got is against the Gold Standard Reserve, whereby, when you receive the money for Council bills here, you can immediately invest it, and so the gold does not go off the market

3080 Does that not come back to the restrictions which are at present placed upon the use of the Paper Currency Reserve?—Yes If it was safe to make temporary investments of the Paper Currency Reserve and we had a percentage, as I have suggested within which we could work, I think you might do away with the Indian branch of the Gold Standard Reserve because you could equally invest your Paper Currency Reserve My doubt is whether you will find sufficient securities of a suitable character in the London market—I do not know about that If you do find sufficient securities of a suitable character in the London market, you could then place your temporary currency investments Of course they are on a different footing to the Gold Standard Reserve investments What might be safe for the Gold Standard Reserve might perhaps, be objected to from the point of view of the Paper Currency Reserve I do not know, it is only my idea that there might be a distinction made

3081 What is the distinction which you think might be drawn?—Only because of the nature of the Paper Currency Reserve investment It is true that it is a reserve against our notes, and it is what the public look to for the repayment of their notes, we are in a fiduciary position there But in the case of the Gold Standard Reserve we really can do what we like with it, it is only a matter of public opinion and we could invest it even in rubber shares if we liked We should not like to do that with the Paper Currency Reserve That is my meaning broadly

3082 The obligation of the Paper Currency Reserve is to provide rupees for all notes that are presented for payment?—Exactly so

3083 Must it not hold rupees rather than gold?—We are not obliged to pay notes in rupees, we can pay them in gold if we like, gold now being legal tender Of course, we should not think of taking such a step, except under some emergency, but there is nothing to prevent our doing it

3084 If the public present those notes in large quantities exceptional quantities, let us say, is the demand likely to be for gold or for rupees?—The demand is likely to be for rupees

26 June 1913]

Mr O T BARROW, C S L

[Continued]

3085. And what you would have in your reserve to meet that demand for rupees is gold?—Not quite, because of course anything like a demand of that sort, when it becomes excessive, is foreseen, and we can always convert our gold into silver sufficiently quickly for that. That is why we keep a certain balance of silver to enable us to do so.

3086. Should I be right in saying that when the crisis comes what will be wanted is rupees and not gold?—Yes.

3087. And that the gold is only valuable because it can command rupees?—Yes.

3088. It does not seem to you to be, under those circumstances, desirable to have the rupees there apparently?—Do you mean to coin in advance of the actual demand?

3089. Instead of holding gold in the Paper Currency Reserve, to hold your reserve in rupees?—But gold rushes into the reserve. Do you mean that we should not accumulate, and that as soon as we have gold we should send it back again and coin rupees?

3090. I meant to suggest that you should exchange the gold which came into the Paper Currency Reserve for the rupees which were in the Indian branch of the Gold Standard Reserve?—That is after all only a very small proportion, that is only 6 crores, and as I explained before we cannot do that unless we have some alternative method for drawing Council bills.

3091. Are you in favour of the opening of a mint in India for the coinage of gold?—For the coinage of sovereigns or of other gold? There is some distinction between the two. For the coinage of sovereigns I should think it was quite unnecessary, and I do not quite see how it is going to be done. The amount of gold that would come from the Indian supply is so small that it would not be worth while doing it merely for that I think, and to import gold to coin it in India seems to me rather absurd if you coin it into sovereigns. Of course any other class of coin that you are going to introduce would stand on a rather different footing, because, although we can get sovereigns enough when we want them from Australia or England, we cannot get the other coins, and there fore if you are going to have the other coins I think the mint for coining them should be in India. That would be the most convenient place probably.

3092. Do you see any advantage in having a gold rupee coinage?—No. A great many people think that the 15-rupee unit, the present sovereign, is too high to meet the general native taste, but that is only a conjecture. I think myself that it is mere conjecture as to how far they would take 10-rupee pieces more freely than they do sovereigns. Personally I should rather doubt it, but it might be tried. There are certain objections, of course, to coining gold at all in India.

3093. Would there be any advantage in trying it?—I should call it rather a disadvantage myself, because it seems to me that it is not necessary in a way to force a taste for gold on the Indian public. I cannot help thinking that if you did do so you would increase the gold drain on Europe, if that is considered a bad thing. If you introduce gold into the currency, I think it is clear that you would require more gold altogether in India.

3094. Of the gold that you might introduce into the currency how much, do you suppose, would remain in currency and how much would take the form of ornaments or go into hoards?—I think it is almost impossible to say, that is merely conjecture again. The natives might like the 10 rupee piece to use as currency, and again they might prefer it for the purpose of hoards, no one knows what they would do. Some people think that they would prefer a 10 rupee piece merely for hoarding purposes rather than the sovereign, because it would be a lower unit. If they did and if it increased hoarding, you would again get a further drain upon England. Whether they did or did not, if it went into the country and stayed there it would mean a further drain of gold from England. It must mean a further drain, whichever it is. Of course it might have no effect, as they may not exhibit any preference for a 10-rupee piece.

3095. I will not pursue the effect on England, but suppose it did mean a further drain on gold from England, would you say that that must be the governing consideration for India?—Yes, I think so. My own feeling is that anything which lessens the world's supply is bad for India, that is to say, if you encourage the gold to go into hoards.

3096. Anything which lessens the amount circulating, you mean?—Anything which lessens the amount of gold available for exchange. I think that does affect Indian trade as it does affect every class of trade, and I cannot help thinking that it affects India as a debtor country perhaps more than other places.

3097. Are you right in describing India on the whole as a debtor country?—India is a debtor country in a way, that is to say, we have an outside loan on which we have to pay interest. Any scarcity of gold seems to me to affect, and must affect, us deleteriously. Also in the world's market any want of gold does affect the demand for produce, and therefore must badly affect India. So there seem to be two ways in which it affects India badly.

3098. I turn for the moment to the Gold Standard Reserve, do you criticise the present location of that reserve?—No, I think it is right.

3099. You hold it is right that the major portion should be kept in London?—I think undoubtedly so.

3100. Will you give me your reason?—It is no use, really, in India. You want the gold at home when a crisis comes. If you have it in India, you would have to send it home.

3101. Would you retain a small proportion of it in India?—Not in gold.

3102. Would you in silver?—In silver, yes. Even much of the gold in the Paper Currency Reserve I would keep here. Because in times of adverse trade we use the Paper Currency Reserve gold at home as well as the Gold Standard Reserve gold, so that the two things are rather interlocked. I think they are both more useful in England, and I also think that actual gold in England would be more useful than securities.

3103. Would you think it necessary that the whole of the gold reserves should be kept in actual gold?—No, I do not think it is necessary, but I think if it could have been done without other objections it would be a good thing.

3104. On striking a balance between advantage and disadvantage, what do you say?—I think the present system is best, but I think there was a good deal to be said for what the Government of India said on that point. They considered gold was more useful than securities in a time of crisis, and so it is because gold then goes into the market.

3105. I gather that you would depreciate holding any part of the gold reserve in long-dated securities?—Yes, I would.

3106. Or in any securities with no date of redemption?—Yes, I would.

3107. Would you fix any proportion which ought to be held of actual gold, or any sum?—I would not. I think it is a difficult thing, but I think that the present arrangement of about 5 millions is a very reasonable one.

3108. On the condition that the rest is held in short-dated securities?—I think that is the preferable plan, certainly.

3109. (Sir Robert Chalmers) Would you wish to qualify your remark about the debtor country a little further? India has debts, but on the whole she is a creditor country, is she not?—Yes, that is so. I was thinking more of the fact that we have an external loan than of anything else.

3110. You have got to pay 20 millions in this country, that was in your mind?—That was in my mind, and the interest on the loan. Of course the more you appreciate the gold, as I suppose you would call it, the worse it is for India, because then India has practically to pay more in interest charges on her debt.

3111. On the whole, there is a balance of trade on the average of years in favour of India?—Yes.

3112. That is an essential fact?—Yes.

28 June 1913]

Mr O T BARROW, C S I

[Continued

3113 Without that India would be in a very painful position?—Quite so

3114 You are speaking, therefore, in reference to a part of India's position and not to the whole when you speak of her as a debtor country?—Yes that is so

3115 You said it is an elementary question, but I should like it, if you would, to be amplified a little further—that you thought the gold in the Gold Standard Reserve should be kept in England?—That is so

3116 Would you mind amplifying your view about that somewhat?—When an adverse trade balance occurs people wish to pay silver in India and receive gold in England.

3117 Because the settlement is in gold at home?—Yes

3118 This is the place where they have to make their payments?—Yes

3119 And consequently you keep the gold here?—Yes

3120 Would you attach any importance to the view which I believe is held in some quarters that it would be a fortifying of the position to keep the gold in India in whole or in part?—I cannot see how it could be. On the contrary, my own impression is that there is a great deal to be said for the view that even the paper currency gold in India is of no use there at all, and that when a crisis occurs we should send it all home and refuse payment of gold in India altogether. That view has been taken, and I do not think it is altogether wrong, but I do not know how far public sentiment would stand it.

3121 Have you considered at all the question whether it would be desirable, with a view to people's opinions and feelings, to have any statutory sanction governing the Gold Standard Reserve?—No, I have not considered the point.

3122 There is, of course, with the Paper Currency Reserve a special statutory sanction?—Yes

3123 But you have not considered the point, you say?—No, I do not think I have.

3124 Coming now to that suggestion of yours about a certain amount of the money in the Paper Currency Reserve being made available for purposes of advances to trade in India at certain seasons, the fiduciary portion of the Paper Currency Reserve is in certain securities, is it not?—Yes

3125 Definite securities, Government of India securities?—Yes, the Indian portion.

3126 If you were to take power, in accordance with what I understood to be your scheme, to lend, we will say, to the Presidency banks a portion of what happened to be in cash, but which you regard as being an investment portion, you would require the same type of securities to be deposited by the Presidency banks, I take it?—Yes, that is so.

3127 That is to say, Government securities?—That was my idea.

3128 Let us see what would be the practical effect of your scheme. You would have power to invest up to a certain figure?—Yes

3129 But you would not invest up to the hilt?—That is so.

3130 You would keep a little sum which you might call  $x$  for immediate use uninvested and remaining as a surplus, which would be a superfluous amount of cash?—That is so.

3131 You do that, keeping it in cash without earning interest, for the major portion of the year with a view to financing trade through part of the year?—Yes, that is true.

3132 Therefore, looked at merely as an engine of profit and loss to the Paper Currency Reserve, it would mean this, would it not, that you would be earning no interest for the best part of the year and you would be earning interest for a portion only of the year?—Yes

3133 So on the whole you would lose in interest?—That is true, but if you will allow me to say so, there is no alternative. What I mean is that you lose now, and under any system you must lose. I am trying to make that loss as little harmful as possible by giving the trade the benefit of it. Whatever system is adopted for the investment of the currency reserve,

I should hold there must always be a balance uninvested which could not safely be invested. It is so under the present system, and if you fix a percentage it must be so, because you must guard yourself by being a little below what would be the safe percentage, although you would be holding an amount which you could invest you are doing so now, and you will do so, I should think, under any system.

3134 But you would be doing it a little further?—You would be doing it with your eyes open—I do not think it would be more.

3135 (Chairman) You would fix an amount which it is safe to invest?—Yes

3136 I understand you to say, and I quite agree with you, that that amount would have to be fixed at something within the limit of safety?—Yes it would.

3137 You have two alternatives before you. Having fixed that sum  $x$  as being capable of investment at a particular period of the year, you may invest it for three months or you may invest it for twelve?—Yes

3138 I understand your suggestion to be that it should be invested for three months for the benefit of trade?—Yes

3139 Instead of for 12 months which would be to the greater benefit of the fund?—Yes. Of course it depends on the light in which you look at it. I look upon it that the percentage which we shall fix for the investment shall be high enough but not too high. If you fix that percentage you cannot work up to it every year, as it would not be safe. Say you fixed 40 per cent of the average circulation of the previous three years, well, the next year you again change that to 40 per cent of the average circulation of the then previous three years, and supposing that the circulation of the last day of the year is a great deal higher than the average of the previous three years then you will really have got more than 40 per cent of your circulation uninvested.

3140 I think you do not quite see the point I was trying to put. Whatever the sum which you fix as being safe to invest, is it not a necessary part of your proposal that a portion of it should be invested only during the busy months of the year when trade requires assistance?—Yes

3141 Whereas, if it is safe to invest it, you would have the opportunity of investing it for the whole year?—I quite see the point, but it seems to me that you could invest temporarily even beyond what it is advisable to invest permanently.

3142 (Sir Robert Chalmers) The Paper Currency Reserve is, as you said, fiduciary?—Yes

3143 And the interests of the Paper Currency Commissioners, are they, or Board—of the authority regulating that reserve—is to safeguard their notes?—Yes

3144 That and that only?—That is so

3145 So far therefore as the object under your scheme is to lend money for the financing of trade it is, would you agree, to some extent a departure from the purely fiduciary position of looking after the interests of the notes?—Yes that is so, but of course we already use the Paper Currency Reserve in other ways than merely securing the encashment of the notes, that is to say, we do use it as a means of helping trade in half a dozen different ways. As long as there is no interference with the primary object, I do not see why we should not do it. There is no interference with the primary object of the reserve which is the repayment of notes, if we give, say, a transfer from one place to another through the Paper Currency Reserve as we often do that is, if we give banks and merchants the option of paying a certain sum into the reserve in one place and taking it out at another.

3146 That is machinery, is it not?—It is a part of the business with the banks. We do not want it done for our own purposes, but we do it to assist them. We do not particularly want the currency funds moved from one place to another at the time we allow it, but we do allow it because we can allow it without inconvenience and for the purpose of helping trade. In the same way when we sell Council bills against currency reserves we are using the currency reserves really as a

26 June 1913]

M O T BARROW, C S I

[Continued]

means to assist trade, because it does not interfere with the safety of the issue, and it has no effect upon that one way or the other—therefore we allow it. Of course, if this scheme of allowing loans were in any way to affect the safety of the issue, I should say, Do not do it, but if it does not affect the safety of the issue, I see no harm in taking steps which would make this currency reserve useful instead of useless, that does not seem to me to be objectionable.

3147 So far as you lose sight of its fiduciary interest, to that extent you are departing from your position as a trustee having in view purely the interests of the note issue, and you are acting as a general philanthropist for trade?—As far as we lose interest that does not affect the Paper Currency Reserve, because the interest is not credited to the Paper Currency Reserve but to the Treasury.

3148 The Paper Currency Reserve of India was modelled on the issue department of the Bank of England, originally and it still retains a general similarity, I believe?—Yes.

3149 The Bank of England does not advance money from the issue department, does it?—No.

3150 To that extent, therefore, your proposal would be a departure from the parent system?—It is, undoubtedly.

3151 Have you considered whether it would be possible to put the Gold Standard Reserve under, perhaps, the same body as the Currency Commissioners?—The currency is not under a Board of Commissioners. I do not remember the wording of the Paper Currency Act, there is a Head Commissioner of Paper Currency, but there is no board, or anything of that sort.

3152 There is an authority, could that same authority also be in charge of the Gold Standard Reserve?—The two things are rather different, are they not? I do not exactly follow you.

3153 They are interlocked to a great extent in maintaining the gold standard, are they not?—Only because we make use of the Paper Currency Reserve for a purpose for which it was not created. The Paper Currency Reserve has got nothing to do with maintaining the gold standard, but we make use of it, just as I said we might make use of it for trade, for that, though it has got nothing whatever to do with that.

3154 (Sir Ernest Cable) With regard to the criticisms which have just been passed upon lending money to trade from the currency reserve, of course the question of interest largely enters into the calculation, supposing, for instance, you were to lend for six months at 7 per cent. you would suffer no loss of interest?—Not if you could lend for six months at 7 per cent, but I do not suppose you could do anything of the sort.

3155 Still you might lend at a higher rate than 3½ per cent?—Undoubtedly.

3156 So the question of interest might not be such a very large item?—It might not be serious. That would depend on whether the trade took it. You must remember that in many years they might not touch it, and you might certainly have an infructuous balance. I think under any system we would always have some infructuous balance.

3157 Which you have now, you say?—Which we have now.

3158 I think you drew a distinction just now, in answering the Chairman's questions, between the purposes of the currency reserve and the purposes of the Gold Standard Reserve, which were quite distinct?—Yes. I say yes, but we really need not have a Gold Standard Reserve at all, though we must have a Paper Currency Reserve. I think the two things are rather different. I think the Paper Currency Reserve ought to be managed upon a stricter footing.

3159 Of course the object of the Paper Currency Reserve is to protect the note issue?—Yes.

3160 And the object of the Gold Standard Reserve is to protect the rupees?—That is so.

3161 Would the two together, speaking broadly answer one and the same purpose, namely, to protect the entire currency?—I look upon them as rather

different. For one thing, we have a note issue which we promise to pay. You may say we have issued a promise to pay the rupees, but we have not done so definitely—we will do so of course, but we do not pledge ourselves that we will pay the rupees.

3162 I was only leading up to this question, whether it would not simplify matters generally if both reserves were thrown together?—It would, and it could be done, but under present circumstances it is impossible because our note circulation is not large enough. It is quite true that the Paper Currency Reserve and the Gold Standard Reserve could be amalgamated and the whole thing worked with the Paper Currency Reserve, but not at present, because our circulation is not big enough.

3163 Do you mean your note circulation?—The note circulation is not big enough to enable us to hold both sufficient securities and sufficient gold. You must have sufficient securities plus sufficient gold to maintain your rupee standard, but we have not got enough. It is a simple matter looked at in view of the figures, and if you take the figures you will see we have not got enough. If we had enough it could be done, and I think some day it will be done.

3164 It is quite inconceivable, is it not, that there should be a run on the treasuries to change notes, because the bulk of the circulation is in 10-rupee notes and 5 rupee notes, which are scattered all over a large continent?—Yes.

3165 Therefore one cannot conceive an inconvenient amount of these notes being presented?—I think you can conceive of an inconvenient amount being presented. I think you will find that in some years the circulation has very largely fallen after times of famine. I think in 1897 and 1898 there was a very large fall in the circulation. It only amounted to a few crores, not to 50 per cent, or anything of the sort, still it was rather a large fall, I think it was from about 30 crores to about 23 crores.

3166 (Mr Gillan) Then you might have a political crisis in which the security of the Government was affected?—Yes, you might. Falls in the circulation have been, you might call them, serious, but not, of course, anything like what would be provided for outside the investment.

3167 (Mr Gladstone) I think you said that the Treasury balances, which used to amount to about 8 crores, are now 11 or 12 crores?—Yes, about 11 crores. That is, of course, at the minimum time of the year.

3168 Do you think that the very large number of treasuries established up country are necessary now?—I have never thought about it, but I should think they were quite necessary.

3169 You have the railway and telegraphic facilities greatly increased, do you think that full advantage has been taken of those with a view to economising the balances and using them to the fullest extent?—Do you mean by reducing the number of treasuries?

3170 And the balances, by being able to move them more rapidly backwards and forwards to where they are required?—Even now we do not move the balances except as we require actual coin, and that is a very small amount. However many railways you have got, whatever the railway communication is, you would not do away with the frequency of remittances merely because you could send it by rail instead of by road, nor would the expense be much less.

3171 It would be much more rapid, and much more economical and much safer, would it not?—It would be much more rapid, certainly, but I am not sure about the other things. I suppose it would be more economical but I have not thought about it.

3172 And safer, there would be less risk?—Yes. At the same time you must remember that the number of transactions tends to grow yearly. What was sufficient for our treasuries 10 or 15 years ago is no longer sufficient, because the number of transactions is multiplied and the expenditure is greater. You require larger balances for that reason, which might neutralise the effect of your increasing railways, and so on. I do not say that our balances are too low or too high, but at the time when they were raised from about 8½ crores to about 11 crores, it was rather care-

26 June 1913]

Mr O T BARROW, C S I

[Continued

fully thought over as to exactly what increase was desirable. I cannot give you the facts now because I have forgotten them.

3173 Was it gone into with a full knowledge of the different conditions that prevail now as compared with 20 or 30 years ago?—I think what was taken into consideration was not so much the altered conditions as what we found an actual practice was the trouble. We found it troublesome and expensive to be constantly moving, and I do not think we compared what the conditions and the means of transit are now with what they were then. What we principally took into consideration—I think it was about 1905 or 1906 that the increase was made—was the amount of trouble we had in moving funds, and the amount of care and trouble, and the number of telegrams, and so on, that the Comptroller-General and his assistants had to deal with. We found it was troublesome with such a small balance because funds were constantly wanted in a place where money was not available. We did not take the greater facilities of remittance into consideration as compared with what they had been 20 years ago, but what the trouble was that we were finding at the time.

3174 Do you not think if those facilities were taken into account, and also the extension of telegraphs and so on, that much more frequent returns might be made to the central authority, and that that would lead to the economising of its balances which are still dealt with in watertight compartments without relation one to another, and in connection with which, therefore, there may be a considerable waste?—There might be, but that is not so. We already consider that we take all the advantage that we can of the means of transit and communication, and notwithstanding that, we found that it gave us a great deal of trouble and expense, and we thought we would lessen that by increasing the balance. We were quite aware at the time it was done that increasing it meant paying practically so much interest.

3175 Would it be possible to have a statement of some of the representative treasuries, small and great, showing the money going in and out, say for a week or a month? I do not know how the other members of the Commission stand, but I have not the slightest idea what goes on at these treasuries. It is a matter of negotiation now, is it not, between the Government and the Presidency banks very often as to whether or not the banks will establish a branch and so enable a treasury to be abolished?—Yes.

3176 Do you not think that the banks would be able to work more economically than the treasuries by combining banking with Treasury business?—Wherever it is possible for the banks to open branches they already do so. I do not quite see how that could be done to a greater extent.

3177 My experience is that the terms are not considered good enough often, and that the banks refuse?—I do not remember any case of a bank refusing because the terms were not considered good enough. I can remember cases of banks refusing because there was not enough business, and that is the consideration, I imagine, that principally operates with the banks when they are asked to open a new branch.

3178 Of course, that difficulty might be met by giving them, as I think is often done, some special terms for that particular branch?—Yes. We have given them minimum balances in certain cases.

3179 (Mr Keynes) Sir Robert asked you one question suggesting that your plan of temporary loans from the paper currency, though it might be useful to trade, would be made at the expense of the interest earned. I want to pursue that point a little. I understand your view is that from time to time you can invest temporarily more than you can safely invest permanently?—I would hardly say that, but I think you can invest temporarily more than you would pledge yourself to invest permanently.

3180 More than it would be wise to invest permanently?—Not exactly more than it would be wise to invest permanently, because I take the view that the percentage might be very much larger than anything

I have suggested with perfect safety, but I am doubtful whether we could take the step of actually publishing to the world that we were going to invest, say, 75 per cent of our reserve, and I think Government would hardly care to face public opinion to such an extent. I personally think it would be quite safe to invest 60 or 70 per cent of our reserve, but I do not think we should go so far.

3181 But you think that objection does not apply to temporary investment?—I think the objection does not apply to a temporary investment. My own view is that it does not make any difference whether you work to a percentage of 40 per cent, and allow the Government to vary its investments within that for temporary purposes, or whether you provide for the fact of temporary advances in addition to that.

3182 If you are investing temporarily money against the permanent investment of which there is no objection, Sir Robert Chalmers was obviously right?—Yes.

3183 But if you can invest temporarily money against the permanent investment of which there is some objection, of whatever kind, then perhaps there is an answer to his point?—I do not say that there is quite a satisfactory answer, and I do not pretend to give an entirely satisfactory answer. What Sir Robert Chalmers said—and my own view is that it is so, but it is my own personal opinion—was that we could safely invest temporarily, because it is more easy, for one thing, to withdraw a temporary investment than a permanent investment, and for another, you want to have some power of varying your investment within the limit which I have fixed as the minimum. One instance of that is this: you have an average circulation for three years, say, of 62 crores—I will give you a concrete instance, that is the present state of facts. That gives you an investment of 24.80 at 40 per cent, suppose at the end of next year the circulation is found to be only 56 crores owing to a famine having occurred, or suppose it is only 48 crores owing to a famine having occurred, which is a quite possible event, then you will have got invested about 50 per cent of your currency reserve, which a great many people would say is an excessive amount. Therefore you would have to have a proviso in your Act that if the investment exceeded a certain percentage—and in fact this was part of my proposal—of the circulation on the last day of the immediate preceding year, that amount of the investment should be withdrawn.

3184 You could withdraw it then more easily than if it were permanent?—That is so.

3185 I would like to put to you another reason in favour of a temporary investment—when a good season is ensured, reserves which were not superfluous so long as the nature of the season was doubtful become temporarily superfluous?—Yes.

3186 Therefore, if the Government keep their funds intact until a good season is assured and lend them on terms which would bring all that money back again by the end of the season, they could do that without running any appreciable risk of being caught short of reserves, whereas they could not have done that permanently, because a bad season might have overtaken them, when they would want the reserves. Would you agree to that?—I am not quite sure that I follow that.

3187 Say that in November the character of the season was obvious, if you have funds then in hand to lend, well and good, you can be sure of the money coming back, but it would be very rash to have lent in August before you were certain how the season would turn out?—Yes, that is so.

3188 In those circumstances the Government could lend with the least risk to itself?—Yes, that is so.

3189 And at the same time it would be lending at a moment when funds were most useful to trade?—Yes, that is so.

3190 Would that be in your mind an additional reason for temporary investments?—Yes, I agree with you.

26 June 1913]

Mr O T BARROW, C S I

[Continued]

3191 But that would not apply at all to permanent investments?—That is so, I agree

3192 Do your proposals for the investment of the Paper Currency Funds apply to temporary investment in London as well as in India?—It was only in India that I was thinking of investment

3193 You were not thinking of lending in London against Government securities?—Well, yes, I was

3194 Both in India and in London?—Yes, both. What I was thinking of with reference to India was entirely as regards advances. I was thinking that we might also invest part of our currency funds not in permanent investments at all, for the reason I have just given to you, the facility of varying within the limit—

3195 In Treasury bills, for example?—Quite so. The two things are separate in my mind. I was thinking separately of advances made to the Presidency banks and of the possibility of investing some of our reserve here at home in temporary securities instead of permanent

3196 They were also separate in my mind. Now I want to go to the point of the investments in London. If that were done, would there then be any reason against the suggestion made by the Chairman of abolishing the silver branch of the Gold Standard Reserve and taking all that into the Paper Currency and putting gold into the Gold Standard Reserve?—I agree to that

3197 Would there be any objection to it?—I think not, and I anticipated that that would be done when we once got a high percentage and a really high circulation. The only question is whether at present it can be done. I have not examined into it. It is a question of figures. It depends on how much you can temporarily invest, does it not?

3198 Is it your opinion that the silver branch of the Gold Standard Reserve only exists, because the Secretary of State is not free to invest the Paper Currency Reserves temporarily?—It comes to that

3199 That is another advantage, therefore, in having this power of temporary investment?—Undoubtedly. That was one of the advantages I thought of

3200 It is simply because the Secretary of State cannot invest the currency money temporarily that it is necessary to hold silver in India separate from the paper currency silver?—That is so

3201 In recent years by the universalisation of a number of notes the old circle system has been, in effect, largely abolished?—Yes

3202 In your opinion is there any reason why the circle system should not be done away with altogether now?—I do not see why we should do it with reference to the very high notes like the 10,000 rupee notes

3203 What would be the disadvantage?—They are not notes that pass from hand to hand. We have done it in the other cases for the convenience of the public, but if you include 10,000 rupee notes, that would merely mean paying for the traders remittances, and in those cases the traders should pay the exchange. In Europe if you want to send money from one country to another you have got to pay the difference of exchange, meaning the cost of carriage, as I understand it—I do not know that I can explain the matter very well, but it should be the same in India. The Government ought not to take any risk of having to pay the cost of any remittance for the sake of trade, and there is no reason why merchants should not pay it themselves. If you universalise 10,000-rupee notes you are, with your eyes open, saying, we will pay all your remittance charges for you if you happen to use those notes. We took the risk in the case of the smaller notes because we considered the advantages to the ordinary holders, the small people, were so great as to overcome any objection to Government having to pay remittance charges, but it would not be so in the case of 10,000 rupee notes

3204 Do you think that now the 100-rupee note is a universal legal tender it is not used for remittance?—I do not say that, but I think the advantages would be greater than any risk we might have to pay for. I am not sure in actual practice whether we have had to pay anything, because I have not been in India

lately. The idea was "that whatever risk was run, it was worth it, but it would not be worth it in the case of notes which would be used purely for remittances and never in hand-to-hand transactions"

3205 You would admit, I take it, that the circle system in the past undoubtedly hindered the popularity of notes?—Yes, it did

3206 And the people will probably be rather slow to understand that that reason has largely disappeared?—Yes

3207 If you entirely abolished even the name "circles" it might help to make it clear to the people?—Yes, it might do so

3208 I am suggesting that it would not really make much practical difference, because if anybody wants to use notes for remittance they can already use 100-rupee notes, and the difference between using ten 100-rupee notes and a 1,000-rupee note is not very great, is it?—I think it is very great. I am not sure—I think Sir James Begbie could tell you that better than I can—but I should think that 10,000-rupee notes would be used practically for payments between bankers, and only for that class of payments. I should think the Government would certainly lose a good deal if they were universalised, not only in the cost of remittances at present, but we get a good deal of premium from allowing funds to be transferred and we should lose the whole of that. Your idea, I take it, is that simply the name of the thing would encourage the circulation and therefore we ought to bear the cost for that reason

3209 The abolition of circles would simplify the system, and the cost would not be very great?—I agree there is a good deal to be said for that view, but I would not do it

3210 (Mr Gillan) Do you suppose that the ordinary person knows anything whatever about our circle system? There is nothing on a universal note, is there, which shows that it belongs to a particular circle except the letter?—That is so, but he does know about the circle system, because he has grown up in the knowledge—everybody has nowadays

3211 The ordinary person who is dealing with small notes?—Yes, he knows that he could not formerly have got a Bombay note cashed in Calcutta. I think the system is generally known

3212 (Mr Keynes) If you could say to people that notes were legal tender everywhere, if the statement could be put into a simple form, would that not do something to clear away the sort of doubt that remains as a legacy of the old system?—I rather doubt whether it would have any great effect. I do not think the wording of the Act would reach the public. I think it is the actual practical thing that they look at most. They know that they can get a Calcutta 100-rupee note changed in Bombay now, or they gradually acquire the knowledge that they can, and I should not think the native Indian people would think of what the actual wording of the Act was, and that it was only in the case of the notes that they themselves used that they would learn that they could do it, and that they would not acquire the knowledge in the case of the very high value notes. It does not seem to me, therefore, that the actual wording of the Act would appeal to the native mind

3213 At present in the case of anybody who was brought up in the old state of affairs, it is a complicated business to explain to him exactly what the existing position is?—Yes, but do you not think it will gradually die away?

3214 Perhaps. You express the opinion that to increase the circulation of the notes was a very important thing?—I think it is very important

3215 Does any way occur to you by which the popularity of the notes could be further increased?—Only what I just mentioned—that we should encash them at more places than the currency offices

3216 Is that feasible?—I think it is feasible. I think it might entail a higher coin reserve, that is the only thing

3217 Would it be possible at, say, the post offices always to encash 5-rupee notes if convenient?—Yes, I

26 June 1913]

Mr O T BARROW, c s i

[Continued]

should think it might be possible, but I am not sure, and I would rather not say exactly

3218 I am rather thinking of instructions to Government officers to do this, in order to produce the impression on the native mind more than is the case at present that the Government would like to make it easy to cash notes?—I think it might be done

3219 At any rate, more could be done than is being done?—I think something more might be done, but exactly what I should hardly like to say without examining the thing closely, as I have never thought of it, in fact, my attention had never been drawn to it until quite recently and it was not drawn to it while I was in India. We never raised the question then whether we should encash the notes anywhere except at the special towns

3220 (*Sir Ernest Cable*) With regard to the suggestion that the post office should always encash 5-rupee notes if convenient to them, that would have a good effect so far as it went, but it would also have a harmful effect if one day the post office were unable to cash them, would that not lessen confidence in the note issue?—There would be an objection to uncertainty

3221 And it certainly might be criticised?—The fact is I have really not considered these things, I have not taken them into consideration at all. It would require a good deal of consideration before we could say exactly how far we could go in the extension of encashibility. You would have to consider all the points we have just been mentioning, and it is not an easy question consequently to answer off hand

3222 (*Mr Keynes*) In your time the Government did not consider whether they were pushing the notes as much as they could?—No, they did not—at any rate, not to my knowledge

3223 Mr Gladstone spoke to you about the amount of coin kept in the sub-treasuries, and he asked you on what sort of principle you had been acting, and you answered, as I understand, that the dominating consideration was that you should avoid the constant bother of the movement of money and so forth, because that was expensive and troublesome?—It is very expensive in such a large country as India

3224 But if you are prepared to face that trouble you might be able to have rather smaller balances at the sub-treasuries without risk?—That might be so at the treasuries, but you cannot have smaller balances at the sub-treasuries, because that is where we collect our revenue, and we do not make payments from the sub-treasuries, or at least very few

3225 As long as the alternative was to move the money into the reserve treasuries and there leave it idle the consideration of the trouble and expense would be paramount, but if the money that you move was being used you could set against that trouble and expense the interest earned, I mean the amount which the Government of India could lend or invest depends on the amount in the reserve treasuries, and the amount in the reserve treasuries depends on the amount in the other treasuries being kept as low as is convenient?—I am afraid I do not quite understand that. The amount which the Government can lend depends upon the amount we get at the reserve treasuries. Are you talking now of loans from the Treasury balances?

3226 No, I am speaking of loans from the Paper Currency Reserve, your original proposal?—A loan from the Paper Currency Reserve has no connection whatever with the balance in our Treasury. The balance in the treasury is entirely independent of the currency

3227 I thought you were speaking of the paper currency offices?—No, I think Mr Gladstone was speaking of the treasuries. But I quite see what is in your mind. If we did not mind the trouble and expense of remittances, we certainly could work with a smaller balance

3228 Is the amount of rupees at the currency offices all over the country kept down to the lowest point?—Yes. We fix the total amount of rupees in our currency at a certain maximum figure at the beginning of the busy season, and work down to the

lower figure at its end, but that maximum is a maximum with reference to all the Paper Currency Reserve, and not to the reserve at one place

3229 On what principle has that maximum figure been fixed?—It has been fixed upon the experience of previous years as to the absorption and the return of rupees from circulation

3230 Has it been overhauled lately?—Yes, quite lately, I think about 1910 or 1912, I have forgotten which

3231 You do not think there is any room for economy in that way then?—In what way?

3232 You think there are as few rupees scattered about the country in Government treasuries as is possible?—Yes, I think so. I think the amount calculated is a very reasonable one

3233 (*Sir Shapurji Broacha*) When you left India you think the Treasury balances had reached the safety point of about 11 or 12 crores?—I think the minimum was calculated at about 11 crores

3234 Have you any idea now what the figure should be for the safety of the Government?—I think it should be about the same. I think we calculated a fairly liberal figure at the time. We used to work with a lower Treasury balance, it was once about 8½ crores at the height of the busy season, and we raised it to 11 crores so as to give us a liberal amount

3235 But that was four years ago?—I think it was about 1909 or 1910 we began raising it. We did not do it all at once, in one year we raised it to 10 crores, and I think in the following year to 11 crores, I have forgotten the exact dates

3236 Supposing we put it at the utmost and say 15 crores?—We never tried to work to so high a figure as that

3237 If it were 25 crores now, what would be your advice?—But we had not that amount

3238 If 25 crores were in the Government Treasury Reserve, and that is the existing figure at this date?—It should not be 25 crores, as a matter of fact, unless you entirely change the principle of how much you draw away to England

3239 That is the balance, not the fixed minimum, as it exists now actually in the Government treasuries?—Do you mean in any particular month?

3240 At the end of last year, March?—You have got to recollect that the balance at the end of March is fixed with reference to what the balance will be on the 30th November

3241 That has been done for some time now. How much do you think would be lent in time of stress or strain on the money market, about five crores?—How much of what?

3242 Of the 25 crores balance lying in the Treasury idle?—We never required a higher balance than about 18 crores in India at any time. A little over 18 crores is our maximum balance on the 31st March, and we do not ordinarily require a higher balance than that in order to have 11 crores on the 30th November

3243 Ordinarily about 12 or 13 crores will suffice?—About 12 or 13 crores will suffice for these months, November, December, and January

3244 Supposing that in January you have 20 crores, I think it would be safely lent, what do you say?—Yes, undoubtedly

3245 Our fiduciary securities are now 14 crores on a circulation of 69?—Yes

3246 That is only 20 per cent of the whole now?—That is about it

3247 Do you not think, compared with what it is in this country and in other countries, that that is a very low percentage?—Yes, I think it is unnecessarily low

3248 In fact Government cannot afford if the Treasury balances are very low, to give you any loans from the currency balance against Government paper?—They could if it stayed as at present

3249 There are only about eight centres or eight circles for encashing notes, is that so?—I do not remember the number, but it is something like that

3250 Could not the Government, with their present machinery enlarge the number of circles?—I am not sure what the advantage would be

26 June 1913]

Mr O T BARROW, C.S.I.

[Continued

3251 (Mr Gillan) But it could increase the number of offices at which notes could be encashed?—Yes, that is one of my points

3252 (Sir Shapurji Broacha) In one of the letters that has been put before us it is stated that the Government have to keep money in 200 large places and about 800 small places, so that when we are talking of a State bank which could have a number of branches, may it not be said that the Government have branches enough already if they choose to encourage the larger taking of notes by the people?—Yes, and I have just said that I think we could, perhaps, increase the number of places at which we encash the notes. Of course, we should not do so at every Treasury.

3253 Did you also say that money could be lent from the Gold Standard Reserve in time of stringency?—I said that it could not.

3254 (Sir James Begbie) I understood you to say that you thought you could not lend from the Treasury balances, because you could not count upon the Treasury balances?—That was so.

3255 Does that apply to the revenue collecting months in the early part of the year?—It might apply. You never know when a time of strain might fall on the Government. It is quite possible that we might be very short of money, and even have to stop the Secretary of State's bills. We did so, you will remember, in 1897. At that time a war occurred, and at the same time there was a famine and the war happened to be in August, but if that happened to be in January or in February, I am not at all sure, even although the revenue collection came in at that time, that we should be in a position to give money to the banks.

3256 Taking the figures over a number of years, the Treasury balances are always high, are they not?—Generally, I do not say that usually we could not give it to the banks.

3257 In the last two or three years there have been very large surpluses, do you think those surpluses could have been held in India and lent out, or do you approve of their having been brought home?—I approve of their having been brought home.

3258 You do not think they would have been more useful if lent out in India, so far as the money market was concerned?—Of course you could retain a certain amount of surplus for loaning in India, but then what are you going to do with it afterwards? Supposing you lent the surplus and did not draw it away when a favourable opportunity occurred, you would be left with it on your hands for the whole of the year except for the first two months.

3259 What would you gain by having it sent home?—By having it sent home it could be spent either in the avoidance of debt by capital expenditure, or in the reduction of debt. It is useful at home, it is no use in India.

3260 As a matter of fact it was lent out in London?—Some of it was.

3261 And it went to accumulate the cash balances?—No, I do not think that is quite right. My own idea is that a large portion of it was drawn away, and as soon as it was possible to employ it, it was employed either for capital expenditure or for the reduction of debt. Of course you cannot always employ your funds at the moment, because there are certain conditions which compel you to keep them perhaps temporarily in hand. The idea was to utilise them as early as possible, and I fancy they were utilised as early as possible. We should have been hampered in doing so if we had left them in India.

3262 I think a good deal of the balances in London were formed from the surpluses drawn from India?—Nearly all; in fact all except the few millions that they had at home.

3263 The balances rose to a pretty considerable figure?—They rose to a considerable figure, but I do not know that it could have been foreseen that they would rise to a particular figure. The Secretary of State, I think very wisely, drew away the balances as he was able to do so. In the long run he must draw

them away, in order to pay out home charges and to reduce debt.

3264 I am talking about surpluses?—And I mean that we must draw away the whole of the surpluses, we cannot leave them unutilised in India, unless you can present some alternative scheme, and I do not see any alternative scheme myself. To keep them simply in order to lend them to the banks for two months would not do away with the great inconvenience that we should experience if we, say, had some temporary debt, which we could reduce in the middle of the year at home, and we are prevented from doing so because we have not drawn away the funds. That perhaps might entail our raising more permanent debt at home which we otherwise should have avoided if we had drawn away the funds. I think it would be a very serious step to leave them in India for the purpose of lending to the banks.

3265 The surpluses might be used, might they not, to reduce taxation?—That is so, of course, they can be used to reduce taxation if you think the permanence of the surpluses is assumed.

3266 I understood you to say that you objected to lending, or that you did not approve of lending in India, because such loans might operate against the sale of Council bills, or because, at any rate, you would not get such a good rate for the sale of Council bills?—I did not say that I had a distinct opinion on the point, I said that it had been suggested, and perhaps there is some reason in it.

3267 After the Government have remitted all that they have to remit in the year, would you still consider there is any objection to lending in India? For example, in the last two or three years the Government have remitted all that they budgetted for very early in the year, perhaps by December, and then they proceeded to sell bills to bring the whole of the surpluses home, in a year like that do you not think that they might give loans in India and help the money market in India?—I think so as regards the portion which need not be remitted home. I think the reason, and the only reason, against it is the idea that if you do help the money market in India with loans, it will get into the habit of depending on the Government. I think that is the idea underlying the objection—that if you help trade, say, in one year like that you have instanced, a year in which it would be quite possible to do so, then in the next year it might not be possible, but trade would have come, after perhaps two or three years, to rely upon its being done, and it would cause trouble when it was not done. I think that is the feeling underlying the reluctance in India to lend the money.

3268 With regard to the loans from the Paper Currency Reserve, would you fix any periods for those loans?—I think that would have to be done.

3269 Would you fix any minimum rate at which they should be given?—I cannot give an opinion upon what the rate should be. It should undoubtedly be something below the bank rate of the day, but what rate I cannot say.

3270 But there would be no absolute minimum in the way of rate?—I suppose Government would not give loans unless it was absolutely necessary, that is to say, unless the bank rate showed it—unless the bank rate was at least 6 per cent to 7 per cent.

3271 I think you said that you consider gold in circulation is of no use to support exchange?—I cannot see that it is.

3272 For the support of exchange it is preferable to have gold in circulation rather than silver, because the more gold you have in circulation the less rupees you have in circulation?—Yes, that is so.

3273 So that negatively, anyhow, gold is preferable for the purpose of supporting exchange?—In that way, it is.

3274 Would you say that the experience of 1907-8 shows that there is some danger of an excess of rupee coinage?—I do not know that that is the case. I think the experience of 1907-8 is perhaps not the most severe strain that we may be subjected to. I think it would be dangerous to suppose it is the greatest we will ever be subjected to. Of course we know that we have got that enormous rupee coinage.

26 June 1913]

Mr O T BARROW, C S I

[Continued

3275 And you recognise that there is a danger attached to it?—There is, of course, a danger attached to it.

3276 You said something about alternative methods of drawing bills by the Secretary of State, is it necessary that there should be any alternative method of drawing bills?—I do not think I mentioned that, did I?

3277 I understood you to say that in the case of the Gold Standard Reserve in India, the silver branch was maintained so that it might be available?—I simply mentioned that because of the difficulty of withdrawing gold from the London market. That was my meaning at the time.

3278 You were thinking of the London market?—Yes, it was the old question of earmarking gold in the Currency Reserve.

3279 Do you think there is some disadvantage in coming gold in small pieces, and do you think it might lead to more gold being wanted for currency purposes?—I do not know that it would. I only said that as far as it did, it would increase the drain of gold and, therefore, might be regarded as an evil. I do not say, one way or the other, anything about its increasing the circulation because I do not know, and I think that it is mere guess-work.

3280 Do you think it would increase the demand for gold?—I think it would, if it increased the circulation or if the natives liked the 10 rupee piece better than they do the sovereign, otherwise I do not think it would have any effect.

3281 I cannot see how it could increase the demand for gold except through the action of the balance of trade?—In this way—at present you have got a certain amount of silver, and Indian merchandise is exchanged for foreign merchandise plus gold plus silver. Now the silver is used for three purposes—arts, hoarding, currency. If you replace any portion of that silver currency by gold, you will take more gold and less silver in payment for your products. Therefore, the use of the gold currency in India increases the drain of gold from Europe, unless you get the gold for it out of Indian hoards, which is unlikely, though there is no reason why you should not.

3282 In the case of silver you have to buy your silver, and you have to use gold to buy the silver with?—Your silver is really a matter more of what you import than of what you export. I am talking about the net imports of gold and silver, and you can leave the export of gold and silver out of account. For your merchandise you receive merchandise, gold, and silver, and part of that silver you use in coinage. As to the parts which you use in arts, and which are hoarded, there is no reason to think that the circulation of gold will alter those two parts. It alters the amount of silver in the currency because then there is more gold used and less silver, consequently, if you use more gold and less silver, you import more gold and less silver.

3283 Do you think you do so?—Why not?

3284 Do you not think the balance of trade is paid in gold and that it is Government which converts the gold into silver?—I am talking of the kind of things that are imported into India. You admit that you import merchandise, gold, and silver into India?—I say that if for any reason you increase the use of gold and decrease the use of silver in India, you will import more actual gold and you will import less actual silver.

3285 Do you mean in the currency?—In the currency or anywhere else. If you increase the hoarding of gold in comparison with silver, you will again import more gold and less silver.

3286 I am afraid I cannot follow that?—That is my argument. I may be wrong, but I think that is true. Suppose you use gold for a purpose you previously used silver for. The country naturally imports what it wants, and it will import more gold and less silver.

3287 Suppose the balance of trade is, say one million sterling, at the present time India takes say, half a million in gold and half a million in silver, that is for use as currency. How do you get that silver? Do you get it out of the balance of trade, which is half a million gold and half a million

which the Government convert into silver themselves, or do you take the total amount of the balance of trade one million, and say the total amount added to the currency is one million? Then if the habits of the people change and make them take gold instead of silver, do you say that the Government would not still take the one million of gold just as before?—I have not taken one million of gold—I have only taken half a million of gold. They have purchased with them produce half a million of gold and half a million of silver and I do not see how you can get away from the fact that they actually send goods out of the country and that they actually bring in gold plus silver, that if they want more gold than silver they will decrease the amount of silver they will bring in and increase the amount of gold they will bring in, and that that must increase the drain of gold from Europe. That is what I hold, and I think it would be the same thing if the 10 rupee piece is simply passed through the mint into hoards.

3288 I am talking about passing into currency only?—I think the same thing occurs in both cases, myself.

3289 With regard to the Gold Standard Reserve, I think you said you thought it ought to be held at home because it was wanted at home in a crisis?—Yes.

3290 As to the liability to convert rupees into gold, does not that liability fall due in India?—No.

3291 The people who want rupees send home for gold to get rupees?—Yes, but they do not want to receive the gold in India, they want to receive the gold in England.

3292 I think the liability is in India, and you have to convert the rupees in India?—Will you offer them gold in India and see what they will say? We did offer them gold in India, they did not send it home, but they asked us for gold in England.

3293 That was because you gave them the offer, was it not, if you had not had the gold in London, what would have happened?—Do you mean that they would have preferred to send the gold home themselves rather than have it here?

3294 I do not say they would have preferred that, but I say the liability to make the conversion is in India, what do you say to that?—I do not know exactly what is meant by the liability.

3295 The liability of the Government?—Theoretically it is so, but it is not so practically. We are supposed to buy back the rupees, and we are supposed to buy them back in India.

3296 (Mr Gillan) I suppose that there are really historical reasons for the present system of treasuries in India, that is to say, they grew up at the time when there was nobody else to do the business?—That is so.

3297 Do you think there is a case for reconsidering it under more modern conditions, I mean with the extension of banking facilities, does it seem very well adapted to these more modern conditions which we have now?—What do you think is not adapted? I am afraid I do not understand.

3298 I mean having an entirely different Government machinery that goes down from the Presidency towns right through the districts, with sub-treasuries, running alongside a fairly developed banking system, duplicating it more or less. I am not putting any definite scheme before you, I am merely asking whether you consider that there is a case for reconsidering the machinery of Government finance in India?—I am afraid I do not quite see the point. It is impossible to say, without knowing exactly what is in your mind, what machinery should be substituted for it.

(Mr Gillan) Some method of, we will say, joining it on to the banking system without the banks taking it over in some way.

3299 (Chairman) Would you agree that wherever the Indian Government can persuade the banks to start a branch at less than the cost of the treasury to themselves, they would be wise to pay whatever within that figure is required to induce the bank to do so?—I think that might be so. I think if we could get an

26 June 1913]

MR O T BARROW C.S.I.

[Continued

extension of banking facilities in place of a treasury it would be a good thing. It is the practical point of view that I am looking at. A bank does not work for the benefit of the public, it works to earn dividends, and if the place is such that it cannot make it pay, then they cannot go there. There are hundreds of places where they could not make it pay.

3300 (*Mr Gillan*) As a matter of fact, can you tell us on what sort of terms the Presidency banks have started new branches?—They have started them very reluctantly, and once or twice they dropped them after they had started them, because they did not pay.

3301 What sort of terms had we to give them?—I do not remember giving them any special terms, except allowing a minimum balance to rest with them.

3302 We guaranteed a minimum balance?—Yes.

3303 For a number of years?—Yes.

3304 That method obviously cannot be very largely extended, can it?—It could be extended.

3305 I mean without increasing your Government balances as a whole. If you earmark five lakhs here and five lakhs there, and if you increase the number of branches substantially, the total would mean an addition to the minimum Government balances?—Yes, it would.

3306 So that there is not very much to be done along those lines, is there?—I am afraid I have rather forgotten. At one time I did know how the matter stood, but it is four or five years since the question was dealt with.

3307 (*Chairman*) Have you ever paid a direct subsidy to any branch?—I do not think so. I do not remember doing anything except guaranteeing them a minimum balance, that was about the only inducement.

3308 You probably would be familiar with the cases where private individuals, great contractors or great companies, for instance, have found it worth while to subsidise a particular branch in order that they may have banking facilities where they are carrying on their work, no banking facilities existing there previously. You do not think that has ever been considered?—I do not think we ever have considered it. My memory is rather bad as to exactly what occurred when we were trying to press the extension of branches, which was about six or seven years ago.

3309 (*Mr Gillan*) I think the only terms offered were the guarantee?—I think that was all we did.

3310 In addition to those treasures scattered all over the country we have got these very large balances at the Presidency towns?—Yes.

3311 And as you know, we have a big business in transfers between the Presidency towns and up-country?—Yes.

3312 I want to ask you, as an official who has dealt with these things in a practical way for a long time whether you do not consider that that sort of business would be better run by experienced bank officials rather than by Government officers?—Yes, I do think so.

3313 Now how about the loans in India, you said. I think in answer to Sir James Begbie, that there was, as a matter of fact, a surplus balance available over and above the minimum working balance in the latter part of the busy season, that is, from January to March we will say?—There usually is, I think.

3314 Your chief objection to lending it out is that it cannot always be depended on?—That is so.

3315 That is to say, there would be years in which there might be no surplus?—I agree.

3316 At the same time that is a surplus which we are bound to have temporarily in India in a good year?—Yes.

3317 Because we are aiming at finishing the financial year, as you said, with a balance of about 18 crores?—That is so.

3318 Does that not mean that that is liable to be drawn off by Council bills?—May I say that finishing the financial year with a balance of 18 crores is of no importance except for one purpose, and that is, so as to be sure on the 30th November of having a balance of 11 crores, otherwise the 18 crores balance is very much higher than what we can work with on the 31st March.

3319 That I quite understand, but as a matter of fact, in order to secure an economical balance at the end of November we did always budget for a closing balance of somewhere in the neighbourhood of 18 crores?—Yes, always.

3320 From January onwards you have a certain amount over and above the minimum working balance?—Yes, we do.

3321 It would be a temporary advantage to the Government to lend that out?—Yes.

3322 It would be making interest?—It would.

3323 And in the years in which they could so lend money from this Treasury balance it would be an advantage to lend it, would it not?—Yes.

3324 Do you not think those two advantages are at any rate to be taken against a possible disadvantage in some year in which Government could not afford to do it?—I think so. I do not hold any very strong opinion against lending the Treasury balances to trade. I say that there are objections to it and I mention the objections, but I do not personally hold a very strong opinion at all against doing it.

3325 But you recommend lending from the currency reserve?—Where it can be done.

3326 Still, that does not exclude this question of lending temporarily from the Treasury balance?—No, it does not.

3327 The two things are not in conflict really?—No, not at all. I merely mentioned the currency policy as one that might be followed if the Treasury policy were entirely rejected.

3328 Several questions have been put to you to-day about the extension of facilities for the encashment of notes, and I think you said in answer to Mr Keynes that that question has not really been considered by the Government of India?—It was not in my time.

3329 When the question of the universalisation of notes was under consideration, the main difficulty always considered was the difficulty that might arise from the use of notes in remittances, was it not?—Yes, that was the main difficulty.

3330 Government was afraid, in fact, of being flooded at some particular currency office by an enormous number of notes collected elsewhere and of not being able to cash them?—Not only that it was afraid it might be necessary to move cash in order to do that.

3331 Do you happen to know as a matter of experience, since universalisation was carried out, whether that difficulty has arisen or not?—I do not know. You must remember that universalisation only preceded my departure from India by a very short time, and there really had not been sufficient time to gain experience of it when I left India.

3332 The reason I am asking you about that is this. We were talking about the extension of offices at which notes could be encashed, probably the difficulty that was in your mind is precisely this remittance difficulty, is it not?—Yes, it is.

3333 If the experience of universalisation of notes had shown, or has shown, that that difficulty has not in point of fact, arisen, would it affect your view of this question of increasing the number of offices?—Not quite. The two things are on rather a different footing. The universalisation of notes merely meant that they could be encashed at the head currency offices. As you know, we keep very large amounts of coin ordinarily at the currency offices, but we do not do so in the case of the treasuries. We have never been in the habit of doing so, and to do so we would have to increase the coin reserves.

3334 The distances between the different currency offices at present are very large, are they not?—Yes.

3335 In order to protect ourselves against the excessive use of notes in remittances we arranged when they were universalised to give transfers?—Yes, we did.

3336 At a nominal rate?—Yes.

3337 Do you agree that that is a safeguard?—Yes.

3338 And it is a safeguard that would not apply to any great extent between two adjacent places?—It probably would not.

26 June 1913]

Mr O T BARROW, C S I

[Continued

3339 Do you not think the possibility of a political crisis is a possibility which, in the circumstances of India, has got to be very seriously considered?—It has

3340 Would that affect your view as to the extent to which it is desirable to carry the fiduciary portion?—Do you mean the extent of the investment?

3341 Yes?—If the reserve is safely invested, if the investment is in securities which are easily realisable in England, for instance, would it affect it seriously? Are they not nearly as good as gold?

3342 Is not this necessity of encashment one which conceivably might come on Government very rapidly? If at any time the stability of the Government were threatened in any way, might there not be an absolute rush to get the Government notes encashed?—Of course there might, it is possible

3343 What I want to bring out is that it is not merely a seasonal need that would have to be provided against, but also the effect of some such circumstance as I have put to you?—I quite understand that

The witness withdrew

At the India Office, Whitehall, S.W.

NINTH DAY.

Friday, June 27, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURI BURJORJI BROACHA

Sir JAMES BEGGIE  
Mr ROBERT WOODBURN GILLAN, C S I  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (*Secretary*)

Mr ALFRED CLAYTON COLE called and examined

3344 (*Chairman*) You were till quite recently, the Governor of the Bank of England?—Yes I gave up that office in April last

3345 I think you appear here to-day as representing the bank?—Yes I should like to say that the governor of the bank was asked to nominate someone to represent the bank I wish the Commission clearly to understand that the bank is only too willing, indeed is desirous, to help the Committee in any way that it can, but when I was asked to write what you may call a piece of evidence, we wrote back to your secretary that while the bank is perfectly willing to answer any questions to the best of its ability, as we are the bankers of the Indian Government we do not wish in any way whatever to appear here as then critics

3346 I think the Commission quite understand the position and we are very much obliged to you for coming?—I will endeavour to answer, as far as I can any questions that are put, but if there should be questions to which you should desire what I will call a considered answer from the bank of course I must ask for them to be submitted in writing, and then I will consult the bank I represent the bank but it is difficult always to represent the opinions of 26 people As far as concerns those questions which turn on the points in the paper that was handed to me by your secretary, I think I can probably give you what is the opinion of the bank Any other questions that may arise, you will quite understand, may require a little consideration, and I may ask you to let me give the answers possibly later on on behalf of the bank

3347 We quite understand that The first question I want to ask you is a general question which, I think, lies at the root of a good many of the subjects we are inquiring into Can you tell me in outline what are the relations between the Indian and the London money markets?—My reply to that question would be that there are no direct relations between the London and Indian money markets The discount rate in London affects the exchange rates, and any gold demand for India hardens the discount rate in London,

that is to say, there may be a considerable indirect effect. If you ask, are there direct relations between the Indian and the London money markets, personally my answer would be in the negative That is a question which you may better address to the Anglo Indian banks, no doubt many of whom you will have before you

3348 Do you regard the present system, by which a Government department through the Secretary of State lends money to the London money market, as open to objection in principle?—Yes, I do, that is to say, I think it is objectionable to have large sums of money raised in London which are, so to speak, not in any sense required for English trade The loans in the market of the Indian Government are very large I had the figures taken out the other day at the bank, and I find that the amount they are lending now through their broker is approximately 11 millions That is money which, in the London money market, you can hardly describe as good money, because it is liable to be withdrawn for reasons which have nothing to do with what I call the London market The India Office lend the money at the best rate they can get quite independent of what I call the considerations affecting the London market proper, therefore, that money may be lent and is at times lent in a way which is disadvantageous certainly to the Bank of England, which has to look after the gold reserve of this country

3349 Will you develop that a little, in what way is it disadvantageous?—The India loans are made by the broker, and he lends, as I said at the best rate he can get, and that rate at times is, I should say, below what it is desirable in the interests of maintaining the discount rate in London that it should be lent at We had a case quite recently in which the India Office was lending money at rates which to us at the bank looked to be too low You have, therefore, a big lender lending money which is at call, and at times—I do not say it often happens but it does at times—acting quite against the central institution which is responsible for the maintenance of rates As you will well understand, if the discount market get cheap money they will put down the rate of bills

27 June 1913]

MR ALFRED CLAYTON COLE

[Continued

3350 Your criticism is that it weakens the control of the Bank of England over the money market?—At times it undoubtedly does

3351 And that that control is the only buttress for the gold reserve of England?—Quite correct, therefore it may be, and it does at times—not often though—work against what we consider the interests of this country

3352 In so working against English interests—you will understand what I mean by that phrase—do you think that it incidentally is disadvantageous to India, or is the profit all on the side of India and the loss all on the side of England?—That depends upon how the money is raised. If you raise the money by bills and the Indian Government has had out some five millions of bills, I should think that it was paying a higher rate for the discount of those bills than it was getting for its money. If that balance is accumulated here merely out of Council drawings I am not able to say whether the rate that they get for their money is or is not higher than what they paid for it. That is a question which the India Office can answer and not myself

3353 To the extent to which the money is raised through the sale of Council bills and telegraphic transfers, is it correct to describe it, as I think you did, as money raised in London? Is it not merely the payment by London of a debt through the Secretary of State instead of a payment by London direct to India?—Probably that is the case. Undoubtedly payment of the drafts has to be made in India and in that sense it, of course, is money raised in India and not in this country

3354 The alternative to the sale of those bills and drafts would be the shipment of gold to India, would it not?—It might be so. It does not necessarily follow that the gold would be shipped from this country, but that might be the result

3355 Do you mean that it might be a shipment of Australian or Cape gold?—Yes. London is the financial clearing house, and it does not necessarily follow that it would have to come from here. In these days of telegraphic transfers there is a good deal of business done from Australia to India, and that takes the place of a shipment from here

3356 When you get to the bottom of it, though it may pass through intermediate stages, is it not in truth and in essence the payment of a trade debt owing by London to India?—Owing by somebody to India

3357 Where the money so raised is represented by Indian Treasury bills, am I right in thinking that those would be raised in anticipation of the Secretary of State's capital requirements?—I know nothing of that. I cannot give you any opinion as to what the Secretary of State's requirements are

3358 You only know that they are raised?—I only know that

3359 Were you referring just now to the loan made in 1908 or some more recent transaction?—I was referring to India bills which were in the market for a considerable time, I do not know what they were raised for, but they were raised, and I should have said they might have been paid off earlier than they were paid off. The bills I refer to were paid off about last year or the year before

3360 I think those were raised in the famine year of 1907-8. Has this system of loans on the London market any effect upon the success or otherwise of Indian loans raised in England?—The system of lending money in London does not damage Indian credit. A man who has any funds and who wants to borrow is in a better position than a man who is bound to borrow

3361 In making these loans against approved security, the Indian Government has been accustomed to advance on the face value of its own securities, on the market value of the best British Government securities, and at 5 per cent. below market value on the next class of securities—all, of course, being a very high class of securities. It has been represented to us that this preference given to their own securities is on the whole desirable as tending to help them to

place their loans at good rates, do you agree with that view?—I agree with the view that it assists those loans, decidedly. In the market, so to speak, looked at from the Bank of England point of view, it makes those stocks into a kind of what are called "floaters"

3362 Of course, *prima facie* it strikes one as curious that they should take an Indian security at its face value even though its market value be below it, and that they should take a British Government security only at its market value. Would you advise the continuance of that practice for the reason you have just given?—I was not aware that it was done

3363 These are the details: "India debentures, India bonds, and guaranteed debentures of the several Indian railway companies, are taken at their par value. Treasury bills, Exchequer bills, Exchequer bonds, India sterling bills, Metropolitan Water Board bills, and London County bills are accepted at their market value, instead of their nominal amount" (see Appendix XI, paragraph 5, page 310), and then India  $3\frac{1}{2}$  per cent., Metropolitan Consolidated Stocks, Corporation of London debentures, and the bonds or bills of Colonial governments and others are accepted at 5 per cent. below their market value?—I should say that to take a security at par value when it may be 10 per cent. below par is bad finance. Personally, this is the first time I have ever known such a thing was done

3364 (Lord Faber) It is not as much as 10 per cent., but the principle is the same—more is lent on it than it is worth?—That is bad business then

3365 (Chairman) It was represented by a witness to whom we put that question, that as the Government of India was both a borrower and a lender, on balancing its two interests, it was worth while to take this risk as a lender for the extra advantage which the Indian Government got as a borrower, do you think that is sound?—No, I do not. I see they have put in Colonial Government securities. We, at the Bank, have never accepted Colonial Government securities as floaters, and I imagine that those Colonial Government securities have only been put in because the India Office broker finds a difficulty in obtaining sufficient other securities. In so far as the Indian Government are taking those Colonial securities, they are departing from the principle that we have always held at the bank, that those floaters should be confined principally, though not entirely, to British Government securities. Therefore, in that respect I should say the India Office in this action are working against the interests of the British Government

3366 Do you include the large British municipalities with a population of over 500,000, whose stock is put here in the same class as the stock of Colonial governments?—Do you mean at the Bank of England?

3367 Yes?—We only include municipal stocks when they are denuded at the Bank of England

3368 Has India, in your opinion, borrowed too much of late?—Our answer to that question is this: India has probably not borrowed too much, but the fact that it is known that she will continue to borrow annually does naturally tend to keep down the quotations for her loans. I would like to add that if India at any time requires money on a large scale, she would probably have to issue a loan with a fixed date for redemption

3369 Can you give me some indication of what you mean by a large scale? I can see that it must be an elastic figure?—I mean if she came in and asked for 25 to 30 millions. The big investment world now, which includes the bankers, and so on, are undoubtedly giving a preference to loans with a fixed date for redemption

3370 That would apply, therefore, to other borrowers as well as to India?—Undoubtedly. I would go so far as to say that, if this country, unfortunately, were at war, and we wanted a large sum of money, I think you would have to alter the system of borrowing by this country

3371 Has the credit of India declined relatively to that of other borrowers?—I think not, if you compare the quotations for her loans with other trustee investments which have no fixed date for redemption. All the Colonial loans have a fixed date for redemption

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued

and from some figures that I had taken out, because I thought you would ask this question, it seemed to me that Indian securities had gone down more than Colonial securities, and I think that is the reason of it. If you compare the decline of Indian Government securities which have no fixed date for redemption with other trustee securities of a similar class, that is to say, where there is no fixed date for redemption, but which have gone down, I do not think the result will be found adverse to India. But I should think you have already had that question answered.

3372 May I return for a moment to what you were saying about the Indian money loaned out on the London money market, and to the inconvenience of the practice in certain respects? Would what you have said about this Indian money apply equally to any foreign money that happened to be on the market Japanese money for instance?—To any money which is of such an amount that the withdrawal of it without notice would be of importance to the London money market.

3373 Foreign government money on the London money market, if of sufficient amount, therefore would be entirely open to the same objection?—Yes.

3374 Have you anything to say as to the relations which prevail between the India Office and the Bank of England?—The relations between the India Office and the Bank of England have always been most cordial and friendly, and the bank has always endeavoured to assist the India Office as far as possible. Last year, however, as the members of the Commission are doubtless aware, a difference arose between the Bank of England and the India Office over the question of the purchases of silver.

3375 Have you anything to say about that?—No. The details of the differences are public property.

3376 It has been suggested that the Government of India might avoid some of the difficulties they have experienced in the past if they purchased silver fairly regularly, that is to say, if, instead of waiting until their demand is a very large one, they purchased year in and year out a certain more or less average amount of silver. Have you any observations to make on that?—I think they know perfectly well that they will require silver, and therefore I think, having regard to what I call the ordinary prudence of merchants, they should not wait until they are put into the hole.

3377 Have you looked at the figures of the circulation of silver coin in India? I ask because our attention has been drawn to the fact that they vary very much in particular years, and that the amounts required as between two succeeding years have varied as much as 20 millions sterling?—I have not. I only know roughly that there is a demand for silver in India dependent very largely upon the monsoon, and of course the Indian Government cannot control the monsoon.

3378 It has been objected by some of the witnesses to any proposals for buying silver regularly, that the result would be that they would be in the slack years altogether overloaded with silver?—That is a thing on which I have no opinion. That is a matter which the Indian people must settle. We at the bank could not possibly have an opinion on that, because we know nothing about it.

3379 To turn to quite another subject, I think you know that there have been suggestions for the creation of a State bank in India, have you formed any general view on such a proposal?—I think the question there rather is, what do you mean by a State bank? Do you mean a central bank or do you mean what I call an official State bank?

3380 Let us take both alternatives in turn. Suppose it meant merely a central bank?—On that point I should say the opinions of the bank differ. I think, as the Commission are aware, one of our directors is a strong advocate for the founding of a central bank in India.

3381 Is that Sir Edward Hambro?—Yes, that central bank to be with or without a branch in London. The position of other directors is that while not directly opposed to the foundation of a central bank, they are willing to leave matters as they are, as they

see no necessity for a central bank. On that particular point you will not get unanimity of opinion among 26 people.

3382 If it meant a State bank in the strict sense of the term, what would be your opinion then?—A State bank in the strict sense of the term would probably be what you have got now, that is to say, you would have a department of the State in which the State would be the shareholder, and that would run the finances of India much as it does now. The whole object of a central bank would be, to my mind, to take the practical financial control out of the hands of the Government and make that bank the Bank of India instead of what is the position now. I think all the evidence, so far as I am aware, makes out that the Government are the principal bankers in India.

3383 I conceive that the object of a State bank would be to discharge the Government from its present liability for managing exchange on the sale of Council bills and transfers, and for the management of the currency?—I can see that a central bank which is going to take the control out of the hands of the Government might be a very desirable thing, but at the same time I do not quite understand how in India which is a continent and not a country like this is a country, you are going to have a Bank so established that it may make a good return upon its capital. This is a question which has been before the Indian world ever since the Fowler Committee, and as I gather, the opinion over there is that the time is not yet ripe for it, but without my knowing the view on the other side I personally am not prepared to give what I call a decided opinion upon it. To argue from India to England is arguing upon two things which are not quite alike. Here in England we have got a central bank which performs functions which it seems to me could not be performed by a central bank domiciled in one of the Presidency towns, Calcutta, Bombay or Madras, where it would be the main bank. As I say that is a point upon which, as I have no Indian knowledge whatsoever and have never been there, I am not prepared to formulate a very definite opinion.

3384 On the whole I gather you think the currency business and the exchange business is done very well by the Indian Government at the present time?—I have no criticism to make on the subject.

3385 Do you think it would be likely to be better done, and to be less open to criticism if it were not in the hands of Government officials whose special training for the purpose must necessarily be somewhat limited, and if it were placed instead in the hands of banking experts?—If you could get them I think probably it would be better run, but, as I say, I have no definite knowledge. The people who have been out in India tell me there is a practical difficulty of getting a sufficient permanent body of competent men to run a bank, entirely apart from what I would call Government interference, but upon that point, as I say I have never been to India, and I cannot give you a definite opinion. In theory I think everybody would say it is better that the banking business should be done apart from the Government, but when you talk of a bank, you have got to get the capital for it, you have got to get your shareholders, and you have got to get your board of management, and I am not prepared to say, one way or the other, that that is possible in India at the present moment.

3386 Suppose such a central bank were established as you have been speaking of. How much Government control over such a bank would be necessary or desirable?—I think the answer should be the less the better.

3387 Is that possibly a reflection of English circumstances on Indian conditions?—Possibly, but that would be my answer to that question.

3388 As regards the establishment of a gold mint in India, have you formed any views on that subject?—I am not personally opposed to a mint coming gold in India, but so long as sovereigns are taken for the currency, local minting seems unnecessary. As regards a mint, if India is going to use coins minted here, she ought to pay for what I call keeping them up to proper value, that is to say, any loss on those coins

27 June 1913]

MR. ALFRED CLAYTON COLE

[Continued]

should not fall on this country, but should fall on the country where the wear and tear takes place.

3389 Suppose that mints were established in India, do you think that much gold would be taken there to be coined?—I imagine they would coin the gold they produce.

3390 Sometimes the gold mines there are under contract to send all their gold to this country for a period?—Then gold, I think, still comes to this country, but I imagine the ultimate result would be that they would coin their own gold.

3391 Do you think a mint in Bombay, for instance would attract South African gold?—If India wanted gold for its coinage, yes. I should say South Africa is nearer to India than it is to London, slightly.

3392 I gather from you that your view is that the mint would not have any effect on the coinage, but the coinage would have an effect on the mint?—A mint, *quâ* mint, cannot increase the circulation of gold except very temporarily. It might very temporarily increase it in this sense, that it might supply a deficiency of coin if it could turn out that coin more quickly than it could get it, say, from this country, but *quâ* mint, a mint cannot increase or decrease the circulation of gold.

3393 Supposing that Indian opinion were in favour of the opening of a mint, have you strong views, either way, as to whether they should coin sovereigns or rupees?—Personally I think they had far better coin sovereigns.

3394 That, of course, would make the establishment of a mint in India a more costly experiment, owing to the control required by our Treasury?—That I know nothing about.

3395 Perhaps you would agree with other witnesses who have been before us, that after all, what the currency medium is to be must depend upon the demand of the people of India, and the Government must supply whatever the people ask for?—Yes, I imagine so.

3396 But in so far as Government can influence the circulation of one form of currency rather than another, do you see any advantage in increasing the amount of gold in circulation?—The increase of gold in circulation has this advantage, that in case of the balance of trade being against India, if a large amount of gold is in circulation, that gold can be exported.

3397 Do you think the gold that is in circulation is of much value for the support of exchange in a time of crisis?—I should say so, undoubtedly.

3398 You think it comes out, do you?—That is my impression. As I say, I have no knowledge of Indian conditions over there, but if you have got gold in the country, and the people are impoverished and that gold returns from circulation, then undoubtedly from the Indian point of view of maintaining exchange that gold is far more useful than rupees which have to be melted and sold at bullion value.

3399 The point, of course, is whether, having gone into the pockets of the people it will come out at the time you want it?—That is a question which you must put to an Indian, not to me.

3400 We have had it in evidence, I think, that in 1907-8 about  $\frac{1}{4}$  millions of gold was issued, and that of that only a quarter of a million was exported and went to the support of exchange?—That would be about a sixteenth of the whole. If you had 16 millions in circulation, then you would have a million on that basis for export.

(Mr. Gilman.) I think it was a sixteenth of the issue of that year, not of the whole.

3401 That is rather a costly load to carry for such small results, is it not?—But you have got to have something in circulation. You will not get the profit on the silver, I admit.

3402 A paper currency would be much less costly than that?—Yes.

3403 (Chairman.) I come now to the Gold Standard Reserve. I think you know generally, in fact I am sure you know, what the position is. Do you approve of the way in which it is now held, or should, in your opinion more of it be held in India?—I should say I have a very decided opinion upon that point, and it is

this. Up to last year I believe no gold was held in India in the Gold Standard Reserve, but the Gold Standard Reserve was entirely invested in securities. You ask whether it should be held in India or in this country, so far as any gold in the Gold Standard Reserve is to be used for maintaining exchange, it should be held in this country and not in India.

3404 Will you give me your reason?—Because for the purposes of exchange, bills, as they were in 1907-8, would have to be drawn upon London, and if the gold is not here it will have to be sent from India to meet those drafts. It is far better and simpler to have the gold here, and not to have to send it at the time when you are drawing drafts.

3405 Do you object to holding any portion of the gold reserve in securities?—No, provided you start with holding gold. That, I believe, has been recognised now. I understand that—I believe it was only last year—the Indian Government have decided to hold five millions of gold in the Gold Standard Reserve. Last night—I had the figure taken out at the bank—they had 1,730,000 in the Gold Standard Reserve, therefore they have made a beginning. That sum, I understand, they are going to make, under their present arrangements, up to five millions. The original intention of the Gold Standard Reserve, I believe, was that the whole of it should be held in gold. That I do not think is necessary when you get beyond a certain amount. The question is what amount is desirable—whether the five millions, that is the proposition—is sufficient. Personally, I should say that the five millions would not be sufficient, and that it ought to be 10 millions, unless the Indian Government clearly see their way in an emergency to use the gold that they hold in the currency reserve. They have got in their currency reserve to day 6,100,000 here, and provided they can see their way to make use of that gold there is no object, and never is any object in banking business, in sitting upon a mass of unnecessary gold.

3406 When you say that they must see their way to make use of that gold, do you mean that in case of crisis they should ship it at once from India?—They have got that here, we have got 6,100,000 of it in the bank. What I am looking at is this. In 1908, when trade was adverse to India, the Indian Government had to sell out something over seven millions of their Gold Standard Reserve securities—you have got the figure, it was over 7½ millions, I think—and a similar contingency must be provided against in fixing the amount of gold they would hold here, because you will probably come on it later. If the storm centre of financial difficulty, which fortunately in that year was in New York, had been in England, the Indian Government might not have been able to sell their sterling securities at all. Of course, they could have sold them at a price—I mean, a give away price. That holding merely of sterling securities is not only a danger to the Indian currency position but to this market also. Fortunately in 1908 the storm centre was not in London and the difficulty was got over, but when the Government is making its regulations for its currency they ought to be made in such a way, to my mind, that they provide for all eventualities, and in that respect India should bear its own burden and not throw that burden upon the London market.

3407 Do I understand your view to be that in one form or another India ought to have in actual gold the largest sum which you conceive she may need in a bad year?—That is practically so. I think beyond that it is quite reasonable she should invest her Gold Standard funds. They cost nothing, they are pure profit out of the silver and they have never cost India a fraction. But provided that what I call a reasonable sum is held—and as this Gold Standard costs her nothing it ought not to be what I call out too fine—provided she holds a sufficient sum, I think the rest can reasonably be invested in securities. But I tell you from my point of view or at least the bank's point of view, that gold should be held in this country and not in India.

3408. You, I think, put the sum which you consider would be required for the purpose, or which it would

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued

be reasonable to have for the purpose, at something like 10 millions or 11 millions?—I am looking at what happened in 1908, when something between seven and 10 millions was required—I do not know exactly what it was, but it is known to the Commission India, to my mind, ought to hold definitely in gold a sufficient sum to meet such a contingency in the future

3409 Do you think that is quite sufficient? You say that at that time New York was the storm centre, the storm was very severe there, and the crisis was very widespread. It was coincident with a famine in India, but that was, I think, by no means the worst of the famines that India has experienced. Suppose that that financial disturbance in New York and the rest of the world had coincided with a very bad famine in India, or with a period of war in India, would it be safe to take as the measure of her possible requirements what she actually needed in 1908?—No. I guarded myself against saying that that amount was specific. I said she had got to provide for what I call any probable contingency.

3410 As regards the remainder, have you anything to say as to the class of securities in which it might be invested? Would you confine it to short dated securities, or would you allow them to take, as they did at one time, consols?—They would prefer undoubtedly to take short dated securities—I think I mentioned that before—because the depreciation on those is very small. Therefore, from the point of view of not having any loss on securities, undoubtedly they had better take securities with a due date, but I should not what I call definitely preclude them from taking other securities, such as their own, they have got their own which have not got a due date, and I do not know that you should rule them out.

3411 You put it very fairly, I think, that India ought to be prepared to save herself in a time of crisis, and not rest her weight on us. If all this gold is held on Indian account in England, is it held in London in addition to the gold that would otherwise be here?—Absolutely.

3412 And it is not taken into account in any market calculations here?—Not at all. It never appears in the Bank of England accounts as published, and it is quite incorrect to say that the market here takes it into any account at all. In dealing with this question there is one point I would mention, it is only a matter of detail, but I think as I am talking about the Gold Standard Reserve I should mention it. It is merely a question of the form of accounts, which I raised in 1909. In the Gold Standard Reserve the Indian Government put in their statement "Cash placed by the Secretary of State for India in Council at short notice." I have objected, and strongly objected, to that, it is a contradiction in terms to state that you have cash at short notice. Cash ought to mean coin, bullion, or bank notes. While I have never thought it makes very much difference in the accounts, say, of English banks, I raised the objection because I do not think a Government department ought to use words loosely, and the one thing about money on short notice is that it is not cash. I see they go on in the same way, but I call attention to it because I think it is wrong, and I do not think Government ought to use a wrong word in that sense. I have told them it is not cash, and, as a fact, there have been times when the India Council called for the money, and they could not get it, there fore it cannot be cash.

3413 One of the witnesses who has appeared before us seemed to think that securities, short dated securities especially, were just as good for the purposes of this reserve as gold, and he presented an argument that what was needed in a time of crisis was not actual gold but what you call bankers' money, and that these securities fulfilled that purpose quite as well as gold. I gather that is not your view?—Certainly not—not in a time of crisis.

3414 Their realisability in a time of crisis rests on what, ultimately? Does it rest on the gold reserve of this country?—I should say it rested on the power of the Bank of England to advance money to buyers to pay for the securities.

3415 Therefore, in the last resort, on the gold reserve of the Bank of England?—Undoubtedly.

3416 Your argument I think is, as I put it just now, that in a time of crisis you do not claim that India should support the London market, but that it should not be an additional drain upon it, and should carry its own burden?—It should carry its own burden.

3417 I want to ask you a couple of questions about the paper currency system of India. Do you think it would be an advantage if some steps were taken to give it greater elasticity?—Not having any practical knowledge of Indian finance, that is a difficult question for me to answer. I do not quite understand the expression "to take steps to give it greater elasticity."

3418 The conditions under which notes can be issued are at present very strictly limited, would you allow the fiduciary portion of the issue to be extended by the Government of India under any circumstances or conditions?—That is a question which it is a little difficult for me to answer in this respect, that I do not know how far or how near India is getting towards a cheque system. As regards the fiduciary issue, provided you have got the fiduciary issue below an amount which can never go back to the Treasury, there is no objection to that fiduciary issue. The Act of 1844 fixed the fiduciary issue in this country at 14 millions. That has nothing whatever to do, as many people suppose, with the Government debt, or anything of that sort, it is simply an amount below which it was thought that the issue would not come back to the central institution, and that has proved to be correct. Owing to the cheque system which of course has been an admirable thing for this country and a most admirable thing for all finance, the note issue of the Bank of England to day instead of increasing is rather inclined to go back, it has practically remained stationary for the last four or five years. When you are dealing with India, which is, in a sense, from a banking point of view an entirely new country, it must not be lost sight of that the introduction of a cheque system in India would probably materially reduce the note circulation, which has undoubtedly increased and is increasing. I took out the figures of the note circulation the other day, and as far as I could see, the active note circulation has more than doubled in the last 20 years. Therefore from that point of view you can see that you can safely give the Government increased fiduciary issue powers. But while I say that, if you are going to have a development of banking and if you are going to have a cheque system introduced into India, you cannot then count upon an increase of the note issue in the future as you have done in the past. That, however, is a practical question on which you must ask those who know India, not me. I have been told—and I am only telling you what I have been told—that banking and cheques are increasing in India. I think it would be incorrect to have the fiduciary issue in India increased in a way that might ultimately lead to possible trouble. Of course when you are dealing with India, if it be found in the future that the fiduciary system should be reduced, well, you can reduce it. At the present moment I believe the active issue in India is about 44 crores and the fiduciary issue is 14 crores—roughly a third. If you are going to get the note issue up to 60 crores, then you can say that that fiduciary issue might be increased to 20 crores, provided it is recognised that if the issue goes down, steps should be taken to carry out the principle of reducing the fiduciary issue strictly, because you do not want to have the slightest doubt upon your note issue. Here in this country if it had not been for cheques probably the note issue of this country would have been as big as it is in France.

3419 If it had that effect could you maintain the conditions of the Bank Act? Suppose cheques had not come in to give, as it were, this aid to your fiduciary issue, would you not have had to increase the fiduciary issue?—I do not think so. Why should you? Over the course of, roughly, 70 years that have passed since 1844 this country would have got all the gold it wanted for its notes and there would have

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued

been no reason for increasing the fiduciary issue. You could not get a big issue of notes against gold in this country, or any country, suddenly, but you can do so gradually. Over the 70 years you would have had gold accumulating in this country—35 millions or 40 millions up to 120 millions or 130 millions—just in the same way as they have in France.

3420 (*Lord Faber*) I gather that the India Office broker sometimes appears to lend money below the market, could you say at all why he does that?—I do not think that he lends it below the market, but he always lends it below the bank rate. He gets, no doubt, the best rate he can, but practically I should say he always, as far as I know from the accounts, lends it, and therefore he has got to take the best rate he can get.

3421 Then it is really that the market know that he has got to lend the money out and will take what they offer him?—That is about it.

3422 If he held off the market and screwed it up two or three times and they did not know whether he was going to lend it or not, would that not help him in the long run to get a better average?—It probably would. If he would not lend below certain rates he would lose temporarily, but in the long run probably he would be recouped.

3423 I think the broker rather gave us to understand that he had a difficulty in lending on the special security which the Indian Government ask for, and that it was rather a tie that the Indian Government demands that security?—That is merely because the amount that he has got to lend being so large the security is not there against it. He would have no difficulty whatever if instead of lending 11 millions he was lending five millions, there would be no difficulty about the security then. It is only because he has got such big sums to lend that there is a difficulty.

3424 There is one rather important question. If India lends money on deposit to the big London banks, do you think it would be unreasonable for India to ask for security?—No.

3425 I suppose that all banks, even the best of them, at times do have to come to the Bank of England to borrow money temporarily, and then the Bank of England gets security from them?—Yes, should a bank borrow.

3426 As regards a central bank for India, I gathered from what you said that you thought the country was perhaps too vast for a central bank to do much good?—I do not say that. I say it is not a question that I can answer as I have no practical experience. What I felt was that you cannot argue from a small country like England, or, we will say, a country like France, and say that what suits that necessarily will suit India. I will not go beyond that, because I have not got the knowledge to form an opinion.

3427 (*Sir Robert Chalmers*) You spoke about the Indian balances, or loans, as not being, if I caught your word rightly, good money. You meant, did you not, that it is used for purposes which are rather outside those of the London money market?—It is entirely outside what I call the ordinary English trade requirements. Indian money is no different to Japanese money, or any other money, but it has what I call nothing to do with British trade. It is a thing which is entirely outside.

3428 Then you raised the point that at times it tended to be lent cheap, and that was raised also by Lord Faber's question recently. Therefore, you concluded that those balances being in London tended to be detrimental to the Bank of England rather than beneficial?—That they have been loaned out in this way in London undoubtedly is so, but only at times, in the ordinary course of business they do not make any difference one way or the other.

3429 You do not agree then at all with the criticism which is advanced in some quarters that the use and location of those balances in London is a boon to London and a boon in proportion to the size of the balances?—It might be held that it is a boon to the

trader by lowering the rates of discount, but it is not a boon from the Bank of England's point of view of maintaining the gold reserve of the country.

3430 Which would mean the ultimate financial condition of the whole Empire?—We, rightly or wrongly, have taken upon ourselves the duty of maintaining a gold reserve in this country, and anything which conflicts with the action which we consider necessary at times—and it is necessary at times to stiffen rates to maintain that reserve or to increase that reserve—necessarily conflicts with the bank. I do not mean to say that it always conflicts with the bank, but it does at times.

3431 Take the case of the Gold Standard Reserve you said that that should be kept in London?—I said such portion of that Gold Standard Reserve as is accumulated for the purpose of maintaining the exchange. I believe the Gold Standard Reserve is used for other purposes—at least, it has been, but that is its main object. In so far as that is accumulated for exchange, that gold should be held in London rather than in India, because you would have to send it over to London if it is going to be used, and therefore you may just as well hold it here.

3432 Do you take that view having regard to the interests of India, and without any reference to the possibilities of its being of any use to the London market?—Absolutely.

3433 You are looking exclusively to India?—I am looking at it exclusively from the Indian point of view.

3434 You went further, I think, and said, as regards that amount of the Gold Standard Reserve which is held in securities, it might be a distinct menace to the London money market?—If those securities had to be realised in a crisis.

3435 Whereas any gold here would be earmarked, and would not be a danger, because it would be outside the metallic reserve which is maintained by the Bank of England?—It would be absolutely outside that.

3436 As regards the coinage of gold in India, there would be no coinage in India if there were a coinage charge imposed in India, is that not so?—I do not know.

3437 I am asking you for your opinion. If you can get gold minted free in London, would you get it sent to the Indian mints if there was a coinage charge?—Not if the coinage charge exceeded the amount which you have got to pay for freight and the other charges to get that gold out there.

3438 Now, as to the currency notes and the fiduciary portion of the fund in India. The conditions of the issue department of the Bank of England restrict the bank to investment in certain very clearly defined securities, I believe—I am simply giving the Bank of England as a comparison?—Are you referring to the fiduciary portion of the Bank of England?

3439 Yes?—I believe that there are no restrictions as regards what we should invest in for our fiduciary issue.

3440 As regards the form of security that you put your money in, are you not limited?—There is nothing in the Act which restricts the bank. We have always invested in British Government securities, or securities guaranteed by the British Government, but I think I am correct in saying that the bank has done that because they thought it was a right thing for them to do, and that they are not restricted by law from any investment. You are raising the question of what I call the strict legal power, are you not?

3441 Yes?—I would not like to give an absolute opinion without referring, but my impression is that there are no restrictions.

3442 Has the bank, so far as you are aware, ever contemplated investing part of the money belonging to the fiduciary portion in such things as trade bills or in advances to bankers?—No.

3443 It has never been contemplated?—Never. The profit on the fiduciary issue, as you are aware, goes to the country and it does not go to the bank.

3444 So you have never contemplated it?—Never—we should not dream of it.

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued

3445 A proposition was made before the Commission that in India a portion of the fiduciary investment should be in the form of advances to banks for short terms, are you prepared to express any opinion on the policy of that proposition?—Do you mean without security?

3446 No, not without security, but on Government securities deposited?—I should like to think that question over before giving you a definite answer. That would be in a sense merely an increase of its fiduciary issue, would it not?

3447 No, not an increase but a substitution. I will express it, as I understand the proposition, in the terms of this country. You would not buy consols but you would lend to a bank on the security of consols for a short term out of the fiduciary portion of the issue?—I think there would be objections to that, certainly there would be theoretical objections to it, and I am rather inclined to think there would be practical objections. If you like to put the question in writing I will consider it. That is mixing up what I call issue with banking.

3448 *Præmâ facie* you are not attracted to it?—*Præmâ facie* I am not in favour of it.

3449 You are not attracted to it, I said?—No. I am not attracted to it.

3450 (*Sir Ernest Cable*) In reply to Sir Robert Chalmers just now I think you admitted that the lending out of India's balances was a benefit to the London market?—I admitted that the lending of large balances here puts down the discount rate, and usually is a benefit to the trader while it goes on, but the liability to have that money withdrawn is not a benefit to the market.

3451 And, of course, it is an unmitigated benefit to the Government of India to be able to lend out these balances here which they are unable to do in India?—They are getting interest undoubtedly on their money, but as to whether that pays them or not you must ask them the question, not me, because they have had to pay something for raising that money.

3452 I am talking of the superfluous balances—such balances as we have?—Yes, if it is merely a question of getting interest on superfluous balances. But I should like to ask this question. Is there any similar system in India—I am asking for information—to what we have in this country, under which surplus revenue goes to the redemption of debt?

3453 (*Chairman*) There is no system exactly comparable to ours, but as I understand our witnesses, the surplus revenue is either used in the extinction of existing debt, or in the prevention of fresh borrowings. You have to start with the fact that the Indian Government is, as you say, continuously borrowing for reproductive or for capital expenditure, and the surplus, being used to redeem such short-dated securities as you spoke of in a part of your evidence, goes to prevent the amount of the fresh borrowing being as large as it would otherwise be?—My difficulty is to see why it is necessary for the Indian Government to have such big balances permanently here.

3454 (*Sir Ernest Cable*) I was going to carry that one point further—that it not only benefits the London discount market, as you suggest, and also the Government of India in the way of revenue, but that in addition the reduction in the discount rate in the London money market does benefit the Indian trader, because it stimulates trade. There is therefore a third benefit to India judged as a whole, you would admit that, I think?—Low rates of money undoubtedly always stimulate trade, but it does not necessarily follow that there is a benefit, you have got to look at the ultimate result of these things. If you have large sums of money lent in this country which are liable to sudden withdrawal, then they are an upsetting feature, and probably the result of that upset may entirely extinguish the previous advantage.

3455 With regard to the State bank, I think you made use of the expression that the time is not ripe for it, do you mean to suggest by that that at some later date it might be advisable?—I think what I stated was that the fact that it had been before the Indian authorities and not adopted ever since the Fowler

Committee showed that in their opinion the time was not ripe. As I said before, speaking for myself, I have no special knowledge as to this question. I discussed it a great many times with Sir Edward Law, whom I knew very well, and I think on the whole he was in favour of it, but I think he was rather of opinion that the time was not ripe. Mind you, I am not giving you my opinion, because I have not got what I call a formulated opinion, it is only the opinion of those who have been out to India. I can tell you what is done here in London, and I can give you practical views of our own money market, but the other side, no, because I have not got the experience.

3456 You could perhaps give us your opinion as to whether, as India is developing and growing in resources, it might not be a very much more difficult project to carry out, say, in 20 years' time than at present?—It seems to me that you have got the nucleus in India of a central institution, because you have got three Presidency banks. I suppose it is quite possible to join those up if it is thought desirable to do so, and then you have got your one central institution. But there is a distinction in my mind between a State bank and a central bank. The State bank presumably means that the whole of the capital belongs to the Government, and therefore it has got to be run by Government, because the Government will not hand over a large sum of money to private individuals to run for them. Whether the conditions allow of a separate central institution, as you have got in this country, I cannot say. I can only say that, as far as a State bank goes, you have got the nucleus of it in your three Presidency banks.

3457 You expressly doubted also whether the State bank or the central bank would be a paying proposition. I should like to ask you as a banker of eminence whether it would be legitimate in a new bank of that sort to have a portion, perhaps a large portion, of its capital in debentures which might make the share capital quite a paying investment?—But you have got nothing to issue debentures on.

3458 On the capital as security?—A debenture is only a debt, and there is no security. What you want in India is a bank big enough to give security for the Government to bank with it.

(*Sir Ernest Cable*) The Agricultural Bank of Egypt has a debenture debt, I believe?

3459 (*Lord Faber*) But that might be founded on a particular class of security—the land?—An agricultural bank probably could issue debentures, that is to say, a mortgage upon something in its possession, but an ordinary bank has nothing. A debenture proper ought to be a mortgage, and therefore it is a liability, not an asset. I do not see how that is possible.

3460 (*Sir Ernest Cable*) Debentures are a liability, and so is capital a liability, it is merely another way of putting it?—I beg your pardon. Capital is a liability undoubtedly, but the shareholder is responsible. The debenture holder is a creditor of the concern, the shareholder is part of the concern itself. The two positions are totally distinct. I am putting it this way—if I am a shareholder in the concern, I am responsible to the debenture holders.

(*Sir Ernest Cable*) They have a prior claim certainly.

3461 (*Lord Faber*) To put it in another way, the debenture man comes first, and he has got to be paid and all the capital has got to be exhausted to pay him?—That is so.

3462 (*Sir Ernest Cable*) You made use of the expression with regard to India's gold reserves that she should bear her own burden, I suppose you mean by that that India alone would benefit by those gold reserves. I put it to you whether in a time of crisis the whole Empire would benefit by the stability conferred by those gold reserves of India?—I do not see exactly where the benefit comes in. What I say is, India should run its finances, so to speak, by playing the game off her own bat.

3463 (*Mr Keynes*) When you expressed the rather paradoxical opinion that the Indian cash balances in London were disadvantageous, were you speaking

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued.]

narrowly from the point of view of the Bank of England, or from the point of view of the whole of the London market?—I was speaking from the point of view of the Bank of England, and I hope I made that clear.

3464 Your remarks would apply equally to all international banking on a large scale, would they not?—To all international banking on a large scale where a withdrawal of that money would affect the conditions of the money market.

3465 I can understand that if London were to cease to be an international money market the life of the directors of the Bank of England would be a less anxious one, and you are merely stating this as a particular application of that?—I am asked here to give the view of the Bank of England, and I am giving you the view of the Bank of England.

3466 And the view of the Bank of England is that any increase in the extent to which London is an international money market makes their time a more anxious one?—Any increase in the volume of transactions which pass through London for which the London money market is responsible, makes the maintenance of an adequate gold reserve here all the more important.

3467 But you would not deprecate the extension of England's liabilities in that way, would you? You would not wish London to be less an international money market, would you?—No, I want to see England maintained as the international money market, and that it should have the position it holds to-day.

3468 Then you would be sorry rather than glad if India was to give up holding its balances here?—From the point of view of the Bank of England I would rather they were what I call kept within more moderate limits, that is all.

3469 From the point of view of the position of the money market, you would be sorry?—I should not be sorry, it is merely a question of size.

3470 Would you be glad?—From the point of view of the Bank of England, from the point of view that London should not be liable to be drawn upon for very big amounts, I should be glad if the Indian balances were kept within more moderate limits. They rise to, I believe, 18 millions altogether. I am not clear what was done with the 18 millions.

3471 (Chairman) I think we have had it in evidence that the 18 millions, those very high figures, were due to what it is hoped may be found to have been rather exceptional circumstances, and partly also to under-estimating the revenue?—I quite agree, but I do not know what was done with that 18 millions here. As far as I can turn it up at the Bank, the loans through their broker have never much exceeded 11 millions, I suppose the balance all went to the banks, and there was no security for it.

3472 There were loans to the banks as well?—We check all the securities at the bank for the India Office, and therefore, we know the amount of the securities. I know the maximum amount of securities deposited at any one time, and I know that the maximum amount of loans to what I call the market have not exceeded something between 11 millions and 12 millions, that is all.

3473 (Mr Keynes) I only wanted to get the point clear that there is nothing peculiar to India about this, and that in general you deprecate London doing international banking business on a very large scale?—No.

3474 (Chairman) I think you did not deprecate London doing international banking business on a very large scale, but you said there was a danger if these large amounts were suddenly withdrawn?—I say that that is a danger which, if it is possible to avoid it, it is well to avoid, but as long as London remains the international money market it has got to shoulder the burdens as well as the advantages of that. Mr Keynes' view apparently is that I deprecate London being an international money market, I absolutely correct that.

3475 (Mr Keynes) I understand there is a disadvantage, but I do want to have your opinion as to whether on the balance it is not an advantage to London to put itself into this position. It makes the problem

of the reserves more difficult, but is it for that reason to be deprecated on the whole?—My answer to that is that you have got to shoulder your responsibilities, and on the whole, it is desirable that London should remain the international financial centre of the trade and commerce of the world. What you are dealing with on this Commission is the question of Indian finance, and you are not dealing with anything more.

3476 Your second reason for rather disliking these large balances was that they sometimes had the effect of forcing the market rate down, I suppose that is true of all large lenders in the market?—That is right.

3477 They have not had a different effect in that way from any other large lender?—No.

3478 So that there again, from the the point of view of the market as a whole, you would not deprecate it?—No. It is quite desirable that London should have its lenders as well as its borrowers, it must have them.

3479 The Chairman asked you your opinion as to how far gold in circulation was available to a foreign drain, and I think you expressed the opinion that it was of some value?—Yes, I expressed the view that gold in circulation is of some value, because, if you get a famine, gold will not be so much wanted, and therefore it will come back to what I should call the bankers, and then it is available. What I stated was that it is better for India to hold gold which is taken, so to speak, at its face value, than to have it in rupees which have got to be melted and sold at their bullion value.

3480 When you gave that answer were you imagining a case in which India had had anything but gold, or in which gold was perhaps a fifth or a quarter of the circulation?—I was not imagining anything. I was only giving you the difference between having a gold circulation and a silver circulation.

3481 Do you mean by a gold circulation one in which nearly all the circulation is gold, or one in which about a fourth or fifth is gold?—My reply was quite independent of the proportion of the circulation.

3482 Then your answer applies even in the case where gold is a fourth or a fifth?—Certainly.

3483 Do you think that when money is returned from circulation it will be the gold rather than the rupees, even when the gold is only a small proportion?—They might come back in equal proportions, I cannot tell you. That is a question you must ask of somebody who has got Indian experience.

3484 Therefore, a certain proportion of the gold in circulation would not be available. The gold would not be available to anything like its full amount in a crisis, and you would not expect, if a fifth of the circulation was gold and a fifth of the currency came back in a time of crisis, that very much of that fifth would be gold?—I should imagine that if a fifth of the currency was in gold and four-fifths were in silver, it might be returned a fifth gold and four-fifths silver. I should say—but I do not know, as it is not a thing which I do know—that probably gold would come back quicker than silver, but that I cannot tell you. Gold is more used, I imagine, by those people who are European managers, and so on, but I really do not know, and it is not a question, I think, that I should answer. It is a question on which you should ask someone who has a knowledge of Indian conditions.

3485 You have not any opinion, therefore, as to whether in Indian conditions, gold, in circulation to the sort of extent I have suggested, would be available, and you did not intend to be expressing an opinion on that?—I only expressed the general opinion that if you have got a large amount of gold in circulation and bullion is required for export, gold is a better thing to export than silver, which has got to be melted down.

3486 With a large amount of gold in circulation, you say?—I am not troubling about the proportion of the amount in circulation.

3487 In the matter of the note issue, I understood that you are nervous about increasing the note issue lest at some not distant date a large number of the inhabitants of India should use cheques?—I am not nervous about anything, and "nervous" is not quite

27 June 1913 ]

MR ALFRED CLAYTON COLE

[Continued

the correct expression to use. I was asked my opinion as to an increase of the fiduciary issue, and I gave you the point that if cheques are largely introduced into the banking system in India, the note issue would not increase in future years as rapidly as it has done in the last 20 years.

3488 Then you did not mean to be expressing an opinion that that was likely to happen within the lifetime of those who are now alive?—I do not express any opinion on Indian matters, because I can only give you what is the experience here in London.

3489 The Chairman put the question to you that if cheques had not been developed in England as they have been, and if we had used notes as they do in some foreign countries, the system of note issue by the Bank of England would have had to be modified, I understood you to say no, and that we should have gone on just as they have in France?—Yes, that is my opinion.

3490 But you would not maintain that the method of regulating the note issue in France is the same as that in this country?—The conditions of the two countries are distinct, but the method of regulating the fiduciary issue of notes in France is under definite Acts of Parliament, just the same as ours. Of course, the two Acts of Parliament are quite distinct.

3491 And their provisions are of quite a different kind?—That is so, so they are in Germany.

3492 If in England notes were to be used on a large scale, and the Act were not altered, we should have to hold gold almost up to the full amount of the notes?—You have to hold gold to day for every note issued above 18 millions odd.—I can give you the exact figure if you want it.

3493 But that is not the case in France?—That is not exactly the case in France, but I am not prepared to give the Commission any information on that without referring as to what the exact conditions of the note issue in France are.

3494 Is there any note issuing country in the world which regulates its note issue on the same system as the Bank of England?—I think not.

3495 So that there is some experience for thinking that in a note issuing country some different system is desirable?—Of course, I think ours is the best, therefore I do not think any different system is desirable.

3496 Do you think that the business of the world could be done if all banks adopted the Bank of England system?—The business of the world would be done. Whether it would be done on the present scale is another matter.

3497 Sir Robert Chalmers asked you your opinion as to holding some part of the cover for the note issue in bills. Is there any country in Europe except England which does not use bills as a part cover of its note issue?—I cannot tell you.

3498 You do not know of any country which does not use bills?—I am not sufficiently conversant with the conditions of all the countries in Europe to be able to answer that question, but I can get the information if you want it.

3499 You objected to the Secretary of State speaking of having cash at short notice. Was your objection purely to the terminology?—It was merely to the terminology that is all.

3500 Your objection was purely to the terminology, and you do not maintain that he ought not to have money in that form?—No, the objection was purely to the terminology.

3501 So long as the money market is solvent would you hold that money at short notice is from the point of view of the Secretary of State, as good as cash?—I do not think you put the question quite correctly. You say as long as the money market is solvent, you mean as long as the individual members of the money market to whom the India Office lends money are solvent.

3502 Yes, that is so, as long as they are solvent, then the money at short notice is as good as cash, is it not?—No, certainly not. It is not cash, and therefore it is not as good as cash, but from the point of view of investment purposes or proper security it is just as good as the investment in the security itself.

3503 If money is lent for four weeks and the man to whom it is lent is solvent, then at the end of the four weeks it is as convenient to the Secretary of State as if he had held the same amount in sovereigns?—You have given the premise that the gentleman is solvent.

3504 Yes?—But that does not always prove to be the case.

3505 (Chairman) Even then the Secretary of State has to wait for the four weeks?—Yes. I made that remark because—you can get it in the India Office, and it is not for me to give it to you—there have been, I know, within recent times, two failures in which the India Office did not get their money back.

3506 (Mr Keynes) I was wishing only to arrive at this distinction—from the point of view of the Bank of England and the market as a whole, they would obviously be in a more comfortable position if the Secretary of State had real cash rather than money at short notice but it may make more difference from their point of view than it does from his point of view?—That is all dealt with by the amount, whether it is to be five millions more or less that you are going to hold in the Gold Standard Reserve. These loans at notice are minor factors in the situation.

3507 There are one or two points of detail arising out of some evidence we have had before us that I should like to ask you about. We were told that only such securities are accepted against loans as are bearer securities, or are inscribed at the Bank of England and that the reason for that was that the authorities of the Bank of England had no means by which they could satisfy themselves that the transfer had been made unless it was a security of that class. Do you think it would be possible to have a simpler machinery so that stocks inscribed at other banks could be taken?—No. If you mean as far as the India Office is concerned, that is a question they must answer themselves, not I. You cannot have simpler machinery for the stocks inscribed at the Bank than we have got now.

3508 That is not the question I was asking. We are informed that the cashier to the Bank of England would not be satisfied that the transfer had been made into the name of the Secretary of State unless the stocks were inscribed at the Bank—that if they were inscribed at some other bank he could not satisfy himself of the fact?—No, he could not because he would have no means of knowing that the transfer was in order. At the Bank of England he can go over to the chief accountant and satisfy himself that the transfer is in order but at any other bank he cannot do it, he cannot walk into another bank and ask to see the books.

3509 (Chairman) As a matter of security, would you consider it adequate if in such a case you received from the bank at which the stock was inscribed a certificate that it had been transferred to the Secretary of State?—That is a question of which I should require notice. It may be a very technical thing, but that I could not tell without looking into it. All those questions about transfers are very technical. I imagine that probably the Bank of England would accept the guarantee of that bank but I do not know whether the bank would guarantee, however that is another matter.

3510 (Mr Keynes) There are two other points of a technical character which I should like to raise, at any rate, at this stage. The first is with regard to the management of the Rupee Debt. We were told that you maintained a separate office for that purpose at the Bank of England, that the amount of the debt is now much less than it used to be—about seven millions—and that the charge for that management works out at much more than 1,000l per million. What are the reasons which make it necessary to have a separate office for the Rupee Debt as opposed to the other debt?—That is a question on which I should be willing to get you the answer, but I cannot answer it off hand.

3511 The Accountant General told us that there was an undertaking by which the India Office keeps a minimum balance of half a million at the Bank of England, and that they in fact often have to keep a

27 June 1913 ]

Mr. ALFRED CLAYTON COLE

[Continued

good but more there, and cannot lend up to the hilt, because the Bank of England will not allow them to strike their balance of the half million at four o'clock. They have made application to the Bank of England to allow them to do that, they say, but the Bank of England do not agree to it. Can you explain to us the reasons for that?—I ask for notice of that question. That is a technical matter which I could not answer without notice.

3512 (*Lord Kilbracken*) You said, and I can quite confirm you, that the relations between the Secretary of State in Council and the Bank of England have been, apart from some recent incidents, altogether cordial and satisfactory?—Yes.

3513 Without going into any details, we may assume certain things have lately been done by the Secretary of State in Council which, from the point of view of the Bank of England, were not altogether advisable?—Only in reference to one matter.

3514 Do you consider these to have been in any degree the result of the financial methods and organisation of the India Office, or, as we are none of us infallible, were they simply a mistake on the part of those who happened to be then administering the system?—I think it was a mistake which, in my own opinion, ought not to have arisen.

3515 It may be assumed for the purposes of argument that it is a mistake?—It has got nothing to do with the general, what I may call broad financial questions of the India Office.

3516 It is a sort of mistake which is a result of the personal equation, and might occur in any conceivable system?—I think so. Of course, my strong objection to that matter was that it put a considerable strain upon the confidential relations between the bank and the India Office as I informed the Secretary of State, because it is difficult to maintain the freedom of confidential relations where one party have for six months been interviewing the other and have not been frank, by keeping something up their sleeve because for reasons of their own they wished to do so. It was a breach in the confidential relationship, but it has got nothing to do with this inquiry, I think.

3517 I believe that no similar mistake affecting the relations between these parties had occurred for very many years?—I do not think it had ever occurred before.

3518 Have you any suggestions to make, either in consequence of this or apart from this, for the improvement of the India Office methods as seen from the point of view of the Bank of England?—No, I do not think so. I should think it is a kind of mistake that is not likely to occur again, I hope so.

3519 (*Sir Shapurji Broacha*) The Gold Standard Reserve is established to maintain the par of exchange at 1s 4d, should not, therefore, the safety of this rate of 1s 4d be made as absolute as possible, so that at no time could it be disturbed?—Undoubtedly.

3520 And for that purpose gold is much safer than securities?—Granted.

3521 In 1907-8, although there was a partial famine, the Secretary of State had to use 15½ millions to maintain exchange. The American crisis was in 1907, and the realisation of securities was in 1908, when Consols were at 88 and money had gone to 3 per cent. Supposing they had had to realise those securities, not in 1908, but during the great American crisis of 1907, would it not have been much more difficult?—I think I told the Chairman that had the financial storm-centre been in London those securities might not have been realisable at all, or, if at all it would have been at a great sacrifice, and not only would there have been that great sacrifice, but it would have had a most prejudicial effect upon the financial world all round.

3522 It would have disturbed the great money market?—Yes.

3523 Suppose there were a great war in which England were involved, and there were panics in the markets of the world, as well as a famine in India, and the Secretary of State wanted money, if you had bankers' bills would not that be creating a little

disturbance in the money market?—I do not quite know what you mean by bankers' bills.

3524 I am thinking of the Secretary of State having liquid money which is not in gold but in short dated bills, or bankers' bills, or whatever they may be called. I think you mentioned in reply to the Chairman that the Secretary of State has 1,700,000 in short-dated bankers' securities?—In the Gold Standard Reserve they have got 1,730,000.

3525 That is not really gold, is it? It is bankers' securities?—No, that is actual gold.

3526 Even if you have money at call, then the calling up of that money at such times would create a sort of fear in the money market, would it not?—Undoubtedly.

3527 But if you had gold to give out, that would help the market?—Yes. Taking difficult times, if India has to draw, and has to pay for those bills in gold, that undoubtedly would be an advantage to London if India has got to give out that gold against its drawings. But the Gold Standard Reserve and the question of the India Office balances are two totally distinct things.

3528 I am not talking of balances, I am only talking of the Gold Standard Reserve, which could not be used for any other purpose than the maintenance of exchange at the par of 1s 4d. India has a greater power of absorbing gold than many other countries, owing to the excess of exports over imports. She has taken about 27 millions this year, and she took about 23 or 24 millions last year, and about 18 millions the year before, and I do not think any country has taken so much gold on balance during the last three years?—Yes, but is it not probable that Indian imports of commodities will increase?

3529 I am talking of the present situation?—I understand, but if you want to found an argument on it you have got to look at the probabilities.

3530 If India were allowed to accumulate gold in the Gold Standard Reserve to the extent of 25 millions or 35 millions in solid gold, would that not be very helpful to the Empire at a time when we had a war, a financial crisis, and a famine all coming together?—I quite agree it would be helpful to have more gold, and the original idea of the Gold Standard Reserve was that the whole of it should be in gold.

3531 Would it not also obviate the difficulty of going to a foreign bank to borrow three or four or five millions if the Secretary of State had those millions in solid gold which he could supply on the credit of India at the Bank of England?—If might or it might not. Do you mean to say that the Bank could borrow from the Indian Government?

3532 Yes?—I should not like to alter our system in this country.

3533 I am talking of the time when the standard gold reserve balances of India are in liquid gold, and perhaps the Bank of England may have to stop payment in gold. Would it not be very useful then that that gold should come in for use? Remember the Secretary of State is master of the Indian finances, and the Government of England is the master of the Secretary of State?—Yes, but I do not want the London money market or the Bank of England to be in any way influenced by the fact that it has got a lot of earmarked gold.

3534 It is earmarked in a way for the maintenance of exchange?—That is so. I do not oppose in any way the Gold Standard Reserve being invested in gold solely, but I quite understand that the Indian Government wish to make some profit out of it, and that you only want to accumulate gold sufficient for practical purposes. The Indian Government have at last realised that they ought to hold some gold, but they had not done so up to last year.

3535 A large amount of solid gold would save us, or put us into a position of absolute security for the maintenance of exchange in the worst of times, even when we had war, famine, and panics all coming together?—To the extent that it is such a sum as is more than India requires in any one year.

3536 You have been talking of a State bank, and I understood you to say that the Bank of France does

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued

business efficiently, but it is a small place to which it is attached, so does the Bank of England do its duty efficiently, because it is a small place to which it is attached. Suppose the Bank of England or the Bank of France were given the duty of doing the work which the Bank of Germany does, the Bank of Italy does, the Bank of Russia does, and the Banks of Norway, Sweden, and Belgium do, would you say that the Bank of England solely or the Bank of France solely could do that vast business as efficiently as they now do it for England or France, as the case may be?—I am afraid I do not quite follow the question.

3537 I mean to say, if the Bank of England were the Bank of Europe, and had to do all the business of the Bank of France, the Bank of Italy, the Bank of Germany, and all the banks of other countries, do you think it could be so easily performed as it is now performed for this country alone?—That is a hypothetical question which it is practically impossible to answer.

3538 (Chairman) I think what Sir Shapurji is suggesting is the difference between the area covered by India and the area covered by England. It is possible for one bank to do the work of the Bank of England in England because England is a country and not a continent, but it would not be possible for one bank to do the same work over a whole continent?—I do not think it is possible, so to speak, in the same way, but I should not like to state that it could not manage currency matters.

3539 (Sir Shapurji Broacha) I am talking of the whole business, currency, financing, lending money to industry and commerce, all the vast business that the Bank of France does now, even to discounting 300 franc bills, or 125 franc bills, or even 5 franc bills. If she were given the management of the whole of Europe, would she be able to manage that work as efficiently as she manages the work now for France alone?—I should think not.

3540 I ask you because there is more similarity between the people of this country and the people of Italy and the people of Germany than there is between the banking classes in India, and India, I say, is as large as Europe?—Your inference is—

3541 That it would be too large a business?—That a State bank or a central bank in India could not do it efficiently.

3542 That is so?—I carefully avoided giving a pronounced opinion, because I said I had no practical knowledge of the conditions in India.

3543 There are now in the Bank of England, as I see by to-day's news, 18 millions belonging to the Government, the municipalities, and other classes, all under the control of the Government, if, instead of the Bank of England holding 18 millions of Government balances, the Government were to put them into vaults at Whitehall, would not the public complain that they were being deprived of the use of the money?—Undoubtedly. The fundamental theory in this country is that money collected by taxation immediately goes back to the use of the country.

3544 If the Government of India had 25 crores or 18 millions or 17 millions sterling in the Treasury vaults, and did not lend that money out—that is, if all that money were swept in and not given out, would not that make the money market more difficult?—That is an Indian question, is it not?

3545 I am putting it in the general way of the world?—In the general way of the world, yes.

3546 Then is it not the fault of the Government that the money markets are dear at one time and cheap at other times? We were told yesterday that you cannot lend money to day in India at 2 per cent on Government paper, and yet sometimes it rises to 8 per cent. If that money were locked up within the walls of Government buildings, then in the case of the money market in India becoming dear, should the Government be blamed for it or not?—I have no opinion to give because I do not know what happens.

3547 I suppose you have no idea, if there were a State bank or a central bank established in India, where it should be placed?—No.

3548 You have told us that Indian money here, as it is not of a permanent character, is not very helpful. At present I think you said there are 11 millions of the Secretary of State's money on loan in London?—It may be more. I am only telling you what has been lent at the present moment by the Government broker.

3549 But that cannot be compared to Japanese money, because the Indian money is bound to be spent in this country sooner or later. Japan might call up her money, and Russia might call up her money, but the Indian money must be used here solely. It gradually goes out just like a banker's or a merchant's fund for goods, or something like that, so it is not the same kind of money that the Japanese money is, which would disturb the market when it is suddenly taken away in large bulk?—That may or may not be so. If the money is wanted in India I imagine it would be sent to India.

3550 No, it is not money which can be in any way dangerous to the London market, because it is London's money in one respect—at any rate, it cannot be as dangerous as Japanese money or Russian money?—I think that is true. The control of the money after all is in this country.

3551 I think Indian credit has gone down in this country in the last two years about 10 per cent, and the 3½ per cent Sterling Rupee Loan I see is now about 8½ or 8¼?—Those are figures which can be very easily worked out.

3552 I think the present is a time when you cannot borrow much money for India if you want large amounts of a sudden, as at one time the Secretary of State could have done?—My own opinion is that the feeling about Indian loans, and so on, is that they are a little bit too much under Government control. If there were bigger facilities given for private enterprise in India, India would probably get money more readily. I am only giving you what I call the current opinion, I have no opinion to offer myself.

3553 If loans were limited to a fixed period I do not think the same difficulties as I have pointed out to you would obtain?—That is what I have said.

3554 (Sir James Begbie) Speaking about the Gold Standard Reserve, I understood you to say that you think it should be held in London, because, if not held in London, gold would have to be remitted home to be drawn upon from India?—That is in the case in which the Gold Standard Reserve has got to be used for the maintenance of exchange.

3555 But there is no reason why a draft should be drawn in India on London to maintain exchange, it would be the same thing if gold is kept in India and issued in India, would it not?—I do not think it would have the same effect on exchange if the gold were held in India and issued in India.

3556 Not if it were issued in India for export?—For export, yes. As I have said, the reason for holding the gold here is that drafts presumably will be drawn on London, and therefore that export of which you speak simply means that the gold will have to come to London. I do not think, for instance, that India could draw and sell bills on Australia. I am looking at it from the practical point of view. When you sell bills in Calcutta I think they are drawn on London, and while London retains its position as the financial clearing house of the world, bills will be drawn naturally on London. Therefore, if, for the purposes of maintaining exchange, that gold has got to be used, the gold will have to go to the place on which the bills are drawn.

3557 If bills are drawn?—Where you maintain exchange it will be by drawing bills.

3558 The usual method is to use gold for international balances, is it not?—The usual method is, when exchange gets up to a point at which it is cheaper to ship gold, that gold will go. The question is one simply of freight and insurance, and when the exchange rises to a point at which there is a margin above the cost of freight and insurance, gold will go.

3559 Now I want to ask you one question with regard to the silver purchases of last year. We have

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued

had it stated in evidence that the silver purchases last year, totalling over seven millions, were effected from the India Office balances, which may have been replenished from the proceeds of the Council bills sales, although the Secretary of State had the option of using the part of the Indian Reserves which is in sovereigns. The question I want to ask is this: Would it have made any difference to the London market if the purchases last year had been carried out by the use of sovereigns taken from the Indian Reserves rather than by money taken from the India Office balances?—The ultimate result would have been much the same. Do you mean to say that if they had paid out two millions of gold, for instance, and they had not sold the Council bills, the Indian banks would have taken that two millions and sent them to India, is that what you mean?

3560 No, I am talking about the way the silver was financed. It was financed, I understand, by payments from the India Office balances, whereas the actual gold reserves might have been used for the purpose?—Are you referring now to the Paper Currency Reserve?

3561 Yes, would it have made any difference to the London market if the actual gold had been used?—I cannot tell you. It depends upon the time of the year at which it was let out—whether the gold was wanted here or not. All shipments of gold here, I mean all increases of gold at the Bank of England—merely put the rate of discount down. It depends a good deal upon the time of the year that gold comes in as to the effect it has upon the money market.

3562 The purchases took place over about six months, I think, of last year, so that the payments would have been spread over, say, June to October, or November. Would not the London money market have been bettered by the receipt of actual gold rather than having to pay out the money from the balances of the India Office?—Are you dealing with five or six millions?

3563 It came to seven millions altogether, I believe?—Do you mean that they had five millions, say, of the Paper Currency Reserve, and the question is whether they should have paid out that gold instead of paying for it by Council drafts?

3564 Yes?—Five millions of gold taken into the London market would be exactly the same as having an extra five millions shipped from South Africa. That of course tends to keep the rate of money down. But what the practical result would have been, I do not think anybody could definitely say.

3565 (Mr Gillan) I should like to ask you one question about this matter of the gold mint. You said that if a gold mint were to be established in India you would prefer that sovereigns should be coined?—I gave you that as my own personal preference.

3566 I quite understand that preference, and I merely wish to ask if there is any very substantial drawback in your opinion in a smaller coin, say a 10-rupee Indian coin, being minted?—Personally I know of none. My reason for saying that I personally prefer the sovereign is that the sovereign is used practically throughout the British Empire, and so long as the Indian Empire remains a portion of the British Empire I think it is a very desirable thing we should have one gold standard and not a considerable number.

3567 Why I asked you this particularly was that we have been told sometimes that a special Indian coin would, perhaps, go to a discount or would be of very little use in foreign exchanges, and so forth?—I do not think, as far as this country is concerned, it would make any difference what it was, because gold is not taken at its face value in international markets, it is simply taken by weight, and it does not make any difference to the weight of the gold whether it is a sovereign or whether it is a mohur.

3568 (Chairman.) It is sold by weight and fineness?—By weight and fineness solely.

3569 (Mr Gillan.) That is why I asked you for your opinion?—People always think because a million

sovereigns have been shipped that they are taken as a million sterling, but that is not the case at all. If you go to the bank for 100l they will not count it out to you, they will simply weigh it out.

3570 With regard to the Gold Standard Reserve, you said, in answer to the Chairman, that the Government of India had recently recognised the necessity of keeping some part of its reserve in liquid gold, and you thought the figure which they had in view, about five millions, was insufficient?—It is insufficient compared with the possible requirements.

3571 With regard to that point, I want to put to you a part of the correspondence on this subject. It may appear repetition, but I put it to you because so much importance has been attached to what was said that I should like to have your opinion. The Government of India suggested to the Secretary of State that a substantial portion of the reserve should be held in gold?—What paper is this in?

3572 I am quoting this from the correspondence between the Secretary of State and the Government of India. It says (see Appendix V, despatch of Secretary of State, No 82, dated 2nd July 1909, paragraph 8, &c, pp 178-9) —“(8) Your second proposal is that a “substantial portion of the reserve shall be held in gold.” (9) The object of this proposal is to ensure “that the reserve shall be readily available whenever “required, even though the necessity should arise at a “time of general financial difficulty in London. There “can, of course, be no possible doubt as to the “importance of this object, but I am not satisfied “that the adoption of your proposal, in substitution “for the present method of dealing with the reserve, “is required for its attainment. As a matter of fact, “I have carefully and constantly kept the same object “in view whenever I have had to decide as to the “disposal of profits on coinage or of sums accruing to “the reserve by way of interest. The plan which I “have followed has been as follows—(1) To hold a “considerable portion of the reserve in the form of “high class securities with a near date of redemption, “because cash can always be obtained at the shortest “notice, by sale or loan, for such securities in the “event of their realisation before maturity becoming “necessary. (2) To hold in addition such an amount “of stocks yielding a higher rate of interest (namely, “Consols) as I can count on being able to sell in time “to meet all requirements that should be met from “the reserve.” The Secretary of State adds, “As my “object has been precisely the same as that to which “your proposal is directed, the chief practical question “that can be raised (apart from those to be dealt with “in paragraph 10 below) is whether I have succeeded “in attaining it. I venture to think that the experience of 1908 shows that the answer to this question “is in the affirmative.” Then, at the end of that paragraph, he says, “I recognise, of course, that in “times of prolonged depression of Indian trade, “especially if accompanied by other adverse conditions, the realisation of securities to the amount “required to support exchange would require care, “but the operation ought not to be beyond the capacity “of the Secretary of State in Council and his advisers, “and I accept the responsibility for carrying it out on “occasion arising.” With regard to that experience of 1908 on which the Secretary of State was then building, I understand your opinion is that matters were much easier for him because the storm centre was in America and not in London?—Undoubtedly.

3573 Perhaps to that extent it would be advisable to modify any judgment that is drawn from the experience of 1908? You see he is building on that, for he says, “I venture to think that the experience of “1908 shows that the answer to this question is in “the affirmative.”—He means to say that they can be sold, does he?

3574 That he succeeded in doing it in 1908?—I give you the answer, which is a very definite one, that if you have India in the position where it is necessary for her to sell large blocks of sterling securities in London the suggestion is a dangerous one. Therefore—I have not seen this letter before—I should not endorse this recommendation of Lord Morley a. You see he

27 June 1913]

Mr ALFRED CLAYTON COLE

[Continued

says that he accepts the responsibility for carrying it out on occasion arising. The occasion, of course, may never arise. The occasion which I have got in view is the simultaneous existence of two conditions—one is a financial difficulty in London, and the other is famine or drought in India. Those two conditions may never arise simultaneously, but the occasion may arise, and when you are considering what it is desirable to formulate as what I may call the fundamentals of the financial policy of a great empire like India, you should not shut your eyes to a possibility.

3575 In fact, on occasion, the responsibility which this despatch accepted might prove to be too heavy?—It might be found that it was based upon—

3576 (Chairman) A miscalculation?—Yes. I hope the Commission quite understand that any information we can give you from the Bank, like replies to those rather technical questions that Mr Keynes put to me, I shall be most happy to have drawn up and sent to you, or to the member who wishes to have it.  
(Chairman) Thank you, we are very much obliged to you.

The witness withdrew.

Mr HARRY MARSHALL ROSS called and examined.

3577 (Sir Robert Chalmers) Do you come here today to represent the Bengal Chamber of Commerce?—Not exactly. I come here by the suggestion and invitation of the Bengal Chamber of Commerce, but they courteously permit me freedom where my views do not entirely coincide with theirs.

3578 Would you be so good as to state to the Commission what your experience has mainly been in connection with this question?—I was a Calcutta export merchant. I was engaged in the export trade for 23 years, comprising a period of 11 to 12 years previous and a similar period subsequent to the mint closure. I was chairman for five years of the Jute Association of Calcutta, and chairman of the Wheat Association for a shorter period. I was also honorary secretary of the Currency Association, which agitated for the closure of the mints, under the presidency of the present Lord Inchcape.

3579 In that latter capacity you have had a large experience of an intimate character in connection with our subject?—I have.

3580 You have been so good as to submit to the Commission a statement of the evidence that you propose to give,\* and I will take you through that to some extent. Beginning with the cash balances, you do not raise any objection, I gather to the plan by which the Secretary of State gets his money across from India?—I raise no objection to that.

3581 Have you anything to say as to the total of the cash balances, joining those kept in India and those kept in London, first, as to their magnitude, is the total too large, in your opinion?—During recent years, it distinctly appears to have been unnecessarily large.

3582 How did the combined balances rise to so large an amount?—Partly through the surpluses of revenue, and partly of course by means of loans.

3583 As to the surpluses of revenue, have you got any remarks to make in elucidation of your view that they are too large?—My view is that the budget estimates of recent years have been unnecessarily pessimistic, and I support that view by reference to the memorandum on the India Office balances, Cd 8619. The seven years comprised in that publication, ending with 1911-2, show that in only three years was a surplus budgeted for, a deficit being budgeted for in four years, and that while the deficits were fairly substantial the surpluses were paltry—331,400l., 46,400l., and 34,000l. The results of those seven years show, on the other hand, a net surplus of between 10 millions and 11 millions sterling. Looked at from the point of view of the seven years, as set forth in those figures, it seems to me that there has been persistent under-estimating, not necessarily intentional but that has been the tendency.

3584 That is a structure on the budget estimates to the extent to which the balances arose from the surplus revenues?—Yes, which necessitated, apparently, taxation which the event has proved to have been unnecessary.

3585 I will come back to that as a last point. The balance is made up not solely by surplus revenue brought across from India to this country but also there have been capital sums raised by issues of loans

and that is a further department creating a large balance?—Yes, certainly.

3586 Given the money in India, do I take it your view is that the Secretary of State is right in selling Council bills freely, with a view to releasing rupees in India, and preventing accumulation in the hands of the Government of India?—Unquestionably.

3587 That tends, in your judgment, to prevent the detriment of the money market in India?—It restores to circulation the currency abstracted from it.

3588 Would you like to say anything further as to the retention of large balances for long periods, and have you any suggestion to make as to the use of any surplus in the reduction of debt?—I think that surpluses in the Indian budget should be treated as they are supposed to be treated in the English budget—as a sinking fund for the reduction of debt, primarily floating debt, and in case of absolute need by the purchase of stock, exactly as the English Government would purchase Consols.

3589 You are referring to the old sinking fund in this country and drawing your argument from that analogy?—Yes.

3590 Is there this difference that debt is paid off in this country on balance, whereas in India the position is rather different, is it not, as India has a Government that is always borrowing?—I agree.

3591 So far as surplus revenue is brought across from India to London and is not used for the specific purpose of paying off debt, is it yet used, is it not, for the same purpose if it ensures the diminution of new debt?—Certainly. In the case of India, might I cite an example? I think that Sir James Westland applied his heavy surpluses after the mint closure, due to the holding up of Council bills, to two purposes—one to railway construction and the other, I think, to the avoidance for two years of rupee loans. That would be similar to paying off debt.

3592 You are aware that in this country the surpluses have been used to prevent new borrowing, and to that extent there would be an analogy?—Yes.

3593 If you were to use the surpluses exclusively on, perhaps, pedantic lines for the reduction of the existing debt, it would mean that you would have to issue new stock—pay off with one hand and raise new debt with the other hand?—That would be inadvisable provided the new stock were shortly to be raised, but if there was a probability of the stock not being required for two or three years, then there is a different aspect to the question.

3594 It would be a question of time?—Yes.

3595 Leaving out of account the question of time and assuming the money to be here what use would you make of the money in London pending the time which we have assumed to be near at hand for meeting expenditure? Have you got any objection to the practice of lending money out in the money market?—No better use could be made of it.

3596 Coming to the collection of revenue, the old doctrine used to be that it was advisable to leave money in the pockets of the leges to fructify, you know that doctrine, of course?—Yes.

3597 Is there any particular difference between the position of India and that of this country in this respect, that taxation is levied to a great extent at one particular season of the year, and so tends to enforce

\* See Appendix XIX, page 443.

27 June 1913 ]

Mr HARRY MARSHALL ROSS

[Continued

a greater pressure on money markets?—That was the case in my time.

3598 It is so in this country, is it not, too, when the income tax is being collected?—It is, but owing to the action of the Bank of England, I believe the funds are released much more rapidly to the market than was apparent in India in my time.

3599 (*Chairman*) In the case of England, we are always over spent at the first part of the year, and therefore the moment we have collected the taxes they are paid out in redemption of the borrowing?—Which is in itself a reduction of the floating debt.

3600 In the case of India, does the time of the greatest collection of revenue come at the beginning of the financial year, or at the end?—The greatest pressure, owing to the abstraction of taxation from the current circulation, is in the early months of the calendar year, or rather the later months of the financial year.

3601 Is the Indian Government borrowing to pay its way in the early months of its financial year, and then paying off that debt in the later months when the revenue comes in, just as happens in England?—I do not know that the Indian Government borrows as the English Government does—at any rate not in India. The Secretary of State borrows in England.

3602 (*Sr Robert Chalmers*) Your point is that the collection of revenue tends to create stringency?—It did, and I believe still does, according to what I have read.

3603 Have you got any suggestions to make by which you think it would be possible to render the money in the treasuries in India available in any form for the relief of the Indian money market, say, by means of loans to banks or otherwise?—Of course it is released now by the sales of Council bills and transfers, but necessarily not always with perhaps sufficient rapidity. It might be released by way of loan to the banks, Presidency or otherwise, possibly, on security in India.

3604 What sort of security?—Undoubtedly Government paper should be a security. What further security might be acceptable is not a question I am prepared to dogmatise upon.

3605 What sort of rate have you in your mind that you would charge on behalf of the Government of India to the banks or other bodies to whom you would lend? Suppose the bank rate at the beginning of December was 7 per cent, what would you do as regards the rate that you would charge?—I see that the Secretary of State in a despatch to the Government in 1899 spoke of the rate being not below the bank rate. It seems to me that if the Government is to insist upon the bank rate, the temptation to employ Government funds for trade purposes would be lessened to the banks if they have to pay the maximum rate.

3606 Do you propose a lower rate, then?—I would not like to say how much lower, but I should think, to effect the purpose we have in view at the moment, it would be necessary to make it a profitable undertaking to the borrowers.

3607 Would those borrowers in your judgment properly be the Presidency banks, or do you contemplate any other borrowers?—Provided the security is sound, I do not see why we should limit those loans necessarily to the Presidency banks only. The exchange banks, provided they desire such accommodation and would lodge an equal security, should be placed on an equal footing.

3608 You contemplate banks?—There is nothing in India, I think, to compare with our big financial houses, and therefore I should say banks in India.

3609 Does it strike you as a possible danger in such a system that the banks might come to count on this as money that they could always get at that time, and would discount the advantage in advance?—I am afraid the mercantile and banking mind would always count on anything that they saw a prospect of being sure to get, but I do not think there would be any danger connected with their counting upon such accommodation, always provided they were prepared

to return the loans duly. In the past we know that was not the case, the Presidency banks have practically expressed inability to return loans in the past.

3610 You are aware of cases, are you, there was one in Lord Northbrook's time, I think?—I am aware of cases. They have been cited and published. Hence I believe the Government established reserve treasuries because of that.

3611 It would be very essential that the Government of India should be certain of getting back its money?—Undoubtedly.

3612 To the day, if it needed it?—Undoubtedly. In connection with that I would say that the capital and reserves at the banks nowadays are very much greater than they were in those days, and possibly the same difficulties would not be encountered again.

3613 Coming now to the sale of Council bills in order to provide for the home charges, the present practice of the India Office in selling its Council bills is familiar to you, I presume?—Yes.

3614 I think you have some alternative method to suggest, would you be so good as to state the methods and the objections you see to them?—I have none myself, but I am speaking of the alternatives which have been suggested in various quarters, and which I have ventured to consider in my previous evidence (*see Appendix XIX, page 544*). One alternative which has been urged is that the Indian Government should pay its home charges through the medium of certain Indian banks. To that I would lodge the objection that jealousy would be aroused by the selection of those banks and by the allocation of their respective proportions of the business. Such selection and allocation would not improbably give rise to the suspicions and innuendoes which have attended the distribution in loans of the India Office balances. Again, I think if the remittances were made at the best rates obtainable, without regard to the amounts remitted through the respective banks, the alternative would merely be equivalent to transferring the auction from London to India.

3615 We have been told that the Secretary of State sells his Councils up to the total demands of the trade, subject always to the proviso that his sales should not prevent a sufficient amount of gold going to India. Do you think he is right in doing that, and do you think his practice is sound?—In selling to the full extent of the demands of trade?

3616 Yes?—I think that he is entirely justified in selling freely and to the full demand of trade so far as his balances in India permit him to do so. The objection I would raise to selling more than those balances permit is, first, that he is under the Gold Note Act, which gives, I believe, the right of ear marking deposits in London and issuing rupees from the Paper Currency Department in India at specie point. And apart from that, I should object to him selling below the specie point. It is difficult, I admit, to say what the specie point always is, but I should object to his selling new rupees, new coinage in fact, below the equivalent of the specie point. In other words, the Secretary of State, or rather the Government of India, has notified that the new rupees would be issued against deposits of sovereigns from the mints, and it also issues notes of the Paper Currency Department at the same rate of 15 rupees to the £. When it has done the latter for every 15 rupees it has the equivalent sovereign, we will take it, but when it issues new rupees it does not hold the equivalent sovereign—it has only got the third of a sovereign. That is where I draw the distinction between the free sale of Council bills at any price against balances down to the minimum of 1s 3<sup>3</sup>/<sub>4</sub>d, and the sale of Council bills against new coinage.

3617 You were associated, you told us, as honorary secretary, with the Indian Currency Association, and you can speak for 20 years, would you say that the change from the silver standard to the present standard has been a boon?—Unquestionably.

3618 Do you hear of any desire, or do you express any desire to us, for a change in the contrary direction?—Towards reopening, do you mean?

3619 Yes?—That cry has subsided.

27 June 1913]

Mr HARRY MARSHALL ROSS

[Continued]

2620 You think it has subsided?—Quite

3621 I think you quote Mr Webb to the effect that more people in India were able to use gold coins now than they were 15 years ago?—Yes. If I may, I will read you the extracts I have made. In 1898 Mr Webb published a memorandum on the Indian currency in which he expatiated on the poverty of India in the following words: "The poverty of the great mass of the people renders a gold coin or gold in any form entirely beyond their means. The native moneylenders would continue to receive 12 per cent to 75 per cent per annum for ordinary temporary accommodation, and they would not, and could not, use and demand that gold capital the assumed advantages of which are one of the main foundations of the present proposals to abandon India's silver standard. The gold standard, with or without a gold currency, could not, for the reasons already given, prove otherwise than injurious to the commerce of India, to the revenues of the Government, and to the well-being of the great mass of the population." That was written in 1898 at the time of the Fowler Enquiry. I read that as evidence that in the opinion of the writer the country was then in a very poverty-stricken condition and quite unable to use a gold currency. But in 1912, 14 years later, Mr Webb wrote "Probably more individuals in India are in a position to use gold coins than in the United Kingdom." The only inference I can draw from that is that in the interval the prosperity of India has put its people in a position to use coins which he said were absolutely unsuited and too rich for them 14 years previously.

3622 You use his testimony in corroboration of your own opinion?—Of my own opinion, yes.

3623 That the closing of the mints and the use of the gold standard has been a boon affecting the prosperity of India?—Undoubtedly.

3624 Coming now to the question of the use of gold coins, do you think that any special efforts should be made by the Government of India to encourage their use?—No, I deprecate such special efforts.

3625 What would be your view?—I think that the question of the use of a gold currency will be solved ultimately by the people of India, quite independently of any efforts that we can make either one way or the other, and I should prefer to leave it at that. I should certainly deprecate any arbitrary measures for preventing the flow of gold to India. On the other hand, I do not think it comes within the province of the Government to depute its officers, as has been done—or, rather, I will not say "depute," but illustrations have been given of Government officers having used their influence to circulate gold coins, and I do not think that is quite what should come within the province of the Government.

3626 You would leave it to the desires of the people?—Certainly.

3627 And to the movements of trade?—Certainly.

3628 A certain number of people hold that the use of gold coins is a very extravagant form of currency, and that the use of tokens, or of paper currency, is a more economical and scientific mode of currency, would that be your feeling on that subject?—Distinctly so. I think the cheaper the form of internal currency the better. So much is saved, and the gold could be conserved for the purpose of securing the external exchange value of the internal currency.

3629 You would not bring any pressure, therefore, to bear on the people to use gold, and you would follow their desires, but you would be rather more pleased to see non-gold used as the actual currency from hand to hand?—I think, really, if I may speak broadly, that the nation which exchanges its valuable products for a lot of metal which it can dispense with is simply wasting those products.

3630 I will take next, if you please, the question of the Gold Standard Reserve. I should gather from your previous remarks that you would regard the maintenance of an adequate Gold Standard Reserve as

being the most vital thing to India?—Under the present currency system, yes.

3631 Up till now that Gold Standard Reserve has been accumulated in the way that you are familiar with, and has been subject to no statutory sanction in any way. Has the time arrived, in your opinion, when any regulations could be drawn up for the government of the Gold Standard Reserve?—With regard to its size or its regulation, only?

3632 Its regulation?—I think it distinctly advisable that something of that nature should be recommended by this Commission. Might I just say why I think so?

3633 If you please?—In the budget statement of 1908 Mr E. N. Baker, when defending his refusal to issue gold freely in the crisis of the previous year, made use of some remarkable words concerning the Gold Standard Reserve. He said, "The time and method of the employment of the gold standard reserve must be at the discretion of the Secretary of State by whom the reserve is controlled." I venture to submit that this is a most dangerous dictum. The reserve should be held under regulations which would bring it into use automatically, and the public should know clearly what the regulations are. Its transfer to the care of a bank or to a special department created by legislative act, with strictly defined powers, would be greatly preferable to leaving its use dependent upon the will or whim of the Secretary of State for the time being or of his financial advisers.

3634 Have you got any general indications that you could suggest to the Commission with regard to the content of the regulations which you have in mind?—What sort of regulations have you in mind?—I have not presumed to lay down regulations which I thought should be preferably left to this Commission.

3635 I will give you an instance. Would you take, as one of your suggested regulations that exchange should be sold freely at 1s 3½d?—I would say more than that. I think that the public which has invested gold in the purchase of rupees is entitled to have that gold returned at the gold export point, which is 1s 3½d.

3636 That would be one of the regulations?—Yes.

3637 Have you any others in your mind that you could mention?—Another would be that, instead of selling the sterling drafts on one day per week, as I think, if I recollect rightly, was done in previous cases, and advertising a certain fixed sum, as is done with Council bills at this end, I venture to think that anyone should be able to purchase a sterling draft on any day of the week for export purposes, so that he may transfer his capital or his money for longer or shorter periods, or permanently if he wishes it, at that minimum rate. I think that with a properly constituted reserve in London of sufficient strength, that might be done with advantage.

3638 That would be the primary regulation, then, that you have in mind?—Yes.

3639 Free sale at a fixed minimum figure?—Yes.

3640 And the use of the Gold Standard Reserve to be restricted exclusively to the purpose of maintaining exchange?—Certainly—for remittance purposes, in my opinion.

3641 Have you any remarks to make on that point, on the subject of the six crores in silver?—At the time that those six crores of silver were substituted for four millions sterling in gold I did make comments publicly at a bank meeting in London on the advisability of that. It was reducing, and, as we know from subsequent events, reducing at a very critical time, the Gold Standard Reserve. Under the new regulations which have lately been promulgated by the Government, it has become not a silver branch but an Indian branch of the Gold Standard Reserve, and I can quite see its usefulness for relieving the seasonal demand for silver which we know occurs. In other words, my objection to a certain portion of the gold reserve being kept in India in silver is lessened in consequence of the new regulations.

3642 You can see its utility to the Government of India, but do you retain objection to those crores

27 June 1913]

Mr HARRY MARSHALL ROSS

[Continued

being part of the Gold Standard Reserve?—No, they are so no longer, really, they are an Indian branch of the Gold Standard Reserve, and are practically used for purely Indian purposes

3643 (Chairman) You mean that, in effect, they have become part of the Currency Reserve?—Practically, because they are interchangeable with it. They should not, in any case, be counted in the amount which may ultimately be suggested by this Commission as the actual Gold Standard Reserve held in London

3644 (Sir Robert Chalmers) It is gold passed into silver, and no longer gold in reserve?—Yes

3645 Passing now to the composition of the reserve, that, at the present moment, as you know, is partly in securities and partly in metallic gold?—Yes

3646 You attach primary importance to metallic gold, I understand?—I would not like to say primary importance, but I think that a certain proportion should be held in metallic gold

3647 How much do you think should be held, and how would you arrive at your figure?—As to size or proportion in gold, or both?

3648 Take both?—As to the size of the reserve, if we may judge by the extent of the drain upon it in 1907-8, the reserve is at present ample, taking into account the very large amount of gold in the Paper Currency Reserve, which practically doubles the Gold Reserve. I attach more importance to the resolution and confidence with which the Currency Scheme is backed than to the mere size of the reserve. A comparatively small reserve, backed by a resolute policy, would give the public more confidence—I attach great importance to confidence in this scheme—and do more to prevent or allay panic than a larger reserve with a continuance of the irresolution and vacillation which have often been apparent in the past. I do not think that the reserve should be unlimited. Its size should be fixed on some reasonable basis, not merely arbitrarily. Its fixture arbitrarily is merely guesswork. It might be fixed on a basis of experience, or of analogy and comparison. In the former case we could go upon the actual loss of gold in the crisis of 1907-8, say, from all sources, about 17,000,000*l.*, or a little more, I think it was (the actual export or transfer of gold out of India was only about 13,000,000*l.*, that is to say, 8*l.* millions, I think, sterling drafts on the Gold Standard Reserve, and a reduction of about 5 millions or 5*l.* millions in the amount of gold held in London against the Paper Currency Reserve, that is the way I estimated that), plus the Council bill shortage for the year, which, I think, was about 3 millions or 4 millions, speaking from memory. To this, a reasonable margin for apprehension should be added, for that, I should say, perhaps, 50 per cent. The public will watch the gradual falling of the reserve, and we should have something to give them ample security in that case. If we start on a basis of analogy and comparison, we may liken the liabilities of the Government under the scheme to those of a banker. It will be necessary to estimate those liabilities. The estimate of the rupees in circulation at the time of the Fowler inquiry was 120 crores. The Committee did not vouch for these figures, and I think that a serious attempt should be made to estimate the circulation, even roughly, now. I use the word "serious," because I have often heard comments on the unreliability of the statistics collected throughout India, very often from Indian sources, as to the composition of the circulation. An estimate of 200 crores would give about Rs. 7 per head of population, roughly. Now the English joint stock banks keep about 23 per cent. of their liabilities in cash, at the Bank of England, at call, and at short notice—that is, including their capital and reserves in addition to their other liabilities, it works out to about 23 per cent. A like proportion gives 46 crores, or, say, about 30,000,000*l.*, as the size of the reserve against rupee liabilities. Of this 23 per cent., the English banks hold about half in actual cash, or at the Bank of England, which is the same thing. This might serve as the basis for estimating what proportion of the reserve should be kept in actual gold. It must not be overlooked that the English banks' figures are "window-dressing" figures, and that the working percentages

are probably smaller. That is simply a suggestion which I venture, with all respect, to lay before the Commission. As to a mere arbitrary guessing at what we should have, 30, 40, 50, 60, or 70 millions, I can only say, so many minds so many guesses.

3649 Do you think the experience of 1907-8 to which you refer is necessarily a complete test for the future?—I think it was a very good one, because it is a curious combination, there was a world's crisis and a shortage of crops.

3650 Was it a world's crisis exactly? The storm centre, to use a phrase we have heard to day, was not in London?—No, it was in America, but the strain was felt in London, as we know.

3651 The storm centre was not in London, and though you had a famine in India, you did not have a great commercial crisis at this centre, London?—That is so.

3652 To that extent, therefore, the past is not a full measure of what might be in the future?—Assuming a great financial crisis, we have not had experience of that in London.

3653 Would you be prepared to indicate, under present circumstances, the sort of amount at which you would keep the metallic gold?—If my basis were accepted of 30 millions, then I would go on what the English banks hold—one half—which would be 15 millions.

3654 You would go as far as 15 millions?—I would go to one half because of my analogy. Similarly, if we go on the basis of experience, I do not think that anything less than 12 millions or 15 millions would be looked on as fulfilling the purposes which I think the Gold Standard Reserve might serve.

3655 Your argument is based, to a great extent, on you view that the amount of rupees in circulation is the primary factor?—Yes, a primary factor.

3656 And not the balance of trade?—"The balance of trade" with regard to India has always been a puzzling expression, "the balance of trade" is a puzzling expression anywhere, but particularly with regard to India. With other countries we will presume that they are exporting and importing, we will say, commodities, and when the trade balance is favourable they import the precious metals as currency, but in India it seems to be quite a different thing, and they import vast quantities of the precious metals, not as currency but as mere articles of merchandise. It is, therefore, very difficult often to say what is the true balance of trade in India, whereas it is simpler in the case of other countries.

3657 You are providing a Gold Standard Reserve with reference to the total number of rupees in India?—Yes.

3658 And not those rupees only which actually impinge on exchange?—The actual rupees which will impinge on exchange at any given time will be those seeking remittance from the country.

3659 You are not dealing with those only, but you are taking all the rupees?—Because it is impossible to estimate what those rupees are. I estimate in the case of the trade balance proving unfavourable and a desire for remittance arising, that if you had a Gold Standard Reserve which would absorb that 23 per cent. of the total rupees in circulation, you would be going, backed if necessary by a loan, as far as you could in reason be expected ever to go.

3660 Some people might think further?—They might.

3661 Is your argument based on the total amount of circulation, or the total amount of rupees coined?—On the total amount of rupees coined. I would not necessarily say coined, because there may be many rupees which are held in hoards, and are not affecting circulation at all. When speaking of circulation I mean the actual amount of money or currency which is being employed for the purposes of trade at the time.

3662 You take the wider definition for the time for your purpose?—Yes.

3663 Leaving that, and coming now to the Paper Currency Reserve, you are aware that there is a certain amount of paper currency reserve which is held in gold?—Yes.

27 June 1913]

Mr HARRY MARSHALL ROSS

[Continued

3664 And that is held in London?—Yes

3665 Would you be so good as to state to the Commission your views on that, do you think that right?—I think that if you have a properly constituted Gold Standard Reserve in London there will no longer be any need to keep any of your metallic currency of the Paper Currency Reserve in this country also. You are having two reserves for one and the same purpose at present.

3666 Have you got any remedy to suggest?—The transfer of the metallic reserve of the Paper Currency Department to India.

3667 The gold of it?—Not at present, because the Government of India have been hampered by the accumulation in its Paper Currency Reserve of gold which will not pass into circulation, but that is what I am ultimately aiming at.

3668 Do you contemplate, in those ultimate aims of yours, any transfer of the six crores of silver to the Paper Currency Reserve?—That I believe is contemplated by the Government as a seasonal thing in its new regulations.

3669 It has been suggested to this Commission that it might be a good thing to make loans from the Paper Currency Reserve on proper security to the Presidency banks with a view to making the currency elastic, and so forth, would you favour that?—I should favour it to this extent. In the first place, we ought to have regulations as to what the fiduciary proportion of the Paper Currency Reserve should be. In my days in India we were frequently, as a Finance Committee of the Chamber of Commerce, called upon to consider the question of increasing that fiduciary issue, and it was always done on the basis of one third of the permanent circulation being assumed to be safely placed in investments. At present there is only something like one fifth and therefore there seems a possibility of a very large extension of the fiduciary issue. Some years ago I believe the Government of India placed it on record in a letter\* that they looked forward to the time when one half of their paper currency would be a fiduciary issue. Without going so far as that and taking the one third, it seems to me that that 9 or 10 crores which could now be placed upon a fiduciary basis might be instead used for easing the money market in the shape of the loans you refer to.

3670 Do you contemplate as much as nine or ten crores being possibly put out in the money market of India?—I do not think it would be, but I think it might be made available.

3671 It would be probably three times too big would it not?—I am no longer in India, and I am not prepared to give an opinion on that point at present.

3672 Am I right in thinking that you would be prepared to make loans from the Paper Currency Reserve to, say, the Presidency banks, within the fiduciary total?—Certainly, I would.

3673 But there again, as you told me in answer to a previous question, at the beginning of your evidence, you would require first rate security?—Yes.

3674 And that would be not in addition to any maximum of the fiduciary issue, but in lieu of part?—In lieu of part, after it had been decided what the proportion of that fiduciary issue might safely be fixed at. As I have instanced to you originally we used to base our calculation on one third, but the Government of India has ventured as far as 50 per cent.

3675 The conditions of India might change, the people may come to use cheques, for instance, and so forth, more freely, and the issue of notes might become relatively less significant than it has more recently been?—The use of cheques in India might be advantageously extended even in the Presidency towns. It is very poor at present. I see in a Calcutta paper received by this mail a complaint from a correspondent, who says that many large firms in Calcutta still pay in currency instead of in cheques, and he is asking the editor of the paper to publish that with a view to inducing the more frequent use of cheques.

\* See in this connection paragraph 5 of Enclosure 1 to letter from Government of India No 295 dated 18th August 1904, Appendix VIII, page 264.

3676 To the extent to which any movement on those lines proceeded, to that extent there would be a diminution of the currency notes?—Of the rupee circulation.

3677 Or of both?—Or of both, unless it proceeded with such expansion of business as to absorb that too.

3678 The point I wanted to get your opinion on was whether a certain measure of caution might not prudently be exercised as to limiting the fiduciary portion of the Paper Currency Reserve, seeing that it is possible that circumstances might change?—You could realise your securities in such a case, and would do so, no doubt.

3679 That is your assumption?—Well!

3680 It is an assumption, you will admit, because the circumstances of the money market might make it very difficult to realise your securities?—It depends what those securities are.

3681 And the size of the market on which you would unload those securities at the time of your need?—Undoubtedly.

3682 Which might be their need too?—It might be their need as well. I would point out that part of the fiduciary issue is at present secured in British securities in this country—gold securities. I am not venturing to submit that all the extension of the fiduciary issue should always be in rupee paper.

3683 May I take you now to the question, which is a very large question, of the State Bank. What would you say on that? Would you favour the Commission with your views about the advantages and the disadvantages of a State bank?—I have ventured to formulate my views on the basis of the memorandum which was submitted to the Fowler Committee by Mr Alfred de Rothschild, and I have read and heard many recommendations of such a bank. I am bound to admit that if it fulfilled the intentions of its would be promoters, and so forth, it would be a most valuable addition to the banking resources of India, subject, as I ventured to point out, to restrictions which would prevent unfair competition with the exchange banks. With regard to that, I may say that Mr Alfred de Rothschild in his original paper submitted that the bank should not conduct any exchange operations, but should confine itself, like the existing Presidency banks, exclusively to internal operations. Of course, that would meet my first objection. Next, to protect from what would be unfair competition the solvent and well-managed Indian banks. I think the Government can regard with complacency, even if it does not encourage, the extension of Indian banking pure and simple, but that it should not, by the institution of a State bank, cut away the ground from under the feet of those solvent institutions. On the other hand, there are a great number of banks being started now in India the resources of which are ridiculously small, and they constitute a danger to the public. Possibly the establishment of a State bank, working in numerous branches on the lines of the Bank of France, might to a certain extent supply a need and be a safe depository for greater savings.

3684 Do you think there is a popular demand for a State bank in India?—I do not think so. I am merely taking this somewhat highly coloured representation of what a State bank will or would do, and I say that such an institution, if it fulfilled these purposes, would be valuable.

3685 You attach particular importance, I think, to a bank of that nature, or otherwise, with branches which would co-operate with the ryot in giving him advances at less ruinous rates than he has to pay at present, but you look forward to something else, and I think you attach importance to something in the nature of co-operative banking?—I do not think I have mentioned that at all in my précis. What I have said is that a State bank would, by opening branches all over the country, provide that absolute security for the native depositor and trader, which has not in the past been peculiarly conspicuous as a feature of Indian banking. I am not thoroughly acquainted with the co-operative credit movement in India, but from what I have read of it, it seems to me that it is meeting the wants of the ryot better possibly than could be done in any

27 June 1913]

Mr HARRY MARSHALL ROSS

[Continued]

other way, but I have not connected that in any way with the State bank

3686 You do not connect it in that way?—No

3687 It is an object you have in view, but you have not connected it with the other question?—I have not connected it

3688 Do you suppose that if there were a big State bank, able to extend its operations by creating branches in places where there are no banks at the present time, it would take long before those new branches would pay?—Predictions in India are more dangerous than in any other country. The only evidence I have which is of any use is possibly that of the experience of the Bank of France, if I might just give that. In 1878—I have taken this from a paper read before the Institute of Bankers some years ago—there were 41 branches of the Bank of France carried on at a loss of 32,000*l*, while 45 branches were carried on at a profit of 99,000*l*. Twenty years later, in 1898, there were only two branches working at a loss, the amount of which came to only 3,000*l* a year, while the productive branches yielded a profit of 413,000*l*. That is the only evidence I can submit

3689 Coming now to the general question of a State bank, it would have to be a very big institution, would it not?—Yes

3690 What sort of capital have you in mind that it would require, treating it as a State bank for the whole of India?—I have not ventured to think of any capital myself, and the capital which has been suggested by others seems to me one which, on present lines would never earn its dividend. When you come to look at the proposed bank as a paying proposition, I find many grave difficulties in the way. The project, as originally submitted to the Fowler Committee, presumed a capital of 14 millions, and to pay a 5 per cent dividend would require a net earning of 700,000*l*. The three Presidency banks have together in capital and reserve about 7½ crores, or five millions sterling, and they pay dividends totalling annually about 340,000*l*. It is difficult to see how this could be doubled short of a heavy Government subsidy in the shape of the profits of the Paper Currency Department. Would a heavy subsidy be just? Assuming that the capital of the State bank be limited to 10 million pounds—that suggestion has been put before me from several quarters—requiring only 500,000*l* net profit to pay 5 per cent, the absorption of the existing banks would, likewise, absorb nearly the whole of this capital. Shareholders in the existing banks would presumably have the option of exchanging their holdings into shares of the State bank or of being bought out. The market value of those holdings is now about 8½ millions sterling. With the usual “inducement” to amicable arrangement, probably nine million pounds would be required to bring about the amalgamation. The actual addition to working capital would be a solitary million sterling. I therefore wind up by saying that, theoretically, the suggestion of a State bank is an inviting one; practically, it is not yet apparent that it would be a paying proposition.

3691 That is your view?—That is my view

3692 Would you say something further as to the utility, were such a bank established, of its looking after the sale of Council bills?—I have not ventured to suggest any alteration in the sale of Council bills

3693 Do you conceive that any particular benefit would ensue?—I do not. I think people would be terribly excited if Council bills were handed over. The jealousy of the other banks would be rampant.

3694 Take another aspect of the probable activities of a State bank. It is quite conceivable that it might be entrusted with the management of the paper currency, what would be your view as to the utility of that?—I think a paper currency is probably better managed by a bank than by a Government.

3695 In time or at once? Could the bank take it over and do the work of the Currency Department?—The bank would take it over in that case.

3696 Could it do it quite as well at once, do you think?—That would depend largely on the staff, I should think.

3697 The paper currency is a profitable concern to the Government?—Yes

3698 And it would be, therefore, a profitable business to the State bank?—If it is going to be handed over it would be taking a large profit which the taxpayer would have to make up. That is my objection to the transfer

3699 Is there any further observation you would like to make?—In regard to the use of the Gold Standard Reserve I am suggesting something which probably will be regarded as heretical, but I will be courageous enough to make it. I say that with a properly constituted Gold Standard Reserve, held in this country, there should be no need for holding any portion of the metallic reserve of the Paper Currency Department here also. The proper place for this reserve would appear to be India, since it exists to insure the convertibility of the notes, not the maintenance of the exchange value of the rupee. As regards the Gold Standard Reserve, hitherto it has been the practice, when exchange threatened to fall below specie point, to offer fixed amounts of sterling drafts on London upon a given day each week. With a properly constituted reserve in London, it should be possible to sell telegraphic transfers upon any day of the week up to a reasonable limit. Assume a grave financial crisis in London, with the exchange banks and merchants anxious to strengthen the resources of their head offices in England. Actual gold could be released in London, to the advantage of all concerned. I am now assuming that we have the reserve I suggested of 30 millions, of which half would be in liquid gold. It is certain that gold released in a London crisis would be to the advantage of London, and it certainly would be to the advantage of India. It would give her a profitable use for her money at a time when she might be willing to lend, and she could not lend it to a better market. It would be of service to the exchange banks and to the merchants anxious to strengthen their London offices if they could have these remittances by means which would help to terminate the crisis. The reason I have for suggesting it is that I was in India through the Baring crisis, and at that time—I take it on the authority of the Bank of Bengal—the aggregate balances of the Presidency banks were about 13 crores of rupees, and they were not able to lend much at 3 per cent. According to a statement of Mr Lindsay, published in the “Economic” on 25th July 1891, pp 960–1, they would have been glad to lend the three millions, or whatever was required, to London at 2 per cent. That is a statement made in print by Mr Lindsay, who was the Deputy-Treasurer of the Bank of Bengal at the time. Had that been possible, there would have been no need for us to go cap in hand to France for three millions of gold. At that time—I was employed in the firm at the time, and I know the fact—a large mercantile firm were desirous of remitting some few thousands of pounds to strengthen their London house—they thought it would be better to strengthen their reserves at such a critical time, though they were in no danger. We were unable to buy telegraphic transfers from any of the English banks, and only through the Comptoir National could we purchase them. The English banks declined to weaken their head offices at that time. Such was the report brought back to us by the brokers

3700 (Lord Fisher) Did I understand you to say that you would let out the Government balances in India at something below bank rate?—I said that unless you made it profitable to the banks they would not borrow

3701 Would it not be better, do you think, to lend out such money as that at market rates? Have you a market rate in India as we have in England, apart from the bank rate?—The banks advance there at 1 per cent. and 2 per cent. frequently over the bank rate.

3702 And that is the market rate?—Yes. They charge 1 per cent. or 2 per cent. to the mercantile houses, the percentage depending largely on the credit of the mercantile houses. That is for overdrafts in course of shipment and so forth in the export trade.

27 June 1913]

Mr HARRY MARSHALL ROSS

[Continued

For long periods I believe special terms, and quite different terms, are made

3703 You might, I suppose allow balances to be taken up there either at market rate or by tender?—That would be for tender by the banks, I understand?

3704 Yes?—I dare say

3705 What I have got in my mind is that I think you might very easily make a grievance if you lent to any particular banks at something below what I should call the market rate?—Quite possibly

3706 It would give those banks an advantage over others?—I am quite with you.

3707 I think if it could be done by tender it might perhaps do away with those grievances?—It would, necessarily

3708 (Mr Gillan) You said, in answer to Sir Robert Chalmers, that you think the balances of the Government of India recently have been unnecessarily large?—Yes

3709 And the cause, you thought, was that the budgets had been too pessimistic?—Yes

3710 I suppose you recognise that under present conditions there are great difficulties in the way of budgeting in India?—There always are

3711 The rule which the Government of India have to follow, *faute de mieux*, is to budget for the normal?—Yes

3712 An estimate based on the normal is an estimate that is bound to be exceeded if you get a good year?—I would venture to interpolate, if I may, that while the Government should budget for the normal, reading the various speeches of Sir Guy Fleetwood Wilson, I think he has always budgeted for below the normal. All his speeches that I have read have been pessimistic ones

3713 That is to say, they have not fixed the normal at a proper level?—As the results prove, apparently

3714 Suppose they had budgeted for a fuller normal, and the actuals in consequence had been closer to the budget estimates, or, rather, we will say, that you foresaw that you were going to have a bigger surplus than was put down in the budget, in that event what would you have done?—In the first place I would not have imposed taxation, but the Indian Government has done so

3715 That was in 1910. If you had foreseen a bigger surplus would you have taken off taxation?—If I had foreseen a bigger surplus for one year, no I have now got in my mind the opium surplus. If I had foreseen a surplus of one year, no, if I had foreseen what appeared to be a permanent surplus, yes

3716 Suppose the surplus you foresaw was going to last, as far as you could judge, for only two or three years?—He would be a very wise Finance Minister who could look more than two or three years ahead

3717 I know, but supposing your forecast was for two or three years only?—I should have accepted it

3718 You mean you would have taken off taxation?—Yes

3719 Would that have been because you consider that taxation at present is, as a matter of fact, excessive?—I would not like to say that taxation is excessive, but I think there are a number of cases where it is inadvisable. In one particular alone I think it is very inadvisable. Might I refer to the income tax? There is an income-tax which, applied to the European firms, is a just tax. I never complained of it, and I pay it still in both countries. As applied to the native it is a mistake. The great aim of the Government should be to get the native of India to invest his money in joint stock enterprises and in securities, but no sooner has he done so than the Government sweeps down upon him for a tax, and if there is one thing hated by the Indian more than another it is a Government tax. It is not an encouragement to the bringing out of hoards to tax them at once when they appear and you can lay hold of them. That is my point.

3720 Would you make use of some of those large surpluses that you foresaw to remedy defects in the

income tax?—I think it is an inadvisable tax, politically considered, as applied to the Indian

3721 With regard to Council bills, I think you said that the effect of Council bills was to restore to the circulation in India the currency abstracted from it?—The currency collected from the circulation is restored to the circulation by sales in the form of Council bills

3722 That is not affected particularly or specially by Council bills, is it? If the Secretary of State did not draw Council bills you would have the funds going into India in the shape of sovereigns and there being exchanged for rupees, restoring in that way the circulation which had been withdrawn?—If rupees are wanted you can only get them either through the Secretary of State or through the importation of gold

3723 If you stopped the sale of Council bills you would not necessarily stop the restoration of this currency which you have in mind?—If you stop the sale of Council bills the Government will accumulate the taxation in its treasuries. It could not remit the proceeds of that taxation to pay its debt in England because those proceeds are in silver. It will have to exchange them in some way or other, and with someone or other, for gold with which to pay its debts in England

3724 But the rupees which were wanted for circulation would equally be withdrawn from the currency by the presentation of sovereigns?—They could be withdrawn from the Treasury by the presentation of the sovereigns, and those sovereigns would have to be remitted at the cost of the Government to England to pay debts

3725 That is a further consequence, no doubt. With regard to the loans from Government balances in India, we have had some witnesses who said they saw no objection to such loans being made, but at the same time they were not very enthusiastic on the subject, and they did not consider that there was any very great necessity for them. What is your view on that?—The necessity would be shown by the tenders which Lord Faber has referred to

3726 Do you think that ordinarily in the course of the busy season in India it would be a good thing for the Indian money market to be helped by loans from Government?—Application has been made in the past by the Presidency banks for loans at those seasons, and they have been refused.

3727 Do you think in a general way it is very important for the Government to help the money market as far as it can out of its balances?—If the Government by its action has abstracted from the circulation currency which is needed, it is the Government's business to restore it to the circulation as soon as possible

3728 On the matter of the form of the currency for India, I think you said that on the whole you would prefer an extension of the note circulation to an extension of the gold circulation?—Yes, I think that is most desirable

3729 There is one point I wish to put in that connection. At present there is the right to cash the notes at only a small number of places in India, that is to say, at the currency offices, if the Government were inclined to increase the number of those centres this is the kind of difficulty that presents itself to my mind, and I would like you to consider it. Suppose you take a place like Ahmedabad, in the Bombay Presidency, where the big crop is cotton. The demand for cash at Ahmedabad will come in February or March or April. It would then subside, and there would be a back current of rupees in what, for Ahmedabad would be the slack season, say from May, or after that. About July you get a great demand for rupees in quite a different part of the country, because then the rute comes on. Therefore, Government will be getting back its rupees, we will say, at Ahmedabad, and simultaneously it will have to plant a very large number of crores of rupees at the other end of the country, in Eastern Bengal?—Do you mean to say in exchange for notes?

3730 Yes?—That is one of the difficulties which the Government faced when it extended the conditions of the universal circulation of notes, but then the profits on the Paper Currency Department are large,

27 June 1913 ]

Mr HARRY MARSHALL ROSS

[Continued

and, if it is a mere question of transporting currency, the Government is well able to do it out of their profits

3731 Do you think it the work of the Government to undertake this responsibility to find rupees all over the country in order to extend its note circulation?—I think that if the note circulation were handed over to a bank, the bank would make profits out of that circulation, and would take risks which possibly the Government at present is somewhat loath to do

3732 Then from your point of view a bank could do this particular kind of business better than the Government could?—I do not say it could, because latterly the Government have extended it enormously, but I say it would be its policy to do so, because it would be profitable

3733 When Sir Robert Chalmers was asking you about the Gold Standard Reserve, and you suggested that certain regulations should be drawn up for it, I think you said something to this effect—that the owners of rupees are entitled to get them changed into gold?—A member of the public who has paid you a sovereign for 15 rupees to place in India is entitled to have his money back if he wishes it

3734 Might I ask you to tell me once more what was the regulation that you proposed on that point?—That the Government should always be prepared to issue sterling drafts, or telegraphic transfers, at this rate of 1s. 8½d. or 1s. 3½d., as the case may be, on demand

3735 I understand this is to be a regulation of some sort?—Yes, and it is practically so now, because the Government does it, but it is not stereotyped in a statutory form

3736 That is what I want to get at. What would be the difference? Would it impose on the Government a legal liability?—If it were put into statutory form it would. The evasion of such a liability means disaster to India, it means the utter collapse of the currency system.

3737 Do you not think that is going rather far? Is this absolute liability to find gold for silver on any or all occasions a feature of the currency of any country except England?—I do not say that India should do that, I say it should only do it for remitters, exactly as Holland does, I believe Holland does that to day—she finds gold for export but not for internal use

3738 That is a point I was not quite clear about. You do not mean that anybody who takes 15 rupees to a treasury or to a mint in India should get a sovereign for it?—No. The sovereign has been brought into the country and changed into rupees. When the man wants his sovereign back again it is to go out of the country. That is the way I look upon it.

3739 Then this regulation would be limited to remittances?—Undoubtedly. Might I quote you in two lines the point as dealt with by the Fowler Committee? The Fowler Committee said in effect that the Government should not be compelled by law to furnish gold for internal purposes. That you will find in paragraph 59 of the Fowler Committee's Report.

3740 I will now go on to the amount of the Gold Standard Reserve, with regard to which you say that you would like to define it with some reference to the amount of rupees in circulation. I think that is your general idea?—That is a suggestion.

3741 You said, I think, that it would be well to have some serious step taken to ascertain the amount of the rupee circulation?—Yes.

3742 I suppose you know of the calculations that were made on that subject by Mr Harrison?—Yes, and by Mr Atkinson too, whom I knew personally.

3743 What were, do you think, the defects in those calculations? Did they not, as a matter of fact, make use of all the information that is probably available on a subject of this kind?—I do not know whether it would be quite right to quote one of the members of the Commission on that point, but Mr Keynes thinks exactly with me. In his very able book which I have had the pleasure of reading, he says doubts were thrown upon the collection of the various statistics which were applied for the purpose of ascertaining this figure. The Government had certain rupees

counted at certain centres, and I believe Mr Keynes throws doubt, as many others have done, on the reliability of these countings.

3744 Do you think the data were wrong?—I have no knowledge, I merely say that that is the fact I have had it said to me by statisticians in India that anyone who knows anything about Indian statistics knows that they are not worth a penny.

3745 What I wanted to get at from you was whether you thought the calculation of the rupees in circulation is not a problem which is indefinite in its nature?—Which is necessarily indefinite?

3746 Yes?—It is a very difficult problem. I believe that the statistics which give the gold circulation in England are not accepted as being absolutely definite, but they are approximate, and I think you may get a similar approximate estimate for India.

3747 Why I am asking you more particularly about this is that I think one reason why you would like to fix the reserve in some sort of proportion to circulation is that you think the circulation is a more definite figure than the amount which would impinge, as Sir Robert Chalmers said, on exchange?—The amount which would impinge on exchange you can never define, I think. That would be the amount which would seek external remittance, and what that is you would never ascertain. It would depend upon the extent of the crisis, the state of trade, and various other factors.

3748 Do you not think that the experience we have had of the past crisis of, say, 1907-8, is perhaps as good an indication of the amount that would be required by the public as any inference based on a calculation of the rupees in circulation?—Quite as good.

3749 Then with regard to the proportion of the circulation that should be fixed as the amount of the Gold Standard Reserve, you referred to the practice of the English joint stock banks as a sort of example, do you think that that is a direct analogy?—It is not a close analogy.

3750 Do you think it is an analogy which might be taken?—It is an analogy.

3751 Is it not the case, for instance, that the amount of the reserve which banks consider they require varies very largely according to the kind of banking business done?—I am taking the average of the whole of the joint stock banks in England and Wales, that is what I am basing my percentage on. They vary very considerably, undoubtedly, but I am simply taking the average.

3752 If you take another class of banks, they would give you a different percentage, would they not?—If you separated the banks you would get a different average, but I am taking the average of the whole.

3753 (Lord Faber) I think in that instance of yours, you said the banks kept cash and liquid assets?—Cash in hand or at the Bank of England to the extent of about half of this 23 per cent.

3754 That is liquid assets, it is not gold, you know that, of course?—I have defined the whole thing. What I said was that the English joint stock banks keep about 23 per cent of their liabilities in cash, at the Bank of England, at call, and at short notice.

3755 Not so very much of that is what you and I understand by cash, that is, gold?—A like proportion gives 46 crores, or say, about 30,000,000l as the size of the reserve against rupee liability. Of this 23 per cent. the English banks hold about half in actual cash or at the Bank of England, which is the same thing.

3756 But it is not in gold. All I want you to understand is that out of that 23 per cent. not much is gold?—What is put into the Bank of England we look upon as gold. That is my point.

3757 They will not regard it as such. Why I say this is because we have a great discussion going on just at this moment, and the Bank of England have taken the standpoint that a balance at the Bank of England is not the same as gold?—It is perfectly certain that it is not, because the total balances at the Bank of England would shrink away the whole of the gold immediately—I admit that.

27 June 1913]

Mr HARRY MARSHALL ROSS

[Continued

3758 They go on and explain it in this way, that the joint stock banks are so very big in England now that under certain circumstances it might not be possible even for the Bank of England to pay all their balances off in gold?—I can quite see that they could not.

3759 Because the outside banks are so big and strong?—Yes. Again, if the whole of the banknotes were presented to the Bank of England, the Bank of England would be insolvent. We know that, and we should suspend the Charter Act.

3760 Still there is a great deal of gold against the notes?—But still they are short. You have a note issue of 55 millions, and you have not that amount in gold at the Bank of England to meet it.

3761 (Mr Keynes) Your figure of the half of 23 per cent is not an ascertained figure, but it is an estimate which is open to doubt, I think?—It is ascertained. I am taking some of the leading banks of the country.

3762 And you are applying the half of the 23 per cent to other banks for which the figure is not known?—Precisely, because they have confused the two halves together in their balance sheets.

3763 So it is a case of not being an ascertained figure?—It is ascertained on the basis of four banks, the London County and Westminster, the Capital and Counties, the Union of London, and the London and Provincial.

3764 It is based on the assumption that all the other banks keep as good an average as those banks?—I should not like to say that, I am hoping that it is so.

3765 It is based on that assumption?—I am assuming that, in these figures.

3766 (Lord Faber) The only point I am trying to make is that liquid assets at the Bank of England is not at all the same as gold?—It is not, I quite agree. When I say it is the same thing, I mean that in England it is looked upon as the same thing.

3767 (Mr Gillan) I would like you to consider the Paper Currency Reserve and the Gold Standard Reserve together in regard to the location of any gold that is contained in them. Do you consider, taking the general question, that as a whole gold held in India is more advantageous for the support of exchange than gold held here?—I should say gold held in England, most distinctly. You could then undoubtedly limit the demand to gold asked for by remitters, and I think it is the only safety of the present scheme that it should be limited to remitters.

3768 Gold that is drawn out from currency in a time of crisis, as it was drawn out in 1908, you consider does not support exchange?—It does not, it disappears.

3769 I want to put this to you, because this is a point which is put by those who hold the opposite view. If you take 15 rupees from a person in India and give him a sovereign, you have at any rate a contraction of the silver currency?—Yes, you have, it is true.

3770 Is not that the effect, as far as that goes?—You do not know whether the sovereign may not go into circulation, in which case it has not contracted the currency.

3771 You are contracting what I may call the dangerous part of the currency, the currency as to which you have a liability, because the sovereign is carrying its value with it?—You are creating no monetary stringency, but if money is wanted for export it will create monetary stringency, it will adjust the balance of trade in that way.

3772 Would you say that if the Government of India were again faced with a crisis, as it was in 1908, it should refuse to give up the gold it has in India for internal circulation?—It should certainly reserve its right, as it has reserved its right, and I think it should certainly be urged upon it, to issue that gold only for export. If it is in such a very strong position that it can safely give up the gold for internal circulation, very well, but otherwise it should reserve that right, and exercise it if needed, undoubtedly.

3773 As regards loans from currency about which you were asked, you said loans of that kind ought to be made on first-rate security, I think?—Yes.

3774 What had you in your mind in speaking of first-rate securities?—I had in mind Government paper in the first place. It is so difficult in India to find readily saleable securities of other kinds, you have not the same market in India that you have here.

3775 You are aware that in other countries the expansion of the note circulation is allowed against bills of exchange, are you not?—Yes, that is so.

3776 What do you say to that, in connection with India?—I never was sufficiently acquainted with the hundi market to be able to express any opinion. It is the only market I was not familiar with.

3777 Lastly, as regards a State bank or a central bank, I do not know that this question has been put before the Commission yet, but one has heard a great deal in connection with these proposals of the difficulty that would arise as a consequence of the rivalry, or the distinction in interests, between the different parts of India—between, for instance, Bombay and Calcutta, do you think that is a serious difficulty in the way of a State bank?—It should not be a serious difficulty, but it always has been a difficulty. I think it was the rock upon which the scheme foundered in the previous case—in 1900 I think an attempt was made to found a central bank.

3778 Do you think it is a difficulty which can be got over?—I think myself that it would be a great advantage if the three Presidency banks were amalgamated, without any attempt to raise a large additional capital as is suggested, and upon which it would be difficult to pay dividends. I think the union of the three banks would be very preferable.

3779 How would you provide for the representation of those different interests, if you say that is a difficulty on which the proposals foundered on a previous occasion, how would you avoid it, or get over it?—I think it would require a diplomat rather than a merchant to deal with that question.

3780 (Sir James Begbie) In the matter of Council bills you have stated objections to the proposal that the bills should be sold only at 1s 4d, and you have made the remark that the Secretary of State would always be the last to be served if he held to the 1s 4d?—If he held for any fixed price, yes. If he holds for any fixed price it practically amounts to this, that there is a permanent and standing offer in the market at such a price, and therefore every wise man will endeavour to transact his business at a rate which is a little, ever so little, better than that.

3781 Is not the Secretary of State the last to be served when exchange conditions are not favourable, whether he holds out for a fixed rate or not?—When exchange conditions are not favourable, and there is no demand for Council bills. If there is no demand for Council bills, there is very little demand for remittance to India possible.

3782 Therefore he is left?—He will be left as soon as he gets down to the minimum 1s 3½d. He need not be left, because he can continue to sell at any price, but he does it at his peril, because it will come back in the shape of sterling drafts from India at a profit.

3783 You are not in favour of the sale of drafts against the Indian branch of the Gold Standard Reserve, nor against new coinage except at specie point, I understand?—The specie point is very difficult to fix, I admit, and the specie point in India is different from the specie point in Egypt and Australia. My only reason is that the addition of new currency to the existing currency should be made in the last resort, and you can only arrive at the last resort by having a maximum price and the market paying that price.

3784 In the case of sales of bills against, say, silver coinage would you suggest that a change should be made in the way these bills are sold? Is there any object in putting them up to auction, for example?—If you put them up to auction you do not fix your specie point, you auction them the same as Council bills.

3785 That is the very object in offering them by tender, is it not?—They would fetch no more than old

27 June 1913]

MR HARRY MARSHALL ROSS

[Continued

rupees such as are already in the Treasury. It is indifferent to a man who is buying rupees in India whether he gets new rupees freshly coined or not.

3786 I am putting the case that the Government are selling bills against a silver coinage?—In other words, it supplies its needs with Council bills, and has no more to sell, is that what you mean?

3787 I am supposing it is only selling against the silver coinage?—A man would not do that so long as he has other balances to draw on, therefore we will assume that the Secretary of State has exhausted all the other available resources, and then he should hold on for the specie point, in other words, he should then fall back upon the law, and the law is that if you tender sovereigns to the mint in Calcutta and Bombay, you receive 15 rupees for each sovereign, or that if you tender gold to the Paper Currency Department you receive rupee notes at the same rate. If he is asked to act under that law in this country, then he should not sell those 15 rupees for 19s 8d, but he should sell them for the full sovereign plus the carriage. It is complicated, I know, by the gold which goes from Egypt and from Australia. It is a very complicated and a very difficult point, but that is just my general idea of it.

3788 Is there any object in offering these bills for tender? Would it not be enough if remitters simply came and said they wanted so much, because the rate is pretty well known, and you can always tell what the rate is? Practically it would be very similar to what is done in ear marking gold, would it not, at 1s 4½d?—It is practically the same thing, only in the one case you are taking rupees which exist in the Paper Currency Department, and in the other case you are taking new rupees which are to be coined specially. My only reason for making the difference is that the Government should only in the last resort issue 15 new rupees for every sovereign, and they would only know when the last resort has been arrived at by the willingness of people to pay the top price.

3789 We have had it in evidence that the India Office, in selling bills, have not paid any attention to the specie point?—That has been alleged.

3790 They admit that they have sold bills, and will go on selling bills so long as they keep exchange between the two specie points, do you agree with that?—I think they certainly should meet the market, and of course make the best rate they can for the India Office with regard to any rupees which are part of their balances, either against Council bills or against excess collections such as we have had of late. Certainly they should meet the market.

3791 Or against a Gold Standard Reserve in India?—I think in my précis I have included the Gold Standard Reserve as a thing which should be held at the gold point, but on carefully thinking it out since submitting my précis I would like to withdraw that, because I see that in issuing rupees from the Gold Standard Reserve in India the Government is getting its pound's worth of gold, and therefore it is not holding only one-third as it would do in the case of a further issue of rupees.

3792 It is a fresh addition to the currency, is it not?—It is in a way. It was originally a fresh addition to the currency which has returned as against sterling drafts. I am now speaking not of the original six crores, but I am speaking of those transactions that took place in 1907-8. So far as regards those original six crores, certainly my reason would apply if they were new rupees. I am now speaking of the currency reserve as a working concern which absorbs and releases them. As regards any old rupees which have been absorbed, the Government, I think, should issue them as freely as it could from the Treasuries, but with regard to new coinage, not.

3793 You would not apply the specie point, then, to those old rupees?—Not to the old rupees which had been absorbed in the 8½ millions which had been remitted.

3794 Regarding the establishment of a State bank, would you say there would be unfair competition with the exchange banks if the State bank was empowered to remit on account of Government the home charges

amounting approximately to about 24 crores, say? I ask the question because you put down in your précis the fact that the total foreign trade of India last year was about 485 crores. If the State bank remitted the Government's home remittances, which amount to, say, 24 crores, would you call that unfair competition?

—At present the Council bills are a very big factor in the operation of exchange banks. They are most useful, we know, and in all probability if they were handed over to a State bank it would be a certain inconvenience and interference with the established banking practice of the exchange banks. It would give rise to objections and jealousies, I think. Moreover, if the Fowler Committee were right in specifically limiting the operations of the State bank to internal purposes only, it would be exceeding their recommendation to give it a right of entry to the London market.

3795 You consider the size of the Gold Standard Reserve is at present ample, taking into account the very large amount of gold in the Paper Currency Reserve?—Yes.

3796 But you do not consider the Gold Standard Reserve by itself is ample to secure stability of exchange?—No, because the Gold Standard Reserve contains no less than four millions which are in silver, so it is only about 18 millions strong, and I do not consider 18 millions of gold is a sufficient Gold Standard Reserve at present. But coupled with the enormous holdings in the Paper Currency Reserve, it is ample and more than ample.

3797 You stated that with a properly constituted Gold Standard Reserve held here, there should be no need for holding here also any portion of the metallic reserves of the Paper Currency Department?—You would be holding two funds for one and the same purpose in that case.

3798 Do you think that under any circumstances a portion of the Paper Currency Reserve should be held in London?—In any circumstances? It has been urged frequently that it is serviceable in expediting the purchase of silver for currency purposes. That could apply to only a small proportion of the gold which might be held. At present it is not very large, but it might be, and has been larger, I think.

3799 It has always been held that it might be useful in the case of a crisis?—It would be equally useful in India, seeing that the Government reserves are ultimately open only for issue to remitters or exporters.

3800 Do you think there is some danger of gold held here causing some discredit to the note issue in India?—Causing discredit on the ground that it is not sufficiently secured?

3801 On the ground that the money intended to redeem the notes is not available on the spot?—Yes. One of my reasons is that the Paper Currency Reserve is primarily intended to secure the convertibility of the note, and therefore it should be held in India, but as the note is payable at the option of the Government in silver, it is not necessary that gold should actually be there against the notes. They are not gold notes so far.

3802 No, but still you have power to issue gold?—If the Government wishes and considers it safe to do so, yes, but in a crisis they might not. They could issue silver only.

3803 I do not know whether you are aware of the fact, but we have had experience in Bombay of serious runs on banks. The banks have been discredited for no good reason, and there has been a run upon them. That has happened more than once. There is the fact that people do take fright sometimes and make a run on a bank, so that we might have a similar instance of discredit in the case of the note issue. It is, therefore, a question in my mind whether it is advisable to hold the gold of the Paper Currency Reserve in London?—I think not, I think it should be held in India. But you must have sufficient gold reserve here, otherwise I do not consider your present Gold Standard Reserve would be sufficient.

3804 The gold in India would still support exchange?—Yes, undoubtedly for internal purposes but it might not for exporting.

27 June 1913]

Mr HARRY MARSHALL BOSS

[Continued

3805 (*Chairman*) How would you propose to secure that gold issued in India in the circumstances you are contemplating should be used only for the support of exchange?—I do not know what measures would be necessary, but I know that it is done. Holland is doing it at present. She is supplying gold freely for export, but she does not bind herself to supply it for internal purposes. I suppose it is done on certificate, possibly in the same way that opium is shipped to China on certificate.

3806 (*Sir James Begbie*) I gather that you are not in favour of doing anything to encourage the use of gold as currency?—No, I am not in favour of the Government encouraging it. I do not think it is necessarily a function of the Government to do that, but if the people wish to have a certain currency the Government should not interfere.

3807 The people should get gold if they want it?—If they wish it, and the Government should neither specially push it on them, nor arbitrarily interfere with their right to get it.

3808 Have you heard that sovereigns are now freely circulating as currency in certain districts?—Certainly, that is so.

3809 Does that fact not prove to you that gold coins are not unsuitable for circulation purposes in India?—I do not think they are unsuitable. Historically, I believe it is a fact that there was a gold circulation.

3810 Do you think it is possible that in other districts where hitherto rupees have been the only or the principal medium of exchange, a change to the use of gold may develop?—I think it is possible.

3811 Let us suppose a position similar to that which we had in 1908 after the crisis of 1907, when the gold reserves fell to a low point and the reserves of rupees were high. I suppose you would agree that such a situation might again be experienced? At such a time the natural desire of the Government would be to see the flow of currency reversed, surplus reserves of rupees re-issued to the public, and the gold reserves restored?—Yes, that would be so.

3812 Suppose the position has changed in this respect, that a great demand for gold as currency has developed, if the currency tide were reversed, the public demand might be for gold coins?—It might.

3813 How would you deal with a situation like that with your reserves full of rupees?—Do you mean would the Government tender notes? The public could import sovereigns, and they are doing so at present. It would not affect the Government if they imported sovereigns in exchange for their produce.

3814 But how would the Government get the gold reserves restored if the gold went into circulation?—If the Government never issued the rupees it would never want the gold backing to support them, because they would be locked up in the Treasury.

3815 Then the rupees would be left in the hands of the Government?—*Pro tanto* the Government liability would be lessened by the amount of gold that is given out for rupees.

3816 The gold reserve would cease to exist then?—If India became a gold currency country the position might not be unlike that of the United States, where they have an enormous amount of dollars which cannot get into circulation which are in the cellars of the Treasury. It rests entirely on the habits of the people. It may come, but if it does it will probably come gradually.

3817 You stated as an objection to the 10 rupee coin that it might check the circulation of the 10-rupee note?—I think so.

3818 Do sovereigns check the circulation of notes?—There is no comparison there.

3819 Not as regards the amount?—The small 10 rupee note is less than a sovereign, and the larger notes which are used for trade purposes do not compete with the sovereign in identical amount. If you had a coin which actually competed with an existing note it might possibly be—I do not know, and I should not like to make predictions about things Indian—that it would affect the circulation of the note to which it was of equal value.

3820 But so far the note circulation is not affected?—So far it is not. I would rather attribute the increased circulation of the note in India to the abolition of the circles—that is, to the universality of the note, than to the mere fact that it is due to other causes.

3821 You also fear that the 10 rupee piece might become popular as a new ornament and disappear from circulation?—It possibly would. That is the opinion of some of the most persistent attackers of the present system. "The Times of India" for instance.

3822 Even if that proved to be the case, would it not be an advantage in so far as it reduced the necessity for fresh silver coinage?—Not if it disappeared—only if it passed into circulation.

3823 Instead of issuing fresh silver coins, if the 10 rupee coin went into the hands of the public?—And became an ornament, it would not affect the circulation.

3824 But it would save the Government the necessity of coining?—How would it?

3825 If, instead of coining fresh rupees they issued 10 rupee pieces?—No, because they would have to issue 10 rupees for trade purposes, but if they are issuing 10 rupee coins which become ornaments on a woman's neck—

3826 Does it make any difference whether the coin goes into circulation or into hoards?—I think so on exchange. The rupee will come back possibly for export, the ornament is less likely to do so except in the case of famine, when the ornaments do come back we know. I think there is a great difference between the two cases, if I may respectfully suggest that.

3827 (*Sir Shapurji Broacha*) You say the Government must not allow great accumulations of money, but that they should deal with the surpluses of India as surpluses are dealt with in England, and let them go to a sinking fund for the reduction of debt. Say, for instance, that they have a surplus of 7 millions this year and apply it to liquidate debt, although they may have shortly to borrow 7 millions, and are wanting 15 millions or 12 millions for public works would it not be a great advantage rather than reducing taxation to go on building with the surpluses public works which are so fruitful?—In the first place, you say, Would it be advisable to pay back those debts if you are going to raise fresh debt shortly? I think I have already answered that. In reply to Sir Robert Chalmers I said if it is a near liability no, but if it is a liability of two or three years hence, then undoubtedly that should not interfere with the proper use of the sinking fund.

3828 India wants 12½ millions or 15 millions for public works every year, so it would make very little difference on the whole. These large surpluses are accumulated owing to certain causes. Take the opium, for instance, the Government could not have reduced that?—No.

3829 Then there was about 7 millions of revenue which the Government could not have anticipated so that out of a surplus of 22 millions 13 millions belong to two items which the Government never anticipated?—But the fact is that according to their own apology or excuse they hold up these large balances while at the same time borrowing or renewing debt.

3830 That would be a very complicated transaction from a merchant's point of view and a banker's point of view?—Very. I think they are wrong, and I venture to submit to the Committee that it is an apologetic excuse but not a sufficient defence.

3831 Should they use their surplus to reduce the debt, or to build railways and other public works?—They did neither one nor the other, and I have submitted a case where Sir James Westland did both.

3832 What did he do?—He had a surplus of 10 or 11 crores in 1894-5 owing to his holding up of Council bills in 1893. The result was that he was landed with 10½ crores of rupees stored in his treasuries which he solemnly undertook not to spend on railways or other purposes, because it would interfere with his currency scheme. He pledged himself to that in his budget of 1894-5, I have his exact words. Within 18

27 June 1913 ]

Mr HARRY MARSHALL ROSS

[Continued

months he had spent those 10½ crores (which was a distinct breach of faith that we ventured to accuse him of at the time) on railways partly and partly in avoiding rupee loans

3833 That is a long time ago?—Do you wish me to say whether we should use that surplus for railway or other public works? If you mean to say that a surplus which shows itself at the end of a financial year is to be employed in public works, then I say that that is a most vicious and demoralising way of budgeting. All public works, railways, &c., should be duly set forth in the budget, and should be criticised in the Legislative Council.

3834 How would you budget the next year's railway revenue—on the basis of this year's, I suppose?—But you always estimate before you say what you can allow for railways year by year

3835 Take two consecutive years, if the railways have earned a certain amount in the first year, I suppose you would budget for the same amount the next year in order to be safe, but at the same time you are not sure what the monsoon is likely to be?—I am not thinking of the earnings, I am thinking of the expenditure. Assume that we have budgeted for an expenditure of 12 millions on railways for this next year, and that at the end of the year the Government finds itself in possession of a surplus of 5 millions, are you suggesting that they should spend that on further railways or public works? It has not been budgeted for, it has not been agreed to, it has not been criticised or debated in the Legislative Council, and I think it is wrong

3836 (Chairman) May I put the case to you as it appears to me, which is not exactly as you see it? Supposing the Government has a railway programme requiring 12 millions and they budget for a surplus over their current expenditure of, we will say, 5 millions, out of which they propose to pay a part of that railway expenditure, and they propose to borrow the other 7 millions required to carry out the whole of it. As the year goes on the revenue comes in so well that they find they have a surplus not of 5 millions but of 12 millions and they then spend the extra 7 millions of surplus in that railway construction. Why should they pay off debt with it on the one hand, and borrow 7 millions in the London market for railway construction with the other?—Was that not dealt with in my previous remark, that if the borrowing is near, certainly they should avoid the borrowing? Then it is the same thing as paying off debt, but if it is a question of wanting to borrow two years hence, then I say that should not be allowed to interfere with your paying off floating or other debt

3837 Do you suggest in the case of the balances of recent years the Government in deciding what to do with them consciously postponed their use for two or more years?—I do not know the mind of the Government, but I know what happened. I know that the balances steadily accumulated year after year for two or three years, and that it was not owing to extraordinary circumstances that these additions were made, because the existing balances were due to known circumstances

3838 Was not the unexpected balance of the first year worked off in the main pretty quickly, the high figure at the end of the second year being the result of another surplus, not of the retention of the first surplus?—The total net surpluses were about 10 to 11 millions according to the statement, but the balances were higher than that, the balances were 18 millions to 20 millions, I believe, at one time

3839 (Mr Gillan) I do not know whether you think that the railway expenditure is suddenly made without being budgeted for. In the case you put that is not what happens. The extra surplus of one year is carried forward as a balance to start the next year, and it is on the basis of that balance that the railway programme for the following year is built up?—That I would agree to, but that surplus was carried forward in the shape of a cash balance which grew, in other words whatever way you look at it these balances were not expended

3840 What has happened—have they disappeared?—This year they have disappeared—after four years as a matter of fact

3841 They have finally been reduced?—Finally

3842 And in the meantime you have maintained a railway programme of 9 or 10 millions a year with practically no borrowing?—The question, of course, suggests itself to one's mind how far this rapid reduction of the balances has been due to the clamour that has been raised

3843 (Sir Shapurji Broacha) Do you say the gold against the currency circulation should not be kept here?—I think as the sole purpose of the currency reserve is to secure the convertibility of the note, necessarily that implies that the metallic reserve should be kept where the note is

3844 What difference would it make when the holder of the note knows that so much in silver and so much in gold is placed there and in England? You are not afraid, are you, that all the gold will be taken away in a day and there will be no time to send the 7 millions to India?—I am not afraid, and I do not think many people are really afraid, but it has led to very great outcry

3845 There are a great deal too many outcries which are created not by the people but by outsiders?—The result of the outcry is this Commission

3846 What difference does it make? Is not the first line of the defence of exchange not to give sovereigns against rupees?—My own idea is that that is a mere phrase. The first line of defence for a currency system which is not based on a gold currency is undoubtedly the fund which is raised to secure the exchangeable value of the rupee. There fore the first line of defence for such a scheme exists in the Gold Standard Reserve

3847 Is it right to disturb it so long as you have the Currency Reserve to pay against it and maintain the exchange?—I think I have said I would not disturb it until the Gold Standard Reserve is placed at a sufficient figure

3848 What good is there in sending that seven millions to India?—What benefit do you derive by keeping it here?

3849 At present I should keep it here. You can draw on that gold, but then you have to pay double expenses?—At present—I quite agree, and I have said so

3850 There is no great force, then, in the argument that that gold should be in India and not here?—The objection I see to keeping it here is that if you once get a sufficient Gold Standard Reserve to secure the convertibility of the rupee it is not necessary, and it is certainly necessary, or ought to be necessary, where the note is circulated

3851 It is kept here by law, they passed a law to that effect?—Not to keep it here, but that it may be kept here

3852 The people of India know that law?—Yes

3853 And the people have not been very unearg to take those notes, because the circulation is increasing?—I admit that

3854 Do you think that the 10-rupee gold piece would check the circulation of the 10-rupee note?—I think it might

3855 The circulation of this 10-rupee note has increased the total circulation, would it not be a waste therefore, to have 10-rupee gold pieces and drive away 10-rupee notes?—Quite so

3856 If for no other reason than for the loss in weight?—Quite so

3857 I suppose you know that when Lord Goschen spent about 900,000l in restoring the weight of the gold coins about two-thirds went into the abrasion of the half-sovereign pieces, and only about one-third into the other?—I know that

3858 The smaller the coin the more danger there is in that direction?—That is true

3859 If the people once know the value of the note they will know that a 10-rupee note will bring them as much as 10 rupees in gold or 10 rupees in silver, that is to say it will buy 10 rupees worth of goods on the market?—Yes

27 June 1913 ]

Mr HARRY MARSHALL ROSS

[Continued

3860 It will do that just as well as a 10 rupee gold piece?—That is the very essence of a paper currency

3861 So there would be no great benefit in having a 10 rupee gold piece?—None

3862 While, of course, there would be an absolute loss in the weight of the coin?—I see no need for an alteration

3863 I think you are not very strongly in favour of a State bank?—No, I am not

3864 You see difficulties in the way?—I see great difficulties

3865 You say a State bank would have one advantage when it is borrowing money from people, that it could assure them of the safety of their money?—A State bank would have a prestige if it were recognised as a State bank

3866 Do you know that such banks do not allow interest?—They take deposits

3867 Most of the State banks do not allow interest?—A bank like the Bank of England would not allow interest on deposits

3868 The Bank of France does not allow interest?—The Bank of France has a special business of its own

3869 Never mind what you call it, but they do help the small persons by borrowing their money and ensuring them the safety of their money?—I have had conversations and correspondence on this subject, and it is held that the Shroffs would be largely depositors with a State bank, which they are not with the Presidency banks. How far that would go Sir James Begbie can probably tell the Commission

3870 I suppose the rules for lending by the State bank would be the same as the rules for lending by the Presidency banks?—I would not like to predict what the rules would be

3871 It would lend on authorised trustee securities?—I cannot say. That is entirely a thing in the air so far

3872 If that were not done by the State bank it would in a way weaken the strength of those securities?—The charter of the bank would have to be drawn up and agreed to. I cannot say what it would contain

3873 Do you think that in lending small sums as the Bank of France does, it would be any benefit to investors?—The Bank of France advances down to 150 francs, I think

3874 They will discount a bill down to 25 francs, they will even go down so low as 5 francs. Would a State bank do that?—Would they advance in that way for the benefit of the interior trade or industry?—I pointed out that it would take a very well trained and a very large and very expensive staff to do it in India. I doubt whether it would be done

3875 I agree it would be very expensive, and that it would require a very large staff, and I suppose the Government would not save much, I suppose, for instance, that all their travelling staff in the accounts department and other departments would still have to be maintained?—That I cannot say

3876 (Mr Keynes) Do you think it possible that a State bank might attract a new class of depositors?—I think it is possible

3877 Is it possible that the co-operative societies would themselves bank with the State bank, and that it would be a convenience to them?—I do not like to make any prophecies at all about that

3878 If the State bank were to enter into exchange to the extent of carrying out the Secretary of State's remittances and no further, that would involve some interference with the existing interests of exchange banks, would it not?—It would involve some interference

3879 Is this a case where vested interests ought, in your opinion, to be respected?—That is an exceedingly difficult question. I have a great respect for vested interests in any walk of life. If the Government is convinced that this would be for the benefit of the people as a whole they can override any vested interests. It is merely a question for the Government, not for me

3880 That is a general principle, you have not any opinion as to its application in this instance?—No, I have not

3881 (Sir Ernest Cable) Sir Robert Chalmers, I think, put to you the question that perhaps the use of cheques might curtail the circulation of currency notes, from your experience in India, do you think that cheques will be used at all throughout the whole country beyond the Presidency towns?—Not within any period that I can look forward to myself. They will be confined to the Presidency towns' business

3882 And that is very nearly covered by cheques, I should think?—I supposed so until I read the complaint I have previously mentioned

3883 Still, the fear of curtailing the currency note issue by reason of the increased use of cheques is rather problematic, after all?—I should think cheques would rather be an addendum to the note circulation than a substitution for it, granted a continuous expansion of trade

3884 A good deal has been said about the surpluses of the Government in India and their application. I believe it is a fact that the development of the country would have been crippled very much unless those surpluses had been devoted to productive works. That being the case, do you still object to those surpluses having been created, so to speak, by taxation?—What has happened apparently is that the revenue of the Government of India has been anticipated by a year or more, in other words, the Government has collected more for a given year in some shape or form, from opium or from railways or from the taxpayers, than it should have done, in other words, the taxpayers of the country have been deprived for that one year, or for a longer period, of the use of their own income or money, as the case may be—of their own products the Government having deliberately withdrawn that from the taxpayer. The rupee with which he paid his tax is only a token, but what has really happened is that an equivalent amount of produce has left the country as against those taxes, and the taxpayer has lost by paying his taxes before they were due

3885 There is a school of finance in India who hold the opinion that a steady unfluctuating rate of taxation, not reducing immediately there is a surplus, but keeping it as steady as possible, operates better for the welfare of the inhabitants as a whole, because the surplus is returned to India in the shape of productive works from which the agriculturist benefits. You do not hold that view, possibly?—I do not object to the revenue being kept on what you would call apparently a normal basis, and I do not object to taxes not being reduced in such circumstances, but I do object to taxes having been imposed when events have proved that with a little more optimism they would not have been required

3886 With regard to the loans by Government to the Presidency banks and others, you suggested that the Government should lend at somewhat below the bank rate, otherwise the market—you used these words—would not be tempted to borrow. It is not the business, you will admit, of the Government to tempt people to borrow their money is it?—I agree, only I think the question arises in connection with the duty of the Government to assist trade by loans in India as well as assisting the London market by loaning in this country. That is how I put it. If you make it the duty of the Government to assist trade by loans, then you certainly must make it the duty of the Government to assist it at a rate which will be a profitable one to the trade that it is helping. If the Government is going to exact the uttermost furthing it puts an impediment on the free use of its balances. I think that Lord Faber put the matter on very sound ground when he suggested practically putting them up for tender. I think that would quite meet my views, and it is a much better way of putting it than I had myself ventured to suggest

3887 It is a notorious fact that India cannot borrow enough money for its development on the terms of the present moment. Do you think by increasing the rate of interest we should get all we want in that way?—India is not singular in that respect in these times, and the loans which were raised in India in rupees stand at

27 June 1913 ]

Mr HARRY MARSHALL ROSS

[Continued

a very high figure comparatively I have always been inclined to think of late years that the Government might often borrow better in India and increase its balance in India rather than face the very much oppressed London market

3888 Have you any remarks to make on the subject of the largely increasing exports of gold to India? Do you think, for instance, that they would seriously interfere with the sale of Council drafts?—They have not done so

3889 And you do not think that they ever will do so?—I do not see how they can if the Secretary of State meets his market freely They will never ship gold if they can get Council bills at a better rate I have only mentioned the specie point in connection with new coinage, remember Otherwise I should suggest that the Secretary of State will do the best for himself if he meets his market freely

3890 I gather generally from your memorandum that if existing interests are safeguarded you have no objection to the institution of a central bank or a State bank?—No, certainly not My only objection to any State aided institution is that it might interfere unfairly with private enterprise I think that what is wanted in India, as in most other countries, is more private enterprise and less State interference

3891 It is suggested that because there was no popular demand—I think those were the words—for such an institution, therefore it should not be given, but I would ask you, as a man with Indian experience, whether in most matters in India there is not very little popular demand?—In what way am I to understand that popular demand—on the part of the European community?

3892 I mean there is very little expression of opinion?—Very little Opinion there is not focussed in the same way as it is in this country

3893 I think I heard you say that you had no experience of the hundi market?—I have no personal experience of it

3894 So perhaps it is no use for me to ask what is your opinion as to the value of the hundi as a document?—As a security, no

3895 You do not think it is particularly sound?—Not being acquainted with it, I would rather not answer

3896 When the Fowler Committee used the term "gold" in connection with the Gold Standard Reserve do you think that they meant to include sterling securities?—No, certainly not I think their report is extremely clear and decisive May I just read you two or three words that I had noted about that point? The following words seem to me quite decisive on that point In paragraph 60 of their report, speaking of this Gold Standard Reserve, they say it is to be kept "entirely apart from the Paper Currency Reserve and the ordinary Treasury Balances" That implies, I take it, absolutely, that it was to be kept in India, because otherwise, if it was to be kept in another country, why put in the words "entirely apart from the Paper Currency Reserve and the ordinary Treasury Balances"? It must be apart if kept in England Therefore, I think the very fact that they said keep it apart from those things which existed in India must imply that it was to be kept in India With regard to what it consists of, the following words taken from paragraph 59 seem to me rather conclusive, "if the exchange showed a tendency to fall below specie point, the Government may remit to England a portion of the gold which it may hold" I can only read that to mean if they had gold in India they should remit gold back, and again, "when it has accumulated a sufficient gold reserve, and so long as gold is available in its Treasury, it might discharge its obligations in India in gold"

3897 And that was the general commercial opinion throughout India?—That it was to be held in gold? I will not say whether I consider it an unwise or wise system, but I think the present system is working better than the one suggested by the Fowler Committee would

3898 (Chairman) You said just now, in answer to Sir Ernest Cable, that you thought the Indian Government might with advantage borrow more in India and less in London?—I do think so

3899 You added that you thought that what India, like a great many other countries, suffers from at the present time is an excess of Government enterprise, and that it would be an advantage if more were done by private enterprise?—I think that is always the case, especially in India It would be an advantage if more opportunities were given to private enterprise

3900 Do you think that the Indian Government could reduce their need for borrowing for development purposes if they made the terms rather more attractive to private enterprise to carry out the same works?—The accusation has been made for years, and repeated, and I have read a great deal on the subject, that the promoters of railway enterprise have great trouble in securing concessions for the construction of railways in India That has been a complaint of long standing How far it is justified I do not take upon myself to say, but that it has existed, and has been repeated, is a fact

3901 Have you heard much complaint, or any complaint, as to the use by the Indian Government of their rights of pre-emption?—When railways have been taken over by Government there have been loud complaints at times

3902 Do you think that some change of policy in those respects would lead to the influx of private capital in larger amounts than has been the case?—Now that the exchange value of the rupee has been secured, I certainly think it would Previously, with open mints and an unstable currency, I should not have thought so

3903 You would desire the Indian Government, then, I gather, to take into their serious consideration whether they could not attract more private capital, and so lower their own needs for borrowing, by some revision of their policy in this respect?—Yes, I do

3904 You spoke in your paper (Appendix XIX, page 544 paragraph 6), and I think in answer to Sir Robert Chalmers, of the greatest need of the present time being a code of clear regulations on the subject now engaging the consideration of this Commission?—Yes

3905 In answer to Sir Robert Chalmers you suggested certain regulations in respect of the Gold Standard Reserve I do not think that you mentioned any other subject on which you thought new regulations desirable?—It was in connection with that part of the paper headed "Gold Standard or Gold Currency," (Appendix XIX, page 543) and I was thinking solely of the maintenance of the rupee and the regulations necessary for that end in making those remarks

3906 The regulations you had in mind were such regulations as you have spoken of in dealing with the Gold Standard Reserve, were they?—Yes

3907 You wish them, I think, to be statutory regulations?—I wish the Government to undertake, either statutorily or in any other binding form, its responsibility with regard to this currency

3908 You have also expressed the desire that the amount of the Gold Standard Reserve should be fixed, not by mere guesswork, but on some definite principle or analogy?—Analogy, principle, or experience

3909 You have told us at what amount you would fix it if you followed what you called the analogy of the English bank?—Yes, I have

3910 But I do not think you have told us at what amount you would fix it if you acted in the light of the experience of the crisis of 1907-8?—I think it figures out to very much the same Taking the loss of gold at 17 millions, plus about 3 millions Council bills, the shortage for the year speaking from memory, was about 20 millions or 21 millions, and I said there should be 50 per cent. for apprehension, which would run to 30 millions again, which would be the same figure as I got by the other formula.

3911 And of that you would in the same way keep half in actual gold?—I suggested that as a basis.

The witness withdrew

At the India Office, Whitehall, S.W.

TENTH DAY

Thursday, July 3, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURJI BURJORJI BROACHA

Sir JAMES BEGGIE  
Mr ROBERT WOODBURN GILLAN, CSI  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (*Secretary*)

Sir ALEXANDER McROBERT called and examined

3912 (*Chairman*) Would you be good enough to tell me briefly what your Indian experience has been?—I have been 29 years in India, and I have been the whole of that time engaged on woollen manufacture. I have been chiefly resident in Cawnpore, but I also have a close connection with an associated institution in the Gurdaspur district of the Punjab.

3913 I think for some time you were president of the Upper India Chamber of Commerce?—I was.

3914 You were also a member of the Legislative Council of the United Provinces for eight years?—Yes.

3915 Do you appear before us to day in a representative capacity?—Yes. I have been nominated by the Upper India Chamber of Commerce.

3916 May I ask you first about the balances? What do you say about the cash balances in London in recent years?—From the returns I find that the closing balance on 31st March 1910 was nearly 13 millions, the following year it was 16,700,000*l* and in 1912 it was 18,400,000*l*. Then apparently in the course of last year they began to use up these balances, and it was reduced to something under nine millions on 31st March 1913, the normal working balance, as I understand, being approximately four millions.

3917 Do you regard the recent balances as unnecessarily high?—It is a little difficult to answer that yes or no, because it is like being wise after the event. I have no doubt the India Office uses a wise discretion in keeping its balances up, and it seems a little hard upon them now when we know all about it to say that they should have done something different.

3918 You do not blame them, I understand, for not having foreseen that their balances would be so high but looking back on events with the wisdom which comes afterwards, you think they were higher than they needed, does that represent your view?—As regards the criticism that I would offer it is really in a way limited to what seems to me the somewhat unnecessary renewal of India bills during that period.

3919 Do you think outstanding India bills might have been paid off?—I do think so. Might I mention in what respect I find that they might have been paid off, even assuming that the India Office could not see into futurity?

3920 Please?—I find that the first year of what might be called an abnormal balance was the year ending 31st March 1909. The balance then was just under eight millions, which is about four millions more than is regarded as a normal working balance. The following year it jumped to 12,800,000*l*, then the figures I have just mentioned follow—16,700,000*l* and 18,400,000*l*. The figures I have here relate to 1910-1. During the year 1910-1 after having started with four millions in excess of the normal working balance the loans floated were 7½ millions and the debt discharged only 1,800,000*l*. During that year India bills were renewed in April to the extent of one million in June to the extent of 2½ millions, and in December to the extent of 1½ millions. Apparently

the following year, starting with a surplus balance of 10 millions, these same bills were once more renewed with the exception of half a million, that is to say, in April there was a million, in June two millions, and in December 1½ millions.

3921 I understand you to suggest that the India Office might properly have used a part of those surplus balances to pay off those bills as they fell due?—Yes, my suggestion is that that might have been done.

3922 It might have been done with advantage in the first of the two years, and if it had not been done in the first it should have been done in the second?—It might have been done in the second.

3923 It has been put to us in evidence on the other side that this renewal of bills or raising of loans was done in accordance with the budget estimates, and before the unexpectedly favourable results of the financial year were known, what would you say to that?—I find that Mr Montagu, in the House of Commons on 30th July last year, explained that the balances were largely due to under estimating in India, meaning I take it, under estimating revenue. It seems fairly clear that he was substantially correct. At the same time the India Office knew that they had these opening balances.

3924 Do I understand you to think that with the knowledge they had they might have revised the estimated programme, and it would have been wise to do so?—I think so.

3925 Have you ever considered whether the date at which the Indian financial year begins could be altered with advantage, from the point of view of enabling the finance minister to estimate more accurately the prospects of the year?—I have not considered the point.

3926 I am right, am I not, in thinking that the realisation of the estimates in India depends almost entirely upon the results of agriculture?—Precisely.

3927 And therefore on the weather?—Yes.

3928 And that the estimates have to be made at a time of the year when the weather is still impossible to forecast?—Quite so.

3929 Have you any objection to the system of lending out Indian balances in London?—No, I do not think I have. It seems to me that since the balances existed they were better in London than anywhere else, they could not have been used in India and they could be used in London. Apropos of those balances, a certain income was derived from them so that really the only loss, assuming that they had paid off the bills I speak of would be the difference in the rate.

3930 Did I understand you to say that the balances could have been lent out in India?—The balances in India are not available for the purpose of lending as they are in London although it seems to me that if the India Office can lend in London there is no reason why the Government of India should not lend in India.

3 July 1913]

SIR ALEXANDER McROBERT

[Continued

3931 You would like, then, to see the balances in India made available for lending?—Whenever that is practicable, whenever the Government of India feel that it would be safe to do so

3932 To whom, do you think, they should lend in such circumstances?—I am inclined to let them lend to anybody who would give the proper security, but primarily I would say to the Presidency banks

3933 Would you be inclined to make a list of approved borrowers in India on the lines that have been followed in London, or to say merely within the limit of our means we will lend to anyone who deposits certain named securities with us?—I think that, at least at the beginning, I would certainly limit it in the first place to the Presidency banks, and perhaps the exchange banks if they care to have it

3934 I understand that from them you would ask security?—Yes, I would.

3935 What securities would you lend on?—Government paper

3936 Would you include Port Trust securities?—I think I should

3937 Indian railways?—I do not think any such securities are to any extent held in India.

3938 Suppose the Government had been in the habit of lending out up to, let us say, a sum of two millions in the busy season, and suppose they had done that for two or three years, and then there came a year in which their balances were not sufficient to enable them to make the loan, do you think that would have any serious effect upon the Indian money market or trade?—It might cause a little extra inconvenience until matters adjusted themselves, but in the end they would be no worse off than they are now

3939 You do not think that they would be worse off because they had come to expect this relief from the Government?—That, I am afraid, is more a matter for a banker to say. I should not like to express an opinion on that

3940 Do you not think it rather likely, if they had received this assistance from the Government in several years, and suddenly, in what was probably a rather difficult time, they found that the assistance was not available, that they would be inclined to criticise and complain of the Indian Government?—I think I would start rather with the assumption that it is hardly conceivable that circumstances could arise that would make it inconvenient for the Government of India to lend a million. The money market in India is extremely narrow, and the difference of a million one way or the other would make a vast difference in a so-called stringency

3941 At what rate would you propose that the Government of India should lend to the banks?—When the bank rate comes to 6 per cent., I should then consider the Government of India might come in and lend their balances at 6 per cent

3942 At the actual bank rate?—Whenever the bank rate goes above 6 per cent., I would let the Government of India give it to the banks at 6 per cent., no matter what the bank rate may be above that. The banks must make something

3943 Would you allow them to make the full difference between 6 per cent. and whatever was the bank rate at the time?—I would

3944 Even if the bank rate had gone to 8 per cent?—Quite so. I am not sure that, on full consideration, I would limit it to 6 per cent., but I think 6 per cent. would be a fair basis on which to start.

3945 In recent years I think the bank rate has only been for very brief periods above 6 per cent., do you remember?—During this last cold weather the rate has been steadily high for a good many months.

3946 Has it been 7 per cent. and even 8 per cent.?—It has not gone up above 8

3947 Is the rate a fairly universal rate over India, or does it vary very much, for instance as between Calcutta and Bombay?—Madras is rather higher than Bombay and Calcutta, but Bombay and Calcutta jump together with fair regularity

3948 Would you lend equally to each of the Presidency banks?—I would if they would give the same security

3949 Without regard to the particular local rate of interest?—Without regard to that, except that anything over 6 per cent. would be a point at which I would authorise the Government of India to begin to lend from their balances.

3950 I take it that this proposal involves the assumption that at the busy time of the year the Government of India would have surplus money lying idle in its treasuries?—Broadly speaking, that is the case

3951 Suppose that it came to the conclusion that it was safe to lend that money, then, under your proposal, it would lend it for about three months of the year, I presume?—I take it that if such a scheme were in operation, it would not be needed for more than about three months

3952 What would the Government of India do with the money during the rest of the year?—What they do now

3953 Leave it idle?—Yes.

3954. Suppose they once came to the conclusion that it was safe to lend it, might it not be worth them while to lend it for six months or 12 months?—If they could do so on terms that would suit them

3955 They could afford to take a lower rate of interest if they could lend it for 12 months than if they could only lend it for three months?—I think one must consider that if the Government of India is run properly, it would not have these surplus balances all the year round

3956 I rather gather that you think the balances in India as well as in London have been unnecessarily high in recent years?—I do not feel that very strongly

3957 Have you any comments to make on the system of reserve treasuries?—No, I think it is a very judicious arrangement.

3958 It necessarily locks up a good deal of Indian money, does it not?—It does

3959 Do you think that more is kept in these treasuries than is needed?—No, I do not

3960 I go now to another subject, but a cognate one. What is your view as to the suggestion which has been made for a State or central bank? Do you think that is a scheme which should be promoted?—I do not think myself that there is room for a State bank. My attitude to the proposal is not one of hostility, but I see difficulties in the way of carrying it out. To begin with, India could not utilise the capital which would be provided by a large State bank, I see some 14 millions are spoken of—India has no use for that

3961. Do you think that one central institution could meet the needs of the different localities, the different Presidencies, as effectively as the three existing institutions?—I do not think a central institution could by any possibility be as efficient in its working as the present Presidency banks are in their own localities

3962 From what you have said in the *precis*\* you were good enough to send me, I gather that you think a State bank would necessarily imply so much official control as practically not to relieve the Indian Government of any of its present responsibility?—That is my view

3963 Some people have thought that it would be a good thing if the management of the paper currency could be handed over to such a State bank, do you not share that view, I think?—I do not

3964 Nor do you see any advantage in transferring the management of the exchange business to a central bank?—I do not. I think it is done very well now

3965 Is it not a necessary result of the present system that separate reserves have to be kept for banking purposes, for currency purposes, and for exchange purposes, and that as long as they are separate reserves more money must be locked up in them than would be the case if one institution had all the responsibilities and maintained a single reserve to meet them?—That is to a large extent true, but it

\* Printed as Appendix XX. page 347

3 July 1913]

Sir ALEXANDER McROBERT

[Continued]

might happen that the drain upon both reserves came at the same time. If the Government of India were instructed to make its balances, no matter in what box they are kept, available for purposes of trade at the time the money is wanted, it seems to me that would meet the whole case.

3986 In paragraph 6 of Appendix XX (page 547) you say "Each of the three Presidency banks has evolved a practice adapted to its own environment, and their absorption by a State bank would in a large measure involve the sacrifice of the advantages to trade which this specialisation secures." I may take that as your considered opinion, may I?—It is.

3987 I gather that you attach importance to that, because both the conditions of the money market and the conditions of business vary so greatly in different parts of India?—That is so, it is due to the seasons being different and the crops being different.

3988 So that you think it of great importance that there should be local management?—Yes.

3989 In order that the policy of the banks may be directed to meet the local requirement?—I think so.

3970 You have told me that you are opposed to the transfer of the management of the notes to a bank, but suppose that that were to be recommended, do you think that notes managed and issued by a bank would have the same free currency that they have at the present time?—I do not think they would. At the first outset, anyway, they would be looked upon with suspicion.

3971 They would not inspire the same confidence as notes directly backed by the Government of India?—I do not think so.

3972 Under those circumstances would you anticipate that there would be considerable restriction in their use?—I would expect a restriction in their circulation.

3973 In that part of the country with which you have been most familiar—I think it is the Punjab, you say—are notes now largely in use?—They are not so much used in the Punjab as they are in the United Provinces, at least, that is my experience.

3974 Does gold circulate to any considerable extent in the Punjab?—Gold does circulate in the Punjab, I think, more than it does in the United Provinces, because in the country districts now it is very rarely that payments in gold for produce are objected to. The cultivators will accept payment in gold when previously they would only take silver rupees.

3975 When they are paid in gold can you follow the gold at all and form any opinion of what becomes of it?—One instance has suggested to me quite lately that it probably is being used for the purposes of hoarding. In Cawnpore we have a village with nearly a thousand houses for workpeople, and just before I left India in March one of our workpeople reported that his house had been robbed. I saw him, and he explained the property that had been taken, and he said it included 12 sovereigns. That seemed to me to be at least symptomatic of what was going on.

3976 Are sovereigns used in payment of wages in Cawnpore?—My own practice, ever since the sovereign was made legal tender, has been to pay all wages in gold as far as it would go, that is, so long as we could get gold. For about three years we could not get gold—about 1907-8-9—but when we can get gold we invariably used it for paying wages.

3977 May I ask why you made that rule? Why did you prefer to use sovereigns instead of notes, for instance?—It was in accordance with my personal sentiment. They did not like it at first, but I wanted to educate them.

3978 You think it an advantage then that they should use gold as currency?—I think on the whole it is.

3979 Would you explain why?—It is more portable, it is easier hidden away, and after all it is the standard of value throughout the world.

3980 It is more portable and more easily hidden away than silver?—That is so.

3981 But it is not more portable or more easily hidden than notes?—No, but the people who use

notes are hardly the people who would be using the sovereign.

3982 Why? Is it because the sovereign is too little, or too much?—The ordinary native—I am speaking now of the small man, the workman—does not handle notes much. It is metallic currency that he believes in.

3983 The general note circulation has very much increased, has it not?—It has.

3984 Do you think it might be further increased if the notes were entirely universalized, or do you think that the universalization of the higher denominations would have much effect?—If that were done it would simply mean that the Government of India would be financing all remittances, because remittances from one part of the country to another would be sent in currency notes, as that would cost nothing. If they were encashable at any treasury it would be the obvious form of remittance, just like a London cheque in this country.

3985 Therefore you would not recommend that course to the Indian Government?—I do not think that the Government of India should undertake the responsibility.

3986 Have you considered the possibility of extending the currency by means of a more elastic note issue?—I have not considered it very closely, but it seems to me that there really is no difficulty in getting notes when one wants them.

3987 At the present time the amount of the fiduciary portion of the notes is fixed by statute, I think?—Yes.

3988 Do you think that the fiduciary portion is as large as it ought to be, or might it, under present circumstances, be safely increased?—I think it might be safely increased.

3989 To what limit would you go, approximately?—I think, on the whole that a maximum ought to be fixed, and that maximum should not be worked up to except when there is some exceptional demand.

3990 One witness has suggested to us that instead of a fixed figure for the invested portion of the reserve there might be a maximum proportion, say 40 per cent, which, as you have just said, would not habitually be worked up to, but that the free balance of it should be made available for loans to trade in times of stringency?—What has happened in the past is simply this—that as the note circulation has increased enactments have had to be passed in order to increase the fiduciary portion, and, if instead of leaving it like that a percentage were fixed, then it would be unnecessary to pass these regulations, and they would act automatically.

3991 I want to ask you a question now about the capital expenditure of the Indian Government, do you think they might raise more in rupee loans?—I think they might.

3992 Roughly, to what extent do you think they could borrow in India?—I would not like to put a figure to it, but judging by the result of the last two loans, when they got over 96 in India and 83 in London, it seems to me that it would be very unwise to borrow in London so long as India was willing to give 96.

3993 Would you always prefer to borrow in India when the terms in India were more favourable?—India's revenue is in rupees, and as far as possible I think the debt should be in rupees.

3994 That leads me to the next question I was going to put to you. Suppose that the conditions are slightly less favourable in India than in London would you, for the reason you have just stated, pay a fractionally greater interest in India?—I think I should.

3995 I want to return for a moment to a question of the banks. Do you recommend any material changes in the conditions now prescribed to the Presidency banks?—In my previous mention that I thought they should be allowed to lend upon any marketable security in India. That is the only alteration that I should propose.

3996 You would not propose to give them access to the London money market?—No. My reason for

3 July 1913 ]

SIR ALEXANDER McROBERT

[Continued

proposing that they should be allowed to lend upon any marketable security is that that is what they do in fact now. One of the regulations is that there must be two names to the document, and one of these names might be that of the office chuprassi, for all the Bank of Bengal cares. They do not want the second name, they know one name is good enough, and it is almost a subterfuge to have the second name. Moreover, it would incidentally have the effect of giving those firms of money agents, who charge one per cent for the use of their name under these circumstances, no excuse for doing it.

3997 As regards the sale of Council bills, I understand that, broadly speaking, you have no criticism to make on the present practice?—No. It has occurred to me sometimes that the sales might be held oftener than once a week. That is about the only difference I would mention.

3998 Intermediate bills are sold, I think?—Yes, they are.

3999 What would be the advantage of having the sales more frequently?—Sometimes people are rather anxious to know what the rate is going to be, and if they have got to wait a week for it, it keeps the strain up.

4000 You say in paragraph 13 of Appendix XX that you would suggest "that all sales should be put through at 1s 4d and all accounts kept on the basis of 1s 4d", what exactly do you mean by that?—When Council bills and telegraphic transfer are sold at anything over 1s 4d, I would put the difference to this reserve fund, and when the Council bills are sold at less than 1s 4d I would draw the difference from that fund.

4001 Would you create a special reserve fund to balance the exchange transaction?—Precisely, it would be a subsidiary reserve which would be first used.

4002 What would be the special object of that plan?—If a gold currency becomes really effective in India, it means that the profit from the coinage of silver would be reduced, because there would not be so many rupees wanted. Since my précis (Appendix XX, page 547) was sent in I have found that apparently the Government of India, or perhaps I should say the India Office, do, as a matter of fact, make their accounts at the rate of 1s 4d, and the difference is treated as a revenue receipt. For the year 1910-1 there was a profit of 70,000*l* and for the next year it was 106,000*l*, so if this plan of mine had been adopted there would have been, as the result of those two years' operations, a reserve of nearly 200,000*l* in sovereigns if used now for exchange below 1s 4d. I may say that it is a practice which I have followed ever since the exchange was fixed at 1s 4d, and my own fund was sufficient to meet the drain in 1907-8-9—it was not exhausted when the rupee came back to 1s 4d.

4003 Having regard to the existence of the Gold Standard Reserve, would you not be rather duplicating the effort in the case of the Government of India?—Yes, but my object would be to have a fund which might be used in what might be called normal conditions. This special Gold Standard Reserve would come into play when there was a crisis.

4004 Perhaps it is hardly within the scope of our reference, but I think you are of opinion that the fixing of the rupee at 1s 4d has been beneficial to India?—I am.

4005 And in particular to Indian trade?—Yes.

4006 From what you have told me I gather that you yourself would desire to see a gold currency in India?—My attitude to that question is not so much that of an advocate of a gold currency on utilitarian grounds, but more for sentimental reasons, perhaps, and for considerations of prestige.

4007 Does that lead you to have any marked preference for the sovereign over a 10-rupee piece, say?—I have no hesitation in preferring the sovereign.

4008 Supposing that the object were, for any practical reasons, to get a large gold circulation, do you think that the sovereign would circulate more

freely than the 10 rupee piece?—I do not really think it would, for the reason, amongst others, that the payment of wages so often falls between 10 and 15 rupees—it is 10 rupees and over, but not over 15 rupees. For trade payments, the advantages of it are rather less.

4009 Do you attach any considerable value to gold in circulation as a support to exchange in times of difficulty?—I do.

4010 On what is that opinion based?—On the broad ground that if the gold is there it will come out if it is wanted.

4011 Does experience support that opinion?—I think upon the whole it does.

4012 Take the crisis of 1907-8, very little gold came out then, I think?—That is true, except what came out of the Government treasures.

4013 Roughly, I think my recollection of what we have had in evidence is that the Government treasures paid out something like 4½ millions, and of that only about a quarter million was exported. And the rest does not appear to have been of much benefit to exchange at that moment?—That would be so. At the same time, if there had been a mint then it is conceivable that gold would have been brought for coinage.

4014 Would you be in favour, then, of the establishment of a mint?—I do not favour a mint because I think it would be a profitable thing to have, but because it is a luxury I think the Government of India could afford.

4015 You are not advocating it very warmly, then?—No, I am not.

4016 Your reason for advocating the gold mint is the same as your reason for advocating the gold coinage, it is a matter of prestige and sentiment?—Precisely.

4017 As regards the Gold Standard Reserve, have you anything to say about the place where it ought to be kept?—I think in the case of the Gold Standard Reserve the bulk of it ought to be kept in London.

4018 Would you keep any portion of it in India?—I do not think I would go beyond the silver portion of the Gold Standard Reserve.

4019 Let me ask first as to the total. To what limit do you think the Gold Standard Reserve ought to be brought?—I would be inclined not to stop until the total amounts to 30 millions.

4020 Of that 30 millions how much would you advise should be kept in actual gold?—I think Government should work up to 10 millions in London.

4021 Would you keep any gold in India as well?—No, not for the Gold Standard Reserve.

4022 Having put by your 10 millions in actual gold, would you be prepared to invest the remaining 20 millions?—I would.

4023 In what class of securities?—Roughly, exactly the classes of securities in which the present balance is held—chiefly Consols.

4024 Not in short dated securities?—I do not think there would be any need to have it in short-dated bills then.

4025 Provided that you have got a large reserve in actual gold as your first line?—Yes.

4026 As regards the rupee portion of the gold reserve, that is as regards the silver in the gold reserve, what have you to say? Do you think it ought to be there?—I do not think there is occasion for very much criticism on it, because the object of it is to have a supply of rupees in the event of the ordinary stocks running down. It is merely a convenience.

4027 You would, I think, agree that the primary object of the Gold Standard Reserve is to support exchange?—Precisely.

4028 But the object of these rupees, as you put it to me, is to support the currency notes?—That is quite so.

4029 Does that not rather point to the conclusion that these rupees ought to be in the currency reserve, and not in the Gold Standard Reserve?—How it strikes me is that it is merely making a convenience of the Gold Standard Reserve.

4030 And you do not mind its being made a convenience of?—No.

3 July 1913]

SIR ALEXANDER McROBERT

[Continued

4031 I think that is exactly the way that some critics would express their criticism—that the Gold Standard Reserve, which ought to be expressly kept to maintain exchange, was being made a convenience of for other purposes, but you do not see any objection to that?—I do not, and, as I say, my approval of the five millions of rupees in India is merely because the fund exists, and it may as well be used for that purpose.

4032 But your approval is conditioned by only a small proportion of the reserve being so held?—That is so.

4033 Have you anything to say on what was done on one occasion—and I think has never been repeated—namely, the diverting of a portion of the profits which ought to have gone to the Gold Standard Reserve to railway construction in India?—I think it was quite wrong.

4034 You would allow nothing to interfere with the accumulation of the Gold Standard Reserve until it has reached the limits that you have expressed?—Nothing.

4035 Do you think the Government of India should undertake now definitely to give a sovereign for every 15 rupees whenever demanded?—No I would not go so far as that. It might land them in consequences which one does not foresee just at this moment, but if they follow their existing practice of doing it, so long as it does not cause inconvenience, I think it will meet the case for some time to come.

4036 Would you think it an advantage if the conditions governing the Gold Standard Reserve could be more expressly determined and given statutory force?—That would, to a certain extent, be almost doing the same thing as undertaking to give a sovereign for 15 rupees, and I do not see that the Government of India would be quite justified in undertaking that unqualified responsibility.

4037 You do not think it would be quite safe for them to do it at the present time?—I should hesitate to do it.

4038 May I put my question in this way. Do you think that it is a thing which it would never be desirable for them to do, or do you merely think that they would be a little rash to do it under present conditions?—I do not know that I should put it quite as strongly as that, but I do feel that it would not be quite a safe thing to do under present conditions.

4039 Have you any observations to make as to the purchase of silver bullion for coinage?—I have suggested that instead of buying a large quantity at one time it would probably be cheaper in the end if it were announced at the beginning of each year that the Government intended to buy so much silver. As far as I can make out from the figures of the 10 years ending last year, the average annual demand was three millions sterling.

4040 Has there been a steady demand throughout the years, or has it varied very much from year to year?—It varies a good deal.

4041 If, therefore, the Government of India were to purchase regularly, they would in some years have a good deal more than they required?—Yes.

4042 And to that extent they would have locked up money uselessly for the time?—But they would probably be buying their silver cheaper than if they were cornered. Bombay would try to corner them.

4043 Do you think that in the long run what they lost in interest they would gain in the price of the silver?—I do think so.

4044 (Lord Faber) I understood you to say in the course of your evidence just now that you are in favour of the Indian Government lending out these balances in India, if possible, on approved script?—I did say so.

4045 Do you think you could get the kind of script that the Government would require, for any amount of money there?—I think you would get sufficient script to cover such advances as the banks would wish to get.

4046 That is the difficulty which some of us feel, whether these securities are to be had in India? If the money is to be lent, are the securities to be had against it?—Take the Bank of Bengal which holds Government paper that rarely falls below a crore and

a half, that means that they could easily raise one million sterling upon it, and a million sterling thrown into Calcutta would make a vast difference to the money market.

4047 I think probably they could manage a million. I was thinking of larger sums. I am perhaps being guided more by what happens in England. Would a million give you a good deal of relief in Calcutta?—A million sterling certainly would.

4048 I understood you to say that you would lend that at a fixed rate of 6 per cent if the bank rate was as high as 6 per cent?—I would.

4049 Would not an awkward position arise? Could you lend to certain specified borrowers at 6 per cent when other people might easily have to pay 8 per cent, would that not make a good deal of talk that certain buyers were being put at an advantage as against the rest of the community?—I do not think so. I do not see why the banks should be asked to work for nothing.

4050 What I have in my mind is, would it not be safer to lend the money at the market rate? A bank, when it gives what it calls the market rate, gives what it thinks it can make a profit on. Why fix the rate at 6 per cent? Why not take the market rate and if the bank will pay more, let it pay more?—Of course if you do, the banks will not make anything, and the banks must make money.

4051 The banks will always tender if they can get it at 6 per cent, because they would be able to lend it somewhere else at more than 6 per cent. A bank can take care of itself, as a rule, I think?—I think we are assuming that nobody else has money to lend except the Government of India.

4052 My point is, why should the Government of India lend even to a bank at 6 per cent when possibly the bank if the market rate were higher, would give a good deal more than 6 per cent?—I see no objection.

4053 Then you would fix the rate at 6 per cent?—No.

4054 I thought in your evidence you said you would make a fixed rate of 6 per cent?—Perhaps I am misunderstanding you.

4055 Suppose the Government want to lend out money in India and the bank rate is 8 per cent, do you propose to lend the banks that money at 6 per cent?—Yes. I should begin, whenever the bank rate went up to 7 per cent, by lending the money at 6.

4056 Why lend the bank money at 6 when the market rate is practically at 8?—Because the banks must make something out of it. They do not work for nothing.

4057 Is it safe, do you think, to lend Government balances for 12 months? Is that not rather long for the Government of India?—I should never recommend anything of the kind.

4058 This seems to me an interesting question, which perhaps you will be able to answer. Do you think India is hoarding gold in the true sense? For instance, is it secreting bars, do the natives of India buy gold bars, are they hoarding gold in that sense?—That I cannot tell you, it is not within my knowledge.

4059 Or are the Indian people now in a position to keep in hand a certain amount of what we call at home pocket money?—They have more money than one suspects.

4060 You know that in England there is a very great deal of what we call gold used as pocket money—a great many millions?—Yes.

4061 I thought that that state of things might have arisen in India, as India is so prosperous. I think I understood you to say that you are in favour of raising the loan in India if it can be done, rather than in England, if the rate is nearly equal?—That is so.

4062 You are of opinion that it would be better for India to hold its debt at home if it can?—I am.

4063 Do you think you could raise a big loan in India such as you sometimes I think, raise in the London market—four or five millions at a time? Could you do that in India, do you think, or would you

3 July 1913]

SIR ALEXANDER McROBERT,

[Continued

exhaust the market?—I should not be prepared to say, but I think there may be ways of doing it.

4064 In 1907 and 1908, those two bad years in India, you say that little gold came in sight outside the treasures, in other words, little gold was brought out by that bad time, and it did not appear?—The Government treasures were emptied of gold.

4065 And they did not fill them up at all from the outside?—Apparently not.

4066 That was because there was little gold in circulation I suppose at that time?—That might have had something to do with it, it is conceivable that that might explain it in part.

4067 Since 1907-8 many millions have been imported into India?—The big import has been in the last three years.

4068 Now about the gold reserve, do you think 10 millions of what we have been told here to call metallic gold is enough?—I do, because in the crisis of 1907-8 it was only necessary for the Government of India to sell drafts on London for just over eight millions.

4069 If you have gold securities in the Gold Standard Reserve would it be possible, do you think, to sell those securities in a time of crisis and get gold for them? A gold security is a very good thing, but you would agree that it is not the same thing as gold?—No, it is not, but the assumption is that you have 10 millions of metallic gold to start with, and you are not obliged to begin selling on an extensive scale at once if you have got 10 millions to go upon before you begin to use the proceeds of your sales.

4070 Supposing that you have two bad years in India, two deficient monsoons together, then you might be in the position of having to sell your securities?—No. I think what would happen, even if you had two bad years in succession, would be that the imports into India would decrease tremendously, because the purchasing power would be so much reduced.

4071 (Sir Ernest Cable) In paragraph 9 of Appendix X.X (page 548) you refer to the possibility of the use of cheques being gradually increased throughout the country. Do you think, knowing the natives as you do, that that would be a very speedy process?—No, what I had in my mind more particularly was the European community using cheques more. The native does not, to any great extent, use cheques for large amounts.

4072 And it is not likely that he will?—I do not think so for a long time to come.

4073 He uses hundis, of course?—Yes.

4074 That is a very reliable form of document, is it not?—It is quite good.

4075 Are they discounted, or re-discounted, by the banks in Cawnpore? Are hundis dealt in?—It used to be the practice for the native merchant to advance money upon hundis to even European firms, and they went straightaway to the Bank of Bengal and discounted these hundis and pocketed the difference. They were able to borrow on better terms at the Bank of Bengal than the borrowers.

4076 The Bank of Bengal did discount them?—They did.

4077 A good deal has been said this morning about the capabilities of borrowing in India. It has been suggested that largely increased sums could be obtained at a slightly increased rate of interest, you agree with that, I understand?—I am afraid I do not quite follow.

4078 I think it was brought up by Lord Faber, and you said, I think, that large sums could be borrowed in India by the Government?—You mean by raising loans?

4079 Yes?—I am not in a position to say that large sums could be raised in India on Government loans. I only know that when the last loans were issued in India and London in England the whole loan was placed at 93 and in India they got over 96.

4080 But such borrowings as those would not bring out the hoards that you have been talking about?—I do not think so except you mean the hoards of the native states.

4081 Not the hoards in the pockets or the dhows of the people?—Not the hoards of the small man.

4082 No means have suggested themselves to you for making those large hoards available for the commerce of the country?—I think the co-operative credit banks are working in that direction, because those banks are mutual, and the members are largely the cultivators who have no doubt small hoards.

4083 You mentioned 30 millions as what I may call your high water mark for the Gold Standard Reserve; but you mentioned that figure without any particular method of calculation, I suppose—it is just your feeling about it, is it not?—I do not know that I could give a mathematical reason for fixing 30 millions, but to my mind it looks to be quite sufficient.

4084 I was only going to put it to you that we might make a calculation on some logical basis of this sort—say, two years' requirements of the Secretary of State?—Roughly, I had that in mind. What is called the annual demand by the India Office comes to about 18 millions or 19 millions. You have the analogous case of Russia. Russia keeps abroad in gold roughly 18 to 24 months of her requirements to pay for what she has to pay in gold in other countries. To a certain extent the economic position of India corresponds to that of Russia.

4085 I gather from your remarks about the various reserves, the Paper Currency Reserve and the Gold Standard Reserve, that you would have no objection to throwing those reserves together?—No, I should not.

4086 You think it would make for simplicity of management, perhaps?—I do not know that I would make a strong point of advocating it, but I see no objection to it.

4087 (Mr. Gladstone) Referring to the question of temporary loans in India, you have mentioned that the Bank of Bengal, for instance, hold about a crore and a half of Government rupee paper, but in addition to that they would probably hold, would they not, considerable amounts of Port stocks and of municipal bonds of the Presidency towns?—Quite so.

4088 And also of sterling Indian Government securities?—I do not know the details of their holdings.

4089 Therefore, probably the amount available would be very much larger?—Quite probably.

4090 It is probably within your knowledge that the Bank of Bengal would think nothing, for instance, of taking up the whole of the Rangoon Port Trust loan for 50 lakhs itself?—Quite so.

4091 If sterling Government of India securities were included that would also bring in, would it not, Government railway scrip, and there is no reason, if the Presidency banks hold India Sterling stock, why they should not also hold Indian Government Guaranteed Railway stock?—That is so.

4092 I think there has been a special enactment allowing the Presidency banks now to advance on scheduled Indian railways, whether they are on a rupee basis or not?—Yes.

4093 So that altogether the amount of securities available from the Presidency banks would be pretty considerable?—Certainly.

4094 I think Lord Faber referred to your suggestion of a fixed rate of 6 per cent., and as a sound economist rather suggested that it would not be very prudent for the Government to accept 6 per cent when perhaps they might obtain 7 or 8 per cent. from others. We have had it in evidence already that the exchange banks do not care about holding those securities which would enable them to accept these loans, and that practically there is nobody else except the Presidency banks holding any sufficient amount of security, therefore the question reduces itself to one of lending to the Presidency banks?—I am aware of that.

4095 If it is reduced to one of lending to the Presidency banks, there does not seem quite the same objection to having a fixed rate of 6 per cent., as that might be most effectual in checking a rise in the bank rate, and that would be for the general advantage of the country?—I understand that the exchange banks would not be particularly anxious to take the

3 July 1913]

Sir ALEXANDER McROBERT

[Continued

Government of India's money on these terms. They were quite content to leave it to the Presidency banks and get what they wanted from them.

4096 With regard to the placing of permanent loans—and you very aptly quoted 96 in India and 93 in London—it is the fact, is it not, that the investment by natives of India in high-class securities is extending very considerably?—That is not within my knowledge.

4097 You probably do know that a certain number of small railway schemes are now being financed in India?—Nominally, but I have heard it said that in actual fact they are financed in England and competing with borrowings by the Secretary of State.

4098 I am now talking of companies with rupee capital under the branch line terms?—I understand that.

4099 You would not be inclined to favour rather better terms being offered in India in order to encourage such investments locally, because you think that they are really taken up or backed in London?—If one could be quite certain that the money is being raised in India, I think it would be quite a good thing. The more you give the native of India an interest in his own country, the better.

4100 Could you tell me whether you are acquainted with the practical working of the small up country treasuries?—No, I am not.

4101 You could not say if the balances are carefully watched and moved about to the greatest advantage?—No.

4102 Would you favour, so far as possible, the substitution of Presidency bank branches for the small treasuries, where that could be arranged, in order to effect economies, as a bank presumably by doing commercial business would be able to work more economically than a Government working simply its own treasury?—I should doubt that. I am inclined to believe that the Presidency banks now go where they think it will pay them.

4103 But whether it will pay them or not in these rather distant up country places really depends upon the terms which they get from the Government, either as regards the minimum balance or the payment of certain charges?—Precisely. The balances in India that are held under the control of the Presidency banks away from the Presidency towns are liable to be taken up at any moment. They have no security on the balances they hold, and they cannot use them, because they may be taken up the next day.

4104 (Chairman) I would like to ask one question in that connection, suppose that the Presidency banks opened more branches and the Government were thereby enabled to close some of their treasuries and transfer their balances to the banks, would the banks be able to work with smaller balances than those now kept in the treasuries?—I would not like to give an opinion off-hand.

4105 (Mr Gladstone) Arising out of that question, perhaps I might suggest that they may be able to utilise these balances better than the Treasury?—If they have the same security which they have in Bombay, Calcutta, and Madras, that these balances will not be reduced below certain amounts.

4106 (Mr Keynes) Can you tell us in what class of transactions you find it possible in your business to use cheques?—Speaking of my own business, I use cheques in practically every case, no matter what the kind of payment, except for wages and salaries, which I always pay in cash.

4107 Are these cheques paid into someone else's banking account, or is it merely the way by which payees get money from your bank?—It so happens we pay largely by cheque, because we keep accounts both in Bombay and Calcutta as well as in Cawnpore and a good many of our payments have to be made in Bombay and Calcutta, and naturally we then issue a cheque upon Bombay or Calcutta to save bank exchange.

4108 If you are buying produce from an Indian trader would you pay him by cheque?—Very rarely. He probably wants either currency notes or actual cash.

4109 Then these cheques which you mention are paid to English merchants?—That is so, largely.

4110 And except when you are making payments to other English merchants you would not use cheques much?—No, broadly speaking I should not.

4111 If you were paying some one in Calcutta and you had not got a banking account in Calcutta but were drawing on a bank which had not an office there, would your customer in Calcutta be satisfied by that means of payment?—I should not do it in that way. I should buy a draft from a bank in Cawnpore that has an agency in Calcutta.

4112 You suggested that there ought to be a certain relaxation of the conditions now prescribed for the Presidency banks, I have not quite understood what relaxation it was that you wanted?—The only relaxation I asked for is that, instead of the regulation by which they are only allowed to advance on a document with two names on it, you should allow them to advance money upon any marketable security, because when they advance upon some such document as a promissory note with two names on it, which simply means that it is for the benefit of one of the parties only—not for the other—the bank takes some form of collateral security which is really what they are lending on, and not upon the names at all.

4113 The banks can at present lend on security which is deposited with them, or the title to which is deposited with them?—It depends on the nature of the security.

4114 What is the kind on which they are not now allowed to lend, and on which you wish them to be allowed to lend?—Such things as shares.

4115 But they can lend on some forms of shares now. You wish them to be allowed to lend against any form of marketable security which does not represent immovable property?—That is so.

4116 You would not include immovable property?—No, I would not include immovable property.

4117 The important part of the relaxation is that they should be allowed to lend against shares and debentures of companies?—That is so.

4118 The bank rate in India commonly reaches 7 or 8 per cent in the busy season, would you regard it as of great importance to the country that that high rate should be reduced?—I think it would be a very great convenience to trade if you could look forward to the rate not going beyond 7 per cent at the worst.

4119 Do you think it a serious burden on trade that the bank rate should go so high?—I think it is a drawback. It is a drain upon the trade of the country. It is a levy.

4120 In the United Provinces and the Punjab you are within the sphere of influence of the Bengal Presidency Bank, are you not?—Yes.

4121 But the seasons, the crops and the methods of doing business are very different from those in, say, Eastern Bengal?—I cannot speak of what happens in Eastern Bengal, except that it is generally understood that there it is chiefly silver that is wanted in payment of crops.

4122 Do you find that the Bengal Presidency Bank is able to adapt itself to the methods of Northern India?—I think the Bank of Bengal in particular—and I can speak of it from some personal knowledge—has laid herself out, of recent years, to adapt itself to meet the needs of the country much more than it used to do.

4123 You have found no inconvenience in the Presidency Bank of Bengal having to direct operations over such a very large area of the country embracing such different conditions?—That is more for the bank manager to say.

4124 You, as a trader, have not found any inconvenience?—I have not observed any difficulty.

4125 You say in your précis that the Presidency banks and the exchange banks are prosperous concerns that have been tried in adversity and emerged triumphantly, is there now in India another class of banks of which that is not true?—I think there is. I think there are a large number of commercial banks that are a danger.

4126 The Presidency banks act as bankers' banks to a large extent both for the exchange banks and also for these mushroom banks?—They do, just as the

3 July 1913 ]

SIR ALEXANDER McROBERT

[Continued

Bank of England acts as a bankers' bank here As regards the prosperity of the Presidency banks it must not be forgotten that, although they are paying now a dividend, and a handsome dividend, upon their original capital, they are not paying very much upon the actual capital employed, because, roughly speaking, the reserve in hand at each of the banks is equal to the capital, so you should divide the return you get upon your capital by two

4127 Do you feel perfectly certain that the Presidency banks are strong enough to relieve all probable difficulties in the next banking crisis, taking account of the fact that they will have to bear the burden not only of their own deposits, but also of the deposits of other banks in India?—I look forward to their doing that

4128 You think they are in a strong enough position to do that?—I think they are equal to it

4129 Would they be in a stronger position if their reserves were amalgamated, and if they were in direct connection with the Government?—Let me say this When I give that answer I am assuming that the Government of India are prepared to let the Presidency banks have the advantage I have spoken of I am not speaking of the Presidency banks now with their existing resources and entirely cut off from any recourse to the Government balances

4130 You are assuming that in a crisis the Government would come to the rescue to some extent?—I think to the extent to which they can advance the money upon proper security

4131 You do not think that a central bank which was an amalgamation of the Presidency banks, and which was in direct and habitual communication with the Government, would be in a stronger position to meet a general banking crisis in India than the three separate Presidency banks now are?—I do not know that it really would, because, after all, that bank would have no larger resources without the Government of India than the banks have now

4132 You do not think that the banking reserves of the country would be strengthened if all the available resources were in one reserve rather than if they were in scattered reserves?—Except that in the eventuality of the drain being upon both kinds of reserve at the same time, it would make a larger sum available in a liquid form

4133 The currency notes, I believe, are in the form of promissory notes of the Government of India?—Yes

4134 The management of the note issue might be taken over by a central bank without the Government of India repudiating the ultimate responsibility of the notes, and without their form being altered?—That might be done

4135 In that case would the confidence that they inspire be reduced?—There would not be the same reason for it if you keep the form of the note

4136 So that you would advocate the form of the note, at any rate, not being changed, even though the management of the note issue was changed?—I do not quite see how you could maintain the form, and still make it an issue of a State bank, but assuming you can do so I do not see that there is any objection to it on that score

4137 With regard to borrowing in India, would it be a good thing do you think to introduce some new form of security, such as railway securities with a guaranteed minimum interest and a share of the profits, would that be attractive to the Indian investing public?—I do not think it would make much difference

4138 Then you think there would be no advantage in that over rupee paper?—I do not think it would be an inducement

4139 With regard to the profits of the munt, in paragraph 18 of Appendix XX. (page 549) you say that the Indian munts, as now run, make a profit of over 100,000L, even when they are slack and coming no new rupees, from the purchases of silver?—Quite so

4140 Do you mean by that the profit on the coinage other than rupee coinage?—Other than rupees and half rupees—four annas, two annas, bronze and

nickel coinage, and also a certain proportion of trade dollars

4141 With regard to the purchase of silver let us suppose that your system of purchasing three millions a year or two millions a year had been in force over the last 10 years, after a long interval coinage began in 1901, and in that year two or three millions would not have been enough?—No, but when I speak of two or three millions I have reduced it to an average

4142 I am now applying that to an actual case In 1901 you would have to exceed your average?—Yes

4143 You would have to pay for that by going below the average of 1902, 1903, and 1904?—You would be obliged to

4144 In 1905 there was heavy coinage again, and, as you would have bought nothing in 1902, 1903, and 1904, in order to bring your average down, in 1905, 1906, and 1907 you would have had to buy very large sums?—You would have had some reserve to fall back upon to begin with You would have been accumulating the portion of your annual buying that you had not used, if you were to buy, say, a minimum of two millions, and when the price is favourable there is no harm in going to three millions

4145 If nearly all the coinage was in 1901, 1902, and 1903, or nearly all in 1901, you would find yourself in 1904 with a small reserve?—That is so

4146 There was a heavy coinage in 1905, 1906, and 1907, in which years you would have had to have bought very much more than your average?—I take it that you would, if you had been below your average

4147 On the actual facts as they were, you would have had to buy more than your average in those years?—Yes

4148 Then in 1908, 1909, and 1910, in order to bring it down again to your average, you would have had to have bought no silver?—During those years the Government of India were holding off coinage because they wanted to fight the Bombay corner, and they endeavoured to get as many people as possible to take sovereigns in payment of Council bills

4149 This is quite a new fact to us Is it one on which you have evidence, that the Government were deliberately refraining from coming?—I am taking it as a belief, I am not in a position to say it was a fact, but that was the public opinion

4150 That the Government were forcing sovereigns on the people?—I am assured it is the case that they tried to do so

4151 They had very large reserves of rupees in those years?—Then why did they want to coin?

4152 They did not want to coin?—The general belief is that they held off to the very last moment before they began to buy, and then they had to take steps to circumvent Bombay

4153 You are speaking now of 1912, not of the period 1908-12?—I am

4154 In the period 1908-12 they would have had to refrain from buying silver in order to bring down the average, which had been spoiled temporarily by the very large purchases in 1905, 1906, and 1907?—Yes If I am asked to say whether I should recommend spasmodic purchases of silver or steady purchases, I should plump for steady purchases

4155 I was trying to suggest that if you had the rule of steady purchases it would not have made the slightest difference?—In that event you would have been no worse off

4156 I am putting this point, that if you had applied your method to the last 10 years, it would not have worked?—I will take your word for it

4157 If you were to apply it to the next 10 years, you would base your average upon the demands in the last 10 years?—It looks to me very much as if my theory is correct, that the Government of India held off buying as long as they could, if the average annual demand is rather more than three millions because you came to a point when they were at starvation

4158 My own opinion is that an assertion that the Government were holding off was only true of a very few months, but I will not press you further on this question. The points I was trying to

3 July 1913]

SIR ALEXANDER McROBERT

[Continued]

bring to your notice were first, that your plan would not have worked for the last 10 years, and, secondly, that for the next 10 years, 10 years being a long period in the currency habits of a country, it would be dangerous to buy, perhaps, years in advance on the basis of that rather remote experience?—Do I understand you to say that if the Government of India had begun 10 years ago buying silver at the rate of not less than two millions a year, the sum they would have had to pay for that silver would be at least as much as they had to pay when they bought eight millions straight off?

4159 I am saying that they could not have kept the programme of buying two millions a year, and that they would have had to have bought much more than two millions in some years, and therefore much less in others?—I take it that you have worked out the prices?

4160 I have worked out the figures of the annual demand for coinage?—And on the average monthly rates for silver during that period, it would have cost the Government of India as much as it did when they had to buy a large quantity?

4161 My argument is simply based on the assumption that you could not buy in the years 1908, 1909, and 1910 silver which you wanted to coin in the years 1905, 1906, and 1907?—That is so, but I have not suggested that you would not buy more than two millions a year if you wanted it, but I would buy two millions in a year I did not want it and make up the balance when it evened itself out.

4162 (Sir Shapurji Bhoacha) In former years, before 1911 the Secretary of State had smaller balances on this side, you said four millions?—Prior to 1909-10. As a matter of fact, the period of abnormal balances began with the year ending 31st March 1909.

4163 The four millions balance was not a large balance?—It is a very good sum.

4164 India has a debt of 500 millions to England, always?—500 millions of what?

4165 Pounds?—In what form? That is not the debt of India.

4166 Yes, that is the debt?—It is under 300 millions.

4167 No, 500 millions altogether, including the rupee paper and including the reserves?—It is 276,281,000.

4168 You do not count the rupee debt and the whole railway debt?—That is counting all the debts.

4169 Never mind, we will not dispute about that. The Secretary of State has to provide the materials for the Indian public works?—Yes.

4170 Taking all these things into consideration, it is a very small balance to keep here in order to be prepared for all contingencies. India had a surplus revenue during the last four years of about 20 millions, I think?—Yes.

4171 Of that surplus revenue, the opium revenue and the railway revenue together make up a sum of 13½ millions, and the further surplus was 6½ millions. Do you think with a progressive country like India a surplus of 6½ millions in four years is excessive?—It depends altogether on what you want to do with your surplus, or what ground you can give for getting it. If getting this surplus means that you have levied high taxation, it is wrong.

4172 I am taking a progressive country like India. Russia, for instance, had a surplus during the last two years of something like eight or nine millions?—What do you mean by a surplus under those conditions?

4173 I mean that you make your budget for a certain amount and what exceeds that amount is a surplus?—Yes, according to the budget.

4174 Do you consider, having regard to all the contingencies of India, that a million and a half a year is an excessive surplus?—I do not know. I would rather not give an opinion as to whether it is excessive or otherwise.

4175 There have been complaints made about excessive surpluses and about taxation that ought to have been reduced at once?—There is no doubt that the income has been estimated with very great caution.

4176 Should not India's income be progressive because the country is advancing by leaps and bounds?—I think there is no doubt that the question of the amount levied by taxation would have been taken into consideration if it had not been that the time is coming when even more will be wanted. It is like getting the toad accustomed to the harrow.

4177 As I said, there was 13½ millions of windfalls from opium and railway excess, could they have used that surplus in India?—I think they made a very good use of it as they did, by paying off the debt.

4178 They were right to use it as they did?—I should think so.

4179 Do you know what the practice of other States is in keeping large funds in foreign countries?—I have mentioned what one might call the classic instance of Russia.

4180 Are we not to be bound by the example of other countries in estimating the Secretary of State's balances?—I am not sure that we are not bound by the Secretary of State's practice.

4181 In judging the Secretary of State, are we not to have those examples before us?—No. I would prefer to hold the Secretary of State's practice up as an example to them.

4182 We will not discuss that. Do you think the Secretary of State was right in using that surplus balance as he did?—I think he was quite right seeing he had it.

4183 And the surplus balance would be no good in India?—As a matter of fact there was a surplus balance in India, too, but it did not do much good.

4184 India having a surplus, that surplus was no good in India?—None whatever.

4185 If they do not use it at once, I think they must wait until it is allocated to certain uses and certain ways and means?—That is what I understand is the only way of dealing with it.

4186 Do you think money ought to be lent to the Presidency banks when money becomes dear?—I do.

4187 And you fix the rate at 6 per cent?—I think 6 per cent is a fair thing to start with.

4188 When the bank rate is raised to 6 per cent, do you not think the Government should commence lending money at 1 per cent less, so as to give the Presidency bank some profit?—No, I do not think so.

4189 If the money is lying idle, what would you say of the Government?—There is a lot of money lying idle now. Income from your funds is not always the first consideration.

4190 Suppose the Government could spare seven or eight crores to trade, and lent that to the Presidency banks when the rate is 6 per cent, would there be any harm in their doing so?—It would be an innovation and I would be disposed to wait until the rate went beyond 6 per cent before I gave them anything.

4191 Is there any harm in lending six or seven crores?—I see no harm in it, but I think the occasion would not have arisen then.

4192 You have been in India for 29 years. I think you told us?—Yes, I said so.

4193 The money market in India has very much widened during the last 29 years, has it not?—It has become a different thing altogether.

4194 And you cannot base your lending on what you experienced in 1874?—I daresay not.

4195 Money is dear from December to March?—Yes, it begins to get dear in November, usually.

4196 Is that owing to money going for revenue into the pockets of the Government of India, to a certain extent?—No. It is due, in the first place, to the need of money to pay for the jute crop of Bengal which is followed immediately by the demand for money to finance the rice crop in Burma. A great part of that does not come back to India.

4197 That is the trade demand, but independent of the trade demand the money goes for revenue payments to the Government of India?—Naturally, once the crops are harvested, the revenue payments begin.

4198 In every country the Government money is given for use by commerce?—I do not want to be tied down to that.

8 July 1913]

SIR ALEXANDER McROBERT

[Continued]

4199 I say that is the fact in every country?—To a limited extent, perhaps, but it wants qualification

4200 In every country they make loans in order to finance the trade of the country, and they do not put the money in the Government vaults. In England, for instance, there are 18 millions at the Bank of England now?—How much of it is borrowed?

4201 (*Chairman*) Does not that 18 millions include funds in the Court of Chancery, and all other subsidiary funds?

4202 (*Sr. Shapurji Broacha*) It includes all the Government funds. If money for three months becomes dearer, it is due to the Government of India keeping that money in their hoards and not putting it out into use?—I would not hang them for that.

4203 And I would not hang them for it, I do not think they have bodies to be hanged. Do you think that the Government of India should lend from their surplus balances?—I do.

4204 And even if those surplus balances at that time happen to be at home, would you get them back?—No, I say subject to the convenience of the time.

4205 I think it is your experience now that money is much cheaper and more easily obtainable than it was 20 years ago, or 10 years ago?—It is cheaper than it used to be in India.

4206 Do you know how much money is raised in India for loans now every year? Is it not about three crores for the Government and about three or four crores for the municipalities, the Port Trusts and the Improvement Trusts?—Yes, that is the annual amount raised.

4207 Do you know that the 3½ per cent sterling loan is 9 per cent cheaper than the rupee loan—that it is under 87 now, whilst last year the rupee loan went at 96?—Or rather over.

4208 And it is expected to go to 96 this year?—That I will not say, I cannot tell.

4209 Do you know that there is a large amount of money coming out in the native states and in Upper India for local railway loans?—Yes, I believe Bombay has obtained a very large sum from the states.

4210 Do you know that a good deal of railway work is stopped by the dilatoriness of the Government of India, or of the Secretary of State, in giving those concessions?—I do not know that I should make that statement. I have no doubt whatever that the Government of India considered the matter very carefully, and to charge them with dilatoriness under the circumstances I think is not quite correct.

4211 So you are agreed in this, that the Government could lend safely six or seven crores to the Presidency banks during the busy season?—I would let them fix the amount, I would not fix it in advance beforehand.

4212 There is no danger of that if the funds are available. You would not commit yourself to the amount?—No.

4213 You are not in favour of a State bank?—No. I am not antagonistic to it, but I am not an advocate of it.

4214 Do you think it would be too large a concern?—I do not think it is needed, and I see obstacles.

4215 Do you see any difficulty in stating where it should be—Bombay, Calcutta, or Madras?—Yes.

4216 Do you think the Presidency banks are doing the work equally well?—I think the Presidency banks are doing very well indeed, and are very accommodating.

4217 There has been a fear expressed that if you lent in India six or seven crores on Government paper at a time of trade demand, the money would not be returned when wanted, apparently you do not believe that?—I do not think there would be any difficulty, I would not anticipate any difficulty.

4218 Even now money is very cheap in India?—Very cheap—2 per cent.

4219 Although the rate of the Bank of Bombay is 5 per cent, and the rate of the Bank of Bengal is 4 per cent, do you know that in Bombay money can be had at 3 per cent?—Yes. You are very fortunate in Bombay.

4220 And do you know that there are no borrowers at present at 2 per cent?—I could find a borrower.

4221 The money would certainly return in the monsoon after the busy season?—Yes.

4222 There is no fear of that money not returning when it is wanted?—I should think not.

4223 Do you know whether the exchange banks can borrow on rupee securities in England?—I have no doubt London takes care of itself.

4224 If they could borrow in India or England on securities, I think the Presidency banks would be equally safe and equally careful to see that they are not tied up when the money has to be returned?—Provided security is given, I would not mind.

4225 Why do you want more frequent sales of Council bills, they can always buy them everyday at  $\frac{1}{8}$  higher than the rate fixed on the preceding Wednesday?—That I was not aware of. They might not want to give the  $\frac{1}{32}$ , they might be expecting it to be  $\frac{1}{16}$  lower.

4226 You said you wanted to educate your people by giving them sovereigns?—I wanted to accustom them to the use of gold.

4227 Did they not use it before?—No.

4228 You know that before 1900 when the standard was established they used to have three or four millions imported every year?—That was used for ornaments, they were shield sovereigns, and were used for necklaces and things of that kind.

4229 How do you know they do not use sovereigns for ornaments now?—I take it they do. They are all used up.

4230 Do you think it is any benefit to force gold on people when 15 rupees can buy the same quantity of food?—Yes, because, after all, if you have a gold exchange standard the natural step afterwards is to have a gold currency, if you can do so economically. The only alternative would be notes.

4231 A gold currency means that you would have to give gold when demanded?—It does not mean a gold standard.

4232 Let us understand the distinction. A gold currency means that you must give gold when demanded?—To make it effective that is the only way to do it.

4233 A gold currency means you have to give gold, or it is not a gold currency?—That is so.

4234 Suppose they had tried a gold currency, in 1908 when they stopped giving gold the gold currency would have been a failure?—That is so.

4235 Is it prudent to risk that failure in another year?—I have not asked them to do so, I have not recommended it.

4236 A good deal of silver bullion has been purchased, and some say Government has made the silver currency redundant, do you think they did?—I do not quite follow you.

4237 It is said that the coming of an excessive number of rupees in the past few years has made a great redundancy of currency, and prices have gone up, do you believe that?—I do not know that that is the reason why prices have gone up.

4238 Do you say that is not the reason?—I do not say that, I say I am not clear about it.

4239 Has a redundancy of rupees raised prices?—I do not know that there has been a redundancy of rupees.

4240 There is no redundancy of silver now, is there?—I do not know, I have not heard that there is.

4241 If they had not bought that seven millions of silver last year there would have been no rupees left, because the rupees went down to about 11 crores?—I understand that there was great need for rupees when they began coming last year.

4242 Your idea is that they should buy silver every year, is it?—I think they should average their purchases.

4243 But they have to buy more silver in the years when they want more rupees?—That is so.

4244 Would you like to refuse to give a man 15 rupees if he presents you a sovereign, and say No, we will pay you only in sovereigns, not in rupees?

3 July 1913]

SIR ALEXANDER McROBERT

[Continued

—What they say now is If you bring me a sovereign I will give you 15 rupees

4245 When they pushed sovereigns in Cawnpore in the beginning of 1901, and also in Delhi and other places, the sovereign went to a discount, did it not?—I have known sovereigns at a discount of four annas

4246 (Chairman) When have you known that happen?—About the earlier years, 1899 or thereabouts. Then, when the people did not know the sovereign, they were very chary of accepting it, and if a man were paid a sovereign in his wages and he went into the bazaar he only got 14 rupees 12 annas for it

4247 Has that ceased entirely now?—That does not happen now

4248 (Sir James Blythe) With regard to your remarks on the Presidency banks and the conditions under which they work you say that you are not in favour of any material change in the conditions now prescribed for the Presidency banks?—Except in the one particular that I have quoted

4249 Are you aware of any other banks without a note issue that work under similar restrictions?—No

4250 When you say the banks, if given access to the London markets, will merely be competing with the exchange banks, do you mean that the object would be to do exchange business?—I assume they would do exchange business, and also take deposits

4251 If the Presidency banks had authority to borrow in London against the securities they hold might it not be an advantage to India if that prevented the bank rate rising to a high level?—Yes, if it were to operate before the 6 per cent rate was exceeded, under the terms of the advances from the Government balances, assuming that that is conceded

4252 Do you know whether the Presidency banks require to remit money to England on behalf of their constituents?—Yes, they have to do that

4253 Constantly?—Yes, that is quite a usual thing

4254 Are you aware whether all the exchange banks are equally willing to supply the Presidency banks with drafts on London?—That I cannot tell you

4255 Do you know whether the rates of exchange at which the exchange banks sell drafts on London to the Presidency banks are always the best rates of exchange?—I think they are usually as good as you can get from the exchange bank direct. That is my own experience. As a matter of fact I always set the one against the other, and as often as not I deal with the Presidency banks

4256 I am talking about bills bought by the Presidency banks, you do not know about that of your own knowledge?—I do not know of bills, I am speaking of buying drafts on London

4257 I am talking of drafts bought by the Presidency banks from the exchange banks. You do not know, do you, whether they always get the best rate of exchange?—If you buy a draft of the Presidency banks on London they would do it through one of the exchange banks

4258 You do not know what rate of exchange is given?—No. I give the market rate

4259 Do you prefer the Presidency banks?—If the Presidency banks give me as good a quotation for my draft as the exchange banks I would probably give the preference to the Presidency banks

4260 Do you find that the Presidency Banks sell drafts on London?—They do

4261 On their own account?—On their own account through their agent in London

4262 Are you aware that the exchange banks compete with local business in India?—Yes, they do

4263 There is no restriction in the number of exchange banks, and they may engage in any business in India?—There is no restriction that I know of

4264 A new bank can be started any day?—Yes

4265 I am afraid I did not quite understand what you meant when you said you would fix the rate at 6 per cent for loans from the Government from the Gold Standard Reserve, why do you fix the rate at 6 per cent?—Because I think it is fair

4266 Would it not be fairer still if you made it lower?—I would not object to its being lower, it would suit me well enough. As I say, it is something in the nature of an innovation and I would not begin too low. It might be found that you could go a little lower afterwards, but it is an experiment and I should prefer to start at six

4267 Do you think that the trade of the country is usually financed without difficulty under existing conditions? Do the periodical high rates of interest not indicate some degree of difficulty?—I do not think so. I do not think myself that there is a great difficulty in financing the trade of the country at any time

4268 Regarding the note issue of a State bank, do you not think that a bank, if given an interest in the profits of an extended note issue, would be in a better position to push the circulation than a Government department?—I am not sure that it would. What would you mean by pushing circulation?

4269 Increasing it?—By compelling a man to take notes if he wanted gold, or what?

4270 A bank can usually give some inducement, can it not?—What would it offer?

4271 If you make it worth while, it might offer a reduced rate of discount?—Would you give notes at a discount?

4272 No, I would give notes in payment of bills discounted?—If a man wanted rupees of gold, you would hardly force the notes on him

4273 I am talking about giving an inducement, a bank could induce notes to go into circulation when it discounted a man's bills, could it not?—There is no doubt that the bank is in a position to promote the circulation of notes, under the circumstances, better than a Government treasury is

4274 There is another point I was not very clear about. You said that the absorption of the three Presidency banks by a State bank would result in the sacrifice in a large measure of the advantages to trade which the present system secures. Why should there be any sacrifice at all?—Because the knowledge that a Bombay bank manager has acquired now would not be of very special use to him if he were transferred to Calcutta, say, or Madras. He has discovered the best way of handling his Bombay customer, which is probably a very different thing from the way he would handle a Bengalee

4275 Would he not naturally be retained in Bombay for that purpose, where he was most useful?—Very likely, but there you have got the experience of your board as well—your specialised board who know all about the conditions

4276 On the subject of Council bills, you do not see that it would be an advantage to transfer the business of exchange to a State bank?—No, I do not

4277 Must you assume that the State bank would do exchange business necessarily?—Not necessarily, but that, I understand, is one of the objects of the proposal—that they should handle exchange, and manage it

4278 As a matter of fact, we have not had any proposal before us yet. In the way of exchange how would the State bank do exchange business? Would it be confined only to the business of Government in remitting the home charges?—I think it would be better to ask a banker that

4279 With regard to the home market in India, you agreed with Sir Shapurji, I think, that the market is now much more open than formerly?—I am quite satisfied it is

4280 In your experience do the mercantile community as a whole require to borrow freely in the busy season?—Yes

4281 And in the off season the loans are paid off?—That is what the off season means

4282 Could that money not be made available for Government loans? Why is it that that money is not put into Government loans now?—Which money do you refer to?

4283 I mean the money belonging to the mercantile community which they hold in the slack season?—I do not know whether that kind of people would

8 July 1913]

SIR ALEXANDER McROBERT

[Continued]

be disposed to lock up their money in Government loans I take it that as a matter of fact the banks, for example, will buy Government paper during the slack season and sell it again when they want to realise in order to use their funds in a better way.

4284 Is it not your experience that the people are afraid of high rates of interest in the busy season causing a depreciation in the value of Government securities?—I think they are afraid of that, there is no doubt about it.

4285 Then if we can bring about a condition of affairs where we should do without these high rates of interest in the busy season that would be an advantage not only to trade but to the Government in the way of loans?—Yes, whatever is an advantage for trade is necessarily an advantage to the Government.

4286 (Mr Gillan) Would you object to the head quarters of the central bank being located at Cawnpore?—No.

4287 Perhaps on grounds somewhat similar to those which induced the Government of India to take its capital and administration to Delhi?—I am not sure that I know the whole grounds on which they made that move, but for geographical reasons I should say that Cawnpore is plainly indicated.

4288 There is one point in the local currency of Cawnpore which I wish to ask you about. Mr Toomey and Mr Fraser of the exchange banks gave us some figures (see Appendix XVIII, pp 541-2) showing the proportion of gold, of notes, and of silver, which circulate at various centres, those showed, I think, that the proportion of notes in the Cawnpore circle is very small even compared with a place like Lahore. Can you suggest any reason for that?—What is it that takes the place of notes in Cawnpore—gold, or silver?

4289 It is difficult to say, gold, chiefly, I suppose?—That seems to me to indicate that gold is becoming more the medium of exchange, as notes used to be.

4290 But why should that be the case in Cawnpore especially?—That I cannot tell you.

4291 In reply to Mr Keynes, you said that the Government of India had put off coming rupees as long as possible?—I said it was believed they had.

4292 I understood you to say that in order to do so they had forced the sovereign into circulation?—I have been told so.

4293 Do you know what was alleged regarding the forcing of sovereigns into circulation? When did it happen?—The name of the firm was given to me, as a matter of fact, but I would rather not mention it, because they will probably be represented here later. A very large firm was said to have agreed to take sovereigns in payment, because they could utilise them just as well as rupees. It is a firm that is in the habit of buying Council bills and telegraphic transfers.

4294 There are just one or two points in your memorandum that I wish to ask you about, as they are not quite clear to me. You say in paragraph 11 of Appendix XX, p 543, "It seems scarcely correct to explain that any capital expenditure has been met out of surplus revenue"?—That is so.

4295 What did you mean by that?—When a man says that he has applied certain surpluses to capital expenditure, it is the same as though a man, who is making out a profit and loss account, were to say that he has debited capital expenditure to revenue when as a matter of fact that is not what takes place. When the India Office go through this operation, it is not quite so

simple as it looks. My understanding is that it is quite true that they pay this actual money for capital expenditure, but coincidentally they write off an equivalent amount of permanent unproductive debt and add the amount to what they call the reproductive debt, so that really the railway construction account is debited with its proper amount instead of its being paid out of revenue. It gives an impression that they are paying something out of revenue.

4296 Suppose you financed your railway programme partly by diminishing your balances, is that not coming out of revenue?—No, because if you do, you are adding to your reproductive debt.

4297 That may be the effect, but it is coming out of revenue, surely?—That is merely a question of words. In effect what happens is not that they pay anything out of revenue, they debit their railway construction account with the proper sum for capital, and do not reduce it by the amount paid out of revenue.

4298 Then you say in paragraph 24 of Appendix XX (p 549) "I do not approve the action taken " in 1907, when over 1,000,000l was taken from the " reserve for railway development, I would even ask " that the sum be replaced " How would you do that?—If you tell me what account was debited and what credited, then I will tell you.

4299 Would you reduce the railway programme in order to do that?—No.

4300 Where could it come from?—If need be, you could have taken that 1,000,000l back into the reserve by raising a loan and putting it into the reserve.

4301 Do you think our position, considering what we hold now in the Gold Standard Reserve and in the Paper Currency Reserve, is so risky as to make this step necessary?—I say that it is not a question of necessity but a question of equity. That sum belongs to the Gold Standard Reserve, and I do not even now know whether that was debited with the reduced capital expenditure of the railways, or whether some equivalent sum was paid off a floating debt, because in the India Office accounts all payments for railways, whether it is on revenue account or construction account are, as far as the India Office is concerned, debited to capital.

4302 That is in the *pro forma* account?—In the Home Accounts you will find no entry whatever for railway stores, such as you will find for civil stores and military stores. It is all debited, as far as the India Office is concerned, to capital, and any allocation that takes place is done on the other side.

4303 Then you propose this, not because you think it is absolutely necessary, but on the broad ground that what was taken away from this fund ought to be given back to it?—That is all.

4304 (Chairman.) I think you said something, in answer to one member of the Commission, intimating that in your opinion some danger was arising in India now through the multiplication of banks with small resources, did I rightly understand you?—Yes, that is quite notorious. There are a large number of so called banks that are only pawnshops.

4305 Has there been any movement in commercial circles in India with which you are acquainted, to ask for any action by the Government?—A movement has been made.

4306 What was the object of the movement? Did they ask for inquiry or for legislation?—They asked that some sort of restriction should be made upon the right of any organisation calling itself a bank.

The witness withdrew.

Mr BHUPENDRA NATH MITRA, C.I.E, called and examined.

4307 (Chairman.) Will you please tell the Commission what your official experience in India has been?—I am at present holding the post of assistant secretary and budget officer in the Finance Department of the Government of India. I have been holding this post since 1910. From 1909 I have been employed as the officer of the Finance Department in

O 19067

charge of the Budget, and I have still got to do this budget work in the post of assistant secretary, and am employed in that work for about three months, for the rest of the year I have got to do the other work which devolves on the assistant secretary proper. Previous to 1909 I was employed in the Finance Department for about three years as

N

3 July 1913]

MR. BHUPENDRA NATH MITRA, C.I.E.

[Continued]

superintendent of the Budget Branch. Before that I was superintendent of the Budget and Resource Branch of the Comptroller General's Office. I entered the Government service in the latter office in 1896, and the first four years of my service were passed in learning the work of the different branches of the office. In 1901 I was made superintendent of the Budget and Resource Branch of the office. I filled that post for about five years, of which about six months were passed on special duty, on work not connected with the Budget and Resource operations. Since 1906 I have been employed in the Finance Department as superintendent of the Budget Branch, then on special duty to work out the new budget procedure in connection with the enlarged councils, and lastly, as assistant secretary and budget officer.

4308. We have been told that the Government of India aim at having a normal balance of about 12½ millions on the 31st March, is that correct?—Yes.

4309. Can you explain what the need for a balance of that amount is?—The balance of 12½ millions sterling does not really represent the minimum balance with which it is possible to work the Indian treasuries. What happens in India is this. There is a period of low balances, and that usually happens about the beginning of December. After that we collect a large amount of land revenue, and the railway receipts and customs receipts are also very heavy towards the latter portion of the year. December is the period of low balances, and 12½ millions represents the balance which, in normal circumstances, the Government of India must have on the 31st March, so as to have a balance of 8 millions on the 1st December. Of that 8 millions, roughly about 4½ millions represent the minimum working balance which is required in the district treasuries, and about 1 million is the minimum balance required in the Presidency banks. It would be very inconvenient to work below the sum of 5½ millions.

4310. Do you mean 5½ or 4½?—5½. I think there are some papers of 1888, and 1898 also, in which Sir James Westland said it would be impossible for the Government of India to reduce the working balances in the district treasuries and Presidency banks below this sum of 5½ millions. The difference between the total minimum of 8 millions which I have just mentioned and this 5½ millions amounts to 2½ millions, and that 2½ millions represents partly a margin against possible risks and partly a reserve to meet famine and other unforeseen contingencies.

4311. When you speak of a reserve for those purposes, do you mean that it is a security against a failure of the revenue, or that it is provided in case expenditure should be raised?—The effect of famine arises in both directions. You may either have a partial failure of revenue, or you may have to meet direct famine expenditure, or you may have to issue large sums as advances to the cultivators. So that it is really a margin against a failure in revenue and also against increased expenditure. The ordinary margin against possible risks, which I have referred to, used to be taken roughly at 20 per cent of the 5½ millions—that is, about one million. In 1901-4 there was some correspondence between the Government in India and the Secretary of State regarding the formation of a famine insurance fund. Lord Curzon's Government wanted to create such a fund by investing in non-famine years the half million which is appropriated every year from the revenues for the avoidance of debt, but the Secretary of State thought that it would not be quite proper to find the money in that way, and that the proper course would be for the Government of India to increase their treasury balances. As a result of this correspondence the minimum balance was increased from 10 crores to 12 crores. Of the latter amount 5½ millions sterling represent the money which is necessary to work the district treasuries and to meet Government payments at the Presidency banks. These 5½ millions include about one million which is at that stage kept in the Presidency banks, and the distribution of the 5½ millions is therefore 4½ millions in the district treasuries and one million in the Presidency banks.

4312. You speak of a million being required at that date—that is, in the early part of December?—That is so.

4313. That is required to work the Presidency banks?—Yes.

4314. Will you explain what you mean by that?—These Presidency banks carry on the ordinary treasury business at the headquarters of Government in the three Presidency towns of Calcutta, Madras, and Bombay. Government has to meet certain payments at these three places, and the money must be there so as to be available to meet these payments. The remaining 4½ millions is distributed among district treasuries, and that being so, I think it will be admitted that it is not a very large sum.

4315. When were these balances last reviewed by the Indian Government?—The minimum balances are practically reviewed every year. The procedure is that every year the Accountant General of each Province examines the estimates of the minimum balances of the district treasuries, and makes any reductions or other alterations that he thinks possible. Then he sends up his estimates to the Comptroller General, and if the latter thinks that the Accountant General has allowed too large a margin he asks the Accountant General to re-examine the figures and to make any possible reductions. I can show the Commission the last review of the Comptroller-General. As a matter of fact, these minimum balances have been rising in recent years.

4316. Why have they been rising?—It is firstly due to the increase in the number of district treasuries. A second cause is the increase in the volume and magnitude of the transactions. A third is that we are guaranteeing a minimum balance at all the new branches of the Presidency banks where the Government is transferring its treasury business to them. Those are the three main causes.

4317. I gather from what you say that the Government of India have been encouraging the Presidency banks to take over the management of the balances wherever they can?—Yes, that is so.

4318. And to open new branches for the purpose?—Yes.

4319. Does the inducement which the Government of India offer for that purpose always consist of their undertaking to maintain a minimum balance with them?—It is the practice nowadays to do so. In the case of the old branches there is no such obligation, but in recent years, when the Government of India has asked a Presidency bank to open a new branch at a place where the bank thought it would be unremunerative to do so with reference only to the local banking business, it has guaranteed a minimum Government balance. I think, roughly, there are about a dozen places where the Bank of Bengal and the Bank of Bombay have either opened new branches or have taken over the management of the Government balances on these conditions.

4320. In such cases has the net result been that the Government has had to maintain a smaller balance or a bigger one?—I should say, from the Comptroller-General's reports on minimum balances, that it has got to maintain a higher balance.

4321. Where they close a treasury and induce a bank to undertake the work, they are obliged to give the bank a guarantee that they will keep a higher minimum balance than they found it necessary to do while their treasury was open?—That is so because the Government Treasury business is conducted mostly on these lines. We do not keep the whole of the cash balance at any particular place in the local treasury itself, but we have an attached currency chest and any surplus treasury balance is transferred to the currency chest, and then forms part of the paper currency reserve. Then when money is required at that particular treasury later on, we transfer the money from the currency chest into the treasury and make an opposite payment at the headquarters of the province or at some other place. In that way if Government transacts the Treasury business by itself at a particular place, it can often manage with a smaller balance than the minimum sums which have been guaranteed to the Presidency banks.

3 July 1913]

Mr BHUPENDRA NATH MITRA, C I E

[Continued.]

4322 If that is so, what is the inducement to the Government of India to close its treasuries?—Mainly because it is part of a policy to place larger amounts out of the Government balances at the disposal of trade in India.

4323 So that in your view the change has been costly to the Indian Government, but is worth doing in the interests of Indian trade?—I think so. Of course I could not definitely say that it has been costly, because against these increasing balances has to be set off the saving which the Government has made in its establishment charges, because as soon as the Government transfers the Treasury business at a particular place to the Presidency bank it can dispense with some portion of the old Treasury establishment, and it has not got to pay to the Presidency bank any sum to cover the establishment charges which the bank will have to incur. At the same time the effect of the arrangement, according to the Comptroller General's reports, has in several cases been to raise the balances.

4324 Will you give me an example?—An increase of five lakhs in Bombay is attributed to the guarantee of minimum balances at the branches of the Bank of Bombay opened at Sholapur and Jalgaon.

4325 Is the increase in that particular case an increase of the Government balance at the headquarters of the bank?—No, at the branch banks. It is an increase in the minimum balance at the district treasuries. These minimum balances have gone up from something less than four millions to about 4½ millions in the last five or six years.

4326 In recent years I suppose the facilities of communication in India have very much increased?—Yes.

4327 Does it not strike you as, at first sight, rather surprising that, whilst the facilities of communication are increasing, the size of the balances should also be increasing? Would you not *prima facie* have supposed that with the increases in the facilities of communication it would have been possible to reduce the balances?—Of course, it is partly owing to the increase in communications that the balances have not increased to quite the same extent as it would have been otherwise necessary to increase them. The transactions of the Government have increased very largely. The number of treasuries has also gone on increasing and we have gradually acquired more territory—Burma and Berar, for instance. In spite of all that, the improvement in communications has enabled the Government of India not to increase its minimum balances beyond the figure which was practically fixed some time in the 80's.

4328 So that, though there is some increase in the total of the balances, they are smaller in proportion to the volume of business than they were several years ago?—Quite so.

4329 Just now you spoke, in cases where there were these treasuries, of the money being used or transferred to the currency reserve, what exactly is done with it when it gets there—what is the effect of the transfer?—The effect of that transfer is that we can reduce the balance of the district treasury and we can transfer the surplus balance to the headquarters, either of the Accountant General or of the Comptroller General.

4330 You put it into the currency reserve, and then you can transfer it to the headquarters of either of those officers—as that it?—What happens exactly is this. We open a currency chest, say, at Agra, and we put the surplus treasury balance there into the currency chest, but the total of the currency reserve is of course unaffected by this transfer, because we make a *per contra* transfer of an equal amount at, say, either Cawnpore, which is the headquarters of that particular currency circle, or at Calcutta, where the headquarters of the Comptroller-General used to be until a very recent date, and where the main currency office still is. In the latter case, the treasury balances at Calcutta are increased and the treasury balances at Agra are reduced, on the other hand, the balance in the currency chest at Agra is increased while the currency balance at Calcutta is reduced.

4331 When you want the money back into the Treasury at Agra, can you without difficulty reverse the transaction?—Yes, that is exactly what we do.

4332 The net result being that you, by the use of the currency reserve, free money where it is wanted from the reserve, and replace money in the reserve at the place where you have a surplus?—That is exactly so, in fact, the Government of India has saved the cost and trouble of actually moving this surplus money from one station where it is not wanted to another station where there is need for it.

4333 In spite of these facilities, which must be very considerable, the Government of India does not think that it can safely reduce the Treasury balance below the figure at which it now stands?—That is exactly the position. In fact, these facilities existed in 1888, and even long before. Sir James Westland, in a paper which I believe has been handed in by the India Office,\* said it was possible for the Government of India to work these district treasuries with the small sum of 4½ millions, owing to the existence of this device of putting surplus money into the currency chest and transferring it through that channel to the headquarter treasuries.

4334 I gather, therefore, that the mere multiplication of branches of the Presidency banks would not enable you to work with any smaller balance?—Not a multiplication on the present lines, that is, if Government has got to guarantee a minimum balance when it transfers the Treasury business to newly opened branches of the Presidency banks, I am afraid it will not be possible to reduce the minimum balances.

4335 When a guarantee of that kind is given, it is given for a fixed period?—Yes, it is usually given for a fixed period in the first instance.

4336 It would then be renewed at intervals, would it?—That is so.

4337 What is the explanation of the fact—I think it is a fact—that the balance in India on the 31st March this year was over 19 millions?—The main reason was that the Secretary of State was unable to withdraw the surplus accumulation to England by selling Council bills at what he considered to be a reasonable rate. Of course, it was helped by the fact that the Secretary of State paid for the large silver purchases which were made in England in 1912-3 out of his Home Treasury balances and not from the money which he had in his currency chest.

4338 The size of the balance was partly due to the use of the English balances for the purchase of silver, and partly to the Secretary of State's selling fewer Council bills?—That is so.

4339 How far does the Government of India control the amount of Council bills sold?—The procedure is something like this. The Government about the 9th of every month knows what its cash balances on the last day of the previous month were, then it calculates what portion of the balances is really wanted to meet the current requirements of India. The surplus so arrived at it places absolutely at the disposal of the Secretary of State, and the Secretary of State is quite free to draw the whole or any portion of it he likes to England by means of Council bills.

4340 So that the Government of India indicates to the Secretary of State a maximum, but the Secretary of State acts entirely on his own initiative as to what amount he sells within the maximum?—That is exactly so.

4341 Would it be possible for the Government of India to make loans from the Government balances to the Presidency banks?—That is a big question. It has been held in the past that such loans are not in the interest either of the Government or of trade. It results on one hand in an undue dependence of trade on Government money, and it may also result in Government locking up money, in the shape of loans to the Presidency banks, for which there may be a sudden and unforeseen demand. It has also been held that if Government lends money to the Presidency banks, the result will be that for the time being the demand for Council bills for trade remittances to India

\* See Appendix II, pp. 43-7 and p. 53.

3 July 1913]

Mr BHUPENDRA NATH MITRA, C I E

[Continued

will fall off, and that will affect the rate at which the Secretary of State sells his Council bills. Not only that, but it is just possible that it may also affect the total amount the Secretary of State may be able to obtain in a year by selling bills and transfers. Of course, if the Secretary of State cannot sell as much as he requires to finance the Home Treasury, the result will be some inconvenience both to him and to the Government of India in the long run.

4342 In recent years he has been able to sell more than sufficient, I think?—That is so. Of course it is possible that circumstances may have somewhat changed in recent years, and that there may not be now the same objection to lending money to the Presidency banks as there may have been in the past. I think possibly that the objection that these loans may interfere with the ability of the Secretary of State to sell the full amount of Council bills, which he requires to finance the Home Treasury, is probably not quite correct under present conditions, because I think the exchange banks in India must get as much money by means of Council bills or imports of gold as would be required to meet the balance of trade, and the result of the Government making temporary loans from its balances to the Presidency banks would be at most to transfer the demand for Council bills from the busy season to the slack season, it will mean a falling off in the demand in the busy season and a larger demand in the slack season.

4343 If it had that result would you regard it as advantageous to the Secretary of State?—It would not be quite advantageous, because the average rate at which the Secretary of State can sell the bills and transfers will be somewhat reduced. In the busy season, if the banks wanted the money in India quickly and readily owing to a stringency in the local markets they probably would take a large amount of telegraphic transfers at a high rate, whereas if they got a temporary loan at that particular stage and had to repay it by remitting funds later on in the year then they will probably take only bills and not transfers. The effect, therefore, would be a reduction in the average rate at which the Secretary of State can sell bills and transfers on India. On the other hand, it is possible that this loss will be largely counterbalanced by the profit which the Government of India would make from the interest on the loans which it issued to the Presidency banks, so that it is an experiment that seems worth trying at any rate, inasmuch as, on the whole there might not be any ultimate loss to Indian revenues.

4344 You see no practical objection on the part of the Indian Government to these loans?—No. It may result in the Government of India having to retain a larger proportion of the surplus balances in India than it now does, but I do not think that that would result in any real inconvenience.

4345 You are not afraid that if Council bills were not sold in the time of pressure, the Secretary of State would be unable to sell enough in the slack months to meet his requirements?—Personally, I do not share the apprehension because I think the balance of trade must be settled somehow or other, and that the import of money, either by means of Council bills or by means of gold must satisfy the balance of trade taken over a series of years.

4346 Assuming that such loans were to be sanctioned, for what months of the year would they be required?—When the Committee of the Bengal Chamber of Commerce approached the Government of India on the subject on the last occasion, which was in 1899, they said they wanted the loans between January and April.

4347 Would you lend to anybody besides the Presidency banks, assuming that such loans were to be recommended and sanctioned?—I think for the present I would confine the experiment to lending to the Presidency banks, because, after all the Presidency banks stand more or less in the position of Government banks, and it is only proper that Government should deal with or through, them.

4348 I presume you would take securities from them for the amount of the loan?—Yes, I would

I may mention that there is an arrangement under which we can lend money to the Presidency banks at times of stringency at the bank's discount rate. As a matter of fact, we have made such loans on several occasions in the past, but there has been no demand on us for such loans in the last five or six years, and it is possible that there is really no necessity for such loans nowadays.

4349 On the other hand, I think it has been suggested to us that the fact that the Government of India have only made those loans at the bank rate deprives the banks of all inducement to take advantage of the offer, because the banks could only lend money at the same rate at which they borrowed it, and would get no reward for their trouble, and therefore they did not like to apply to the Government for the money. Do you think there is force in that?—Yes, of course there would be some force in it. If the bank did not get any reward for the trouble they took in the lending of the money, it would act as a deterrent from its taking such loans.

4350 At what rate do you think the Government of India should lend, if it lent at all? Should it lend at something below the bank rate?—There is no use in lending at the bank rate if no one will take the money at the bank rate, so that if the Government of India really wants to give larger assistance to trade, and trade requires the assistance, I think it would be desirable to lend it at some fraction below the bank rate, so as to leave the bank, which does the business, some margin of profit.

4351 What sort of security ought the Government of India to require, do you think—its own paper?—I think that is what it actually requires as a matter of practice, and to start with, I do not think we should go the length of taking other securities.

4352 Not even the best independent securities Port Trusts, for instance?—Of course we might make an exception in the case of Port Trust securities, because they are in fact as good as the securities of the Government of India.

4353 Supposing the Government of India had decided to make such loans, and had been able to do so for three or four years, then let us suppose that from one circumstance or another their balances had shrunk and in the fifth year they were unable to give the accommodation, I think you have already said that one of the reasons which had deterred the Government from doing it in the past was the fear that that would have a rather disastrous effect upon trade?—That is so.

4354 Do you think that view is shared by the Indian commercial community? I ask you the question because I think the witnesses who have come before us have said they did not think there would be much difficulty arising from that cause?—I think, in the past, members of the commercial community in India have themselves admitted this difficulty, and possibly to meet that argument the better plan may be not to lend out money from the Treasury balances, but to have some sort of elastic paper currency.

4355 I think we will come back to that later?—After all, it is not really the function of Government to lend money for the benefit of trade in India.

4356 As I understand it, the criticism directed against the Government of India is that as a tax collector it bottles up a great deal of money just at the time of the year when the stringency in the money market is greatest, that it does not immediately require that money for its own use, and that it would be of great assistance to the money market to have that balance freed at that time?—The stringency in the money market could be easily met also by an elastic paper currency, and of the two alternatives an elastic paper currency would be a better solution of the difficulty than lending money from the Government balances.

4357 If assistance is to be given by the Government to trade, would you prefer that that assistance should be in the form of some rearrangement of the management of the Paper Currency Reserve rather than in the form of loans from the Treasury balances?—Yes.

3 July 1913]

Mr BHUPENDRA NATH MITRA, C.I.E

[Continued]

4358 At the same time, I gather from what you said earlier, the Government of India has been actuated by this desire to serve trade in closing the treasuries and handing over the balances to the banks?—Quite so, in fact the Government of India tries to do all that it can be reasonably expected to do, and as a matter of fact I believe it leaves larger balances nowadays even at the head offices of the Presidency banks than it used to do

4359 It does not therefore seek to keep its balances at the head offices down to the fixed minimum?—No, it never does so

4360 Does it keep as little as it can in the reserve treasuries, and put as much as it can, in the banks?—No, it cannot be said that it does that either. The arrangement is that it allows its balance at a Presidency bank to mount up to a certain figure, and if it exceeds that figure, which is about a crore in the case of the Bank of Bengal and a smaller amount in the case of the other banks, then it transfers the surplus from the bank to the reserve treasury, but then on occasion it would even allow its balance in the Presidency banks to go above that limit

4361 When it leaves the money with the bank it receives no interest, does it?—No, nothing

4362 But the money is available through the bank, or a portion of it, for trade purposes?—Quite so

4363 When it transfers it to the Treasury, of course the Government of India equally earns nothing upon it?—Quite so

4364 But it is not available for the purposes of trade?—That is so

4365 Would you give me briefly the reasons for the establishment of the reserve treasuries?—I think the reason was that there was some trouble which arose in 1874 and 11 years previously owing to the Government keeping all its surplus balances at the head offices of the Presidency banks. In 1863 Government could not get from the Bank of Bengal the money which it wanted to meet certain necessary and emergent payments, and the same thing occurred in connection with the Bank of Bombay in 1874. In the latter case Government wanted only about 35 lakhs, to meet emergent expenditure in connection with operations undertaken to relieve distress expected from scarcity in Bengal. The demand evoked a protest from the bank that the withdrawal would probably result in a panic and dislocation of business in the money market. The last-named incident was what actually led the Government of India to introduce the system of reserve treasuries

4366 Do you think the danger of such a state of things recurring is great at the present time?—I cannot say that the danger has passed away. In 1898, when the banks approached the Government of India on the subject of the use of Government balances in aid of banking resources in India, the bank rate had gone up to something like 13 per cent, and possibly, but for the institution of the reserve treasuries, the state of affairs which took place in 1874 might have repeated itself in 1898

4367 On the other hand, would it be fair to assume that, if the Government had lent more money to the banks, the bank rate never would have gone to 12 per cent?—It is very probable that that result would have been obtained, but *per contra* it might have been that if there were no reserve treasuries, the banks would have used Government money to carry on the ordinary business of trade, which ought to be financed by them from their own capital, and that they would have found it very difficult to surrender the money if and when it was required by Government. I may mention that 1898 was a period of great stringency with the Government of India also so far as the balances went, and if the Government of India, having lent its surplus balances to the Presidency banks, had wanted to withdraw them, we would probably have had a repetition of the experience of 1874.

4368 Therefore, to obtain perfect security you think it is essential that the system of the reserve treasuries should be maintained?—I think so

4369 I suppose it is the case that some inconvenience is involved to the Indian money market in consequence of the establishment of that system?—It is so. Possibly it results in the bank rate rising rather high in the busy season, because so much money is withdrawn from the market, but it is not the business of Government to provide money for the purpose of trade, and it ought only to place so much at the disposal of trade as it conveniently can. If the placing of all its balances at the disposal of trade results in inconvenience to it, I think it would be perfectly justified in having a separate reserve and not making any portion of that money available for trade purposes

4370 I think everyone would agree with you in that statement. The criticism, as I say, is not that the Government neglects its business because it does not help trade, but that the Government, by withdrawing more money than is needed for its own particular requirements at a busy portion of the year, actively hinders trade. I rather gather that you say that may be so to some extent, but it is done as little as is possible?—That is so

4371 And that to go further might endanger security?—Yes

4372 Suppose the Government of India were willing to lend money, what amount do you think in a normal busy season would the market take up?—I think one of the members of the deputation from the Committee of the Bengal Chamber of Commerce which waited on the Government of India in 1898 said that the amount needed to relieve stringency in the money market would not be large and would be about one million. That, of course, is a question to which different people would give different answers, but if we are to judge in any way from the demand which is made for telegraphic transfers in December or January, the amount may be a pretty large figure. Another of the members stated that the demand for such assistance would be reduced when India had a stable exchange, and if that was correct, then the demand at the present day ought to be less than even one million.

4373 I think it follows, from what you have said that you are clearly of opinion that it would be impossible simply to abolish all the reserve treasuries and transfer all the Government balances to the Presidency banks?—Yes, that is my opinion

4374 You have, I think, already told me that you would not recommend under any circumstances, in the first instance, loans to anybody except the Presidency banks?—Quite so

4375 In these circumstances, is it a fair inference from what you have said, that you do not think the Government of India could have used to advantage in India any part of the balances recently held in London?—Yes. If the trade could not have taken more than a million, of course it follows that the Government of India could not have used advantageously any considerable portion of the surplus balances in India.

4376 You have already spoken of the possible effect of the sale of Council bills on any such loans made in India, the fear of adversely affecting the sale of Council bills has, I think, been one of the principal reasons for not doing it, has it not?—Quite so

4377 But on the whole you are not very much impressed with the danger?—That is the position

4378 In regard to the balances in England, they also have been very large for the last few years, have they not?—Yes

4379 That, I think, has been mainly due to the large surplus receipts from Council bills?—Quite so

4380 And those have been due to the considerable surpluses which have accrued in each of these years above the budget estimates?—Partly that, and partly to the lapses in the grants that were made for the railway capital expenditure.

4381 Why has there been so much under-expenditure there?—I think it is due partly to some difficulty in obtaining stores from England, and partly to more time being taken than was anticipated in preparing and sanctioning proper plans and estimates, so that there was some delay in commencing the works.

3 July 1913]

Mr BHUPENDRA NATH MITRA, CIE

[Continued]

4382 Has expenditure been affected at all by the difficulty of getting labour in India?—No, I do not think that has affected it to any degree. There may have been one or two cases, but I do not think they have materially affected the spending of the money.

4383 Generally speaking, could you carry out an even larger railway programme than that which has been provided for, without meeting with any labour troubles?—I am afraid I am not competent to answer that question, but thus much I can say, that in 1912-3 the railways were able to spend practically the whole of the capital grant, which amounted to over 10 millions. That indicates that there were no labour troubles. I may also mention that a good portion of the money which is allotted for railway capital expenditure goes to meet the requirements of open lines, mainly, that is, to meet the cost of additional rolling stock, and here labour questions do not really come in.

4384 Unless they are English labour questions, or European ones?—That is so.

4385 I think the balances in London have been increased by borrowings on the part of the Secretary of State?—There have been some anticipatory borrowings.

4386 In those cases, does the Secretary of State act on the advice of the Indian Government?—No. What happens is this. The budget programme of borrowings is fixed some time about the end of the preceding year, and the Government of India and the Secretary of State settle between themselves what amount of loan will be raised in England and in India respectively, after that stage it is not usual for the Secretary of State to consult the Government about the amount of the sterling loan.

4387 In that case the consultation between the Secretary of State and the Government of India as to the amount of borrowing to be done takes place before the opening of the financial year?—Quite so.

4388 In the review which they make, do they look further ahead than the coming financial year, or do they confine themselves to one year?—As regards the definite programme of borrowings, they simply look forward to the coming year.

4389 And in agreement it is settled that so much will need to be borrowed in the course of that year?—Quite so.

4390 They arrive at that figure on the basis of the budget estimates, I suppose?—Yes, that is so.

4391 If in the course of the year revenue comes in more favourably than had been anticipated, is that fact communicated to the Secretary of State?—Yes. He gets the Comptroller General's monthly statement of the treasury transactions in India, which shows exactly how the revenue is coming in.

4392 Does the Secretary of State, having fixed before the beginning of the year, after consultation with the Government of India, the amount which he has to borrow in London, again consult the Government of India before actually issuing a loan?—No, he does not.

4393 Might it not be the case that in a good year if he did so consult the Government of India they would be able to say that the revenue was coming in so well that the loan which they had contemplated as necessary before the year began was now proved to be unnecessary?—Quite so, particularly if there was any apprehension that the loan would not be obtainable at a favourable rate, I am quite sure that the Government of India would advise the Secretary of State of that.

4394 Do you think there might therefore be some advantage in more frequent communication between the Secretary of State and the Government of India before the Secretary of State actually issues any portion of the loans agreed upon?—I think so.

4395 (Sir Robert Chalmers) Is it quite certain that these steps are not taken already?—The Secretary of State does not now consult the Government of India before actually floating a loan in the English money market.

4396 But there would be communications, I gather from a previous answer of yours, that would pass from the Government of India to the Secretary of State, not necessarily official utterances, but dem-

or semi official utterances, explaining the position, and the way the revenue was coming in, and so supplementing previous information that had gone forward?—That is so. The Secretary of State is now informed how the revenue is coming in, but there is no consultation between the Secretary of State and the Government of India as to whether a sterling loan should actually be raised or not just at the time when the Secretary of State issues the loan in the English market.

4397 As you say, the Government of India does supply supplementary information if and when it accrues in India?—Yes, it supplies information, but it never supplies any advice in the matter.

4398 (Chairman) It is not merely the total amount of borrowing, as I understand, but the proportion of the borrowing in India and in London which is settled in anticipation at the beginning of the year?—The actual amounts are settled as part of the budget programme.

4399 Might it not sometimes happen that as the year went on, the Government of India would see the possibility of raising on favourable terms in India a larger proportion of their total needs than they had at first thought possible?—That contingency might arise. Under existing arrangements, the Government of India tries to raise in India as much as it is possible to get out of the market on reasonable terms.

4400 Latterly, the rupee loans in India have been very successful?—That is so.

4401 Do you think there is much possibility or probability of an extension of borrowing in India in the course of the next few years?—The expert opinion on that matter is that it will not be possible to borrow larger sums than what we actually take from the market without further reducing the market price of rupee paper.

4402 The last two rupee loans in India I think have been issued at a better price than the sterling loans in London?—Yes.

4403 But you do not think that the better prices would have been maintained if the Government had sought to raise a larger proportion in India?—I think that that is the opinion held by bankers in India. The people we usually consult before raising our loans have given us that advice.

4404 I think you said just now that it was the policy of the Indian Government to raise as much as they could in India on satisfactory terms?—Yes, that is so.

4405 The object being to restrict as far as possible the creation of new debt in England?—Yes, to restrict the growth of the sterling borrowings.

4406 These borrowings are, I think, entirely for productive capital expenditure?—They are mostly for that purpose. Of course, in recent years we are raising sums for the construction of Delhi.

4407 Putting the creation of the new capital at Delhi out of account, the money has been almost entirely raised for railways or irrigation works?—Quite so.

4408 Do you happen to know whether the Government of India have considered whether it would be advisable to try to encourage private enterprise to do more of this work, in order that so they might lessen their own capital responsibilities?—I am afraid I could not answer that question, as I have no definite knowledge on the point. My recollection is that they afford all reasonable facilities to encourage private enterprise. At the same time, the railways constitute a very valuable asset to the Government of India, and it is possible that when questions of handing over the State railways to private companies have arisen they have not favoured the idea.

4409 I understand it would not come within your official responsibility to advise upon that point?—No, it would not.

4410 Now I should like to ask you to tell me as briefly as you can, how you set to work in India to prepare an Indian Budget?—We prepare some sort of rough forecast in November just after the autumn monsoon has been fairly established. For this purpose we obtain from the Civil Account officers their estimates of the revenue and expenditure for the current

3 July 1913]

Mr BHUPENDRA NATH MITRA, C.I.E.

[Continued.]

year. We also obtain from the accounts officers who maintain the accounts of the important Imperial departments, *e.g.*, railways, military services, posts and telegraphs, &c., their estimates of revenue and expenditure. We examine these various figures, and we settle what we consider to be the preliminary revised estimates for the current year. From those figures, after making due allowance for the normal growth of revenue as well as of expenditure, we prepare a rough forecast for the following year. This forecast gives us in normal years a certain amount of revenue surplus, and then we discuss to what purposes this surplus is to be devoted, whether we should reduce taxation, or whether we should spend it in meeting needs for the improvement of various branches of administration, *e.g.*, education, sanitation, and things of that sort, or whether it should be applied in both directions. Then we submit our proposals for dealing with the surplus to the Secretary of State, who passes orders on them. That constitutes the first stage of our budget work.

4411. At about what time of the year would these sketch proposals reach the Secretary of State?—Usually about the beginning of January. At the same time we prepare the programme of capital expenditure. We know from the rough forecast of the revenue account what portion of the revenue surplus we can allocate to capital expenditure. We also prepare a rough forecast of the amounts that we can borrow in India and in England—of course, the latter figure is settled in consultation with the Secretary of State. We then commence the next stage of our budget work. About the beginning of January we get the regular budget estimates from the provincial governments. There are in India nine provincial governments which have got certain financial powers. Of course, these powers are more or less restricted by rules which have been laid down by the Government of India and the Secretary of State, but the provincial governments have got some amount of freedom in spending the revenue which is placed at their disposal. They prepare their budget estimates, both of revenue and of the expenditure that they propose to incur from it. Nowadays they have to consult their legislative councils as regards the distribution of their surplus money, but in January it is not possible for them to do so. What they do is this. In sending up to the Government of India the first edition of their budget they put in a lump sum, so many lakhs, the distribution of which they will decide later on after consulting their respective councils. We get these budgets, and our main duty in connection with them is, firstly, to examine the estimates under certain heads of revenue. The revenue under some of the heads—land revenue, excise in some provinces, stamps, and income tax—is shared between the Government of India and the provincial governments, so that the Government of India has got an interest in the proper estimating of revenue under these heads. The Government of India is, moreover, ultimately responsible for seeing that the provincial governments keep their expenditure within the resources at their disposal. It must therefore check any tendency on the part of a provincial government to over-estimate its revenue so as to get a larger spending grant for the following year than it ought to. After the estimates of revenue have been checked, the Government of India simply prescribes the limit up to which the local government can incur expenditure in the following year. That finishes the examination of the provincial estimates in the first stage.

4412. Suppose that the expenditure by a particular provincial government sanctioned by the Government of India proves to be in excess of the revenue, how is the deficit met?—Each of the provincial governments is required to maintain what is called a minimum balance, below which it can not ordinarily reduce its balance, so that if in any bad year the revenue falls short of the budget estimate and the expenditure cannot be reduced below the budget grant, the deficit is temporarily met by drawing on the provincial balance. As a matter of fact, the provincial government may for the time being have a larger balance than the minimum, and then it may not have to draw upon

the minimum balance, but if it was working about the neighbourhood of its minimum balance, it may have to use temporarily a portion, or the whole, of its minimum balance, or even to take a loan from the Government of India. In that case, the Government of India would insist on the provincial government making up its minimum balance at the earliest possible opportunity.

4413. Are those balances of the provincial governments kept in the provincial government treasuries, or in the central government treasuries, or in banks?—There are no provincial government treasuries as distinguished from those of the Imperial Government. These provincial balances are more or less of the nature of credits, and the Government of India has the disposal of all the money. It manages the treasuries, but it keeps an account showing the amount which each provincial government has got to its credit.

4414. So that in considering what amount of money is at any time locked up in the Government balances, the Government balances about which you were speaking earlier are inclusive?—Quite so. At the moment there are about 10 crores of provincial balances included in the balances of the Government of India.

4415. Now, will you resume your account of the making of the budget?—When we have finished our examination of the first edition of the provincial budgets, we communicate to the provincial governments the figures of the budget estimates for revenue and expenditure as passed by us, and we tell them that they can distribute the total sum that we have allotted as their expenditure grant for the following year among the different heads of account in consultation with their councils. After we have finished with the estimates of the provincial governments, we examine the estimates of the wholly Imperial revenue and expenditure. The main items are, firstly, the military services. Of these a detailed estimate is prepared by our Military Finance Branch, in consultation with the Military Accountant-General and the Army authorities, *viz.*, the Commander-in-Chief and his staff. At the end of December, we have already decided, in connection with the preliminary budget forecast, what sum of money we can allot to meet military expenditure in the following year. If we find that the total of the detailed budget exceeds that limit owing to some special causes, we may have to raise that allotment in January or February if we find it possible to do so. Secondly, there are the estimates of the smaller commercial departments, the Post Office and Telegraphs. The Post Office estimates do not generally give much trouble, because the expenditure is usually kept well within the revenue, and the work of the department generally results in a profit. In the case of the Telegraphs, the expenditure has in recent years been higher than the revenue, mainly owing to the need for the establishment of radio stations, and we have to go into these estimates carefully, and allot as much money as we conveniently can for the efficient maintenance of the service. Then comes the most important Imperial department, the Railway Department. There, it is very difficult to make any correct estimate, owing to the magnitude of the transactions and their liability to respond to the agricultural prospects and trade conditions of India. Still, we make the best estimate we can with reference to the advice of the administrative authorities. After we have settled the estimate of revenue, we decide how much money is to be allotted towards the working expenses of the railways. We have arrived at some sort of preliminary conclusion on that point also in December when preparing our budget forecast, but when the detailed demands of the railway administration have come in, and we may have to alter our preliminary figures with reference to these demands and our ability to allot a larger sum towards the working expenses of the railways. Lastly, there are some other heads under which revenue and expenditure are wholly Imperial. One of these is opium. The estimate of opium revenue in recent years has presented great difficulty. The Government of India, as a matter of policy, decided that they would only budget for what they call the

3 July 1913]

MR BHUPENDRA NATH MITRA, C I E

[Continued

surplus standard\* of revenue in each year, and would postpone the consideration of the disposal of any accrued surplus from this source until later on in the year, in December and January. Other important Imperial heads are salt, customs, mint, and the charges of the central administration and of the survey of India and other similar scientific departments. These are also examined about the end of January. We also get, about the second week of January, the estimates of the India Office, which show the amount of revenue and expenditure, the amount of capital expenditure, the capital liabilities in connection with the discharge of debt which must be met in the following year, and other receipts and disbursements outside the revenue account. When these various estimates have been settled we compile, about the beginning of February, the total figures of Imperial revenue and expenditure and of provincial revenue and expenditure for the whole of India, and then we again examine the ways and means position. We know what the Imperial surplus will be, and we know whether the provincial governments will draw anything from the balances which they have got on deposit with the Government of India, or whether these balances are likely to be increased in the course of the ensuing year. We also know what amount we are going to spend on capital expenditure, on railways, irrigation works, &c, in the following year. Then, again, we have got another set of transactions called the deposit, advance, and remittance transactions. In India the practice is for the local boards, the Mofussil municipalities and other similar bodies to bank with the Government of India and to deposit their moneys at the Government treasuries, from which they draw such sums as may be required from time to time. It is also the practice of the Government of India to issue loans to cultivators in times of famine, and for land improvement and certain other purposes in normal years, as well as loans to municipalities and other public bodies in certain circumstances, and to the native States to meet administrative needs and famine requirements. Estimates for all these various items of outlay, and the receipts in connection therewith, have to be prepared by the Government of India in consultation with the Comptroller-General. When we have got together all the estimates of capital, deposit, advance, and remittance transactions, we know exactly what sum will be required to meet the capital liabilities of all sorts in the ensuing year. We then prepare, also in the first week of February, a compilation of the ways and means position. I may here mention that at the time when we are settling the budget estimates for the following year for the various items of revenue and expenditure, and of the receipts and disbursements outside the revenue account, we also settle the corresponding probable actuals for the current year, which are technically called the revised estimates, so as to arrive at the probable opening cash balance in the budget forecast of ways and means. In this connection we depend mainly on the advice of our account officers and of the Comptroller-General. One main point on which we ask the help of the latter is this. The important Imperial departments, viz, the railways and the military services, draw money from the treasuries by cheques to meet their expenditure, and they also pay the bulk of their receipts into these treasuries. So we can always as regards the current year check the total net military expenditure, as well as the net railway revenue and capital expenditure, from the Comptroller-General's estimates of the transactions of these departments with his treasuries. The second compilation, both of revenue and expenditure and of the ways and means position which I have referred to, is the first regular budget compilation, the previous compilation in December being only a forecast. If we find that this compilation indicates any material variation in the revenue surplus as compared with the forecast, we either curtail the budget programme already settled or devise means for spending the additional surplus. Then we go to the Secretary of State about the beginning of February with any

alterations which we may consider necessary in our earlier proposals regarding both the revenue surplus and the ways and means programme.

4416 Is it then that the estimates are finally settled?—No, they are not final even then. About the first week of February we get the provincial estimates back from the provincial governments. They inform us of any important corrections which they think are necessary in the revenue heads, and if the result of these corrections in any province is a large deterioration in provincial revenues the local government must curtail its total expenditure grant accordingly. If, on the other hand, the corrections result in an improvement, it is open to the local government to ask for an addition to its expenditure grant for the following year. We go through these provincial estimates again, and finally settle the estimates of revenue as well as the provincial grants for expenditure. The same process is repeated as regards the Imperial items of revenue and expenditure. In some cases, particularly the railways, there have been very big variations at this stage from the earlier estimates. Then about the middle of February we finally make up our estimates. They are then presented to the Imperial Legislative Council in the form of the Financial Statement. That represents the financial proposals of the Government of India for the following year, but it is not the final budget.

4417 That, I take it, is only settled by the vote of the Imperial Legislative Council?—What happens is this. Any member of the Council can move a resolution asking the Government of India to make changes in taxation or to allot money to some definite object for which no provision has been made in the budget, or he may ask the Government of India to increase or reduce the provision under any particular head. Even if that resolution is carried, the Government of India is not bound to accept it—it may or it may not do so.

4418 (Mr Gillan) It takes the form of a recommendation to the Government of India, does it not?—That is it.

4419 (Chairman) In the main, as I understand, the budget may be said to be settled in the month of February?—That is so, except as regards important variations. After the Council have discussed the Financial Statement and have had an opportunity of placing their recommendations in respect of it before the Government of India, the latter go through the estimates again, but at that stage they make only important alterations, i.e., only such corrections as are likely to affect materially their calculations about the revenue surplus or about ways and means, and then about the end of March they finally present the estimates to the Council. At that stage the Council cannot make recommendations in respect of the estimates.

4420 At what point would the Government of India in conjunction with the Secretary of State have to make a decision as to whether they would propose an increase or a decrease of taxation?—That would be at each of these stages. The first proposal is submitted to the Secretary of State about the beginning of January.

4421 When would the final decision be taken?—The final decision would be taken about the middle of February.

4422 The official year begins in April?—On the 1st April.

4423 The accuracy, or the realisation of the budget forecast depends, I think you have said, mainly upon the condition of agriculture?—Upon the condition both of agriculture and of trade.

4424 Trade and the railways being themselves very largely dependent on the harvest?—That is so.

4425 All these estimates have to be made at a time of the year when the Government cannot possibly forecast whether the harvest would be a normal or an abnormal one?—Quite so, we cannot know anything about the position.

4426 I presume, therefore, that they budget for what you may call a normal harvest?—That is exactly so.

\* See in this connection H C 155 of 1911 p 4

3 July 1913]

MR BHUPENDRA NATH MITRA, C I E

[Continued

4427 Do you know whether the Government of India have ever considered whether they could not make their forecast with much more accuracy and more satisfaction to themselves if they altered the date of the financial year?—So far as I can recollect, the question has not been examined in recent times. I should think the main point was that they followed the practice in England, and having done so they have never given a serious thought to altering it.

4428 Of course there is always inconvenience at the moment of change in a matter of that kind, but setting that aside, and setting aside for the moment any objections that might be raised in England, do you think it would be an advantage to the Government of India to alter the date?—I must say I have not thought about it.

4429 Other things being equal, it would enable you to estimate with greater accuracy, would it not?—Yes, but even if we altered the date and made the year end on the 31st December, the result would be that in January we would not know exactly how the accounts of the preceding year stood. In any case we will certainly not be able to forecast the course of the ensuing monsoon much better than we do now. The only advantage will be this, that we will know more definitely than at present how we stood as regards the past year. I do not think the change of the financial year so as to make it terminate on 31st December will in any way help the Government of India in forecasting the course of the monsoon in the following year.

4430 I was wondering whether you could not postpone the beginning of the financial year to a date at which you would have some knowledge of the monsoon—suppose we take the end of October?—Such a change would probably enable us to frame a better estimate than we can now. We have got two monsoons, the autumn monsoon and the winter monsoon, and we would not be able wholly to meet the difficulty, but still, it would be better than the present position.

4431 The large balances of which I have spoken, which have accrued in recent years both in India and in London, I understand from you, and I think we have had it from another witness, include sums which are already allocated and which are placed at the disposal of the provincial governments?—Quite so.

4432 They are not what you may call free money within the control of the Government of India at the time when it shows them in their balances, and while therefore they are a credit to the Government of India there is a corresponding debit?—The actual money is in the hands of the Government of India, but it involves on them a liability to supply the provincial governments with any sums which the latter may require, out of the amounts standing to their credit, to meet provincial expenditure which has received proper sanction. A good portion of the Government of India's balance consists of similar items.

4433 Do you think it would tend to avoid misconception, if, in publishing the balances you eliminated those sums which had already been promised, though not actually spent, if, in fact, you carried them to a suspense account and showed them in a suspense account separate from the free balances of the Government of India?—They are actually shown in a suspense account, but when we state our cash balance we show the actual amount that is held in the treasuries. As it is apart from this balance which has been promised to the provincial governments, there are considerable sums which really represent the balances of local boards and municipalities.

4434 I noted that you said that also. The general effect of that as it seems to me, is to make the casual or careless observer think that the free balances of the Indian Government are very much higher than they really are?—The published cash balances are certainly not free balances. They represent the money which the Government of India holds in its treasuries. It may be that a portion of it represents savings banks deposits, while another portion of it represents the balances of provincial governments, and a third portion represents the balances of municipalities. It consists of the aggregate money which the Government of India has got under its control in its treasuries.

4435 It is the gross balance?—Yes.

4436 Some of our witnesses, I think—and I might even say for myself, as a member of the Commission that I have been a little puzzled—have confused those gross balances of the Government of India with the net balance of the British Government at the Bank of England, they are clearly quite different things?—Quite so.

4437 Would it not be worth while in any statement in which those balances appear, at least to append some note to show what was a free balance, and what was already allocated to specific purposes?—That amounts to preparing a statement of assets and liabilities. In fact, Sir Edward Law once prepared it and published it in one of his financial statements. If it is of any use, it could be prepared without much trouble, but all the necessary information can be obtained from the Finance and Revenue Accounts if it is wanted.

4438 I want to go back for a moment now to the question of the rupee loans. In the first place, what is the total amount of rupee loans outstanding held in India and in London respectively?—I could give you the figure, it is published in an annual return of the Indian Commercial Intelligence Department. I quote the following passage, "Of the rupee debt it is estimated that, including Rs 137 5 millions held in London, Rs 728 6 millions were held by Europeans at the end of 1910, and Rs 652 4 millions by Indians, the holdings by Indians being 47 per cent of the whole debt. It should be noted, however, that the invested currency reserve is included in the sum held by Europeans."\*

4439 Have you any later figures than those?—No, I have not. They indicate that 73 crores were held by Europeans at the end of 1910, and 65 crores by Indians. I could get later figures out if required.

4440 Of the portion held by Indians, roughly speaking, by what classes of the population is it held—do men of small means take any share in those loans?—The bulk is held in what may be termed big holdings, i.e., by rich men and men employed in commerce.

4441 I think you said that it was the policy of the Indian Government to raise as large a sum as possible in rupee loans?—Yes, that is so.

4442 I am not sure that I asked you, but at any rate I will ask you again in case I did not, what is their reason for so doing?—It is firstly a matter of policy. They consider it is politically good for the country that as much of the public debt as is possible should be held by the people of the country. In the next place, another reason is that the increase in the rupee borrowings tends to reduce the foreign debt, and consequently the home charges.

ELEVENTH DAY

Friday, July 4, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

LORD FABER  
LORD KILBRACKEN, G C B  
SIR ROBERT CHALMERS, K C B  
SIR ERNEST CABLE  
SIR SHAPURJI BUREJIBJI BROACHA

SIR JAMES BEGGIE  
MR ROBERT WOODBURN GILLAN, C S I  
MR HENRY NEVILLE GLADSTONE  
MR JOHN MAYNARD KEYNES  
MR BASIL P BLACKETT (*Secretary*).

MR BHUPENDRA NATH MITRA, C I E, recalled and further examined

4443 (*Sir Ernest Cable*) You said that the Budget Estimates were based on what is called the normal harvest. Could you define what a normal harvest means? Is it based on an average of yield?—That is so, that is to say, we assume that the rainfall would be moderate and not scanty or plentiful, that the crops would produce what you would call an ordinary yield, and that the trade conditions would be normal throughout the year.

4444 (*Mr Gladstone*) I should like to ask you a few questions about the working of the district treasuries. Are there any recent official reports showing the actual daily and weekly transactions?—No, I am afraid there are none.

4445 Could you give us a statement showing the actual balances on different fixed dates at specific treasuries?—No, not without getting the figures from India.

4446 You referred yesterday, I think, to the transfer of surplus funds to the currency chest?—Yes.

4447 Can you tell me how often that may be done in a year?—It may be done at the surplus treasuries almost every month. In fact, at times, when the revenue flows in in large quantities, it may have to be done weekly.

4448 Would a return of the receipts be sent to the Accountant General every week?—It is sent once every month ordinarily, but, when the revenue collections are heavy, the Accountant General often calls for a weekly or fortnightly return from the surplus treasuries.

4449 Then he takes action based on the return which he receives?—Quite so.

4450 So that there would not be much delay in transferring any surplus money to the currency chest?—No, there is not usually.

4451 I think you rather indicated that the substitution of a branch bank for a district treasury involved an increase in the minimum Government balance?—For the time it does. So long as the arrangement regarding a minimum guarantee holds good, it naturally involves some increase in the minimum balance.

4452 Would not the saving in establishment charges more than counterbalance the cost of such additional balance?—I have not made any actual calculation, but I am doubtful, because I do not think there is any material saving in establishment charges. At these places Government has still got to maintain what is known as the accountant's department. The bank simply takes over the actual function of receiving and keeping the money and of making the payments. But anybody who has got to make a payment must go to the Treasury, and there we must maintain the proper establishment to give him a chalan or authority to hand over the money to the branch bank. Similarly, as regards the payment, the Treasury officer issues some sort of a cheque or payment order on the branch bank, after satisfying himself that the payment is in order, and that the party who claims the money is

entitled to it, then the branch bank makes the payment. So Government saves only a part of the Treasury establishment, not the whole of it.

4453 You would, I suppose, acknowledge that a branch bank ought to be able to conduct the business more economically by being able to combine banking business with Treasury business?—*Prima facie*, it ought to be so, but the difficulty, I believe, is that at these places the need for banking facilities is not very great, and that is why the bank, when it opens a new branch bank and gets the transfer of Government business, insists on some sort of minimum balance for a certain number of years. It is possible that after this period is over the guaranteed minimum balance will be reduced, or it may be possible to dispense with the guaranteed minimum.

4454 Do you not think that on balance it would be advisable for the Government to hold out inducements to the bank to establish these branches?—For that very reason I think it does so. Otherwise I do not think it would ever agree to maintain a minimum guaranteed balance.

4455 I should like to ask you one question on the subject of permanent loans. In England various securities are issued by the India Office to meet the requirements of the money market—short term, fixed dates, bearer and floating bonds. Would not there be a demand for securities of this kind in India?—It is possible that there may be a demand, but then the question is whether it is any advantage to the Government to get this loan. It is very probable that we will get the money at what is known as the slack season in India, but that at the beginning of the busy season, which is more or less our tight season also, we will be called upon to return the money which has been lent to us for a temporary period, and it may not be quite convenient to the Government of India to pay back the money just at that time.

4456 But suppose the bearer or floating bonds were issued with a currency of five or ten years there would be very little fluctuation in price, and these securities would be extremely convenient for borrowing, whether from the Government or from the banks and would supply a popular want?—Quite so. That would give the Government some additional capital for the time being. But there are objections on principle to raising money by means of these temporary debts. For example, if temporary debt has got a currency of five years and at the end of the five years, when the time comes for repaying it, and there is, let us suppose, a famine in India, Government may not find it possible to repay the money without raising a permanent debt on less favourable terms than it would have got if it had raised the money by permanent debt at the time when it floated its temporary debt.

4457 Quite so, those conditions are met in London, and they might be met there, by bills for a year in the case of an exceptional time, or something of that sort?—My impression is that the India Office them-

4 July 1913]

Mr. BHUPENDRA NATH MITRA, C.I.R.

[Continued

selves do not quite favour the idea of raising money for long periods by means of temporary loans. The policy is to raise temporary debt in times of pressure and stringency and then to substitute for this temporary debt a permanent debt as soon as market conditions make it possible to do so on reasonable terms.

4458 My suggestion is that these securities would be extremely convenient for the purpose of loans, say from the Government itself, because they would be redeemable at an early date, they would not vary in price, they would be good security for the Government, and they would be popular with bankers and others to be used for that purpose?—I admit that there would be some advantages, but then there may be countervailing disadvantages, and the disadvantages may be greater than the advantages.

4459 There are one or two questions I should like to ask you on the Budget year. The yearly forecasts are now made in December-January, I understand?—That is so.

4460 Of course, in December-January nothing whatever can be known about the monsoon—about the following season, but if the forecast were made in July-August the general course of the monsoon would be pretty well known?—Of the autumn monsoon, no doubt.

4461 You use the expression "the autumn monsoon", that is the June-July monsoon?—Yes, that is so.

4462 That is the really important monsoon, taking India generally?—Quite true, but not in all parts of India. For example, a failure of the winter rains would largely affect say the wheat crop in the Punjab, and possibly also in the United Provinces.

4463 That would not be known in December-January, would it, you might have favourable weather later on which would assure the wheat crop?—Quite so, but then in January, or at least about the beginning of February, we have a pretty fair idea how the winter rains will turn out.

4464 But still, the wheat crop in the Punjab, and the North-West is not of similar importance to the general rice crop throughout India and Burma, which depends upon the June-July monsoon?—I do not quite accept that statement as regards the Burma rice crop. I am not sure that it absolutely depends on the July rainfall.

4465 (Mr. Gillan) May I ask a question upon that? You are not suggesting, are you, that a failure of the winter rains is of anything like the same importance as a failure of the regular monsoon?—No, not quite.

4466 Not quite?—No.

4467 Is it anywhere in the same latitude, so to speak?—I think so, in fact, I think if there is a failure of the winter rains there is a considerable effect both on the revenue and on the economic conditions of the country.

4468 (Mr. Gladstone) Assuming, as I do, that the June-July monsoon is the really important monsoon, it would be, would it not, a great advantage to Government to make their forecast in July-August rather than December-January?—Yes, there would be some advantage, that is quite true.

4469 Then you indicated that three or four months were occupied in preparing the figures for the Budget. Would it be necessary to have so long a time? Could not that be compressed into a couple of months?—I am afraid that it would be impossible, having regard to the fact that the estimates of the various Provincial Governments have to be incorporated in the Budget of the Government of India, and to the present procedure with regard to provincial Budgets. The provincial Budget has got to be considered in some form or other by the Legislative Councils of the provinces. Previously, I think, we used to finish the Budget in about a month, or a month and a half, but we had to lengthen the period after the constitution of these enlarged councils so as to give them some time to discuss the estimates.

4470 But probably if the Government of India considered it of importance to compress the time it might be managed?—I am not sure about that, in

fact, I doubt if it could be managed without curtailing the facilities now enjoyed by the Legislative Councils of discussing the Budget.

4471 If the forecast were made in July it would be possible, would it not, to close the financial year on the 30th September?—Yes, quite so.

4472 And that date, I understand, would coincide with the revised dates which have been recently settled by the Government for railway half-years and years?—Yes.

4473 You are aware that they have lately been changed?—Yes. Of course, the railway year now ends on the 31st March, the same as the financial year, but then, as all the railways make up accounts half-yearly, the change to the 30th September would not really affect them.

4474 (Mr. Keynes) Would there be any technical difficulties in the way of this proposal of changing the financial year to an October-to-September year?—Would that date be, for any reason, less convenient than the present date from the purely office point of view?—No, so exactly that, but then I think there may be objections from the administrative point of view. It might mean that the various local governments and subordinate officers would have to be tied down to some amount of office work at a time of year which they probably devote to touring. But I am not sure of this.

4475 (Mr. Gillan) From that point of view it is a better time, is it not, than in the cold weather?—Quite so. It is in the cold weather that they go touring. But, if the Budget of the Government of India is to be finally settled in September, the district officers will have to prepare their estimates some time in March or even February.

4476 (Mr. Keynes) There was some question raised yesterday about the supplementary information, which you supplied to the India Office as to how revenue was coming in in the course of the year, for their guidance in raising loans. You said, I think, that monthly returns of the Comptroller-General were forwarded?—That is so.

4477 What sort of document is that? Is it one from which it is easy for a person who is not actually in India to ascertain what the ultimate receipts of revenue are likely to be?—Of course, it is so difficult to make any safe forecast with reference to the actuals of a month or even of two or three months, and particularly if the India Office have to float their loan, as they did last year, in May. What actually happens is this. The Comptroller-General, immediately the Budget estimates have been settled, distributes the Budget estimates both of revenue and of expenditure over the twelve months of the year. Then at the end of every month he issues a printed statement comparing the actual revenue receipts and the actual expenditure with the distributed Budget, and that shows whether the revenue and expenditure are actually showing an improvement over the distributed figures. The India Office can, however, always find out from these returns whether the actual closing balance of the previous year was materially higher than the amount entered in the Budget Estimates. About that there can be no doubt, and if that balance shows any large improvement I think there would be no difficulty in their judging whether it is necessary to raise the full amount of the loan if the market is unfavourable to them.

4478 But this is simply a monthly routine document from which they can draw their own conclusions?—Quite so.

4479 There is no process by which the Financial Member or the Financial Secretary in India informs the Secretary of State from time to time as to what is known as to the likelihood of the estimate being realised?—No, that is the very point which I mentioned yesterday. They are not asked for any advice on the point. The India Office gets these routine papers, and they are more or less in a position to judge for themselves. They have never asked for the opinion of the Government of India in this particular matter.

4480 If the opinion of the Government of India was asked for they could probably give the India Office

4 July 1913]

Mr BHUPENDEA NATH MITRA, C I E

[Continued]

something more valuable and more definite than this routine monthly document?—Very probably

4481 In estimating the heads of revenue I suppose amongst the most important, and also amongst the most doubtful are railways and the land revenue?—Yes, and Customs also plays an important part

4482 In estimating these many months before you can have any accurate information as to how the seasons will turn out, do you assume something rather below the average of previous years, or on what principle do you do it?—As regards land revenue there is not much difficulty. We can find out what the demand is, and if there is no famine or failure of the monsoon or other special causes, which would necessitate any considerable suspensions or remissions of revenue, then we can make a fairly correct estimate of the land revenue

4483 Is the estimate which you publish in March, then, an estimate based on the hypothesis that there will be no important remissions?—Quite so. We only allow for ordinary remissions, not for any special remissions necessitated by famine or other abnormal circumstances

4484 It is rather, therefore, a maximum estimate than a minimum estimate?—For land revenue it is generally so. At the same time there are certain tracts where the land revenue assessment depends upon the area cropped, so that if the crops are better than the average in those tracts the land revenue returns will be higher than the normal figures

4485 In those tracts you know the actual average figures of the previous years?—Not exactly the actual average figures, we know at the time what the cropped area under assessment is, and the estimates are based with reference to that area

4486 The area which has been sown?—Which has been settled, so to speak

4487 I mean in these districts of variable crop area you cannot know, when you are making the estimates, what the area will be in the following year. In estimating that, do you take the average which was cropped in previous years or not?—We do not actually take the average of previous years. We allow for some growth over that average. There is always some normal growth over that area, and this normal growth is allowed for. In fact, if crops are plentiful the land revenue becomes considerably increased, on the other hand, if, owing to floods or failure of the rains or other abnormal causes the crops do not come up to the average, then the land revenue falls off

4488 I should be right, therefore, in concluding that on the whole, apart from some small adjustments, in your estimates of land revenue you do not make any considerable allowance for the contingency of a bad harvest?—Quite so

4489 They are rather towards the maximum than towards the minimum?—They are based, as I said, on the normal harvest. You cannot say it is the maximum, because if the harvest is a really good one, in some places you may get a larger return from the land revenue than if it is a normal harvest

4490 But that seems to differ from the impression I got from your former remarks, that it was based on an actual fixed figure. Is this normal figure a computed one or an average?—That figure is based on the actual figure of the previous years after we have eliminated from it all abnormal collections of arrears, and things of that sort. Then we make allowance for the normal growth of revenue, not for any abnormal growth or for any abnormal remissions or suspensions, and that is how we make our estimate

(Chairman) It is very much like the British Budget estimate

4491 (Mr Keynes) Then with regard to the other important item, in the case of railways have you any information as to how the estimating is done? I suppose for the most part you accept the figures of the railway authorities?—As a matter of fact we do not, we make very large corrections in their figures with reference to the actuals of the past year, but, of course, here also we try our best to eliminate all abnormal factors, and the corrections we accordingly

have to make are often very considerable, in fact, in some years they amount to something like two crores

4492 And in the case of Customs?—In the case of Customs we mostly base our Budget Estimate on the receipts in the ten months or the eleven months of the current year. Then we make allowances for any abnormal factors, for example, in recent years the imports of silver have been abnormally high, and in forming our Budget Estimate we had to allow for the fact that these high imports might not be continued in the following year. Similarly we make allowance for any other large abnormal factor which may have affected the revenue in the current year, such as the Burma rice exports, which are affected by a variety of causes, and therefore we take the Budget Estimate at what seems to us to be a normal figure

4493 I had formed a general impression that the estimates were based on so cautious a principle that there would be a surplus unless the year was a rather poor one, and a large surplus if it was a good one. You would not agree with that, I understand, from what you have said just now?—It is not wholly correct, for example, there was a year in recent times when the actual result, owing to famine, was a large deficit as against a small surplus which the Budget had anticipated

4494 Has there been any tendency for the Budget Estimates to be more cautious in quite recent years than they were say eight or ten years ago?—No, I do not think so

4495 You put down the recent large surpluses entirely to unforeseeable causes and to exceptionally good seasons?—Quite so, it is partly due to opium and partly to the very great improvement in the economic conditions of the country

4496 (Sir Robert Chalmers) The general prosperity of India?—Yes, quite so

4497 (Mr Gillan) As regards opium, it was due to a deliberate policy which excluded from the Budget Estimates a certain portion of the opium revenue in advance?—Yes, I think I mentioned that to the Chairman yesterday

4498 (Mr Keynes) I have one other point, not connected with the Estimates. In the million which you allowed in the minimum balance as lodged at the Presidency banks did you include the amount lodged at the branches or only that at the head offices?—No, that is only at the head offices. It is 4½ millions for the district treasuries, including the branch banks, and 1 million for the head offices of the Presidency banks, that makes 5½ millions. Then there is 2½ millions for the reserve treasuries

4499 I should like a little more information as to the precise relation between the Government and the Presidency banks at the branch offices. I suppose the amounts lodged there on Government account are very variable in amount—I mean at the individual offices?—At individual offices I do not think they are ordinarily much higher than what we keep at a district treasury. There may be a little more in cases where we have to give a guarantee under the new system, but otherwise I do not think that they are materially higher than what Government would keep at a district treasury

4500 I did not mean to inquire so much as to their absolute size, but rather as to whether they are very fluctuating? Are they much higher at some times of the year than at others?—If figures are required I think I could put in figures

4501 You have not any impression on your mind as to whether they are fluctuating?—I have no definite recollection, but I think I have the figures readily available\*

4502 I am asking these questions because I want to know whether it is necessary for the Presidency banks to keep at the branch offices a very large proportion of the Government deposits in cash. If the Government deposits are held at call and are of a very fluctuating character, evidently they would have

\* The figures are being obtained from India, and will be printed as an appendix to the Final Report

4 July 1913 ]

MR BHUPENDEA NATH MITRA, C I E

[Continued

to hold large cash deposits there, and I wanted to know how far that was the case?—My impression is that ordinarily there is no material fluctuation in the balances kept at the branches of the Presidency banks

4503 Even speaking of the individual offices, not merely of the aggregate?—Quite so

4504 (*Sr Shapurji Broacha*) Of course, you are telling us the views of the Government of India, and not your own personal views?—No The views which I have given in several cases have been my personal views, and I think that is distinctly understood. They do not commit the Government of India in any way

4505 What would be the exact minimum amount that the Treasury requires for carrying on the business of the country?—The district treasuries?

4506 All put together?—It is roughly 5½ millions, without allowing for any margin or reserve, but if you allow for a reasonable margin and a small reserve it is 8 millions, the figure I mentioned yesterday

4507 That 8 millions does not include the balances belonging to the provinces or the municipalities?—It includes everything, it is the amount which is held at any particular date in the Government treasuries

4508 Then we are told that 18 crores or 19 crores is the minimum balance required, or 12,000,000 sterling You do not agree with that?—No As I tried to explain yesterday, that sum represents the minimum working balance which the Government of India wants at the end of March In India there is a period of high balances and a period of low balances That amount of 12 millions is required at the end of March, so that we may have a balance of at least 5½ millions in December, which is the month of our low balances

4509 Five and a half millions is the required minimum in December, and 8 millions for working balances, which leaves a little margin for the Government Then anything after 8 millions could be lent Of course, the Government may require money for other purposes sometimes all of a sudden—we know these contingencies happen in every country—but for the purposes of the Government 8 millions, or 12 crores, would be sufficient, keeping the margin of about 2 millions, because 5½ millions is the absolute minimum?—I would not say that quite as regards the end of the year, March 31, because apart from the 300 district treasuries we have got a large number of sub treasuries, about 1,500, and the land revenue mostly comes in, in the first instance, in those sub treasuries A good portion of the land revenue comes in in March, so that there may not be time to bring in all these revenue collections at the district treasuries by the end of the month, and the minimum balance in the district treasuries on March 31 must necessarily be higher than 4½ millions

4510 I understand all that, but I accept your version, that so long as the Government of India have 8 millions in the treasuries they have a fair amount of working margin for contingencies, because the absolute minimum is 5½ millions I accept your version as regards all these difficulties, and so on, but you require 8 millions in the treasuries always to keep a fair working margin?—I do not see how that follows We want 8 millions in December

4511 Five and a-half millions is the minimum which you require and 8 millions would leave a working margin 8 millions you will always have in the treasuries, there is no doubt of that That will leave a little working margin, but when there is 12 millions there would be 4 millions in excess, do you agree with that?—Yes But that 12 millions is required at a particular date, and the 8 millions at a different date

4512 Quite right, but I am speaking of that particular date when you have more than 8 millions That is a surplus which the Government at that time does not require, except in case of extreme contingencies?—I am not even prepared to say that, because what actually happens is this The Secretary of State's drawings are heaviest between December and March, and, even if we restrict our remittances to the amount required to finance the home Treasury, his

drawings will still be heaviest at that period, so that towards the end of the year we really want a higher balance in India

4513 Never mind I accept your version, as I said. You gave us a version that 5½ millions is the minimum, and 8 millions would leave a little margin for small contingencies, in order to keep money easy?—Anything over that would be a surplus for the time

4514 (*Mr Gillan*) May I explain one thing, Mr Chairman? I think what the witness means is that these 8 millions is the balance that is required about December with reference to the conditions of December, but that perhaps a slightly higher working balance would be required, say, in March, because of the different conditions of March (*To the witness*) Is that what you mean?—A slightly higher balance That is exactly so

4515 (*Sr Shapurji Broacha*) You say slightly higher It is 8 millions and 12½ or 12 millions, which is 50 per cent higher, that is not slightly higher?—That may be so

4516 For instance, if you have 12 millions you can certainly easily lend for the purpose of trade 2 millions?—The point is this We could in fact possibly lend temporarily if the trade would promise to pay it back to us say in the next month or so

4517 There is no doubt of the trade promising to pay back at the time when the loan terminates, there is no doubt of that, that contingency you need not calculate upon If Government promises that 2 millions taken in January would be repaid in April certainly the Indian market is such that the Presidency banks would be able to pay with absolute certainty, you can take that, and on that contingency I think the money could be lent?—Yes, in fact I have already said there would be no practical difficulty on the part of the Government of India in lending the money

4518 You have referred to what the Government would risk by lending the money I think prosperity of trade means prosperity of revenue?—Did I say the Government would get any advantage? What I have said is this, that the Government would lay itself open to certain risks, and the Government ought to avoid those risks as far as possible I think that is all I said

4519 But if the Government has not helped the trade up to now the Government would be working on the wrong policy?—I do not think it is a fact that they have deliberately not helped trade

4520 Never mind, I do not say that they did it deliberately, but that was their judgment and it was a wrong judgment What do you mean by saying that the Secretary of State sells, or keeps selling, Council bills for the settlement of trade until the balances are exhausted? You said that I think the Secretary of State has nothing to do with the settling of the balance of trade, except to get money which he wants here?—I am not sure that I used the exact expression What I think I said was this, that it is the practice of the Secretary of State to sell bills and transfers in excess of what he actually requires to finance the home Treasury, and that he does so to meet the demand on the part of banks for remittances to India. It is not the function of the Secretary of State to do so, but then it is beneficial both to the Government and trade, and for that reason he does it

4521 These 300 district treasuries often have surplus money which they can always transfer from one treasury to the other, sometimes one treasury has got more money than it requires, and they may have to meet demands at some other place, for instance, Bombay, and Bombay wants a transfer Of course, the Government does that transfer?—It is often done

4522 So these 300 district treasuries give facilities for trade by giving transfers?—Yes, quite so

4523 Are there not 800 sub-treasuries?—I could not give you the exact figure, but I should think there are nearer 1,500 than 800

4524 And they do the sort of business which a branch of a bank would do where there is no branch of a bank—transfer money from one place to another?—Some of the branches have got agencies where they have not got branches

4 July 1913 ]

Mr BHUPENDRA NATH MITRA, C I E

[Continued

4525 That is what I said, and these branches are allowed to use the minimum balance which they have agreed between them, the Presidency banks and the Government, they are allowed to make what use they like of the minimum balance?—Yes, they can

4526 What is the total Government balances in these branches?—I suppose we have every week a statement of the Government balances which there are in the branches?—I could give you the figures I have the figures, and I could give them if they are required

4527 They would appear in their statement every week?—I do not know

4528 They do appear?—In the statement published by the bank?

4529 They estimate the Government balances, so much in the Presidency towns and so much in the branches?—Yes, the figures are given in the statements published by the banks themselves

4530 For instance, at the end of September we know the conditions of the monsoon, and, except for the small winter crop, we know the condition of the crop to be exported. The condition of the different crops—jute, rice, indigo, and all those crops—is known at the end of September, at least, we know the condition of the monsoon at the end of September?—We know at least the effect of the principal monsoon

4531 I am talking of the principal monsoon. Up to September the monsoon throughout the whole country is known?—Yes

4532 And if you are framing your Budget in June to the end of September you know the condition of the railway earnings, you know the condition of the jute, cotton, and rice crops, all those conditions are known to you?—Yes

4533 The wheat crop is not absolutely dependent on rains, for instance in Gujerat you do not want rain at all, the dew does the business. The dew, of course, helps in growing the wheat in Gujerat?—Yes, but then in some parts of the country—

4534 I know that is not so in several provinces, in the United Provinces and in the Punjab, but then, of course, there to a good extent the canals help the wheat crop?—That is so in irrigated areas

4535 So that at the end of September, except for a very small amount of the quantity to be exported, everything would be known?—That is so

4536 Then if they were to make their Budget from October 1 they could forecast the character of the whole of the year and commence again next October, because on October 1 they will know what the next year will be like. Do you think in that month the heat would prevent the Government knowing these things?—The Budget would have to be prepared some time in July or August, but the heat would not affect in any way the Government of India, or any local government

4537 Of course, the loans could be raised in the monsoon, independent of public works?—Yes, but there is one difficulty. The Government would have no idea at that time of the trade conditions. The busy season would be from December to February or March, and the present advantage is that the Government has definite information as to how the trade conditions in the busy season are going to turn out. If the financial year is changed as proposed, it will certainly have to budget for normal trade conditions

4538 I beg your pardon. At the end of September we make up our mind what the export crop will be, and I think if we can judge, the Government can judge with equal certainty?—Is the produce an absolute index to the trade? Does it not depend upon the demand from other countries for the export of the produce? I doubt if they would be able to make a fair estimate of, say, the cotton movements at any time in July and August

4539 In July and August you cannot, because if the September rain fails half the crop perishes?—Yes

4540 At the end of September you are certain of the rain, you do not want any more until November or December?—Yes, but then you would have to frame your Estimates somewhere in August, even if the year opens on October 1

4541 Yes, but the progress of the monsoon goes on with the progress of the Budget making, and if odds and ends are to be put in you can put them in at the end of September or the middle of September?—I am not sure of that. If the financial year is to begin on October 1 the Budget must be settled in September

4542 I suppose your Budget makes provision for the normal growth even on the last season's revenue?—Yes, it does

4543 Of course, you cannot provide for the failure of the monsoon or for the failure of other things, and you cannot calculate to a certainty the coming railway revenue of the year or the coming land revenue of the year in January or February?—That is correct

4544 How do you make your calculations for the purchase of silver? For instance, you have 19 crores of silver now, and say at the end of August or September you are assured of your monsoon, how much silver do you think you ought to have for the busy season?—I think we have laid down that we want 18 crores to start with at the beginning of the busy season

4545 (Mr Gillan) 24 crores, is it not?—Yes, there is the margin of 6 crores in the Gold Standard Reserve. By 18 crores I meant the stock in the Currency Reserve

4546 (Sir Shapurji Broacha) And you would have those 18 crores in the Currency Reserve during the busy season?—Yes

4547 If it falls, you have to buy?—Quite so

4548 (Sir James Begg) When a change of taxation is contemplated when you are preparing your Budget, is it a matter of discussion between the Government of India and the Secretary of State?—Yes, all changes of taxation require the sanction of the Secretary of State

4549 Is it the procedure that the Government of India submits proposals to the Secretary of State?—Yes, quite so

4550 The Secretary of State does not suggest any alterations himself?—On occasion he has done that, but generally with reference to the proposals of the Government of India. When the proposals of the Government of India come to him it is quite open to him to say "You have got this amount of available revenue surplus to dispose of. Instead of disposing of it in the way you propose, please consider whether you should not adopt these other alternative methods." Thus, for example, supposing the Government of India proposed to reduce the Customs tariff so as to reduce their available surplus it would be quite open to the Secretary of State to say "I do not agree with you about this particular matter. Please consider whether it would not be better to reduce the Salt duty, and not the Customs duty"

4551 The Secretary of State does not propose any alteration off his own bat?—No, it is not usual for him to do so. He has not got the necessary information before him

4552 In the Budget Estimate for 1910-1 the amount of Council bills to be sold was put down as 15½ millions. Did that sum include any provision for capital expenditure?—Yes. What actually happens, as I explained yesterday is this. The Government of India, in consultation with the Secretary of State, finds out how much money will be available for capital expenditure. Now that money may be obtained either from the revenue surplus or from loans

4553 Loans in India?—Loans in India or in England. After the amount of the loans has been settled we settle the amount of the remittances from India to England. The Secretary of State estimates that he has got a certain amount of revenue expenditure to meet in England and that he has also got to meet a certain amount of capital expenditure. He then tells the Government of India. To meet these disbursements I will raise a certain amount by means of loans in England, I have got a certain amount of surplus balance which will be used for that purpose also, but there remains this difference of 15 millions, or whatever it may be. You will have to send that

4 July 1913]

MR BHUPENDRA NATH MITRA, C I E

[Continued

" sum from India by means of Council bills, or, if Council bills fail, by actual remittances in gold " So that the 15½ millions to which you are referring was intended to cover all the payments at the home Treasury, both revenue and capital, in that particular year.

4554 Can you say how much capital was included in that sum?—I could give the amount of capital expenditure in England in that particular year and the amount of capital receipts, but it would be impossible to say how much of this 15½ millions was actually earmarked for capital payments in England.

4555 It is not earmarked in advance?—No, there is no earmarking.

4556 In the case of the current year the amount put down for Council bills is about 21,650,000. Can you say how much of that is intended for capital expenditure?—As I have already said, there is no earmarking as regards the Council bills or the remittances, but you can have a good idea of what portion of these Council bills is required for capital payments in England by working out the net capital expenditure in England in the year.

4557 You have told us about the advice that is sent every month, I think it is, to the Secretary of State, stating how much balance he may draw against?—Quite so.

4558 Does that mean that the whole of the surplus balances for the time being are specially held to meet Council bills?—Yes, they are placed at his disposal.

4559 (Mr Gillan) I think some of the evidence you gave suggested that there was a great difficulty about increasing the number of branches of Presidency banks without Government assistance?—Yes, I think that has been the experience in recent years.

4560 Do you know of any branch that has been started without Government assistance?—I do not think I could reply to that question definitely.

4561 Is it within your knowledge that the Bank of Madras have, as a matter of fact, started a number of what they call sub agencies?—Yes, they have done so.

4562 And in their case no Government assistance was given, I think?—No.

4563 In reply to the Chairman yesterday on the question of lending money from Government balances in India, you mentioned certain objections. One was, I think, that money for which the Government might have a sudden demand would be locked up?—Yes.

4564 That objection would not apply very strongly, would it, to money which was lent out, say, in January or February and was repayable by April? What I mean is that in that period there is no sudden demand likely to come on the Government through any seasonal calamity?—No, but then there may be other calamities apart from seasonal ones.

4565 Will you mention them?—There may be a big operation on the frontier, or a big war.

4566 But the probability, we will say, of a sudden demand on the Government is less at that time of the year?—That is so.

4567 They can see their way more clearly at that period?—Yes, that is so.

4568 Another objection which you mentioned was in connection with Council bills?—Yes.

4569 You mentioned that it might reduce the amount available for Council bills?—That is so. That is the view which has been put forward at times.

4570 I think that is another point. For the time being it would actually reduce the amount available for Council bills?—Yes.

4571 Then, when the Secretary of State has drawn all that he wants to draw, there is normally an amount left in our balance over and above the minimum working balance at that time of the year, is there not?—Yes, quite so.

4572 Which would be available for loans?—Yes.

4573 As regards the amount of Council bills sold altogether, or the price at which they would be sold, your view, I take it, is that there would be a reduction in the busy season and an addition in the slack season?—Yes, that is so.

4574 If the result was slightly to reduce the price obtained in the busy season ought there not to be a corresponding betterment in the price in the slack season?—Yes, probably that is so, but on the whole there is likely to be a reduction in the average.

4575 That is what I wanted to get at. How do you work that out?—Because in the busy season, when there is a stringency of money in India, they take a larger amount of telegraphic transfers. If we offered loans from Government balances, when the time came for repayment they would import money into India by means of bills, and as the rate for the bills is naturally lower than the rate of transfers, there is thus a probability of the average rate for the year being lower.

4576 (Sir James Begg) But the bank will be paying interest on the loans in the meantime?—Yes, I think I mentioned that yesterday.

4577 (Mr Gillan) So that this effect would result from the substitution of bills for telegraphic transfers, that is what you mean?—Yes.

4578 (Mr Gladstone) And that would mean a difference of  $\frac{1}{2}$  in the rupee in exchange?—Yes, that is the usual difference.

4579 (Mr Gillan) As regards the previous attitude of the Government upon the question of loans, it is the case, is it not, that in 1899 the Government of India did propose that loans should be given as a matter of system?—Yes, I think they made that proposal.

4580 And that proposal was negatived, as a matter of fact, by the Secretary of State on the ground that it would interfere with his Council bill operations?—Quite so.

4581 But it is also the case, is it not, that at that time the Government seem to have been thinking rather of an all-the-year-round loan, a more or less permanent loan?—I am not sure of that. No, I do not think it is correct. My recollection is that they distinctly stated that the loan would be given for three months, that was to be the maximum period of the temporary loan.

4582 (Sir James Begg) When was that?—That was 1899, I think.

4583 (Mr Gillan) I am not sure if I am right in thinking that you said yesterday that you would prefer loans to be given from currency?—I did not exactly say loans, but I said that the assistance to trade should be given from currency.

4584 You would prefer that method?—Quite so.

4585 But even if you were to give assistance from the Currency Reserve that does not dispose of this question of how you are to deal with the temporary surplus that you have in your Treasury balance from January to April, does it?—No, of course it does not.

4586 We have still to consider that question, have we not?—Yes. In connection with this I think I may mention one incident that I came across yesterday. It is possible, after all, that there may not be any demand from the banks for loans from Government balances in India. An instance, which goes to support this view, took place, I think, in 1907. The local branches of the Exchange banks approached the Government of India for loans from the balances in India, but the head offices of these banks said that they preferred using Council bills to taking such loans.

4587 There is one point I wanted to ask you with regard to the amount that is left with the Presidency banks. You said that the practice of the Government of India is to withdraw money from them when our balance with them exceeds a certain sum?—That is the ordinary practice.

4588 But it is recognised, is it not, that the banks may retain even a surplus above that sum on payment of interest?—Quite so, yes.

4589 That is recognised?—Yes, that is recognised.

4590 Have you ever known it to be done?—I know of no case in which actual interest has been charged, but I know of cases where a higher balance than the ordinary maximum has been left at a Presidency bank.

4591 That is so, but has a Presidency bank ever said to us when we were on the point of withdrawing

4 July 1913]

M<sup>r</sup> BHUPENDRA NATH MITRA, C.I.E.

[Continued]

our money, "Do not do it, leave it with us and let us pay interest"?—No, never

4592 You never knew them do that?—Not in recent years, no

4593 (S<sup>r</sup> James Begbie) Has that intention of the Government been intimated to the Presidency banks, that they will leave the money if the banks will pay interest upon it?—Yes, I think they know it

4594 (M<sup>r</sup> Gillan) You were speaking yesterday about the Government of India advising the Secretary of State as to the flotation of loans at home. The fact remains, does it not, that generally these loans are floated at a period of the year when it will be very difficult to forecast what is going to happen, or to give the Secretary of State any advice on the point?—Yes, quite so. When the loans are floated in January or February there would be no use in giving the Secretary of State any advice

4595 Or even when he borrows in April or May?—As I mentioned yesterday, when it comes to a question of borrowing, after the close of the financial year the actual state of the cash balance, as compared with the Budget estimate, will help to some extent at least in deciding whether it is necessary to raise a loan, or the full amount of the loan budgeted for, in an unfavourable market

4596 I understand that, but even supposing your opening balance has turned out to be better than was put down in the Budget, would it be very safe at that early period of the financial year to base your action entirely on the increase in your opening balance without reference to the possible outcome of the monsoon, for instance?—Of course, if there is anything wrong with the monsoon the result will probably be the issue of a much larger loan, but in a case of that sort the India Office may prefer to have recourse to temporary loans

4597 Then I think the Chairman in the same connection put to you a question about the possibility of increasing the loan raised in India in the course of the year?—Yes

4598 During the year?—Yes

4599 One point I wish to put to you in that connection is this. Is it not the case that when the Indian loan has been announced in the Budget the Presidency banks and all the people concerned make their arrangements on that basis?—Yes, that is so

4600 With a view to that particular sum being raised about July or August?—Quite so

4601 The Government of India have generally considered that it would not be very convenient to the banks or to others to make a sudden change in the amount announced?—Yes, that is so, in fact, it would affect the rate

4602 And they probably would not make any change unless in view of some very special necessity?—Quite so, that is true

4603 (S<sup>r</sup> Shapurji Broacha) May I ask one question? The Secretary of State could not refuse from April to December to sell bills at a lower rate than 1s 4d. He has to spend money. I suppose the Secretary of State has to spend half the amount allotted to him between April and December or April and November?—It may be even more than half

4604 So that if he does not sell bills at the market rate, and at a time when the banks could not make provision for their export season, I think he has to sell because of necessary expenditure here at less than 1s 4d?—Not always necessarily, because he has got some reserve under his control upon which he can fall back if the exchange is really unfavourable

4605 By "unfavourable" I do not mean below the gold point, I mean if it is still at the gold point, and the gold point is not 1s 4d, it may be some times 1s 3½d, or it may be sometimes 1s 3¼d, and so on?—Yes

4606 So the Secretary of State, in order to provide for his requirements, has to sell between April and December, or October or November, what he requires?—Quite so

4607 And supposing he sticks out for 1s 4½ or 1s 4¼, or even 1s 4d, and the monsoon does not turn out well, he may be left in the lurch?—Quite so

4608 So as business people you have to provide as you go on?—Yes

4609 And the Secretary of State is not wrong in selling for his requirements now at 1s 3¾d or 1s 3½d?—No

4610 So those who criticise the Secretary of State's action do not take into consideration his requirements?—Criticise in what respect?

4611 Have you read M<sup>r</sup> Webb's book? He lays down laws?—I know

4612 It would not be so if the Secretary of State were allowed to draw in anticipation of one year's requirements, then he could wait?—Yes, quite so

4613 If he fails in getting his rate he has still money in hand?—Yes

4614 You said that the Secretary of State did not want to lend in India because it would interfere with his exchange operations?—Quite so

4615 Of course, I need not ask you the Secretary of State was wrong in that one thing, the banks bring out money in India immediately to pay for their export bills, and it would make no difference whether the money is at 2 per cent or 6 per cent in India except for a very small amount, but, of course, that is a matter for discussion?—Yes

4616 (L<sup>o</sup>d Kilbracken) I think you said that the India Office was supplied with financial statistics from time to time by the Government of India as the financial year went on, but that the India Office did not invite and did not receive the comments of the Government of India on those statistics?—What I exactly said was that the India Office never asked for any comments

4617 And did not you say or imply that they were not volunteered by the Government of India?—Exactly so, quite

4618 You expressed the opinion that it would be advantageous if such comments were asked for and supplied?—Quite so

4619 But I suppose we may assume that if the Government of India thought it advisable to comment on those statistics it would do so without hesitation, and would not wait to be invited?—The point is that it is well understood that so far as the loan operations in England go the Secretary of State is the final authority, and no advice on the part of the Government of India is required

4620 What do you mean by "is required"?—is invited?—Yes, that is so

4621 You mean it is not asked for?—Quite so

4622 But you do not mean that it is not required in the sense of not being advantageous?—It is a matter wholly for the decision of the Secretary of State. The Secretary of State has never asked the Government of India for any advice in the matter, and the Government of India naturally has not considered it proper to give him advice of its own motion

4623 I should have thought if the Government of India had an opinion they would volunteer it. I take it you are referring exclusively to official correspondence?—Yes, that is so

4624 You are aware, no doubt that there is a very full and free exchange of opinion and of views between the India Office and the Government of India by means of private and semi private letters and telegrams?—Yes, quite so

4625 Do you think that as a matter of fact the India Office is not at any given moment fully informed as to the views of the Government of India on the financial situation from week to week?—No, I do not think there is any such definite practice

4626 You do not think that they are informed?—My impression is that the India Office are not actually informed about the financial position from week to week

4627 You think that they are not sufficiently informed by means of official correspondence, with the addition of the private and semi private correspondence which is, as we all know, always going on?—No, I do not think any advice or any definite information is furnished regularly from week to week by means of this private correspondence

4 July 1913]

Mr BHUPENDRA NATH MITRA, CIE

[Continued

4628 You are not aware of it, at any rate?—  
Quite so

4629 You said also that the Secretary of State does not take the initiative in questions of taxation. You mean that he does not do it in an official despatch or telegram?—Quite so

4630 But, as the Secretary of State is in constant correspondence privately with the Government of India is it not impossible to say, as regards any given proposal, whether it really originated in this country or in India?—Quite so. Of course, it would be impossible for me to say whether it is usual for the Secretary of State to write privately to the Viceroy asking him to consider a particular proposal.

4631 (Chairman) I want to know now about the paper currency system and reserves. In the first place, as regards the paper currency system, is it rather a rigid system at present, is it not?—Yes, it is

4632 Do you think it would be desirable at this stage to make it more elastic?—I think an experiment might very well be tried

4633 Do you think it would be safe now to increase the fiduciary portion of the issues?—Yes, that could be done now without any inconvenience

4634 Is there any figure in your mind by which you would think it safe to increase the fiduciary portion?—No, I have not got any particular figure in my mind

4635 I mean the percentage of the whole?—I do not think there would be any difficulty if we kept about one third of the net circulation in securities

4636 What would you say to the suggestion that a part of that fiduciary portion of the reserve, instead of being placed in what we ordinarily mean by securities, should be used for assistance to trade?—I think that could very well be done. In fact, that was what I was coming to yesterday, viz., that, instead of making any regular arrangement of lending money to banks at times of stringency, we might have a more elastic paper currency

4637 I think you did speak yesterday, and again to day, of giving assistance to trade, if assistance was to be given, from paper currency rather than from the balances?—Yes

4638 Was that what you had in your mind when you so spoke?—Quite so

4639 As regards the Gold Standard Reserve, am I correct in saying that that exists solely for the support of exchange, or has it other objects?—That is its main function. It has also been held that, apart from its function of supporting exchange in times of difficulty, there is the other function of supplying rupees in exchange for gold when there is an abnormal demand for rupees

4640 You regard it as part of the object of the Gold Standard Reserve to supply, not gold to India, but rupees to India?—Yes, in times of stringency, quite so

4641 Would not that rather be the part played by the Currency Reserve?—Yes, that is the part which the Currency Reserve ordinarily plays, but in time of stringency, when the Currency Reserve may fail to satisfy the purpose, it is necessary to have some sort of special reserve, and it has always been held that it is the function of the Gold Standard Reserve to supply that special reserve

4642 How does the Gold Standard Reserve supply that need?—We have what we call the rupee portion of the reserves in India, where we hold about four millions sterling, and in times of abnormal demand for rupees we have indented upon this reserve

4643 Then the rupee portion of the Gold Standard Reserve which is kept in India exists merely for that purpose?—Quite so

4644 I think that is a departure from the recommendations of the Fowler Committee?—Yes

4645 In their recommendations it was contemplated that the Gold Standard Reserve should have no object except to maintain the exchange?—Yes, but then I think it follows as a consequence of that recommendation, that if there is a shortage of rupees in India the result will be that exchange cannot be maintained at the standard particular rate.

O 19067

4646 What would happen if there was a shortage of rupees in India?—Rupees would be at a premium above the standard rate

4647 So that in those cases you are using the Gold Standard Reserve not to maintain the exchange value of the rupee, but to prevent it from rising too high?—That is so

4648 (Mr. Keynes) May I interrupt? If there was a shortage of rupees would it not be necessary for the Government to withdraw their notification? At present there is a notification that rupees can be obtained in exchange for sovereigns?—Yes

4649 If the Government had no more rupees left they would have to withdraw that notification, would they not?—Quite so, but then that would lead to a dislocation of trade and a large amount of trouble

4650 I mean no premium could result unless that notification had been withdrawn?—That is quite true, but in the Mofussil if there is a shortage of rupees the result will be that there will be a premium on the rupees in circulation

4651 (Chairman) Have you known any cases where there has been a premium on the rupee?—I have known of cases where there has been very great difficulty owing to trade not getting the proper amount of rupees that it required, in fact, that is exactly what led to the establishment of this special holding of rupees in the Gold Standard Reserve

4652 Assuming that a portion of the Gold Standard Reserve is to be devoted to that purpose, it follows, I think, that it must be kept in silver?—Yes, that is so

4653 And that the proper place for that portion of it is in India?—Yes

4654 Do you consider that the proper place for the rest of it is in London?—Yes, I do

4655 Will you tell me very briefly why you say that the proper place is London?—Because the function of the gold portion is to prevent exchange from falling materially below the standard rate of 16d. Now if exchange falls below that rate, the main difficulty is that the Secretary of State will not be able to meet his sterling obligations. For that purpose it is essential that this reserve should be at a place where it could be readily available to him to meet these obligations

4656 (Sir Robert Chalmers) Not only his obligations, but also to maintain parity for trade in general?—That is so. In fact we maintain that by selling bills in India on London in exchange for rupees

4657 And that might be regarded by some as even more important than the transactions of the Secretary of State?—That would undoubtedly be more important from the point of view of trade itself.

4658 And India generally?—Yes

4659 (Chairman) I think it has been suggested to us by some witness that one purpose of the Gold Standard Reserve is to supply gold to India. Do you agree with that?—Of course, at times of stringency the supply of gold in India itself also helps to maintain parity of exchange. If, for example, we have got a portion of the reserve in India and rupees are getting redundant, so far as the standard rate of exchange is concerned, then if we issue the gold freely the result is that it partly helps to raise the balance of trade in favour of India, because the gold so issued may either be exported from the country or it may tend to reduce the import of gold into the country, so that in either way it helps to raise the balance of trade in favour of India and it thus helps to improve or steady the rate of exchange. But then I think that this function of supplying gold in exchange for rupees or notes should be performed by the gold in the Currency Reserve so long as we have a large amount of gold in that reserve in India.

4660 Do you say that experience shows that gold issued to India in times of exchange difficulty does support the exchange?—I have an impression that it does so, that seems also to be the natural consequence.

4661 Take the case of 1907-8. I think about four and a half millions additional gold were issued, if I remember rightly, from the treasuries?—That is

O

4 July 1913]

MR BHUPENDRA NATH MITRA, C I E

[Continued]

Possible The crisis extended over portions of two financial years. My recollection is that in one of these years two millions were issued. Probably the remaining  $2\frac{1}{2}$  millions were issued in the other year.

4662 I think I am right in saying four and a half millions, I think there was evidence that only about a quarter of a million of that was exported?—Is that so? I had an idea that about two millions were exported, but I am not sure.

4663 This evidence was in a memorandum submitted to us by Mr. Abrahams, the statement relates to the events of 1907-8. It will be seen that the "sovereigns held in Government treasuries in reserve in India decreased between September 1907 and September 1908 by 4,394,000l of which 215,000l represented light coin sent by the Government of India to the Secretary of State and the remainder, "4,179,000l, issues to the public in India. The export "on private account during the same period amounted to just about 250,000l" (see paragraph 9d (b) of Appendix III, page 90). It would seem from that, as far as one can lean upon that experience, that gold in circulation in India or issued in India does not go to the support of exchange?—But then, even if the gold is absorbed it will reduce the demand for import of gold into the country, and in that way it would support exchange.

4664 Have you any view to express on the question of the opening of a mint in India?—I think myself that we ought to have a gold mint.

4665 Will you tell me why?—The main reason is that we ought to have some means of coining a gold coin in India.

4666 I must ask you why again?—Because I think that, for the time being, it would help us in the maintenance of the gold exchange standard to have a larger circulation of gold in India, and though it is true that we get our requirements by the import of sovereigns into the country, a gold mint in India would indicate to the public at large that Government was certainly earnest in its endeavour to foster gold circulation in the country. It would also attract to the mint the amount of gold produced in the country itself, and this amount would be turned into sovereigns there.

4667 Let me ask you first about the gold produced in the country. I think some years ago—I have not the exact year in my mind—the Government of India withdrew its proposal for the opening of a mint at that moment because they found that all the gold produced in the Indian mines was under contract of sale to London. Do you know whether that condition of things no longer exists?—No, I could not say anything definite on the point, but it seems to me that, once we open the mint, the contract is bound to be terminated, and we will get that gold in our mints.

4668 Is that necessarily so? I presume that the mines have heavy remittances to make to London, their shareholders are in London. May it not pay them to remit their gold direct to London and tender it here?—It may be so. But they could arrange for these remittances easily by tendering the gold in India and getting payment against it in England through banks.

4669 Would you propose to charge any seigniorage on gold coinage?—No, nothing. Of course, we should have to charge something for refining the gold, but nothing in the way of seigniorage.

4670 Is there any refinery in India now?—No, I do not think there is one.

4671 Do you think, apart from the gold produced in mines, much gold would be brought out of hoards in consequence of the opening of a mint?—It may not be immediately, but it is possible that at times of stringency during periods of famine, after the country has been saturated with gold, gold ornaments will come out from hoards and be sent to the mint for coinage.

4672 Is gold taking the place of silver in hoards, whether in actual bullion or ornaments?—There is no definite information on the point, but I think there are some indications pointing to the fact that gold is gradually displacing silver in circulation, and also, naturally, in hoards.

4673 In your opinion it is desirable to encourage that?—Yes, I think so, at least, at the present moment.

4674 Notes are playing a very large part in the circulation of India at the present time, are they not?—Yes.

4675 And an increasingly large part?—Yes.

4676 Do you not think that there is a good deal to be said for notes as the most convenient and cheapest form of currency?—Undoubtedly notes are better in this respect than an actual gold coin.

4677 Is that not a little in conflict with what you were saying just now, that you wanted to increase the amount of gold coin in circulation?—The point is this: India is still an undeveloped country. It is natural that a great portion of the masses should prefer metallic currency in place of paper currency, there fore, for the time being, it would be advantageous to have an actual gold currency in circulation to displace the silver currency, but later on, as the country develops, the note circulation will probably increase and displace the gold currency.

4678 As an ideal, then, you look forward to the supersession of metallic currency by notes as far as possible?—Quite so.

4679 But in the meantime you would prefer to see gold taking the place of a portion of the silver?—Quite so, because, in fact, such a substitution would reduce our currency difficulties. The less the amount of rupees we have in circulation, the smaller would be our liability at times of crisis when we may be called upon to support exchange.

4680 I want to know how exactly, in your opinion, the amount of rupees in circulation, provided they are not in excess of the demand for currency, affects exchange, or your difficulties in regard to exchange?—What happens is this: The amount of rupees in actual circulation at any time must be equal to the demand for the rupees themselves, but at times there may not be a demand for the total volume of rupees which has found its way into the hands of the public, exactly as happened in 1908, and some portion of the rupees are returned to our currency offices, and either gold is taken in exchange or these rupees are, so to say, sent out of the country by being put into our currency offices, and gold in London taken against the rupee payments in India. Now if we had a larger circulation of gold and a smaller circulation of rupees our difficulty at that stage would be considerably reduced, because then, in a crisis of that sort, the gold itself would go out of the country, or, on the other hand, there would be a smaller import of gold into the country for hoarding, arts and manufactures.

4681 If you had a large amount of gold in reserve would not that serve exactly the same purpose?—Yes, but the point is this: We will have to go on gradually increasing this reserve, because, as there is an increased demand for metallic currency we shall have to issue more rupees, we shall have to coin more rupees and issue them, and we shall have to increase the gold reserve to meet our liability in respect of these additional rupees. On the other hand, if we can reduce the demand on us for rupees and can meet it by an increased circulation of gold, of course the whole machinery will go on automatically.

4682 Supposing as long as trade is expanding, and the prosperity of India is increasing, the demand for rupees goes on increasing and then comes a check, you do not suggest that the whole of the new rupees which have been put out in the course of the prosperous years would come back to the Treasury, do you?—No, not the whole of them necessarily, but probably a good portion. In fact, there will be a repetition of what actually happened in 1908.

4683 But even in 1908 a very small proportion of the issues which had been made came back?—That is so, but then the risk would be increased if we went on adding to the volume of the rupee currency.

4684 Do you think it has increased in proportion to the increase of the currency?—No it cannot be quite proportionate but still there would be some increase in the risk.

4 July 1913 ]

Mr BHUPENDEA NATH MITRA, C I E

[Continued

4685 I suggest to you that as against those contingencies you must keep a gold reserve, and with that I think you agree?—Yes, that is so

4686 I should say you must have gold in the first instance, and you must have that gold either in circulation or in the reserve or probably in both. But I would suggest to you that it is more economical and quite as useful to keep it in the reserve as to keep it in circulation?—Yes that is so. But then, on the other hand, if we do that and go on adding to the rupee currency, it means that we increase our liability to convert the rupees into gold when the necessity for doing so arises. We can certainly meet that liability by keeping a large amount of gold in reserve, but, instead of taking all that responsibility on Government, I think the other plan of having a large amount of gold in circulation and making gold displace rupees would make the system more automatic, and reduce the responsibility of Government in the matter.

4687 Are you treating it as being in practice obligatory upon the Government of India to give gold for rupees whenever asked?—It is practically obligatory. Of course, in theory there is no obligation, but at the time of the last crisis I think the Government of India found that it was desirable to give out gold in exchange for rupees so long as it had got gold, and I think it is necessary to do so at times of panic so as to avoid creating any suspicion in the minds of the people about the currency policy of Government.

4688 Would you think, therefore, that the time had come for the Government of India to undertake an actual legal obligation to give gold for rupees?—I do not think it is necessary to go so far at present.

4689 (*Lord Faber*) There is one question I should like to ask you. It is your opinion, I think, from what you have said, that India is using world's money when she uses gold in her circulation—money available for all purposes, but, when rupees are used, India is not using world's money. Do you agree with that?—Quite so.

4690 (*Chairman*) What is the use of the gold in the Paper Currency Reserve in India?—Its main function is to supply gold to the public whenever they may demand it, that is to my mind its primary function. Of course, it is used for other purposes; a portion of it is nowadays held in England as a reserve from which the Secretary of State can purchase silver expeditiously at an emergency, or from which he can finance the home Treasury if there is any prolonged falling-off in the demand for Council bills at the specie point rate.

4691 It follows, I think, from what you said that you hold rupees in the Gold Standard Reserve in order to supply the public in India with rupees when they want them, and you hold gold in the Paper Currency Reserve in order to supply them with gold when they want it?—Not quite, because we have rupees in the Paper Currency Reserve which we issue to the public when they want rupees. The rupees in the Gold Standard Reserve constitute a second line of defence. They are a margin. In fact, the inflow and outflow of rupees to and from the Currency Reserve is more or less automatic, and it may happen, as it actually happened in the past, that at times of extreme stringency the rupees in the Currency Reserve may prove insufficient. Then we have a second line of defence, and we can make use of it.

4692 Have you ever considered whether it would be under those circumstances desirable to amalgamate the two reserves?—That would destroy the character of the special reserve. For, if we amalgamated the two reserves and kept the total sum in the Currency Reserve, it would be liable to fluctuations with reference to the ordinary exchange operations of the Currency Department, and it may so happen that at times the bulk of the rupees may be taken away, and there may not be a sufficient stock left to meet immediate demands. But if we keep a certain amount of rupees in a special reserve, then as soon as the rupees in the currency are more or less exhausted, and we start drawing on the silver in the gold reserve, it is an automatic indication

to the Government that it must coin rupees expeditiously.

4693 You mean that if they were working with only one reserve the facts which were passing under their eyes might escape their notice?—It is possible.

4694 But the fact that they have to go to the gold reserve for rupees is an alarm-signal?—Quite so; it is an automatic alarm-signal.

4695 Given the use, as you have explained it, of those two reserves, do you see any other reason than that for keeping them separate?—No, there is no other that I know of.

4696 Do you see any advantage in putting them together if it could be done?—Apart from the objection based on the advantage of having a special rupee reserve, I do not see any other objections to keeping them together.

4697 As regards the Gold Standard Reserve in London, a portion of it is in gold and a portion of it in securities. Have you any views as to the amount which ought to be kept in gold?—I think that a fairly large amount ought to be kept in gold. I believe the Secretary of State has recently agreed to hold five millions in liquid gold. Possibly that is a sufficient sum to start with, but my personal opinion is that it would be better to have a higher amount.

4698 Would you indicate any total for the Gold Standard Reserve as a whole or for the gold portion of it in particular?—As regards the Gold Standard Reserve as a whole, I think we ought to keep not less than 25 millions. When we have reached that limit of 25 millions, we might then review the whole position, and might consider whether a portion of the coinage profits might not be diverted for some other purpose. But until we had reached that point of 25 millions, which I think was clearly indicated as a necessary reserve by the experience of 1908, I do not think we ought to touch the further accumulations in the gold portion of the reserve.

4699 Do you mean to keep the whole 25 millions in actual gold?—No, that figure I mean to be the total amount of the reserve.

4700 As regards the actual gold, you think five millions hardly sufficient?—Hardly, I think. Probably 15 millions would be a suitable sum. I think during the last crisis we lost something like 18 millions, and we were lucky that the crisis did not synchronise with a very great stringency in the English money market itself, and a large fall in the price of sterling securities. If that had been so we should have been obliged to sell our sterling securities at a very great loss.

4701 Do you think it is fair to take what happened in 1907-8 as a measure of, shall I say, the greatest danger against which you can reasonably be called upon to provide?—That is the only experience that we have got to guide us, and for the time being I think we must depend upon it. We may have to alter our views on the subject when we are confronted with another crisis.

4702 It was put to us the other day by a witness, and I think you have just indicated that you agree, that it would have been far more serious in 1907-8 if what that witness called the storm centre had been in London instead of in New York?—I certainly agree with that view.

4703 Again, there was famine in India in 1907?—Yes, that is so.

4704. Was it a bad famine?—It was not a very bad famine.

4705 You could easily conceive of a worse famine?—Quite so.

4706 I think there was no war that year?—No.

4707 You might have circumstances, therefore, much more unfavourable to India than they were in 1907-8?—It is quite conceivable that it may be so.

4708 That would seem to imply that you should provide for something more than what was actually proved to be required in those years?—That is so.

4709 Have you ever had occasion to consider whether the Gold Standard Reserve should be brought under statutory regulation?—My personal opinion is

4 July 1913]

Mr BHUPENDRA NATH MITRA, C I E

[Continued

that at the present moment at any rate it is better not to bring this reserve under statutory regulations

4710 I think on one occasion, and on one occasion only, money has been diverted from the Gold Standard Reserve for expenditure in India?—Quite so

4711 The Government of India I think did not approve of it?—That is so

4712 And it has not been done since?—No

4713 Do you wish to say anything on the question of a State or central bank for India?—No, I do not want to offer any opinion on the point unless any particular question is asked me

4714 There is one other question I want to put to you It refers to the coinage of gold in India Supposing that were to be decided upon, have you any view as to what the coinage should be?—I certainly think the coinage should be the sovereign, the coin of international trade If that is impracticable, then, of course, as a last resort I would fall back on a special coin for India

4715 You are aware that if you want to coin a sovereign you have to have a special mint under the supervision of the British authorities?—Yes

4716 And that it is a rather expensive proposal, therefore?—I would, nevertheless, go to the length of incurring that expenditure

4717 (Sir Robert Chalmers) As regards the tendering of gold at the assumed mint in India, that would turn to a very great extent on price, would it not?—Yes

4718 As to whether it were cheaper and as to whether it fitted in with the arrangements of the mine-owners, with agents, as regards commission, and so forth, there would be all those questions?—Yes, quite so

4719 But ultimately it would turn on price?—Yes

4720 Taking price a little further into detail, if, following the Australian precedent, there were a mint change in India, that would militate, through the price, against the arrival of gold at the Indian mint as compared with its coming to London, which is a free mint?—Quite so

4721 (Sir Ernest Cable) I think it would assist the Commission, in considering the question of increasing the elasticity of the note issue, if you could tell us how these notes are issued Are they issued in large parcels to Mahájans and local bankers or do the people themselves come and take the notes in small quantities? Do you happen to know what the habits of the people are in that respect?—From the currency offices?

4722 Yes?—The issues are mostly in large parcels, and the paper currency which filters to the Mofussil mainly finds its way there through the banks

4723 So that they are issued through the banks, really, and the native Mahájans, and so forth?—Yes

4724 (Mr Keynes) Are there currency chests at all district treasuries?—There are currency chests at most of the surplus ones, I may say at all the surplus ones The treasuries may be divided into three main classes There are the deficit ones, *i e*, those which do not collect enough revenue to pay the charges at that particular treasury, there are some which just sufficiently pay their way, and there are the surplus ones There are currency chests at all the surplus treasuries, there are also currency chests at most of the deficit treasuries, particularly those which are located in out-of-the-way places, where it would be difficult to send remittances regularly month after month, and it is a convenient arrangement to send a big remittance at a certain period of the year, to keep the money in the currency chest, and to issue portions of it to the Treasury from time to time to meet requirements

4725 Is that also true of sub-treasuries?—No, as regards sub-treasuries it is unusual to have currency chests

4726 When a branch of a Presidency bank takes over some part of the work of a district treasury I suppose the currency chest remains untouched?—The Bank of Bengal usually maintains currency chests for Government at these places, but the Bank of Bombay has never undertaken this obligation, and at all the places where we have a branch of the Bank of Bombay

doing Government Treasury work the Government maintains a separate currency chest

4727 When the bank maintains the currency chest does that simply mean it keeps it in its vaults, or does it mean more than that?—That is all it does

4728 It merely safeguards the rupees?—Yes

4729 It takes over no other function?—No

4730 It does not actually issue notes against rupees?—No

4731 It is merely the safeguarding of the rupees that it undertakes?—Yes

4732 I understand that the Government economises over remittances to a very great extent by using the currency chests instead of sending balances backwards and forwards?—That is so

4733 It releases money out of one currency chest and puts it into another?—Yes

4734 When a Presidency bank takes over the Government balances are the facilities of the currency chests allowed to the Presidency bank?—I do not quite understand the question

4735 I mean can a Presidency branch bank, in a place where there is a currency chest, cash notes out of its currency chest as freely as the Government would, and so remit by those means?—The ordinary currency chest does not actually cash notes It the branch bank at such a place wants more coin it applies to the Accountant General of the particular province and he may or may not give the bank more coin from the currency chest But the usual practice is that a branch bank is allowed to take over the coin in the currency chest at such a place on payment of a certain amount of premium—it is usually a small premium—to the Accountant General

4736 So that the branch bank which takes over the Government balances has not quite the same facilities of remittance as Government had, because it has not full control over the currency chest?—So far as the Government balances go, the facility is the same If there is any surplus, the Accountant General will ask the Presidency bank to make a transfer from the Government balance at its branch to the currency chest Then again, if the Accountant General finds that the Government balance at the branch bank is running short he will at once order a transfer from the currency chest to the Government account at the branch bank Of course, the Presidency bank does not get the same facility so far as its private balance is concerned, but the Accountant General always gives it the first choice of the accumulations in the currency chest at such places, charging it with a small premium He also usually hands over to it the entire surplus Government balance free of charge, if it makes an opposite payment at some other bank or at its head office

4737 About how much is the premium?—It varies between  $\frac{1}{10}$  and  $\frac{1}{2}$  per cent

4738 If there were to be some system of a Central bank managing the note issue I suppose it might possibly be profitable for that bank to have branches where it is not now profitable, for this reason, that they would be able to use the currency system for remittances to the same full extent as the Government now use it?—Quite so If it is practicable to have a State bank which will relieve Government of all its responsibilities as regards currency and banking, that sort of thing would be possible

4739 I mean at present there is only a very partial economy effected when the branch bank takes over the Government balances, because there is a great deal of semi banking work which still remains in Government hands?—Not exactly The currency work certainly remains in the hands of Government, but not semi-banking work

4740 No, the currency work remains in the hands of the Government?—Yes

4741 Can you explain as fully as possible the extra legal facilities which are given for the encashment of notes? I understand the public can actually demand encashment at the place of issue or at the Presidency town office, but that you give other facilities outside the law when it is convenient Can you outline the nature of those facilities?—What happens is

4 July 1913]

Mr BHUPENDEA NATH MITRA, C I E

[Continued

this At the District Treasuries facilities are given for the encashment of currency notes so long as there is sufficient coin in the Treasury available for the purpose. Apart from this arrangement we have at certain important centres what is called a Currency Agency. We have one at Allahabad, we have several in the Punjab, we have one I think at Mandalay, and I believe we are about to open one at Delhi. These Currency Agencies issue notes, which usually are given a distinctive mark, for circulation among the public against a deposit of coin in that particular agency. The notes which are thus issued from the agency are freely encashed at that agency, other notes being also encashed so far as it is found possible to do so without any inconvenience. That is the other extra-legal facility.

4742 In practice are they nearly always able to do that or not?—I should say that the facility given is a substantial one. They are often able to cash the notes at the more important treasuries.

4743 I mean is it your impression that the public can place reasonable reliance on being able to cash them or not?—Yes, at almost all the important treasuries they can, I think, rely on getting a currency note cashed at the Treasury.

4744 Are currency notes ever cashed for the convenience of the public at sub-treasuries?—No. The nature of sub-treasuries is different. They are mostly collecting centres where the revenue is collected. A sub-treasury does not make any payment of its own motion. If the district treasury issues a sort of cheque on it to make a payment in any particular case it makes the payment from the revenue collected by it, but no cash is ever sent to a sub-treasury to meet any particular payments, and a sub-treasury cannot cash currency notes.

4745 But I suppose a sub-treasury has rupees in its chest which have got there from taxation?—Yes.

4746 Is there any reason why, when those rupees are in excess of its probable outgoings, it should not use them to cash notes?—We would have to maintain a large establishment at the sub-treasury. We would practically have to convert the sub-treasury into a regular treasury.

4747 There is no other objection?—No, none.

4748 If that were done it would mean that there would be some sort of facility for encashment of notes at 1,500 places instead of 300?—Yes.

4749 Has it ever been considered whether that is practicable?—It has never been considered, for the reason that the sub-treasury is always looked upon as a centre for the collection of revenue. It has no other function, practically.

4750 Can you explain to me as to what sort of extra-legal facilities are given for the supply of gold?—There, again, it is the same thing. So long as a treasury has got a supply of gold it issues it freely to anybody who may want the gold. When there is a large supply of gold at the currency offices, the Comptroller-General and the Accountants-General usually keep the various treasuries where gold is in regular demand properly supplied with gold.

4751 They do send gold on purpose in order that it may be available in order to give the public extra-legal facilities?—Quite so, so long as they have a large stock of gold.

4752 Do they send rupees for the same purpose?—Yes they have to.

4753 I mean they do not merely give the public extra-legal facilities when the stock of rupees has got very high, they do send rupees on purpose in order to give them extra-legal facilities?—The Government tries its best to meet the public demand for rupees, and it often concentrates rupees from various places where there is not any large demand for them to places where there is a large demand, but in such cases what usually happens is this. The banks or the big firms get hold of these rupees by the purchase of supply bills or transfers by paying a small premium to the Accountant-General.

4754 Were the extra-legal facilities for gold given with a view to getting more gold into circulation?—

Yes. That is so. When we have got a large amount of gold in our hands we try to give special facilities to get it into circulation.

4755 You deliberately send gold to places where you think it may be wanted in order that more gold may get into circulation?—Yes, that is so.

4756 (Mr Gladstone) You referred to the treasuries numbering 1,500. As a whole could you give us any idea of the proportion of the Government balances in those 1,500 treasuries as against the 300 district treasuries?—I am afraid I could not give you any.

4757 Roughly?—No, I could not.

4758 Would it be half?—I could not say.

4759 Perhaps you could get it?—Yes.

4760 (Chairman) Will you be able to get the information here?—No. In fact, I tried to get it here and failed. But if the information is wanted, I could certainly telegraph to India and get the information, I could get it, say, for one particular province.\*

4760a (Mr Gullan) But it must vary very much at different times of the year?—It must vary enormously.

4761 (Mr Gladstone) I mean an approximate proportion. This very convenient system of the currency chest which exists at the district treasuries does not apply to sub-treasuries, and the object of my question was to see whether that might not be extended?—Of course, the arrangement is that as soon as any large sum accumulates at a sub-treasury it is immediately withdrawn to the district treasury, and, except in months when a large amount of land revenue is collected, January, February, and March, very little actually remains in the sub-treasuries.

(Mr Gullan) I may say that these are little places twenty miles away from headquarters, and money is being brought in regularly once a week or so. It is not retained there.

4762 (Sir Shapurji Broacha) I suppose Government tried to do its very best to push gold into circulation between 1900 and 1907?—Yes, they made an effort.

4763 Until the gold circulation or the gold sovereign went down to a discount at one time?—I have no information on that point.

4764 Government tried its best to put gold into circulation for seven years until the exchange crisis came?—Yes.

4765 I suppose it was an experiment to see how far the pushing of gold would help exchange during a time of crisis, but the crisis was not helped by gold coming out, is that so? After forcing gold into circulation among people for seven years until gold went to a discount, the crisis came, and gold did not come out to help exchange?—As I said, my view is—

4766 No, it did not come out?—Quite so.

4767 Instead of coming out, a further four millions were absorbed?—Yes.

4768 And you say that the four millions might have helped in not bringing out more gold from England or from outside?—Quite so.

4769 Are you sure that that is the only cause, or was it because gold had appreciated, and they wanted more to put into hoards in place of rupees? It only displaces the rupees, nothing else?—I am afraid there is no definite information about that.

4770 So that experience does not give any encouragement that pushing gold into circulation will help exchange?—Does it naturally follow? Even assuming your view is admitted to be correct, when the country is saturated with gold, then the gold in the hands of the people is bound to help Government in an exchange difficulty.

4771 Do you know that the country was then saturated with gold, that there was 300 millions in all imported—accumulated gold—and although the Government did its best to push the circulation for seven years, yet none of that accumulated gold came out, so it does not support your theory that if more gold is pushed into the country it will help Government in the day of its distress?—I am not sure if that is true. You say that gold displaced silver in hoards.

\* The figures are being obtained from India, and will be printed as an appendix to the Final Report.

4 July 1913,

Mr BHUPENDEA NATH MITRA, C I E

[Continued]

Supposing we reach a point when there is no more silver in the hoards to be displaced. When that state of saturation is reached, the gold in the hands of the people is bound to help Government in times of exchange difficulties.

4772 How could you arrive at a day when there are no more rupees? At present there are more rupees in the country than gold?—That is so, and for that reason I say—

4773 You say that if you push currency gold into circulation now it will be a help in the future?—Yes

4774 Supposing the Government were to give as much gold as was wanted, and supposing a time like 1907 came, and the Government stopped issuing, would that not create more want of confidence than to say to them before, "We will not give you all that you want"?—When the stage I am referring to is reached, Government will not have to tell them that it will not give them gold.

4775 Government has to say, "We have no gold," just as they had to say in 1907. You stopped then for three years, do you not remember that?—That was because we had no gold.

4776 Does not that fact create more want of confidence, by refusing to give them gold when they want it, than it would to tell them before, "We will not give you the gold that you want"?—The point is this. We are now going on accumulating a large amount of gold, and, if we supplement that by trying to substitute gold currency for silver currency among the people, the result will be that, when a second crisis comes, there will be in the first place a smaller amount of rupees which will come out from the hoards.

4777 That is your conjecture of what would happen, but it does not seem reasonable from the past, at least, the past has not given any encouragement to go upon?—We have had experience of only one single occasion, and then certainly the gold circulation among the people had not made any large progress, nor had we any large gold reserves in our hands.

4778 I say what has happened in the past does not encourage forcing gold upon people?—I do not see any reason why that should discourage us.

4779 Because the people did not bring their gold out?—That is because the country was not saturated with gold, that is my point.

4780 Did I not say that there is more gold in the country than you will receive for the next 10 or 20 years? India, as they say, is the sink of gold?—That is so, but what is happening is—

4781 You cannot say that there is any encouragement for the pushing of your policy. You must ground your views on the past. The future is conjectural?—My point is this, that we have not sufficient opportunity for judging whether the country would have helped us if it were properly saturated with gold.

4782 That is your conjecture. Now let me deal with what you said about a mint. Is it a necessity or a sentiment?—I consider it mostly a necessity.

4783 Do you know that South Africa is the home of gold production?—Yes.

4784 There is no mint?—I do not know. Possibly the development of currency ideas in South Africa is higher than it is in India.

4785 How is there any dissimilarity? They want gold in circulation. They have the same sentiment as the people of India about gold?—The difference is that in our country there is not quite the same confidence in a paper currency among the people as there is in other countries.

4786 Suppose that a mint were granted in recognition of sentiment—of course you say it is a necessity—what gold would you bring to the mint? There is, as you say, the Mysore mine gold?—Yes.

4787 Do you know that two thirds of that gold comes to England, whether you buy or do not buy gold in India? They want it for their profits here?—That I did not know.

4788 If you bring one third of that gold to your mint, that is, three quarters of a million one third less will come from foreign countries to satisfy the

requirements of the trade, so that India does not gain much in gold?—I do not know much about the circumstances of those mines.

4789 I think you are mistaken in saying that there is no gold refinery, there is a gold refinery?—I doubt it.

4790 The mint refines gold if you want it and gives you a certificate which is accepted by the Bank of England?—I think they assay it, but I do not think they refine it, that is my recollection.

4791 They assay it. Of course, you are for sovereigns, whatever may be the larger cost?—Yes.

4792 To keep up the same coin in the Empire?—Yes, quite so.

4793 I suppose if you use rupees from the Gold Standard Reserve in India you will have to earmark gold here for the currency if it is against exchange. You are drawn upon by the Secretary of State and you have no need to come upon the Treasury you borrow instead, that is to say, you give from the silver in the Gold Standard Reserve?—Yes.

4794 Then the Currency Reserve will have to be augmented to that extent in England by placing gold in the Currency Reserve which is here?—No, not the Currency Reserve, the Gold Standard Reserve.

4795 No, you are mistaken, if you say it is from the Gold Standard Reserve—you will have to pay gold earmarked here to the Currency Reserve?—You have to pay the gold from the Currency Reserve to the Gold Standard Reserve in England, and against that you pay the rupees from the Gold Standard Reserve into the Currency Reserve in India.

4796 Suppose no bills are drawn against you, or anything like that, and yet India wants the rupees, you have to borrow from the silver portion of the Gold Standard Reserve and replace that by gold from the Currency Reserve?—I do not quite understand.

4797 The Secretary of State does not draw from the Treasury, and yet rupees are wanted from the Currency Department?—Well?

4798 And you have no more rupees to give?—Well?

4799 You borrow from the silver portion of the Gold Standard Reserve and pay into the silver portion gold from the Paper Currency Reserve?—Quite so. We can make the payment in India, but we should probably prefer to do it in England, because on such an occasion the Secretary of State usually sells Council bills in excess of the requirements of the Home Treasury.

4800 How would you benefit by taking some of the Gold Standard Reserve from here to India? I suppose it is said that a portion of it may be kept there?—I do not think I said so. I said that a portion of the Gold Standard Reserve is kept in India.

4801 (Sir Robert Chalmers) You said the silver portion?—Yes, the whole of the silver portion must be in India. That is all I said.

4802 (Sir Shapurji Broacha) You said that the Secretary of State does not interfere with the advice given to him by the Government of India usually he weighs it and perhaps makes some suggestion?—Did I say that?

4803 You said that recommendations made by the Government of India are as a rule accepted by the Secretary of State with sometimes a suggestion that such and such a thing ought to be done, or something like that.

(Mr Gillan) In what connection?—Was it about taxation?

(Sir Shapurji Broacha) Yes, and other matters. (Witness) What I said was I think that the Government of India make recommendations to the Secretary of State, and the Secretary of State has full discretion to accept those recommendations or not to accept them or to place other suggestions before the Government of India.

4804 (Sir Shapurji Broacha) But you said that there are no cases where the Secretary of State has not accepted the recommendations of the Government of India?—I do not think I said that.

4805 Then I will leave it. I want to ask you one more question. If you want to make a gold currency,

4 July 1913 ]

Mr BHUPENDEA NATH MITRA, C.I.E.

[Continued.]

then you will give gold to whatever extent is required ?  
—Yes

4806 Would you require a gold standard or gold currency ? I mean now, at the present time Would you like in India a gold standard or gold currency ?—We have the gold standard, and I want gold currency in addition I would prefer to have gold currency in addition

4807 Supposing the gold currency were given, it means that whatever gold is asked to be given must be given ?—Does that necessarily follow ? All you want is that anybody who takes his gold to the Mint will get back a sovereign in exchange

4808 No there is a difference between gold currency and a gold standard. With a gold standard you can refuse the gold, but with gold currency if you refuse to give a sovereign for 15 rupees you have failed to maintain your currency ?—If that is so, all I want for the present is the gold exchange standard plus an obligation on the part of the Government to coin into sovereigns any gold presented for the purpose at a Mint in India

4809 That is quite different If you introduce a gold currency it means that the Government put themselves under an obligation to give sovereigns for the number of rupees tendered That is a gold currency We are now on a gold standard and you wish to have a gold currency ?—No, if that is the meaning you attach to a gold currency I certainly do not want a gold currency in that sense at present

4810 (Sir James Begbie) With regard to the silver portion of the Gold Standard Reserve on one occasion some years ago the Secretary of State drew against that reserve which led to a protest by the Government of India Do you remember that ?—Yes

4811 We have that in the correspondence That process was repeated later on, in 1910 and 1911, I think ?—Yes

4812 Can you tell me under what circumstances the reserve was drawn upon at that time ?—On our side we have not got much to say about the transaction It was done expressly under the instructions of the Secretary of State If we had not taken the loan, the Secretary of State would have been obliged to transfer gold from his Treasury to the Paper Currency Reserve or to the Gold Standard Reserve

4813 That was in 1906 ?—Yes

4814 But in 1910 there was no gold at that time, was there ?—Yes

4815 Was not the reserve reduced altogether by Council bill sales ?—Yes, on that occasion upon which the silver portion of the reserve was reduced by an increase in the gold portion in England

4816 That is what I mean that part of the reserve was intended to supplement the reserve of the rupees in the Currency Department ?—Yes

4817 Was there any need to draw upon that special reserve in 1910 or 1911 to supplement the rupees in the Paper Currency ?—No, it was not wanted for that particular reason The point was that we had a large number of rupees in the Paper Currency Reserve, and at one stage I believe the Secretary of State thought that we might reduce the amount of rupees in the silver branch of the Gold Standard Reserve. So he inquired about half the balances of the silver reserve in gold securities in England Then there was some correspondence between the Government of India and the Secretary of State on the subject, and the silver branch of the reserve in India was eventually raised to the full amount of four millions

4818 You cannot give us any further information about the reduction of the silver reserve from six crores to three crores ?—That is all I can tell you

4819 With regard to the gold position in 1908 in the Paper Currency Reserve, we have heard a good deal about the question whether gold held in India would support exchange. Can you tell us where the gold was issued in 1908 ? Was it issued at the Presidency towns or was it issued from the District treasuries ?—A good portion of it was issued at the Presidency towns.

4820 And some of it in country ?—Yes.

4821 So far as it was issued in-country, that could scarcely be expected to be exported ?—That is so.

4822 At a time like that do you think it is expedient to issue gold to the general public ?—I think it is better to do it, because in the first place it would help to allay any suspicion about the intentions of Government to maintain its currency policy, and in the second place my view is, as I mentioned before, that any gold issued in that way would go to reduce the demand for the import of gold into the country

4823 There is no gold coming into the country at that time ?—No

4824 Do you not think it is of more importance to retain gold when the exchange is adverse for the purpose of maintaining the standard ?—The maintenance of the standard is undoubtedly the more important function of the gold in the possession of Government. At the same time, if we do not issue gold at a time of crisis we would immediately engender suspicion in the minds of the masses about the intentions of the Government with regard to the currency In 1908, as soon as Government said that they did not want to issue gold, I believe there was an increased demand for it at the currency offices

4825 That was in the Presidency towns ?—Yes

4826 With regard to the purchase of silver for coinage last year, can you tell us whether the plan which was adopted to finance this purchase, that is to say, by the sale of Council bills, was adopted at the suggestion of the Government of India, or was that left to the discretion of the Secretary of State ?—I think the suggestion was made by the Secretary of State, and the Government of India did not object to it

4827 In India the Paper Currency Reserves are kept entirely apart from the cash balances of the Government of India ?—Yes, that is so

4828 Do you know of any reason why that practice should not be followed in London ?—I think the same practice is followed in London also, and that the portion of the currency reserve which is held in London is kept quite separate from the balances of the home treasury

4829 But is it not the case that last year Council bills were sold against the currency reserve in India and the proceeds of those bills were put to the cash balances in London ?—No, I do not think that would have happened In fact, it cannot be done, because the Paper Currency Reserve is under law something quite distinct, and for that reason all the money which is held on account of the Paper Currency Reserve in England is specially earmarked

4830 In the case of loans which it has been suggested might come from the Paper Currency Reserve, I assume that you refer to loans in India only ?—That is so

4831 Not loans in London from the portion of the gold reserve held here ?—No All I intended was that those loans should be given against an actual increase in the circulation of currency notes

4832 (Mr Gillan.) Something has been said about these currency chests I only want to ask in order to make it plain The object of establishing these currency chests is not to give facilities for encashment of notes, is it ?—No

4833 It is merely what we call a resource operation ?—That is so. It is the function of the currency agencies, as I mentioned, to facilitate the exchange of currency notes.

4834 About the use to which gold held in India can be put in time of crisis, do you remember how much gold we had at the beginning of the 1907-8 crisis ?—No, I cannot give the actual figure, but I have heard that we lost about four millions in India.

4835 Was that all we held at the beginning of the crisis ?—Yes, that was apparently the case.

4836 What I wanted to get at was this There was considerable discussion in the Government of India at the time, was there not, as to what should be done or should be allowed to be done, with this gold—whether it should be given to people who wanted it for use in the country or restricted to people who wanted to remit it out of the country ?—Yes.

4 July 1913]

Mr BHUPENDRA NATH MITRA, C I E

[Continued]

4837 Do you happen to remember anything of the drift of that discussion?—So far as I remember, the Government of India first wanted to restrict the issues to meet *bona fide* demands on the part of the people of the country for a gold currency, that is to say, they wanted to stop all issues which were clearly required for the purpose of export, and with this object they decided that gold was not to be issued from the currency offices to anybody in sums in excess of a certain limit at a time, it was probably 10,000 at one time. Then I think eventually they thought that it would be safer to issue the gold freely so long as they had it, because their previous orders led to a rush for gold at the currency offices, and their limit was evaded by half a dozen men from the same bank going to the currency office and getting parcels of 10,000 at a time.

4838 (Mr Keynes) May I ask a question? Are we to understand that at the first stage of the crisis the Government deliberately tried to prevent the export of gold and deliberately tried to force gold into circulation?—No, it was not exactly that. What the Government did was to prevent the gold which it had in its possession from going out of the country. That is all it tried to do. It certainly did not try in any way to force gold into circulation.

4839 But it would only issue gold to those who wanted it for circulation purposes?—That is so.

4840 And deliberately withheld it from those whom it suspected of wanting it for export purposes?—Yes, that is the position.

4841 (Mr Gillan) For that purpose it imposed a limit?—Yes.

4842 Is that limit still in force?—No, I do not think there is any limit in force now.

4843 Is it not the rule that any applications for over 10,000 in gold shall be reported to the Comptroller General?—They are probably still reported to the Comptroller General, but so far as I know they are not reported for his orders. The Accountant General can issue the gold, and then he reports it to the Comptroller-General for other purposes.

4844 What is your own feeling about these alternatives? Supposing that this monsoon were to fail, you would have a lot of gold in India. How would you deal with the situation? Would you make any distinction between the gold taken for circulation in the country or for remittances abroad?—No, I would not make any distinction.

4845 Would you simply give it out to the first comer until your gold was exhausted?—Yes, quite so.

4846 Assuming that the greater part of that gold were taken for some use in the country—perhaps I am repeating a question already put to you, but I want to make it clear—do you regard that as equally efficient in the support of exchange as gold that is sent home?—It may not be equally efficient, but I think it fulfils the same object.

4847 The only reason I think you have given for that opinion is that *pro tanto* it goes to reduce the imports of gold?—Yes.

4848 Is that your only reason?—Yes, that is so, and, of course, there is the other reason that it would help to allay any panic or any suspicion in the minds of the people at large about the intentions of Government.

4849 That I understand. As a matter of fact, in a time of crisis or a bad season does the import of gold in one shape or another continue?—Taking the year as a whole I think it must continue, because some amount of gold must be absorbed for use in arts.

4850 For one reason or another?—Yes.

4851 The import of gold you think is always going on?—I think so.

(Mr Gillan) May we have a figure for that, Mr Chairman? I think we must have it at some time. Can we have it now? I have no doubt we can get it from somewhere.

(Chairman) Can the witness give us the figures? I do not mean at this moment, but can he hand them in?

(Witness) I think I could.

4852 (Chairman) The Secretary will get them\* (To the witness) In reference to the question just asked you, do I understand that the import of gold which you expect to take place into India in a time of crisis, and which you think might be lessened or reduced by having a larger amount of gold in circulation, is an import of gold, not for currency or for exchange purposes, but as merchandise?—It may be for both purposes. If the people can get the gold required for internal circulation from the currency offices there may be a smaller demand on their part for imported gold for a similar purpose. Of course, in a crisis like the one we had in 1908, the demand for currency will naturally be reduced.

4853 (Sir Robert Chalmers) May I ask one question as regards the location of the balances in London? In respect of the Gold Standard Reserve, I think I understood you to say that that is located in London in the interests of India?—Yes.

4854 You are very clear about that?—Yes.

4855 And as regards the raising of loans in this country, I think you expressed the opinion that every penny that can be raised in India is raised in India?—Yes. Of course, that is the view of the people on whose advice we depend when raising our loans in the Indian market.

4856 What is your main reason for keeping the Gold Standard Reserve in London? Would it be this sort of ground, that it is in London that the payments have to be made for which the Gold Standard Reserve exists?—Yes, that is so.

4857 Suppose you kept it in India you would not have secured that object?—Not exactly. Supposing we kept it in India, and then a crisis happened, and the Secretary of State was compelled to stop selling Council bills in India, then he would require money to pay the Home charges, and the Government of India would be compelled to ship its gold to the Secretary of State.

4858 It would be an extravagant method of doing the thing which you aim at doing by the better method which you described first?—Quite so.

4859 And in all those matters of the location of balances and the application of balances is it your own private opinion that the one object studied has been the interests of India?—I think so myself.

4860 (Sir James Begbie) May I ask one question as regards the question asked by Sir Robert Chalmers? You said that if the Secretary of State could not sell Council bills they would have to ship gold. The Government can buy their own drafts against the Gold Standard Reserve in London, can they not?—I do not understand the question. It would be just the other way. In a crisis people would want to pay in rupees in India, and would want to obtain gold in London.

4861 Yes, but I am talking about the Government's own remittances. Supposing the Secretary of State is not able to sell drafts in London on India, in that event you said that the Government of India would have to send home gold, but would the same effect not be arrived at if the Government of India bought their own drafts against the Gold Standard Reserve?—I do not see exactly how it would help them in getting any money in England. The demand then so far as the Government is concerned, is for more money in England, and in case of a crisis I do not see how the Government could get that money in England without actually shipping gold, if it kept the gold portion of the Gold Standard Reserve in India.

4862 In 1908 the Government sold bills in India against the Gold Standard Reserve in London?—Yes.

4863 The Government then did not buy their own drafts against that reserve, did they?—No.

4864 They could have done so if they had the money in India?—No. I do not quite understand the question. In 1908 what the Government did was this, they took rupees in India and gave drafts on London.

4865 That is to say, to the public?—Yes, to the public. If the Secretary of State wanted to take back those drafts it would not have helped him in any

\* See Appendix XXI., page 633.

4 July 1913 ]

Mr BRUPENDRA NATH MITRA, CIE

[Continued

way so far as the balances in the home treasury went. What the Secretary of State wanted was more money, and these drafts created a liability on him. They increased the payments from the home treasury.

4866 Yes, but the Gold Standard Reserve exists for the purpose of meeting a case like that, does it not?—I understand the assumption is that the Gold Standard Reserve was to be transferred to India. If the Gold Standard Reserve remained in England, of course the Secretary of State could have sold the securities of the Gold Standard Reserve. That would

have depleted the money in the Gold Standard Reserve temporarily. But I think the point was, if the money in the Gold Standard Reserve was transferred to India, what would happen in the case of a crisis.

4867 (Sir Robert Chalmers) That was exactly the point I wanted to put to you—as to the policy. You answered that in the interests of India it was desirable to keep the Gold Standard Reserve here?—Quite so.

4868 The balances were dealt with in the interests of India here?—Yes.

The witness withdrew.

At the India Office, Whitehall, S.W.

TWELFTH DAY

Thursday, July 10, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (Chairman)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURJI BURJORJI BROACHA

Sir JAMES BEGGIE  
Mr ROBERT WOODBURN GILLAN, CSI  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (Secretary)

Mr JAMES N GRAHAM called and examined.

4869 (Chairman) I think you represent the Bombay Chamber of Commerce?—Well, I can scarcely say that I represent the Bombay Chamber of Commerce. I believe they were good enough to give my name, but my connection with the Chamber of Commerce is of very old date.

4870 Will you give me very briefly, so that we may have it on the record, the nature of your association with India?—It is now, I am sorry to say, about 45 years since I went to India, but I have been closely connected with commerce all that time, and, in fact, I may say that my firm is one of the largest in India, and has very large financial transactions both as regards exports and imports.

4871 I think you wish your views to be taken as personal to yourself and not to be considered as delivered on behalf of your firm?—That is so.

4872 Are you in favour of the establishment of a central or State bank for India?—I assume that the constitution of such a bank has been carefully considered and is looked upon as not only practical but practicable, and it is in that sense that I would answer any question put to me on that subject. Provided that it is practical and practicable, I certainly would be in favour of its institution being very fully considered.

4873 What is your idea of the business which such a bank ought to transact?—I am not a banker, but I should say that the Government of India, like anybody else, requires a banker, and should not be its own Bank. For instance, to become money lenders, that is to say, in other words, a Bank, is not a suitable function for a Government. That is the view I take of it, and therefore a Bank would be more suitable to do the banking business of the Government.

4874 In the banking business you would include, I understand from what you have just said, the loaning out of any balances, that is to say, you contemplate that the Government of India would keep its balances with the bank, and that the Bank would use them as they thought fit?—I am not intimately acquainted with how the Bank of England carry on such operations, but I should regard these balances as being in very much the same position as the public deposits in this country in the Bank of England.

4875 Would you give to the bank the management of the currency—the note circulation?—I should think that would naturally become one of its functions.

4876 And the exchange business, or that part of exchange business which is at present done by the sale of Council bills?—Yes, I should say so, under instructions from the Council.

4877 Do you contemplate that it would do general banking business throughout India?—That, of course, is a very big question. I have thought a good deal of how it would be constituted in India, and I should think there were considerable difficulties connected with that, not insuperable, but at any rate difficulties that require very great consideration.

4878 You contemplate, I understand, that the Government would be represented on the board of directors of the bank?—Yes, I should think so.

4879 But the majority of the directors would be representatives of the shareholders, and unofficial?—Yes, certainly.

4880 Do you think such a bank should be formed by some amalgamation and possibly extension of the three Presidency banks, or that it should be an entirely new institution, so to say, superimposed upon them?—What passed through my mind was that it would be a new departure absorbing the Presidency banks.

4881 Do you think that the local needs of the people of India would be as well met by one centralised institution of that kind as they are by the three Presidency banks?—I should think that the Presidency banks would still continue to perform their functions within their spheres, and that the central bank, wherever its headquarters might be, would have a directing power. But I cannot talk as a banker, I can only talk theoretically on subjects of that kind.

4882 In that case you think that something in the nature of a local board, at any rate, would be required in the separate Presidencies in order to provide sufficient knowledge?—Yes, I should think so. India is too large a country for the concentration of all the executive work at one centre.

4883 You have already said that your first reason for desiring, if it were practical, the establishment of such a bank is to relieve the Government of banking duties?—Yes, and not only to relieve the Government, but to relieve the Government officials of duties which I do not think are within their sphere.

4884 Apart from that, have you other reasons why you think that the establishment of a central

[10 July 1913]

MR JAMES N GRAHAM

[Continued]

bank would be desirable?—I do not know on the spur of the moment that I can suggest anything

4885 I will ask you one or two specific questions Do you think that such a bank would secure in the form of deposits much of the treasure now hoarded in India, in other words, would it get out of India an addition to the banking capital of India?—That entirely depends I should say that it came within the functions of the Presidency banks, under the direction, of course, of the head Bank, to organise a system throughout their spheres of establishing credit, because in India it is a matter of confidence and credit to get these hoards out A native will not bring his money to a bank unless he is absolutely confident that he will get it again That has been so from time immemorial, certainly for the last 40 or 50 years, to my knowledge The natives put away their money in the ground because they can find it there again

4886 As far as they are prepared to bring out their money at all and entrust it to anyone, do you think that want of confidence in the Presidency banks prevents their doing so at the present time?—I cannot say at the present time, because, except as a visitor, I have not been closely in touch with India for a good many years, but I certainly think that it is the case that natives will not readily trust their money to anybody else except to themselves

4887 But you think if a State bank were established they would have sufficient confidence in that to entrust their money to it?—I think they would, and what I have in my mind is the Scotch banking system, which is a wonderful illustration of what can be done throughout a country by local institutions which get the confidence of the surrounding people

4888 I was wondering whether the mere fact that the bank was called a State bank and had certain intimate relations with the Government, including at least one Government director on the board, would appeal to the native mind as giving a security different in kind or amount from that which was given by such old institutions as the present Presidency banks?—I think the fact that it was a State bank might I do not think the personnel would come before the people depositing their money, but the fact that it was a State bank would certainly give confidence, and that confidence would grow when they found that they could take their money and get it whenever they wanted it again, and get it with something a little more than they had put in Confidence would grow, but it would take time, no doubt

4889 I think you said you would transfer to such a bank, if it were established, the exchange business, so far as it dealt with the sale of Council bills and transfers That is so, is it not?—Yes, that is so, because I have always thought that the Council drafts might be regulated, not only for the convenience of the Government, but for the convenience of the general public I put some views of that kind before Lord Salisbury so long ago as 1876—it is an old story—and suggested that the Council drafts should be allocated more or less throughout the year, and available throughout the year, to meet what were found to be the general requirements of the trade, &c

4890 I will return to that in a moment, but may I first ask you whether you would allow the State bank to compete with the exchange banks for general exchange?—No, I should say not

4891 You would confine it to drawings to meet the needs of the Secretary of State?—Yes

4892 If it was decided to establish such a bank, you have already told us how you would deal with the Government of India balances, but suppose it were decided not to establish such a bank, have you any criticism to make on recent management?—It seems to me that what the Indian Government want in this country are bankers rather than a Bank of their own They have certain disbursements to make, they have their ordinary disbursements, and disbursements for the purchase of silver, and for creating what may be absolutely essential and necessary as a Reserve fund These are all disbursements which they have to make, or to provide for, and it seems to me that that can be

done by a Bank more legitimately than by Government officials

4893 But hitherto the Government have had to do it?—That is true

4894 And, as you say, as long ago as 1876 you made representations to Lord Salisbury, then, I think, the Secretary of State, on the subject?—Yes, as regards Council drafts more particularly, which had been very badly managed previously

4895 And following thereupon there was an improvement, in your opinion?—Three weeks after my letter went in, some of the changes suggested were adopted

4896 Have you any further changes to suggest as a result of your later experience?—The only one which was not adopted—at least, I think it was the only one which was not adopted—was what I have already referred to—a kind of allocation of Council drafts over the year according to what might be considered convenient both for the Government and for the public

4897 Is not that done now? I think it would be the contention of the Secretary of State that, subject to the necessities of the Indian Government, and to taking security as far as he can that he shall be able to meet them in the course of the year in which they fall due, he does manage his business in the light of the interests of trade?—I have no exception to take to the management as it has been carried on, we are talking rather of principles as to how it should be carried on than the practice which has existed I should think probably it has been very well managed so far as the present system admits

4898 You have no particular observations to make on the size of the balances in recent years, either in London or India?—I have not studied what these balances have been, but I certainly think that unnecessarily large floating balances kept in this country are not desirable under the circumstances, that the Government collects its taxes in India, and to transfer that money here and to keep it unnecessarily is not a sound system

4899 Have you looked into the use of the balances sufficiently to say that in your opinion money has been unnecessarily brought here?—No, I have not

4900 I presume you would agree that supposing the revenue turns out more favourably than is expected, and there is a considerable balance, it is reasonable for the Secretary of State to bring that balance to this side to meet capital expenditure for which he would otherwise have to borrow?—Yes, certainly

4901 You would not recommend that a surplus should be distributed in the form of a reduction of taxation unless it were a permanent surplus, I suppose—unless it were one upon which you could count in subsequent years?—Would it not follow that in budgeting for the following year the Indian Government would either take credit possibly for another windfall of the same kind, or for what might be considered a permanent increase in the revenue of the country?

4902 Of course in any particular circumstances it might be right to do it, or it might not, that would depend upon the particular circumstances All I asked was, supposing that the Government felt that the surplus was a windfall, to use your own word which would not be repeated, you would not recommend a remission of taxation which could only hold good for one year with the necessity of reimposing a tax in the following year?—No If I may speak from a business point of view, I would be rather inclined to put the windfall into a reserve

4903 Is not that what the Secretary of State does?—Do you mean investing it?

4904 Well, in using it for development works, for railways or irrigation?—I am entirely in favour of that

4905 The reason why he has brought these balances—these large sums—over here is because in normal times, and without the balances he is a constant borrower here If, therefore, he has a windfall in a particular year, or in a series of years, could he make a better use of it than bringing it over here to meet

10 July 1913]

Mr JAMES N GRAHAM

[Continued

expenditure for which he would otherwise have to borrow? In other words, could he make a better use of it than using it to prevent the creation of debt?—Have I not answered that question already? The money would be there, whether it is in India or here, and available for that purpose, and it would be a matter of convenience, I should say, whether it was held in this country or in India.

4906 Suppose the Secretary of State had larger balances in India, or that there was a surplus in his existing balances, do you think it would be desirable for him to loan out the surplus in India in somewhat the same way as he has lent out temporary surpluses here in London?—No, I do not think Government should do that. I think that should naturally go through a Bank. Is not the system now that the Presidency banks receive the balances of Government?

4907 They receive a portion. They always have a good deal of Government money, but at the same time there is a good deal of money in Government treasuries at certain periods of the year, and it has been suggested that at the busy months of the year the Indian Government might lend that money on the Indian money market?—Would it not be better for them to let the Presidency banks have it? I was connected at one time with the Bank of Bombay—I think I was chairman at the time—and I remember, I do not know whether it was the Secretary of State or the Finance Minister, trying to corner the money market of India in order to raise the rate of exchange for Council drafts. That is not an incident which is likely to recur, I should think, but that is an actual fact.

4908 Supposing the Government of India made a practice whenever it could of lending additional sums to the Presidency banks in the busy season of the year, let us suppose that they had been able to do that for three or four years running, and then came a year of strain and stress in which they were unable to make any loan, what would be the effect of that upon trade?—In whichever way it was, the effects on trade must be very serious, but I do not see how it would make any difference that they had benefited trade at one time and that they could not do it at another time. Trade would have to look after itself.

4909. A suggestion has been made that if they had done it for two or three years trade would have come to count upon it, and when, after that period, it was not done, the effect upon trade would be much more serious and disastrous than if it had never been done at all?—I think trade would look after itself.

4910 I go to another subject. The Secretary of State has, of course, very heavy demands to meet in London, and they are growing as he borrows more money. Do you think he could lessen the strain by borrowing more largely in India? I do not know whether you can speak with authority upon that question?—I do not think I can speak with authority, but from my knowledge of India I should always advocate that, if loans can be raised in India, the money should be obtained there rather than in London.

4911 But you would not like to express a confident opinion as to whether he should borrow more largely than he has done in India?—No, there are much better opinions obtainable than mine on this subject.

4912 I gather from what you have already said that, assuming the Secretary of State is to deal himself with Council bills and transfers as at present he has to do, you favour his practice of selling, not merely to meet his own requirements, but as far as he can up to the requirements of trade?—No. I would not advocate his selling more than he requires for his disbursements and possibly for other purposes, such as, for example, if it were desirable to increase the reserve fund in this country.

4913 Taking his own needs in the widest way, you would say that he should sell to the extent of those needs, but no further?—Yes, that is the doctrinaire view which I would take. Whether or not a little elasticity should be allowed in that—whether he should sell at higher and higher rates—I am not prepared to say offhand. That is an open question, but certainly as a rule—there might be exceptions—I should think that he should sell to meet his own legitimate requirements.

4914 Do you think that they would be generally held in India?—I do not know.

4915 What is your objection to his selling to meet the needs of the trade in addition to his own requirements, if he can do it without inconvenience?—I think myself that trade had better look after itself, and that if the money that has been collected in taxes is through banking channels put at the disposal of trade that is quite sufficient.

4916 I think that you have always been in favour of the creation of a gold reserve?—Yes.

4917: And you thought that the creation of a gold reserve necessitated the restriction of the free coinage of silver?—Yes; in fact, I may say that I go back to the year 1876, when for some six years—the great battle of the mono-metallists and the bi-metallists had been raging, and I do not know whether I was the first or not, but I then put forward the necessity of creating a gold reserve, and the consequent necessity of restricting the coinage of silver. I do not know that anybody else had proposed that before I did so myself.

4918 Looking back on what has happened since those steps were taken, you see no reason to modify the opinions you have expressed?—None whatever.

4919 In connection with these changes, I think you advocated the opening of a mint for the free coinage of gold?—Yes.

4920. And you recommended that the coin should be the sovereign?—Not necessarily the sovereign, but a coin identical with the sovereign.

4921 In weight and fineness?—Yes.

4922 Will you tell me shortly why you advocate the opening of a mint for the coinage of gold in India?—There is nothing novel in that idea at all. In 1835 the Government had dies for gold mohurs. I forget what the value of the mohur was, but I have one in my pocket. Again, in 1870, the Government, without consulting anybody, so far as I can remember, took it into their head that they were going to introduce, I suppose, bi-metallism into India, and they sent out the dies for 10-rupee and 5-rupee pieces. That was in 1870. There were, I think, only 30 of the 10-rupee pieces coined, I have one with me at present. That was the date when the great revolution took place both in trade and in money by the opening of the Suez Canal, and owing to the results of the Franco-German War, and so the dies were luckily put on the shelf, and were never used any further, because had it been attempted to put a 10 rupee piece in circulation it would very soon have disappeared.

4923 Where would it have gone, would it have been melted down, or hoarded, or what?—It would have been melted.

4924 But you think that a sovereign, or the equivalent of a sovereign, would not be?—If it is called a sovereign or a mohur or whatever it may be, it has in India its market value. If you give it a fixed rupee value you get into all the difficulties of bi-metallism.

4925 I do not think you have yet told me why you want a mint opened except that you said it was an old idea?—Merely for public convenience. I do not think that is a very important consideration. It is a matter of public convenience that anyone who has gold bullion in any shape might go to the mint and get it coined.

4926 Do you think that much gold would be taken to the mint in India if there were a mint?—I do not know. I think I rather founded my idea on the fact that preceding Governments of India had contemplated coming gold, and I did not know of any objection or difficulty. If there are difficulties or objections, then the sovereign is a very excellent coin, and might do all that is required.

4927 Is there any difficulty in getting sovereigns if people want them in India now?—I have only in recent years been there as a visitor, and now I have been very glad to find that sovereigns pass freely and are easily obtainable.

4928. Your desire, I gather, is to see a gold currency as far as possible established?—No, I do not think that matters very much. I should like to see it so far current that you could always change a gold coin, for instance, not to take a sovereign to get your ticket

10 July 1913 ]

Mr JAMES N GRAHAM

[Continued

at the station and be offered 10 rupees for it, as you were long ago

4929 On the other hand, if people can be induced to use paper currency you see no objection?—No objection at all. In fact, I think that it is quite possible that if there were a Bank such as we have been talking about—this may be theoretical—there might be a gold paper currency as well as a silver paper currency.

4930 Would it be an unfair inference from what you have said that on the whole your reasons for favouring the opening of a mint in India are sentimental rather than practical? I do not say they are any the worse for it?—I do not admit that they are sentimental. I merely adopted them because I thought it might be a convenience to the public.

4931 As regards the gold standard reserve have you any observations to make upon that?—Do you mean as to where it should be located?

4932 Yes, in the first place, where should it be kept?—I think the best place to keep a reserve is the place where it will be required for the contingencies against which it provides, and therefore I should say that is in London.

4933 Have you any view as to the amount which it should reach? It is fed from certain sources. Would you continue to feed it with the whole of those sources until it reaches some fixed amount?—I think that is a question upon which the Government should get the expert advice of bankers and others, which would be more valuable than mine.

4934 You would say, therefore, that it was also rather a question to put to bankers as to what proportion of the reserve should be held in actual gold and how the rest should be treated?—I should say that there certainly should be a reserve which is held permanently in gold on certain conditions, that is to say, it is held against certain contingencies, and only available for use should those contingencies arise.

4935 What are the contingencies which you contemplate specially?—For instance, we have had experience of famines, and difficulties, when it would not be desirable to force Council drafts on the market, and under such circumstances it might be desirable to trench on the gold Reserve.

4936 You would use it as a reserve for the maintenance of the exchange value of the rupee, is that your meaning?—Not exactly that, but to prevent enforced sale of Council drafts in this country.

4937 In an unfavourable market?—Yes.

4938 The effect of that enforced sale would be to depreciate the exchange value of the rupee, would it not?—Yes. I should think just now, for instance, supposing the Council were to offer 100 lakhs of Council drafts and make no restriction as to the rate at which they were to be placed we should not see much of the fixed rupee.

4939 Am I right in saying that the object with which you originally proposed the gold reserve was the maintenance of the exchange value of the rupee?—No, I do not think that is the primary object of the reserve.

4940 What is the primary object, in your view?—The primary object is because the Indian Government has gold obligations to meet which it must meet, and if it only had silver with which to meet them it would be in a bad way.

4941 It is a reserve for the times when the circumstances of trade are such that it cannot get gold to meet its obligations here in any other way?—More or less, yes.

4942 I think you do not desire to express any opinion as to the amount which should be held in gold?—No, I think that is a question which would require a great deal of consideration.

4943 Have you any criticisms to make on the present practice in regard to the purchase of silver for

rupee coinage?—I think that such transactions would naturally go through the bankers or the Bank, which ever it might be, that represented the Indian Government in London.

4944 But as long as there is no such bank you have no suggestions to make for improved practice in those matters by the Secretary of State?—I think the difficulty which arises there is in respect of what might happen—not what has happened or what is likely to happen, but as regards what might happen. For instance, with regard to the recent incident in which the Government were rather called to account for the way in which they acquired silver, I think in that case the transaction was carried out on good business lines, but, on the other hand, it is conceivable that under the conditions which exist it might have been badly or improperly carried out.

4945 You think, at any rate, it is an invidious duty for a Government to have the discharge of, and that it would be better done by a business institution?—I think so.

4946 (Mr Gladstone) You have referred to the objection to Government undertaking such very large banking and financial business, but the same thing applies, does it not, to the management and control of railways? The circumstances are such as almost to render this large Government superintendence essential. Would you go so far as to recommend that the railways should no longer be managed by the Secretary of State?—What I have had in view in anything I have said has been mainly in respect of financial transactions when Government officials are brought into direct contact with the public. As regards the control and management of State railways, these involve other considerations than those I have referred to. The executive and financial management of State railways necessarily devolves on the direct representatives of the Government.

4947 Then in the event of a State bank being established it would be necessary to have a great deal of Government control?—I should think there would be decidedly a certain amount of Government control.

4948 So that that would not really relieve Government of the responsibility of continuing to conduct these operations?—I think it relieves Government of the operations themselves. The Government do not become moneylenders themselves, it is an institution which does it. At present the Government are money lenders.

4949 Take the control and management of the Port Trusts in India, where there are official directors. In the last resort the Government is held responsible for the policy and the direction of these Port Trusts, although they may only have one or two representatives on the Trusts, is not that so?—There is nothing in the nature of trade in that, either in money or other things.

4950 The management of docks is a large business operation?—I do not see how it would be possible to manage it otherwise. That is one of the functions which the Government exists for, I should think.

4951 (Sir Shapurji Broacha) Were you in Bombay when the first Bank of Bombay was in liquidation?—No, I arrived just after, it was still in liquidation, I think, when I arrived in Bombay.

4952 I mean the first Bank of Bombay—the old Bank of Bombay. Were you there when it went into liquidation? Do you know the history of the first Bank of Bombay?—No, I arrived in Bombay about two or three years after it failed.

4953 So that you do not know anything about that, or its constitution?—No.

4954 Or whether the Government had shares in it?—No, I know nothing about that.

4955 Nor about the Government directors on the board?—No.

The witness withdrew.

The Hon MONTAGU DE P WEBB, C I E, called and examined.

4956 (Chairman) Will you begin by telling us briefly what your Indian experience has been, so that we may have that on the record?—I first went out to India 23 years ago as a merchant, and my experience for the last 23 years has been as a merchant.

4957 I think you are President of the Karachi Chamber of Commerce?—Yes.

4958 Do you express their views to day?—Yes.

4959 You speak for them as well as for yourself?—Yes.

10 July 1913]

[Continued

4960 You have been good enough to supply us with a memorandum giving your views on the subjects referred to, and I propose to print that with your evidence, as we have done with other witnesses, or shall do with some other witnesses (see Appendix XXI, page 550) That being so, I will not ask you questions on what you have written there, but I will put some questions to elucidate what you have written Your first point, I see, is that the total balances of recent years have been excessive?—Yes

4961 Am I right in thinking that you attribute that to undue pessimism in budgeting?—Yes

4962 You think that on the facts known to the Finance Minister at the time when he presented his budget he would have been justified in taking, and indeed ought to have taken, a more favourable view of the outgoings of the following year?—Yes

4963 At the same time I suppose you will admit that it is very difficult at the beginning of a financial year in India to forecast what the revenue for the following year will be?—Very difficult

4964 It depends in the main on the monsoon, I suppose?—Yes

4965 That directly affects the general revenue?—Yes

4966 And of course the railway revenue?—Yes

4967 Would you agree that under those circumstances, having regard to the uncertainty, it is desirable that the Finance Minister should err if at all on the side of caution?—Yes

4968 You would agree that it would be undesirable that, owing to having taken too sanguine a view of the prospect and having remitted taxation, he should have in the next year to re-impose the taxation remitted?—Yes

4969 In regard to those balances, you suggest in your memorandum, I think, that they should have been used to reduce taxation, that on realising those balances the Government of India should either have reduced taxation or budgetted for large deficits, or suspended all borrowing and invested the balance in reproductive works?—Yes

4970 Having regard to what you have just said to me, do you think that in the circumstances of those years a prudent minister would have remitted taxation?—Yes, I think so I think that excessive caution was shown in preparing these budgets I think considerably more risk might have been run without jeopardising the financial position at all

4971 You think that, say, in the first of the years that you take, it would have been safe on the results of that year to reduce taxation in the following year, or in which year would you have thought that that could be done?—Yes, I think that with a million and a half surplus something might have been taken off

4972 On the facts as then known, not looking back with your knowledge since acquired of the results of the later years, but upon the facts as then known?—I think so I think in any year when there is a million and a half or two millions to the good the Government would be safe in budgetting to dispose of that surplus, not necessarily by taking off taxation, but perhaps by using the money instead of raising fresh loans—the customary and usual loans

4973 Given the situation of India as it is at present, I think that you recognise that she needs large capital sums for development?—Very much so

4974 Assuming however, that you had a surplus available, would you have advised the use of it for development purposes?—Yes

4975 Rather than for the reduction of taxation?—Yes. The chamber of commerce in Karachi have pressed that course upon the attention of other chambers, and I think we also have drawn the attention of the Government to it, but I am not quite sure about that. We have certainly consulted other chambers on the question of utilising these large surpluses, particularly for railway purposes.

4976 So that, of the three alternatives which you suggest in your memorandum, the one which you yourself would have chosen would have been suspending borrowing and devoting the surplus to reproductive capital expenditure?—Certainly May I in this connection draw attention to the fact that by a

printer's error in the fourth line of paragraph 5 of my statement "15,000,000" has been printed for "5,000,000"? I intended it to be 5,000,000 It should read, "And that a cash balance of, say, 5,000,000 in excess" instead of "15,000,000"

4977 That shall be corrected You said that your criticism is that the Government of India was unduly pessimistic?—Yes

4978 Putting that on one side for the moment, assuming their calculations were reasonable at the time when they were made, would you then criticise their practice, or would you say that taking their assumptions—assuming their premises—they did, in fact, what you would recommend?—To a certain extent, yes

4979 Having a realised surplus in each of these years they did not budget to swell the balance so obtained, but they budgetted to reduce it to something like the normal Is not that so?—I think last year a surplus was budgetted for, as far as I remember I seem to have a very distinct recollection of Mr Gokhale over and over again pressing the attention of the Council to the fact that there was a surplus, and that he was positively certain that the surplus would be very much greater I remember that distinctly I think it was in last year's budget debate

4980 Of the years you name, I think the only one in which they deliberately budgetted for a larger balance than usual was the year 1910-1, and the ground put forward for that was that they had heavy repayments for debt to make in 1912

4981 (Mr Gullan) May I explain? What happened was that the Government of India, in the budget to which Mr Webb refers, had budgetted for a surplus, I think of a crore and a half, and what Mr Gokhale said in the budget debate was, It is quite true you have budgetted for this sum, but I think you really are going to have a surplus very much larger He said that in the budget debate, and I think that is what Mr Webb meant?—That is what I have in mind

4982 (Chairman) That is really your original criticism, that they were unduly pessimistic?—Yes

4983 That may be a question of temperament or wisdom?—Quite so

4984 But I was going to intentions Assuming that their programme had been realised and their estimates had been correct, you would not have found great fault with the results, would you?—If the estimates had been proved to be correct, no

4985 As regards the use made of the large balances, in paragraph 8 of Part I of your memorandum (page 552) you point out that the Secretary of State has lent to certain borrowers in London large sums of money for a period of several years in all?—Yes

4986 And that those loans have always been made as short-term loans?—Yes

4987 And that therefore the rate of interest which has been obtained has been less than would have been secured if the money had been lent for longer periods?—Yes

4988 I want to ask you whether, in your opinion, the Secretary of State was wrong to lend only for short terms?—I think certainly wrong in view of the magnitude of the balances available

4989 You think he ought to have adopted the policy of lending, say, for 12 months?—Assuming that he was correct in accumulating this money in the first instance, then the best policy if he was able to lend it would have been to lend it certainly for very much longer periods than three to five weeks.

4990 But assuming that he believed that his balance would be reduced by the end of the year to normal, would you still say that on that assumption he was wrong to make his loans for such short periods?—That question seems to me to take the form that assuming that he was right he was right, but seeing that every week he was withdrawing money from India, which he did not in the least require, in my opinion, he could not possibly imagine that he would run short of money By the sales of Council drafts he is weekly withdrawing money, so that he would be an extreme pessimist who thought that he was going to run short of money, I think, in those circumstances, especially with 10 millions, 12 millions, or 15 millions of cash in hand.

10 July 1913]

The Hon MONTAGU DE P WEBB, C.I.E

[Continued

4991 In your view the major portion of that money, or a large portion of that money, should have been left in India?—Yes

4992 And as I understand, you would suggest that in India it should be lent out to lessen the stringency of the money market?—Yes, if this accumulation in the first instance was unavoidable

4993 Might it not be right to accumulate it even though it were avoidable, India being a country which is in this great need of development of which you have spoken? The amount of development which you do measure very largely by the resources which you can make available in any year?—In a sense, yes

4994 If you have a prosperous year might it not be good policy for the Government of India to use that prosperity to carry out a larger policy of development than it otherwise would do?—Yes, it might conceivably be so. If it be laid down as a general policy of the Government of India that money shall be raised by taxation which is to be used as capital on reproductive works, there is a great deal to be said for that policy at times

4995 As regards the balances which might have been made available in India, to whom would you have lent them?—In the first instance to the Presidency banks

4996 Would you have gone outside the Presidency banks?—Yes

4997 You mean that the Government of India should directly have lent to others besides the Presidency banks?—Yes

4998 To whom?—There are many other banks. Some of the exchange banks which are operating in India borrowed some of this money in London. I have no doubt they would have borrowed it quite willingly in India, where it was, no doubt, wanted

4999 Then you would lend it both to the Presidency banks and exchange banks if they wished to take it?—Yes

5000 Would you lend it to anyone else?—Yes

5001 To private borrowers?—Yes

5002 Would you ask security from everybody?—Not necessarily everybody. I should ask security from most people, certainly

5003 From all private borrowers I assume you would ask security?—I think so, yes

5004 Would you from the banks?—Not necessarily. It depends upon the amount and the time, and the general situation. There are times when I should unhesitatingly lend the banks any amount of money on no security, and there are other times when I might conceive it advisable in the public interest to take security. It depends on the general financial circumstances, and possibly the political situation at the time

5005 Does that mean really that it would depend upon your judgment of what the position of the banks was at the moment?—Yes

5006 You are aware that the Presidency banks have considerable Government balances, I suppose?—Yes

5007 But you think that without taking security it would be safe largely to increase the sums placed with them?—Yes, I think so

5008 Do you contemplate that this money would be needed all the year round?—A large sum of additional capital?

5009 Yes?—Possibly not all the year round

5010 Mainly in the busy months the winter months?—Mainly in the cold weather, yes

5011 So far as you took security, what sort of securities do you contemplate that the Government of India might accept against such loans?—All Government paper in the first instance, and securities of semi-Government institutions such as the Bombay Improvement Trust or the Calcutta Improvement Trust, and I do not know why selected Port Trusts, and even selected municipal loans, should not form a good security for temporary advances

5012 Securities of public authorities generally?—Yes

5013 You do not mean that the Government of India should lend on commercial paper?—No, not on commercial paper

5014 What amount of money do you think could be usefully employed in India in that way?—It is very difficult indeed to say. Of course, the popular impression is that there is not very much scope for using very large sums of money. That is the popular impression, but as against that there always are, in my own practical business experience, large demands for capital, and there are always large opportunities for employing capital, and to me there are many opportunities which are not availed of. I can see many opportunities of using capital

5015 Do you think they would use more than four or five crores in any normal year?—In the busy season

5016 Yes?—It is very difficult to say. I could not say straight away, but I think the general impression, so far as my experience goes up to the present, is right, and that there is no large scope for the sudden engagement of enormous volumes of money such as there is in this country

5017 It has been objected sometimes, and I think it is an objection which has had weight with the Government of India in the past, that even if they could see their way from time to time to lend money in the method which you propose, there would be a danger that the Indian money market and Indian traders would come to count upon that assistance from the Government, and then if in any year the Government was unable to give it, very serious consequences, something in the nature of a crisis, might follow. What do you say to that?—I do not think there is any ground for that theory in the least. I think that with a thoroughly suitable and satisfactory currency system you could always draw funds in large quantities from London in emergencies

5018 So that you think it conceivable that there might be difficulty for the Indian Government to withdraw this money from the banks to which it had lent, or refuse to lend to them, but you think that London would be a reservoir out of which it could always supply itself?—Yes in an emergency

5019 Of course, as you have said earlier, the revenue of India is a very uncertain quantity, depending so largely on one factor, the monsoon?—Yes

5020 You also are aware, of course, that the demands which the Secretary of State has to meet in London year in and year out are very large?—Yes

5021 Do you not think there is something to be said for his practice of getting his money over here when he is certain that he can and not waiting till the last moment when he needs it, and when he may find a difficulty in transferring it?—My view is that he can take very much greater risks than have been taken in the past

5022 You think in that respect also he is unduly cautious?—Dreadfully pessimistic

5023 I want to turn for a moment to paragraph 9 of Part I of your memorandum, where you point out that in 1910 the cash balance in hand on the 1st April was nearly 12,800,000, and yet in that year you say that the Secretary of State borrowed three sums of 1,000,000, 2,500,000 and 1,500,000 respectively?—Yes

5024 I think your contention is that, given that cash balance, he ought not to have borrowed?—No, he ought not to have borrowed. I think

5025 The borrowing, I think, took the form of a renewal of the bills which fell due?—I think it did

5026 In that year, 1910, the budget estimate was for a closing balance of five millions odd?—Do you mean the Secretary of State's budget?

5027 I mean the budget of the Indian Government?—I cannot say from memory

5028 I misunderstand you, perhaps, I mean the estimate of the India Office balance?—The Secretary of State's estimate?

5029 Yes. The estimate to which they were working was that the balance of 12,799,094 on the 1st April would be worked down to a little over five millions on the 31st March 1911. Perhaps you would take it from me that that was their estimate?—Yes

5030 That is the estimate which was framed as to what the position would be at the end of the year. You would say 5½ millions, which is the figure which

10 July 1913]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued

he estimated to have, was too great a figure?—Two millions too great, I think.

5031 You would say that, although he had to pay off 2½ millions of bonds at fixed dates besides meeting his ordinary expenditure?—Yes.

5032 You think with that in front of him it would have been safe for him to estimate for a balance of only three millions at the end of the year?—Certainly, I think so.

5033 You recognise that his decision as to paying off bills must be taken a little in advance of the time at which they fall due?—Yes.

5034 If he has to renew bills he must make his arrangements with the Bank of England so as not to clash more than is necessary with other operators?—Yes.

5035 Taking those figures, there was one million falling due on the 9th April, 2½ millions falling due on the 10th June, and 2½ millions falling due on the 1st December. Those are the figures given in your memorandum (page 553), with the exception that the December number in your memorandum stands at 1½ millions because only 1½ millions out of the 2½ millions was renewed. What I wanted to put to you was, whether you thought that at the time of the year at which he had to take his decision as to renewing the sums falling due in April and June he had any more knowledge than he had when he framed his original budget estimate of what the results of the year would be?—He could have no more accurate knowledge of what the final results would be, certainly, and also that part of the year I admit was a very bad season of the year at which to draw money from India, but in that respect I can only say he appears to me to be unduly pessimistic. I think that he is not running nearly so much risk as a private financier who had to deal with those figures would run. He is taking a very much safer line, and an unnecessarily safe line, it appears to me.

5036 But given what you consider his original error of being unduly pessimistic in framing his budget, nothing had occurred up to that time which ought to have made him reconsider the position?—That I cannot say from memory now. It was in 1910.

5037 But you would agree that at that period of the year—early in June—he would know little or nothing more of the prospects of the year than he did when he made his budget statement?—No, not much more in June.

5038 So that, given the original error, the practical criticism is that instead of paying off only one million in December he ought to have paid off the whole 2½ millions then?—I think he might have done so, yes.

5039 Is it within your knowledge that besides those bills he had to pay off nearly two millions in 1912-3 and a sum of 1½ millions in 1913-4?—There were large sums to be paid off, but I do not remember exactly what the figures were and the dates.

5040 Would you admit the necessity for doing that as a reason for keeping the balances somewhere above normal, at whatever figure you might fix your normal?—It does not appear to me necessary to make any special provisions for those payments when there are cash balances at the beginning of the year of over 16 millions sterling. I cannot see any necessity to make any special provision for anything with a 16 millions sterling cash balance. In fact, if he drew no bills throughout the whole year he could very nearly carry on and pay off all debts with an opening balance of 16 millions or an opening balance of 18 millions. I cannot conceive any necessity to make any preparation.

(Mr Gillan.) May I explain that the budget always provided for a very large reduction in the opening balance?

5041 (Chairman.) What do you say to Mr Gillan's suggestion? Let me put it in this way. It seems to me that because not merely the opening balance, but the closing balance, was very high, you argue after the event that he ought to have done something different?—Yes.

5042 But the Finance Minister did not anticipate that the closing balance would be very high. I think he proposed to keep it higher than you consider

necessary, but I will come to that in a moment, but in each of these years he budgeted for a great reduction in the closing balance?—The Secretary of State budgeted for a certain reduction, but the figures appeared to me to be extremely questionable. I have before me the explanatory statement which was published last February, giving at length the reasons for those reductions (Cd 6619). In explaining these large closing balances, on more than one occasion the reason is put forward that the Secretary of State drew nine millions in excess of his requirements. That is the explanation which occurs on more than one occasion, that the balance turned out to be very much greater than anybody had anticipated or imagined, the reason being that the Secretary of State had himself made it very much larger by weekly piling it up without the slightest necessity, as it appears to me.

5043 Assuming that the total balances were for one reason or another very much larger than had been expected, what was the best use that the Government of India and the Secretary of State between them could have made of the surplus?—I think the best use would have been to place money at the disposal of the Indian money market, not to have lowered exchange by drawing it away to this country.

5044 But in getting it over here was not the Secretary of State getting it where it would eventually be needed?—Not in the slightest, I think.

5045 Would it not eventually go to capital expenditure on railways?—It might do so, but I do not know that it necessarily would, and if it went to capital expenditure on railways, then a certain proportion of it, and only a certain proportion, would need to be expended in this country.

5046 But to the extent to which he had to spend it in this country on rolling stock or on material for the railways, London is the place where it would be wanted?—Yes, to the extent to which the surplus balances are expended in railway material, London is the place where it would be wanted, certainly.

5047 And to the extent to which it went to the redemption of debt, it would be wanted in London?—Yes.

5048 To the extent of those two demands do you think that the Secretary of State was right to bring it here?—I cannot say that I do, because I do not think when the money was brought over there was the slightest idea as to how it was to be used at all. So far as I am able to discover by looking at the records it seems to me that it was brought to this country without rhyme or reason, and when the money was accumulated here in enormous quantities then only did the office turn round to see what could be done with this money. I do not think it was contemplated that the week-by-week withdrawal was for the specific purpose of buying railway material in case it might be wanted in the future. I do not think that was the intention, although, of course, when the money was brought here it had to be utilised somehow. But if the surplus collections of revenue are utilised in capital works, then a certain proportion will be required in London, and it can be made use of, but that only appears to me to be, so to speak, a way out of a difficulty. Having brought the money here and having to use it somehow or other, perhaps the best way to use it was to expend it on capital works—reproductive works.

5049 We will pass from the question whether the original estimates were justified. Supposing the money to be there could the Secretary of State or the Indian Government have employed it for any purpose more useful to India than either the reduction of old debt or the avoidance of new debt?—No, probably not.

5050 If they had at once employed it for either of those purposes you would not have criticised their action?—No, if the money had been employed immediately for those purposes, but debt cannot be redeemed at a moment's notice. The action which our Chamber of Commerce took was to press upon the Government the desirability of expending some of the surplus accumulations on railway construction. That course we took on several occasions. Of course, we do not in Karachi have the knowledge of the moment at which debt can be redeemed but we do know, or we think we have some idea, when money ought to be spent on

10 July 1913 ]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued]

capital works, and when we saw large accumulations, the action we took was to press for the utilisation of that money on capital works as being the best way to make use of it

5051 When you and I both just now made use of the expression that if the Secretary of State had been able to use this money immediately you would not have greatly criticised, you would not press the word 'immediately' too hard, would you?—No

5052 You mean within a reasonable time?—Yes, but in view of the figures in my note I might say that three or four years, or four or five years, was not a reasonable time

5053 Your real complaint on this matter, given the existence of the high balances and the fact that they could not be or were not used at once in the way stated, is that they were loaned out on the London money market instead of being loaned out in India?—Yes, in short, that the best use was not made of the money

5054 The best use in what way, the best use from the point of view of earning interest, or from the point of view of the general advantage to India?—Both

5055 You think a higher interest could have been earned in India?—I am quite certain it could

5056 Do you hold that opinion on an average of the whole year?—Yes, certainly

5057 Taking account of the fact that you might only be able to employ the money in India for a small portion of the year?—Small sums of money might be utilised through the whole of the year, but very large sums of money could not be utilised through the whole of the year. Past experience has not led the Indian money market to expect that these enormous sums of money will be available, and it is not to be expected that in any year when a large amount of money is suddenly thrown at the money market in India it can receive it or make use of it. Even the London money market broke down under those circumstances, no securities could be produced, and the money had to be given to bankers on deposit without securities, this happened even in London, and it is not to be supposed that India could swallow such large sums of money unless it had been the habit for many years to place this money at the disposal of the Indian money market. If the money was regularly made available in India I have not the slightest doubt that means could be found for making use of it

5058 I think you formed a special objection to the loan to bankers in England, or is your objection there merely a general one to loaning the money in London at all?—A general objection. I do not intend my note to be any reference to individual borrowers in any way. If the money is lent, of course I assume that it has been lent to the best borrowers and to the best advantage. I am only objecting to the whole principle

5059 Does that apply to what you say in paragraph 10 of Appendix XXI (page 553)? At the end of paragraph 10 you mention one particular house to which loans were made?—Yes

5060 That is merely an illustration, you have no special criticism to make?—No

5061 Suppose these balances had been retained in India, I understand from what you have told me there were two methods by which you would have used them, one was in loans to the banks and other borrowers, and the other was in railway development in India?—Yes

5062 Railway development in India, I suppose, would have caused a corresponding increase in the Secretary of State's expenditure at home?—Yes

5063 And to that extent would have justified additional remittances to this side?—Yes

5064 In paragraph 12, Part I, of Appendix XXI (page 553) you say 'Remembering that the Indian Paper Currency and Paper Currency Reserve are under State control and therefore easily available to Government in times of grave national emergency, I am of opinion that the Government of India's floating cash balance ought, in the interests of economy, to be kept down to a maximum of 10,000,000.' What is the meaning of the reference to the Indian Paper Currency and Paper Currency Reserve in that connection? Do you mean that the total currency reserve should be diverted to other

purposes besides the maintenance of currency?—In times of grave national emergency, yes, certainly, in exactly the same way that the Bank Charter Act has, in times of grave emergency, been suspended in this country, and issues of bank notes have been made against which the securities were not held which were required under the Act. In the same way, in times of grave national emergency, no doubt paper currency could be issued in India against which the securities which are required under the Paper Currency Act would not be held. In other words, paper currency might be floated to some considerable extent in times of national emergency without any security except the credit of Government

5065 (Sir Robert Chalmers) If I may interrupt, is it the fact in the case of the Bank of England that there has been any issue without anything at the back of it?—I think practically nothing except the credit of the Government

5066 That is your belief, is it?—I think so, yes

5067 You do not take the view that it is the absence of gold and the deposit of securities which must be utilised in those circumstances?—The reason for the note issue is the absence of gold—the scarcity of gold

5068 Instead of gold, would you not agree that in those cases the action contemplated has been to deposit securities in lieu of gold, but still securities?—Yes, it may have been so contemplated

5069 It is not an issue with nothing at all behind it?—I think it has been

5070 (Chairman) Does it not occur to you that at such a time as you have spoken of, instead of there being an increased demand for paper currency paper currency might be coming in for encashment?—It probably would in some circumstances

5071 But you would take power to refuse encashment?—Yes, I think it might be done in times of grave national emergency. Supposing the metallic supply of currency runs out or could not be got hold of—suppose it was hoarded or disposed of in some way to cause the Government embarrassment, I think the Paper Currency Act might be suspended in a time of grave national emergency till the crisis was got over

5072 In forming your view as to what balances the Government of India ought to keep, you are influenced in part by the fact that there is a reserve against the note issue which you think might in a crisis be made available to supplement any deficiency in the balance?—Yes

5073 Of the total balance of 10,000,000 which you suggest, you propose that 3,000,000 might be kept in London, leaving 7,000,000 in India?—Yes

5074 Will you tell me how you arrive at all three of those figures, by what process of calculation or reasoning do you arrive at the fact that 10,000,000 is sufficient in the whole, 3,000,000 in London and 7,000,000 in India?—Do you mean the proportion of three to seven?

5075 And the total?—The total of 10,000,000 I have arrived at because on former occasions the Government of India's cash balances have been down to that figure without disaster

5076 And the proportion?—The proportion is on the same principle. The Secretary of State's balances have been down very nearly to three millions. I think in years gone by the usual figure used to be about four millions, it was three and a half to four or four and a half millions. I think that used to be the Secretary of State's balance many years ago

5077 (Mr Gillan) Will you give us the years to which you refer?—Do you mean the Government of India's balance being down to 10,000,000?

5078 Yes?—I will give you the exact dates (see Qu 6031)

5079 (Sir Robert Chalmers) As regards the balances in London, about what amount do you think at the beginning of each quarter the Secretary of State has to pay out for dividends? Would it be practically three millions for that precise purpose?—For dividends on the guaranteed State railways?

5080 All the dividends that fall to be paid by the Secretary of State here in London. Is it about three million pounds that has to be paid at the beginning of

10 July 1913]

The Hon MONTAGU DE P WEBB, C I E

[Continued.]

each quarter?—It is a large sum, yes I think it is approximately getting on for that

5081 And therefore that would swallow up the whole of your balance straight away?—If there were no money coming in, yes

5082 (*Chairman*) In the case of the balance in India, do you draw your 7,000,000l from a comparison of the lowest balance which they have held with safety?—Yes

5083 Are you aware that the Government of India have from time to time carefully gone into that matter to consider what balances they should hold?—I am not aware, but I hope so

5084 We have had it in evidence, I think, that they have examined the needs of their different treasuries, and the calls made upon them, and they have fixed their figure—which is much higher than yours, it is 12½ millions on the 31st March—with a view to the actual needs. Are you prepared to challenge their opinion from your own knowledge of what they require in district treasuries or in their headquarters treasuries?—I am not prepared to challenge it, no I do not know what enquiry has been made or what figure has been arrived at I have never heard of this figure of 12½ millions before. However, 12½ millions is nearer to 10 millions than the 30 millions or the 27 millions which have been held recently

5085 It corresponds with the seven millions, it is the balance in India?—Yes Mr Gillan asked me the year I will give the exact year I cannot put my finger on it at this moment, but I will give the years, as I have all the balances taken out for 10 or 12 years

5086 You say in paragraph 14 of Part I of Appendix XXI (page 554) "With regard to the 10½ crores " cash balance in India, as much of this as possible should " be placed at the service of the Indian money market, " just as is done by Government in England." What exactly do you mean to convey by that?—I mean to convey by that that I understand in this country the Government balance is kept at the Bank of England

5087 And that the Indian balance should in the same way be kept with the Indian banks?—Very much more freely than the Indian banks, to a very much larger degree than at present.

5088 Contemplating as you do a much larger amount of money being left with them, do you intend that they should have its use free of interest, or do you propose that they should be charged with interest?—I think that negotiations might be entered into I do not know why the banks should receive these favours free of charge

5089 You intend that the banks should lend the money out again for the benefit of trade?—Yes

5090 What sort of rate should the Government charge—bank rate, or something below bank rate?—I should only suggest that they must charge as much as they can get It is very difficult to say what the figure would be It would vary considerably I heard of banks this year in the last cold weather paying as much as 7 per cent for money, and I myself placed money with banks this cold weather at 5 per cent

5091 When you say in your memorandum that the balances kept with the Presidency banks should be considerably increased, you do not mean on the present terms?—No, not necessarily on the present terms

5092 You say "The withdrawal and retention in " the Government treasuries of vast sums of cash " arising out of the customary collection of the Indian " revenues contributed materially to the severe " seasonal tightness of the Indian money market," paragraph 14, Part I, Appendix XXI (page 554)?—I think so undoubtedly

5093 That is specially the case, is it not, because the pressure on the Indian money market for trade purposes comes at the same time as the major collection of revenue?—Very much at the same time, yes

5094 And that is unavoidable, is it not?—I am not quite certain, but I believe that the Government collect their money at this period because the crops are being sold, and there is plenty of money available, and it is a convenient time for Government to collect its revenues

5095 (*Sir Robert Chalmers*) They are mainly land revenues?—Yes, mainly land revenue.

O 19067

5096 (*Chairman*) But your desire would be that they should hold it as short a time as possible and return it into circulation through the banks as quickly as possible?—Yes May I, in connection with the previous question, point out that in the explanatory statement prepared by the India Office in February last in summarising the question of the balances it concludes that "As far as can be foreseen the balance " at the India Office on the 31st March 1913, will be " about half what it was at the corresponding date of " 1912, while there is no present probability that on " the 31st March 1914 it will exceed the amount " required as a safe working balance" (Cd 6619), the clear inference being that in previous years it has exceeded the amount which is required for a safe working balance That is the India Office's own view of the situation

5097 In connection with what you have said as to increased loans to the Presidency banks, do you think that there would be any advantage in the creation of a State or central bank?—I have seen proposals in the "Times" and other papers, but I have not yet been able to see what advantage to India on the whole would arise from the creation of a State bank

5098 Would you be afraid yourself that if one central institution took the place of these three banks the needs of the different districts served by them would get less intimate attention than in the case at present?—No, I do not know why they should

5099 As far as you are concerned you do not attach any great importance to the establishment of a central bank?—No, as far as I am able to understand the proposal which appeared in the press—of course, I do not know how far that is authoritative—it does not appear to me to hold out any advantage to India commensurate with the disadvantages and the risks and dangers.

5100 (*Chairman*) We will go now to the sale in London of Council bills and transfers I observe that you say in paragraph 2 of Part II of Appendix XXI (page 555) that "The first and only object of the " weekly sales of Council drafts was, and should remain, " the provision in London out of revenues collected " in India of the sums necessary to enable the Secretary " of State to meet India's home charges"—I think so

5101 May I take it from that that in your opinion the Secretary of State should sell the amount required to meet his own charges and nothing more?—Yes

5102 You are wholly opposed to his selling for the convenience of trade?—Altogether

5103 For what reason? I assume, in putting that question, that he sells only when it is convenient to him to do so, but in excess of his needs, and that there is a trade demand for those Council bills What is your objection to his selling them?—I think it is outside the functions of Government to undertake international finance, which is the work of a banker, that is my chief reason

5104 If he did not sell, what would happen?—As things are at present, sovereigns would have to be shipped to India.

5105 That would be more costly?—Much more costly than the past sales of the Secretary of State.

5106 Would not sovereigns which were shipped to India at one period of the year have to be shipped back to England at another period of the year?—It is possible

5107 At any rate, to a very large extent?—I do not think so

5108 You think not?—I think not. I think it is possible that some gold might need to be returned at the end of the busy season, but not necessarily

5109 (*Lord Faber*) It would depend wholly, would it not, on the balance of trade between the two countries?—Entirely

5110 (*Chairman*) But taking the conditions of trade in the past few years, is it your experience that if the Secretary of State had not sold in excess of his own needs, and the difference had been met by the shipment of gold to India most of that gold would have remained in India?—I think probably recently some of the gold would have had to have been returned.

5111 If it had to be returned, then there would be a double additional charge on Indian trade?—If the

P

10 July 1913]

The Hon MONTAGU DE P WEBB, C I E

[Continued

gold had been returned there would be a charge on Indian trade, yes

5112 (Sir Robert Chalmers) Of 10s per cent each way?—Whatever the cost might be, wherever the gold was shipped from, I do not consider that it is any part of the functions of Government to expend the public revenues in facilitating private trading by shipping gold about at the public expense. That is my view. There is no doubt that the present procedure is economical from the trader's point of view, but it is a loss to the Government.

5113 (Chairman) Under the practice which has been pursued, gold has not been shipped either way?—Gold has been shipped to and from India.

5114 There has been a certain amount of gold shipped?—Government have shipped back some gold, too.

5115 To the extent to which the Secretary of State has sold in excess of his own needs, that form of remittance has been substituted for the shipment of gold?—Yes.

5116 And to that extent, or to a proportion of that extent, the re shipment of gold has been avoided?—To some extent the re shipment of gold has been avoided.

5117 Has that cost India anything?—Yes.

5118 Will you tell me why and how?—Because every sale which the Secretary of State has made of rupees below gold import point is a direct loss to the Indian revenues.

5119 Then you hold that no gold should be sold below 1s 4½d?—Below gold import point. It fluctuates of course.

5120 When you are speaking of the gold import point are you thinking of the point at which it pays to ship gold from London?—No, not necessarily from London, it may be from Egypt or it may be from Australia.

5121 It often is cheaper, I think, to ship either from Australia or from Egypt than from London?—Yes.

5122 But in your opinion the Secretary of State ought to hold out for some fixed minimum, ought he not?—Yes, I think so.

5123 What is that fixed minimum?—I should put the fixed minimum, so far as sales on behalf of the home charges are concerned, at a shade below gold import point. Possibly on the year that would be about 1s 4½d, sometimes it would be 1s 4d and 1½ annas, that is to say, 1s 4¾d, sometimes it may even drop below 1s 4½d, it may sometimes approach 1s 4¼d, but on the whole, on the average, I should think 1s 4½d would be a reasonable fixed rate to take.

5124 You would fix the rate at such a point as would make him certain to obtain the amount that he wanted himself?—Yes.

5125 And you would never sell below that rate?—No.

5126 Would there not be great difficulty in getting at all a level point throughout the year?—I cannot see any reason for the difficulty.

5127 I take it that the demand is much greater at one period of the year than at another?—Undoubtedly.

5128 Would the greater demand come in the second period of the year?—In the second period of the official year, yes.

5129 Supposing that, finding that the demand was slack and the rates therefore low in the first part of the year, he had offered very little, could he be quite certain that he would be able to cover that in the latter portion of the year?—I think so.

5130 We come again to your original criticism, I think, that he is unduly cautious?—Very much so in this respect.

5131 In your opinion, he might take much greater risks than he does?—I think that the process of auctioning might very well be abolished, and if there were a brass plate on the door of the India Office saying that rupees are always obtainable here at 1s 4½d on any day of the week and at any time, that would meet the case probably. Of course there are practical difficulties. The Treasury balances in India would have to be sufficient to permit of the sale of rupees in this way, but it seems to me that there is no reason why the rupees should be auctioned, or why they should not be available at all times at a fixed rate.

5132 Is not the auction a way of obtaining the best price possible?—Yes.

5133 And is it not the best way?—Not at present, because the present auctions are conducted on an incorrect minimum. They are being sold at present, for example, below 1s 4d, which in my opinion is merely throwing money away.

5134 Supposing the Secretary refused to sell until he got a higher figure, he would not sell at all, would he?—I think he probably would.

5135 You think he is so far in the position of a monopolist that he can practically fix his own price within the limits which you have named?—Yes, I feel quite certain of that.

5136 Your criticism rests upon that assumption, that he really commands the market, and can make his own price?—Yes.

5137 (Mr Gillan) May I ask what you think would happen in a famine year?—I think that portions of the Treasury balances and of the Gold Standard Reserve would be shipped home in sovereigns.

5138 There would be no drawing of Council bills?—Possibly not. You would ship home probably some of the revenue collections in the form of sovereigns.

5139 (Chairman) Have you considered what effect the fixing of a rigid rate of that kind might have on the balance of trade?—I do not think it would have any effect at all.

5140 You do not think that the course of trade is affected by the rates at which these transfers can be obtained?—Not on the whole. They may produce temporary fluctuations, but on the whole, taking the year's trade as a whole, I do not think it has the slightest effect whether you make it 1s 3½d, 1s 4d, or 1s 4½d.

5141 To what length do you carry that? Supposing instead of 1s 4d the Secretary of State said, "I will not sell below 1s 6d," what then?—I think he would get 1s 6d.

5142 Could he get 2s?—I think so.

5143 Practically, in your opinion, the Secretary of State can fix the rupee at any value he likes, and can enforce it on the market?—Any reasonable figure. You cannot carry it to an absurdity.

5144 (Lord Faber) He could not carry it to a price at which you could ship gold?—Under the existing legislation by which the sovereign is legal tender for 15 rupees he could not at present sell it at higher than 1s 4½d, because, according to the present legislation, sovereigns are legal tender for the equivalent of 15 rupees. That would, of course, need to be altered, and the sovereign would have to be legal tender for 10 rupees if it were contemplated to force the rupee up to 2s.

5145 (Chairman) But apart from that, you think he could force the rupee to any price he liked by merely refusing to sell it at a lower price?—Yes, any reasonable price.

5146 How does the experience of 1893 bear that out? I put it to you that in 1893, when the mints were closed, the Secretary of State was urged to sell no Council bills cheaper than 1s 4d?—Yes.

5147 His experience was that sales at that price were impracticable, but for six months he refused to sell at lower than 1s 3½d. The maintenance for a time of this minimum converted the normally favourable balance of trade into an unfavourable one?—Temporarily.

5148 At 1s 3½d the Secretary of State could only sell trivial amounts of bills?—That is so, the reason being that the Secretary of State flooded India with tons of silver rupees at the time when the mints were closed, and consequently there were more rupees available than anybody wanted, and the Secretary of State had to wait for several months before any demand for more rupees arose.

5149 Meanwhile he had to borrow nine millions to make good the shortage in his receipts in this country?—Yes.

5150 Then he resumed the sales, but at a lower price?—Yes.

5151 You think there is no lesson to be learnt from that except the fact that too many rupees had been coined immediately before the closing of the mints?—Yes.

10 July 1913]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued

5152 (*Sr Robert Chalmers*) What did the exchange go to later on? Was it 1s 0½d?—It dropped in those days before the closing of the mints.

5153 No, I mean after 1893. It was about 1s 0½d, was it not?—A shade below 1s 1d, as my memory serves me.

5154 That was some time after the closing of the mints in 1893, when there was nothing special in the way of extra additions to the currency?—The year that exchange fell below 1s 1d was, I think, about 1894, but I am not quite certain.

5155 (*Chairman*) Assuming that the Secretary of State adopted the policy which you suggest, the effect would be very largely to increase the shipments of gold to India?—Yes.

5156 What do you think would happen to the gold when it got there?—I think as the years went on more and more of it would pass into circulation and be used exactly as gold is used in every other country.

5157 That would be a gradual process?—Yes, a gradual process.

5158 In the meantime what would happen to the gold? I suggested to you that the major portion of it would have to be shipped back, but I think you do not agree with that?—Some of it might have to be shipped back, yes. It would depend on the balance of trade.

5159 And the rest, until gold largely increased in circulation, would be where, would it be in hoards, or would it be returned into Government treasuries, or what?—I think at first it would probably accumulate in the Paper Currency Reserve, and a certain proportion no doubt would be hoarded. I think the hoarding would diminish year by year.

5160 In subsection (b) of paragraph 5 of Part II of Appendix XXI (page 556) you say "As soon as a sum equivalent to the total of the home charges had been realised, not another rupee should have been put up for auction until the proportion of sovereigns in the Indian currency had exceeded public requirements." What exactly do you mean by that? Do you mean until the Paper Currency Reserve was overloaded with sovereigns and insufficiently supplied with rupees to meet possible demands?—Yes.

5161 Has there not been rather more than enough gold in the treasuries and Paper Currency Reserve in India of late?—The rupee portion of the Paper Currency Reserve sunk to a low figure last year.

5162 Then take the reserve treasuries in India. On March 31 last there was nearly 20 millions of gold?—Yes, I believe there was.

5163 Would you consider that when 20 millions of gold had been reached the public requirement was exceeded?—No, not necessarily.

5164 Have you any measure which you could indicate to us of what figure the public does require?—I think the measure is the demands of the banks who are financing trade. There have been several occasions, I think, when the supply of rupees has run short, especially in Bengal, and when the banking community were calling out for more rupees. When that stage is reached it is evident that rupees are in demand.

5165 That stage never ought actually to be reached. The Government of India ought to foresee the difficulty before it arises and always have rupees enough?—Yes, I think so.

5166 They must act in prevision of such a demand and not merely coin rupees after it is found that they cannot supply them?—Yes, I think so, although I believe the usual practice in this country is for the banks to make demands for token coinage, and when the banks make demand then the mint authorities coin the small change and issue it. In the same way, when the banks make demands for rupees in India then the Government might issue rupees.

5167 The position is not quite the same in India?—Not quite the same.

5168 Because you do not have an institution like the Bank of England?—It is not quite the same, but it is very much the same.

5169 When there is as much as 19 millions of gold in the reserves in India and in the treasuries is not your condition met that the proportion of sover-

eigns in the Indian currency has exceeded public requirements?—Not necessarily. There is no reason why the entire Gold Standard Reserve should not be held in sovereigns, and very nearly the whole of the Paper Currency Reserve held in sovereigns, and nearly the whole of the balance in the Government treasuries held in sovereigns, there is no reason why the entire currency should not be sovereigns.

5170 We are talking of the public requirements for sovereigns?—Yes.

5171 I am not now talking of the Gold Standard Reserve or the Paper Currency Reserve, but if the number of sovereigns or the amount of gold in the Treasury stands at a very high figure, is not that because the public has paid in sovereigns and not drawn them out?—Not necessarily. It may indicate that the public are using sovereigns as currency and that Government revenue is collected in sovereigns, and that the trade of the country is carried on by means of sovereigns. It does not necessarily mean that there are too many sovereigns, or that the proportion of sovereigns in the currency is unduly large, it does not necessarily mean that.

5172 What do you mean by saying that the Government should sell no more bills until the proportion of sovereigns in the Indian currency has exceeded public requirements?—I mean until the banks and the public are demanding more rupees.

5173 Until the Government are unable to supply the demand for rupees?—Yes.

5174 And short of that point arising you would go on accumulating gold?—Yes. May I correct paragraph 5, sub clause (c), of Part II of Appendix XXI (page 556)? The last portion of the paragraph reads "but not at a lower rate than specie point for gold imports—then 1s 4½d." I should like to make it read "then about 1s 4½d." because, of course, the gold point was not a fixture, and I do not mean to imply that that figure indicates a fixed figure. It is an approximate figure.

5175. I am coming now to your conclusions in this section, paragraph 7. You say that it is only by the means which you have proposed that the India Office's noxious interference with the foreign exchanges, imports of gold, local discounts and general price levels can be checked. As regards foreign exchanges, the object of the Government of India, I suppose you would agree, has been to maintain the exchange at a stable point, as stable as they could?—Up to a certain point, yes. This policy has not been carried sufficiently far.

5176 Then your objection is not to the object, but you say that they have not carried out the object out effectively?—They have not carried it out to its conclusion, that is to say, they have not secured the highest obtainable rate for the rupees which they are selling.

5177 Is it your opinion that it is India's interest to have a stable exchange?—Yes.

5178 Has that been secured by the system which has been adopted?—Speaking generally, yes.

5179 Could it have been secured in any other way except by large gold imports?—I do not quite follow.

5180 Suppose the Secretary of State had not sold Council drafts to the extent to which he has, the exchange would only have been maintained by the export of gold?—Yes, and always at gold point. We should not have had exchange down below 1s 4d or at 1s 4½d; we should have had exchange regularly and steadily in the neighbourhood of 1s 4½d.

5181 And that, I think you have already said to me, would be more costly to the Indian trade than the present system?—No, not costly to Indian trade as a whole.

5182 But more costly to the people who had to make the remittances?—It would be temporarily to those people who are interested in the import trade of India an advantage to get as high a rate of exchange as they could, but it is only a temporary advantage. It is not a permanent advantage. It is an advantage from day to day and week to week. If I am a Manchester importer, for example, it is an advantage to me week by week to get as high a rate of exchange as I can, and if I am an exporter of produce from India then it is an advantage to me week by week to get as low a rate of exchange as I can, but that is not a

10 July 1913]

The Hon MONTAGU DE P WEBB, C LE

[Continued

permanent advantage or a permanent loss to India. It is only a temporary matter from week to week or from month to month.

5183 On the general balance the advantage of the community is to have a stable exchange?—Yes, a stable exchange. I do not think it makes any difference to India whether it is stable at 1s 3d, 1s 3½d, 1s 4d, or 1s 4½d, so long as there is a fixed exchange.

5184 You have said quite clearly, and very reasonably from one point of view, that you do not think it is the business of the Government to be managing the foreign exchange?—Not at all, it is most objectionable.

5185 Do you, apart from that, make any criticism of the action of the Secretary of State? I think you do, but I want to get it quite clearly?—In regard to the sale of Council drafts?

5186 Yes?—My only objection in this connection is that the Secretary of State is making a rate of exchange.

5187 And that he is not making it as good for himself as he might?—That is exactly the case.\*

5188 (Lord Faber) I only want to ask you a very few questions. We have heard a good deal about the big balances at home, and, granted that they are too big, I suppose you think that that is more a question of expediency than a question of principle? It depends, in fact, upon the failure of the monsoon, or two monsoons running, or upon the inability of the Government to pay for material for railways which had been contracted for but which had not been delivered, and, therefore, the balance has swelled in that way. You would agree that it is more a question of expediency and not of principle, it is not a big question in itself?—I am not quite sure whether I

## NOTE BY MR WEBB

\* The following extracts from the press in India with regard to the Secretary of State's sale of India (Office) Council bills on the 12th February 1913 speak for themselves—

1 "As was to be expected, in view of the happenings in the local money market, there was on Wednesday a slack demand for Councils, with a consequent decline in the minimum rate, at which these were let go, to 1s 4d for bills, and 1s 4½d for telegraphic transfers, tenderers at these rates receiving seven per cent of their requirements. The total taken in bills was Rs 15,10,000, and in T T Rs 84,90,000 and Rs 100 lakhs will be again on offer next week. The two matters for comment in this allotment are the heavy proportion of T T, Calcutta alone taking Rs 44½ lakhs in view of the comparative surplus of money here, and the fact that the Secretary of State continues to keep his offerings at Rs 100 lakhs, in view of the diminishing rate."—Calcutta commercial correspondent in the "Pioneer" of 17 February 1913.

2 "The Secretary of State has sold 100 lakhs at the periodical bidding on Wednesday of which 85 lakhs were allotted in telegraphic transfers. The India Office has accepted one thirty-second less and has not reduced the amount of Council bills, which seems to cause some irritation among Exchange banks."—"Times of India" (Bombay), 15th February 1913.

The probable explanation of the Secretary of State's action in thus artificially depressing exchange, is given in the following letter of the 13th February 1913, to the "Sind Gazette" (Karachi)—

3 "May I point out to your readers that the Secretary of State for India has now stopped the further importation of sovereigns into India by the simple expedient of artificially forcing down exchange. Yesterday the India Office sold 15 lakhs of rupees deliverable in Calcutta at 1s 4d each. Of course, nobody can afford to import into India sovereigns which will only command Rs 15 each in India, when, by giving those sovereigns to the Secretary of State for India in London, fifteen rupees can be obtained from the Treasury at Calcutta or Bombay or Madras."

The Secretary of State has not the slightest need for these extra sovereigns in London. Indeed he holds over 90,000,000 of India's money there already. But by this simple device of selling legal tender rupee tokens at below gold import point, he prevents India from receiving in gold the sums that are due to her in payment of the balance of trade in her favour.

Here we have yet another example of how the India Office manipulates India's exchange and currency, not—let it be carefully noted—for the benefit of India, but solely for the benefit of a section of the London money market.

It is exactly the same trick that used to be played centuries ago to prevent this or that country from getting the precious metal. That the India Office should, in this twentieth century, stoop to a repetition of the practices of the Middle Ages in this connection is a striking comment upon the way in which modern London thinks it is able to govern modern India. The India Office is making a sad mistake.

follow the drift of the question. My view is that there ought to be no big balances, but if there are big balances they ought to be used in India and not in England, they ought to be used first in India rather than in England. If by unavoidable circumstances large balances are accumulated in England, then they must, of course, be used in the best possible way. In those particular instances I do not think that those balances have been even used in the best possible way, because they have been used for short period loans rather than for long period loans.

5189 Would you change the date of the budget? It would enable the Chancellor of the Exchequer in India, so to speak, to budget nearer the mark if the budget was made after the monsoon?—I do not think so. I think the monsoon has got to come into every year, whether it comes early or comes late.

5190 Yes, but in one case, as I understand it—I may be wrong—you budget before the monsoon, and in the other you budget after?—The object of the budget is always to prepare a statement for the year to follow. It is an estimate of your financial arrangements for the year to come, and, whether you make that forward estimate in the month of March or in the month of September, in either case you would have the monsoon coming into the 12 months, and it would be equally uncertain, because you would be calculating for the coming monsoon of the next year.

5191 (Chairman) If your financial year began on October 1, would not the Finance Department know much more of the prospects of the year than when it began on April 1?—They would know no more about the year to come, but they would have a very much better idea of the year which had just passed.

5192 But would not they have of the year to come? Would not they by the month of October know what the results of the one monsoon had been, which was the more important one?—Yes, in that respect they would know what closing balance they would be likely to have.

5193 (Lord Faber) They would know whether India was likely to be prosperous in the coming year owing to a good monsoon having passed?—Yes.

5194 Are you aware, touching the question of the big balances again, that for the first time for a good many years certainly India is not raising this year any loans at all? They are going to take it out of the budget balances.—I am very glad to hear it.

5195 As you know, they borrow generally four or five millions a year at home?—Yes.

5196 They have not done so this year, it is coming out of the balances, or, at least, so we are informed?—That is a policy which I think should have been adopted some time ago.

5197 Do you think that if the Secretary of State in London lent for longer than five weeks, say for three months, he would get materially better terms, bearing in mind the great factor that the Secretary of State only lends on very first-class floaters in London? What I mean is this. Given that the Secretary of State wants this particular kind of security, would he ever be able to get much better rates than he does now for three or five weeks' money? Is it not rather the class of security that makes the loan so difficult to put out?—I think a long period loan must of necessity command a better rate than a three weeks' loan, no matter what the security is. It stands to reason that you can make better use of money which is in your hands for three months than you can of money which is in your hands for three weeks. How much greater the advantage would be is a matter which I am not sufficiently expert to give an opinion on, but you would get an advantage undoubtedly.

5198 At the moment, as the Chairman says to me, perhaps you would pay more for the three weeks' loan than you would for the three months' loan?—That is possible.

5199 Taking it for granted that part of the big balance should be lent in India, would you tell us what your own mind is about the possibility of lending it—on security, of course? I think you perhaps agree that security should be demanded in all cases, if not, I should like to hear your reasons for not demanding it, but, granting that, do you think you could lend out

10 July 1913]

The Hon. MONTAGU DE P. WEBB, C. I. E.

[Continued]

these big balances which are sometimes lent out on behalf of India in this big market of London?—I do not think it could be done with the same ease with which it can be done in this country, but, bearing in mind that my view is that the large balances ought not to exist, I think there would be no difficulty in disposing of the small balances which might be accumulated in the Government treasuries.

5200 Do you think that when the Indian Government is lending out money in India they should lend by tender? It is rather a good principle, is it not?—I should think so. I think it is a good principle, yes.

5201 One more question which interests me very much, the exchange question. I gather that you only want the Government to sell enough bills to give them the money which they require for home charges?—Yes.

5202 You do not want them after that to interfere in the trade of India at all, you want the trade balance between the two countries to be regulated by gold exported or imported as the balance of trade may demand?—Yes.

5203 As, in fact, is done now between other civilised countries, such as America and England, and England and Paris?—Yes.

5204 (*Su Robert Chalmers*) As to a State bank, do you think there is any organic demand for a State bank in India?—No.

5205 One other question on a matter which was touched on in your examination-in-chief, and that is the paper currency. I am referring to paragraph 12 of Part I of Appendix XXI (page 553). Do you really contemplate enlarging the paper currency without either metal or securities behind the additional notes?—No.

5206 What do you propose to do?—With regard to the paper currency, to continue as at present.

5207 In answer to the Chairman, I gathered that you said that in time of stringency or difficulty you would set the printing press to work and you would print notes, putting into the reserve neither securities nor metal?—In periods of grave national emergency, yes.

5208 You would?—In periods of grave national emergency.

5209 But that paragraph of your memorandum on the subject of paper currency proposes that you should have your normal balances reduced to your 10 millions in view of the fact that you have got a certain reserve in hand for paper currency?—Yes.

5210 Is that reserve, in whatever form it is held behind the notes, too big, in your judgment?—The metallic proportion of the reserve?

5211 Metallic or securities. I am not entering into the proportion, but do you think that the total reserve is too big at present?—Not at all. The total reserve is exactly the same as the amount of the note issue.

5212 You would be prepared, then, to reduce that, and to reduce your Treasury balances, because you could draw away from behind the notes something, metal or securities, which is there?—In case of emergency, yes.

5213 But you would be doing that on a normal basis, would you not, according to that paragraph, you would be calculating on normal circumstances and reducing your Treasury balances?—Yes.

5214 Do you think that is quite sound and safe?—For the Government of India, yes.

5215 You would, therefore, *ex hypothesi*, be reducing the security behind the notes as they stand to day?—Yes.

5216 And you would be doing that in normal times?—Yes.

5217 Coming to paragraph 3 of Part I of Appendix XXI (page 550), would you be so good as to turn to the figures which Mr. Abrahams put in, of which you have a copy, I think. It is Appendix No. II. Will you look at page 81 of that?—That is Statement E.

5218 That is the one. Do you see the totals for the four years in the last column but one, that is what I am going to ask you questions on?—Yes.

5219 You point out that nearly 20 millions more than was actually necessary in four years has been

collected, and you put that down to heavy taxation?—Yes.

5220 Is that quite supported by that page in the returns at which you are looking? Under the heading of "Net Revenue" you will see that the third item is "Taxation," which accounts for just over two millions of the 20 millions for the four years?—Yes.

5221 Therefore, strictly speaking, the taxation has resulted only in two millions of the total amount of 20 millions to which you referred in that paragraph of your memorandum, that is so, is it not?—Yes, that would appear to be so.

5222 And the great factors in making up the 20 millions are "Opium, 7,310,457l.", and "Commercial undertakings (including railways)," which is over 7½ million pounds?—Yes.

5223 Those big items are not taxation, there is an amount of about 15 millions out of the 20 millions that does not come from taxation?—Yes.

5224 Who do you think paid the extra amount on the opium, amounting to 7,310,457l.? Did the ryot or the inhabitants of India pay it?—Yes.

5225 Do you think so?—Yes.

5226 Do you think the incidence was on anybody in India?—No, not the ultimate incidence.

5227 Is it not a question of price? Was it not paid for by the Chinaman?—Yes.

5228 So that that was not a burden on the people of India?—No.

5229 Taking the commercial undertakings, including railways, which resulted in an excess amounting to 7½ millions, that is mainly railways, as I think we quite agree?—Yes.

5230 How would that result? Is not that mainly between the ports—the produce going out and imports coming in?—Goods traffic and passenger traffic. The passenger traffic was a very large proportion, in fact it is the major proportion, of the Indian revenue from railways.

5231 You would put this down to passengers and not to goods, would you?—No, it is probably, in the main, goods, I should think.

5232 It would be, in fact, prosperous trade in and out?—Yes, I should think so.

5233 Therefore, would you quite hold that the 20 millions represents over-taxation of India, if you look at it in detailed examination, even to this extent?—No, it would appear that the whole of the 20 millions is not altogether over-taxation.

5234 That is all I meant?—A large proportion of it is not over-taxation, it is revenue collected in excess of expenditure. That is how it is described in my note, "Revenue collected in excess of actual expenditure." Those are the words.

5235 The excess of expenditure arose not specifically from what is called taxation?—Only a proportion of it.

5236 And that proportion about 10 per cent of your 20 millions?—A small proportion, yes.

5237 Will you turn to Appendix II, Statement B, on pages 74-5?—Yes.

5238 Taking the total closing balance in the Budget for 1913-4, that stands at 16,639,100l., does it not?—Yes.

5239 That is a reduction from the actual closing balance of 1912-3 of about 11 millions?—Yes.

5240 Similarly, going back a year further, there is a reduction from 30,669,702l. to 19,589,871l.?—Yes.

5241 And in the year before a reduction from 30 million pounds odd to about 21½ millions?—Yes.

5242 And in the first of the three or four years you have taken there is a reduction from 25,074,522l. to 17,735,242l.?—Yes.

5243. Those figures indicate a very definite desire on the part of the Government of India to reduce their balances—to use their balances in some form or other. They have actually reduced their balances by very substantial amounts throughout the period of four years, is not that so?—It appears, as far as I am able to see by the figures, that each year the Government have estimated a smaller balance, but actually they collected a much larger one.

5244 I quite agree, but having collected the still larger one, they sought with great anxiety always in

10 July 1913]

The Hon MONTAGU DE P WEBB, C I E

[Continued

the next year to reduce their balances and not to keep them so high as they have grown to be, as a matter of fact?—So the figures seem to indicate

5245 What use do you suppose they have made of those sums which they took out of their (as you say) inflated balances? What use did they actually make of these moneys? May I suggest the answer? Will you turn to Statement A in Appendix II, page 72, which deals with the receipts, disbursements, and balances for the year 1912-3. If you will look under the head of "B Receipts," you will observe "Loans issued, 5,000,000," that is item 3?—Yes

5246 Now will you look under "C disbursements." You will see the item "Capital outlay on railways, irrigation works, and Delhi"—Yes

5247 That is over 11½ millions, is it not?—Yes

5248 The next item is called "Discharge of debt," and it is 6½ millions?—Yes

5249 Adding those two items 9 and 10 together, they amount to 13 millions?—Yes

5250 That is capital outlay in discharge of debt. We began with the figure "loans issued," which is five millions, consequently, there was 13 millions that had been expended which had possibly, would you say, come out of balances?—It appears on the face of it that nearly 12 million pounds was expended in 1912-3 on railways, irrigation works, Delhi, and discharge of debt

5251 Over and above the amount of loans issued?—Yes

5252 Now turning back to the page before, page 71, for the year 1911-2, we have a similar sum net over and above the loans issued, amounting to about eight millions. I arrive at that like this. Do you see item 3 "Loans issued, 4,188,400."?—Yes

5253 Then I come down to items 9 and 10, and I add those together, and make them about 12 million pounds, which makes a difference of about 8 million pounds?—Yes, so it appears

5254 For the year 1910-1 you find a similar balance of about seven millions, you can take that from me. For the purposes of that question I take items 3 and 8a together?—That is six million pounds odd of loans, and about 13 million pounds of expenditure

5255 That leaves about seven millions, that would show that there has been great expenditure, and that the expenditure must have come from some place other than revenue or capital?—Yes

5256 And the expenditure with which we have been dealing is net over and above the loans issued?—Yes

5257 In a previous question I drew attention to the steady amount by which the (as you would say) inflated balances had been reduced?—Yes

5258 They have in fact been applied to capital purposes or the discharge of debt?—Some portions, yes

5259 To the extent which we have mentioned?—Yes, apparently

5260 And that sort of purpose is one that commands your approval?—Yes, certainly

5261 Coming to Part II of your memorandum (page 554), is the Government of India in the ultimate analysis in a different position from any individual who has money to get?—No

5262 What does an ordinary individual do having to remit money from India to England? Does he stand out for 1s 4½d?—Do you mean an ordinary individual?

5263 Yes?—It is no use standing out for it, because the Secretary of State undersells him every time. There is no reason why he should not get 1s 4½d except for the Secretary of State

5264 You think that the Secretary of State is in such a very strong position as to be able to dominate everything?—I do

5265 Is the exchange of India essentially on a different footing from, we will say, the exchange between London and Paris?—No

5266 Dealing with France, taking the par of exchange which we have agreed to be equal to 25 francs 22 centimes, do you think that an individual or a big corporation should always stand out for something over that parity?—No. The circumstances are not the same, though, because as a rule the balance of

trade is very much in India's favour, and consequently India, as a rule, has large sums which have to be remitted to India. As things stand at present there is no way of remitting those sums except by either shipping gold or purchasing the Secretary of State's Council drafts. If you ship gold, the exchange stands at 1s 4½d or 1s 4¼d, and there it would nearly always remain were it not that the Secretary of State comes in and sells rupees at 1s 3¼d for no reason whatever

5267 Have you any support in any country of the world that you can point to for your departure from the general doctrine of exchange?—To what doctrine do you refer?

5268 The doctrine that you should be prepared to get your money across at your own time within specie point, that is the general doctrine. Why should India depart from it?—There is no reason why India should depart from it. If India were worked at specie point the public would have to effect their remittances at specie point

5269 What do you mean by specie point? Do you mean a bit below and a bit above 1s 4d?—By specie point I mean the point equivalent to the cost of importing sovereigns into India. That is what I call specie point

5270 That would answer to 25 francs 33 centimes in Paris?—Possibly

5271 Would you say that a person similarly positioned, dealing in that exchange, should refuse to deal except at 25 francs 33 centimes?—No, because I do not know that the balance of trade is regularly largely in favour of Paris as between London and Paris, but in the case of India the balance of trade is largely, as a rule, in favour of India. It is largely in the one direction in the case of India, and therefore exchange generally, without the interference of the Secretary of State, would always remain in the neighbourhood of 1s 4½d until such time as a change occurred and the balance of trade was turned in the opposite direction

5272 Would you expect to be able to get the rate that you favour at all seasons in the year?—Yes

5273 That is your belief?—Yes

5274 (Chairman) You mean whatever amounts the Secretary of State might require at any season of the year?—Yes

5275 (Sir Ernest Cable) Throughout your evidence you evidently have been in favour of budgeting more closely?—Yes

5276 That would involve, would it not, more borrowing by the Government of India for reproductive public works. He would have to borrow more?—As compared with the recent procedure, yes

5277 With reference to that, do you think they could borrow more in India than they do now?—Yes

5278 At the present rate of interest?—Yes, I think so

5279 You would not think it necessary that they should increase the interest?—I do not think so. I think there is more capital available in India than is popularly supposed

5280 And you think it would come out in larger quantities if required?—I think so, especially if the rupee paper could be used as security for advances from the Government in times of heavy trade pressure. If holders of rupee paper could always utilise that paper to obtain loans from the Government in the busy season of the year I think there would be greater scope and greater demand for rupee paper than there is at present

5281 In your evidence regarding lending out the Government balances you advocated lending not only to the Presidency banks and the exchange banks, but also to firms?—Yes

5282 Of course, there are first class firms and second class firms. You would not suggest lending to any firm?—Oh dear, no, certainly not

5283 Would it not be rather an invidious task for the Government to discriminate between firms?—It is a task that the India Office seems to have carried out most successfully. There are 72 favoured borrowers on the India Office list in the City of London, and I do

10 July 1918 ]

The Hon. MONTAGU DE P. WEBB, C. I. E.

[Continued

not know why there should not be 72 favoured borrowers on the Government of India list in India. I think I could make a larger list than 72.

5284 Then you went on to say that you thought there would be very large opportunities in India for utilising this capital. Do you wish to include in the purposes for which this capital is to be used, expenditure on local industrial enterprises, or merely on financing crops?—Mainly I have in my mind the financing of crops.

5285 You would not suggest that the money borrowed from Government should be utilised for other enterprise?—Not in private enterprises, no. There are many occasions when improvement trusts and port trusts and municipalities require large sums of money which the Government might place at their disposal if they felt that it was beneficial.

5286 I gathered that you were rather against a State bank?—I am unable to find that the advantages outweigh the disadvantages to India.

5287 I was only going to ask you whether any State bank, which would be looked upon by the masses as a Government bank, would not have the effect on the populace of bringing out hoards on deposit?—It might conceivably do so, yes.

5288 That was one of the things that occurred to me?—The public have an opportunity now of taking advantage of the Post Office Savings Bank in India, and I think the figures show that the Post Office Savings Bank is being used more and more every year. I recognise that it is an argument in favour of the State Bank that it might help to attract deposits from nervous depositors, that is an argument in favour of a State bank, and a sound argument, I think.

5289 (Mr. Gladstone) I gather that you do not think that there would be very extensive opportunities of lending money in India, but that if the Government balances were considerably reduced the sums which would be available would be very moderate?—Yes.

5290 And such as the market would take?—Yes.

5291 With regard to your suggestion that loans should not be limited to the Presidency Banks, we have had it in evidence from the Exchange Banks that they would prefer that the loans should be limited to the Presidency Banks. They would not care to take the loans themselves?—That is a matter in which the Exchange Banks know their business better than I do.

5292 We have had that in evidence. Then if the Government are to look to private individuals to take these loans, would it not be very advisable for them from time to time to issue a moderate amount of short fixed term bearer bonds which would be convenient security with the smallest possible fluctuation?—Yes, I think such an issue might be very useful.

5293 That would be a security which would be popular with private individuals, and which they would be willing to hold throughout the year, and to utilise for loans in exceptional cases?—Yes, I think that would be very useful.

5294 There is obviously an objection to holding rupee paper, which may be expected to fluctuate with market conditions, not, perhaps, to the same extent as Consols do here, but in a smaller way?—Yes, I think such an issue would be very useful.

5295 With reference to paragraph 15 of Part I of Appendix XXI (page 554), sub-paragraphs (a) and (b), have you considered the system followed in regard to the purchase of stores at the India Office for railways and other things?—I know the system, I have some knowledge of the system.

5296 A very large amount of money is involved?—Yes.

5297 And this has to be taken into account in fixing the amount of the balances in London?—Yes.

5298 If railway and other Government stores were purchased and paid for in India, the amount of the Home Government balances might be *pro tanto* reduced?—Yes.

5299 You see no objections to this course being followed?—If for many years the India Office was able to work with a balance of four millions I see no reason why they should not still be able to work with a similar balance, and not require 15 or 18 millions.

5300 My point is that if they had not to purchase those large amounts of railway and other stores and pay for them, that would be put upon the Government of India, who would pay in India in rupees, and to that extent, of course, the balances here might be reduced?—Yes, certainly.

5301 Which policy, I understand, you favour?—Yes, certainly.

5302 I understand your view is that there is no reason why the Secretary of State should do for the Indian trade by excess sales of Council bills what no other Government does for traders?—Quite so.

5303 But is there any other country in the same position as India and England?—Not exactly, no.

5304 Is it your view that the movement of the crops might be left to banks and to traders just the same as it is in the Argentine and Egypt?—Yes, I think so.

5305 But do you think it is possible for the Government to avoid the great responsibility which they now carry in regard to maintaining the Gold Standard Reserve and other matters? Is it possible for them to leave that entirely to what I may call private enterprise?—I think that as soon as a little more gold has flowed into India there will be no necessity for the Government to have anything to do with it. I think the gold standard will be maintained in exactly the same way as it is maintained in every other country, without Government assistance at all. I think that as soon as there is a little more gold in the country there will be no necessity for a Gold Standard Reserve or for anybody to think or trouble or worry about exchange—not the slightest. There will be sufficient gold in the country to provide for export whenever the trade balance turns against India, and in that case there is nothing whatever for the Government to worry about as to foreign exchange or maintaining even the standard.

5306 But during the interval during which that happy state of things is being brought to pass, Government must maintain their responsibility and control?—Yes, I think so.

5307 Therefore, you do not really think that the conditions are the same as in Canada, for instance?—Not yet.

5308 You hope they may be?—They will be, I feel sure, in a very few years. My own view is that they would have been so 10 years ago had it not been that the gold standard policy has not been carried out.

There was a Committee which sat in 1895 which reported exactly what should have been done. Had the Fowler Committee's policy been carried out there and then on the spot, the gold currency and standard might have been effectively established many years ago. That is my view.

5309 I think with regard to the balances your view is that a total of 10 millions as a minimum balance is sufficient, of which seven millions should be held in India and three millions in London?—I said so.

5310 And I think you said you based those figures upon some actual returns for a particular year which you would let us have?—Yes.

5311 I believe Sir James Westland—I suppose it is 15 or 20 years ago—fixed upon 8 crores as the minimum balance in India?—I do not know.

5312 That, of course, has not been worked to, because it is said, and truly, that India has developed enormously, the number of treasures has greatly increased, and the trade of the country, and so on, and therefore that is a figure that has been treated as obsolete. You do not hold that view?—I do not know at all. I did not know that that figure had been fixed on or discussed at all. I was not aware of that fact.

5313 Do you think that in the management of treasures, sub-treasures, and district treasures the Government do not take sufficiently into account the modern improvements in railway facilities and telegrams, and so on?—I have not gathered any impression that the treasures are badly managed.

5314 But I gather that your view is that the balances are too large?—Yes, it is very much easier now by means of telegrams and railways to shift money from treasury to treasury than it was fifty years ago.

10 July 1913 ]

The Hon MONTAGU DE P WEBB, C I E

[Continued

5315 You have not yourself made any careful examination of those treasures—the daily transactions and the maximum and minimum balances which they hold?—Not any further than is revealed in the Paper Currency Reports, which I have frequently read and studied

The witness withdrew

At the India Office, Whitehall, S.W.

THIRTEENTH DAY.

Friday, 11th July 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURJI BUEJORJI BROACHA

Sir JAMES BEEBIE  
Mr ROBERT WOODBURN GILLAN, C S I  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (*Secretary*)

The Hon MONTAGU DE P WEBB, C I E, recalled and further examined

5316 (*Sir Shapurji Broacha*) The recommendations of the Indian Currency Committee made 14 years ago, which were accepted by the Secretary of State and the Government of India in 1899, should now, you consider, be carried out in their entirety?—Yes

5317 I think you have changed your opinions very much in the last 14 years?—Yes, very much

5318 Do you wish that the recommendations of the Fowler Committee should be treated as sacrosanct in 1913, although that is not what you thought in 1898?—I have changed my opinion since 1898, for very good reasons I may add

5319 The members of that Committee were human like yourself, should we not therefore now be guided by the light of experience? That was the greatest experiment of all ages, and we have stumbled badly in many places, but we have now the light of experience in other countries, and we have the experience of what has happened in India. May we not, therefore, suppose that it is necessary to have a change in some respects?—Certainly, if it is proved necessary

5320 Then, of course, the report of the Fowler Committee is not sacrosanct?—In my opinion the recommendations are sound

5321 The Committee was composed of human beings like yourself?—In my opinion, events have proved that the recommendations of the Committee were sound and correct

5322 They are sound in your opinion now?—Yes, because the production of gold has, since that period, so very enormously increased. That is why I have changed my opinion

5323 You say in the four years, 1910, 1911, 1912 and 1913, there has been an excess of 20 millions over the budget estimates, is that not so?—Yes there has been an excess of revenue collected of 20 millions

5324 You said that though you heard Sir Robert Chalmers state that of that amount about 14 millions were non recurring windfalls, and after knowing that not only will one of the windfalls, opium, as a wind fall wholly disappear, but even any revenue from opium is likely to disappear, as I presume you will admit?—It looks like it

5325 Should you not therefore deduct the 14 millions from the 20 millions, thus leaving only six millions of excess revenue?—I cannot say from memory how much of the 20 millions represents collections from opium sales

5326 Do you think a million and a half of excess revenue per year in a progressive country of 320 million inhabitants who are increasing in prosperity by leaps and bounds is a great excess?—No

5327 I think it means a very closely made budget, for which whoever made it deserves great credit?—In spite of the warnings of the time about the opium revenue? I think at the time the extra silver taxation, &c., was put on, it was pointed out very clearly to the Government of India that the opium revenue would increase in the immediate future and not diminish

5328 You speak about the silver taxation, but I think that has been a blessing in disguise, because it has raised the accumulations by 11 per cent?—I cannot speak to the percentage from memory

5329 It has enriched the Indian people to that extent?—I do not regard the extraction of taxation in order to accumulate money in the Government treasuries as a way of enriching the people

5330 You say that India has for some years been unnecessarily heavily taxed, and that the budgets have not been framed to correct this over-taxation. Is not India the lightest taxed country in the world? Could you name a country that is more lightly taxed than India is at present?—It depends on the way in which the problem is regarded

5331 What it depends on is the income of the country, is it not?—If the taxation is regarded in reference to individual incomes, I should think India was heavily taxed, but if the amount of revenue extracted from a country of that size is only taken into consideration, then the country is lightly taxed

5332 Japan resembles us in wages and Japan, of course, is not a very rich country. The taxation in Japan per head is 17 rupees, and the taxation per head in India is 3½ rupees, what do you say to that?—I am not surprised, in view of the recent Russo Japanese war

5333 Then why should you say that India is heavily taxed? It is not a heavily taxed country at all. Take, for instance, the taxation in Egypt, which you might call a poor country, there it is 21 rupees per head. In Turkey even it is 14 rupees per head. You have asserted that more money had been collected in India than was necessary?—That was necessary for the purpose of meeting expenditure

5334 Yet India has a fifth of the taxation of Japan, a fourth of the taxation of Turkey, and a sixth of the taxation of Egypt, per head of population, do you accept those figures?—I think it is quite possible

5335 I think you must confess that there is not a country so lightly taxed as India is, if you do not admit it, show me one. You are a public writer, and you know Indians have taken up your cries, and I want you to prove that cry that India, compared with any other country in the world, is heavily taxed?—I do not

11 July 1913 ]

The Hon MONTAGU DE P WEBB, C I E

[Continued

think that is relevant to the assertion which I make in my note

5336 Talking of taxation, you must say that India is the most lightly taxed country in the world, must you not?—I think for its size that is probably correct, although India is also the poorest country in the world per head of population

5337 It is just as poor as Japan, and the wages of both countries are the same?—I do not regard low wages as a test of prosperity

5338 Compared with any country in the position of India, India is the most lightly taxed country of the world?—Per head of population, and, as I say, it is also the poorest country in the world, per head of population

5339 I compare India to a country that is equal to India in many respects, and that country is Japan, next comes Turkey, then Egypt, then Russia. We are only taxed one-fourth of what they are taxed, or one sixth, or one seventh, or one tenth. I have taken here the poorest countries, so I think it must be admitted that India is a very lightly taxed country?—Undoubtedly it is per head of population, and, as I have said more than once, it is also the poorest country in the world per head of population

5340 Is it better than Japan in wages?—I do not know

5341 Our wages and Japan's wages are the same in the mills?—I doubt it very much

5342 Then prove it?—It is possible that the wages of mill hands in Bombay may be higher than the wages of mill hands in Japan, but India is a very great agricultural country, and I do not regard the wages of mill hands in Bombay as necessarily a test of the prosperity of the whole country

5343 As a general proposition, we are large employers of labour in the centre of India, and we are giving 200 per cent more wages than we were giving six years ago, or even 10 years ago, and wages have risen about 300 per cent. even in the Punjab?—Some wages have

5344 In which part of India would you say that the wages are poorer than in Japan?—I make no such assertion

5345 I say, taking the wages per head, and comparing everything, India is the most lightly taxed country in the world?—I think possibly it is per head of population

5346 You say "possibly it is," but can you prove otherwise?—I have not the material at my disposal at this moment to enable me to examine the wages of all the countries of the world, but I think it is quite possible that India per head of population, is more lightly taxed than any other country

5347 You say in paragraph 4, Part I of Appendix XXI (page 550), "On the contrary, in a country " that is notoriously handicapped for want of ample " supplies of cheap capital, and where the rates of " interest and discount rise to heights unknown in " any other part of the Empire," and so on. Will you state in which other countries of the Empire except England, the rate of interest is higher than in India?—I do not know any country where it is higher than in India.

5348 I am talking of Canada, I am talking of Australia, I am talking of the West Indies, and all those places, is the rate of interest there higher than in India?—I do not think so

5349 I can prove my point by one personal instance of yours. Though the bank rate was 8 per cent. in March or April, your firm could have borrowed at 4½ per cent or 5 per cent at any time during the last four or five years?—Are you referring to last March?

5350 You can take any March in the last five years. Your firm has been able to borrow for 12 months at 4½ or 5 per cent. for the working of its mills. Show me any mill in Lancashire that could borrow for 12 months at 4½ per cent.?—I cannot show you any mill in Lancashire. I do not know what they are paying for their money in Lancashire

5351 I am talking of your firm, and I tell you they are able, all through the year, even when the bank rate is 8 per cent.—just now it is 6 per cent.—to borrow at

4½ per cent. Even when the bank rate was 6 per cent, you could have borrowed for 12 months at 4½ per cent, and there is not any other part of the Empire where you could borrow under 6, 8, 9, 10, or 11 per cent according to the distance, whether it is Western Canada, or Eastern Canada, or Northern Canada, and so on. Do you know that the best firms in Australia pay 7 per cent for call money?—I cannot say what the best firms in Australia pay

5352 Then you make this statement, but you cannot prove it. You, being an Englishman, have stated, and the natives wanting a cry are taking it up, that India is the most heavily taxed country, and that the rates of interest in India are more heavy than in any other part of the Empire. I think you have made that statement without having any proof of it in your own hand?—I believe the statements which I have made in my note are correct

5353 How are they correct? You cannot prove it?—So far as my experience goes of the rates of interest that are paid in the Colonies, I have never heard of such high rates being paid as I have known in my experience being paid in India.

5354 Gave me an instance of your experience?—In which country?

5355 I am talking of the Empire. I suppose you do not mean England, but you mean Australia, or Canada, or the West Indies, or those places. Can you show me where your firm can borrow for a year at 4½ or 5 per cent?—I do not regard my own firm's transactions as a criterion of what money can be raised by other firms

5356 There are gentlemen and officers who pay 50 per cent, but you cannot compare them when you are talking of the rate of interest commercially. Seeing that India is so lightly taxed, and that India requires a great many public works, such as sanitation and education, for the development of India, should not the Finance Minister continue to budget a little higher rather than a little lower, in order to carry out all this work without borrowing?—If the Government of India propose to raise money by taxation for the construction of capital works, that is a policy which has a great deal to be said in its favour, but, up to the present, in preparing their budgets, the Government of India have not in their budgets stated that they are raising money for expenditure on capital works. If the taxation is so adjusted as to produce large surpluses especially to be devoted to capital works, I think there is a great deal to be said for it

5357 If they have, as you say, budgeted for too much, then they have squandered the money, on what have they spent it?—I did not say the Government of India has squandered the money

5358 Has the Secretary of State squandered the money?—I think the Secretary of State has not used it to the best advantage

5359 I agree with you that money ought to have been lent in India where the rate of interest is higher. Now the Government of India have about 7 crores or 10 crores in excess of requirements in the treasuries, can they lend more than 7 crores in India?—Certainly, in present circumstances, I should think not

5360 Then they have not been doing anything wrong in not keeping more money in India?—I hold the contrary opinion

5361 You were stating yesterday that they should lend to the exchange banks. The Government would not lend money under 6 per cent., or something like that, so why should the exchange banks borrow from the Government of India instead of bringing that money from England, especially as you say that they could not lend more than 7 crores now under present circumstances?—I do not think they could

5362 How should they use the 18 millions? Should they let it lie fallow in India just for the delectation of the people of India, should they hold these 18 millions there without interest?—I am not aware that the Government of India have attempted to lend 7 crores on the market, and I am not, therefore, in a position to say they could not have lent more. That was only a rough estimate on my part. Possibly

11 July 1913]

The Hon MONTAGU DE P WEBB, CIE

[Continued

if 7 crores had been lent to the public, 8 or 9 or 10 crores might be lent

5363 Let me tell you—and I put my experience against yours—that the Government of India could not have lent 5 crores?—It is quite possible

5364 Do you know that from 1893 to 1895 this country, England, lent money because they had no scope for it at five eighths of 1 per cent for a year?—Quite possibly

5365 And at half of 1 per cent for a year?—That is quite possible

5366 They have to employ their money, and 3 per cent, if they cannot employ their money elsewhere, is six times as large as what the English banks got between 1893, after the Baring crisis, and 1896?—I certainly admit that three is six times as much as one half

5367 That lasted for three years?—I do not know that

5368 Of course, you must confess that they had to lend the money, or it would have been lying fallow in India?—I cannot say that the whole of it would have been lying fallow in India, some portion might

5369 Of course, it was the policy of Government not to lend, and I think it was an unfortunate policy which has brought about all this trouble, but still I think they could not have lent more?—I would not say that until I tried how much they could have lent

5370 All the witnesses who have preceded you, including bankers of experience, have said that they could not?—I think it is quite possible that it would be difficult to lend at 5 or 6 per cent

5371 So I think you can say that the Secretary of State was right in lending at any rate of interest, I do not say whether he lent at the best rate or not—that is another question—but the Secretary of State was right in lending money so as to get some interest?—I think the Secretary of State would have done better to have sent it back to India and have tried to lend in India first

5372 But he had seven crores there already?—That money was not lent out for the purposes of India

5373 The Secretary of State could have ordered that money to be lent?—He could have done so, but he did not

5374 Why did you take the Secretary of State's lending? Why did you not take first the Government of India's lending in India what they had in excess?—They should have done so

5375 I say you should have done so?—If I had taken up that policy several years ago, I should certainly have agreed that

5376 They could not lend upon security more than 11 millions in this country for a long time?—I do not know about that

5377 This is the richest country in the world, and yet at one time they could not lend more than 11 millions on security?—I noticed that the India Office could not do so

5378 Taking the two countries together, India and this country, do you think India could have done so?—I cannot say

5379 You are a very intelligent writer, can you not say that?—I cannot say what the Government of India might have done had they tried

5380 I think it seems that you have made statements without giving adequate proofs?—I think I have made sufficient inquiries

5381 You cannot give proof of that statement for one You say the Secretary of State should not have borrowed three millions when he had so much money in hand last year?—I think he should not

5382 Your exact words are—this is in paragraph 10, Part I of Appendix XXI (page 553)—“Last year, notwithstanding the vast sums of public money at the India Office's disposal, and in spite of the fact that the London money market was faced with more demands for capital than it was able conveniently to meet, an effort was made to borrow 3,000,000 in London on behalf of the Government of India.”—That statement is true

5383 Seeing that the Government of India's credit is not so good in this country as it was, were they not right, having so much to do in connection with public works and not being able to borrow in India, to borrow, when they could borrow at a good rate, as much money as they could in this country?—I do not think there was any necessity to borrow at that period

5384 Do you know that they could not borrow to day at the same rate?—Quite possibly

5385 Do you know that that same 3½ per cent stock has gone down 7 per cent since the last borrowing?—Quite possibly

5386 What do you do in private business?—I never borrow when I am full of money

5387 You borrowed for your railway a year before your concession was given to you?—No, I did not borrow at all

5388 You took money from the shareholders?—I did not borrow I desire to put it on record that I borrowed no money, and that I did not ask the public to lend me any money in advance in connection with any of my business concerns

5389 If money is required, you say in paragraph 12, Part I (page 553), “I am of opinion that the Government of India's floating cash balance ought, in the interests of economy, to be kept down to a maximum of 10,000,000, of which 3,000,000 might be kept in the Treasury in London, leaving the balance of 7,000,000 to be held in the treasuries and Presidency banks in India” Then you say that at anything like a time of necessity they can take money from the Currency Reserve, but they would have to pass an Act for that, would they not?—Yes

5390 They could not do it offhand?—No

5391 The Bank Act has not been suspended since 1866, but, supposing we fall short, they would have to suspend the Act and take the money from the Currency Reserve?—Yes

5392 Is that not a very difficult and very long way to go in order to have starvation supplies given to them?—I do not regard these figures as starvation supplies

5393 I will give you one public instance The Bombay Port Trust required a balance of a crore and a quarter for carrying on their works, and the Secretary of State has to provide for about 12½ millions, and has to be able to supply funds for all the necessaries, do you think in face of these facts that allotment would be correct?—I think it is sufficient

5394 On what basis do you go? When a corporation like the Bombay Port Trust require a crore and a quarter or thereabouts to carry on their business, do you think the Secretary of State should be put on a par with a port trust?—I think the figures I have given are large enough

5395 Do you know that India has a debt of about 500 millions on railways and other things, for which the Government of India is responsible?—No, I do not know that

5396 It is so?—I do not think it is so

5397 Then will you kindly tell me what it is?—I believe the Public Debt of India is about 270 millions

5398 Including the railway debt, for which we are responsible?—I think that is about the whole of the debt There is about 180 millions of debt in this country, and roughly about 90 millions of debt in India

5399 That is not all, there are the railway companies?—I cannot say from memory exactly what the railway capital comes to

5400 I think it is 375 millions for railways alone, so we will put it in round numbers as something between 400 millions and 500 millions You have not gone into that matter, I suppose?—As I have said, I cannot tell you from memory the capital of the railways

5401 Do you know what the Public Debt of Russia is?—No, not without making a reference

5402 I suppose it is 500 millions, in order to protect that debt and the interest, do you know what the Russian Government keep in gold outside Russia?—I could not tell you from memory

5403 Sixty millions or thereabouts, and, further, to protect their commerce and other things, the Bank

11 July 1913 ]

The Hon MONTAGU DE P WEBB, CIE

[Continued

of Russia holds European bills or has in Europe 21 millions, do you know that?—I cannot speak to that from memory

5404 It is in yesterday's "Times", shall I read it to you?—I am perfectly prepared to take these assertions as being correct if they were in yesterday's "Times"

5405 Do you know why the Russians keep so much gold outside their country?—Because their credit is not so good as ours, I take it

5406 Do you know that there are people in Russia who have the same cry as yourself, and that the Russian Minister defended his action by reference to the Russian foreign trade?—I am not surprised to hear it

5407 And almost all the papers here have accepted it?—I think that policy might find a good deal of support in London

5408 Is Indian commerce such a light thing that you would not give it every possible facility in the money markets of the world?—I have a large personal interest in Indian commerce myself, and I do not believe what I think you are suggesting is necessary

5409 In Part II, paragraph 2, of Appendix XXI (page 555), you say "With the Indian mints open to the free coinage of silver, and the sterling value of the rupee depending entirely on the sterling price of silver in London and New York, no better means of paying India's sterling debts could possibly have been devised than weekly auctions in London of a portion of the stocks of rupees accumulated in the Treasuries in India in the course of the collection of the revenues by Government. The competition of the public at these weekly auctions enabled Government to secure the best possible sterling prices for such rupees as were auctioned, and the system was therefore admirable in every way." What is the difference now?—The mints are closed to silver

5410 But up to 1872, the time when Germany demonetised silver, the ratio of 15½ of silver to 1 of gold remained fixed and constant, just as now between 1898 and 1913 the ratio of gold standard has remained fixed at 16½ of gold to 1 rupee, so I think there is no difference, and that if it was admirable then it is admirable now?—That is precisely my contention, that the circumstances have entirely changed, that there is every possible difference, that the mints being closed to silver the value of silver rupees in India is entirely divorced from its value as a marketable commodity, and that therefore there is no reason whatever to auction rupees at this moment

5411 I think there was a very good reason then, because they could have the silver minted or sold at that ratio?—There was every reason for auctioning rupees when the mints were open, but there is no reason for auctioning when the mints are closed

5412 Do you want the mints to be opened for the Secretary of State to commence again?—For the free coinage of silver? No, certainly not

5413 You say the auctioning was all right?—Before 1893 it was all right

5414 There was a ratio, and you admit that system was most admirable?—Yes, before 1893

5415 Suppose the Secretary of State were to start now and open the mints in India, would the system be most admirable?—I do not think the Secretary of State should re-open the mints to the free coinage of silver. I think that would be undesirable

5416 You have said somewhere that fluctuations in exchange prevent people from moving their capital to and fro between England and India as freely as they might otherwise do. What about the fluctuations of exchange between the United States and England?—They are very different.

5417 How is that?—Because the fluctuations in the case of India are liable to be affected by the action of the Secretary of State, whereas in the case of other countries the movements in exchange are not liable to be affected by official interference

5418 What is exchange? I take exchange to be the transfer of wealth from one country to another, with the additional cost of freight, insurance, and

commission?—I do not know that I can accept that definition exactly as it is made

5419 Will you describe how it is different from the case of France, say? Does it cost you more than it would cost between France and England, or between France and the United States, or between France and Egypt?—I can only say that the difference between the two cases is that, in the one instance, the United States or France, movements in exchange take place in response to the requirements of trade only, whereas in the case of India movements in exchange take place in response to the activities of the Secretary of State

5420 What more would you pay than if you had to transfer your wealth from Russia to England—what more does it cost than the freight, insurance and commission?—I really cannot say.

5421 You are a merchant of great experience who has been doing a large export business, and you know that buying and selling actually depends on a difference of one sixty-fourth?—Yes, I do know that fact

5422 It is so?—Sometimes it is so.

5423 And that depends on the rate of interest?—

Yes

5424 Therefore, I say that was a very wide statement to make, when you tell the people of India that they are not on a gold basis, and that they cannot transfer their wealth between one country and another?—I never made any such statement that the people of India cannot transfer their wealth from one country to another

5425 Here it is; it is an extract from one of your letters—"State-manipulated fluctuations in exchange prevent many people from moving capital to and fro between England and India as freely as they might otherwise do." Who are the people that told you that—not the banks?—I think I understand what Sir Shapurji is driving at. What I have stated is that, owing to the interference of the Secretary of State with exchange, the public do not so readily transfer temporarily their money backwards and forwards to India as they would do if there were no Secretary of State interfering with exchange. I make that assertion from my own personal knowledge, as I am frequently engaged in moving money temporarily backwards and forwards

5426 How is it any different to what would be the case with the United States? Would not the man in the United States be interfered with in the same way?—If I were to transfer money between this country and the United States, I should have nothing to reckon upon except the movements of commerce, which I should be able to gauge as well as anybody else, but in the case of India I have to gauge not only the movements of commerce but the eccentricities of the Secretary of State, and it is those eccentricities which prevent me from taking the risk

5427 It is the same movement that moves exchange in India as in the United States?—No, it is not the same

5428 Yes, it is?—I differ

5429 Then in one of your letters you say, "In 1905-7 the Government of India coined over 40,000,000l worth of new silver rupees, thereby stimulating and contributing to the rise in prices in India that brought so many of the poorest classes to the verge of starvation." Do you know that in 1905-6 eight millions and in 1906-7 ten millions of silver were brought into India, so that was not a correct statement?—I understand your question to be this—that because 18 millions worth of silver was brought into India, it was not possible to manufacture 40 millions worth of rupees out of it.

5430 Yes, that is it?—I should think that with 18 millions sterling worth of silver it would be possible to coin very nearly 40 millions worth of rupees, because the value of the rupee in metal is only about 9d. or 10d.

5431 It was 18 millions brought in, and what they turned out in rupees was 40 millions?—I think both figures are probably correct

5432 (Chairman.) What you meant was a face value of 40 millions?—Yes. Possibly the 18 millions of silver is taken at its market value.

11 July 1913]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued]

5433 (Sir Shapurji Broacha) Out of those 40 millions, 13 millions would go to the Gold Reserve?—Some proportion would

5434 Do you think that contributed to the rise of prices?—Yes

5435 All the commodities that grow in India are exported, and it is the export price, that is, what the exporter is willing to pay, that makes the price?—I cannot acquiesce altogether in that suggestion

5436 I can aid you in that. When there were no railways wheat was used in the Punjab as fodder when there was an excess of supply and they could not use it for food, but to day the man in Germany who buys Indian wheat pays more for it than the Indian people do, because he has to pay freight, insurance, commission, tariffs, and all that sort of thing, so India has the advantage in price over the countries which buy Indian produce. How can you say, therefore, that prices are made by excess of currency, or redundancy of currency?—I think excess of currency does affect prices

5437 But not in India, because the prices are made by foreign buyers?—I think any excess of currency affects prices in India

5438 Will you tell me how it affects prices? If Germany wants to buy your wheat at six rupees, and you say Germany shall not buy it at six rupees, why do you not put tariffs on the export?—I do not favour a tariff on exports

5439 I think you are wrong in your statement that excess of currency contributes to the rise of prices?—I hold the contrary opinion

5440 When do you say there was a great redundancy of currency in India, taking any period you like to name from 1898 or 1899 up to 1913?—I think the silver currency was redundant about 1893, 1894 and 1895, and I think the silver currency was also redundant about 1906 and 1907

5441 That brings me to another point you made in reply to the Chairman. In 1893 you said the exchange went down because the currency was flooded with rupees?—That was one of the reasons

5442 Do you know that Russia is not a debtor country, in so far as the export and import of merchandise is concerned?—I do not know

5443 It has been stated that she exports about 70 to 75 crores more than she imports, so that Russia has just that excuse which you put forward for India, that India was not a debtor country, in a sense that her exports are larger than her imports?—I am not quite sure what the position is with regard to Russia, without making references

5444 Do you know that Japan has almost all her gold in this country—from 27 to 35 millions?—I am not quite sure what the amount is, but I do know that Japan has a good deal of gold in this country

5445 Should not that have some influence on the amount which the Secretary of State should have in his hands?—I do not think that Japan's financial position is at all a safe guide

5446 The United States exports from 100 to 150 millions, which is about 225 crores, more than they import. Do you know that it is in yesterday's "Times" that the States exported 12½ millions more in 11 months of last year than they imported?—I have not read yesterday's "Times" sufficiently carefully to be quite certain about it. I did not notice that passage

5447 (Mr. Keynes) Under Part I of Appendix XXI (pp. 550-4), I think I understand what your position is, but I have got one or two questions to ask. As regards paragraph 8, which relates to the sums of money which have been borrowed and repaid by various firms, do you mean to suggest that India's borrowers have held sums anything like those continuously since 1908?—Not necessarily

5448 Then what exactly do you mean to suggest by those figures?—I mean to suggest that there have been loans continually running apparently for five years

5449 Do you mean merely that those firms had some loans, not that they had loans of one million and upwards?—Not in one loan, but that they borrowed sums during the year and repaid sums during the year amounting to one million. If the loans were for

periods of three months, we will say, they might conceivably be for 250,000 each time, which would make one million borrowed in the year. If money was borrowed for shorter periods, it might perhaps be only 100,000

5450 I was thinking of this sentence, "The above borrowers appear to have been the recipients of what amounts practically to standing loans, totalling in all several millions sterling, for a period of over five years." In that sentence you do not mean us to infer that those firms had standing loans of several millions for over five years, do you?—No

5451 I wanted to get that point clear, because it seemed to me that the sentence bore the other interpretation?—I might perhaps be permitted to explain that the figures and the exact words which I have used are those which were given in Parliament in answer to a question put, I think, by Mr. Gwynne last November, but I can verify the question and tell you exactly\*

5452 I do not want that, thank you, it was only the inference you were drawing from these figures I wanted to be sure about. In paragraph 12 of Part I of Appendix XXI (page 553) you propose that the Secretary of State should have in London three millions as a maximum balance, do you mean by the phrase "maximum balance" that, except on rare occasions, his balances should never exceed three millions?—Yes

5453 Did you arrive at this figure because you found that his balances had never fallen below three millions?—I arrived at that figure because I found that on several occasions the Secretary of State held a balance of about four millions

5454 Do you argue that what experience shows to be a safe minimum must therefore be a safe maximum?—I infer that what has been satisfactory in the past, namely, a balance of four millions—

5455 As a minimum?—I do not know whether it is a minimum or not, because the official publication only gives the balances at certain periods, for example, I find that on the 31st March 1893 to 1901, on the 31st March 1903, on the 31st March 1907, and on the 31st March 1908, the Secretary of State held balances of about two to five millions sterling

5456 May I put it in this way—that because four or five millions have on certain occasions been found sufficient, therefore three millions would be sufficient on all occasions?—That is somewhat the way in which I argue

5457 Now I will turn to Part II of Appendix XXI (pp. 554-7). With regard to the remittances by sales of Council bills, I am not quite clear whether you criticise these remittances on the ground that they were made too soon, or on the ground that they should not have been made at all?—What remittances by sales of Council drafts do you refer to?

5458 I mean remittances by means of Council drafts in 1910, 1911, 1912 and 1913, do you argue that they were made too soon, or that they ought not to have been made at all?—I argue that no remittances over and above the requirements of the home charges should have been made at all. Of course the home charges must be provided for, but over and above the home charges I argue that no money should have been remitted at all, and that no Council drafts should, therefore, have been sold

5459 That of the sums actually remitted a large part ought not to have been remitted at all?—Yes

5460 You have probably noticed that on the 31st March 1913 the Secretary of State's balances were very nearly what they were on the same date in 1909, four years previously—they were just a trifle more. I think your memorandum does not give the figures for 1913?—I had not the Secretary of State's figures when I wrote that memorandum

5461 The actual figures, I may add, were 8,372,900 on the 31st March 1913, therefore they were very nearly what they had been four years previously. I understand that of the sums remitted during that period, you hold that some part ought not to have been remitted?—I find that the balance four years

\* See Hansard, Vol. XLIII., pages 1461-2 and pages 1709-60

11 July 1913 ]

The Hon MONTAGU DE P WEBB, CIE

[Continued

previously (*i.e.*, in 1910), held by the Secretary of State, was over 12 millions

5462 1909 I am speaking of?—In 1909 it was 7,983,000!

5463 That is very nearly the same?—Yes, it is

5464 Would you argue that during that period sums have been remitted which ought not to have been remitted?—Yes

5465 They were all spent, which of the purposes on which they were spent do you think were improper?—I do not know in what direction they have been spent

5466 I am putting on one side the sums credited to the Gold Standard Reserve and to the Paper Currency Reserve, to which I am coming later on, apart from those amounts all sums remitted have been spent?—I only know, so far as you have just this minute informed me, that the balance has been reduced to eight millions. That is all I know. But even if you tell me the balance has been reduced to eight millions I am still in the dark as to how it has been done and why it was not done a year or two before

5467 I understood you to say that the remittances were not merely sent too soon, but that they ought not to have been sent at all?—So I thought

5468 I am not now asking whether the Secretary of State remitted at the right date or not, but whether, at whatever date he remitted, he spent the money for improper purposes?—I cannot say that he spent it for improper purposes, because I am not aware where this money has gone

5469 First of all, the home charges, you admit that they are all right?—Yes

5470 Secondly, the purchase of silver, and I think you allow that?—Yes

5471 Thirdly, there is the redemption of temporary debt, is that a proper purpose?—Yes

5472 And fourthly, there is the expenditure on railway material?—Yes

5473 Putting apart the Gold Standard Reserve and the Paper Currency Reserve, practically every penny remitted during the past four years has been spent on one of those four purposes?—If that is so, it has been spent on proper purposes, and the only criticism in that case that I should offer is, why was not the temporary debt paid off many years ago instead of only last year?

5474 Your criticism then comes down purely to this point, that the Secretary of State has done certain things at a later date than he ought?—That he has brought money to England several years in advance of his requirements

5475 But it does not amount to any more than that?—That is one way of putting it. I can admit that in a sense the action of the Secretary of State resolves itself into bringing to this country several millions some years in advance of his own requirements. That appears to me to be very grave mismanagement.

5476 I only wanted to get exactly what your position was, because there are at least two different lines of criticism which to my mind are rather mixed up in your memorandum, namely, that through excess of precaution he postponed doing things which he could have done sooner, and the other point, that he was draining away money from India and doing various terrible things to India when he ought never to have brought the money from India at all, but now I understand that the second part is not your charge?—Yes, those are my charges—doing things that he ought not to have done

5477 Then in regard to this money which he ought never to have brought at all, which are the ways in which he has used it that are improper, I come back to that?—I was not aware how it had been used before I received the information that you yourself have given me. If the money has been used simply for home charges, for the redemption of debt, for the purchase of silver, and for railway material, it has been used properly, except that the debt might have been redeemed a year or two earlier than it has been redeemed.

5478 If I am right that it has all been used for those purposes, then that part of your criticism falls to the ground?—I do not understand how it falls to the

ground, because even if the money has eventually been correctly disposed of—

5479 I do not say that particular part of the proposition falls to the ground, only the part of your criticism that the money has been remitted in excess. I am not dealing now with your criticism that it has been remitted at the wrong time, but with that part of your criticism which says it ought never to have been remitted at all. That, I think, falls to the ground if the only purposes for which it has been spent are those I have named?—If all the money has been properly disposed of, that portion of the criticism is in a sense disposed of.

5480 If it has been spent on the purposes I have named, then it has been properly disposed of?—It has been properly disposed of in the end, eventually. I have never asserted for a moment that the Secretary of State has improperly disposed of the money. What has occurred is that he has accumulated vast sums for which he had no need, and then, under the effect of repeated criticisms, he has at length disposed of that money, but only under the stimulus of repeated criticisms.

5481 When you say improperly remitted, you mean remitted too soon?—Remitted years ahead of his requirements.

5482 Not remitted too much?—He has apparently disposed of it in the end.

5483 I come now to your proposal about fixing the price of Council bills. In your memorandum you have suggested that it should be fixed at  $1s\ 4\frac{3}{4}d$  or  $1s\ 4\frac{1}{2}d$ , but in your evidence to the Chairman you suggested that it should be fixed at  $1s\ 4\frac{1}{8}d$ . Which of those figures do you wish to maintain?—The figure that I suggest for the home charges is one that shall be below the gold point. Of course, the gold point varies from month to month, and therefore it is impossible for me to give the exact figure, but I should think that about  $1s\ 4\frac{1}{8}d$  would be a workable point for the home charges.

5484 I understood you to propose that the Secretary of State should put up a brass plate?—Yes.

5485 On which he should say that at all times of the year there should be a certain fixed rate for Council bills?—Yes. I think it should be  $1s\ 4\frac{1}{8}d$ .

5486 That  $1s\ 4\frac{1}{8}d$  would be the fixed rate?—That rate should be a stable rate, but it would, of course, be liable to alteration.

5487 It would be maintained all the year?—Possibly, or at the end of six months there might be reasons for amending the rate. I should say that  $1s\ 4\frac{1}{8}d$  would be about the correct figure to start with.

5488 That is your proposal, that there ought to be sales of bills at all times of the year at that rate?—Yes.

5489 Are you aware that the rate got for these bills between 1910 and 1913 was almost exactly  $1s\ 4\frac{1}{2}d$ ?—Quite possibly.

5490 So that your proposal would have made no practical difference?—It would have made a great deal of practical difference in actual business.

5491 The Secretary of State would have undergone the risk and inconvenience of undertaking this liability to sell at a fixed rate without getting any more for his bills?—That I cannot say.

5492 I understood your line to be that the Secretary of State should not put himself out to help trade, but that he should get the most profitable rate for his bills?—Yes.

5493 If your policy had been followed, he would have undertaken certain risks, and would have got no more profitable rate than he actually got?—That I cannot say. I cannot see the risks.

5494 Taking my figures, if he did in fact get  $1s\ 4\frac{1}{8}d$ , that would be the case?— $1s\ 4\frac{1}{8}d$  is about the specie point now, but a few years ago the specie point was considerably higher—it was  $1s\ 4d$ , and  $1\frac{1}{2}$  annas, and there was a time when it was 2 annas—I am speaking in Indian phraseology, I should say. If the Secretary of State has only got an average of 1 anna now,  $1\frac{1}{2}$ , over  $1s\ 4d$ , it is clear that he is doing

11 July 1913]

The Hon MONTAGU DE P WEBB, C I E

[Continued

right, but if 1 anna is an average which corresponds over a period of years, then he has got a poor rate

5495 I am speaking of the period from 1910 to 1913?—I think from 1910 to 1913 the average rate ought to have been more than 1 anna, over 1s 4d, possibly 1½ anna— $\frac{3}{8}$

5496 Taking your figures, if he had put up his brass plate, he could not have got more than that?—He might have got  $\frac{3}{8}$  four years ago, that is, his brass plate might have shown the rate of  $\frac{3}{8}$ . His brass plate, I suggest this year, should show 1 anna, but four years ago I think the gold specie point, the import point into India, was nearer  $\frac{1}{2}$  than  $\frac{1}{4}$

5497 I was trying to argue it on your figure, but of course if you take a different figure, I shall have to use different arguments I will pass from that to a further point connected with it Suppose that the Secretary of State fixed some rate, which may be 1s 4½d, or some other rate, and he does not sell enough bills to meet his various charges, how is he to make up the difference?—Ship home sovereigns

5498 These sovereigns he has taken at the rate of 1s 4d, that is, he has issued rupees against them at the rate of 1s 4d?—He may not necessarily have issued any rupees against them at all They may be sovereigns that the public have imported

5499 How else have they got into his treasuries?—Through the collection of taxation

5500 At the rate of 1s 4d?—I cannot tell what the rate is The public import sovereigns when it pays them, sovereigns are paid to the Government in the form of taxation, and the Government then finds itself in possession of the sovereigns in its treasuries

5501 The sovereign is legal tender for so many rupees at 1s 4d?—Yes

5502 Therefore the Government could not receive it in payment of taxation at any other rate?—No

5503 It therefore receives this gold at 1s 4d?—That is so as between the Government and the public, but the public would have imported the sovereigns at a different rate to the 1s 4d

5504 I am speaking of the Government The cost of bringing those sovereigns back would be  $\frac{1}{8}$ d, would it not?—Something like that

5505 So the sovereigns that would have to be brought back to the Secretary of State would bring in money at the rate of 1s 3½d?—Yes

5506 You are proposing that he should stick out for 1s 4½d, and then for the balance which he cannot get at that rate, he should bring sovereigns home at what works out at 1s 3½d?—Yes

5507 And you think that policy would lead to his getting a better average rate than his present policy?—Yes My reason is that, roughly speaking, in four years out of five, the balance of trade is in India's favour, so I take it that in three years out of four, or in four years out of five, the rate of exchange would always stand at the gold import specie point, or in the neighbourhood of it, and that only on rare occasions, one year in five, would there be a risk of some small portion of the Secretary of State's home charges having to be shipped back in sovereigns That is the risk

5508 Suppose that seven eighths were sold at 1s 4½d, and one eighth had to be brought back in the way I have described, will you take it from me that it would work out at about the same as if he had sold them at an average of 1s 4½d, so that if only one eighth had to be brought back in gold, he would be no better off than he is at present?—If the figures that you state are correct, that would be so, but it would be a much more correct procedure, in my opinion

5509 It does not look, however, as if there is much in it from the public point of view of getting a better rate of exchange?—I have not worked out these figures that you tell me of

5510 They are an important part of the argument, but you have advanced this proposal of yours without working them out? What I mean is this You are suggesting to me that the Secretary of State remits home seven-eighths of his home charges at 1s 4½d,

and one-eighth of his home charges at 1s 3½d?—This might happen only one year in five

5511 In the case of one eighth he has to bring home the sovereigns?—That is equivalent to bringing home one eighth at 1s 3½d, and you assure me that the average between one eighth at 1s 3½d, and seven eighths at 1s 4½d, is about 1s 4½d, if that is so, then there is not much in it in the year in which it occurred

5512 This calculation is the only sort of calculation that you can make, if you are wondering which of these two policies would pay best?—That is so

5513 But, nevertheless, you have not examined it?—Assuming those figures to be correct, that state of affairs would arise on an average one year in five and only one year in five, because only one year in five would it be necessary to ship home gold in payment of a portion of the home charges So one year in five he would be no better off, he would merely stand at 1s 4½d, but in the other years as a whole the exchange would be higher

5514 You propose, therefore, that he should undertake this very serious liability of selling bills at all times of the year at a fixed rate, and run the risk of not being able to get his home charges back, for what would clearly be a mere tuppenny ha'penny profit, even if he got it?—I cannot recognise the slightest risk whatever of any kind, on the contrary there is less risk than there is at present, because were this system in force, he would only withdraw from India the amount required for home charges—16, 17, or 18 millions, whereas at present the Secretary of State is withdrawing 25, 26, 27, or 29 millions wholly unnecessarily

5515 But we have agreed that they are withdrawn for necessary purposes?—Not necessary purposes at the time they were withdrawn They were subsequently made use of, but they were quite unnecessary at the time they were withdrawn

5516 If less had been withdrawn in the earlier years more would have been withdrawn in the later years?—No, because the floating debt would never have been incurred, I take it, in London, and, therefore, there would have been no necessity to remit money home to pay off that floating debt

5517 If it had not been incurred, then more money would have been required to meet the purposes for which it had to be spent?—Possibly, if the same balances had to be maintained, that is, if you hold that the level of the cash balances maintained by the Secretary of State is correct, but I assert that that balance was unduly heavy, and therefore that these loans were unnecessary

5518 That is going back to another point, which we discussed earlier?—That is another point, I admit May I state at this point that I cannot agree for one moment that the procedure of selling Councils at a fixed rate involves any risk on the part of the Secretary of State more than he is at present incurring? It does not involve the slightest risk

5519 (Sir Robert Chalmers) Is that so as regards the seasons? It might be that the season of demand for bills might not be the season at which the Government of India was in possession of rupees, you would admit that that would be the case, would you not?—Yes, that is a little additional risk

5520 It might be a very important question?—That could be overcome

5521 It would depend on a calculation of supply and demand?—Yes, but I imagine that would have to be overcome possibly by the shipment of gold

5522 (Mr Keynes) Your proposal merely comes to this, that it is your opinion, not on the basis of any calculation, that if the Secretary of State brought over as much as he could at 1s 4½d, and the balance, whatever it might be, in gold, that would lead to a better average rate of exchange than what he now gets?—Yes

5523 That is not based on any calculation or any minute investigation of any sort?—It is impossible to base it on any exact calculation, because there is no profit in working out imaginary instances on past experiences There is no profit in going back three

11 July 1918]

The Hon MONTAGU DE P WEBB, C.I.E

[Continued.]

years, and saying that if 27 millions had not been remitted to England but only 16 millions had been remitted, and if exchange had been at such-and-such a point and if this had occurred and that had occurred and the other had occurred, the result would be different I do not think that is a profitable investigation

5524 May I put to you one or two considerations that should be taken into account? Suppose you fix exchange at  $1s\ 4\frac{3}{4}d$ , then the Secretary of State would never sell any bills when there was gold available in Egypt or Australia, would he?—It depends on what the gold specie point was

5525 When there is gold available there, I assume it would be below that?—Yes, quite possibly

5526 In some years there is a very great deal available in Australia and Egypt, is there not?—Yes

5527 An amount almost equal to India's balance of trade?—Quite possibly

5528 In those years the Secretary of State would sell no bills?—I cannot say that

5529 Or very few bills?—When you referred to the balance of trade, I thought you meant the balance of trade not taking the home charges into consideration, but over and above the home charges

5530 Over and above the home charges the balance of trade is trifling, is it not?—I should not call it trifling

5531 How much is it?—It varies between, I suppose, nothing up to as much as 10 millions or 12 millions

5532 What is the average—about three millions or four millions, I think it is something small of that sort?—I should have thought, without looking into the figures, that the average would be nearer five millions in recent years. In recent years the balance has been very large, and in the years immediately following the closing of the mint the balance was very small

5533 A great part of that balance is needed for payments of interest and so forth in England, and what you may call the available free balance is what the Secretary of State draws?—I think there is a much larger balance due to India than what the Secretary of State draws

5534 How is that used?—It is liquidated by the shipment of sovereigns to India, and over 20 millions, I think, went in last year

5535 That brings us to a point at which we can argue I was thinking of the additional amounts available over what are now available. When there is a great deal of gold in Australia and in Egypt, all that gold would go and the Secretary of State would not sell bills?—Not if the Secretary of State's rate was fixed at too high a level

5536 If fixed at  $1s\ 4\frac{3}{4}d$  in such years, therefore, he would be in difficulties about selling the full amount?—If his rate was too high

5537 He would be also in difficulties in those years in which there was an adverse balance?—Yes, he would be in difficulties in the sense that the rate would need revision

5538 On the other hand, if you fix the rate at  $1s\ 4\frac{3}{4}d$ , gold would never flow to India from England in that case?—I should be very sorry to say never, but I do not think it would frequently flow

5539 It would flow very seldom?—It would flow very seldom in present circumstances

5540 Is he not driven therefore to a fluctuating rate, from the fact that sometimes gold is available in one place and the gold import point is at one figure, and sometimes gold is available elsewhere, and then the gold import point is a different figure, so the actual figure is not steady throughout the year?—It was for that reason I suggested that the rate of  $1s\ 4\frac{3}{4}d$  would be a business-like rate to take to commence this method of selling Council drafts

5541 Still you agree that if they took that rate gold would very seldom flow to India out of England?—Yes, I agree

5542 But you have criticised the Secretary of State's policy precisely on the ground that the rate he has charged has had that effect?—I do not follow the question

5543 I understand you have criticised the Secretary of State on the ground that he has sold bills at a rate which prevented gold from going to India?—Yes

5544 And yet you have proposed a rate that shall have that effect?—Up to the extent of the home charges, certainly I put the Secretary of State's requirements first. That is why I took the rate of  $1s\ 4\frac{3}{4}d$ , because that would enable the Secretary of State to make his remittances for a certainty before gold commences to flow

5545 We then come back to the old point that you consider that he has remitted more than he needs in Great Britain?—Yes, at the time that he made the remittances

5546 If the gold had gone to India in the earlier years, it would have had to be brought back in the later years. Suppose over the four years he had to remit exactly what he did remit, and he remitted less in earlier years so that the gold flowed to India, he would have had to have brought all that gold back again?—I cannot agree to that straight away, because the fact of his not permitting the gold to be imported has been the occasion of a certain amount of silver coinage in recent years, the silver coinage affects prices, and prices affect the movement of trade. So I cannot say I should acquiesce altogether in that proposition, but, speaking generally, I say yes

5547 I cannot see that the thing comes to much. All that would happen would be that the gold would have been taken out to India, the expense of which would have been borne by Indian traders, and then in a later year it would have been brought back to England, the expense of which would have been borne by the Secretary of State, and apart from those two items of expense, things would have been very much the same as they are?—Even assuming that things were very much as they are, assuming that the result so far as the Government books are concerned was the same, we should still have secured this important consideration—that the public would not have constantly had the rate of exchange jumped about, jumped up and jumped down, by the eccentric action of the Secretary of State\*. Even assuming that there was no difference in the Government accounts, assuming that on the average at the end of three years the amount which the Secretary of State realised turned out the same, we should still have eliminated this disturbing influence of an official interference with the exchange, which makes it very difficult sometimes for the public to know what to do in the financing of their business

5548 What do you mean by calling the Secretary of State's action eccentric, is it not dictated by well known rules?—I think not. I confess that at times I have been unable to conceive any rule by which it has been dictated at all. That is why I used the adjective "eccentric"

5549 The people most concerned in this question, you would agree, are the exchange banks?—They are the people who get most of the convenience out of the transactions

5550 They have expressed themselves as entirely satisfied?—I quite understand that. I think they are perfectly satisfied. The bankers are the people who will take advantage of this convenience, and I should not expect any exchange bank to say otherwise than that it is a most excellent arrangement which ought not to be disturbed

5551 I understand that the result of all this is that the one advantage which you claim for your proposals is that persons in India would have more certainty as to what the rate of exchange is?—Yes, that is one advantage

5552 And there is no other important advantage?—I think there would be an advantage to the State, that is to say, I think the Secretary of State would have realised more for the rupees that he has sold than he actually has done. That point you question, but I do think he would have realised better myself. Those are the two advantages

5553 With regard to the steadiness of exchange, I have got one or two questions I want to put to you

\* See note by Mr Webb to question 5137 on page 228.

11 July 1913]

The Hon MONTAGU DE P WEBB, C I E

[Continued

Suppose that the Secretary of State fixed his rate at 1s  $4\frac{1}{2}d$  or 1s  $4\frac{3}{4}d$ , and, having met his requirements, stopped selling, exchange would rise possibly up to the gold point?—Yes

5554 Or, on the other hand, while his offer of 1s  $4\frac{1}{2}d$  was open, exchange might be a great deal lower than that?—Yes

5555 In what way would there be greater certainty than there is at present? Exchange would still fluctuate between some figure like 1s  $3\frac{1}{2}d$  and 1s  $4\frac{1}{2}d$ . In what way would it be more certain?—It would be more certain, because in four years out of five the balance of trade is in India's favour, and consequently in four years out of five exchange would have remained at the gold import point

5556 But at any given time of the year it would be a matter of great uncertainty what the exchange rate would be?—I should not feel very much uncertainty. As a practical merchant dealing with finance every day I should feel very much the reverse. I should feel very much more easy if I knew the Secretary of State was not going to interfere in any way. Speaking as a practical merchant, if I knew that the Secretary of State had one rate and one rate only, viz, 1s  $4\frac{1}{2}d$ , I should then as a practical merchant make my calculations on the movements of trade as far as I was able to judge them, and I should feel that one cause of uncertainty, namely, the Secretary of State, had been eliminated

5557 (Sir Robert Chalmers) What is it in his action that strikes you, as a practical man, as the cause of uncertainty? You know how much he is putting up?—Yes

5558 How long do you know that beforehand?—Only seven days

5559 Is it the seven days that is the most important to you?—Partly

5560 You do know it in advance, but you would like to know more in advance?—In practical business we sometimes have to make our calculations six, seven, eight, and nine months in advance

5561 (Chairman) You do not suggest that the Secretary of State could possibly announce, sufficiently in advance to meet your convenience, what he is going to do, do you?—Yes, because if the Secretary of State has his fixed rate of 1s  $4\frac{1}{2}d$  that might stand for the whole year

5562 I understood you to say that even that fixed rate must be varied from time to time by the Secretary of State according to the gold point?—It is conceivable, if the Secretary of State was not able to realise the sums required for the payment of the home charges, that at some period that rate might need revision

5563 (Sir Robert Chalmers) You mentioned six months as the period, I think?—Yes

5564 Which is less than the period which you would desire for your practical convenience?—Yes, but even if it were revised once in three months, or even if it were revised once in a month, it would be an improvement upon revision once every seven days

5565 The difference between a week and a month is what you come down to?—I would rather not have a month, because in practical business we have to make our calculations several months in advance. Therefore, I would much prefer to have a year, if it is possible to fix the rate for an entire year

5566 (Mr Keynes) I would like to put the question to you from the Secretary of State's standpoint. We start him on the 1st March with three millions in London. He announces that he will sell no bills below 1s  $4\frac{1}{2}d$ , it is improbable in that case that he will sell bills at that rate in any large quantity until the next busy season comes round, is it not?—I do not think the rate would have any effect. When once it is known that the Secretary of State acts on these principles and that there is only the one rate, I do not think that rate will have any effect on the amount that he will sell. The public will apply for whatever money is actually wanted

5567 It would affect the amount that he would sell at different times of the year, for instance, people would not want money in India at that rate at present?—Yes, they would. In exactly the same way as the

public are now taking 20 lakhs from the Secretary of State every week at 1s  $3\frac{1}{2}d$  or 1s  $5\frac{1}{2}d$ , I think in exactly the same way at this time of the year they probably would take 20 lakhs at 1s  $4\frac{1}{2}d$ . I think at this season of the year 20 lakhs a week can be utilised, and the public would take them. At other seasons it may be that 100 lakhs a week, perhaps 120 lakhs a week, are likely to be taken

5568 I put that same question to the exchange bankers whom we saw, and they gave a precisely opposite answer, you think they would be wrong on that point?—Yes, I think so. If I may be permitted to add a word, if the rate were suddenly at this moment pushed up from 1s 5 annas to 1s  $4\frac{1}{2}d$  I can quite believe that the sudden shock to the public would be such that the Secretary of State possibly would sell no Councils for three weeks or a month or two months, but if this principle were introduced and carried into operation regularly year by year, I do not think it would have that effect at all. I think that in the slack season the public would take 20 lakhs, 30 lakhs, or 15 lakhs, whatever they required, and in the busy seasons they would take very much more

5569 It is your considered opinion that if the rates for Councils were fixed, the Secretary of State would sell substantially the same amount week by week that he sells now?—Yes, I think so

5570 In an article which appeared in your name in the "Pioneer," some weeks ago, you argued that the Secretary of State would certainly get buyers for his bills, because there is no way except the purchase of Councils by which rupees can be obtained in large quantities?—Yes

5571 You are not aware of the notification which has been in force for a great many years by which the Government of India have bound themselves to supply rupees or notes in exchange for the tender of sovereigns?—I am perfectly aware of that

5572 Then the purchase of Council bills is not the only way of getting rupees?—In large quantities with certainty, yes

5573 The Government of India have bound themselves to give you rupees in exchange for sovereigns in any quantity?—They have, but on one or two occasions they have not been able to do so, and possibly, if I were to ship out five millions of sovereigns to-morrow they would not be able to do so

5574 On what occasions have they refused to do that?—I cannot give you the exact year correctly, but I was in Calcutta some years ago when there was a shortage of rupees, when 8 anna pieces were shipped to Burma to finance the rice trade, and when the people of Burma would not have the 8-anna pieces, and the 8 anna pieces were all shipped back again to Calcutta, although they were legal tender. There were not enough rupees, in fact, to go round. I remember on more than one occasion that occurring

5575 You mean that this notification was not maintained by the Government?—I think they had a difficulty on that occasion in maintaining it

5576 They had a difficulty, but did they maintain it?—It has been maintained, I think. There has been no actual breakdown

5577 (Sir Robert Chalmers) You are not aware of any specific refusal of the Government of India to abide by the terms of their notification?—No, I cannot recall any

5578 (Mr Keynes) You would agree then that what you wrote in the "Pioneer" wants some modification?—No, I think it is substantially correct, as referring to prompt supplies of rupees in large quantities. There are ways of raising rupees in certain quantities, but in large quantities they can only be obtained in that way, by presenting the sovereigns to the Government and getting the rupees from the Paper Currency Reserve. It is conceivable that the Paper Currency Reserve may not have sufficient rupees in it at the time to supply the demand

5579 Let me quote your words—"The Indian mints now being closed to the public (a most objectionable state of affairs that puts India, momentarily, on a par with Persia or China), there is now no way by which the public in India can obtain supplies

11 July 1913]

The Hon. MONTAGU DE P. WEBB, C. I. E.

[Continued

" of rupees on a large scale except by purchasing " them in London from the Secretary of State " You agree that there is a notification which has always been maintained by the Government, by which you can get rupees in exchange for the tender of sovereigns?—Yes, I was perfectly aware of that notification. Perhaps the expression "in large quantities" may not have conveyed to you the same meaning that I had in my mind when I wrote it. The large quantities may be modified by the inability of the Government at certain periods to produce rupees as rapidly as the public might import sovereigns, especially if the Secretary of State's drawings were restricted to 16 millions or 17 millions required for the home charges.

5580 (*Mr. Robert Chalmers*) The statement was not based on a specific actuality?—No.

5581 (*Mr. James Begg*) You said yesterday, referring to the budget of 1910, that you thought the realised surplus of the previous year warranted a reduction of taxation, you thought that when there was a realised surplus of a million and a half, taxation might have been taken off?—Yes, it might have been taken off.

5582 As a matter of fact, were not some additional duties put on in the budget of that year?—I think 1910 was the year of additional taxes on silver, cigarettes, and petroleum.

5583 To the extent to which these additional duties brought in fresh revenue, they contributed to the subsequent surpluses?—Yes, undoubtedly.

5584 You were questioned yesterday about the sales of Council bills to prevent gold going to India, because the sovereigns might be shipped back again, if there was an effective gold currency in India, would there be any need for the re-shipment of sovereigns to buy silver on a large scale?—Not on a large scale.

5585 Consequently there would be no need to sell bills to prevent gold going to India?—No, I strongly object—and that is one of the grounds of my objection—to sales of Council bills at below the gold import point.

5586 I gather that you are in favour of selling Council bills to lay down money in London for the purchase of silver?—Yes, for token currency purposes.

5587 Would you say that the silver purchases should always be paid for from the proceeds of Council bill sales?—They most certainly ought not to have been paid for last year from the proceeds of Council sales. That, I think, was an unpardonable blunder. On some occasions I think it would be a satisfactory way of providing for the token currency if a small sum were entered in the Secretary of State's budget every year and drawn from for replenishing the token currency, the idea being to prevent any excitement in the silver market, and to enable the Government to replenish its token coinage on the best possible terms.

5588 When silver is purchased from the proceeds of Council bills for coinage purposes, that means an addition to the total currency of India, does it not?—Yes, it does, in a way.

5589 If you use gold from the Paper Currency Department to buy silver for coinage, that is a substitution of silver currency for gold currency?—Yes, quite so.

5590 There is no increase of the total currency in that way?—No.

5591 Whereas if you sell Council bills to be used for buying silver, that is an actual addition to the total currency?—Yes, that is so.

5592 Do you regard it as a disadvantage to India to carry more metallic currency than is absolutely necessary?—Yes.

5593 Regarding Council bill sales below the specie point, do you consider that they act as a stimulant to the export trade?—Not permanently.

5594. But so long as the sales go on?—They act as a stimulant, that is, a falling exchange acts as a stimulant temporarily.

5595 Sales of Council bills might cause exchange to fall?—Certainly, and they have done so.

5596 The other way about, the effect on the import trade would be in the opposite direction?—Quite so.

5597 Selling Council bills in that way means, does it not, that the gold standard is prevented from working naturally?—Undoubtedly.

5598 The nearer you get to the gold import point, the nearer you get to automatic working?—Quite so.

5599 The ability to sell Council bills depends, does it not, on the balance of trade being in favour of India?—Wholly.

5600 The higher you put the rate, the less chance you have of selling your bills unless under very favourable trade conditions?—I doubt whether the actual level of the rate would have much effect upon the trade of the year, taking it as a whole.

5601 If you put it too high you get sovereigns going in?—Yes.

5602 You cannot go above the import specie point?—No.

5603 If the Secretary of State holds for a fixed rate for his Council drafts, and you have an unfavourable state of trade, the balance of trade being against India, he would not be able to sell at his rate if it was a high one?—No.

5604 Then it would be a question, would it not, how long he could afford to wait for the money he requires?—Yes.

5605 An allusion was made yesterday to the time in 1894 when the Secretary of State held back the sale of Council bills for certain rates for a certain time?—Yes.

5606 Do you remember whether when the decision was arrived at not to hold up the sales for special rates an intimation was issued that the sales would be resumed at market rates?—Yes, I remember that. It was notified at the time that sales would be resumed at market rates, and I remember very well the consternation that this notification produced in the mercantile mind at the time. I remember myself being under the impression that the Government were holding out for 1s 4d, and then we were suddenly told that the Government would take any rate that was offered. I think the effect was to send exchange with a run down to 1s 1d, speaking from memory.

5607 Do you consider that the reason of that was that the balance of trade was not sufficiently in favour of India to absorb the accumulations of remittances which had been held up?—That result was produced, I think, by the excessive coinage of silver at the time that the mints were closed, which had the effect of checking the balance of trade in India's favour.

5608 The result of holding up the bills for a fixed rate and then throwing the accumulations upon the market was disastrous, was it not?—It was, in my opinion.

5609 Would you say that that experience showed that when unfavourable trade conditions prevail the Council bill system is a disadvantageous one for the Government?—No, I do not think so.

5610 They put themselves in the position that they have to declare how much they want to sell, does that not place them in a bad position?—I think not. I think the public know that 16 millions or 17 millions, or 18 millions, have got to be remitted during the course of the year, and if at any time the balance of trade is against India, then I think there is nothing for Government to do except to ship home sovereigns from their revenue accumulations to meet their home charges.

5611 (*Mr. Gillan*) I am not sure that we are looking at this question of Council bills in exactly the same way, and I would like to make that clear, if I can. In Part VIII, paragraph 2 (h), of Appendix XXI you (page 569) have given a definition of Council bills. You say, "They are simply sales in London of sovereigns or rupees delivered in India."—Yes.

5612 I am not sure if you mean that they are sales of actual coin, so to speak?—Yes, so I regard them.

5613 Suppose that you had an account, we will say, with the Bank of Bengal at Calcutta, and that your home firm had sent you out a bill for, say, five lakhs of rupees, but you did not immediately want the

11 July 1913 ]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued]

com for that, what would happen to it?—I should pay it in to my credit at my bankers in Calcutta

5614 You are banking at the Bank of Bengal with whom the Government are also banking?—Yes

5615 In that event it would mean simply a transfer from the Government account to yours?—Yes

5616 I will suppose that you also deal in opium, you have bought a lot of opium and you have got to pay Government, and you pay them by a cheque which transfers the amount from your account to the Government account?—Yes

5617 That cycle is complete without any coin?—Yes

5618 Supposing that a great many transactions in India were done by cheques instead of by coin, these Council bills would not mean sales of actual coin, would they?—Not exactly

5619 Would it not, therefore, be more correct to say that they are sales, we will not say necessarily of coin, but of a right to a certain sum in Indian legal tender currency?—I should not object to that definition

5620 Would you be prepared to go further, if we transposed the definition and said that these Council bills which the Secretary of State at present sells in London are really equivalent to purchases by him in Indian currency of bills on London? That is what they are equivalent to, is it not?—In a sense, yes

5621 I am only putting that, because it seems to me to put the matter in rather a clear light. That legal tender currency in India is liable, is it not, to appreciate and depreciate in exchange, and that naturally like any other currency in any other country?—As regards the foreign exchange, yes, it is liable to fluctuate between the specie point inwards and outwards

5622 What I was going to say is that those fluctuations do not depend on the cost of importing sovereigns, as you said just now, they are limited by that cause, but they do not depend on it?—Not wholly

5623 In the passage that I have quoted from your memorandum, you go on from that definition to say "and the cost to the public should be only a shade below the actual expense of shipping 'sovereigns to India'" (page 569)?—Yes, that is so

5624 Why do you make it depend on that factor?—Because the balance of trade is, on the whole, in India's favour

5625 I can see what you said in reply to Mr. Keynes on that point, but here it seems to me to be an inference drawn from that definition?—Yes that is so

5626 Do you still think that is correct?—Yes, I think so

5627 Yesterday, in answer to the Chairman, you spoke of the Secretary of State making, I understood, a rate of exchange, but that I was not clear about?—Yes, I did

5628 What is the total volume of Indian trade? I put it to you that it is somewhere, in and out, between 300 and 400 crores a year?—Yes

5629 That creates exchange to that extent?—Yes

5630 The Secretary of State's demands are, we will say, 30 crores?—Yes, it is a very large demand

5631 Assuming that he has, we will say, a tenth of this exchange created by the total trade of India, how is it possible for him to make a rate? That is what is not clear to me. How can a person who is dealing, we will say, in a tenth of any commodity, exchange or anything else, make a rate?—I can explain that very easily. He makes a rate in this way. When in the eyes of the public the demand for remittances to India is weak, and he suddenly and unexpectedly announces that next week he will dispose of 50 lakhs instead of 30, he thereby at once depresses exchanges by  $\frac{1}{3}$  or so. If he announces next week I will not auction any rupees at all, he will strengthen exchange but if he announces next week I am going to sell 100 lakhs instead of 50, and the market is already weak, the instant effect will be to knock exchange down at once. His mere announcement that he is going to sell next week so many rupees has a depressing effect upon the market, or a strengthening effect upon the

market if he reduces the amount of rupees that he is putting up for auction

5632 As I understand it, you mean this, that being a very large dealer in this commodity, he has the power of disturbing the market?—Being a monopolist, almost, in the sale of rupees—for he is not only a large dealer, he is a monopolist—being a monopolist, he can largely make the rate. He can say week by week I will not sell a single rupee, and in that way he can force the rate up to specie point. If he does not take that action, but says I am going to sell next week 50 lakhs, and then in a subsequent week I am going to sell 100 lakhs, and the week after I am going to sell 200 lakhs, he can depress the rate down to specie point outwards

5633 I am afraid I must pursue that point if you say he is a monopolist. In what sense is he a monopolist? It is open to anyone to take sovereigns into India and demand rupees, is it not?—Yes, under the notification which Mr. Keynes just reminded me of, that is so

5634 How is his position then one of monopoly?—I regard it as a monopoly in this sense, that through out the last year or two he has actively intercepted and prevented the export of sovereigns to India by auctioning rupees at below specie point

5635 That is another point altogether, surely, I was asking you about his position as a monopolist?—That is how he has exerted the power which his position gives him. If you take into consideration the fact that he has undertaken to produce rupees in exchange for sovereigns in India at the rate of 15 rupees to a sovereign, to that extent I admit that he is not a monopolist

5636 (Chairman) May I put it to you that your idea would be better expressed if instead of calling him a monopolist you said that he had undersold all possible competitors?—Yes

5637 (Mr. Gullan) That is rather a different point?—There is no competitor, though, except the Government, because there is nobody who can supply the rupees, even if they are coined and supplied in India in exchange for sovereigns, there is only one supplier and that is the Government

5638 (Chairman) But the Government has bound itself?—The Government has bound itself, has undertaken, to supply rupees

5639 (Mr. Gullan) I will ask you now another point in the same connection. In paragraph 7 of Part II of Appendix XXI (pp 556-7), you refer to the interference of the Council bill system with foreign exchanges. Is it your view that the sales of Council bills within the Secretary of State's requirements have that effect?—I would not in those circumstances describe it as an interference; they would affect exchange, of course, because the Secretary of State is such a large drawer on India. In so far as they are for his legitimate requirements in this country, I should not describe them as an interference. It is only when he commences to draw in excess of his legitimate requirements in this country, that I describe the transaction as an interference

5640 So that this reference to interference in this paragraph which I have quoted was based on the fact that in your judgment he has drawn in excess of his requirements?—Yes

5641 I merely wished to make that clear. I think you said something about sales of Council bills depressing exchange?—Yes sometimes

5642 That is their natural effect?—Yes

5643 Suppose that the Secretary of State had in particular cases refrained from selling Council bills for the time being, that would have a good effect on exchange would it not?—Yes, it would stiffen exchange

5644 But assuming always that he is not selling outside his requirements, he would at some later date have to sell so much the more?—Yes, he would have to put himself in funds either by sales or by receiving specie

5645 Assuming that he sold this sum later on, at that time *pro tanto*, the effect would be to depress exchange?—I am not quite sure about the *pro tanto*,

11 July 1913]

The Hon. MONTAGU DE P. WEBB, C.B.E.

[Continued.]

because at the other seasons of the year trade may be very brisk, and there may be an immense demand for money, and if the Secretary of State sells when there is an immense demand for money, he does not depress exchange so much as if he sells when there is a very small demand for money. Therefore, while there is a tendency to depression, I cannot say the tendency is *pro tanto*.

5646 I do not say that one could follow it out quantitatively, but you do not think it would have an equal effect in the opposite direction?—No, it would not have an equal effect.

5647 I understand that in a bad season he would get a lower rate, but would not the amount on the market have exactly the same effect in the one direction that it had in the other direction?—If the amount that he put on the market corresponded exactly with the additional demand, yes.

5648 Now I come to the amount sent home to meet the requirements of the Secretary of State. I think you have more or less agreed, in answer to Mr. Keynes, that, taking the period as a whole, there has not been sent home more than the Secretary of State actually in the long run needed or spent?—I would be inclined to put it, that, having sent home very much more than he has required, he has successfully managed to get rid of it in legitimate ways.

5649 Very well, I will come to that later on. I must ask you what you exactly mean by home charges when you say that the sales of Council bills should be directly limited to the home charges?—Do you desire me to define home charges?

5650 I will put it in this way. Do you mean the home charges year by year?—Yes.

5651 The home charges of a particular year?—Yes.

5652 If the home charges this year are 20 millions, he has not to remit home 21 millions, is that your position?—Yes.

5653 How would you treat exchange by Council bills over a series of years, taking good and bad together? In a famine year you said that you would bring home sovereigns?—Yes.

5654 At a rate equivalent to 1s 3d and, I suppose, 1½?—Thereabouts.

5655 It is not, in your view, wise finance to anticipate a possibility of that kind?—Quite so.

5656 It is not wise finance in your opinion?—No, it is not wise finance.

5657 It is not?—Not to anticipate, not to force exchange down to specie export point in anticipation of a famine year, which I consider is the policy that the Secretary of State is now following. I will take an example from to-day's position. The Secretary of State is now selling at below 1s 4d for no conceivable reason that I can think of except that he has habitually done it before for several years and he is doing it again, but not for any reason that I can discover.

5658 In your opinion, is it not wise of him to take advantage of a strong exchange or of favourable seasons in order to get his money home? You would risk everything and leave anything that he requires to be brought home in the course of the year, whatever that year was?—I would risk each year—take each year as it stands.

5659 About the way in which the money is being used—that is a matter you referred to just a moment ago. Sir Robert Chalmers put to you some figures yesterday, and I think Mr. Keynes also brought it out this morning, showing how it has been used?—Yes, that is so.

5660 Would you not agree, in view of those figures, that the Government of India have, as a matter of fact, succeeded in keeping up a very reasonable programme of public works, and at the same time have avoided borrowing to any large extent?—I think the programme of construction which has been carried out is on the whole not unsatisfactory.

5661 And that has been done with very little net borrowing?—It has been done on the whole with little borrowing certainly.

5662 Incidentally, that is a result which has been obtained only by reason of these large balances which the Government of India have held?—Yes.

5663 To that extent, would you agree that the existence of those large balances has had a beneficial effect?—Yes.

5664 You say in paragraph 10 of the first part of your memorandum that the policy of constructing reproductive capital works in India "does not appear to have been actively developed" (page 553), I do not quite understand what you mean by that sentence?—That sentence is based upon the fact that there has been a strong agitation from Bengal and Bombay that the amount spent on railway works has not been sufficient. Although large amounts have been spent, there is a consensus of opinion in Bengal and Bombay that the amount has not been sufficient. The fact remains that although in this connection the Railway Finance Committee in 1907-8 recommended 12½ millions annually to be spent on railways, that amount has never been spent.

5665 I quite agree?—Therefore, although large amounts have been expended on capital works, I do not consider that sufficient has been expended.

5666 Would you have been inclined then, taking the general financial outlook into consideration, to spend more?—Yes.

5667 In the present year's programme of railways and other works, we have to draw to the extent of no less than 11 millions from our balances—I daresay you noticed that in the financial statement?—Yes.

5668 Supposing you had spent more money in previous years on railways or any other objects, what would have been the result this year? I put it to you that there would have been two alternatives—either you would have had to drop very much of your railway programme, which I presume you would admit would have been very unfortunate, or you would have had to borrow very considerably in the London market?—I do not see it in that way at all. It appears to me that if the railway programme had been more completely carried out in the years gone by, there would not have been the necessity to spend so much on it now.

5669 (Sir Robert Chalmers) You think it is finite, do you?—No, not finite.

5670 (Mr. Gillan) It is only the last two or three years I am considering?—I understood the question to be that if this money had been spent in the past it would not be available to spend now, and my reply to that is that if it had been spent in the past there would not have been so much necessity for spending it now.

5671 We have been keeping up a programme of about 9 millions or 10 millions, and this year we have increased it?—Instead of the 12½ millions recommended by the Railway Finance Committee, that is to say, the Government of India's programme has been several millions short of the recommendations of the special committee who were formed to advise the Government in that respect—their actual work has been considerably short of the recommendations of that committee, although the work has been large.

5672 What I was putting to you was that if we had spent all the money in the last two or three years we might have had to drop from this programme not say, 10 millions, but a great many, perhaps 5 or 6?—Such a thing is conceivable.

5673 Do you not think the Government were, as a matter of fact, well advised in keeping a little money in hand, so as to maintain a steady programme instead of jumping up and down by millions?—I think it is possible that had I been responsible for the railway programme five years ago, I might have acted exactly the same as the Government have done, but the fact remains that circumstances have proved that it was not adequate.

5674 (Lord Kibricksen) You tell us that, generally speaking the Government of India and the Secretary of State have erred by excess of caution and unwillingness to take risks?—Yes.

5675 You say that, I suppose, speaking as a business man?—Yes.

11 July 1913]

The Hon MONTAGU DE P WEBB, C I E

[Continued]

5676 In other words, you apply to this question the principle which would govern a merchant in managing his own business, and looking at it from that point of view, you think that the Government has been over cautious?—Yes

5677 Or pessimistic, as you say?—Yes

5678 A merchant who wants to succeed in business has, I suppose, to take risks pretty often?—Yes

5679 Do you think that a Chancellor of the Exchequer or a Finance Member of the Council, with all his responsibilities for the affairs of a great country, should act on the same principles as a private individual who is trying to make a fortune in business?—Not exactly the same

5680 Does it not come to that?—It is a matter of degree. I would not suggest that the Government should conduct their business on exactly the same lines as a private firm who are paying a dividend, but I think if they moved a step or two in that direction it would be a good thing

5681 You admit that there is a very considerable difference?—There is a difference certainly

5682 And that the principles, in other words, which guide them should not be the same?—Not identically the same

5683 (*Mr Keynes*) In answer to one of my last questions you said that if the Secretary of State fixed 1s 4½d as the rate for his bills he would sell about the same amount each week as he does now?—I think so

5684 At present he sells some bills every week?—As a rule, yes

5685 No one will buy from the Secretary of State at 1s 4½d if the rate in the outside market was below this?—If the gold import point was below it

5686 If the exchange rate in the outside market was below it?—That is right

5687 Therefore you hold that if the Secretary of State pursued the policy you recommend, the rate in the outside market would never be below 1s 4½d?—It would only be below on those occasions when the balance of trade turned against India

5688 But in ordinary years it would never fall below 1s 4½d?—I think so

5689 It is therefore your considered opinion that if the Secretary of State announced he would not sell bills below 1s 4½d, then in normal seasons exchange never would fall below that rate?—That is so

5690 (*Chairman*) Now we will turn to Part III of Appendix XXI (pp 557-9), if you please. The principal recommendation that you make in that part is that the Bombay mint should be opened at once to the free coinage of sovereigns, I think?—Yes

5691 Will you please explain to me what advantages you think the opening of the mint would bring to India?—One advantage, in the first place, would be that movements in the foreign exchange would be regulated automatically—it would facilitate their regulation automatically. The other advantage is that it would also facilitate the growth and development of a gold coinage

5692 Taking the first point I do not quite follow you meaning when you say that it would facilitate the automatic regulation of exchange, in what way would it do that?—It would enable the public at all times to present gold for conversion into sovereigns whenever they required them, and would therefore give them another means of putting themselves in funds, in cash, than at present exists

5693 Am I to understand that the advantage in that respect would be derived from the facility for coining the gold which is now in India?—That is one of the advantages

5694 What would that gold be? Do you suppose that the produce of the Indian mines would, if such a mint were opened, be tendered for coining in Bombay?—I think so

5695 I think we have had it on the authority of the Indian Government that some time ago they found that the mines were under contract to send their gold to England?—That is so

5696 They have large dividends to pay in England?—Yes

5697 Do you think the inducements to them,

under those circumstances, to send gold to the mint in Bombay would be large?—If the mint were regulated on the same excellent principles that regulate the London mint, yes

5698 Even though having these large sums to pay in England, you think it would pay them better to have their gold coined in Bombay than to send it to England?—Yes, I should think so

5699 At any rate, that is one of the sources on which you count?—Yes

5700 Do you think that much gold would be produced from the hoards?—I do not think that the effect of a mint would be suddenly to draw gold out of hoards, but in times of danger and emergency it would afford a means of turning the savings of the people in the hoards into money

5701 Rapidly?—Rapidly. In past famines and in past times of trouble, metal has been produced from hoards, and I think a similar experience would occur again

5702 May I take it that you do not anticipate that it would add very much to the amount of gold coinage in India, but you think on the whole it would have that effect?—Yes, I think so

5703 You propose, I take it from what you have said, that no seigniorage should be charged on the gold coined at the mint?—Certainly not

5704 Sir Robert Chalmers points out to me that in the first paragraph of this section of your memorandum (page 557) you quote the Indian Currency Committee's recommendation (section 54) "that the Indian mints should be thrown open to the unrestricted coinage of gold on terms and conditions such as govern the three Australian branches of the Royal Mint." Those terms and conditions do include seigniorage, perhaps you are not aware of that?—I was not aware that there was any seigniorage charged in Australia. As far as I remember, I think a charge was made for maintaining the mint but I did not know there was a charge in the form of seigniorage

5705 At any rate, I am to take it that it is an essential point in your proposal that no such seigniorage should be charged here?—Yes

5706 The principal advantage which you would expect to derive is that you would increase the amount of gold coin in circulation?—That would be one of the tendencies

5707 Is there any other advantage?—The advantage is that the country would be fitted with what I regard as an essential part of its monetary mechanism. I regard it as an essential part of its currency mechanism that it should have a mint at which money could be coined at the requisition of the public

5708 I want to get exactly at your reason why that is essential. Am I right in thinking that you consider it essential to a proper currency system that there should be a gold currency?—Yes

5709 And essential to a gold currency that there should be a gold mint?—Yes, on the spot, in India itself

5710 It has not been found essential everywhere—in South Africa, for instance, where you have the largest production of gold?—There always was a mint there, I think until we closed it

5711 There is no mint at present. There was a Transvaal mint, you mean?—Yes. I cannot conceive why a mint has not been opened in South Africa

5712 (*Sir Robert Chalmers*) You are not aware of any large and definite demand for a mint from South Africa, are you?—No, not beyond the demand that I myself endeavoured to stimulate when I was in South Africa

5713 (*Chairman*) As you put it, it seems to me that it is really rather for the perfection of a theory than for any very definite practical advantage that you can point to, that you advocate the opening of a mint for the coinage of gold. What I mean to suggest is, that the only practical advantage you have suggested is that it would increase the number of sovereigns in the currency?—It would do away, in a measure, with the management by the Secretary of State of the foreign exchanges in that there would be

11 July 1913 ]

The Hon MONTAGU DE P WEBB, CIE

[Continued

always the mint at which the public could convert their gold into legal tender coins in the event of the Secretary of State taking any action of which the public did not approve. It is a safeguard, so to speak, an additional safeguard, that the people of India can on the spot obtain their own money on presentation of the metal.

5714 Regarding them as an additional safeguard of exchange, the sovereigns coined at the mint must be exported, must they not?—Not necessarily.

5715 How would they support exchange without being exported?—The actual support is not exercised until the time comes for their exportation, but the fact that they exist and can be exported when needed, is a sufficient practical support to exchange. It establishes confidence.

5716 That is to say, if I understand you rightly, the more gold you have in circulation in India, the greater the reservoir on which you have to draw for the support of exchange in a time of crisis?—Yes, and if the tap to that reservoir is in your own possession and can be controlled by yourself, you feel still more confident.

5717 The moment you need to export sovereigns for the maintenance of exchange, would sovereigns have any advantage for that purpose over bar gold, or other forms of uncoined gold?—Very little.

5718 So that if bar gold was hoarded in India and came out in a time of crisis, it would be equally as available for the support of exchange in that form as it would be if it came out of the hoards in the form of sovereigns?—Yes, to a large degree.

5719 Now with regard to the gold in circulation in India, do you think that it is very effective for the purpose of supporting exchange?—It is most effective.

5720 Do you think that in a time of crisis it would go to the support of exchange?—Unquestionably.

5721 You do not think that at such a moment there might be an increased instead of a diminished tendency to hoard?—I do not think so.

5722 Do you think that gold in circulation is as effective for that purpose as gold in the Secretary of State's reserves?—No, it is not so effective.

5723 For every 100l in the reserve there is 100l which directly supports exchange. Is that not so?—If the gold is freely in circulation it is an additional support to the reservoirs in the Government's possession and in the possession of the banks. Everybody has his own reservoir, so to speak.

5724 If a million were in circulation, some proportion only would go to support exchange?—Yes.

5725 Whereas if a million were in the reserve, the whole would go to the support of exchange?—If it was required, and if it was used.

5726 To that extent gold in circulation is less effective for the maintenance of exchange than gold held in the reserve?—Yes.

5727 Do you regard a gold currency as desirable in itself, apart from its particular effect on exchange?—Yes.

5728 You do not regard it as rather a wasteful form?—No, I do not think so—not in India. It is wasteful in highly developed countries, but not in India.

5729 For what reason?—Because India is not so far advanced, and her circumstances in regard to trade and commerce are not similar to those of this country. A very large proportion of the population cannot read or write, and therefore are quite incapable of drawing cheques, they live far from railways, and altogether there are very many reasons for the use of a full value metallic currency in India which do not exist in this country at all.

5730 Would you go so far as to say that to the extent to which the population can be induced to use their currency notes or silver, it is a cheaper and better form of currency than gold?—No, I would not say that, speaking from the point of view of India, I would not say it was better.

5731 (Sir Robert Chalmers) Is it cheaper, was the question?—No, certainly not, unless the notes are supported by securities and not by metal.

5732 (Chairman) Now I want to refer to a subject with which you deal in Part III, paragraph 7 (c), of Appendix XXI (page 558), and on which we touched yesterday. You say that fresh rupees should not be coined until the proportion of the gold in the currency is found to exceed the requirements of the public?—That is so.

5733 I asked you yesterday, but I do not think I got a very clear answer from you—perhaps I did not put my question well—what is your test for the needs of the public? How would you test those needs?—The test I should take would be the requirements of the traders for money to carry on their trade, European and Indian. That would, no doubt, find its expression through the banks.

5734 But not its whole expression through the banks. For instance, the Government must have sufficient rupees for the encashment of its notes?—Yes, rupees and sovereigns.

5735 It must be prepared to give rupees in exchange for sovereigns whenever they are tendered?—So long as it accepts that responsibility. It is a self-imposed responsibility.

5736 It must also have rupees to meet Council bills?—If rupees are demanded. Rupees may not necessarily be demanded. In my part of the world I am quite sure that some export firms would as soon receive sovereigns in payment of Council bills as rupees.

5737 To the extent to which rupees are demanded for any of those purposes, the Government must be prepared to meet it?—Yes.

5738 Would you be surprised to learn that those are the tests which the Government of India apply?—No, I am not surprised. I know it is the test, and I think I have drawn attention to the fact that although Government had decided on one policy, then attitude appears to be. After all, if the people do not want a gold policy, we will not press it.

5739 That brings me to another point. I think you call our attention to the view of the Currency Committee that "when Government has accumulated a sufficient gold reserve, and so long as gold is available in its treasury, it might discharge its obligations in gold instead of rupees."\* Is that what you are alluding to?—Yes.

5740 I will just pause at that point to ask you. Do you think the Government has accumulated a sufficient gold reserve already?—Yes.

5741 In this country, or do you mean the total?—To carry out its obligations in India in gold—do I understand the question correctly?

5742 I mean for all purposes?—For local purposes in India I think sufficient gold has been accumulated in India to enable the Government of India to carry out its obligations in gold.

5743 Without trenching upon any gold required as a reserve for the maintenance of exchange?—Yes, certainly.

5744 You seem to me to translate the opinion of the Currency Committee, that when that state of affairs has been reached the Government might discharge its obligations in gold instead of rupees, into an injunction to the Government of India so to discharge it?—Yes.

5745 You quote with disapproval the expression of policy of the Government of India that "while refraining from taking any steps to force the gold on the people, they discharge their obligations in sovereigns wherever 'payees so desire', or, in other words, that they give the payee what he asks for."—Yes.

5746 Your opinion is that they ought, if I may use the expression, to force the gold upon him?—I do not like the word "force." My view is that if Government intend to establish a gold currency, they should take reasonable steps to carry out that policy, and not pause at every step in the policy to ask everybody if they want it carried out or not.

5747 Suppose the Government had come to the conclusion that there was no reason for establishing a gold currency, as exchange was being maintained without it, and could be so maintained, is there any reason then why they should attempt to press upon the public something which the public *ex hypothesi* does

\* Report of Indian Currency Committee of 1899, paragraph 39 (C 9390)

[11 July 1913]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued]

not demand?—I should think Government had come to a wrong conclusion in those circumstances.

5748 So that your criticism on all this part of their policy is that it is their duty to establish a gold currency?—Yes, as recommended by the expert committee especially appointed to advise them in this matter, as accepted by the Secretary of State, and as accepted by the Government of India.

5749 Have you any reason for desiring the establishment of a gold currency beyond the additional support that it would give to exchange?—Yes. I think it would add immensely to the credit of the country generally if a gold currency were in circulation, and if the world generally understood that the currency of India was on exactly the same footing as the currency of England, and that there were no further currency risks in dealing with India than there would be in dealing with Australia or Canada. I think that would be a great gain to the credit of India.

5750 That really comes back to exchange again—to the support which such a currency would give to exchange?—Yes.

5751 You do not think the other measures taken by the Government of India and the Secretary of State are sufficient to give that public sense of security in the maintenance of exchange?—No.

5752 In paragraph 8 of Part III (page 558) you say "If the Government 'put their hearts' into this business, to use Professor MacLeod's expression, India will very soon have a gold currency in active circulation" and "the exchange value of the rupee will be as permanently secured as the exchange value of the English shilling, or the French 5-franc piece, or the silver dollar of the United States of America, and that, too, without the necessity of maintaining any Gold Standard Reserve"?—Yes.

5753 Do you mean that under those circumstances there should be no reserve in existence, or do you only mean that whilst it would be wise to have a reserve, there would be probably no call upon it?—I mean there would be no necessity to maintain what is now known as the Gold Standard Reserve. I mean that there would be sufficient gold in the possession of the banks, in the possession of Government, and in the possession of the public, to support exchange without extraneous assistance from what is now called the Gold Standard Reserve.

5754 You think that the banks would accumulate something in the nature of the Bank of England gold reserve?—I think everybody would have to hold gold, and the metallic portion of the reserves against the paper currency would be almost wholly in gold. There would be therefore plenty of gold available to support exchange without the assistance of what is now known as the Gold Standard Reserve.

5755 (Lord Faber) As regards this very important question of maintaining the gold reserve, at present I suppose you think it is quite necessary to have a Gold Standard Reserve?—I think it is desirable to have a Gold Standard Reserve now until a gold currency has been thoroughly established throughout the whole of India. It is not so necessary now as it was five years ago.

5756 You would agree, I think, in believing that the very fact of having a Gold Standard Reserve renders it unnecessary to use it; the public are so satisfied with the condition of the reserve to maintain gold payments, that they will not come for gold as they would do if there were no such reserve?—The public will never come for gold until the balance of trade turns against India and when the balance of trade turns, they will come for gold. I do not think they are influenced, or can be influenced, by any other consideration than the balance of trade. Of course, with the existence of the Gold Standard Reserve at present, there is more confidence than there would be without the existence of that reserve.

5757 (Sir Robert Chalmers) In paragraph 7 of Part III (page 558) you put most strongly that it is "weak and unbusinesslike" for the Indian Government to consider what the Indian public desire. Do you quite stand to that expression of opinion, or do you modify it in any way?—Not in the slightest in this connection.

5758 A bold autocracy would be your line?—In this connection, yes.

5759 Coming down to gold in the possession of individuals, you lay great stress on that, but do you think that the possession of gold in the form of coins in the pockets of individuals is a real strength to exchange which you can depend on when a crisis comes?—It depends on the nature of the crisis. If the crisis means the failure of the rain and the crops in India, leading to a reversal of the current of trade, yes I think so, certainly.

5760 Have you got any support for that view in past history? Before you answer I will indicate what we have received in evidence—in the crisis of 1907–8 the Paper Currency Reserve lost 4½ millions of gold, which all went into circulation and, on your hypothesis, would have strengthened exchange by being available for support?—I do not think a parallel can be drawn from the example of 1907–8, because, owing to the terribly bad management on the part of the Government, they themselves depressed their own exchange down to such a point as to make it profitable to the public to hoard sovereigns.

5761 As a matter of fact, out of that 4½ millions only about a quarter-of-a-million came home, are you aware of that?—Yes.

5762 Therefore, that experience does not show that the passage of sovereigns into currency at any rate necessarily supports exchange and supports it in the hour of need?—That example affords no support to that theory in the slightest. May I be permitted to say that on that occasion the moment that I personally required sovereigns I went to the Treasury and asked for them, and the Government declined to give me sovereigns? I went to Bombay and the Government declined to give me sovereigns. I went to Calcutta and had a long talk with the Finance Minister, and I pointed out to him that he himself was breaking down exchange by omitting to let go the sovereigns. Still the sovereigns were not let go for several weeks. Government themselves, by their own action, created that feeling, that lack of confidence, which led to sovereigns being hoarded. It was Government themselves who destroyed their own scheme.

5763 When you get the alternative of payment in rupees or in sovereigns, do you not think that, in a time of crisis, there would be a tendency to pay in the less valuable form?—Not the slightest, if there is gold in circulation throughout the country, but if there is insufficient gold, or if there is a lack of confidence in the action that Government will take, then gold will assuredly be hoarded, but if gold is fully in circulation if the metallic reserve of the paper currency consists wholly of gold and if Government make it quite clear that they are not going to let exchange down themselves, then I think no tendency to hoard sovereigns, or to pay in rupees, would arise.

5764 Do you still attach importance to the possession of gold in the form of sovereigns by the people?—Yes, very much.

5765 Do you remember the late Lord Goschen took rather the opposite view in the speech he made at Leeds some years ago?—Yes.

5766 He spoke, I will not say with disrespect of waistcoat pocket gold, and indicated his belief that when you wanted it it was not available?—That is so.

5767 You are aware of that fact?—Yes. I think that Lord Goschen's view was perfectly correct in respect of this country, but I think the circumstances in India are entirely different. The circumstances in India are these, that if there is a failure of the crops in a certain portion of the country, money has to be produced to remedy this state of affairs, and if the savings of the people are in the form of sovereigns, if the hoards are in the form of sovereigns, they have to be brought into the market, and so money flows into the market and will flow into the banks. But the conditions are altogether different in this country where everybody recognises that the gold reserves are very slender, and where, in a time of crisis, there would be a tendency for everybody who was ignorant and ill-informed to hoard gold.

11 July 1913 ]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued.]

5768 Do you think there would not be that tendency in India?—No.

5769 (Mr. Keynes) You say that sovereigns are now in circulation to the extent of over 40,000,000 in India, is that approximately the figure of the total absorption of sovereigns by the public since 1898?—The source of that figure is the last report of the Paper Currency Department of 21st December last, and the extract is as follows: "The latest estimate of the number of rupees in circulation is 180 crores, and the figure for gold may be taken to be 60 crores. The growth of the circulation of silver has not kept pace with the growth of the circulation of gold." Those are the figures dealing with the current amount of the currency in circulation, silver and gold, which I have taken from the last official report of the Paper Currency Department.\*

5770 Is that an unpublished report for the year 1912-3?—This is for the year 1911-2, and was issued on 21st December 1912. This is an article of my own from which I am quoting the words of the Comptroller-General of Paper Currency—not the report itself.

5771 The only figures I know are the figures of the absorption of sovereigns which are given in the return you speak of, and 40 millions is the approximate figure of absorption since 1907-8?—It is described in the return as the figure for "gold in circulation" which "may be taken to be 60 crores." If the report could be produced I have no doubt I could easily find the passage.

5772 (After examining the report which was produced) I think I am right. If the figure be taken in its context it appears to be that of the absorption. The figure is obtained by adding up the sovereigns which have left the Government treasuries and have not come back in the period since 1907-8. It includes, therefore, those sovereigns which were in hoards and those sovereigns which have been melted. You would not maintain, would you, that the 40 millions were in circulation in the sense that they were being used as currency?—I have only the report to go upon. They are in circulation very freely in that part of India with which I am most familiar—West and Northern India, they are in everyday circulation there quite freely.

5773 Forty millions is the same circulation as the notes and about one third of the rupee circulation. You will agree that there is no experience which would justify any such estimate if you interpret "in circulation" as meaning "used as currency"?—The report I have just quoted gives the rupees in circulation as 180 crores.

5774 Perhaps I might read it. In the report there is a table which shows the amount of sovereigns which are issued from the Currency Department each year, and the amount which are returned to it. The balance which leaves the Currency Reserve is called the absorption. Those figures are added up on page 13 of the return to which you refer, and the word "absorption" is constantly used, but I see that it is the absorption of a longer period than I said. The absorption taking these figures, appears to have been 46 crores between 1905-6 and the date of the report, and the 60 crores seems to be made up by an allowance for previous years. These figures, therefore, include the sovereigns in hoards and those sovereigns which have been melted. The words "in circulation" are, I believe, intended in this passage to mean "taken in absorption," and you would not maintain, would you, that it is at all probable that they could mean more than that?—I have no information to go upon other than the words extracted from the official report. If the official report has printed "circulation" for "absorption," it may be so.

5775 But you have no other evidence whatever?—No evidence other than that Paper Currency Report.

5776 You argue that the Government should put their hearts into the business of urging on a gold circulation?—Yes.

\* Published in Gazette of India for Saturday 21st December 1913, pp. 3235-344.

5777 Do you mean by that that they should refuse rupees to those who want them?—No.

5778 You say they acted weakly in only giving sovereigns if the Indian public so desired, and then you go on to complain of them because they have only taken the step of discharging their obligations in sovereigns wherever the payee so desired?—Yes.

5779 You do not imply by that that you want them to give sovereigns where the payee does not so desire, do you?—No.

5780 It is only in those cases where the payees are really indifferent that you urge that the Government should give sovereigns?—Quite so. A large number of the payees are perfectly indifferent, and if the cashiers of the Government, or the Treasury officers, handed out sovereigns, I think they would be quite content with them.

5781 Is that as far as you want the Government to go?—Yes.

5782 I thought in answer to Sir Robert Chalmers you rather implied that you wanted to go further than that, and that you wanted to force sovereigns?—I do not like to use the word "force." I would not say to a merchant who came to my office and said, "Will you please pay me in rupees?" "No I insist on paying you in sovereigns," but I might try to persuade him to take half in sovereigns and half in rupees, and in that way induce him to take a certain number of sovereigns. A similar line of conduct might be adopted, I think, by Government officers.

5783 If that policy were followed, you think we should very soon have in active circulation 100 millions?—I think that is quite possible.

5784 Do you include in that 100 millions, gold in the reserve of the Paper Currency?—No.

5785 You mean 100 millions in the pockets of the people at the banks, and at the treasuries, apart from the Government reserves of gold?—And, let us say, in hoards.

5786 And in hoards?—Yes. The people of India are not always equipped with pockets, and it is quite a usual thing on the part of a native of India to keep his money in his house. Sometimes for the sake of security he buries it in the ground, and it is then generally referred to as a hoard, but what the native has in the ground under his bed is exactly the same as what we should carry in our pockets or keep in the house. The word "hoard" has a very misleading effect upon people who are not familiar with the customs of the country.

5787 I quite agree that you cannot draw a sharp distinction between circulation and hoards. Taking your figure of 40 millions, which I do not accept, as the present figure, that would represent an addition of 60 millions?—Yes.

5788 Do you imagine this would be chiefly at the expense of notes or rupees? Which would it take the place of?—I think it would largely take the place of rupees. It would not wholly take the place of rupees, but it would supplant rupees, I think, to a certain extent. There would be an additional growth of metallic currency habits as well to be taken into consideration, there would be a growth of the opportunity of the use of metallic money generally.

5789 So we should find Government with perhaps 60 millions of rupees on their hands, because I presume you are not assuming this would circulate as well as all the rest of the rupees?—It would take many years to do this, and of course the rupee circulation would have to be used up by degrees.

5790 In your memorandum you say "very soon"?—Yes.

5791 I am not quite clear about this: Is the 60 millions of additional gold to be wholly additional to the rupees now in circulation, or is it to be in diminution of the rupees in circulation?—I think it is largely additional.

5792 All the present rupees will still be in circulation?—Not all the present rupees because large quantities go over the frontiers, to East Africa, and to different parts of Central Asia, and so get out of sight. Nobody knows what becomes of the rupees, they constantly disappear.

11 July 1913 ]

The Hon. MONTAGU DE P. WEBB, CIE

[Continued]

5793 The total circulation of India is variously estimated, but I suppose that nobody would put it at above 160 millions sterling. Would you put the present circulation at about that, let us say, 250 crores of notes and rupees together?—I have not been accustomed to mix the notes with the rupees.

5794 Then let us take them separately?—Taking the rupee circulation, I should think it might approximate—

5795 To 200 crores?—Yes, I should think so—more even.

5796 Say 130 millions sterling. You are supposing an addition to the currency of 60 millions, allowing for the fact that the currency has been very greatly increased—and you rather criticize that—lately, how long do you think it would take India to absorb another 50 per cent?—Possibly seven years to 10 years.

5797 You think seven to 10 years?—Yes.

5798 There has been a very exceptional increase of currency since 1900, has there not?—Yes.

5799 It has not amounted to such a high proportion as that?—India is advancing very rapidly indeed, and the extension of irrigation and the spread of railways is leading to trade developments, so I think she will require a great deal more currency in the near future than has been used in the past.

5800 You policy is based on these two assumptions—first, that approximately the existing number of rupees will remain in circulation, and next that, in addition to those India will in seven to 10 years absorb 60 millions more of currency?—Not that the present amount of rupees will remain in circulation, because there is a constant disappearance.

5801 Apart from natural wastage?—The natural wastage and disappearance are continually going on. I anticipate that these 60 millions will be added to the currency in gold.

5802 I come now to the question of the reserve. Do you think that, even although the present circulation of rupees remains—when I say the present circulation, I mean reduced by natural wastage in the course of many years—the Government would not still be wanting reserves?—What kind of reserves—the reserves in the Paper Currency Department or the reserves in the Gold Standard Reserve?

5803 I am thinking of the Gold Standard Reserve?—I think when this amount of gold has entered the country the Gold Standard Reserve will be altogether unnecessary.

5804 India would still be in a different position to other countries if she had 100 millions to 150 millions worth of tokens in circulation, would she not?—I do not know. She would not be very different from France and the United States, who have a very large silver token currency in circulation.

5805 But nothing like that?—I forget exactly what the amount is, but they have a large silver token currency.

5806 In the case of the United States the amount of gold that they have is, as you know, enormous?—It is.

5807 And quite out of proportion to the sort of figure you are suggesting here?—Quite out of proportion.

5808 In the case of France it is also very much bigger than you are suggesting?—Yes.

5809 So there would not be a parallel?—The two cases would not be identically similar, they would only be roughly similar, in the sense that there would be a large token currency floating about.

5810 I think I have got the premisses of your proposals rather clearer now. I should like to pass on to your contention that if such a system is to be established, as I now understand you to wish, the system will be more stable than it is at present. You are supposing that out of a total currency of perhaps 250 millions 100 millions would be of gold, is that correct?—Yes, approximately.

5811 There was a further point put that I should like to refer to. I suppose that the sovereign in India is in respect of the purchasing power of the people equal to about a 5*l* note in England—I do not mean it is

that exactly, but a sovereign in India is a large amount?—I do not quite follow the drift of that question.

5812 The drift of the question is this. Do you think that out of 250 millions, part of which will be in notes of high denominations, so much as 100 millions would circulate in coins of so high a denomination as the sovereign?—Yes, if by the word "circulation" you remember that I include hoards.

5813 Semi hoards we will call them?—Yes, the semi hoards of the people.

5814 We have a circulation of which, including hoards, 100 millions is gold, 120 millions we will say rupees, and perhaps 30 millions notes. A serious crisis arises in which some part of the circulation is returned to the Government, you would not maintain that only gold would be returned to them, would you?—It depends on the nature of the crisis.

5815 Whatever the nature of the crisis it would not be all gold?—No, probably not.

5816 If it were a crisis in which confidence were shaken in any respect people would rather keep the gold instead of the silver, would they not?—There might be that tendency no doubt.

5817 The Government could not therefore rely upon not having at any rate some important number of rupees returned to them?—Certainly.

5818 And it would have to maintain reserves by which they could cash rupees in terms of the sovereign?—If they maintain their present legislation.

5819 Under any system?—No. It is quite conceivable rupees might not be legal tender over 1,000 or 500.

5820 Would you allow the rupees to sink to a discount?—Such a thing is conceivable.

5821 Your proposal does include that, does it? You would not take steps to prevent rupees, which were circulating in our hypothetical case to the amount of 120 millions, from falling to a discount?—I cannot conceive any circumstances when 100 millions of gold is in circulation in India in which the token coinage would fall to a discount.

5822 If there were any surplus of rupees which people wanted to get rid of rather than get rid of sovereigns, the rupees would be at a discount, would they not?—I could not imagine such circumstances with such a large gold circulation.

5823 You have admitted that the Government would have some rupees returned to them?—Possibly a very large number.

5824 That is to say the people would, to a certain extent, prefer to dispose of the silver?—Yes, some people would.

5825 If there were no facilities for their doing this, the silver must fall to a discount?—If the crisis were of such a nature that enormous numbers of people wanted to turn rupees into sovereigns, such a thing is conceivable. I do not think it would ever happen, and I cannot imagine it would happen, in practice, but as a theoretical problem such a thing is certainly conceivable.

5826 You would not recommend the Government to take any steps to guard against the possibility, then?—No.

5827 With reference to the Gold Standard Reserve, in paragraph 8 of Part III of Appendix XXI (page 558) you have described it as wasteful. You are aware that the Gold Standard Reserve was wholly built up out of the profits of the silver circulation, are you not?—It was originally built up out of the profits of coming silver.

5828 So that if the silver had not been coined, you can say if you like there would have been no need for this reserve, but it would not even have existed?—If the present legislation did not exist, the Gold Standard Reserve would not have existed.

5829 So the present system pays for itself?—I do not understand how a currency system can pay for itself. I do not quite know what that means.

5830 I mean simply that the expenses of maintaining the reserve are met wholly out of the profits of the coinage, and do not form any additional charge?—There is no expense in maintaining the coinage. I do not understand what that means at all. The effect of coming a large number of rupees and cir

11 July 1913 ]

The Hon MONTAGU DE P WEBB, CIE

[Continued

culating them at a value very much above their face value, has left in the hands of the Government a large accumulation of money, but I do not know how you could describe that accumulation of money as providing a currency free of cost, or as maintaining the cost of the currency.

5831 I was trying to get at what you meant by calling the Gold Standard Reserve wasteful?—May I ask which paragraph you are referring to?

5832 Paragraph 8 of Part III, page 558?—It would become wasteful in the sense that keeping any metallic reserve is wasteful, the holding of any metallic reserve is a waste of money.

5833 (*Sir Robert Chalmers*) Like the gold reserve in the Bank of England?—Yes, in a sense that is wasteful.

5834 (*Mr Keynes*) If the reserve were brought into existence through the existing system of currency, you cannot call this system wasteful as compared with a system in which the reserve would not even come into existence?—If it were not wasteful, it would not be wasteful, that is all I can say.

5835 I do not understand how that answers my question?—If a system of currency had not been introduced by which this reserve had been created, I could not have said that the reserve was wasteful, because the reserve would not have existed. When gold is freely in circulation there will be no necessity to maintain a gold reserve at all, that is to say, these 20 millions can be turned to account by being used in reproductive works, and therefore, instead of having a certain portion of it, whatever the metallic portion now is, lying idle, it may then be used profitably.

5836 My point is that these 20 millions or so that you use in this way have only come into existence because your policy has not been followed?—No, I cannot admit that at all. I do not know quite what you refer to as my policy.

5837 I refer to your policy of pushing a gold circulation and refraining from coining fresh rupees. If that policy had been followed in the last 10 years this 20 millions which you propose to devote to reproductive purposes would not exist?—Some portion of it would not have existed, certainly. It would always have been necessary to manufacture a certain amount of token coinage, and to the extent of the manufacture of token coinage there would be a surplus lying in the Gold Standard Reserve.

5838 I only wanted to be clear that you were not proposing to supplant rupees by gold, and at the same time to get the advantage of being able to use your Gold Standard Reserve?—There will be no future reserve, or at least, only a very small one. I would only utilise what already exists. The fact that it is wasteful, I think is generally recognised from the circumstance that Government themselves have invested a certain portion of this reserve in securities.

5839 I want to take up now a point that I have already touched on. In reply to the Chairman you said the main reason for which you wanted a gold currency was to make exchange more stable, and in a further reply to him you said that you do not propose that the Government should take any steps to prevent rupees falling to a discount, though you think it is improbable they would so fall. In those circumstances do you think it is true that exchange would be more stable?—Certainly, I think greater confidence would be felt in the currency if a larger proportion consisted of gold.

5840 If it were known that there was this enormous quantity of rupees, and the Government had taken no precautions to prevent them falling to a discount?—I do not think that would have any effect on the public at all, so long as there was a very large gold circulation.

5841 Now let me compare this as regards stability with the alternative that might exist seven or 10 years hence, if the present policy is followed. I am talking your hypothesis that there is a greatly increased demand for currency—I do not myself think it could possibly grow on the scale you suggest, but assuming there is a considerably increased demand for currency—under the existing state of affairs a certain number of additional rupees would be coined, which would

strengthen the Gold Standard Reserve, and a certain number of notes would get into circulation for the larger payments, and that would strengthen the Paper Currency Reserve. Suppose the circulation is increased by 60 millions, then it would not be extravagant to suggest that the existing reserves would be doubled, because they have actually been built up to their present figure with a less expansion of currency than what you are contemplating. So that as regards stability you have got to compare your proposed state of affairs with 100 millions of sovereigns in circulation or in hoards and a great number of rupees against which the Government takes no precautions, with a state of affairs in which they have reserves double what they have now?—Yes.

5842 Do you maintain that yours is a more stable state of affairs?—I think it is much more satisfactory.

5843 More stable?—Yes, more stable because inspiring greater confidence.

5844 You do actually maintain that at a crisis it would be less likely that exchange would fall under your system than under this one?—Infinitely less likely. If there was a crisis to-morrow, I do not think this gold reserve could be turned to account, or at any rate only a very small portion of it. I am perfectly certain that the portion of the reserves which lies in London in the form of securities would not be realised.

5845 I think that is getting on to rather a different point, you are now criticising the holding of securities?—Yes.

5846 Supposing you compare it with the state of affairs when the reserve is held all in gold?—I find it very difficult to imagine that, at any rate with a Government desiring to put a large portion of it in securities.

5847 That is quite a different argument. As to the alternative between securities and gold, it would be possible for the Government to pursue the main outlines of their existing currency policy, and at the same time to have it all in gold, would it not?—If I am asked the question, supposing the present gold reserves were doubled, and supposing the whole of that gold reserve were held in gold.

5848 (*Sir Robert Chalmers*) The extra portion?—No, supposing the whole of the reserves were held in gold, then, if I understand Mr Keynes' question it would be, do you not think in those circumstances that would establish confidence? I say, yes, certainly, if the whole of the reserves were held in gold. But I am very doubtful whether the Government would hold such a large amount in gold.

5849 (*Mr Keynes*) Would it be more stable than your alternative proposal?—If the gold were existing in the hands of the people or in the banks, then I think my proposal is equally satisfactory, in fact more so.

5850 Although you have admitted that of the amount returned some part might be rupees?—Yes, that is conceivable.

5851 You think that is a consistent state of mind in which to remain?—I think so.

5852 I should now, in conclusion, like to put the position to you in a rather more general way. I think that all thinking people would agree with what appears to be your contention, namely, that for large payments rupees are a very bad medium of exchange, and that it is not a very good thing to have such an enormous currency of expensive tokens as India has?—Yes.

5853 When I look to the future it seems to me that there are two lines on which she can develop—that which you suggest, and a state of affairs in which Government, instead of encouraging gold, encourages notes. I understand from other parts of Appendix XXI that you are not opposed to the note issue, and that you do see some advantages from using more notes?—Yes.

5854 Are you clear that, if you compare a gold future and a note future as alternatives, there are not advantages on the side of the notes from the point of view of economy and elasticity, and not least from the point of view of stability?—There are advantages on the side of the notes, certainly.

5855 Is not your gold policy rather likely to kill a note policy?—I do not think so, unless circumstances

11 July 1913]

The Hon MONTAGU DE P WEBB, C I E

[Continued

prove that gold is more suitable to the requirements of a partially developed country like India, than notes. If the gold replaces notes, I think that is proof positive that the conditions of India are such that gold is more suitable as a monetary medium than notes.

5856 You are not proposing to let things take their course, but you are urging that the Government should actively further gold?—Yes.

5857 They could if they like, in the same sort of way that you describe, actively further notes?—Yes.

5858 It might make just the difference into which scale they put their influence?—I think Government influence should be applied in both directions, both in increasing the note circulation and in increasing the gold circulation.

5859 As an alternative?—I do not think so.

5860 There is a great bulk of small purchases, wages and so forth in which only rupees can be used, there is another set of payments in large amounts in which gold could be used, as is the case in Northern India to day, or in which notes could be used as is a good deal the case in other parts of India. It is largely a matter of custom and of habit, and of which is made most convenient by the Government, as to which of those two things happens. Is not gold rather a rival to notes than to silver?—At first it is, but I do not regard it as a rival, looking at the policy generally. Just at the moment gold is likely to compete with notes at first. I regard the currency in this way, the development should proceed step by step from silver to gold to notes, that is the natural development. If I am asked if a note circulation is not the most economical form of currency, I say yes, certainly, once we have stepped over the gold step, we will develop the paper step. At present the conditions of India are such that I think she wants to be taught how to make the fullest use of the gold currency before we go on to the notes, but both are desirable unquestionably.

5861 May I say that that theory of the evolution of money is not an historical one? It has not actually been the case, has it?—I think so.

5862 That most of the nations of the world have gone through those stages?—I think most nations of the world have tried to use both metals, and most nations of the world have given it up as a bad job and concentrated their attention on gold and made silver a subsidiary coinage. I think the most advanced nations of the world have come to the conclusion that paper is still more economical than gold, and are using as much paper for gold and as little gold as possible.

5863 Can you name any country except Egypt in which gold has ever formed the principal means of exchange?—If by the principal means of exchange you include the whole of the nation's transactions, no.

5864 Such a proportion as would be represented by gold, if your policy was successful in India?—I think England is a good example of a considerable use of gold.

5865 But in proportion to the whole transactions it would be a fraction of 1 per cent?—If the whole of the wholesale transactions of the country are concerned, I daresay possibly so, but in India you have 315 millions of people, a very large proportion of whom must handle a metallic currency.

5866 Of course, we all know the state of affairs in England, where the cheque system has made the position of gold and silver relatively unimportant, but apart from that, taking more comparable cases, can you quote any instance which even appears to support your view?—That gold is used more freely than silver?

5867 That gold is used as the principal medium of exchange?—No, I think not.

5868 On any country in which that ever has been the case?—No, I think not.

5869 So that this process of evolution by which you, first of all, use chiefly silver, then chiefly gold, and then chiefly notes, is a theoretical description?—I do not think I said use chiefly silver and then chiefly gold and then chiefly notes; I meant that the experience of modern nations was such that attention was concentrated gradually on silver, and then on gold, and

then on paper. I do not think any country has used gold more than silver or more than paper.

5870 By attention being concentrated do you mean in controversial writings or in the currency?—I mean as a mainstay of the currency.

5871 Where has gold been the mainstay of the currency?—Gold is the mainstay of the currency everywhere in the world as far as I am aware.

5872 Could you mention some particular country?—I cannot mention any country where it is not, for example, gold is the mainstay of the currency in England.

5873 There is an ambiguity in the term, "the mainstay" may mean that the country's reserves are held in gold?—That is what I call the mainstay.

5874 What you are proposing in India is that there should be no reserves in gold?—That no Gold Standard Reserve should be held. I am merely suggesting that this particular amount that now exists, the gold in the Gold Standard Reserve, should not be contained in that form. Of course, there will be gold reserves in the banks and against the paper currency.

5875 I was not speaking of some country in which the reserves were held in gold, but of some country in which the main currency, from the point of view of the actual media of exchange, was gold?—I cannot certainly name a country where, taking the country as a whole and the transactions as a whole, gold money is used more than any other currency.

5876 You are proposing, therefore, a state of affairs in India to which we have no parallel anywhere else?—No, certainly not. I do not suppose gold would be used more as currency in India than any other media of exchange. All over the world the great bulk of the population are poor, and the great bulk of the population use silver coins for currency purposes in all the countries.

5877 I was trying to get at the basis of your theory that there is a sort of natural progression from silver through gold to paper, and I say there is no historical foundation for that view whatever?—History appears to me to support an exactly opposite conclusion, that is all I can say.

5878 As long as Governments were thoroughly untrustworthy nobody liked paper currency but since Governments have become more trustworthy in these matters, all countries have got as quickly to that as they could, leaving out the gold step. Is that not true?—I think the force of circumstances has compelled countries to use paper, not that they particularly prefer it, but I think they have been so compelled undoubtedly.

5879 For whatever reasons, would you say that is a correct account of what has happened?—Yes.

5880 The point of my last few questions has really been simply this—that there is a great deal to support the view that the alternative is not so much gold or silver as gold or notes, and, historically, recent experience on the part of nearly all countries is in favour of notes rather than gold. If you are to put it on the historical basis, or on the experience of other countries, then the answer would be in favour of notes rather than gold. I think you have conceded as much to me as this, that if it were true that it was between notes and gold, you would prefer notes?—Not for India in its present state of development. If I had to select between notes and gold for a currency medium for India in its present state of development, I should certainly advise every Indian to have a gold coin in his pocket and to pay gold and not notes.

5881 What would be your reason for that?—Because I think a country using a gold currency would command very much greater respect in the world than a country which did not use a gold currency, and only had paper and nothing behind it.

5882 There is only one country that has actual gold as the principal medium of exchange, do you think the prestige of Egypt stands higher than that of most nations and countries?—I cannot say that I am sure the prestige of India would stand very much higher if she had a gold currency in free circulation all over the country.

11 July 1913]

The Hon. MONTAGU DE P. WEBB, C.I.E.

[Continued]

5883 (*Sir Shapurji Broacha*) I asked you a question about 40 millions of silver coin, and you said you meant 40 millions in rupees and not in gold. I then reminded you that there were only 18 millions of silver taken to India?—I remember, that was in the years 1906-7.

5884 You say in one of your letters that "40 millions left with the world at large for the price of the silver created a plethora of gold in the world and created a boom in the world", so you meant 40 millions of gold?—I do not know from which exactly of my many productions on the subject of the currency Sir Shapurji is quoting. The amount of rupees that were coined from 1905 to 1908 I have described as the heaviest coinage on record in the history of the world. It was over 62 crores of rupees. That figure is drawn from the official records and can be verified.

5885 I am quoting from a letter you wrote in November 1912 to which I replied, and in which I wrote about this 40 millions of gold, but I could not challenge your correction at the time, and so I took your explanation as correct, but now I find that it was not so. You actually said "40 millions left with the world," by which you meant "40 millions of gold left with the world at large for the price of the silver created a plethora of gold in the world and created a boom in the world?"—I am not quite sure what point Sir Shapurji is making. I understand him to mean that in a letter of mine written in 1912 I asserted that 40 millions sterling worth of new silver rupees were brought into existence, and he does not think that 40 millions sterling worth of rupees were brought into existence. I thought it was. I have nothing further to say. I think that if the total currency is increased to the extent of 40 millions, and circulates at that face value, it is equivalent to 40 millions.

5886 (*Chairman*) According to Mr. Abrahams' figure between 1905 and 1908 there were 64 crores added, which is 42 millions sterling?—I wrote "over 62 crores," and probably at the time I wrote I had not got the exact figures. Sir Shapurji is evidently arguing that 42 millions worth of token money is really not worth 42 millions but is only worth 20 millions, which is perfectly true of its metallic value.

5887 (*Sir Shapurji Broacha*) What you have said is that 40 millions of gold was left with the world at large and that made a boom in the world, and now you say that 18 millions created a boom in the world, and American securities and everything else in the world rose?—I think my figures are all right as far as I am able to make out at present.

5888 (*Lord Faber*) I think the difference between you is that one is talking of the face value of the coin in circulation and the other is talking of the bullion?—Yes.

5889 (*Sir Shapurji Broacha*) It did not create a boom in the world, did it?—That is a matter of opinion. I think it contributed to the rise in prices which has been in progress ever since.

5890 Has everything gone up in the last six years? Not cotton which was 7d in 1904, and came down to 3½d in 1905-6. It was a matter of production and demand?—Individual commodities may have sunk in price and yet the general price level may have risen.

5891 You said in reply to Mr. Keynes that the exchange bank managers' opinion is not to be taken into consideration, because they are interested and look at exchange simply from the point of view of profit?—I did not make exactly that statement.

5892 Is that not your opinion?—No, certainly not. My opinion is that the exchange bank manager to whom you sell Council drafts finds them a very great convenience in the conduct of his business, so it is hardly to be expected that he would criticize that arrangement.

5893 I may tell you that they make the same profit in their business on the Secretary of State's Council bills when he sells bills at ½ as when he sells at ¼?—I do not know about that. You may have an inside knowledge of the workings of these exchange banks which I do not possess.

5894 Then opinion is not to be impugned, and it is an honest opinion, because it makes no difference to their profit whether the sales are at ¼ or ½?—I think from practical experience that it makes a very great difference. Any bank manager, if he knows that he can at any day of the week put himself in funds by the simple process of buying rupees from the Secretary of State, knows that is a great convenience to him.

5895 (*Sir Robert Chalmers*) But the price does not make his profit?—No, it is not the price, but the convenience of being able to get money at a moment's notice.

5896 (*Sir Shapurji Broacha*) What they generally get is the difference between the price at which they buy from the Secretary of State and the price they buy bills at for export, and the London discount rate, so it does not matter whether the exchange is ¼ or ½?—In that case, not a bit.

5897 Their profit being only the difference between the buying and selling rates?—Exactly.

5898 So it would be no advantage to them, in giving their evidence, to mislead the Commission?—Not a bit.

5899 I thought you were rather, may I say, unjust in impugning their creditableness in what they said to the Commission?—I have no knowledge of what the banks have said to the Commission.

5900 You are a merchant, and you know the position of these things yourself?—I know that a convenience of this kind is a convenience, and I should hardly expect those who benefit from the convenience to criticize it very severely.

5901 It is the same with exporters and importers. You do not mind, when you buy wheat, what the exchange is, so long as you can make your 1 per cent. or 2 per cent profit?—Not a bit.

5902 It may move alternately one way and the other, but to the man who does a commission business like yourself, or to a bank, it makes no difference what the exchange rate is?—Not from day to day.

5903 You say you have to make your calculations for a month or for a week ahead as to the rate you do your business at, but in which country have they not to make that calculation? Do you not see in the paper's one day that the Paris exchange is one point against us, and the next day it is two points in our favour? That is a thing which a prudent merchant will take into account, and the Secretary of State's differences are not more. I think you said that Government were not able to sell their bills between 1893 and 1898 at 1s 4d. I do not think I made any assertion of that kind, but I think it is approximately correct.

5904 You gave as one of the reasons that the market was flooded with rupees?—Yes, at the beginning of the period.

5905 Supposing you had in the currency 50 crores of rupees, and the market was flooded at the time, yet if your export was 50 crores and your import 20 crores, how would it affect the rupee at all—the balance of trade must be paid?—I do not know exactly what the question is.

5906 You thought that the rate of exchange did not lift itself up because Government flooded the market with rupees?—That is my opinion.

5907 But I say that if the export was 50 crores and the import, say, 10 crores, or if the export is 60 crores and the import 30 crores, how would the rupee interfere with the exchange coming up? Foreign nations must pay, must they not?—Yes.

5908 Yet with all that, Government were not able to lift the exchange to 1s 4d?—Because the circumstances could not be as your hypothesis suggests.

5909 There may occur a year when the Secretary of State is not able to maintain the exchange at 1s 4d, on your policy what would you do?—Ship sovereigns from India.

5910 On which account?—Sovereigns would be shipped from the Treasury balances in India to the Secretary of State in London on his account for the payment of home charges.

5911 From the Government of India?—From the Government Treasury balances.

11 July 1913]

The Hon. MONTAGU DE P. WEBB, CIE

[Continued]

5912 Do you remember the last crisis?—I remember the crisis of 1907-8

5913 There were about 4½ millions of sovereigns issued then, and only a quarter of a million came to the help of exchange, so that instead of the people giving out sovereigns, they took them away?—Yes, owing to the scare created by the Government's mismanagement

5914 Do you know that the Government, as a matter of policy, pushed the sovereign between 1900 and 1907 until sovereigns went to a discount?—The sovereigns did not come out between 1900 and 1907

5915 At the time of the crisis, notwithstanding all the accumulation of sovereigns in the hands of the people, not a single sovereign came out, but, on the contrary they applied Gresham's law, and the cheaper metal was driven out for the dearer?—The Government themselves depressed exchange to below 1s 3½d., and thereby made the sovereign so valuable that the people commenced to hoard it. But that was entirely owing to the Government's own action in failing to release the gold when it was required

5916 It did not help exchange then?—On the contrary, Government very nearly broke the exchange down altogether,

5917 Do you think when exchange is falling or when exchange is wanting in confidence, any gold will come out for rupees?—Certainly

5918 Do you know the law that the depreciated metal will be thrown against the appreciated metal?—I am very familiar with it

5919 You say that there is a redundancy of token coins?—To which year do you refer?

5920 Take any year you like?—I do not think there is a redundancy of the rupee currency at this moment

5921 Then why do you prevent Government from buying silver?—I am not preventing Government from buying silver

5922 Do you know what is the amount per head of population in the Currency Department now in rupees?—I should think it would be very small

5923 Do you think it is as small as in the Bank of France? What is the number of 5 franc pieces per head of population there?—I have not the remotest idea

5924 Do you know what is in circulation in France per head—it is 25 rupees. Taking Mr Keynes's calculation of 164 or 165 crores in circulation, that would come to something like 5½ rupees per head in India. You know, of course, that business in India is a cash business?—Yes, very often

5925 They have not the instruments they have in Europe, such as bills, to take the place of cash?—Not so many of them, but there are some

5926 Therefore they require more money for exchange?—They do require more coins

5927 They should have more coins per head than any civilized country, because civilized countries have other instruments?—That does not in the least follow

5928 It must follow?—Not in the least. I think that depends on the amount of trade that they do

5929 It does not matter at all what trade they do. India has a very large trade more than any other part of the British Empire, and I say there is no large rupee circulation at all?—I have no complaint to make of the rupee circulation at the moment

5930 Do you not think that if France has 25 rupees in circulation India should have 10?—I do not think any comparison can be made between the economic condition of France and the economic condition of India

5931 Do you know that any other gold is dearer than sovereigns to bring out to India?—I think it all depends on circumstances

5932 Give me the circumstances under which it can be cheaper?—Ordinarily, it is cheaper to import sovereigns than gold in any other form, but it depends on the betterness of the gold

5933 I say to bring in gold in any other form, no matter what the betterness may be, is dearer than to bring in sovereigns?—I can hardly agree with that conclusion

5934 (Sir Robert Chalmers) Would it be cheaper to take 10 ounce bars from Australia?

5935 (Sir Shapurji Broacha) Show me how you can bring gold cheaper than in the form of sovereigns?—If depends on the betterness of the gold. Ordinarily it is not cheaper to bring uncoined gold, it is ordinarily cheaper to bring sovereigns
